Total cost: Pays LIBOR+1% within the loan contract
Receives LIBOR within the swap contract
Pays 8% within the swap contract
Total pay 9%

The market risks (possibility of adverse price fluctuations) are most often covered by commodity swaps (4). In a commodity swap the producer is demanded to make some payments towards the consumer in case the spot price gets over the swap contract, and the consumer pays the producer if the spot price gets under the agreed level. The commodity swaps can be achieved anytime two terms are accomplished: essential prices and spot market cleared.

The force majeure and political risks are generally insured, either by commercial insurance (for force majeure events and or some political risks), or by political insurance programs (for certain specific political risks).

Conclusions

With large projects, maybe more than other times, the risk management is asked to find that solution adjustable to any case and which can make the risks bearable by the parties. To harden the things more, the emergence of such a risk can be rarely isolated from the rest of the project, leading to a chain reaction. That's why, risk approaching for such projects must be achieved in an integrative way, considering all the details. There is no universal rule regarding the risk management for large projects, still in the middle there is the principle of risk distribution to the parties more liable of managing them.

For an effective management of project risks, management of the organization must follow closely the main objectives of an effective and efficient management system.

Effective enforcement of these objectives is likely to lead achieving the goal of risk management, that of "maximizing shareholders", and the implementation of customer, employees and organizations requirements.

The most important objectives to be mentioned are: establishing clear responsibilities in risk management; transparency and comprehensive reporting system; existence of a financial performance measurement system , expected and unexpected losses and capital allocation for each risk; assessing the cost of capital, the minimum rate of return and limits exposure to organic growth; using principles of risk diversification; existing plans for disaster recovery or business continuity

plans; independent and efficient control of risk management; highly professional and specialized knowledge employees etc.

The paper has analysed the losses generated to organizations by the market risk especially emphasizing the asset price volatility (goods, financial investments) driven mainly by factors affecting supply and demand in the market. It was found that the price volatility can significantly expose both participants in market transactions and non-participants at risks.

The conclusion of risk management analysis is referring to the most important factor that led organization to focus on market risk was that, after years 70's, the global exposure has increased noticeably, so the poor management of this risk has become a leading cause of loss organizations.

Under these circumstances, and especially when it comes to projects at large the phrase which best applies for the effective risk management is: "just cannot do without it!".

GENERAL OVERWIEV ON EU ECONOMY

NICOLETA GEORGETA PANAIT*

Abstract
The impact of the international economic crisis on new EU member states has proven to be more severe than the first estimates of the economic analysts. The situation is different for each Member State, the nature and the dimension of the challenges faced are not identical, and the pace of reform is not the same. The economic crisis has prompted intense and sustained action by the EU's national governments, the European Central Bank and the Commission. All have been working closely together to support growth and employment, ensure financial stability, and put in place a better governance system for the future.
Sustainable development in the future is the common responsibility of all Member States and EU institutions, because our economies are closely interlinked, and the EU economic governance now reconfigured to provide more effective responses at the policy level, to give a good reaction to the present and the future challenges.

Keywords: *economic crisis, innovation, economic growth, investment, banks*

Introduction

The countries from Euro area have been affected by the crisis differently - while Germany and the northern countries generally have better overcame the crisis, the Southern part was confronted with a succession of crises and unprecedented recession.

There is no rule applies to all in order to stimulate growth and employment, but there are common objectives and a series of reforms that we need to develop differentiated on further fiscal consolidation, the resumption of normal lending to the economy, promoting growth and competitiveness in present and to the future, finding solutions to unemployment and the social consequences of the crisis, public administration modernization.

Spain, Portugal, Greece, Ireland, Italy, faced current account deficits in the past decade and in the same period, Germany, particularly, Austria, the Netherlands, Finland, Belgium had trade surpluses.

The analysts put this situation into account of common currency that would prove to be inadequate to the scale of a continent where countries coexist with very different economies.

In addition to an overvalued euro, the southern states have had a common impact of any economic crisis: public expenditures remain relatively stable (in the big public sector wages must be paid), but the revenues plunge immediately (loss crisis firms, thus less tax income receivable, less money from VAT, etc.).

For these countries there are few solutions: either immediately reduce wages and make mass redundancies or borrow. Greece borrowed heavily in the financial markets and this fact has had a big effect when investors alarmed by the financial condition began to demand an interest rate of 12% instead of 3% Thus, Greece and other countries have had to draw on IMF and other foreign donors in exchange for austerity policies, which are likely to be ineffective.

The situation in Germany is different because was slightly affected by the housing bubble; it's traditional more oriented to export than for consumption. This, combined with a policy of wage moderation, drove German export prices to be stable and fairly low. So that's why, today Germany has a constant competitive advantage, and that keeps the euro at an exchange rate quite high. In fact, as U.S., Europe suffers from China's currency manipulation in exactly the same way it suffers Spain, Portugal or Italy because a euro too strong.

* Assistant Lecturer, PhD, Faculty of Economic Sciences, "Nicolae Titulescu" University of Bucharest (e-mail: nico.panait@gmail.com).

Due to financial and economic crisis, Europe has adopted a series of measures such as the creation of the European Fund for Stability, idea of banking and fiscal union and ECB interventions. Although these measures had important results, return to growth requires more effort and international financial institutions to be involved in these efforts, and the focus on promoting sustainable economic performance in the EU region.

The western world is going through a combination of crisis financial, social, of the euro area and one of globalization.

Economic development in the emerging countries under the influence of the international financial crisis

In Romania in 2012 the economic growth, was due as a result of the significant increase of the volume of activity in the segment of services and the increases of taxes. Statistic data show that the results from agriculture and industry have negatively affected GDP growth (-1.4% influences the total GDP, respectively, -0.6%), while the building industry had a neutral effect.

Industry, agriculture and construction fields should be as high in total GDP in order to put a label whether a country is developed or not. Thus the services sector it creates gross value, but the weight in the GDP is less. The Lisbon strategy was established that EU countries must support the development of manufacturing in Europe not in other areas, because this part of industry will have the largest share in the wealth.

To achieve higher GDP EU countries should shift to developing sectors where there are as many operations with big complexity.

Agriculture did not affect the development of GDP in the first half of the year; the negative influence was strongly concentrated in the third quarter and declined in the last quarter of the year. On the other hand, services sector recorded a significant lead in the second half, managing to mitigate the decline in the third quarter GDP and return to positive territory in last quarter.

The construction domain felt a boost in mid, but only managed to cover what he lost at the beginning and end of 2012. We could not record growth for 2012, with no increase in taxes, so net taxes (taxes levied - State grants) supported the result of economic growth so the entire year, and each quarter, less an election period.

In this context, it is noteworthy that the development of industrial sector sets the tone for the whole economy and counts for the progress of labor productivity. Here this results achieved this year were lower than in 2011, except during recovery period in the second quarter when the outcome was almost similar with 2011.

For Romania the manufacturing industry has the largest share in the stock of foreign direct investments. Certainly it would have been much better for the Romanian economy if the foreign investment was bound to a greater extent for manufacturing, a domain where the added value is bigger comparing with other sectors. Manufacturing sector has the largest share in GDP. Companies with foreign capital who activated in the manufacturing sector had 43,4% of employees and created in 2011 64% of turnover and 57% of value added in the economy. Industrial sector has contributed with approximately 30% to Romanian GDP.

One reason would be joining the European context; our result is still above the average growth of -0,3% recorded in the EU27. Eurostat data showed that in 2011 only seven countries had growth above 1% (Latvia, Lithuania, Estonia, Slovakia, Poland, Sweden and Malta), while eight states saw declines of over 1% of GDP (Greece - with a minus 6,4%, Portugal, Cyprus, Slovenia, Italy, Hungary, Spain and the Czech Republic).

As the period of economic uncertainty remains in Europe, state members were made unable to fulfill Europe 2020 objectives regarding employment, research and development, climate change energy, education and fighting poverty, so we can say that Europe didn't achieve its objectives. It is necessary to make progresses in all these areas to evolve towards a European smart, sustainable and positive development.

Under this strategy, Member States submit with annual frequency, the national reform programs, in accordance with the integrated guidelines, aimed at removing obstacles to economic growth and employment at national level.

The efforts of Member States are supported in the EU by initiatives and policies which are associated, for example, with the process of achieving the single market for funding research and innovation and to improve access EU firms to international markets.

Economic reforms undertake in the goods, services and labor market have to be flexible and to stimulate competition and they are essential for the smooth functioning of EMU. These reforms allow Member States to increase potential economic growth and the level of employment. Also, these reforms are the base support for Member States to improve productivity and competitiveness, while improving resilience of these economies to economic shocks. Implementing structural reforms in the euro area is a must, because Member States cannot use monetary and exchange rate policy as an instrument of national economic policies. Therefore, structural reforms are also essential to avoid imbalances in the euro area.

On a short-term the fiscal consolidation can have a negative effect on economic growth; this effect can be amplified during the financial crisis when funding conditions for other operators are also strict. The fiscal consolidation is not the only factor that matters for growth: according to the choices made on the structure adjustment "multiplier effect" of fiscal policy will be different.

In countries with relatively large shares of public expenditure in GDP and relatively high tax rates, the fiscal consolidation achieved through spending cuts rather than through a further increase of the tax revenue contributes more to long-term economic growth.

Less developed member states are unable to finance their needs and that's why they have to address to markets and to make efforts to control rising spreads for bonds because doubts of investors about the sustainability of their public finances. To restore investor confidence, reduce costs and debt repayment create fiscal room for maneuver in these countries need sustained effort, at a pace appropriate for the inclusion of public finances on a sustainable path. Negative impact on growth can be largely mitigated, provided that fiscal adjustment is correctly designed. Regaining fiscal sustainability will be the benefit of the public and the private ones of these countries and will contribute to the overall financial stability of the EU.

EU states have different economical and fiscal position and that is why the EU Commission is in favor of filing a differentiated fiscal consolidation effort, appropriate for each country. Under the Stability and Growth Pact, these strategies should focus on the progress made in structural terms rather than in purely nominal and include a structural adjustment to support both growth and social equity. Such a differentiated approach also contributes to readjust current account imbalances.

Aspects of banking system in emerging countries

Deteriorating of sovereign debts continued to affect seriously banks' funding costs and market access. Sovereign debts problems may affect banks in various ways, from direct losses on sovereign debts and lower values for the activities and funding guarantees from the central bank, to lower benefits that banks derive from government guarantees, including a damaged quotes bank.

Market participants remained concerned about sovereign exposures after the European Banking Authority (EBA) published on the 18 of july 2012 the results of the second round of bank stress tests. The financial markets react not so confident, encouraging, despite improvements in the quality, seriousness and cross-checking against comparing with the last year's exercise.

EBA identified capital shortfalls in eight of 90 major banks, and recommended raising capital for another 16 banks which have passed within a 1 point percentage compared to the threshold of 5% for Tier 1 capital. The impact of this identified data on the market was limited but showed somewhat greater differentiation between banks. CDS rates rose for Greek and Spanish banks, and fell for Irish and Portuguese banks. The analysts focused on sovereign exposures communication accompanying the official results to run their own sovereign default scenarios.

In most cases, it has been suggested that reductions generated by peripheral European debts could lower the capital ratios, but at manageable levels. However, serious concerns regarding the expansion of the sovereign debts crisis in Italy and Spain led to a vast sale of shares and securities in banking system. Increased selling pressure from banks in Italy and Spain, those of Belgium and France, and later in banks across the continent, including those based in the Nordic countries.

In the absence of market financing, banks based in countries associated with sovereign debts problems continued to rely on ECB liquidity to finance a significant portion of their balance sheet. For Greek banks, central bank financing was 96 billion euro, plus cash emergency for Irish and Portuguese banks, the corresponding figures were 98 billion Euros and 46 billion Euro. Banks in Italy have doubled borrowing from the ECB as at 85 billion Euros. However, research in the area indicates that most large European banks have already funded about 90% of their funding target 2012 and 2013 were pre-funded.

This year Romanian banks faced a shortage of consumer confidence, which was in the end expressed by a low credit portfolio.

According to the specialists, a preliminary financial result for the 40 credit institutions on the Romanian market indicates cumulative record loss of 2.12 billion lei last year, almost triple from 2011. Last year was the third year in a row when the Romanian banking system recorded a negative result, bringing the highest increase in volume loss1.

This was the consequence of worsening the deterioration of loan quality, but also the balance of credits, while the production of new loans collapsed and many banks have become non-performing assets sold packages. Negative results have been affected both large and small banks. In 2011, cumulative losses of banks totaled 777 million lei and in 2010 about 516 million lei. At a loss of 2,1 billion, return on equity in the system remained in negative territory with a loss of 5,4%. As in previous years, the central bank continued to press banks with negative shareholders to provide additional capital amounts so that the average solvency system stood at 14,6% at the end.

Throughout 2012 the banking system solvency was over 14,50 %. The system is stable. Not all banks had the level of solvency over 14,50 %. Are 16 to 17 banks where central bank imposed a higher solvency limit of 10%, not 8%, and asked them monthly reporting, not quarterly, given their previous developments.

According to estimates made by the central bank, at the end of last year, performing loan ratio in the Romanian bank system rose to 18,2 %, almost four percentage points higher than previous year. This growth is not surprising, given that the economy has not recovered, many insolvencies continued to show among companies, many of restructured loans in the first years of crisis have come to acquire new debts, transforming into "toxic actives". Also, the banking system has been shaken by a series of fraud cases that are still under investigation, and the high level of non-performing loan suggests weaknesses in risk assessment systems. Analysts say that the growth of "toxic waste" does not stop even this year.

Companies, besides the difficult access to financing their activities, they are loaded by increasing pressure on interest. Banks derive a gain of 4,6 percentage points for new loans comparing with deposits of firms and 5,2 % for the hip, double the other countries in the region.

In Poland, the profit margin was 2,2 % for new loans and 2,1 % for those sold referring to deposits in December, banks in Hungary, had a profit margin of more than HUF deposits of 2,6 % in December, the Czech Republic, the difference between interest rates on loans and deposits by firms (in crowns, local currency) was 2,2 percentage points at the end of last year. Same margin exists for loans in sold.

[1] National Bank of Romania (NBR), "Financial Stability Report", 2012.

Only banks in Bulgaria have higher margins of profit, comparable to those in Romania in relation to firms, 5 % for th loans to the hip and 4,3 % for new loans. Although high profit margins and commissions increased lately banking system in Romania posted a record loss last year of 2,1bn lei. NPL ratio reached 18,2% in November last year, from 14,3% in December 2011 and about 2% in 2008. The largest banks in the system have non-performing loans over 20% of the portfolio.

BCR (Erste Austria) had a rate of nonperforming loans (NPL) of 26% in September 2012. For comparison, the Czech Republic banks have an NPL ratio of 5,2%, Poland 8,7%, while banks in Hungary have an NPL rate of 18%, similar to those in Bulgaria. Most banks balance sheets hit corporate loans, where NPL rate is increasing because of poor risk analysis for real estate financing granted before the crisis and the difficult economic environment in other sectors.

Banks in Romania intended in 2012, to decrease the level of nonperforming loans (NPL), unlike other years, when they had focused more on high volume for the loans.

The existence of a well-crystallized risk management and a proper capitalization is essential in order for the banks to operate in a healthy manner and contribute to the stability of the financial system. In this context, the identification of possible weaknesses in the management of key banking risks was still the center of gravity of supervision.

Analyzing the nature of foreign capital entered to the Romanian banking system we notice the European domination even from the countries of the European Union. And here we could see an interesting concentration, the accumulation of over 40% of the investors in just two countries, Austria and Greece, which are not reference economic powers in Europe.

Sure that dominant infusion of foreign capital, contributes equally to a strong dependence for the banks in Romania to the international financial turmoil, and this fact contribute to the stability of our financial sector.

Conclusions

European Union shall take effective measures to gradually overcome the biggest financial and economic crisis in decades. The impact of the international economic crisis on new EU member states has proven to be more severe than the first estimates of the economical analysts.

The situation is different for each Member State, the nature and the dimension of the challenges faced are not identical, and the pace of reform is not the same. Reforms are implemented and yet important adjustments occur, but there you can see a recovery.

It is necessary to continue the process of adopting the reforms in order to build future economic growth and competitiveness, smart sustainable and inclusive growth, job creation, and in the same time the EU must be able to demonstrate that their policies work, that will produce results in time and will be implemented fairly in terms of the impact on our societies.

Sustainable development in the future is the common responsibility of all Member States and EU institutions, because our economies are closely interlinked, and the EU economic governance now reconfigured to provide more effective responses at the policy level, to give a good reaction to the present and the future challenges.

The first, who will notice the results of these policies, are Member States which have undertaken profound reforms, reduces imbalances and improves competitiveness. Reform process must be aimed not only at restoring economic growth, but also on setting the foundations of a different quality growth after the crisis. Structural reforms at national and EU level should strengthen the EU's ability to compete globally, generating internal growth through sustainable activities that will equip the EU with the policies and tools to ensure a prosperous, and effective use of resources.

Unity and equity in the Member States and at EU level will be essential elements to ensure that efforts will be acceptable politically and socially, and in the end is also the benefit of all.

STUDY ON FINANCIAL OFFSHORE CENTRES, THE RISKS AND DEREGULATION OF THE INTERNATIONAL FINANCIAL SYSTEM, CAPITAL LAUNDERING AND TERRORISM FINANCING

MĂDĂLINA ANTOANETA RĂDOI[*]
ALEXANDRU OLTEANU [**]

Abstract
After the end of the 90's crisis, the settlement of the international financial system has taken an important place within the international organizations. There are important debates regarding the need of a compulsory reform to prevent crises.
Means of preventing crises, especially within the field of foreign vulnerability assessment regard: transparency, following the international regulations and codes, refoundation of the financial compartments, liberalization of the capital movements.
In addition, a set of work program is needed regarding the crises settlement and sovereign debt restructuring. Serious matters are requested regarding the adoption of fight tools against money laundering and terrorism finance.
Offshore financial centers assessment is placed in the field of activity by refinancing of the financial sector, it is one of the health balance sheet elements achieved by the IMF and by the World Bank within the financial compartment assessment program.

Key words*: offshore financial centers (CFO), risks CFO, FATF (Financial Action Task Force), FSF (Financial Stability Forum), bankruptcy risk.*

Introduction

The aim of this study is to analyze the role of the offshore financial centers within the international financial system and the risk for its stabilization. The main thesis on the result analysis is the following:

The risk for international financial system stabilization increases together with the development of the activities from the offshore financial centers. The surveillance and control of the offshore financial centers is a must. The risk for the international financial system diminishes with the increase of the respect for the international regulations. In the future, information transparency and international regulation enforcement could replace offshore financial centers surveillance and control. Their Assessment program drawn by IMF is an important factor in risk reduction.

The drawn analysis regards:

- Features of the offshore financial centers (CFO);
- Risks cause through CFO;
- CFO Assessment results.

Literature review

1.Features of the offshore financial centers (CFO)

1.1 Offshore financial centers concept

The offshore financial centers belong to the international financial market, which concerns activities among non-residents.

Four types of transactions are available in the international financial centers, represented in Diagram no.1.

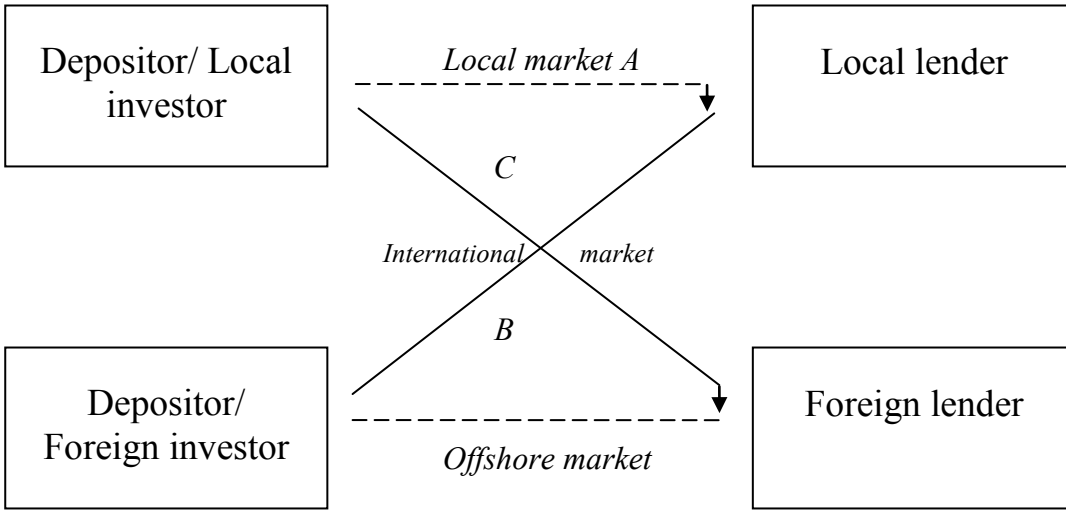

Diagram no. 1. Transactions scheme in international financial centers

If the depositors or local investors offer real funds to the local lenders, we deal with Local market A.

We deal with an international market B, C if the foreign funds offered to the local customers or the local funds offered to foreign customers.

The offshore market D appears when the foreign funds are offered to foreign investors.

It's not a satisfactory definition for the offshore financial centers.

We should mention that, in general, a financial offshore center is a right where many activities are undergone by non-resident persons and which have unfavorable circumstances for international financial activities.

The word "offshore" means "outside the continent" and regards the islands situated far from America and Europe, which offer reduced taxes and mild terms to register companies. In English, the terms "offshore" and "overseas" are used with the meaning "external". The beginning of the concept's use in USA dates back in the 30's. The development of the CFO takes place in the 60's and the 80's once with the taxation increase and restraints regarding the capital circulation and exchanges, and, also, the expense increases on the national markets.

The appearance of the euro market in the 60's represented the beginning of the financial operation liberalization in a currency, other than those of the countries or the establishment where it is situated. The European financial places (London, Paris) offer deposits, loans, bonds issuing in Eurocurrency. Then the transactions are achieved through offshore centers.

We should notice that the offshore centers are difficult to compare and classify due to the great differences on their size, their geographical position, their population, the GDP level, according to their main activities. Among the offshore financial centers, greater jurisdictions such as: Hong-Kong SAR, Luxemburg, Singapore or Switzerland can distinguish, but also smaller economies with international financial centers such as: Bahamas, Belize, Anguilla or Gibraltar. Richer centers, better structured, are competitive due to the efficiency of the services provided. The new centers, smaller and poorer, don't have time or funds to increase the efficiency of the financial compartment. The GDP level is very weak in comparison with the financial inset which is being transferred. In order to get acquainted with the CFO classification, there is no unique list according to which a country of the offshore center can be classified.

The offshore lists are created by the countries, international organizations, agencies marked by the country risk and used to end the differences among them. If the countries admit "high tax", they apply the prescriptions against the fiscal paradises the other way round.

FATF (Financial Action Task Force on capital laundry) and FSF (Financial Stability Forum) set a list of the "uncooperative" countries which don't follow the international regulations or don't do any effort to approach them. The lists are altered and updated periodically. The list drawn by the IMF together with OECD, Financial Stability Forum and the World Bank, contains 40 centers of offshore financial centers. The present document uses a list of 44 jurisdictions published in 2005 with the IMF report[1)] (1).

1.2 Activities led within the offshore centers

The financial activities undergone offshore are numerous. They offer banking services, insurance operations, stocks and shares, shares control. They can also achieve such non-financial transactions such as the marine or car book, airlines or home.

International Business Companies (IBC), located in CFO, are screen companies with duty free limited responsibility, interceding to fulfilling activities at the capital level via shares, stocks and deed tools issuing.

The main customers of the offshore centers are private multinational companies for their own fortunes.

The offshore centers offer the customers a reduced or zero tax a convenient legal system, a high quality banking system and experienced auxiliary force. Finally, the offshore centers adopt, in order to attract customers, a larger notion of the bank secrecy.

The most frequent activity types are the banking services offered through the international bank branches located in the offshore centers. The number of the financial institutions which offer services in the offshore centers and the number of local institutions is given in Appendix 1.

The banks don't exist in centers, or they are in minority. For instance, in Labuan-Malaysia there are only 49 offshore banks, Vanuatu has 34 offshore banks and 4 home banks, in Bahamas there are also 212 banks, from which 203 are offshore. Another example of offshore institution domination is Barbados with 199 insurance companies, from which 180 are offshore.

If we analyze the international business companies, they are plenty. For example, in the British Virgin Islands there are 350.000 international business companies, 47.000 in Bahamas and 35.500 in the Mau Islands.

The organization of offshore centers offers advantages and costs for the receiving countries. The advantages are (2):

- function expenses through the offshore institutions (banks, insurances);
- salary payments to institution public servants can be a major advantage;
- taxes on benefits and license rights are a revenue source for the receiving countries;

[1] From a list of 44 contacted jurisdictions, 41 were assessed offshore.

- easier access to the international financial markets;
- increase of the local staff experience;

The costs for an offshore center for the host countries are:

- activating an expensive communication service;
- control making to follow minimum regulations, which induce the costs;
- losing the local currency independence;
- increased competition in local finance through international banks;

The offshore typology analysis shows three types:

(1) the New York type, where there is a special agreement of founding the offshore center such as N. York, Tokyo and Singapore;

The international activity accounts are different from the national accounts. The international accounts benefit from the reinforcement of some national activities mandatory restrictions (for example the mandatory reserves);

(2) the London type which is characterized by transaction liberalization for both residents and non-residents;

(3) the "high installment" (fiscal paradises) where there are no duties for non-resident transactions.

The offshore centers are used both as transaction counting centers and operation centers (3). London is a typical transaction operation center at large. Cayman is an example of transaction counting which takes place outside the center.

The fiscal paradises are used to:

- diminish the person's duties;
- reduce taxes on civilians.

The fiscal paradises are one of the CFO forms concerned with diminishing taxation. In order to obtain such advantages, individuals can receive citizenship of CFO (actors, athletes). Company tax reduction is possible only for companies registered within the fiscal paradises.

2.Risks caused by CFO

In the beginning, the activities and financial inset weakness in the offshore centers didn't imply surveillance and assessment through international institutions due to the reduced deregulation risk for the international financial system.

Risks have increased once with the growth of the CFO activity and world financial market growth integration.

The CFO more important risks are:

- international financial destabilization;
- run away from taxation;
- bank crises;
- capital laundry and terrorism finance.

International financial destabilization

If we consider the financial stability from the country's point of view and not from the CFO's, the aspect of the financial activity from the offshore center it's not so important because it can regard tax evasion and diminish of the budget expenses.

But in host countries the offshore center, especially in small countries where there is a great inequality between the number of local and offshore institutions, the offshore activity can destabilize

the economy of the host country. This can lose its political currency independence and there can occur the possibility of a financial crisis.

From an international perspective, it is emphasized that today the centers wind hundreds billion dollars; the effective amount of the financial activities is large and it concerns many people from the world.

The IMF experts calculations which are based on data given by the BRI, suggests that the CFO cross-border assets were almost 4.6 trillion USA dollars (an average of the total cross-border assets), from which 0.9 trillion USA dollars in Caribbean and a trillion USA dollars in Asia. Most of it (2.7 trillion), is CFO assets from London, J'IBF (International Banking Facilities) from New York and JOM (Japanese Offshore Market)[2)].

Unfortunately, the smaller ones, the offshore financial centers are today about 20% from the cross-border banking outset.

Every year, about 60 thousand companies are registered in offshore centers. The deposit value in centers exceeds 1300 billion USA dollars. Their role is to transfer capital and manage growing assets. About 60% from the world assets are underwritten through offshore centers.

These aspects of the activities from the centers risk compromising the international financial stability. The abilities of the centers to attract global financial operations, imply an important surveillance factor against competition on the international market.

The competition and the benefit brought when it corresponds to the innovation tools and the financial products reduce the cost of the financial services all over.

But it is concerning when cost reduction comes from not obeying the regulations and control laws.

A jurisdiction that doesn't obey the minimal norms can be subjected to financial instability.

The absence of the reduced data regarding the operations from the centers still represents an obstacle in risk assessment for the international finance stability.

Run away from taxation

Run away from taxation can be a movement of the activity in a fiscal paradise where taxation can be reduced in comparison to the native country. Moreover, registering an offshore company makes it not to pay taxes. The revenue level in the world hit taxation. The loss of budget revenues by the countries are estimated at 3% (Finland) and 23% (France).

The company Euron is an example of tax reduction due to the registration of 900 branches in the offshore centers. Euron created 692 branches in Caimans, 119 branches in the Turkish islands and Caicos, 43 in the Maurice Islands and 8 in the Bermuda. For three years, Euron didn't pay taxes and in the same time received VAT refund. In total, the bursary of the USA lost about 382 billion USA dollars. The recent obligations in branches, the creative compatibility and the audit considered distorted led to the fall of the Euron stock course, after the relevant information and eventually the Euron bankruptcy and destabilization of the capital market.

Banking crises

The most important risk on the bank market is the bankruptcy of the offshore banks. For example, the famous case of bankruptcy of the Credit and International Trade Bank in 1991 and of the Meridian International Bank in 1995.

The operations of the offshore banks play an important role in the financial crisis from Latin America and Asia and now in the 2007 global crisis. The absence of the real regulations at the consolidated banks allowed arbitration operations to take place by frequent transfer between the offshore establishments and the offshore related banks.

[2] Offshore Financial Centers – IMF Background Paper, June 23, 2000, p. 9.

More offshore banks from Asia are used for operation on the capital markets. They don't know the contribution of the offshore funds to the credits in the region. This is the cause of a liquidity risk on the exchange market and on the financial system of those countries.

Another risk is represented by the greater offshore banks in comparison with the onshore banks. The assets concentration in offshore banks produces a risk for the local banks. The solution doesn't consist only in a close surveillance of a CFO, but a consolidated surveillance in the origin countries is imposed. This is due to the fact that IMF introduced the financial vulnerability assessment for both: onshore and offshore centers.

Capital laundry and terrorism financing

Nobody knows exactly what the actual level of world capital laundry is. The level is estimated to reach between 2 to 5% from the global GDP (4).

After September 11 2001, capital laundry and terrorism financing have become issues to be discussed globally.

The social and political costs of capital laundry are consistent. "Organized crime can be the core of the financial institutions, which can produce reduction in large economic sectors and can corrupt the political system. Dirty money also destabilizes the financial system of a country and supports a severe crisis."[3)] The offshore financial centers offer favorable conditions for such activities, due to the fact that the offshore financial centers assessment program contains FATF norms.

3.Results of the offshore financial centers assessment

3.1. Initiatives of the international institutions

The control authorities and a number of international courts work together on control issues on offshore financial centers activities. The analyzed issues regard less than three aspects: money laundry, fiscality and financial regulations. We should emphasize the role of IMF, GASI, OCDE and FSF among the institutions who deal with CFO.

The financial action group for capital laundry (FATF) deals with the implications of money laundry and terrorism financing at criminal and legal level.

In FATF last report it was signaled that from 12 centers, the anti-money laundry devise shows weak criticism. FATF publishes in his report a list of 15 "non-cooperative jurisdictions". This list was corrected in the sense that seven jurisdictions in progress were removed from the "non-cooperative" list from the countries territory, but they supported 6 new centers. In 2005 IMF and the World Bank made 48 FATF recommendations regarding the reference their operational activities register.

OCDE focuses on fraud, fiscal competition and fiscal regulation differences. It launched a project on "damaging fiscal practices", which regards the centers. OCDE published a list with 35 jurisdictions identified as a fiscal paradise ("high installment"). During the Barbados reunion, OCDE and the developing countries (CFO included) created a special group to deal with the regulations acceptable for the operations from the fiscal paradises.

The Financial Stability Forum (FSF) delegated the work group in April 1999 to study the implications of the offshore financial centers in the international financial stability.

The first report[4)] of the group regards the financial surveillance of the CFO, the second (May, 2005) classifies the centers in three categories according to the control quality, cooperation level and priority set for the future assessments.

---

[3] Op. Cit. [5)].

[4] The report of the work group was published in April, 5th, 2005, it is available on the Forum site.

In the first group there are included the CFO which have the fiscal paradise status opposite the ones which use the regulations against the fiscal paradises. The second group regards the countries which are not fiscal paradises. And the third contains the countries which are occasionally included in the paradises list.

Other assessments

The results of some of the CFO assessments are published in the following reports:

- "The Edwards Report", published by the government of Great Britain in 1998, which assesses the centers situated on the territories from Great Britain (Jersey, Guernsey, Sark and the Man Islands);
- "The KPMG Report", completed in 2000, assesses 6 overseas territories of Great Britain which offer offshore services (Caimans, the British Virgin Islands, Turk Islands and Caicos, Anguilla, Monserrat and Bermuda).
- "The Ad-Hock Group on Non Cooperative Jurisdictions", created by FATF in 1998[5)], assessed 31 non cooperative jurisdictions, according to 25 criteria from the capital laundry point of view.
- A 15 non cooperative jurisdiction list was published as a result of this activity in 2000.

3.2. CFO assessment program by IMF

In 1999, IMF together with the World Bank started the activities regarding CFO, by announcing an assessment program of the financial sector (PESF), launched as an experiment. The program consists of a health exam for the financial sector of the countries and allows interpretation of the macro caution indicators which shows the past crises. The assessment program (PESF) equally regards the offshore financial centers.

The program which assesses the offshore financial centers was launched by the IMF in 2000. It contains two groups (5):

- Financial control, containing the assessments;
- Technical assistance and statistics.

The assessment of the offshore financial centers is optional and it is achieved on three levels of intensity (6).

- The 1st module is a self-assessment, with the professionals' technical assistance, if the PFO follows the regulations. It regards the PFO responsibility and it is an introduction to the independent assessment.
- The 2nd module is an independent assessment performed by the IMF on keeping the regulations.
- The 3rd module is a complete assessment, set by the IMF, of the risks and vulnerabilities if the presumptive international and regulation observance.

As the assessment in modules 2 and 3 is concerned, it can be achieved by a group of surveillance professionals from the surveillance agencies from the offshore centers, experts from the World Bank and additional experts as the one from FATF. In assessing the standards from each module, the priorities are decided according to the activated lead within the centers, insisting on the effort against capital laundry.

IMF supports the offshore centers to gather information which can allow voluntary self-assessment through its technical assistance. In 2004, 4.3% (7) from the technical assistance it was

[5] http://www.imf.org/external/rp./mae/oshore/2000/eng/role.htm.

offered by IMF for the offshore financial centers and the fight against capital laundry and terrorism financing.

Technical assistance to support the centers decreases the statistics and especially helps their participation to the statistical data collection.

3.3. Results of the first CFO assessment stage

According to the IMF report from February 25, 2005 (8), the first stage of the CFO Assessment program was ended (1). 41 from 44 contracted jurisdictions were assessed and published in their reports. Within the 2nd module, 24 jurisdictions were assessed; 14 chose PSEF (Financial Sector Assessment Program). From the last three, one was assessed within the PSEF and two received technical assistance.

During the first stage the international norms were assessed, as follows:

- The basic principles from Bale – for a more effective financial control – were assessed in 41 jurisdictions and partially in one (Monaco).
- The basic AIS principles (Association Internationale des Controleurs d'Assurance) were assessed in 21 jurisdictions.
- The objectives and the regulation principles for the OICV securities (Organisation Internationale de Commissions des Valeurs) were assessed in 16 jurisdictions.
- The FATF norms (Groupe d'action financiere sur le blanchement de capitaux) were assessed in 25 jurisdictions.

Two jurisdictions (Nauru and Nine), whose activities were limited, weren't subjected to an assessment, but they received technical assistance. We should still add that the assessment doesn't hint the same centers: it is distinctive at the centers which don't take part in Module 1, Module 2 and in the assessment programs of the financial sector (PESF). The statistics background is not the same.

The assessment depends on the development level of the activity sector, especially of the banking sector, money laundry and terrorism financing, company and stock exchange markets, as well as suppliers and fiduciary services.

BANKING SECTOR

The more important activities from the offshore centers are the banking services. More banks placed in CFO represent the branches and subsidiaries of the international banks. Their first activity is receiving deposits on different markets and their sending to their origin establishments.

The offshore banks make, in companies' accounts, capital tax free operations in foreign currency, on companies, value added, dividends or interest and exchange control. Banks offer special services to natural persons such as managing goods, successional planning, and currency trade and withdrawal regimes. Such proposals regard the non-banking services such as the fiduciary and surveillance services. Assets management in CFO is motivated by different factors: further protection against origin country quest, fiscal optimization.

The contribution of the financial sector in GDP in CFO is large enough.

But there is not enough information on the subject. For example, this indicator reaches 53% from GDP in Jersey, 40% in the Virgin British Islands, 25% in Gibraltar and only 7% in Barbados.

The number of banks registered in centers differs a lot: from one bank in Sf. Lucia to 427 in the Caiman Islands (appendix 1).

The extension of the cross-border financial assets in connection to the % GDP is enormous in certain centers. For example, in the last years, in the Caiman Islands, this indicator has risen to 56871%, in Guernsey to 7384% and in Jersey to 6879% from GDP. GDP is in these centers.

The results of the assessment are shown in Chart no. 1 on 27 offshore financial[6]. Within the assessments, the compatibility level with the banking surveillance principles of the Basel Committees (BCP – Basel Core Principles)[7].

Chart no. 1 Level of compatibility with the Core Principles for an effective financial control

[6] Offshore Financial Center Program a Progress Repport. Prepared by the Monetary and Exchange Affairs and Statistics Departments. March 14, 2009. IMF www.imf.org/external/np./mae/oshore/2009/eng/031403.htm.

[7] Core principles for effective banking supervision. Basel committee on Bouncing Supervision, Basel, September 1997.

Source: Report of OFC, Module 2 and FSAP Assessment: Offshore Financial Centers The assessment program: An Information Note. http://www.imf.org/external/np./mae /offshore/2009/eng/082902.htm

The chart list contains 25 principles. The results regard banking surveillance in 27 offshore centers[8)] which were compared with the assessment results from 60 countries (9 developed countries, 15 transition countries, 36 developing countries). The obtained results show the compatibility degree level with the principles, in 60 international financial centers and 27 offshore centers, which is relatively high. In certain cases, it is higher in the offshore centers just as in the cases of those 60 countries assessed within the program.

If we consider the compatibility level with the basic principles, two groups of countries distinguish in the offshore centers: countries with high compatibility level and countries with reduced compatibility.

About 35% from the countries show a reduced compatibility level with the Basel Committee Principles. These are countries with 1% offshore total assets. In average, these are not offshore banks and the assessment results show that the national banks surveillance principle is followed.

The great offshore centers, with an important activity, won't lose their good reputation and focus on the surveillance of the sectors which are connected to their cross-border activity and their business. Most of the centers are according to the surveillance principle exercised through the receiving countries (principle 24), and also with the consolidated surveillance principle (principle 20) and global consolidated surveillance (principle 23). Such a correspondence takes place in the case of the principle regarding the fight against capital laundry (principle 15).

When the activity of the offshore banks as lenders is reduced, the principles regarding the credit policy and loans classification are not met (principles 7 and 8).

The smaller centers are the ones who ignore the national banks surveillance principles (principle 16) and the market risk (principle 12).

In the same time, the centers are encouraged to increase their internal and external surveillance funds. On their side, the financial institutions wish to increase the services range which is a need of a greater correspondence to the principles limited to the market and credit risks.

The often cities lack in Basic Principles implementation for an effective banking control, concern the following fields:

– caution regulations and adequate capital (principles 6-14);

– control implementation methods (principles 16-19);

– place for the control authorities in the structure (principle 1).

Reductively, in about half of the organizations, the need for intensive activities in the field of bank risk management control was noticed. The banking customers' experience in the field of loans is reduced.

The control representatives have much knowledge on banking activities and banks, enhancing their use and complementary expertise use regarding, for example, the risks.

Fight against capital laundry and terrorism financing

After 2002, IMF and the World Bank intensified the assessments regarding the fight against capital laundry and terrorism financing. The assessments for the offshore centers involve from now on a shield committed to the fight against money laundry and terrorism financing. The mission of offshore financial centers assessment allowed to raise certain points in drawing the national

[8] Which are: Andorra, Anquilla, Aruba, Barbade, Belize, Iles Vierges britaniques, Costa Rica, Chypre, Gibraltar, Guernsey, Ile de Man, Jersey, Labuan (Malaesic), Lichtenstein, Macao, SAR, Luxemburg, Iles Marshall, Monserrat, Antilles neerlandaises, Polau, Panama, Sarura, Seychelles, Swiss, Bahamas, Vanuatu.

authorities intentions, of objective recommendations. Among the elements highlighted by the assessment, there are: the failure of the juridical frame and lack of efficiency against money laundry.

The most important lack of compatibility with the principles FATF HO + 8 standards is the surveillance weakness. The field whose demand is a control restatement belongs to the cooperative inter-agencies (home and cross-border) and the terrorism financing crime. The countries have the duty to take measures to reform the devices for fight against capital laundry and terrorism financing. The IMF action plan resorts to paying more attention to this fight, by consulting art. IV. But the quality and the effectiveness of the fight against terrorism financing were questioned.

IMF supports the jurisdictions by technical expertise and regulations and law forming drawing and enforcement.

The great countries can agree on taking some discriminating measures against the centers which don't follow the norms, for instance in the fiscal or financial field (market access, norms for inherent funds and special waivers).

The launched CFO assessment program was drawn to carry out two stages of achievement. The IMF managers decided that a second stage contains 4 elements:

- permanent surveillance of the CFO activities and standards conformity;
- surveillance system and CFO activities transparency;
- technical expertise development;
- increased collaboration among the organisms fixed by the norms and national and extraterritorial control bodies.

The existent weak points are still in more fields, such as:

- fight against capital laundry and terrorism financing;
- cross-border cooperation;
- exchange of information between jurisdictions.

The detection of the weak points supports the priority definition for future assessments.

Conclusions

All of the above underline the idea that the offshore financial centers can cause risks for the stability of the entire international financial system. The international financial system destabilization risk, caused by the CFO, increases together with the increase of the financial markets and their activities in CFO. The assembly study confirms the thesis according to which the CFO surveillance and control are needed in order to diminish the risks.

The international norms implementation is an important factor in risk reduction. The implementation process of the international norms in CFO is advanced, but applying those norms is not identical in all the centers.

The assessment program of the offshore centers allowed obtaining needed information to identify risks. It is essential for the assessment results to be made public. The information transparency over the CFO activities and the international norms enforcement influences risk reduction connected to the centers and comes to replace CFO surveillance and control. The great CFO's are more advanced in the implementation of norms for their function which creates o better opinion over the international markets.

The offshore financial centers analyzes allow us to draw certain detailed conclusions:

It can be underlined that before the launching of the assessment programs of the offshore financial centers, there wasn't much information on the CFO activities and risks.

The assessment program identifies the risk and the weak points in CFO, but, in general, all the weak points are still hidden.

Assessment at the level of international norm conformation shows that norm obedience is increasing, but differentiated according to the activity forms and country. There are fields in which there is control reinforcement.

The strict execution of the new surveillance and control principles eliminate the risks, but the CFO costs increase.

In the future, the tax and exchange restrictions reduction in the international financial systems influence over the loss of the advantages connected to CFO creation and term equalization for the function of the financial markets.

The CFO role in the international financial system and the risk to set the international system is diminished with the progress achieved in uniting the terms, services effectiveness on the international markets and reduction of the differences in the financial centers.

FINANCIAL LITERACY – AN ESSENTIAL LIFE SKILL IN TODAY'S SOCIETY

SANDRA TEODORESCU*

Abstract
Financial education is a concept that emerged nearly 200 years ago, namely in the 18th century. Its role grew rapidly in the 20th and 21st centuries. It is centered around concepts such as budgeting and saving, integrated into financial education programs, aimed both at explaining salary management mechanisms and at presenting financial protection mechanisms and long and medium-term investment tools. Financial literacy is not just a trend, but an essential life skill in today's society, which enable us to develop and balance our budget, make more appropriate short and long-term saving decisions, and select the best financial products that could make life easier for us.

Keywords: *financial education, saving, insurance, pensions, income, family budget*

Introduction

Concepts such as *'A bank', 'Stock Market', 'Credit Card', 'Court of Accounts', 'Inflation', 'Patrimony', 'Fair Price', 'Pension', 'Revenue', 'Salary', 'Speculation', 'Overestimation'*, and *'Assets'* are frequently used, which is perfectly normal since they refer to the ability to make appropriate saving and spending decisions. They also offer us and our society the financial stability and prosperity we need.

Looking at our history, we can see that the above-mentioned concepts emerged several centuries ago. In ancient times, in the Middle Ages and even in early days of capitalism, society was ruled by rich elites which exploited resources in their own interest, at the same time retaining political and economic power. The aristocracy, the landowners, the bourgeoisie involved in trade and banking, and, later on, the industrialists, strived to accumulate as much wealth as possible and prosper. The workers and producers had no alternative but to make saving decisions, although their access to resources was very limited, enabling them to survive, and not to grow or prosper.

Two centuries ago, after the scientific and technological revolution, economy started to develop at an accelerated pace, and many opportunities emerged, leading to general growth and prosperity. As a result of massive social confrontations and protests staged by the middle and lower classes, oppressed in history, the political elites finally understood that workers and producers should be given more access to resources, and benefit from relative prosperity.

In less than 50 years, the situation of industry employees improved significantly in developed countries. For example, one can hardly compare the Victorian Age in the first half of the 19th century, as decribed by Charles Dickens, with 'la belle epoque' during King Edward's reign, in antebelum England. People had decent houses, water waste systems, electricity, and free access to insurance policies, pensions and education. They had decent salaries, enabling them to grow and prosper. Financial services, including loans, became available, and many had the opportunity to improve their standards of living. Life became easier for most of them.

It is important to mention that countries far away from the Western community, such as Romania, where industrialization emerged in early 20th century, managed to establish a large banking system, especially in poverty-striken areas, such as the rural South, where agricultural producers and farmers were thus supported to buy land, machines and seeds or encouraged to sell

*Associate Professor, Ph.D., Faculty of Economic Sciences, "Nicolae Titulescu" University, Bucharest (e-mail: tsandra@xnet.ro).

their products on the markets, at a better price. In other words, they were provided everything they needed, including unprecedented access to resources. Today, in early 21st century, we are living in a diverse world, and the willingness to prosper is general, the aspirations are broad, amid a multitude of alternative possibilities. Therefore, the opportunity to fulfill our expectations depends on our ability to skillfully manage resources.

Exposition of Facts

Financial education should be fostered and enhanced, since it teaches us about the importance of preserving the resources available, which are not infinite, so that our children and future generations be able to benefit from them. I shall now offer the following example: during the December 9, 2012 parliamentary elections, two referendums were held. Unfortunately or not, many people did not participate, so the results were annulled. One of the referendums focused on Rosia Montana (Alba District), a heavily debated topic, concerning which the following were suggested:

1) To open the gold mines exploited in ancient times by Romans, and create new jobs to improve the local population's standards of living, and

2) To preserve the traditional culture, the beauty of a unique area, and its resources, and protect the environment, taking into account that cyanide is used in gold mining industry.

Although it is hard to make a decision, it is obvious that our welfare aspirations *hic et nunc*[1] destroyed the forest and polluted the river, transforming the once beautiful landscape into sprawling desert. And that was not the result of a cataclysm, but of our greedy nature. Financial education teaches us that prosperity is achieved through production, based on significant resources, which we no longer have. And that is the most dramatic challenge our civilization has to face. We are forced to make a difficult decision: either to strive for welfare and consume all resources or limit our aspirations and use resources adequately, in a balanced manner. It is thus necessary for us to be aware that the inherited resources and values are too precious to be wasted in a few generations. Therefore, saving and preserving, protecting the environment and a balanced exploitation and use of resources should be key concepts in today's society.

Going into details, I shall take into account individual or family interests, and bring into discussion our society, which faces a compelx crisis. The economic decline has a lingering financial impact. After years of growth and increased production, experienced by almost all nations, not only by the Western and Northern industrial communities, people start to believe that welfare is unlimited and everyone can enjoy it. However, a series of crises have emerged since the 1970s. Although interrupted for a short period of time, they have showed us that spending and income must be controlled if we want to have enough resources, achieve and sustain prosperity and welfare. The same applies at the family level, too.

The happy days when states, governments, institutions or employers took care of people and staff, urging them to relax, as they were watching, have long passed and it is highly unlikely that they return soon. Facing high risks, society and people should take a balanced approach, make calculations, carefully preparing budgets and spending, along with consumption plans, and maintain tight control over resources in order to be able to exploit them on the short, medium and long term, and to develop and implement financial education programs[2].

The Central Concept

A concept addressed to consumers, and, first of all, to young people, financial literacy may ensure stability and secure saving and investment opportunities, since it provides useful information

[1] Latin for here and now.

[2] See reference [1].

helping us avoid bad loans, select the best banking products and tools, and increase competitiveness and innovative capacity[3].

The financial institutions, banks, and insurance companies that have been involved in financial education programs since 2004 could be among the potential financial literacy providers and beneficiaries. And, of course, I should also mention the NGOs and sponsors. However, Germany tops the world's list, with 52 financial education programs implemented, while Romania has just embarked on the quest[4]. The financial education programs should start in kindergartens, for children aged between 3 and 5 years, according to their intellectual ability and capacity to learn. Then, in schools, for pupils aged 6-10 years, who should be taught essential financial concepts, and explained what is the money and the value of the money. Later on, in high-school, youngsters should be explained the relationship between expenditure and income, in order to make adequate saving decisions and spend money carefully. They should understand financial planning and the mechanisms for setting aside money for savings and investments as well as for the family budget, including with the help of financial institutions[5].

The European Commission also considers financial education as fundamental to form a single market and aims to stimulate the European citizens to acquire basic knowledge of personal finance. To this end, on December 18, 2007 the Commission sent a statement of financial education. This Communication aims to define the principles for national quality financial education and also the presentation of initiatives managed by the EU in this field[6].

Thus, given the lack of knowledge of consumers on financial products, and given the increasing diversity and complexity of these products, the Commission decided to promote the development of financial education in the EU. This Communication is part of the measures on retail financial services provided in the Commission report "A single market for 21 century Europe" and aims to assist stakeholders in the development of financial education programs through:

- awareness of the need to combat financial illiteracy;
- a high quality financial education within the EU;
- sharing of the best practices;
- developing practical tools to facilitate a more efficient financial education in schools.

Financial education is beneficial to individuals (e.g., it can help citizens make better financial provision for unforeseen situations), to society (reducing the risk of financial exclusion and encouraging the consumers to plan and make savings) but also to the whole economy (approved by favouring behaviour and additional liquidity to capital markets).

Commission set out eight principles that could assist in spreading financial education bodies involved in the development and implementation of financial education programs:

- Financial education should be available and actively promoted at all stages of life on a continuous basis.
- Financial education programmes should be carefully targeted to meet the specific needs of citizens. In order to achieve this aim, ex-ante research should be conducted on the current level of financial awareness on the part of citizens, to identify those issues that particularly need to be addressed. Programmes should be timely and easily accessible.
- Consumers should be educated in economic and financial matters as early as possible, beginning at school. National authorities should give consideration to making financial education a compulsory part of the school education curriculum.
- Financial education schemes should include general tools to raise awareness of the need to improve understanding of financial issues and risks.

[3] See reference [7].
[4] See reference [3].
[5] See reference [3].
[6] See reference [8].

▪ Financial education delivered by financial services providers should be supplied in a fair, transparent and unbiased manner. Care should be taken to ensure that it is always in the best interests of the consumer.

▪ Financial education trainers should be given the resources and appropriate training so as to be able to deliver financial education programmes successfully and confidently.

▪ National co-ordination between stakeholders should be promoted in order to achieve a clear definition of roles, facilitate sharing of experiences and rationalise and prioritise resources. International co-operation between providers should be enhanced to facilitate an exchange of best practices.

▪ Financial education providers should regularly evaluate and, where necessary, update the schemes they administer to bring them into line with best practices in the field.

Financial education is the responsibility of the Member States and the EU can provide important practical help. Thus, the Commission defined the following initiatives as priorities:

▪ The creation of a group of experts in financial education comprising representatives of Member State authorities (including education experts), financial services providers, consumer organisations and other groups where appropriate. Its aims will be to share and promote best practice on financial education and advise the Commission on how the above principles are being implemented;

▪ Providing sponsorship to Member States and private actors in the organisation of national/regional conferences on financial education (including messages of support and use of European logos);

▪ The publication of an online database of financial education schemes and research in the EU;

▪ Development of a teacher training module on financial literacy – The Dolceta initiative has already proved very useful in facilitating the teaching of financial issues to adult learners. Building on this, the Commission started, from the beginning of 2008, the development of the module on financial education for teacher-training purposes. This project is undertaken with the help of pedagogues and financial experts from the European Universities Continuing Education Network. This Dolceta module provides teachers in primary and secondary education with ready-to-use kits, including internet training, in order to encourage and help them to incorporate financial issues into the general curriculum on a voluntary basis. All materials are adapted to the national cultures. Upon the completion of this teacher-training module, national development teams will, where possible, participate in teacher-training events to advertise the consumer education materials and encourage teachers to use them.

At present, Romania's National Association of Insurance and Reinsurance Companies (UNSAR)[7] with *Junior Achievement Romania* (JAR)[8] support, develops a program called 'Ensure Your Success', addressed to college and high-school students. In February – June 2011, the courses were attended by a large number of pupils (6,000) from 117 towns and 37 districts (54 schools and 97 high-schools). 150 teachers participated in the program, along with UNSAR volunteers.

It comprises 5 educative modules, for two groups of pupils (aged 12-15 years, and, respectively, 15-18 years). Its main goal is to explain them salary management mechanisms, especially insurance policies. One of the modules, titled 'The Power of Savings', is addressed to college and high-school students, and is centered on financial planning and the basic principles for

[7] **UNSAR** is an insurance companies association established in 1994 to develop and boost cooperation in the field, at the national and international level. 13 insurance and reinsurance companies founded the organization which became, in 2007, a full member of CEA Insurers of Europe.

[8] **JA** is a non-profit organization founded in 1993 within Junior Achievement Worldwide®, USA and Junior Achievement-Young Enterprise, Europe. JAR is the largest international company in the field of economic education. In Romania, 284,000 pupils from 2,400 schools attend JA programs of "learning by doing", developed at the local level with the help of Education Ministry, its institutions and business circles.

setting family budgets. The other two modules, 'Risk Insurance' and 'Risk and Insurance' targets 7th and 8th grade pupils, and focuses on the basic concepts of insurance programs that can limit the potential adverse financial effect of risks. It also contains an introduction into the insurance domain. The other two courses, 'Insurance Policies, Savings and Investments', and 'Investments, Benefits and Risks', are addressed to 10th and 11th grade students, teaching them how to use financial protection mechanisms, including to make long-term investments[9]. JAR and the Romanian Commercial Bank's Vienna Insurance Group launched a program called 'ABC Insurance' in 31 schools. 44 consultants were involved in it, and 1,000 pupils attended the courses. It contains 3 modules: 'My Personal Plan', 'Investments for A Future of Growth', and 'Protecting Your Future'. Delivered during the classes, the workshop activities are based on role play, games and case studies, providing a large number of educational materials. The programs help participants familiarize with basic financial notions, including salary management mechanisms and insurance policies[10]. To enable the next age group (young people aged 18-26 years), namely the next generation of employees, entrepreneurs or family members to better retain financial information, JAR in cooperation with ING Insurance Group and Wall Street.ro, have initiated a program called 'Your Project and The Future' which provides a large amount of data on financial planning and life insurance policies[11].

As a result, on March 28, 2012, a Protocol on Cooperation was signed by Romania's National Bank and the Education Ministry, according to which the two institutions would undertake joint efforts to boost financial literacy and implement financial education programs in schools and high-schools, based on projects launched by Romania's National Bank, following the European model[12]. Addressing another group of beneficiaries, the Romanian National Association for Consumer Protection (APCR) launched a financial education program, at the national level, called 'Family Budget'. It targets broad segments of population, especially family members, and is aimed at improving their understanding of basic modern financial concepts. It also teaches them how to use tools for setting up a family budget and prevent overdebts[13]. The participants are also offered the opportunity to access a website and consult online financial experts. In addition, a series of debates were held in 5 major cities, including Brussels, with the participation of European media outlets and national consumer organizations' representatives. Other seminars are centered upon the introduction of provisions regarding the consumer credit and financial literacy in the Romanian legislation. The goal is to improve the efficiency of financial education programs, based on a unitary approach which will enable us to develop adequate tools to support financial planning[14].

In the end, I would like to mention the last segment of population targeted by our programs, namely the future pensioners or Romania's adult population, providers and beneficiaries of saving systems. ING Pensions Fund has got involved in awareness campaigns and financial education programs since 2010, holding debates on the issue, attended by students and young employees. The workshops are organzied in state and private universities, in order to explain the vital role of private pensions system in today's society.

Since it is a new concept, basic notions are approached, namely the personal pension ownership, the possibility of offering benefits such as optional pensions, which are deductible, and to choose a pension fund[15].

In conclusion, financial education programs are mainly addressed to young people. According to a European survey, 78% of the subjects believed they possessed limited knowledge and could not manage on their income, while 20% said they had no basic financial notions and could hardly

[14] See reference [5].
[15] See reference [2].

manage their resources. However, one should notice that 97% of the respondents were aware of the important role of financial education programs, which should be taught in schools and family[16].

Conclusion

In the end, one may conclude that financial literacy is essential in today's society. Therefore, everyone should know the basic notions in the field, in order to be able to take smart financial decisions, set out the family budget, save enough money for the future, and choose the best financial planning and management strategy and tools, in order to make life easier.

LANGUAGE, POWER AND INTERNATIONAL RELATIONS: THE CASE OF ENGLISH IN THE EU

MARÍA LUZ SUÁREZ CASTIÑEIRA*

Abstract

Though generally overlooked, the language question is at the core of International Relations studies: it is associated with power in general and with the concept of "soft power"[1] in particular. Indeed, language cannot be considered as just an instrument of communication. In the context of the Nation State as well as in the context of the EU and International Relations in general, it has a strong symbolic value. At the level of the EU and its institutions, the linguistic governance is a very technical and political debate. On the one hand, the European institutions have been promoting multilingualism as crucial for social and political inclusion, but, on the other, English has imposed itself as the main lingua franca. Despite the affirmation of the official character of all national official languages, the EU has never clearly addressed the challenge we are facing. The main focus of this presentation is on whether in the context of regionalization and globalization, English can be stopped from being used as the main lingua franca. First the EU language reality and doctrines will be addressed. Then we shall consider the unbalance of power and the role of English in the EU and worldwide on the basis of several theoretical debates, and finally we shall conclude addressing future challenges.

Keywords: *Globalization, regionalization, international relations, soft power, lingua franca, language policies.*

Introduction

That languages are instruments of power is widely accepted. On the one hand, throughout history Nation States have often imposed, directly or indirectly, their own national language. There have been, and still are, language conflicts in many different places all over the world: in Nation States like Belgium, Spain, Canada, India, in the ex-Soviet countries, in many African countries, etc. On the other hand, there is a clear correlation between the power of the linguistic groups and the spread and prestige of their languages: Latin with the Roman Empire, Spanish with Spanish colonization, French with the French Revolution and the Napoleonic conquests, English with English colonization, etc. In the post-Westphalian order of international society, with the increasing power of international and regional organizations as well as with the process of globalization in all fields, the communication problem, and therefore the linguistic issue, has become more and more challenging. For political projects of integration like the EU, where diversity itself plays an important role, how the linguistic issue is addressed is even more problematic, particularly as the number of languages spoken within the EU has increased with successive enlargements.

Democratic citizenship in the EU is, among other aspects, dependent on the preservation and promotion of cultural diversity on the one hand, and the achievement of a common communicative sphere, on the other. In other words, the EU has the challenge of how to make the greatest possible number of EU citizens competent in three or more languages (mother tongue(s) + two) not only to allow democratic participation in multilingual (bilateral and multilateral) environments within the EU but also to facilitate participation as European citizens in wider global processes. However, in reality, and according to the 2012 Eurobarometer statistics, English as the only *lingua franca* is gaining

* María Luz Suárez Castiñeira, Associate Professor, PhD, Director of the Institute for EU Studies, Faculty of Social Sciences and Humanities, University of Deusto, Spain (mariluz.suarez@deusto.es).

[1] Several authors relate languages, directly or indirectly, to the notion of "soft power". P. Bourdieu (2001) deals with the symbolic value of language, an idea which is particularly meaningful in the context of this paper. Joseph Nye (2004) with his notion of "soft power" refers to the ability of a State to influence directly or indirectly the behaviour or the interests of their actors through cultural or ideological means. Stephen Berro (2009) states that language is the most concrete and measurable way to observe the diffusion of soft power.

ground within the EU. The question is whether in the context of increasing regionalization and globalization there is an alternative to the use of English *lingua franca* and whether in the short term it is even possible to make the majority of Europeans not only competent in English *lingua franca* but also in another EU language apart from the mother tongue.

The language reality in the EU and the language doctrines

The EU language regime was regulated by Council Regulation nº 1 called "Determining the languages to be used by the European Economic Community"[2] in April 1958 following Article 217 of the Treaty of Rome (1957)[3] which reads that "the rules governing the languages of the institutions of the Community shall, without prejudice to the provisions contained in the Rules of Procedures of the Court of Justice, be determined by the Council acting unanimously". The Council directive contains the following eight articles which define the linguistic status of the political project of European integration:

Article 1. The official languages and the working languages of the institutions of the Community shall be Dutch, French, German and Italian.

Article 2. Documents which a Member State or a person subject to the jurisdiction of a Member state sends to the institutions of the Community may be drafted in any one of the official languages selected by the sender. The reply shall be drafted in the same language.

Article 3. Document which an institution of the Community sends to a member State or to a person subject to the jurisdiction of a Member State shall be drafted in the language of such State.

Article 4. Regulations and other documents of general application shall be drafted in the four official languages.

Article 5. The official Journal of the Community shall be published in the four official languages.

Article 6. The institutions of the Community may stipulate in their rules of procedure which of the languages are to be used in specific cases.

Article 7. The language to be used in the procedure of the Court of Justice shall be laid down in its rules of procedure.

Article 8. If a Member State has more than one official language, the language to be used shall, at the request of such State, be governed by the general rules of its law.

At the time, when the Treaty of Rome was signed, only four languages were involved: Dutch, French, German and Italian. Today, after successive enlargements, 23 languages[4] (24 with the accession of Croatia as of 1 July 2013) have to be considered, increasing the level of complexity of the language issue. The existence of a multilingual reality is indeed one of the defining features of the European Union. However, and the rich tapestry of language goes beyond the 23 official state languages spoken today in the 27 countries of the European Union. Indeed the European linguistic diversity is fed mainly by the more than 60 non-official languages, the so-called regional or minority languages, spoken by more than 40 million citizens as their mother tongue, living or co-existing with the state languages in their respective communities. These non-official languages are characterized by a great diversity of situations both regarding their use and their internal legal status.

[3] See http://www.eurotreaties.com/rometreaty.pdf.

[4] The European Union 23 official languages are Bulgarian, Czech, Danish, Dutch, English, Estonian, Finnish, French, German, Greek, Hungarian, Irish, Italian, Latvian, Lithuanian, Maltese, Polish, Portuguese, Romanian, Slovakian, Slovene, Spanish and Swedish.

This linguistic diversity has been seen as one of the key elements for building the European project since the late 1970s and early 1980s. Obviously, taken together, the minority groups have a considerable demographic and political weight, besides representing a potential source of social conflicts. From a theoretical perspective, relegating the language of the minority groups to the condition of marginalization would mean contradicting the very foundation of the European project that emerged from the destruction left by the conflicts of the 19th and part of the 20th century. Besides being a union of states, Europe must unite all peoples, groups and citizens. The European institutions have claimed on various occasions that the construction of Europe is based on cultural wealth and diversity and that in order to be European nobody must stop feeling what they are primarily, Basque, Catalan, English, Flemish, French, Galician, Occitan, Romanian, Welsh, etc., or fail to maintain an awareness of identity as received from history.

So, understandably, the European institutions are absolutely unanimous in considering language diversity or multilingualism a European value, a sign of identity that must be promoted and protected, a principle which stands radically against ranking one language above all others. Moreover, the loss of any of these languages would automatically mean a weakening of the tradition and wealth of multicultural and multilingual Europe. Consequently the two supra-national bodies, the European Union and the Council of Europe, engaged in language-policy making, have actively been promoting language diversity and plurilingualism, principles that, at least in theory, have been endorsed by all member states. Linguistic diversity refers to the fact the Europe is multilingual and all its languages are equally valuable modes of communication and expressions of identity, whereas plurilingualism refers to the capacity of individuals to develop a degree of communicative ability in a number of languages over their lifetime in accordance with their needs.

In Europe, multilingualism and plurilingualism have become political concepts closely related to the process of constructing the polity. The EU's White Paper of 1995 already referred to languages as instrumental in helping to build up the feeling of being European with all its cultural wealth and diversity and therefore in building up the needed European identity/citizenship (European Commission 1995: 67). The fundamental role of language in the creation of this polity led the EU Heads of State and Government in 2002 to set the long-term objective for all EU citizens to speak at least two languages in addition to their mother tongue(s).[5]

The European institutions seem to postulate some kind of causal relationship between language learning and European identity/citizenship. Therefore European institutions encourage the learning of languages not only as an essential condition for intercultural communication and acceptance of cultural differences, but also for participation in democratic and social processes in multilingual Europe and social cohesion (European Commission 2002, Council of Europe, 2004). Plurilingualism provides the necessary conditions for mobility within Europe, but is above all crucial for social and political inclusion of all Europeans. With respect to the long-term objectives, the Council of Europe has provided instruments of various kinds to support language acquisition such as the *Common European Framework* (2001), the European Language Portfolio, or the *Guide for the Development of Language Education Policies in Europe* (2003), as well as to support planning for regional and minority languages: *The European Charter for Regional or Minority Languages* (1992) and the *Framework Convention for the Protection of National Minorities* (1994). The EU[6] has also promoted a number of programmes in order to advance towards plurilingualism: the Lingua Programme in 1989, the Socrates and Leonardo da Vinci Programmes in 1995 and more recently Comenius in 2000, etc. The project of the European Higher Education Area, the so-called Bologna

[5] Conclusions of the Barcelona European Council in March 2002: http://ue.eu.int/ueDocs/cms_Data/docs/pressData/en/ec/71025.pdf.

[6] The European Commission has invested millions of Euros to finance a number of important language projects. Worth mentioning is the 2004-2006 Action Plan (8,200 million euros) to promote language learning and linguistic diversity, including regional or minority languages through an integrated approach.

Process (after the Bologna Declaration, June 1999) also depends for its success on language learning, among other aspects, as was recognized by the European Parliament in 2001 with the "Resolution on universities and higher education in the European Area of knowledge "which called on member states and universities to recognize the importance of learning foreign languages and to organize language courses for those students who did not pursue studies in the humanities or linguistics, as only the knowledge of several languages will facilitate mobility and help achieve greater European integration. Facilitating the acquisition of other languages and the command of basic communication skills has, therefore, become the responsibility of governments and education institutions alike.

The question is whether the many policies adopted by the European institutions are ambitious enough for such an ambitious political project. The European Community founders addressed the multilingual reality by granting all the official languages (Dutch, French, German and Italian) of the Member States the same official status at a time when other International Treaties limited the official and working languages.[7] Since then, with successive enlargements, all the official languages of the Member States have automatically become official languages of the regional block. It seemed a bold decision then with only four languages but now, with 23 and soon 24 languages, the language issue has become increasingly complex and even unmanageable. How does the principle work in practice?

An important political function has been assigned to language in the construction of Europe, and therefore in the creation of a common European identity, but the language question is seldom included among all the deep and theoretical debates on European Integration, such as culture and religions. Apart from the recognition of the official status of all the official languages of the Member States and the much proclaimed need to promote plurilingualism in European citizens, the Common policy in the language issue is extremely limited. There are no precise rules as to how the Union must address its citizens, how to constitute a common linguistic space or a communicative sphere, or as to the language or languages to be used in international forums. What is more, this lack of clarity also affects the internal functioning of the Union institutions, as will be explained later. In reality, there is *laissez faire* everywhere and, consequently, there is no such equality in the language issue. Plurilingualism is more a wish than a reality and, despite the reluctance of the EU, English as the dominant *lingua franca* has imposed itself in all key domains, including the institutional level.

Unbalance of power in favour of English

Current circumstances of increasing wider processes of globalization have favoured the adoption of English as a corporate language in many larger business based in Europe and as the language of instruction in higher education institutions, putting the non-competent speaker of English at a considerable disadvantage. Under these circumstances, it is difficult to see how the dominance of English could be curbed. The 2004-2006 Action Plan of the European Commission, designed for this purpose, did not do much to stop the influence of English, though certainly drew attention to the fact that English alone is not enough.

Foreign language education policies in Europe, though embedded in national education systems and their distinct traditions, are influenced by these wider processes of globalisation and the way languages are perceived to operate in global interaction in Europe and worldwide and therefore in general tend to favour English as the first foreign language in schools. This is confirmed not only by the 2012 Eurydice report[8] which shows that in many countries English is the only language taught in primary schools and that the main motivation for language learning is the language prestige, the value of the language for social mobility. English has become such a priority with parents that in a

[7] The United Nations, for example,limited the number to six official languages: Arabic, Chinese, English, French, Russian and Spanish, with English and French being the working languages, whereas the the Organization for Economic Cooperation in Europe, the OECE, later called OECD, the North Atlantic Treaty Organization (NATO) and EFTA (European Free Trade Agreement) decided to have only two languages, English and French.

[8] http://eacea.ec.europa.eu/education/eurydice/key_data_en.php#path.

number of states this has led to concomitant language-tutoring in the private sector, starting at an even younger age than in the public sector. The 2012 Eurobarometer[9] report shows that English is perceived by Europeans to be by far the most useful language to know (67%) compared to 68% in 2006), followed by German (17% compared to 22%) and by French (16% compared to 25%). Spanish ranks fourth with a 14% share (compared to 16% in 2006). The 2012 Eurobarometer also confirms two worrying trends: first that there is a notable decrease in most European countries of the proportion of Europeans who speak two languages and, second, that Europeans are hardly motivated to learn a new language; only a minority (14%) have continued learning a language in the last two years; less than one in ten (7%) have started learning a new language in the last two years. Thus, the promotion of language policies does not seem to be having a considerable impact in terms of the proportion of Europeans who become plurilingual.

The common linguistic policy concerning the internal functioning of Institutions is limited too, in its nature and scope; and the principle of equality is hardly applied. Only five institutions, the Court of Justice, the European Council, the European Commission, the European Parliament and the Court of Auditors, are legally bound by the obligation to have all twenty three languages as official and working ones, a principle established only in 2003, following the complaint of a Dutch citizen[10] who could not read the webpage of the Office of the Harmonization of the Internal Market in her own language.[11] According to the principle of equality of languages, the official Community websites should be in the 23 official languages: some are but many are not. The EU portal and the European Parliament portal are available in the 23 official languages. However, for example, the Regional Policy-Inforegio website[12] is only available in eleven languages: Bulgarian, Czech, English, French, German, Hungarian, Italian, Polish, Romanian, Slovakian and Spanish. Surprisingly, the Research and Innovation website[13] can be read only in English, whereas the CORDIS[14] (Community Research and Development Information Service) website exists in six languages, English, French, German, Italian, Spanish and Polish. Other websites exist only in three languages: it is the case Education and Training of the European Commission[15]. Whenever the website is in English and some other languages, the choice of the latter seems to depend exclusively on demographic grounds.

The linguistic unbalance also applies to Community programmes, including Community funded linguistic programmes such as Lingua - Socrates Action 4 - Language Learning and Teaching, which, oddly enough, provides information only in English.[16] This unbalance affects mostly the so called "Lesser Used languages". In some cases the expression refers to the smaller official languages of the institutions, namely Bulgarian, Czech, Danish, Dutch, Estonian, Finnish, Greek, Hungarian, Portuguese, Slovakian, Slovenian and Swedish; whereas in other cases the expression refers to minority languages, such as Basque, Catalan or Gaelic, within the Member States.

The European language policy is hardly applied in institutional proceedings, either. The EU Court of Justice uses only French whereas the European Central Bank has turned English into its only official language, as can be seen from the language policy stated on its website.[17] This

discrepancy between the declared official policy and the reality is an outstanding feature in the daily work of the institutions. At the European Commission, all the preparatory meetings and documents are made in only three languages, English, French and German, though even here there is a huge unbalance between the use of English and French, while the use of German is almost symbolic. Contrary to what can be read in the 1958 Directive regulating that the four official languages were also working languages, with the increasing number of languages added to the EU, the European Commission has thus established a distinction between official and working languages. In its website we can read that the 23 are official and working languages but "due to time and budgetary constraints, relatively few working documents are translated into all languages. The European Commission employs English, French and German in general as procedural languages, whereas the European Parliament provides translation into different languages according to the needs of its Members."[18] This obviously represents a problem for the language doctrines of the EU. And much has been written on this dilemma. The challenge for communicative integration in the EU is how to accommodate unity and diversity, since Europe needs a good degree of both. With 506 possible linguistic combinations (soon 552 with Croatia's accession), it is impossible for the Parliament and the other institutions to deal with the daily communication needs of multilingual Europe, and therefore, for practical purposes, the *lingua franca* imposes itself. [19]

Is there an alternative to English *lingua franca*

At this moment it is difficult to see how the use of English as *lingua franca* could be resisted or at least how its hegemony curbed. The challenge for the EU, as already pointed out, is not only how to make the greatest possible number of EU citizens competent in three languages (mother tongue + two) in order to make democratic participation in multilingual (bilateral and multilateral) environments within the EU possible but also how to facilitate participation in wider global processes. Despite the fact that most of the political groupings, including the European Union or the United Nations, have adopted linguistic policies, English has become the language of globalization. The correlation between English and globalization has been much debated.[20] The hegemony of the US in world affairs has made it a powerful instrument of communication. English is the language of communication used key areas such as high diplomacy, financial markets, international trade, electronic communication, international mass media and film industries. In consequence, a good knowledge of English is a requirement for jobs in the diplomatic services and in almost all big companies in the world. It has become the language needed for advanced research and the language of instruction in higher educations in many countries worldwide, not only in the English-speaking ones. English is also the most important language used in the internet. For all practical purposes, English is already the communication language in almost all world international organizations such as APEC (Asia-Pacific Economic Cooperation), ASEAN (Association of South East Asian Nations[21]), the BSEC (Black Sea Economic Cooperation[22]) or the European Central Bank. In terms of official the British Council list 80 countries in the world where English is recognized as an official

[18] See http://ec.europa.eu/languages/languages-of-europe/eu-languages_en.htm.

[19] In "Europe's Linguistic Challenge" (2007) , P. Van Parijs uses the expression "*maximin* rule" in connection with the use of lingua *franca*. When confronted with the choice of a language in front of an audience, a speaker will use the language which is best known by the member of the audience who knows the least languages. This *maximin* criterion will tend to maximize the minimum competence. Thus, in the case of the EU and other international institutions this spontaneously leads in most cases to the use of English.

[20] See Joshua A. Fishman (1999) and David Crystal (2000, 2007).

[21] ASEAN member countries are Brunei Darussalam, Cambodia, Indonesia, Laos, Malaysia, Myanmar, Philippines, Singapore, Thailand and Vietnam.

language.[23] English is an official language widely spoken in many parts of the world. English expansion is of course a result of the English colonization. And the United Kingdom was the most successful country in the world as far as colonization is concerned.

English is associated with prestige and power, But then, it is not the first time in history that a language is chosen as the only communication language in international relations, associated with prestige and power. In the Western world, Latin, the language of two important international actors, the Roman Empire and then the Church, was used from the 8th until well into the 15th Centuries as a *lingua franca* between elite, as the language of science, administration, diplomacy and higher education, i.e. in a way similar to English nowadays. Latin, however, was progressively replaced by other languages as other actors progressively grew in importance. Italian became important from the 15th until the 17th century as a language for culture and diplomacy, and finally French from the 18th Century onwards. Then French imposed itself in Western and Eastern Europe as the only European communication language when France became the economic, demographic and military giant of Europe. It maintained the status of the language of Diplomacy and culture, even when France and an international actor lost importance in favour of other countries like Germany or Russia. English began to grow as an international language, at the height of the British Empire, and when the United States began taking ground as a world power.

During the first decades of the European Integration, French used to be this lingua franca but since the seventies, English has been more and more used. In the nineties, the Scandinavians, Austrians and Finns disrupted the balance between English and French due to their scarce knowledge of French. The last Eurobarometers (2006 and 2012) prove that English is by far the main second language in Europe. The question is whether its hegemony is at risk and whether another international language will rise and occupy its place. As noted by J. Fishman, "historically languages have risen and fallen with the military, economic, cultural and religious powers that supported them"(1999:10). The role of English as a world language may suffer as complex international, economic, technological and cultural changes are underway. There are many factors that may affect power of English in the future.

Firstly, even considering the number of countries where English is an official language, it is still only spoken by a small minority of people in the world. Even in the EU it is a misconception to think that English has already become a universal lingua franca. Both the 2006 and 2012 Eurobarometer reports shows that Even though English is the languages that is most learnt, only 38 per cent of Europeans are able to communicate in English, which means that almost two out of three Europeans are not able to do so. When results are analyzed at national level, then the differences between countries are daunting. English is widely spoken in countries like Sweden (89%), Malta (88%) and the Netherlands (87%), but far less widely in countries like Bulgaria, Italy, Portugal or Spain where English is much less firmly entrenched, even if most children and adolescents are now exposed to English in schools.

Secondly, both the economic crisis which is slowing down the pace of globalization and the emergence of new economic powers such as China, India and Latin American countries, are accelerating the use of regional languages such as Arabic, Chinese, Hindi, and Spanish, which are growing at a faster pace than English. Russian has been and still partly is a *lingua franca* in Central Asia, the Caucasus and Eastern Europe. Notwithstanding the undeniable power of English, a shift is taking place in favour of new world languages. Similarly, the Arabic use is still growing in North Africa and Asia and Chinese in East Asia.

Thirdly, in a number of countries like Denmark or the Netherlands, where English is firmly entrenched, there has been, since the 1990s, a bigger stress to use and protect the national official language as a growing reaction to the widely spread use of English in key domains like Higher Education. Similar reactions have happened in other areas of the world such as Canada, with the

[23] See http://www.britishcouncil.org/map_of_countries_where_english_is_an_official_language.pdf.

result of well-planned language policies. Globalization is accompanied by regionalization and the globalization of English by a tendency to defend the local language status and use. The emphasis on identity, and therefore the need to preserve one's culture and language, is becoming more and more important as a side effect of globalization. The detailed study of David Graddol (2006) for the British Council is not optimistic about the future of English as the main language for international relations.

Fourthly, in terms of native speakers, English is falling in the world's rankings in favour of Mandarin, Spanish, Hindi-Urdu and Arabic which are rising in number. All these languages play a very important role in their own regions. They are developping besides English as global languages.

The importance of maintaining multilinguism

Three factors should be taken into consideration when approaching the relevance of language learning in the context of European integration. First, as has been repeatedly expressed by European institutions, language learning is crucial for the construction of Europe as a polity and therefore requires adequate planning. Second, the importance of the language issue is evident from the evolution of transnational civil society at both a European and world level, and this requires planning, too. Indeed, the evolution of transnational civil society is closely related to trends toward global governance and, therefore to notions of discourse and debate in a public sphere. The development of European transnational society cannot be separated from the development of global civil society which, for economic, cultural and technological reasons, among others, has adopted English *lingua franca* as the language of communication in key domains. And this is a phenomenon that cannot be ignored by the European institutions. The challenge for communicative integration in the EU is how to accommodate unity and diversity, since Europe needs a good degree of both.

Third, there is the already mentioned correlation between language and power which needs to be considered in the context of the political integration of the EU. For the founding fathers, the symbolic use of the language was considered more important than its practical value as a communication tool. Many International Relations theories, particularly the social constructivist ideas which developed as reactions to the empirical and rationalist currents, support the necessity to deal with the symbolic function of the language when determining a linguistic policy or behavior in International Relations. In this connection, political philosophers such as P. Bourdieu, among others, relate languages to hegemony and the diffusion of dominant ideas. The Soviet language policy in the ex-Soviet Union, particularly in Central Asia, illustrates this relation clearly. Russian was imposed as an interethnic language in order to diffuse the Soviet ideology and ensure the merging of the Soviet nations. As a consequence the symbolic value of the national languages was diminished in favour of that of Russian. Because big proportions of populations were not fluent in that language, this resulted in an imbalance between symbolic and communicative functions of languages in Central Asia. The case of Central Asia also provides an excellent example of the relation between language policies and international relations. When the Soviet Union collapsed, language policies became one of the most important aspects of the nation-building processes for the newly independent countries, and each different language policy option was related to a foreign policy alternative.

Nevertheless, even the realist and neo-realist theories can be applied to the importance of the symbolic power of languages in the context of the EU, as they lay the emphasis on the search for power as the main engine of international relations. Promoting one's language and culture is a good way of promoting one's interests and influence on other actors in the international scene, which brings us back to the notion of "soft power" (Nye 2004) This concept can function as framework to explain the reluctance many in Europe have expressed toward "American cultural imperialism" which is may gradually have been imposed through the English language.

These theoretical frameworks are very useful to understand the importance of the language issue in the process of European integration. They help understand how, as Sephen Berro suggests

"an accurate language policy could promote political integration, or on the contrary, how the hegemony of one language in a regional block could be counterproductive, sending negative signals about the final objective of the integration project."(2009: 21).

Conclusion

The language issue is a highly political and technical debate. Both linguistic unity and linguistic diversity must be considered as vital elements in the process of European integration. The three levels of participation (subnational, national and supranational) meet at the European institutional level where day-to-day debates and negotiations on the future of Europe can evolve. In the context of multilingual Europe (23 official languages and more than 60 regional or minority languages), for practical purposes, debates can only be carried out in English *lingua franca*, according to the "maximin" principle. For this reason, a number of scholars see the European institutions themselves as contradicting Article 22 of the Charter of Fundamental Rights of the EU, which states that "the Union shall respect cultural, religious and linguistic diversity", because in day-to-day affairs, English as *lingua franca* is increasingly the dominant language in which documents are drafted and discussed. Other scholars like Breidbach (2003) are in favour of a common communicative sphere in which the interests of all Europeans can be defended in one of the multiple linguistic identities Europeans can take without having to rely on translation. For this group of scholars, what must be guaranteed is that there is equality between the EU official languages in promulgating legislation in parallel in all languages, that interpretation is provided between all languages at the most important meetings and that citizens are able to communicate with the administration in their own language.

As Breidbach (22) points out "European citizens' acceptance of policies for European integration probably depends to a large extent on their ability and willingness to participate in a European public debate." In order to become full actors in this debate Europeans need an interlingual mediator and English *lingua franca* has imposed itself in this role, as an instrument of communication. However, this is problematic for the promotion of linguistic diversity through foreign language teaching. Should English *lingua franca* become the instrument of communicative integration. The European institutions do not want to explicitly grant English such a role: "policies for language education should therefore promote the learning of several languages for all individuals in the course of their lives, so that Europeans actually become plurilingual and intercultural citizens, able to interact with other Europeans in all aspects of their lives." (Council of Europe 2003: 7). At a European and global level, under circumstances of implicit power structures, the fact of not speaking English puts the individual at a considerable disadvantage and, therefore, it is difficult to see how the influence of English could be curbed. But, then, one also needs to consider that even in Europe, those who can communicate in English still belong to a privileged minority, particularly in Eastern and Southern Europe.

The other important challenge is how to achieve the long-term objective for all EU citizens to speak at least two languages in addition to their mother tongue(s) set by the EU Heads of State and Government in 2002 at the Barcelona European Council. While, in the light of the conclusions of the 2012 Eurobarometer, the competence in English is still a challenge for the majority of Europeans, transnational discourses in Europe cannot rely on a single shared language. The symbolic aspects involved in language use also need to be considered as discussed above. Language integration, then, should work toward the achievement of adequate balance between language unity and language diversity.

THEORIES OF REVOLUTION: THE GENERATIONAL DEADLOCK

RADU-ALEXANDRU CUCUTĂ*

Abstract

The paper attempts to highlight the main characteristics and the main flaws of the most important classification of theories of revolution, the generational approach. The first half aims to discuss and present the main tenets of the most important taxonomy of theories of revolution, as well as the similar attempts made by several scholars to build alternative classifications of theories of revolution. The second part of the paper attempts to show the limits of the aforementioned perspective and the importance of looking for alternative approaches to the study of revolutions. The paper considers that the generational perspective remains impermissibly flexible and elusive, ignoring the main paradigmatic debates within the field of study and maintaining a strong bias in favor of the clearest category, that of structural theories.

***Key words**: revolution, theories of revolution, structural theories of revolution, generational classification.*

Introduction

The most important element that requires discussion is the relevance of classifications in the study of revolutions. I believe classifications are important for several reasons. On the one hand, they are important in mapping out the theoretical space pertaining to revolutions. On the other hand, the limits of classifications can become very well limits of theories of revolution. Moreover, classifications are relevant not only for the specific conceptual content of the theories themselves, but also in regard to the major paradigms of social science that influence the particular field, as well as for the very important relationship between the studied phenomenon and the theoretical framework encompassing it. Last, but not least, classifications are important in order to define the major theoretical debates that shape the study of revolutions.

The generational classification can be considered probably the most important effort dedicated to charting out the theoretical endeavors regarding revolutions[1]. The generational perspective, developed by Jack Goldstone and reaffirmed successively by John Foran divides the space of theories of revolutions into three clear generations of theories and a post-third generational perspective. The most important aspect of the generational perspective is that the classification is not purely chronological. Of course, the concept of a generation of theories is supposed not only to illustrate the apparition of successive perspectives on the revolutionary phenomenon, but also the important paradigmatic debates which are supposed to have taken place and to have influenced the study of revolutions. Moreover, the time-frame that encapsulates theories of revolution makes it easier to accommodate the influence that new events have on theoretical models and endeavors, thus showing for example how Third-World dynamics shaped and influenced theories of revolution which up to that point had been dedicated mostly to successful major social revolutions.

[1]For an outline of the generational perspective on theories of revolution see Jack A. Goldstone, "The Comparative and Historical Study of Revolutions", *Annual Review of Sociology*, Vol. 8 (1982), as well as his more developped perspective, „The Comparative and Historical Study of Revolutions" in *Revolutions. Theoretical, comparative and Historical Studies,* (Wadsworth Cengage Learning, 2008), Jack. A. Goldstone, "Toward a Fourth Generation of Revolutionary Theory", *Annual Review of Political Science*, 4 (2001), and John Foran, "Theories of Revolution Revisited. Toward a Fourth Generation?", *Sociological Theory*, Vol. 11, 1 (Mar. 1993).

Taxonomies of theories of revolution

The generational classification is by no means the only attempt to order a theoretical subfield of study that at times proves as elusive as the studied phenomenon itself, nor does it represent the first attempt to draw a chronological distinction between the different theories. Chalmers Johnson's draws a distinction between four categories of theories of revolution: theories that privilege the actor's role, structural theories, conjunctural theories and political process theories[2]. Another important attempt of distinguishing between different perspectives on revolution is Eisenstadt's chronological classification of „naturalist" and „structural" theories[3]. Tilly opts for a paradigmatic presentation of the numerous theories of revolution that focuses on ideal-types, thus establishing five inter-related categories that characterize theories of revolution: the Marxist, Millian, Durkheimian, and Weberian perspectives, which are joined by the revised Marxist theoretical group[4] and his own anti-Durkheimian, Marxist, Weber-indulgent and Mill-friendly model[5]. Roderick Aya divides the spectrum of theories of revolution in three large categories – theories focusing on the intentions of the revolutionists themselves, theories that take into account the results of the revolutionary process and theories that focus on the concept of multiple sovereignty[6].

A different approach is that taken by Timothy Wickham-Crowley. Although his undertaking seeks to map out the distinction between structural theories, his insistence on discussing the works of Eric Selbin, Lynn Hunt or Forrest Colburn, whose perspective is nevertheless somewhat critical towards the capacity of structural studies of understanding revolution itself makes his classification more likely a „map" of recent attempts of studying revolution. The same conclusion can be reached if we take into account the fact that Wickham-Crowley focuses on aspects that are deliberately ignored by structural theorists, such as the problem of agency and the role of cultural factors[7].

Wickham-Crowley describes two epistemic axes which connect the social dynamics to cultural ones and contingency to structure, which result in four ideal-types: structure-social plan, structure-cultural plan, contingency-cultural plan and contingency-social plan[8].

We see therefore that the attempt to offer a classification of various theories of revolution is not the privilege of the generational perspective. As mentioned, it offers nevertheless some impressive advantages on its competitors – it manages to draw a time-line that links theories of revolutions and revolutions; it manages to sum-up what are the great paradigmatic shifts and debates; it manages to illustrate a convincing image of the evolution of our accounting and understanding of the revolutionary phenomenon.

The generational classification focuses on the theoretical debates on the causes, origins and dynamics of revolutions by focusing mostly on three "generations" of theories and of theorists. There is a somewhat implicit dialectical perspective present in the generational approach: each new generation criticizes the main tenets of the one preceding it, pushing the image and the study of the revolution towards a new direction.

[8] Wickham-Crowley, „Teorii structurale ale revoluției", 54.

The first generation of theories of revolution is „the natural history of revolution"[9]. For Goldstone, and for Foran too[10], „the natural historians" of revolution are mainly concerned with describing the patterns of revolutionary events, starting from a small series of extraordinary revolutionary cases. Most commonly, the English Revolution of 1640, the American, French or Russian Revolution represent the empirical bases from which largely descriptive accounts of the phenomenon are drawn. The first generation of theorists thus manages to identify a series of common characteristics of revolution, which end-up being seen, according to Goldstone, as empiric generalizations concerning the phenomenon itself[11]. Intellectuals „desert" the regime prior to its immediate downfall, while it tries to make-up for its short-falls with a program of all-encompassing reforms. The fall of the regime is most of the times precipitated by its perceived inability to deal with the military, economic or political challenges, and not by the actions of the opposition *per se*. The opposition manages to take over the state, and a succession of political groups contest for the leadership of the new government. The moderate factions are the immediate leaders, but they are soon replaced by radicals who go on to enact a program of wide social and political transformation fo the society. The scope of the transformation of the society leads to a conflict between moderates and revolutionary radicals, which normally ends up with the ascent to power of a military figure, that accommodates the transition of the revolution towards another moderate phase, during which the new regime acts with pragmatism[12].

The criticism leveled against the first generation of theorists and theories[13] is that there is, at least according to Foran and to Goldstone, an obvious reluctance of looking for the causes of the revolutionary phenomenon. Moreover, the „natural historians" are content with identifying the empiric occurrence of the intellectual contestation of the regime and not with its genesis[14]. John Foran boldly points out that the first generation theorists are rather more preoccupied with "describing" revolutions instead of "explaining" them[15].

The first generation is followed according to Goldstone by the general theories of revolution[16]. In opposition with the first generation, the second category remains extremely fluid both for Goldstone and for Foran. At times it seems more a residual category that needs to separate chronologically the first generation from the "structuralist" wave. The authors of the taxonomy themselves go at great lengths to ensure the paradigmatic coherence that the classification should entail: thus, initially, the "general theories of revolution" Goldstone adheres to become for the same author "general theories of political violence"[17]. Moreover, the authors belonging to this category are a matter of dispute. For example, Tilly is positioned differently by the two authors: Goldstone sees him as a representative of the second generation, whereas Foran sees him belonging amidst the structuralists[18].

Within the second generation of theories, in order to draw a clearer outline, Goldstone distinguishes between the psychological approach to the study of revolutions and the systemic

[18]Foran, „Theories of Revolution Revisited: Toward a Fourth Generation?", 2.

approach. The first[19] is built around the hypothesis that revolution is a particular response/reaction to increasing misery or oppression. The systemic approach, best exemplified by the works of Smelser or Johnson insists that the study of revolutions as an ultimate form of social change must start from the study of various forms of disequilibria within the social system[20].

Adding to the vagueness of the second generation is the form that the second sub-category takes later in Goldstone's view. Not only does he rname the generation, but he also makes room in it for Huntington's thesis on the effects on uneven modernization, as a synthesis of the two previous sub-categories, the psychology inspired theories and the systemic branch of the generation[21].

In spite of the great variety or flexibility that the second generation shows, the proponents of the generational classification try to sum-up the main characteristics of the theories comprised within this group. Nevertheless, the distinction is affirmed rather at a methodological level. In comparison with the "natural history" theorists, second generation scholars put an emphasis on increasing the number of cases they study. As comparison becomes the preferred method, second generation theorists believe that increasing the empirical sphere is warranted in order to avoid the vulnerabilities first generation theories had to deal with.

Adding to the specificity of second generation theories, Foran considers that the concepts grouped within this category can be best seen as what Rod Aya named "volcanic" theories of revolution. Revolutions are almost inevitably the result of accumulating social or emotional pressure. Theories falling in this group can be subdivided for Foran between Parsons inspired theories (such as the works of Smelser or Johnson) and psychological approaches (best summed up by the works of Gurr or Davies, focusing on relative deprivation[22]).

Although Foran tries to make the category more coherent, by trying to establish tha paradigmatic foundations of second-generation theories, he is much more successful in pinpointing the problems these theories raise. Moreover, it is important to note that Foran's emphasis on the criticisms brought against second-generation theories is proved by his reluctance to find a name for the second generation (thus eschewing the problems that Goldstone had to face).

For Foran, as for Aya, the problems facing second generation theories are numerous. Neither relative deprivation, not sub-systemic disequilibria are easy to observe or measure. Moreover, the outline of the explanatory model remains tautological and, at the same time, prone to post-factum false identifications[23]. Second generation theories are tautological because they fail to move beyond the deprivation-violence hypothesis and self-referential because of the tendency to identify disequilibria after the revolutionary events have taken place. Last, but not least, Foran emphasizes that in spite of the second generation theorists' adherence to the imperative of subjecting a larger number of empiric cases to their comparative framework, second generation theories are unable to explain the major characteristic of revolutions themselves: their rare occurrence and their totally extraordinary nature.

If the second generation of theories raises numerous questions and problems for both Foran and Goldstone, the third generation seems to offer a rather more homogenous and coherent corpus of theories and concepts. The major characteristic that links theories placed under the generous umbrella of "structuralism" is their attempt to study, for the first time, in a systematic manner the causes of the revolutionary phenomenon[24]. Most of the times, revolutions are caused by the particular

[19] For works representative for this sub-category see James C. Davies, „Toward a Theory of Revolution", in *American Sociological Review*, Vol. 27, No. 1, (1962) and Ted Robert Gurr, *Why Men Rebel* (Princeton, New Jersey: Princeton University Press, 1970).

[21]Goldstone, „The Comparative and Historical Study of Revolutions" (2008), 5.

[22]Foran, *Taking Power. On the Origins of Third World Revolutions,* 9.

[23]Foran, „Theories of Revolution Revisited: Toward a Fourth Generation?", 2.

[24]For relevant works that fall into this category see Theda Skocpol, „France, Russia, China: A Structural Analysis of Social Revolutions" în *Comparative Studies in Society and History*, Vol. 18, No. 2, (Apr., 1976); Theda

outline of the conflicts between states and elite groups and by structurally determined weaknesses of the states themselves.

It is important to note that most theorists falling within this category affirm the autonomy of the state as an institution; distinct from the interests of elites and dominant classes, and the existence of a competitive system of states exerts pressure on the states themselves. Within this competitive system, the states unable to cope with the challenges the system of states itself generates are subject to political crises that set-up successful revolutions[25].

Besides the preoccupation with the causes of the revolutionary phenomenon, another direction of the structural theories of revolution consists of identifying the types of states that are prone to be affected by the phenomenon. Moreover, somewhat reverting to the scope of the first generation of theories, structural theorists also try to build-up a theory that explains the results of the revolutionary process. This development is entwined with the emphasis put on the identifying the causes of the revolutionary phenomenon[26].

It is true that there is a clear difference between Goldstone's and Foran's approach. Goldstone insists on the characteristics of the generation itself and on the main issues studied by structuralist scholars – the complex relationship between the states and the elites, the causes of rural or urban revolutionary events. Foran prefers to identify the precursors of the structuralist generation, thus discussing the contributions of Eric Wolf or Barrington Moore, while trying to account for Theda Skocpol's study's central position within the third generation of theories of revolution[27]. While Goldstone focuses on identifying the main tenets of the structuralist approach, Foran is more interested on identifying the scholars that belong to it.

The generational perspective concludes with the fourth generation of theories of revolution. Its somewhat adjacent character is shown not only by the lack of a proper label, but also by its purely situational position within the efforts of Goldstone and Foran. The fourth generation, while supposing to lead forwards the efforts into studying revolutions, is defined more by the criticism brought inevitably to third-generation approaches and by the inescapability of chronology. In a dialectic manner, the fourth generation develops and refines the hypotheses and the methods of the structuralist wave, aware both of their shortcomings and of their potential. Thus, Foran underlines the fourth generation's preference for multi/causel models that strive to integrate factors as diverse as economy, politics and culture, while paying attention to the importance of discourse or ideology[28].

As far as Foran is concerned, the main characteristics of the post-structuralist generation lie with questioning the issue of agency and exploring the role culture plays in revolutionary dynamics. For Goldstone, the task of the new generation of theories and of theorists is to question Skocpol's main assumptions, such as the stability of the regimes[29]. Goldstone also tries to sum up the new elements that are factored in by the multi-causal approaches of the fourth generations. Most prominent among these are concepts such as dependent development, demographic pressures, and cultures of rebellion or loss of nationalist legitimacy[30].

Skocpol, *States and Social Revolutions*. *A Comparative Analysis of France, Russia and China*, (Cambridge: Cambridge University Press, 1979), Theda Skocpol & Ellen Kay Trimberger, „Revolutions and the Development of Capitalism" in Theda Skocpol, *Social Revolutions in the Modern World* (Cambridge: Cambridge University Press, 1997); Charles Tilly, „Does Modernization Breed Revolution?" in *Revolutions. Theoretical, Comparative and Historical Studies*, ed. Jack A. Goldstone, Wadsworth Cengage Learning, 2008; or Charles Tily, *Regimes and Repertoires*, (Chicago & London: The University of Chicago Press, 2006).

[30]Goldstone, „Toward a Fourth Generation of Revolutionary Theory", 172.

At the same time, it is important to notice that Goldstone insists that continuity between the structuralist theories and the fourth generation is maintained. Fourth generation theories remain theories that deal not only with the multi-causal nature of revolution, but also try to find explanations for the results. Moreover, the future theories of revolution must accommodate actors more diverse than earlier theoretical endeavors, while accounting for the importance of concepts such as identity, ideology or gender, while methodologically, rational choice theory, quantitative or Boolean approaches should define fourth generation studies[31].

Limits of the generational classification

The limits of the generational classification concern the exclusion of several important contributions to the study of revolutions, the problems concerning the leading characteristics that define the first generation of theories, the flexibility in identifying and defining the different categories (especially the differences that set apart the second and the third generation) and the bias towards the structuralist perspective, shown especially by the debate on the merits of the fourth generation of theories. Last, but not least, the appeal to agency and culture in the study of revolution is not sufficient to draw a distinction between the third and the fourth generation of theories of revolution as works related to the structuralist wave already employ these approaches and as the epistemic and methodologic assumptions of the third generation can remain unchallenged even while focusing on culture or ideology.

Some of the limits the generational classification exhibits are not particular to the classification itself – the flexibility and elusiveness in regards to several theoretical perspectives and concepts is common to several such perspectives. Sometimes, the classifications lead to definitional extremes – the methodological and epistemic framework of a particular theory can be transformed easily in the main theoretical tenets of another perspective. For example, Johnson is convinced that relative deprivation theories are theories that focus on agency, because of the emphasis they place on the individual apprehension of the deprivation. Moreover, Johnson believes that there are few differences that set apart Huntington and Skocpol. Eisenstadt, on the other hand, takes a different perspective, placing in the same category the „natural historians of revolution" and the relative deprivation theorists (in spite of the fiery criticism that Gurr levels against Edwards or Brinton).

Another prominent flaw of all major classification attempts is their inability to encompass all the major works in the field. The problem, which is common to the generational classification, has three aspects. On the one hand, while some endeavors may be considered proto-theoretical indeed, such as Tocqueville's account of the effects of the French revolution, their influence on contemporary theoretical models is indisputable. Moreover, while a case can be made for the exclusion of authors which do not attempt to build-up theoretical models (such as Tocqueville or Arendt), the same cannot be said about works which deal precisely with the topic of revolution – for example, with the prominent exception of Tilly's attempt, few classifications try to fit in Marx or Lenin. Last, but not least, prominent theoretical models remain unaddressed by the classifications.

The generational perspective is in essence an epistemic attempt inspired by Popper's and Kuhn's criteria regarding theoretical endeavors[32]. Thus generations are employed rather as paradigms – successive theoretical waves that initially try to explain the exemplary cases of the empiric area studied, before attacking the central major hypotheses. Moreover, in a truly Popperian manner, theories are disproven for neither Goldstone nor Foran by empiric reality, but by other theoretical endeavors, belonging to latter generations, that manage to offer a better explanation of revolutionary events. The influence of Kuhn and Popper is nevertheless not dominant – Skocpol is criticized for her theory's inability of predicting or explaining the 1989 revolutionary wave or the 1979 Iranian Revolution.

[32] See Karl Popper, *The Logic of Scientific Discovery*, London & New York, 2002 and Thomas Kuhn, *Structura revoluţiilor ştiinţifice,* Bucureşti: Humanitas, 2008.

There are at the same time several other problems with the generational classification. The chronologic influence makes it at times rigid and leads the inclusion in a generation of works and concepts that belong to different epistemic traditions and which employ different if not outright incompatible research methodologies. For example, the first generation, that of the "natural historians" seems rather a post-factum attempt of artificially setting up a category in order to group together the first attempts of studying the revolutionary phenomenon. The coherence of the generation is given rather by the preference of the authors included in the category to compare revolutions to natural phenomena and by the common professional background (historians). Moreover, chronology matters. Brinton for example, in spite of a positivist-inspired methodology, remains concerned with the importance of accepted ideological prescriptions during the course of revolution.

Moreover, if the role of the first generation is to comprise the foundational theoretical, it is striking to observe that important attempts at studying revolution are simply left out. The works of Sorokin, Adams, Le Bon, Tocqueville or early Marxist perspectives are left out. The "natural history of revolutions" serves rather as a target of later generations, needed in order to establish epistemic legitimacy.

At the same time, it is important to notice that the generational perspective is no stranger to ignoring the contributions of authors that come from outside the major debates on the nature and study of revolutions. Authors such as Arendt, Dunn, Dahrendorf, or Walzer are difficult to accommodate within the generational perspectives, although their contributions gain paradigmatic relevance.

Moreover, I believe that the distinctions between the second and the third generation are themselves problematic. On the one hand, it is obvious that some authors remain problematic and tend to blur the distinction between the two generations – Tilly's and Huntington's cases are symptomatic to this regard, both authors shifting between the two generations without becoming comfortable members of neither one of them. Sometimes the internal borders within generations shift in order to make room for "unclassifiable" authors - it is for this reason that relative deprivation becomes for Goldstone in his second attempt to describe the generational classification a theory concerning disequilibria within systems in order to better integrate Huntington's thesis on the impacts of modernization.

Moreover, the differences between the second and the third generation exclude that both categories of theories share a significant positivist outlook, being both integral parts of the tradition of explanation within social sciences[33]. The insistence on causality is another clear link between second and third generation theories. Moreover, in spite of Aya's criticism, there are few differences between the "volcanic" model of revolution and structural analysis. Both generations have a similar outlook on structural or systemic imbalances. Epistemically there can be no distinction between a theory explaining revolution as the result of an incredible accumulation of individual discontent and resentment and a theory that posits that the increasing difficulties of state institutions in front of political, military or economic challenges eventually result in revolutions. The differences lie in the level of analysis where each theory chooses to operate – while second generation theories prefer to focus on disequilibria between the different components of the wider social system, third generation theories focus either on the relationship between the autonomous states and the wider international system they are a part of or on the dynamics of particular institutions. The implicit difference seems to be rather that between the implicit functionalist assumptions of the second generations, heavily influenced by Parsons and the Marxist heritage or influence of many of the third generation theories.

[33] For the distinction between explaining and understanding see Martin Hollis, *The Philosophy of Social Science. An Introduction*, (Cambridge: Cambridge University Press, 2003) or Martin Hollis and Steve Smith, *Explaining and Understanding International Relations*, (Oxford: Clarendon Press, 1991).

Imbalances or wider institutional disequilibria are the causes of revolution – the difference is to what degree human societies do act as systems and to what degrees are revolutions functions of the system itself.

