METHODOLOGICAL PARTICULARITIES IN INVESTIGATING HOME LARCENY

NICOLETA-ELENA BUZATU*

Abstract
The study below is meant to focus on the methodological particularities regarding the investigations concerning home larcenies. In the Romanian penal law, the simple or the aggravated theft as well as the other infringements against patrimony are charged by the special part of the penal Code. The theft from dwellings takes the most unexpected and diverse forms: the only main preoccupation of the thieves is not to be seen or caught in the act. Consequently, the main aspects to be analyzed are: establishing the flagrant infringement, investigating the scene of the deed, hearing the injured person, hearing the witnesses, searching, identifying and catching the doers, as well as other activities of penal suing necessary in investigating any home larceny.

Key words: *investigation, infringement, theft, home larceny, Penal Code, Code of Penal Procedure*

Introduction

Infringements against patrimony are charged in Title III of the Special Part of the Romanian Penal Code. The new regulation regards the patrimony in its larger sense, without making any distinction between the public and private property.

In agreement with article 208 of the Penal Code[1], theft - in its simple form - is considered to be any movable goods seized from somebody's property without the consent of the respective person but simply taken into the unjustified possession of the thief. Any energy having an economic value is also considered to be movable goods, as for example documents. The deed is considered to be a theft even if the goods partially or totally belongs to the doer and, the moment the theft was committed, it was in the legal possession of another person.

The aggravated theft is considered to be committed in one of the circumstances provided by article 209 of the Penal Code, letter a)-i): the perpetration committed by a group of two or several persons; by a person holding a weapon or a narcotic; by a masked or disguised person; an attack against a person unable to react or to defend himself/ herself; when the deed happens at night, during a period of calamity, through house breaking, climbing or by an abusing use of a proper or of a false key.

Another aspect of the aggravated theft is also the one provided in paragraph, 2 letter c): a document meant to prove the legal status or the identification of a person.

In conformity with article 211 of the Penal Code robbery is considered to be that form of theft committed with violence or menace or by making the victim become unconscious or unable to defend himself/herself, as well as the theft followed by the above mentioned means as to enable the thief to either keep the stolen object or eliminate/ remove the traces of his/her infringement, or to facilitate the doer's escape.

The same article also provides other forms of burglary at letter a)-h) as: robbery committed by a group of two or more persons, by a person holding a weapon or a narcotic; by a masked or

[1] Law no 15 of June 21, 1968 - Romanian Penal Code - published in the Official Gazette no 79-79 bis of June 21, 1968, republished in the Official Gazette no 55-56 of April 23, 1973, and then in the Official Gazette no 65 of April 16, 1997, with further amendments.

disguised person; committed at night or during a calamity; committed within a house or in its annexes.

Incrimination practically protects the fact that a movable goods belongs to a certain patrimony.

According to the Explanatory Dictionary of the Romanian Language[2], *a dwelling* is defined as being the place, the house, the building where somebody lives or might be living; a domicile.

For a theft infraction may be recorded there shall be accomplished the following demands[3]:

- to purloin a goods from a building/house;
- the goods shall be movable, that is able to be transported or transferred from one place to another;
- the goods shall be in the possession of another person;
- the goods shall be seized without the consent of the person who owned it;
- the seizure shall have an immediate consequence;
- to exist a causality connection between the seizure and the immediate consequence.

THE MAIN ASPECTS THAT SHALL BE CLARIFIED BY INVESTIGATING A HOME LARCENY

The investigation of home larceny - as one of the forms of infringing upon the private property of the citizens - includes a series of peculiarities especially imposed by the fact that the delinquent can be an unknown person to both the injured and to the witnesses; yet, in most of the cases there is not even known the distinguishing characteristics of the one to be pursued[4].

When it is about an investigation of a home larceny, the task of the inquiry shall compulsorily settle and solve the following problems[5]:

- when and how the theft has been committed;
- what goods have been stolen and whom did they belong to;
- who was the person who committed the theft;
- where have the stolen things been deposited;

The preliminary stages in the inquiry taking place in the cases belonging to this category are the investigation at the scene of the deed and the hearing of the injured person.

Operation moods used in committing home larcenies

To know about the operation moods is of an efficacious interest in order to establish the ways of the delinquent's access, whether they were only one or more, to identify and raise the objects that helped them to commit the breaking in, to establish a group of suspects, to legally settle the deed, etc.[6]

The operating moods are varied, as follows:

- penetrating into the house after a deep and preliminary study, or in the basis of certain "sold hints";
- penetrating into a house under different pretexts or presenting false identification cards;
- penetrating into the house by breaking the windows, forcing the doors or the windows by the use of the physical force or of other breaking instruments; the use of original or false keys, master keys or of other improved instruments, the use of the "breaker" or of the "extractor" - according to the case;

[5] *Idem.*

[6] For more details, see Lazăr Cârjan; Mihai Chiper – *op. cit.,* 404.

- penetrating into the house by climbing down the top of it or by breaking the ceiling or the wall, etc.

The concrete identification of the movable goods. Depending on how this problem is settled the classification of the deed will be possible, as well as the estimation of the quality and quantity of the stolen goods as for the total estimation of the whole prejudice to be recovered. A concrete identification of the stolen goods can facilitate the pursuing activity of identifying and recovering them, as well as that of catching the delinquents.