Nikki R. Keddie also insists that the concept of a gap between expectations and results or of a structural imbalance is not enough to differentiate between second and third generation theories[34]. She suggests that the difference between the two groups of theories might lie with the different empiric load theories operate with. In order to improve the validity of their predictions, second generation theorists attempt to increase the number of cases taken into analysis, even if this means sometimes leaving the space of revolutions and discussing border-line cases (or wider social collective actions involving violence), whereas the proponents of structural theories focus on a reduced number of cases (successful social revolutions). However, while Skocpol focuses indeed on a handful of cases, both Gurr and Tilly try to encompass rebellions, revolts or wider protest movements altogether, thereby expanding the field of inquiry, but raising the additional question of unwarranted concept elasticity.

Moreover, theories from both generations are concerned on some occasions with the same phenomena. Neil Smelser tries to explain collective action, the focus of many of Charles Tilly's works – it is obvious that the methodology and the dynamics of the authors are nevertheless different.

In spite of Foran's or Goldstone's attempt to draw clear lines between the two generations, theories belonging to these groups easily become interchangeable. The most puzzling aspect is that the authors belonging to the categories themselves have no trouble in breaking the boundaries between the second and the third generation. Gurr's thesis can easily be equated with that of Skocpol, as far as Eisenstadt is concerned. His own analysis on the nature of political and institutional centers is similar with Tilly's view on the relations between elite groups Aya has no trouble in explaining Theda Skocpol's hypotheses in Tilly's terms[35]: the revolutionary situations whose importance he emphasizes are the "political revolutionary crises" Skocpol considers as paramount for the outbreak of revolutions.

The generational classification also ignores agent-centered theories. Neither Freud-inspired perspectives, nor theories employing a rational approach to the study of revolutions find themselves comprised by the generational classifications (although it is important to note that rational choice theory is considered by the framers of the classification itself and by prominent third generation theorists a useful addition to the study of revolutions).

The fourth generation of theories is also affected by the imprecision regarding its definitions. Foran and Goldstone do not agree on its main tenets and research objectives, or on its relationship in regards to the structuralist theories. While Goldstone believes that fourth generation theories might perfect the flaws of the third generation, Foran is passionate about the new directions that theories of revolution might explore: integrating agency-centered approaches and culture into the study of revolutions.

While insisting on agency and culture addresses the vulnerabilities attributed to structural theories might prove itself the solution to the study of revolutions, it is important to note that structural theorists themselves (nor their precursors) are that averse to discussing ideology and culture. Skocpol herself becomes eventually convinced that ideology can fit into her causal explanatory pattern[36], whereas Eisenstadt focuses from the start on integrating cultural explanations into his theoretical model.

The image of the fourth generation is therefore problematic. Insistence on agency, for example, under the guise of rational choice theory is neither a new attempt, nor has it opened revolutionary venues in the study of revolution[37], Aya himself arguing in its favor under the label of "vicarious problem solving"[38]. One of the most poignant criticisms to Skocpol suggests rational choice perspectives should be pursued in the study of revolutions[39]. While some fourth generation theorists might indeed question many leading assumptions of the third (or second) generation of theorists, it is by no means obvious that the post-structuralist effort marks or should mark a paradigmatic or epistemic break with previous undertakings. Third generation theories are not hostile *per se* to discussing agency. In addition to that, discussing culture does not equate to taking an agent-centered perspective and, as Michael Taylor shows, rational choice approaches are not incompatible with structuralist theoretical endeavors.

Moreover, structures and top-down constraining influence can be cultural as well. Francesca Poletta makes a convincing appeal towards "investigating the objective resources and constraints determined by the dimension of political structure"[40]. Simply appealing to culture does not entail shifting the study of revolutions towards an agent-centered perspective. In this light, culture becomes simply another structure that can fit the multi-causal pattern Goldstone calls for. However, adding culture to the list of structural constraints only increases the conceptual elasticity within the field - Charles Kuzman makes a convincing case in arguing that multi-causal patterns beg prioritization: "states matter, culture matters, social structure matters, accidents and history matters, everything matters"[41]

The transition from the first generation of natural historians to the post-structuralist research agenda is not that sudden and is not marked by increased paradigmatic differences or epistemic debates. The conclusion that new research into revolution must bring forth agency and culture does not entail by itself major changes, nor does it warrant a breach with extant epistemic assumptions or methodology.

Conclusion

The generational classification remains undoubtedly a major focal point in the study of revolutions. Its flaws however are numerous. First of all, the categories themselves call for additional definitions, as overlapping between theoretical models seems to become at times a major issue. The distinction between the second generation of theories and the structuralist group of theories is problematic, as is the precise positioning of several authors. Secondly, numerous contributions are left outside the taxonomy, while alternative perspectives are too easily discarded. Fourth, the classification is not able to illustrate the main inter-paradigmatic debates within the field of theories of revolution. The generational classification places a major emphasis on the role of the third generation in shaping our accounts of the revolutionary phenomenon. This focus however is insufficient in clearing out the attributes and characteristics of the post-structuralist effort, which is not saved by the appeal for the study of culture and the integration into main theoretical models of agent-centered perspectives.

THE NEW DIMENSION OF THREATS THAT THE EUROPEAN ACTORS ARE SUBJECT TO IN NEIGHBORING STATES CRISIS MANAGEMENT

DĂNILĂ VALENTIN-BOGDAN[*] and DĂNILĂ MARIAN-ALIN[**]

Motto: "It's good to have power, but it's better not to need the power."
Mahatma Gandhi

Abstract
Restructuring activities of the current international system increases the amplification of the existing inequalities in developing countries with unlimited potential for the European market.
Thus, amid security system vulnerabilities and uncontrolled situations, the local conflicts may spread to neighboring regions, affecting also the strategic security environment.
The dynamics of political and military events reveals that security and defense go beyond the responsibility of a single country, a fact which causes a greater involvement of democratic states and international organizations.
Against this background, the work in question provides not only an insight into the new international dimension, but also a possible response version in order to enable risk and vulnerabilities (of economic, social or religious nature) management, in the benefit of all.
Therefore, restricting undesirable phenomena can be achieved by harmonizing the actions on the various interest sectors at national or international level, similar to the objectives underlying the American concept of "homeland security".
As a solution, the concept itself connects everything that can be connected, when we talk about security, in a widespread network of state intervention mechanisms, namely, the external instruments of power. For this reason, homeland security is characterized by a plurality of stakeholders, from a local and national level to a European and transatlantic one.

Keywords
"security environment", "global stability", "geopolitical changes", "homeland security", "strategic objectives".

The Orient continues to be a traditional hotbed of conflict. We can talk about big states, with some influence, as Turkey, Iran, India, Afghanistan, but history has shown that an outbreak of the conflict in the area has often led to a chain reaction. Regional adversity is generated by regional-cultural differences, which brings Arabs against Muslims or Jews.

Also, according to Karl L. Brown, the region has always been a *penetrated system*, subjected to a high level of external intervention, a fact which nourished the Arab-Israeli hostility. This has been due to the considerable oil resources and the geographical position of the region which is located at the confluence of NATO's interests (via Turkey), Russia, China and, most recently, the EU.

In this context, geographically speaking, Eastern Europe is very close to Russia, so that Moscow believes that the events in the area can directly influence the stability and the security of the country under the concept of *close neighbourhood*. It is important to note, however, that the Middle East is not *stricto sensu* a part of the *close neighbourhood*, as it has never dictated them their

[*] PhD Candidate, "Mihai Viteazul" National Intelligence Academy, Bucharest, Romania (danila.valentin.bogdan@gmail.com).

domestic and foreign policies in the way that it did in Moldova. The East can, however, affect the situation in Central Asia and the Caucasus - Chechnya, Daghestan – scandalizing the Islamists. Russia has good intentions regarding the cooperation with the Greater Middle East especially by settling and securing the arms market.

The war in Iraq-2003 was the United States way to demonstrate to Russia that it ignores its global leadership and power ambitions, thus, leading to misunderstandings on the part of Moscow and the EU. However, Russia was not involved in the settlement of the conflict, leaving this task to Germany and France. Russia's drawback - produced by the Iraqi conflict - lies in the fact that regional instability brought with itself the loss of several billion dollars debt, which Iraq owed to Moscow, as well as the loss of the economic-military contracts between Russia and the Saddam regime. In 2004, Moscow canceled 90% of the external debt and promised investments of four billion dollars to rebuild the country. Russia condemned the U.S. intervention, adopting the position of defender of the Arab cause.

As regards the situation in Syria, governmental forces are working now with more determination in order to neutralize the outbreaks of instability, using a variety of means of combat. However, the army has not yet used the full arms potential and combat equipment, the number of troops entering the battle remaining limited.

The chain of events and changes in South-Eastern Europe during the 90s led to policy responses, policy approaches and long-term strategies, which are sophisticated enough for this part of Europe.

The history of the South-Eastern region has no better example than these two European Union principles that interact dialectically. However, the experience of four wars in the last decade in the South-Eastern Europe calls for rethinking and improving the strategic principles and EU instruments for South-Eastern Europe.

The largest and most dangerous instabilities in international relations are typical for transition periods, during which the old and new structures of the international system at different levels are at conflict. Under these circumstances, even the smallest changes can cause strong reactions of transforming the initial conditions.

The Southeast-European instabilities are caused by several structural causes such as:
- The transition from a bipolar world to one not yet defined of the international system, a fact which has led to a trend towards unilateralism and to the transformation of the area into one global clash of interests and states. A national aspect of this process in the region is that some countries tend to gravitate from a global powerhouse to another. The European Union with its Euro-Atlantic dimension is certainly one of these centers of power.

Another consequence is the balkanization, fragmentation of regional relations between states and international relations polarization around centers of power.

After the Cold War, the European Union, the United States and other developed countries made the European integration possible; on the other hand, Russia continued to be hesitant, and wavered between playing the role of broker of the new power balance and being dependent on Balkan countries, respectively playing the constructive role of world leader in the 21st century, by stimulating the regional formation tendencies as a regional organizational expression of globalization.

- The painful changing of the region, from a condition of lack of an economic and trade area, in a more cooperative economic space.

- Internal systemic transitions of some countries in South-East Europe and various national attitudes vis-à-vis social, economic, political and strategic homogeneity, including different orientations of the recent global centers of power.

- Various models and levels of adaptation of some countries in the region to expanding Western democratic state is based on the principle of "common security" and market economy system - a process generated by the collapse of socialism in its Soviet and Yugoslav variant.

- The predominantly destructive disintegration of the Yugoslav Federation, four wars that followed, and the emergence of state-building issues in South Eastern Europe.

It is sufficient to mention only the Cold War period with its three types of state and blocks that existed at that time: NATO, the Warsaw Treaty Organization, and those who were not allied. The infrastructure - transport, communications, economic relations, etc. – has reflected the thinking and polarized actions during the Cold War.

The result was the state separation and because they were not related, it was followed by a further distancing of the region from other parts of the world, which adapted to the growing economic, informational, humanitarian imperatives.

A broader picture was clouded by the difficulty which the transitional countries were undergoing (excluding Greece and Turkey); we refer to the countries which have experienced the shift from state ownership and planned economy to private ownership and market economy. The poor management of transformation processes, including economic and political adventurer behavior in some countries, repeated criminal privatization cases so that all these instabilities have generated a whole range of risks, occasionally threatening the continuity of state authority in different countries (Albania, Romania, Bulgaria, Republic of Moldova).

Ethnic and religious antagonisms motivated by cognitive, emotional, perception deficiencies and multiplied by careerist political activism. This is the most discussed source of conflict in the last decade - a lasting source of instability, regional and national security threats. Mobilizing Croat ethnics warned observers and participants in the South East European conflicts.

Strategic components and branches that are specific elements of Southeastern Europe security: analyzing the situation in Romania we find that the national security intelligence doctrine (2003) establishes three security strategic components:

- National defense - a set of measures and actions undertaken by the Romanian state to protect and guarantee national values;

- National security - the bail provided by the State in relation to protecting and fulfilling objectives and security interests;

- Public order - a set of politic, economic, social, directions allowing the normal functioning of state institutions, maintaining public peace, assuring citizen security, respecting and protecting their rights.

In the field of international relations, phrases such as the ones enumerated belor are more commonly used:

- Collective security: the condition of the relations between states, created by taking, on Treaty, measures of common defense against aggressions;

- areal security (under-regional): situation resulting from the mutual relations established by the states in a relatively small geographic area, with a specific feature that ensures states territorial integrity, independence, sovereignty and protection against any threat;

- Regional security (continental): safety condition of the states in a continent on respect for the independence, sovereignty and territorial integrity.

- Global security: state of the international system in which each state is satisfied by being safe from any such aggression or interference which is able to affect fundamental values;

- Security Policy: an assembly of measures and actions in all social policy areas designed to ensure the optimal state preservation and to strengthen defense and to promote its fundamental interests.

In terms of everyday relationships, we are dealing with the term of citizen safety, representing the convergence of several security subsystems: food, life, economic, financial, social, health, property, environmental, etc. issues.

Hence, at least two logical reasons result:
- Security is more than safety, and by achieving safety it also maintains and protects security;
- National security is a part, but also a course of action or means in achieving security.

Modern situation

An accurate and complete analysis of the current security environment, with the threats it poses to state's national interests requires knowing the evolving trends of global environment and regional security and threats. This approach can give us a closer image on the reality in which the security status needs to be provided.

Today, we face a series of combined threats to international stability, from "modern warfare" to war "without borders" or "asymmetrical warfare". Two main ideas shape what we see occurring with "modern war": the loss of the nation state monopoly on war and the return to the world of cultures in conflict.

Martin van Creveld in his book, "Making War", argues that the modern paradigm of war, where the nation-states wage a war for state reasons, using official armies struggling with other similar organizations is unusual from a historical point of view.

The overall security environment level reveals several trends of influence in the security field, such as: globalization, multiplication and diversification of global security actors, technologies proliferation, as well as the ever-growing importance of non-state actors, environmental issues increasing pressures on military and security processes and population growth.

Dealing with initial threats of a new type of war requires a commitment to propel military thinking and potency. First, we must resort to these qualities when we try to protect ourselves from the tendency to use technology excessively in order to meet new global challenges and the ever-increasing demands on our limited resources and operational forces. Recent events show us that the warfare based on advanced technology is ineffective against terrorism, giving results only when the enemy plays by the same rules, but it cannot simply ignore terrorism.

The new type of threat is due to a wide range of destabilizing factors, from regional gangs acting in border areas to attacks on the financial infrastructure by the organized crime, resulting in new operational and informational challenges.

The connection between war and crime involves ethnic enmity, refugees and criminal exploitation type. Conflicts are often fueled by criminal actions. These criminals usually have less advanced technology, but they are at the beginning of the exploitation of modern technology. The access to this type of technology is facilitated by money offered by criminal organizations, and so goes the distinction between war and crime.

There are far more intangible trends to predict the ability of these groups to influence global stability. In our world connected by cable, global organizations with modest political or economic means may carry out activities with a high impact, but with unpredictable consequences. As regards military intelligence structures, the operational challenge is to prepare our forces to respond to a broad spectrum of unexpected and extremely ambiguous threats. A new design approach to the next war in the 21st century will represent a window throwing light on future missions and providing an accurate assessment of unexpected and undefined threats.

The Black Sea Region

The complexity of the security environment in the Black Sea region highlights a number of state actors, in this case mainly referring to coastal states and non-state actors with an international location.

Wider Black Sea Region is a concept related on the same process of expanding democratic values, stability and peace in Europe, as well as the ones defended by EU and NATO. This is also a region where governments want to achieve security, modernization and a better standard of living for

their citizens. Thus, governments in the region have to deal with cross-border crime and threats given by reheating frozen conflicts.

The main features equally acceptable for the Black Sea region are situated on the line of two concepts that have been assigned two dual visions targeting the region; thus, the region is seen alternatively as a joining area - bridge and transit area - or a dividing area, respectively a border and buffer zone.

The attempts to theorize a cohesion of the region were hit by historical arguments - which has never witnessed a zone cohesion or collaborative culture arguments - non-existent and questioned by numerous unsolved bilateral cases, but also by geopolitical reasons - taking on the specific value, very different and unbalanced of the member countries, ranging from the giant Russian Federation, through the eternal presence of Turkish interests, by returning to the forefront of Ukraine (until recently subordinated to the interests of Moscow) to Romania and Bulgaria, NATO members and the little Georgia with confessed Euro-Atlantic aspirations.

Another issue widely accepted is the need to protect energy routes in the region, no matter if it is the piping route Baku-Tbilisi-Ceyhon or TRACECA projects or on Soupsa Bako-Tbilisi tarck or railway ones Tbilisi-Poti and Tbilisi-Batumi or the route of Nabucco and the planned White Stream with its variants Soupsa - Constanta through Crimea and the branch in Odessa Brody Gdansk for gas transport in northern Europe.

The Black Sea countries (Romania, Turkey, Bulgaria, Russian Federation, Ukraine and Georgia) are interested in creating a climate of stability and security in which they can conduct cooperative projects and economic and social development.

The Black Sea Economic Cooperation (BSEC), created in 1992, includes as full members also Albania, Armenia, Azerbaijan, Greece and Moldova. Other seven countries: Austria, Egypt, Israel, Italy, Poland, Slovakia and Tunisia have observer status.

BSEC decision-making body is the Council of Foreign Ministers, whose international secretariat has permanent headquarters in Istanbul. It is seen primarily as an experiment in order to prepare the EU enlargement and to train candidates in this regard.

Aspects of military cooperation in the area have not yet been addressed in the countries of the region, but only through bilateral or trilateral security plans. A hope for the normal regulation can be brought by the BSEC Organization, where they initiated a series of measures for nomination the situation in the region and cooperation in many fields, among all Member States.

It is worth emphasizing bilateral and multilateral military relations with the Black Sea countries, including neighboring countries: Bulgaria, Ukraine and Moldova, but also the project of Naval Cooperation in the Black Sea (Blackseafor) with the participation of Romania, Bulgaria, Georgia, Russian Federation, Turkey and Ukraine. Multilateral under-regional cooperation will mark the participation of Romania, together with Bulgaria, Greece, Turkey, Macedonia, Albania (Slovenia and the USA as observers) at the Multinational Peace Force in Southeastern Europe (MPF-SEE).

In the Romanian interest area, handling minorities represent the main sources generating risks and threats to national security. Despite the positive developments of international relations, in particular with neighboring States, the history confirms that Romania's political-geographic neighborhoods have influenced our destiny often.

In geopolitics of Europe, Romania has understood the need to use, as better as it could, its whole diplomatic assembly in order to overcome territorial or border disputes, crisis or potential conflicts.

Currently, the issue of economic security moves from the field of national economies in an increasingly well-defined regional and international economic complexes space. The accession and integration structures such as the European Union or the World Trade Organization are provided to participate and benefit from the advantages of regionalization and globalization.

About Threats

Early - to mid-1990s - represented a period of drastic change regarding the national security conditions for the EU Member States and the Balkan countries. For Greece, this change was complicated by an internal political transformation that began in 1974 and continued through the 90s. Among the factors that have an influence on the security situation in Greece during this period are found the political, economic, social, and regional ones, but also the location of Greece in the Balkans and eastern Mediterranean.

On the one hand, Athens has to adapt to the new security environment that emerged after the Cold War ended. Being a part of the Balkans and Eastern Mediterranean, Greece is geographically located in an unstable area.

Moreover, Athens had to deal also with "traditional" threats. For most European countries, the collapse of the Warsaw Pact and the Soviet Union triggered a profound change in their security policies. Greece was an exception to this rule, because for decades, Greek security policy considerations were dominated by threats from Ankara. In the post-Cold War era, Turkey remains the main concern of security for Athens.

Today post-Cold War global structures are in a state of flux. Analysts and policy makers in small countries try to identify and predict trends and recommend adjustment policies in developing models worldwide.

The challenge for Greece, a country of medium size, set strategically, and independent is to protect its territorial integrity, democratic system and values. Today's Greece can be described as democratic, internationalist, Western, free enterprise-oriented, and a sensible strategic outpost of the European Union and NATO, in troubled regions of the Balkans and Central and Eastern Mediterranean.

Following two "catastrophic" changes (the Cold War and the collapse of the Soviet Union), the Mediterranean region, the Middle East and much of its surrounding areas are in the midst of a rapid geopolitical development, however, without a clear direction. Analysts discern an "arch or triangle of crisis, stretching from the Balkans to Central Asia, Transcaucasia and Middle East." Most regimes in these regions are facing or will soon be facing a crisis of political legitimacy.

In addition, the transition from free bi-polarity to polycentrism, after the Cold War, has increased the autonomy of regional actors and intensified peripheral conflicts. The new environment presents the "actors" with new threats and opportunities.

Greece's strategic position mattered in obtaining NATO membership (1952). During the Cold War, Greece provided an essential link on the southeastern flank of NATO.

Turkey, for example, could have been isolated from other NATO members, if Greece wouldn't have participated also to the Alliance. For many Greek decision-makers, the country's strategic importance to the West has been underestimated and sometimes even neglected. Successive Greek governments have continued, however, to contribute on the Western defense strategy community.

Given the rather chaotic nature of the international system, small states, with their limited capacities, try to deal with their security problems by developing strategies based on the balance (internal and external) and / or alignment. Because small countries have fewer options and less freedom of maneuver than big powers in order to promote security interests more effectively, Greece sought to integrate its policies in their partners' ones from the European Union and NATO allies.

From a historical point of view, the main strategic dilemma for Greek policy makers was whether to ally with the dominant maritime power in Eastern Mediterranean region or with the dominant land power in the Balkan Peninsula. In most cases, aware of their responsibility to defend two thousand Greek islands that stretch from the eastern Aegean Sea to the Adriatic, they chose to ally with maritime power.

During the 1940s and early 1950s, the difference between conservatives and liberals (communists were outcasts because of the civil war in Greece) on security issues and NATO had its

importance. Basically, both groups believe that the main threat regarding the Greek security comes from beyond its northern borders and communism (external and internal) threatened mutual cherished values. Therefore, NATO was seen as essential to national defense and the United States have been treated as a natural ally and guarantor of Greece.

Greek defense orientation until the mid-1960s was based on the U.S. belief that the main security problem would be internal rather than external. Greek armed forces (in contrast to Turkey's) were first stocked and organized to meet internal communist threat. According to NATO planning, it was expected that Greece, "with some limited equipment, could cause a delay of Soviet forces in the event of a global war."

Even earlier than the late 1950s, the southeastern flank of NATO has faced periodic cycles of high intensity. The emergence of the Cyprus problem in 1950, the Greek-Turkish crisis in 1960, the Greek Junta done after the 1974 coup and the Turkish invasion and occupation of the island (which continues today) was complicated by a series of Greco-Turkish friction in the Aegean region, due to the pressure of Turkey to revise the Aegean status quo. This has led to refocusing the defense doctrine in Greece, with the officially declared "threat from the East", as the main concern for security.

Restoring the democratic regime in 1974 was indeed a major turning point in Greek Security Policy. This new period of Greek political history, lasting from 1974 until now, has been characterized by diversifying the external relations in Greece, including a relative decrease regarding its relations with the U.S., in favor of economic and political integration in Western Europe and improving relations with Eastern Europe.

In the post-Cold War era, Greece faces what she considers a major threat to security and a number of risks: the threat is seen as coming from her neighbor in the East (Turkey) and risks are considered as resulting from the instability in regions like the Balkan and the Mediterranean. In addition, Greece is involved in a dispute on the issue of recognition of the official name of FYROM and is concerned about human rights for the Greek minority in Albania.

The perception of a potential military threat from Turkey was widely shared by the public opinion and reflected in expert debates, as well as in the security planning for at least the last two decades. Cyprus crisis of 1974 can be seen as turning point in Greek security considerations after the Second World War: Turkish invasion and the subsequent occupation of northern Cyprus, was for Greece, a very traumatic experience, but also the basis for "new thinking" in terms of security.

Greek security planners are concerned about Turkey's revisionist objectives regarding Greece, expressed in official statements, diplomatic initiatives and military actions (including conducting "offensive" armed forces in the Aegean). Its reduced geography and population, compared with that of Turkey further increases insecurity in Greece.

As one analyst points out, "Turkish officials' statements that, usually are on the first page in the media in Greece, has intensified Greek fears. For example, the Turkish Prime Minister Demirel stated in 1975 that "... half of the Aegean is ours. Everyone knows that it is ... We know how to crush our enemies' heads when Turkish nations' prestige, dignity and interests are attacked." Moreover, direct challenges (e.g. "the group of islands, are located at a distance of 50 km from the Turkish coast ... should belong to Turkey") and doubts about the Greek sovereignty over the Aegean islands were regarded with fear.

"Revisionist actions" in Turkey include violating the Greek airspace, the refuse to show delimitation of the Aegean continental shelf to the International Court of Justice, threats of war, in case of Greek maritime territorial limits expansion, from six to twelve miles (according to the Law of the Sea Convention of 1982), and challenges in the Aegean status quo, codified by several international treaties (1923 - Peace Treaty of Lausanne, 1932 - Agreement between Turkey and Italy, and the Treaty of Paris in 1947, which led to Imia crisis in January 1996).

Policymakers in Greece believe that Turkey hides its unfriendly intentions behind significant military capabilities. Since 1991, Turkey has launched an impressive program of modernization its armed forces. Such a considerable increase in military spending at a time when other European countries, USA and Russia have reduced their defense budgets in an effort to benefit from the "peace dividend" is a concern for neighboring countries, including Greece.

The full implementation of Turkey's weapons programs threatens with changing the principles of the bilateral Greek-Turkish balance of power, despite the economic sacrifices that confronts Greece. If, through diplomatic means and maneuvers, it might produce a balancing of the Turkish military superiority, the only option available for Greece remaining a costly and destabilizing military race, which could create economic problems for both countries and would enhance their security dilemma.

According to security analysts in Greece, the focus of any armed conflict between Greece and Turkey would be the Aegean Islands and Cyprus (by extending the occupation of the south, or even trying to control the whole island).

The end of the Cold War deeply affected Greek security. Although its strategic value probably increased, it also faced the fluidity and uncertainty of the northern borders. The disintegration of Yugoslavia and the civil war gave rise to a variety of explosive tensions of ethnic, political, social and economic nature, which represented an acute concern for Athens. The proximity and fear that instability in the Balkans (limited to the former Yugoslav Republic or general) could paralyze Greece's integration into European trends, created a state of vulnerability. The economic parameters of the problem are significant. Greece was based on rail and road communications throughout Yugoslavia which accounted for 40 percent of its trade with the European market. Prolonged rupture of this vital link had direct economic consequences on Greece and led to the imposition of sanctions by the European Union against the Federal Government of Yugoslavia. Greek authorities have estimated that the imposition of these sanctions led to losses of about $ 10 million per day.

Moreover, it is worrisome the situation that would cause a disintegration of the southern part of the former Yugoslavia, which would lead to the employment of foreign powers in conflict.

Greek-Bulgarian consultations on security issues have been encouraged by the insecurity state felt by both countries in relation to Turkey's military power and political interests in the Balkans (relations between Bulgaria and Turkey became difficult as a result of Turkish minority maltreatment during the communist regime in the mid-1980s). In this context, we could talk about the Athens-Sofia axis. Bilateral relations have peaked in 1986, with the proclamation of the "Declaration of Friendship and Cooperation" which stated that there could be held consultations between the two countries involved, whenever the security of one of them was in danger (a term used by the Greeks during Greek-Turkish crisis in March 1987).

In an attempt to interpret the Greek security policy, certain factors can be identified. In every system of policy developing, there are various political, cultural, institutional and psychological factors influencing policy implementation process. These factors are both endogenous and exogenous and reflect recent trends, but also a long-term state security policy.

The progressive approach of Greece to the European foreign policy, continuous uncertainty characterizing Greek-Turkish relations, the dominant role of personalities in decision making and the lack of an institutional organization meant to ensure long-term assessment on a wide range of security issues and assist / coordinate crisis management mechanisms are the dominant factors shaping Greek Security Policy.

The main institutional bodies responsible for foreign and defense policy - The Government Council Cabinet on Foreign Affairs and Defense (GCFDM) - do not produce alternative policies. They almost never meet, and when they do, they implement and legitimize choices already made by the Prime Minister and a small group of Ministers. Despite a number of initiatives undertaken in

recent years - such as the creation of a Foreign Policy Council (FPC) - Greece still lacks proper coordination of policies to meet the challenges of a stable regional and international environment.

FPC consists of the Minister of Foreign Affairs, members of all parties represented in the Greek Parliament, and a number of experts. The Council aims to reach consensus on foreign policy issues and to provide "continuity and consistency". The unique role of the Foreign Policy Council is to provide advice on matters of foreign policy and not to coordinate other bodies or to engage in crisis management.

It carefully considered the need of establishing a new institution able to coordinate the existing scattered bodies from different ministries, to offer timely advice on a range of issues, establish a stringent crisis management mechanism and to oversee every step in making policy.

Greece's military doctrine is defensive at the strategic level, in accordance to NATO position. Its objective is to eliminate any threat or actual attack against Greece and protect Greek national interests. Greece, as a status quo country, aims at convincing any revisionist powers, following a cost-benefit analysis, that a possible aggression would not be favorable for the latter. Deterrence by threat would be credible and can take many forms, including denial targets on the battlefield, damages suffered by the military, and other values. At the tactical level, the doctrine may have a defensive or counter-offensive orientation, depending on the circumstances.

After the impressive performance of the U.S. armed forces in the Gulf War, Greece decided to reorganize its ground forces, with emphasis on smaller units (from divisions and regiments to brigades and battalions), with increased mobility.

In 1994, Greece and Cyprus have developed the Common Defense Doctrine. According to this doctrine, as long as Turkey maintains an occupying force of more than 30,000 troops in Cyprus, Greek and Cypriot defense domain would increase the level of cooperation. In this context, any attack against the Republic of Cyprus would constitute a casus belli for Greece. The initiative (in fact, a policy of deterrence) has a clear defensive character and is aimed at avoiding or confronting any aggression against the contracting parties by improving cooperation and joint training of armed forces in Greece and Cyprus.

Since 1974, when Turkey invaded Cyprus and occupied a share of 37 percent of its territory, Greece has maintained a high level of defense spending (an average of 6 percent of GDP, which is the largest of the NATO countries). Military and intensive training spending were deemed necessary in order to offset Turkey's quantitative advantage of military equipment and labor. Although there is consensus among the main political parties and the Greek people about the need to "sacrifice" for national defense, military spending is a heavy burden for the Greek economy at a time when Greece is implementing an economic austerity program in order to join the next phase of the European Monetary Union. However, in the wake of the Imia crisis and the announcement of a Turkish weapons program of $ 31 billion (for over 10 years), Greece was forced to announce a program of $ 14 billion (on a period over 5 years).

Conclusions

Europe has a legacy of violent terrorist attacks going back to the days of multinational empires in Russia, Austro-Hungary and Germany. In the United Kingdom, Spain and France, terrorist bomb attacks occur at regular intervals. Shootings are a manifestation of the traditional challenges against national and international security. This form of violent protest against the established political order will continue to exist for a long time.

Strengthening security in a broader sense is compromised for the sake of resolving acute situation. Serious disruption on the internal market of European societies could be a form of structural threat that must be confronted by public authorities.

In Europe, an early warning sign of this trend was recorded by the Chernobyl disaster in 1986. In this context, a cloud of radiation was then sent to Ukraine, Central and Northern Europe. The

accident resulted in damage to human and animal health, agriculture and business for more than a decade.

Under these circumstances, national governments have to deal with security issues involving critical infrastructure of society and governance requirements. Thus, the objectives of national defense and international security are not allowed to build new infrastructure vulnerabilities.

The technological complexity of modern society opens up opportunities for the development of a high risk, produced by strong coupling between sectors and across national borders. Interconnecting infrastructure has become part of everyday life, since the society depends on reliable power supply systems, robust communication and IT networks operations. Naturally, antagonists wanting to harm society have interests in finding critical points, where different facilities have common elements. A major task in planning the achievement of societal security is to turn potential vulnerabilities related to the technological complexity into highly reliable systems.

The economic dimension of security is actually an extension of economic security and the other areas. The economic dimension of security, as well as the economic security itself, it has not only a linear determination - when the economy is performing, the security is more secure, but a non-linear, dynamic and complex one, characterized by uncertainty and unpredictability.

In the context of international dynamic, partnerships multiply, international organizations and bodies evolve unpredictably (some are strengthening, others corrode) and the regional ones multiply and adapt to specific conditions.

The purpose of all these partnerships, unions, organizations and bodies is to ensure conditions for optimizing economic, political, social, informational and military relations, in order to establish and consolidate a less dangerous security environment, for increasing person, property, institution, states and world security.

There is still a chance that the security environment, founded and grounded on value systems and a dynamic, explosive, complex and high performance economy becomes favorable for long-term development, progress and peace.

THE NATIONAL SECURITY - MEDIA POWER LINKAGE. A THEORETICAL FRAMEWORK

KARIN MEGHEŞAN[*]
VERONICA MIHALACHE[**]

Abstract
The mechanism of national security policy is an issue of increasing interests in post cold war era. But what is the impact of the media upon national security policy decision making? New world wide events show us that more than ever national policy is often at the mercy of the media. The Wiki leaks, the Murdoch inquiry, the impact of new social media on Arab democratic movements are just some examples regarding the effect of nearly simultaneous presentation of information around the world.
The world is changing, and the processes by which national policy is developed may also be changing especially in the security domain.
The essence of this study, as the title suggests is the idea of a „dual use" media in the national security issues.
This study employs a relatively narrow definition of national security issues as only those which are concerned with national survival and preservation of our society. The media affects us as individuals and as a collective body so we will like to focus on a realistic understanding of the media-secrecy-security linkage, noting that we will do nothing else but advance and underline the main points of view from the public and scientific discourse.

Keywords: *national security, foreign policy, media, decision making, liberty vs. Security, public opinion*

National security construct

It is no doubt among specialists that national security policies issues can be included in foreign policy preoccupation.

The main argument for this assertion is that as foreign policies are influenced by a multitude of dependent and independent variables, either external or domestic by nature, so is nowadays homeland security policy more and more influenced by changes in the international system, by specific changes in the information age both nationally and internationally.

One of the most important sources[1] in the statecraft machinery, especially in new age of information revolution, is public opinion. The nature of public opinion affects one nation's conduct beyond the national border and the nation perception of security issues. A potentially important component in the public opinion - foreign policy linkage is the role played by the mass media. The value of media increases its significance as an influential and instrumental tool about building confidence or promoting mistrust among people (the behaviour of policy makers themselves are affected by their own image in the media coverage or the image of the world conveyed by the mass media) on issues related to national security.

In fact the main issue regarding the national security-media relation still is the problem between secrecy and free society. Long time ago, in a period of effervescent discussion about the moral strength of secret governmental agency (covert operations, Church Committee, Vietnam,

[1] For details regarding the sources of foreign policy, see the model for analysis proposed by James Rosenau and adapted in K. Megheşan, *Decizia de politică externă,* Analele ANI, nr.11/2006, Editura ANI, Bucureşti, 2007, pp. 109-123.

Watergate 1970-1976) the former CIA Director, W.Colby characterized the necessity of choosing one of the answers to questions posed „should we forswear secret intelligence in order to protect our freedoms, and look to a resulting moral strenght to save us from the threats or must we accept limits on our freedoms in order to preserve our community in a dangerous world?"as a cataclysmic choice.

In Walter Lippmann's view, a nation is secure to the extent to which it is not in danger of having to sacrifice core values, if it wishes to avoid war, and is able, if challenged, to maintain them by victory in such a war[2]. Unfortunately, the term "national security" has long been used as a symbolic concept of a policy objective. Like all others "national" concepts (national interests, national values), national security has a wide and ambiguous meaning.

National interest was for far too long a guiding star for national security and foreign policies. The cores of national interest are the national values. However, individuals, states, and other social actors have many values. Therefore, some well-known analysts plead for a new framework in analyzing national security.

Security for whom? Security for what values? How much security? For what threats? By what means? Security at what costs? Security in what times?[3]

As for the problem of secrecy dilemma former, President Ford said that he would gladly share the secrets with 300000000 Americans if no further explosions would occur

Media and security policies have a strong connection in the contemporary strategic environment and this connection is better understood by public opinion in times of war or internal/international crises.

In today's information age, asserting that the media has an important impact on national security decision making is almost as saying that military capabilities, geography or resources have an impact on national security decision making.

Political or military actors work in an environment shaped by the media. Media shapes the perception of decision-makers and people. In addition, based on these perceptions the political decision-makers formulate policies, choose lines of actions. One of the most important effects of mass communication is the agenda setting.

Mass media influences the public agenda directly by weight of attention and media authority, the public opinion influences the policy agenda, and media agenda is influencing the policy agenda.

It is extremely difficult to comprehend media's power and influence in the contemporary world, therefore this article has no intention to do so. The essence of this paper is the idea of media's double utility. Media can be quite useful for security policies, can inform and educate the population regarding national and universal values, spread those values, and it can promote foreign and security policies. At the same time, through presenting controversial aspects of the society, media can be a weakness security wise. In security issues, media as well as population can be educated. This is what we would like to focus on, with the mention that we will do nothing else but advance and underline some points of view regarding the relationship between mass media and national security.

Media as a societal source in shaping national security policies.

James Rosenau (1980) first used the concept of societal source in his seminal work *Pre-Theories and Theories of Foreign Policy*, *the Scientific Study of Foreign Policy*. Any source on foreign policy is a mix between dependent and independent variables, between possible effects on

[2] Walter Lippmann, *U.S. Foreign Policy*, Little Brown, Boston, p.51, in Christopher W.Hughes, *Security Studies*, Routledge, 2011.

[3] David Baldwin, *The Concept Of Security*, in Christopher W.Hughes, *Security Studies*, Routledge, 2011, pp.24-36.

external or domestic environment. Analyzing the public opinion- foreign policy decision relation is one of the core directions in modern FPA[4] (foreign policy analysis).

All modern leaders (political, religious even military) from Obama, to Pope or imams utilize media to project their power. Nation state actors or non-state actors do the same thing through media / project power. Winning the hearts and minds of people in the new informational, technical age is about projecting power, desirability, welfare using media and new media tools.

In terms of perceptions, of popular and policy makers' images, the media have attributed "almost dictatorial powers."[5] The dynamics of media impact are different, varying, and diversified in different countries: authoritarian system, libertarian system or social responsibility system.[6] .A closed and dictatorial society can control the information and the messages that it wishes to convey to the rest of the world far more effectively than an open society. A democratic society becomes the victim of its own need for openness, transparency. The paradox of international affaires-public opinion relations is the absence of basic knowledge about foreign affaires, security, and the lack of interests on "alien" issues. The day-to-day lack of interests changes in times of trouble. The media may create new issues and new "trouble spots." As McCombs and Shaw wrote in 1972, the media may not tell us what to think, but they do tell, us what to think about. The capacity to define what is significant, what comprises a problem what constitutes an issue, what poses a crisis and what alternatives are available resides with the media.[7]

After the agenda is set ("news that fit to print," news of public interests, information's considered common goods) the media functions as *gatekeepers* by filtering the news and shaping the way it is reported.[8] In other word, the public debate appears not because events occur but because the media coverage of events.

Unfortunately, in the international arena, the major actors use media as a source of propaganda to promote some special and sometimes obscure interests in order to bring desired changes in the prevailing system. It is well known that the media has become a tool of American global agenda to influence the rest of the world for promoting its strategic interests in the post 9/11 age. In addition, the post 9/11 age is an age of war, a different kind of war but, by no means, war. Considering the fact that in war, psychological operation is not the only function which media is called upon to perform in the content of national security, some specialists agree that in a globalize society media becomes a lethal weapon against the enemy, and the population as well.[9]

"The camera and the computer have become weapons of war…This new and awesome technology enabled journalists to bring the ugly reality of war to both the belligerents and others around the world, serving as a powerful influence on public opinion and governmental attitudes and actions."[10] The new media power in the globalize world is well analyzed in George Packer article *Knowing the Enemy* [11]"if bin Laden didn't have access to global media, satellite communications and the Internet, he'd just be a cranky guy in a cave. "

As a conclusion, literature is full of studies about mass media's influence during wars. We will briefly present some of the most up-to-date preoccupations below:

- ✓ Media's role in perception management in conflict situations
- ✓ Media as a force multiplier in war situations- media management awareness should be taught in the armed forces training and education. "Dealing with the media in an insurgent environment has its own pitfalls so the media policy of the establishment during terrorist activities, militancy, and low intensity conflicts should be especially well defined."[12]
- ✓ Media as initiator and sustainer of mass motivation – the basis of policies and actions associated to different stages of on-going conflicts.
- ✓ Inability of some international actors to admit and counterattack the actions of the media, actions that may endanger military tactical and strategic objectives; media campaigns that increase the actors' vulnerability on an international level.

On the other hand, in peacetime the media is viewed as an amplifier, as policy change agents. Media serves as a checkpoint by ensuring that the policy-makers are taking the right decisions.

There can be little doubt that the media have the power to influence events in national security issues on international and national scene, sometimes by its design as a societal source, sometimes by accident.

The ways in which the dynamics of mass communication influence the military and national security leadership are countless and as complex as the influences of geography, politics, logistics, or any number of other factors beyond the balance of forces at the scene of conflict. Each situation in which media dynamics plays a role in the development, execution, and outcome of military strategies must be regarded as unique."[13]

Social media. Opportunity or Vulnerability?

Another complex issue in the media-national security connection is the new media or the so-called social media[14] considered by some specialists[15] a challenge for democracies. Why is that? Because social media channels such as social networks and blogs present powerful tools to spread information to the masses. Just remember the Moldavian twitter riot, the London riots, the Iran elections[16], the WikiLeaks disclosures, or the Arab freedom movements. Social media is about sharing information, is by its nature permission based. Debates on how social media may jeopardize national security began with the case of a former Israeli soldier who posted pictures of herself while on military duty.

According to media experts[17], what is scary about social media is what has been happening in terms of social media affecting national security. Besides its social positive effect, sharing the common goods (what are common goods in terms of classified information is another controversial debate), social media appears to be adding a whole new set of factors to be considered in relation with negative effects on national security and military or political interests. The debate on how far

the freedom of expression should extend is old but the power to instantly disseminate information in a real time viral fashion is new. In addition, it is not only about instantly dissemination. The classical deontological obligation to over verify the information you share it is no longer possible in the Blogosphere. What source is credible? The indicated source it is really the source of the message? Who is the good guy and who is the bad guy? Denial and Deception are more than ever difficult to counter on World Wide Web. What is propaganda and what is counter propaganda on the Web? The efficient use of the tools provided by the new media is the new military power because electronic media and social media are the most effective and powerful means of mass motivation. Motivation is essential for both aggressor and victim. Motivation and will are in fact important elements in the Clausewitz war equation: E= CxW, where E is efficacy on the battlefield, C military capabilities and W is the will, desire to use all the available capacities.

Andrew Mack (1975, 175-200), one of the first asymmetric conflict theoretician wrote in *Why Big Nations Lose Small Wars*, that W is in fact the interest. The weak actor interest for victory is sometimes more important than huge capabilities. So motivation, willingness, interest are important variables in modern wars; media is a force multiplier in perception management, psychological warfare and eventually is an instrument of war.[18]

Secrecy vs. liberty

"The role of press in democratic society is not to take national security into consideration, it is not to implement national policy, and it is not to be patriotic. It is to be aggressive, it is to be suspicious, it is to be skeptical, and it is to be hostile to the government." In our opinion that kind of remarks, even if a media anchor like Ilana Dayan makes them[19], are nothing more than media extremism. Nevertheless, the years since the 9/11 events have been years of extremes in national security journalism. Today a journalist, (classic journalism, or new-media journalism) is not just an observer but also an action player in the national security enterprise. As any over player in this special enterprise media must well aware of its responsibilities especially in an era, in which the tradeoff between liberty and security is one of the crucial issues. "In virtually every society, individuals and groups seek security against the state, just as they ask the state to protect them against harm from other state. Human rights and state security are thus intimately related. The most profound choice relating to national security is, therefore, the tradeoff with liberty." [20]

We live in a different world today than 100 years ago, so in our opinion Benjamin Franklin's words "Those who would sacrifice liberty for security deserve neither" are no longer correct. We have to make some difficult choices between liberty and security, but we must be well aware of the meaning of both.

Unfortunately, among other negative effects on the Romanian contemporary society, the communist tragedy made us unable to find a balance between freedom and security. Traumatized by the importance of the secret and secret services from the communist period, we often forget that keeping a nation's secrets ultimately influences its very own existence and even its well-being on the international stage. Romanians often forget that in a democratic society, intelligence services' role, either civil or military, is to protect the state and its citizens. This statement might seem a display of false patriotism that is why we have other arguments at our disposal: civil controlling over services, the partnerships between Romanian and western services, alliances, multi and bilateral relations on informative line. However, such undertaking concerning both the maturity of the Romanian society and that of the media's is quite complex when it comes to the secrecy issue and the economy of the presented material does not allow such a discussion.

[20] Richard Ullman, *Redefining Security, in International Security*, vol.8, no.1, 1983, p.129-153.

In authoritarian regimes the power of secret was accepted (since there was no other option), and preserved (most of the time through coercion). However, free societies and free press strove for the revelation of the secret, creating a contest between how much should be revealed and how much should be kept secret in the nation's interest. A performant PR department with „inteligent" intelligence public releases might be a valuable asset for an intelligence service in time of peace as well as in time of war/crises because the history shows that only in times of great danger for the nation, secrets were respected. The issues, which appear in this situation, are dangerous for the very existence of a nation: to what extent is the public aware of this danger? What secrets are important in such a situation? It is well known that secrets have their own "unit of measure". When media should get involved (that means we should have an informed media regarding security issues) and objectively distinguish between sensitive information of national security and mere news whose publication does not necessary provide a better understanding of the society.[21] Who could be an authority that could decide, beyond any doubt, what information can harm national security?

Difficult questions with complex and divergent answers. What we can emphasize is that, generally national security policy deals with life and death issues. Moreover, those issues apply not of "expendable" proportions of societies and these resources -but in the contemporary world with the very life and death of whole societies and their cultures.[22]

Generally, the issues regarding freedom-security is widely analyzed in literature by media experts and human rights fighters. This is why, most of the time opinions are not entirely objective. At the same time, experts in national security cannot be considered objective either. Most of the time, they are purposely ambiguous in order to avoid accusations of infringing human rights.[23]

From our point of view, both media scoops and secret keeping are of outmost importance in a society that considers itself truly democratic. The secret is not compatible with free societies. We have to understand the difference between classified information regarding national security and information, which is mere news for the public. The understating of such differences means nothing without proper laws. In the same time, we have to be able to answer the questions about how much information should be disseminated.

For a brief explanation of the difference between news and sensitive information just remember the Wikileaks case. The public debate starts in July 2010 with the online posting of 92.000 classified U.S. government documents relating to the war in Afghanistan. For a better confirmation of the disclosed materials, Wikileaks allowed three huge media organizations The New York Times, The Guardian, and the German Der Spiegel, access to the material in order to analyze and fix the information puzzle. Even if the leaked information proved to be already known the specialists drew many comparison to the leak of the Pentagon Papers in 1971[24] . The Wikileaks disclosures renewed an old dilemma – what kind of news is good, and what kind of news are bad for the citizens and for the nation's sake?

The U.S.Admiral Mullen in a Pentagon briefing comments: "Mr. Assange can say whatever he likes about the greater good he and his source are doing, but the truth is they might already have

[24] In 1967, Secretary of Defense, Robert McNamara commissioned a top-secret study of the Vietnam War. The study (Pentagon Papers), which filled-forty seven volumes, is about the detailed formulation of U.S.policy toward Indochina, including military operations and secret diplomatic negotiations.

on their hands the blood of some young soldier or that of an Afghan family. Disagree with the war all you want, take issue with the policy, challenge me or our ground commanders on the decisions we make to accomplish the mission we've been given, but don't put those who willingly go into harm's way even further in harm's way just to satisfy your need to make a point." On the other side of the liberty-security barricade is the freedom of speech fighters. Let us remember the reactions of the Anonymous[25] group in the Wikileaks case, or in the most recent israeli-palestinian conflict.

The sensitivity of sources and information is another complex and delicate debate. Sometimes even professional journalists may not fully understand the reasons why some information is sensitive without a classified bench. On the other hand, public officials have good reasons in demanding secrecy. Government officials rightly fear that the disclosure of secret information would undermine the national security. Sometimes, they are concerned that the disclosure would betray the confidence of intelligence partners.

The most uncomfortable conflicts arise when the public disclosure of a government secret is both harmful to the national security and extremely important to public debate. Therefore, it is a matter of costs and benefits in terms of liberty security dyad.

United States authorities established policies and procedures and assigned responsibilities for identifying unauthorized disclosures of classified information appearing in the media. As US document specifies it is addressed only to unauthorized disclosure of classified information that appear in the media and does not address to unauthorized disclosure that do not meet the criteria for significant disclosures. On this subject Gabriel Schoenfeld, senior fellow at the Hudson Institute Necessary Secrets, offers us a masterpiece: National Security, the Media, and the Rule of Law. Schoenfeld discovers a growing rift between a press that sees itself as a freedom of speech guardian, a “heroic” force promoting the public’s “right to know” and a government that needs to safeguard information or even intelligence vital to the successful conduct of national defense.

Conclusions

The link between national security and media is so tight and in the same time, so risky to comment. A framework for analyzing this link begin with the classical intelligence paradigm „need to know” but in the real modern world, characterized by new threats, new security vulnerabilities, new friends and new opponents, a new paradigm is shaping the theoretical framework - „need to share” paradigm.

A need to share paradigm as a starting point for analysing the national security-media linkage – needs a multivariables factorial design. We consider this design an important issue for further studies regarding the real impact of the need to know/need to share paradigms on national security, freedom, media and new media relations.

DAN DIACONESCU: THE POLITICS OF BREAD AND CIRCUSES

VALENTIN QUINTUS NICOLESCU[*]
SABINA BASIUL[**]

Abstract
Founder and owner of two television stations, Dan Diaconescu found the opportunity to rise the electoral support for his anti-system party through media channels in the circumstances of a tumultuous political year and a bitterly personal power struggle between President Traian Băsescu and Prime Minister Victor Ponta. He described the victory in the upcoming parliamentary elections as a start of the battle against the post-communist Romanian political class that impoverished the country. Through this battle lead by him and other members of his party, his „army of angels"[1], Dan Diaconescu says he can liberate the Romanian people and install „people's dictatorship" that will punish all the political class for the injustices suffered by them.
In a context of highly visible and influential populist discourse, this paper considers the self-representation of Dan Diaconescu and his People's Party – Dan Diaconescu during parliamentary election campaign in 2012. First of all, a multi-methodological approach was adopted to examine the key elements of national populist discourse: antagonistic struggle between politicians and citizens, popular sovereignty, corruption of the political class and popular mobilization for political change. After that, I will examine how this Romanian form of populism represents the rival version of western representative democracy, the populist democracy specific to Latin America based on direct representation embodied by a leader or a party capable to symbolize the power of the people. Within this frame, I will try to analyse to what degree Dan Diaconescu's populism enrolls in the logic of Latin American populism instead of a cultural or ethnic populism dominant in Europe.

Key words*: national populism, anti-system parties, populist discourse, People's Party – Dan Diaconescu*

Introduction

This paper's main purpose is to analyze to what degree Romanian populism, particularly Dan Diaconescu's, enrolls in the logic of Latin American populism due to the absence of democratic culture, the precarious socio-economic conditions, political instability and corruption inside the country. Understanding the emergence of PP-DD under these conditions, it will become clearer how this party succeeded in obtaining 14,64% of the votes for the Senate and 13,99% of the votes for the Chamber of Deputies[2] and, thus, becoming the third most represented party in the country.

In the first part of the article, I will try to explain the difficulty of establishing a definition of populism and highlight the common characteristics of these movements that mark them as populist. The second part is intended for assessing a distinction between European and Latin American populism starting from the concept of democratic representation. We will see that the absence of democratic culture and the long history of governmental populism are common features for Romania and most of the Latin American states and are at the basis of new populist movements. In the last part, I will examine the populist logic of action and Dan Diaconescu's discourse of and his People's Party's during parliamentary election campaign in 2012 to show how similar this party is with most of the populist parties in Latin America.

What is populism?

Despite the widespread use of the notion of populism, all analysts admit it is very difficult, even impossible to establish a definition encompassing all features that populist manifestations share. That's why most of the literature on populism is characterized by reluctance in assigning this concept a precise meaning. Most often, as Ernesto Laclau stated[3], conceptual apprehension is replaced by appeals to intuition or by descriptive enumerations of several different features whose relevance is based rather on their level of proliferation.

Laclau considers the impasse that political theory reached in analyzing populism is due to the limitation of the ontological tools available to political analysis. Thus, the impossibility of conceptual apprehension is based on, according to Laclau[4], limited methods used by political science to approach the problem of how social agents integrate all political experiences faced over time.

I have chosen to discuss only Laclau's theory of populism because he tries to overcome the deficiency of which I have spoken above starting from the construction of popular identities as a set of strategies that make possible the manifestation of the people as a collective actor. In his analysis, populism is described in positive terms and the rationality inherent to its political logic is not excluded as it happens in most of the literature where populism is seen as vague and irrational. Moreover, I can say this theory positions Laclau on the side of those who rehabilitate the democratic nature of populism by claiming that democratic identities and populist mode of identification are based on the same logic. His theory induces us to see populism as a mode of identification rooted in the big gap between political institutions and people and highlights the limitations of an entirely institutional approach of democracy[5].

According to Laclau[6], by populism we should not understand a movement with a specific social base or ideological orientation, but a type of political logic. While social logic involves following rules, political logic is related to the institutions of society. When a process of social change occurs and it gives birth to a global political subject that brings together a plurality of social demands, political space divides. Thereby, identities are created by establishment of a political border between fulfilled democratic demands as status quo on the one side and unfulfilled democratic demands on the other. These demands not fulfilled by those in power because they are reluctant or incapable are often institutionalized in a political movement. In these conditions of emergence, whatever the social or ideological content of the political movement under discussion, we are dealing with a form of populism[7].

Laclau's conceptual characterization of populism has two other aspects, one concerning naming and the other one concerning affect. I will discuss only the first one of them due to its relevance for the paper[8]. Because the term "people" expresses the ensemble of social agents as such, without suggesting there exists a given unity of the group, the heterogeneity of the demands is only transformed by the popular identity into a unity[9]. This unity is false since the real existence of a unity is impossible as long as the unfulfilled demands are an expression of the structural system, not of the real demands of individuals. According to Laclau[10], this situation involves two consequences. First of all, the moment of unity of popular subjects only exists at the nominal level, not at the conceptual one. Second of all, the limits between the demands that are going to be incorporated into the system

[8] The second one treats populism as a Lacanian object of politics and due to its psychoanalytic contents it is not necessarily relevant for this paper.

[9] Laclau, *On Populist Reason,*118.

[10] Ibid., 118.

and the ones that are going to be excluded are blurred and always subject of contesting. Thus, the language of a populist discourse is always imprecise and changeable because it attempts to operate with a social reality that is heterogeneous and changeable, not because it implies an inappropriate understanding of the wide world[11].

By understanding populism as a political logic, Laclau succeeds in explaining his flexible nature as it can be used as a logic for movements with distinct ideological contents from far-right to radical left. Moreover, he highlights another two major features of populism[12]: his radical democratic substance and the common roots shared with democracy in construction of popular identities. But, on the other side, it has two major problems[13]. First of all, Laclau fails to analyze undemocratic side of populism. Although he does not affirm that populism is necessarily democratic, his arguments that democracy depends on the construction of a democratic people and that democracy is not always liberal do not take into account this side of populism. Second of all, he tends to understand populism as a natural form of radical politics or even as a natural form of politics. Laclau claims in an earlier text that 'if populism consists in postulating a radical alternative within the communitarian space, a choice at the crossroads in which the future of a given society hinges, does not populism become synonymous with politics? The answer can only be affirmative"[14]. The problem here is that not all politics in radical and not all radical politics is populist and furthermore, status quo and its radical alternatives are all political constructions[15]. Even if Laclau uses a definition too restrictive for politics to explain populism, I think this theory represents an important contribution to the literature on populism because it incorporates three important features frequently neglected, especially the one concerning the flexible nature of populism.

Besides these features of populism defined by Laclau, I will present a list of relevant elements frequently encountered in populist movements, especially at the discourse level. Because of the wide variety of populist movements, I would like to mention from the beginning that this list will not be complete and it can be extended by the reader. More than that, due to the flexible nature of populism, we can find populist movements where a part of these elements are missing. I have chosen to add this list alongside with the short presentation of Laclau's theory of populism in order to create a multiple picture of a populist movement no matter what social base or ideological orientation it has.

- antagonistic struggle between politicians and citizens (populist movements are defined by fighting against power structure and political elites whose interests are in conflict with interests of the "people"; the political elite is described as corrupt and degenerate)
- popular sovereignty - "power to the people" (populist movements claims that represent popular sovereignty[16] because people should be the source of all political power as long as "the will of the people is supreme over every other standard"[17]; this is why a lot of them militates for direct democracy so that decisions will be made by referendum or popular initiative[18])
- three perspectives of how they relate to people (their appeal is to people within the nation, the common people – plebe, and to the ethnic people)

• a different perception of democracy (populists perceive democracy rather as an affective relation of mutual identification between people and government than an institutional practice and a culture of political responsibility[19])

• popular mobilization for political change (an essential feature of populist movements is the political mobilization of the people directed by the leader for the promise of political system change and barrier between political elites and people abolished[20])

• apolitical temporality (populists promise to eliminate the time barrier between personal or collective desires and their fulfillment, time barrier that defines complexity of political action[21])

• anti-elitism (the fight that populist movements are taking is not only against power structure and political elites, it is against all dominant ideas and values in the society presumably imposed by elites[22])

• charismatic leadership (an important feature of populist movements is the figure of a providential leader[23] that represents the will of the people; populists create a personal relation between leader and people not only by personalizing him but also rejecting institutional structures, including bureaucratization[24])

What do Romanian and Latin American populism have in common?

As we could see, because every form of populism is rooted in the socio-political reality where it appears, we cannot use a list of key elements of populist movements to analyze different forms of populism from different parts of the world. This type of approach is more likely to be misleading. Following Laclau's theory on populism, I have decided to start my analysis with the concept of democratic representation and the general conceptions about it. Hanna Pitkin[25] mentions in one of her works the occurrence of two conceptions about democratic representation which may serve as a central element in development of populist movements. The first conception, dominant in the world, is based on the delegation of power through elections to a limited number of individuals that should act according to people's interests. This is typical for modern representative democracy and develops a social distance between the representatives and the represented. Opposed to this version is the second one, based on direct representation embodied by a leader or a party capable to symbolize the power of the people. This is typical to populist democracy and its origins are exclusively Latin American.

These two conceptions about democratic representations and their versions of democracy can be useful to make distinctions between European and Latin American populist movements. In Central and Eastern Europe, populism has multiple forms but the great part of them can be certainly associated with the first conception I have talked about. That's why for the most part it is reduced to ethnic and cultural populism. Guy Hermet[26] even talks about two contradictory forms of popular identification that we can find in the literature about Eastern European populism. According to the first of them, people's identity is defined by a number of aspects concerning language, religion and even physical appearance. Assuming that people are carriers of a set of genes propagated from a generation to another, it appeals to a past related to the golden age of ethnic genesis. Contrary, the second form of popular identification is a product of common history that leads to the development

[19] Guy Hermet, *Sociologia populismului* (Bucharest: Artemis, 2007), 9.
[20] Ibid., 39.
[21] Ibid., 39.

[26] Guy Hermet, *Sociologia populismului*, 212.

of a collective memory. This memory gives birth to a feeling of political membership of a collectivity that most of the time is intermingled with the national state.

Although the second form of popular identification is the only one accepted, and present in our days, we can find traces of the first one in the program and discourse of some European populist movements. This could explain partially why these movements often have reactions related to linguistic particularism and religious intolerance. More than that, analyzing the increasing importance of national state in their activity and discourse, we can see a composite that incorporates elements from both forms of popular identification. That's why East European populist movements appeal to an aggressive nationalism that refers more to primordial people than to the body of citizens of the national state in its actual acceptance[27].

Latin American populism, on the other side, represents the rival version of western representative democracy, populist democracy. It is based on the political participation through the agency of a leader or an entire party that represents the power of the people. This way, populist movements respond to the popular demand of real citizenship, people being convinced that they do not know more than some disappointing judicial or electoral features of it[28].

In Europe, we can talk about three stages of manifestation of democratic citizenship[29], stages that have gradually contributed to the construction of democratic culture. First of them is legal and refers to the recognition of equality before the law, the second one is political and it is connected to universal suffrage and the third one is rather social than political and is assigned to the development of welfare state. Contrary, in Latin America we can talk about the absence of a democratic culture as a process where three aspects[30], partially opposed to the ones that contribute to the construction of democratic culture in Europe, had a great significance. Firstly, for a long period of time a generalized non-citizenship was imposed by dictatorships and oligarchic regimes. Secondly, there was a false liberal citizenship reduced to a ballot that most of the time was falsified. Last but not least, populist citizenship appeared and not succeeded to change anything, managing only to increase the legitimacy of the ruling rich minority.

In Romania, although the democratization process had started earlier than most of the Latin American states, the absence of a democratic culture is obvious. This absence is foremost a consequence of failure in the history of a stable and enlightened governance. Even if we are tempted to blame the communist regime for the lack of democratic experience, even before the World War II Romania didn't have solid democratic basis. Although, the four decades of communist dictatorship under Gheorghe Gheorghiu-Dej and Nicolae Ceaușescu destroyed every trace of democratic culture for Romanian people. Generalized non-citizenship and false elections were just a few of the arrangements to maintain power over the people and to block democratization attempts. After the violent overthrow of the communist regime in 1989, Romanians had to build democratic structures without a social and political base and this was a tougher challenge for Romania than for almost any of their post-Communist neighbors. More than that, after more than twenty years Romania is heavily criticized for the culture of lawlessness, corruption and winner-take-all politics. Taking all these features in consideration, we can see that at least two of the three aspects that contribute to the absence of democratic culture in Latin America are playing the same role in Romania.

Romania and the majority of Latin American states do not share only the absence of democratic culture, but also the long history of governmental populism. Unlike most of the European countries, in Romania, governmental forms of populism were always in front of its non-governmental and subversive forms. The first manifestation of Romanian populism coincided with

[27] Ibid., 211.
[28] Ibid., 205.
[29] Ibid., 204.
[30] Ibid., 204-205.

the formation of this country as a political structure[31]. Over time, it took different forms from what we can call boulangism under Marshal Alexandru Averescu to the national populism professed exclusively by the state, under Nicolae Ceaușescu[32]. The domination of these forms of populism created the environment for the development of what we can call populist citizenship in Latin America. That's why I could say that we can look at the appearance of populist citizenship as an element that contributes at the absence of democratic culture not only in Latin America, but also in Romania.

People's Party – Dan Diaconescu

One of the actors that stand out from the others, through his populist logic of action and discourse, in the parliamentary elections from 2012 is Dan Diaconescu, the leader of People's Party-Dan Diaconescu. Founder and owner of two television stations, Dan Diaconescu found the opportunity to raise the electoral support for his party starting even before the election campaign through media channels. This type of populism, called frequently media populism is specific to Latin America but now it has spread all over the world. Its central element is the television that helps neo-populists to communicate with the masses as radio did for traditional populists, but it is definitely more effective in communicating their charismatic qualities[33].

Therefore, a month before the legal start of election campaign, Dan Diaconescu arrived at Romania's economy ministry with seven bags containing three million euros to pay the overdue wages of the workers from a chemical plant called Oltchim. The money didn't eventually get to the workers but the electoral support for his party was considerably increased and, since then, he started to call himself "Romania's next president" on the nearly daily appearances on one of his television stations, OTV[34].

Dan Diaconescu found the opportunity to increase the electoral support for his party in the circumstances of a tumultuous political year and a personal power struggle between President Traian Băsescu and Prime Minister Victor Ponta. Although the coalition lead by Prime Minister Victor Ponta was always favorite to win the elections and won them in a convincing manner[35], his credibility was damaged after an accusation of plagiarism in his PhD thesis and the failed attempt to impeach President Traian Băsescu in the summer of 2012. The president, also, was not having a high credibility and, more than that, he was deeply unpopular due to his backing of austerity measures and his abuse of power. Acording to the turnout of the July 2012 referendum, 87,52% of the people who voted agreed to impeach President Traian Băsescu[36].

These are only few of the problems that contribute to the political and economical instability of Romania. Thenceforth, I will present more of them. Regarding the relation with the EU, although Romania joined it six years ago, now it is brought into question if the country is apt to be part of the block. It is considered a second-tier member and it is excluded from the passport-free Schengen zone[37]. Furthermore, Romania is the second-poorest and one of the most corrupt EU states[38] and its

justice is constantly subject to monitoring. In the last seven years, 23 politicians have been sent to trial for corruption[39]. Although there exists a small number of very rich people, millions of people are living from subsistence farming or minimum wages[40]. More than 30 percent of residences have no running water and almost five percent do not have mains electricity[41].

Taking all these aspects into consideration and, also, the absence of a democratic culture and the long history of governmental populism that I have talked about earlier, we can understand the emergence of People's Party – Dan Diaconescu, the logic behind the actions of Dan Diaconescu and his party and the succes registered in the elections. More important than that, we can see why Dan Diaconescu's populism enrolls in the logic of Latin American national populism instead of a cultural or ethnic populism dominant in Europe. The political instability, the precarious socio-economical conditions and corruption are features of a larger framework that constitutes the basis of populist movements in poor countries and Latin America is the main scene for this type of populism.

Under the conditions of a political crisis caused by the widespread discontent with the two major parties and their leaders, seen as arrogant and corrupt, PP-DD appeared as a anti-system party capable to assemble the people who are dissatisfied with the actual political establishment. Behind the wheel of a white Rolls Royce in his shiny purple jacket, Dan Diaconescu promises to save the Romanian people from the poverty caused by the political class whose actions are exclusively dictated by their personal interests. "Once in power we will make things right. We will have bread, glass and brick factories like in the old days,"[42] Diaconescu told to the voters from Târgu Jiu, the city where he was running for parliament. As we could see, another essential feature of populist movements appears. Dan Diaconescu talks about the political mobilization of the people directed by him for the promise of political system change starting with "the revolution of the vote" ("If we all leave the house on election day, we will succeed. Only this way we could make a country like abroad, as young people say ... I propose you to make a revolution of the vote, this year in November..."[43]).

Unlike most of the populist parties in Europe, PP-DD denies a part of the features of what we call democratic power. He speaks about installing the "people's dictatorship" to punish the political class for impoverishing the country. In the name of the people, he plans to seize illegal assets acquired by doing business with the state and to create an institution called People's Court for people to be able to decide how politicians should be punished for their injustices[44]. The anti-elitism is a basic element for his party so that their proposals are based on the idea that power elites and bureaucracy are inefficient and corrupt (Romania does not necessarily need skilled people, but needs people that won't steal anymore"[45]).

Therefore, people's problems can only be solved by simple persons like him and "his army of angels"[46]. That's why, as most of the populist leaders from poor countries, he is admired by simple people because of his image as a man of a modest background who made good and didn't forget where he came from. Although he drives a luxury car, he has never fixed his teeth and doesn't talk too much about his personal life[47].What makes me also believe that Dan Diaconescu's populism is closer to Latin American populism than to the populist forms dominant in Europe are the party's

[47] Ibid.

inapplicable simple proposals regarding common problems of the people and his charismatic leadership. PP-DD is proposing to pay entrepreneurs 20,000 euros for starting a new business, to raise salaries and pensions, cut sales tax to 10 percent, build 200.000 apartments for poor people and people to stop paying installments for twelve months. Although it is impossible that this measures to become real, proposing them has a great impact on public because they, hypothetically, solve the simplest problems people confront with in everyday life.

Conclusions

As we have seen, there are two rival democratic representations that can help us make a distinction between European and Latin American populism. The first conception, dominant in Europe, is based on the delegation of power through elections to a limited number of individuals. Opposed to this version is the second one, typical for Latin America, based on direct representation embodied by a leader or a party capable to symbolize the power of the people. One of the basic conditions of the emergence of the second version and of Latin American populist movements is the absence of a democratic culture, absence that we can also see in Romania, foremost as a consequence of failure in the history of stable and enlightened governance.

But the absence of a democratic culture is not the only element that contributes to the emergence of the national populism specific to Latin America. People's Party – Dan Diaconescu arisen due to other favorable circumstances, like political instability, precarious socio-economic conditions, corruption and winner-takes-all politics. It is an anti-system party designed to assemble the people who are dissatisfied with the actual political establishment.As most of the populist movements from Latin America, it has a charismatic leader and propose simple but unapplicable solutions for the simplest problems people confront with in everyday life. Although it is impossible this measures to become reality, by proposing them, Dan Diaconescu managed to increase the electoral support for the party, because, in a poor country, these are the problems that really matter for people and they want simple solutions for them, solutions that they can understand.

HOBBES' POLITICAL PHILOSOPHY

MHAI NOVAC*

Abstract
This is basically an attempt at an original conceptual reconstruction of Hobbes' philosophy as set in Lehiathan, namely one in the view of which Hobbes was neither an atheist nor an absolutist, as the standard interpretation holds, but rather what we could call an agnostical pragmatist (fact which, quite surprisingly, places Hobbes in the company of Burke). More to the point, my basic claim within this paper is that Hobbes was not such an 'enemy of individual freedom' as we traditionally hold him to be and that his thought was just as attached to the notion of individual freedom as the later contractualist views. The difference however, arises from the fact that Hobbes, unlike Locke, Rousseau or Kant, was what we could call a voluntaristic determinist and consequently viewed human freedom not so much as 'unhindered action derived from reflective choice', but rather as what we could call 'reasonable fulfillment of the basic human inclinations' (self-interest). As such, I will analyze the three main focal points of Hobbes' thought, namely (i) human nature, (ii) the principle of association and (iii) the principle of authority. More specifically I will try to offer a perspective on the link between his voluntaristic determinism, his notion of legitimate absolute coercion (sovereignity) and his political theology (the view that any form of political authority rests on a religious legitimacy) in trying to demonstrate how all these were Hobbes' specific way of seeking to find individual freedom a place under the sun.

***Keywords**: self-interest, behaviorism, sovereignity, contract, commonwealth*

I. Introduction

Hobbes' thought was deeply struck by the political and social events from during the English Civil War (1642-1651). As such, very originally, its basic assumption is that the greatest threat to individual freedom is constituted not so much by tyranny or despotism, but by anarchy. In other words, the essential claim of his political philosophy would be that the unregulated freedom of all is more harmful to the freedom of each than any form of authoritarianism, however arbitrary and cruel. He sets his arguments in this respect in three main works: *The Elements of Law* (1640), *De Cive* (1642), *Leviathan* (1651).

In a general sense, the intent behind Hobbes' philosophy is twofold: (i) the determination of an eventual scientific principle of morality and politics; (ii) pacifism, namely the edification of a system that predisposes people to the accomplishment of their civic duties.

Noticeably, the former finality is rather theoretical, while the latter practical. Therein resides the strong link between these two finalities which actually belongs to the specific British version of the Enlightenment: knowledge means power. In this respect, the influence of Bacon on Hobbes is rather obvious as the basic idea in the former's thought, i.e. that the essential finality of knowledge is the domination of Nature, remains unaltered in the latter's philosophy. As such, according to this vision, the main task of knowledge is not so much of a theoretic and descriptive, but rather of a practical nature.

II. Contents

This constitutes an adequate starting point for the understanding of Hobbes' criticism of classical philosophy (Socrates, Plato, Aristotle, Plutarch, Cicero). In this respect, Hobbes adopts Machiavelli's argument in claiming that all traditional political thinkers, notwithstanding their *doctrinary peculiarities*, shared the same fundamental flaw: *they aimed too high*, i.e. they derived their claims from an idealized and artificial conception on human nature, which condemned their

* University Assistant, PhD, Nicolae Titulescu University, Bucharest (novmih@yahoo.co.uk).

vision to utopianism; they[1] made up imaginary laws for imaginary communities. He, on the other hand, will allegedly derive his political considerations empirically, i.e. on the basis of the observation of human behavior in its most *natural* environment: society. More specifically, Hobbes claimed having tried to arrive at an universal principle of morality, that is *natural law*, not so much on the basis of reason as such (as a supposed fundamental and irreducible human faculty) but of a motivation which, at least empirically, seems far more powerful: self-interest. To the extent that he is the first to systematically integrate inductive empirical observation with deductive reasoning, Hobbes can be considered the first *political scientist*. Therefore, in order to understand his political theory we must first take a glimpse of his wider epistemological perspective.

As such, in his understanding, philosophy and science[2] are essentially faced with two complementary methods:

(i) the *synthetic* method, based on deduction, which, essentially, infers from general to particular, i.e. from the prime causes to their apparent effects;

(ii) the *analytic* method, which infers regressively, i.e. from certain apparent phenomena (effects) to their supposed prime causes;

In this context we must consider Hobbes' claim that there are two fundamental principles of the universe, i.e. *the body* (*matter*) and *movement* (the displacement, as the changing of *the locus*): "(…) every part of the Universe is Body; and that which is not Body, is no part of the Universe: and because the Universe is All, that which is no part of it is nothing (…)".[3] At the same time, as we have seen, with respect to the elucidation of the human nature, Hobbes preferentially adopts the analytical method. As such, he sets about from the observation of the actual empirical behavior of humans and then regressively and inductively draws general conclusions on the prime principles of any motivation whatsoever. As such, he claims, the facts on which he grounds his analysis constitute common knowledge accessible to anyone from one's own everyday experience. In this respect, he suggests in *Leviathan* that anyone can test the validity of his considerations by pure introspection: anyone who would take the time to look within oneself and observe one's own thoughts, passions, natural inclinations, more precisely their influence on one's own behavior would arrive at the same conclusions.[4] Basically, what we are dealing here with is an empirical and causal conception on human nature, i.e. one in which the human behavior can be understood as *passion mechanics*, thereby excluding all matters of purposive explanations of our actions, namely of exterior motivations for the individual behavior. The reason for his avoidance of this sort of teleological explanations is, as he claims, twofold: first, as the *objects of passions* vary across individuals depending on heredity, biology, education etc. and second, as they can be, and for the most part actually are, dissimulated. *In nuce*, we could say that with regard to human nature Hobbes is a deterministic behaviorist.

Further on, in matters of *morals* he is a nominalistic relativist – in his conception, good and evil are nothing but words, i.e. generic labels applied to various situations, the contents of which depend upon their specific relation to the individual observing them. More to the point, according to Hobbes, when someone claims a thing to be *good*, we should not understand by it anything more than that it provides the respective individual a certain form and amount of pleasure. Moreover, in his

---

[1] Just as Bacon did, actually.

[2] This being represented, first and foremost, by geometry, the only one that, according to him, had achieved at the time a series of undisputable conclusions.

[3] Thomas Hobbes, *Leviathan*, (New York: Oxford University Press, 1996), 447.

[4] When Hobbes speaks of introspection we should take the notion in a generic sense, namely regarding only those motivations which are valid for humans in general. Precisely on this ground Hobbes claims that each of us, provided that he learns how to observe and interpret his own motivations, will manage in knowing the others' motivations as well.

view, inclinations are much stronger than rational thought: "for the Thoughts are to Desires, as Scouts and Spies to range abroad and find the way to the Things desired."[5]

Paradoxically, although a critic of both Socrates and Thomas Aquinas, he shares their notion that the principle of the moral law should be sought within nature, *human nature* that is. This basically constitutes one of the first modern explicit formulations of the so called *natural state theory*. But however modern in its formulation it actually represents an attempt at providing an answer to a very old philosophical question: are human beings *moral* willingly or only when constrained to being so? And as you could imagine, Hobbes' answer corresponds to the latter alternative, i.e. that humans act morally only by constraint. All the more, against Aristotle, he claims that human being is not a *social animal* and that only due to constraints within natural state as such humans come to associate with each other. More to the point, the natural state constitutes for Hobbes that pre-political condition in which all humans live without any form of civic government or authority which would inspire them fear of any sort. As an observation, Hobbes does not claim that any such state has necessarily actually existed at some point in human (pre-)history, but that such states exist in his time in areas which, for one reason or another, are placed outside the boundaries of the *proper order* of things: America, the European states during times of civil war (England), the inter-state relationships during times of war etc.. In a general sense, we could claim that to Hobbes, the natural state constitutes more of a counterfactual model which serves to lay bare and clarify those aspects of the natural inclinations of the human being which become relevant when seeking to design an adequate political and social order.[6] More to the point, allegedly, through this model we can determine the motives, purposes and objectives which make human individuals want to form political communities by association. Once determined, the problem becomes designing an optimal social order for the accomplishment of these finalities. This is basically Hobbes' task in *Leviathan* and, as we can see, it is set from a fairly deterministic perspective on human nature.

Now, for a more detailed exposition of the aforementioned problematical and conceptual framework. Synthetically, Hobbes' initial preoccupation in *Leviathan* would amount to the following question: *How would human condition look like in the absence of the civil society?* As a first observation, Hobbes states that humans are much more equal with each other than has been previously acknowledged and, surprisingly, that the most relevant of these supposed equalities is represented by their equal possibility of killing each other. The importance of this type of equality derives from the fact that, in his view, self-preservation constitutes the fundamental interest of any individual. This is the basic interest which all human individuals essentially share and consequently the collective backbone of any functional political community should reside in the fear of death. However, Hobbes goes on, equal abilities lead to equal *hopes of wellbeing*, respectively to equal material claims and therefore to inter-individual competition for acquiring and securing those rare things which make the object of everyone's particular interest. In other words, in his search for personal security and wellbeing, each individual comes to the point of wanting to subjugate the others precisely in order to eliminate any potential threat. On the other hand, happiness as fulfillment of personal wellbeing constitutes, in Hobbes view, not so much an *immutable state of grace* but a perpetual transition from one object of desire (which has been attained) to another (which although unattained is attainable). Moreover, in this perpetual attempt, the individuals seek not only to acquire the desired objects but also to secure and universalize their acquisition, that is to ensure their permanent possibility of attaining every conceivable object of desire. As we can see, in Hobbes view, happiness and power are two faces of the same coin.

On the other hand, power, he claims, has a special relation to vanity, understood as an innate tendency of the human individual towards self-righteousness and –flattery. And this self-evaluation is always of comparative nature, that is it takes place on the background of the relationships between

[5] Idem 48.

[6] I.e. both just and functional.

the respective individual and the others: any man wants for the others to appreciate him as much as he appreciates himself and when this narcissistic need is not met by the others (treating him with arrogantly and disrespectfully) he is unavoidably overwhelmed by the desire to destroy them.

This subjectively biased comparison principle is used by Hobbes to explain most of the collective activities of humans, even those destined for personal recreation. More precisely, when they are together, humans try to share activities that produce laughter and amusement. Laughter however is, in Hobbes view, caused either by the attainment of sudden glory, or by the perception of something deformed or misplaced in the other and in comparison to which the respective individual comes to see himself as obviously superior, thereby becoming overwhelmed by self-admiration. Precisely this latter aspect makes Hobbes establish a sharp distinction between honor and justice, claiming that the former has nothing to do either with the latter, or with morals in general – in his view, honor does not constitute anything more than the acknowledgement of someone's superiority, be it harmful or helpful for the person acknowledging it.

Further on, according to Hobbes, there are three main causes potentially responsible for the conflict between individuals: (i) competition, (ii) distrust, (iii) fear. All three reach their apex within the state of nature which is therefore basically defined as *a war of each against all*. In the *Leviathan* he provides it with the following characterization: "men live without other security, than what their own strength, and what their own invention shall furnish them withal. In such condition, there is no place for industry; because the fruit thereof is uncertain: and consequently no culture of the earth; no navigation, nor use of the commodities that may be imported by sea; no commodious building; no instruments of moving, and removing such things as require much force; no knowledge of the face of the earth; no account of time; no arts; no letters; no society; and which is worst of all, continual fear, and danger of violent death; and the life of man, solitary, poor, nasty, brutish, and short."[7]

Obviously, in the state of nature there is no possibility of addressing any form of justice, as justice and injustice lack any meaning without a preexisting law which, in this case, doesn't exist. As Hobbes puts it, within the state of nature *man is alienated from his kindred*. In a wider context, this argument is set against the classical Aristotelian view regarding the supposed social nature of man, claiming quite the opposite, i.e. that the civil state is conventional and not natural. However, this does not mean that, according to Hobbes, human nature would lack any intrinsic forces and tendencies towards association and *civility*, but only that the anti-social tendencies within man are just as powerful as these, if not more powerful given the proper conditions. Essentially, to Hobbes, nature constitutes not a model, but an anti-model for society, precisely because the latter appears through the negation of the former: by observing nature we can learn what not to do as citizens.

Consequently, he will attempt to find the two categories of *natural forces*, namely those hostile and those favorable to the peaceful coexistence of the individuals, respectively to determine those mechanisms by which the former can be inhibited and the latter strengthened. His solution resides in a certain dialectic between the fear of death and the appetence for comfort (along with the hope of attaining it by productive activities). In other words, reason is the key in finding the proper balance between these three passions (fear, desire and hope) and employing them for the better use of mankind, i.e. peaceful association. We must take note of the fact that, for Hobbes fear of death and the desire for comfort have an ambivalent status as they belong both to the pacifying and to the conflictual factors. Vanity, on the other hand is, in his view, a solely negative passion, belonging exclusively to the latter category. Synthetically, his task in *Leviathan* would basically amount to the attempt of determining those mechanisms by which reason can (i) direct the fear of death and the desire for comfort strictly towards their pacifying consequences and (ii) dominate and even eliminate vanity. In this respect, Hobbes' mechanistic determinism with regard to human nature becomes quite apparent: it represents nothing more than an immutable system of forces which, if properly known and influenced, can be manipulated just as easily as any physical system. The only specific aspect of

[7] Thomas Hobbes, *Leviathan*, (New York: Oxford University Press, 1996), 84.

this type of system is the fact that the law governing it is the moral one, i.e., in Hobbes' terms, the *natural laws*, in the hierarchy of which the supreme status is obviously held by self-preservation. In other words, all laws and political obligations stem from and are subject to the individual's natural right to self-preservation. Quite interestingly, although the political finality of this argument is different[8], this assumption places Hobbes in the proximity of liberalism. The philosophical difference however is quite important, as while for Hobbes the grounding principle of self-preservation resides in volition (passions, inclinations, instincts), for the liberals lies with pure reason. The apparent advantage of Hobbes' view in this respect is that to the extent that these so called *rights* are backed by subjective passions they attain some measure of self-sufficiency – they don't have to be imposed as they correspond to the fundamental affective principles of human existence: self-interest. Basically, what we are dealing here with is an attempt of legitimating a peaceful society on the grounds of egoism. In fact, these are the most proper terms in which we can refer to Hobbes' understanding of the concept of *natural right*: the absolute freedom in doing those things instrumental to one's own self-preservation and, complementary, of abstaining from those that endanger it. All the more, just as for Machiavelli, the right of pursuing a certain finality implies the right to the means necessary for attaining it.

Further on, to the extent that individuals vary both in intelligence and prudence (i.e. the natural capacity to anticipate danger), some understand better than others the necessities instrumental to self-preservation. However, notwithstanding intelligence, no man in particular is in fact sufficiently interested in the wellbeing of the others. Therefore, in the state of nature, each individual must be the only authority in judging the means necessary to one's own self-preservation and, consequently, of using them in any way fit to this end. Basically, in the state of nature, *every man is entitled to everything*. As previously stated, all this belongs to the so called *natural rights*.

Natural laws, on the other hand, are rational precepts instructing individuals with respect to the alternative means instrumental to avoiding the various dangers to their self-preservation. These laws stem on the one hand from their natural rights, and on the other, from their irrational desires. Quite expectedly, the ground of the system of natural laws is peace. Correspondingly, the basic natural law states that people fundamentally seek peace and are entitled in this respect to any means necessary in protecting themselves against those in relation to whom there can be no peace. All the other subsequent natural laws are instrumental to this basic one.

As such, the first natural law[9], states that any individual must renounce his potential claim on all things[10] when all the others show themselves willing in doing the same, that is to limit oneself to as much personal freedom with respect to the others as he is willing to acknowledge on their part with respect to him. This is the covenant that grounds the so called *social contract* by which the political community is born. Consequently, within the political community each individual pledges himself by contract with respect to all the others in obeying such authority (person, council, institution) they have acknowledged together as sovereign. This is what we could call political sovereignity. Moral sovereignity, on the other hand, further belongs to the individual, i.e. to one's own right of self-preservation. In this context, the task of the political community resides precisely in making sure that the two types of souveregnity converge as much as possible, the product of this convergence being peace. More precisely, according to Hobbes, each individual becomes part of the contract by virtue of his own personal interest, but, once he renounced by contract a certain right for the benefit of protection on the part of the community, he implicitly obliges himself not to hinder in any fashion those in favor of which he renounced the given right (the Sovereign) in making use of it and of its corresponding authority. In short, people, by their own personal agreement, pledge to obey the civic duties stemming from the contract. This is what Hobbes calls the *covenant principle* and it

[8] The legitimation of the absolutistic monarchy.
[9] I.e. primarily derived from this fundamental one.
[10] *Naturally valid* in the state of nature.

represents the institutional ground of justice. As such, any agreement is based on trust, but how can this trust be ensured? And his answer is that by the reciprocally shared fear of the consequences of breaking the agreement. In fact, this is precisely why there was no trust among individuals in the state of nature, namely because there was no authority equally feared by all when envisioning the perspective of breaking the agreements. Consequently, in Hobbes' view, before speaking of justice and injustice, there must be (i) an initial agreement with respect to the moral meaning of these terms[11] and (ii) a specific legitimate power, i.e. a *sovereign*, equally coercive with respect to all individuals who partook in the initial contract. In sum, the sovereign must make sure that the fear of the punishment is always greater than the attraction of any potential benefits from breaking the contract.

In a general sense, what makes Hobbes special in the philosophical context of his age is the attempt to ground political legitimacy on morality and morality on self-interest (and correspondingly, fear): we could say that, paradoxically, to him, sovereigns are morally bound to keep their soveregnity undivided, unbroken and absolute as otherwise they would fail to meet the self-interests of all his subjects on which the very existence of the state rests.[12] Given this specific view on sovereignity, Hobbes criticizes the Aristotelian notion of justice according to which the legitimacy of any political authority derives from heredity. More precisely, according to Aristotle, some individuals are born to rule and others to obey. In this univocal relationship of authority of the former with respect to the latter, the role of the leaders is to distribute benefits proportional to the virtues/defects of each individual. This is what in moral philosophy is called distributive justice. Hobbes' objection is that this notion is (i) false, as in the state of nature (i.e. by birth) all people are equal and (ii) dangerous, as it encourages vanity which can bring upon the dissolution of the political community. As such, in his view, true distributive justice requires the existence of an impartial arbiter whose fundamental role resides not so much in distributing benefits depending on every individual's merits or misconducts but in treating everybody in keeping with their natural rights, i.e. equally: if he is to be permissive he must be equally permissive with all, if he is to be oppressive, he is to be equally so with all.

We must take note of the fact that a very frequent objection to this notion of natural equality is to say that nature, quite obviously, doesn't make all men equal: some are more intelligent than others, some are born stronger or otherwise gifted than others. Hobbes' counter-argument at this point is quite interesting (and penetrating actually): if nature has made all individuals equal, this equality should be acknowledged as such, and if it didn't, people, given their essential egoism, would never agree to acknowledge their own inferiority with respect to others, and all the less to form communities with other such *superior individuals*; as such, claims Hobbes, even if natural equality between individuals were a false notion we should still pretend it were a true one for the sake of peace and of the political community as such.

Roughly, his moral conception amounts to the golden principle: *do unto others what you would have them do to you*. For the argumentation of this view Hobbes attempts a pragmatic reformulation of the theory of virtue in the terms of which virtue corresponds to nothing more than those actions, persons, situations favorable to self-preservation, respectively to its essential condition, peace. Complementarily, vice is the opposite of such things. With respect to this latter aspect however, he notes that the main flaw of the rational laws and precepts is that they, by themselves, are coercive only morally and not physically as well, in other words that they bind individuals only in consciousness and not in deed, while in order for them to be really functional it would be required

[11] I.e. to what specifically is *just* an *injust*.

[12] A consequence of this rather odd conception is the extension of the notion of *just war*. More to the point, if in the standard view of the time (Grotius, for example), a war was deemed just only to the extent that it was made (i) as a reaction to a direct aggression, (ii) in order to secure some form compensation for unjust harm or (iii) punishment in Hobbes' view (iv) preemption could also constitute a legitimate reason for war.

that people feared the consequences of their breach. This requires certain concrete conditions that ensure that all people equally obey these laws as, otherwise, even if, *in extremis*, some chose to obey them voluntarily, they would fall victims to those who chose not to. All this comes to justify the necessity of some form of sovereign political authority.

As such, common security is in the interest of each individual in particular, and it requires the existence of a social body that is to be sufficiently numerous so as by its collective strength to be able to (i) render the eventual breach by any individual of anyone else's natural rights a very *unprofitable endeavor* and (ii) defend all its members against foreign threats. In order to accomplish this task, the political community must be established as a sole and undivided legal person by a contract in which each individual, by his own will, binds himself with respect to all the others in acknowledging the will of this legal, civic and artificial person as his own. Obviously, this is the commonwealth. In other words, each individual must consider the actions of the sovereign power as stemming from his own will. Institutionally, this sovereign will can be *incarnated* by an individual (the monarch), or by a council (the Parliament).

There are two steps in the conclusion of the contract as viewed by Hobbes: (i) a voluntary pledge by each member of the future social body that he acknowledges as sovereign any such individual or council as chosen by the community and (ii) the actual vote with respect to the identity of the sovereign as such. Interestingly, Hobbes suggests that the legitimacy of the sovereign is not justified by its source, i.e. by the actual way in which it arises, but by the way in which the sovereign exercises its authority. Consequently, the social contract must not be seen as a descriptive document, but as a purely normative one, i.e. as a modal fiction, as an *as if*. In this respect, we must take note of the fact that Hobbes separates between two actual ways in which commonwealths arise, the *natural* and the *institutional* one. However, fear is in both circumstances the binding element of the political community. As such, if despotic commonwealths, on the one hand, result in a *natural way* through the fear of the subjects with respect to the sovereign (as in the case of a conqueror for example), the institutional commonwealths, on the other, result on the base of the reciprocal fear of the individuals. Either way, as noted, fear is the catalyzing element of the political association and, as such, claims Hobbes, legally, there is no difference between the establishment of a commonwealth through conquest and its institutional establishment. Obviously, says Hobbes, nobody has ever actually signed such a contract, but the point is that all those living within the territory of a commonwealth and, consequently, benefit by its protection, should see themselves (and *be seen*) as implicit parts to such a contract.

In what follows, a few considerations on the specific aspects of the sovereign's absolute authority:

(i) the right to punish – the sovereign is the only one who holds the right to punish and, as such, any form of justice must be intermediated by its authority.[13]

In this context the sovereign *cannot be abusive*, i.e. no individual could rightfully claim that the sovereign had committed an abuse with respect to an alleged initial agreement as, technically speaking, there never was such an agreement between the sovereign as such and each individual but only between the individuals themselves with respect to the sovereign. In legal terms, the sovereign was the object and not the subject of the social contract. Consequently, given that the sovereign is not party to the contract, he is the only one still having the right to all things that, in the state of nature, belonged to all individuals. All the more, given that the sovereign represents all individuals, this alleged accuse of injustice would be self-contradictory, that is the respective individual would accuse himself that he violated his own rights, which is impossible. Therefore, the sovereign cannot be held accountable by his own subjects.

(ii) the right of declaring war and concluding peace (including that of claiming the support of its citizens in these respects, both financially and physically).

[13] This corresponds more or less to what Webber would later on call *legitimate monopole on violence*.

The ground for this second authority is quite obvious: these rights, in order to be functional, must belong to the same authority that has the capacity to punish those who refuse to acknowledge them.[14]

Precisely the same ground justifies the concentration of the (iii) legislative and (iv) judicial powers in the hands of the sovereign, given that it is highly probable that people would otherwise refuse to obey the commands of someone who they had no reason to fear. In short, according to Hobbes, the law constitutes nothing more than the commands of the sovereign and it must define and regulate absolutely any aspect of public relevance: which are the goods attainable by the individuals, the nature of private property, respectively its boundaries, the publicly accepted actions, the defining elements of morality and its legitimate means of enforcement.

All the more, to the extent that the sovereign must also own the means necessary to the fulfillment of his commands, he is also exclusively entitled to the (v) executive power, i.e. it has the sole right of naming the councilors, ministers, magistrates and all other such officials.

Last, but no least, the sovereign holds the right to (vi) censorship. The reason is that, according to Hobbes, to the extent that people's voluntary actions result from their decisions and their decisions derive from certain shared moral notions, the sovereign must also have them under control for the benefit of the political community, i.e. he must be the supreme judge of all opinions, doctrines and *intellectual stands* precisely in order to be able to eliminate those potentially harmful to the common good.[15]

Now, against everything that later contractualists (Locke, Rousseau, Kant) shall have to say with respect to *rightful authority*, Hobbes claims that the sovereign must not even obey its own laws, given that it is the one generating them. This, by a very simple reason: new circumstances may require new laws and so, if the sovereign was bound by the already existing ones, it could not act appropriately with respect to the new circumstances and this would affect its capacity of doing precisely what the contract requires it to do, protect its subjects.

Now, a few of words on the rights the individuals have with respect to each other and more importantly, to the sovereign. In this respect, Hobbes accepts some form of limitation of the latter's authority based on those particular inalienable rights of the individuals which cannot be either transferred or alienated by contract. More to the point, to the extent that the contract was concluded in the interest of protecting individual life and ensuring all necessary means in this respect, the sovereign cannot demand of any *particular* individual to do anything against this fundamental personal interest – correspondingly, any individual is entitled to refuse to harm himself or do anything detrimental to his own self-preservation (provided that this is not a request addressed by the sovereign to *all* members of the commonwealth). In short, (a) the right to self-preservation is inviolable. Apparently there is a self-contradiction in Hobbes' claims in this respect – one could ask: *How does this inviolable character of individual self-preservation become consistent with the right of the sovereign to forcefully recruit soldiers in times of war? Isn't it precisely risking their lives for his benefit what he asks of its subjects? And, in this context, doesn't the coward refusal to take part in war become the right thing to do precisely on the grounds of the natural right to self-preservation?* Hobbes' answer is that avoiding participation in war is not morally condemnable but that, in such conditions, the task of the sovereign is precisely to make sure that the fear of the consequences of desertion is always greater than that that of partaking in war. In simpler words, in a state of war, the

[14] The relation to the actual political status of Hobbes' contemporary England is obvious given that *the power of the purse*, i.e. the right of imposing taxes, represented the main *point of debate* between the Parliament and the king, leading to the civil war.

[15] Obviously, this clause is relevant in religious matters as they have constituted another important cause for conflict in the history of England. In this respect, Hobbes makes an interesting distinction between religion and superstition claiming that the difference between them resides in their public acceptability; in other words, notwithstanding the fact that they both represent forms of *fear of invisible powers*, the former is permitted by the public authority, while the latter isn't.

sovereign must impose *in his own camp* a series of coercive measure which are so draconic that no individual, precisely by its personal interest, would be tempted to desert. In short, during times of war the sovereign must make shore that his own subjects fear him more than their enemies on the other side.

Other individual rights are: (b) any individual has the right to refuse to accomplish a task demanded by the sovereign provided he manages in finding a suitable replacement; (c) any condemned individual has the right to oppose an executioner in performing his task[16]; (d) any individual is entitled to refuse in making a deposition detrimental to his own interests; (e) no individual can be rightfully coerced in performing an action harmful to his own life.

By the compliance with these fundamental individual rights we can separate the good (i.e. proper, efficient) sovereigns from the bad ones; however, irrespective of their characterization, the power of the sovereign remains absolute, that is, in Hobbes view, *bad sovereigns* are entitled to just as much power as the *good* ones. In other words the sovereign, good or bad, is entitled to executing or detaining all those refusing to execute his demands, irrespective of the eventual morally legitimate character of the latter's refusal. In short, according to Hobbes, it is not legitimate for the people to rebel against bad sovereigns. Why? Because in his view, the sovereign is accountable only to God.

However, a certain limitation of the sovereigns' power derives indirectly from his ability in ensuring the security of its subjects with respect to third parties – the obligation of the subjects to obey their sovereign lasts only as long as his power to protect them. If the sovereign loses this capacity, he is sovereign no longer.

In what follows, a few words on Hobbes' view on what we would presently call *political regimes*. Basically, he addresses the classical distinction between monarchy, democracy and aristocracy while changing its meaning – in his terms, they are not three different forms of sovereignity, as there can be only one, i.e. the absolute one, but only different ways of institutionalizing it. As such we have three potential situations in this respect:

(i) monarchy – when sovereignity belongs to a single individual;

(ii) democracy – when sovereignity belongs to a council or a board in which every individual member of the commonwealth has the right to vote;

(iii) aristocracy – when sovereignity belongs to a council/board to which only part of the citizens belong;

However, as mentioned, despite using this classical distinction, he criticizes its originators' (Plato, Aristotle) understanding of it, especially the separation they established between these three *legitimate* forms of government and their three allegedly illegitimate ones, namely tyranny, anarchy and oligarchy. More to the point, Hobbes criticizes the fact that in the classical understanding, the distinction between good and bad government was drawn on accounts of the interest in which the sovereign used its authority, i.e. the common good, for the former and the personal good, for the latter. In his view however, these characterizations are relative as they derive rather from the sympathies and antipathies of the *perceiving subjects* with respect to the regime in cause, than from its intrinsic nature or some alleged objective moral standards. Therefore, those beneficially affected by the sovereignity of a single (particular) individual shall call it monarchy, while those disfavored by it, tyranny and so on. As such, in a general sense, in Hobbes' view, the distinction between a tyrant and a legitimate monarch becomes irrelevant as long as subjects and rulers (irrespective of the way and interest in which they exercise their authority) both share the same main benefits of sovereignity, namely protection and peace, respectively shortcomings of its lack, i.e. anarchy and civil war. More specifically, his argument claims that just as the people would have no interest in undermining the absolute power of the sovereign, as in this case they would lose the protection he granted them, the latter would have no interest in unnecessarily worsen the people's condition as, ultimately, his own power and political wellbeing directly depend on their state and relation to him.

[16] This having no consequence, however, on the legitimacy of the latter's performing this duty.

Probably, the tacit assumption behind Hobbes' argument in this respect is that we can never plausibly expect for a sovereign to fully obey the public good in stronger measure than his personal one, then the problem becoming not so much in finding the one who is willing to do that, but rather in devising such a political system in which the two interests converge as much as possible.

Further on, against classical positions such as Cicero's or Aristotle's, he claims that the power of the sovereign and the freedom of the subjects do not vary that much in these three political regimes, to the extent that in all cases both the absolute character of the sovereign's power and its essential finality (security and peace) remain the same. As such, Hobbes interprets one of the classical problems of political philosophy (*Which is the best form of government?*) in his typically pragmatic manner: *Which type of government is best suited for ensuring peace and security?* His answer is that as the bearers of the sovereign power are, ultimately, mere human beings, more preoccupied with pursuing their own interest than that of the entire community, the latter would best be served in that system in which (i) it is the closest bound to the former and (ii) the former is as undivided as possible.

Consequently, his resulting criticism of democracy is rather obvious: given that in such a regime each individual bears only a small fraction of the sovereignity, the number of those who will try to bend the common good to their own interests is much larger than in the other regimes. In his words, in a monarchy there can be only one Nero, while in a democracy as many as those who are willing to butter up the crowd.[17] All the more, Hobbes claims that despite the alleged superior capacity of democracy in controlling its officials, in a monarchy, although nobody can explicitly prevent the monarch from naming incompetent or immoral persons as public officials, he will most often avoid doing that, given that a bad administration of public affairs would be detrimental to his own interests. In a democracy on the other hand, the promotion of incompetent or immoral persons is unavoidable, given that such a regime functions by the very competition between various popular orators and demagogues whose power is limited only by their ability to manipulate and control the masses. The main problem would be that the unavoidable conflict between these various claimants to power breaks the unity of the people, which can very easily derive in civil war.[18] As such, Hobbes claims that those who are hostile to monarchy on its alleged lack of freedom, fall victims to a misunderstanding of both their own interests and desires and of those of the pro-democratic demagogues. As mentioned, his argument is that while the relation between sovereignity and individual freedom does not vary substantially from one regime to the another, the promoters of the notion of *equality* seek to undermine the sovereign in power only so that they could take his place. In other words, the critics of monarchy pretend to desire democracy not so much for attaining freedom for all citizens, but only power for themselves. So, essentially, Hobbes' position with regard to democracy would be that its alleged universal freedom and equality represents a mere cover for vanity and will to power.

At this point however we must draw a distinction between the *post-contractual democracy*, i.e. as the form of government eventually emerging after the conclusion of the contract and the *pre-contractual democracy* as the democratic procedure by which the individuals still living in the state of nature choose to conclude the contract and its incumbent clauses. More to the point, given that in the state of nature all individuals are equal, so that any form of legitimate obligation is in fact a self-obligation, in order for the future social contract to be legitimate, it must be grounded on the general agreement between each individual with all the others with respect to the acknowledgement of any such sovereign as chosen by their majority. Basically, the initial act of choosing the sovereign is

[17] This will become a quite typical objection to democracy. One century later we will find the same notion with Burke and Voltaire. In this respect, the latter would claim that he would rather *be governed by a single lion than by a thousand rats*.

[18] Expectedly, aristocracy lies somewhere in between these two alternatives, its quality basically depending on its bias towards one of them.

essentially democratic, irrespective of the later way in which this will exercise its authority within the commonwealth. This is a potentially vulnerable point of Hobbes argumentation as someone could ask: *Well, in this context, to the extent that some individuals withdraw their initial agreement in obeying the absolute authority of the sovereign doesn't that discharge them of the obligation to do so?* Hobbes' reply is that the initial agreement was not concluded between the individuals and the sovereign as such, but only among the individuals with respect to the creation of the commonwealth and the designation of the sovereign, so that in order for someone to legitimately withdraw from under his/its authority[19] the individual agreement of all contracting individuals would be required; as such, if a single contracting individual would refuse to withdraw its agreement, the sovereign's authority would remain untouchably absolute with respect to all individuals. A potential counter-argument to Hobbes' claim would be that in this terms there is an unjustifiable unbalance between the type of consent initially required for the designation of the sovereign, when the agreement by the majority sufficed, and the type of consent ultimately required for the dissolution of the sovereign, when the universal agreement of all contracting individuals is necessary. However we will not follow any further this direction of analysis, given that this fact is outside of the scope of our finality.

Further on, Hobbes' critical attention is directed towards the so called *mixed government*, that is what the modern theory of democracy (Montesquieu) would later on call the se*paration of the powers of the state* between the executive (monarchy), the juridical (aristocracy) and the legislative (the people) branches. His argument against this form of government is that the individual freedom is just as developed in such a regime as it could be in any of the three *pure* ones as long as there is consent among the three branches of the authority; individual freedom could increase only if conflict would arise among the three branches, but the incumbent price would be far to great, i.e. civil war which in fact ultimately leads to the complete loss of the individual freedom itself. The true sovereign, on the other hand, derives its/his strength according to Hobbes, not by consent but by the unity of all wills in a single legal person. All the more, true monarchy is the hereditary, not the elective one, as in the latter case, the true sovereign would not be the monarch, but the elective board – as such, for soveregnity to be authentic, the monarch must have the right of designating his successor and if he, for one reason or another, fails to do so, the closest kin must be designated in his place.

One of the fundamental errors which the sovereign can make at the very establishment of his/its rule of the commonwealth is for him to content himself with less power than necessary for the insurance of peace and security, precisely in order to get the respective commonwealth.[20] As such, when public safety requires the use by the sovereign of certain powers and authorities upon which it was initially agreed otherwise, this may seem abusive and lead to mutiny and rebellion.

As such, any renunciation on part of the sovereign to some part of its authority represents an infringement of its/his own duty as sovereign. His authority can be only absolute and correspondingly, he/it must make sure that the people are completely informed with respect to the grounds of its/his authority and also to eliminate any potentially usurping perspectives. As mentioned, this has to do not so much with the *interests* of the sovereign, but with his/its duty: any encroachment on the absolute character of sovereignity is potentially harmful as it can bring upon civil war and, implicitly, the loss of security and peace which represent the basic finalities of the initial contract. As such, all such *usurping doctrines* must be eliminated.

---

[19] Just as in order for the sovereign as such to be dissolved.

[20] The greatest issue with hereditary monarchy was, of course, succession and the conflicts to which it led. In this context, a very frequent phenomenon arose when having, on the one hand, a foreign claimant to the throne which was already taken and an interior group of lords dissatisfied with the present monarch. Quite expectedly, in such conditions, an agreement between the exterior claimant and the lords was concluded, by which the latter would support the former's claim to the throne, while the former that he would grant them certain privileges once he attained the rule of the commonwealth. Although somewhat profitable, on short term, for the monarch in cause, on the long term, such arrangements always lead to very unstable power relations between the monarchy and the nobles and, in many cases, to civil war.

The first type of such doctrines is the one claiming, one way or another, that there is a fundamental incompatibility between faith and natural reason. The problem here would be the fact that such views promote the idea that only individuals as such are the rightful moral judges of their own actions. On the other hand, Hobbes claims that such an argument could eventually be valid in the natural state, but under no circumstances in the post-contractual commonwealth in which only the sovereign can be the supreme moral judge. Any deviation from the absolute character of sovereignity is harmful to the commonwealth and must be eliminated.

A second type of such insurrectionist views, is the one claiming that everything an individual makes *against his own consciousness*, even when representing commands of the sovereign, constitutes a sin. Hobbes' objection in this respect is quite interesting: the subject must obey the command of the sovereign irrespective of his personal opinion on the matter and, if the respective action really constitutes a sin, then only the sovereign and not its performer will be held accountable for it by God. On the other hand, he further claims, any disobedience to the command of a sovereign constitutes a sin, even when his/its command is unjust, as the sovereign is nothing less than God's chosen representative on earth.

The third type, corresponds to those doctrines that we could call *mystical*, namely those holding that faith and grace are not attainable by study and reason , but by some form of supernatural inspiration, i.e. by subjective revelation. If this were true, asks Hobbes, how come that not all Christians automatically become prophets, but, on the contrary, most of them guide their behavior by certain *exterior models*? Basically, all such doctrines are in his view potentially harmful as they instigate to rebellion and anarchy.

I think that in order to understand all this we should take a glimpse at Hobbes view on the relationship between political and divine authority in history (corresponding epistemologically to the one between political philosophy and theology). As such, to him, *God's kingdom* was an actual commonwealth inhabited by actual citizens, namely the Jewish people. Their relationship to God was from the very beginning contractual in nature, the first agreement being the one between God and Abraham by which the former promised to grant the latter the land of Canaan in exchange for his and his offspring's loyalty. Thereby, Abraham becomes the instrument of God's power on Earth, that is the *worldly sovereign*, with the right (and duty) to punish all those who refuse to obey his (and indirectly God's) laws, under the pretense of personal revelation (the mystic attitude). The contract between man and God is renewed by Isaac and Jacob, suspended during the Egyptian exile and subsequently reinstated by Moses on Mount Sinai.

In my opinion, we could consider Hoobes' arguments in this respect as a legitimatory attempt with respect to Caesaropapism, i.e. the view holding that religious and political authority should be placed in the same hands, namely those of the monarch. Consequently, he offers a very original interpretation of the teachings of the Bible. For example, in the case of Jesus, Hobbes claims that His three basic divine qualities, (i.e. as Redeemer, Teacher and Emperor) are not concomitant but successive. On Earth, he claims, Jesus only fulfilled the first two qualities, and proof of this fact is that He never manifested any actual political intention in His stand, i.e. of changing the civil laws or to contradict the authority of the Jewish king or of the Caesar. Hobbes applies this *successivistic* interpretation to the very notion of Trinity as well. More to the point, he claims that God, as one and the same entity, was represented in three historically different circumstances: Moses represented Him as the Father, Jesus as the Son and the apostles as the Holy Spirit.

This *historical teologism* is backed by Hobbes' *manifestationist* attitude with respect to religion, essentially holding that in matters of belief, what matters is not what one feels, but what one does[21]; at the same time however, *what one must do* mostly refers to the plain obedience with respect to the status quo, i.e. to actually *not doing anything*. As such, for example, in these terms, martyrdom does not constitute a Christian imperative. In other words, if a heathen sovereign demands of a

[21] In perfect opposition to Luther's claim.

Christian to renounce the Christian God in favor of the heathen one, he should do it, as it as the *politically right* thing to do. In this case, the sin is not of the one obeying, but of the one commanding (the heathen monarch), and he is the one that shall be held responsible in the eyes of God. On the other hand, if the respective Christian were to disobey the commands of the heathen sovereign, and refuse to renounce the Christian God, he will be held responsible for it by the Christian God Himself. Why? Because the heathen king is, in some indirect form, the instrument of the Christian God's will so, if someone were to disobey him, he would disobey God's will itself. Basically (and paradoxically), according to Hobbes' claims, it constitutes a Christian sin to contest the authority of a heathen, or sinful sovereign. As mentioned, all these claims are in fact arguments for Caesaropapism: on Earth the religious authority derives from the political one as, if Constantine, the first Christian emperor, was also the Bishop of Rome, all subsequent Christian sovereigns automatically inherited his religious capacity as well. As such, basically, the religious authority adheres to soveregnity, so that the priests in a Christian commonwealth are the mere ministers of the sovereign, i.e. they draw their entire authority from his, as supreme priest.

Correspondingly, Hobbes' soteriological view is quite *realistic*: the Kingdom of God will begin after the resurrection of the dead and it will constitute an earthly commonwealth ruled by Christ himself. The Hell and the Devil are in fact on Earth, the former corresponding to the state of nature and the second to any enemy of the legitimate Church. At the same time, to Hobbes, the so called *tortures of Hell* constitute in fact only a metaphorical expression for *the envy that burns the hearts of the damned* when witnessing the happiness of the redeemed, i.e. of those enjoying the sovereign's protection.

Noticeably, Hobbes eliminates the distinction between the earthly and the divine worlds precisely in order to harness the political resources of religion. More to the point, in claiming to bring man's world in accordance with God's, he actually brought the latter in the former. Even if that does not enable us to say that Hobbes was an atheist, his influence on the subsequent atheist thought is rather obvious. On the other hand, his *theopolitics* grants him (along with Machiavelli) a specific place in the history of this type of issue as he moved the question from an ontological realm[22] (*What are the arguments for the existence of God?*) into a pragmatic one (*What are the effects of the belief in God?*). In this context, he prefers faith by virtue of its latent benefits with respect to social cohesion.

III. Conclusion

As we can see, Hobbes' thought is articulated on three focal points: (I) human nature, (III) human coexistence and (III) the principle of authority. The order of the argumentation proceeds correspondingly. In what follows, we will sum up Hobbes' basic claims in these regards. As such, he initially holds that the human individual is a deterministic system of passions and inclinations (among which reason is a fairly secondary faculty in terms of power). Correspondingly, freedom basically amounts to nothing more than self-preservation[23] and, in this understanding, constitutes the basic human interest. At the same time, however, reason constitutes the most suited faculty for the achievement of self-preservation. On the other hand reason is unattainable by the individual as such, given that, on this level, reason is *slave to passions*. Nevertheless, given that most often passions are self-contradictory, reason can become dominant in those specific circumstances in which they are properly balanced in order to cancel each other out. Still, on the individual level, this specific balance of the opposites is unattainable. As such, human association becomes necessary in order to achieve this state of reason which is instrumental in attaining self-preservation. Further on, this association is realized by means of a contract in which each individual agrees with all the others to renounce his/her individual authority in favor of the ruling authority of the commonwealth thus created. This

[22] As it had happened in the medieval scholastic philosophy.
[23] The rationalistic notion of *freedom as rational choice* is deemed illusory.

authority is the sovereign who basically constitutes (i) a collective body and (ii) the only rational person of human origin. As such, he/it is the only one preserving the natural authority which had previously belonged to all individuals. Further more, he/it must have at his/its disposal all the resources and collective force of the commonwealth in order to be able to (i) protect its members from exterior dangers and (ii) keep egoistic passions in check. Basically, given that the sovereign (as an institution) is the only fully rational person in the human world and that reason is the best way of achieving the basic individual interest, i.e. self-preservation, Hobbes holds that it is in the most direct interest of the individuals to subject their wills to that of the sovereign. However, individuals would not be willing to do that in front of a human authority and, as such, the sovereign must be seen as a direct representative of God on Earth. Only to the extent that he/it would be seen as some sort of *earthly god* could he/it inspire the necessary respect in order for the individuals to unquestionably obey its/his authority.

SOCIAL EQUITY SYSTEM

ANTON-PETRISOR PARLAGI*

Abstract
*The aim of this paper is to present a application of social equity system, as normative principle, in democratic development of society. Political phenomenology of law reveals that normativism does not simply reflect the judgment of every citizen, considered **ut singuli**, but it rather reflects the effect produced by the interaction between ideonomic value and the politonomic goal of social regulation. Normative systems are set up through a social process and express the freedom of individuals ideonomically; they also socionomically reveal the individuals' freedom of choice as regards the norms specific for a certain social structure; finally, normative systems express the common action of altering normativity from a politonomical point of view.*

Key words: *phenomenology of law, ideonomy, socionomy, politonomy.*

1. Prolegomena

According to the phenomenology of law, one can notice that the ideonomic dimension of social equity system can be nowadays identified in legal liberalism theories; in this respect we make reference to F. Fukuyama, for whom liberal democracy is the final point in the ideological evolution of human race and the final form of governing conceived by the people. On the other hand, M. Duverger defines social equity system through its ideonomic significance when he states that democracy is included in liberalism because political institutions are organized and function in conformity with a set of *principles*: free elections, the autonomy of judges, parties system, political freedoms. All the elements which we have mentioned have an ideonomic character since they express a single principle, i.e. the principle of freedom; the legal formalization of the principle of freedom made it possible for free elections, the autonomy of judges, parties system, and political rights to exist. In this context, one has to mention G. Burdeau, who – focusing on the ideonomical character of democracy – stated that democracy is a utopia which manifests itself as a "political and institutional curiosity".

According to the phenomenology of law, social equity system reflects the rationality of the norms system, which makes the existence of law possible. From a politonomic point of view, social equity system imposes a system of political norms (individual freedom, social equality and participation) which makes the existence of a normative supra-structure – known as social justice – possible. Social equity system – seen as a phenomenon through which the individuals equally participate in the elaboration of a normative system – is legitimized thanks to the correctness of political governing criteria; e.g., the legal doctrine of social democracy attempts to justify isocracy ideonomically through the following three axiological political principles: freedom, solidarity and social justice. In order to complete the definition of social equity system we underline the fact that *isocracry* is a political principle of law which, together with *isonomy,* and *isegoria,* creates a complete image of the political phenomenology of law.

2. Social equity system and personality

The normative significance of the transcended "shepherd" dominated ecclesiastical law in the Western world for centuries even though (or precisely because) normative power was transcendental. The conviction that normative power was divine subsequently evolved into the political doctrine of the power state which was capable of imposing *laws* for making freedom and equality between

people possible. Apart from the Western conviction that divine law is imposed upon people through the force of rationality, Eastern conviction was different and upheld that law must be imposed through the force of the people; an illustrative example is represented by Confucianism, according to which political power can impose social harmony as a supreme norm that is necessary since it helps each individual manifest one's own personality.

Asian people used force to defend law for they considered it important for social harmony and not because it reflected human rationality; this explains why any individual who did not know the law – and not the one who had a different culture, religion or race – was considered a barbarian. It is important to notice that –according to the phenomenology of law– Eastern doctrine mainly justified the use of force due to the necessity to impose law, i.e. in an ideonomic way, as a system of ethical norms: this also explains the politonomic conclusion according to which power can be exercised only by the virtuous human being, the individual who can ensure social harmony. In Christian doctrine, normativity, which ensured the docile participation of the individual in political life, was paradoxically justified through the non-human character of law; since it was divine in nature, the law could not be passed, altered or repealed for the human sake.

John Dewey, an outstanding representative of pragmatism, defined the ideonomic nature of normative systems *avant la lettre* when stating that – through communication – individuals express their ideas and check them for verifying their effects, which means that they actually act "in a democratic way". From a socionomic perspective, the principles of pragmatism can partially describe isocracy as a way of collectively acting in order to adopt normative decisions; what actually interests us is the political effect of decisions, manifested as a common will to modify the normative system entirely. According to the legal doctrine, it is difficult to justify the individuals' equality of rights ideonomically as long as socionomically individuals were not, are not and will never be equal as to their rights. Consequently, the fundamental issue for legitimizing any political power is represented by the impossibility (or possibility) to legally institutionalize political rights and freedoms. That is why when referring to the political phenomenology of law one has to make a distinction between the concepts of political equality understood ideonomically and equalitarian politics understood politonomically. In this respect, it is important to point out that in the legal system of certain states there existed ideonomic norms, specific for certain ethnical or religious communities, which legally guaranteed different forms of autonomy, including the right to self-government (except for territorial autonomy): *exempli gratia,* the Kabala of the Jewish Polish-Lithuanian community, religious *millet* communities within the Ottoman Empire, the *national curies* of the late period of the Habsburg Empire, and – in modern states – the rights of national minorities.

It seems that the ideonomic significance of polical equity is sufficient for proclaiming the universality of a normative system. This form of social equity system, which is exclusively based on the rationalist component of Western Enlightenment, became concrete in the theory of the *identity* of natural rights; these rights would exist in all individuals in an equal way and without discrimination. As one can notice, political systems used this supposition regarding the normative system in order to justify any form of power; the institution of the "universal vote" illustrates the fact that the right to choose expresses the will of a political power and not the will of an individual. This legal institution no longer has anything in common with the ideonomy of the freedom of option but rather with the freedom to participate in elections (naturally on condition "political equality" is observed) with a view to legitimizing a certain political power. The hypothesis according to which the political power of an individual is equal with the power of the others thanks to the fact that the law recognizes the equality of electors in the electoral process cannot be upheld if analysed from an ideonomical point of view; in this respect, Amartya Sen states that thanks to the formal character of the law the result of elections "might be" generally recognized even if it does not tell us anything about the freedom of choice. In the chapter on *isogory* we pointed out that the freedom of choice is in its turn confined in the electoral process.

The theory according to which social equity system is ensured through the political act of elections – as an equal power of decision for individuals – cannot be justified at normative level. Firstly, from an ideonomical point of view elections have no legal significance: they tell us nothing about the principles or values which the individual wants to transmit in the normative system. Secondly, from a socionomic perspective, elections only reflect the participation of individuals who, in their majority, can choose antidemocratic normative systems; see the case of Hitler. Finally, from a politonomic perspective, elections legitimize a normative system whereby an "elected" minority has the right to govern a majority, which obviously is a non-democratic phenomenon.

If people were born equal, as Tocqueville considered, it means that their right to elaborate, alter or impose the law must is equally granted. Differently from the Anglo-Saxon legal doctrine, which attempted to legitimize the transfer of a natural right into a positive right, according to the principle that people have been equal ever since they were born other legal theories upheld that normative systems must set up equality for all individuals no matter under what conditions. According to the phenomenology of law one can notice that both theories mistake the politonomic level for the socionomic level when it comes to political equality; in the first case, the principle of equality promoted by the legal system is annihilated by the inequality generated by the social and economic system; in the second case, the principle of equality is annihilated by the political and legal systems which exclude most of the individuals from the ruling of society.

It is, thus, necessary to define social equity system as regulatory power, which is equal for all individuals and which has a triple normative significance: ideonomic, socionomic and politonomic. *Firstly,* from an ideonomic perspective, social equity system has a programatic significance, i.e. it reflects a certain normative concept (political, legal, moral, social, religious etc.) as to the individual rights and freedoms. One should bear in mind that it is *only* at this normative level where political equality is justified through the legal recognition of individual rights and freedoms. Yet, at ideonomic level one cannot reduce the notion of equality to the idea of uniformity because this would create normative "chaos", as Constantin Noica coined it since all individuals, driven by the will to be identical, actually become the slaves of uniformity; thus, equality is meaningless unless it allows as much freedom as possible (Noica C., 2007) *Secondly,* from a socionomic perspective, social equity system implies social structures (organizations, foundations and other civic associations), which try to impose their own normative criteria at political level. As we have already stated, one of the principles that are specific for the political phenomenology of law expresses the permanent tendency of sociocracy to convert into politocracy.

However, one has to notice that the individuals' belongingness to different normative structures does not express equality in a socionomic sense at all; the analysis made by Mancur Olson reveals that not all the members of society are ready to take part in social activity with a view to accomplishing common objectives. From a socionomic point of view, normativity does not reflect equality but rather the intentions of individuals who are driven by their needs or interests, which can be probably formalized by a legal institution; in fact, political participation of individuals is unequal, but since the normative system legally recognizes their equality, all the individuals pretend the same benefits. Liberal civic individualism, which extends individual freedom to the utmost, does not recognize the legitimacy of a normative system that could impose a limit upon human rights; this is actually the reason for which liberalism cannot explain the individual's participation in collective actions although it recognizes them. Marxist theories are different since they proceed from collective normativity to the individual; in this case, the subordination of the individual is established by the needs of the class (recently by the needs imposed by religion, ethnicity, sex, etc.), ignoring the fact that the individual is free to choose. According to Marxism, the political and legal system expresses normative principles and values which are specific for a social class and according to which the individual benefits only from those rights and freedoms that are useful for the system. *Thirdly,* from a politonomic perspective, *isocracy* -in greek sense-, manifests itself as a normative system which legitimizes political power; is, from this point of view, a form of manifestation of the Greek paradox

according to which power is too tough for a simple mortal, which does not imply the exclusion of a regulatory democratic system (the *demos*). Naturally, from an political perspective, a normative system does not automatically imply a democratic dimension; from a politonomic perspective, Robert Dahl considers that democracy is possible only if normative systems would recognize power as equal for each communities within the political system. Political phenomenology reveals that equality between communities is not possible simply because they are different normative systems from a socionomic point of view; some give priority to social norms, others regulate equality of chances or of governing participation conditions etc. The fundamental principle of social equity system implies that the equal exercise of normative power by all individuals legitimizes political power; normative legitimacy refers both to the content of power attributions and the purpose for exercising power. Social equity system can be understood as the equal and direct participation of individuals in the structuring or destructuring of normative systems; according to *isocracy*, political power – which by definition is unsubordinated – is subject to the *law*.

The socionomic character of isocracy can be determined by analysing from a Hegelian perspective the dialectical relation between the "quantity" and "quality" of equality in the creation of normative systems. There are opinions according to which a larger participation (quantitatively) in the expression of normative principles is enough for setting up social equity system; there are also voices according to which participation is relevant only if isocracy is accomplished in conformity with value criteria (qualitatively). A phenomenological perspective reveals that isocracy is the normative system which can surpass the conflict between norms which concern value and socionomic norms (those which refer to the degree of participation). At first sight, participation seems more important for social equity system since it expresses the political will of the majority. Let us suppose that the degree of participation reflects isocracy since it legitimizes power; however, the degree of participation does not determine the degree of utility (or social value) of the normative system. On the one hand, *the law* can be politonomically justified by the degree of participation; on the other hand, it cannot be justified if it contradicts legal principles even if it expresses the will of the majority. Moreover, as Mancur Olson noticed, participation reflects a personal interest, a fact which questions the existence of common goals in the elaboration of normative systems.

The theory – according to which the more democratic a normative system is, the larger social participation it ensures – cannot be ideonomically upheld simply because values cannot be equalized; the theory of value cannot be replaced by the theory of participation in order to justify a normative system except for the risk of transforming it into a totalitarian system. If the right to participation was assimilated with the right to regulation, all legal institutions should be modified. Firstly, ideonomically, the notion of person (seen as an entity) would be replaced with the notion of "collective actor" on the political scene, which would allow normative systems to replace individual rights with collective rights. Secondly, from a socionomic perspective, isocracy would be possible if the normative system replaced participation principles with norms of redistributing national assets. Finally, from a politonomic point of view, the normative system would become a political strategy meant to ensure equality between the parties engaged in the electoral competition, between power and opposition or between state and citizens. Within such a normative system – according to Fritz W. Scharpf – it would be enough for any "collective actor" to be able to mobilize the resources that are necessary for engaging in a political fight against another competitor. If we identified normative power with political power, we would face an ideonomic contradiction because the notions of majority and opposition would be meaningless; however, as long as both express the will of the citizens, there is no opposition. *Isocracy*, as a form of equal participation in the construction of normative systems, has, first of all, an ideonomic dimension thanks to the capacity of the individual to impose his principles; it also has a socionomic dimension, thanks to the force of regulatory systems specific for each social structure (organizations) and a politonomic dimension, thanks to the decision-making power of political institutions in the legislative area.

When it comes to the analysis of normative systems, the issue regarding the conflict between equality and freedom remains unsolved. As A. John Simmons noticed, liberalism cannot offer a satisfactory explanation for our political links because as long as the individual does not have interpersonal relations with the legal entity of the state, the latter is not bound to observe the norms imposed by those persons. In reality, the individual is nevertheless obliged to have legal relations with the state government where he resides as a citizen; however, since citizenship tends to become a transnational institution, it is important to observe national normativism. Carole Pateman has noticed that the issue of personal obligations cannot be solved unless political theory and practice detaches itself from the liberal notions and categories. *Firstly*, the theory of equal participation in the construction of political and legal systems ideonomically implies conceptual instruments for exercising power; we should not leave aside the fact that access to power is controlled ideologically exactly because political power is a means of social control. Ideonomically, the control of the individual is accomplished as ideocracy, through ideological persuasion; in this respect, Plato used to say that religion ensures the individual's obedience through its noble lies; Aristotle used to speak about the persuasion of the crowds; Machiavelli compared rulers with lions that dominate through force and with foxes that rule through cunning; V. Pareto borrowed the idea of power that is imposed through force and cunning; Lenin used to say that domination has two social functions, i.e. acting as a tyrant and as a priest. In modern societies political domination is ideonomically justified through the necessity to guarantee individual rights and freedoms; in consequence, participation in elections is merely a technical method of legitimizing power no matter the content and value of rights and liberties. *Secondly,* socionomically, the classical theory of democracy used to consider that political equality is necessary for the equal distribution of welfare; political phenomenology of law reveals that political equality does not generate an equal distribution of welfare. The phenomenon was thoroughly analysed by J.A. Schumpeter, who defined democracy as an "institutional set up" whereby some individuals are granted the right to adopt decisions subsequent to the organization of elections.

The socionomic character of social equity system is probably best defined by the *constructivist* theory, which explains the formation of political, social, etc. structures as a permanent combination (aggregation) of interests and/or contradictory objects of dispute. From a constructivist point of view, the political solution for settling the conflict between state normativism and individual freedom can be accomplished through a *network* which allows interaction between different social groups and their public actions. From an ideonomic point of view, the isocratic value of political decisions is assured through legal institutions; from a socionomic point of view, political value depends on the quality of social institutions; according to politonomy, the value of social equity system derives from the capacity to negotiate politically either through the recognition by power of a common system of negotiation norms or through concluding a legal agreement between those who participate in the political decision-making process. According to social equity system, constructivism is, thus, socionomically useful because it requires state institutions a series of political obligations: either to settle social conflicts for ensuring equal opportunities or to regulate equity through professional statutes. *Thirdly,* from a politonomical perspective, social equity system depends on the force of regulatory institutions, which is recognized by those who govern and those who are governed; in this respect, we have previously stated that free elections are not enough for legitimizing political power. According to the phenomenology of law, we could include social equity system within the system of "horizontal democracies", as defined by Giovani Sartori and understood as a form of citizen participation in the elaboration of normative decisions. (Sartori G., 1999, pp.305-320)

3. Social equity system and consensus

Political consensus must be included within the category of isocratic pillars thanks to its ideonomic value: dialogue may reconciliate ideological gaps which exist between those who wish to change the system for their own interest and the state that wishes to maintain the normative system in

the name of everyone's interest. A large number of authors consider that the *isocratic* value of political dialogue is a *sine-qua-non* condition for democracy; thus, some authors have come to define political institutions through dialogue. J. Gicquel states that within Western constitutional regimes there are numerous forms of political dialogue; e.g., political representation is a form which regulates dialogue between the elected ones and electors; political pluralism creates political dialogue through the parties which constitute an interface between power and citizens; legislative assemblies are institutions which cannot function outside political dialogue**.** The force of political dialogue does not derive from the citizens' legal equality; on the other hand, dialogue legitimizes a normative system since it ideonomically reflects the wish of the parties. According to phenomenology of law, political dialogue must be legally formalized and institutionalized first of all at constitutional level and also through the laws that regulate the way exercise of power. If we take Jurgen Habermas' remarks on normative suppositions about democracy as a starting point, it is necessary to analyse the way in which political dialogue facilitates normative construction. To Jurgen Habermas equal and democratic access to dialogue implies the existence of a *non-coercitive* accord – known as "ideal discourse situation"- whose influence on moral consciousness is serious. One has to mention the fact that the equality of the parties involved in a dialogue does not imply political equality except for the situation when there is a legitimate power that guarantees this institution legally. In fact, Jurgen Habermas underlined the idea that a crisis of the state's rationality illustrates a legitimacy crisis when the norms imposed by the political system come into contradiction with the norms of "civic individualism" (Habermas J., 1976). The more "individualist" political behaviour of citizens within civil society is, the less empathic and solidarity they are (in our opinion, solidarity is an ideonomic value which is extremely important for political participation). As regards isocracy, participation in political dialogue tends to be more and more "individualist" because every individual tries to avoid participation without giving up the rights he/she obtained through the others' participation. Political phenomenology abounds in examples regarding the way in which individuals become attached to institutions only after the latter guarantee their individual rights; however, once obligations are imposed, individuals refuse to recognize the institutions that grant their rights. Phenomenology of law reveals that political dialogue is more consistent when power needs legitimacy; on the other hand, when power is stronger, the right to dialogue is confined through discretionary legal acts. Hermet Guy's hypothesis regarding the present forms of social equity system is illustrative for it presumes that political participation is either a legal form of approving previously adopted decisions or a way of accomplishing electoral goals; at the same time, Lizette Jalbert considers that dissociation of citizenship – as an effect of the crisis of democratic participation – is similar to "controlled participation". (Guy H., 1988; Jalbert L., 1987)

Normative systems acquire an increasingly *non-legal* character due to the fact that a series of clauses regarding political participation are established through consensus. In this respect, it is worth mentioning the increase of norms for negotiation procedures and the improvement of social dialogue techniques and contractual science, which determine, modify and create more and more complex normative non-legal systems. First of all, one has to notice that non-legal normativism is similar to the politonomic process of legal constructivism: the more complex and numerous norms of political and social conventions are, the more independently they start functioning and the freer they are from those who created them. Secondly, political consensus can be set up only if the legal system and the non-legal regulatory systems are interdependent. Although positive law is institutionalized through law, one should not neglect the fact that positive law can also be institutionalized through conventions that were concluded prior to political decisions simply because positive law establishes the content (orientation) thereof. From an phenomenological point of view, we are interested in the political effect of these non-legal regulatory systems since they function in parallel with (or even differently from) the legal system.

A political phenomenon which is relevant to social equity system is represented by the fact that *collective negotiation systems*, which initially regulated only the parties' interests, have rather

become systems of accomplishing objectives that transcend these interests. In other words, a non-legal regulatory system which settles a social issue more quickly, more economically and more democratically is, from a political point of view, more efficient than a legal system. Collective negotiations – as a form of participation in the elaboration of laws – are more and more used for justifying political equality and isocracy. A normative act which was negotiated prior to its adoption has a double effect: socionomically, it creates consensus between social partners and politonomically, it expresses the will to commonly accomplish general interest. According to the political phenomenology of law, negotiation functions as an isocratic principle due to the parties' equal positions in the elaboration of laws. Through the delegation of legislative power, social partners (trade unions, employers' associations, professional associations, etc.) draw up drafts of normative acts which the lawmaker is entitled to validate or invalidate according to the so-called method of the *blocking vote*. It is also possible for the legislative power to elaborate the draft of the normative act and negotiate it with social partners to subsequently adopt the negotiated solution. Political consensus is also specific for the process of law application, whenever collective negotiations are set up as instruments for enforcing the law; this happens whenever the lawmaker provides that the application of the law requires conventional norms. Analysing this phenomenon in labour law, Alain Supiot considers that the transfer of power – towards negotiators so that they could apply the law – is similar to investing social partners with legislative power, a fact which makes law become a subsidiary norm. (Supiot A. 2005, cap.4.) The application of law by social partners manifests itself as an "executive power" since these organizations elaborate norms for applying the law only conventionally. Phenomenology of law reveals that there are numerous situations in which the legislative assumes the power to regulate laws and also adopts norms for the application of law, thus, "subduing" the executive power of the government.

Social equity system brings into evidence the hidden non-democratic aspects of regulatory non-legal systems. A first observation refers to the conditions under which a collective convention can be concluded and which were institutionalized in a non-legal way; it is known that the signing of conventions was initially granted to all participants in the social dialogue; afterwards, this possibility was gradually confined and, thus, the institution of the *conventional capacity* was created (obviously this institution is different from legal capacity). The institution of the conventional capacity is the corollary for the evolution of the collective convention system; if these collective negotiations ensure isocracy, political power must protect them, set up norms (institutions) whereby the equality of those who participate in negotiations could be guaranteed. The normative system was created through social conventions and it socionomically illustrates non-parliamentary democracy, a kind of social consensus created by the legal system. In this respect, ideonomically, social conventions are firstly justified through an accord of will, which is not legally formalized, and secondly through freedom of negotiation. From a politonomic perspective, the creation of social conventions depends on the existence of political conventions and institutions that allow (do not allow) social negotiations; that is why, in order to have consensus between social and political institutions, there has to be a regulatory system, known as the law. The legality of social conventions is not the same with the legality of the goal that these conventions try to achieve; naturally, according to the regime of contractual freedom no one is legally bound to negotiate and conclude a contract and the object of the contract cannot infringe the law. Since social conventions are not legally concluded, the Roman principle *quod nullum est nullum producit efectum* functions as a political principle. What matters from the perspective of political phenomenology of law is the fact that social equity system is more and more accomplished as a consensual non-legal normative system and less and less as a confining legal system.

Social equity system is extended in democratic societies through *public action contracts*, which, beyond their legal significance, are politically meant to protect individual rights and freedoms. By means of these contracts there were created both a rather political than legal regulations and "laws" on partnerships, which place social equity system at the congruence of classical

institutions – see the cooperation in the public domain of private law with civil law institutions. The isocratic character of public action contracts does not derive from private law norms nor from public law norms, but rather from consensual norms. Firstly, contracts of this kind have an ideonomic dimension because principles and non-legal means of public action are set up through negotiation procedure norms. Secondly, contracts of this kind have a socionomic component through the non-legal dispositions on material, financial, human, etc. resources that are necessary for the partnership to be fulfilled. Finally, the politonomical component of public action contracts takes into consideration the political will in order to maintain the status-quo; these contracts are concluded in different domains: environmental protection (the Netherlands), social protection and urbanism programmes (Italy, Spain); such contracts are also concluded for setting up of ad-hoc work groups (Germany) or (in compliance with *common-law*) for adopting public-private financial conventions of infrastructure (Great Britain). According to the political phenomenology of law, public action contracts confine the area of law enforcement. The complexity and political efficiency of public action contracts confine the normative intervention area of the state; on the one hand, the political force of these contracts confines the citizen's degree of participation in the adoption of normative decisions; on the other hand, the social force of these contracts reduces legal responsibility of those who govern. In this respect, one has to mention generated a wrong interpretation of social equity system, liability is shared by partners. The possibility of accomplishing social equity system as a form of governing through a contract made some authors support the idea of a new "political regulation" of society. J. Commaille brings a set of socionomic arguments to demonstrate that one can govern without political institutions if governmental agencies, ad-hoc commissions, debating forums belonging to commissions, etc. are created. Actually, these institutions can function very well outside legal regulations; the problem is that they have a clear objective, a confined sphere of applicability and a limited social effect. Consequently, a normative system which functions outside a legal system has a non-equality character. No matter how democratic such a system of public actions is, it excludes a part of the individuals from political participation, and finally from ruling society; even if citizens are entitled to vote during elections, a convention or a contract which produces effects only between the signatory parties is political, non-equal.

Social equity system illustrates the fact that political identity evolves and, in consequence, political identity is reflected by a normative system to the extent to which political power allows this identity to evolve. If democracy was defined only as *isonomy*, as equality of all citizens before the law, regulation of political rights would no longer be necessary; if democracy was confined to *isopolitia*, as political equality between citizens, regulation of individual rights and freedoms would no longer be necessary; finally, if democracy was confined to *isogonia*, legal systems would be useless because normativity would simply impose itself within human communities. J. Linz and A. Stepan approached this aspect in their study dedicated to the transition towards democracy, underlining the fact that in present societies there are no "multiple and complementary" identities of individuals. Political identity is an important issue to isocracy because any modification in the normative space generates a confinement or an extension of the content of individual rights and freedoms. Firstly, we must notice that once the political structure of the legislative power is modified, its ideonomy also alters, so that the way isocracy is regulated will be different. It is easy to notice that the ideonomy of political institutions, after a post-electoral coalition is created, is different from the ideonomics thereof before elections: politonomically, this phenomenon illustrates that parliamentary activity of parties no longer expresses the electors' political will. If all who are elected formed a single parliamentary group or if all who are elected declared themselves politically independent, they would enjoy the ideonomic dimension of the normative process simply because each MP will represent himself. Secondly, we must notice that legislative activity illustrates the ideonomy of political parties though political parties have never received such a mandate from electors; MPs should represent citizens' will exclusively and not their party's will. In this respect, Samuel Huntington is right to state that political parties supplement or replace traditional political institutions

which had a fundamental role in organizing the citizens' political participation. (Huntington S.P. 2004, p.45; ibid. 1999, p.79). Parliament must embody the ideonomy of nation so that one cannot accept that a part of the legislative, be it political or non-political, expresses a different ideonomy; as Alain Supiot has noticed, no intermediary body can impose the law to the others. Since each MP expresses the will of the nation, the concepts of *power* and *opposition* are meaningless; ideonomically, no representative of the people can oppose another representative of the people just because his/her party belongs to the opposition. Thirdly, if we accept the hypothesis firstly formulated by M. Hauriou, according to which the legislative is a *buffer-institution* between power and the electoral body, we can conclude that isocracy is ensured only if legislative activity is subject to constitutional norms, no matter if it reflects the citizens' will or not. In order to define isocracy, it is not enough to have a normative system based upon the principle of equality in the act of governing; it is also important to have an equal module of participation for electing the members of the government. If we confine democracy to its socionomic dimension, as this is reflected in the legislative process, we can indentify just one of the conditions which are necessary for isocracy to exist. Similarly, representatives must continue to regulate the individuals' political equality through norms that illustrate *how, when, who* and *by what means* this equality is accomplished.

Phenomenology of law reveals that social equity system expresses the relation between the ideonomia of political institutions and the socionomia of social structures in the process of creating normative systems. In order to prove that isocracy has an ideonomic dimension it is necessary to firstly notice the rational conditions of the choices which individuals make, of the factors which determine the choice of a certain normative institution to the detriment of another one. *Firstly,* ever since politocracy organizes the so-called "free elections", the individual's capacity to express his/her opinion is limited to the organized ballot; *e.g.,* if a list election is organized, the elector cannot express his option for a certain candidate. Freedom of choice is also limited when normative systems are altered either because society undergoes a process of transition from totalitarism to democracy or vice versa; normally, electoral laws are passed according to a set of non-legal criteria (ethnical, religious, community etc.), which are meant to bring advantages to a leader or a certain political party. As S. Huntington pointed out, young democracies do not manage to structure their institutions in order to minimize their attempts to make use of such legal solutions for obtaining votes.

Social democratization through political institutions generates an undesired effect in the sphere of *isocracy* because it allows access to power for non-democratic, extremist parties, which confine both the individual's freedom and the sovereignty of the state: in this respect, the case of Yugoslavia is suggestive. Secondly, social equity system manifests itself thanks to the fact that normative systems eliminate the confinements exercised by the state over the individuals and extend the sphere of individual rights and freedoms. In this respect, one can identify another paradox of democratization: if politonomically an *upgrade* of political freedoms is accomplished, ideonomically one can identify a degradation of political freedom. Political democratization ideonomically questions the value of normative systems because it allows various kinds of freedom: asocial, amoral, acultural etc. *Thirdly,* the process of democratization displays an unstable character of political structures and legal institutions, which is determined by the fact that politocracy makes use of the right to force rather than the force of law. In this respect, E. Mansfield and J. Snyder consider that during the period of transition towards democracy states become more aggressive and more inclined towards provoking a war. *Fourthly,* one does not have to mistake social equity system, as a form of power, for democracy; phenomenology of law provides many examples of normative policies that intentionally subdued democratic institutions in order to prove the inefficiency thereof and to justify autocracy or dictatorship.

4. Social equity system and delegation of power

The mechanism of political representation does not only imply equal participation in elections, but also equal participation in political dialogue. In all political regimes, which function

according to the principle of representation, normative systems regulate the obligation of elected representatives to meet, discuss and consider the electors' opinions. Socionomically, political equality depends on the parties involved in the political dialogue, as well as on the consensus that can be reached by social structures and power representatives. If the normative system does not grant equality to the parties involved in the dialogue or does not ensure communication or does not allow divergent opinions to exist, isocracy acquires a conformist character: that is why isocracy can be set up in totalitarian systems if it lacks its ideonomic dimension. Politonomically, one can notice that all representative institutions function thanks to the dialogue between power and opposition, the opinion exchange between the powers of the state, thus, as Clemanceau said, ensuring the glory of a country in which people enjoy freedom of speech. Ideonomically, confusions between the legal institution of representation and political representation led to a wrong interpretation of social equity system. Those who embrace Rousseau's theories consider that representative institutions can express people's will through the elected ones on condition that the latter exercise their term of office in an imperative way; one of the promoters of the imperative term of office, L. Duguit, considered that there is no difference between the members of the legislative body and ordinary mandataries. It is obvious that the error incurred by this theory consists in the fact that it transposes a contract of mandate from the civil sphere to the political sphere. On the other hand, the setting up of *representative* institutions itself appears under different forms in the context of a political system.

Representative bodies can be set up subsequent to elections on the basis of proportional representation, as it happens with most European states through the *first-past-the-post* system, which is specific for normative Anglo-Saxon systems. Firstly, one has to approach the problem of proportionality, i.e. the criterion according to which the number of representatives is established; no matter how high, the number of representatives contradicts the principle of social equity system according to which all individuals must equally take part in the act of governing. The same problem exists in the case of representatives who were elected with a majority of votes but did not obtain all the votes. Paradoxically, social equity system as an equal way of exercising political power is limited by representative institutions: due to the fact that society is vertically structured, pre-electoral isocracy is after elections replaced with representative institutions so that the will of most electors is replaced with the will of the elected minority.

Ideonomically, one can notice that social equity system illustrates the choice of representatives whose unique political quality is the fact that they become "more equal" than those who have chosen them; socionomically, isocracy illustrates only direct, equal and free participation of citizens in appointing representatives; politonomically, isocracy only reflects the democratic character of political competition in the process of setting up representative bodies. In this respect, Robert Dahl stated that democracy must be a selective *poliarchea* and a *merit poliarchea* (Dahl R.,l953.); to support his opinion with arguments he made reference to political power distribution within different communities. As far as we are concerned, a political system based on representation cannot be mistaken for isocracy, which must represent the political system; in other words, representative institutions are not isocratic by themselves, but in the way they reflect, organize and respect the citizens' will.

The need to have legitimate and relatively stable power institutions determined the legal distribution of responsibilities towards the majority, towards a politically active minority. R. Michels was one of the first who analysed the phenomenology of delegating political power and he referred to the way in which big organizations appoint a leading minority in order to be efficient. One negative effect on social equity system would be the fact that delegation grants political leadership to a minority that detaches itself step by step from majority and transforms itself in oligarchy. Ideonomically, one can notice that oligarchical phenomenon is in contradiction with isocracy, which presumes that political participation in social ruling is extended. That is why, once the majority expressed the will to delegate power to a political institution, social equity system must be ensured by that very institution. In this respect, J. Schumpeter elaborated an alternative theory of democracy

according to which the majority can appoint a number of persons who are obliged to observe the electors' will; in their turn, electors are obliged to appoint a national executive power, called the government. Thus, Schumpeter considers that democracy is reduced to an institutional system in which some persons acquire the power and make political decisions statutory after winning the votes of the majority.

According to the political phenomenology of law, the success of polical equity depends – if power is delegated – on a series of problems. First of all, these problems are ideonomical because the appointment of a representative expresses the will of those who appointed him / her, and not the will of the elected one. Citizens' representatives are not invested with the power to express their own ideonomy but rather with the power to fulfil the electors' will. The fact that those who are elected subsequently assume the right to impose their own ideonomy as "representatives" of the citizens is illegitimate; let us not forget that Gaetano Mosca criticised the pluralist political system (Mosca G., 1939) exactly because the elected "representatives", no matter the parties they come from, would make use of imposture, lies or bribery in order to accede to power. Ideonomically, the consequence of this state of facts is the mistrust of electors as regards the correct attitude of the elected ones and the sanctioning of the latter during elections. Garry Crotty and William Jacobson thoroughly describe the electors' mistrust and the fact that the sensible assessment of politicians' performance leads to the sanctioning thereof during elections by simply refusing to vote for them.(Crotty G., & Jacobson W., 1980). One has to notice that elected representatives also have political instruments and techniques whereby they ensure, at least apparently, political legitimacy; one of these instruments is exactly the institution of representation. In the process of representation, each elected person has to choose between expressing his/her own will and expressing the electors' opinion; thus, the institution of representation does not interdict freedom of opinion but it limits the content thereof. Politonomically, one can justify the ideonomy of an elected representative who acts in the interest of the state, even if this representative aggrieves his electors' ideonomy.

The problem of the contradictory ideonomy existing between a representative's free will and his/her obligation to politically obey his party was differently settled in the American doctrine; the problem was solved by politically influencing civil service according to the citizens' rights to know their representatives' ideology; German legislation regulates the "neutral" character of the civil service, whereas the French system is more liberal and admits "compromise". Politonomically, the legal institution of *representation* justifies the exercise of political power by persons who were especially appointed for this purpose. Ideonomically and socionomically, the universal vocation of representation has a series of consequences simply because the idea of representation logically opposes the extension of political rights for, as long as an individual is sovereign, he cannot be replaced. Socionomically, individuality – understood as unique will – comes in contradiction with the principle of representation, which ignores this form of individuality. According to Dominique Schnapper and Christian Bachelier the "republic", i.e. the political regime based on the principle of citizenship, must not be mistaken for "democracy" in the sense of applying republican principles on everybody. (Schnapper D. & Bachelier Ch., 2001, p. 108)

The principle of citizens' representation was put into practice before the universality of the vote was constitutionally guaranteed simply because ideonomically politocracy must justify its power through the so-called democracy of the suffrage, democracy which ensures "equality" of the vote. Even if the vote can be ideonomically considered equal, in the sense that each individual is entitled to a single vote, still from a politonomical point of view, the vote is unequal when certain individuals are not entitled to vote. We do not refer to disenfranchised citizens (who are not entitled to vote due to certain objective reasons: they are minors, they are mentally insane, the judiciary withdrew them this right); we refer to *censitary suffrage systems* that exclude a part of the citizens from exercising electoral rights based on the following criteria: race, residence, ethnical origin, religion, sex, etc. Political phenomenology of law reveals that there are more powerful censitary suffrage systems than those that were legally set up and in this respect one can give the example of absenteeism;

individuals who do not vote were not excluded by the normative system, but by the political system. Recent research has revealed the fact that social categories which are politically not ready to exercise their electoral do not vote, even if they have reached a certain ideonomical level: see the case of young people or those who are politically indecisive, or those who contest a political regime etc. Due to these phenomena,

Daniel Gaxie considers that elections are merely a mechanism which hides relations between political forces, a way of dissimulating social relations even if elections allow freedom of expression. (Gaxie D.,1978, pp.248-250). Marxist doctrines argue that this dichotomy between the citizens' legal freedom and their political inequality can be explained economically; thus, citizenship is formal and it masks the system of domination. Elections are a premise of social equity system because they regulate the way in which political systems are organized and function. Ideonomically, elections ensure the domination of the majority ideonomy in representative institutions; socionomically, elections impose community norms in representative institutions; politonomically, elections politically legitimate normative institutions. From the perspective of the phenomenology of law we are interested in the legitimate relation between these representative institutions and the legitimacy of the government; in other words, a legitimately appointed institution can perform illegitimate actions and vice versa. On the one hand, citizens can directly sanction their representatives through vote; on the other hand, representative institutions can be sanctioned through motions of censor adopted by parliament for reshuffling government. Thus, social equity system depends on the intervention or lack of intervention of a representative institution on an executive authority. For social equity system, what matters is the very relation between a representative institution's legitimacy and the way in which political right of individuals are represented. If in the former case legitimacy is ensured through elections, in the latter legitimacy derives from the way in which power is exercised. Thus, an institution which enjoys democratic legitimacy thanks to the fact that is elected but which breaks the constitutional limits of power is obviously non-democratic.

For representative institutions not to become discretionary, formal or informal institutionalization must be limited through social control mechanisms, including through elections, a fact which makes us conclude that social equity system is socionomically determined. Elections constitute a socionomic system which regulates isocracy, as a political relation between citizens and those who govern, due to the fact that citizens validate or not the activity of those who are elected and grant them or not a mandate to act. In presidential democracies, which have populist or plebiscite tendencies and a limited term that cannot be renewed, socionomic legitimacy is affected because the president's political responsibility towards the electorate is reduced; in the absence of a socionomic control system – as the one represented by elections – a president may commit power abuse. Apart from a president, a prime-minister who is not legitimized during elections is less probable to abuse power because he is controlled by other political institutions: he can lose legitimacy through the vote of mistrust expressed by the opposition or he can lose political support of his/her party. In presidential democracies, the situation is different; in this system early elections do not exist so that crises provoked by a discretionary power cannot be settled, as it happens in parliamentary systems. Democratization of societies does not only imply the problem of modifying representative institutions, it also implies the problem of modifying normative systems so that isocracy can function. Consequently, criteria established by R. Dahl for evaluating the level of democratizatization in a society may be left out. Even if elections are free, power institutions have a representative character and power distribution is accomplished at all levels, the mechanism of passing, adopting and enforcing normative decisions limit social equity system.

5. Social equity system and majority

In ancient democracy, the majority of the people had a procedural value because ancient democracies offered a political solution when passing a new law. The system of government which is legitimized by the will of the majority was anticipated by the political philosophy of the

Enlightenment, which came up with the idea that the sovereign people had the power to set up its own laws. Since the law was considered the expression of the majority will, the vote was favoured and it was used in order to replace the ancient democracy method of cast lots. The quantitative approach of the majority principle, which was imposed in the deliberating procedure of medieval institutions, prevailed after the French Revolution to the detriment of any qualitative criteria because it illustrated equality of the individuals'. Let us remember A. De Toqueville's ideonomy, according to whom the act of governing can be simplified with the numbers that make the law. In the ideonomy of isocracy, the problem of the majority must be correlated with the political character of normative decisions. We would like to mention that a quote by Thucydides from the Preamble to the European Constitutional Treaty was eliminated; according to this quote democracy implies the power of the biggest number; it is obvious that it was not the legal meaning of the majority which was not acceptable for the European institution, but its political meaning because Thucydides definition was contrary to the principle of equality between the states and not to the legal principle of equality between individuals. Thus, if remain in the sphere of ideonomy, the principle of *majority* has no political meaning because it refers to a concept, a prevailing theory, a body of opinions which contradict the views of the minority. According to socionomy, the principle of *majority* defines a force relation between different social structures (groups) that participate in adopting normative decisions in conformity to a set of rules: *relative* majority, *absolute* majority*, qualified* majority etc. According to *isocracy*, which defines political equality in the act of governing, one has to mention the fact that *majority* must not be mistaken for *unanimity* either ideonomically or socionomically. Political phenomenology of law recorded cases in which a majority, although legally entitled to adopt a law, could not do this without the citizens' political accord; in a semi-direct democracy, the people divide power with their representatives and, thus, a law adopted by parliament, even if unanimously, does not come into force until it is voted by the majority of the electors who become "deputies for a day", as Charles de Gaulle used to say. (Haskew Michel, 2011).

As regards the referendum, even if a bill was adopted with a majority of votes in parliament, this must be accepted or rejected by the people's vote. Even if it is almost impossible to justify the principle of unanimity from an ideonomic perspective, it is possible to explain it politonomically. Unananimity is not ideonomically possible because individuals are mentally and affectively different, they have different cultural levels and it is impossible for all of them to have the same normative opinion at the same time. Socionomically, the legal notion of unanimity lacks a real support because society is made up of a series of layers, different groups, categories or social classes who have various needs and values. Moreover, the concept of unanimity discourages different opinions which are essential for economic, social and political progress; Tocqueville used to say that we should fear despotism generated by the anonymous ruling of opinion and the majority conformism. Finally, in the sphere of politonomy, unanimity can be paradoxically explained through the infringement of isocracy because a *total* majority is not possible outside force or the threat of force. According to some authors, not even the majority is necessary; according to J. Schumpeter, democracy can function very well only through "electoral competitition" without depending on a majority; in this respect, he gives the example of Victorian Great Britain, when females and most of the males were not enfranchised.

The concept of democracy is often defined ideonomically as a measure of exercising power in conformity with the majority's will; this makes us draw the politically incorrect conclusion that power might be exercised in a non democratic way if it expresses the will of that majority. In this respect, Raymond Aron stated that any political regime is to a more or less extent an *oligarchic* regime even if decisions are democratically adopted by a majority. (Aron R., 1965) . As long as people are not governed by saints, those who participate in the governing system will benefit from power. If a normative system offers institutional and legal guarantees, oligarchic tendencies are limited, more than in any regime. Actually, Raymond Aron considered that it is only in a

constitutional system where political elites are open, allowing, at least theoretically, all citizens to accede to power through elections.

The principle of *majority* is of interest to social equity system in a triple way: ideonomically, because elections illustrate the majority's normative option; socionomically, because elected representatives exercise legislative attributions; politonomically, because the majority can impose a norm upon a minority. From a legal perspective one has to distinguish between the principle of majority and constitutionalism; socionomically, constitutionalism implies a relatively large consensus as regards the supremacy of the constitution and especially the acceptance of "self-limitation" power procedures, as well as the possibility to modify the system with the help of an exceptional majority. For democratic societies, in which *nomocracy* (the ruling of the law) is observed, constitutionalism implies a clear hierarchy of the laws, an independent system of legal interpretation and a solid legal culture of the civil society. Another observation refers to the fact that the rule of the majority has strong ideonomic significance for law; e.g., if certain norms are adopted through the vote of the majority, it is necessary that these norms are correct and efficient for democracy to function. It is obvious that the passing of an electoral law by a parliamentary majority, whereby a party is granted 2/3 of the seats in parliament, even if that party did not obtain the majority of votes expressed by the citizens contradicts the principles of socionomy but it is correct from a politonomical point of view. Ideonomically, one can also notice the fact that even if the law is the expression of a majority's will at parliamentary level, this law does not express the will of most of the citizens. In this case, the vote of the parliamentary majority is meant to impose a constitutional norm that contradicts the principles of constitutionalism, which requires another democratic majority, i.e. the citizens' majority. We must also take into consideration the fact that social equity system ideonomically imposed itself in the legal system through the rule of the majority, which is *politically limited* and according to which the rights of a majority of the population cannot infringe the rights of a minority; thus, when defining isocracy, one has to take into consideration both the ideonomic component (normative policy) and the politonomic component (political normativism).

6. Conclusions

Social equity system which ensures equal participation of citizens in the ruling of society is legally regulated through norms, institutions and legal systems. Thus, social equity system implies both the institution of representation and its correlative – confining the citizens' possibility to participate in political ruling in the context of extending and diversifying the political body of the *demos.* To Ch. Lindblom, as well as to Robert Dahl a set of political conditions would be enough to make democracy possible: freedom of expression, freedom of political association, the right to vote, the right to be elected, as well as the right of leaders to take part in free and correct elections.(Dahl R.,1953). Ideonomically, one can notice that the requirements of isocracy are formulated as political freedoms and not as legal rights; in fact, an individual who enjoys freedom of speech but who is not entitled to exercise it is excluded from power. According to the phenomenology of law equal participation in the exercise of power is legal fiction since each individual is considered to be equal with the others; however, it is only through this legal fiction that the individual can effectively participate, e.g. as a citizen, in elections; it is only through this fiction that a child is granted political rights but is not given the right to exercise them. Moreover, as Giovanni Sartori noticed, equality, understood economically, might mean equal fortune for all or the lack of any fortune for anyone in case all assets belong to the state. (Sartori G.,1999, pp.309-310). Thus, it is obvious that defining equality requires specific legal instruments and must comply with the will of politocracy. Marxism was wrong in mistaking one of the conditions for exercising power for power itself and when it reduced political force to working force or when it assimilated political rights with economic rights. The technocrat doctrine denies the idea of equal participation of citizens in the exercise of power; according to Helmut Schelsky, "no ordinary citizen has the knowledge and technical means whereby to participate in the over-formalized decision-making process" (Schelsky H.,1961, p.29). A. Frisch

also stated that direct democracy is no longer possible today and, thus, the vacuum must be filled with technocrats. If power becomes a form of technical and scientific governing, normative systems should invest science with legislative powers, legitimize management as executive power and invest coordinating institutions with jurisdictional powers. Political phenomenology of law paradoxically reveals that political systems cannot be classified in conformity with political principles; however, they can be differentiated through legal norms and institutions. Firstly, one has to notice the fact that according to legal institutionalization, each political system has a set of different legal principles and values. Secondly, each political system differently regulates participation in the ruling of society; some political systems allow access to power only to aristocratic, traditional or bureaucratic elites; others also allow middle categories to participate in the exercise of power, whereas large democratic societies allow all citizens to take part in the exercise of power. Thirdly, as S.P. Huntington noticed, political regimes are different from each other according to the relation between political institutionalization and participation: political systems with a low level of political institutionalization and a high level of participation are those in which sociocracy –while using its own methods– directly acts in the sphere of policy. Huntington mistakes the socionomic level of participation for the politonomic level of institutionalization, in which participation is possible only due to a formalized legal system.

THE IRONY OF SAMENESS
EUROPEAN UNION AND INDIA'S COLD RELATIONSHIP

MIHAELA PĂDUREANU[*]
SILVIU PETRE[**]

Abstract
Trying to establish themselves as global actors, both European Union and India pursue their interest through multiliteralism. Although both of them developed intense relationships with the United States, Russian Federation, China and other regional actors, EU and India do not find profoundly attracted to one another. While EU steers Central Asia or China, India in its part sees the European framework as the sum of its parts at best and prefers bilateral proximity with individual nations once at the time: UK, France Italy, Germany or Poland. The irony of this state of affairs is that both EU and India have similar traits if judged by their effort to bridge ethnic, religious and economic diversity into a single body. Apart from that both EU and Indian economies struggle to shape a compromise between social protection and the neoliberal agenda.
In this paper we analyze the relationship between European Union and India by focusing on their foreign policies. Our main hypothesis is that EU and India should cooperate due to their attraction to the same values and norms. As future unfolds along with common challenges such as regulating financial flows or tackling terrorism and environmental issues, European Union and India should try to reach a common language.
This relation can also be a test for EU's aim to become a global actor because an established cooperation with an Asian country would provide the necessary framework to work outside the European space and to demonstrated its commitment to become an important player in IR.

Key words: *democracy, values, security, liberalism, EU, India, European military, industrial complex, Dassault-Rafale*

Introduction

In this paper we focuse on the EU's foreign policy towards India, mainly on the speed with which this relationship has developed in the last decade. We seek to explain why the relationship has evolved so rapidly and why it began to include areas like security, common threats, the role of international institutions. In order to support our research we use qualitative methodology, a case study about the EU-India relation. This case study is important because it shows the importance that shared norms, values and institutions have on the partnership, and we consider them methods to deepen it; and in the second place we observe a paradox, because the both actors are subscribing to the democratic process their relationship has showed some slowing.

1. The theoretical framework

For a long time, the relation between India and EU (European Community) was based on trade and economic cooperation and hasn't went through tense times. In the 90's their partnership began to contain more concrete objectives that were enforced by a more and more institutionalized framework: in 1994 was signed the Cooperation Agreement, in 2000 the Summits were introduced as a tool to facilitate the political dialogue, since 2005 India has been EU's "strategic partner" and the European External Action Service has worked on a Country Strategy Paper for India 2007-2013. In

all this official documents, the role of norms and shared values is taken into account from the beginning and they are seen as important ways to keep on building and developing the relation: "Respect for human rights and democratic principles is the basis for the cooperation between the Contracting Parties and for the provisions of this Agreement, and it constitutes an essential element of the Agreement", „India and the EU representing the largest democracies in the world reiterate that their partnership is based on the sound foundation of shared values and beliefs. Our common commitment to democracy, pluralism and rule of law and to multilateralism in international relations, is a factor for global stability and peace", „India and the EU, as the largest democracies in the world, share common values and beliefs that make them natural partners as well as factors of stability in the present world order. We share a common commitment to democracy, pluralism, human rights and the rule of law, to an independent judiciary and media". Therefore, we consider that the theoretical framework that could help us the most to explain the EU-India partnership should the liberal one. Liberalism allows us to introduce individuals, ideas and institutions when analyzing foreign policy and to better explain certain decisions.

Important concepts for the liberal theory are: individualism, freedom, constitutionalism and institutions – whose role is to maintain the order; and even though it appeared as a domestic theory, liberalism has managed to project its domestic quality and values to the international level. The democratic regimes are peaceful towards each other, but are agressive towards non-democratic states. Liberals make hypothesis about each of K. Waltz's three levels when the try to explan what causes wars and M. Doyle identified three types of liberals: first image Lockean, which regards the human nature; second image commercial, also named societal and the third image kantian or republican internationalist. The lockean image, although anarchic is based on states that are representative and had obtained citizens' consent while looking to protect life, liberty and property and can trust in one another; the commercial liberals consider that the markets and the capitalist system together with "democratic majoritarism" will increase the level of peace. The third type of liberals represented by Kant and the republican internationalists consider that the states must agree on three conditions in order for the world to obtain peace. These conditions are: representative, republican government; respect for nondicriminatory rights and social and economic interdependence. All these different liberal assumptions lead to the following conclusions: that liberal democracies will reject the balance of power and will trust the community of liberal states, will have a positive duty - which implies defending the members of the liberal community- , will sustain market economy as well as human rights avoiding the use of force. In an early classification of liberal tradition towards the level of analysis, M. Doyle talks about Kant's liberal internationalism in which citizens apreciate the moral equality of them all, Machiavelli's liberal imperialism where citizens are unequal and seek to rule because they fear to be dominated and Schumpeter's liberal pacifism with rationalized, individualized and democratized.

These three distinctions of liberalism have been reclassified by A. Moravcsik, using the link between social preferences and state behaviour in ideational liberalism –that shows how state behaviour influences conflict and compatibility between collective social values, commercial liberalism – it explains the way in which state behaviour affects gains and losses on individuals and groups in society and republican liberalism – concentrates on who state behaviour is illustrated on different forms of internal representation.

The liberal theory belongs to the bottom-up approaches or actor-based perspective of the foreign policy analysis that consider individuals and societal groups as prior to politics because their interest are defined before the politics and are only using politics to obtain those goals and therefore this kind of analyse includes a includes more that just political or governmental explanaitions. The three core assumptions of the liberal theory are: one- that states are the primal actors in international politics, second – states represent the domestic society and are constantly recreated by new political actors and third that *„interdependent state preferences determines state behavior"* and that the states are trying to realize their preferences – different from other states- but under the constraints imposed

by other states' preferences. The other approach to the foreign policy analysis is the structural perspective (realism, neoliberal institutionalism, organizational behaviour approaches, social constructivism) usually addressing different questions or explaing different things, such as the decision making process or the choice for some actions. In this paper we will explain the focus on some actions rather then the process making, more precisly why has the relation between the EU and India evolved so rapidly and so deepen going from economic cooperation to a political partnership and although our theoretical framework is the liberal one, based on an actor perspective, we consider that the structural dimension of the policy should be also taken into account. By the structural dimension we understand the the economic, social, cultural factors that are perceived by the actors and to whom they react and that influence some types of interaction between them. For example, in this case we consider globalization as one important structural factor that influences EU's policy towards India.

One methodological problem that we want to adress is the way in which we will define the EU. If we can surely say about India that is a state, there are difficulties regarding the way in which EU can be conceptualized. This subject has been discussed also in regard with the sort of authorithy the EU has mainly because it has not replaced the national state but is more than an organization. The way in which its institutional and judicial structure evolved made J. Ruggie name it as the "first truly postmodern international political form" challenging the raltions between territorial space and state. While Duchêne called it the „civilian power Europe" that should avoid military power in order to maintain its influence.

Even if EU's development has lead to a new and difficult to describe political form, its construction and durability are linked and motivated by the need to avoid another war to to stimulate prosperity on the continent. W. Hallstein explains the construction of the European Community as a way to allow "Europe to play its full part in world affairs.. . . [It is] vital for the Community to be able to speak with one voice and to act as one in economic relations with the rest of the world" hence, a coherent foreign policy is vital for streghtening EU's role in the world.

2. EU-India cooperation

Although the European project was also a response to the Soviet Union, its existence continued even after the end of The Cold War, contrary to realists and neorealists prediction and in the 90s took steps to develop a Common Foreign and Security Policy and a European Security and Defence Policy renamed Common Defence and Security Policy after the Treaty of Lisbon. In the security area, the European progress towards a coomon voice in the world evolved much slower than it did in the economic sector. The market policies are governed by the „Community method" described as a set of rules and practices that provide a major role for supranational institutions while on the foreign and security policy the supranational institutions have little or no power. What the member countries found to be a common feature that wish to support in the foreign policy is the soft power of their construction. Looking to have certain identity in the international system, Europe aimed to be, in the word of R. Prodi a global civil power: „We must aim to become a global civil power at the service of sustainable global development. After all, only by ensuring sustainable global development can Europe guarantee its own strategic security". This shows that by spreading its influence EU islooking to ensure its security and to encourage development for its partners. At the base of EU's normative power are five major norms peace, liberty, democracy, rule of law and respect for human rights and four minor norms social solidarity, anti-discrimination, sustainable development and good governance that are spred contagion, informational diffusion, procedural diffusion, transference, overt diffusion and the cultural filter. All this norms can be found in the India-EU partnership as they both recognize the shared values that are at the base of their relation. And EU is still streghtening the normative dimension of the relation by sustaining the

implementation of these norms in the institutional framework between them. If EU apperas more like a normative power looking for its own place, India is considered to be a *status-quo* power which does not wish to expand its power.

An important form of institutional cooperation has been established since the India-EU Summit that took place in 2000 in Lisbon when they reafffirmed that „based on the shared universal values of democracy and the respect for human rights, rule of law and fundamental freedoms, stress our commitment to promote socio-economic development and prosperity, as well as international peace, stability and security" and EU considers India as the „warrant of stability in the chronically unstable South Asian region". The EU-India Joint Action Plan set in 2005 and reviwed in 2008 mentiones the main areas of cooperation for them: promoting peace and comprehensive security, promoting sustainable development, promoting research and technology, promoting people-to-people contacts and cultural exchanges.

The shared values and norms between them and the role of stabilizer that the India has in South-East Asia represent important incentives to keep on developing the partnership. As democracies attached to the the market economiy, they are improving the economic trade by opening in 2007 the disscussions for signing the *Free Trade Agreement.* EU is India's biggest trading partner with a total amount of trade in goods of 86 million euros in 2010 and this sum increased in 2011 with 20%. The biggest exporters were Germany, Belgium and Great Britain with 60% of exports to India. India accounts for 2.6% of the EU's total exports and 2.2% of the EU's total imports and if the trade agreement is signed the trade could double to 155 billion euros by 2015. This means that economic cooperation has developed in a very complex way and that the partners are looking to increase their advantages, but there are also points on which they disagree. According to an analysis on the FTA impact on India published in March 2010, it seems that India is unwilling to include the norms mentioned in the chapter *Trade and Sustainable Development*, the whole chapter more precisely because it requires measures to protect the enviroment and to protect children form labour. The economic relation has a great potential and can became a motivation for continuing to deepen their partnership.

Although India has benefited from aid from the EU, this donor-beneficiary relation has begun to transform to a partership and India's own growing economy will put further demands on the Asian power making it more willing to become independent. Even if we consider India to be a status-quo power, its role is more important now than it was ten years ago. Still India needs to find answers to problems like poverty, access to education and health care. The latest Country Strategy Paper for India 2007-2013 is defined as a transition paper that will move the relation from assitance for development to actors' economic cooperation and to reduce actions while also supporting the implementation of the *Millennium Development Goals* and *the EU-India Action Plan*. At the last EU-India Summit in February 2012, the President of the European Council Herman Van Rompuy mentioned that this Summit will offer the possibility to streghten their relation and to develop the political dimension of their colaboration and that the „increased cooperation between India and the EU can make a difference for the security and the prosperity of our continents". EU and India cooperate on research and inovation programmes and they signed the *EU-India Joint Declaration on Research and Innovation Cooperation* based on the *„Innovation Union"* document for EU and the *„Decade of Innovation"* paper for India. These documents describe the following common threats for which solutions are needed: climate change, energy security, water, resources, demography, security, natural disaster management, sustainable trasnport and mobility, health and combating diseases.

Regarding cooperation on security problems it has been established that at the bilateral level will be held consultations regarding threats like terrorism, cybercrime and piracy, regional issues like the need for a stable Afghanistan, a democratic Pakistan, the importance of regional integration and closer cooperation in South Asia and global issues: the international economic situation, poverty

eradication, the need for sustainable development, climate change, the Iranian nuclear issue. They also sustain multilateral solutions for this problems and a more institutionalized framework for South Asia, although the Security Council Reform is an important topic for India.

EU and India have a commun approach to the world affairs' current status and this has contributed to an increased cooperation in the security sector. As EU is constructing its global image in the international system, its valus and norms are the tools to legitimate to its actions.

What does it takeso long for an EU-India free trade agreement?

In 2010 New Delhi and Brussels agreed to sign a free trade agreement which hailed the promise to boost mutual exchange to over 100 billion dollars/year. We are three years away from 2010 and an FTA is still mirred in the quagmire of diplomatic details. In order to answer this dilemma we must drill deeper into the democratic mechanisms and capture the tangou between politics and economics.

It seems to be a self-evident truth the link between democracy and free-trade. The liberal creed envisages an international environment where both domestic and external relations are regulated by transparent and representative institutions. However reality is heterodox vis-a-vis theory. Many times people demand social safety nets. In response governments issue protectionist regulations designed to foster internal growth and halt foreign business considered toxic to national interest. As an ironic contrast history display several examples of state-led liberalisation measures enacted by authoritarian regimes such as Pinochet's Chile or the postMaoist China.[1] Those sample tend to spurr the idea that sometimes democracy and free-trade collide and only strong leaders can push pro-business disregarding social costs and public protests.

According to Kevin O'Rourke one cannot infer a simple, predictable correlation between democracy and free trade inclinations. Financial power, GDP per capita, the status and solidity of working class are factors moulding the political economy adopted by governments.[2]

Torsten Persson follows a more institutional approach and distinguishes between majoritarian and proportional democracy vis-a-vis trade liberalisation. According to Person in majoritarian regimes public debate colludes to adopting market friendly stances while proportional settings tend to privilege social safety nets and protectionism.[3]

Its is probably fair to say that, regardless of domestic colors or regime, each state purses its interest in a rational manner, aiming to extract the best opportunities from the global economy and at the same time preserving sensitive industries and vulnerable social classes or underachieving branches of economy. In this respect the European Commission warned about a protectionist wave sweeping global economy in 2012. On the other side of the coin, the same European architecture strives to insulate its farmers from cheap competition with developing regions such as Sub-Saharian Africa.[4] To turn the rhetoric the other way around, Zhang Yansheng, Secretary General of the

EU is not alone in this stance. Across the ocean, United States joins in the belief that economic firewalls are needed to protect national production against foreign competitiros. One of the favorite topics in the last campaign for presdency was China's rogue behavior in property rights. Pundits and politicians alike accuse Beijing for playing an alleged double crossing game: it wants to be a part of WTO but at the same time practices industrial theft.

Apart from governments, several executives have expresse their friendly attitude towards protectionist measure in certain sectors. Rachel King, "GE Survey: Protectionism at Odds with Innovation".

Academic Committee of the National Developmentand Reform Commission advised UE leaders not to compete against China in labor intensive domains like textiles and instead concentrate on improving the high-technology skills indispensable to an information society.[5]

At the other side of Eurasia, India experiment with independence made protectionism a cornerstone of democracy itself. The spinning wheel on the Indian flag did not represent a symbol of industrial modernity as the Soviet sickle&hammer. It was instead a Ghandian icon of an agricultural Weltanshaung which annexed economic needs to spiritual redemption and not material welfare. For decades Indian political economy stubbornly suppressed private initiative. The collapse of Soviet bloc delegitimised socialism in India as well.[6] Facing an overall collapse early 1990s, New Delhi accepted to make a volte face and open its gate to liberalization. Nonetheless, given India's million living undr the poverty line marketisation remains a taboo or even a bete noire in certain areas.

Bellow we have a chart representing the overall globalization index, also known as KOF Globalization Index. It was created in and the research is organised in three different strands: politics; economics; society. Among indices and variables : flows trade (percent of GDP); foreign direct investment, stocks (percent of GDP); portfolio investment (percent of GDP); personal contact telephone traffic; transfers (percent of GDP); international tourism; foreign population (percent of total population); information flows Internet users (per 1000 people) etc.[7]

[Accesed 23 February 2013]

If we count the rankings for 2012 we see that top ten is mostly populated with European countries (and Asian tigers) while India is somewhere bellow the 100th place.[8]

If we take into account another index, namely Open Market Index we notice a more nuanced picture: members of European Union are scattered across the whole list.

(Hong Kong #1; Singapore #2; Luxembourg #3; United Arab Emirates #4; Belgium #5;
The Netherlands #6; Ireland #7; Switzerland #8; Estonia #9; Denmark #10; Sweden #11 Slovak Republic #12;..France #28; Poland #33; Romania #34).

It is true that India's place (ranked #66) reflects the persistence of red tape, but at the same time EU as a whole remains a hotchpotch of richer and poorer regions with different economic needs.[9]

Summing all the things said above, we may coclude that a free trade agreement between EU and India sould be judged on a two level basis. In both entities we have a globalized urban class with higher education, connected to the latest technology sitting above marginal communities for whom globalization remains a possibility more than a reality.

Westphalian paradigms and collective security in Indo-European security designs

As India judges its security interests still within a Westphalian paradigm Brussels does seems to play a role much beyond diplomatic symbolism.[10] Although the European capital is bypassed by

New Delhi one gets a very different picture studying bilateral security cooperation between India and different European countries.

During the Cold War India's defence cooperation towards different nations reflected its position on the Eurasian chessboard as well as its commitment towards Non-Alignment, according to Kanwal Sibal, former Foreign Secretary of India.[11]

Initially crafted for the military needs of the British Empire, the armed forces of an independent India would need foreign equipment. Jawaharlal Nehru's grand vision for his country was a blend of Ghandian anti-modernist pacifism and the craving for mdernity, heavily influenced by the Soviet model. Thus, India's foreign policy, both in Nehru's years and afterwards tried to blend the effort towards strengthening the values of UN Charter, achieving dezarmament, especially at the nuclear level with a more realist back-up plan to have a respected hard power as a bargaining chip. Three were and remain the components of the Indian defence cooperation pattern:

1) indigenization: meaning the aim of Indian industry to achieve technological autarchy;
2) relying on traditional trustworthy partners such as Russia, United Kingdom and France;
3) diversifying the supply horizon with new players according to New Delhi's economic or strategical interests: United States, Israel, Germany, Sweden, Spain, the Czech Republic, Poland.[12]

One supplementary remark has to be noted down: India's cooperation with Western countries has to take into account the deepening and gradual maturing of the Europen Union. Thus one has to talk about a pure bilateral phase prior to 1990 and a composite bilateral phase hailing the birth of a European military industrial complex.

A. Devolution of the British influence and the searching for new partners

Although India gained its independence in 1947 it did not severed the relationship with the British completely. Actually until April 1958 the Indian navy was headed by a British. Overall the Indian armed forces were of British craft: Centurion tanks, Vampires, Canberra, Hunter and Gnat aircraft, and Leander class frigates. However, the enmity with Pakistan as well as Cold War politics widened some distance in the Anglo-Indian relationship.[13]

India's first defence contractors took place in the 1950s but the real military build-up coincided with the end of the non-Alignment honeymoon. Nehruvian diplomacy was based on two premisis: the regional Sino-Indian affinity and, on the broader stage on the syndicalization of Third World's independent states against the superpowers of the North: United States and the Soviet Russia. When China defeated India in 1962 and India won the upper hand against Pakistan in 1965, the political elites from New Delhi realised that multilateralism alone would not suffice.

Apart from Soviet technology, Indians pursued the French connection as Gaullist France was using military diplomacy as a means to make friends in a postcolonial environment. Thus India acquired its French Ouragan, Mystere and Alize[14] fighter jets during the '50 and '60s along with licenses for the Alouette and Lama helicopters during the 1970s.

[13] Kanwal Sibal, "India's defence ties with Europe".

[14] On 25 June 1953, India ordered 71 Ouragans. They started arriving that year with deliveries being completed in 1954. Another 33 Ouragans have bee ordered in 1957. They were used against anti-government riots in

In 1979, when India ordering around 130 aircraft Anglo-French Jaguar aircraft, with licence production and transfer of technology as part of the package, the British made a sizable come-back into the Indian market.[15]

With the West Germans India managed to complete the acquisiton of Dornier submarines, especially after the 1971 conflict with Pakistan.[16]

The end of the Cold War, late '80s was not quite the finest hour of Indian defence and military history. The overall collapse of the economy, following the overall crisis of the dirijist model,[17] the engagement in Sri Lanka, the death of Indira Ghandi and of her son, Rajiv in 1991 were completed by the Bofors scandal (1987). Early 1980s Indian Army decided to renew its stock of artillery so it launched a bid to which several high profile companies from West along with USSR responded. In 1986 the Swedish Bofors was shortlisted and won the auction along eight a contract 1,25 bld$ worth. A year later, on April 16, 1987 a Swedish radio talked about alleged bribery to Indian officials in order to scheme auction. One name was Wineshvar Nath Chadda, an international peddler for international pharmaceutical firms turned to defence business. It was discovered that Chadda had connections with an Italian firm and an Austrian bank and that his money were filtered through a Ponzi scheme involving Swiss accounts. In India the case was taken up by Chitra Subramaniam, a journalist working for The Hindu.[18] The result was an immense scandal tarnishing the name of Rajiv Ghandi. Although all the suspects were acquitted the event took a heavy toll on Congress' chances in the 1989 national elections.[19]

B. The allurement of the European defence industrial complex

Charles Tilly's dictum that war makes the state and the state makes war is also valid for the post1945 European community. During the Cold War Europe's weary nations relied on American defence while the spectre of mutually assured destruction remained a constant reminder for the heavy price industrial modernity must be willing to pay. As industrial potential reinvigorated itself, European governments rebuilt their security capabilities but with little to moderate success in joint ventures. Whereas the Maastricht and the Amsterdam treaties have set forth a transnational security concern, what really facilitated the birth of a common European military industrial complex was another war, one in their backyard: the Kosovo crisis. It was to be NATO's moral redemption for the failures of the international community as the later had proved idle or ineffective in curbing several genocides during the 1990s.

The birth of a European CMI should be seen in double perspective: both as a top-down measure and as a upstream pressure coming from the defence lobby.

A short political history for such process can be abbreviated as follows:

1992- The Petersberg Tasks decides that Western European Union should channel its resources

towards peacekeeping and managing crisis stemming from failing states

1997 (June) Amsterdam Treaty signed, EU military capability to be introduced in

European Security and Defence Policy (ESDP)

1998- The Declaration from Saint Malo authored by British Prime Minister and French

President Jacques Chirac shows the need for an autonomous European defence architecture within NATO

1999 (June) Amsterdam Treaty enters into force

1999 (October) Javier Solana is appointed as the EU's High Representative for common

foreign and security policy (CSFP) and head of the Council of the European Union

1999 (Dec.) EU agrees on creation of 50-60,000 Rapid Reaction Force

2001 (Feb.) Nice Treaty signed, EU "crisis management" capability to be introduced under EDSP

2001 (June) EU Military Staff is declared operational

2001 (July) European Advisory Group on aerospace is created

2002 (July) EU "Strategic Aerospace Review for the 21st century" (the "STAR 21"report) published

2003 (Jan.) First EU crisis management mission, to Bosnia-Herzogovina

2003 (Feb.) Nice Treaty enters into force

2003 (March) First EU military deployment, to Macedonia

2003 (Oct.) EU convenes Group of Personalities (GoP)

2003 (Dec.) EU Security Strategy adopted

2004 (March) GoP report: "Research for a secure Europe" published

2004 (June) EU constitution signed, commits member states to progressive improvements in military

capability

2004 (July) EU Defence Agency agreed with Javier Solana as its first director[20]

2006 (January) The EU Gendarmerie Force (EGF) is launched.[21]

For the worldwide postCold War military industrial complex the peace dividend meant a base figure in business as arms sales begun to fall from 1987 only to start rising again in 1998. In 2004 it was estimated that world military spending accounted for 2,6% of world gross domestic product or 162$ per capita. Late 2000s world wide military spending approached Cold War numbers.[22]

Another factor affecting the dynamics of defence industry is the growing costs of production for military equipment as a function of increasing technological complexitity. It is quite known Norman Augustine's saying that in 2054 United States armed force will be able to maintain only one jet and afterwards, as costs follow their exponential trend the effort to assemble one single plane should consume the entire American bugdet. Whether Augustine's predictions are exaggerate or no, the growing price of defence paraphernalia as become an established fact.[23] In order to cope with

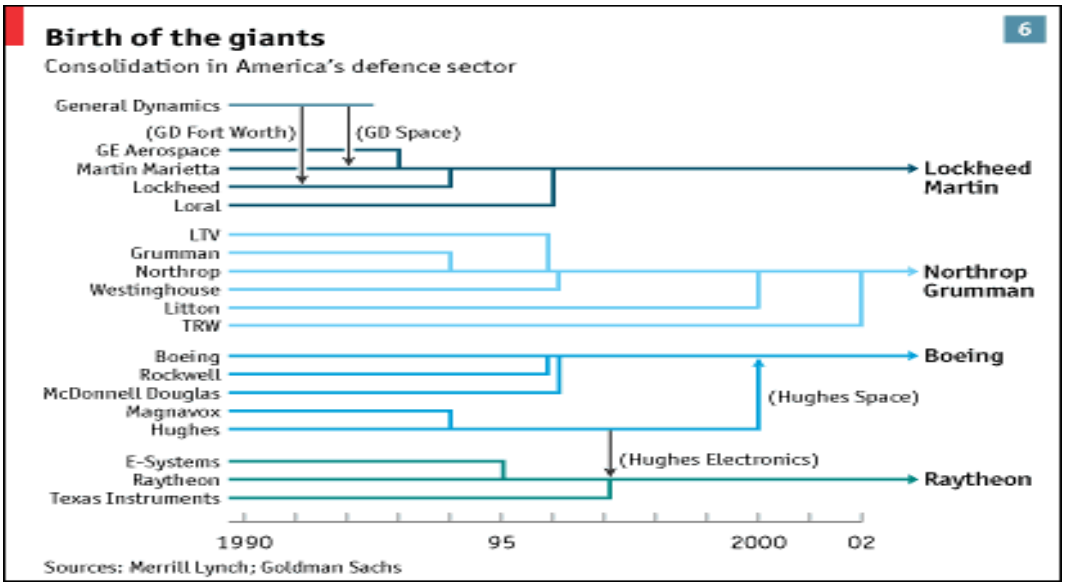
such dynamics American defence market has witnessed wave of successive mergers and acquisitions during the 1990s.[24]



To cope up with the competition the European defence industrial base plunged into realignments similar to Medieval dynastic marriages.

Late '90s, when Tony Blair and Jacques Chirac agreed to the Declaration of Saint Malo, Daimler Chrysler Aerospace (Dasa), British Aerospace (BAE) and Aerospatiale-Matra (Italy) were planned to unite in what should have become European Aerospace and Defence Company (EADC). The blueprint was abandoned and British Aerospace merged with GEC Marconi giving into BAE Systems- today world's second weapons producer. The remaining actors, namely DASA, Aérospatiale-Matra and Construcciones Aeronáuticas SA (CASA) melted into EADS: European Aeronautic Defence and Space Company.[25]

Similar arrangments, but on a smaller scale happened also at the national level. For example in Germany, out of seven important defence players in 1997, only two remained during middle 2000s.

Bridging the gap with private sector

The American security build-up in the aftermath of 9/11 rolled the dice for the European defence complex as well. In july 2002 Javier Solana teamed-up with a series of European Commisars, European MPs and high-profile personalities from industry to write a report called Strategic Aerospace Review for the 21st century, or STAR 21. Seen as controversial by outsiders, the report stressed the importance of purring massive investments in aerospace and security research.

"Defence spending in a time of austerity. The chronic problem of exorbitantly expensive weapons is becoming acute", The Economist, Aug 26th 2010. Accesed 21 February 2013, http://www.economist.com/node/16886851.

[24] *"An industry reinvents itself: America's defence companies are turning dual-purpose", The Economist, July 18th 2002. Accesed 21 February 2013, http://www.economist.com/node/1223580.*

[25] Jürgen Wagner, "The EU As a Driving Force of Armament Pressure In Terms of Arms Build-Up, War Chests, and a Military-Industrial Complex for the World Power Europe", Informationsstelle Militarisierung (IMI), *Politics and Society*, (Nov.2012) 40-45.

Amongst those who served as fulcrum between politics and economics were representatives of the most important European defence companies: Jean-Paul Béchat, Chairman & CEO SNECMA; Manfred Bischoff, Co-chairman EADS; Sir Richard Evans, Chairman BAE Systems; Jean-Luc Lagardère, Co-chairman EADS; Alberto Lina, President & CEO Finmeccanica; Denis Ranque, Chairman & CEO THALES; Sir Ralph Robins, Chairman Rolls-Royce.[26]

Another 2002 document: the Strategic Research Agenda for aeronautics released by the

Advisory Council for Aeronautics in Europe (ACARE) warned about the perils of remaining behind US technological advance.[27] In March 2003 a communique issued by the European Commission: 'Towards an EU Defence Equipment Policy'[28] predated the European Security Strategy as manifest papers in this regard.

A symbiosys between Brussels and defence industry cannot be possible on long term without the lobby agencies.[29] The most important of them is considered to be ASD – the Aerospace and Defence industries Association of Europe created after the merger of the European Defence Industries Group, the European Association of Aerospace Industries and Eurospace, the Association of European Space Industry. ASD's first three chairmen were Mike Turner, a CEO at BAE Systems, Pier FrancescoGuarguaglini, Chairman and CEO of Finmeccanica and the current ASD chair, Thomas Enders, CEO of EADS[30]

Raffale multirol-jet as a litmus test for an (Indo)-European single defence market

In January 2012 it was announced that Raffale-Dasault from France has been shortlisted as the winner of India's bid for a new multirol jet.[31] The process begun in 2007 when India decided to renew its aging fleet of military jets and started an international auction. After several preliminaries the menu was reduced to only a few major players: two American options: -> Boeing F/A-18 Super Hornet and Lokheed Martin's F-18; Dassault Rafale from France; Eurofighter; Swedish Saab and Russian MIG-35 Mikoyan. Rafale's victory was seen with mixed colors. For some American voices such as Admiral Mike Mullen, India's choice was foolish vis-a-vis the Washington-New Delhi strategic partnership. Over the Atlantic, in a crisis ridden European Union Rafale's triumph over Eurofighter Typhoon signaled the preeminence of national solutions over communitarian ones.[32] In France itself, the public opinion backfired against President's Sarkozy scheme to sell a very expensive plane at a dumping price in order to secure the bid and possibly gain for himself another five-year term.

However if one chooses to look beneath the skin of media clichees and judge things in long durée will see a slightly different picture. First of all EADS holds 46% of Dassault action, even

[32] Hasnain Kazim, "**EADS Loses Massive Contract: India Opts For French Fighter Jets".**

though it doesn't have the right to vote in the board of directors. Second, the unexpected victory of Dassault against a more predictable Typhoon one generated a snowballing on the European defence market. Late 2012 EADS and Britsh BAE Systems announced their decision to merge in order to better their chances in competing with the American rival Boeing. If the merger would really take place Dassault should find itself marginalised on the European stage.[33] Third- by choosing Rafale over other existing alternatives India does not give up the other European players. As a testimony of its huge appetite for top-notch military technology New Delhi signed a 700 bld$ contract with BAE Systems in July 2010. India will receive 57 Hawk Advanced Jet Trainers to be built under the license of HAL, a subsidiary of a larger state-owned company. The engines for the Hawks will be constructed in Bengalore.[34]

Sealing bonds: Indo-EUropean naval cooperation

Defence cooperation between countries wouldn't be complete if confined only to equipment transfers. Joint exercises facilitate know how and socialize values and mentalities. Using a biological metaphor one can say that while technological transfers are the anatomy of military diplomacy and security cooperation, joint exercises are the physiology of the same phenomenon.

In this respect one event is heavily significant. Middle July 2012 eight of India's most important ships have set sailes circumscribing New Delhi tous les azimuts naval ambition. Four of them headed towards Shanghai covering the Eastern part of the Indian Ocean. The other four, namely INS Mumbai, INS Aditya, INS Trishul şi INS Gomti turned the other way around to cover Africa's eastern troubled water only to pass through the choke point of Aden and meet the warm breeze of the Mediterranean Sea. This western fleet commanded by rear-admiral A.R.Karve arrived in the port of Haifa to celebrate 20 years of naval cooperation between India and Israel. Haifa was to be only the middle of the trip as India's four frigates headed towards Marseille, passed by Gibraltar and circumvented the British Isles.

As the global shift of power goes to Pacific, Mediterranean Sea is reinvested with a new strategic meaning. It ceases to be the trampoline for European nation to project their goals into Eurasia and becomes the meeting point for Asian prowess expanding over West's traditional backyard. In India'scase, experiencing Mediterranean hails the maturing of its blue water Navy and, subsequently, the vector of global prestige.

During the first postIndependence decades, India's defence preparations have been crafted to meet threats flooding from the northern and northeastern borders, namely from Pakistan and China.

[34] Dassault tops EADS for Indian jet deal, UPI.com, Feb. 3, 2012.

Therefore ground troops and aviation received the most attention with Navy being kept at a Cinderella status. A certain wave of build-up followed India's 1971 conflict with Pakistan which had acquired a naval dimension beyond the terrestrial pitched battles. Lesson learned- Indian navy fortified its arsenal with several state of the art pieces: anti-submarines Soviet planes (Tu-142 and Il-38), German Dorniers, British Sea King anti-submarine helicopters along with new German made submarine.[35] Supplementing the policy of acquisition Indian engineers pursued a dual track: 1) fungibility- the adaptation of equipment to accommodate several suppliers such as France, Russia and Israel; 2) indigenization- the ability of fulfilling national needs without any (substantial) external help. As for the latter it was more than technological necessity, but apart of the philosophy of swaraj, self rule. Otherwise put India could not consider itself independent as long as it was at the mercy or the whims of other international actors, in any given field of activity. The Leander frigate programme was the first step of indigenisation, Nilgiri being the first ship of its kind to be launched at sea (October 23 1966) and Vindhyagiri the last (1981). Today it is considered that India's naval indigenization reached 73% of paraphernalia.[36] At the end of 1990s ***Bhāratīya Nau Senā*** was the seventh in the world possessing around 100 battle ships out of which 15 submarines, 2 aircraft carriers and 23 fregates& distroyers. Displaying the confidence given by financial boom, Indian navy emabarcked on an ambitious plan of modernization. The aim is to align three aicraft carriers, 10 distroyers and 24 frigates along with 6 Scorpene submarines by 2020.[37]

The economic liberalisation of 1991 marked the replacement of Nehruvian non-alignment with multilateralism or even omni-alignment.[38] Pragmatism was to be the hype of a globalised India and consequences followed at the tactical and strategical levels.

New Delhi's defence policy embraced partnership with numerous states, big or small. Concerning the military shopping spree India'a behavior envisaged multi-level contacts with its closest costumers:

- With the French Navy *Bhāratīya Nau Senā* shares common events since 1993. In 2001 they pioneered the Varuna naval exercise which celebrated its 12 birthday in 2012. 2009 witnessed perhaps the vastest training of its kind. In 2010 Varuna took place in the port of Mumbai and brought together FNS Dupleix, the frigate INS Brahmaputra and the submarine INS Shankush. In 2011 India was represented by INS Virat, indigenous made frigates Godavari and INSA Ganga along with a class Shishumar submarine- INSA Shalki. In 2012 in was France's turn to host Varuna with the aircraft carrier Charles de Gaulle, the distroyers FNS Forbin and FNS Tourville, tanker FNS Meuse and last but not least FNS Amethyste nuclear submarine. India's voice was articulated by Mumbai distroyer, frigates Trishul and Gomati plus the tanker Aditya. Late October French submarine Dupleix returned the visit and anchored in the port of Mumbai. The last event of the year was given in December by the visit of admiral Bernard Rogel in India.[39]

- The reality of Indo-Spanish defence cooperation was a late comer. New Delhi opened diplomatic relations with Madrid in 1956 and since then their bilateralism was strengthen by several agreement, especially in the fields of taxation, culture, education and environment. Although Spanish-Indian naval joint history does not count memorable events, Spain's and Indian ships have the same goal of liquidating piracy in the Golf of Aden. Moreso, as a fulcrum between American, French and German military equipment Madrid has become interesting for South Asia's defence market. In October 2012 the visit of King Juan Carlos in Delhi proved to be an optimum occasion for signing a defence deal involving submarines. The Iberic company Navantia is among Europe's top brass security providers and has agreed to sell India the S-80 submarine, which is similar to French Scorpene. As Navantia maintains good links with Lockheed Martin the parameters for a longer rendez-vous are set.[40]

- With Germany India found in high-level technology a common idiom. From Berlin's point of view having a performant arms industry and a powerful navy can expand German influence all over the globe. The atavistic Teutonic martial ardour is now hidden under the banner of defence cooperation and diplomacy. Today the German Navy operates two flotillas. The surface fleet commands 15 frigates of three types and more than 200 submarines toping as one of NATO's finest. The German vessel have joined multinational effort of fighting piracy apart from many other kinds of missions.[41]

The first Indo-German defence agreement was signed in 2006. After two years followed the first bilateral naval exercise. In April 2008 Germany a 700 personnel Task Force for a two days training visit at Kochi. The was represented by the Federal German Ship (FGS) Hamburg, an air-defence ship; frigate FGS Koeln; and replenishment tanker FGS Berlin. India placed in line one helicopter and two training ships— INS Tir and INS Krishna.[42]

Mid February 2012 German Naval Chief Vice Admiral Axel Schimpf paid a visit to India where he encountered Prime Minister Manmohan Singh and Defence Minister, K.Anthony. Both sides tackled a various range of issues amongst which the common threat of piracy.[43]

Indo-Polish booming defence encounters[ʃ]

Facilitated by the existence of a Warsaw Pact, New Delhi developed diplomatic and economic relations with East European states. After USSR, India received significant amount of aid from Poland, Yugoslavia and Czechoslovakia. Bellow is a table describing India's aid agreement with USSR and Eastern Europe during Nehru's years and shortly afterwards:

Creditor country	Amount given (millions of rupees)	Amount utilised up to 31 March 1966 (millions of rupees)[44]
URSS	4869,3	2820,8
Poland	413,0	113,4
Yugoslavia	214,3	97
Cechoslovakia	631	126,1
Total	6154,6	3157,4

Defence cooperation between Warsaw and New Delhi dates since 1980s and continued more or less as East European small arms (mostly illegal) production has flooded Asia's hotspots. Polish firms maintained their presence in South Asia selling finished products, spare parts and repair services. The bigger contracts were however those with Southeast Asia, Malaysia and Indonesia. (Malaysian government announced it would buy Polish PT91 main battle tanks).[45] After 9/11, within the context of Bush's war on terrorism, Poland- then an aspiring NATO member- signed a defence memorandum with India during a visit by Polish defence minister Leszek Miller, February 2003. The subsequent contract, 600 mil.$ worth envisaged the modernization of T-72 tanks. One year later, in 2004, as a sign of Polish loyalty towards the Indian partner, Warsaw refused a Pakistani request for armament. Polish deputy-defence minster, Janusz Zemke told his Indian peers that: " *We cannot supply you tanks and then sell anti-tank missiles to Pakistan*" in the context of Pakistani foreign minister, Khurshid Mohammad Kasuri, visiting his country.[46] In 2004 both countries established Joint Group on Defence Cooperation, also. In march 2008 Polish state-owned firm, Bumar (established in 2002) was poised to honour a contract of 809 million euros (1,2 bld$). It is said that the ontract- still on the roll- consisted of 200 WZT-3 armoured cars, 100 PZA Loara mobile anti-aircraft units, 110 self propelled cannons among other things.[47] More recently, in 2010, Polish prime-minister, Donald Tusk was accompanied by a delegation of ministers and businessmen in three day

trip to India. Tusk, the first non-communist Polish premier to visit India went to New Delhi and Bengalore and had discussions with Manmohan Singh. The dialogue bared fruits as India agreed to buy Polish made armoured vehicles. At that time was even the rumor for the establishment of some joint firms but the name of the companies were not released.[48] Further on, Zemke proposed to the Indian delegation upgrading their stock of Pechora missiles. Built in Soviet times they were modernized by Polish engineers in order to fit NATO standards. Their fuelling systems has been upgraded from 25 km range to 100 km range.[49] Also the missiles were calibrated to new radar guidance. In the early 2000s Poland possessed 800 Pechora type rockets envisaged to protect its major cities.[50]

Other common topic is educational and scientific cooperation, with its subspecie: security research. In January 2011 IDSA and the University of Warsaw prepared a meeting to bridge defence matters and academia in one place. IDSA was represented by Shri N.S. Sisodia, Director General, Smita Purushottam, Wing Cdr. V. Krishnappa, Joyce Sabina Lobo, Rajorshi Roy, and Pallav Pal. From the Polish side the delegates were: Professor Edward Halizak, Director of the Institute of International Relations, Dr. Boguslaw Zaleski, former Deputy Minister of Foreign Affairs, Institute of International Relations, and Dr. Jakub Zajarczkowsky, Chairperson of the Centre for Contemporary India Research and Studies, Institute of International Relations, University of Warsaw. The event did not finish without a trace as an Indian Studies Masters programme was started at the University of Warsaw.[51]

Conclusion: non-zero sum game within democratic peace theory

It is widely believed that internal constitutions of regimes shapes diplomatic behavior and facilitates the socialization of interests. A world of democracies should approximate if not fulfil the Kantian dream of an everlasting peace. As representative institution reflect the inner pacifism of human nature, competition between countries shouldn't go beyond economic competition and

[49] The Soviet made Pechora Missiles (surface-to-air) have bee none of Kremlin's finest export brands. From Cuba to Egypt, Myanmar and India a great number of countries were equipped with this rockets, mainly Pechora S-125 model . As nowadays Russia embarkes on a program of ballistic expansion , Russian firm Oboronitelnye Sistemy found a new existential reason in upgrading old Pechoras with a younger version: Pechora 2M. However, in 2006 it was announced that Indian staled the modernisation of its Pechora arsenal and refused both Russian and Polish offers. It is very possible that Delhi's refusal was caused by the decision to buy Israeli Spyder SAMs instead of opting for modernizing old gear.

institutionalized disputes. Where realism sees a zero-sum game international system, a liberal creed pictures an interdependent society redistributing benefits and expanding the circle of priviledges.

If one looks at the EU-India relations one would see that common values and shared challenges could not forge a warmer relationship, at least untill now. One explanation is India's late economic miracle which was surpassed by China. The second explanation dwells in the realm of narratives. India sees the European Community as the some of its parts, at best. Although Brussels has been added on the agenda of Indian diplomacy it doesn't have much weight, or at least a weight of its own. Beyond diplomatic chit chat and exchange of beautiful polished words a common institutional framework still awaits.

At the Westphalic-national level, a developing India finds many opportunities in Western countries. Especially in defence cooperation- which was one of the main topics of our study- a hungry India completed many contracts with the emerging EU's military industrial complex.

Issues to join efforts exist all over the rainbow of international agenda but the future of Indo-EUropean elationship depends more on the way Europe will acquire one single voice and gain a strong foothold in Asia.

NEW TENDENCIES REGARDING SAME-SEX MARRIAGE IN THE MEMBER STATES OF THE EUROPEAN UNION: – A BRIEF INSIDE AND OUTSIDE PERSPECTIVE –

JONE-ITXARO ELIZONDO[*]
OANA-MARIUCA PETRESCU[**]

Abstract
Sexual orientation discrimination has been recently outlined within the Plenary Session of the European Parliament that took place in Brussels, on 24th May 2012 as a priority in the fight against discrimination of all kind, making a "call on EU member states to consider giving access to cohabitation, registered partnerships or marriage to lesbian, gay, bisexual and transgender (LGBT) people".
Taking this statement as a starting point, this paper aims first to briefly analyse the European Union's legislation defending sexual orientation discrimination and its limits. After that, a comparison between the Spanish and Romanian legislations will be made, choosing thus two countries within the EU that have very different paths and views in this matter, finally assessing the recent Tribunal Constitucional judgment regarding the constitutionality of same-sex marriage. In the same line our analysis will also focus on giving an overview of the EU panorama focusing on those countries that have extreme and opposite views about the matter.
This study would not be complete without taking into account the contrary situation that is taking place in certain non-Member States of EU such as: Ukraine, Russia or Moldova. This fact was also highlighted by the European Parliament in the last Plenary Session saying that "in the European Union [and in other European states, referring to the recent situations occurred in Ukraine, Russian Federation or Moldova], the fundamental rights of LGBT people are not yet fully upheld".

Key words: *European Union, same sex marriage, sexual orientation discrimination, Treaty of Lisbon*

1. Introduction

Same-sex marriage[1] is legal in fourteen countries in the world: Argentina (2010), Belgium (2003), Canada (2005), Iceland (2010), Netherlands (2001), Norway (2008), Portugal (2010), South Africa (2006), Spain (2005), Sweden (2009), Denmark (2012). Uruguay (2013), New Zealand (2013) and France (2013). It is also legal in twelve states of the United States[2], as well as the district of Columbia and the native-American tribes of Coquille, Little Traverse Bay Bands of Odawa Indians and Suquamish; in some of the states in Mexico (Mexico D.F., Oaxaca and Quintana Roo); and in fourteen out of twenty-six Brazilian states[3].

[1] This term (same sex marriage) will be used regarding lesbian and gay marriages, as is the term used in the global academic world.
[2] Connecticut, Delaware, Iowa, Maine, Maryland, Massachusetts, Minnesota, New Hampshire, New York, Rhode Island, Vermont and Washington. GayMarriageProCon, "Should gay marriage be legal?" http://gaymarriage.procon.org/ , accessed 20 May 2013.
[3] EFE Agency, "México DF legaliza el matrimonio homosexual", *El País*, December 22, 2009, accessed March 11 2013, http://elpais.com/diario/2009/12/22/sociedad/1261436409_850215.html

There are also some states that recognize same-sex marriage but do not carry them out, such as: the states of Brazil which do not perform same-sex marriage, Aruba, Curaçao and St Martins (which recognizes marriages carried out in the Netherlands), Israel, Mexico (for marriages taken place in Mexico) and some US states[4]. Outside the European Union (EU), it is being studied in many places such as Colombia[5] or Brazil. In both states right now it is possible to registry same sex marriages in front of a public notary following important sentences in both countries but there is not an approved law allowing it yet. In Nepal remains in agenda but the future of the law remains uncertain.

Meanwhile, in the EU Member States a heterogeneous map is being drawn in the issue of same sex marriage. On one hand, more than a half of the countries that perform same-sex marriage in equality with the heterosexual ones in the world are member states of the EU. On the other hand, there are others that have modified their laws in order to state clearly that marriage can only be performed between a man and a woman.

The EU itself has made, by ways of producing laws (such as 2000/42[6] and 2000/78 Directives[7]) which form part of the *acquis communautaire*, efforts to eradicate sexual orientation discrimination but harmonization of this issue remains undone.

An analytical description of the issue will be offered, describing the efforts made by the EU in this respect via the primary law, secondary law and multiple resolutions from the European Parliament or statements from the heads of the institutions.

Also, an analysis of the Spanish and Romanian situation will be given. The choice of these case-studies was made based in the different situations they are living towards same-sex marriage. Both are Members of the EU, but whereas Spain entered in 1986, Romania joined in 2007. Both have applied the above mentioned Directives in their territory but the outcome of that application has been very different. Spain approved same-sex marriage in 2005, but it was claimed unconstitutional from one of the political parties (the right-winged *Partido Popular*) and its future remained uncertain until the Constitutional Tribunal sentence reaffirmed its constitutionality last November. In Romania same-sex couples do not have the right to marry nor to civil unions.

After the analysis of the two specific cases, an overview of the issue in the EU will be offered, stating which countries have already approved same-sex marriage, which have it in the agenda and which ones have made changes in their constitutions so that heterosexual marriage is reinforced. A look to the Ukrainian, Russian and Moldavian situations will be offered so as to compare the situation inside and outside the borders of the EU, where strong anti-homosexual movements are taking place. Finally, some concluding remarks will be given.

EFE Agency, "Solo en once países del mundo está legalizado el matrimonio homosexual", *Rtve.es*, November 6, 2012, accessed March 11 2013, http://www.rtve.es/noticias/20121106/solo-once-paises-del-mundo-esta-legalizado-matrimonio-homosexual/573157.shtml.

[5] As for 25th of April 2013 Colombia's parliament rejected same sex marriage law, although, as stated, in 2007 approved the possibility following a Constitutional Court ruling. It gives same sex marriages similar inheritance, pension and social security rights that heterosexual marriages do.

[6] Council Directive 2000/43/EC of 29 June 2000 implementing the principle of equal treatment between persons irrespective of racial or ethnic origin, published in Official Journal of the European Union, L 180 of 19/07/2000.

[7] Council Directive 2000/78/EC of 27 November 2000 establishing a general framework for equal treatment in employment and occupation, published in Official Journal of the European Union, L 303 of 02/12/2000.

2.Anti-discrimination laws in the EU regarding sexual orientation

The principle of equal treatment constitutes a fundamental value of the European Union, first established as a principle in trade law, specifically in the context of the Economic liberties and clearly protected for first time in the Treaty establishing the European Economic Community (1957), by requiring that men and women should receive equal pay for equivalent work[8].

Regarding the principle of equal treatment, the European Union made in time significant progress in achieving gender equality[9], in recognising the principle of non-discrimination based on sex, race, nationality etc. and in banning these forms of discrimination. In this context, it is worth to mention that former article 13 of the Amsterdam Treaty (1997) represents a milestone and was the first time sexual orientation discrimination was introduced as a protected ground in a EU Treaty[10]. This article was subsequently modified by the Nice Treaty (2001) to allow for the adoption of "stimulus measures" in order to support initiatives of each member state. This way the EU aims to show a coherent and integrated focus in the fight against discrimination, thus recognizing areas in which discrimination is common in order to combat it. In the same way, the wording lets the door open to legislate about situations of multiple discrimination[11].

Discrimination was also taken into account when drafting the European Constitution which finally was rejected, establishing the fight against discrimination (in general, not establishing a list of protected grounds, thus not including sexual orientation specifically) a priority, a fundamental objective in the EU.

In December 2000, the Charter of Fundamental Rights of the European Union was adopted, but won't be enforceable until 2009 along with the Treaty of Lisbon. The 3rd chapter of this document is dedicated to Equality and contains 7 articles (20-27). Article 21st is the one containing specific provisions about discrimination on the ground of sexual orientation discrimination[12]. Much more, according to the Lisbon Treaty, the Union promotes equality (article 3 of TEU) and combats inequalities through the actions it implements (Article 8 of TFEU).

Also in 2000 two important Directives[13] were approved in the area of non-discrimination: Council Directive 2000/78/EC[14] establishing a general framework for equal treatment in employment and occupation (hereinafter the "Employment Equality Directive") and Council Directive 2000/43/EC[15] implementing the principle of equal treatment between persons irrespective of racial or ethnic origin in the following fields: employment, education, social security, health care and access to goods and services (Known as "Race Equality Directive").

[12] Article 21 of the Charter of Fundamental Rights of the European Union: *"1. Any discrimination based on any ground such as sex, race, colour, ethnic or social origin, genetic features, language, religion or belief, political or any other opinion, membership of a national minority, property, birth, disability, age or sexual orientation shall be prohibited"*.

[13] Report *"Discrimination in the European Union"*, January 2007, accessed March 11 2013, p.4, http://ec.europa.eu/public_opinion/archives/ebs/ebs_263_en.pdf,

[14] See footnote 9.

[15] See footnote 8.

Despite this variety of provisions, only the Employment Equality Directive mentions sexual orientation but focused solely in discrimination in employment and occupation. As a matter of fact, in line with the habitual "prudence" of the EU institutions when sensible matters are being discussed, the preamble of the Directive it is expressly mentioned, that none of the provisions shall be interpreted as to oblige the Member States to change the Civil and Family Law. These two directives were complemented by the creation of a Community action programme to combat discrimination[16] with a budget of 100 million euros between the years 2001-2006 including sexual orientation discrimination.

The European Parliament on the other hand has been much more clear in its approach to this topic and has adopted a great number of resolutions since the '90s regarding sexual orientation discrimination accepting same-sex marriage and encouraging Member States as well as the European institutions to take steps forward the recognition of same-sex unions, including marriage. Although not legally-binding the resolutions from the EU Parliament are seen as a strong political tool.

The first resolution adopted in this regard was the Resolution on equal rights for homosexuals and lesbians in the EC (A3-0028/94) the 8 February 1994[17] which aimed to finish the prohibition on same-sex marriage or provide access to equivalent regimes. It was based in what is known as the "Roth report" and asked for a Directive which should legislate about (among others) marriage equality for same sex couples[18].

The 3rd of July of 1997 a written question was presented to the Commission asking why there was still no Directive on the issue, to which the Commission answered that in the time the Roth report was adopted, the Community Treaties did not "bestow on the institutions any specific powers for tacking discrimination based on sexual orientation"[19]. The answer also stated that the Treaty of Amsterdam was going to give the Community powers in that respect. The Commission did not gave any specifics about a possible Directive in this respect though, and the only Directive approved that tackled sexual orientation discrimination has been 2000/78 so far, which stated, as mentioned before, specifically that "(22) This Directive is without prejudice to national laws on marital status and the benefits dependent thereon."[20]

Among other resolutions it is remarkable that in December 2008, the European Parliament voted 401 – 220 in favour of a report which calls for same-sex marriage and civil unions to be recognised across all EU states and at the same time, while adopting a Report on the Situation of Fundamental Rights in the EU recommended mutual recognition of same-sex partnerships[21].

Plenary Session of the European Parliament that took place in Brussels, on 24th May 2012 outlined as a priority in the fight against discrimination of all kind, making a *"call on EU member states to consider giving access to cohabitation, registered partnerships or marriage to lesbian, gay, bisexual and transgender (LGBT) people"*[22].

3.Situation in the European Union member states

A. Spain

Same sex marriage came as an electoral promise of the socialist government of Jose Luis Rodriguez Zapatero. After winning the elections in 2004 the socialist government passed the law[23] that allowed same-sex marriage in the *Congreso de los Diputados* and in the Senate the 30th of June 2005, making Spain the third country in the EU and the world allowing same-sex marriage.

The socialist group found a lot of opposition (even if a 56.9% of the population approved the policy-change[24]) from social groups linked in their majority to the Catholic Church (Bishops and *Foro de la familia*[25] mostly) and the right-winged party *Partido Popular* (PP). Indeed this last political party filed an appeal claiming the unconstitutionality of the law in September 2005.

There were no political changes until November 2011, moment in which the right-winged Partido Popular won the elections with an absolute majority and fear came that they would overrule directly the law now they were in charge and had the necessary power to do so. Because of that spread fear the new-elected government had to state that they would respect what the Constitutional Court would rule about this issue[26]. Until that moment, 22.442 same-sex weddings were at stake[27].

In the 6th of November 2012, the Sentence of the Constitutional Tribunal[28] came out, rejecting any kind of unconstitutionality in the law. The tree conservative judges out of 8 that voted against the sentence wrote dissenting votes.

[28] Sentence 198/2012 of the 6th of November 2012. Unconstitutionality Appeal 6864-2005. Filed by more than fifty members of the Popular Group of the Congress in relation to Law 13/2005 of July 1, by which the civil code in matters of law to contract marriage is amended. Institutional guarantee of marriage and protection of the family: constitutionality of the legal regulation of marriage between persons of the same sex. Published in the *Official Journal (BOE)*, no. 286, 28 of November 2012, sec. TC., pp. 168-219.

The appeal petition was based in 8 reasons of unconstitutionality[29], the central one being the statement by PP that the wording of article 32 of the Spanish Constitution did not permit such a thing as same-sex marriages[30].

The adoption of the Law meant a change of some of the words used in secondary legislation (man or woman changed by the spouses, for example), that the PP interpreted as by changing some words, a mayor change was taking place including the total change and de-naturalization of the marriage institution.

For proving the law was unconstitutional, they claim a breach in article 32 of the Spanish Constitution of 1978. The article states as follows:

> *1. Man and woman have the right to marry with full legal equality.*
>
> *2. The law shall make provision for the forms of marriage, the age and capacity for concluding it, the rights and duties of the spouses, the grounds for separation and dissolution, and their effects.* [31]

In this respect, the sentence stated that the article permitted a margin for interpretation, and even if it same-sex marriage was not probably what the legislator had in mind at the time of writing it, it provided the necessary margin not to have to change the Constitution for the adoption of same-sex marriage. That is to say that it did not implicitly bring same-sex marriage but neither excluded it of the marriage institution. The article was phrased like that due to the discriminatory situations lived by women during the Franco dictatorship[32], in order to prevent this situation from happening again this was a way of highlighting the equality between man and woman once more in the constitutional text.

At the same time, the Tribunal defended that the law, as well as the society was a "living tree" that required an evolutionary interpretation.

Spain was also the first country in the world permitting adoption in equality to heterosexual couples. In the same sentence we have mentioned in the previous paragraphs, the Tribunal stated that since same-sex marriage was equal to heterosexual marriages they had the same right to access the adoption of children. The Tribunal stated that the child's interest had to prevail at all times, thus every case had to be studied in its own, but that there was no reason of unconstitutionality[33].

Still, there are voices claiming that marriage should only be called like that when it is formed between a man and a woman, the last case being the Minister of Home Affairs (Ministro del Interior) Jorge Fernández Diaz stated in March 2013 that the "survival of the species won't be guaranteed in the case of same-sex marriages", declarations that have been criticised even from his own political party.

B. Romania

According to the European surveys[34] Romania is "guilty" of having one of the strongest negative attitudes towards the Lesbian, Gay, Bisexual and Transsexual (LGTB for now on) community in the European Union. This attitude is contrary to the European values of protecting human rights that include the rights of the LGBT community, values which have been made their own by Romania when it joined the EU in 2007. With this occasion, the country was asked by the European Union legislation to "facilitate" the recognition of the same-sex relationships registered in other EU member states (e.g.: same-sex marriage, civil unions or domestic partnerships) and to eliminate as much as possible the discrimination based on sexual orientation at national level.

There are a range of positive aspects to be mention in which Romania has made significant progress as regards the LGBT rights legislation since 2000 when it fully decriminalised homosexuality: it has introduced and enforced wide-ranging anti-discrimination laws, equalised the age of consent and introduced laws against homophobic hate crimes. Also at the institutional level a new body in charge of analysing all the forms of discrimination has been formed, namely National Council for Combating Discrimination (CNCD). This council has the power to impose fines when discriminatory situations are taken place, both to natural and legal persons and includes the protected ground of sexual orientation[35].

But we should highlight the fact that even after 6 years from the Romanian accession to the EU this topic is still a very sensitive subject to be discussed and analysed either by the NGOs for protection of human rights and in particular of LGBT rights or by the politicians.

The institutional and legislation modifications occurred in the last years have allowed the LGBT community to become more visible, for example by organizing social and cultural events. However, from the legal point of view there are still few achievements in this field, since the Romanian legislation does not recognise yet the partnership or same-sex marriage. Furthermore, in 2009 the Romanian Parliament decided to change the words "between spouses" from the Family Code, considered to be too vague into more concrete terms: *"between a man and a woman"*, banning, least for the next couple of years, the possibility of future same-sex marriages[36].

This rigid attitude of the Romanian authorities and *expressis verbis* provision into the new Civil Code that the marriage will only be that between a man and a woman has been considered to be discriminatory by the national and international NGOs (e.g.: group ACCEPT, the International Gay and Lesbian Human Rights Commission, and the European Region of the International Lesbian, Gay, Bisexual, Trans and Intersex Association (ILGA-Europe) which required for measures to be taken in order to eliminate this discrimination from the national legislation and harmonizing with the European one in the field[37].

Also, there were three articles of the mentioned new Civil Code that were regarded as discriminatory by the European Network of Legal Experts in the Non-discrimination Field: Article 277 (prohibition of same-sex partnership and marriage, including denial of recognition of partnerships and marriages registered in other countries for Romanians), Article 462 (the

[37] Ibid.

prohibition of adoption by two persons of the same sex), and Article 258 (definition of family as marriage between a man and a woman)[38].

Taking into consideration the above mentioned, a similar situation can be noticed as regards the same-sex partnerships or marriages celebrated abroad by the Romanian citizens, which are not recognised by the Romanian authorities, except for the partnerships or same-sex marriages made abroad where one or both partners are foreigners and have a valid partnership in their Member State of origin. In this context, the couple can be registered as such on the Romanian territory[39].

C. Overview of the situation regarding same-sex marriage in the other Member States of the EU

Referring to same-sex marriages in the EU a really heterogeneous map can be drawn. Out of the 14 states that perform same-sex marriages in the world, 7 are members of the EU. In this part we will have an overview of the situation of same-sex marriage in the EU, showing which states have already approved, in which it is being discuss right now and which states have a constitutional provision stating that marriage is between "a man and a woman" exclusively, what has come to be known as a constitutional ban.

As it has already been mentioned, there are seven EU member states that have approved same-sex marriage: The Netherlands, Belgium, Denmark, Spain, Sweden, Portugal and France. There are other member states which are currently discussing the issue: England and Wales, Ireland, Germany, Luxemburg, Finland or Andorra (even if it is not a member state of the EU it has a very special relationship with the EU).

In Ireland it seems movements in favour of same-sex marriage are driving the incorporation of the issue in the agenda of the government. In the case of Finland, it seems that for the moment there will be no change in the actual law, although it was one if the first states that approved registered partnership. On the other hand there are some states who have recently introduce modifications in their constitutions in order to reinforce the statement that marriage is between a man and a woman, which are Latvia, Lithuania, Poland, Hungary and Bulgaria.

The modification of Family Law contained usually in the Civil Code has been done both by introducing the possibility of different and same-sex marriages or by making the provision gender-neutral, thus not stating the sex of the spouses.

The first EU state member to approve same-sex marriage was The Netherlands[40] in a law passed the 7th of December 2001. This made the Dutch the first ones to have the right to same-sex marriage. Following the conclusions of an special commission created for the study of the issue in 1995, and after approving gay civil-unions in 1998, the final draft of the legislation was presented in September 2000 and was adopted by an overwhelming 107 votes against 33 in the House of Representatives[41].The main article changed in marriage law stated that "A marriage can be contracted by two people of different or the same sex"[42]

Belgium, the second state member to approve same-sex marriage did on the 30th of January 2003.The next state to approve same-sex marriage was Spain in 2005, whose case has been studied

[41] BBC, "Dutch legalise gay marriage", September 12 2000, accessed March 11 2013, http://news.bbc.co.uk/2/hi/europe/922024.stm.

[42] Article 30 in the marriage law originally: *"Een huwelijk kan worden aangegaan door twee personen van verschillend of van gelijk geslacht."* Taken from A. Llanza I Sicart, and S. Navas Navarro, *Matrimonio homosexual y adopción: Perspectiva Nacional e Internacional.* Madrid: Editorial Reus, 2006, p. 298.

in depth in another part of this article. In Sweden, same-sex marriage law passed the 1st of May 2009, followed by the decision of the church of Sweden of also marrying same sex couples the 1st of November 2009 by a 70% of the votes[43].

Portugal passed the Law 119/XI[44] allowing same-sex marriage in January 2012 after an intense social debate. Francisco Assis, socialist member of the Parliament stated that "The living world has defeated the prejudice one"[45].

Denmark adopted legislation allowing same-sex marriage in June 2012, but since 1989 couples of the same sex could access registration as a couple with similar juridical effects as marriage (not in some aspects regarding adoption the parental rights o assisted reproduction). The change in the law has been done by making gender neutral the bill allowing gay marriages (both church and civil registry weddings)[46].

France was the last EU member state to approve same sex marriage. Like in the case of Spain it was an electoral promise of the socialist party, in this case ruled by François Hollande and has been a really controversial law that has moved a great number of French citizens both against and in favour of the law, followed by incidents and violence against the LGTB community. In spite of these attitudes approval rate (in August 2012) was of 65% for same sex marriages and 53% for allowing same sex unions to adopt children[47]. The law passed the 23rd of May 2013 but it was not signed by the President until the Council ruled it was a constitutional the 17 of May 2013[48].

Some other EU member states have the issue on the political and legislative agenda or are working on it. These are: England and Wales (expected this year), Scotland, Germany and Ireland. It is still in Finland's agenda even if it was but put aside the 20th of February 2013th, when the Finnish Parliament's Legal Affairs Committee voted narrowly to reject a gender-neutral marriage bill proposed by National Coalition Party minister Alexander Stubb and others, meaning it will not be brought before the full legislature for consideration. Slovenia asked their citizens via referendum the 25th of March 2012 only a 26% of the population voted and the results where 55% against 45%.[49]

Map: Made by the author

On the other hand, there are some countries, as explained earlier that had or have recently introduced or modified their constitution in order to expressly state that marriage is a union between a man or a woman: Poland (article 18), Latvia (article 110 changed in 2005), Lithuania (article 38, changed in 2010), Hungary (article L.1., changed in 2012) and Bulgaria (article 46). This movement towards a reinforcement of the heterosexual nature of marriage has been strong in ex-communist countries. In fact, the modification of the constitutions arose many protests from LGTB associations and worried NGOs. Reactions include a European Parliament Resolution[50]on violation of freedom of expression and discrimination on the basis of sexual orientation in Lithuania.

[50] European Parliament Resolution of 19 January 2011 on violation of freedom of expression and discrimination on the basis of sexual orientation in Lithuania (2012/C 136 E/10) Published in the *Official Journal of the European Union* C136 E/50 of the 11 of May 2012 http://eur-lex.europa.eu/LexUriServ/ LexUriServ.do ?uri=OJ:C:2012:136E:0050:0052:EN:PDF.

Map: Made by the author

It is also interesting to address the different support rates regarding same-sex marriage in the different Member States. A Eurobarometer Discrimination Survey in 2006 found that existed major differences between EU Member States also exist regarding public opinion towards LGBT people and issues. For instance, the majority of the population in The Netherlands (82%), Sweden (71 %) and Denmark (69 %) was in favour of same-sex marriage, but only a small minority in Romania, (11 %), Latvia (12 %) and Cyprus (14 %). Also, while in the Netherlands 91 per cent of the population was comfortable with having a homosexual as a neighbour, in Romania only 36 per cent was of the same opinion. The Eurobarometer Discrimination Survey in 2008, using a ten point 'comfort scale', produced similar results: Swedes (9.5%), Dutch and Danish respondents (9.3%) were the most 'comfortable' with the idea of having a homosexual as a neighbour, but a much lower 'comfort' level was recorded in Bulgaria (5.3%), Latvia (5.5%) and Lithuania (6.1%)[51].

[51] Data found in Fundamental Rights Agency of the European Union, *Homophobia and Discrimination on Grounds of Sexual Orientation and Gender Identity in the EU Member State, Part II: The Social Situation* (2009), pp.9-10.

4. Legal Status in Non-Member States: Ukraine, Moldova and Russia

A. Ukraine

In 1991 Ukraine became one of the first ex-Soviet countries where homosexuality has been decriminalized. This fact permitted the LGTB community to become more visible at the national level, more precisely, by having their own bars, publications, and human rights organizations.

Except the positive part of the visibility and changing the legislation as regards decriminalizing of the homosexuality, there are still problems in recognizing all the rights to this community since the political and social perception is still at a very low level, followed violent attacks on LGBT activists took place during the commemoration March of the international Human Rights Day in 2003 or during other public events, such as "Kiev Pride" in 2012 and 2013.

From the legal point of view, the new Constitution, approved in 1991, apart from mentioning the basic human rights, it does not mention *expressis verbis* the terms of sexual orientation or gender identity. Furthermore, article 51 of the Constitution specifically defines only the marriage as a voluntary union between a man and a woman[52].

In recent years a couple of bills regarding the ban to discuss in public or in media about the homosexuality, bring into Ukraine various videos, photos or audio products or other similar products have been discuss. In fact, both Bill nº0945 (formerly Bill nº8711) and Bill nº1155 are pending second voting in the parliament and if approved it would mean that a person who offers information about LGTB associations (for instance) could face up to 5 or 6 years of prison. According to Human Rights Watch, the approval of these laws would "create an environment of state-promoted discrimination against LGTB people"[53].

This situation has been qualified by the local NGOs, Amnesty International organisation, the European Union, Human Right Watch and the United Nations to be serious "homophobic" actions which means that if the situation remains the same in the next period and no improvements are made in order to eliminate these bans, Ukraine will experience difficulties in the negotiations process to the European Union led under the EU-Ukraine Association Agreement, which entered into force in 1998. In fact, in the context of a Ukraine- EU visa liberalization negotiations the Foreign Minister of Ukraine was obliged in February 2013 to announce the adoption of anti-discrimination laws to reach at least one of the benchmarks for the process to be successful[54].

Moreover, in the opinion of the EU officials, "these homophobic bills are unacceptable for a country that aspires to deeper relations with the European Union"[55] and be part of a Europe of 28 Member States already, taking into account that Croatia will be fully Member states starting with the 1st of July 2013. The same statement has been made during the EU-Ukraine summit that took place in February 2013, where the main goal of the summit was the Ukraine's reform agenda, including the situation of the human rights, linked to the possible signature of the EU-Ukraine Association Agreement.

---

[52] Article 51. *"Marriage shall be based on free consent between a woman and a man. Each of the spouses shall have equal rights and duties in the marriage and family.*

Parents shall be obliged to sustain their children until they are of full age. Adult children shall be obliged to care for their parents who are incapable to work.

The family, childhood, motherhood, and fatherhood shall be under the protection of the State."

Ukrainian Constitution, accessed March 18 2013, available in: http://www.president.gov.ua/en/content/chapter02.html.

[53] Human Rights Watch, "Ukraine: EU Should Raise LGBT Rights at Summit", February 21 2013, accessed March 1, http://www.hrw.org/news/2013/02/21/ukraine-eu-should-raise-lgbt-rights-summit.

[54] The Guardian, "Ukraine gay pride marchers ready to defy violence", May 18 2013, accessed May 18 2013, http://www.guardian.co.uk/world/2013/may/18/ukraine-gay-pride-marchers-violence.

[55] See note 55.

Nowadays, there are no anti-discrimination laws covering sexual orientation or gender identity in Ukraine. There is though a national hate crime law that could be interpreted as including sexual orientation and gender identity.

It is necessary that Ukraine issues concrete laws in this field in order to eliminate as much as possible all the negative situations in which the LGBT community is put so far, as well as clarify the contradictory laws being discuss right now. In addition, if Ukraine wants to become a full member State of the European Union it will be obliged to align and harmonize its legislation with the European one and also it will have to protect the LGBT citizens from certain forms of discrimination and harassment.

B. Moldova

Starting in 1991, an important moment in the history and evolution of Moldova, several progresses in decriminalizing homosexual relations were made, being in the same line with the general attitude of Moldova to guarantee protection of human rights by laws[56]. Thus, in 1995, homosexuality between consenting adults was legalised[57] while in Transnistria, the self-proclaimed autonomous republic, *"homosexuality is illegal[58]"*.

In addition, in September 2002 new laws were introduced in order to equalise the age of consent. As from January 2003, amongst other things, the position of gays and lesbians in Moldova looks to have improved in a very good manner, especially when nowadays Moldova shows to be very committed to the European values in the field of human rights as well as respecting these.

Nevertheless, nor same-sex marriage nor civil unions are legally recognised since the Constitution of Moldova is banning same-sex marriage[59]. Other laws mention in a general manner the terms of "sexual orientation" or "sexual orientation discrimination" but without defining them, examples are: the Law on Application of Lie Detector /Polygraph no.269 from 12.12.2008; the Law on Asylum no.270 from 18.12.2008 and the Law on Freedom of Expression no.64 from 23.04.2010[60]. That lead to the approval of anti-discrimination Law no.101/2012[61] the 25th of May 2012 that will enter into force this 2013 and even if they don't mention sexual orientation as a protected ground in the first article where a list of general discrimination protected grounds is given (it is important to state that the list is not closed, thus sexual orientation could be interpreted

[59] Article 48(2) *The family is founded on the freely consented marriage of husband and wife, on the spouses equality of rights and on the duty of parents to ensure their children's upbringing and education.*

Constitution of the Republic of Moldova, accessed March 11 2013, available in English in: http://www.presedinte.md/const.php?lang=eng.

[60] See footnote 58, pp. 3 and 9.

[61] This law transposed the Council Directive 2000/43/EC and the Council Directive 2000/78/EC into the legislation of Republic of Moldova, accessed March 11 2013, http://lex.justice.md/viewdoc.php?action =view&view=doc&id=343361&lang=1.

to be included in "any other similar ground"), it does mention sexual orientation during the text regarding discrimination protection as regards to employment (article 7)[62].

At the international scene, in 2011 Moldova used its vote in the United Nations Human Rights Council to vote against the first UN resolution condemning discrimination and violence against individuals based on their sexual orientation and gender identity[63], which *"represents a historic moment to highlight the human rights abuses and violations that lesbian, gay, bisexual and transgender people face around the world based solely on who they are and whom they love"* according to the U.S. Secretary of State Hillary Rodham Clinton.

As a final remark, during 2011, Moldova was subjected to the periodic reviewing process in the field of human rights in general and equality and non-discrimination policies in particular, taken by the UN, which final report was published in 2012. One of the recommendations made in the report was to *"intensify efforts to address discrimination against LGBT people; to investigate and prosecute crimes against LGBT community members"* but most of all *"to take action to build broad support for* [their] *rights in the context of the new anti-discrimination law"*[64].

C. Russia

In the Russian Federation, until 1993 homosexual relations made by adult males were punished under the Russian Federation Criminal Code by imprisonment. After this year and under the strong pressure coming from the European community and after the new Criminal Code came into force in 1997, this incrimination was repealed. Presently, the male homosexual acts are decriminalized[65], while the lesbian relations were not criminalised at all. Also, in 2003 the age of consent was modified and established in 16 regardless of sexual orientation.

The Russian Constitution in Article 19.2[66] it is stipulated very clearly the equality of all women and men, including the fact that the state will "*guarantee the equality of rights and liberties regardless of sex, race, nationality, language, origin* [...]", stipulating in the same time that "*any restrictions of the rights of citizens on social, racial, national, linguistic or religious grounds shall be forbidden*". Sexual orientation discrimination is not, hence, protected as a ground of discrimination, nor is it in secondary legislation. This leaves Russia with no general or specific laws that protect against discrimination on the basis of sexual orientation or gender identity. In the same line, there is no recognition of same-sex couples (married or not) by the Russian laws. The family code establishes in its article 1.3 that "Family relations shall be regulated in conformity with the principles of a voluntary conjugal union between a man and a woman"[67], which has been an argument invoked defend the thesis according to which marriage is celebrated only between man and woman by the Constitutional Court of the Russian Federation in a case introduced against

the provisions of the Family Code, which considered that "*in order to register a marriage, the mutual free consent of a man and a woman was necessary*" [68].

Also, some laws similar to the Ukrainian under-consideration gay-propaganda laws have been approved in different regions of the Russian Federation, establishing *"administrative punishment for the so-called "promotion of homosexuality among minors[69]"*; as well as bans for the prides[70] in some major cities. The situation is unbearable for the LGTB community since violence from the authorities and ultra-orthodox groups has been increasing.

5. Conclusions

A clear and opposite double movement is taken place in the EU. On one hand, there is the "Western Europe" and on the other the "Eastern" one, formed by the countries that once belonged to the URSS. This is can be seen in the maps incorporated to the present article.

"Western Europe" is clearly working toward marriage equality and has already some kind of Civil Union system established, along with the guidelines of the EU. On the contrary, in "Eastern Europe", although a clear step against sexual orientation discrimination has been made to fulfil the EU's requirements, there is still a long way to go. In the last years many countries have changed their laws (both the Constitutions of Family o Civil Codes) against the recommendations from the European Institutions and NGOs to reinforce the idea of the heterosexuality of marriage. A study should be made to find out the reasons of that rejection to homosexuality in order to fight it from the core. It is senseless to provide a society with legal provisions (such as Directive 2000/43/EC or Directive 2000/78/EC) if social attitude remains archaic.

Another phenomena that requires our attention is that there are many times that society is prepared to make a change and acceptance levels are high but the government rejects to take the necessary measures, for instance in Germany or Finland. The lack of relation and understanding between citizens and the government is also affecting rights.

Moreover one of the main problems same-sex couples find is that even if they get married in a member state that permits it their union won't be recognized in other member states if that legal figure does not exist in that same country. A system of recognition if not performance of same sex marriages is absolutely necessary across EU member states.

In the times there are yet to come, all this has to be beard in mind, since we cannot forget that we are *United in Diversity*[71]; and to be united, we have to be equal both in rights and obligations. This won't happen until the whole society possesses a whole citizenship; something that does not happen in all the Member states of the EU.

As President Mr. Van Rompuy said on the occasion of the International Day against Homophobia, "*Combating homophobia is thus enshrined in the EU's founding act and statement of values. It is something that distinguishes Europe from many other parts of the world".* He also stressed three ideals that in his view represented European values[72]:

THE EUROPEAN JUDICIAL COOPERATION IN CRIMINAL MATTERS IN THE LIGHT OF THE LISBON TREATY

OANA-MĂRIUCA PETRESCU*

Abstract

The judicial cooperation in criminal matters together with the police cooperation were mentioned for the first time in a treaty, as a European legal instrument, with legal binding effect, by the Maastricht Treaty in 1993 in Title VI (Provisions on cooperation in the fields of Justice and Home Affairs). In time, taking into account the political and legal realities faced by the European Union, there have been important amendments brought to the contents of the Justice and Home Affairs policy through the Treaty of Amsterdam (1997) and the Treaty of Nice (2001).

Nevertheless, the new amendments brought by the Treaty of Lisbon in 2009 in the field of judicial cooperation have determined the "rethinking" and separating it from the "police cooperation" in two different chapters of Title V of TFEU (dealing with Area of Freedom, Security and Justice) which will be briefly analysed in this paper.

Bearing in mind all mentioned above, the aim of the paper is to analyse, on the one hand, the important amendments brought in the field of judicial cooperation by Lisbon Treaty from the legislative and procedure point of view as well as the new created institutions, highlighting in the same time the relevant principles governing the European judicial cooperation, such as: principle of mutual recognition of judgements and judicial decisions by Member States, mutual assistance in criminal matters etc.

On the other hand, we will be able to devote additional focus to studying the contribution of the Court of Justice of the European Union ("CJEU") to the development of the "Judicial Cooperation in Criminal Matters" since this court has full jurisdiction over this domain by the date of the entry into force of the Lisbon Treaty.

***Key words**: Treaty of Lisbon, criminal matters, judicial cooperation, Court of Justice of the European Union, mutual assistance*

I. General considerations

The globalisation process which started to be visible since the middle of 1980s and especially since the middle of 1990s, involved, among others, the integration of international markets, capital and investment movements, migration and free movement of people for studying, leaving, travelling and the dissemination of knowledge, as the positive meaning of the term of globalisation. Much more, other domains were also linked to the globalisation process, such as climate change, cross-boundary water, air pollution and over-fishing of the ocean.

From the negative perspective, the globalisation process increased the criminal phenomenon which expanded beyond the national borders, at international and European level, representing a major problem. The main reason of this expansion was the incapacity of the national legislations to fight efficiently against the criminal phenomenon and to adopt the appropriate measures to combat it.

The first steps in this direction have been made by the UN Resolution no.808 of 22nd of February 1993, where the International Court[1] was created, with the headquarters in Hague, to trial the people who allegedly violated the provisions of the international humanitarian law on the territory of former Yugoslavia after 1991[2].

* PhD, postdoctoral researcher in the *European Integration* Research Team, Faculty of Law, University of Deusto, Bilbao, Spain (email: oana.petrescu@deusto.es).

[1] This court is also known as the International Criminal Tribunal for the former Yugoslavia.

[2] Vasile Pavaleanu, *The judicial cooperation in criminal matters within the European Union*, The Annals of "Ştefan cel Mare" University Suceava, Fascicle of The Faculty of Economics and Public Administration, Volume 9, No.1(9), 2009, pp.348.

In order to fight against the crime and especially against the transnational organized crime in a efficient manner, and to cooperate in the field of police and judicial matters, the regionalization's idea of international criminal law was mentioned for the first time during the colloquium of the International Criminal Law Association held in September 1992 in Helsinki[3] when it was proposed to create a core of laws at the European level (substantial and procedural), common to the all the EU Member States.

Since its beginning, the judicial cooperation in criminal matters between the EU Member States had experiences many alterations[4] due the different ways to legislate this domain at the national level. For this reason, almost all Western and Central European countries have joined together to form a functional and intergovernmental structure[5] with strict legislation and enforcement rules.

Presently, 27 Member States are acting together to deal with important policy issues that have cross-border implications in the field of judicial cooperation, while the legislative acts adopted by the European institutions concern not only the law enforcement and criminal justice, but also the police issues such as immigration, border control, asylum or visas, etc.

In the following we will analyze the topic from a triple perspective: legislative, institutional and procedural as follows.

II. From the legislative perspective

The beginning of the judicial cooperation in criminal matters between the Member States of the European Union (EU) was modest, with no institutional and legislative force as it is nowadays.

Due to the growing of terrorism danger in Europe – e.g. in Germany with the Red Army Faction terrorist group (RAF[6]) in the 1970s and 1980s, in Italy with the Red Brigades, during the 1970s and early 1980s or in Spain with the Euskadi Ta Askatasuna terrorist group (ETA[7]) between the late of 1970s and 2000s and other terrorist groups - the states started in the middle of 1970s to cooperate in judicial matters on an informal, intergovernmental basis[8].

Later, in the middle of 1980's *"an enforcement of this collaboration became necessary* [which determined the introduction] *of free movement of persons* [in accordance with the conditions stipulated by] *the Schengen Cooperation and Convention*[9] [and] *led to a gradual elimination of the border controls along the common borders"*. In order to balance the new freedom of movement recognized by the Schengen Convention, it was necessary to take a number of compensatory measures including those regarding the coordination and cooperation between the police, customs

[6] Also known as the Baader-Meinhof Gang. In German the name of this group is *Rote Armee Fraktion.*

[7] In English the name of this group is *Basque Homeland and Freedom*.

[8] Niggl Philipp, Speth Maximilian, Zinsmeister Andreas, op. cit., pp.2, webpage: http://www.inm-lex.ro/fisiere/pag_60/det_881/4641.doc, accessed March 26, 2013.

[9] In July 1984 France and Germany signed an agreement in Saarbrucken to lift border controls. In October 1984 Belgium, Luxembourg and the Netherlands joined this Agreement. These five original "Schengen" member states then signed this first Schengen Agreement in June 1985, http://www.statewatch.org/semdoc/assets/files/keytexts/ktch5.pdf, accessed March 26, 2013. A further Convention was drafted and signed on 19 June 1990. In addition, Schengen cooperation has been incorporated into the European Union legal framework by the Treaty of Amsterdam of 1997. The Schengen area gradually expanded to include nearly every Member State. Presently, almost all the EU Member States are part of the Schengen area, except Bulgaria, Cyprus, Romania, United Kingdom and Ireland (webpage: http://europa.eu/legislation_summaries/justice_freedom_security/free_movement_of_persons_asylum_immigration/l33020_en.htm and http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=CELEX:42000A0922%2802%29:en:HTML, accessed March 26, 2013.

and justice as well as those concerning the principle of *non bis in idem* which is specific in the field of extradition and enforcement of the criminal judgments[10].

During the negotiations for drafting the Maastricht Treaty, the Member States made a list of domains of common interest both for them and for the European Union and defined the intended ways of inter-institutional cooperation, considered to be an important point of common interest[11].

For this reason, the judicial cooperation in criminal matters was mentioned for the first time in a treaty, having legal biding, namely in the Maastricht Treaty (well-known as the Treaty on European Union (TEU)[12] which in former article K1 of Title VI - *"Provisions on cooperation in the fields of Justice and Home Affairs"* stipulated that "*For the purposes of achieving the objectives of the Union, in particular the free movement of persons, and without prejudice to the powers of the European Community, Member States shall regard the following areas as matters of common interest:* […] *(7)* ***judicial cooperation in criminal matters***".

In another way to say, this topic was part of the Third Pillar of the Treaty called Justice and Home Affairs (JHA), which later was renamed Police and Judicial Cooperation in Criminal Matters (PJCC) in 2003 through the Treaty establishing a Constitution for Europe, which failed being ratified by the Member States because of France and the Netherlands in May and June 2005. The Third Pillar existed between 1993 and 2009, when the Treaty of Lisbon (initially known as the Reform Treaty[13]) entered into force.

The same idea of judicial cooperation was reiterated by the Treaty of Amsterdam[14], in former article 61 letter e.) of Title IV - *"Visas, Asylum, Immigration and other Policies Related to Free Movement of Persons"*. Thus, one of the concrete measures[15] was *"to establish progressively an area of freedom, security and justice* [which] *aimed at a high level of security by preventing and combating crime within the Union* […]*",* by adopting the necessary legislative, institutional and procedural measures in the field of police and **judicial cooperation[16].**

Later, during the Tampere European Council (Finland), on 15th and 16th of October 1999, in the Presidency Conclusions was introduced an important key element which was considered to be the cornerstone of the judicial cooperation between Member States, namely the mutual recognition of the judicial decisions and judgements[17], having three essential and fundamental principles: mutual trust, mutual recognition and direct contact between the Member States. The same principle was also reiterated in the Hague Programme, adopted in November 2004[18] and in the multi-annual programme

I consider that this principle should apply to the judgments and to other decisions of judicial authorities, to the pre-trial orders, in particular to those which would enable competent authorities to secure evidence and to seize assets which are easily movable. In addition, the evidence lawfully gathered by one Member State's authorities should be admissible before the courts of other Member States, taking into account the standards that apply there.

[18] Webpage: http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=CELEX:52005PC0184:EN:HTML, accessed March 26, 2013.

in the Area of Freedom, Security and Justice for the period 2010-2014, the so-called Stockholm Programme, which was approved by the European Council in December 2009[19].

We can observe, the principle of mutual recognition is a key concept for the European judicial area, because only through it is possible to overcome difficulties created by the differences between the national judicial systems of the EU Member States. This principle can be developed only if a high level of mutual confidence or trust exists between Member States, which depends in particular on the strict upholding, by each national judicial system, of the high standards as regards the protection system ensured to the individual rights. The second key element is the mutual recognition itself, which is very important both at the pre-trial and final judgment stage and it covers the recognition of evidence, non-custodial pre-trial and post-trial supervision measures, disqualifications, enforcement of criminal penalties and decisions as well as the convictions issued in the course of new criminal proceedings in other Member States[20]. The third element is the direct contact that should be established between the Member States in order to take all the measures to harmonize their internal legislation in the field.

In 2001 the Treaty of Nice[21] amended the provisions of the Maastricht Treaty and the Treaty establishing the European Community, reforming the institutional structure of the European Union to withstand eastward expansion and extending the field of Police and Judicial Cooperation in Criminal Matters in former articles 29 – 42 of Title VI of TEU - *"Provisions on Police and Judicial Cooperation in Criminal Matters"*, where one of the objectives was: *"to provide citizens with a high level of safety within an area of freedom, security and justice by developing common action among the Member States in the field* [...] *of police and* ***judicial cooperation in criminal matters*** [...]*"* (former art.29 paragraph 1 of TEU).

It is worth to mention that the main objective of the European Union in the field of Justice and Home Affairs has changed in only 5 years from the intention *"to establish progressively an area of freedom, security and justice"* for its citizens as it was provided in the Treaty of Amsterdam to the action *"to provide* […] *a high level of safety within the area of freedom, security and justice"* as it was stipulated in the Nice Treaty which represents an important commitment assumed by the European institutions in ensuring a sustainable Area of Freedom, Security and Justice for all Member States, in general and an efficient judicial cooperation in criminal matters in subsidiary.

This ambitious "*goal* [was to be achieved] *by taking the following* [institutional and legislative] *measures* [in accordance with former articles 29 and 31 paragraph 1 of TEU]*: closer cooperation between police forces, customs authorities,* [competent ministries] *and other competent authorities in the Member States, both directly and through the* ***European Police Office (Europol)****; closer cooperation between judicial and other competent authorities of the Member States including cooperation through the* ***European Judicial Cooperation Unit (Eurojust)*** *and approximation, where necessary, of rules on criminal matters in the Member States"* and preventing possible conflicts of jurisdiction between Member States. By "*approximation of rules on criminal matters in the Member States"* we shall understand an adjustment of the national criminal legislations of the Member States to a common minimum standard and not full – scale unification of them, which technically was not possible to be realised taking into account the differences between them. In certain fields of the criminal legislation, such as: organised crime, trafficking in human beings, exploitation of children and child pornography, terrorism, fraud, money laundering, corruption, cyber crime, racism and xenophobia, the legal texts have been adopted or are negotiated to adopt common definitions and harmonise the level of sanctions applicable to these offences[22].

---

[19] Webpages: http://www.europarl.europa.eu/ftu/pdf/en/FTU_4.12.6.pdf and http://register.consilium.europa.eu/pdf/en/09/st17/st17024.en09.pdf, accessed March 26, 2013.

[20] Webpage: http://www.europarl.europa.eu/ftu/pdf/en/FTU_4.12.6.pdf, accessed March 26, 2013.

[21] The Treaty was signed on 26th of February 2001 and came into force on 1st of February 2003.

[22] Webpage: http://www.europarl.europa.eu/ftu/pdf/en/FTU_4.12.6.pdf, accessed March 26, 2013.

In order to eliminate as much as possible these differences existed in the criminal legislations of the Member States, the Lisbon Treaty foresees that the European Parliament and the Council, through the directives adopted in accordance with the ordinary legislative procedure, *"may establish minimum rules concerning the definition of criminal offences and sanctions in the areas of particularly serious crime with a cross-border dimension resulting from the nature or impact of such offences or from a special need to combat them on a common basis"* (article 83 of TEU).

Regarding the legal instruments, the Third Pillar has consecrated the following (former article 34 of TEU): **common positions** defining the approach of the European Union to a particular matter; **framework decisions** for the purpose of approximation of the laws and regulations of the Member States; **decisions** for any other purpose consistent with the objectives of this title, excluding any approximation of the laws and regulations of the Member States and, finally, **conventions** which it shall recommend to the Member States for adoption in accordance with their respective constitutional requirements and procedures.

The new amendments brought by the Treaty of Lisbon[23] in the field of judicial cooperation in criminal matters have determined the "rethinking" and separating it from the "police cooperation" in two different chapters of Title V of TFEU (dealing with the Area of Freedom, Security and Justice), namely: in **Chapter 4** on Judicial cooperation in criminal matters (articles 82 – 86 of TFEU) and in **Chapter 5** on Police cooperation (articles 87 - 89 of TFEU), without defining in a way or another these two domains[24]. The only reference to the judicial cooperation in criminal matters is made by article 82 para.1 of TFEU where "[it] *shall be based on the principle of mutual recognition of judgments and judicial decisions and shall include the approximation of laws and regulations of the Member States in the areas referred to in paragraph 2 and in article 83*" of TFEU.

On the other hand, the doctrine[25] tried to give a concrete definition to the judicial cooperation, considering that there are three criteria to define it, as follows: the inter-state element (in this case, it is about the cooperation between the EU Member States); the degree of the organization of a formal framework or institution building (in this situation, the cooperation is developed by the national judicial authorities of each EU Member States) and the dependence of European Union Law (we can talk about the supremacy of the European Union Law upon the national law).

Under the Treaty of Lisbon, the legal instruments which can be adopted in the field of judicial cooperation in criminal matters are: regulations, directives and decisions, similar to the First Pillar. Furthermore, in accordance with article 82 of TFEU: *"the European Parliament and the Council* [...] *shall adopt* [the necessary] *measures to*: ***lay down rules and procedures*** *for ensuring recognition throughout the Union of all forms of judgments and judicial decisions; prevent and settle conflicts of jurisdiction between Member States; support the training of the judiciary and judicial staff; facilitate* ***cooperation between judicial*** *or equivalent authorities of the Member States in relation to proceedings in criminal matters and the enforcement of decisions"*.

As regards the innovations introduced by the Treaty on the Functioning of the European Union in the field of Justice and Home Affairs (JHA), these mainly concern:

- changes in the legal framework and the legislative procedure applicable in several areas. Thus, the legislative proposals will now be adopted by qualified majority voting in the Council in accordance with the procedure set out in article 293 of TFEU, while before the Lisbon Treaty the legislative procedure involved the unanimity voting in accordance with former article 67[26] of TEC. In addition, the European Parliament, as co-legislator, delivers its opinion by the co-decision

[23] The Treaty was signed in 13th of December 2007 and came into force at 1st of December 2009.
[24] Cyrille Fijnaut and Jannemieke Ouwerkerk, op. cit., pp. 26-27.
[25] *Ibid*, pp. 27.
[26] "[...] *The Council shall act unanimously on a proposal from the Commission or on the initiative of a Member States and after consulting the European Parliament"*.

procedure[27] and the European Commission has the right of initiative to propose new legislative acts with respect to the judicial cooperation in criminal matters. Much more, the Lisbon Treaty introduces the possibility that an initiative can also come from a quarter of EU Member States, according to article 76 of TFEU;

- the possibility to create an European Public Prosecutor's Office and the Standing Committee on Operational Cooperation on Internal Security (COSI); the role of the Court of Justice of the European Union (CJUE) is consolidated, being able to trail, without any restriction, the ordinary procedures for preliminary references and infringement proceedings initiated by the European Commission. Nevertheless, for five years following the entry into force of the Lisbon Treaty (during the period 2009 - 2014), acts issued in the field of judicial cooperation in criminal matters adopted under the previous Treaty cannot be the subject of such proceedings[28], being imposed transitional provisions in this field. Regarding this point, the United Kingdom, after long debates, managed to insert the following provision: *"At the latest six months before the end of that transitional period* [in December 2014]*, the United Kingdom can decide still not accept the powers of the EU institutions regarding that part of EU legislation"* (article 10 para.4 of the Lisbon Treaty Protocol no.36)..

As regards the **European legal instruments** adopted in the field of criminal matters, the **most well-known** are as follows:

1.The Convention of 19th of June 1990 applying the Schengen Agreement of 14th of June 1985 on the gradual abolition of checks at common borders (known as Schengen Agreement). Thus, it is possible to create direct contact between judicial authorities under article 53[29] of the Schengen Convention;

2.The Council Act of 29th of May 2000 establishing in accordance with the former article 34 of the Treaty on European Union the Convention on Mutual Assistance in Criminal Matters between the Member States of the European Union and the Protocol of 16th of October 2001 to the said Convention[30]. This convention aims to encourage and modernise cooperation between judicial, police and customs authorities within the European Union by supplementing provisions in existing legal instruments, while also respecting the European Convention for the Protection of Human Rights of 1950[31];

3.**The Council Framework Decision 2002/584/JHA of 13th of June 2002 on the European Arrest Warrant (EAW)[32] and the surrender procedures between the Member States.** According to the said framework decision:

---

[27] Jean-Louis Antoine-Grégoire, AN AREA OF FREEDOM, SECURITY AND JUSTICE: GENERAL ASPECTS, March 2011, pp.1 webpage: http://www.europarl.europa.eu/ftu/pdf/en/FTU_4.12.1.pdf, accessed March 26, 2013.

[28] *Ibid,* pp.1,

[29] According to the said article: The "*requests for assistance may be made directly between legal authorities and returned through the same channels*".

[30] Webpage: http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:C:2000:197:0001:0023:EN:PDF, accessed March 26, 2013. The primary aim of the Convention is to improve judicial cooperation by developing and modernizing the existing provisions governing mutual assistance, mainly by extending the range of circumstances in which mutual assistance may be requested and by facilitating assistance, through a whole series of measures, so that it is quicker, more flexible and, as a result, more effective.

[31] The Convention was signed in Rome on 4th of November 1950 and entered into force on 3rd of September 1953; webpage: http://www.echr.coe.int/NR/rdonlyres/D5CC24A7-DC13-4318-B457-5C9014916D7A/0/Convention_ENG.pdf,accessed March 26, 2013.

[32] Webpages: http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=CELEX:32002F0584:en:HTML; http://ec.europa.eu/justice/criminal/recognition-decision/european-arrest-warrant/index_en.htm and https://e-justice.europa.eu/content_european_arrest_warrant-90-en.do?init=true, accessed March 26, 2013. The European arrest warrant is a judicial decision issued by a Member State with a view to the arrest and surrender by another Member State

▪ it replaces the existing texts in this area, including the classic instruments in the field of extradition (bilateral treaties and the multilateral conventions concluded between the states);

▪ it replaces the extradition system by requiring each national judicial authority (the executing judicial authority) to recognise *ipso facto (by the fact itself)* and with a minimum of formalities the requests for the surrender of a person made by the judicial authority of another Member State (the issuing judicial authority);

▪ it simplifies and speeds up the procedures, given that the whole political and administrative phase is replaced by a *judicial mechanism;*

▪ it provides strict time limits as regards the procedure to return a person which is arrested, no later than 90 days since he/she was arrested or 10 days if the person gives his/her consent to the surrender;

▪ it applies in the following cases: where a final sentence of imprisonment or a detention order has been imposed for a period of at least **four months**; for offences punishable by imprisonment or a detention order for a maximum period of at least **one year**;

▪ the European Arrest Warrant must contain information on: the identity of the person concerned; the issuing judicial authority; the final judgment; the nature of the offence; the penalty etc. In this context, a specimen form is attached to the framework decision and includes all the information mentioned already;

▪ the EU countries can no longer refuse to surrender, to another EU country, their own citizens who have committed a serious crime or are suspected of having committed such a crime in another EU country, on the grounds that they are nationals;

▪ it stipulates simpler procedures for 32 categories of serious offences, where the dual criminality principle is abolished. These serious offences are: terrorism, trafficking in human beings, corruption, participation in a criminal organisation, counterfeiting currency, murder, racism and xenophobia, rape, trafficking in stolen vehicles, and fraud, including that affecting the financial interests of the Communities etc.;

▪ the Member States and the national courts have to respect the provisions of the European Convention on Human Rights as well. Anyone arrested under an EAW may have a lawyer, and if necessary an interpreter, as provided by the law of the country where he/she has been arrested.

4. The Council Framework Decision no. 2002/465/JHA of 13th of June 2002 on Joint Investigation Teams (JIT)[33]. The relevant provisions of the said framework decision are:

▪ it was adopted with a view to combating trafficking in drugs and human beings, as well as terrorism;

▪ at least two or more Member States may set up a Joint Investigation Team by entering into an mutual agreement, which may also include experts of Europol, Eurojust, and European Anti-Fraud Office (OLAF). In addition, the representatives from other EU Members States can be seconded experts within the Joint Investigation Team if they are interested in participating in such team. Non-EU Member States may also participate in the activities of a Joint Investigation Team with the agreement of all other parties;

▪ each Joint Investigation Team involves direct exchange of information when it is necessary between the members of the team without any other formalities. Also, it works for a specific purpose

---

of a person being sought for a criminal prosecution or a custodial sentence. It is a tool designed to strengthen the cooperation between the national judicial authorities of the Member States by eliminating the use of extradition. The framework decision was implemented into the national legislation by mid of 2005.

[33] Webpages: http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:L:2002:162:0001:0003:EN:PDF and http://www.europol.europa.eu/sites/default/files/council_rec_on_jit_agreement___march_2010.pdf, accessed March 26, 2013.

and a limited period, which may be extended by *mutus consensus*, while the composition of the team shall be set out in the agreement;

- so far, this instrument has not been fully developed by all the Member States and has already encountered implementation difficulties due to the different criminal procedure codes existing in the Member States; the evidence which might be administrated because is formally classified while the exchange and admissibility of such evidence can be problematic, especially if no bilateral or multilateral agreement is in place to allow for the exchange of classified information etc.

Since the 1950s, in the field of judicial cooperation in criminal matters have been concluded many **international conventions** and other legal instruments, which have been signed and ratified by the majority of the EU Member States, among which we can mention:

1.The European Convention of 20th of April 1959 on Mutual Assistance in Criminal Matters (also known as the "mother" Convention). This legal instrument served as legal tool for issuing the Council Act of 29th of May 2000 on mutual assistance in criminal matters between the Member States of EU;

2.The additional Protocol of 17th of March 1978 to the European Convention on Mutual Assistance in Criminal Matters;

3.The Council of Europe Convention of 8th of November 1990 on Laundering, Search, Seizure and Confiscation of the Proceeds from Crime;

4.The United Nations Convention of 19th of December 1988 against Illicit Traffic in Narcotic Drugs and Psychotropic Substances.

III. From the institutional perspective

In last 20 years, the EU Justice and Home Affair field was *"subject to a complex institutional evolution, culminating in the application of the Community' approach to the decision-making process, to the legal instruments and to the jurisdiction of the Court of Justice[34]"*, especially after entering into force of the Lisbon Treaty in December 2009.

In the following we will make a brief presentation of the institutional evolution of the issue, pointing out the most relevant moments, as well as the important amendments brought by the Lisbon Treaty.

Thus, before entering into force of the Treaty of Maastricht in November 1993, at the international level was developed only an *"informal and intergovernmental[35]"* cooperation where certain international treaties were concluded between the Member States, mostly in the field of criminal law issues, such as: asylum, visas, immigration policy etc. Unfortunately, this cooperation proved to be ineffective since many of these treaties were not ratified, except the Dublin Convention for asylum requests[36] and the civil law Conventions which were linked to the legal order of the former European Community[37], presently European Union. In this phase, we can notice that the Member States could not establish a common cooperation in this field because of the lack of internal legislative and institutional provisions that could facilitate developing of such cooperation in a more concrete and sustainable manner.

---

[34] Paul Graig and Grainne de Burca, *The evolution of the EU law*, Oxford University Press, 2011, pp.269.

[35] *Ibid*, pp.269.

[36] The Dublin Convention was signed in June 1990 in conjunction with the Schengen Implementation Convention – webpage: http://www.fdcw.unimaas.nl/staff/files/users/215/Dublin%20System_EGHM.pdf, accessed March 26, 2013.

[37] Paul Graig and Grainne de Burca, op.cit., pp.270.

The period of 1993 – 1999 is described in the doctrine[38] as *"formal intergovernmentalism"*, where specific tools and rules related to the former Title VI - *"Justice and Home Affairs"* have been adopted by the Treaty on European Union. So, these tools and rules represent an important step in the intergovernmental process, while the Council "*may* [...] *draw up conventions* [...][39]*"* or other acts in this field, without clarifying which are these *"other acts"*, such as: Joint Actions, Joint Positions or Common Positions[40].

During the same period, another stone in constructing the intergovernmental process was assigning the role to the Court of Justice to have the jurisdiction over the dispute settlements or preliminary references coming from the national courts of the EU Member States as regards each Convention signed in the framework of the Third Pillar, in accordance with the provisions of former article K.3 para.2 of TEU[41]. In practice, this jurisdiction of the Court was exercised only as regards the civil law Conventions while concerning those signed in the field of criminal law and policing, the Member States could not reach a common agreement because of their different national systems but also because of their "egos" regarding the totally independence to decide in the field of Conventions, as part of the International Public law. The only thing that Member States could agree was to give to the Court of Justice the jurisdiction over the preliminary references coming from their national courts, including those who are having the status as final courts in accordance with the domestic provisions in the field[42].

From my point of view, this phase had certain gaps since, on the one hand, the European Parliament had only the right to be informed and consulted by the Member States holding the rotating Council Presidency on the "principals aspects" of debates in the field of the Third Pillar, and, on the other side, the European Commission was refused to have joint right of initiative with the Member States in specified areas, especially in the policing and criminal law[43]. To all these, we can add the fact that this phase was hampered because of the maximum control shown by the Member States' governments and their desire to transfer as little powers as possible to the European level, which imposed eventually significant limits on the effectiveness of the EU action in this field[44].

Between 1999 and 2005, the doctrine[45] argued that in the institutional evolution process occurred another phase - "*modified intergovernmentalism*" - which consisted of retaining the key features of the intergovernmental approach with certain and modest concessions to the Community method, where few issues of the EU Justice and Home Affairs domain related to the immigration and asylum law have been transferred to the First Pillar, through the Treaty of Amsterdam (1997), domain which has been communitarised step by step, by adopting special transitional rules for a five-year period with respect to the application of the European Union law to the former Title IV of TEC. On the other hand, the issues remaining from the initial Third Pillar, namely criminal law and policing, were still subjected to even fewer elements of the European Union's legal order.

As regards the legal instruments which have been used in the remaining Third Pillar, significant changes took place during the period 1999 - 2005, which means that the conventions and common positions from the previous period were kept, while new types of measures have been introduced and used by the Council on a regular basis during its decision-making process, such as: framework decisions and decisions, taking into consideration that these instruments should not be

[38] *Ibid* pp.270; webpage: http://www.eurotreaties.com/maastrichteu.pdf, accessed March 26, 2013.
[39] Former article K.3 of TEU.
[40] Paul Graig and Grainne de Burca, op.cit., pp.270.
[41] According to the article: *"such conventions may stipulate that the Court of Justice shall have jurisdiction to interpret their provisions and to rule on any disputes regarding their application, in accordance with such arrangements as they may lay down"*.
[42] Paul Graig and Grainne de Burca, op.cit., pp.271.
[43] *Ibid* pp.271.
[44] *Ibid* pp.271
[45] *Ibid* pp.272.

ratified by the national parliaments according to their internal constitutional rules in order to take effect. In order to eliminate as much as possible the problems raised by the ratifying of the conventions by the Member States, a number of pre-Amsterdam Joint Actions and conventions have been replaced by framework decisions and decisions, as new legal instruments[46]. Furthermore, the Treaty of Nice amended the decision-making rules on asylum, being also added a Protocol to the Treaty in order to clarify the modality to adopt the decisions under the former Title IV of TEC[47].

"A number of developments which altered the institutional framework", also known as the *"residual intergovernmental"* period[48], took place during 2005 and 2009 when significant changes have been made in the field of immigration and asylum law[49]. On the other side, no changes have been brought to the Court of Justice's jurisdiction, although several preliminary references have been received by the Court of Justice in accordance with the former article 234 of TEC and other infringement actions against Member States have been introduced by the European Commission under the former article 226 of TEC[50]. In the same line, we should mention that the roles of the European Parliament and the European Commission were not transformed into competitive ones, adapted to the realities of the middle of 2000s while *de facto* changes of the institutional framework in the field of EU Justice and Home Affairs had a limited impact on the evolution of policy as regards the adoption of legislation[51].

As for the Third Pillar, it is worth to highlight two important changes: one of them is represented by shifting the criminal law and policing policy to the First Pillar, especially as concern the competence of the EU to adopt criminal sanctions and rules on cooperation between law enforcement and the private sector, and the second change is represented by infiltrating the principles of the First Pillar into the Third Pillar, in particular as regards indirect effect, the scope of the Court's jurisdiction and the autonomous interpretation of the measures provided for in the Third Pillar[52].

Finally, the Treaty of Lisbon (2009) marks an important moment in the institutional evolution of the EU Justice and Home Affairs, representing in the same time a triumph of the EU law in this area. The relevant changes introduced by the Lisbon Treaty are: qualified majority vote applicable to: the legal migration, the most part of the criminal law and policing issues, the visa lists and visa formats; full jurisdiction of the Court of Justice in all JHA areas; the application of the regulations and directives to policing and criminal law matters; extensive revision of most competences in this area, and in particularly regarding the immigration, asylum etc. In this moment, apart from all the changes occurred, the Court of Justice still have a five-year transitional period over the Third Pillar measures adopted before the entry into force of the Lisbon Treaty, according to the provisions provided for in article 10 of Title VII of the Protocol no.36 attached to the Treaty of Lisbon[53].

As regards the judicial cooperation in criminal matters between the Member States, according to the doctrine[54] it can be grouped, as follows:

- traditional cooperation based on mutual assistance in the special fields as extradition;

---

[46] *Ibid*, pp.273-274.

[47] According to the Protocol on Article 67 of the Treaty establishing the European Community said that: "[...] *From 1 May 2004, **the Council shall act by a qualified majority**, on a proposal from the Commission and after consulting the European Parliament, in order to adopt the measures referred to in Article 66 of the Treaty establishing the European Community"*.

[48] Paul Graig and Grainne de Burca, op.cit., pp.274.

[49] In this case, after the initial five-year transitional period ended en 1st of May 2004, the European Commission automatically gained its right of initiative, and the co-decision procedure with qualified majority vote.

[50] Paul Graig and Grainne de Burca, op.cit., pp.275.

[51] *Ibid*, pp. 275.

[52] *Ibid*, pp. 277.

[53] Webpage: http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:C:2012:326:0201:0330:EN:PDF, accessed March 26, 2013.

[54] Cyrille Fijnaut and Jannemieke Ouwerkerk, op.cit., pp.29-30.

▪ networking cooperation based on a formal way, as it is the case of European Judicial Network, Liaison Magistrates or on *ad-hoc* basis, represented by the contact point networks etc.;

▪ co-active cooperation, represented by the setting-up of the Joint Investigation Teams, or other teams created *ad-hoc* in order to deal with the crisis situations, which can be intervention units of the Member States;

▪ trans - border cooperation, which can be represented by the surveillance, cross-border data sharing or cross-border cooperation teams in the combat against terrorism or organised crime etc.

Related to the institutions created and developed during this complex institutional evolution that took place in the last 20 years in the field of Justice and Home Affairs, and bearing in mind the classification of the judicial cooperation, in the following we will briefly analyse few of the networks and institutions created before and after the entry into force of the Lisbon Treaty, as follows:

1. European Judicial Network (EJN)[55] is a network of national contact points for the facilitation of judicial cooperation in criminal matters. It was created by the Joint Action 98/428 JHA of 29th of June 1998[56] in order to fulfil Recommendation no.21 of the Action Plan to combat organised crime adopted by the Council on 28th of April 1997[57] upon the Belgian initiative and it was officially inaugurated on 25th of September 1998 by the Austrian Minister of Justice acting as the Presidency of the Council of the European Union.

The EJN is composed of the representatives of the European Commission and the National Contact Points of the Member States designated by each Member State, coming from the public authorities, the judicial authorities and other competent authorities having specific responsibilities in the field of international judicial cooperation, both in general and for certain forms of serious crime, such as organized crime, corruption, drug trafficking or terrorism, while its Secretariat is based in Hague, the Netherlands.

As the national contact points are concern, they are judges, prosecutors, representatives of the Ministries of Justice, strongly committed to put their experience in the benefit of the European judicial cooperation in criminal matters. In order to be appointed in accordance with the domestic rules, legal traditions and internal structure of each country, the only condition is to provide effective coverage for all forms of crimes throughout the country. Presently, there are more than 300 national contact points throughout the 27 Member States. It is expected that the number of the national contact points to increase in the next period due to the Croatia accession to the EU, starting with 1st July 2013.

The EJN's purpose is to create more effective judicial cooperation, particularly in combating serious crimes, by means of: providing legal and practical information to competent local authorities; providing support with requests for judicial cooperation; creating a European Union judicial culture; cooperating with other Judicial Networks, third countries and judicial partners[58] etc.

Finally, according to Point V of the Madeira Declaration[59] *"the work done by the EJN in partnership with other networks, not just at the European level* […] *but also within an international framework involving the other existing judicial networks, will promote a European and international*

judicial culture founded on the shared values affirmed by the [former] *Treaty on the European Union"* and presently Lisbon Treaty.

2. The establishment of **EUROPOL**[60] was agreed in former article K1 paragraph 9[61] of the Treaty of Maastricht. The agency started limited operations on 3rd of January 1994 as the Europol Drugs Unit (EDU) and in 1998 the Council Act 95/C 316/01 of 26th of July 1995 drawing up the Convention on the establishment of a European Police Office (Europol Convention)[62] was ratified by all the Member States of that time and came into force in October 1998. Europol commenced its full activities on 1st of July 1999. In 2009, the Europol Convention has been replaced by the Council Decision 2009/371/JHA of 6th of April 2009 establishing the European Police Office (EUROPOL)[63] starting with 1st of January 2010. Europol has more than 700 staff in the Hague headquarters, the Netherlands, which are coming from different kinds of law enforcement agencies, including regular police, border police, customs and security services.

Europol represents the European law enforcement agency aiming to make Europe safer by assisting the Member States in their fight against serious international crime and terrorism, international drug trafficking and money laundering, organised fraud, counterfeiting of the euro currency etc. It works closely with the law enforcement agencies in the 27 EU Member States, including with Croatia, the newest EU Member State and in other non-EU partner states such as: Australia, Canada, US and Norway to whom Europol develops cooperation arrangements. All these law enforcement authorities rely on the intelligence work and the services of Europol's operational coordination centre and secure information network.

3. Eurojust[64] or the *"European Union's Judicial Cooperation Unit"* was set-up by the Council Decision 2002/187/JHA of 27th of February 2002[65] to reinforce the fight against serious crime, with the premises in Hague, the Netherlands. The discussions on establishing a judicial cooperation unit started in 1999, during the European Council Meeting in Tampere, Finland on 15th and 16th of October 1999 and ended during the Spanish Presidency of the European Union[66] when the Eurojust Decision was published on 28th of February 2002, while its budget was released in May of the same year, and the Rules of Procedure were agreed in June 2002.

Eurojust fulfils its tasks through the College which nowadays is composed of 27 National Members, one from each Member States, which can be seconded by the national members. These members are judges, prosecutors or police officers of equivalent competence, appointed and detached to Eurojust in accordance with their national legal systems. Taking into account the fact that Croatia will be part of the European Union starting with 1st of July 2013, the provisions regarding the

[61] According to this article: "*For the purposes of achieving the objectives of the Union, in particular the free movement of persons, and without prejudice to the powers of the European Community, Member States shall regard the following areas as matters of common interest:* [...] *police cooperation for the purposes of preventing and combating terrorism, unlawful drug trafficking and other serious forms of international crime, including if necessary certain aspects of customs cooperation, in connection with the organization of a Union-wide system for exchanging information within a European Police Office (Europol)*".

[62] Webpage: http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:C:1995:316:0001:0032:EN:PDF, accessed March 26, 2013.

[63] Webpage: https://www.europol.europa.eu/sites/default/files/council_decision.pdf, accessed March 26, 2013.

[64] In April 2012, the College elected Michèle Coninsx, National Member for Belgium, as its President. The National Members for Estonia and Luxembourg, Raivo Sepp and Carlos Zeyen, currently serve as its Vice-Presidents.

[65] Webpage: www.eurojust.europa.eu, accessed March 26, 2013. The Decision was subsequently amended by the Council Decision 2003/659/JHA of 18 June 2003 and the Council Decision 2009/426/JHA of 16th of December 2008 on the strengthening of Eurojust. The new Decision's purpose is to enhance the operational capabilities of Eurojust to fight transnational organised crime, increase the exchange of information between the interested parties, facilitate and strengthen cooperation between national authorities and Eurojust.

[66] Between January and June 2002.

appointment of the national member within the College as well as the seconded national members to the Eurojust will be applicable in the same manner as for the rest of 27 Member States.

As the mission of Eurojust is concern, according to article 85 of TFEU it *"support*[s] *and strengthen*[s] *the coordination and cooperation between national* [competent] *investigating and prosecuting authorities in relation to serious crime*[s][67] *affecting two or more Member States* […]*"* by: facilitating the execution of international mutual legal assistance and the implementation of extradition requests; improving rendering of their investigations and prosecutions more effective when dealing with cross-border crime and assisting, upon the request of a Member State, the investigations and prosecutions concerning that particular Member State and a non-Member State if a cooperation agreement has been concluded or if an essential interest in providing such assistance is demonstrated.

In order to carry out its tasks in the best conditions, collaboration agreements were concluded by Eurojust with other European institutions, such as: the European Judicial Network, Europol, OLAF and Liaison Magistrates, including with non-Member States (e.g.: Norway, Iceland[68], Switzerland and the Former Yugoslav Republic of Macedonia), with US and Croatia[69], as well as with international organisations[70] for the exchange of information and personal data or the secondment of officers.

Furthermore, "*in order to combat crimes affecting the financial interests of the* [European] *Union, the Council, by means of regulations* [....] *may establish a European Public Prosecutor's Office from Eurojust"* (article 86 of TFEU).

As regards the main goals of Eurojust, these are: to stimulate and improve the coordination between the national authorities in which scope it works closely with EU partners such as the European Judicial Network, Europol, and OLAF where appropriate; to improve cooperation between the national competent authorities, in particular by facilitating mutual legal assistance and the execution of mutual recognition instruments such as the European Arrest Warrant, the European Evidence Warrant[71]; and finally to support competent authorities in improving the effectiveness of their investigations and prosecutions by seeking solutions to recurring problems in judicial cooperation. On the other hand, in non-operational strategic matters, Eurojust works closely with European institutions such as the European Parliament, the Council and the European Commission as well as with the national parliaments.

4. In conjunction with the previous point, in article 86 of TFEU is stipulated the possibility, but not the obligation, as well as the conditions to create "*the* ***European Public Prosecutor's Office (EPPO)***[72] *from Eurojust"* by adopting a series of regulations following a special procedure in order

[67] Eurojust's competence covers the following types of crimes and offences such as: terrorism, drug trafficking, trafficking in human beings, drugs and arms, counterfeiting, the sexual exploitation of women and children, cybercrime, money laundering, computer crime, crime against property or public goods including fraud and corruption, criminal offences affecting the European Community's financial interests, environmental crime and participation in a criminal organization. For other types of offences, Eurojust may assist in investigations and prosecutions at the request of a Member State.

[68] This agreement concluded on 15th of November 2005 can be seen on the webpage: http://eurojust.europa.eu/doclibrary/Eurojust-framework/agreements/Agreement%20Eurojust-Iceland%20%282005%29/Eurojust-Iceland-2005-12-02-EN.pdf, accessed March 26, 2013.

[69] Croatia is set to become the 28th Member State of the European Union on 1st of July 2013.

[70] One of these international organizations is International Criminal Police Organisation (Interpol).

[71] The European Evidence Warrant (EEW) replaces the system of mutual assistance in criminal matters between Member States for obtaining objects, documents and data for use in criminal proceedings, webpage: http://europa.eu/legislation_summaries/justice_freedom_security/judicial_cooperation_in_criminal_matters/jl0015_en.htm, accessed March 26, 2013.

[72] Webpages: http://ec.europa.eu/justice/criminal/judicial-cooperation/public-prosecutor/index_en.htm and http://www.europarl.europa.eu/committees/en/studiesdownload.html?languageDocument=EN&file=73791, accessed March 26, 2013.

"to investigat[e], to *prosecut*[e] *and bring to judgment* [...] *the perpetrators of, and accomplices in, offences against the Union's financial interests*[73]*"* and providing an adequate protection in this field.

If such Office will be created, in liaison with Eurojust, it shall exercise the functions of prosecutor in relation to such offences. The European Council may adopt a decision by acting unanimously after obtaining the consent of the European Parliament and consulting the European Commission to extend the powers of the European Public Prosecutor's Office to include serious crime having a cross-border dimension, if the case may be.

As we can notice, the establishment of the European Public Prosecutor's Office has a unique regime, with a special procedure taking into account the following reasons:

a.The treaty is establishing the general framework for setting up such office, as a possibility and not as an obligation, while the detailed arrangements related to its nature and operation of the office, its statute and competences, the rules of procedure applicable to its activities[74], and other rules will be determinate by the regulations;

b.This office will not be created under the ordinary legislative procedure. A special legislative procedure will be used instead. Thus, the Council is in charge to act unanimously after obtaining the consent of the European Parliament. If the unanimity cannot be reached, a group of at least nine EU Member States may refer a proposal to the European Council, in the framework of enhanced cooperation, based on articles 82 and 329 para.1 of TFEU.

In practice, the first debates regarding this project took place during the Spain's Presidency of the EU, in the first half of 2010[75]. In parallel, three projects conducted by the University of Luxembourg with the financial support of the European Commission have been drafted since 2010, having unique purpose to realize a comparative analysis of the 27 different national legal systems of investigation and prosecution, serving as a principle source of reference for the European model rules of criminal procedure for the EPPO. The comparative analysis included, among others, studies of vertical cooperation in administrative investigations in subsidy and competition cases, the accession of the EU to the European Convention on Human Rights, judicial control in cooperation in criminal matters, mutual recognition etc.

Apart from these three projects, a group of 160 European criminal law experts, practitioners, academics and policy makers[76] has examined during 2010-2012, in detail, the public prosecution systems in the 27 Member States and has scrutinised proposals for a procedural framework for the EPPO[77], while a concrete proposal to establish the European Public Prosecutor's Office is expected to be sent by the European Commission to the European Parliament in June 2013, based on *"commitment to uphold the rule of law"*.

5. Back in history, the first mention on the establishment of **Standing Committee on Operational Cooperation on Internal Security (COSI)**[78] has been made by the Stockholm Programme[79] which called for development of a comprehensive European internal security strategy, knowing that this objective is difficult to be realised since the internal security is still a national responsibility. According to the said Program, this new Committee is in charge with *"developing,*

monitoring and implementing the internal security strategy" of the European Union. In addition, *"in order to ensure the effective enforcement of the internal security strategy* [COSI] *shall also cover* [...] *judicial cooperation in criminal matters relevant to operational cooperation in the field of internal security"*. In the same time, the European Commission supports the COSI' activities to strengthen operational cooperation and coordination of actions between the EU Member States competent authorities.

Thus, the **Standing Committee on Operational Cooperation on Internal Security** was established by the Council Decision 2010/131/EU of 25th of February 2010 on setting up the Standing Committee on operational cooperation on internal security[80], which represents another innovation brought by the Lisbon Treaty. This body is composed of members of the competent national ministries of interior who will be assisted by permanent representatives of the Member States within the European Union in Brussels (Belgium) and by the Secretariat of the Council. Eurojust, Europol, European Agency for the Management of Operational Cooperation at the External Borders (FRONTEX) and other relevant bodies may be invited to attend meetings of COSI as observers, while the European Parliament and the national Parliaments will constantly be informed of the proceedings.

According to the Council Decision setting up COSI[81], the Committee shall have the following tasks:

- to facilitate, to promote and to ensure effective operational cooperation and coordination in the field of EU internal security[82], in accordance with article 71 of TFEU, having no legislative role and no involvement in conducting these operations. In this capacity, it will act in a number of different areas including police and customs cooperation, the protection of external borders and judicial cooperation in criminal matters;
- to evaluate the general direction and efficiency of the operational cooperation;
- to assist the Council in reacting to terrorist attacks or natural or man-made disasters or the solidarity clause stipulated in article 222 of TFEU as it is well-known[83];
- finally, COSI will submit a regular report on its activities to the Council, who will then inform the European Parliament and the national Parliaments.

Except the Council Decision mentioned above, another document entitled "**The Internal Security Strategy for the European Union:** "*Towards a European Security Model"* was adopted by the Justice and Home Affairs Council on 25th of February 2010 and approved by the European Council in its meeting held on 26th of March 2010. According to the common threats for the internal security of the European Union are: terrorism, organised crime, cyber-crime, cross-border crime, natural and man-made disasters and other such threats, while "*an EU-wide approach*" capable to

[83] The European Union mobilises all the instruments, including the military resources, to prevent the terrorist threat in the territory of the Member States and to protect the democratic institutions and the civilian population from any terrorist attack. The Member State concerned, at the request of its political authorities, is assisted by the other Member States. In all the case, when we are talking about the application of the solidarity clause to the terrorist attacks we are talking about *"The Musketeer's Cloak"* which is a provision taken over for the first time in the Lisbon Treaty from article 51 of the Charter of the United Nations, where the main principle is *"all for one, and one for all"* (<<Tous pour un, un pour tous>>), which means that if a Member State is under a terrorist attack the rest of the Member States can intervene in order to help the Member State under siege and to eliminate as much as possible the terrorist attack and its effects; webpages: http://www.statewatch.org/news/2013/feb/eu-solidarity-clause-austria-10956-12.pdf and http://www.icj-cij.org/documents/index.php?p1=4&p2=1&p3=0#Chapter7, accessed March 26, 2013.

respond to all these challenges in an efficient manner has been formulated[84]. This strategy will be developed and implemented by the COSI in the coming years, without being designed yet a strict schedule.

IV. From the procedural perspective

The provisions regarding the Court of Justice's jurisdiction in point of the Justice and Home Affairs before the Lisbon Treaty, including judicial cooperation in criminal matters, are complex and purposively restrictive[85]. Thus, the Treaty of Maastricht excluded in former article L any Court's jurisdiction over the JHA[86] while the Treaty of Amsterdam provided for a limited jurisdiction as regards the cases lodged before it and formulated on the grounds of former article 35 of TEU, which established three exhaustive categories[87] of the Court's jurisdiction over the measures in the field of Justice and Home Affairs, and article 68 of TEC. These categories are, as follows:

- article 35 para.1 established an optional preliminary reference procedure on the validity and interpretation of framework decisions, decisions and conventions established under the former Title VI of TEU as well as of the measures implementing them, only if the Member States made a declaration to accept the Court's jurisdiction in accordance with former article 35 para.2 of TEU;
- article 35 para.6 established a limited judicial review procedure concerning the legality of framework decisions and decisions in actions brought by a Member State or by the European Commission in the conditions stipulated by the Treaty;
- and finally article 35 para.7 stipulated a procedure for solving Member State and institutional disputes regarding the interpretation or the application of conventions established under former article 34 para.2 letter d. of TEU. However, this article does not confer jurisdiction on the Court to rule on the validity of the measures adopted in the field of JHA including in the field of judicial cooperation in criminal matters.

In order to eliminate the deficiencies in the Court's jurisdiction and to improve its competence in the field of Justice and Home Affairs including in the field of judicial cooperation of criminal matters, it was established a Working Group X (WGX) on "Freedom, Security and Justice" to work on various procedural aspects even though its mandate did not specifically refer to reform of the judicial architecture. One of the conclusions of this group was that a fundamental reform of the Court's jurisdiction was necessary and *"the limited jurisdiction of the Court is no longer acceptable concerning acts adopted in areas as police cooperation or* ***judicial cooperation in criminal matters,*** *which directly affect fundamental rights of the individuals*[88]". In addition, *"specific mechanisms stipulated in* [former] *article 35 of TEU and article 68 of TEC should be abolished and that the general system of jurisdiction of the Court should be extended to the area of freedom, security and justice, including action by Union bodies in this field*[89] *"*.

Treaty of Lisbon was a very good occasion to include all the recommendations made by the Working Group X in the final report on judicial control of the Justice and Home Affairs. Thus, the special jurisdictional rules stipulated in former articles 35 of TEU and 68 of TEC have been abolished, being extended in the same time the jurisdiction of the Court by adding the expedited procedure as regards the Title V of TFEU – *"Area of Freedom, Security and Justice"*. According to the said procedure, the Court of Justice can give its rulings quickly in very urgent cases by reducing

---

[84] Webpage: http://www.europeanfoundation.org/my_weblog/2011/03/the-eu-internal-security-strategy-promoting-more-eu-integration-rather-than-cooperation.html, accessed March 26, 2013.

[85] Stephen Carruthers, op.cit., pp.6.

[86] *Ibid,* pp.7.

[87] *Ibid,* pp.12 and the following.

[88] *Ibid,*pp.31.

[89] *Ibid,*pp.32.

the time-limits as far as possible and giving such cases absolute priority[90]. Such a procedure can also be used for references for preliminary rulings, in which situation the application is made by the national court and must set out in the application the reasons and the circumstances establishing that a ruling on the question put to the Court under discussion is a matter of exceptional urgency.

A special situation is related to article 10 of the Treaty of Lisbon Protocol on Transitional Provisions which preserves the jurisdictional powers obtained by the Court of Justice under the former Title VI of TEU in respect of the Justice and Home Affairs acts issued, including those drafted in the field of judicial cooperation in criminal matters, before the entry into force of the Lisbon Treaty with one mention that these. This transitional provision will cease in five years after the entry into force of the Treaty. As a result, the scope of the Court's jurisdiction will depend on whether an act in the field of judicial cooperation in criminal matters was adopted before or after the Lisbon Treaty effective date and, if adopted before that date, whether or not it has been amended[91].

As regards the visas, asylum, immigration and other policies related to free movement of persons (e.g.: judicial cooperation in civil matters, recognition and enforcement, which is the former Title IV TEC and the current Title V - Chapter 3 of TFEU), the Court can be notified by all the national courts, no matter the level and not only the supreme courts, having the competence to take measures which are justified on grounds of public policy having a cross-border dimension. Therefore, in this matter the Court acquires general jurisdiction, right in the moment of the entry into force of the Treaty of Lisbon.

V. Conclusions

The criminal phenomenon as the negative result of the globalization process involves, on the one hand, finding the best solutions to fight against the crime and especially against the transnational organised crime, and, on the other side, taking the necessary legislative and institutional measures even though the judicial responses to all the threats are still not enough to keep up with the development of the organized crime, which became a sophisticated and international phenomenon, especially in the last 20 years.

For this reason, we need to develop a common European criminal justice area by ensuring an effective cooperation in the field of criminal matters, by supporting the national law enforcement authorities of the Member States in taking all the appropriate measures, and by developing a very good cooperation with the European institutions, organs, offices and bodies in the field, such as: the European Commission and the European Parliament, as the key institutions in drafting the legislation; Eurojust, Europol or European Judicial Network as the key enforcement bodies etc. The starting point is the respect of one of the most crucial principles: the mutual recognition of judicial decisions in all EU Member States.

In order to achieve the main goal, the Lisbon Treaty provides a stronger basis for strengthening the legislative framework and the institutional capacity of the criminal justice area, while foreseeing new powers for the European Parliament and expending the jurisdiction of the Court of Justice of the European Union.

Nevertheless, there remain serious concerns as regards the availability of access to justice for individuals and an effective judicial control over the Justice and Home Affairs measures taken in this field before entering into force of the Lisbon Treaty.

I believe that the new European offices that will be created, EPPO and COSI, in accordance with the provisions of the Lisbon Treaty will contribute effectively in developing the judicial cooperation in criminal matters, in designing the legal framework necessary to contribute to establishing a level of common rules in this field within the European Union in fighting efficiency

[91] Stephen Carruthers, op.cit., pp.37.

against the offences in general and financial crimes in particular and in improving the collaboration with other European institutions, bodies or organs, such as: OLAF, Eurojust or FRONTEX, but not only.

EXPORTING ECONOMIC SECURITY TOWARDS THE EUROPEAN UNION: EASTERN NEIGHBORHOOD IN CONTRAST TO SOUTHERN MEDITERRANEAN

OXANA SOIMU[*]

Abstract
A prosperous neighbourhood for a developing country is an undeniable fact. Among most eloquent examples serves the European Neighbourhood Policy (ENP) that is subject of large debates. In this context, we are used to get knowledge about the benefits that the ENP brings to Eastern and Southern Mediterranean partners. On the other hand, many studies criticize the European Union (EU) foreign policy as presenting weak incentives and conditionality. Nevertheless, this situation requires from our point of view a thorough analysis about the share of economic security that is "imported" by the EU due to the ENP implementation in its immediate vicinity. Thereby, an empirical analysis is going to be carried out in this article where the manoeuvre with some statistic data and macroeconomic indicators within economic security typologies is expected to generate useful insights in order to identify: Who generates more economic security gains for the EU? In more details, tracing the analytic parallel between economic measures within the European Neighbourhood Policy and contemporary approach to economic security, namely according to the European vision of security it enables the author to reach conclusions which of the EU's neighbours show more economic certainty and security. If this correlation generates positive results, then the author will assert that the EU offer regarding the Neighbourhood Policy is prospective for recipients but also for the EU in terms of economic security "import".

Keywords: *European Neighbourhood Policy, economic security, Eastern partners, Southern Mediterranean partners*

I. Introduction

The main scope of this study is to exhibit at some extent how much economic security the Southern and Eastern ENP partners export towards the EU (the author will interpret results obtained via the quantitative method of research and security itself is difficult to quantify). This in fact could resolve a number of questions related to "prosperity generating"[1] in the European surroundings.[2]

Taking it step by step, firstly, the author chooses to work more on economic dimension of the ENP because from the very beginning and namely from the origins of the ENP, "interconnecting the neighbourhood in terms of trade and political relations, energy, infrastructure, and telecommunication networks" was somehow left on the second plan[3].

In this vain, regarding the economic policy coordination, the EU tends to be honest and fair to all its partners in the neighbourhood, but it is quite complicated to equally provide incentives and economic security techniques to all. Among others, Delcour concludes about EU's difficult ability to respond to several challenges from the neighbourhood that differently perceives the EU foreign policy intentions and neighbour countries necessarily have their own preferences for cooperation and foreign policy[4]. In addition, Delcour mentions about some actions at regional level (in its work –

Eastern ENP partners) concerning the achievement of the security objectives to / from the neighbourhood[5]. Thus, in the present article it is focused on the economic security that can be provided by the ENP partners at least at regional level, author working by contrast.

Generally, this study will be performed by quantitative and qualitative research methods. Therefore, to argue what neighbourhood is more secure for the EU and presents more economic security prospects in general, the author will manoeuvre with statistical data and here the interpretation of result will be performed in qualitative terms. Besides, in order to find *Quo Vadis* the EU – Neighbourhood "marriage", the present study will provide a snapshot of economic security in the neighbourhood not at individual level but at regional level, connecting the retrospective aspects related to the EU security with some prospects. In addition, working with macroeconomic indicators (retrieved from the World Bank (WB) database) and data from international rankings it will be calculated a regional average value that will illustrate by contrast the regional economic capacity, the state of economic security and chances to penetrate one of the largest global markets – the EU market.

Speaking about qualitative method, two important moments the author highlights: firstly, by revealing the economic difference between these two camps (Eastern and Southern ENP partners) it will explain the result of this research purpose; secondly, it has to be established towards what the EU aspires in its surroundings. Thus for this purpose, to "play" with retrospective/prospective objectives it will be used a method of analysis (a schematic representation) not very common for the literature body on European Studies, this in turn injects novelty in this analysis. The TRIZ (Theory of inventive problem solving) theory[6] will be used.

In order to clarify the reader, an important remark follows: the author is not actually going to start with the economic security conceptualisation because "definitions of economic security are in themselves dependent on perceptions and values" [7].

One can be concluded that this comparative analysis is one more contribution to put in light the EU's external policy vectors and assistance trajectory towards its neighbourhood.

II. Two camps: different approaches and different interests

Whereas the EU external actions and foreign policy is mainly based on security purposes in its surroundings, therefore it could be reiterated that the security and the ENP go in pair[8]. Besides, the economic dimension of the ENP and of security is also strongly interconnected mainly from the retrospective point of view – among main cornerstones of the Union's formation are economic interferences. In this context, for the EU neighbourhood, a real boom was the widening good vicinity's relations and the launch of the ENP among "different countries" and "common interests"[9]. Therefore, above everything, there were created two trajectories of economic policy coordination in the South and in the East: each of them benefiting of Barcelona Process[10] (which shortcomings

related to economic reform winnow the connection between economic measures for the partners and economic domestic interests of the EU[11]) or Partnership and Cooperation Agreement (PCA)[12]. And in this context, the author agrees with the fact that "the ENP corrects a number of deficiencies of the Euro-Mediterranean Partnership" [13] and also asserts that it is without any doubt that at the same extent the ENP also „corrects" the PCA.

Turning to the significant body of literature, the „contrast" between the South and Eastern partners was obvious from the very beginning. For instance, Del Sarto and Schumacher consider that Eastern partners were sceptical concerning the new ENP because the last considered this new foreign EU policy as a delay regarding the EU membership, instead of Mediterranean Southern partners that were much enthusiastic about the ENP[14].

Taking the other side of the coin and namely the EU interest, Marchetti underlines the EU "preference" rather towards the Eastern neighbours instead of Mediterranean.[15] In reality, the EU entered into dalogue with two different camps where some of them are strained by frozen conflicts and others strungled by "political and religious extremism"[16] but the both present weak capacity for democracy building. For this reason, the EU could fall in a kind of foreign policy hysteresis because it is difficult to maintain the "balanced approach" in these conditions of continous economic and political challenges. Besides, EU member states and espeacially those that border the Southern and Eastern vecinity present very different economic and political interests[17].

Regarding the financial assitance, Longhurts has calculated and resumed that the Southern ENP partners beneficiate and "consume" more than the Eastern in a ratio of 2 : 1[18]. Same author identified that "the top recipients are Palestinian Authority, Republic of Moldova (henceforth: Moldova) and Lebanon"[19]. Regarding the "EU's principal method" and "long - term vision of relationships", Longhurts exhaustively draws a comparative table and delimitates that for the South, the EU undertakes a regional approach in contrast to the East that takes advantage of a bilateral approach "with small elements of sub-regionalism"[20]. In economic prospects, the EU – Southern ENP equation of economic relations look for deep relations in comparison with the EU – Eastern ENP that tends to deep free trade[21]. Is it the problem in the geo-economic organisation of these two neighbourhoods? Among others, Missiroli proposed their regrupation in "(sub-) regional "clusters""[22].

Regarding the participation into European Single Market (ESM), Escribano identifies that most difficult is for the Southern Mediterranean[23] but meantime they accept to carry this cargo of the EU economic directives "partly in pure pragmatism"[24] and because the EU is "major source of economic aid"[25]. For a holistic justification and additional conclusions, the author of this study concentrates regional macroeconomic average data in the Chart that follow, thus a comparative analysis is conducted. On the other side, some EU member states that "run the risk of losing their comparative advantages in certain economic sectors"[26] look rather to increase the aid instead of deep trade relations[27]. This is a kind of safeguarding the domestic market from the part of the EU members that share borders with its Southern and Eastern partners. For the last both actors this is a threat because they easily become "good consumers of foreign aids" and do not develop the capacity for self-development and export-oriented economic growth.

Another token that divides the EU from its neighbourhood it is the real interest. Therefore, "the EU is obviously first and foremost interested in securing *itself*"[28] By constrast, the neighbourhood look for more aid and market integration. Besides, the Eastern group has as declared objective the EU memebership[29]. In addition to the last, the author would like to exemplify by Moldova. Thus, mass media often vehiculates with the idea that moldovan citizens and decision and policy – makers wants to "fall into the EU canvas" mainly for visa liberalization. Contrary to the above said, the author considers that this is thought by people that many years ago emmigrated to the EU instead of people who remained in Moldova, those who have a pro-European vision and who in economic terms look for European standards, quality and capabilities to protect their markets and values.

Missiroli points that the EU through Partnership and Cooperation Agreement (PCA) had more economic interest towards Eastern partners in contrast to the Mediterranean[30]. Nevertheless in order to reduce economic disparities at regional level it is difficult to find one general aplicable formula for all economies and meanwhile respect the principle of differentiation.

Table 1 illustrates the following situation: the ENP seems to be dissonant with economic realities of EU neighbours. Apart from the case that both Southern and Eastern ENP partners in average terms are "Partly Free"[31] they also do not enjoy too much perception of corruption. Only Israel and Georgia present capacity to fight againts corruption (Table 1). For the rest of partners as well as for the EU this is a threat to internal market and affect the cooperation with prospective trade partners. The Human Development Index (HDI) however reflects that the Southern and Eastern ENP partners present capacity for development and modernisation and a relative good life quality. On the other hand, according to the Failed State Index 2012 the EU member states are positioned in the categories of "Moderate" and "Sustainable" states while its neighbourhood really presents worrying signs[32]. For instance, in "Alert" are Syria and Egypt and the rest of Mediterranean and Eastern

partners are in "Warning" situation meeting issues related to "economic decline", "uneven development" and "weak security apparatus"[33]. Hereby, towards EU, both partners "export" rather insecurity than security and for this reason EU emphasize the cross-border cooperation and developed the new principle-incentive of "more for more"[34]. Nevertheless, the European Commission reached the conclusion that "despite a difficult context, the EU has been able to establish a partnership for reform with its neighbours"[35]. This is the EU modality of securitisation because "economic security requires more than just maximizing current economic prosperity"[36] it exits its capabilities, models of governance and assistance outside its borders thinking on stable economic surroundings. Therefore, the author believes that the EU at least has the moral right to establish the rules of economic integration in its surrounding even risking with internal disputes among Member States and despite present conditions of financial crisis it continues assisting the neighbourhood's impoverished economies.

III. Eastern and Southern Mediterranean: harmony or discord with the EU (in macroeconomic trends)?

Contemporary security studies broaden foreign policy implications into security analysis and securitisation[44] whilst "the economics-security nexus"[45] receives new insights. For this study, the author is going to put face to face the cause that is designated to be the ENP and the effect which is security - the EU's main objective (author analyses the economic dimension[46]). Thereby, matching the cause with the effect is going to be done upon the two camps (Eastern and Southern ENP

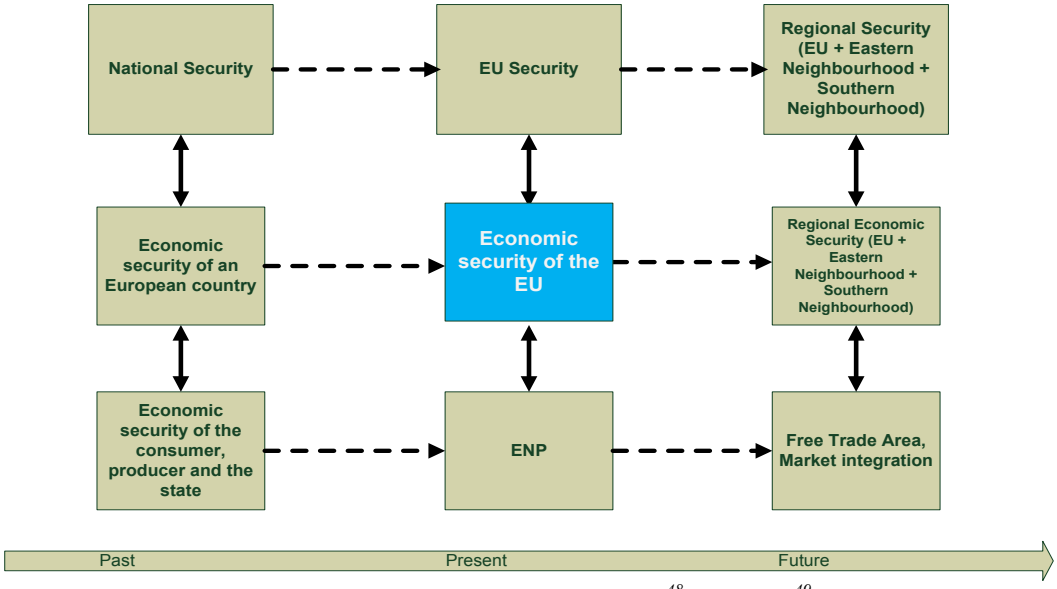
partners). In this order of ideas, if the ENP could be considered as "Foreign Economic Policy (FEP) power", thus in perspective it should make the neighbours sustainable exporters of economic security ensuring both (EU and its Neighbourhood) "supply security", "market access security", "finance-credit security", "techno-industrial capability security", "socio-economic paradigm security", "transborder community security", "systemic security" and "alliance security"[47].

Before starting the analysis it should be clarified towards what tends the EU. Thus, just to recapitulate the evolution of economic security on the European continent from cornerstones until present realities when we already speak about EU and its neighbourhood, author compiled the information in the Fig. 1, showing that the EU's main objective of all times is security. Besides, as it was mentioned in the Introduction, this representation was performed according to the TRIZ method of problem solving because the author finds it is simple and easy to understand.

Fig 1: The economic security of the EU with ENP implications



Source: Author's elaboration relying on the TRIZ theory[48] and Buzan[49]

Thereby, according to the Fig. 1 it can be observed a shift from European security retrospectives towards the prospects of Regional Economic Security (involving the EU economic security and the Neighbourhood Security). Likewise, the economic security of the EU is one central system that on the one hand it is the result of a "super-system" (EU security) and on the other hand, the ENP (with a sustainable economic mechanism) is the foreign policy that contributes to the EU

[47] Christopher M. Dent, "The state and transnational capital in adaptive partnership Singapore, Korea and Taiwan," in *Handbook of Reaserch on Asian Business,* ed. Henry Wai - Chung Yeung (Cheltenham: Edward Elgar, 2007), 228-229.

[48] This figure was performed according to Orloff´s explanation regarding the "Strategy of Inventing", in Michael A. Orloff, *Inventive Thinking Through TRIZ: A Practical Guide,* Second Edition (London: Springer, 2006), 210. economic security. In perspective, the ENP will contribute to the market integration and the Free Trade Area and this in turn will be one of the factors that will contribute to the overall regional security, involving the EU security and the Southern and Eastern ENP partners' security.

At present, we can observe that foreign policy (above all the economic dimension) implications are broadened and this contributes to the EU economic security's objective achievements. Many years ago, great intention marked the security objective and namely the change of "the politics of exclusion" by "the politics of inclusion"[50] and then following deep transformations by replacing the "inside" with the "outside", the "self" with the "other" and "boundaries" with "borderlands", emphasising the "exchange" and the "interaction" and generating more dynamism for the Union[51]. In the future, it is aimed a secure area of economic integration and possibly with new designs of foreign economic policy.

Likewise, author believes that the formula EU economic security + Neighbourhood economic security is achievable if the EU and its neighbourhood economic efforts will be symmetric and honest.

For the last years, the experience of the ENP implementation showed that this policy brings noticeable benefits of economic nature and amongst them the wider access for products to the EU market through the Autonomous Trade Preferences (ATP). In economic security terms this is a form of economic safeguarding for both the EU and its partners from the neighbourhood.

The first four charts (Chart 1, Chart 2, Chart 3 and Chart 4) are interrelated and portray the following situation: the most important contribution regarding the agriculture, value added as % of GDP has Eastern ENP partners whilst in industry until 2008 the Southern ENP partners enjoyed success, but from 2009 predominate the Eastern ENP partners. According to WB data, it seems that in export terms the East enjoys more success in contrast to the South, excluding the year 2008 when the global financial crisis seriously affected the East and gave green light to the South due to Jordan, Libya and Tunisia, recording more than 50% of exports as % of GDP (Chart 3). However, it is difficult to say that the economic growth of the Eastern ENP partners is due to export – led model because the Chart 4 exhibits the following situations: the East overrun the South regarding the imports as % of GDP where the biggest share occupies Belarus and Moldova and Jordan and Lebanon.

With regard to the Chart 5 it can be deduced that for the period 2003-2008 the EU and its Southern ENP partners are on the same wavelength regarding trade and this denote a good cooperation between them as well as interdependence. Besides, it demonstrates at some extent that the Barcelona Process generated economic added values. Unfortunately, once with the global financial crisis, it is obvious that the EU economic decline pulled down its Southern partners as well as Eastern. For the last, situation in the East worsened and the trade decreased more.

Overall, such situation explains the fact that the EU economic security depends on its partners and vice versa. So far, both Southern and Eastern ENP partners need a cost-effective strategy for the economy. This is because a paradoxical situation occurs if we look at the Chart 6 that shows the central government trends as % of GDP and the Chart 4 related to imports. It seems that EU partners from the neighbourhood ask for more aid to import and not to developed domestic capabilities to generate an export-led economic growth. Fortunately, for import-oriented countries, a solution could

be that the production possibilities can be developed in services or technology and communications, it means that the import of the last should be transformed into productive means[52]. Probably such situation is also interconnected to the Chart 10, where for instance the Eastern ENP partners spent very few money for research and development being less competitive in comparison with Southern ENP partners. In addition, Mediterranean partners, record more revenues, excluding grants (as % of GDP) in contrast to the East that record less revenues (Chart 7).

Regarding the tax revenue (Chart 8), for the Eastern ENP partners the value preponderantly increased in order to cover the budget deficit.

Finally, the Chart 9 reflects that the military expenditures (% of GDP) in the East boosted for 2004-2007 because of the conflict in Georgia and in the South because of increased military expenditures in Jordan and Israel. Unfortunately, the increasing trends of military expenditures affected the economic growth in the region. Or, it means that the given economy intents to prevent some prospective threats of political order and invest in researches for military purposes as well as uses the labour force that could occupy other economic sector with more added value.

Generally, in trade terms, one can be asserted with certitude that both the Eastern and Southern ENP partners still are at the stage of gaining trust in front of the EU. Both regions do not present too much economic security level; thereby they still need aid from EU. Nevertheless, according to EUROSTAT[53] data regarding trading with the EU it can be mentioned that there are some successes of acquis adoption, but in economic security terms this approximation must not be perceived as "a panacea for economic and trade shortcomings"[54] like it is for Moldova. Undoubtedly, the EU and neighbour countries have learned lessons from the previous experiences of Action Plan's implementation. Likewise it is obvious that for the last period the ENP improved in conditionality and consistency[55]. On the other hand, the FDI inflows shown in the Chart 11 designate the East (mainly due to Georgia and Moldova) as being more attractive in contrast to the South (mainly due to Jordan and Lebanon) and even the EU. This is a good opportunity for the EU partners and it means that this region presents more prospects of cooperation and the economies tend to the functioning on a capitalist basis. However, a lot has to be done concerning the regulatory reform and fight against corruption (Table 1). Regarding the FDI outflows (Chart 12) the EU hold supremacy and is main investor in both regions. Likewise, the Eastern and Southern ENP partners present weak capacity for FDI outflow (Chart 12).

Consequently, the bureaucratic approach to doing business, former legacies of trading (mostly in the East and including the partners' behaviour), institutional low capacity and flexibility to adapt to new norms and issues related to FDI flows that could contribute to economic growth, all of them explain the incapability to ensure "alliance security"[56].

In terms of inflation (Chart 13), both regions present weak capacity for stabilisation. For instance in the East, the inflation rate increases because of boosted prices for the consumption on domestic and global market. In addition, it is a worrying sign that the prices of the minimum consumption basket are often dictated by the prices of petroleum products. The South is mainly affected by Egypt with almost 10 % of inflation[57].

In terms of unemployment, situation remains critical in both regions as well as in the EU. Losing the agriculture and industry value added (% of GDP) have negative impact upon the labour force and as a result it increases the unemployment rate (Chart 1, Chart 2 and Chart 14). In addition, like Moldova, the rest of the ENP partners do not present efforts in area of labour standards and institutional mechanisms are not cost-effective[58].

In terms of energy imports (Chart 15), the EU could receive important gains from East and South taking into consideration that overall, both regions import less energy than EU, except Moldova, Belarus, Israel, Jordan, Lebanon and Morocco that are almost totally dependent on energy imports. As stabilising factor regarding energy export and production for the East are Azerbaijan and less Ukraine and Georgia. In the South the added value in energy production and export is due to Libya and Algeria overrunning the EU and the East.

In the end, all actions related to trade and tariffs' barriers, prevention of economic crime and trafficking, illegal migration, custom modernisation and close economic relations among EU member states and the immediate vicinity in border areas are subject for deep Cross-Border Cooperation (CBC) which is "a key priority of the European Neighbourhood and Partnership Instrument (ENPI)"[59]. This is the first step in exporting security to the EU and importing security from the EU to neighbour partners. Indeed, it is not easy to "promote economic and social development in border areas", "address common challenges", "ensure efficient and secure borders" and "promote people-to-people cooperation"[60]. For this reason in the following table (Table 2) the author intends to organize possibilities of achieving the above objectives and in addition shows the situations when there are risks of failure and insecurity.

Table 2: Cooperation or defective relation between the EU and the ENP partners

Situation	Circumstances and results
EU and ENP partner cooperate	- Low transition costs; - Compromise fulfilled; - Foreign policy successfully implemented; - Strong incentives; - Conditionality respected; - Acquis adopted with success;
EU assisted and the ENP partner did not fulfilled	- EU financial and technical assistance was not used according to initial purposes; - The ENP partner did not fully use the foreseen budget.
EU review its directives towards the neighbourhood	- EU fulfilled the compromise but the ENP partner did not; - EU capitalizes but the ENP partner looses the opportunity.
Lack of control, monitoring and credibility; incapability for regulatory approximation.	- Lack of coherence and dialogue; - Weak institutional incentives; - Interests other than those supposed to generate positive outcomes above all security.

Overall, it is even difficult for the EU to achieve a "systemic security"[61] taking into consideration the "inside" diversity as well as the "outside" diversity in interests, economic models and values.

IV. Conclusions

This article is not about dividing the East from the South but rather to find where (in which region) the EU should take more advantage of security without the fear of losing something and where the EU and its neighbourhood should improve regarding the CBC in order to create a secure zone of cooperation. Yet, the President of the European Commission Barroso declared: "There are as many variations of ENP as there are partners."[62] From here follows the constant need to revitalize the fundamental principle of the ENP – the differentiation. Hopefully, the ENP is open for improvements and more security and prosperity achievements.

The intent of contrasting Southern Mediterranean with the Eastern neighbours can be made with reservation because both vicinities of the EU differ concerning the democracy perception, the "substance" and interests of the cooperation EU – Neighbourhood, economic values and forms of trading. However, regarding the contribution in macroeconomic terms to average results of each country in the region, author agrees that "Mediterranean countries that, despite internal differences, presents a higher degree of homogeneity"[63].

The common point for both the EU and its Neighbour Partnets is that "security depends equally on reality and perception"[64]. It can occur that what for the EU presents economic security, for the partner country could represent insecurity or even an economic threat. Thus, it is not surprisingly that "security ... strongly depends on others and not only on oneself"[65].

In this article, author has clarified to what the EU tends instead of the ENP partners that still are at the stage of deciding about what they really want.

In the context of this study, the insecurity issues are also the result of low effort of local governments for the approximation. Besides, the administrative command control (specifically for the Eastern ENP partners), pronounced asymmetries between the domestic policy and foreign policy objectives, discrimination of foreign investors, high level of corruption and regulatory issues prevent the deeper market integration.

Relying on the analysis of macroeconomic indicators as regional average value, author reaches the following conclusions:

- In empirical terms, the two regions are separated by concrete interests, but both Eastern and the Southern ENP partners meet difficulties in ensuring "finance-credit" and "market-access" and even "supply" security;
- The EU would benefit more in terms of energy security in the South than in the East (if we exclude Russia);
- The Eastern ENP partner would bring benefits for the European market regarding the food security, fertile soils and ecologic products. The real problem is that even though the EU intensely assured the East with technical and financial assistance, the Eastern ENP partners have many times neglected the core objectives of the ENP and focused more on EU membership, however;

[65] Ibid.

Undoubtedly internal security issues, especially the economic issues arise from the state's incapacity to prevent and face unpredictable risks. What however distinguishes the EU from its neighbour partners is the fact that Member States are based on the rule of law and namely the law has supremacy. Unfortunately, the EU's neighbours including Moldova and Ukraine have not made changes in the legal framework therefore they strive to rather bypass the law than to respect it, yet.

To end this study, Kratochvil mentioned about the ENP that a lot could be said not only in positive terms[66] and this in fact could explain the existent constraints in economic terms.

Thereby, the author believes that there is much more to say about economic security at the EU level and its surroundings. Each macroeconomic indicator and policy involved require a separate empirical analysis for at least some EU member states that share same border with immediate neighbourhood in the East as well as in the South, in order to find out where is that point that strangles the economic security purposes.

TOURISM AND LOCAL DEVELOPMENT IN VAMA VECHE AND 2 MAI

MIROSLAV TAŞCU-STAVRE[*]

Abstract
The touristic attractiveness of the southern Black Sea seaside has determined a chaotic urban development of the area in the last 20 years. Nonetheless, the development of the two sites, located less than 5 kilometers away one from the other, recorded significant differences. In this analysis, using the Bloomington School system of analysis, developed by Elinor Ostrom, one tries to explain the mechanisms that have determined the adoption of different development strategies in the settlements. The key for understanding the strategies chosen by the two communities will be the history of the specific institutional restraints, which will further determine the manner of referring to the seasonal tourists in the area.

Key words: *local development, neo-institutionalism, transition, tourism, urbanism.*

Introduction

The objective of this paper is understanding the way in which the changes that have occurred after 1989 determined the development of the southern Romanian seaside, in a relatively short period of time, in an unique manner. The dramatic change recorded especially in Vama Veche, as one will further see, can be accounted for by the different institutional structures[1] in the two examined places and the influence the institutional structures had when it comes to further development, especially in the field of building areas.

In the given context, one of the goals of this analysis will be to evaluate the conditions of the institutional changes in 2 Mai and Vama Veche and the impact these particular conditions have on the ways of changing.

The methodological option is centered on the analysis framework developed by "the Bloomington School", the creation of Elinor Ostrom (1985, 1986, 1990[2007]) and we consider it offers an useful instrument for understanding and solving *collective action* problems. Based upon the Ostrom-model, the paper wishes to highlight the methods chosen by the two communities (2 Mai and Vama Veche) in the case of self-organizing and self-governing, in the context of common resource dependency, so later on will be able to explain the different state of development in the two coastal villages (Taşcu-Stavre, 2011 : p 10).

The prime merit of the initiative is considered to be that it has reached the profound symptomatology of the *Romanian transition,* with its acute dilemmas. In this context intuition was that Vama Veche provides fertile ground for the elucidation of post-communist transition's devious trail through the chance to have a relevant point of comparison at hand: 2 Mai, having, by 1990, a similar profile in the data's essential.

Main Content

As is shown, different *history* of reporting to *tourists* influenced by specific institutional context, will be key to understanding the different developmental trajectories in similar environmental conditions (both communities are beachfront). Basically, our analysis will follow chronologically how certain institutional features determine specific strategies of actors, and how institutional change occurs. At the end of this work we hope to cover a period of time sufficient to elucidate the mechanisms that develop in the southern part of the Romanian seaside. Analysis is not

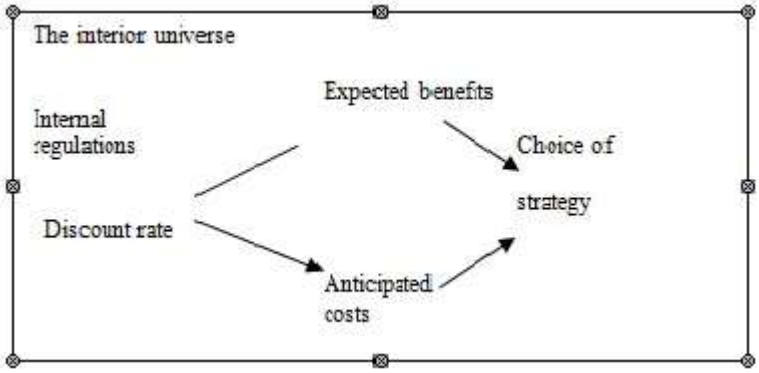
[*] Lecturer, PhD, Faculty of Letters, Cultural Studies, University of Bucharest (m_tascu@yahoo.com).

[1] In the present demarche, following the outline traced by Ostrom (2007) and North (2003), I will consider the institutions as the formal and informal rules that the actors follow, the rules that restrain and regulate people's behavior.

an exhaustive one but is rather a summary of the findings of an approach that has spanned almost eight years of field research and concluded with a Phd thesis entitled *Approaches institutional transition in Romania. An analysis of institutional change in Vama Veche and 2 Mai*[2].

Methodological options for rational choice- type neo-institutional approaches takes into account the following considerations: it offers a broader conception of rational action, trying to explain the change in objective and subjective factors and rejects determined character of the society's becoming.

The exterior universe



Interior universe of individual choice (adapted from Ostrom, 2007: 51)

This diagram will help us understand why the strategies chosen by individuals belonging to the two communities are so different. Evaluating various parameters in the two communities, we can understand the influence of these factors for the election of different strategies that in turn will generate different future developments.

A key aspect for increasing overall benefits is the problem of organization. Moving from a situation in which the actors act independently, to one adopting common strategies is not easy to achieve. Choosing an effective method to solve this situation is not so easy to achieve. It remains to highlight what the chosen solutions are in the two communities together with the changes from 1989. We find that the two communities resort to a series of solutions (from privatization up to intervention of a third party state or other actor) and we can hardly say that the one of these solutions is better than another. Regardless, however, the solution chosen, privatization and free market or government intervention, we find that both in institutional terms concerns the establishment and use of institutions. This implies, according to Ostrom (2007: 55), credible commitments and monitoring. In our approach we will follow what institutions will change and what institutions will be preserved along with the changes from 1989. Analyzing this process I can draw some conclusions about the meaning of changes in Romania and to see how effective these changes prove to be.

Not always the solutions found are more effective in the use of common goods. Whether excessive use can lead to depletion of that resource or that only certain people benefit from a resource and manage to exclude others from accessing it, both are two examples of inefficiency. My study will examine, in a comparative approach, the solutions adopted and will try to highlight the differences between the two communities, following that the results offer a support for the area's future development policies. We are interested in how the two communities have solved the problem of the collective action and what types of institutions have offered the best solution to the dilemma of cooperation.

[2] The PhD thesis was presented at SNSPA (NSPSPA) in 2011 and is being published.

Up Until 1989

Following how the institutions will change after 1989 in the 2 villages by the sea, it is important to make a quick list of rules and norms existent in the two communities up until 1989. In our opinion, two types of restraints will influence the actor's strategies until 1898. It's about, on one hand, *constraints and natural particularities* regarding the access to the area, and on the other hand, it's about a series of *administrative constraints* that, as we are about to demonstrate, will lead to the adoption of different strategies regarding the reference to tourists in the case of the two communities (Taşcu-Stavre, 2011: p 134-139). For a detailed description of the history of tourism in the area I recommend the works of Maria Tirca (2004) and Simina Guga (2006) that have taken a series of interviews in the two communities.

First of all thanks to the *constraints and the features of the environment* we can appreciate that the *access in the area* is a *difficult* one. Situated at the southern extremity of the Romanian coast, at the border with Bulgaria, the access to 2 Mai and Vama Veche is difficult both in terms of *infrastructure* and *logistics*. In the absence of proper means of travel, the road to 2 Mai or Vama Veche constitutes a true adventure, requiring changing between different modes of transportation. The access to Mangalia can be achieved by train or by car. To reach the destination, the connection between Mangalia and 2 Mai was provided by buses with a relatively reduced frequency. In addition, it traversed a mobile bridge in the naval port of Mangalia, which could take a long while. In addition, in the '80s the access through the port was restricted and the access to the 2 villages was done by a road approximately 10 km long, which detoured around Limanu Lake, through Limanu village. The same treatment was applied to private cars which were going to 2 Mai or Vama Veche. The bridge that crosses Limanu lake today, and shortens the road by a few kilometers was built in the second half of the 1980s, being basically a simplification of means of transport in the area[4].

On second hand, the *management constraints*, as we are about to demonstrate, will lead to the adoption of different strategies regarding bringing tourists into the two villages. Thus, in terms of *access* and *temporary residence* in the two villages: we can assess that access was virtually restrained to Vama Veche. Invoking the fact that the village is a border community, access and temporary residence in Vama Veche were restricted. There was a law[5] stating that non-residents of the border villages must announce to the local authorities the purpose of stay[6] and to the location where they can be found during their stay. Basically, with few exceptions, Vama Veche was inaccessible to non-residents. The law, although not restricting the locals the right to host non-local resident, by the requirement to announce the presence of strangers in their households will make impossible the development of tourist-host relationships similar to those of 2 Mai.

In conclusion, the options available residents of the two communities up until 1989 focused on the following activities:

- agriculture
- tourism

We consider that the two options are not exclusive, but alternatives that will complement traditional preoccupations specific to activities within rural areas and that aim to improve quality of life. Agriculture remains the dominant occupation, but with time, tourism will become *a source of additional income* obtained *seasonally*, especially in 2 Mai. On the other hand, in Vama Veche main occupation will remain *agriculture*.

---

[4] From the discussions with local authorities, the link achieved by constructing a bridge over Lake Limanu aimed the route that was to link Mangalia to Vama Veche and had no easier access to the south coast in the area.

[5] Decree 678 of 10.07.1969 concerning the regime of security of the state border Socialist Republic of Romania.

[6] Generally were allowed visits from relatives or justified for job responsibilities (for work).

As we can see a number of differences between the two localities take form as follows:

• In 2 Mai – allowed access and residence → will lead to a relatively constant flow of tourists in the area → the beach will represent an attraction point and will be used for purposes of tourism.

• In Vama Veche – limited access and restricted residence → will lead to a poor and limited flow of tourists.

The Period between 1990 and 1996

With the summer of 1990, access to the two villages will no longer be restricted. This will open a number of opportunities for Vama Veche, which was practically deprived of receiving flows of tourists. If up until 1989, tourists had access only to 2 Mai, after 1990 they will gradually discover Vama Veche. The impact made by the changes in 1989 was captured and research by Miruna Tirca (2004) at the community level of 2 Mai. She makes the following observations on the changing flow of tourists from the two localities as follows:

"There existed the period of the first years after the revolution, gained by considerable popularity marked the place (2 Mai), which led to the inevitable attraction of new categories of tourists and visitors. There followed a period, up to the second half of 90s, when things seemed to follow the starting direction tourists continue to flow and expand the village buildings. But then the crowds followed the exodus into Vama Veche, starting with them the second half of the 90s, then an unprecedented development of this place. In 2 Mai, things have shifted, probably as a result of said exodus... " (Tîrcă, 2004: 89).

Regarding the life strategies, starting with the first years after 1990 can see a dependency of the 2Mai locals on the resources from tourism. During this period there is the "discovery" and "conquest" by tourists of Vama Veche with tents and continuing a tradition of accommodation hosted in 2 Mai. Strategies to attract tourists from 2 Mai, respectively the lack of a strategy from the locals in Vama Veche will lead to the following typology (Mihăilescu, 2005):

• "*backyard tourism*" - in 2 Mai - based on the hosts and the host's backyard where the yard plays an important role of social space between tourists or tourists and hosts.

• "*beach tourism*" - in Vama Veche - especially camping, based on self-management of resources needed for spending the holiday.

During 1990-1996, despite the fundamental institutional changes at the constitutional level, it will not substantially affect the life strategies of local people in the two villages from the waterfront. However, we can consider that, at least with regards to 2 Mai, *tourism* becomes *an important source of income* (even if seasonal), compared to resources gained from agriculture. In Vama Veche, *agriculture* will remain main trade and revenues from agriculture as a joint venture. Nevertheless, due to migration of a large number of tourists towards Vama Veche, tourism will be *an additional source of income* for a minority of residents. In the coming period however, significant changes occur in the context of increasing numbers of tourists in the area. (Taşcu-Stavre, 2011: p 167-170).

Planning the differences due to institutional changes, especially in terms of *access* and *residence*, we find that hosts are a preference for accommodations in 2 Mai and options for camping on the beach in Vama Veche (self-management – self-organization):

• In 2 Mai - access and residence is allowed → will determine an increased flow of tourists in the area → increase dependence on tourism during the summer season.

• In Vama Veche - access and residence is allowed → will lead to the discovery of the area by tourists → tourism takes place independent of local infrastructure and local people ("beach tourism").

The Period between 1996 and 2003

The period between 1996 and 2003 is not chosen randomly, but represents period of radical changes starting with the exponential growth in the number of tourists, chaotic urban development,

multiplication local stakeholders and the transition to a phase of conflict between them, especially in Vama Veche. This period can be considered to be one of spontaneous development. Through a *spontaneous development*, we refer primarily to changes in the structure and typology of housing and spatial growth of settlements, in the absence of urban regulations and constraints from local authorities (Taşcu-Stavre, 2011: p 170).

Amid the increased number of tourists both in 2 Mai and in Vama Veche, problems of housing and adequate tourist infrastructure development becomes a priority. The way to solve this differs in the two localities. In 2 Mai development occurs in a rather *incremental (through continuous adjustment of supply and demand)*, i.e the intensive use of existing space within the boundaries of the village followed by an extensive moderate development. In Vama Veche, however, there is a rather *chaotic development (extensive / intensive due to a uncovered request)* by extending the village borders and an intensive use of land plots for construction. The extension is done in successive waves which increase the surface area of the village a couple of times (see Annex I. 1). In 2 Mai, with the exception of the area from the southern end, towards Vama Veche and the areas close to the beach, the development is done mainly by the use of space in their yards, be it renovation and / or addition of one or more rooms, whether about building a new wing. In Vama Veche the situation is totally different: buildings are erected more and more, the most popular areas being near the beach. An important role is played by local authorities through a series of administrative measures, expanding Vama Veche village in successive waves, currently between 2 Mai and Vama Veche, the seafront being completely built-up area (see Annex I.1). Instead of measures and planning which takes into account local specifics which will pursue development in the interests of the local community, we will reach a emergence of urban infrastructure unspecific to the area (buildings with function, aspect and height different then that of the local one). Starting with '95-'96, it became increasingly clear that the accommodation infrastructure becomes unresponsive to the increasing flow of tourists in the area. If in 2 Mai both the local infrastructure and local practices have made the impact of changes to be a manageable one, in Vama Veche new wave of tourists coming in a relatively short period will cause an unplanned reaction and a chaotic development of the urban infrastructure. The increase in housing throughout the community can be seen in the statistics of Limanu

Years	1992	1996	2003
Housing from private funds	1180	1256	1620

(See Taşcu-Stavre, 2011 : p 174).

Thus, if between 1992 and 1996 the number of dwellings increased by 76 units, between 1997 and 2003 the increase is by 364 units. To a number of 1620 houses this represents an increase of 29%. Considering that housing increase in Hagieni is almost nil and that Limanu's growth was moderate, we can say that in 2 Mai and Vama Veche there have been the largest growth rates. The most spectacular impact will be recorded in Vama Veche, where the number of households will be in the 90s around 50 and increases about three times, recorded in 2001 a total of 155 dwellings. In 2 Mai, even though the increase was one just as spectacular as the large number of buildings emerged, the impact remains a lesser one by the fact that this village already had the highest number of houses before (Taşcu-Stavre, 2011: p 174-175).

The way to achieve this growth of housing was done as follows:

- *extensive* - by extending the buildable areas (increasing city limits sequentially);
- *intensive* - by intensive use of land (the advent of multi-level construction and occupancy of buildings obf larger land).

Development of the two villages was made possible by the ease with which building permits were issued by local authorities and the lack of regulation appropriate for urban development needs. Basically, the two communities, but especially Vama Veche, "grew" horizontally (expanding built-up) and vertical (high density construction and high level). Horizontal growth was possible because

of the council's decisions to successively expand the limits of the two villages, while high density vertical increase of buildings has been possible due to individual initiatives to increase accommodation. In the absence of regulations to determine what and how to build (for almost 10 years), we are witnessing a radical change in the appearance of the two villages.

If some communities which are having a moderate development a number of issues concerning the use of outdated urban regulations appear, in the two villages, 2 Mai and Vama Veche, this situation has determined a chaotic development of the area, especially in Vama Veche. Urban regulations that operated until 1999 (the date on which the City Council will approve a new General Urban Plan) dates from the 80s[7]. Thus, instead of a development that would start with a General Urban Plan (GUP) and including a number of regulations that take into account local specifics, leading to sustainable development of the village, we had a situation in which the process that made possible the development of housing typically included the following steps:

- granting of land respectively restoration of property rights,
- remove land plots from agricultural purposes and passing them for use in expanding the city limits;
- issuing of construction permits based on existing regulations
- eventually developing a G.U.P. to legitimize changes and local urban organization.

Even if the changes produced in a relatively short period of time will affect both seaside towns, in Vama Veche the impact will be more pronounced. Here the number of new buildings will exceed that of the existing buildings, the percentage of buildings that do not comply with local specifics being higher than in 2 Mai, and the number of residents who have bought and built in the area by 2003 will exceed the number of remaining locals. Gradually, in Vama Veche accommodation offers will exceed demand and will lead to a conflict due to competition for attracting a larger number of tourists. The intensive development of the villages can be seen in the Limanu village's statistics showing how built surfaces look in the village.

Year	1992	1996	2003
Habitable area - mp	47.000	50.474	77.961

(See Taşcu-Stavre, 2011 : p 185).

We thus find that, during 1996 - 2003, built area increases by 65% for the whole village. But if we take into account that Hagieni and Limanu built area remains at a moderate increase, we estimate that 2 Mai and Vama Veche will focus all of this new added area. Considering that, as shown above a number of newly bult houses from 1996-2003 represents 29% of the total, we have basically a situation where about 30% of the new buildings occupy 65% of the total built up area in 2003.

Summarizing, we find some elements that led to all this. First, the regulations from the past, particularly before 1990, did not allow the local community to benefit from tourism in the area similar to the locals from 2 Mai. As we have seen, even after the 90s, tourism in the area insignificantly influenced the community here. Second, many locals choose to sell land acquired or, moreover, found that restoration of property rights and land reform will benefit a lot of nonresidents (some from other villages in the commune, some not). Third, the expansion of the village will be in successive waves, resulting in increasing the surface area several times. In Appendix I.1 can can see the old hearth of the village as well as its size compared to the current situation. To all this is added the way the local authority has responded. The absence of a local development plan, combined with old and outdated urban regulations will lead to an accommodation infrastructure and services that do not comply with local specifics and that destroy the image of the village. The City Council's position, through taken administrative measures, in particular by extending the buildable areas, and by

[7] It is about the *systematic outline of Limanu pr.295/1980* document prepared by IJP Constanţa.

releasing a large number of building permits, will favor this process of sub-urbanization. The fact that the vision of local development does not seem take into account the locals interests also results from following interview: *"The idea is that we should go ahead and organize Vama Veche as well as possible. Tourism goes on and life goes on. And those that do not like this place, I suggest you go to an island or somewhere else. "*(the mayor apud. Guga, 2006: 79).

Synthesizing the institutional context in a comparative way, we find the following:

▪ in 2 Mai – the increasing flow of tourists ("backyard tourism") → liberalization of urban regulations and the possibility of private initiative → modernization of households will consider tourists demands → new buildings appear not complying with local specifics → determine extra revenue from tourism especially for locals

▪ in Vama Veche – the increasing flow of tourists → liberalization of urban regulations and the possibility of private initiative → massive investments among residents in land acquisition and new constructions → reduced earnings from tourism among the locals → new constructions appear not meeting local specifics and destructive the village image → determine earnings from tourism for nonresidents

The Period after 2003

Although a necessary step, the G.U.P. elaboration of the Limanu village started in 1999, which followed to evaluate the stage of development of the 4 localities and come up with propositions for urban organization with the goal of resolving existing dysfunctions; this in turn will constitute the source of new tensions.

On one hand, the proposed plan implemented in 1999 is inconsistent with the specific architectural aspects and local maximum height levels of buildings[8], density or existent building topology. This plan not only legitimized the chaotic development up until then, but opened the possibility of continuing this situation in the future. The problem of the maximum height and density of buildings is not only an aesthetic issue, but raises more serious functional problems (overcrowding and "sub-urbanization").In the absence of municipal infrastructure (roads, water, sewer, etc.), especially in Vama Veche, construction continued at the same rate would affect both tourism and the environment. It's mainly about the ability of the beach to receive far too many tourists[9], but also the effects that the new buildings have on the environment in general and the natural reserve in the immediate vicinity in particular, given the lack of sewage (Taşcu-Stavre, 2011 : p 194).

On the other hand, the new G.U.P. not until the summer of 2003 obtained all necessary approvals to enter in effect[10]. Under these circumstances, the rules of local urban development dating from 1980, are included in the *Systematic Outline of Limanu Village pr.295/1980* prepared by IJP Constanta. Not only did 23-year-old regulations could not be a basis for local development, but they clashed with the recent legal provisions Law. 350 of July 6, 2001 concerning zoning and urban planning, which in art. 65 states that: "In the absence of approved county land management plans and general urban plans for territories, one cannot invest in construction, engineering works and utilities, as well as other urban investment.". Basically, the application of these rules condition local development of rational land use management measures contained in the PUG. Unfortunately, not only in Limanu, until such legislation of urban development, there were no coordination of various policies in an integrated framework. This process, in which they distributed land, they built houses after which the utilities issue is resolved , finally led to a series of failures as we detailed in the

[8] For example, the ability to build in the area of the seafront on 5-6 levels.

[9] Tourism Ministerial Order no. 485 on 15.05.2009 on the use of beaches for tourism purposes states that it is necessary to ensure a 5 mp of beach per person.

[10] Not incidentally was missing even the environmental permit.

previous chapter. This is the reason why in September 2003 "Mişcarea Salvaţi Vama Veche"[11] notifies the Prime Minister's Control Department for violation of legislation in the field of urbanism. Following a review of the State Construction Inspectorate in November the same year, we obtain the annulment of using PUG Limanu and suspension of the right to issue building permits to develop a new plan. In April 2004 will be held and will be financed by the Ministry of Public Works and Housing an auction to develop a new G.U.P. plan that would take into account the specifics of the four localities (Limanu Hagieni, 2 Mai and Vama Veche) and which for the first time in Romania, contains a sociological study and recommendations on the sustainable development of area[12]. Although the urban plan was developed in 2005, is not in use even today, as it covered all administrative steps necessary for it's entry into effect[13]. Under these conditions, the urban development of the village continues, without taking into account the legal regulations, in the area being constructed over the last years just as much as until now. Thus, both on the number of emerging households and built area, there are recorded significant increases according to statistics

Year	1992	1996	2003	2007
Number of houses from private funds	1180	1256	1620	1826

Year	1992	1996	2003	2007
Habitable area – sq.m	47.000	50.474	77.961	97.223

(See Taşcu-Stavre, 2011 : p 206).

Basically, between 2003 - 2007, when issuing building licenses was prohibited, there are still about 200 new homes, built areas (after new construction or enlargement of existing ones) increasing by approximately 20,000 square meters. Compared to 1992, the village's built living space is doubled, rising from 47,000 to 97,000 square meters. The spectacular development of built space is recorded in Vama Veche, where we recorded the largest number of new construction.

Synthesizing the institutional context in a comparative way, we find the following:

- in 2 Mai - stabilization the flow of tourists ("backyard tourism") → regulations governing administration of the beach and the natural reserve → ban issuance of building permits → development of a new G.U.P. → moderate development of new buildings → growth of the locals dependency of the tourist season;
- In Vama Veche - increasing flow of tourists ("bedroom tourism") → intervention of "Salvaţi Vama Veche" → new regulations concerning the management the nature reserve → ban on issuing construction permits → development of a new G.U.P. → explosive development of new buildings → increasing the number of locals offering rooms for rent and therefore the dependency on the tourist season (Taşcu-Stavre, 2011 : p 210).

Conclusions

As I was mentioning in the introductory chapter, the key to understanding the different ways of growth is constituted by the institutional context specific to the two localities. This way, the differences recorded in the context of certain formal and informal rules have had a decisive influence in gaining benefits from tourism in the two communities. Practically, even before 1989, the life

[11] The establishment of the Protected Areas Association for Bio-Cultural Conservation will be in November 2003.

[13] It's about procedures covering of the approval of in City Council to the approval from many ministries and Constanta County Council.

strategies of the locals for the two coastal village (having similar conditions) were different. If in 2 Mai more and more locals begin or continue a tradition of renting out rooms, during the holiday season, in Vama Veche, with the exception of the camp organized by the University of Cluj, this type of practices would be lacking.

From here on a whole chain will determine/ limit the strategies for those from Vama Veche after 1990, because not being ready to offer conditions similar to those from 2 Mai, will miss the opportunity to obtain additional income from tourism. In Vama Veche a "beach tourism" is evolving (see Mihailescu, 2005) based on self-management of holiday resources. The beach becomes the center around which the village grows. But, in time, based on the growing numbers of tourists, come the first entrepreneurs. And this time we see a difference from 2 Mai, the local community missing the start in the race for "foreigners". The explanation of the fact that the locals of Vama Veche don't manage to benefit from toursist has at it's basis the following mechanism: the constraints that have existed since 1989 have prevented tourists from coming, in other words, the demand for accommodation practically being nil has determined the offer for accommodation to go towards zero as well (exception being of course the camp organized by Cluj).

In these conditions, even if after 1990 a demand for accommodation appears, it will not be satisfied, the built land, even the facilities being inferior to those from 2 Mai. This thing will influence the topography of the public that will choose to come to Vama Veche, acting as a filter. Thus, tourists from the early 90 choose to "occupy" the beach area with tents. Just as North (2003), we can confirm that history matters, in the sense that the constraints from Vama Veche (existent up until 1989) will block certain individual actions, that in turn will hinder the appearance of relations similar to those in 2 Mai. In the end, the local's strategies, as well as the topography of the tourism practiced in the two communities will differ as I have shown above.

A conclusion to these steps would be that current work highlights the opportunity of utilizing a series of elements in the study of transition. Maybe the most important contribution comes from the methodological approach option of a rational type of neo-institutional choice, which is being verified by the following arguments.

This approach offers a systematical method to study the effects of institutions over behaviors. As I have shown, the model named situation of individual choice (Ostrom: 1990) offers a realistic vision of individual behavior in choosing a strategy. The analysis at this (operational) level presumes the understanding of the way the process of choosing a strategy takes place by an individual, starting from the premiss that the individual choices depend on the structure of the given incentives in the given context. To analyze the transition processes, the theoretical neo-institutional view offers in this way advantages in understanding how a series of institutions influence individual behaviors and strategies, as well as in equal measure helps in understanding how the changes in the institutions take place.

The presupposition to this approach to development, be it economic or political, are specific to particular institutional context, which has the property to vary according to the historical time and the geographical space (national). As a result, *there cannot be a universal development model, but only alternative specific institutional model.*

ANNEX I.1

THE ROLE OF EUROPEAN BANK FOR RECONSTRUCTION AND DEVELOPMENT IN PROMOTING ENVIRONMENTALLY SOUND AND SUSTAINABLE DEVELOPMENT

CONSTANTIN BRĂGARU[*]

Abstract
One of the most important development banks which finances private initiatives in the Central and Eastern Europe countries is the European Bank for Reconstruction and Development (EBRD). EBRD as international financial institution plays a very important role in the development of many sectors such as agribusiness, energy efficiency, financial institutions, manufacturing, municipal and environmental infrastructure, natural resources, power and energy, property and tourism, telecommunications, information technology and media, transport.
Its objectives aim to promote transition to market economies by investing mainly in the private sector, to mobilize significant foreign direct investment, to support privatization, restructuring and better municipal services to improve people's lives and to encourage environmentally sound and sustainable development.
The present scientific article focuses on the last objective respectively ***the bank commitment to promote environmentally sound and sustainable development*** *and shortly presents EBRD environmental policy because EBRD, unlike other development banks, has strong and imperative regulations regarding this issue. This is why all the EBRD potential beneficiaries must prove that their projects are environmentally sound.*

Keywords*: business management, environment, policy, requirements, sustainable development*

ERBD Environmental Policy

The purpose of EBRD is to promote "environmentally sound and sustainable development" in the full range of its investment and technical cooperation activities pursuant to its constituent treaty, the Agreement Establishing the EBRD[1]. The Bank believes that sustainable development is a fundamental aspect of sound business management.

The EBRD commitment envisages that the projects it finances:

- are socially and environmentally sustainable;
- respect the rights of affected workers and communities and
- are designed and operated in compliance with applicable regulatory requirements and good international practice.

In order to translate this objective into successful practical outcomes, the Bank has adopted a comprehensive set of specific Performance Requirements ("PRs") that clients are expected to meet, covering key areas of environmental and social impacts and issues. The Bank is committed to promoting European Union (EU) environmental standards as well as the European Principles for the Environment, to which it is a signatory, which is reflected in the PRs.

The Bank expects clients to assess and manage the environmental and social issues associated with their projects so that projects meet the PRs. The Bank's role is:

- to review the clients' assessment;
- to assist clients in developing appropriate and efficient measures to avoid or, where this is not possible, minimise, mitigate or offset, or compensate for adverse social and environmental impacts consistent with the PRs;
- to help identify opportunities for additional environmental or social benefits; and

[*] Associate Professor, PhD, "Nicolae Titulescu" University of Bucharest (costin_bragaru@yahoo.com).

[1] Article 2.1 of the Agreement Establishing EBRD, European Bank for Reconstruction and Development, *Basic Documents of the European Bank for Reconstruction and Development,* November 2006.

• to monitor the projects' compliance with its environmental and social covenants as long as the Bank maintains a financial interest in the project[2].

As we mentioned before, bank-financed projects are expected to meet good international practice related to sustainable development. To help clients and/or their projects achieve this, the Bank has defined specific PRs for key areas of environmental and social issues and impacts as listed below[3]:

PR 1: Environmental and Social Appraisal and Management
PR 2: Labour and Working Conditions
PR 3: Pollution Prevention and Abatement
PR 4: Community Health, Safety and Security
PR 5: Land Acquisition, Involuntary Resettlement and Economic Displacement
PR 6: Biodiversity Conservation and Sustainable Natural Resource Management
PR 7: Indigenous Peoples
PR 8: Cultural Heritage
PR 9: Financial Intermediaries
PR 10: Information Disclosure and Stakeholder Engagement.

Each PR defines, in its objectives, the desired outcomes, followed by specific requirements for clients to help them achieve these outcomes:

PR 1: Environmental and Social Appraisal and Management

The Bank requires clients to develop a systematic approach, tailored to the nature of their activities or projects, to managing environmental and social risks and opportunities that will enable the client to comply with the Bank's Environmental and Social Policy throughout the life of the Bank's involvement with the project.

This Performance Requirement ("PR") 1 outlines the client's responsibilities in the process of appraising, managing and monitoring environmental and social issues associated with projects proposed for EBRD financing. Environmental and social impacts and issues will be appraised in the context of the project's area of influence. This area of influence may include one or more of the following, as appropriate:

• The assets and facilities directly owned or managed by the client that relate to the project activities to be financed (such as production plant, power transmission corridors, pipelines, canals, ports, access roads and construction camps).

• Supporting/enabling activities, assets and facilities owned or under the control of parties contracted for the operation of the clients business or for the completion of the project (such as contractors).

• Associated facilities or businesses that are not funded by the EBRD as part of the project and may be separate legal entities yet whose viability and existence depend exclusively on the project and whose goods and services are essential for the successful operation of the project.

• Facilities, operations, and services owned or managed by the client which are part of the security package committed to the EBRD as collateral.

• Areas and communities potentially impacted by: cumulative impacts from further planned development of the project or other sources of similar impacts in the geographical area, any existing project or condition, and other project-related developments that can realistically be expected at the time due diligence is undertaken.

---

[2] European Bank for Reconstruction and Development, *Environmental and Social Policy*, November 2008.
[3] Idem 2.

- Areas and communities potentially affected by impacts from unplanned but predictable developments caused by the project that may occur later or at a different location. The area of influence does not include potential impacts that would occur without the project or independently of the project.

Environmental and social impacts and issues will be appraised in the context of the project's area of influence. This area of influence may include one or more of the following, as appropriate:

- The assets and facilities directly owned (i) or managed by the client that relate to the project activities to be financed (such as production plant, power transmission corridors, pipelines, canals, ports, access roads and construction camps).
- Supporting/enabling activities, assets (ii) and facilities owned or under the control of parties contracted for the operation of the clients business or for the completion of the project (such as contractors).
- Associated facilities or businesses that are (iii) not funded by the EBRD as part of the project and may be separate legal entities yet whose viability and existence depend exclusively on the project and whose goods and services are essential for the successful operation of the project.
- Facilities, operations, and services owned (iv) or managed by the client which are part of the security package committed to the EBRD as collateral.
- Areas and communities potentially impacted (v) by: cumulative impacts from further planned development of the project or other sources of similar impacts in the geographical area, any existing project or condition, and other project-related developments that can realistically be expected at the time due diligence is undertaken.
- Areas and communities potentially affected (vi) by impacts from unplanned but predictable developments caused by the project that may occur later or at a different location. The area of influence does not include potential impacts that would occur without the project or independently of the project.

PR 2: Labour and Working Conditions

EBRD believes that for any business, the workforce is a valuable asset, and that good human resources management and a sound worker-management relationship based on respect for workers' rights, including freedom of association and right to collective bar gaining, are key ingredients to the sustainability of the enterprise.

EBRD will seek to support, though its operations, the initiatives of other institutions such as the ILO (International Labour Organization) and the EU to promote the decent work agenda. At a minimum, the client's human resources policies, procedures and standards shall be designed to:

- establish and maintain a sound worker-management relationship
- promote the fair treatment, non-discrimination and equal opportunity of workers
- promote compliance with any collective agreements to which the client is a party, national labour and employment laws, and the fundamental principles and key regulatory standards embodied in the ILO conventions that are central to this relationship
- protect and promote the health of workers, especially by promoting safe and healthy working conditions.

The next working conditions and terms of employment must be followed:

General

Projects are required to comply, at a minimum, with: national labour, social security and occupational health and safety laws, and the principles and standards embodied in the ILO[4]

[4] International Labour Organiyations (ILO) conventions 29 and 105 (forced and bonded labour), 87 (freedom of association), 98 (right to collective bargaining), 100 and 111 (discrimination), 138 (minimum age) 182 (worst forms of child labour).

conventions related to: the abolition of child labour, the elimination of forced labour, the elimination of discrimination related to employment the freedom of association and collective bargaining.

Child labour

The client will comply with all relevant national laws provisions related to the employment of minors. In any event, the client will not employ children in a manner that is economically exploitative, or is likely to be hazardous or to interfere with the child's education, or to be harmful to the child's health or physical, mental, spiritual, moral, or social development. Young people below the age of 18 years will not be employed in hazardous work and all work of persons under the age of 18 shall be subject to an appropriate risk assessment.

Forced labour

The client will not employ forced labour, which consists of any work or service not voluntarily performed that is exacted from an individual under threat of force or penalty. This covers any kind of involuntary or compulsory labour, such as indentured labour, bonded labour or similar labour-contracting arrangements.

Non-discrimination and equal opportunity

Projects will comply with EU requirements on non-discrimination related to employment. In particular, the client will:

- not make employment decisions on the basis of personal characteristics, such as gender, race, nationality, ethnic origin, religion or belief, disability, age or sexual orientation, unrelated to inherent job requirements;
- base the employment relationship on the principle of equal opportunity and fair treatment, and will not discriminate with respect to all aspects of the employment relationship, including recruitment and hiring, compensation (including wages and benefits), working conditions and terms of employment, access to training, promotion, termination of employment or retirement, and discipline.

Special measures of protection or assistance to remedy past discrimination or promote local employment opportunities or selection for a particular job based on the inherent requirements of the job, which are in accordance with national law, will not be deemed discrimination.

Workers' organisations

The client will not discourage workers from forming or joining workers' organisations of their choosing or from bargaining collectively, and will not discriminate or retaliate against workers who participate, or seek to participate, in such organisations or bargain collectively.

In accordance with national law, the client will engage with such workers' organisations and provide them with information needed for meaningful negotiation in a timely manner. Where national law substantially restricts the establishment or functioning of workers' organisations, the client will enable means for workers to express their grievances and protect their rights regarding working conditions and terms of employment. These means should not be under the influence or control of the client.

Wages, benefits and conditions of work

Wages, benefits and conditions of work offered should, overall, be comparable to those offered by equivalent employers in the relevant region of that country/region and sector concerned. Where the client is a party to a collective bargaining agreement or is otherwise bound by it, such agreement will be respected.

Occupational Health and Safety (OHS)

The client will provide the workers with a safe and healthy work environment, taking into account inherent risks in its particular sector and specific classes of hazards in the client's work areas, including physical, chemical, biological, and radiological hazards.

The client will take steps to prevent accidents, injury, and disease arising from, associated with, or occurring in the course of work by:

- identifying and minimising, so far as reasonably practicable, the causes of potential hazards to workers
- provision of preventive and protective measures, including modification, substitution, or elimination of hazardous conditions or substances
- provision of appropriate equipment to minimise risks, and requiring and enforcing its use
- training of workers, and provision of appropriate incentives for them to use and comply with health and safety procedures and protective equipment
- documentation and reporting of occupational accidents, diseases and incidents
- emergency prevention, preparedness and response arrangements.

Projects will comply with relevant EU OHS requirements and, where such requirements do not exist, relevant IFC OHS guidelines.

Grievance mechanism

The client will provide a grievance mechanism for workers (and their organisations, where they exist) to raise reasonable workplace concerns. The client will inform the workers of the grievance mechanism at the time of hiring, and make it easily accessible to them. The mechanism should involve an appropriate level of management and address concerns promptly, using an understandable and transparent process that provides feedback to those concerned, without any retribution. The mechanism should not impede access to other judicial or administrative remedies that might be available under law or through existing arbitration procedures, or substitute for grievance mechanisms provided through collective agreements.

Non-employee workers

In the case of non-employee workers engaged by the client through contractors or other intermediaries to work on project sites or perform work directly related to the core functions of the project, the client will ascertain that these contractors or intermediaries are reputable and legitimate enterprises.

Supply chain

The adverse impacts associated with supply chains will be considered where low labour cost is a material factor in the competitiveness of the item supplied. In such circumstances, the client will take reasonable steps to inquire about the use of child labour and forced labour 4 in its supply chain in relation to goods and materials which are central to the core functions of the project.

If the client learns that child labour or forced labour in contravention with ILO standards are apparent in the supply chain and the goods or materials contribute materially to the core functions of the EBRD-funded activities, the client will take all reasonable steps to address this in accordance with the following requirements:

- In relation to child labour, the client should only continue to procure such goods or materials having received satisfactory undertakings or evidence that the supplier is committed to implementing a programme in line with good international practice to eliminate such practices within a reasonable time frame. The client will report on progress with the implementation of such programme to the EBRD on a regular basis.

- In relation to forced labour, the client should only continue to procure such goods or materials having received satisfactory undertakings or evidence that the supplier has taken appropriate steps to eliminate the conditions that constitute forced labour.

PR 3: Pollution Prevention and Abatement

The EBRD recognizes that sustainable development is a fundamental aspect of sound business management and that the pursuit of economic growth and a healthy environment are inextricably linked. Pollution prevention and abatement are key ingredients of a sustainable development agenda and EBRD-financed projects must meet good international practice in this regard.

The objectives of this Performance Requirement (PR) are:

- to avoid or, where avoidance is not possible, minimise adverse impacts on human health and the environment by avoiding or minimising pollution directly arising from projects
- to assist clients in identifying project-related opportunities for energy and resource efficiency improvements and waste reduction
- to promote the reduction of project-related greenhouse gas emissions.

Requirements

General

It is acknowledged that EU environmental requirements for the pollution prevention and abatement measures are based on the best available techniques, without prescribing the use of any technique or specific technology, but taking into consideration the technical characteristics of the installation concerned, its geographical location and local environmental conditions so as to ensure a high level of protection for the environment as a whole. ESAP provisions to achieve compliance with these requirements should take into account any nationally agreed time frame to bring about compliance with EU legislation (for example, in EU candidate countries). For projects in countries other than EU members, candidate and potential candidate countries, the time frame set in the ESAP for achieving compliance with EU environmental requirements should be consistent with any bilateral agreements or action plans agreed between the EU and the relevant country, but may take into account the cost of application and the local conditions that prevail.

Where EU environmental requirements do not exist, the client will apply other good international practice such as the World Bank Group Environmental Health and Safety Guidelines. In such cases the Bank will agree the applicable requirements with the client on a project by project basis.

For each project, the Bank will identify and agree with the client the relevant applicable environmental requirements and guidelines.

Pollution prevention, resource conservation and energy efficiency

During the design, construction, operation and decommissioning of the project (the project lifecycle) the client will consider technical characteristics of the installation concerned, its geographical location and local/ambient environmental conditions and apply pollution prevention and control technologies and practices (techniques) that are best suited to avoid or, where avoidance is not feasible, minimise or reduce adverse impacts on human health and the environment while remaining technically and financially feasible and cost-effective.

The client will avoid the release of pollutants or, when avoidance is not feasible, minimise or control their release. This applies to the release of pollutants due to routine, non-routine or accidental circumstances with the potential for local, regional, or transboundary impacts. In addition, the client should examine and incorporate in its operations, energy efficiency measures and measures to conserve water and other resources, consistent with the principles of cleaner production.

Wastes

The client will avoid or minimise the generation of hazardous and non-hazardous waste materials and reduce its harmfulness as far as practicable. Where waste generation cannot be avoided but has been minimised, the client will reuse, recycle or recover waste, or use it as a source of energy; where waste cannot be recovered or reused, the client will treat, destroy, and dispose of it in an environmentally sound manner. If the generated waste is considered hazardous, the client will explore commercially reasonable alternatives for its environmentally sound disposal considering the limitations applicable to its transboundary movement.

When waste disposal is conducted by third parties, the client will use contractors that are reputable and legitimate enterprises licensed by the relevant regulatory agencies.

Safe use and management of hazardous substances and materials

The client will seek to avoid, reduce or eliminate the use of hazardous substances and materials, and consider the use of less hazardous substitutes for such substances and materials so as to protect human health and the environment from their potential harmful impacts. Where avoidance is not feasible, the client will consider the safety of their uses and apply appropriate risk management measures in order to minimise or control the release of such substances/materials into air, water and/or land resulting from their production, transportation, handling, storage, use and disposal relating to project activities. The client will avoid the manufacture, trade, and use of hazardous substances and materials subject to international bans or phase-outs due to their high toxicity to living organisms, environmental persistence, potential for bio-accumulation, or potential for depletion of the ozone layer.

Emergency preparedness and response

The client will be prepared to respond to process upset, accidental, and emergency situations in a manner appropriate to the operational risks and the need to prevent their potential negative consequences.

Industrial production

The client will put in place processes to ensure that all emissions and effluents and wastes are inventoried and monitored on an ongoing basis. Clients required to report project-related releases of pollutants to the European Pollutant Release and Transfer Register (E-PRTR)[5] will also report these data to the EBRD.

Ambient considerations

To address adverse project impacts on existing ambient conditions, the client will:

- consider a number of factors, including the finite assimilative capacity of the environment, existing and future land use, existing ambient conditions, the project's proximity to ecologically sensitive or protected areas, and the potential for cumulative impacts with uncertain and irreversible consequences; and
- promote strategies that avoid or, where avoidance is not feasible, minimise or reduce the release of pollutants, including strategies that contribute to the improvement of ambient conditions when the project has the potential to constitute a significant source of emissions in an already degraded area. These strategies include, but are not limited to, evaluation of project location alternatives and emissions' offsets.

[5] Companies located in the EU and EU candidate countries which release pollutants into air, water and/or land above specified thresholds are required to monitor and report the release quantities to the E-PRTR (The European Pollutant Release and Transfer Register). E-PRTR was adopted by EU Regulation 166/2006 and will succeed the current European Pollutant Emission Register. See www.eper.ec.europa.eu/eper.

Greenhouse gas emissions

The client will promote the reduction of project-related greenhouse gas (GHG) emissions in a manner appropriate to the nature and scale of project operations and impacts.

During the development of projects that are expected to or currently produce significant quantities of GHGs[6], the client will procure and report the data necessary to enable both an assessment of baseline (pre-investment) GHG emissions and an estimate of post-implementation GHG emissions. Guidance on data requirements should be sought from the Bank. The GHG assessment will cover direct emissions from the facilities owned or controlled within the physical project boundary, together with those from any external operations on which the project is dependent, including indirect emissions associated with the off-site production of power used by the project.

Guidance on the definition of project boundary should also be sought from the Bank. Quantification and monitoring of the parameters needed to evaluate GHG emissions will be conducted annually during the life of the project.

In addition, the client will assess technically and financially feasible and cost-effective options to reduce its carbon intensity during the design and operation of the project, and pursue appropriate options.

Pesticide use and management

The client will formulate and implement an integrated pest management (IPM) and/or integrated vector management (IVM) approach for pest management activities. The client's IPM and IVM programme will entail coordinated use of pest and environmental information along with available pest control methods, including cultural practices, biological, genetic and, as a last resort, chemical means to prevent unacceptable levels of pest damage. When pest management activities include the use of pesticides, the client will strive to reduce the impacts of pesticides on human health and the environment and, more generally, to achieve a more sustainable use of pesticides as well as a significant overall reduction in the risks and uses of pesticides consistent with the necessary crop protection.

The sustainable use of pesticides shall include:

- minimising or, where possible, elimination of the use of pesticides minimising the hazards and risks to health and environment from the use of pesticides
- reducing the levels of harmful active substances by replacing the most dangerous with safer (including non-chemical) alternatives
- selecting pesticides that are low in human toxicity, known to be effective against the target species, and have minimal effects on non-target species and the environment
- using low-input or pesticide-free crop farming
- minimising damage to natural enemies and preventing the development of resistancein pests.

The client will handle, store, apply and dispose of pesticides in accordance with good international industry practice such as the Food and Agriculture Organization (FAO) International Code of Conduct on the Distribution and Use of Pesticides.

---

[6] The significance of a project's contribution to GHG emissions varies between industry sectors. Guidance on the amounts of GHG emissions likely to be associated with projects in different sectors is given in *EBRD Methodology for Assessment of Greenhouse Gas Emissions – Guidance for consultants working on EBRD – financed projects (GN0)*. The significance threshold for this Performance Requirement is generally 100,000 tonnes CO2 equivalent per year for the aggregate emissions of direct sources and indirect sources associated with purchased electricity for own consumption. However, a lower emission threshold may be appropriate where a project aims to bring about large improvements in production efficiency. Clients are encouraged to consult with the Bank in such cases on whether data procurement for GHG assessment will be required.

PR 4: Community Health, Safety and Security

The EBRD recognises that project activities, equipment, and infrastructure often bring benefits to communities including employment, services, and opportunities for economic development. However, projects can also increase the potential for community exposure to risks and impacts arising from temporary or permanent changes in population; transport of raw and finished materials; construction, operations and decommissioning; accidents, structural failures, and releases of hazardous materials. So, the clients policies has:

- to avoid or minimise risks to and impacts on the health and safety of the local community during the project life cycle from both routine and non-routine circumstances;
- to ensure that the safeguarding of project-related personnel and property is carried out in a legitimate manner that avoids or minimises risks to the community's safety and security.

Requirements

Community health and safety requirements

General requirements

The client will identify and evaluate the risks and potential impacts to the health and safety of the affected community during the design, construction, operation, and decommissioning of the project and will establish preventive measures and plans to address them in a manner commensurate with the identified risks and impacts. These measures will favour the prevention or avoidance of risks and impacts over minimisation and reduction.

Where the project or stage of the project poses material risks to or potential adverse impacts on the health and safety of affected communities, the client will disclose relevant project-related information to enable the affected communities and relevant government agencies to understand these risks and potential impacts, as well as the client's proposed prevention, mitigation and emergency response measures, as appropriate. The client will consult with affected communities and relevant government agencies about the proposed measures before they are finalised and take their concerns and comments into account. The client will review the measures regularly, and engage the affected communities and agencies on an ongoing basis, informing them on the status of implementation of plans and commitments, results, and discussing with them any material changes needed to the plans, in advance of changes. Information disclosed may be summarised (maintaining a sufficient level of detail to allow stakeholders to fully understand the risks, potential impacts and measures to be taken) and/or redacted to remove confidential information.

Infrastructure and equipment safety

The client will design, construct, operate and decommission the structural elements or components of the project in accordance with good international industry practice, and will give particular consideration to potential exposure to natural hazards, especially where the structural elements are accessible to members of the affected community or where their failure could result in direct or indirect injury to the community. Structural elements will be designed and constructed by qualified and experienced professionals, and certified or approved by competent authorities or professionals.

When structural elements or components, such as dams, tailings dams or ash ponds, are situated in high-risk locations and their failure or malfunction may threaten the safety of communities, the client will engage one or more qualified experts with relevant and recognized experience in similar projects, separate from those responsible for the design and construction, to conduct a review as early as possible in project development and throughout the stages of project design, construction, and commissioning. For projects that operate moving equipment on public roads and other forms of infrastructure, the client will seek to prevent the occurrence of incidents and accidents associated with the operation of such equipment.

Hazardous materials safety

The client will prevent or minimise the potential for community exposure to hazardous materials that may be released by the project. Where there is a potential for the community (including workers and their families) to be exposed to hazards, particularly those that may be life-threatening, the client will exercise special care to avoid or minimise their exposure by modifying, substituting or eliminating the condition or substance causing the hazards.

Where hazardous materials are part of existing project infrastructure or components, the client will exercise special care when conducting start-up and decommissioning activities in order to prevent exposure to the community. The client will liaise with the competent authorities to obtain available information on exposure levels of those materials which are known to cause non-communicable disease, such as cancer or lung disease.

Environmental and natural resource issues

The client will prevent and avoid or minimise the exacerbation of impacts caused by natural hazards, such as landslides or floods, that could arise from land use changes due toproject activities.

The client will also avoid or minimise adverse impacts due to project activities on air, soil, water, vegetation and fauna and other natural resources in use by the affected communities.

Community exposure to disease

The client will identify those communicable diseases that can be transmitted by the project components or its workforce (including contractors). Action plans should be developed, where appropriate, to prevent or minimise the potential for worker and community exposure to vector-borne and other communicable diseases that could result from project activities. Where specific diseases are endemic in communities in the project area of influence, the client is encouraged to explore opportunities during the project life cycle to improve environmental conditions that could help reduce their incidence, both among the workforce and locally.

Emergency preparedness and response

The client will be prepared to respond to process upset, accidental, and emergency situations in a manner appropriate to the operational risks and the need to prevent their potential negative consequences.

As part of the client's assessment of public health, safety and security risks and potential impacts from project-related activities, the client will identify major-accident hazards, and will take all measures necessary to prevent major accidents and to limit their consequences for humans and the environment, with a view to ensuring high levels of protection to humans and the environment in a consistent and effective manner. Such measures will be identified in a major-accident prevention/emergency preparedness policy and an appropriate management system including organisational structures, responsibilities, procedures, communication, training, resources and other

aspects required to implement such policy and to respond effectively to emergencies associated with project hazards. The management system will include an internal and an external emergency plan. External emergency plans will be established with the objectives of:

- containing and controlling incidents so as to minimise the effects, and to limit damage to humans, the environment and property
- implementing measures necessary to protect humans and the environment from the effects of major accidents
- communicating the necessary information to the public and to the emergency services or public authorities concerned in the area
- providing for the restoration and clean-up of the environment following a major accident.

The client will assist and collaborate with the community and the local government agencies in their preparations to respond effectively to emergency situations, especially when their participation and collaboration are necessary to respond to such emergency situations. If local government agencies have little or no capacity to respond effectively, the client will play an active role in preparing for and responding to emergencies associated with the project, and will demonstrate capacity to respond to reasonably predictable incidents, either directly or indirectly (for example, with the assistance of emergency responders, third party contracted responders, insurance).

The client will exercise prevention and response plans on a schedule appropriate to the sector and risk associated with the project, but at least on an annual basis. The client will update local authorities and communities regularly as plans change or have to be tested.

Security personnel requirements

When the client directly retains employees or contractors to provide security to safeguard its personnel and property, it will assess risks to those within and outside the project site or facilities posed by its security arrangements. In making such arrangements, the client will be guided by the principles of proportionality, good international practices in terms of hiring, rules of conduct, training, equipping and monitoring of such personnel, and applicable law. The client will make reasonable inquiries to satisfy itself that those providing security are not implicated in past abuses, will ensure they are trained adequately in the use of force (and where applicable, firearms) and appropriate conduct toward workers and the local community, and require them to act within the applicable law. The client will not sanction any use of force except when used for preventive and defensive purposes in proportion to the nature and extent of the threat.

PR 5: Land Acquisition, Involuntary Resettlement and Economic Displacement

Involuntary resettlement refers both to physical displacement (relocation or loss of shelter) and to economic displacement (loss of assets or access to assets that leads to loss of income sources or means of livelihood) as a result of project-related land acquisition 1 or restriction of access to natural resources

The objectives of this PR are:

- to avoid or, at least minimise, involuntary resettlement wherever feasible by exploring alternative project designs;
- to mitigate adverse social and economic impacts from land acquisition or restrictions on affected persons' use of and access to land by: providing compensation for loss of assets at replacement cost and ensuring that resettlement activities are implemented with appropriate disclosure of information, consultation, and the informed participation of those affected;
- to improve or, at a minimum, restore the livelihoods and standards of living of displaced persons to pre-project levels, through measures that can be enterprise-based, wage-based and/or enterprise based, so as to facilitate sustainable improvements to their socio-economic status;
- to improve living conditions among displaced persons through provision of adequate housing with security of tenure at resettlement sites.

PR 6: Biodiversity Conservation and Sustainable Management of Living Natural Resources

The EBRD recognises the need for the protection and conservation of biodiversity in the context of projects in which it invests. The term 'biodiversity' (or biological diversity) is defined in the Convention on Biological Diversity (CBD) as the '*variability among living organisms from all sources including, inter alia, terrestrial, marine and other aquatic ecosystems and the ecological complexes of which they are a part; this includes diversity within species, between species and of ecosystems*'. The Bank supports a precautionary approach to the conservation and sustainable use of biodiversity and the management of impacts upon it in line with the Rio Declaration and the CBD.

The targets of this Performance Requirement ("PR") are:

- to protect and conserve biodiversity;
- to avoid, minimise and mitigate impacts on biodiversity and offset significant residual impacts, where appropriate, with the aim of achieving no net loss or a net gain of biodiversity;
- to promote the sustainable management and use of natural resources;
- to ensure that Indigenous Peoples and local communities participate appropriately in decision-making;
- to provide for fair and equitable sharing of the benefits from project development and arising out of the utilisation of genetic resources;
- to strengthen companies' license to operate, reputation and competitive advantage through best practice management of biodiversity as a business risk and opportunity;
- to foster the development of pro-biodiversity business that offers alternative livelihoods in place of unsustainable exploitation of the natural environment.

Requirements

Habitat protection and conservation

General

All habitats (whether modified, natural or of critical conservation value) support complexities of living organisms which vary in terms of species diversity, abundance and ecosystem and economic value. For this reason, due diligence undertaken by the client should include consideration not only of natural undisturbed habitat, including that of critical conservation value, which may be affected by the project, but also of habitat which has been disturbed or degraded by human activity, and new manmade habitat areas such as reservoirs and grasslands. Such due diligence should include an assessment of any mitigation measures to be applied to the proposed development.

Modified habitats

Modified habitats are those where there has been apparent alteration of the natural habitat, often with the introduction of alien species of plants and animals, such as agricultural areas. Where modified or newly-created habitats may be impacted, the client should aim to minimise any further degradation or conversion of habitat. Where there is merit on conservation grounds and depending upon the nature and scale of the project, the client should identify opportunities to enhance habitats, protect and conserve biodiversity or encourage sustainable harvesting/management of the area in question. This might include foraging, bee keeping, bird watching, etc.

Natural habitats

Natural habitats are land and water areas where the biological communities are formed largely by native plant and animal species, and where human activity has not essentially modified the area's primary ecological functions. In areas of natural habitat, there must be no significant degradation or conversion of the habitat to the extent that

(i) the ecological integrity and functioning of the ecosystem is compromised or

(ii) the habitat is depleted to the extent that it could no longer support viable populations of its native species, unless:

- there are no technically and economically feasible alternatives
- the overall benefits of the project outweigh the costs, including those to the environment and biodiversity
- appropriate mitigation measures are put in place to ensure no net loss and preferably a net gain of biodiversity value in the habitat concerned, or, where appropriate, a habitat of greater conservation value.

Critical habitat

Irrespective of whether it is natural or modified, some habitat may be considered to be critical by virtue of:

- its high biodiversity value;
- its importance to the survival of endangered or critically endangered species;
- its importance to endemic or geographically restricted species and sub-species;
- its importance to migratory or congregatory species;
- its role in supporting assemblages of species associated with key evolutionary processes;
- its role in supporting biodiversity of significant social, economical or cultural importance to local communities; or
- its importance to species that are vital to the ecosystem as a whole (keystone species).

Critical habitat must not be converted or degraded. Consequently, in areas of critical habitat, the client will not implement any project activities unless the following conditions are met:

- Compliance with any due process required under international obligations or domestic law that is a prerequisite to a country granting approval for project activities in or adjacent to a critical habitat has been complied with.
- There are no measurable adverse impacts, or likelihood of such, on the critical habitat which could impair its ability to function in the way(s) outlined in paragraph .
- Taking a precautionary perspective, the project is not anticipated to lead to a reduction in the population of any endangered or critically endangered species or a loss in area of the habitat concerned such that the persistence of a viable and representative host ecosystem be compromised.
- Notwithstanding the above, all other impacts are mitigated in accordance with the mitigation hierarchy.

Protected and designated areas

Areas may be designated by government agencies as protected for a variety of purposes, including to meet country obligations under international conventions. Within defined criteria, legislation may permit development in or adjacent to protected areas. In addition to the applicable requirements of this paragraph, the client will:

- consult protected area sponsors and managers, local communities and other key stakeholders on the proposed project ;
- demonstrate that any proposed development in such areas is legally permitted and that due process leading to such permission has been complied with by the host country, if applicable, and the client; and that the development follows the mitigation hierarchy (avoid, minimise, mitigate, offset) appropriately; and
- implement additional programmes, as appropriate, to promote and enhance the conservation aims of the protected area.

Invasive alien species

The accidental or deliberate release or introduction of alien species into native habitats can have significant adverse impacts on biodiversity:

- Clients will not intentionally introduce alien or non-native species into areas where they are not normally found unless this is carried out in accordance with the regulatory framework governing such introduction. Under no circumstances must species known to be invasive be introduced into new environments.
- During due diligence, clients will assess the possibility of accidental transfer and release of alien species (for example, through risk analysis) and identify measures to minimise the potential for release, if any.

• With respect to the international shipping of goods and services, the Bank is guided by the International Convention for the Control and Management of Ship's Ballast Water and Sediments. Clients are expected to comply with appropriate obligations developed in the framework of this Convention.

Genetically Modified Organisms (GMOs)

There are a number of EU Directives which cover the deliberate release of GMOs into the environment (EU Directive 2001/18/EC), the placement on the market of food or feed products containing or consisting of GMOs (EU Regulation 1829/2003), export of GMOs or unintentional transboundary movement of GMOs, contained use of GMOs (in research for example (Directive 98/81/EC)) and labelling and traceability (for example, Regulation 1829/2003, 1830/2003). Within EU Member States and candidate countries clients are required to comply with applicable national and local requirements and policy. Thus, no GMOs should be used or released to the environment without approval being given by the competent authorities, or where the relevant local authority has declared itself as GMO free. In other EBRD countries of operation, clients must adopt the precautionary approach and conduct risk assessment in line with EU requirements and this PR. The Bank will also take these elements into account during its own due diligence.

Sustainable management and use of living resources

Clients will manage living resources in a sustainable manner. Clients seeking finance for projects involving the use of living resources will conduct due diligence to assess the sustainability of the resource use, taking into account the following principles:

• The use of any resource needs to be considered in the light of the functions it plays within the ecosystem. For example, clear felling of forests may have adverse impacts on soil erosion, watershed hydrology and fisheries. Similarly overfishing of one species may affect the ecological balance and long-term integrity of ecosystems.

• A precautionary approach should be taken, and aggregate and cumulative impacts should be considered.

• Users of living resources shall seek to minimise waste and adverse environmental impacts and optimise benefits from uses.

• Plantation or farming of species or populations that are not natural to the location and not tested for their invasiveness and or dominance over local species should be restricted or subject to adequate studies and approval prior to utilisation.

• The needs of indigenous and local communities who live in or around the development area or whose use of biodiversity resources may be affected by the development must be considered as well as their potential positive role in conservation and sustainable ecosystem use.

Natural and plantation forestry

The conversion of disturbed land or natural habitats to forestry shall be subject to due diligence as outlined above. Critical habitat must not be converted or degraded. Clients in the forestry sector will ensure that all natural forests and plantations over which they have management control are independently certified to internationally accepted principles such as those of the Forest Stewardship Council. Where due diligence reveals that forest management practice does not meet such standards, clients will develop a management plan to allow for compliance to be attained within a time frame considered reasonable by the Bank. The harvesting of forest products must be undertaken in a sustainable way.

Fisheries

Clients involved in the harvesting of fish or other aquatic species must be able to demonstrate to the Bank that all their activities (from harvesting through to processing) are being undertaken in a

sustainable way. This can achieved through attaining independent certification (where such exists) or through studies undertaken as part of due diligence. Fishery activities are not necessarily limited to harvesting. Re-population or introduction of different species or populations (especially in closed environments such as lakes) must ensure that the new stock does not destroy or displace existing local fish species.

Supply chain

Where the project uses external suppliers of living resources (hereafter: "resources") over which the client does not have management control and these resources are central to the project's core functions, the client will adopt and implement a sustainable resources procurement policy, procedures and action plan to ensure that:

- only resources of a legal and sustainable origin are purchased
- the origin of the resources is monitored
- the resources do not originate from protected areas or from areas recognised as having high ecological value, and that the biodiversity and the functions of the affected ecosystem are maintained in accordance with internationally and nationally approved principles.

Clients should give preference to purchasing resources certified to internationally accepted principles of sustainable management, where available.

Biodiversity and tourism

Environmental and social impact assessments of new or significantly expanding tourism activities and infrastructure will be consistent with the *Guidelines on Biodiversity and Tourism Development*. These outline the nature of baseline information needed, the range of issues that should be considered, as well as the nature of impact mitigation and appropriate monitoring and reporting that should be included in the subsequent action plan for the project.

PR 7: Indigenous Peoples

Private sector projects can create opportunities for Indigenous Peoples to participate in, and benefit from project-related activities that may help them fulfill their aspiration for economic and social development. This Performance Requirement ("PR") recognises that Indigenous Peoples may play a role in the process of transition towards open-market economies by promoting and managing activities and enterprises as partners in development alongside the private sector and their governmental representatives. Specific objectives are as follows:

- to ensure that the transition process fosters full respect for the dignity, rights, aspirations, cultures and natural resource-based livelihoods of Indigenous Peoples;
- to avoid adverse impacts of projects on the lives and livelihoods of Indigenous Peoples' communities, or when avoidance is not feasible, to minimise, mitigate, or compensate for such impacts;
- to enable Indigenous Peoples to benefit from projects in a culturally appropriate manner;
- to support the client to establish and maintain an ongoing relationship with the Indigenous Peoples affected by a project throughout the life of the project
- to foster good faith negotiation of the client with, and the informed participation of, Indigenous Peoples when projects are to be located on traditional or customary lands used by the Indigenous Peoples, when customary or non-traditional livelihoods will be affected by the project, or in the case of commercial exploitation of the Indigenous Peoples' cultural resources
- to recognise and respect the customary laws and customs of Indigenous Peoples and to take these into full consideration;
- to respect and preserve the culture, knowledge and practices of Indigenous Peoples in accordance with their wishes.

PR 8: Cultural Heritage

The EBRD recognises the importance of cultural heritage for present and future generations. Consistent with the Convention Concerning the Protection of the World Cultural and Natural Heritage and the Convention for the Safeguarding of Intangible Heritage, this Performance Requirement aims to protect irreplaceable cultural heritage and to guide clients to avoid or mitigate adverse impacts on cultural heritage in the course of their business operations. In addition, the requirements of this Performance Requirement related to a project's use of cultural heritage are based in part on standards set by the Convention on Biological Diversity, namely:

- to support the conservation of cultural heritage in the context of EBRD-financed projects;
- to protect cultural heritage from adverse impacts of project activities;
- to promote the equitable sharing of benefits from the use of cultural heritage in business activities;
- to promote the awareness of and appreciation of cultural heritage where possible.

PR 9: Financial Intermediaries

Financial Intermediaries (FIs) are a key instrument for the EBRD to promote sustainable financial markets and provide a vehicle to channel EBRD funding to the micro, small and medium-sized enterprise (SME) sector. Through its network of partner FIs, the EBRD can support economic development at a scale of enterprise that is smaller than would be possible through direct EBRD investment. The EBRD supports a variety of financial service providers including among others, private equity funds, banks, leasing companies, insurance companies and pension funds.

The objectives of this Performance Requirement (PR) are:

- to establish a practical way in which the Bank's mandate to promote sustainable development can be implemented in its FI investments, in line with best international practice in the commercial financial sector;
- to enable FIs to manage environmental and social risks associated with their business activities and to promote good environmental and social business practices amongst their clients;
- to promote good environmental and human resource management within FIs.

PR 10: Information Disclosure and Stakeholder Engagement

The EBRD considers stakeholder engagement as an essential part of good business practices and corporate citizenship, and a way of improving the quality of projects.

This Performance Requirement ("PR") outlines a systematic approach to stakeholder engagement that will help clients build and maintain over time a constructive relationship with their stakeholders, in particular the locally affected communities. The process of stakeholder engagement is an essential component of the appraisal, management and monitoring of environmental and social issues associated with the client's investments.

Conclusions

We may conclude that EBRD allocates a great importance on environmental protection. It seeks to ensure that the projects that finances are socially and environmentally sustainable, respect the rights of affected workers and communities and are designed and operated in compliance with EU applicable regulatory requirements and good international practices.

Romania is one of the countries from Eastern Europe who benefits from EBRD financial support. This is why, on 28th February 2012, the EBRD Board of Directors aproved a financing strategy for our country. The strategy underlines that *The Bank's Environmental and Social Policy applies to all projects carried out in Romania*. *It will be important to identify any vulnerable*

populations that may be disproportionately affected by the projects and to ensure that stakeholder engagement activities include any marginalised groups. Health and safety is also an important consideration for all projects and the Bank will work with clients and sponsors to promote the development of an appropriate safety culture[7].

LINK BETWEEN SUSTAINABLE DEVELOPMENT AND EFFECTIVENESS IN REGIONAL GOVERNMENT[1]

JAN ZÁVODNÝ POSPÍŠIL*

Abstract

The paper describes relationship between sustainable development and regional government efficiency. Author defines first sustainable development, its principles and relationship to the public administration area. With usage of systematic review is later defined efficiency in public administration. Based on this information is analyzed relationship between sustainable development and the effectiveness of the management system of regional government.

***Keywords**: Sustainable Development, Public Administration, Regional Government, Effectiveness, Local Agenda 21.*

Introduction

This paper deals with the issue of sustainable development in the field of public administration quality, respectively efficiency of regional government. Sustainable development is an important factor in the process of the gradual penetration of all areas of modern society at all levels (macro, meso and micro level) and all areas (environmental, economic and social) with regard to future generations and the environment.[2] The principle of sustainability is practically applicable to all fields of human activities. It just must be always adapted to the certain field. From definitions of the term is recognizable what is the goal of sustainability. The achievement of this goal must be done through a series of phases, which respect the essence of the field. Public administration is one of the most important institutions that can assist through its process to meet the objectives of sustainable development of the company.

This is the reason this article was written. The author tries to gain insight on the issues of sustainable development of the whole society, which plays an important role in public administrations. Specifically, the process of regional government as a meso-level implementation of the concept of sustainable development. The regional government is so very important to the fulfillment of the aims of sustainable development. At the same time the performance of regional governments is specific. This is an area where its status, functions and principles are often subject to numerous changes and reforms primarily motivated by political influence. It is possible to say that in a society there is an effort to continuously improve the current state of public administration - the effort to achieve maximum efficiency. (Broad) It follows also need for evaluating of quality and efficiency.

However, for evaluating quality of public administration (or regional government itself) it is necessary to develop methodologies and standards that make it possible. Currently there are a number of methods that can be used for quality measurement, respectively effectiveness of public government. However, existing methods generally do not take into account the concept of sustainability. Author of this article attempts to look at the regional government evaluation issue with the view of the concept of sustainability. In this point of view he is using the Local Agenda 21 document, which can be considered as the starting point for evaluating the effectiveness of regional

[1] The article is a part of the work on the grant of the Czech Science Foundation no. P408/11/1929 – Regions in the Czech Republic: a model of efficiency.

* Assistant Professor, PhD, Moravian University College Olomouc, Olomouc, Czech Republic (email: jan.pospisil@mvso.cz).

Governments in view of the objectives of sustainable development. By an analysis of this document is possible to answer the question of what it needs to be measured in order to regional administration be assessed in the scope of the sustainable development concept.

In the processing of this paper, author used specialized literature concerning the issue of the concept of sustainability and efficiency in the performance of regional governments. This paper is a synthesis of published knowledge on various topics. Its aim is to bring more information to the issue of measuring the effectiveness of regional governments in relation to sustainable development.

Definition of Sustainable Development

Sustainable development is a term which has recently been studied in environmental area, where he originally belonged to. It is possible to meet him in almost all possible fields of human activity. At present, it is possible meet this term in many areas such as the social, economic, natural,... Despite, or perhaps because of it, his interpretation is very diverse, and it is very difficult to precisely define.

Original understanding of sustainability as such represents the development of human society, ensuring a consistent economic and social progress, together with full preservation of the environment.

The concept of sustainability, which in Bramwell and Lane[3] was first mentioned in 1973. In the forefront, however, came only after 1980. Important role in formulating sustainable development played a WTO (World Tourism Organisation). The first milestone represented Manila Declaration (1980), which pointed out that the sources cannot remain unchecked and it is important to realize that all resources in the future may be lost or destroyed.

International Commission for the UN Environment issued in 1987 a report entitled Our Common Future.[4] This was the result of careful exploration of the environment and pointed to the need to make fundamental changes that are necessary for sustainable development. The continuous development in this report is defined as: "*... a method of development that meets the needs of the present without compromising the ability of future generations to meet their own needs*".[5] The report presents the most important issues affecting the human civilization and you need to seriously consider them.

As one of the most serious problems stated in the report is the population growth. According to the report is the need for action, the result should be to stabilize the population. A related problem is the population growth in large cities and especially their suburbs. Another report mentions the need to improve health care, social security, population, and improving access to education. It also mentioned the need to ensure food security for a broad population groups, provided stability of natural resources.[6]

Already at the time of the report inform about the very actual problem that represent increasing requirements for energy and increasing consumption. The report stresses the need to increase the production of renewable energy sources and thereby reduce air pollution and greenhouse gas emissions from the use of fossil fuels. It takes into account also industrial production and poisons, which are spreaded in the environment. This type of waste has to be eliminated as much as possible. It is closely related to environmental pollution and production of chemical substances, which according to the proposals of the UN should not be placed on the market before they have

[6] World Commission On Environment and Development*, Our Common Future* (New York: Oxford University Press, 1987).

been tested. It has to be assessed their potential impact on human health and the impact on the environment.[7]

The original definition was later identified as inadequate as it does not take into account all the factors affecting the development of the company and it's mostly very anthropocentric.

Therefore, later was formed another definition that attempted to describe sustainability with several factors. For example, Eber[8] states that sustainable development advocates widespread use and maintain resources to obtain their durability. Sustainable development represents the possibility of continuous economic development, which seeks to maintain the environmental, socio-cultural and economic resources of the country for future generations.[9]

One of the most accurate definition is a synthesis of the previous definitions. This definition is currently being used in the training process of environmental education at universities. The definition says: "*Sustainable development is a complex set of strategies that allows usage of economic tools and technologies to meet the social, material and spiritual needs of people while fully respecting environmental limits"*[10]

This definition can include a wide range of factors, which are also important for understanding and application of sustainable development. As Ivan Rynda[11] stated, the individual components of sustainability are in the intersection. For the concept to work it is necessary that these elements together helped to create a single common area of the world.

Principles of Sustainable Development

The concept of sustainability is based on the integration of the three areas - social, environmental and economic. Sustainability in one of these areas should not negatively affect other areas. The main principle of sustainability is to achieve balance between these three dimensions in order to achieve long-term effect.

Other principles of sustainability are based on the definitions of the term. By using systematic review of definitions and documents relating to sustainable development, can be determined other principles of sustainable development. These principles are focus on the future and future generations, the responsible use of resources and equity. All these categories are present in all of the three areas of sustainable development.

For example, Eber[12] states that sustainable development advocates widespread use and maintain resources to obtain their durability. Sustainable development represents the possibility of continuous economic development. It seeks to maintain the environmental, socio-cultural and economic resources of the country for future generations.

Besides the general principles of sustainable development, based on the very essence of the concept, it is possible to define the basic principles of sustainable development in specific areas. In this case, the general principles are applied to the specific conditions of the existing sector.

Relationship to the Public Administration Area

In terms of the specific application of the sustainability concept into the field of public administration, it is very important to mention a conference which was held in Rio de Janeiro in June 1992. At the conference the representatives of the participating countries adopted several important

documents to guide the implementation of the principles of sustainable development in the countries, at all levels of government and in all sectors. They are the following documents:

• Rio Declaration On Environment and Development: the most comprehensive set of principles of sustainability

• United Nations Framework Convention on Climate Change

• The Convention on Biological Diversity: The Cartagena Protocol on Biosafety entered into force in September 2003

• Non-Legally Binding Authoritative Statement of Principles for a Global Consensus on the Management, Conservation and Sustainable Development of All Types of Forests

• Agenda 21: a comprehensive guide of global actions which may affect or observe the transition to the sustainable development concept

New document called Local Agenda 21 is based on Agenda 21 requirements. Local Agenda 21 is a tool for applying the principles of sustainable development at local and regional level. It is a process which through improvements in governance, strategic planning (management), public participation and the use of all acquired knowledge of sustainable development in individual areas, improves the quality of life in all its aspects and points to the responsibility of citizens for their lives and the lives of other beings in space and time.

Local Agenda 21 (LA21) is a program for towns, cities and regions, that introduces the principles of sustainable development into practice taking into account the local problems. It is formed in the presence of and in cooperation with citizens and organizations. Its objective is to provide long-term high quality of life and environment in a specific place.

Local Agenda 21 is a time consuming process which, through improvements in governance, strategic planning (management), involving the public and the use of all acquired knowledge of sustainable development, enhances the quality of life in all its directions and leads to the citizens responsibility for their lives and the lives of others.[13]

LA21 is a progressive method of improving the quality of public administration, leading to the practical application of the principles of sustainable development at local and regional level. Unlike other methods LA21 offers, in addition to quality and efficient work of the public administration, a number of added values, such as satisfaction of the population, their active participation in public life and in decisions on public matters.

LA21 is part of a broader effort to good governance, which is included in the term "good governance". From the perspective of the UN and the EU the good governance must be open, transparent and accountable to the public, effective for public participation in decision-making and planning based on partnership with other social sectors, and respecting the professional point of view. Only such governance can lead to long-term sustainable development of the municipality or region. LA21 is a process that is fundamental to sustainable development. An essential part of a working MA21 are undoubtedly: strategic planning and quality management system including funding system, ongoing and active communication with the public - building partnerships, systematic and measurable approach to sustainable development.[14]

Efficiency in Public Administration

Public administration in democratic economies should work in accordance with applicable legislation. Not only transparently, ethically and professionally, but also economically, efficiently and effectively. Within the meaning of the concept of Good Governance it means, that public administration is actively associated with citizens and meet the public interest.

[13] "O místní Agendě 21," CENIA, accessed February 19, 2013, http://www1.cenia.cz/www/node/304.

[14] United Nations Conference on Environment and Development, *Agenda 21: Programme of Action for Sustainable Development* (New York: United Nations, 1993).

From the analysis of available documents ensues that the definition of quality regional government is not clear. Professional literature does not offer an adequate and universal answer to this question. Mostly is the problem of quality of regional government associated with the administration processes, resources, staff, partnerships and performance of the government.[15] In contrast to this notion is efficiency which is usually expressed as the difference between inputs and outputs.[16] The efficiency can be viewed from two perspectives - from an internal and external perspective.

Currently the evaluation process of regional government is based on key requirements that are required by the performance of public administration. This is called the principle of "3E", which consists of three components - Economy, Efficiency and Effectiveness. Sometimes it is supplemented by a fourth "E" which is in this case an Equality.[17]

Relationship between Sustainable Development and the Effectiveness

In fact objective indicators for measuring the quality and effectiveness of public administration do not exist. It is mainly about the essence. Particular solution may be to achieve the concept of sustainable development. Thanks to its essence - combination of three areas - economic, environmental and social - can be achieved by its applying the effective functioning of the regional government. Therefore more important is the need to constantly look for opportunities fulfillment of the concept of sustainable development, the search for indicators and evaluate the implementation of the concept.

Instructions for implementing the principles of sustainable development in the Local Agenda 21 can also be a starting point for the development of indicators for measuring the effectiveness of regional government.

LA 21 monitors and describes the setting of key governance processes that are necessary for the implementation of Agenda 21 at the local or regional level. Also anticipates a further essential aspect - by using indicators of sustainable development monitors the real impact of various aspects on the locality development. Indicators of sustainable development are a practical tool to measure the progression of the Local Agenda 21. It is a set of information that shows whether the goals set are closer or they are moving away. They make it possible to see whether the used activities have a positive impact on the area.

Indicators are chosen not only for the overall process, but also for partial projects. Always they must have three aspects - quantity, quality and time. For each level of targets are selected appropriate indicators - strategic (regional governments by them can monitor the achievement of strategic targets - such as citizens' satisfaction), managerial (as we will check that the system works well) and implementation. Indicators at each level must be linked.

Commonly used indicators of society development (such as gross domestic product) do not provide adequate and comprehensive data that are needed to assess the sustainability of development. Therefore there is need for look for new indicators. Nowadays there are a set of recommended indicators at the international level. At the same time there is already developed a system of indicators for sustainable development at the national level.

In relation to public, indicators are being used as a tool by which can easily inform about the changes that take place based on the LA21 process. In this respect, the well presented indicator can lead to the involvement of other people in the process of LA21. It depends on the creative approach of those who are presenting the indicators.

The starting point for setting the LA21 bases for measuring the effectiveness can be the document: European Common Indicators of sustainable development at the local level. It is an

[15] Iveta Vrábková, "Vyjádření efektivity a kvality ve veřejné správě," *Acta Academia Karviniensia* 1 (2010).
[16] Dušan Hendrych, *Správní věda: Teorie veřejné správy* (Praha: ASPI, 2007).
[17] Norman Flynn, *Public sector management* (Los Angeles: Sage, 2007).

initiative that aims to encourage European local communities in the establishment of common indicators that allow to monitoring and measure the progress recorded to local sustainability and efficiency simultaneously.

The document includes the following areas, from which it is possible to create specific benchmarks:

1.Citizen´s satisfaction with life in the community (general satisfaction with various aspects of life in the community).

2.Local contribution to global climate change (CO_2 emissions expressed as ecological footprint).

3.Local transportation and passenger transportation (daily travel distances and modes of transportation).

4.Availability of public green spaces and local services (availability of the nearest public green area for local residents and affordability of basic services).

5.Ambient air quality (number of days with good and wholesome air quality).

6.Children´s traveling to and from school (means of transport that children use to travel between home and school)

7.Sustainable management of the municipality and local businesses (the proportion of public and private organizations that have adopted and use of environmental and social management methods)

8.Noise pollution (the proportion of the population exposed to harmful levels of noise)

9.Sustainable land-use (sustainable development, restoration and protection of areas and lands within the municipality/city)

10. Sustainable Products (share of environmentally friendly certified)

Based on these areas, for the future there is necessary to set common standards which can be used by regional governments to measure the level of implementation of the sustainable development concept in the region. At the same time they will also talk about the effectiveness of regional governments from the perspective of sustainable development.

Conclusions

This paper provides the basic insight into the problems of sustainable development in the field of public administration and the effect on its efficiency. Using analysis of available documents author defines the concept of sustainable development and the effectiveness of regional government. Thereafter author dealt with the issue of measuring the implementation of the concept in public administration sphere.

The concept of sustainable development has become one of the solutions of contemporary postmodern era.[18] Institutions across the social spectrum are aware of the importance of this concept. The basic principles of the implementation of the concept include: the focus on long-term goals, the voluntary implementation of the objectives, the need for partnerships between different implementers and many possible targets in the implementation of the concept.[19] Under these conditions is the public administration area which can be suitable for controlled introduction of the concept in to the society.

At the same time there is need for measuring of the outputs and efficiency in public government. Paper tried to answer the question whether it is possible to use information about the implementation of sustainable development concept as a means of measuring the regional government effectiveness.

[18] Martin Zielina, "Veřejná správa jako jeden z aktérů regionálního trvale udržitelného rozvoje podle konceptu Triple Helix" (paper presented at the Conference Our Common Present: Changing Society?, Prag, March 23rd, 2012).

[19] Slavoj Czesaný, *Koncepty a měření udržitelného rozvoje* (Praha: Český statistický úřad, 2007).

In this case author chose for this purpose a document named Local Agenda 21. It is the practical application of the principles of the Agenda 21 document at the local (municipal, community) practice. Local Agenda 21 is a practical implementation of local projects in collaboration widest interest groups that leads to sustainable development and maintain the quality of life at local level. Based on the analysis of this document, the author determined the method of creating standards, which are intended for measuring the sustainability and efficiency of regional government.

This paper primarily aims to be information platform for the introduction of the concept of sustainable development in the regional government. It may be usable for regional government´s decision makers as well as the basis for further research in the area.

This paper is part of a much larger project, which deals with the issue of measuring the effectiveness of the regions. Therefore in the future research will continue in the searching possibilities of measuring the effectiveness of public governments and the entire regions. The project is focused on research of the functioning of regional self-government and of regional authorities (thereinafter the regions) in the Czech Republic. As a primary research in the field of public administration, the project should contribute to gain knowledge on the activities of the regions, the research of which has still been neglected.

FOOD CRISIS OVERLAPPING THE ECONOMIC CRISIS

CARMEN RADU[*]
LIVIU RADU[**]

Abstract
The present paper seeks to find some answers regarding the existent causality between the economic, financial, demographic and food crises. Crises are interrelated, thus one crisis cannot be analyzed without the other, as the effects of one crisis are or may represent causes for another crisis. The current food crisis translates today in food price increases, in the health of the population that does not have enough resources for a balanced diet and in obesity problems of the young generation (Romania ranks third among European countries). All these issues with immediate and direct effects over the population in our country determined us to conduct a rigorous and careful observation on the development of the phenomenon of food crisis.
Food crisis, its causes and consequences – aging population, the migration of the active population to other countries (especially from the rural areas) and the agglomeration of the disadvantaged population in certain geographical areas, can cause social and economic imbalances.

Keywords*: food crisis, obesity, malnutrition, subnutrition, aging population, sustainable development, economic growth.*

Introduction

Crises are interconnected, one without the other cannot be analyzed, since the effects of one crisis are or may be one cause for other crises. This is the reason why Gilles Bonafi (2010), like other authors, believes that the issue of the crises should be analysed both globally and on different levels. Among these, the most important levels are the following:

- the financial or the monetary system, whose pillar is the dollar;
- the adaptation of the economic system to the new information technologies that determines the destroying of millions of places of work;
- the energy crisis; the danger that lurks democracies and freedom, because the real power is held by a handful of people through capital accumulation. (Momcilo Luburici, 2010).

In 2005, the famous economist John Kenneth Galbraith pointed out that all it takes is "a few strong and convincing enough sellers to determine what people buy, eat and drink"; the ecocide[1] determined by the current economic system. Reality shows that the risk lies in the disastrous effects caused by the food crisis degenerated from the economic crisis, the crisis itself actually being a greenhouse effect, meaning a disaster caused by disasters and, in its turn, a generator of other disasters. One of the reasons why the food crisis is not treated with the attention that is was once given, is that the notion of famine has been redefined. A couple of years ago, the famine was located strictly geographically[2], while today it affects the whole planet. Lester Brown [3], the American author who published a manifest-book translated into 35 languages "Full Planet, Empty Plates: The New Geopolitics of Food Scarcity" points out in the subtitle of his aforementioned book "The New Geopolitics of Food Scarcity" the acute problem of the least developed countries which are

[1] The ecocide represents the act of destruction of an ecosystem, especially through excessive exploitation.

[2] Blanchet, J., and Lefebvre, D. (1995). *PAC, GATT, OMC*. Le grand Chambardement, Paris, Edition France Agricole.

[3] Lester R. Brown is the president of Earth Policy Institute, a neoliberal environmental research institution based in Washington DC, and one of the best known researchers in the field of global environmental issues, sustainable development and environment protection (the work *Outgrowing the Earth: The Food Security Challenge in an Age of Falling Water Tables and Rising Temperatures,* Tehnica Publishing House, Bucharest, 2005).

experiencing a sustained population growth and for which providing food becomes one of the most serious contemporary problem. Stating from the beginning of the book that "Food is the weak link in our modern civilization", Lester Brown starts from the observation that over the last decade, world grain reserves have fallen by one third and the world food prices have more than doubled, triggering "a worldwide land rush and ushering in a new geopolitics of food."

Taking into consideration the globalization of the grain market and the ability to transport them, famine is less concentrated in certain geographic regions and more in low-income groups. At present, the food crisis translates in rising prices globally, growth that is affecting low-income populations, forcing many to end up even below the limit of subsistence. Thus, we start wondering today whether the current world economic crisis is either cause or effect of deepening the demographic, financial, food, energy resources and other crises.

Nowadays it is believed that the causes of the food crisis could be linked to:

1. Population growth[4], population growth on Earth. If in 1950 there were about 2.6 billion people, in 1975 their number reached over 4 billion, while in October 2011 their number reached 7 billion. According to demographic forecasts for 2050, the Earth's population will exceed 9.3 billion people.

Figure no. 1: Population growth between 1950 and 2050

2. The insufficient production of agricultural goods worldwide. It is estimated that at present over 1.2 billion people are facing hunger. Therefore it will be necessary to obtain increases of

[4] Gabriela Molanescu – The Bucharest University of Economic Studies, Theoretical and Applied Economics, Volume XIX (2012), No. 4(569), page 57-69 Contributions to the Substantiation of the National, Original and Coherent Strategy of Interruption of the Involution of Romania's Agriculture.

agricultural food production to ensure and provide food for 2.3 billion people in addition to the current population.

3. Climate changes. Summers are becoming drier and winters frostier but without significant precipitation which will destroy crops.

4. Bio-fuels. It is impossible for the agriculture from the European Union to produce as much wheat so that to be used as bio-fuel without affecting the agricultural products market.

5. Speculators. The speculation on the financial market led to price increases that cannot be explained. Thus, the price of wheat and rice increased by 30% in one day, which inevitably caused the emergence of speculators.

6. Changing consumption habits. About 40 years ago meat was considered to be a luxury food, but nowadays people eat meat in large and exaggerated quantities.

Theoretical background

According to an international study conducted once in two years (the last one is dated 2012) by World Wildlife Fund (WWF) the Zoological Society of London and the Global Footprint Network [5], humans will need two Earths to support our lifestyles by 2030 because we are draining the world's resources so quickly and only another planet in addition will be able to cover our demand for natural resources. According to the same study, if people continue with the same lifestyle, three planets will soon be needed just to cover the survival needs of the human civilization. Qatar, Kuwait, United Arab Emirates, Denmark, the United States of America and Belgium are countries considered to be currently large consumers of natural resources. In the first half of this classification, Italy and the Russian Federation are ranked as countries with a moderate consumption of natural resources. Romania is ranking 60 and the list of large consumers closes with the poorest countries of the world, such as Afghanistan, Congo, Burundi, Eritrea or Sudan which are countries that are still facing malnutrition and subnutrition. There are currently 850 million people malnourished in the world, of which 200 million are children.[6]

"The massive loss of biodiversity and habitats undermines the natural systems upon which we depend for the food we eat, the air we breathe and the stable climate we need. The depletion of natural resources caused by human consumption also poses risks to our economic security: for instance, scarcity of resources and degraded natural systems will increase the price of food, raw materials and other commodities" declared David Nussbaum, one of the WWF specialists involved in the project. The study suggests that if the expected global population of 9.2 billion people in 2050 were to eat a typical Malaysian diet, we would need 1.3 planets to sustain us. The situation changes radically if everyone were to eat an Italian diet, humanity would need closer to two planets in order to survive.

Also, the reports provided by the FAO (Food and Agriculture Organization of the United Nations) believe the currently a billion people worldwide suffer from hunger. The current food crisis that emerged in 2010 can rival that of 2007-2008.

These are observations that can only lead to the following questions: is there a connection between the great economic crisis of 1929-1933, also known as the Great Depression, and the current economic crisis or their causes are radically different? Is there a link between the commencement of the previous food crisis (2007-2008) and the commencement of the current economic world crisis? What do we know until now?

The Great Depression was caused by overproduction, took place between 1929-1933 and was characterized by a dramatic drop in global economic activity. The first signs of the crisis occurred in

[5] Produced by WWF in collaboration with Global Footprint Network and the Zoological Society of London, the report examines the state of our natural world, and our impacts upon it.

[6] According to *the Food and Agriculture Organization of the United Nations*.

1928. The commencement of the Great Depression in the United States is usually attributed to the sudden devastating collapse of US stock market prices on October 29, 1929. The Great Depression had devastating effects in both industrialized countries, as well as in less developed countries whose economies were depending mostly on exports of raw materials. The level of global trade decreased rapidly, as personal income, tax revenue, profits and prices dropped also. Cities all around the world were severely affected, especially those dependent on heavy industry. Construction activity was virtually halted in many countries. Farming and rural areas suffered as crop prices and agricultural commodities fell by approximately 40-60%.[7] Mining and logging had perhaps the most dramatic decline as demand plummeted and re-employment alternatives for miners or forest workers in other sectors were the lowest. The Great Depression in different countries of the world ended at different times. In most countries recovery programs were designed and most of them have gone through various political transformations that have driven them towards left or right extremes. Societies based on liberal democracy were very weak because of the crisis and dictators, such as Adolf Hitler came to lead some of the most powerful states and prepared the political and military conditions to trigger the Second World War in 1939. He who learns from past mistakes can avoid repeating them in the future.

The experts of the International Monetary Fund (IMF) revised radically the economic growth forecasted for 2009 estimating that, globally, the advance shall not exceed 3%. Strongly affected by the financial crisis, the situation for industrialized countries is even worse: only a maximum of 0.5% growth. Reports from the Fund warned gradually on the delicate situation in which the world economy finds itself, perhaps the most serious in the last eight decades. The experts' thought are once again populated by the recession from the early '30s, given the fact that the events seem to unfold exactly the same: stocks fall, companies go bankrupt, and banks face liquidity shortages. Even the chief economist of the International Monetary Fund, Olivier Blanchard, has called for urgent fiscal interventions designed to rebalance the market, especially to avoid feelings of panic. In harsh times, the global economy needs consumer confidence.

Analyzing the situation detachedly it is impossible not to wonder: are we already in an economic crisis comparable to that of 1929-1933? At that time, Wall Street had become for years the financial centre of the Western world, and in 1929 it was considered that America already has a decade of prosperity. Only a few economists warned of imminent decline that was to come. The market simply could not sustain such rhythm. In the days before "Black Thursday", as the day of October 24, 1929 remained and accepted in history as triggering moment for the Recession of the early '30s, the stock market was highly volatile. The investors' main worry was not the accelerated decline of the stock market indexes, but rather the large volume of shares traded, which was perceived as a sign of latent distrust. The stock market crash of 1929 was, in fact, more complex than it has been traditionally spread. Suddenly, the shares value began to decline, investors began to sell and panic took over the global finances. On October 24, 1929, nearly 13 million shares were traded. On October 28, the most important stock index lost 13% in one day. The next day, the threat becomes a reality: 16 million shares were traded, causing stock prices to decrease to minimum rates. Wall Street ceased to be an indestructible legend. The major American financial companies have tried to remedy the situation by buying large quantities of shares as a sign of confidence that they still have and invest in the "market reason".

What do we know today? On February 1, 2007 a law to increase the minimum wage was enacted (Fair Minimum Wage Act of 2007), law which has blocked investments and, implicitly, the crediting process. It has also reduced drastically the efficiency of U.S. companies that were competing with emerging economies, especially China. On February 17, 2007 the British bank

[7] Willard W. Cochrane, *Farm Prices, Myth and Reality* (1958), page 15; World Economic Survey 1932–33, League of Nations, page 43.

Northern Rock was nationalized by the British Government. After one month, JPMorgan Chase & Co Bank bought the investment bank Bear Stearns at a very low price, with the help of the U.S. central bank (Federal Reserve) and on September 7, 2008 the largest mortgage banks in the United States (Freddie Mac and Fannie Mae) were placed under federal supervision. After a week, the company Merrill Lynch (the third largest investment bank in the world) is taken over by Bank of America and Lehman Brothers (the fourth largest investment bank in the world) declared bankruptcy. On September 16, 2008, the United States Federal Reserve Bank and the U.S. government nationalized the largest insurance group in the world, American International Group (AIG) which was threatened by bankruptcy, and led to a rescue agreement with the Federal Reserve Bank for a US$85 billion dollar secured loan facility.

The United States of America announces the recession, and from that moment chaos begins. But a close analysis of economic history shows us that periods of economic depression have usually followed a pattern that was not so little predictable. Almost without exception, major economic crises in history, had similar developments[8]. Of course, each crisis has its own specificity, but there are some key similarities in the sequence of stages that all these crises have gone through.

The first common feature we observe when we analyze the way most economic crises unfold relates to the periods that precede such crises. Thus economic crises are usually preceded by a period of sustained economic growth. But if this economic growth is initially a healthy one, as the population's optimism in general and entrepreneurs' in particular increase, an "overheating of the economy" takes place. That economic growth which was initially healthy is becoming more and more one built more on speculative grounds, and one can easily observe an increasingly pronounced distance of the economic growth from the real economic basic rules.

The thinking trends of Keynesian inspiration, as well as the institutionalist ones, consider that there has been a overproduction phenomenon combined with a lack of aggregate demand in the period before the crisis, while monetarists believe that a determining cause of the Great Depression was the application of bad monetary policy by the U.S. authorities, which led to an unfortunate restriction of the money supply in circulation, that turned an ordinary recession into the worst and bleakest economic depression the world economy would face. The severe drought period in the Mississippi River basin in 1930, caused great difficulties to the U.S. farmers. Many of them were forced to sell their properties just to be able to pay their taxes or debts accumulated. Such circumstances led to the significant decrease in aggregate demand for all social categories. It also determined the decrease in the production of goods, and also, people's income. They were about to face bigger and bigger difficulties in paying their rates on already purchased goods. Are we somehow in a similar stage of unprecedented development of the consumption?

China is more and more taking into account the process of controlling the commodity prices so that to decrease inflation. The Russian Federation has suspended external deliveries of wheat because of the danger of insufficient supplies of wheat to meet the domestic demand of the country. The United Nations Organization warns of the situation in North Korea, a country that is headed towards a new stage of "chronic" food crisis. As we already showed at the beginning of this paper, a classification of the high risk countries ranks among the first 5 positions countries such as Afghanistan, Congo, Burundi, Eritrea and Sudan. At the opposite end are countries such as Qatar, Kuwait, United Arab Emirates, Denmark, the United States of America and Belgium. A global food crisis is imminent! This warning which is released periodically by competent experts and specialized institutions, should normally compel countries to a more rational attitude and behaviour to food consumption. Especially since, according to experts of the United Nations (UN), one billion people

[8] Alexandru Asavoaei "The economic crisis - a predictable phenomenon", the Faculty of Economics and Business Administration, July 18, 2012.

worldwide suffer from hunger and food prices will remain high on a medium term. Nevertheless, according to a study conducted by the Swedish Institute for Food and Biotechnology, an estimated one-third of food produced for human consumption is lost or wasted globally, amounting to 1.3 billion tonnes per year, namely 33% of everything that it is produced worldwide. Such reality represents a paradox, given that nearly one billion people worldwide suffer from hunger. In the same vein, the experts of the Food and Agriculture Organization of the United Nations warn that we are approaching a crisis of food prices. It seems that there is food, but many countries (especially those who were "richer" after the economic crisis - an example could be the BRIC group - Brazil, Russia, India and China) have decided to make supplies of domestic production but at the same time, they are buying goods in large quantities from anyone selling.

The UN Food and Agriculture Organization (FAO) foresees that the grain offer of the Asia-Pacific region will decrease considerably in 2050, so it will not be able to meet the growing demand. Consequently, investments in agriculture aimed at expanding productivity represent a priority for all countries. The agriculture, a sector highly dependent on climatic conditions and human factors, is conducted under the global impact of climate change. According to some market reports, if the current global warming continues, the productivity of major crop yields in tropical countries could decrease by 20 to 30%. On the other hand, the process of supplementing new farmlands was minimal and was done by tropical deforestation which, in turn, involves substantial environmental costs. In many countries, primary agricultural lands are restricted in favour of industrial and residential constructions. Moreover, the insufficient water resources and the underdeveloped irrigation systems affect the development of agriculture. Most food markets face major challenges arising from the growing demand, the changes in climate, the increase of production costs and commodity prices and poor crops, based on the diminishing of food reserves and agricultural areas. As we already mentioned, the main causes are the decrease of grain reserves because of unprecedented weather and hydrological conditions, the restriction on exports and a low dollar that has favoured the inflation. In 2011, the price of butter has reached the highest price in history; the price of sugar is hit a record of the last 30 years, while the price of wheat and corn increased by 40%.

But let us see how much the prices increased in reality. The price of wheat increased by 91% since the beginning of 2010 until the end of 2011, and the causes for such price increase are, among others, the extreme weather events in 2010: the Russian heat wave, fires in Israel, flooding in Pakistan and Australia, landslides in China, snowfall in the U.S. and the 12 hurricanes in the Atlantic Ocean[9]. To all these causes we can add up the protectionist measures of countries such as the Russian Federation and Ukraine, measures that, in the fall of 2010, limited grain exports because of low production and fears that they will not meet internal needs.

The quotations for corn increased by 57% over the same period, because crops were fewer, but surprisingly, the demand continued to go up, especially in China. In fact, grain consumption increased most in East Asia, the region becoming at present the largest consumer of grain. Oilseed consumption recorded an increase of over 1000% in East, South, and Southeast Asia. Sugar consumption has gone up exceptionally in South Asia since 1960 with a compounded annual growth rate of over 12%, more than four times the global growth rate. Livestock, the most expensive of the analyzed food commodities, saw demand move up without precedent over the past five decades in East Asia, with China accounting for almost 90% of the consumption. Note that sugar reached the maximum peak of the last 30 years. The general food price index for December 2010 was one percent higher than in June 2008, but cereal prices were still 13% below the level reached in 2008.

Figure no. 1: The evolution of the FAO Food Price Index

Source: http://www.fao.org/worldfoodsituation/wfs-home/foodpricesindex/en/

Man "consumes" on average 4.1 liters of diesel oil, 29 kilograms of soil and 2.2 tonnes of fresh water per day. "These are the resources consumed to feed one person. Multiply this number by 7 billion people and you will realize that all this huge amount of resources consumed is almost impossible to replace", said researcher Julian Cribb[10] at a conference of the Academy of Science in Canberra. In his paper entitled "The coming famine. The global food crisis and what we can do to avoid it" Julian Cribb says that the biggest personal impact of humans on the planet is how they consume food. He argues that most people do not realize what impact has such consumption for the planet. The reasearcher warns that in less than half a century the global food system will reach "points of no-return" unless there is radical change to farming systems, cities and the world diet.

"Take soil for instance. According to the Food and Agriculture Organization of the United Nations, the planet is deteriorating at a rapid pace, and we're losing up to 100 billion tonnes of topsoil a year, mostly into the oceans. Soil takes thousands of years to form, so it is not going to be replaced any time soon. Despite progress in countries like Australia, soil degradation is getting worse, not better. Some scientists say we will face a shortage of good farming soils within 70 years" argues the same Julian Cribb.

The situation is similar in the case of water. Over 4,000 cubic kilometers of water are extracted from the soil each year, the extraction being mostly unsustainable. Regions of the planet such as China or the Middle East will face a severe water crisis by 2030. However, the researcher says, what most governments and authorities on food security have failed to admit publicly is the scarcities of resources such as water and arable lands.

The reasearcher warns that "There is still time to act – but the action must be fast and it must be universal. Julian Cribb also says there are opportunities for major new developments in food production. "There are also 25,000 edible plants on Earth, 99% of them unfamiliar to most people.

[10] Julian Cribb is a science communicator and author of *The Coming Famine: the global food crisis and what we can do to avoid it*. He is a member of *On Line Opinion's* Editorial Advisory Board. Source Article from http://www.jurnal.md/ro/news/criza-alimentara-mondiala-ameninta-omenirea-707756/.

So we have not yet begun to explore the culinary potential of our home planet. For example, Australia alone has 6,100 edible plants of which we currently eat just five or six!" explains the researcher.

In the same context, Professor Alyson Warhurst, chief executive of Maplecroft, points out the importance of food: "Food security is a critical geopolitical issue and an important factor for investors concerned with sovereign risk, food and agricultural business with respect to supply chain integrity and foreign direct investments." Lester Brown also, in the aforementioned paper "Full Planet, Empty Plates: The New Geopolitics of Food Scarcity" starts from the observation that over the last decade, world grain reserves have fallen by one third, and the world food prices have more than doubled, triggering "a worldwide land rush and ushering in a new geopolitics of food."

Conclusions

In line with the increase in household income levels, food expenditure patterns have also undergone changes[11]. Generally, in countries with lower income, food takes a much bigger share in the total household expenditures than in the higher income countries. Thus statistics show that a level of a Gross Domestic Product (GDP) per capita of less than USD 5,000 usually implied at least 30% of consumer expenses went toward food. This percent can reach even 50% for a number of countries with the lowest GDP per capita levels. Thus, the share of food in total expenditures tends to decline as a country's per capita income moves up. In high-income countries the share of food in total expenditures had an average share of 10.9%. Similarly, the composition of the food basket has also changed in tandem with the income increase. A larger share of food expenditure is allocated to higher value products such as meat or sugar and confectionery, leaving a lesser percent for basic commodities like bread and rice. However, the analysis of expenditure may not always be accurate. For instance, the breads and cereals category has a similar contribution to the total of food budgets. However, the number of calories derriving from this category account for 57% of total calories consumed in low-income countries and only 36% in high-income countries. This indicates that low-income countries consume larger amounts of simple breads and cereals (corn, rice) compared to other food categories. On the other hand, higher-income countries buy smaller amounts of more expensive products (packaged and processed cereals like breakfast cereals), which explains their relatively high share in total food expenditure. Therefore, in order to get a reasonably clear picture of the basket's composition, the analysis needs to cross-reference and collate data related to the share of individual food groups and the calories/nutritional value derived from them. Furthermore, product prices need to be considered too, since some more expensive products in lower-income countries can have a similar contribution to household expenditures despite much lower consumption volume.

Low-income countries will experience most severely the food crisis because in such countries population growth is sustained. One can consider that, at the same time with the unfolding of the financial crisis, we are also in a powerful food crisis and Romania is seen among the vulnerable countries being ranked 12th in the world within a classification of vulnerability to food price increases. Our country imports too much food not be affected by what happens on the international market. Moreover, in the last couple of years, Romania has faced dry and very warm summers. According to the National Institute of Statistics, in 2010, Romania had the highest inflation in the last five years. Among the products whose prices gone up the most we mention vegetables, cigarettes, canned food, as well as some service or administered prices.

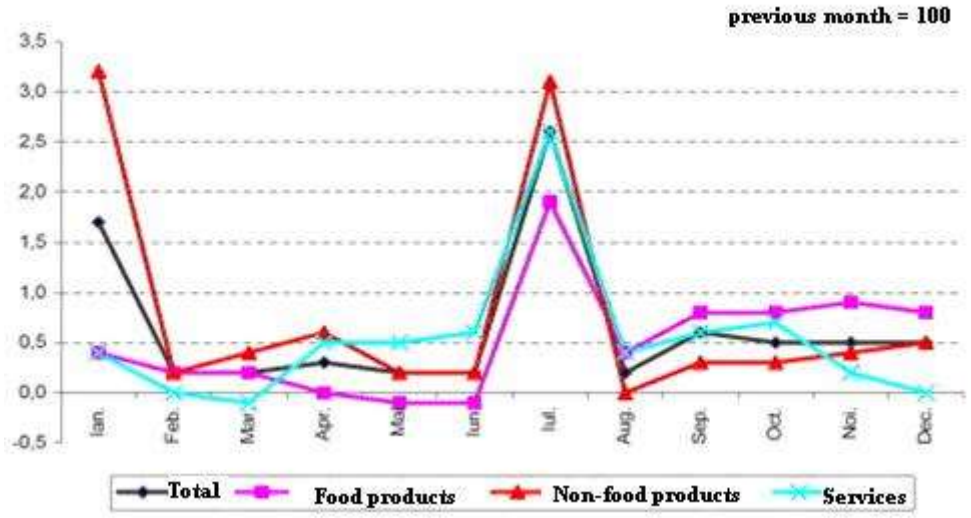
Figure no. 3: Monthly increase in prices for 2010 (overall and by categories of goods and services)



Sorce: The National Institute of Statistics

Following the analysis made by experts according to some generally accepted criteria, it was concluded that Romania meets all the requirements to qualify among the countries with poor food security. This result is supported by the following aspects: low agricultural production, vast areas of uncultivated land or lands worked rudimentary, food price explosion superimposed over a continuously lower purchasing power because of the economic crisis. This situation determines large segments of the population to no longer afford to provide their food needs from their monthly income. The seriousness of the situation also lies in the fact that a food crisis may become a succession of crises at any time should the market imbalances persist, and the competition for energy sources will continue to affect the production and the commodity market. The causes of the food crisis in Romania may be grouped as follows[12]:

1. About half the food products consumed in our country is imported, which means that any price increase on the international market will affect immediately our domestic market.

2. A large part of the domestic food production is exported, which means that we cannot trust the assumption that the domestic production will save us from the food crisis. Should the prices rise all over the world, then all the Romanian wheat will be exported as before to Europe.

3. Romania's population spends more than 50% of their income for purchasing food products, which means that the limit of endurance has either already been reached or exceeded. The consumer cannot afford and support new price increases because he simply does not have the money needed to purchase expensive product.

4. The speculative factor on the food supply chain is very long, with an endless string of intermediaries who will take advantage of the occasion to obtain greater profit on the consumers' expense.

[12] "The food crisis and the possible repercussions on Romania" - Assoc. Professor PhD, Rabontu Cecilia Irina, Professor PhD, Niculescu George, Constantin Brâncuşi University of Tg-Jiu.

Price increases affect mostly people with medium and below-medium income who limit their consumption in return as a reaction to the price increase. Another direct effect is the deterioration of the quality of life due to the fact that people cease to invest anymore in their own comfort and wellbeing.

From the data and observations presented within this paper, it is evident that a food crisis overlapping the global economic crisis will seriously affect household budgets and, implicitly, the food consumption. As a solution we can argue that: the lack of food products on the market could be resolved by motivating the domestic producers and by targeting the domestic market. Also, another controversial solution would be a larger production of genetically modified foods that have adverse effects on human health, but that might solve the problem of food scarcity. Therefore, public policies ought to consider encouraging the domestic production, the increase of foreign investment in agriculture, the increase of the levels of leasing and alienation of land, the increase of technology and invariably the reduction of prices.

THE DEMOGRAPHIC CRISIS AND ITS CONSEQUENCES

LIVIU RADU[*]
CARMEN RADU[**]

Abstract
The demographic decline can create major dysfunctionalities not only on a social level but also from the perspective of the economic-financial evolution of the world's states. The obvious aging of the industrialized states' population overlapping the import of cheap workforce in the developing countries can start mutations whose consequences are somewhat predictable but discouraging. First, an accelerated urbanization of the states is foreseen, second, the decrease of birthrates, negative external migration, increase of mortality and its stagnation in a larger value than that of the birthrate, and not least the population's aging will hinder a part of the developing countries to sustain a high rhythm of long-term economic increase. The social-economic consequences will be reflected in the labor market, the householders' amount of income as well as in the education's level. All these impose a rethinking of the public politics, especially of the social insurance's system and of the education, a reorientation of the economy based on the increase of specializing in production and productivity, as well as a financial stability unburdened by the politics' interference in the business environment.

Key words*: demographic decline, population aging, migration, urbanization, public politics, economic growth.*

Introduction

The demography represents the science which studies the human population's dynamics. It contains the size, structure and territory repartition of the population as well as the method in which this population evolves in time for the births, deceases, migrations and aging. We can demographically analyze societies' basics or we can refer only to groups defined after certain criteria: the level of culture and civilization, nationality, standard of living, religion etc.

Demography emerged at the same time with statistics (in the XIX century) and eventually separated from this last one in order to become an independent science with a distinctive domain of research and analysis. Demography represents an interference, frontier discipline. Through its research processes, demography belongs to mathematics, however through the analysis of the investigations' results it belongs to the field of social-economic and political sciences. At present, on an European and global level, demography records the most rapid progresses within the field of social sciences.

In 1878 within the second International Congress of hygiene, Emile Levasseur proposes the term of "demography" to designate a distinctive science. This term will replace the already acknowledged theories regarding social statistics, social physics or theories of the population. It was only after four years after this proposition that the term "demography" was officially included during the international Congress of hygiene and demography by describing the new science of population.

In the demographic study, quantitative and qualitative numerical data are used, which are gathered through censuses, questionnaires or through the mean of governmental institutions which offer statistical data regarding the population's changes (births, deaths, marriages, etc.). The demographic data can also result from media surveys carried out with a commercial purpose and based on methods of indirect estimation. The first modern census is considered to be the performance one that took place in 1790 in the United States.

The specialized literature has beneficiated throughout time of prestigious authors' theories and analyses: John Graunt (considered to be the first statistician and demographer through his work „Natural and political observations upon the bills of mortality chiefly with reference to the

[*] Lecturer, PhD, "Nicolae Titulescu" University of Bucharest, Romania (lgradu2005@yahoo.co.uk).
[**] Lecturer, PhD, "Nicolae Titulescu" University of Bucharest, Romania (cradu@univnt.ro).

government, religion, trade, growth, air, diseases etc., of the City of London" from 1662), Thomas Robert Malthus (the founder of the theory which carries his name, according to which the population is growing in a geometrical progression, while the sustenance means are growing in an arithmetical progression – as a consequence of this relation between the population and the economic state, Malthus considers poverty, diseases, epidemics and wars to be positive factors for humanity, given the fact that they insure the equilibrium between the population's number and the quantity of sustenance), Achille Guillard (defined demography as "the mathematical knowledge of the populations, their general moves and physical, civil, intellectual and moral states" – 1885).

The demographic studies do not have only one self-purpose, that of knowing the demographic evolution of a certain zone, country or even an entire terrestrial civilization, they are, however, mainly useful from the economic and political environment point of view, because the reports between the population and human groups and the production, repartition and consumption of natural resources and treasures can be tracked. These sorts of demographical analyses are also required from the social and economic politics point of view, for the knowledge of the tax payer population or from the perspective of the economic capacity and military potential of a country. The public politics of a government, including those regarding medical assistance, insurance system and pensions, increase their consideration for the demographical analyses, evolutions and prognoses.

The demographical changes from the last years have multiple consequences under an economic, social, political and durable development aspect. This study is aimed at emphasizing a part of these consequences and their implications on the governmental politics and strategies.

Theoretical background

In the year 1999, the UNO announced the birth of the 6th billion person on this planet (Adnan Nevic, born in Sarajevo). After only 12 years, on October the 31st 2011, the planet's population reached 7 billion inhabitants. In only 12 years[1] the globe's population increased with 16,66%. If we take in account the fact that the evaluations of the UNO statistics Committee's secretariat show that throughout approximately 70 years, from 1930 until 2000, the globe's population had tripled by gradually rising from 2 billion to 2,518 billion in the year 1950, followed by 3,024 billion in 1960 and at the end of the year 2000 exceeding 6 billion inhabitants[2]. The population's projection made by UNO's demographic division in 1958 proved to be a realistic one for the year 2000, being placed between the estimation limits of 4,88 and 6,9 billion inhabitants.

Furthermore, according to statistics, the globe's population will increase towards reaching nine billion around the year 2050 even in the situation in which the birth rate will follow the descending course foreseen by the UNO's specialists. They estimate a 50% decrease of the global population's growth rate, in relation to the one recorded between 1959 and 1999.

This growth is not equally distributed (figure 2) since it requires totally different approaches regarding the public politics aimed at all the aspects of economic and social life influenced by these demographic evolutions.

The global economy has been based until now on a growing population and this trend will continue in the developing states and only in a small matter in the industrialized states. Out of the strongly industrialized countries, it is only for the United States of America (312 million inhabitants in the 2010 census) that the specialists have a significant positive prognosis for the year 2050. On the other hand, the risks of overpopulation are real and much more serious than those of under-population.

The specialists from the "Vladimir Trebici" Demographic Research Center contend that the decrease of birthrates, negative external migration, increase of general mortality and its stagnation on a larger value than that of the birthrate are the main causes that lead to demographic aging. These tendencies are more accentuated in Europe especially.

The demographic evolution's main consequences are:

A. On a social plan:

1.The birthrate's increase in certain geographical zones and its decrease in other areas;
2.The birthrate's decrease in the strongly industrialized countries;
3.Infantile mortality;
4.Emigration and immigration;
5.The changes of consumption tendencies;
6.The population's aging;
7.The extending age of retirement;
8.The rethinking of social politics.

B. On an economic plan:

1.Substantial changes of production in certain branches and under-branches of activity;
2.Negative evolutions and tendencies of labor productivity in certain domains;
3.The need to adapt to consumption needs;
4.Changes in the technology of exploiting resources;
5.Differences related to the way of satisfying necessities.

C. On a political plan:

1.The changes of industrial power poles;
2.Conquering new areas of influence.

A. The consequences of demographic evolution on a social plan

The demographic decline and emigration

When confronted with a scarring demographic decline during the second half of the XX century, many strongly industrialized states in Western Europe tried to substitute the labor force

deficit by importing cheap workforce from poorly industrialized countries, especially from the Middle East. Consequently, large ethnical minorities were constituted and were unable of becoming socially and culturally integrated, a problem which still exists today, as it is shown by the tensions existing in the French society, for example. Although it is not a viable long-term solution, soon Romania will become an attraction point for immigrants from poorer countries that will try to occupy the niches left open in the labor market by the Romanian people that left. This is what happened in countries such as Italy and Portugal, which constituted for a long time sources of emigration and which have now become points of attraction for the Romanians on the lookout of winning opportunities. For the time being, the number of immigrants in Romania remains reduced (10 000 people in 2008, 5% more that in the previous year). The total number of labor permits released to foreigners was of 76,700 in 2008, with 30% more than in 2007. Out of these, one third represents citizens of countries part of the EU, 24 percent being from Italy and 18% from Germany, however the main origin country of immigrants in Romania remains the Republic of Moldova.

The most chosen destinations by Romanian emigrants are Italy, Spain and France, perhaps because of the similar and easy to learn languages. Romania is becoming more deserted and mediocre, thus reaching the point of losing its elites, which leave to continue their studies in greater universities such as Harvard or Cambridge. Romanians' migration is a phenomenon which no government can keep under control because of the lack of competitiveness. Hence, the labor force's migrations were and continue to be one of the main preoccupations of the Romanian government but without any efficient measures taken in order to combat this problem. Simultaneously, the migrations have a negative impact on the business environment, to this extent losing money along with the loss of people. Romania's population, estimated in 2002 at 21,680,968 inhabitants, will decrease down to 19.433.700 in 2022, and eventually will reach 18.136.724 in 2032. Romania's population has already reduced with more than 2,6 million since 2001, presently being represented by 19 million inhabitants, as shown in the latest census. The officials placed this accelerated decrease of population next to the reason that many have left the country in order to find a job in European countries such as Spain, Italy and France. The number of Romanian emigrants in the year 2009 (at the beginning of the economic crisis) was of 2769 million, which represented 13,1% of the total population. The money sums send in the country, in 2009, by the workers hired outside the country's borders, represented 4,4% of the GDP. When it comes to the deliveries during 2008 and 2009, Romania was surpassed only by Ukraine. The sums sent home by the Ukrainians throughout the two-year period exceeded 5 billion dollars a year. According to the data published by the World Bank, over 6,5 million Ukrainians live in foreign countries.

We are currently facing two problems. The first: Romanians are migrating from poor areas in the country to the big cities. Second: Romanians are leaving the country to find work places in other states of the European Union. Both migration trends provoke an enormous demographic erosion in the rural areas because those who leave are young, educated and professionally prepared. Those who remain in the country are either old, or without any training or talent. These cannot determine the Romanian economy's success. Referring to those who do return, however, in the country, they return from Spain and Italy, where the economy in recession, especially in constructions, is causing people to lose their jobs. As soon as the conditions will change, we will assist to their new departure from this country. Nonetheless, we must consider that most Romanians have accommodated in the countries they work in, their families are already there and returning in the country is not a solution for them.

For example, at the beginning of the year 2010, 439 people, young and old (48% of which were older), came back to 1000 adults, as opposed to 509 young and old people, as it was recorded in 1992 when the older population represented only 33 percent. The researchers from the "Vladimir Trebici" Demographic Research Center admit that the 65 years old population share…..(Cercetătorii de la Centrul de Cercetări Demografice "Vladimir Trebici" susţin că ponderea populaţiei de 65 de ani şi peste va creşte numeric până în anul 2015) a mancat cuvinte..And the results of the population's

projection confirm the continuation of the demographic aging process in the following decades, through the numerical and proportional decrease of the young people under 15 years old and the increase of the mature population.

The result of an analysis made by the European Committee, Romania's population has reduced with over one million people from 1992 and the prognoses indicate a decrease of approximately 2 million until 2020, especially for the young people with ages between 0 and 24, as shown by the experts from the Romanian administration. The birthrate has reduced, the number of young people with ages between 0 and 14 has dropped from 22,7 percent in 1992 to 15,9% in 2005, and that of old people over 65 years old has risen from 11 percent to 14,7 percent in the same time interval. The Romanian administration experts admit that the decreasing tendency of birthrates and the population's aging process will continue. The total number of live-births has drastically and continuously dropped from 1987 to 1995, when it stabilized for a while but restarted a new decrease from the year 2000 and lasted until 2002. According to studies made by the "Vladimir Trebici" Demographic Research Center, the number of live-births was with 40 percentages lower than in 1985. Starting with 1992, the deceases number constantly surpassed the live-births, thus contributing to the population's numeric decline. As far as the demographic aging is concerned, the specialists sustain that in less than two decades, every five Romanian inhabitant will enter the "elder" category.

The demographic aging

The demographic aging is a phenomenon that has been affecting modern states for several decades. The modernization has produced marking changes in the family structure, with significant demographic implications. As a result of the increasingly higher level of participation of women on the labor market and of the usage on a large scale of contraceptive methods, the number of births has significantly dropped and the family model that included a family with many children and fertility close to the natural one, has been replaced with the model that includes one or two children. On the other hand, the technological development has lead to new medical treatments accessible to the entire population. This matter, combined with the significant life quality improvement, has lead to the increase of the average life expectancy. In other words, in the industrialized states, people have begun to live longer than 50 years ago, but fewer and fewer children are being born, paradoxically, within the wealthy families.

The aging phenomenon is especially present in Europe and Japan. It is estimated that Europe has already reached a critical state: after one century of natural demographic growth, the perspective for this century is, on the contrary, a natural decline and an excessive aging of the population. A large part of the eastern European countries are already experiencing the demographic decline and numerous western countries will do so too in the near future. According to the UNO's demographic projection, the diminution of the population's effective will reach southern Europe in a couple of years, followed by Western Europe after 2010 and northern Europe after 2030[3]. The decline will be very scarring in Federal Russia, Eastern and middle Europe and more moderate in western and Northern Europe[4]. Some countries will be in advance or late towards one of the demographic processes. For instance, Western and Eastern Germany have already known a population decline in the mid '80s, as opposed to Ireland which, thanks to its high fertility, will experience the continuous growth of its population in the first half of this century as well. Despite the intensity and rhythm differences that will persist between various countries, all European societies have or will have to mainly face the same tendencies of demographic decline and aging. As far as longevity is concerned, everyone aspires to live a long life and in good health, but society has to provide a favorable environment for the old people, by continuing to ensure an intergenerational equity in all the social

[3] Les Tendances en matière de population en Europe et leur sensibilité aux mésures, des pouvoirs publics, Asamblée parlamentaire, mai 2004.

[4] Europa septentrională reprezintă Europa de nord şi cuprinde ţările scandinave şi baltice.

life's domains[5]. The population's tendency to age has a profound impact on all generations and on the highest parts of the economical and social domains: labor force, social protection, education, culture and politics.

Out of all the demographic evolutions, the increased 80+ age segment is also the most intense and most rapid one. Regarding this tendency, one might say that the various regions of Europe are not affected in the same way. The asymmetrical demographic impact represents by itself a challenge since it implies the politics' need to adapt to the regional realities. In some countries, such as Italy for instance, the overrepresentation of very old people is the result of the accumulation of the effects of high fertility between the two wars and the massive decrease of birthrates in the '80s. Given the life expectancy increase as well, we will assist in most part of the countries to a strong increase of the age 80+ group after 2025. It is also expected that the very elderly people (80+) will be part of the group that will experience the fastest growth. In the first half of the XXI century their number will practically triple, thus reaching 65 million, as opposed to the present 22 million. The highest increase rate is foreseen for the period between the years 2000 and 2015. According to UNO's medium projection version, in 2050 the very old people will represent 7% of Eastern Europe, 10% in Northern Europe and 12% in the south and west.

The implications are major for the society's functioning method in its ensemble. A first consequence resides in the fact that the dependent population, mainly composed of retired people and of children, numerically surpasses the active population and can lead in the future to society's incapacity to insure incomes for the inactive. To this extent, the first ones aiming towards a potentially collapse are the pension systems and the medical assistance, both large resource consumers and dependent on the active population's incomes. The population's aging process has been for several decades in the political agenda of all powerfully industrialized states, and the solutions adopted vary from keeping those that reach their retirement age as long as possible in activity, to stimulating fertility through the work program's flexibility and offering public children-care facilities.

Romania: demographic aging or demographic decline?

The demographic aging phenomenon is more accentuated in the rural environment than in urban areas, approximately 19 percent of the rural population surpassing the age of 65. The aging process will have negative effects in time. On January the 1st, Romania's population was of 21658,5 thousand inhabitants, out of which 48,8 percent were men. Romania's actual demographic situation is not an isolated case in the European context. The entire Europe has known evolutions similar to the one in Romania, however the decrease of fertility is more accentuated in the ex-socialist countries. At the end of the previous year, it was estimated that the global population surpassed 7 billion inhabitants and specialist considered that in the year 2050 the level of 9 billion inhabitants will be exceeded. According the specialists' expectancies, in the XXI century the world population will continue to grow but in a slow rhythm, after which, in the last decades, it has experienced an exponential increase.

Last studies confirm the scarring demographic decrease that our country is experiencing. Relieving the restrictions imposed by the communist regime regarding the family planning and contraception, as well the economical decrease through which the Romanian society has passed in the first years of transition, have led to the drastic decrease of birthrates. The fertility rate is part of the most reduced in Europe, even if from the beginning of the year 2003 a slight increase was felt, mainly in the urban areas. Demographic studies show that in Romania the number of children that are born is a lot under the one required for replacing generations. Unlike the strongly industrialized European countries, in Romania people are living less, the medium life expectancy being more

[5] Les tendances en matière de population en Europe et leur sensibilité aux mésures des pouvoirs publics, Asamblée parlamentaire, mai 2004.

reduced in comparison to states such as Sweden or Holland. Poverty, low access to medical services and lack of sanitary education represent only a part of the factors that explain this situation. Nevertheless, the number of children that are born does not insure the replacement of generations. Furthermore, it is expected that the economic and social development will raise the medium life expectancy. All these will aggravate the population's aging process. Beyond the population's "universal" aging process, Romania has been confronting in the last years with a powerful external migration. Although there are no official data referring to this phenomenon, the unofficial estimations mention almost one million Romanians that are working in Italy and another one in Spain. You can hear the Romanian language spoken everywhere in many European countries, which thus shows that the migration phenomenon for finding jobs in foreign countries is indeed a massive one. Those who leave are in general part of the active population, adult people with a qualification.

All these aggravate the country's demographic decline. The predictions made in this context by demographers are worrying. According to the United Nations Population Fund's estimations, Romania's population will reach 16 million inhabitants until 2050 if long term measures will not be taken. Practically, in 40 years the dependency rate will be of 1 to 9, meaning that one adult will have to support the vulnerable age groups (children and elders). This is the gloomiest scenario imagined; nevertheless it represents an alarm signal to which the required attention must be paid.

Romania's National Bank economists estimate that the demographic problems (the population decrease and aging process and the labor force migration) will hinder Romania from sustaining a high rhythm of long-term economic growth, the migration's demographic shock could be reversible but the birthrates' decrease, which began in 1992, cannot be compensated and will be reflected in the labor market starting with the year 2010. Moreover, the "demographic time bomb" concept is not a new one, as it is the main factor which determined the states to launch private pension systems in order to overcome the pressures which the population's decrease and aging will have on a global level on the public pension budgets.

Only seven countries could manage to reach economical growths above 5% for more than 20 years, among which are China, Ireland and Macau, but none of them had demographic problems. Romania cannot hope, because of the demographic problems, that it will reach such growth rhythms for a medium or long term. According to a study presented by Bianca PAUNA, representative of the Economic Research National Institute, the external migration represents in Romania's case 10% of the total population and almost 25% of the active population. As we previously emphasized, migration has as a main disadvantage the emergence of labor force deficit, which presently mostly affects the big cities in Romania. In accordance to the Eurostate data, the statistical division of the European Union, Romania will suffer until the year 2060 a dramatic loss of population – which will affect the public pension system and which will make private economy absolutely necessary. According to the same data published by Eurostate, Eastern Europe's population is aging more rapidly than the Western one. Consequently, the eastern migration will decrease and the ex-communist countries will have to find in the next decade new solutions for maintaining the rhythm of development.

Eastern Europe also has the most decrease rates of participation in the labor force by young people, women and elderly.

If the actual migration and demographic trends will be maintained, and the economy will not offer stimulants to investors and autochthonous labor force in order to remain in the country, Romania will not have the possibility to recover the economic discrepancies that separate it from the civilized world. According to a study made by the Institute for Population and Demography in Berlin, the most unattractive regions in Europe, from an economic and standard of living point of view, are in the rural areas in Romania, Poland, Bulgaria, Italy and Greece. The qualificative expresses a complex of factors taken in consideration for the study's elaboration: birthrate, economic development, population income, level of education, living conditions, migration etc. In three decades, a decent life, if not a prosperous one, and functional economies will be present in countries

such as Switzerland, Sweden, France, Great Britain, Austria and Germany. While countries like the Czech Republic, Slovakia, Slovenia and Hungary will be, in their turn, places with a certain degree of economic development. Even if they are facing the same problems, specific to their ex socialist camp, they have started the reforms early, are decisive towards their objectives and have allocated the resources necessary to reaching them. Dr Reiner Klingholz[6] - one of the authors of the German study, considered that the low score obtained by Romania, which placed it among the countries with an uncertain economic and demographic future, was calculated based on the indicators that quantify economy in general, labor market, housekeepers incomes, level of education etc. Even if the Romanian economy also recorded growth rhythms superior to European developed economies, the statute of a country that recently entered the European Union is noticeable since high development differences exist towards the old member states, as well as towards other ex-communist countries.

Depending on the human resources' dimension, four of the fifteen countries members of the European Union, such as Germany, France, Great Britain and Italy are large countries, two are part of the middle countries group (Spain and Holland) and the others are considered small countries.

Also, the diminishing active population also attracts the drastic decrease of labor productivity in economy. The specialists believe in the existence of methods through which the economic growth cannot be affected by this situation, such as the development of modern industry and services sector, simultaneous with the education's level improvement. Thus, the following question arises: how fast and especially how efficient can Romania invest in competitive education, service and industries, in order to insure decent living conditions for the aging population?

B. Romania's case regarding the demographic evolution's consequences on an economic plan

Eight, nine years ago, some authors[7] considered that the demographic crisis manifestation and the labor force's migration towards countries of the European Union represented a positive process through which national product can be formed, money can be brought in the country, a new culture and civilization model can be implemented or a business can be set on the basis of the accumulated incomes. Also, from a macroeconomic point of view, the migration's effects were beneficial because the small investors started and coordinated business in the country, created working places without private or public investing support from the national economy. The incomes created by this sector joined the internal consume fund, funds destined for development and, on some measure, for economy's budgetary resources. Also, the money transfers, with powerful implication on a microeconomic level as well as macroeconomic, were considered another positive effect of migration[8]. Regarding these transfers, Romania's National Bank's estimations reached 1.753,5 billion USA dollars in 2004 and 4.440,9 million USD in 2005(4), which represents 4,51% of Romania's GDP for the year 2005. The effects of the money transfer on a macroeconomic level are difficult enough to be measured because of the multiple interactions on the macroeconomic variables level. These transfers have visible effects on investments and economies. The most visible impact of these transfers is recorded on the home's expenditures, which is highly important on a macroeconomic level, being recorded in the internal aggregated demand, part of the GDP. The money transfers towards homes represent direct sources of income increase, which leads to the

[6] Dr. Reiner Klingholz, director al Institutului din Berlin pentru Populaţie şi Dezvoltare, a descris provocările cu care se confruntă sistemele sociale datorate natalităţii în scădere şi creşterea numărului de persoane care sunt în vârsta de pensionare la Diplomatenkolleg - 16 februarie 2012.

growth of consumption and implicitly to the temporary reduction of poverty. These sums have the capacity to reduce the social polarization through their redistribution effects.

After a while it was considered that that category of Romanian people existed that left the country to work, people disappointed by the lack of opportunities in this country, the poor living conditions and the low degree of civilization. The most often encountered economic motives are related to the low salaries as well as the lack of working places. Another complaint is related to the number and level of imposed taxes, which do nothing more than deepen the citizens' level of frustration and the business environment. The minimum economy wage, unemployment aid and social services do not compare to their level offered in other countries. The politicians that gained power in the last period have not managed at all to change the situation. Everybody considers that the educational system must be strongly improved so that the Romanian elite will not leave the country but in spite of this, nothing is happening. More and more young, well-educate people but members of separated families or with reduced incomes, choose from more and more younger ages to leave in foreign countries.

At the present we can notice the dramatic potential of the well qualified labor force that Romania has to generously offer to foreigners. The Romanian state spends approximately 10.000 Euros for every citizen before hiring him, for those that stay in school until the age of 18. Among others, the money is spent for education, transport and social services. In addition, the sum spent for those that finish university studies is almost doubled. This is why when a qualified worked leaves, a corresponding restitution of the investments made for his professional training is less likely.

Today, Romania's labor market[9] is characterized by a rate of relatively low activity compared to the EU's medium, high rates of unemployment for the group ages of 15-19 and 20-24, a high percentage of early retirement from the formal labor market and a significant degree of occupation in the agricultural sector characterized by the lack of taxpaying. Also, in the occupied population's structure split into sectors, a few negative tendencies manifest[10]:

- the increase of the population working in agriculture, associated with the emphasized demographic aging process and the feminization of this branch and the rural environment;
- the decrease of the population involved in industry and agriculture, with direct effects on the ensemble economic results, on the human factor quality, labor motivation, economic and social efficiency;
- the extremely slow evolution in proportion and rhythm, unequal on branches, of the population occupied with services;
- the exports decrease (as a result of the internal production decrease), the artificial support of the national currency.

This evolution was the result of the simultaneous action of numerous economic, demographic and social factors. Between these, the highest share is represented by the economic factors and, above everything, by the economic organism's restructuring, which led to an accentuated economic decline. In consequence, in Romania's labor market more types of unemployment exist (conjectural, frictional, as well as other types that, naturally, are present in a "settled" market economy), but the most predominant is the structural one. In this context we must not forget the influence of a demographic factor. The unemployment, as a result of the game between labor force supply and demand has risen, on one hand through the compressing of the first, and on the other hand through increasing the second one through: a) *the massive redundancies* of the occupied labor force (over

[9] Programul de convergenţă pe 2008-2011 elaborat de Guvernul României în mai 2009.

60% of the unemployed people number); b) *the new presence* on the labor market of some labor force contingencies – graduates of the secondary and superior school system and, in addition, of other categories of unoccupied population.

C. The demographic evolution's consequences on a political plan

On a global level, the demographic situation is in full evolution. This phenomenon is reaching all states of the world. If in order to reach 2 billion inhabitants, 130 years were required for the world's population (1880-1930), in order to surpass from 6 billion (1999) to 7 billion (2011), only 12 years were required. This evolution is different from one state to another, from one region to the next. In the last decades, the world's population has known an accelerated growth, especially in the developed states. In Europe a great demographic tendencies diversity is observed, which is characterized by a diminished population in Germany and Russia and, on the other hand, a rapid increase in France and Great Britain, mainly caused by migrations. To this extent, it is important for the demographic challenges to be transformed into opportunities of such matter that guarantee a durable economic growth and international security. The population's scheme of growth is very different in the developing countries or underdeveloped and developed countries. In the first case, demography is characterized by a strong proportion of young people that represent more than half of the population. The enormous proportion of young people in these underdeveloped regions, often instable, imposes a great social burden and serious problems of the governments' infrastructure that have no means of offering them education, social services, homes and lasting work possibilities. On the other hand, if the young ones do not find a working place in their country they tend to emigrate, heading for Europe or North America, where they hope to be able to work and be better paid than in their natal country.

Simultaneous with the numerical growth, the global population is aging. According to projections, until 2050, the number of people over 60 years old will triple on a global level, thus reaching 2 billion individuals. Europe, according to the same source, will have a larger number of elderly people, which will maintain for several decades. Indeed until 2050 more than one third of the European population should surpass the age of 60. This situation will impose major changes in politics and the attitude towards age. We are talking about the social protection and the medical assistance which these people over 60 years old regularly require more. The developed countries are facing the aging of their populations. The rate of births is a lot under the developed countries. UNO foresees that the number of 60 year old people and higher, in the developed regions of the world, will increase from 245 million, in 2005, to 406 million, in 2050, while the number of those younger than 60 will diminish from 971 million, in 2005, to 839 million in 2050[11].

A special place among the demographic phenomena is occupied by the urbanization. According to the UNO reports, 60% of the world's inhabitants will be living in cities by 2030 (70% in 2050)[12]. In 2008, the global urban population equaled the rural population level. It is foreseen that due to the demographic growth, the majority of the population will be in urban areas. The demographic projections presume that the number of townsmen will reach 4,9 billion near 2030 and the number could reach 9,2 billion in 2050. The cities will totally absorb this increase and will continue to attract people from the rural environment in search of a better and well paid working

place. This demographic growth will be concentrated in the urban areas in less developed countries, especially in Asia, Africa, Latin America and Caribbean[13].

In parallel with the globally urbanization, we are assisting to the expansion of cities with more than 10 million inhabitants. In 2007, 19 such cities existed, number which should increase to 27 until 2025; 80% of these cities are situated in developing countries. These already huge cities, which will literally be taken by assault by a multitude of new residents during the next decades, will suffer various calamities such as poverty, road block and pollution, as well as critical transport services and questionable living conditions. As a result, the poor townsmen will often live in insanitary homes, without water, electricity or sewerage. Uncontrolled urbanization and growth of megalopolises will generate security problems. The large cities expansion will basically reach the shore regions situated at less than 100 km of coast.

At the present, 60% of the world's inhabitants live at less than 100 km off shore and 70% at 320 km from the sea. These regions are exposed to environment threats such as hurricanes and floods. Taking in consideration that the majority of large cities are in developing countries, they will lack infrastructures and sanitary homes. The development of these countries will put pressure on the municipal installations and state institutions. The competent governments that have sufficient resources will probably manage to insure a good management, but the townsmen from poorly developed states and fragile countries will probably suffer repercussions because of the absence of financial means and of adequate infrastructures. The global urbanization will continue. The big cities' deficiencies in underdeveloped countries will increase the risks of diseases, pandemy and humanitarian crises, thus emphasizing the more and more urbanized character.

Conclusions

The measures that the EU expects in order to support the defiance of the population's aging are circumscribed in mainly general frame, out of which components we mention[14]:

- The population's aging requires a complex political approach, by also including the aspects related to economy, occupation, social problems. Societies must not only guarantee the supply of an adequate frame for elderly people, but also economic and social viability in an old world. The politics related to this domain must take in consideration the entire complexity of interactions between demography and society. The EU's responses to the aging population's challenges are part of the global strategy launched by the European council in Lisbon and confirmed afterwards by the councils in Nisa, Stockholm, Götteborg, Laecken;
- States must act now in order to resolve problems because later on the solutions will complicate. The cost of corrective measures is higher;
- Adaptation politics are required as much as change politics. The reactive type of politics tend to adapt society's structures to the demographic evolution, the politics based on change aim at modifying the demographic factors in order to obtain the effectives wanted by the population and a composition of equilibrated ages. They do not exclude each other, instead they can be integrated in various combinations;
- Substantiating politics in regard to aging must be based on the course of the entire life and on society's ensemble. Adapting to the population's aging concerns people of all ages, thus increasing the politics' degree of adequacy through including measures that take in consideration the requirements of people from all age groups. All generations will have to contribute to finding solutions and means of adaptation. The objective must be "a society for all ages";

[15] *Nations Unies, Perspectives d'urbanisation mondiale: révision de 2007*, New York, Nations Unies, 2008, pp. 1, 2, 4; *Gouvernement des États-Unis, Joint Operating Environment Trends and Challenges* for the Future Joint Force Through 2030, Norfolk, United States Joint Forces Command, décembre 2007, p. 15.

[14] Ana Bălaşa " Îmbătrânirea populaţiei: provocări şi răspunsuri ale europei interesul uniunii europene pentru îmbătrânirea populaţiei. Scurt istoric".

▪ The politics and practices are based on what is called active aging (oldness), which involves the education and shaping throughout the entire life, the later and progressive withdrawal from activities, the practice of activities that preserve capacities and health. This also implies reducing dependency and just as well reducing the costs of withdrawing from activities and those of health care;

▪ Integrating the dimension of equality between men and women. Aging is a phenomenon characterized by important differences between men and women.

Taking in consideration the long-term demographical hypotheses, the increased fertility rate is essential for ameliorating the scenery which, in the actual given conditions, includes a rapid aging rhythm of the population. To this extent, Romania's government adopted the 396/2006 Law regarding the offer of financial support for constituting a family, which includes the offering of 200 Euros for every family with the condition that both partners are at their first marriage. Furthermore, with the purpose of increasing the birthrate, the no. 148/2005 OUG (the government's emergency ordinance) was modified so that families will receive support for raising their children, by introducing the option with which the monthly allowance of raising the children is 85% part of the monthly average of the professional incomes from the last 12 months (but 4000 lei maximum) or 600 lei and an additional monthly stimulant of 100 lei. Also, mothers beneficiate of maternity vacation for raising the brat for two years or, in the case of a child with disabilities, up to three years[15]

The main objectives of the health system's reform are:

▪ insuring an adequate financing of the sanitary system so that the population's needs are fulfilled as much as possible;

▪ decreasing costs for hospital medical assistance by improving the management of the hospitals that function on the principle of financial autonomy;

▪ increasing the ambulatory medical assistance's capacity to resolve the population's health problems, inclusively by insuring family medical cabinets with computing technique, computational programs and communication services;

▪ creating and consolidating the national system of urgency medical assistance and qualified first-aid.

On behalf of insuring the financial resources, the following measures have been or will be adopted:

▪ multiplying resources in order to increase the tax payers number;

▪ regulating the performance of the private (additional) health insurance system in order to diversify the resource base and increase the competitiveness within the system;

▪ introducing and completing the concept of co-payment and minimal health services package.

The additional implication of the private sector in providing medical services is essential for reducing the pressure wielded on public resources and for improving the medical services' quality. An additional source for investments was insured by introducing in 2006 the vice tax, with the purpose of combating the excessive consumption of tobacco products and alcoholic drinks, improving the infrastructure of the health public system and by financing health programs.

Other economic measures for overcoming the demographical crisis can involve reorienting the economy towards unique services and products with global impact, increasing productivity, encouraging the development of industries that can create a high added value, increasing specialization in production.

GOOD GOVERNANCE AND ECONOMIC DEVELOPMENT IN THE XXI CENTURY

EMILIA CORNELIA STOICA[*]
ANDREI CRISTIAN STOICA[**]

Abstract
Nowadays, information, goods, people circulate and brew. The evolution of science and technology, market and capital dynamics, the generalization of models of development and living, these changes affect the relationship with the biosphere and threaten its balance at the same time the one becomes aware of the complexity and probably their fragility. Governance, from local to global, is at the heart of those quantitative but also qualitative changes. Governance is the complex regulator system of the human society which manages both the internal and relations with the outside world, which at the same time guarantees the stability and allows adaptation. Governance is an architecture, a set of practices born of practical challenges that societies face, forming a system that allows to formulate general principles. Stating general principles of good governance will help to build a stable and sustainable society, the common frame of reference against which one can lie and act within and outside the public service. Thus, the governance is based on a territorial approach and the principle of active subsidiarity. Governance been based on a universal ethic of responsibility, it puts the economy in its place and defines what is the market and what does not belong, defines the cycle of development, implementation and monitoring of public policies, organizes cooperation and synergies between actors.

Keywords*: good governance, public management, sustainable development, democracy, budget, public authorities*

1. Introduction

Nowadays, the level and extent of interdependence between human beings, between companies, between humanity and the biosphere have radically profoundly changed and to meet new economic, social, cultural challenges, public authorities need to think a new state management architecture.

With globalization, information, goods, people circulate and brew. In addition, technological advance, opening markets, capital flows, the adopting models of economic and social development lead to the establishment of new relationships within society and the natural environment.

Public management is a system which regulates the life of a complex society, both within the country and in its external relations, guaranteeing stability and allowing them to adapt to international changes.

In the capitalist system, governance shows four major components: the corporate, the market, the central public authority and the political system of representative democracy, each of these components having a specific role. The primary role of corporations is to produce goods and services, organizing and utilized labor, technology, capital and information. The market is the place where is facing supply and demand of goods, labor, capital. Public authorities have the responsibility to manage the public sector to provide public services for a decent living for the population, to implement appropriate economic and social policies, while a representative democracy defines the rules establishing and implementation of the will of people.

On the other hand, the extension of what referred to as globalization can exacerbate social inequalities and increase the risk of damage to the natural environment. Consequently, the four components of the governance - corporate, market, public authorities and representative democracy –

[**] Associated Professor, PhD, "Nicolae Titulescu" University of Bucharest; PhD, Ministry of Finance (andrei.cristian.stoica@gmail.com).

there are not enough to meet an environment conducive to the development of emerging and developing countries.

Therefore, at the beginning of the XXI century it is necessary to develop a new vision of governance, to be able to balance economic activities, human resources and environmental protection.

1. Governance and democracy

Globalization offers new opportunities for all countries to benefit effectively from the liberalization of trade, investment, capital flows and technological change, to engage in the dynamics of global economic integration. However, it submits the majority of developing countries, constraints and challenges mainly due to obvious gaps in governance that prevent them from enjoying full and equal opportunities.

We can define the governance as a process where a board of individuals works to assure the legal and moral health of an organization. Governance is the set of rules and procedures organizing reflection, decision and the enforcement of decisions within a social body.

Nowadays, governance has come in force as a vitally problem in developing countries both for foreign investments and for official development assistance providers. Essential element of a sound management, the good governance based on the principles of transparency, participatory democracy, consolidation of civil society, the elimination of corruption, and capacity building. Democratic governance is a key to development. The major role played by institutions, rules and political processes in economic growth and human development are now recognized.

Governance is an area where nobody has a recipe or methodology defined. Beyond universal principles, each country is engaged in a specific process, both the result of a particular history and a set of equilibria, and issues of power relations between actors in constant evolution. Separation of powers and the independence of the judiciary are among the pillars of any democracy. The system needs to ensure equitable access of litigants to its services but should also contribute, through impartial and neutral justice, to create a climate of confidence conducive to political openness, economic, cultural and social. Recruitment of professional civil servants on the basis of objective criteria, the development of systems and legislation to fight against corruption, the training of officials on best practices for efficient provision of public services.

There is a close correlation between governance and development, and an international consensus on the need to improve the overall level of governance as the ultimate end and the principal means for sustainable development.

Democracy is directly related to the idea of the governance that must comply with the needs of individuals and not the reverse. The principle of election, and therefore the responsibility punishable, is a fundamental element of democratic governance. But elections do not feel enough, democratic governance also requires a legislative body that represents the people. It requires an independent judiciary capable of enforcing the rule of law equally to all citizens. It requires professional security forces and politically neutral and serve the people. It implies that accessible media are free, independent and impartial. And finally, it relies on an active civil society, able to challenge the government and offer different modes of political participation.

2. Good governance – pillars and shortcomings

Good governance rests on several pillars, but also faces some shortcomings and risks that can significantly impact negative social and economic life of society

- Integrity as a system of rules and values governing the responsibility of safeguarding resources and public assets and ensure their efficient use. Speaking of the bill requiring that we accept the principle of separation between the public authority and administration, it can both rebuild a government on principles of good governance and preservation of the leeway of politicians. The

fundamental problem is indeed the delegation of powers to avoid any risk of political interference in administrative decisions.

- Transparency, essential to ensure public access to accurate and up to date with the possibility of diffusion. Respect for human rights, particularly of national laws, is a sine qua non of a state of law. Every citizen must feel safe in society. If intimidation, threats, the culture of impunity is excluded, then everyone will assume his role at best civic and democratic. The organization of security through a police efficient and integrated is not so much a matter of public policy a necessary step towards effective democracy. It guarantees peace and rule of law.

- Integrability as collective commitment to ensure broad participation of all actors in society in the preparation and implementation of public policies. Administrative decentralization is to recognize people the freedom to manage their own affairs, clearly refers to the idea of the local democracy. It implies a radical revolution in the mode of administration of the territory. Decentralization represents one of the pillars of the democratization process in creating space taking into account local principles of participation, transparency, pluralism, separation of powers, fair and transparent management of resources and state of law.

- Empowerment and accountability in order to ensure optimal management of human, material and, of course, financial resources and link achievements with the objectives set. No country in the world can sit a public authority without credible set up a public finance system efficient and effective. Proper management of public funds is part of responsible and democratic governance. Ideally, the public policy of a government is reflected in strategic plans and then reflects a budget. Budget preparation, execution, and monitoring are therefore important actions to ensure the quality of public management. A government must have a complete view of its revenues to allocate its resources well, ensuring efficient management of cash flow and improve control systems and audit. A system of public finance more efficient is also an important factor to increase aid donor countries. In addition, it allows the help to better integrate into government systems rather than through parallel systems.

Of all the aspects of good governance, improving efficiency and increasing financial responsibility (accountability) in the public sector are considered essential elements of a framework for economies to prosper. Since the mid-1990s, the role played by systems of public expenditure management has benefited increasing attention as a tool of governance. At present, good governance is primarily gauged in terms of the degree of transparency in decision making and implementation of policy and through the communication mechanisms of financial responsibility of governments and their proper functioning.

Several shortcomings and failures taint governance in a country and at all system levels, including:

- Lack of participation and integration of all components of society and territorial spaces in the path of development. No effective democratic governance cannot do without half the world's population. The principle of equality between men and women is rooted in each legislative defines international human rights. Yet, access to different levers institutional, economic or political is more difficult for a woman than for a man. They are more exposed to poverty and human rights violations while hitting discrimination in education, at work or in social relations, undermining the democratic principles that should guide the rule of law. However, their contribution is essential in the development and democracy.

Certainly, to ensure an optimal allocation of the aid, recipient countries must have mechanisms fiables and democratic structures to manage these financial supports. But this requirement applies to all players support, i.e. also donor countries. Harmonizing their practices by aligning local strategies, they participate in the democratic governance of development aid.

- Lack of responsibility and accountability on the part of managers of public affairs. The weaknesses in internal controls and audits increase the risk of misuse and misappropriation of funds. This then leads to risk the loss of confidence placed both in the state and in the public services.

Approximations and poor management of all public funds available also to a large extent, influence the attitudes of external partners. Management disorder finances no incentive to increase the volume of aid, or simplified procedures for granting his first.

- Failure to mark the judicial system. The legislative omissions, absences of normative standards or deficiencies normative standards under the requirements of the Constitution were not considered as such by the Constitution or by organic legislation can cause great damage to civil society.

- Corruption as one of the manifestations of bad governance. Corruption in government can be a major obstacle to economic growth in that it discourages investment. The financial cost of corruption is clearly felt and recognized by service users. Shortcomings in the practices of the public sector create entry points for corruption and are a key factor to the lack of integrity of public agencies. Even if the information gathered reveals major problems of governance, the overall diagnostic investigation indicates that the government agencies maintain procedures and controls relatively strict decisions about staffing and budget.

Good governance requires a systematic approach to improve the functioning of public institutions. Although the results of the diagnostic survey highlight the weaknesses within the state structure, it should be noted that to improve performance, reforms are needed at both utility providers and users. In general perceptions, households classified government and themselves, citizens, as two agents contributing to corruption.

The performance of the public service in terms of quality of service and integrity of institutions, are determined in part by the procedures governing the activities of officials. They relate to operations concerning the budget and staff, recognition of merit in recruitment and promotion, oversight mechanisms and channels raise reactions (feedback) of service users.

Service quality has a direct link with poverty reduction. The availability of efficient public services, good quality, reliable and accessible is a key element of improving the living conditions of the poor. If households believe that public services are inadequate, unreliable or corrupt efforts against poverty suffer.

Transparent and regular budget resources are a key indicator of good governance. The application of good independent audit mechanisms to monitor the process of budgetary decisions is essential to ensure transparency and proper management of public funds.

How public sector institutions manage tenders, contracts and acquisitions is an important aspect which provides an indication of the level of efficiency and transparency.

As part of an evaluation of the quality of a public service, it is important to know whether the service providers consider citizens as users or clients of the service. It is useful to define as citizens to instill an ethic of public service based on the needs of citizens as users of a service.

Poor governance and corruption contribute to increasing the problem of citizen security. The poor performance of the justice system and the lack of public confidence in the ability of law enforcement, are forced high.

Private companies can be affected in many ways by the activities of governance and regulation. Regulations and policies are necessary but can often become unnecessary barriers. The lack of transparency can help to create confusion and distortion, while corruption at government level can distort markets.

Misunderstood regulations, misapplied or poorly designed ones can create difficulties for companies and, therefore, affect the growth and economic development. So that regulations become too cumbersome and unsuitable for businesses, a regular process of consultation between the persons and entities affected by the policies and regulations and those who write is desirable. This can be used not only in the preparation of better regulations but also to corporate information on changes in future regulations that might affect their products or production methods to enable them to make the necessary adjustments to comply .

Clarity and transparency of government actions are not only important for consultation and information on regulations and policies, but also to the process of advertisement and public procurement.

Regular and independent auditing procedures and administrative decisions concerning the budget is one of the hallmarks of good governance.

Transparent and regular consultations between users and providers of these services, or between regulators and objects of regulation and populations concerned, are another feature of good governance. Careful governance and integral implies that a citizen would want to complain or make suggestions regarding the provision of a particular public service.

To implement the principles of good governance have been issued several rules in legal and regulatory framework of each country, such as:

- Public services are organized on the basis of equal access of citizens of fair coverage of the national territory and continuity of services. They are subject to quality standards, transparency, accountability and responsibility, and are governed by the democratic values and principles enshrined in the national legislation.

- Agencies responsible for achieving and / or distributing public services perform their duties according to the principles of rule of law, neutrality, transparency, probity, and general interest. They monitor comments, suggestions and complaints of citizens.

- They reflect the management of public funds in accordance with the legislation in force and shall be subject, in this respect, the obligations of monitoring and evaluation.

- A charter utilities fixed all the rules of good governance on the functioning of government, regional and local authorities and other public bodies.

- Any person elected or appointed, exercising a public office shall establish, in accordance with the procedure established by law, a written statement of assets and assets held by it, directly or indirectly, upon taking office, during activity and upon termination thereof.

- The authorities in charge of good governance are independent. They have the support of state bodies. The law may, if necessary, create other regulatory bodies and good governance.

Conclusions on good governance and sustainable development

The concept of good governance has two terms: the adjective "good" and the noun "governance", which means the way of managing public affairs. When this management is done well, we talk about good governance, in the opposite case, we speak of bad governance. Regarding the specific content of this good management and public affairs in question, that is to say, therefore, the concept of good governance itself is the subject of two designs. The first design is the fact that the very institution that has designed, birth, and promoted the concept of good governance, that is to say the World Bank (WB), which brings good governance simply economically sound management, transparent and effective of public funds.

This design known as technical manager, because highlighting the sole criterion for effectiveness of methods of economic management without any consideration of the socio-political environment within which these management methods, is thus reduced to an exclusively accounting and financial good governance: managed economically sound, transparent and efficient, and that public money available to the states by bilateral donors and multilateral agencies should initiate a process of growth and development . Adjustment that WB advocates in this context is, therefore, a purely economic adjustment. Of course good governance is under good economic governance, but economic issues, as they are culturally, socially, and especially politically located, cannot be treated ex nihilo, that is to say, without consideration of the context and environment in which they bathe and with which they have dialectical relationship positive or negative

The last two decades democratic demands have taken their account and popularized the concept of good governance in the context of a new design that transcends that of WB. According to this second design, good governance is not only a question of economic management, it also assumes above all a political system based on liberal democracy and the rule of law. In other words, it

assumes ideological pluralism, multiparty, separation of powers, universal suffrage, the legal equality of citizens, respect for human rights, an independent judiciary, a liberal state, the possibility legal certainty for citizens to attack the state and its agencies to justice, transparency in the management of public affairs, the association of this population management, in particular by means of consultation and administrative decentralization, accountability, the fight against corruption. This second design devotes a broadening of the concept of good governance, and this expansion is in line with the politicization of the concept. Good governance sought here is good democratic governance, which is at the political level. In short, with this design, policy adjustment is added to the economic adjustment to complete and ensure success.

Turning now to the notion of development, it is often perceived as the situation in a country where economic growth is faster than population growth. The link established between economic growth and development that today it is generally equated with that one measured in terms of Gross Domestic Product (GDP), and in fact, it is generally considered nowadays as developed countries are those whose GNP per capita exceeds $ 5,000. But economic growth and development do not necessarily coincide. We talk about economic growth when there is an increase over a long period, the real GDP per capita. Growth appears as a quantitative concept because to evaluate in terms of GDP. It differs development, which is a qualitative concept, although it is are two interrelated phenomena. The qualitative nature of the development means that it boils, specifically, a qualitative improvement in the level and living conditions of the vast majority, at least, of the population in the areas of food, housing, transport , communications, education, health, leisure, freedom, employment, etc. Development, in the full sense of the term, is not only the economy, it is a global phenomenon because concerns areas as diverse as the cultural, social, political, economic, technical, the individual rights and freedoms and collective, etc. In conclusion, we can say that the true development means the development of the population of a given society, and that the intellectual, cultural, social, political, economic, material, etc.

THE RECEPTION OF A CONTROVERSIAL PLAY – *EVANGHELISTII* – IN POST-COMMUNIST ROMANIAN SOCIETY

CARMEN D. CARAIMAN, LECTURER, PHD*

Abstract

In this paper we intend to present the reception of the play Evangheliştii [The Evangelists] (published in volume in 1993 and represented on stage in 2005) written by Alina Mungiu Pippidi in post-communist Romanian society. In the interpretation of this topic we have considered the author's artistic goals in relation to the "horizon of expectation" of the Romanian theatre public, as well as to the reaction that critics and institutions outside the world of theatre, such as the Orthodox and Catholic Churches, and local public institutions, had as regards its publication and stage representation.

Thus, we have pointed out the clash and the gap that exist between the author's postmodernist approach to religious faith (i.e. the deconstruction of the Christian ideology) and the often wrong reception of the play's topic coming basically from the Church and in part from the theatre audience. The reception of this play in post-communist Romania is analysed in relation to the rigid, formalist perspective on art shared by an important part of the theatre audience.

One of the main conclusions we have drawn is that the openness degree of our society members to the freedom of artistic creation illustrates, in fact, the degree of civilization and, implicitly, of tolerance which we have acquired up to a certain point in time as a society, especially that today our country is no longer totalitarian and, in consequence, no artistic manifestation can be censored by any ideologies coming from the public space.

Key words: *deconstruction of religious ideology, agnostic dramatic discourse, post-communist Romanian theatre audience, "horizons of expectation", aesthetic freedom vs. religious ideologies.*

Introduction

Alina Mungiu-Pippidi[1] has an international reputation as a Romanian academic, and is one of the most prominent voices of Romanian civic society. Her literary activity dates back in the 1980s. As a prose writer and playwright she has enjoyed favourable critical receptions coming basically from renowned critics, a fact that is true including for her most controversial literary work, i.e. the play *The Evangelists*, which, however, confronted with harsh criticism coming basically from church representatives, local public institutions, and rarely from writers and critics[2].

So far Alina Mungiu-Pippidi has published two volumes of theatre (*The Death of Ariel*[3] and *The Evangelists*[4]). In 1992 the play *Evangheliştii [The Evangelists]* was awarded the distinction of "the best Romanian play of the year". Four years later, in 1996, the play was published by Modern International Drama in New York and later on it was represented on stage at Tătăraşi Athenaeum in Iaşi on 3rd December 2005[5].

---

* Carmen D. Caraiman, Lecturer, PhD, Nicolae Titulescu University of Bucharest (cdcaraiman@univnt.ro).

[1] Alina Mungiu-Pippidi founded SAR (Romanian Academic Society), is an expert of the European Commission and frequently participated in conferences organized by renowned universities (Oxford, Stanford, Harvard, and Princeton).

[2] Most literary critics that wrote about *The Evangelists* appreciated that this work of art deserves the prize of the best play of the year (1992). Few Romanian intellectuals, however, such as Teodor Baconski, Adrian Papahagi, Academician Constantin Bălăceanu- Stolnici, regarded the play as heretical.

[3] Alina Mungiu-Pippidi, *Moartea lui Ariel,* (Bucureşti: Editura Unitext, 1997).

[4] Alina Mungiu-Pippidi, *Evangheliştii*, (Bucureşti: Editura Unitext, 1993; see also the latest edition: Alina Mungiu-Pippidi, *Evangheliştii*, (Bucureşti: Editura Cartea Românească, 2006).

[5] An interesting detail in this respect is the fact that *The Evangelists* was first represented by the actors from Iaşi Tătăraşi Athenaeum under the coordination of Benoit Vitse in Hungary and only afterwards in Romania (see Alina Mungiu-Pippidi, „Interviuri", in *Evangheliştii*, (Bucureşti: Editura Cartea Românească, 2006).

The courage of re-interpreting and deconstructing the history of a millenary, internationally widespread religious ideology – Christian ideology – by projecting it into the time of Jesus and the Apostles and viewing it through the voice of the central character (Cherintos, a Greek sophist), who relates it to the universal world of ideas, to doubtful, ironical criticism and rational deduction, all have been interpreted as reflecting a boldly heretical attitude on the part of the author. Nevertheless, the writer's intention was to approach a millenary ideology in the form of theatre, the theatre of ideas.

The writer describes *The Evangelists* as "an exercise meant to deconstruct a social construction of a religion /…/ it is a play about propaganda"[6]. The text asks questions such as: How can we be certain that old sacred texts were written through the inspiration of God? How reliable is history since those who wrote it were either subject to the time rulers or were paid to write in a certain manner and with a certain political goal? Does the miracle recorded at the end of the play (Jesus stands and walks, though stabbed by Paul, and promises Maria Magdalena to go with Him to Heaven) represent the author's acceptance of the Christian truth? Is there any topic that should not be approached by playwrights for fear that it might sound heretical or agnostic to the Church? Is it appropriate for theatre productions to be construed by the Church? How influential have religious ideologies been in society? Have religious ideologies been subjected to modifications that were meant to inculcate their supporters certain mentalities and behaviours so that they could be more easily manipulated?

Paper Content

The reception of *The Evangelists* considerably depended on the audience's "horizon of expectation"[7], in our case – the Romanian post-communist theatre audience that prior to December 1989 had been accustomed to a rather *rigid* dramatic discourse[8], as Miruna Runcan pointed out in her study *Teatralizarea şi reteatralizarea în România (1920-1960) [Teatralization and Re-teatralization in Romania (1920-1960)]*. According to Miruna Runcan and C.C. Buricea Mlinarcic, the revitalization of Romanian theatre starting with the 1960s generation led to the creation of a *rigid canon*, from which the Romanian theatre audience found it difficult to "escape": "What the 1960s founders intended to be a normal and healthy process of authentic theatrical freedom of expression, including the challenge of the spectator's imagination and direct reflexivity, became after 1990 an *undeclared canon of aesthetical self-sufficiency*."[9] In consequence, the Romanian theatre audience was – when the play was published and represented on the stage – unprepared to perceive the author's message properly for it was stuck in the former canon created by the famous golden generation of stage directors and actors that had gained an outstanding reputation before 1989. Thus, the audience was aesthetically instructed but only up to a certain extent for it had been kept away from multiple experimental forms of theatre.

In our hermeneutical approach we have considered - in accordance with Hans Robert Jauss' theory on reception - the *three parties* involved in it: the author and her artistic goal, the play (the text), and the post-communist Romanian theatre audience. In order to point out the clash between the author's artistic goals and the audience's *horizon of expectation*, we have first of all considered the writer's declarations regarding her intention to approach such a topic in her playwriting, and also the temporal, social and cultural context in which this religious issue was developed. In the interview

[6] In original: „*Evangheliştii* este un exerciţiu de deconstruire a contrucţiei sociale a unei religii /…/ este o piesă despre propagandă." - Apud Alina Mungiu-Pippidi, cap. *Interviuri*, *Arta nu poate merge în vârful picioarelor de teamă că va deranja pe cineva*, în vol. *Evangheliştii*, (Bucureşti: Editura Cartea Românească, 2006), 123.

with Emilia Chiscop[10], Alina Mungiu-Pippidi gives information about the time when she considered writing this play, i.e. around 1988 (a year before The Romanian Revolution in December 1989). In this interview, Alina Mungiu-Pippidi mentions her interest in the phenomenon of history falsification, and in the role played by intellectuals in society. At the time she was a psychiatrist (who faced human suffering daily) and a journalist (who was aware of the moral degradation of the intellectuals). Alina Mungiu-Pippidi draws our attention to the novel *Ultima cruciadă*[11] *[The Last Crusade]*, which she wrote between 1987 and 1989 and which she regards as illustrative for her vision in *The Evangelists*. In this novel, one of the characters embodies Teilhard de Chardin, who as a scholar and missionary dedicated all his life to the poor and dispossessed, and whose sacrifice for the other must be regarded, in the author's vision, as an example to be followed in everyday life. As an agnostic, Alina Mungiu-Pippidi admitted that if God's existence was real, he could not offer people good and justice for granted; in other words, without people's participation and self-sacrifice God's good intentions will not fulfil. The writer also admits the influence of Sartre's, Camus's and Montherlant's intellectual and anticlerical theatre upon her writing. Moreover, Alina Mungiu-Pippidi draws our attention towards a character in *Ultima cruciadă*, a representative of the clerical world, who wrote a heretical book that reinterpreted the life of Jesus from a perspective that departs from the official version promoted by the Orthodox and Catholic Churches. In this heretical book when Jesus is asked whether He had resurrected or not, the answer He gives is a rhetorical one: "What did you do for Me to resurrect?"[12]

The author's message is quite clear: as a society which regained its freedom and dignity we, the Romanians, have the duty to rebuild the Christian and political values that we praise in words through the very actions we perform. The intellectual "game" that the author proposes Romanian readers and theatre audiences in *The Evangelists* is to start thinking freely and to make Christian values real through our own sacrifice. That is to say religion must be lived; religion does not imply verbally inheriting Christian clichés about the meaning of life and its values; on the contrary it implies living these values, acquiring them on inner level. The play also does more than that: it hints at the influence of religious propaganda upon society members. Is this surprising for a representative of our society which was for decades subjected to brain cleansing through political propaganda?

On the other hand, besides the fact that the Romanian theatre public was not ready (accustomed and instructed) to accept freedom of expression in art, religion has always been a delicate topic to approach in our country; thus, the author's theatre of ideas came as an unexpected struck on the Romanian theatre repertoire. From this perspective, Liviu Maliţa was right when he pointed out that the writer's anti-clerical attitude in post-communist Romanian society was not meant to be an offensive attitude but a manifestation of his/her freedom of speech: "The writer, the artist in general, started to assume the liberty of adopting a rebellious attitude against the religious sphere. If he/she disavowed it during the communist period, when the religious topic itself was oppressed, and consequently it arose a feeling of solidarity from the artist; now, in the climate of liberty, the rebellious attitude becomes legitimate in the artist's eyes. More often than not, this is not a stronger reaction against the autochthonous realities, but the linkage to the Western ethos, to <<postmodernism>> and deconstruction, to de-structuring, parody and a certain demystifying disposition. But, since the new attitude is no longer imposed in a propagandistic manner, but freely chosen by the playwright, it has a good chance to become artistic."[13]

[13] Liviu Maliţa, *The Religious Imaginary in the Romanian Post-War Dramaturgy***,** Babeş-Bolyai University, Cluj-Napoca, Romania, http://www.phantasma.ro/caiete/caiete/caiete12/31.html - accessed 7th February 2013.

The reception of a play which is meant to deconstruct religious ideology and is published and represented on stage in post-communist Romania has to be linked to the social and cultural context in which it was created. Absolute aesthetic freedom that creators enjoyed after December 1989 in Romania represented a challenge that many authors and artists dared to assume no matter the reactions they might generate. Naturally, the effervescence of literary activity comprised a wide range of tones on the part of authors who either embraced a violent language and a gloomy perspective over communist / post-communist Romanian society in prose, poetry, drama, and script writing or used their freedom to develop topics that approached previously unacceptable subjects (criticism of political ideology) or sensitive themes (religion and its power and influence over masses, which is one of the topics of *The Evangelists*).

The horizon of expectation characteristic of the post-totalitarian theatre public was on the one hand marked by the eagerness to experience new artistic creations and on the other hand it proved rather inhibited (a natural reaction to the once forbidden act of free reasoning). Despite the newly gained freedom of speech and expression, the post-December 1989 Romanian art consumers (theatre / film audience, readers, music fans) and public institutions reacted to the new creative context set up after the Revolution either with enthusiasm or by embracing a harshly critical attitude.

Writing a play that questioned Christian ideology and coldly analysed it as any other ideology through the voice of the central character, Cherintos, and through the perspective of human sins (such as thirst for power) embodied by Paul and, in fact, by all characters (including by Jesus) must have represented an unacceptable blasphemy for many.

Church representatives reacted promptly after the play's first representation. Thus, the former Patriarch of the Orthodox Church, Teoctist, stated that: "/…/ if somebody writes about the Church or about *The Holy Book* or even a literary work such as *The Evangelists*, that person unconsciously brings defamation to Christian learning".[14] In his turn, Ioan Robu, Bishop of Roman-Catholic Church of Bucharest, stated that: "It is blasphemy to our life and faith. [...] When such a play is interpreted in a theatre, I, as a man of Church, and each of us cannot feel happy to see that what we hold as holy is ridiculed". And, finally, we quote the words uttered by one of the most famous members of the Romanian Academy, Constantin Balaceanu-Stolnici, who considers that: "Any person who has a Christian culture will regard this play as a shame".

In an article published in *Cotidianul*[15], Cristian Teodorescu informs readers that *The Evangelists* was not initially represented on the stage in Romania because actors did not want to provoke a scandal and, consequently, the play was interpreted in Hungary. Afterwards, the play was interpreted in Romania. Besides the reaction of the Church, on the 6th of December 2005, the cultural commission from the Local Council of Iaşi joined in order to decide whether the play could be represented or not on the Tătăraşi Athenaeum stage any more. The mayor of Iaşi at the time, Gheorghe Nichita, planned to inspect the Tătăraşi Athenaeum's activity, an attitude that reminded people of the former totalitarian repressive methods and censorship. However, the play was finally not interdicted.

Apart from the above mentioned wave of criticism, we consider that reference must be made to a part of Romanian society which reacted in a critical way to *The Evangelists* because religious faith has always been perceived as a constant unifying factor for Romanians no matter the provinces they came from or the historical period. From this point of view, the Church has symbolized a form

[14] You can read here the translated fragments in original: I.P.S. Teoctist: „şi cineva, dacă scrie despre Biserică sau despre Evanghelie sau chiar o piesă literară precum Evangheliştii, aduce fără să-şi dea seama o jignire Bisericii, învăţăturii creştine"; Ioan Robu: „Este o blasfemie la viaţa şi credinţa noastră. [...] Când se joacă aşa ceva într-un teatru, eu, ca om al Bisericii, şi fiecare nu putem fi bucuroşi că ceea ce este mai sfânt pentru noi este ridiculizat". Constantin Bălăceanu-Stolnici: „Orice om care are o cultura creştină consideră această piesă o ruşine". [15] Cristian Teodorescu, *Cotidianul*, 5 decembrie, 2005.

of resistance against foreign suppressors and the communist atheist propaganda, besides the fact that it is an essential part of our moral and spiritual heritage. However, the tragic events that the Romanian Christian Churches (The Catholic Church United with Rome[16], The Orthodox Church[17], The Catholic Church, and The Protestant Church) underwent during the totalitarian regime are in general known to little extent by Romanians even if many books have been published on this topic. Naturally, this unawareness and lack of interest manifested by most of the Romanians is on the one hand an offence to the martyrs of the Church and on the other a negative factor that currently hinders our moral evolution as a nation.

The play contains a set of shocking details as to the Christian myth, such as the ones referring to Jesus (the Narrator of the play and the character who finally reveals to be Christ), Paul and Peter (the Apostles), and the four Evangelists (the four disciples of the Greek sophist Cherintos: Luke, Matthew, John, and Mark). All of them are depicted in a manner that does not correspond to the well-known history related by the New Testament. Briefly speaking the most representative figures of Christianity are depicted as ordinary men, apart from the last scene in the play in which Christ, even if stabbed by Paul, does not die. In Alina Mungiu-Pippidi's play Jesus appears as a feeble, inoffensive character, who is fond of Helen (the Greek, pagan correspondent of Maria Magdalena) and whose dream of spreading the Christian ideology made him follow Paul. In *The Evangelists* Paul represents the fanatical, combative "Christian", who is aware of the power that ideas may have over the others and who decides to re-compose the whole story of Christ in order *to seduce* (conquer) through it as many supporters as possible. To him religion must be imposed on the others no matter the sacrifice this must require in order to transform the world into a better place. Murders did not prevent Paul from making his dream come true. Thus, the four holy books are written in the presence of Christ, whose words are, however, modified as Paul indicates in order to correspond to the version that the latter wants to have. After the four books are written, Paul murders the Evangelists and tries to convince Cherinthos about joining him in his attempt to make the prospective Christian Church a powerful institution through the new Christian doctrine. However, Cherinthos commits suicide by drinking the poisonous wine prepared by Paul for the Evangelists. Cherinthos cannot accept that his disciples died because of his negligence and that the books written in his Academy will be used as ideology for conquest. Finally, Paul sees his dream fulfilled for his thirst for power is now satisfied. Apparently, he is the only character who is victorious. Yet, the play concludes with Christ's words, who - despite of being stabbed by Paul - keeps walking and promises Helen, his lover, to join Him in Heaven.

The other Apostle in the play, Peter stands, at least apparently, for the real Christian: he is meek, humble, fair, kind-hearted, and incapable of imposing his faith upon the others through force. However, the play does not leave room for great ideals to come true. Thus, Peter, after being deceived into believing that he sees the figure of Resurrected Christ, leaves Antiochia to let the other Jews know about this miracle and about Paul's "assiduous" work for disseminating the Christian learning.

Another element that must have shocked Church representatives in the play is the reinterpretation of Jesus' resurrection. The Christian traditional version of resurrection is replaced with a story in which Jesus is not killed on the cross, but Barabbas through an intrigue woven by Paul and meant to keep Jesus alive so that the Jews would believe in His resurrection subsequent to Barabbas' (apparently Jesus') sacrifice at the order of Pilates.

---

[16] The Catholic Church United with Rome or the Greek-Catholic Church was abolished in 1948 by the communists, an act that brought with it a large number of sacrifices on the part of priests or church goers who were either killed or suffered in prisons'.

[17] The Orthodox Church also underwent a tragic period during the communist regime; in this respect, one can consult the following selective bibliography: Mircea Păcurariu, *Istoria Bisericii Ortodoxe Române*, (Chişinău, 1994); Mihai Rădulescu: *Rugul aprins. Duhovnicii Ortodoxiei în ghearele comuniste*, (Bucureşti: Editura Ramida, 1993); Pr. Prof. Dr. Dumitru Stăniloae, „Prigonirea Bisericii Ortodoxe strămoşeşti sub comunism", in *Vestitorul Ortodoxiei Româneşti*, 1990, no. 3, p. 3; Vasile Manea, *Preoţi ortodocşi în închisorile comuniste*, (Cluj: Editura Patmos, 2000).

The dialogues between the four Evangelists (who are paid together with their master, Cherinthos, to write the life of Christ according to the story told by Paul and the Narrator) illustrate in part freedom of thinking and in part irony and cynicism. The four Evangelists and Cherintos are a group of Greek philosophers who had not known or heard about Jesus Christ and who accept to write the story of the Jewish prophet in exchange of money. The dialogue between Cherinthos and one of the disciples regarding the writer's freedom of creation is bitterly sad. According to Cherinthos no writer can exceed the limits imposed on him by the client who paid for that work to be written; the only thing a writer can do is to try to write a very good and trustful story.

The ambiguous ending leaves more room for interpretation. The writer did not intend to contradict or deny the Christian myth. On the contrary it accepted its possibility and miracle. The conclusion which the reader draws refers both to the uncertain process of writing the allegedly sacred texts and to the use thereof in a fanatical way and with the intention to control masses.

From an aesthetical point of view the play is written in a vivid and intellectual style, and it is full of witty dialogues. Dramatic action aims at formal perfection: scenes follow each other in a natural manner, without delays or unnecessary sequences. Characters seem, however, to be somehow outlined, except for Paul, the fervently fanatic supporter of the Christian ideology – depicted according to his corrections and indications. Finally, the characters and dramatic action serve the purpose that the author assigned them, i.e. that of being the vehicles of the author's deconstructive approach to Christianity.

Conclusions

An interesting aspect remains to be analysed in the future, namely: how the perception of this play will evolve in time for - according to Hans Robert Jauss - the hermeneutics of any text is in fact an attempt: "to examine the text in its original historical context – by examining the dynamic of its original production and reception (*the text within history*)", "/…/ to trace a history of the text – by examining the text's reception by communities of readers in different historical periods (*the text throughout history*)" and "/…/ to examine the text in relation to general history – by examining the way a text, in its social function, not only arises out of, and is received from within a historical context, but can also have determining impact on that wider, general history (*the text and history*)."[18]

The Evangelists is the author's protest against the power of any ideology that attempts to lead people blindly and transform them into mechanical performers of rituals, as well as a lesson which teaches us that in any society and at any time it is natural for the former and present hierarchy of values to be gradually reinterpreted and challenged in order to make room to a multitude of forms of expression, topics and discourses. And isn't such a perspective necessary especially in a society which undergoes a period of transition from totalitarianism to democracy?

ETHICAL CHALLENGES OF THE E-LEARNING SYSTEM

MARIA CERNAT*

Abstract
This article is the result of a four years teaching experience in one of the largest and controversial Romanian Universities using the E-learning system: Spiru Haret. It is a well-known fact that this was the first Romanian academic institution that used the E-learning techniques in wide and systematic way. Numerous articles appeared in the press in 2009 when the scandal of fake diplomas first started. This article is the perspective of an insider, that is, of someone who taught information and communication techniques in this institution for several years. I consider my experience and my findings to be balanced and objective and I also believe that we have to analyze things in a more profound and rational manner after the 2009 media storm ended. My article provides very useful information in this area since there are no academic articles on the way this Romanian academic institution (mis)understands the power of E-learning tools.

Keywords*: academic capitalism, E-learning system, digital resources, ethical problems in higher education, e-learning and higher education.*

1. Introduction

I shall begin my article with a series of general considerations about the E-learning system. Since this new technological tool made its way into the university numerous scholars tried to bring forward its merits but also its pitfalls. The E-learning system covers a wide variety of technological instruments used in the educational process. The first section of my article consists in an attempt to provide a definition of the E-learning concept. The ways E-learning can be used are also numerous and this is why I consider it is very important to establish some of its most important functions. Without such conceptual clarifications it is not possible to argue for or against E-learning.

In the second section of my article I am concerned with a general perspective on the advantages and disadvantages of the E-learning system. It is of course common knowledge the fact that E-learning system is not a positive thing by itself. It is merely a tool and before embracing it as one of the most important elements in assuring the quality in higher education we must be aware of its downsides. This is why I shall focus in the second section of my article on gathering the most important arguments for and especially against E-learning educational tools. My perspective is rather pessimistic in terms of technological capacity of developing educational quality.

I consider the technological determinism to be a very naïve and misleading perspective. Using computers in the educational system is not a positive thing in itself. Quality in higher education has to do more with people than anything else. If the arguments in the second section of my article are not convincing enough I am almost certain that the data presented in the third part of my paper will prove that sometimes the E-earning system can be the worst enemy of quality in higher education. The way Spiru Haret University managed to use the E-learning against quality is the sad lesson of our recent educational history every fan of the E-learning system has to learn.

2. What does "E-learning" means?

The term "E-learning" has been used for almost two decades. *A bright future for distance learning: One Touch/Hughes alliance promotes interactive 'e-learning' service* is the article published in 1997 by Aldo Morri wrote an article in the "Connected Planet" review[1]. Since 1997 this

* Lecturer, PhD, "Dimitrie Cantemir" Christian University of Romania (macernat@gmail.com).

[1] Aldo Morri (1997) „A bright future for distance learning: One Touch/Hughes alliance promotes interactive 'e-learning' service", *Connected Planet*, *online* document found at http://connectedplanetonline.com/mag/telecom_bright_future_distance/.

term has been used to designate several ways that modern computers can be used to make the educational process more efficient. The pioneers of E-learning were the major private corporations that had important financial resources and little time to invest in the training of their employees. No matter how loose a definition of the E-learning might be is has to do with the use of computers. Private companies had the ability to invest in educational hardware and software. Universities – the place where the Internet was first developed – soon followed this trend and began using more and more digital resources in the educational process. This is also the result of the fact that in today's academic capitalism the university is no longer the unique "provider of knowledge"[2].

I think it is crucial to have a general perspective on the way nowadays university works before understanding the meaning and the function of the E-learning system. The development of E-learning went hand in hand with the idea of making education a more efficient process. The ideal of efficiency in higher education is by no means the direct result of adopting a liberal perspective on education. We are no longer engaged in the difficult and vague task of building a character. The most important task of faculty members is to make "knowledge corporation" (the university) profitable. We no longer provide young students with insightful knowledge. Instead we sell profitable information to our potential "clients". Our efficiency is tested with the help of a dual "element": the student. He is a client, but also our product whose insertion on the market labor is the ultimate indicator of a well done job. The use of digital tools in the educational system is therefore the result of the private corporation pressure (the universities had to compete with other "knowledge providers") and of the liberal perspective on higher education (the university has to function as efficient as a major private company).

But what E-learning rely means? From a very general point of view E-learning is related to distance learning. The use of computers on a wide range as well as the technological advances of the Internet made distance learning a more feasible project than ever before. But the E-learning system is related to a series of activities that are not necessarily connected with distance learning. In fact, there are components of E-learning that can be used in any educational circumstances: forums, audio and video-taped educational materials, the use of informational supports such as the CDs. As all the definitions provided over the years mine is surely incomplete but I consider the best way of rendering the proper meaning of this concept is to think of E-learning system as *the process that uses digital resources in educating people*.

Broadly speaking there are three components of almost every educational process: teaching, learning and evaluating. The digital resources can be used in each of those training steps. Video and taped materials can serve as an excellent tool for a more vivid and provocative academic presentation. Virtual simulation of certain processes can provide very memorable representations for extremely abstract scientific concepts. And finally, tests can be taken on computers and students can be evaluated *online*.

The most important functions of E-learning are closely related to the main steps in the educational process. Therefore, the E-learning has the function of making teaching more provocative and cost-beneficial, easing the learning of abstract concepts and providing very powerful and useful tools for evaluation.

There are indisputable merits of the E-learning system. Those merits can be devised into two categories: educational merits as well as "business" merits. I shall not embark here on the difficult if not impossible task of providing an exhaustive list of those merits but I think it's important to focus our attention on the most important ones. The distinction between the educational merits and the "business" merits is difficult to grasp especially in the era of academic capitalism. I believe it is related to the intellectual and the financial value. The intellectual merits of E-learning are related

[2] Delanty, G. (2001) *Challenging Knowledge. The University in the Knowledge Society*. Buckingham: The Society for Research into Higher Education & Open University Press.

solely to the educational process. When listing those advantages such an assessment should ignore the financial benefits. Such merits are:

- Asynchronous education: the teaching process is not necessarily done in real-time. The *online* lectures offer the student the possibility of taking a certain class at a later time during the day.
- Interactive education: the forum and discussion lists makes it very easy for the trainer to gain access to the students feedback;
- Connectivity: even if the student-teacher relation is digitally mediated, it offers both of them more ways of constructively interact. The digital tools provide multiple communication channels bringing the teacher and the student closer;
- Flexibility: the student has access more information than ever before and he/she can access it on its own time;

In the process of adopting the E-learning system those merits are not the most important elements taken into consideration. The financial benefits of the E-learning system are the crucial ones. In the era of the entrepreneurial university we often hear people speak in marketing terms. The famous concept of the return of investment (ROI) is used as the decisive tool of evaluating whether the E-learning system is used or not in an academic institution. Does it pay off to invest in computers, learning software and other software license? In the case I am about to present such an investment proved to be incredibly profitable.

I shall not end this section of my paper without presenting some of the most important downfalls of the E-learning system. Most of them are the result of adopting the narrow perspective of technological determinism:

- expecting the E-learning to function in the same way the classical educational system does;
- expecting the E-learning to replace highly trained professors;

I believe that the most important pitfalls of the E-learning system come from the main assumptions its creators and users are adopting:

- education should be focused on the individual and his/her needs;
- the students are rational clients in search of useful information that will allow them to find good jobs on the labor market;
- the educators are intellectual workers that provide useful and profitable information and are guided in their efforts to secure the profit of the university by the trends in the labor market;
- last but no least: education has to be cost-effective;

I shall now analyze each of those assumptions. Most of the advantages related to the E-learning system are related to the possibility of each individual to study in his own way and rhythm. Nowadays it seems the whole educational process is conceived and focused on the individual and its needs. The university is no longer a place where a group of people are following the same educational paths. The postmodern "multiversity" is a place where several individuals find their own way through the curricula. While this flexible perspective seems appealing it ignores the role of the academic community in the educational process. "The informal curricula" – being together with other students, following the same educational path in and outside the university is almost as important as the individual study. The main reason most of the long-distance students drop out is exactly this one: they lack the emotional support of others in the whole educational process. While flexibility is by no means important, the sense of belonging to a community that overcomes the same obstacles is also crucial to a good education.

This is surely related to the next assumption I underlined above. The neoliberal perspective on higher education assumes the fact that students are rational clients in search of useful information. The emotional needs of the students as well as the importance of the academic community are completely ignored. The emotional needs are closely connected to academic profit. In order to secure the institution's financial welfare the educators have to "seduce" the students to *like* their courses. Being in a constant competition with each other and with educators in other institutions the faculty

members have to get the students to like their courses by all means necessary. In our consumerist and hedonistic society it seems only natural to appeal to the student's emotional needs.

This puts the educator in a very difficult situation: although the student is supposed to be a rational individual in search of useful information, the education provider has to get him/her to *like* the course he/she is teaching. The higher educator's ability to attract as many students as possible is connected to the last assumption: the main goal of any university is to place the higher numbers of students on the labor market using the lowest number of resources possible. If profit is the ultimate value of a university it makes it very difficult for quality to find its way into the educational process.

3. The Spiru Haret E-learning system

We may think fatalistically that what happened in Spiru Haret is merely another example on how Romanians manage to destroy any system that seems to work perfectly elsewhere. This is not entirely far from the truth, but there are also important aspects worth mentioning. Although this case contains almost surrealist and grotesque aspects it is merely the expression of the academic capitalist perspective taken to the extreme. But let us analyze what happened at Spiru Haret.

After the visit to several universities in the United States the former rector of Spiru Haret, prof.dr. Aurelian Bondrea, came home in 2007 with the idea of making radial changes in the educational process. Therefore he made a very cost-effective investment buying thousands of computers and opening dozens of long-distance learning centers all around the country and even abroad. He also paid a huge amount of money for the license of an otherwise very sophisticated educational E-learning platform. After two years of ongoing expansion a huge scandal started: the Ministry of Education received a solicitation for almost fifty thousand academic diplomas although this academic institution has systematically refused to be evaluated by the Romanian Agency of Quality Assurance in Higher Education in order to receive accreditation for its educational programs. This unprecedented fact is the direct result of introducing the E-learning system against the quality assurance in higher education. Thus, in 2005 the number of students enrolled at Spiru Haret University was 90.000. After the introduction of the E-learning platform the number of enrolled students reached the astonishing value of 275.000. Almost one third of Romanian students were enrolled at Spiru Haret. The large number could only mean that the university was seeking to expand. But, the big problem resided in the fact that while the number of students grew beyond all conceivable boundaries, the number of professors remained almost the same. Thus, in 2005 there were 1081 faculty members (from teaching assistants to professors). In 2008 there were 1334 faculty members hired by Spiru Haret University. This lead to the unprecedented situation in the Romanian education history where there was only one teacher to 206 students. For a comparison it is important to mention that the general ratio in Romanian state universities is 1/25.

Finally in 2009 Ecaterina Andronescu, former and current ministry of education, put an end to this situation by literally denying the right to enroll students for the long-distance learning centers of Spiru Haret University. This is the short story of a national educational disaster. I consider it is only fair to raise two questions:

1.How was this possible?

2.What was the role of the E-learning system in all this?

Although the first question could be addressed in a very complex and detailed manner I think there are some possible answers that can be considered as starting points for further research. The fact that a Romanian academic institution was able to enroll so many students without having the necessary accreditation forms proves a very simple thing: the Romanian institutions sent to control and restrain such behavior were not invested with enough money and power to do their job. They lacked the practical ability to control and stop such behavior.

I intentionally left at the end of my paper the most important question of my article: what was the role of the E-learning system in lowering quality standards at Spiru Haret University? After a careful examination of the arguments in section two we could be able to answer this question:

- The Spiru Haret management expected the E-learning system to function as the traditional educational system. No formal training for faculty members for the use the Black Board educational software was made before 2011 – almost three years after the E-learning was introduced;

- The Spiru Haret management expected the E-learning tools to replace highly trained academic personnel. Although the number of students exploded in 2008 only three hundred additional professors were hired;

- The Spiru Haret management was interested only in financial advantages: they paid no attention to any sort of quality assurance, nor formally or literally;

- The Spiru Haret students were only interested in buying a certification that could allow them to get ahead others in their careers;

- The very sophisticated Black Board educational software was used only to give multiple choice tests. The educators were forbidden to interfere with the testing methods and computer generated test results.

- The crucial "link" between teacher and student was severed since the evaluation was no longer in the hands of the teacher. The educators were not given the possibility of making other type of evaluation. They had to develop multiple choice items for all types of subject matters.

- The corruption of administrative personnel in the Spiru Haret University made it possible for the students to obtain in a black market system all the correct answers to the multiple choice items in their tests. All those answers were than published online[3], so any effort to offer a fair process of evaluation was futile.

4. Conclusions

Academic capitalism cannot function to the benefit of the society as long as the financial profit is the only relevant value taken into consideration. The labor market is a poor regulator of the "diplomas free trade". Although most of private companies do not value the Spiru Haret diplomas in the hiring process this decision is not the same for the state institutions. There are a lot of employees in the administration of our state that received important raise of salaries and climbed the institutional hierarchy as a result of such controversial diplomas.

The liberal perspective on higher education has to be tempered if we want to achieve quality in this important type of education. We need state founded institutions powerful enough to stop immoral academic behavior.

The university cannot function as a shoe factory. No matter how appealing the private management system may seem, education utterly transformed into some sort of capitalist trade is equivalent to the Spiru Haret "business" model. The university should be guided by other concepts than "return of investment", "cost-effective educational strategies" borrowed from corporate management.

SOCIO-EMOTIONAL COMPETENCE AND ITS ROLE IN THE PROFESSIONAL TRAINING OF FUTURE OFFICERS

HĂHĂIANU FLORENTINA[*]
ŢEICAN BRÂNDUŞA[**]

Abstract
The term competence has become a priority for public policies. In the field of education and professional training competences lie at the basis of curricula, of specializations in universities, of qualifications or professional standards. It is obvious that in any sector of human resources - be it economy, public services or policies, in any kind of activi - be it individual or at the level of organization, firm or collectivity, competences have become the key factor and the main reference.
Thus, its popularity went hand in hand with its unlimited spread in the detriment of its conceptual clarity. Today we meet the term competence everywhere and at any time, but there is no minimal consensus with respect to terminology. We speak of competences and "skills" (a term difficult to translate in Romanian), key and basic competences, capabilities and abilities etc.
With this article we will try to bring a better understanding of the concept. Moreover, since it plays an importnat role in an officer's activity or in their environment, we will tackle on the affective dimension in their competence profile: relations with others, decision-making process, work motivation and satisfaction, team work, self-control, etc.
In order to become experts in a certain socio-emotional competence, such as team work or analyzing a conflictual situation, we need to develop an inner ability from the socio-emotional fundaments. Why? Because i nany activity the rational dimension doesn't suffice, there has to be an affective side, as well. Emotion depends on the way a person evaluates and assesses a situation. Affective and cognitive processes, though different in their nature, are inseparable and in tight connection in the activity of an intelligence officer, for instance.

Key words*: competence, socio-emotional competence, education, socio-emotional intelligence, officers*

Context

Who can honestly say that they understand and fully master their emotions, or that they understand other people's emotions and the way these influence the quality of our daily life?

Increasing attention is given to the concept of socio-emotional intelligence at a national and international level (Roco, 2001) should raise questions on what was considered so far to be "intelligent"; hence the support of several programs for socio-emotional development, which are real instruments for disseminating and raising awareness on its impact on the daily life, in assuring a successful career. Speaking of the military environment in general and of the concept of "intelligence" in particular, this type of activity implies, among many others, certain relations between officer and source, relations whose success will depend of the competence of the officer. It is clear that a positive social relating will improve his position, his image, the trust required to obtain the necessary information. It also supposes an understanding of the opponents' strategies, so that their plans could be dismantled, as well as an assessment of the information obtained in order to establish if this should be accepted as truth or as potential disinformation.

In training human resources with higher qualification there is this view that a high level of emotional intelligence leads to academic success, but especially to social and professional success. Unfortunately, time has proved that the IQ is just a piece of the puzzle. The intelligence officer needs more than native intelligence. Relating or the "talent" to make people reveal their own thoughts,

[*] Assistant Lecturer, PhD, "Mihai Viteazul" National Intelligence Academy, Bucharest, Romania (flori.hahaianu@gmail.com).
[**] Assistant Lecturer, "Mihai Viteazul" National Intelligence Academy, Bucharest, Romania (brrandusa@gmail.com).

interests, feelings, state of mind, etc, represent a drive for the successful career of an intelligence officer. In this activity the cognitive component doesn't suffice; there has to be an affective side as well. Emotion depends on the way the person assesses and analyzes a situation.

That is why quality education regards the needs of the beneficiary. At present, training of future intelligence officers is a challenge for the educational system, and requires a holistic approach of intelligence. Therefore, in this article we propose a model of the competences necessary for an intelligence officer, a model that will lie at the basis of their training. Given the characteristic of socio-emotional intelligence, they are absolutely necessary in the military environment, especially for officers in intelligence. It is a reality that needs to be studies not only from a psychological point of view, but also from a social, educational and instrumental-operational one.

2. Socio-emotional intelligence: a critical-constructive perspective

In 1990, Joh D. Mayer and Peter Salovey, in an article for *Imagination, Cognition, and Personality* review for the first time defined emotional intelligence: a form of social intelligence that supposes the ability to acknowledge and understand their own feelings and emotions as well as other people's, to recognize various emotions and feelings, as well as to use this information both in guiding the cognitive abilities and in the correct adjusting of the behavior according to the context – "an ability to perceive emotions, to access and generate emotions so that they come to support thinking, to understand emotions and their significance and to efficiently regulate emotions so as to determine an improvement in emotional and intellectual development" (Salovey, Mayer, 1990, 189).

From this moment on, the concept of *emotional intelligence* takes the lead in the academia. At the same time, we also speak of *social intelligence*, a concept many theories in the field tend to leave aside (Neacşu, 2010). Howard Gardner (1983) describes individuals' tendency to ignore what happens during their interactions, naming this tendency "myopia". The consequence of this myopia is ignoring the social aspect of our intelligence. According to evolutionist psychologists, social intelligence evolved to cope with the challenges of certain social trends within a group.

Psychologists failed to agree which of human abilities are social and which emotional. The two fields are interwoven, just like the social feature of the brain overlaps the emotional centers (Parkinson, 1996, *apud* Goleman, 2007). "All emotions are social", says Richard Davidson, director of the Laboratory for Affective Neuropsychology from Wisconsin University. "You cannot separate the case of an emotion from the world of relationships – our social interactions are those who lead our emotions" (Goleman, 2007, 101).

2.1. Main directions in defining emotional intelligence

There are three *main models of emotional intelligence.* The first one belongs to Peter Salovey and John Mayer, a model that sees emotional intelligence as a form of pure intelligence, a cognitive ability. A second model belongs to Reuven Bar-On, which presents emotional intelligence as a mixed intelligence, made up of the cognitive ability and the personality aspects. This model emphasizes the way cognitive and personality factors influence the general state of mind of the individual. The third model was introduces by Daniel Goleman, who also sees emotional intelligence as a mixed intelligence, made up of the cognitive ability and the personality aspects, but this model revolves around the way the cognitive and personality factors determine professional success.

All three models are accompanied by instruments to gauge the emotional intelligence quotient. Recent research has shown there is a relation between the three models of emotional intelligence. Emotional intelligence has proved to be a predictor of satisfaction in life, of a healthy psychic, of positive interactions with colleagues and family. A low level of emotional intelligence was associated with a violent behavior, even delinquent, with illegal drug and alcohol consuming. Emotional intelligence was shown to be linked to a higher degree of success among those who share similar positions (senior managers, for example). Moreover, hiring people with a high level of

emotional intelligence, as well as training the existent personnel to have a more developed emotional intelligence, were associated with financial gain in the private sector. Thus, training for developing emotional intelligence at work may take place at all levels, through development programs.

Despite the extensive research dedicated to emotional intelligence in the past decade, the concept still remains controversial. There is currently a debate on the legitimacy of the construct, the superiority of a model over another, gauging emotional intelligence, as well as on the ability to form emotional intelligence.

With respect to social intelligence, a reliable method to measure it would include not only higher approaches (questionnaires), but also lower approaches (highly spread non-verbal measurement) (Goleman, 2007) or the Ekman test[1] to read micro-expressions. As Ekman's assessment shows, the social brain is eager to learn to read micro-emotions, which suggests that certain key abilities of social intelligence can be strengthened through training via electronic means.

Above all approaches and theoretical models, it is unanimously accepted that socio-emotional intelligence is an important part of the human psychic, more important for social and professional success than intelligence defined in classic manner (IQ).

3. Socio-emotional competence – a key factor in officers' professional training

3.1. Approaches in defining competence

The extreme popularity of the term was accompanied by its unlimited spread, to the detriment of its conceptual clarity. We hear the term competence everywhere and at any time, but it doesn't have a minimal terminology consensus. Competence and "skills" (a difficult word to translate in Romanian) are mentioned, key competencies and basic competencies, capacities and abilities, professional standards and occupational standards, qualifications and capabilities, etc.

Some clarification is needed. A remarkable effort in this respect was the OCDE project "Definition and Selection of Competences" (2002) or DESECO, as well as the initiative of the European Commission on key-competences (2006). We will focus on these contributions.

The DESECO project drawn up by OECD at the beginning of 2000 is a prestigious reference to be used in all discussions on using competencies. The team of this project (OECD, 2002; Weinert, 2001; Rychen and Salganik, 2003) use a definition focused on results and on the capacity of an individual to solve problems specific to a certain context (social, economic, cultural): "Competence is defined as the ability to successfully cope with the individual or social requirements, to achieve a certain activity or task" (OECD, 2002, 8).

In the Methodology of the national framework for higher education qualifications data[2] is presented referring to the definition of the concept of competence, as well as the categories used to analyze it.

According to the above mentioned methodology, *competence* represents *the proven ability to adequately select, combine and use knowledge, abilities and other acquisitions (values and attitudes), with a view to successfully solving certain work or learning situations, as well as to achieving professional or personal development, under conditions of efficacy and efficiency.* We may consider that competence is the ability to cope with certain situations, thus to solve a given task. Competence is the ability to efficaciously react to a series of situations by timely using the necessary knowledge with the purpose of identifying and solving problems. There is always knowledge subordinated to a certain competence, but competence is not just that. Competence gives the one who has it the right to say: *I can do this.*

In our country, professor *Dan Potolea* defines competence as: "*Competence is an adequate selection, combination and usage process, under the form of an integrated and dynamic assembly, of*

[1] Measurement that uses WEB to assess the ability to detect microemotions, resulting a new means to assess the ability to manifest empathy at a non-cognitive level, a basic condition for emotional resonance.

[2] http://www.upt.ro/pdf/calitate/Metodologia_CNCSIS.pdf. Accessed in October 20, 2012.

knowledge, abilities (cognitive, actional, relational, ethical, etc.) and of other acquisitions (values and attitudes, for instance), in order to successfully solve a certain category of situations under conditions of efficiency and efficacy" (Conceptual Bases for Developing the National Qualification Framework in Romanian Higher Education - ACPART 2010).

Joras M. (2002, Preface) presents five major ideas which represent consensual points of view on competences:

1. Competence ensures the creation of a group of "informal" abilities, difficult to pinpoint in the traditional literature;

2. Competence is linked to action; it allows one to take action, to achieve tasks, and thus it can be easily identified; it does not exist on its own, independent from activity, from the problems to be solved, from what needs to be done;

3. Competence is observable in a precise and confined context; only in this context can we speak of transferability conditions;

4. Competence regards three families of abilities: the ability to know or general knowledge, the ability to know what to do, and the ability to know how to be (relating abilities or social behaviors);

5. These abilities are integrated. It is not about acquiring abilities expressed in performance, but structured and constructed abilities; they represent a capital of resources that, combined among themselves, allow activity.

A question must be raised: *what we evaluate* or *what is the operational level we establish for evaluation*, taking into account the fact that a competence does not manifest itself as such, in a singular and isolated manner, and a certain competence may take the form of a multitude of contexts and through different actions. Moreover, the moment we switch to analyzing competences, we realize they are not similarly applicable, they are not equally compatible with their deconstruction into skills, behaviors and performance indicators. For instance, those non-cognitive components of competence (values, emotional moods) cannot be measured as easily as intellectual operations or practical activities, which are forms of manifestation of competences.

From the definitions mentioned above, we can say that what is unanimously accepted is the fact that any competence has two components:

~ *resources:* knowledge, skills and attitudes that a person needs to make use of in order to solve various problem-situations; resources are made of: *knowledge* ("to know"), *skills/abilities* ("to make") and *attitudes/values* ("to be, to become").

~ *problem-situations,* when the person needs to make use of these resources (learns and puts into practice that potential). Without creating concrete situations meant to put theory into practice, that potential remains only at the level "to know", and not advances to the level "to make".

As mentioned above, the current approaches on inscribing competence do not explicitly take into account the level of competence and the context. On the contrary, competence, the level of experience and the context are three different dimensions that should be inscribed separately in order to maximize their re-usage. For example, it is not yet clear if "flying a plane" covers both the ability to fly a small plane and the ability to fly a bigger, passenger plane. Or in the situation when "writing in English abilities" competence represents a certain level, such as intermediate, fluent, native or simply the existence of a competence. Thus, the same competences may be used in different contexts, or the same level of competence may be used again for various certifications. The same is applied to contexts that in many situations already exist, therefore may be used again by competences. In conclusion, competence may be a tridimensional model made up of the following variables: experience, competence and context.

3.2. Importance of socio-emotional competence

While socio-emotional intelligence determines our potential to learn how to be self-possessed, our socio-emotional competence shows how much of this potential we accumulated under the form

of practically applicable abilities. In order to become experts in a certain socio-emotional competence, such as team work or analyzing a conflicting situation, we need to internally develop an ability belonging to socio-emotional intelligence. But socio-emotional competences represent acquired abilities.

The way to define social competence has represented, for several decades, a difficult issue. Arguments in this field are most of the times characterized by a lack of vocabulary and common conceptual frameworks between academics. Keith Topping, William Bremner and Elisabeth A. Holmes (Bar-On, 2008, 39) consider that the complexity of the issue was highlighted several decades ago by Bandura, whose experimental research showed that social learning is a function with multiple variables. Among these, the most important ones were related to attention, retention processes, motion reproduction and motivation.

Who could be called, accurately and without any doubt, "competent from a social point of view"? Social competence seems to contain more variables, each evolving only in one dimension, since it doesn't have a yes/no binary or categorical value. The definition given by Keith Topping, William Bremner and Elisabeth A. Holmes (Bar-On, 2008, 43) to social competence is possessing and making use of the ability to integrate thinking, emotions and behavior, with the purpose of achieving tasks and social results that are valued in the context and culture of origin.

With the help of thinking and emotions, socially competent persons manage to select and control the behaviors they will use or restrain from in any given context, in order to reach the target set by themselves or by others (Keith Topping, William Brenmer and Elisabeth A. Holmes in Bar-On, 2008, 43). The definition suggests that a social competence doesn't include only knowledge and abilities to process information, but also a set of conditionally applied aptitudes or procedures. These might include a perception of relevant social clues, their interpretation, a realistic anticipation of hindrances, an anticipation of consequences of personal behavior on one's self and on the others, finding efficient solutions for interpersonal problems, shifting social decisions into efficient social behaviors, and expressing a positive feeling of self-sufficiency.

Specific abilities of social competence include communication in various environments, tolerance, expressing and understanding different point of views, trust and empathy. People should be able to manage stress and frustration, to express themselves in a constructive manner and to make the difference between various development plans (personal, professional, social). Attitudes correlated with this competence are collaboration, assertiveness and integrity. Individuals should be interested in socio-economic development and in intercultural communication and put a stress on diversity, respect for others and overcoming prejudices[3].

Social competences represent one of the key aspects identified by the European Commission having a direct impact on member states development. Social competences can be defined as abilities that allow individuals to "live together". Beyond such a large range of understanding the concept, these competences are really difficult to define, since they vary in content (for example, abilities, behaviors) function of context, age, etc. this kind of competences reflects a person's level of adapting and acting on various plans: family, work place, school, free time activities, etc., aspects that contextually and historically are understood and applied differently in different socio-cultural spaces. In the past years, approaching social competences was the drive for practitioners and theoreticians in various fields, partially because of their permanent character.

Social competences are linked with social and personal welfare, which supposes an understanding of how individuals can ensure their mental and physical health, including resources for self-use, for the family and for the social environment, as well as knowledge on how can all these contribute to a healthy life style. For a successful social and interpersonal participation, it is essential that generally accepted behavior codes be understood in various societies and environments (for instance, at the work place). It is equally important to acknowledge the basic concepts regarding

[3] http://www.upt.ro/pdf/calitate/Metodologia_CNCSIS.pdf. Accesed in October 20, 2012.

individuals, groups, work organizations, gender equality and non-discrimination, society and culture. What is essential is to understand socio-economic and multicultural dimensions of European societies and the way national cultural identity interacts with the European one.

The most important part of this competence includes the ability to constructively communicate in various environments, to show tolerance, to express and understand various points of view, to skillfully negotiate in order to trigger trust and to empathize. Individuals must be able to manage stress and frustration situations, to express them constructively, and also to distinguish between personal and professional environments. This competence is based on an attitude of collaboration, assertiveness and integrity. Individuals must show interest for socio-economic development and interpersonal communication and must appreciate diversity and respect for others, to be ready to overcome prejudices, but also to compromise.

Everyone is socially competent at least in one situation and no one is competent in all situations. We tend to consider a person as generally socially competent if they success in getting along with people in a wide range of situations. But sometimes we can be in the wrong if we make suppositions about the social competence of a person in other situations than based on the social competence within family environment.

Employers are interested in what a person can quickly learn and do, thus social competence becomes one of the transferable aptitudes constantly looked for by them. The reason is that the employee's activity will almost always take place in a social environment.

With respect to *emotional competence*, it has been defined in various ways, the most famous definition being given by Denham S. (1998): "*Emotional competence is the ability to understand, express and regulate emotions.*" When emotional competence is optimally developed, the three abilities are interdependent and act in an integrated and synergic manner.

"Establishing harmonious interpersonal relations is influenced both by the social and emotional competence." (Stănculescu, E., 2008, 83). Thus, the defining characteristics of emotional competence suppose emotional expression, understanding emotions, an ability to adequately react to other people's emotional manifestations.

Emotional competence is showing self-efficiency in social transactions that require affection - this is the definition of Carolyn Saarni (Bar-On, 2011, 79). Self-efficiency represents reaching a goal that reflects cultural values and beliefs through a personal note, within social transactions that require affection, the way everybody responses emotionally.

Processes that participate in emotional competence are the personal ego, the moral dispositions and the history of personal development. The complexity of these processes resides in the fact that they are localized in a certain period and cultural context. Thus, the ego is the one that has the role of coordinating and mediating in an adaptive manner the importance of environment for the individual. The moral disposition is in agreement with personal integrity. With respect to the history of personal development, this highlights the fact that we learn to give meaning to our contextual emotional experiences through social exposure to the emotional discourse and narrative by means of developed cognitive abilities.

Following this presentation of the theoretical fundaments of emotional competence, we will briefly present the structure of emotional competence as seen by Carolyn Saarni (Bar-On, 2011, 87), aptitudes that will be presented in a certain succession, other than their sequence of development:

- acknowledging the personal emotional state;
- the ability to recognize emotions in other people, based on the situations and expressive indicators;
- the ability to use the vocabulary of emotions and expressive terms usually available in the subculture of the person;
- the ability to show empathy and compassion for the emotional experiences of other persons;
- the ability to understand that the inner emotional states don't necessarily correspond to the exterior emotional expression;

- the ability to find adaptive solutions to perturbing emotions using self-regulating strategies;
- acknowledging the fact that the structure or nature of relations is partially defined by the degree of emotional transparency as well as by the moment of expressing or the authenticity of the exteriorized expression and the degree of reciprocity or symmetry in the relationship;
- the capacity of emotional self-sufficiency.

Research shows that the bases of emotional competence development are laid since early childhood[4]. Developing this emotional competence helps people create and maintain relationships; those who understand emotions and how they are expressed will be able to empathize with those who experience negative emotions and communicate them exactly what they feel. At the same time, people who are emotionally competent will be able to adapt more easily to the professional environment. Last but not least, developing this competence represents a means to prevent further behavioral and emotional problems.

3.3. Socio-emotional competence of the intelligence officer

Why is socio-emotional intelligence so important for an intelligence officer? Because it plays an important role among all factors that influence the efficiency of an officer's activity or the whole system he is part of, with all that it implies: relations with the superiors, the decision-making process, motivation and work satisfaction, maintaining talented people in the organization, team work, work quality, etc.

In this activity the rational dimension is not enough, there also has to be a affective component. Emotion depends on the way the person assesses and analyzes a situation. The affective and cognitive processes, though different in their nature, are inseparable and in a tight interrelation within the intelligence activity.

In conclusion, a person with a higher socio-emotional intelligence is likely to present *an increased tolerance to frustration*, an ability to postpone the achievement of desires and gratifications, an ability to *self-regulate dispositions* and an *optimistic, hopeful attitude*. An increased level of socio-emotional intelligence grants individuals *self-control* (over emotions, dispositions and feelings, but also over thoughts and actions), a *positive self-image* mixed with *a favorable self-esteem*, irrespective of external variables, *an ability to cope with stress and to adapt to changes, a capacity to empathize and efficiently relate* with others, a skill to establish *realistic goals* and *to find a motivation* in achieving them.

To come back to higher military education, the paragraph above may represent a "pattern" of the ideal graduate of a military school.

In what way does an intelligence analyst stand out? Through the fact that he operates with data and information from a wide range of themes (both from open sources, and from secret ones) and draws out explanations, predictions, prognoses etc. in national security issues, meant to fundament political decisions (Perianu, 30).

Moore and Krizan (2003, 96) make a complete configuration of the main *abilities, characteristics, skills* and category of *knowledge* necessary for an analyst, presented in ***Scheme nr.1.***

Doing performance in *intelligence* analysis[5] supposes the existence of certain psychological characteristics/requirements of the analyst, structured as following:

a) *mental skills*[6]

---

[4] http://orizontdidactic.wordpress.com/2012/02/18/competenta-emotionala-si-rolul-ei-in-dezvoltarea-armonioasa-a-copilului/. Accesed in November 20, 2012.

[5] Knowing the psychological profile needed for analysts offers the possibility to establish new minimal performance and selection standards, useful not only for analysts and their supervisors form the perspective for professional training and evolution, but also for projecting career evolution.

[6] The concept we used in the context, *aptitudes* represent the psychical and physical skills that allow individuals to successfully achieve several types of activities. The analysis activity needs more *mental* aptitudes. These are defining for the thinking process, which has a central role in reflecting reality: through abstractization and

Analytical performance means a continuous interrelating of several types of thinking. The way they act is valued according to certain criteria: proposed operations (algorithmic thinking - heuristic thinking), finality (reproductive thinking, productive, critical thinking), direction of evolution (divergent thinking and convergent thinking) and logical approaches (inductive thinking and deductive thinking). The functioning of all these thinking "species", relevant for the analysis process, require the existence of certain cognitive aptitudes considered essential for doing performance in this kind of activity;

b) *skills*

Function of the specific activities of the analytical process, they can be:

(1) *formative* (active learning, learning strategies) - presented mainly in the professional training process;

(2) *resolutive* (skills specific to scientific learning, ability to solve complex problems, active learning) - they actively and determinately intervene in the current activity (at all three analytical levels: operational, tactic and strategic);

(3) *regulatory* (ability to monitor and manage time) - it refers to those "automatisms" developed within the coordination and control processes, that ensure the quality of analytical activity;

c) *personality characteristics (actual features of direct relevance for the analysis activity and for professional interests) and connected elements related to psycho-character implied in this process.*

The psychological profile of the intelligence analyst combines variably the following styles of personality[7]: 1) investigative (analytical, cautious, critical, complex, curious, intellectual, with a capacity for introspection, precise, rational, reserved); 2) realist (social abilities, conformism, perseverance, sincerity, naturalness, normalcy, self-sufficiency); 3) conventional (careful, conformist, conscientious, defensive, efficient, methodical, persistent, practical); 4) artistic (complex, expressive, idealist, imaginative, impulsive, independent, creative, original, sensitive and open);

d) *work style*

Psychological practice shows us that the ideal profile of the analyst supposes a balanced combination between the *perfectionist, perseverant and balanced* styles;

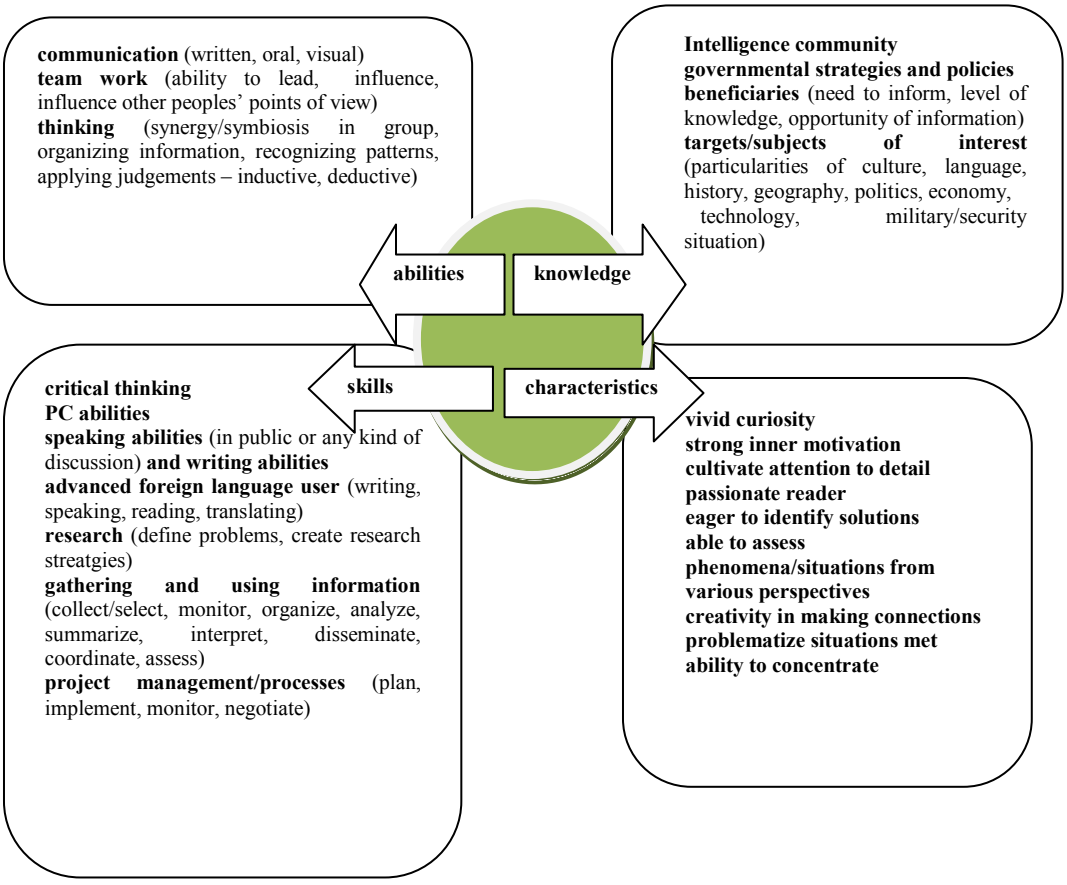
e) *motivational aspects of the analyst*

Similarly to other occupational categories, the following needs can be emphasized, whose fulfillment leads to professional satisfaction: the need to be successful, to exploit one's own potential, to have professional recognition, work diversity, professional independence.

generalization, coordinates in mental actions, it extracts and works with information related to category and determinant relations, in judgments and concepts.

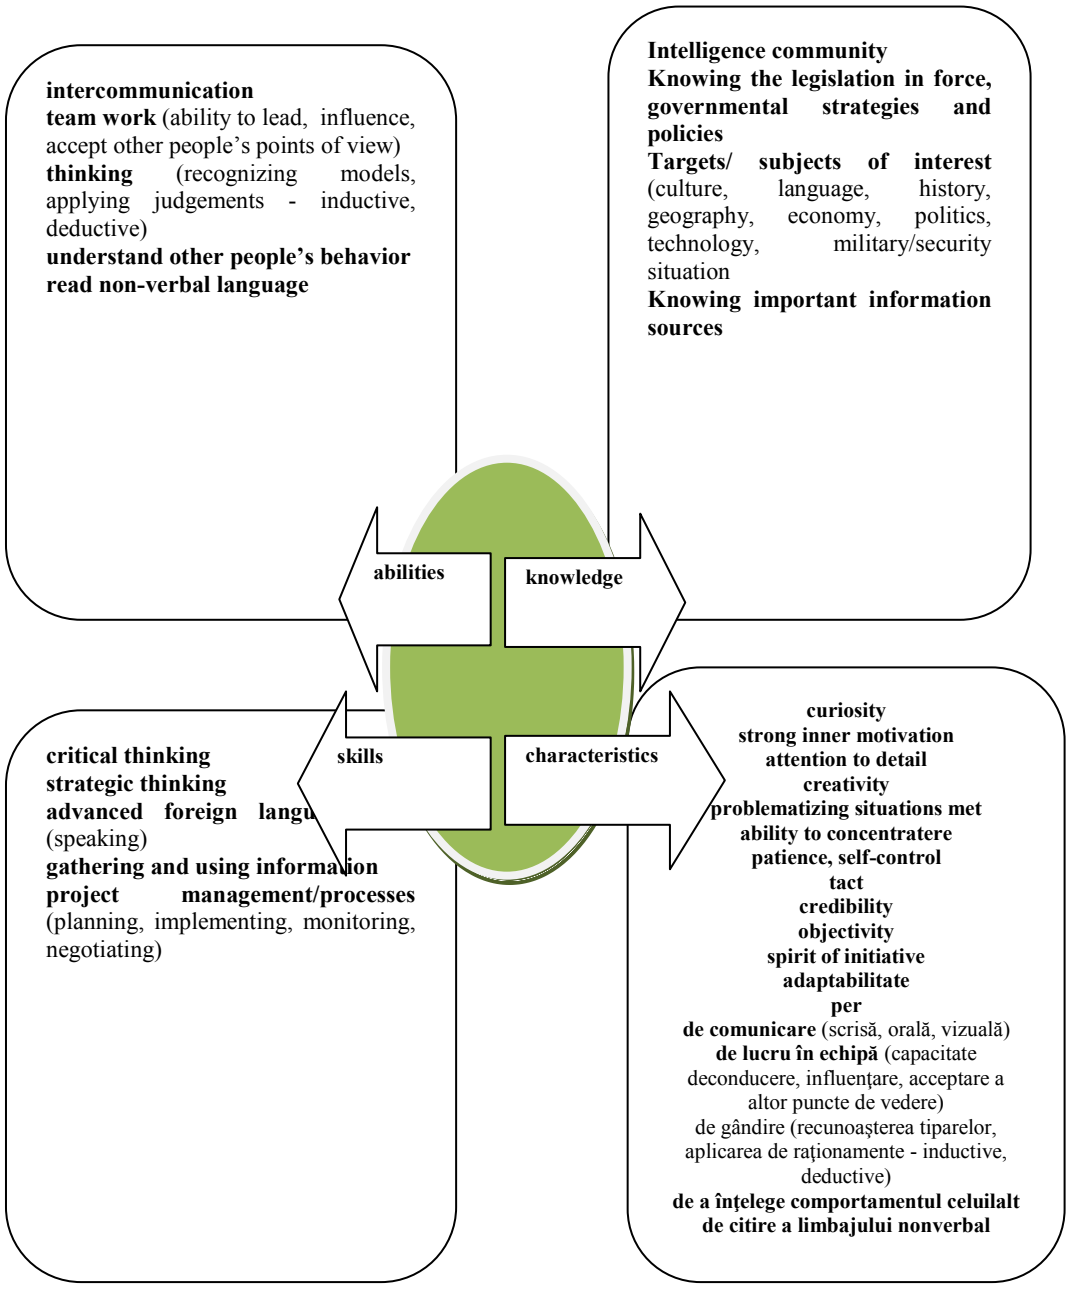
[7] In order to identify them, specialists started from *Holland's theory on professional interests and career choosing,* that develops a hexagonal model including 6 types of personality structured around the criterion of professional interests (*realist, investigative, artistic, social, enterprising* and conventional).

Scheme nr. 1 Basic competences of the *intelligence* analyst



With respect to the operative officer, the literature is not that generous. But we can read between the lines and see what competences he may need. Based on the previously presented model and on some documentary materials, we propose a configuration of the main abilities, characteristics, skills and category of knowledge he may need.

Scheme nr. 2 Basic competences of the operative *intelligence* officer



Many have wondered whether these competences can be improved once a person has reached maturity and started work. The answer is yes. The work place is a logical frame for the effort to improve competences associated with socio-emotional intelligence. There are hundreds of studies within organizations that present competences such as self-trust, flexibility, empathy, perseverance, a capacity to get along with others, associated with higher performance. Moreover, their improvement

has proved necessary, since many adults now start work without having the necessary competences. Last but not least, most of the adults spend most of their time at work, as compared to any other place.

Thus, there are efficient programs for improving socio-emotional intelligence in a number of fields associated with training and development. These include programs for management training, for communication and empathy development for doctors, programs that teach police officers how to tackle conflicts, courses for stress management and courses for the unemployed.

The concept of socio-emotional intelligence suggests new directions both for research and for the practice of training and developing in organizations. In the field of intelligence, the concept of socio-emotional intelligence will add something new, not only a conceptual contribution, but also a practical one. Thus, we propose a training program for intelligence officers as well, for them to improve their socio-emotional competences.

Finally, we consider as benefits of competence systems the fact that there would be a set of professional targets - employees are aware what is expected from them at the work place, and the recruitment systems and evaluation will be founded on objectivity, correctness and transparency, while the measurable and standardized processes will be presented in a certain organization framework. There will also be a connection between their individual and organizational objectives, as well as an increase in promotion, professional development and mobility.

PRIVATIZATION OF EDUCATION IN IRAN: A COMPARATIVE MODEL

ABBAS MADANDAR ARANI[*]
LIDA KAKIA[**]
BATOL MOAZENI[***]

Abstract
In Iran and after end of war with Iraq in 1988, establishing Non-Governmental Schools was first action of the government in operationalizing the policy of privatization of education. During the early years like many newly-established economic activities, a common tendency existed among the government and investors. In recent years, non-governmental schools' authorities have been observing the "getting the stop sanction" proposal from the part of NGS founders. In fact, during the three last decades, different states adopted different policies about these schools. At the first years the government has followed "Strong Support" policy. In the middle years proceeded to the "Balanced Support" and now, the government applies the policy of "Washy Support". At first part of present paper we shortly try to explain policies and strategies on privatization of education according to the Klein's Model. In the second stage, privatization experiences of education in other countries are referred. In the final part, we will try to show the process and position of privatization policy of education in Iran in a comparative perspective. All these issues will show that policies changes of privatization of education are affected by the lack of consistency in policies of different Iran's States.

Keywords: *Educational System, Non-Governmental School, Privatization, State, Iran.*

Introduction

The change in economic attitudes and the global tendency towards decreasing the government's role should be considered as the main effective factors in the relationship of the political system with other social institutions such as education during the late two decades of the twentieth century and the early years of the new millennium. The main axis of reforms is increasing the role of private sector in managing tasks that governments considered it's planning, performance, and control as their own undeniable right (*cf* Bray, 1996). Because of this, many developing countries with centralized educational systems abandoned administrating different services and educational tasks to the private sector during this period (Whitty & Power, 2000). In Iran and after end of war with Iraq in 1988, establishing Non-Governmental Schools was first action of the government in operationalizing this policy. These schools came into existence with the purpose of increasing the society involvement - especially in economic & financial aspects- to help the government. During the early years like many newly-established economic activities, a common tendency existed among the government and investors. On the one hand, the government supported establishing NGS by economic helps and legal and organizational supports, a process that more or less has continued during the last two decades with ups and downs. On the other hand, increasing social demands for education and a competition for accessing to a qualified education provided suitable grounds for attracting the private sector's investors. While exact statistics has not been collected by the Ministry of Education about economic consequences of establishing NGS during the last two decades, existing statistics up to 2010 shows the amount of economic saving of Iran's government as follows:

- 13893 ten-class schools
- Employing of 105724 as NGS staff
- 7325227000000 Iranian Rials (NGSO, 2010)

In recent years, non-governmental schools' authorities have been observing the "getting the stop sanction" proposal from the part of these schools' founders. The report of Non-Governmental Schools' Office (NGSO, 2009) at the Ministry of Education shows that the founders' request for "stopping the school's activity" is undergoing an ascending trend in all provinces compared with the previous years, so that during the two years of 2008 and 2010 and in the whole country –in three elementary, junior and high schools – 700 and 457 NGS have stopped their activities (NGSO, 2010). In addition to this, Mesri (2008) shows that from the total NGS of Tehran, 2000 schools have vacant seats and more than 90 percent of them get along with financial problems.

Despite being affected by the idea of "Knowledge Economy," the need for decreasing the economic dependence of schools and universities to the government income in a global level has been proved more than before (*cf* Best, Harmer & Dewey 1997; Bryson, 1998), economic changes in Iran and existing challenges does not show positive perspectives for the future of NGS (Kakia, 2009; Madandar Arani & Sarkar Arani, 2009). In fact, during the two last decades and by NGS in Iran, different states adopted different policies about these schools. In the first years, the government's policy was to support the spread of establishing and welcoming private investors. In the middle years, the current government proceeded from "Strong Support" to the "Balanced Support." Now, the government applies the policy of "Washy Support". Due to this, Iranian states have never been able to follow a unified and specified policy, and their policies have changed constantly. It is clear that this change can be interpreted from two aspects. The first is that the change of every state necessarily brings about the change in economic policies and the second is that investing in education is followed by economic fluctuations like any other investments. At first and shortly we try to explain policies and strategies of the education privatization according to the Klein's Model. In the second stage, privatization experiences of education in other countries are referred. In the final part of the paper, we will try to show the process and position of privatization policy of education in Iran using the above-mentioned model and in a comparative framework. All these issues will show that policies changes of privatization of education are affected by the lack of consistency in policies of Iran's government more than being affected by the economic changes.

Policies and strategies of the education's privatization

In analyzing and assessing the privatization process in the world, economists mainly acknowledge that education has changed from a social service to an industry. Teachers have changed to professional ones more than ever and they put their scientific abilities on sale. Among these, arts, foreign languages, mathematics, and sciences teachers are pioneering (Kakia & Zeinali, 2005). In this situation, schools are also competitive centers and active economic institutions that combat for survival. The results of this combat are efficiency, quality, and effectiveness that one benefits from in short-term (private benefits of education), and the group benefits from in long-term (social benefits of education). All this was said to be able to find a balance among people, investors, and the government in this basic process by accepting the reality of "Quality of Education" in present world. Considering the key role of governments, it is necessary to explain policies and strategies of the education privatization with regards to Klein's Allocating Resources Model.

During the two recent decades and in many parts of the world, we observed a movement trying to question the attitude that the government is the best system that can provide all people with instructional services (Heyneman, 2001). It is interesting to state that this great movement, as the new economic policies of statesmen, insists on the parental choice, establishing various private schools, and making competitions among them. These reforms are often called "Marketization" and "Privatization" of the educational system. Although the above terms are often used interchangeably and there exists no exact definitions for them, it can be stated that marketization is the elementary stage of privatization and what is often remembered from the privatization of education is actually marketization of educational activities in the form of getting tuitions and helps from people to schools and universities. On the other hand, it must be acknowledged that privatization has occurred

in none of the developed and developing countries in the real sense of the word, and what we observe in these societies is a movement on a continuum which starts from decreasing the complete role of government and continues towards marketization and finally complete privatization (Whitty & Power, 2000). Based on this imaginary continuum, the place of countries can be specified with a view to the economic orientations of the government and its effects on the educational system. Before specifying the place of countries on this continuum, it is better to mention the fourfold phases of the relationship between the private and governmental sectors with a view to providing educational and financial resources. For specifying the pattern of allocating financial resources and educational provisions, the theoretical model proposed by Klein (1984) can be used (Figure 1). This model shows the probable fourfold form of the government and private sector contributions as follows:

Financial Resources			
Private	**Public**		
2	**1**	**Public**	**Educational Provisions**
4	**3**	**Private**	

Figure 1: Allocation's Model of Educational and Financial Resources

Klein believes that abandoning the education to the private sector or government is comprehensible in the form of two basic fields: First providing financial resources such as building, material equipments, monetary expenditure and second educational provisions including training and employment of human resources, educational planning and school management (Klein, 1984). Considering these two fields, Klein recognizes four states of participation of government or private sector in education. In the first state, the State itself undertakes providing both financial resources and educational provisions (teachers, books, curriculum, and so on) and does not permit the private sector for participating and investing in education at all. The politicians' main presumption in the first state is that education has such a basic and sensitive role in the country's destiny that it must not be accessed by the market fluctuations and competitions of the private sector. In the second state, financial resources are provided by the private sector (mainly parents) and through establishing mechanisms like getting tuition, but formulating educational policies and performing them has been left to the State, and the private sector has no right to make decisions and people are mainly regarded as an Customer. This state is called Marketization of education. In the state 3, the State gives financial resources to the private sector through providing facilities like loans and abandoning lands. Likewise, educational decisions and policies such as method of enrolling students, employing teachers and principals and budget distribution and allocation are undertaken by the private sector and are determined based on the criteria and mechanisms governing the market. Perhaps, with regard to the culture common to economic issues in Iran, the term "Ministrant State" can be known as a suitable term for describing the position of government in this state. In the state 4, the State lacks any role in both the above two aspects that the phrase "Education without the State" can be used (Whitty & Power, 2000). In this state, education liberalization or complete privatization of education is started by deleting governmental subsides.

The education privatization: Other countries' experiences

Here education privatization policies in two developed countries of Britain and USA and two developing countries of China and India can be compared with each other according to the Klein

Model. For understanding the slow process of education privatization and its move towards the complete privatization, we start from the experience of China and finish with the experience of USA.

According to the Klein Model and for many years, the policy governing **China** has been to follow the first state that can be affected by the ideological governance of the Communist Party in this country. It is clear that after beginning economic reforms in the two final decades of the twentieth century and "Chinization the communism ideology" by Mao successors, the movement of China's government has tended from the first state towards the second state. Despite the first delay, China has started its hasty steps towards privatization of economics during the two past decades. Yet it is clear that China's political system does not accept changes and transitions in line with the economic system (*cf* Cheng & DeLany, 1999). However, policies taken by the China's government during the current half of the century enabled this country to face fewer problems in the field of education and to precede many countries, including its own great neighbor, India (Cheng, 1994). Strong educational system structures especially generalizing elementary instruction, improving the economic state of teachers, welcoming an economic system based on privatization, and developing good political relationships and dependent on priority of national benefits created a suitable ground for moving quickly towards marketization of education in this country. Due to this, the Chinese government regarded two main axes: First, the government's main role in determining policy-makings was constant, and its role decreased in the higher education and secondary education. Second, it continued its supportive policies on poor and rural strata, while increasing pressure on the rich and middle citizen for paying parts of educational expenses of their children. However, it can be stated that in spite of China's great achievements –especially during the current decade and developing the privatization process– the educational system has been influenced by it to a lesser degree (*cf* Bray, 1996). Due to this, it must not be forgotten that in a comparative perspective, China is still a rural country and its experience in moving towards free economics in the field of education is much less than India.

Simultaneous with China, changes in its great neighboring country, i.e., India can be remembered. India has enjoyed a longer background in facing the new world, and has adapted itself better with the exigencies of the world and education privatization process. Policies, especially started in the 1990s in India, were mainly affected by the membership in the Global Trade Organization and accepting the principles governing it that for instance the complete financial independence of universities on the government can be remembered. However, in this country and in the previous decades, non-governmental organizations (like religious institutions) have had active presence in forming educational and welfare trusts (especially in Health and Medicine). The Indian states tried to decrease the pressure of privatization process on the poor class of the society by determining some percentage of the universities quota and good schools for the poor children and also building and equipping schools in deprived areas (Molnar, 1998). In addition to this, in the recent years the role of two other factors should be mentioned that caused the development of education privatization process in India. The first factor considers increasing the share of educational expenses in the household economic baskets of the middle class – forming a great part of the billion population of this country. Policies of the Vajpayee's state in welcoming and accepting membership in the Global Trade Organization and economic conformity with the modern changes and consistency of these policies in Manmohan Singh's state has caused increasing the tendency of people for investing more in education (*cf* Desai et.al, 2008). Likewise, tendency of the Vajpayee's state reinforced the urban middle class – the class which is critically increasing the Indian population structure – flourishing private schools and universities. In recent years and by the re-governance of the Congress Party, it should be acknowledged that the State and the current Prime Minister, i.e. Mr. Sing, also follow exactly the previous policies and opposed to the traditional policies of the party, which mainly supported poor peasant people (French, 2008). Considering the system of capitalist economy's exigencies, the quick globalization process, a political system based on democracy, and a strong support of the human resources have all contributed that India's educational system be forced

to welcome the privatization process more than ever. In this situation, decreasing the role of the government and teachers' union on the one hand, and increasing parents' role on the other hand are clear. The second factor affecting positively on the education privatization process in the recent years should be known as increasing interests of Indians residing in abroad in sending their own money inside the country and establishing private schools and hospitals (Goyal, 2008). In a cursory look, education privatization policy in **India** is mainly tended to following the third state of Klein's Model. This is true especially about India's current State. This State shares financial resources to the private sector, especially to investors in small urban or rural areas, through providing facilities like loans and abandoning lands (Amiri, 2005). Also, it should be acknowledged that all States governing in India during the current half of the century believed in the principle that educational decisions and policies like the methods of enrolling students, employment of teachers and principals, and methods of budget distribution and allocation should be shared to the private sector and should be determined based on criteria and mechanisms governing in the market, while acknowledging the need for existing governmental schools.

Among developed countries, **Britain** must be known as the first country taking steps for actualizing the idea of social systems privatization. In England and during the 80s, majority of children were learning in schools which managed under the control of local education authorities (LEAs). By choosing Margaret Thatcher and then John Major, they tried to decrease options which were LEAs' monopoly (Whitty & Power, 2000). Also of other actions of these governments, establishing new schools named " Urban Technology Colleges " – which were a new type of secondary schools managed by private companies - can be mentioned (Newmark, 1995). In a quick look, it can be pointed out that intercommunion of Thatcher and Major's States in Britain were mainly based on decreasing the role of teachers' union for the benefits of the government and parents that were performed through putting more emphasis on holding national examinations under the supervision of the Ministry of Education and increasing parental intervention in choosing their children schools (Besley & Ghatak, 2001). Of course, by the start of Tony Blair's premiership, this point was stressed that although Thatcher's reforms, due to holding national examinations, caused increasing the qualitative level of schools in the whole country, its negative consequences were degrading the social position of teaching profession and increasing teachers' dissatisfaction. Due to this, during the current decade, Blair and his successors' policies mainly have been decreasing Thatcher's extremist changes and establishing a kind of balance among three sources of decision making power in the educational system, i.e. the government, parents and teachers' union (Simpson, 2009).

In **USA,** due to the limited power of the central government, determining its role is a difficult task, for many decisions and policies are made at states and regions' levels. Of course, economic orientations of states on the one hand based on less dependence on the federal government and on the other hand on decreasing attacks against the educational system – that is especially affected by the advances of the Soviet Union in the cold war era - caused starting a gradual and slow trend in privatization in final decades of the twentieth century (Broughman, Swaim & Keaton, 2009). This increasing trend shows that the government and teachers union's roles have not changed very much, but the amount of American parents' interests in their children's educational issues has increased and educational expenses in the baskets of the household economy has gone through a rising trend (Glenn, 1994 ; Gewirtz, Ball & Bow, 1995). However, according to Whitty and Power, state governments have adopted different policies for developing the education privatization during the two previous decades. A company named Edison Project can be mentioned as an example that using encouraging policies of states. This company has increased the number of schools under its coverage all over America to more than 48 and only in 1999; it has invested 126 million dollars in this task (Whitty & Power, 2000).

It is clear that regarding the historical background and the type of political management in two developed countries of Britain and USA, the degree of educational system's privatization has

enjoyed a quicker trend compared to other countries and their progress should be considered from education marketization towards the complete privatization (Hill et al, 1997). Considering the political and economic structures based on individual freedoms and capitalist system, these governments necessarily believe in the motto "Small is beautiful" and abandoning the majority of government tasks to the private sector and hence following Klein's 4th state. The only point to be stated about these two countries is differences in emphases partly affected by the governance of different parties made in these two countries. For instance, in Britain the Laborer Party and in USA the Democrat Party tend more to abandon more authorities to parents in school tasks and the Liberal Party in Britain and the Republican Party in USA tend more to increasing private investors' power in determining the tuition.

Policies on privatization of education: Case of Iran

Following the Klein Model**, Iran** has a conflicting condition (Figure 2). On the one hand, mainly Iran used the state 2, so that financial resources are provided by the private sector and through establishing mechanisms like getting tuitions, but formulating educational policies and performing them are left to the government and the private sector does not have the right to make any decisions and it is regarded more as a customer. On the other hand, by having a glance at the state 3, the government of Iran –like India– shares facilities like loans and abandoning lands to the private sector. Simultaneously, it should be acknowledged that sometimes some States in Iran are fond of the 4th state in their speeches and in practice they tend to the 1st state. Also, some educational authorities believe that because the education is not completely **private goods** and its market structure is not based on competition, then education without intervening and supervising of the government does not have conformity with economic logics. Due to this, observing many cases of deficiencies in the mechanism of the market in production, distribution and consumption of education completely justify the government's intervention and its role. On the other side, some supporters of the education privatization believe that because the education is not completely **public goods**, then its market structure is not a complete monopoly and it cannot be completely governmentally organized and have a logical justification for it, especially that experiences resulting from governmental schools show various weak points (Alavitabar, 1990). Although more than two decades have passed from this research results, the following assessments are also suggestive of continuation of this binary attitude during all these years (Madandar Arani, 2012). This contradictory mode causes confusions for the founders and creating challenges that partly from the very beginning it is followed by the stop of school activities and wasting individuals' time and economic capital.

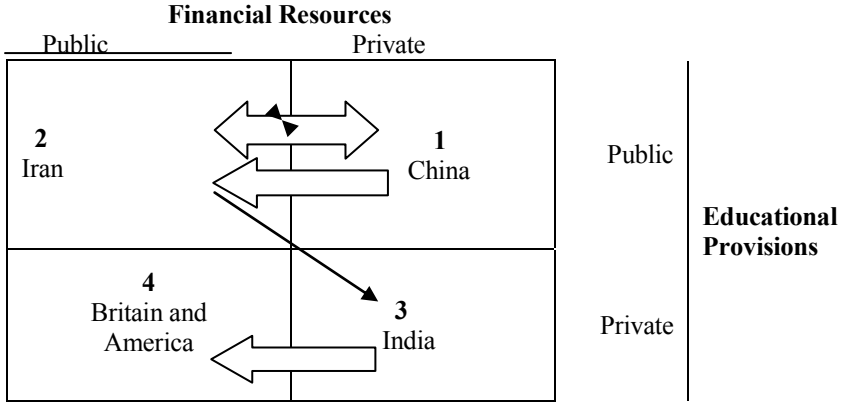

Figure 3: The place of countries according to Klein Model

Conclusion

Considering the above explanations and according to the Klein Model, the places of countries can now be outlined on an imaginary continuum from a complete governmentalization state towards the full privatization. In this continuum, 5 countries places have been determined:

Diagram 1: Continuum of the educational system privatization process

According to this continuum, we are observing a privatization trend that can be named "Creeping Privatization." In fact this type of privatization is a semi-marketization of the governmental services by the centrality of parents' choice power, giving more options to the local authorities, and individuals' investments in education. While decreasing the government's role, these actions cause that the private sector faces more optimistic perspectives for investing in education (Razzaghi, 1997). In such a situation, the private sector first feels that politicians have come to the belief that the privatization approach has more priority than methods that were already widespread. In addition to this, it finds out that the governmental institutions have been forces to make their selected mechanisms near the mechanisms of private sector and market more than ever (For example, making competitions in schools) (Lee, Lin & Wang, 1994).

Considering what was stated and with an analytical-comparative perspectives, it should be acknowledged that in the privatization process –and trying for decreasing the financial pressure of education on the government budget– **Iran**'s economic policies are assessable in the interval of China and India. On the one hand, Iran is fond of the private sector's intervention and especially cultural/religious institutions for investment in education, and on the other hand while decreasing the economic role, it continues its own political and educational role by presenting innovations like establishing Semi – Governmental schools. Due to this, it can be stated that currently the present State in Iran does not follow any of these countries approaches with certainty. It is a politic that can be the source for some problems of the Non-Governmental Schools' founders. Here, for a better understanding of this issue, past three decades transformations are referred to in detail:

NGS establishment and activity after conquering the Revolution in the late 1970s should be divided into three ten-year periods to assess its transformations trend. In the first decade (1979-88), and affected by the country's revolutionary atmosphere, few private schools inherited from the previous regime were closed and their pupils were transferred to the governmental schools (Bageri & Najafi, 2008). Opponents believed that only children of the high-income class could enroll in these schools and because of the high quality of education, a great share of the university students consists of these people during the upcoming years (Mohammad Beigi, 1991; Sarraf Esmaili, 2004). By passing 2 or 3 years, some events happened that it was not possible to be ignoring of their positive and negative effects. The most effective of these was the initiation of Iran and Iraq war. In fact, war

became the most important obstacle for allocating financial resources to the Ministry of Education, so that at the end of this decade student's capitation decreased very much in a fixed rate (Jafari, 2010). We should also mention the effect of decreasing oil revenues, government's policy supporting the increase of population rate, quantitative development of schools in rural areas and immigration to cities which caused increasing the rate of social demands of education and the number of pupils especially in elementary and junior schools (Ansari, 2005). All these provided the required political and educational grounds for making and approving formation of "Non-Governmental Schools' Bill" and permission of entering the private sector to the field of education at the end of this decade.

After approving the mentioned law in 1988, the second decade started (1988-1998). The government regarded the progress of privatizing policies of education as necessary with regard to purposes like increasing the amount of investments of private sector in education, and the decrease of the private sector liquidity. Because of this, these schools enjoyed the government's supporting policies. Governmental supports included the administrative (organizational supports), financial/material (giving low-interest loans and assignment of land), and human (dispatching teachers) aspects. The practical consequence of these supports at the end of this decade was to have about 5 percent from the whole student population-over 18 million students- under the coverage of NGS and more than 7000 schools were founded (Puyan, 1997; Tahmasbi, 2004; Falahi, 2009). By the beginning of the third decade (1998-2008), the number of schools from 6192 in the academic year of 2000- 2001 increased to 13000 in the academic year of 2009-10 (NGSO, 2010). Currently, the rate of Non-Governmental Schools has reached about 11% of all the country's schools. In recent years and with the intensity of economic crises like the simultaneous inflation and depression, educational authorities and policy makers observed appearing the phenomenon "Non-Governmental Schools Stop." Also, other previous supports has changed and decreased because of the special attitude of present president of Iran, Mr. Ahmadi Nejad towards private schools. Considering the time transformations of the three current decades and the Klein Model, these aspects can be inferred from the situation of NGSs in Iran:

- The relationship of NGS with governments is mainly affected by the economic motivations
- The governments' supports of these schools have not followed a constant and specified trend.
- Educational system's marketization and privatization have been a slow but increasing trend.
- For majority of States during the past three decades, economic independence of NGS has not been tantamount to accepting these schools' independence in other fields.
- For the founder, investing in education has not been necessarily based on rules of investment in economic activities or accepting the principle of its advantage and disadvantage, but it is based on bargain power and seeking assistance from the government.
- The government feels right to intervene in all issues of the school.
- The founder regards himself as the creditor of the government in all fields
- In reality, neither the government nor the founders have accepted 'The education privatization" as an economic activity subject to offer and demand

GLOBALIZATION IN RELATION TO NATIONAL AND LINGUISTIC IDENTITY

CAMELIA NEAGU*

Abstract
As an international language used for global, political, cultural and financial exchange, the English language teaching in promoting globalization has been approached from diverse views. The paper intends to investigate the most used terms for globalization since Western countries or the United Nations are now considered the super power with a leading economic, cultural and military position in the global order and, of course, with many of the most apparently cultural expressions of globalization. As English has been the prevailing foreign language in the curricula of educational institutions, it is accepted as the dominating language in the world for globalization comes to be commonly known in political and educational communication.

Key words: *international language, English, globalization, national identity, educational communication, curricula.*

Introduction

At the beginning of the 21st century, the world experiences processes of both integration and disintegration. The expansion of world markets as a form of economic globalization can be understood as a process of integration composed of international flows of capital, goods, information and people. This process is both a form of economic integration and polarization of wealth that exacerbates tendencies toward greater global inequalities between rich and poor countries and regions. It also accentuates the need of a new system of governance. We are the witnesses of an accelerated set of changes – economic, cultural, technological and political – that create new possibilities and dangers both for democratic state and the notions of citizenship and national identity.

However, as Sheila L. Croucher pointed out, few terms are so difficult to explain as this already commonly used one: "globalization": "Few terms have been more widely and frequently used yet less clearly defined or understood than <<globalization>>. Every year since the mid-1980s the number of books and articles with the term globalization central to their titles has grown exponentially /…/. It is also increasingly common for the authors of these works to begin their analyses bemoaning the lack of conceptual clarity surrounding their subject matter and promising to rectify it. Some progress has been made, but many of the aspirations for greater conceptual and analytical clarity remain unfulfilled. The challenge is a tall one, reflecting the genuine complexity of the topic at hand. Globalization is a reality that is so large, so multifaceted, so ongoing, and so defiant of conventional categories and methods of analysis that it frustrates social scientific precision even on the part of the most dedicated of scholars. On the other hand, some blame must be attributed to sloppy scholarship and to the desire on the part of the media, politicians, and the general public for quick and easy explanations, or excuses, for complex pervasive and often unsettling economic, political, social, and cultural trends."[1]

There is a close relationship between the issues of identity and globalization. The concept of identity has undergone significant changes which many authors attribute to as the "crisis of identity". In contemporary socio-cultural conditions, an individual is forced, even if he wants it or not, to be in a constant search for identities. That implies the search for the meaning of the individual in relation

* Camelia Neagu, Lecturer, PhD, "Nicolae Titulescu" University of Bucharest (camelianeagu@univnt.ro).

[1] Sheila L. Croucher *Globalization and Belonging: The Politics of Identity in a Changing World*, (Oxford: Rowman and Littlefield Publishers, Inc., 2004), 9.

to the self and to the society. But such an identity can no more be fixed and this contradicts with the way identity was perceived before globalization became so widespread.

How might the process of globalization affect the process of identity formation? The main feature of modern global society is the interrelation between numerous communities. From socio-cultural perspective, globalization exercises a great effect on building the relationships between and among various locales. In our present world, where different distances are much shortened by transportation and communication technology, globalization is becoming interwoven with human's life and sometimes it is the leading factor contributing to the de-centering and dislocation of identities. Due to the spread of mass communication, an individual becomes more and more involved in the process of increasing mutuality of the world, being exposed to the widest variety of opinions and viewpoints, often contradictory and hardly reconcilable. This has a great impact on his identity. With the increase in number of such groups originating from various cultural backgrounds his / her identity becomes more vulnerable to the influence of the external forces and more difficult to affirm. That means, not only that relationship between people and happenings transform, but also that identities of people also undergo dramatic changes.

These changes have led some authors to consider that the notion of identity is not valid any more since identifying oneself with someone or something is not the feature that characterizes the postmodern individual. The mediation of experience by the means of communication has reached its peak, and its dangerous influence causes the substitution of the real world with the world images, signs and representations and the individual no more gets involved into reality. That's why I consider television signifying a powerful medium of globalization. News is often cited as the example of the collage; events are reported in a single short news program that may share nothing in common but the date of happening. This radical view that renders globalization leads to the dissolution of identity, the dissolution of the sense of one's self. By placing the emphasis on the mediating effect of the mass media we can say that their selective reproduction and representation of the events must be based on the cultural and national specificity of the concrete locales. Most new programs on local television put an emphasis on the representation of local events over the international ones. So, we may conclude that the effects of globalization sometimes are exaggerated while the local specificity is ignored or denied.

What globalization had definitely contributed to was the erosion of the "master identities" such as citizenship in the abstract meaning of membership in the territoriality defined and state-governed society. While the process of globalization undermines the traditional perception of locality as a bounded space, it seems to have a different kind of influence on another dimension of "locality" – that is, various rituals, ceremonies and collective memories that bind the people together.

So, we can conclude that the impact of globalization is contradictory. On the one hand, it works towards unification of the world, but on the other, this proves to have a dubious effect on diminishing the local specificity and the tendencies towards the local and cultural become more and more discernible. At present, national identity continues to be the object of governmental policy. It may be more important how it actually is since national identity is the inexorable subject of politics.

As John Edwards pointed out: "The essence of identity is similarity: things that are identical are the same, after all, and the word stems from the Latin *idem*. And this most basic sense is exactly what underpins the notion of identity as it applies to personality. It signifies the 'sameness' of an individual 'at all times or in all circumstances', as the dictionary tells us, the fact that a person is oneself and not someone else. It signifies continuity, in other words, that constitutes an unbroken thread running through the long and varied tapestry of one's life. It can even invoke an almost mystical sense of connectedness, particularly when one considers the very real changes that take place in that tapestry."[2]

[2] John Edwards, *Language and Identity*, (Cambridge: Cambridge University Press, 2009) 19.

As linguistic identity is largely a political matter, we may say that there is an urgent need to foreground the issue of politics of language. The link between language and identity has had a long and varied history nowhere more than in Europe. It was in Europe that language became a key element in the emergent nation-states. These new nation-states have come to share their names with the languages that were so vital for their political legitimacy. This process is still continuing in the sense that we are still living in an age of nationalism.

Identity is not a mere reflection of reality, a simple form of self-awareness, but rather a socially constructed phenomenon. Identity can change and even the most homogenous state contains varieties that may form the basis for present or future affiliation. If they have to gain any political recognition, they will have to fight against the principle of economy of scale and against the vested interests and historical advantages of established standards. Identity may carry the sense of "sameness", but it does not have to be mono-dimensional.

The other factor working against a monolingual state is the immediate result of mass immigration. Most major European cities now contain a mosaic of ethnic groups, speaking languages new to the area.

Technological advances have also had a profound effect on the language. Air travel, satellite TV, the Internet, telephone, video films and publishing facilitate a range and diversity of linguistic contacts. These media will not by themselves promote and maintain a multilingual society. Without a feeling of language identity and the will to keep a sense of group no amount of digital communication will prevent language shift. European powers (Britain, Germany, France, Austria, Belgium and Italy, for example) not only controlled the economies of their third-world colonies, but also exported the notion of linguistic identity as a basis for political legitimacy.

Identity involves not only "sameness", but by extension "otherness". In knowing who we are like we also know who we are not like and the sense of identity is dependent to some extent on an understanding of boundary where that with which we identify stops.

The invention of nation-state had already persuaded people to identify themselves with something in addition to the traditional social structures of family, clan and religion.

All the border changes seen in Europe over the last few decades, the reunification of Germany, the division of the Soviet Union, Yugoslavia and Czechoslovakia, all point to the continuing partition of political units along ethno-cultural lines with languages as one of the most important factors in building and defining national identity. Anderson says that "in a world in which the nation-state is an overwhelming norm, all of this means that nations can now be imagined without linguistics commonly.", but the states can afford to be more accommodating and are more tolerant on minority languages. The language identity in Europe is diverse, complex and ever changing. Stephen Barbour adopts a broad approach and examines nationalist and internationalist discourse. He assumes that every nation should have its own nation state in which the national language should dominate since language and national identity are allied. Internationalist discourse demonstrates awareness not only of languages spoken by small groups, but also of English as a global lingua franca. Nevertheless, much internationalist discourse overstates the dominance of English in international exchanges.

In terms of language choice for world-wide relationship and communication, the foundation of globalization has led to growing international debate on the theme of English language in both academic and business fields.

How academics, politicians and journalists see the place of the English language in the image of the various nations? Many politicians and journalists adopt a generally nationalistic language because this reflects what the public wants to hear.

A global perspective recognizes the need of an international language. The response to this need on the part of many internationalists is to use English. A global perspective poses little real threat to national languages or minority languages. Globalism seems able to co-exist with linguistic

and cultural pluralism. The international language, be it English or the earlier international language French, tends to influence other languages, but not generally replace them in all spheres of life.

The consequences of espousing both internationalist and nationalist perspectives can impinge on many aspects of personal and professional life, for instance the professional activity in which many academics are engaged, namely language teaching.

There is a widespread perception of crisis in the teaching of languages other than English. Many students know they can encounter cultural variety in all major cities through the medium of English.

It can be said that English has gained a particular place among languages. Different languages have also been influenced by the challenge English imposes, inclining to a greater or lesser amount to establish English words, pronunciation, and word order in their language.

Language learning is thought to be a vital aspect of forming a European identity. The teaching and learning of English increased dramatically during the second half of the twentieth century in response to the growing use of English as an international language. This in turn was in large part related to the dominance of the USA politically and economically, a fact reflected in the role that English plays in international youth culture.

The popularity of English as a foreign language in European schools and universities means that young Europeans are now much better able to communicate with each other than their parents were. English does mean that young Europeans are able to speak to each other, which will surely give rise to a sense of being European. More relevant, however, is the question of whether English in Europe allows young people to express multiple identities. The growing body of research in Europe suggests that for young people English can symbolize the international youth culture. English is used now so extensively throughout the world that it can serve as an "open reservoir" for symbolic meanings.

English has become the prevailing foreign language in the curricula of educational institutions in foreign language learning. English is accepted now as the dominant language in the world as globalization comes to be commonly known in political and educational communication. Globalization and English language have been widely recognized as landmarks of most present societies. This indicates that cultural globalization is closely linked with the development of English as a global language. There is no doubt that many countries have been making attempts to support English education in order to engage actively in international activities.

One of the objectives of foreign language is to expand insight into the foreign nations since understanding different cultures will guide students toward globalization. The teaching of culture is not a secondary objective, rather equally important, and balances the linguistic syllabus of English teaching and learning typical English language instructional materials to convey cultural messages from a one-dimensional-base view toward a wide view. The students should be guided to take more reflective or ethnographic attitude toward the cultural values of other nations as a way of raising their knowledge of intercultural issues.

We want to prepare the students to communicate in the multicultural world of English. Globalization has not been implemented merely to unify language and increase use of English. National linguistic cultures may be under pressure and this is very much compatible with globalization theorists' characterization of the process. Governments must pay closer attention to languages as the language is the key factor in identifying national identity.

Because national identity of students is very important, they should be familiarized with their national history and identity. This is a better trend to acculturate learning, not simply providing a bulk of knowledge about foreign countries and people. Students may compare and contrast cultures of two or more nations while bearing in mind that the cultural manifestations are always constructed and, therefore, open to analysis and debate.

Cultural learning means not simply understanding of foreign culture but to tolerate cultural differences even when it is not fully understood or articulated. Such an approach fosters generally

open-minded, tolerant and sympathetic attitude towards other cultures. Students should understand that every culture must be respected and in the area of globalization, people should do their best to keep valuable cultural customs.

Cultural training does not necessitate teachers to act as information providers because details about different cultures are already available in a vast number of related publications, including textbooks. The role of the English language teacher, besides teaching students how to speak, understand, read and write English, is to provide opportunities for students to involve in meaningful communication with different people and cultures and to react critically on these interactions.

The recent developments have a tremendous impact on the very identity of individual languages and also that of the speakers of those languages. The question of identity is fast becoming a politically loaded issue, as Pandit (1975, p. 118) has noticed: "Loyalty to language is probably not as external to linguists as it may appear to be. An enormous amount of social and cultural information is encoded in a message; verbal interaction in a speech community is a cultural event; it reinforces sense of belonging and asserts one's existence in a community. In this sense, identity with language is not external, not a superposition – political or social – but an intrinsic linguistic trait. The speaker's attachment to his variety and his language is symptomatic of the cultural load his language carries for him."

Conclusion

In the emergent world order marked by instability and cultural intermixing at an unprecedented rate, we are constantly asked to negotiate our identities in response to pressures from all sides. In the case of our linguistic identities, the issue is further complicated by the fact that certain languages such as English have been found to be playing a hegemonic role, threatening the very survival of local and minority languages all over the world. Globalization has helped foster linguistic hybridity, but on the other hand contributed to the spread of certain language and the consequent disappearance of others. I believe that concepts as "master-language" and "native speaker-hood" are to be approached as political rather than linguistic issues.

COOPERATION AND EDUCATION FOR SUSTAINABLE DEVELOPMENT IN GLOBALIZATION ERA

NEDELCU ELENA*

Abstract
The present paper aims to approach a relatively new topic: international cooperation for sustainable development. The first part of this paper is a theoretical construct which deals with the connection that exists between its main variables: globalization, democratization and development. This part of the paper also brings into evidence the necessity and importance of international cooperation for sustainable development (SD) during the globalization era.
The second part of the paper aims to briefly analyse the importance and practice of education for sustainable development (ESD) in our contemporary society: the case of Romania. Conclusions represent the object of the last part of the paper.

Key words: *international cooperation, globalization, sustainable development, education.*

Introduction

The present study aims to analyse a topic that is both interesting and exciting for the present world subject to the process of globalization. The topic we refer to is sustainable development (SD) seen as a fundamental objective of the millennium and the need of involvement and cooperation of all actors on the international scene with a view to accomplishing this objective. For the peoples of the world to be able to aspire to a sustainable future on Earth it is necessary for international cooperation to intensify, as well as for the administration of the development process to be intelligently and sensibly made, and for the political and civic involvement to be made in a massive and responsible way.

„Our biggest challenge in this new century is to take an idea which seems to be abstract – sustainable development – and turn it into a reality for all the world's people", as" Kofi Annan, the General Secretary of the United Nations, used to say on 14th March 2001, in Bangladesh.

The implication and cooperation with a view to accomplishing the objective represented by sustainable development implies a radical modification of mentalities and visions regarding economic and social development, the nature of social, national and international relations, as well as the act of bearing social responsibility by all international actors on the global scene. The change of mentalities requires modifications at the level of socialization and education. It is necessary for certain sustainable-development oriented concepts, attitudes and behaviours to be formed and for sustainable development to be an educational objective both at national and international level.

In order to point out certain significant aspects related to the extent to which sustainable development has become an educational objective in Romania we have pursued a case study. This case study aimed at revealing the interest, accomplishments and the degree of implication that are characteristic of the non-governmental organizations which got involved in educational projects for sustainable development.

The subjects of the present study: sustainable development and education for sustainable development (ESD) constituted a major concern for important thinkers: John Elkington, Holmberg, A.Sobol, Fritjof Capra, Ulrich Grober, Alfred Sauvy, Johannes Tschapka, Robert Axelrod and many others.

The present paper, even if it puts to good account only a part of the results generated by research outputs, it also contains a novel element: the above mentioned case study analyses

* Associate Professor, PhD, "Nicolae Titulescu" University of Bucharest (doina.nedelcu@yahoo.com).

educational sustainable development practices/projects proposed by non-governmental organizations in Romania in collaboration with other national and international organizations.

Paper Content

Sustainable development in globalization era. International cooperation for sustainable development

Motto:

"Sustainability is much more than a simple technocrat project that intelligently administers resources, it is much more than a simple term used within the Club of Rome, World Bank or UNO. This idea will be further reinforced once it is understood as a new civilizing project, a new one which is however deeply rooted into our traditions and human consciousness ....."[1]

Sustainable development is a new, generous and corrective perspective over the development of the world, societies, and human beings in the globalization era. ,,This perspective aims at creating an innovating social development concept which can face future in the sense of becoming a regulatory idea, as, in fact, happened with the concepts of: democracy, freedom, justice and so on and so forth."[2]

A synthetic definition of sustainable development – perhaps the most used – is given by Lester Brown, the founder of Worldwatch Institute. This definition has been taken from the report entitled "Our Common Future" of the Brundtland Commission: "Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs." [3]

According to F. Capra: "/…/ A human sustainable community must be constituted in such a way that its lifestyle, technologies, as well as its commercial, economic and physical structures could *sustain nature and life, and not destroy them*.[4]

Nowadays, without a consistent international cooperation, sustainable development remains an unaccomplished ideal. Globalization – a continuous, complex, irreversible and contradictory process – has created such a system of interdependence that outside it chances to survive are scarce. In other words, there is no alternative to cooperation for international actors. The existence and development of international states, organizations, corporations, NGOs and individuals etc. is not possible outside cooperation. We refer to cooperation in general and cooperation for sustainable development in particular. We refer to cooperation among all international actors in order to help all the states develop economically, socially and culturally and in order to help the human being develop no matter to what part of the world we refer.

The multi-dimensional nature of sustainable development is outlined in a suggestive way in the chart below[5]:

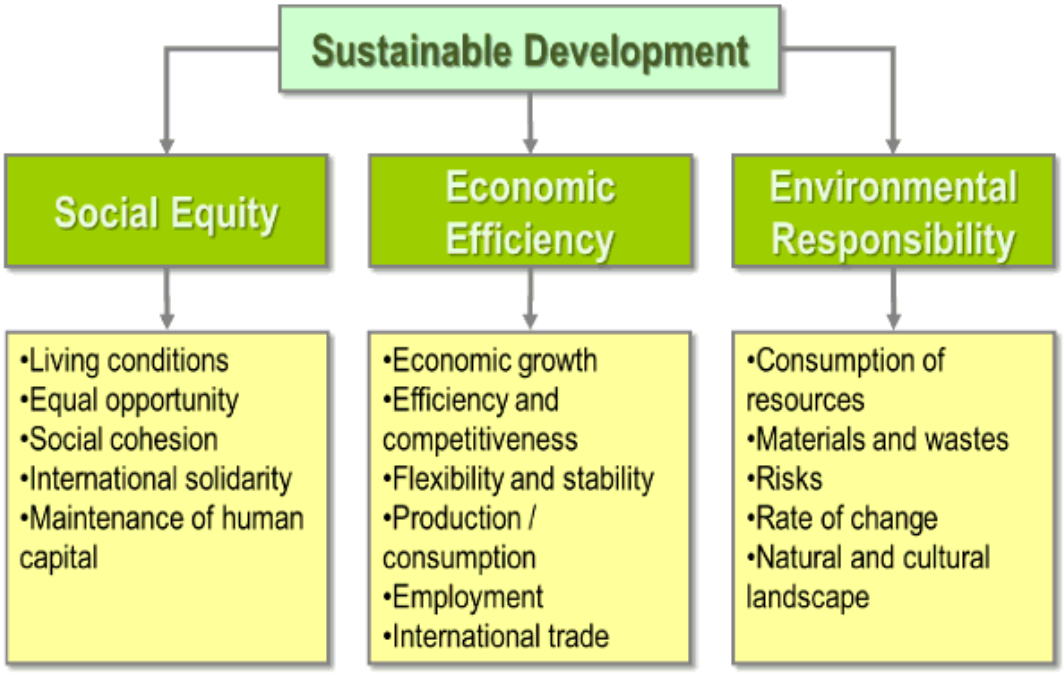
O comunitate umană durabilă trebuie să fie constituită astfel încât stilul ei de viaţă, precum şi tehnologiile şi structurile ei comerciale, economice şi fizice *să menţină natura şi viaţa, nu să le distrugă*."

[5] http://people.hofstra.edu/geotrans/eng/ch8en/conc8en/3es.html.



In a brief presentation, we may say that the general purpose of cooperation for sustainable development is the reduction of the differences that exist between the poor and the rich, as well as peace assurance, protection and preservation of natural life spaces.

International collaboration for development first of all implies a partnership between states/organizations that are donors and states/organizations that are beneficiaries; this is a partnership that involves all international actors (states, corporations, international organizations, NGOs etc.) of which, all parties have advantages on the whole. We do not refer to banks only, but to expertise, experience exchange, good practice exchange, as well as other potential benefits. The donating organization also promotes its image and increases its visibility; these are aspects that should not be ignored. The benefits of organizations must be understood in all their complexity and in relation to all the multiple dimensions that they imply.

Last but not least, cooperation for development indirectly aims at achieving certain macro-objectives like: assuring stability for beneficiaries, diminishing or stopping illegal migration, reducing migration of the labour force through the development of beneficiary member states at national level. Analysing these objectives – benefits posed by sustainable development, we conclude that they reflect a democratic perspective over the evolution of the world and international relations. In other words, the implementation of sustainable development is a component and a premise for the democratization of international relations.

2.2 Education for sustainable development

Motto:

"The purpose of this ... UNO decade ...is to bring together the multitude of initiatives from political education to environmental education, from global education to peace-oriented education,

while also including all these elements into the larger domain of education for sustainable development."[6]

Sustainable development implies that all categories of international actors go beyond certain economic, narrow and selfish visions and mentalities. Thus, it is necessary for a new perspective to be shaped and shared over human to human relationships, as well as over human – environment relationship.

It is also necessary – as the famous physicist Fritjof Capra, a supporter of the holistic paradigm, argues – to adopt radically different principles and values. According to F. Capra, the main obstacle that prevents us from accomplishing sustainable development is the fact that we are trapped in our own obsolete principles, and Newtonian rigid image over life. As a counterbalance measure he suggests a conceptual framework that integrates the biological with the cognitive and social dimensions of life. The unified, holistic way of understanding life is represented by his fundamental manner of organization: the network. In his paper "Hidden Connections – A Science for Supporting Life", Fritjof Capra argues that all living systems components are linked between them through equal and horizontal relations like in a network. This is true for the metabolic networks within the cells, as well as for trophic relations within ecosystems and even for communication networks within human societies.

The conviction that the whole is always different than the simple sum of its components is central for this systemic perspective. According to this theory, only sustainable measures are accepted, that is to say only measures that do not affect living systems.

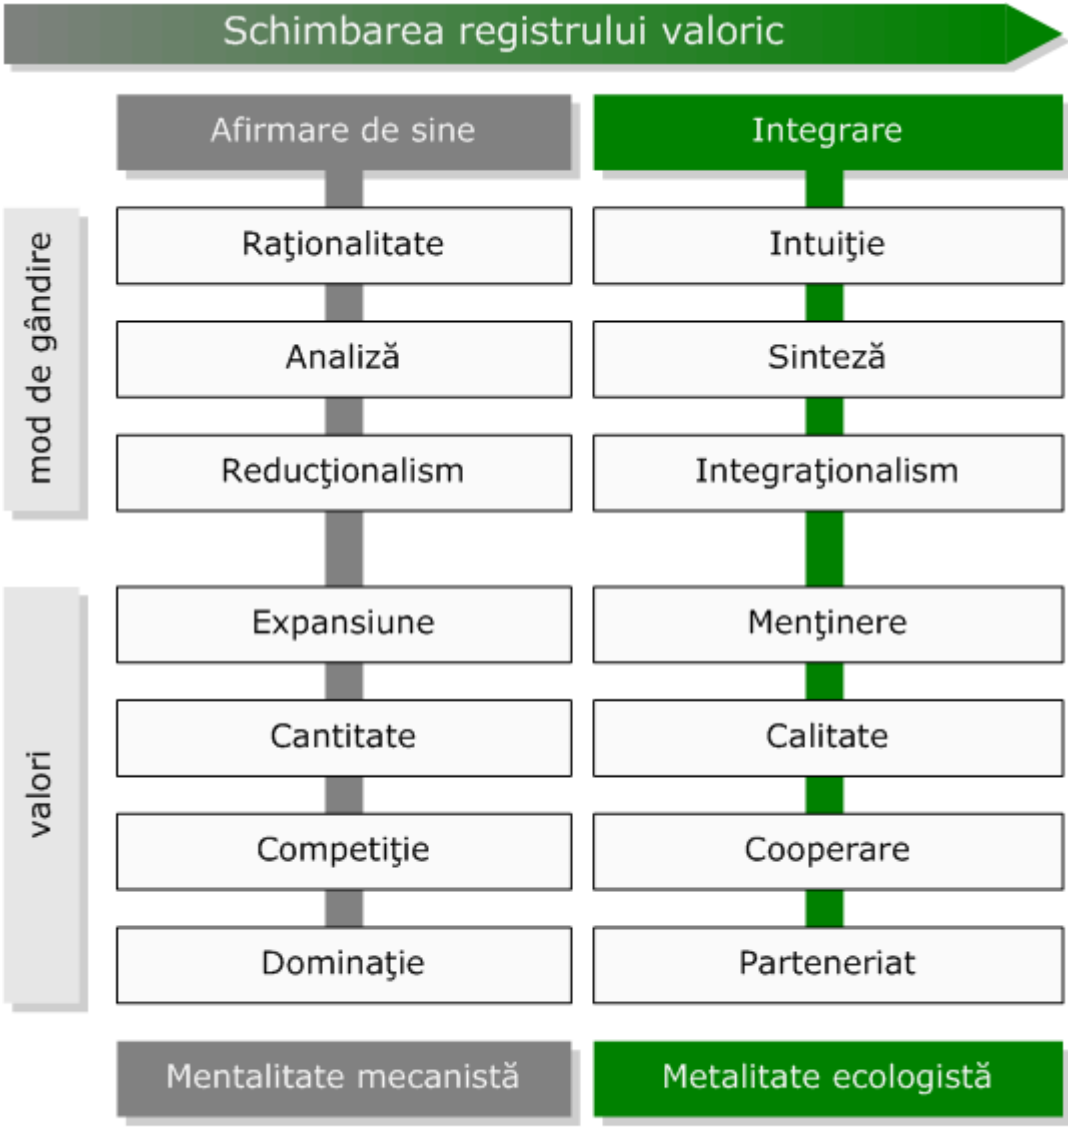
Fritjof Capra tries to put his theory into practice. He is a founding director of the Centre for Eco-literacy located in Berkeley, California, which promotes ecology and systems of thinking in primary and secondary education.[7]

He understands that it is necessary to have an intense and consistent education for sustainable development so that the holistic perspective over life could have more and more supporters. Subsequent to the application of this paradigm – the famous physicist argues – mentality and values will be different, they will transform in a better way human beings, societies, the environment and the planet. The way mentalities are going to be altered is briefly, yet illustratively outlined in the chart below:[8]

[6] Johannes Tschapka; apud: Ökolog Netzwerkzeitung, 3/2004, "Nachhaltigkeit leben (und) lernen"; in: Umwelt & Bildung 3/2004; original text: *"Scopul acestui ... deceniu ONU ... este să aducem la un numitor comun multitudinea de iniţiative, de la educaţia politică şi până la educaţia de mediu, de la învăţământul global şi până la educaţia pentru pace, subordonând toate acestea domeniului mai larg al educaţiei pentru o dezvoltare durabilă.".*

[7] http://en.wikipedia.org/wiki/Fritjof_Capra.

[8] Fritjof Capra , Wendezeit, Munchen 1991, p.XI-XII, http://www.dadalos.org/nachhaltigkeit_rom/grundkurs_1.htm.



(după: Fritjof Capra, Wendezeit, München 1991, p. XI-XII)

Another point of view integrates ESD within the educational system and it correlates it with the other components thereof. According to this perspective, education for a sustainable development "does not represent a mere extension of environmental education, which further includes social or economic aspects..., [while it must] be a strong connection element between politics, global education, environmental education or sanitary education[9]

[9] Willi Linder, Hohe Ansprüche; în: umwelt & bildung 3/2004, p. 3.

The efficient and consistent implementation of ESD is a major objective of UNO and the European Council. The accomplishment of the Millennium Objectives cannot be conceived outside appropriate educational policies or outside the implementation of ESD.

In consequence, the General Assembly of the UNO decided on the 20th December 2002 that the period comprised between 2004-2014 should be named the Decade for education in the spirit of sustainable development (resolution 57/254). The assembly appointed UNESCO as a leader-agency in promoting the Decade, and assigned UNESCO the task of conceiving a pattern for international implementation and for clarifying the link between the Decade and other educational processes like the Dakar Action Platform, which was adopted in 2002 by the World Forum of Education. Governments were invited to promote public awareness and an as large as possible program attendance, including cooperation with civil society and other authorities.

In Romania, besides the Ministry of Education and Research, as well as other authorities, the civil society (especially certain non-governmental organizations) brought a substantial contribution to the implementation of ESD projects that are basically aimed at young people, i.e. pupils and students.

2.3 CASE STUDY:
INVOLVEMENT OF CIVIL SOCIETY IN EDUCATION FOR SUSTAINABLE DEVELOPMENT: "AGENDA 21"

The present case study aims to present Romanian NGOs involvement in achieving education for sustainable development, as well as the successes and difficulties they face in implementing programs aimed at this objective. We focused on the work pursued by Agenda 21 in this area.

Our case study was based on participatory observation in the project. For achieving the Millennium Development Goals, for involving students and teachers in colleges of education programs and projects in development, Agenda 21 included a management interview and study documents with a view to recording the activities of the foundation.

In contemporary society we find that there are a lot of both governmental and non-governmental organizations involved in achieving sustainable development education.

Among the most representative non-governmental organizations concerned with ESD one should mention: The Civil Society Development Foundation, UNICEF Romania, The International Organization for Sustainable Development, Agenda 21, The Association for Sustainable Initiative etc.

Among the public organizations that pay a particular interest in this field of activity I would mention: The Environment Fund Administration, The Ministry of Environment and Forests, Region 8 Bucharest – Ilfov – Regional, The Agency for Environmental Protection Bucharest, The Environment Fund Administration, The Romanian Water Headquarters, The Municipality of Bucharest, City Hall District 1 Bucharest, City Hall District 2 Bucharest, City Hall District 3 Bucharest, Hall District 4 Bucharest, Hall District 5 Bucharest, Hall District 6Bucharest, The Ministry of Education, Research, Youth and Sport , The Council of Europe, and The Canadian Agency for International Development.

Assistance and Programs for Sustainable Development – Agenda 21

The main goals of Agenda 21 are: assistance and programs for Sustainable Development. Agenda 21 is a non-governmental, not-profit organization, of national interest, which is politically and religiously free and it was founded in February 2003.

Agenda 21 has devised a variety of ESD projects undertaken both nationally and internationally. The project results developed by this organization are outstanding: in collaboration with the Ministry of Education helped to introduce in Romanian pre-university education to a new discipline aimed at education for sustainable development.

Agenda 21 has initiated and coordinated the modernization process of social science curricula taught in school education so that it would match the needs of sustainable development and the Millennium Goals.

The Organization Structure comprises: President (Professor PhD Alexandru Tasnadi), Executive President (Professor Nina Cugler)**,** Project Coordinator (Florina Pavel) and Volunteers.

The Mission of Agenda 21 includes the following objectives: a) strengthening the role of children and young people in the implementation of sustainable development; b) developing partnerships with the local authorities for valorising the local initiatives and for making the local government more efficient; c) granting assistance and support for the marginalized groups.

Target Group Value

The education opportunities given to children and young people are the guarantee of a sustainable society. Volunteer work in the benefit of the community is one of the fundamental values of the association. Young people are part of the process and are involved in all projects of the organization.

Collaborations with other organizations and institutions : Open Education Centre – Bulgaria, Bucharest School Inspectorate, Ilfov County School Inspectorate, Romanian Radio Society, HIVSports – UK, County Council of Seville, Open Youth Bulgaria, Youth Council Romania, Town Hall of Cazalla de la Sierra, Askim City Hall – Norway, Bucharest Museum,

The main projects of Agenda 21

Of the main projects pursued by Agenda 21 we mention: *Millennium Development Goals Achievement involving high school students and educators specialized in development education programs and projects, Strengthening environmental governance in Bucharest, Students Ombudsman, The involvement of young people in the promotion of human rights, ABCD... Multipliers for human rights**, Civic education through television, A European ABC of Young people participation etc.*

Millennium Development Goals Achievement involving high school students and educators in development education programs and projects (December 2010 – June 2013***)***

- Development education is one of Romania's obligations undertaken once joining the European Union, that of defining and developing a national policy of international cooperation.
- The main objective of development cooperation policy of the European Union is to end poverty in the framework of sustainable development, including achieving the Millennium Development Goals.
- The aim of the project is to involve students and educators from 4 EU countries and one from the Republic of South Africa in the process of elaborating and promoting the development education programs.
- The themes approached will be correlated with 3 pylons from National Strategy of development cooperation: social justice and ending poverty, sustainable development, good governance and guarantee for observing human rights.
- Objectives: to enhance public awareness about Global problems and Millennium Development Goals among young people and among educators at community level; to develop and use the creative potential of young people so that they will be capable to initiate projects on themes related to global problems, human rights and millennium development goals; to build a support for the local policies on development issues with focus on poverty, discrimination and human rights; to establish communication networks between educators / teachers / local authorities and young people from developing and developed countries which will change the attitudes of the people involved in them.
- Expected results: the elaboration of a Development Education Guidelines, the creation of a Development Education Trainer's Kit, the creation of three Country Development Education curricula (Bulgaria, Romania, Italy), and three Country Development Education packs (Bulgaria, Romania, Italy), as well as an International Development Education Curriculum and an International

Development Education pack; setting up a network of well trained and motivated 150 educators / teachers and university lecturers which will introduce Development Education and the accomplishment of MDG within the partner countries; assuring an increased level of awareness among 3,000 young people, high school students, and university students; encouraging young people activities: 30 projects on development education that will aim at increasing the level of awareness in what concerns the development education problems in the developing countries; 80 policy-makers in schools inspectors and representatives of civil society; 3 Country Development Education Conferences (Bulgaria, Romania, Italy) on development education theme, an International Development Education Conference and Students "World Summit" on MDG.

Strengthening environmental governance in Bucharest (July 2009 – December 2010)

- Financed by: The Council of Europe, Norway Government, Bucharest City Hall

-The project entailed a more sustained involvement of the civil society in the process of strengthening the institutional capacity of the local authorities for elaborating environment strategies, as well as for raising citizen's level of awareness in what concerns environmental issues within the community they live and for enhancing collaboration with the public authorities for identifying and applying proper solutions.

- Objectives: strengthening environmental governance in Bucharest, by importing the know-how offered by the Municipality of Askim, Norway; educating the citizens, especially young people to adopt a behaviour characteristic of a sustainable life style.

- Results: valuable expertise provided by the grant giver and by the Norwegian partner :study visit for 2 Romanian experts ,training for civil servants, experience exchange through a climate network; human and institutional resources diversity: NGOs, public authorities, academic institutions, schools, teachers, students, pupils, the public television, other media institutions, young volunteers; young people, the main actors of the educational activities:12 young leaders, trainers: 400 young people in 12 high schools, 3,000 young people participant in the eco-volunteers march, over 5,000 young beneficiaries of the projects realized in high schools.

Students Ombudsman **(**March 2005 -present)

- Funded by: UNICEF Office Romania, The Ministry of Education, Research, Youth and Sports, The Council of Europe

-Students ombudsman is a national project that started in 2005 in partnership with MERYS and UNICEF Office in Romania.

- Student's Ombudsman is a project that aims at creating and implementing in schools an institution capable of assuring knowledge, promotion and respect for children and the youth's rights. The aim of the project is to teach young people how to act in a democratic society, how to take responsibilities and how to gain skills for exercising their rights.

- Vision: The Students Ombudsman proposes the creation of an institution that: a) will ensure the knowledge, promotion and respect of child / young people rights; b) will mobilize by a unitary mechanism students, teachers, parents, other partners in the community (local authorities, mass media, private companies etc.); c) will stimulate the significant participation of young people and will focus their energy and creativity for shaping the environment they live in.

- Mission : a) to teach young people how to act in a democratic society; b) to help young people take responsibility and fight for their rights; c) to contribute to the development of young people's participative behaviour; d) to complete the education offer of school and family by involving the young people themselves as education providers.

- Structure: In each selected school , the Students Ombudsman was formed by 7 people : 5 students (SO President, SC President, Member 1, Member 2, Member 3) , 1 teacher , 1 parent.

- Results:

a) Over 10,000 young people from 300 schools gained skills and developed necessary competences for their life as an adult in a democratic society; b) Over 5,000 cases of child rights infringements were solved; c) The training during 4 annual training session of the school inspectors

responsible with educational activities (42 participants from all the country's counties and from Bucharest); d) 10 workshops for developing monitoring mechanisms and a National strategy on education for human rights in schools; e) Meetings of the experts for the elaboration of the National strategy on human rights education in schools; f) The elaboration of a curricula based on child rights that will be introduced in the initial training of the teachers in SNSPA; g) Promotion and training materials elaborated and disseminated: child rights manual, methodological guides, posters, flyers, child rights caravan; h) 3 national camps organized in partnership with UNICEF and MECTS (editions 2009 and 2010) and with MECTS and ANSIT (2011 edition), which were attended by 300 young people from all over the country; i) The referral to the project as a good practices example for the youth participation in the UNO's Child Rights Commission report; j) The promotion at international level within some international conferences ("Let's create Europe with and for children", organized by Council of Europe in Stockholm, 2009, "Europe for Citizens", European Commission, Trieste 2010) and within international youth exchanges where members of the organization participated.

- Difficulties in accomplishing ESD projects

Subsequent to interviewing Mrs Executive President (Professor Nina Cugler) we could identify the major difficulties that the organization is facing in implementing its projects. The President of the organization appreciates that most of the managers in the domain identify the same obstacles in achieving their goals.

In accomplishing international projects, the main identified difficulties are connected to the differences between the educational systems, especially that these projects propose the introduction of the ESD issues in the curriculum. The Western European partners have a much more considerable autonomy in establishing the curriculum based on the needs of the local community. Parents, students and NGOs play an important part in this process. In this context, for example, in the new project in which Agenda 21 is partners with Italy, France and Austria, she is facing real difficulties in adjusting the project concept to our educational system, "as we have a centralized one".

On the other hand, there are financial difficulties especially because the projects are on a multi-annual basis, usually 3 years, the reconciliation for our investment (the commission initially grants 80% of the 100% grant that supports the project - meaning 75% on the projects coordinated by old state members of the UE, and respectively 90% for the new members) is done after the project is finished. This means that in case the coordinator is from the old members of the UE, we have to support a percentage of 45% from the costs of the project, and in case is a new member is 30%.

There are also linguistic barriers, sometimes it is hard to have target groups with whom to work in a common language and the work is doubled because of the need to translate a lot of materials. It is a double effort - on one hand all the documents of the initiator and the partners involved, on the other hand on national level all the documents in Romanian. Finally, the success of the project is given by the way in which all the partners are complying with their obligations and they are doing the activities as they were established. Sometimes, there are delays and even blockages in the implementation of the project due to the multi-partners character of the project.

3. Conclusions

The paper brought into evidence the importance and the need of international cooperation, the necessity to get all international actors involved in implementing SD principle in social life at all its levels. The vision according to which the development of certain states implies the poverty of others is already obsolete. Mitigating social differences, that is the clash between the rich and the poor, ensuring peace, protecting the green area are major objectives of the millennium. Their implementation requires not only the awareness of the crucial need to implement SD, but also the change of mentalities through a common effort to educate decision making factors, young people, as well as all citizens in the spirit of SD.

The paper points out that the Romanian society has proved open to promote SD and ESD. We have noticed that this issue is an important topic on the Ministry of Education and Research Agenda, as well as on the agenda of public and also private organizations, but basically on the agenda of Romanian NGOs.

The present case study brought into evidence the initiative, diligence, consequence and accomplishments of the Romanian civil society in implementing ESD projects. More precisely, the analysed case study focused on presenting Agenda 21 projects. Agenda 21 Foundation impresses through it numerous and complex projects, as well as through achieving its objectives and through an efficient collaboration with school inspectorates, as well as other public and private organizations. However, apart from its successes, the civil society is still facing important difficulties in the attempt to implement its projects, including the international ESD-oriented ones.

Besides financial difficulties, there are also differences that are hard to be overcome – especially the inconsistencies between the organization of the existing educational systems (see: the relation autonomy / centralization between the components of every system, linguistic barriers, the non-observance of deadlines by projects partners etc.

The present paper may be a starting point for the accomplishment of a larger research work that would imply a more complex methodology as regards the way in which different ESD socialization agents get involved in Romania.

ABOUT THE FOUNDERS OF LEGAL SOCIOLOGY AND THEIR IDEAS

MIRELA CRISTIANA NILĂ STRATONE*

Abstract
The main founders of the juridical sociology are considered to be Eugen Ehrlich, Max Weber, Theodor Geiger and Georges Gurvitch, The researches of juridical sociology from Romania are demonstrating the existence of a real tradition in this domain at a national standard. Some roumanian explores of formation jurists have practicated in the cognitive demarche a sociologycal abordation about the law, what have been fatal conduced to the fixing of the base of the juridical sociology in Romania.

Key words: *juridical sociology, alive law, normative life, social needs, the comprehensive and the rationality of the social actors*

Introduction

In one form or another, the initiators of legal sociology had in mind from the beginning the social needs.

Most jurists argue that the habit and the tradition can not constitute as sources of law. But the habit is formed by repeating the investigations to resolve a social need. Of course he, the habit, with time can join the tradition, that later to get custom. And not anyway, but by an evolutionary process. And if we talk about custom, we are in the area of sociological jurisprudence.

Therefore, starting from social need, it is imperative to analyze the relationship between social order imposed by judicial order, but also reverse legal order determined by social order, the latter being certainly the result of free human action that produces the so-called right living at Eugene Ehrlich.

Social determinism of the rules and legal rules confers the right a social character. This is expressed by the fact that legal norms are not aprioric to the social life of individuals or groups. They are even born from the contradictions that occur in the societal life.

The analytical capacity of sociology as a science inevitably leads to highlighting the deviant behavior compared with the conformist one. Through legal sociology, it has initially tried to capture the degree of internalisation of social norms and determining mechanisms of sanctioning through the dimensions of social control. In this sense, education and coordination of social agents in accordance with social needs, occupied an important place in their essential social role.

The ratio of law and morality sends us in the area of social order as a result of social morality of the time. Choosing by the social actor of a certain type of behavior is actually a result of its social need, coupled with the moral education at which it is situated.

Paper Content

The main founders of the juridical sociology are considered to be Eugen Ehrlich, Max Weber, Theodor Geiger and Georges Gurvitch.

Eugen Ehrlich[1] has been considered as being the founder of the juridical sociology. He consideres the law as being a result of a proceeded norme from the individual and social activity of the social actors.

---

* Lecturer, PhD, "Nicolae Titulescu" University of Bucharest (mrl_cristiana@yahoo.com).

[1] Eugen Ehrlich - Austrian origin, was a professor at the University of Cernauti (Bukovina), where he organized and condced a sociological seminar for the research of the living law of various ethnic groups, including the Romanian one. Praising the work of Ehrlich in this area, Dimitrie Gusti stated that: "Eugen Ehrlich occupied a place of honor in legal science as a lively and creative spirit, he was a devoted member of the Romanian Social Institute, and

In 1913 Eugen Ehrlich writes the book "*Grundlegung der Soziologie des Rechts"* which appears at Munchen and Leipzig. This work appears in the year 1936 in USA in english language with the title:" *Fundamentals Principles of Sociology of Law*").

"The whole development and evolution of the law doesn't exist neither in legislation nor in the sociology theory of the law or doctrines"[2].

In this meaning the author underlienes the fact that the rules of the behavior transformed in law norms by technical-juridical instruments can be intimate and explicated by the *induction*: This is realized by the base of metods of sociologycal research and it starts from the observation, the description and the explanation of the individual and social behavior.

Increasing the societal role of the "alive law" Ehrlich has underlined the study on the difference between *the legal* and *positive law* and the *"alive law"*. Thus it shows that the oficial legislation reaches only a part of the juridical order of the society, the biggest part of the law evolves and acts independent of the legal law and of the official order. This part of the law it is named *"the alive law"*, creation of the social quarters, result of the interactions between persons.

In this situation the role of the juridical sociology could be that to research systematic in totality and in deepness the alive law.

The alive law take difference and completed form by:

- the contemplation of the positive law and juridical documents
- the direct observation of the normative life of the social quarters

This necessity to explore the alive law has appeared in the succeeding of the evident and official finding, respecting the disability of the oficial law to control and to regulate the social activity in its totality.

Therewith the author shows that "the juridical sociology must occupy primal with the investigation of the alive law and with the prominence of the role and the social services of the various cutums usages and juridical sociology practices and nonjuridical of the social quarters which integrates the society".[3]

Regarding to the normative order. Ehrlich have mentioned and explained the notion of "*social order pacifier"*. This one is entitying and it works nearby the juridical one and official one of the state and is characterizing by:

- spontaneity
- non-contentious content
- underlain on the free organization
- adjustable by metods and instruments of communication

The importance of the study of the alive law has been assumed by others sociologers too, which have discovered in it the causes of the oficial law, idea which, all of a sudden with the one of the study of social effects of the official law, have remained to the researches's base regarding to the study of the object of the juridical sociology.

Max Weber[4] has denoted in the german sociology from the end of the XX century, by his contributions about the power, juridical sociology and the administrative one.

embraced with loyalty Romanian citizenship. "(Dimitrie Gusti, the individual, society and state in the constitution, in sociology militans, 1934, p. 105, Dan Banciu - Elements of legal sociology, Lumina Lex Publishing House, Bucharest, 2000, p. 32).

[2] *Ibidem*, p. 30.

[3] *Ibidem*, p. 31.

[4] Max Weber (1864-1921) - was awarded of the Faculty of Law in Berlin. He was a professor at Freiburg and Heidelberg. He lived a long time in Italy and the United States. He was appointed by a German armistice commitee of Versailles and in the committee charged with drafting the Weimar Constitution. In 1918 he taught at the University of Vienna and the University of Monaco in 1919. (Sophia Smith - Legal Sociology, Lumina Lex Publishing House, Bucharest, 2001, p.33).

He analized insistent the reports between law and society. This thing began with the publication of his first books[5] concerning to the socio-economic conditions of the prussian peasants, phenomenon which he studied under empiric form.

The results of that research have redounded to the promotion of some reformers ideas which were regarding the legislation.

The main directions to whom the cognitive demarche has straighten were:

- the social action
- the social relations
- the alive law

"The action is social in the extent that in the virtue of the subjective semnification keyed it from the persons who acts, and take adunt of the others behavior and as result it is orientated in that way"[6].

He defines the sociology as being the science of the social action.

Regarding to the report between the law science and the law sociology, Weber consideres that:

- the law science sees about the correct expression of the normes under form of specific linguistic concepts being a prescriber science, because it express what it have to be;
- the law sociology sees about the study of the manner in which the norms are transpose in usage, with other words it is searching the conformity or nonconformity of the behavior to the norms, it's a descriptive science, because it shows what it is.

Max Weber has redounded to the pointing out of the juridical sociology in the following directions[7]:

1. The comprehension and the rationality of the social actors: starting from the human person as base unit, the author shows that this has permanently a comprehensive behavior and the sociology has the merit to furnish explanations regarding to the *reasons* of the type choice of behavior squared up to by person.

Among the reason of the choice of a certain deportmental type, Weber has taken in disscution the *well-founded ones, so the rational ones*. Thus he tried a differentiation of the rationality in two types*: the symbolic rationality* (the correspondence of the aims with social values) and *the instrumental rationality* (the realization of the aims with the most efficient ways).

2. *Ideals types of authority*: analising the report between the juridical order and the administrative one. At Weber "the state and the administration compose that human partnership which is allocating the monopoly on the physic legitim constraint and which realize a domination report of the people, by people based on the legitim exertion instrument of the constraint"[8].

For this authority under form of domination to manifest to the persons, appearance the necesity of the existence of some justifications. These can take an interior and exterior form:

a) - *the interior justifications* are recovering in:

- *the traditional authority* – what suppose the unconditional adhesion of the persons to the cutums, become legitim, usages customs, being the oldest form of authority, met to the sovereigns, monarches,pontiffs,etc;
- *the charismatic authority* – the holders of this type of authority interweave the physic qualities with the ethical ones, they are the politician leader, the militants bosses, who we find in the traditional societies and in the modern ones; in antiquity they were gods and herous, today they are the public persons from which is parttakeing mass-media;

[7] Dan Banciu - Elements of Legal Sociology, Lumina Lex Publishing House, Bucharest, 2000, p. 43.

[8] *Ibidem*, p. 45.

- *the legal authority* - it is underling on the rational conformer of the social actors, convinced by the valability legality of the law state and in the same time the competence and the objective of the public and official authority.

b) - *the exterior justifications* are represented by the law and legislation[9] agents diverse in space and time.

Weber consideres that the transformations and the revolutions occurred, in conjunction with the law and the representative institutions have fallowed the rationalizing and of the bureaucratic what is determining so order predictibilitation and stabil hierarchy of status at organizational level, and so dissary in some special situations.

An another aspect of the researches undertaked by Weber it referes to the relation: *customs-convention-law*. The custom appears here as atitude wich on recurrence is typifying. The type is maintaining by tradition, being transmited from the forerunners to the progeny by recurrence having to the base the imitation (imitation-custom). In this situation the custom becomes convention, at which the person accedes from his own. The passing from the convention to the cutum ot os made gradual and continued.

In this situation "we are in the presence of the specific law when the interest subjects can ask for the garanty of the observance of the conventional norme or even of the custom, of a coercitiv[10] apparatus".

An another subject squared up to by Weber in his studies makes reference to the *juridical occupations*. Thus, he sintetize the following ideal types[11] of law:

- *the materialistic and irrational law*, that is destitute of the report to a norme, but amenable only to the arbitrary choice of the one who judges; this law type has determinated the advent of a prime development stage of the law in which the base element is constituting the *law creation by the prophets;*

- *the materialistic and rational law* in which the decision it is based on "a sacred book or appealing to the ethic imperatives, to the politics saings", it is the law type which has determinated the advent of the second development stage of the law and namely the *empiric production of this one, with the help of the anterior*, so a reference base appears;

- *the formal and irrational law* in which the magistrate in his adjudicational act it is based on irrational norms, but existed in religious books or belonging to the divine revelation; this law form is the one who has contoured the third development stage of the law by his assessment by the *theocratic power*, that is the period when the law acts as a divine power, what it have led to the forming of the theocratic state, too;

- *the formal and rational law* – "this exists when the lawgiver and the magistrate decide basing on anterior, relegating to the codificated norms and taking offence his decisition, on the base of abstract concepts" ; here we meet with a law type, which it have determinated the advent of the fourth development stage, put across in the listing of the law in the sisthematic cadre, this being a result not of the prophet's acts, neither effect of the anteriors of the magistrate practice or of the divine act, but purely, *materialization of the jurist's acts.*

The Weber's work is imposing, and the aspects squared up to are from far away the most burner subjects and alike problems, with which it has collated among the history the capitalist society.

In the study of the law sociology he analizes punctilious all the law's pecularitys reported to the epoch, but specially the society's culture of the membership.

---

[9] *Ibidem*, p.47.

[10] Popescu - Legal Sociology, Lumina Lex Publishing House, Bucharest, 2001, p. 34.

[11] Ibidem, p.35.

The contribution of Weber to the sociological theory in different European countries is imposing. More, in USA, weberian conceptions have led to the action's advent and of the symbolic relations, two forms of relations.

Theodor Geiger[12] (1891-1952), an another representative of the german sociology have undertaken multiple researches succeeded with results drisen in the representative works. Among these, we consider needful to present the following:

"*Das unecheliche Kind und seine Mutter im Recht des neuen States*"("The legitim son and his mother in the right of the new state") – 1920 , it's his licence's work in the idea pursuant to whom beyond the law the born child out of marriage belonged to the maternal social medium, while the legitim one belonged to his paternal social medium. In these conditions the legitim kids were in amterial inferiority comparative with the legitim ones.

In 1939 Geiger has published a *sociology tenor in the Danish language*. Offering a definition to the social sciences, he was making the difference between sociology in a large meaning and the sociology in a limited meaning.

To mention is the fact that the sociology in limited meaning is reffering to that which is named "the empiric analytic and general theory of the sociology". One of its discipline is the special sociology, which at its turn is dividing in subdisciplines. One of this subdisciplines is the law sociology, too.

The law represents a namely type of social order and namely the imperative order, existed in second plan than real order. In this work the author presents the difference between the law sociology and the juridical science in the meaning that "the sociology is first interested of the real order, while the jurist is interested of the imperative order.

The sociology discourses the law as genre of social order, in general while the jurists take in consider only the order maintained by the state"[13].

In 1946 appears in Sweden a work, *centred on the report between law and morality*. Thus, he shows that while in the primal society the law and the morality concurred, in modernism these are separated, in the meaning that each acts in different planes and automatic the morality has lost the attribute of social control instrument about the law.

The preliminary studies concerning to the law sociology appear in 1947 in Danmark and it's named "*Vorstudien zu einer Soziologie des Rechts*".

In this studies are analyzed the aspects clung: social order and independence, behavior, norm as the law under form of social order, sanctions, systems, law's sources. It emerges that the analysis of the juridical sociology it is differenced from the one of the juridical science, by which she discovers and explains the facts and the social relations, which is constituting premises of the compulsoriness and of validity of the norms of the law's source, the passing from the spontaneous sanction to the organized one.

In this studies, too, Geiger discourses " the reports of the law with the morality, the politic and the juridical awareness[14]" and with them the passing from the social organization to the juridical one,

---

[12] Theodor Geiger (1891-1952) was awarded the University of Würzburg. From 1918 is set at Berlin, where carried out an intense activity of study and research. In 1928, he was appointed professor at the Higher Technical School in Braunschweig. He took a stand against National Socialism. He was forced to emigrate to Denmark (1938), where obtained a chair. After the German invasion of Denmark is forced to flee to Switzerland. he sets in Stockholm and Uppsala, has lectures and conferences in Lund,too. After the war he returned to Denmark where he is a professor at the University of Aarhus. Between 1951-1952 he taught at the University of Toronto (Canada). He conduced research in empirical legal sociology and wrote theoretical works in this field. His license was a work of sociology that has sustained at the University of Würzburg in 1918 and included Geiger's research findings on 'illegitimate son and mother in law new state ". It was published in 1920 and regarded as one of the first books on the subject. (Sophia Smith - Legal Sociology, Lumina Lex Publishing House, Bucharest, 2001, p. 43).

[13] *Ibidem,* p.45.

[14] *Ibidem,* p.47.

this on the agency of the sanction, which appears here as a dynamic instrument of the cognitive demarche.

Concerning to the law's sources the author offers information about a namely successive order of those: commonness, juridical practice, legislation, juridical science.

An another subject discoursed by Geiger in his preliminary studies aims scarcely the juridical awareness order "and analyses his cognitive function, the reality of the juridical awareness, its role as a critic instance, the subject of the juridical awareness and positive juridical awareness"[15].

On the other hand, Geiger has launched the theory pursuant to whom the general sociology, by the agency of the subjects amenable the research, represents an ideological criticism.

The work "*Arbeiten zur Sociologie*" ("Sociology study ") has been published posthumous, at Berlin, in 1962. In this study, Theodor Geiger explains the difference between the *material juridical sociology*(is regarding the determinant character of the society to the law's address) and *the formal juridical sociology*(the law represents the cultural system which offers reference for the adjustment of the society's life).

The author suggests in this work "as subjects of research" socio-juridical, the actors which persuade the decision of those who are transposing in life the law, the social effects of some juridical institutions, thus like family, property,etc[16].

Georges Gurvitch[17](1894-1965) has substantial redounded to the substantiation of the juridical sociology as science, by the realization of an definitely bond between sociology and the law science.

His works[18] are constituting in present reference points for the explores of the juridical science domain and of the juridical science ones.

Georges Gurvitch has dignified the contrast between society and state. Thus he show that the state law doesn't constitute the only or the unique law source, and from here he made only a step, namely to show that the juridical order represents the result of the statal action and of the others independent organisms of state which are sources generator of law[19].

The ideas on which have supported his researches have dressed the *form of the juridical pluralism of the normative facts and of social law*.

Regarding to the juridical pluralism, in Gurvitch's opinion this is basing on the theory of the normative facts differenced as followings:

- *relation facts*-facts which endorses the sociability, the relationship with other persons; these facts trains the personal values of the individual and they are in conjunction with the individual law.

- union and sociability facts by communion and interpenetration-facts which implies *transpersonal values* and they are in conjunction with the social law.

The individual law persuades the adjustment of the interpersonal relations, while the social one is manifesting at organization level or human community.

The social law is a integration law, communion and collaboration, manifested specially under two froms: the work's law and the international law.

Georges Gurvitch has defined the juridical sociology under the form "expression of some pluralistic concepts, being that part from the sociology of the human spirit which studies in its totality

---

[15] *Ibidem*, p. 48.

[16] *Ibidem,* p. 44.

[17] Georges Gurvitch (1894-1965) was a native of Russia. In the period 1915-1920 was professor at Petrograd and then to Tomsk. He was one of the participants in the Russian Revolution of 1917, then emigrated to France. Here he worked as a professor at the University of Strasbourg, then in Paris at the Sorbonne. From France he went to U.S. in New York, where he was professor at the Faculty of Social Sciences.

[18] *L'ideé du droit social* (Paris, 1934), *L'expérience juridique et la philosophie pluraliste du droit* (Paris, 1935), *Eléments de sociologie juridique* (Paris, 1940), *Sociology of Law* (New/York, 1942), *Problémes de sociologie du droit* (în *Traité de sociologie*, Paris 1960).

[19] Dan Banciu - Elements of Legal Sociology, Lumina Lex Publishing House, Bucharest, 2000, p.52.

the social reality of the law and which take count of the variety almost infinite of the experiences of all the societies and all the platoons describing the concrete content of each type of experience and disclosing the law's reality which the schedules and the symbols are more hiding then expressing it[20]". From here results that that juridical pluralism is a cement between law and social reality.

The juridical sociology in Gurvitch's opinion is dividing in three categories:

a) - juridical microsociology or the microsociology of the law which is dividing[21] in:

- the horizontal study – about on the organized societies law which acts by sanctions and organized coercion, exteriors, but about on the unorganized societies law, which forces under spontaneous form and diffuses the collective life.

- *the vertical study* – about on the law's species which acts by the hierarchy's complexity of status existed in interdependence. With the specific social relations.

b) - the differenced sociology of the law – the functions which are executing some human collectivity is putting across in manifestations of the law it studies:

- *the juridical typology of the particular active platoons*, able to create organized suprastuctures(familial, territorial, professional, interes, platoons, etc);

- *the juridical typology* of the global societies which conduces to the constitution of the great law's system.

c) - the genetic sociology of the law, whom objects are constituting from:

-the tendentious regularities of any type of juridical system

-the factors which persuades those regularities of the change of the juridical system: economics, political, demograss, cultural, etc.

The juridical sociology has in Gurvitch's conception a theoretic and philosophical character. In this way it is distancing from that fundamental juridical sociology on the empiric research and although the author doesn't negate the respective research type, he is appreciating selective.

The contribution of Georges Gurvtich to the development of the juridical sociology consists in that, on a hand he has underlain a model for the systematic construction of the juridical sociology, and on the other hand, he offered in a realist mode an ensemble image of the domain and the specific of this science, a thing which conduced to the extending of the research area and to the thoroughgoing study of the study's object.

Conclusions

As a result of attempts to demonstrate the link between social life free of rules and marked by social needs and the rules of law, legal consciousness appears positive in the spotlight.

In its entirety legal order represents the reference system necessary to the regulation of social life. In this context, it is inevitable the contrast between society and state. While the state believes in a form more or less explicitly that state law is the only source of law and implicitly of the legal system, legal sociology demonstrates that legal order can not perform their goal, unless is established as a result of state action coupled action of other bodies, unstated, the latter being undoubtedly sources of law.

Through the connection between the living and the legal right, is justifying the need for legal size evolution of social life. The right can not be an immobile entity, because it is not a dogma: it provides understanding, explanation and especially is in constant change, according to the requirements of the social life. When a legal norm is no longer matching to the social need, it is necessary another. In the absence of this action, anomia appears inevitable, given the social movements.

The sociological research of the evolution of social and legal order is a essential condition of the regulation of societal life.

THE MUSLIM FAMILY BETWEEN MYTHS AND SOCIAL IMPACT, SEEN TROUGH THE EYES OF A NON – MUSLIM

MIRELA CRISTIANA NILĂ STRATONE[*]

Abstract

This study is part of an extensive analysis of the social impact caused by the characteristics of the Muslim family in the Romanian and European society. Between the religious and the social demands, Muslim family manages all the harder to enroll in the course imposed by tradition. A great importance has the knowledge and the understanding of the intra and interfamilial behaviors, this one needs first to detect and to avoid the myths related to the Muslim family. Addressing and clarifying this issue lies in the center of the present study. He represents a necessity without which Muslim family life, the role of the woman and the man in this family can not be understood fully, given that their religion and their way of life tend to cover an area of increasingly greater psychosocial space both at European level and worldwide.

Key words: *Muslim family, myths, social impact, European psychosocial space, reintegration.*

Introduction

The fact that the Muslim religion is dominated by a strong expansionist character has never been a secret and much less it is not a secret in present, when this trend is openly expressed.

The faith in Islam is presented both as a dynamic tool of the Muslim [1] religion and as a basis, foundation of the Muslim spirit. It must be given that the Islam dominates the Muslim religion until near confusion. This is no way an exaggerated opinion, as some Muslims might support, but evidence, which logical it mustn't be demonstrated. His power consists in the ignorance of the tribal society and in the conservative form of organization: THE CLOSED CIRCLE.

This symbol is fundamentally and separates the world in two: on one sight is the Islamic population, located inside the circle and on the other sight is the rest of the population, the non-Islamic one, located outside the circle.

In terms of social psychological, the core of the closed circle is represented by the Muslim family, The family group is one of the strongest channel through which is transmitted intergenerational the Islam.

Under theoretical facts, the Islam is presented as a beautiful religion, rich, interesting, and especially tolerant. This Islam religion is soaked in her nature by the force of the Arab cultural imperialism which has between others the major interest to annihilate the women's personality under the mask of the familial worthiness.

But, the Muslim family, like another ordinary social family, assumes for the existing and the function of the married couple two parts, each other with its status and role. The two elements of the married couple behave major differences comparative with what exist outside the closed circle. These differences, beyond the interest derived from the need for knowledge of the non-Muslims, terrible intrigue, because they often transcend the most elementary rules of hygiene, good sense and respect. Even the family affection is hard to understand. And here I make the bracket suitable for the ethnocentric approach.

It is obvious that on the Muslim woman's shoulders stand all the pride and shame of the world located in the closed circle. Towards her it acts so much coercion and punishment that femininity acquires hideous, grotesque meanings.

---

[*] Lecturer, PhD, "Nicolae Titulescu" University of Bucharest (mrl_cristiana@yahoo.com).

[1] The Islam itself.

Increasingly often, the ancestral need for freedom and affection is pushing these women outside the marking killer - circle line.

But not only is the woman the one who makes the unusual prohibitions and the need for normal but the man, too. We are surprised to find out that the Muslim men has reached the conclusion that he is no longer accepting the carnage forcibly imposed by Islam on his body. At the same time, he is the one who is directing, supervising and applying crushing sanctions against the women. However, his human nature and social influence have come to intertwine into a force once impossible through which it defeats the power of Islamic dogma and here it is now, how in growing number he leaves the fear circle.

Paper Content

Beyond the closed circle area the Muslim citizens are living their lives in other dimensions, sometimes confused and overwhelmed by an immense freedom. This freedom embraces them as a divine gift to which many of their fellows not even dream of. However, the free life outside the circle is foreign to them too and incomplete in the same time because the Islamic precepts will never entirely leave them.

In good faith or not, some stereotypes regarding to the Islam practitioners has wanted to be demolished.

Faith in God has been used over the years to justify both extreme and extremist acts in a number of nations where collective consciousness and in some cases national consciousness have been based on religious concepts. Is the case of Muslim peoples too, whose full-time guide proved to be the Islam. As it was mentioned earlier, the Islam is a beautiful religion dominated by positive energy. This is from theoretical point of view. In fact, the Islam is used by expansionary interest groups, from a justifying position: in the name of Islam are committed murder and unimaginable atrocities and it is especially defended by a timeless law. Sure those things don't presents easy, so it is necessary for the beginning to bring at issue some of the so-called myths about Islam to easily see then how this element of a impressive dynamic is returned even against their own followers.

1. The Islam was spread by the force of the arms

Initially, those who have set out to the spreading of the Islam formed a small group. This small group preached Islamic religion to the east in countries like India and China and to the West, where they focused among others Morocco and Spain. The people of these territories could not be bound by a group of believers to renounce at their religion and forcefully to adopt another. If these people were even partially converted to Islam they did it willingly. Also here must be mentioned that on the occasion the Mongol invaders on the occasion of a little part of the Islamic territory conquering, they haven't prejudiced the religion, they haven't intended destroying or impairing it, but furthermore they have adopted it.

At the time when Islam had spread in some areas, this action was marked by the construction of churches and synagogues for non-Muslim s under the dominion, that the religious life of another faith should not be disturbed. This care and also respect for other religions prompted the non-Muslim s to convert to Islam.

That been said, it can be deduced that the Islam was not spread by the sword, so using jihad bis saif, but by respect.

2. The fight on the way to God, for His sake, take the form of Islamic jihad

In Arabic, jihad means struggle. This fight requires action of exertion, of struggle. Islam uses this word to explain the battle that gives the followers on the way to God. Jihad exists in several forms, some below and others located at a higher, deeper level. The main forms of jihad are: jihad al-nafs (fighting your own self), jihad bil-yl-san (fighting by word) bil yad jihad (fighting through

action), jihad bis saif (fighting with sword). Jihad al-nafs is considered to be higher than jihad bis saif.

The heroes' cult supports a full report to faith in God and what it refers to Him. So, those who die during a pilgrimage to Mecca, or for any reason when they are on their way to a mosque, they come to be considered martyrs.

The fact that a person dies while fighting the war and becomes a martyr is considered a false in the Islamic religion.

In conclusion, Jihad means to fight for God's sake. Under these circumstances, how can you convict an Islamist formation that solves everything through jihad, meaning that it is fighting for the sake of God, no matter what methods and with what results? So this is how it is seen the situation from the point of view of the followers of this religion, or rather how it is intended to be viewed things from certain groups. On the one hand we have fanatics who seek to justify any transgression in the name of God, and on the other side it must be said that there are not neglected the forces which are training causing fanatical movements under the umbrella of Islam.

3. The Muslim s commit atrocities during the war

And this is considered a myth by the supporters of the Muslim religion. They argue strongly that any Muslim military during war Muslim, wherever it is, is expressly bound to respect ten rules which absolutely prohibit murder of children, women and elderly men, mutilation of corpses, acts of betraying, movable and property of the enemy, the slaughtering of the animals outside the food need and other immoral acts.

Therefore, through the existence of these mandatory rules, is considered that the Muslim s are true good people even during the war. By trying to demolish this myth, the non-Muslim s, the entire public opinion is put in front of a model of gentleness, of kindness and exceptional humanity together, describe the Muslim warrior.

The question is: Which one is the myth and which one is reality between the two hypotheses?

4. The Muslim s are terrorists

It is true that Islamic terrorism is presented as a concept extremely generous in size. On one hand, we are dealing with some very effective stereotypes cultivated through mass communication. The public image of Islamic terrorism cover the entire Muslim breath and beyond. The view that if you have joined at Islam you instantly became member in international terrorism cult and you obey unconditionally the remaining commandments of Allah, is very strongly cultivated by the media. In parallel with this image, they return on the table every time it must defend the Islam even the teachings left from Mahomed or contained in the Qur'an and which are not promoting anything but love for Allah and man. But the issue is whether there is really an obstacle between Islamist religion promptings and actions of Muslim s Islamist terrorism.

How much faith in Islam succeeds to come between collective consciousness and geopolitical interests?

5. Women in Islamic religion have no rights

It makes case that, while in some Muslim countries are really serious force on laws against women, in countries dominated by Islamic religion women have the right to freedom of movement (to leave alone from house, if this can be a right and not normal state), education, marriage and divorce. But practice looks different and the question is why particularly women, after ascertaining that they complied with the teachings of the Qur'an, they feel betrayed by Allah, abandoned by him and get to ask increasingly stronger: Now, after I have subjected listened when I need you, where are you, Allah?

As I mentioned earlier in this paper, a increasingly number of Muslim s in groups or individually, are able to leave the countries where the oppression in the name of religion reached the limit of endurance.

A serious problem is the Muslim immigration in Europe. In larger groups or individual as well as families they arrived in developed and tolerant countries under social and political terms, where in time by the succession of generations, were stabilized.

Living and working in the new conditionst, the Muslim s came in contact with social and cultural values of Europeans. These values in their turn have influenced their lifestyle at individual and familial level.

Occidental lifestyle triggered a progressive impact on psychological matrix of the Muslim family. The effects of this impact are increasing from day to day, with negative behavioral symptoms, deviant within the group. This are reflected in the growth and diversification of intra-family problems.

The increase of the divorce rate is a rapid growing phenomenon directly proportional to the number of new immigrant of Muslim families, but also of the Europeanized ones. New immigrant families are coming from a culture where the partners have equal rights to marriage decision, more exactly they do not choose each other freely, because the woman is chosen to accept the husband imposed by parents. The impact with the freedom of decision on occidental society, determine firstly the renouncing of the married woman at the partner previously imposed, this being now in a society that no longer requires constraints under marital aspect.She can choose her wanted her husband, she can live in concubinage, she can remain alone, but above all these she has a chance to break away from a relationship imposed. This does not mean that only Muslim woman renounces at the married couple, but also Muslim man. One of the reasons is that he chooses to make everything from scratch, to renounce at the family obligations that came from home. However, it is noteworthy that divorce proceedings are brought in measure as the majority of women.

The stabilized Muslim families in Europe are subject of the divorce, because even if they live by the occidental rules, the dogmas of Islam are perpetuating within families in such a way as children reached the age of marriage are suffering the rigors of these dogmas. This happens often under pressure from origin families also living in Europe or when the young do not know enough rights.

Also about these Europeanized families it must be said that they get to fall apart from common , non-religious causes without any connection with the Islam or Muslim tradition. The causes may be common namely an emotional economic, sexual level, etc..

The mixed marriages between Muslim women and non-Muslim men represent sometimes the proper framework of the birth disagreements in the marital couples. Of course, we can mention here a variety of causes, but it is clear that overrides the cultural-religious ones.

The intra-familial problems often take forms of ***marital abuse*** or ***spouse abuse.*** Here you find, firstly the sexual abuse in the couple, the Muslim man being the ordinary one with the woman-object, subjected at his wishes at any time. Do not forget that in the Muslim families is almost a rule that the young wife must sexually serve her husband as well as his father and his brothers,too. In terms of respect and affection that Muslim women are founding outside the closed circle, it is natural for women to claim their rights. It results nearly normal physical and verbal aggression, economic constraints, freedom of movement and expression, etc.

The difference of culture between country of origin and the adoption one of Muslim s, creates serious problems of adaptation. Thus, while children of Muslim families in poor countries are used as aids for maintaining their parents, younger brothers and sisters, children of occidental families have special care, that goes from personal development to vocational training all passing through institutionalization, being subjected to education. The fact that Muslim s give birth and then treating them according to the custom of the country they had left her for a better life leads to a kind of

abandonment, ***parental neglect***. Here it must be said that these parents often do not understand the reason they are accused of parental neglect. Underlying these problems is, of course, the lack of education.

The expectations that have the Muslim immigrants in Europe are not on the same wavelength with social offer from countries where they choose to live and work. Moreover, we are talking about a big discrepancy. Obviously they are not prepared to accommodate the requirements of the new society they enter. Sure that those already established in occidental society have advantages not only morally and therefore they handle easier. But it can not be said that they do not encounter obstacles. The past is perpetuated in their consciousness and it demands his tribute.

On one hand, the lack of education, is hard transmitted from ancestors, on the other hand, the lack of good intentions and limited capacity to adapt to the society, is leading to ***deviant social behaviors***. From social deviance to the reduced ability or inability integration path appears shaped closed circular trajectory, because these two dimensions are interdependent. In this way, some Muslim s who managed to escape from the closed circle are reaching to another circle, where education, individual freedom, justice and the quality of human relationships dictate the social rules.

The deviant behavior of these individuals frequently conflict with the law and get in the ***delinquency***. Europeanized Muslim s, individually or together with their families reach to fully contribute to increasing crime rates. And we do not call cases where the Muslim families, compelled by individuals or terrorist groups end up committing large-scale atrocities. It would be a too simplistic approach and such a subject requires a special approach.

The increasing number of ***acts of prostitution*** appears as a growing plague of Muslim traditional family values, values which at least theoretically promotes fidelity between spouses and unconditional obedience of parents.

A freedom that Muslim man or woman does not know how to receive and put to good use in his own and beneficial sense, puts the individual in a position to choose wrong. This is one of the causes of joining the crime of prostitution.

At the same time we are witnessing at some kind of revenge from the Muslim women from sexual oppression that their religion did not grow, but the reality of the Muslim community practice it diligently. Once they have escaped from the influence of unhealthy family practices (I mentioned about this in the first part of this paper) they feel the need for compensation. This compensation sometimes takes negative forms under moral and social aspect, among them being the practice prostitution, too. ***The revenge or compensation*** (it substitutes the meaning of the two terms here two terms) comes as a response to poverty in their home country through prostitution and aiming the solving of the financial problems.

Not the least it must be said that prostitution as other delinquent behaviors are simply accepted as a model of behavior in the absence of alternatives. The cause in this case is clearly the lack of education.

An example worth for noting here is that the girls ran away from Muslim families from poor countries and whose new address is not known by parents, relatives, reach in countries like the Netherlands or Belgium where social system and the law on immigrants advantages them. Over there they get involved in casual relationships or concubinage with strangers of their culture. They make known to the families left behind these relationships, knowing that it is almost impossible for relatives to found and punish them. The reason is the revenge on a mother who have mutilated their body in childhood (cutting the labia sometimes with a shard of glass and sewing them to preserve their virginity until marriage, or family would be dishonored) and on a father who has built the respect of the community with the cost of physical and psychological sacrificing of their daughters.

Very suggestive in the book, “The handcuffed Virgin”, the author Ayaan Hirsi Ali, a somali born Muslim, describes the physical horrors which was subjected of her mother and grandmother, female genital mutilation. Running away from an arranged marriage, her settle in the Netherlands

and the stages followed to integrate into the new society. She gets politician in the Dutch Parliament, makes a movie with Theo Van Gogh on the condition of the Muslim women. Because of this movie, Van Gogh, because it shows to the world realities which musn't be known by the public, is assassinated in broad daylight in Amsterdam by Islamists. Under these conditions, Ayaan Hirsi Ali who has ran away from homeland because of Islam, is running away from the Netherlands this time also because of the Islam and reach in the U.S., where observes the same thing: here the Islam begins to spread.

These issues and many others that I have not mentioned here can be easily observed. They are a warning to the Muslim community. Deviant acts presented at Muslim families tend to crack the main stronghold of the Muslim community, because the family is the safe nucleus of this community, the keeper of virtue and moral force.

The Muslim conversion of the Europe

One of the non-violent methods by which Muslim s want to evangelize the world is based on *increasing the birth rate* among this population. This measure fits like a glove to fill the gap left by the declining of the birthrates not only in Europe and in the USA. To maintain a people on a normal demographic line, each family is required to give birth to two children and a quarter. In civilized countries they are opting more frequently for a child, and because earlier this future birth parents were taught to count the costs that would be required for the growth, care, and education of future child. The Muslim family, mostly poor and uneducated do not call for such an analysis, being guided of commandments blindly inherited from the Prophet.

The low birth rate among indigenous Europeans combined with an unprecedented wave of Muslim immigrants with large families could see Europe becoming dominated by Islam in the space of a few generations. (*Telegraph.co.uk, sept, 2010*).

So, it is expected that in a few decades, Europe will be majority Muslim.

Another method which aims the musulmanize of the Europe is based on *converting of the non-Muslim to the Islam.*

Those who defend the religion shout loudly that does not seek the Muslim conversion the imposing of the Islam religion with the sword or terrorist acts, but by the great jihad (struggle with his own soul, with his own conscience), which on first examination by translation means peace. If we look at the Qur'an, we find that the root, jhd, appears in 35 verses 22 times with a general sense, 3 times with spiritual connotation and in the 10 cases remaining, with clear reference to warlike action. Even Allah ordered, 'Kill those who fight you, wherever you find them and expelled them from where they expelled you ..,,,."[2] „ Believers[3] are to you a clear[4] enemy". „ Fight them or convert them to Islam" 'Kill them (Christian, Hebrew) wherever you meet[5]."

To note that there are about 1.3 billion Muslims worldwide. They live in the regionalised Islamic territories as specified in The Cambridge History of Islam: central territories (Arabia, Egypt, Syria, Anatolia, Persia, Central Asia) and remote territories (Europe, Africa, Southeast Asia). Starting from the fact that these people understand Islam as a submission to their God Allah, there are born absolutely legitimate questions about how they can transform their bodies into weapons to exterminate innocent people. Of course, we seek answers to question in their culture and civilization dominated by religion.

[2] Coran-Sura 2; 191; 192.
[3] The reference is made to the Christian faithful, Hebrew, generally non-Islamists.
[4] Coran, Sura 4; 104.
[5] *Ibidem*, Sura 2; 187.

The international social-political perception

The combination of the terrorist attacks and suicide terrorism of the entire Muslim world lead to the identification of this world with terror. In fact, the Islamic world should be dissociated of the terrorist attacks of extremists.

But this is very difficult, especially after the WTC 11 September 2001. The strong bond created by Islam and terrorist have drove the Jihad on the highest level of international terror. Even if in support of this dissociation is to ban the Koran call, "Do not kill yourself"[6] public opinion can not compromising the facts and evidence.

Above of peace and love of God, in the social and international politics we are dealing with distinct features of Muslim life. These are represented very strong with a kind of fanaticism that it often exceeding the one of the Japanese kamikaze (just one example among others possible) by a fear of God that they are taught to love for fear of punishment and a fatality which never proved correspondence with reality.

The effects of these characteristics are materialized in the degrading habits, vacancy, delinquent behavior, negligence to the quality of life and more. A large gap in the lives of Muslim s refers to dignity, sanctity and respect for man. Underlying these privations is the degrading sexuality that we have mentioned in this paper.

,, The Muslim s, individually may show splendid qualities - but the influence of the religion paralyzes the social development of her followers. There is no other more retrograde force in the world[7]."

Therefore, the Islam is expected to grow mainly through the Muslim conversion of the Europe and beyond, as mentioned above. Regarding to this, it raises a number of questions and all converge to formula: "How?"

Of all the questions, one is distancing and namely:

How many individuals who will be born in Muslim families in developed countries, in a not subject Islamic society will embrace Islam instead other religion and more, instead of freedom and an uncensored life by the rules imposed by the Prophet?

Important is that more and more Muslim people get to know a civilized lifestyle. And they prefer it from the love of Allah, the one that has been imposed to them and who do not respond when they need him.

From a sociological point of view, is aimed on one hand in what proportion the Muslim s already Europeanized have adapted to the social rules of non-Muslim occidental society, and on the other hand what will select the future immigrants and newborns in Muslim families: ***the religion or the laicism***?

Conclusions

The Muslim family continues to surprise with the force which it defends its traditional values, no matter how hard it is to do and how much it sacrifice. The conformity in obedient form represents the matrix on which the set of values and rules within Islamic culture has been formed.

It is true that through the eyes of a non-Muslim European, most of the habits and customs which govern Muslim family life seem to be real punishments and is not normal to be judged these issues from a different culture. Such an approach can be considered an effect of the ethnocentrism. But on the other hand, is a fact that Muslim s want to convert Europe and beyond, so it is inevitable the observing, studying and accepting or not accepting the values that shape social behavior.

While they seek to integrate, we, outside the closed circle, seek to know and to understand them, this being a condition which is emerging for possible future coexistence. For the future, those who see these lines unrealistic, inaccurate or even an affront (who knows?) are challenged to openness, honesty and explanations. It is a way to get to know and accept each other.

GENDER EQUALITY POLICIES DURING THE POST-COMMUNIST ROMANIAN SOCIETY - TRANSFORMATION OR CONSERVATION OF GENDER PATRIARCHAL REGIME?[1]

ALINA HURUBEAN*

Abstract

The paper aims to analyze family policies, labor market and social protection policies in the light of their correlated effects on the dynamics of gender relations, to identify such new tools for understanding national realities in European countries and to propose appropriate directions for intervention by programs and policies. The current research on public policies considers that the analysis of family policies, of labor market or social security policies, from the perspective of gender (in)equality, offers relevant indicators with regard to the welfare regimes and quality of democracy or to the democratic deficit in the post-communist Romanian society, placed in the actual European context.

This paper attempts to identify the mechanisms through which the state and its public policies reproduce and enhance traditional/conservative cultural models on gender roles and asymmetric social relations between men and women, also they reproduce the restrictive force of classic dichotomies between public-private life or productive-reproductive work. Despite the stated principle of gender equality, public policies maintain hierarchies and gender disparities in Romanian society, as in other European countries. This approach research shows that the complex interaction between cultural models of gender roles in the family/society and public policies is relevant to contextualized analysis of public policies and gender equality policies.

The purpose of this paper is to analyze the influence of cultural patterns (on family gender roles, labour organization etc.) on public policy (family policies, labor market policies, gender equality policies) in order to advance a set of questions: how do family and gender ideology influence the content of public policy and the conservation of gender regime in post-communist Romanian society? How can gender equality increase through public policies and to what extent is gender mainstreaming approach an appropriate solution in this sense?

Keywords: *public-private life report; gender regime; post-communist Romanian society; gender equality policies; cultural gender patterns.*

Introduction

This study falls within the thematic range which focuses upon the analysis of public policies from the perspective of gender equality. *The research objective* is the analysis of the relation of interdependence between the public policies concerning education, labour market, family, social security and cultural models (values, attitudes, convictions, stereotypes) related to family, gender roles, labour organization, correlating professional life with family and personal life, the border between public and private life as they are configured in post-communist Romanian society. By engaging in this research I look for answers to the following questions: *How do cultural models/family and gender ideology influence the contents of public policies? To what extent do public policies related to education, labour market, family, social security, depending on their cultural context, contribute to the (re)production of the gender division of labour and the preservation / change of gender imbalances in the sphere of public and private life?*

In the "cultural context" phrase, the concept of *culture* is used in its broad sense given by social anthropology, where culture is conceived as a "mental soft" referring to the patterns of

thinking, feeling and acting typical of a social group, community or nation (Hofstede et al. 2012, 17). The kernel of a culture is given by its values, which are considered to be the "invisible mental soft" of institutions, laws, public policies and social practices. The international researches of the population's values and attitudes (The World Values Survey (WVS) have facilitated the development of comparative studies, which give a clearer picture of the cultural background of public policies and explain why similar laws and practices work differently in different countries (Hofstede et al. 2012, 34). Besides other analysis dimensions of national cultures used in the comparative researches, the representation of masculinity and femininity is considered to be one of the aspects which shed light upon the understanding of cultural differences among countries with regards to the contents and impact of gender equality policies.

Aiming at identifying the social and cultural mechanisms which produce and maintain gender inequalities, i.e. the cultural basis of public policies, the investigation goes beyond the declarations of policy makers or governments with regards to reaching the objective of the equality between men and women in Romania. Endorsing the necessity of correlating the policies which regulate the sphere of public life (especially the policies related to labour market) with the policies focused upon social security / rights which also regulate private life issues (family, maternity, sexuality, domestic labour, care, the correlation and "reconciliation" between the professional and personal family life), I direct this analytic procedure towards the interrogation of the complex relations between the public and the private sphere in relation to gender regime or order[2] in the Romanian society of the present.

The analysis of this complex interconditioning between the public policies and the cultural models with regards to gender roles in family/society, i.e. the values and attitudes related to the issues of equality between women and men and the significance of the border between the public and private sphere is relevant to any contextualized research which focuses on the public policies from the point of view of gender equality. Since the 1970s, feminist studies and the research focused on the dynamics of the social relations between the sexes have shown that the issues of equality between women and men must be approached at the intersection between the public and the private space because the inequalities in the sphere of private life are inevitably projected onto and then firmly grounded in the sphere of professional labour and public life (Bereni et al. 2011, 110). Through this kind of research, which includes the gender component and the feminist perspective and analysis of public policies, the labour of care is taken out of the area of the private life in order to shed light upon the underlying social protection systems and the way in which these are built on the pattern of sexed and unfair division of labour. Domestic work, seen as a hypostasis of the labour of care performed within the family especially by women, becomes a referential field of research with significant economic and political stakes, lying at the very core of today's debates around restructuring the social protection systems and reformation of welfare regimes. Comparative reesearch shows that family is the main supplier of welfare, which means that the issue of correlating productive labour with the activities of care is not solved at the level of the EU countries, and the regimes of European social welfare, except for the Northern countries, give an uncertain answer to the issue of gender inequalities in the sphere of public and private life (Letablier 2001, 19-24).

Therefore, this study tackles the relation between the public and the private sphere correlated with productive-reproductive work, the gendering of the two areas, the hierarchy-oriented approach and unfair valorization, as well as the consequences of this dichotomy at the level of the public policies related to the labour market and correlated policies in the context of post-communist Romanian society.

[2] *Gender regime* or order implies the dynamics of the socially and historically contextualized social relations between genders, i.e. the means of interaction between men and women within everyday institutions and practices, related to education, division of labour, public and private life, structure of power and the mental structures of these practices and institutions (Magyari-Vincze 2002, 146).

1. Gendered Frontier of the Public-Private Relation – Analytical and Political Stakes

The analysis of the issues related to labour and labour market from the point of view of the social relations between genders puts the whole problem in the area of the multiple interdependent connections between the public and private sphere because the social importance of labour and its economic stakes must be taken into account both in relation with the paid/productive labour and with domestic labour, and the gendered labour division in the public and private domains. Identifying gender inequalities, which are obvious in the public sphere (such as the weak participation and representation of women in political bodies; the inequalities between women and men on the paid labour market from the point of view of payment, work place quality, professional trajectories, etc.), as well as taking intervention and correction measures with a view to striking a balance will have no social impact and sustainable effects if they ignore the structural and invisible inequalities in the private sphere (mainly the imbalance generated by the gendered labour division, by defining and assuming domestic labour and the management of social time) (Silvera, 2012).

Tackling the imbalance between women and men in relation with labour, in all its forms (paid and unpaid; productive and reproductive or domestic), I raise some thorny aspects entailed by the relation between the sphere of public life and the sphere of private life, which used to be considered areas of demarcation between the two genders. The rigid separation of the two spheres, done in the name of liberal democracy and of the right to privacy, excluded an important set of social life issues from the area of research and public policy intervention. Those issues are related to the body, sexuality, violence, reproductive labour, maternity, family (Miroiu 2004, 69-71). At the same time, the analysis of the relation between the public and the private sphere in terms of opposition generated narrow and exclusivistic meanings of politics and citizenship, defined in terms of values and masculine activities and resulting in the exclusion of women from history (Waylen 2000, 216-221).

The modern person's need for *individual freedom* lies at the origin of this distinction, its effect being the statement of one's right to private life and the creation of a space where other persons or state institutions will not interfere (a space free from such interventions). Thus, the classical deep seated meanings of the public and private life concepts are outlined: *the sphere of private life* refers us to "the closed, personalized zone, which is invisible to the public eye, the place where the intervention of other people in one's own life stops, the limit to the information others have on our life" (Miroiu 2004, 70), as well as everything that has to do with "the private property, market and civil society"; *the sphere of public life* is identified with the action area of the State through public policies and political activity in general, (Gal and Kligman 2003, 57), with the public interest and welfare, with what is visible and accessible to others (Miroiu 2004, 70).

This distinction, considered "*the most solid and enduring of the liberal political and philosophical proposals*" (Iliescu 1998, 154), is related to other distinctions and must be judged in association with these: state-civil society, political-personal sphere, social-individual sphere, work place-home, productive/paid labour-domestic/unpaid labour, a.s.f. These correlations allow the understanding of different and nuanced meanings acquired by the public and private life concepts, in the contents of some theoretical constructs, within some culturally and historically contextualized everyday ideologies and practices.

Although it has an older history, the distinction between public and private life mainly belongs to the space of liberal policies and theories, which launched the *"separate spheres" doctrine,* which distinguishes between public and private, state-civil society, production-family. Through this perspective, the idea of a private life area, which must be seen by the authorities as holy and inviolable (Iliescu, 1998) becomes defining. The classical liberals gave a major importance to this distinction, associating what is private with freedom, in the sense of *negative freedom*. The attempt of distinguishing the two spheres, of establishing the border between public and private life is problematic and may generate controversies. Serious objections can be made against the idea that a really private sphere should exist, and within it the individiual's acts and attitudes should not

influence society, which renders the demarcations between facts of exclusively private significance and events of public sequence rather difficult (Iliescu 1998, 159).

Thus, both the intervention of the state as a warranter of individual rights and the role of the state as an important actor in formulating the policies of social protection are put forward, which means the stakes of the analysis of the relation between the public and the private sphere and of reconsidering the border between the two spheres are social (the social relations between sexes from the perspective of justice and social citizenship), economic (economic and social valorization of labour in the private sphere; the development of domestic services and emplois domestiques) and political (the issue of the intervention of the State in managing social welfare).

Apart from the positions supporting the necessity of a clear and often rigid demarcation between the two spheres, there are theoretical perspectives which argue the interdependence between the two areas and the flexibility of the border separating them (Phillips 2000, 397). The women's emancipation movement, as well as gender studies, have significantly contributed to the effacement of this border and the reconsoderation of their relation.

The feminist movement of the 1960s belongs in this mode of interrogating and critiquing the definitive nature of a border between the public and the private sphere. It saw the contentious character of the drastic separation (rigid distinction) between the public and the private sphere, (instituted by the tradition of European modernity, as well as the older Judeo-Christian tradition) on account of the fact that *the private sphere* is very frequently a space of abuses and injustice, of family violence, while the state refrains from intervening in this area, which may mean a tolerant approach to these abuses and the frailty of securing individual freedom. Carol Hanisch's message "*the personal is political"* in the essay "The Personal Is Political" (1971), which remains the epitome of the second wave of feminist movement, marked a major contribution to enriching political theory through reconsidering the concepts of public and private life and the role of the State and public policies, which become more sensitive to the domestic/private issues (Ballmer-Cao et al. 2000, 40). In this sense, a concept of *privacy* in relation with the individual and not with the family must be created, in the sense that "freedom must be extended in the private sphere as personal, individual, and not collective (family) freedom." The argument is that "personal problems are not merely personal, but also part of the social/public phenomena just because human rights do not lose their validity on the doorstep to one's home" (Miroiu 2004, 71).

Both in a reflexive context and at the level of concrete action, the dualism/dichotomy between the public and the private sphere, masculine/feminine, respectively, are frequently associated, and this association refers us to the order of gender/gender relations characteristic of a given society (Gal and Kligman, 2003). There is a whole theoretical and practical tradition of this association, whose origins are in ancient history and which has not disappeared; this tradition considers the dualism between the public and the private sphere a factor which generates separate spaces for women and men, placing women in the "domestic" private sphere and men in the space of collective business (Dragomir and Miroiu 2002, 301). Thus, it may be argued that the *distinction between the public and the private sphere has been gendered,* which means it has been culturally encoded from the point of view of gender differences, which led to the architecture of a social space with gender peculiarities for women and for men, which often becomes a space of gender inequalities (Miroiu 2004, 71).

The manner of analysing and representing the relation between the public and the private sphere, i.e. the opposition/separation, engendering and ranking of the two spheres, the habit of identifying femininity and the roles taken by women with the private space (as if this were a matter of fact), as well as the reflex of unequally valorizing tasks, which results in taking the family problems, care labour, gender inequalities in the private sphere out of the public sphere are considered problematic by the feminist approaches (Okin 2000, 345-347).

Thus, putting forward the relation between the public and the private sphere (le rapport public-privé) and the flexibility of the border between the two spheres does not mean that this border has been effaced and the private life has been turned into a political issue or that the idea of some

high and abusive interferences (which yielded bad consequences upon the dictatorial regimes by adopting pro-natalist policies in communist Romania or forced sterilization policies in China).

Even if there are numerous differences and divergences among the feminist theorists concerning the relation between the public and the private sphere, reconsidering this relation has generated a significant shift of perspective at the level of social and political theory, with visible effects at the level of concrete life. The following gains/new perspectives upon the way of getting to grips with the world are relevant to this argument: a) looking at the two spheres as interdependent and understanding that the inequalities in the private sphere trigger other inequalities in the professional sphere; being aware that the private sphere is an important place of fabricating/molding gender relations (Bereni et al. 2011, 113); the connections between these two spheres (professional and familial/domestic), both at the level of analysis and at the level of intervention through public policies increase the chances of achieving the translation from *de jure* (judicial equality) to *de facto* (actual equality); b) the problems in the private sphere (travail domestique, de sexualité, de fécondité) are not merely personal, but political problems of general interest, which implies a reconsideration of the concept of political issues (Phillips 2000, 397); c) questioning the notions and implications of domestic labour, the gendered division of labour and unequal valorizing of labour: productive versus reproductive labour; d) the issues of correlating the professional time, the familial time and personal time (Silvera 2010, 63-64); e) the rigid distinction between public and private grounds any patriarchal system of reference (Miroiu, 2004); f) the more involved in the private sphere and the more attached to domestic roles women are, the more acute their subordination and oppression will be (Bereni et al. 2011, 113); g) putting forward the supposedly universal concept of *citizenship* and the issues of keeping women out of the area of civil, political and social area for a considerably long time interval; h) the identification and analysis of gender inequalities from the perspective of both components (public-private); gender problems relate to the way in which both spheres are organized (Miroiu 2004, 72); i) extending the concept of democracy, in the sense that enforcing democracy in the public sphere is not possible in the absence of enforcing its principles in the private sphere to begin with; j) reconsidering the "*gender contract*" and questioning the condition of woman in today's society from the perspective of the values of freedom, equality and social justice (Silvera 2010, 63-64); k) the relevance of the analysis of cultural, social and institutional mechanisms through which the restrictive force of the classical dichotomy is reproduced and reinforced by the public policies, and which, despite the declared principle of gender equality, are likely maintain the gender hierarchies and disparities.

Another impact of these perspective shifts upon the relation beween the public and the private sphere, generated by the feminist movement and gender research, consists in a series of regulations adopted in several countries worldwide in the last decades; these regulations have guaranteed and reinforced the civil and social rights within the sphere of private life: family rights (marriage, divorce, children custody) ; the possibility of sexuality and reproduction control; the support of the state in bringing up children ; gender equality on the labour market; access of women to jobs stereotypically considered to be the panache of manhood; equal payment for labour of equal worth; legal provisions preventing rape, pornography, prostitution, sexual harassment and domestic violence; policies of preventing sexism in education, hiring, mass-media (Miroiu 2004, 72).

Considering the relation between the public and the private sphere as a social and cultural construct and analysing the process of the (re)configuration of the two spheres and the border between them contextually, and the way in which productive labour and care are related to them, re-considering care as a womanly job, which is invisible and mainly done in the family/domestic sphere, is a political, social and economic stake of major importance for our modern times.

2. Gender and Unequal Division of Labour – a Structural Imbalance

Thematizing the dichotomy between the public and the private sphere puts forward the gender division of labour, the separation and hierarchy between productive labour, which is mainly

masculine, and reproductive or domestic labour, considered to be typically feminine. Issues related to the aspects of the gender division of labour, care and domestic labour, the way in which they are transferred and reproduced in the sphere of public activities (resulting in the weakening of women's position on the labour market (inequality of access, maintenance and progress in the labour market), directing them towards womanly fields of activity, the segregation of labour market both vertically and horizontally, thus perpetuating and reinforcing the structural inequalities in the social relations between women and men are crucial to this analysis.

Domestic or reproductive *labour* (including housework, house maintenance, cooking, caring for and bringing up children, caring for dependent persons, administrative tasks, a.s.f.) is considered to be the labour behind productive labour (which is paid and visible); it is performed, in most European countries, as unpaid labour and it is almost exclusively the responsibility of women as "double labour day", even when they are active on the labour market. Even if theorists are divided as far as the economic stakes and identified solutions to domestic labour are concerned, they share views with regards to its specific contents, domestic labour comprising any type of labour, performed for the benefit of others and free of charge, within the couple and family, in the name of nature, love or maternal duty (Bereni et al. 2011, 114).

Revealing the mechanisms that generate gender inequalities, the research in the field of gender studies has highlighted several aspects related to domestic labour and mainly the fact that it does not enjoy the same social valorization as paid labour, it generates and maintains relations of power and structural gender inequalities within the couple and family, preserving the woman's economic dependence, isolating her in the private space and being the cause of rendering her inferior and oppressed. Labour performance and the income associated with labour are, in the contemporary society, criteria measuring social success and personal success, while *domestic labour*, although being the women's ancestral contribution to economic activity, *remains in the invisible, unpaid and socially low valorized area*. Ignoring the wealth generated by domestic labour and its contribution to the economic welfare, as well as the fact that this type of labour is not included in the classical statistics and in the enforcement of social rights, have negative impacts at several levels: a) it generates and maintains situations of *economic dependence and impoverishment* for several categories of women, mainly housewives, women living in rural areas, uneducated women, women without any qualifications and diplomas, women doing part-time jobs, women suspending their career, single-parent families led by women, etc. b) it underestimates women's economic contribution to the social production/welfare, although women ensure, even in the 21st century, two thirds of the whole of domestic tasks; c) it generates distortions in the economic analysis and in the projection of public policies by ignoring the correlation between domestic labour and professional activity; d) it shows the limits of GDP calculus and of the procedures which determine other indices of measuring social welfare and economic growth (Méda, 2008, 155) .

Research focused on reconsidering and revising the border between the public and the private sphere shows that running public life according to the principles of democracy cannot be achieved without enforcing those principles in the private sphere in the first place, and approaching the issue of the political participation of women and promoting women's employment without paying heed to the constraints of private life is pointless and it also implies a very narrow and restrictive outlook with regards to democracy (Phillips 2000, 405-416). Women's low participation in the political life, as well as the frequent interruptions of their careers can be largely explained by the private constraints which exert a pressure upon their public engagement (e.g. the time budget of women and especially those who are mothers is different from men's, the subordinated roles in the domestic sphere which generate and maintain the women's lack of self-confidence, as well as the low-esteem representations of women).

Behind the issues of correlating productive labour with care, professional life with family/personal life lies, more or less overtly, the stake of equality between women and men in the public and private space (Walby 2000, 51). Failure in striking a balance between professional labour

and domestic labour and family life has a negative impact upon performance, efficiency and the satisfaction derived from one's work, and at the same time it is considered to be a *factor of indirect discrimination against women on the labour market* for at least three reasons: a) women's access and maintenance on the labour market, as well as quality work places (which entail constant professional investments) are limited in the absence of caring services for minor children and for other dependent persons in the family (who usually become women's responsibility); b) the difficulty of striking a balance between the two labour spheres reduces women's participation in all the other components of social, cultural, political and economic life; c) it leads to maintaining the gender stereotypes and asymmetries in terms of resource and power distribution, of playing gender roles in the public and private space (they maintain the unequal division of labour in the family; lower positions of dependence for women (Dragolea, 2007).

The balance ("reconciliation") *between professional and personal life*, between productive labour and domestic labour respectively, is defined as "the situation characterized by satisfaction, minimum role conflict and optimum capability of the employee both in the tasks and roles at the work place and those in the personal/family life," aspects which can be measured with the help of subjective/qualitative and quantitative indices of work satisfaction (www.cpe.ro, 2007). How can this balance be struck? What are the factors responsible and the examples of good practice recorded in the European space so far? – these are only a few questions thrown by the researchers on this topic in the last few years[3].

The policies of equality among women and men (from equality of access to the labour market, from payment equality to the policies of correlating professional life with personal and family life) have been and still are essential to the social and economic policies of the European Union (Lisbon Agenda and post-Lisbon Agenda). In their context, the issues of correlating the social time – as family, personal, professional time – are of major concern because they have implications both at an *ethical* and *social* level (the purpose being the founding of a fairer society, centered upon the principle of equality between women and men), as well as at an *economic* and *demographic* level (increasing women's employment level on the labour market; demographic increase; "reconciling" family and professional life) (Silvera 2010, 63). Equality between women and men on the labour market "restera uniquement formelle tant que la question des soins informels aux personnes dépendantes ne sera pas résolue" (Jenson, 2001).

The strategic development directions at a European level, also supported by the development of research in this complex field, shows that equality on the labour market and in relation with labour does not concern only women/mothers, nor is it a problem of the individual or of the family. The role of the state, of the market and of employers, as well as the manner and the extent to which these key factors get involved are elements of maximum importance in devising proper and efficient gender equality policies. In this context, regulations generically called *reconciling policies* between professional labour and family or personal life have been developed.

Initially centered upon the rights which result from assuming parental condition (maternity/paternity leave; parental leave), reconciling policies at the present moment consist in the totality of the measures designed to support the employees with a view to harmonizing the social roles they perform in the space of public and private life, i.e. the balance between professional and family life. Therefore, apart from the rights provided in relation with parental leave, the "reconciling"[4] policies include childcare services (at least for age groups between 0-3 years from 3

[3] For a discussion of this aspect, please see Moller Okin S., 2008; also: *Revue Française de Socio-Économie,* 2008/2 - n° 2; *Travail, genre et sociétés,* 2001/2 - N° 6; 2010/2 - n° 24; 2011/2 - n° 26; *Cahiers du Genre,* 2009/1 - n° 46.

[4] The terms of "reconciliation" – used in relation to the policies of the EU which aim at striking a balance between the professional sphere and the family and personal sphere – are considered, within the feminist research of the present, as improper because they preserve the idea of "natural" division and segregation between women and men. Alternatively, the concepts of *balance* or *correlation* among all the components of our labour, time and activity are preferred (professional time/family time/personal time; productive work/reproductive work) (Silvera 2010, 63).

years - compulsory school age), after school programs, family friendly programs for organizations, flexible working arrangements (part-time, flexible hours, career breaks, although these measures are considered "false" conciliation measures, viewed in terms of the risks posed by long-term) and financial grants, subsidies, tax rebates, social care (Bereni et al. 2011, 122-124). All these regulations and intervention methods can be found in a set of correlated public policies – *policies of education, of labour market, family policies and social policies* – which, in connection with one another, could offer sustainable solutions to the issues of the correlation/balance between professional life (labour market; the sphere of public life) and personal/family life (the sphere of private life) (Letablier, 2001).

At present, there are no unitary political practices concerning the equality between women and men on the labour market and in relation to labour at the level of the EU member countries. In order to meet the objective of gender equality, some countries adopt mainly anti-discriminating policies (which are necessary, but not suffiecient in order to ensure a sound equality), while other countries lay stress upon correlated policies, which support the labour market (« reconciliation » policies, family and social policies, which are characteristic of the welfare regime). In other words, the policies regarding the labour market must be projected and analysed in correlation with the social policies (ensuring, warranting social rights) and with family policies (the system of care for children and dependent persons; supporting birth policies), which should integrate the dimension of gender equality, because a real increase of the rate of employment for women and men on the labour market – considered to be the essential condition for economic progress at the EU level – cannot be achieved without ensuring some institutional and financial mechanisms of correlating professional life with family/personal life, adapted and contextualized according to the profile of each country (Letablier, 2001). The insufficient correlation of these policies, as well as the scarcity of services and support structures in most of the European countries do not only prevent the achievement of the labour market objectives, settled at the level of the EU, but they also maintain and reinforce the inequalities between women and men, as well as those among various categories of women.

3. Cultural Models Underlying the Relation between Labour and Family in Post-communist Romania

In today's Romanian society, as well as in other European countries, there are many inequalities/disparities beween women and men on the labour market, as well as in the public and private life. Despite the considerable changes in women's status in society in comparison with previous decades, *women and men do not have equal chances* in terms of their educational and professional trajectory or family life. The gender asymmetries and inequalities are social constructs, being generated and maintained by conservative social and cultural mentalities and mechanisms, largely perpetuated in the communist period, which maintain the traditional roles and gender stereotypes, thus restricting women's choices, opportunities, development and participation in the social and professional life.

The analysis of family policies, labour market and social protection policies from the perspective of the cultural models endorsing them, and the conjugated effects they generate upon the dynamics of gender relations offer new tools for getting to grips with the national realities in the European countries, and they may indicate adequate intervention methods through public programmes and policies. Reflecting the social gender relations existing in a society at a given moment in history, as well as the prevailing cultural models, public policies contribute, in their turn, to building and regulating gender relations in the public and private sphere, while their allegedly neutral nature only disguise and more often than not deepen existing gender inequalities in the sphere of the two social sectors.

This *complex interconditioning between cultural models related to gender roles in family/society and public policies* is considered relevant for a contextualized analysis focused upon public policies (Lazăr 2010, 113-116). Identifying the mechanisms by which the state, through the

public policies it promotes, reproduces and deepens the traditional cultural models with regards to the gender roles and social relations between the sexes, as well as the restrictive force of the classical dichotomy between the public and the private sphere, productive and reproductive work is an important objective. Despite the declared principle of gender equality, public policies may maintain gender-based hierarchies and disparities. However, the figures and statistics which are usually invoked and which may indicate a more or less acceptable reality concerning the equality between women and men on the labour market cannot explain the social and cultural mechanisms underlying the social relations of gender in relation to labour, which maintain the structural gender inequalities.

Therefore, in order to reach "the heart of the matter" and account for the differences among the European countries, as awell as perceive the difficulty of conceiving and enforcing a shared plan aimed at solving the issues at EU level, we need to look into the values and attitudes of the population in relation to gender roles, the problem of equality between women and men and the relation between the public and private sphere. The international research of the values and attitudes of the population (the World Values Survey (WVS), the European Social Survey (ESS) have facilitated the development of the studies focused on the correlations between the cultural models/national cultures, public policies, welfare regimes[5].

In today's Romanian society women face the difficulty of striking a balance between the two spheres of labour (professional/paid labour and domestic labour), resulting in social constraints and pressures, which means difficult and sometimes radical life options of the "*either…or*" kind (either professional life/career or family life), the success in either of the two fields being achieved to the detriment of the other. Because of the cultural and socializing models, striking this balance is more imperative for women than for men and it consequently puts more strain on women than it does on men because it is precarious, threatened by the role conflict and the eternally awkward negotiation on the distribution of reproductive labour in the private sphere. This state of affairs actually typifies countries in which the major social actors (the state, the market, the business company) fail to involve in the social welfare system from the point of view of gender equality in relation to labour, labour market, family.

In Romania, thematizing the issues related to domestic labour occurs in academic research and a few European financed projects, but it is absent from the public debates and the analysis of public policies. Even if in the official documents the principle of "reconciliation" or harmonization between profession and private life/family is often referenced, there are no specific regulations concerning this issue, which might also indicate the means by which this balance can be struck. This means that it is there merely as an abstract statement with no concrete support.

Comparative research shows that in most of the European countries, as well as in Romania, a cultural pattern has been preserved, and according to that pattern family is regarded as the main provider of welfare, which means that the issues of correlating productive labour with activities of care have not been solved. Explicit gender equality principles (antidiscrimination laws which ensure legal access to education, employment, political participation, as well as assertive measures designed to favour women in order to give them the opportunity of redressing past injustice) fail to contribute to an increase of the actual level of gender equality in a society/country, unless they are endorsed by the set of public policies of implicit equality (those policies which, although they are not focused on the equality between women and men, *implicitly* generate significant effects upon social relations among genders by maintaining or diminishing structural gender inequalities).

---

[5] Two seminal research studies are worth mentioning: R. Inglehart, 1997, *Modernization and Postmodernization: Cultural, Economic and Political Change in 43 Societies,* Princepton University Press; G. Hofstede, G.J. Hotstede and M. Minkov, 2012, *Culturi şi organizaţii. Softul mental. Cooperarea interculturală şi importanţa ei pentru supravieţuire* (Cultures and Organizations. Software of the Mind. Intercultural Cooperation and Its Importance for Survival), Humanitas, Bucharest.

This category includes labour market policies, family policies, social protection and education policies, which from the point of view of the conjugated effects they produce upon the dynamics of gender relations, implicitly increase or reduce gender inequalities. If there is no correlation between the two sets of policies from the point of view of gender equality, then the latter will be merely a formal (legal) equality and not a real (concrete, substantial) one, and the problem of reconciling one's profession and private life remains unsolved.

The social attitudes to and representations of domestic labour gravitate around a dominant tendency: care is not considered to be work, it is confined to the private sphere behind closed doors, and it is thus seen as women's "natural duty", something which occurs naturally and gets sorted out only through individual or family arrangements. The culture of partnership, of negotiating and sharing tasks and roles, of equal valorizations of the differences between the sexes, of accepting an open competition based on equality of chances is very litlle developed in the Romanian society, both at the level of couple and family life, and in the sphere of public life. Inequalities in the sphere of private life are plentiful, but they are not addressed publicly and nor are they perceived as social issues of public interest. The public-private separation, considered a "natural given", is very clear cut, like the gendering of the two spheres, correlated with the "inferiorization" of the private sphere and the invisibility of domestic labour. The significance of these correlations owes a lot to life experience during the communist regime.

The relation between the public and the private sphere was correlated in the Romanian society during the communist regime, when the private sphere and family haven were particularly valorized, being considered a "refuge" protecting the individuals from the hardships of political power, which gave them some room to enjoy freedom as well as a necessary support network (Heinen 1996, 249). Therefore, the significance of the relation between the public and private space was far from the formula "le personnel est politique" of the feminist movement in the 1970s. The way in which the private sphere was valorized in communism explains, to a large extent, the attitude of rejecting feminism and its slogan in the post-communist period, an attitude which has its origins in the fear of blurring the borders between the two spheres, which might deny the individual's access to an important refuge area (Heinen 1996, 259).

Social rights of a universal kind were an important safety net, but they were accompanied by the individual's submission towards the omnipotent paternalist and intrusive State (Heinen 2009, 106). Ensuring *welfare socialist* mechanisms and reinforcing social citizenship was achieved at the price of breaching the civil and political rights and freedoms (Dorottya and Dorota 2009, 77).

The emancipation of women through labour did not entail an equivalent gain in the sense of an increased autonomy for them, an aspect which should raise the issue of today's strategies and national and European policies, which insist unilaterally upon a higher rate of employment for women on the labour market, without correlating it with family and social policies.

Previous research on this topic emphasizes the coexistence of several cultural (normative) models which regulate (prescribe, pre-establish) the social relations between men and women with regards to labour and the labour market, family life and gender roles.

The criteria used/dimensions analyzed in the studies focused on the survey of cultural models and gender regimes, which regulate the social relations between the sexes are: women's investments in their profession and/or children, family; their interest in professional formation; continuity or discontinuity on the labour market (Magyari-Vincze 2004, 29-48); the flexibility/non-flexibility of the border between public and private sphere, as well as the roles performed in these activity areas (analysis dimensions aim to identify whether the two spheres and associated roles are seen as interdependent or separated and separately/unequally valorized; public/private correlation versus segregation; productive/reproductive labour) (Sainsbury 2000, 233); family model and gender roles or "family and gender ideology" (in this respect, there is the traditional model, based on role segregation; the family in which the man is the head of the family and the main breadwinner, while the woman's responsibilities are entirely focused on housework and children upbringing; the modern

family model, which is mainly egalitarian, the family with two income sources and "the double career family"; celibacy; single parent family, etc.) (Badinter 2010, 31-37); feminine ideology (the practice of autonomy and the assertion of the subject-woman; autonomy versus submission/dependence) and masculine ideology (career, success versus family/personal life) (Lipovetsky 2000, 171-176).

Correlating the existing research results with direct (exterior and participative) observations of several categories of women, I applied and developed the pattern proposed by Elisabeth Badinter in her contentious book published in 2010 *Le conflit: la femme et la mère*, thus configuring a few models (ideally types) of correlating between profession and family life, professional labour and caring labour, which outline a certain horizon for women in the Romanian society, at the crossroads between personal options and social constraints. Thus:

a) **the traditional cultural model**: may include women with three or more than three children, who interrupt their labour on the labour market for a long interval of time or even irreversibly in order to commit themselves to the full-time job of being mothers. The model is characterized by: clear segregation of family roles ("male breadwinner / female care"); public-private separation and opposition; women are economically dependent upon their partners; this is a patriarchal model based on relations of power and "the complementarity of roles"; it is a model which may be identified both in the rural and in the urban environment, as well as in the couples with a high level of education;

b) **the neo-traditional cultural model** (or the modernization of the previous model): may include mothers with two children, active on the labour market, with low income or more often than not part-time jobs, or working without a work contract. This model includes women who pay more attention to family life than to their profession. It also includes the family with two income sources, but it fails to bring essential alterations to the previous model with regards to women's autonomy and the division of domestic labour. Nevertheless, this model is not always identified with the patriarchal model of couple relations, since there are also partnership relations between the members of the couple; this category might also include women who, although childless, "choose" to refrain from working on the labour market in order to look after their spouses/partners or to accompany their partners as "decorative objects";

c) **the modern cultural model** : like the previous model, this tends to « reconcile » maternity, family, personal and professional life ; the model includes couples/families with two income sources and double career couples/families, in which the partners invest in their professional formation and development and both perform domestic labour (« deux pourvoyeurs de revenus/deux pourvoyeur de soins » (Méda 2008, 119); women are interested in the dynamics of labour market and the opportunites it offers, they institute a partnership with regards to domestic roles and/or they outsource them (from the larger family : grandparents and/or access to paid services) ;

d) **the postmodern cultural model** : includes childless women ; some of these define themselves as independent ; their ideals in life do not match marriage or family patterns ; celibacy is an assumed life model, but there is also the « unintended » celibacy, perceived as failure or as resignation ;

e) **the model of single parent families led by women** ("femmes au singulier ou la parentalité solitaire", Gaulejac and Aubert 1990): is characterized by the diversity and heterogeneity of its social and professional types and categories ; their marginality or marginalization is not the same and it is not perceived as such by all the types of single parent families (Gaulejac and Aubert 1990, 47); there are relatively few points they share : the fact that they involve women who bring up their child/children on their own or they involve intended single parenthood (the celibate women) or unintended single parenthood (separation, divorce, the partner's death) differences are numerous : the single parenthood which is coped by social services and not by assisted categories ; transitory single parenhood and lifelong single parenthood, etc. The situation of single parenthood depends very much on the cultural and social capital of the single mother/parent : cases vary from adolescent mothers

(who are « deviant » or not trained in contraceptive methods and sex life) to the category of « mothers in distress » (who lack the skill of planning their life/have no life project, who see no prospect in surviving/developing outside of the married couple, and who had no alternative models in this respect) and the voluntary celibate motherhood (characterized by social innovation ; high school and professional capital ; economic independence; age above average maternity age; high self esteem, etc.) (Gaulejac and Aubert 1990, 47-51).

Applying this typology to the Romanian social reality, we notice that the group of women is very heterogenous in relation to the way in which they combine labour with family life (the men's group is more homogenous). Heterogeneity depends upon living environment (rural-urban), education level and degree, professional formation (higher education, further education, no education or incomplete education), regions, age, ethnic belonging. Despite the absence of statistic data which should indicate with accuracy the proportion of these models characterizing the feminine population in Romanian society, observing the behaviours and « options » around us, we may say that, in spite of the heterogeneity of individual options, the traditional and neo-traditional models prevail for a diversity of social and professional categories, and especially for the age group (35-50), which shares a certain socialization pattern, more exactly the differentiated/stereotypical gender socialization, characterized by dichotomy and asymmetry, which induces an imbalance of power in gender relations, generates multiple social disparities, prescribes specific trajectories for women and for men, thus considerably reducing the equality of development chances for the two groups.

There are few educational messages encouraging girls/women to become independent by investing in their school and professional formation in the first place. Even if girls outnumber boys at all levels of education (with certain variations of profile) and their school results are often better than the boys', more often than not they have to cope with the social pressures of defining their identity by getting married and having children. These social pressures are supplemented by economic constraints generated by the labour market in Romania (low salaries ; different salary for women and for men) and the absence of child care services, which make mothers « opt » for the « smaller evil. »

The postmodern model of the independent woman is not particularly encouraged, especially in certain social environments and country regions. The socializing factors send contradictory messages, family ideology and pleas for maternity (social pressures for being a « good mother » are numerous) co-exist with the ideology of « attractive womanhood » and « successful manhood ». Women's identity in Romania is closely connected with marriage and maternity, considered to be key factors in a woman 's life. The state also endorses this through its public policies (two year parental leave) and through the lack of care support, care remaining the families'/women's responsibility. The labour market failing to be particularly attarctive for women (in terms of salary and promotion), success through marriage is considered to be a « sound » option, just like the « option » of being a housewife and looking after one's own children.

Conclusion

Promoting gender equality in the post-communist Romanian society faces a paradox: many of the policies and programmes run in the name of gender equality (equality of chances; equality with the masculine standard) actually continue and reinforce the gender inequalities typical of the traditional gender order. That is an apparent paradox, which becomes explicable (albeit not acceptable) if we analyse in its depth the invisible „mental soft" (concepts, values, attitudes, behaviour characteristic to Romanian society and culture), which underpins the enforced laws and regulations and the created institutions and organizations.

In the mainly patriarchal/masculine cultures, the idea of gender equality itself is perverted and becomes equality with the masculine standard. The gender inequalities and imbalances are continued in a more subtle and paradoxical form, even in the guise and through the ideal of gender equality, figured out at the level of common sense within certain public programmes and policies (Magyari-Vincze 2004, 29-30). Running governmental programmes, public policies and European financed

projects aimed at promoting gender equality does not mean that these will also yield sustainable effects in the field of concrete life. These only reproduce the cultural patterns and gender stereotypes at the level of the collective mindset.

Contrary to the almighty and oppressive role (of total control on public and private life) exerted by the communist state, the post-communist state, relying on a neoliberal ideology, has dramatically reduced its economic and social role, and especially its role of redistributing and achieving social justice, which has led to an alarming decrease in the number and quantity of existing support services (nurseries, kindergartens, public care services for persons in need, hospitals), which inflated the amount of labour "to be carried out" by women in the private sphere, the impairment of their freedom of movement and of their chances to combine professional labour with domestic/family tasks. The social protection system at present, which depends on the level of income, is centered upon the most needy categories. In contrast to family-centered ideology, social and family policies are not oriented towards family development and demographic growth, but merely upon ensuring a minimum level of survival. Unlike in the previous period, the gains in the field of civil and political liberties have been achieved at the cost of sacrificing social rights and alarming quotas of inequality and social polarization, thus affecting the social citizenship component.

The equal opportunities principle is double-edged in the sense that the meritocratic side it contains (according to which women are not supposed to be promoted through assertive action), which is part and parcel of the equality of opportunities in its most current meaning in our cultural space as well, allows past injustice and gender inequalities to continue in the present despite the legal frame which provides gender equality (Dragomir and Miroiu 2002, 25).

Ensuring the equality of chances in gender social relations means ensuring equality as a premise, equality with regards to the conditions of one's start in the social competition. In this case, gender equality (as chance equality), related to the liberal principle of meritocracy, ignores *ab initio* the existence of gender equalities in the area of private life and the fact that women, who have the responsibility of work in the sphere of private life, have a reduced access to competition and resources. "*Frozen in their condition of housewives and active mothers, women cannot be equal competitors on the labour market, they have a real deterrent in the competition. Meritocracy invoked as a liberal principle applies to those who are free from feeding and care activities*" (Miroiu 2004, 114).

Experiences which are typical of women (such as pregnancy, abortion, breast feeding, maternity) as well as the experiences which are generally conceived as the responsibilities of women (such as the care for children, the elderly, the sickly persons; single parenthood, sexual harassment, rape, prostitution, sexual exploitation; the experience of subordination and discrimination, etc.) outline a set of *specific interests* despite major differences among women according to age, education, ethnicity, cultural and geographic space, etc. (Băluţă 2007b, 46-47). In order for these specific interests to get on the public/political agenda and to be sorted out through the public policies focused on gender equality, women need a group awareness and forms of political activism based on the existence of interests which are different from those of men (Mihai 2011, 9).

Reconfiguring the public space in post-communist Romania has been achieved in mainly masculine terms, both the representation of women in decision-making structures and their public visibility being reduced. In this context, the formulation of specific interests has been and still is rather weak, and the progress made is not consolidated, the risk of regress being a permanent threat. The constraints of everyday life, the cultural models promoting family and maternity-oriented measures as key factors of structuring feminine identity, the absence of civic practice, as well as the "preventive antifeminism" maintain an attitude of resignment from involving in the public and political life on the part of women. Nevertheless, the topics perceived to have an urgent character when related to basic needs (supporting children and women in need) manage to engage women's energies, unlike the strategic and political interests. The question is whether the formulation of the social issues of the private sphere and their constant and coherent presence on the public agenda might generate a more active involvement of women in the civil and political life, thus contributing

to the concrete expression of women's social citizenship (Heinen 1996, 258). In our society, there is an almost paradoxical co-existence of the discourse favouring maternity and the precarious rights and services supporting it (for instance, the child's allowance, received since birth until the child's coming of age at 18, amounts to around 10 Euro). Both in communism and in post-communism, the social protection and family policy system, which is under-financed, stuck in inner contradictions and incoherent approaches, contributes to the maintenance and even the consolidation of gendered labour division: horizontal and vertical segregation, salary discrepancies, gender inequalities in relation with domestic labour and professional paid labour.

NEGOTIATION METHODS FOR COLLABORATIVE ACTIVITIES IN NETWORK ENTERPRISES

ADINA-GEORGETA CRETAN*

Abstract

This paper provides a collaboration support for small and medium enterprises within a Network Enterprises which cannot or do not want to fulfill a major contract alone. In that case, in order to better meet a higher external demand, the managers are willing to subcontract parts of their contracts even to competitors.
This approach is illustrated by a business-to-business interaction, being proposed a scenario where partners are autonomous gas stations grouped in a virtual enterprise (VE). In such a VE, we present a schematic example of a collaboration process using negotiation and coordination mechanisms that we proposed in this paper.

Keywords*: Network Enterprises, Services, Cooperation, Collaboration, SME*

1. Introduction

Recent advances in the information technology have made possible the development of a new type of organization, the virtual organization. The concept of "Virtual Enterprise (VE)" or "Network of Enterprises" has emerged to identify the situation when several independent companies decided to collaborate and establish a virtual organization with the goal of increasing their profits. Camarinha-Matos[1] defines the concept of VE as follows: "A *Virtual Enterprise (VE)* is a temporary alliance of enterprises that come together to share skills and resources in order to better respond to business opportunities and whose cooperation is supported by computer networks".

Given this general context, the objective of the present paper is to develop a conceptual framework and the associated informational infrastructure that are necessary to facilitate the collaboration activities and, in particular, the negotiations among independent organizations that participate in a Network Enterprises.

The negotiation process was exemplified by scenarios tight together by a virtual alliance of the autonomous gas stations. Typically, these are competing companies. However, to satisfy the demands that go beyond the vicinity of a single gas station and to better accommodate the market requirements, they must enter in an alliance and must cooperate to achieve common tasks. The manager of a gas station wants to have a complete decision-making power over the administration of his contracts, resources, budget and clients. At the same time, the manager attempts to cooperate with other gas stations to accomplish the global task at hand only through a minimal exchange of information. This exchange is minimal in the sense that the manager is in charge and has the ability to select the information exchanged.

When a purchasing request reaches a gas station, the manager analyses it to understand if it can be accepted, taking into account job schedules and resources availability. If the manager accepts the purchasing request, he may decide to perform the job locally or to partially subcontract it, given the gas station resource availability and technical capabilities. If the manager decides to subcontract a job, he starts a negotiation within the collaborative infrastructure with selected participants. In case that the negotiation results in an agreement, a contract is settled between the subcontractor and the

contractor gas station, which defines the business process outsourcing jobs and a set of obligation relations among participants[2].

The gas station alliance scenario shows a typical example of the SME virtual alliances where partner organizations may be in competition with each other, but may want to cooperate in order to be globally more responsive to market demand.

The collaborative infrastructure, that we describe, should flexibly support negotiation processes respecting the autonomy of the partners.

We are starting with a presentation in Section 2 of a VE life cycle model. Then, we are briefly describing in Section 3 the architecture of the collaboration system in which the interactions take place[3].

The main objective of this paper is to propose a collaboration framework in a dynamical system with autonomous organizations. In Section 4 we define the Coordination Components that manage different negotiations which may take place simultaneously.

In Sections 5 and 6 we present the model of the negotiation process, that can be used by describing a particular case of negotiation, and the negotiation algorithm. Finally, Section 7 concludes this paper.

2. The main steps of the Virtual Enterprise life cycle

The life cycle of virtual enterprise is classified into six phases. The relevance in different phases is shown in Figure 1 and the statement for each phase is given as follows:

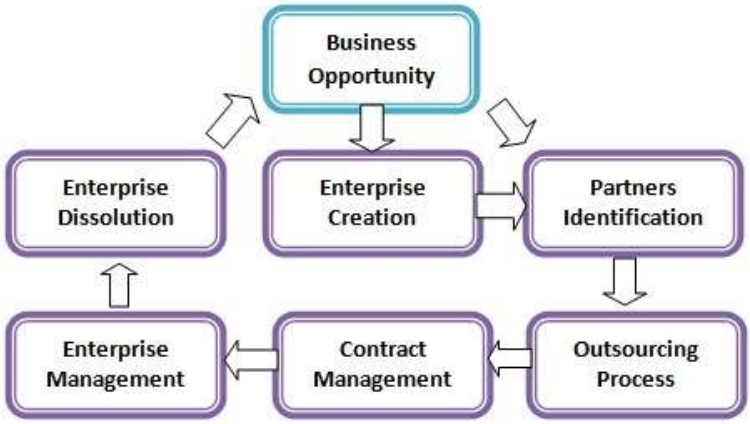

Figure 1. Life-cycle of a virtual enterprise

a) VE creation

When a business opportunity is detected, there is a need to plan and create the VE, identify partners, establish the contract or cooperation agreement among partners, in order to manage the processes of the VE.

[2] Singh M.P., (1997) *Commitments among autonomous agents in information-rich environments*. In Proceedings of the 8th European Workshop on Modelling Autonomous Agents in a Multi-Agent World (MAAMAW), pp. 141–155.

b) Partners search and selection

The selection of business partners is a very important and critical activity in the operation of a company. Partners search can be based on a number of different information sources, being private, public, or independent. The enterprise's private suppliers' list is a data repository that contains information about the companies that have had commercial relationships with this enterprise. This information composes an *Internal Suppliers Directory (ISD)*. External sources include directories maintained by industrial associations, commerce chambers, or Internet services. This information composes the *External Suppliers Directory (ESD)*. Another emerging solution is the creation of clusters of enterprises that agreed to cooperate and whose skills and available resources are registered in a common *SME Cluster Directory* (CD).

c) Outsourcing of tasks within a VE

In this stage of a VE life cycle, we can assume that a gas station company receives a customer demand. In this respect, the Manager of this company may negotiate the outsourcing of a schedule tasks that cannot perform locally with multiple partners of selected gas station companies, geographically distributed. The Manager can select the partners of the negotiation among the database possible partners according to their declared resources and the knowledge he has about them.

The outcome of a negotiation can be "success" (the task was fully outsourced), "failure" (no outsourcing agreement could be reached) or "partial" (only part of the task could be outsourced).

d) Contract management in the VE

In case the negotiation process ends in a successful, a contract is established between the outsourcing company and the insourcing ones. The contract is a complex object, which is based of trust in this coordination mechanism. Moreover, it contains a set of specific rules, such as penalties, expressing obligation relations between the participants.

In case of failure of a partner, the Manager will have to supervise if the obligations are honored (for example to oblige the partner to finish his work or to set penalties) and to modify the business process renegotiating parts of the work that have not been realized.

e) Management of the VE

A VE is a dynamic entity in which a new company may join or leave it. Members may need to leave for many reasons, when they change their activity or when they don't want any more to collaborate with the partners of the VE. In case of departure from the VE, the leaving partner may either notify all the partners. It also may leave without giving any information. The departure of a partner from the VE will have an important impact on ongoing contracts especially when this partner is an insourcer of an important amount of task.

f) VE dissolution - after stopping the execution of the business processes.

3. The Collaborative Infrastructure

The main objective of this software infrastructure is to support collaborating activities in virtual enterprises. In VE partners are autonomous companies with the same object of activity, geographically distributed.

Taking into consideration, the constraints imposed by the autonomy of participants within VE, the only way to share information and resources is the negotiation process.

Figure 2 shows the architecture of the collaborative system:

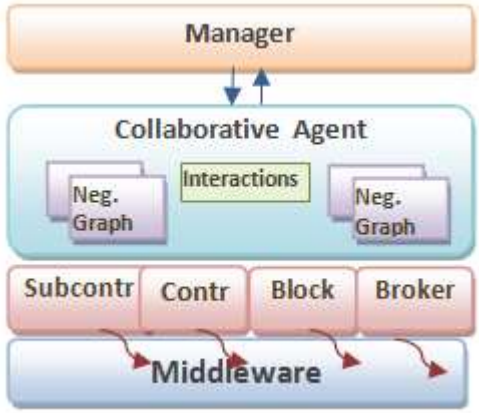

Figure 2. The architecture of the collaborative system

This infrastructure is structured in four main layers: Manager, Collaborative Agent, Coordination Components and Middleware. A first layer is dedicated to the Manager of each organization of the alliance. A second layer is dedicated to the Collaborative Agent who assists its gas station manager at a global level (negotiations with different participants on different jobs) and at a specific level (negotiation on the same job with different participants) by coordinating itself with the Collaborative Agents of the other partners through the fourth layer, Middleware[4]. The third layer, Coordination Components, manages the coordination constraints among different negotiations which take place simultaneously.

A Collaborative Agent aims at managing the negotiations in which its own gas station is involved (e.g. as initiator or participant) with different partners of the alliance.

Each negotiation is organized in three main steps: initialization; refinement of the job under negotiation and closing[5]. The initialization step allows to define what has to be negotiated (Negotiation Object) and how (Negotiation Framework)[6]. A selection of negotiation participants can be made using history on passed negotiation, available locally or provided by the negotiation infrastructure (Zhang and Lesser, 2002). In the refinement step, participants exchange proposals on the negotiation object trying to satisfy their constraints (Barbuceanu and Wai-Kau, 2003). The manager may participate in the definition and evolution of negotiation frameworks and objects (Keeny and Raiffa, 1976). Decisions are taken by the manager, assisted by his Collaborative Agent (Bui and Kowalczyk, 2003). For each negotiation, a Collaborative Agent manages one or more negotiation objects, one framework and the negotiation status. A manager can specify some global parameters: duration; maximum number of messages to be exchanged; maximum number of candidates to be considered in the negotiation and involved in the contract; tactics; protocols for the Collaborative Agent interactions with the manager and with the other Collaborative Agents (Faratin, 2000).

[6] Smith R., and Davis R., *Framework for cooperation in distributed problem solving*. IEEE Transactions on Systems, Man and Cybernetics, SMC-11, 1981.

4. Coordination Components

In order to handle the complex types of negotiation scenarios, we propose different components[7]:

- *Subcontracting* (resp. *Contracting*) for subcontracting jobs by exchanging proposals among participants known from the beginning;
- *Block* component for assuring that a task is entirely subcontracted by the single partner;
- *Broker*: a component automating the process of selection of possible partners to start the negotiation;

These components are able to evaluate the received proposals and, further, if these are valid, the components will be able to reply with new proposals constructed based on their particular coordination constraints[8].

From our point of view the coordination problems managing the constraints between several negotiations can be divided into two distinct classes of components:

Coordination components in closed environment**:** components that build their images on the negotiation in progress and manage the coordination constraints according to information extracted only from their current negotiation graph (*Subcontracting, Contracting, Block)*;

Coordination components in opened environment: components that also build their images on the negotiation in progress but they manage the coordination constraints according to available information in data structures representing certain characteristics of other negotiations currently ongoing into the system (*Broker)*.

Following the descriptions of these components we can state that unlike the components in closed environment (*Subcontracting, Contracting, Block)* that manage the coordination constraints of a single negotiation at a time, the components in opened environment (*Broker)* allow the coordination of constraints among several different negotiations in parallel[9].

The novelty degree of this software architecture resides in the fact that it is structured on four levels, each level approaching a particular aspect of the negotiation process. Thus, as opposed to classical architectures which achieve only a limited coordination of proposal exchanges which take place during the same negotiation, the proposed architecture allows approaching complex cases of negotiation coordination. This aspect has been accomplished through the introduction of coordination components level, which allows administrating all simultaneous negotiations in which an alliance partner can be involved.

The coordination components have two main functions such as: i) they mediate the transition between the negotiation image at the Collaboration Agent level and the image at the Middleware level; ii) they allow implementing various types of appropriate behavior in particular cases of negotiation. Thus we can say that each component corresponding to a particular negotiation type.

Following the descriptions of this infrastructure we can state that we developed a framework to describe a negotiation among the participants to a virtual enterprise. To achieve a generic coordination framework, nonselective and flexible, we found necessary to first develop the structure of the negotiation process that helps us to describe the negotiation in order to establish the general environment where the participants may negotiate. To develop this structure, we proposed a succession of phases that are specific to different stages of negotiation (initialization, negotiation, contract adoption) that provided a formal description of the negotiation process.

[9] Muller H., *Negotiation principles.* Foundations of Distributed Artificial Intelligence, 1996.

The advantage of this structure of the negotiation process consists on the fact that it allows a proper identification of the elements that constitute the object of coordination, of the dependencies that are possible among the existing negotiations within the VE, as well as the modality to manage these negotiations at the level of the coordination components.

5. The Negotiation Coordination Model

This section proposes a formal model to settle and manage the coordination rules of one or more negotiations which can take place in parallel, by describing the basic concepts underlying the model, and the negotiation model using the metaphor of Interaction Abstract Machines (IAMs). The Program Formula is described to define the methods used to manage the parallel evolution of multiple negotiations.

Basic concepts

In this setup, at a local level, the model requires a formal description of the rules of coordination that manage the behavior of the agent in a negotiation; at a global level, the model must provide a global coordination of all negotiations of an agent.

The fundamentals of the negotiation model are given by the following basic concepts:

A *Negotiation Model* is defined as a quintuple M = <T, P, N, R, O> where:

- T denotes the *time of the system*, assumed to be discrete, linear, and uniform[10];
- P denotes the *set of participants* in the negotiation framework. The participants may be involved in one or many negotiations;
- N denotes the *set of negotiations* that take place within the negotiation framework;
- R denotes the *set of policies of coordination* of the negotiations that take place within the negotiation framework;
- denotes the *common ontology* that consists of the set of definitions of the attributes that are used in a negotiation.

A *negotiation* is described at a time instance through a set of negotiation sequences.

Let Sq = {si | i $\in \mathbb{N}$} denote the set of *negotiation sequences*, such that $\forall$si ,sj $\in$ Sq, i $\neq$ j implies si $\neq$ sj. A *negotiation sequence* si $\in$ Sq such that si $\in$ N(t) is a succession of negotiation graphs that describe the negotiation N from the moment of its initiation and up to the time instance *t*. The negotiation graph created at a given time instance is an oriented graph in which the nodes describe the negotiation phases that are present at that time instance (i.e., the negotiation proposals sent up to that moment in terms of status and of attributes negotiated) and the edges express the precedence relationship between the negotiation phases.

The *negotiation phase* (*ph*) indicates a particular stage of the negotiation under consideration.

The *Status* is the possible state of a negotiation. This state takes one of the following values (*Status* $\in${*initiated, undefined, success, failure*}):

- *initiated* – the negotiation, described in a sequence, has just been initiated;
- *undefined* – the negotiation process for the sequence under consideration is ongoing;
- *success* – in the negotiation process, modeled through the sequence under consideration, an agreement has been reached;
- *failure* – the negotiation process, modeled through the sequence under consideration, resulted in a denial.

[10] Hurwitz, S.M., *Interoperable Infrastructures for Distributed Electronic Commerce.* 1998, http://www.atp.nist.gov/atp/98wpecc.htm.

Issues is the set of attributes with associated values that describe the proposals made in a negotiation phase.

Snapshot is the set of combinations between a negotiation aspect (*Status*) and the information that is negotiated (*Issues*).

The functions *status* and *issues* return, respectively, the state (status) of a negotiation instance and the set of the attributes negotiated (issues) within a negotiation instance.

Metaphor Interaction Abstract Machines (IAMs)

The metaphor Interaction Abstract Machines (IAMs) will be used to facilitate modelling of the evolution of a *multi-attribute, multi-participant, multi-phase negotiation*. In IAMs, a system consists of different *entities* and each entity is characterized by a state that is represented as a set of *resources*. It may evolve according to different laws of the following form, also called "*methods*":

A1@…@An <>- B1@…@Bm

A method is executed if the state of the entity contains all resources from the left side (called the "*head*") and, in this case, the entity may perform a transition to a new state where the old resources *(A1,...,An)* are replaced by the resources *(B1,...,Bm)* on the right side (called the "*body*"). All other resources of the entity that do not participate in the execution of the method are present in the new state.

The operators used in a method are:

- the operator @ assembles together resources that are present in the same state of an entity;
- the operator <>- indicates the transition to a new state of an entity;
- the operator & is used in the body of a method to connect several sets of resources;
- the symbol "T" is used to indicate an empty body.
- In IAMs, an entity has the following characteristics:
- if there are two methods whose heads consist of two sets of distinct resources, then the methods may be executed in parallel;
- if two methods share common resources, then a single method may be executed and the selection procedure is made in a non-deterministic manner.

In IAMs, the methods may model four types of transition that may occur to an entity: *transformation*, *cloning*, *destruction* and *communication*. Through the methods of type *transformation* the state of an entity is simply transformed in a new state. If the state of the entity contains all the resources of the head of a transformation method, the entity performs a transition to a new state where the head resources are replaced by the body resources of the method. Through the methods of type *cloning* an entity is cloned in a finite number of entities that have the same state. If the state of the entity contains all the resources of a head of a cloning method and if the body of the method contains several sets of distinct resources, then the entity is cloned several times, as determined by the number of distinct sets, and each of the resulting clones suffers a transformation by replacing the head of the method with the corresponding body. In the case of a *destruction* of the state, the entity disappears. If the state of the entity contains all the resources of the head of a transformation method and, if the body of the method is the resource T, then the entity disappears.

In IAMs, the *communication* among various entities is of type broadcasting and it is represented by the symbol "^". This symbol is used to the heads of the methods to predefine the resources involved in the broadcasting. These resources are inserted in the current entity and broadcasted to all the entities existent in the system, with the exception of the current entity. This mechanism of communication thus executes two synchronous operations:

- *transformation*: if all resources that are not predefined at the head of the method enter in collision, then the predefined resources are inserted in the entity and are immediately consumed through the application of the method;

• *communication*: insertion of the copies of the predefined resources in all entities that are present in the system at that time instance.

6. Negotiation Algorithm

In the proposed scenario, a conflict occurs in a network of enterprises, threatening to jeopardize the interoperability of the entire system. The first step consists in identifying the Enterprise Interoperability issue. The following steps refer to analyse the problem, evaluate possible solutions and select the optimal solution. The proposed solution for conflict resolution is reaching a mutual agreement through negotiation. The benefit of this approach is the possibility to reach a much more stable solution, unanimously accepted, in a shorter period of time.

The design and coordination of the negotiation process must take into consideration[11]:

• Timing (the time for the negotiation process will be pre-set);

• The set of participants to the negotiation process (which can be involved simultaneous in one or more bilateral negotiations);

• The set of simultaneous negotiations on the same negotiation object, which must follow a set of coordination policies/ rules;

• The set of coordination policies established by a certain participant and focused on a series of bilateral negotiations[12];

• Strategy/decision algorithm responsible for proposals creation (Olteanu, 2012);

• The common ontology, consisting of a set of definitions of the attributes used in negotiation.

The negotiation process begins when one of the enterprises initiate a negotiation proposal towards another enterprise, on a chosen negotiation object. We name this enterprise the Initiating Enterprise (E1). This enterprise also selects the negotiation partners and sets the negotiation conditions (for example sets the timing for the negotiation) (Schumacher, 2001). The negotiation partners are represented by all enterprises on which the proposed change has an impact. We assume this information is available to E1 (if not, the first step would consist in a simple negotiation in which all enterprises are invited to participate at the negotiation of the identified solution. The enterprises which are impacted will accept the negotiation) (Kraus, 2001).

After the selection of invited enterprises (E2 … En), E1 starts bilateral negotiations with each guest enterprise by sending of a first proposal. For all these bilateral negotiations, E1 sets a series of coordination policies/rules (setting the conditions for the mechanism of creation and acceptance of proposals) and a negotiation object/framework (NO/NF), setting the limits of solutions acceptable for E1. Similarly, invited enterprises set their own series of coordination policies and a negotiation object/framework for the ongoing negotiation.

After the first offer sent by E1, each invited enterprise has the possibility to accept, reject or send a counter offer. On each offer sent, participating enterprises, from E1 to E2 ... En follow the same algorithm:

Algorithm: Pseudocode representation of the negotiation process

Inputs: Enterprises *E1...En; NO(Negotiation Object); NF(Negotiation Framework)*

Outputs: The possible state of a negotiation: *success, failure*

            }end if;
      }end if;
}
END
```

7. Conclusions

The functioning of this kind of alliance suppose task achievement, which cannot be individual treated, by a single participant for better adjustment of the clients requirements.

The proposed infrastructure aims to help the different SMEs to fulfill their entire objectives by mediating the collaboration among the several organizations gathered into a virtual enterprise.

A specific feature that distinguishes the negotiation structure proposed in this work from the negotiations with imposed options (acceptance or denial) is that it allows the modification of the proposals through the addition of new information (new attributes) or through the modification of the initial values of certain attributes (for example, in the case of gas stations the gasoline price may be changed).

The business-to-business interaction context in which our activities take place forces us to model the unexpected and the dynamic aspects of this environment. An organization may participate in several parallel negotiations. Each negotiation may end with the acceptance of a contract that will automatically reduce the available resources and it will modify the context for the remaining negotiations.

In the current work we've described in our collaboration framework only the interactions with the goal to subcontract or contract a task. A negotiation process may end with a contract and in that case the supply schedule management and the well going of the contracted task are both parts of the outsourcing process.

In order to illustrate our approach we have used a sample scenario where distributed gas stations have been united into virtual enterprise. Take into consideration this scenario, one of the principal objectives was related to the generic case and means that this proposed infrastructure can be used in other activity domains.

Regarding research perspective continuation, one first direction which can be mentioned is the negotiation process and the coordination process taking into consideration the contracts management process. In this way the coordination can administrate not only the dependence between the negotiations and the contracts which are formed and with execution dependences of those contracts.

Another perspective is to deliver to the user one instrument which allows him negotiation protocol definition according with the restrained negotiation interactions possibilities. Consequent, this will be a problem of coordination on which the infrastructure must solve on negotiation protocol administration and protocol build perspective.

TIME SERIES FORECASTING USING NEURAL NETWORKS

BOGDAN OANCEA[*]
ŞTEFAN CRISTIAN CIUCU[**]

Abstract
Recent studies have shown the classification and prediction power of the Neural Networks. It has been demonstrated that a NN can approximate any continuous function. Neural networks have been successfully used for forecasting of financial data series. The classical methods used for time series prediction like Box-Jenkins or ARIMA assumes that there is a linear relationship between inputs and outputs. Neural Networks have the advantage that can approximate nonlinear functions. In this paper we compared the performances of different feed forward and recurrent neural networks and training algorithms for predicting the exchange rate EUR/RON and USD/RON. We used data series with daily exchange rates starting from 2005 until 2013.

Keywords*: neural networks, time series, forecasting, exchange rate, predicting*

Introduction

Classical statistical and econometric models used for forecasting in the field of financial time series fails to efficiently handle uncertainty nature of foreign exchange data series. One of the largest and more volatile financial market is the foreign exchange market, exchange rates being among the most used and important economic indices. Forecasting the exchange rates is a difficult problem from both theoretical and practical point of view because the exchange rates are influenced by many economic and political factors. During the time, many statistical and econometric models have been developed by researchers for the purpose of forecasting exchange rates but this problem remains one of the major challenges in the field of forecasting methods.

Recent studies have shown the classification and prediction power of the Artificial Neural Networks. It has been demonstrated that a neural network can approximate any continuous function. Neural networks have been successfully used for forecasting of financial data series. The classical methods used for time series prediction like Box-Jenkins, ARMA or ARIMA assumes that there is a linear relationship between inputs and outputs. Neural Networks have the advantage that can approximate any nonlinear functions without any apriori information about the properties of the data series.

In this paper we compared the performances of different feed forward and recurrent neural networks and training algorithms for predicting the exchange rate EUR/RON and USD/RON. We used data series with daily exchange rates starting from 2005 until 2013 provided by the National Bank of Romania. We developed two different kinds of neural networks, a feed forward network and a recurrent network and compared their performances for foreign exchange rate prediction. The feed forward network was trained by the classical backpropagation method, by the resilient backpropagation and one of its' versions, while the recurrent network was trained using a multistream approach based on the Extended Kalman Filter.

Related work

In (Kondratenko, 2003) the authors presents a forecasting method for exchange rates between American Dollar and Japanese Yen, Swiss Frank, British Pound and EURO using a recurrent neural network. Before the data series were presented to the neural network some preprocessing operations have been done based on normalization, calculation of Hurst exponent, Kolmogorov-Smirnov test in

[*] Professor, PhD, "Nicolae Titulescu" University of Bucharest (email: bogdan.oancea@gmail.com).
[**] IT Director, "Nicolae Titulescu" University (email: stefanciucu@yahoo.com).

order to remove the possible correlations. An Elman-Jordan recurrent network has been used to forecast the one-day ahead value of moving average of returns with the window equal to 5 observations. The number of hidden neurons was chosen equal to 100 with a linear activation of the input layer and logistic activation of the hidden and output layer. The neural network predicted the increments sign with a high probability – approximately 80%.

(Chen, 2003) compared the performance of a Probabilistic Neural Network with a GMM-Kalman Filter and random walk approach for predicting the direction of return on market index of the Taiwan Stock Exchange. They reached to the conclusion that PNN has a stronger forecasting power than both the GMM–Kalman filter and the random walk models because PNN has a better capability to identify erroneous data and outliers and it also doesn't require any apriori information about the underlying probability density functions of the data.

A comparison between a neural network and a Hidden Markov Model used for foreign exchange forecasting is also given in (Philip 2011). The results of the study show that while the Hidden Markov Model achieved an accuracy of 69.9% the neural network had an accuracy of 81.2%.

A hibrid model ARIMA-PNN is presented in (Khashei, 2012). The values estimated with the ARIMA model are changed based on the trend of the ARIMA residuals detected by a PNN and optimum step length obtained a mathematical programming model.

Data transformation in order to improve the accuracy of the forecast is used in (Proietti, 2013). The authors considered the Box-Cox power transformation and showed the forecasts are improve significantly compared to the untransformed data at the one-step-ahead horizon.

(Man-Chung, 2000) used a conjugate gradient learning algorithm with a restart procedure to improve the convergence. To further improve the convergence the authors also used a multiple linear regression for weight initialization instead of the classical random initialization. They used the network to predict the daily trading data of some companies from Shanghai Stock Exchange.

Methodology

In this paper we analyze the exchange rates for two currencies EUR and USD between 03.01.2005 and 19.02.2013. The data series are obtained from the National Bank of Romania. Figure 1 and 2 shows the corresponding exchange rates EUR/RON and USD/RON. It can be seen from these charts that the data are heavily jagged. To improve the accuracy of the forecasting it is better to remove the correlations between the inputs and made them statistically independent. Thus, we studied not the exchange rates but the logarithmic returns given by the following formula:

$$R_n = \frac{\ln E_n}{\ln E_{n-1}}$$

More, in order to increase the learning rate additional data preprocessing that smoothed the data distribution was performed before training the network. We normalized the data using a logistic function according to the following formula:

$$\tilde{R}_n = 1/(1 + \exp(\frac{R_n - \bar{R}}{\sigma}))$$

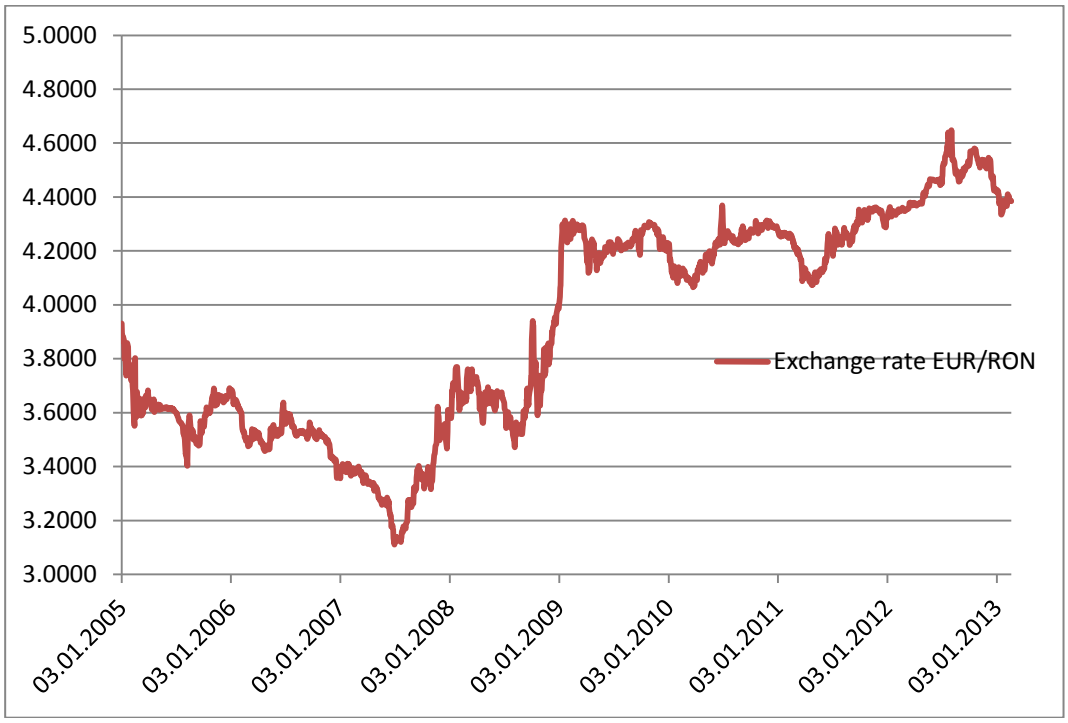

Figure 1. The exchange rate EUR/RON

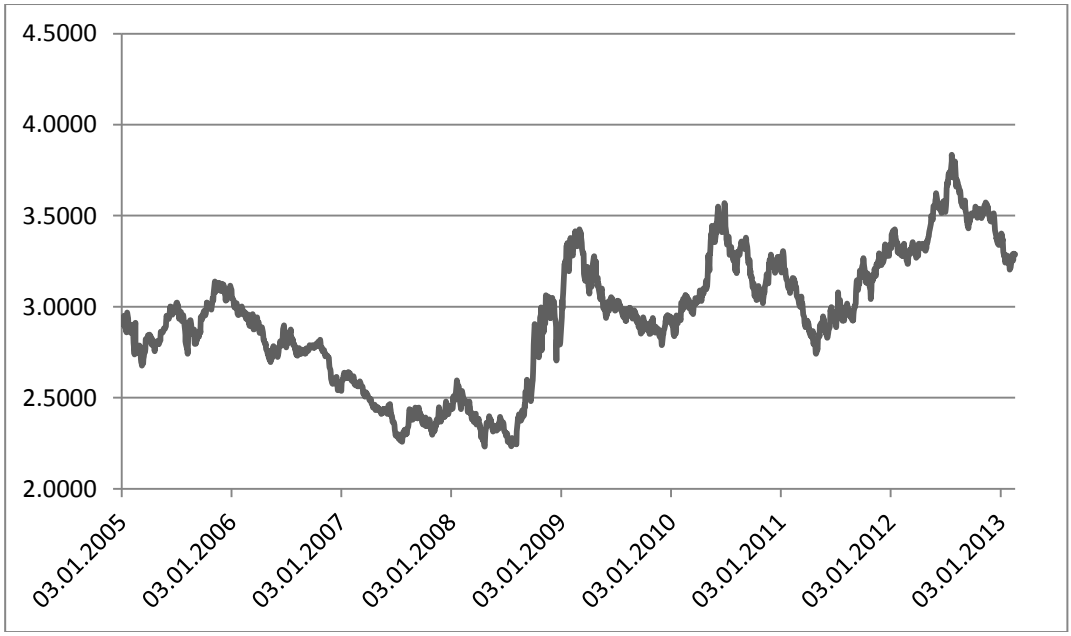

Figure 2. The exchange rate USD/RON

This transformation normalizes the data and guarantee us the values are in [0,1] interval. The two data series transformed according to the method described above are presented in figures 3 and 4.

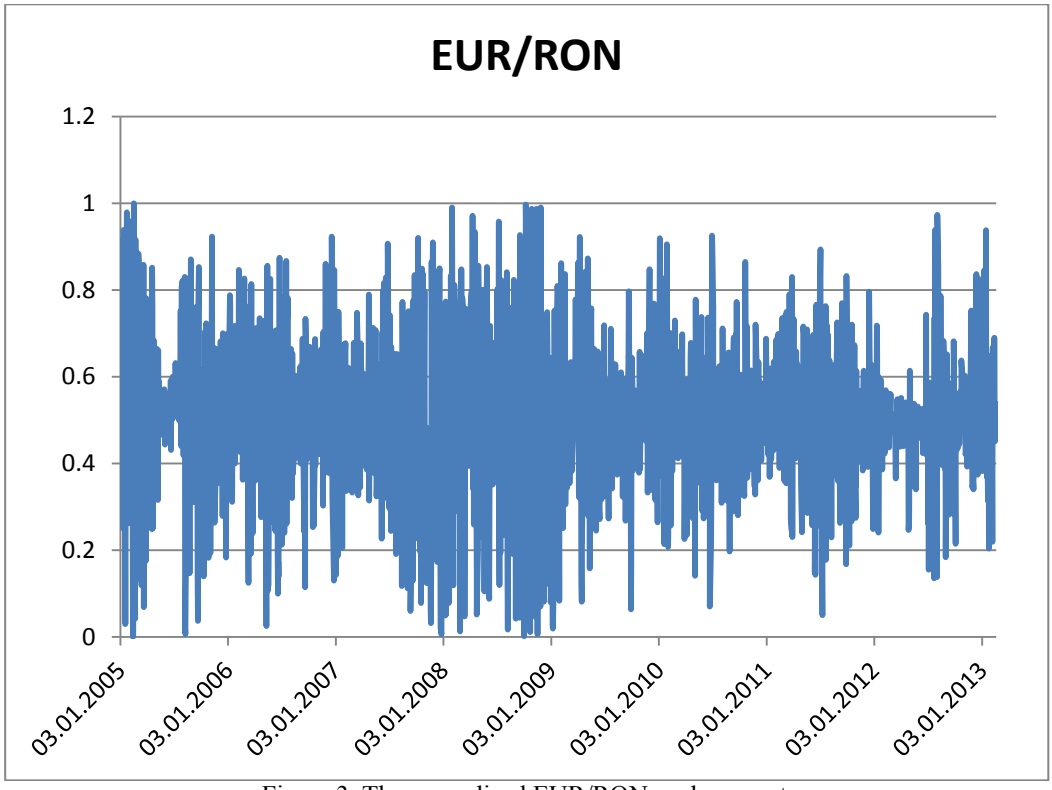

Figure 3. The normalized EUR/RON exchange rate

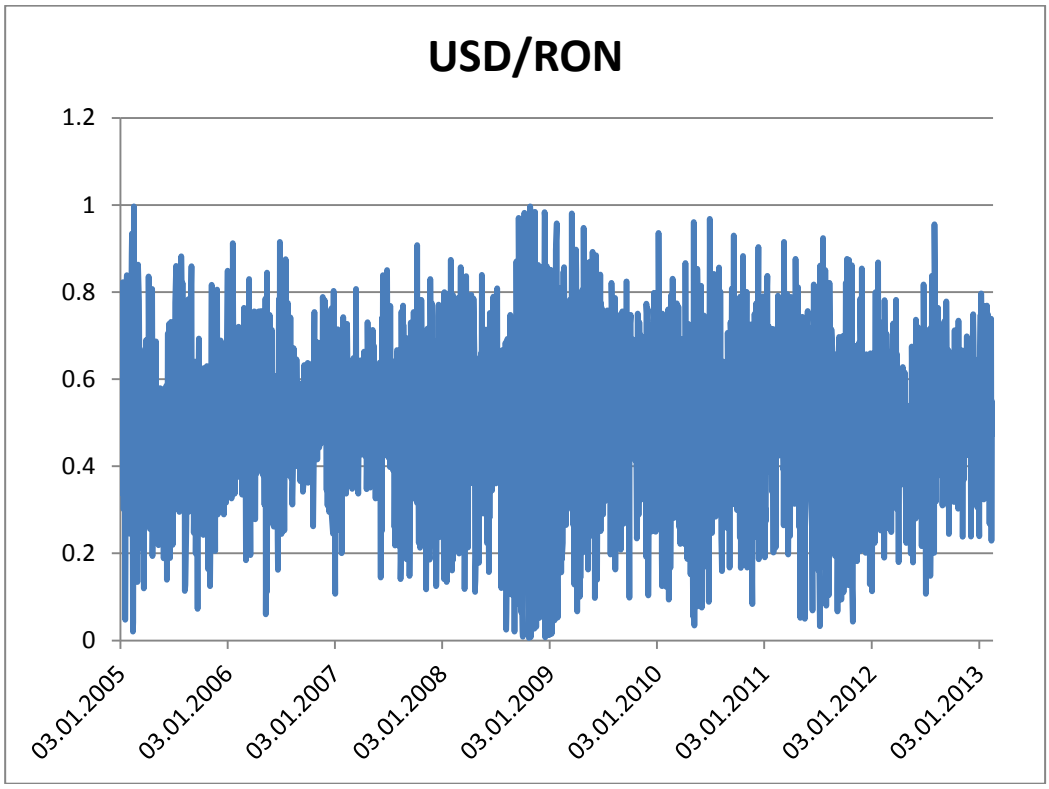

Figure 4. The normalized USD/RON exchange rate

Results

First, we built a feed forward neural network with three layers, one input layer, one hidden layer and one output layer. We chose the optimum number of neurons by trial and error: 20 neurons (i.e. we fed into the network the past 20 values of the time series) in the input layer and 40 neurons in the hidden layer. The output layer has one neuron, the value of the time series at t+1 time moment. For the input layer and the output layer we used a linear activation function and *tanh* for the hidden layer. The data sets were spitted in two parts: 80% of the values were used for training and 20% for testing purposes. We tested several training algorithms (Rojas, 1996): backpropagation, resilient propagation and a version of it called RPROP+ which is one of the best performing first-order learning methods for feed forward neural networks (Igel, 2000). The iRPROP+ training algorithm combines information about the sign of the error function derivative which is error surface information with the magnitude of the network error when the decision of reverting an update step is taken. As the error function for our network we used MSE.

The results for the three training algorithms were similar, with an increase in convergence speed of about 25% in the case of iRPROP. As a stopping criteria we imposed a value of 0.1% of the error function.

Second, we tested a recurrent neural network (Jaeger, 2002) with an Elman Simple Recurrent Network architecture trained by Extended Kalman Filter (EKF) method, with the derivatives of the network output computed by Truncated Backpropagation Through Time method (Werbos, 1990), (Zipser, 1995). We used a multistream approach for training the network. If the training data sets are heterogeneous, it is possible that a recency effect may appear – the weights are updated according to the currently presented training data. To circumvent this issue the solution is to scramble the order of

the presentation of the data and to use a batch update algorithm. The multistream procedure avoids the apparition of the recency effect by combining the scrambling and batch updates. Multistream EKF divides the training data set into several parts, each subset being a stream. For each *Ns* streams a different instance of the same network is used. A full description of the training procedure (multistream EKF) is beyond the scope of this paper but an interested reader can find this in (Feldkamp, 1998). We used a network with 20 input neurons, 10 fully recurrent hidden neurons and one output neuron. We split the training data in 20 streams randomly chosen each stream with 200 points. The window for truncated backpropagation was 20. With these parameters we obtained an error in forecasting of about 0.01% which is an order of magnitude better than in the case of the feedforward network.

Conclusions

Forecasting financial time series is a difficult problem. In this paper paper we compared the performances of different feed forward and recurrent neural networks and training algorithms for predicting the exchange rate EUR/RON and USD/RON. We used data series with daily exchange rates starting from 2005 until 2013 provided by the National Bank of Romania. Before training the networks we applied a preprocessing procedure to the data sets which removes the correlation between data and normalized the data series. Our tests showed that the recurrent network performs better than classical feed forward network in this case.

CLOUD COMPUTING AND INTERNET OF THINGS FOR SMART CITY DEPLOYMENTS

GEORGE SUCIU[*], ALEXANDRU VULPE[**], GYORGY TODORAN[***], JANNA CROPOTOVA[****], VICTOR SUCIU[*****]

Abstract
Cloud Computing represents the new method of delivering hardware and software resources to the users, Internet of Things (IoT) is currently one of the most popular ICT paradigms. Both concepts can have a major impact on how we build smart or/and smarter cities. Cloud computing represents the delivery of hardware and software resources on-demand over the Internet as a Service. At the same time, the IoT concept envisions a new generation of devices (sensors, both virtual and physical) that are connected to the Internet and provide different services for value-added applications.
In this paper we present our view on how to deploy Cloud computing and IoT for smart or/and smarter cities. We demonstrate that data gathered from heterogeneous and distributed IoT devices can be automatically managed, handled and reused with decentralized cloud services.

Keywords: *cloud computing, open source, internet of things, smart cities, decentralized cloud*

Introduction

The paper addresses the convergent domain of Cloud computing and Internet of Things (IoT), that are nowadays two of the most prominent and popular ICT paradigms, together with the emerging topics of Big Data and Energy Efficient IT. The Cloud computing paradigm[1] is an umbrella term for computing services that are accessible over the Internet and developed on a common pool of remotely hosted resources.

There are different kinds of cloud computing services depending on the type of resources delivered via them, current state-of-the-art Cloud services can be such as Infrastructure as a service (IaaS), Platform as a service (PaaS), Software as a service (SaaS), Network as a Service (NaaS), Storage as a service (STaaS), Sensor as a Service (SSaas) and others. These services permit to the users to obtain high reliability, increased security, high availability and to deliver Quality of Service (QoS) at low total cost of ownership (TCO). There are projects like RESERVOIR, VISION-CLOUD, OPTIMIS, CONTRAIL, that are cofounded by the European Commission, thru which were developed pan-European cloud services and also created new Cloud technologies like resource management, security or others and also relevant applications.

Correspondingly, the IoT paradigm[2] relies on the integration of a large number of heterogeneous devices, which are connected to the internet via different networking protocols. IoT

permits the communication between different sensors connected to the Internet and the use of their services towards relevant applications. The concept was originally coined and introduced by MIT, Auto-ID Center and closely linked to RFID (Radio Frequency Identification) and electronic product code (EPC). Similarly the EC has financed a number of FP7 projects in the area of IoT (IOT-A, iCore, BUTLER, SENSEI).

The importance of our research derives from the fact that we propose ways thru which the Cloud and IoT concepts can be used in the context of Smart Cities. Therefore, our main objective is to propose a framework for cloud-based management of data received from sensor devices that can be used for Smart Cities scenarios. We will describe related work and their shortcomings that our research aims to address and present the adopted research methodology and implementation framework.

1.RELATED WORK

Already at the emerging of Cloud and IoT technologies, it has become clear that there is a need of convergence. Furthermore, integration with green energy efforts is a current hot research topic. IoT applications are using a wide range of heterogeneous distributed sensor network. They need to handle a huge number of sensor streams, and could benefit from the distributed elastic storage capacities of cloud computing systems. This cloud structures can boost the computational capabilities of IoT applications, permitting to several multi-sensor applications to perform complex big data processing that is subject to different QoS constraints. Other IoT services like large scale sensing experiments or smart city applications can benefit from a utility-based model, which is based on the on-demand delivery of IoT services over a cloud infrastructure.

A current state of the art about EU FIRE[3] projects is presented in Fig. 1.

Fig. 1. List of current IoT and Cloud eco-system

[3] EU FIRE project - http://www.ict-fire.eu/home/fire-projects.html

A number of projects originated from Machine-to-Machine (M2M)[4] but the current state of art of M2M platforms is quite fragmented and there is not a single view toward an interoperable smart object world. The M2M commercial platforms are vertically focused on solving specific sector issues and are tightly integrated with applications. This approach, taken from the telemetry legacy applications, has created a bunch of sensor devices not interoperable with each other, with high boundaries and integration possible only at database or presentation layers, without possibility of efficiently applying big data mining approaches.

For many years, M2M deployments were based on proprietary/custom applications and networking infrastructures, which were typically expensive to build, manage and maintain. Today's market for sensor devices is a hotbed of idea generation, as the prospect of embedding intelligence in the form of M2M technology into mobile devices has everyone excited about the possibilities[5]. The current market is already filled up with devices that can track everything from blood-glucose levels to traffic patterns.

As an example, SmartSantander proposes a unique in the world city-scale experimental research facility in support of typical applications and services for a smart city. The facility will comprise more than 20,000 sensors and will be based on a real life IoT deployment in an urban setting. The core of the facility will be located in the city of Santander, the capital of the region of Cantabria situated on the north coast of Spain, and its surroundings. SmartSantander will enable the Future Internet of Things to become a reality[6].

2. PROPOSED CONCEPT

2.1. Research Methodology

With our study we would extend the advances of IoT and cloud computing, by highly innovative and scalable service platforms through which to enable smart city services. The paper analyzes the gaps and designs solutions of how cloud computing is applicable to real-time data from embedded applications, thus unifying the IoT and cloud paradigms.

The vision is to propose a concept for a cloud open-platform integration of existing M2M approaches. The sensor and communication device manufacturing community is only one part of the model, where the application and service side is pushing for enablers to seamlessly access to widely distributed, real-time data from the environment. Throughout the recent past years, the concept of open-platform development, management and monitoring has emerged, basically solving again problems mainly from the technological point only in specific sectors.

In Cloud Computing, the word CLOUD is used as a metaphor for "the Internet," so the phrase cloud computing means "a type of Internet-based computing", where different services – such as servers, storage and applications – are delivered to an organization's computers and devices through the Internet. Similarly to IoT, a Cloud is a type of parallel and distributed system consisting of a collection of interconnected and virtualized computers that are dynamically provisioned and

[6] Future Internet Research & Experimentation - http://www.smartsantander.eu/

presented as one or more unified computing resources based on service-level agreements established through negotiation between the service provider and consumers[7].

The concept will focus on a Smart City cloud interoperability and connectivity scenario based on the SaaS delivery model. This approach holds the immense promise of reducing capital and infrastructure costs while improving efficiencies of service provision within the Smart City framework. SaaS delivers software over the Internet, that eliminates the need to install and run the application on private servers, simplifies maintenance and enables customers to use applications remotely through IoT from anywhere in the world.

2.2. Conceptual framework

The framework proposes to design and implement an interoperable decentralized open source cloud platform for IoT applications, with the main objective to enhance existing M2M and their IoT foundations.

We will introduce in this chapter SlapOS, an open source Cloud Operating system which was inspired by recent research in Grid Computing and in particular by BonjourGrid[8]. Slapos is a meta Desktop Grid middleware for the coordination of multiple instances of Desktop Grid middleware. It is based on the motto that ”everything is a process”.

2.3. Cloud and IoT Architecture

SlapOS is based on a Master and Slave design. In this chapter we are going to provide an overview of SlapOS architecture and are going in particular to explain the role of Master node and Slave nodes, as well as the software components which they rely on to operate a distributed cloud for telemetry applications.

Slave nodes request to Master nodes which software they should install, which software they show run and report to Master node how much resources each running software has been using for a certain period of time. Master nodes keep track of available slave node capacity and available software. Master node also acts as a Web portal and Web service so that end users and software bots can request software instances which are instantiated and run on Slave nodes. Master nodes are stateful. Slave nodes are stateless. More precisely, all information required to rebuild a Slave node is stored in the Master node. This may include the URL of a backup service which keeps an online copy of data so that in case of failure of a Slave node, a replacement Slave node can be rebuilt with the same data[9].

It is thus very important to make sure that the state data present in Master node is well protected. This could be implemented by hosting Master node on a trusted IaaS infrastructure with redundant resource. Or - better - by hosting multiple Master nodes on many Slave nodes located in different regions of the world thanks to appropriate data redundancy heuristic. We are touching here the first reflexive nature of SlapOS. A SlapOS master is normally a running instance of SlapOS Master software instantiated on a collection of Slave nodes which, together, form a trusted hosting infrastructure. In other terms, SlapOS is self-hosted, as seen in Fig. 2.

SlapOS master nodes keep track of the identity of all parties which are involved in the process of requesting Cloud resources, accounting Cloud resources and billing Cloud resources. This includes end users (Person) and their company (Organisation). It includes suppliers of cloud resources as well as consumers of cloud resources. It also includes so-called computer partitions which may run a software robot to request Cloud resources without human intervention. It also includes Slave nodes which need to request to SlapOS master which resources should be allocated. SlapOS generated X509 certificates for each type of identity: X509 certificates for people who login, an X509 certificate for each server which contributes to the resources of SlapOS and an X509 for each running software instance which may need to request or notify SlapOS master. A SlapOS Master node with a single Slave node, a single user and 10 computer partitions will thus generate up to 12 X509 certificates: one for the slave, one for the user and 10 for computer partitions.

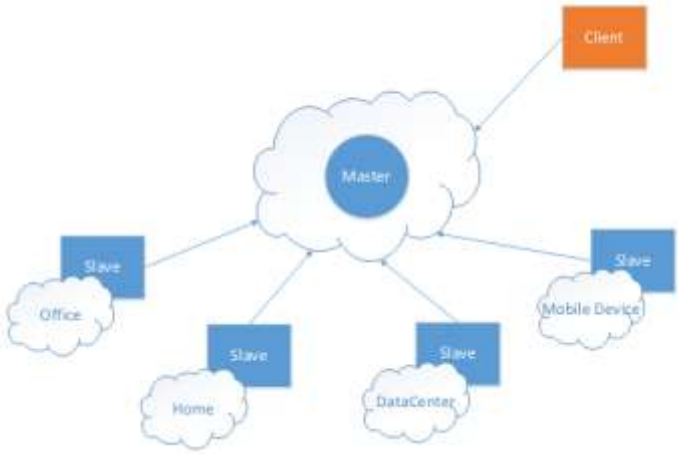

Fig. 2. SlapOS Master – Slave Architecture

Any user, software or slave node with an X509 certificate may request resources to SlapOS Master node. SlapOS Master node plays here the same role as the backoffice of a marketplace. Each allocation request is recorded in SlapOS Master node as if it were a resource trading contract in which a resource consumer requests a given resource under certain conditions. The resource can be a NoSQL storage, a virtual machine, an ERP with web-portal interface for displaying sensor data and Google Maps integration for RTUs localization, a Wiki, etc. The conditions can include price, region (ex. China) or specific hardware (ex. 64 bit CPU). Conditions are somehow called Service Level Agreements (SLA) in other architectures but they are considered here rather as trading specifications than guarantees[10]. It is even possible to specify a given computer rather than relying on the automated marketplace logic of SlapOS Master.

By default, SlapOS Master acts as an automatic marketplace. Requests are processed by trying to find a Slave node which meets all conditions which were specified. SlapOS thus needs to know which resources are available at a given time, at which price and under which characteristics. Last, SlapOS Master also needs to know which software can be installed on which Slave node and under which conditions.

[10] A. Vulpe, S. Obreja, O. Fratu "Interoperability procedures between access technologies using IEEE 802.21" *2nd International Conference on Wireless Communication, Vehicular Technology, Information Theory and Aerospace & Electronics Systems Technology (Wireless VITAE)*, 2011, pp. 1-5.

SlapOS Slave nodes are relatively simple compared to the Master node. Every slave node needs to run software requested by the Master node. It is thus on the Slave nodes that software is installed. To save disk space, Slave nodes only install the software which they really need.

Each slave node is divided into a certain number of so-called computer partitions. One may view a computer partition as a lightweight secure container, based on Unix users and directories rather than on virtualization. A typical barebone PC can easily provide 100 computer partitions and can thus run 100 RTU web portals or 100 sensors monitoring sites, each of which with its own independent database. A larger server can contain 200 to 500 computer partitions.

SlapOS approach of computer partitions was designed to reduce costs drastically compared to approaches based on a disk images and virtualization. As presented in Fig. 3, it does not prevent from running virtualization software inside a computer partition, which makes SlapOS at the same time cost efficient and compatible with legacy software.

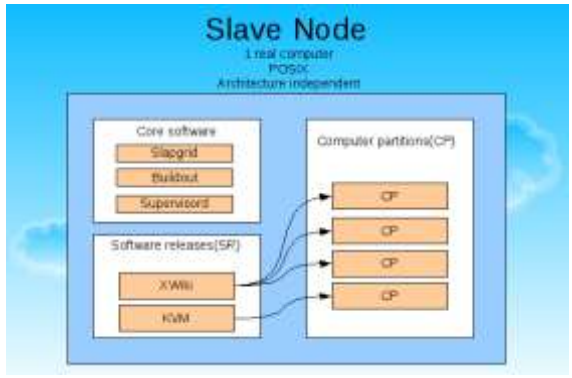

Fig. 3. SlapOS Slave Node

SlapOS Slave software consists of a POSIX operating system, SlapGRID, supervisord and buildout[11]. SlapOS is designed to run on any operating system which supports GNU's glibc and supervisord. Such operating systems include for example GNU/Linux, FreeBSD, MacOS/X, Solaris, AIX, etc

SlapOS relies on mature software: buildout and supervisord. Both software are controlled by SLAPGrid, the only original software of SlapOS. SLAPGrid acts as a glue between SlapOS Master node (ERP5) and both buildout and supervisord, as shown in Fig. 4. SLAPGrid requests to SlapOS Master Node which software should be installed and executed. SLAPGrid uses buildout to install software and supervisord to start and stop software processes. SLAPGrid also collects accounting data produced by each running software and sends it back to SlapOS Master.

Supervisord is a process control daemon. It can be used to programmatically start and stop processes with different users, handle their output, their log files, their errors, etc. It is a kind of much improved init.d which can be remotely controlled. Supervisord is lightweight and old enough to be really mature (ie. no memory leaks).

Buildout is a Python-based build system for creating, assembling and deploying applications from multiple parts, some of which may be non-Python-based. Buildout can be used to build C, C++, ruby, java, perl, etc. software on Linux, MacOS, Windows, etc. Buildout can either build applications

by downloading their source code from source repositories (subversion, git, mercurial, etc.) or by downloading binaries from package repositories (rpm, deb, eggs, gems, war, etc.). Buildout excels in particular at building applications in a way which is operating system agnostic and to automate application configuration process in a reproducible way.

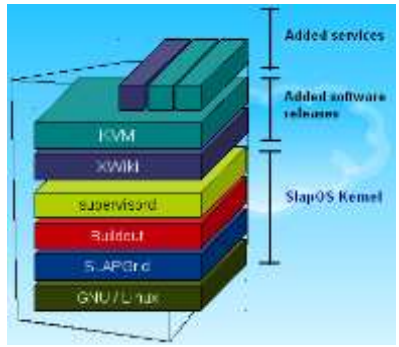

Fig. 4. SlapOS Kernel and User Software

Every computer partition consists of a dedicated IPv6 address, a dedicated local IPv4 address, a dedicated tap interface (slaptapN), a dedicated user (slapuserN) and a dedicated directory (/srv/slapgrid/slappartN). Optionally, a dedicated block device and routable IPv4 address can be defined.

CONCLUDING REMARKS

A Smart City deployment requires the integration of a distributed open sensor network and a decentralized cloud-based platform.

The current research explored the characteristics of a cloud platform for smart cities deployment with the focus on validating the platform's ability to deliver tailored IoT functionalities via the cloud middleware.

Furthermore, we will develop the proposed framework to include also applications for smart villages that will result in novel approaches for the monitoring of the agri-food supply chain and environmental monitoring in rural areas.