Establishing the exact moment of the perpetration is important for the legal classification of the deed: simple or aggravated theft. It also is important for the forensic investigation of the case due to the traces to be discovered at the scene of the crime and which can lead to identifying the thief.

Identifying the means and methods used in committing the infringement is also important as it serves in the legal classification of the deed in one of the categories: simple theft, aggravated theft or robbery.

Identifying the doer and his/her participation in the larceny is also important in order to analyze the deeds and to establish the penal punishment amounted to any of the co-participants or accomplices depending on each one's contribution in perpetrating the breaking in, in concealing the goods and in favoring the doer.

Identifying the injured person. For identifying the possessor of the stolen goods and their being discovered in the possession of the offender, there are plenty of cases when the goods seized from the broken-in apartments are hidden, used by the offender or sold. It is thus necessary to identify the persons whose goods belonged to. In case of robbery, the identification of the injured person is done with difficulty as the victim might be unconscious or even dead and the goods and the identifying documents could have been stolen.

Establishing the conditions that favored the perpetration has a preventive character as to support and guide those legal persons who are to take security measures. In the case of home larceny there are not the least security measures and so, the timetable of the inhabitants can be easily found out, as well as who are the visitors or what kinds of goods are sheltered there.

FIRST MEASURES TO BE TAKEN IN THE CASE OF A HOME LACERNY

If an injured person informs the authorities in a written claim, by denunciation or ex office they shall start - as soon as possible - the following procedural acts: the findings of the flagrant infringement, the investigation of the crime scene, the hearing of the injured person, the hearing of the witnesses, searches, the identification and catching of the offenders as well as other activities connected with the penal pursuit, necessary for the investigation of the home larceny.

Establishing the flagrant infringement

In agreement with article 465 of the Penal Procedural Code[7], a flagrant infringement is the one discovered right in the moment of committing it or immediately after. It is also considered a flagrant infringement that infringement whose doer - immediately after committing the crime - is followed by the injured person, by the eye witnesses and by the public roaring or, that doer who is caught in the proximity of the crime scene with weapons or any other object that could have been used in the time of the breaking-in.

In such a situation it is very easy to solve the case. The author of the crime is immediately arrested and identified. The injured person and the eye witnesses can be immediately heard and they can thus help in catching the offender avoiding any possible future mutual influence. The author can be searched and interrogated about the deed. The crime scene will be also examined and the

[7] Law no 29 of November 12, 1968 - Penal Procedural Code, published in the Official Gazette no 145 of November 12, 1968, the Official Gazette no 146 of November 12, 1968, republished in the Official Gazette no 78 of April 30, 1997, with further amendments.

conclusions shall be mentioned in the report[8]. In the light of article 467 of the Code of Penal Procedure, the report is read to the defendant as well as to the previously heard persons, who are informed that they can complete the declarations or manifest their objections. The report is signed by the penal authority, by the defendant and by the witnesses.

Examination of the crime scene is made immediately after the information regarding the robbery was received, as it is an indispensable procedural act within the examination of such an infringement.

The *crime scene* shall be understood not only as the scene proper from where the goods have been seized, but also the access entrances, the itinerary followed by the doer when coming or leaving the criminal field, the place where the acts of violence or the threats against the injured person took place, as well as the place where the goods have been hidden[9].

By examining the crime scene there can appear many important data referring to the methods and means used in committing the theft, to the number of persons and to the operating time, to the way followed by the doers and to the stolen goods.

The offender's traces and the tools used in the breaking-in shall be discovered, fixed and raised. Thus, while examining the places where the penetration took place - doors, windows, walls, ceilings, roofs - in the place where the goods used to be or from where they were taken, there can be discovered footwear traces, sole traces, instruments used in burglary, lost or abandoned things belonging to the offender[10].

The traces left by the breaking-in tools appear then when various instruments, apparata or any other specially made up or adapted objects are used during a perpetration[11].

It is impossible to enumerate all the breaking-in tools because in practice they can take the form of nails, tongs, screw drivers, hammers, crowbars, levers, pick axes, drills, spanners, monkey wrenches, and other adapted and especially manufactured.

To force the locks special devices are used; among the most spread ones being the "pontoarcă" key, the breaker, the extractor, the "cypometer" and the bulldozer.

In the case of windows, they force them by disjointing the glass from the frame by the help of a thin and curved lever or, simply, by cutting and breaking the glass.

For breaking the walls, the floors and the ceilings they use pick axes, chisels, pick-hammers, various corrosive substances and even explosive materials.

According to the type of breaking, the traces left behind can be classified in: depth or surface traces, static or dynamic, and - as a matter of fact - visible traces.

The main methods of fixing the traces created by the breaking instruments are: the report made up at the crime scene, the photography, the judiciary film, the judiciary videograme and the moulding.

Data concerning various professional habits of the author of the crime can be vindicated, as well as data concerning his/her possibility of knowing the topography of the place or of that of hiding the seized objects.

The objects lost or abandoned by the doer can be materialized in fragments of objects or remaining of sawdust, glass splinters, etc. Many of the traces specific to breaking-ins are to be found in a micro-trace form and can be also discovered on the clothes or on the body of the offender. Attention shall also be granted to the biological traces: hairs, blood traces and saliva.

After the interpretation of the traces discovered in the crime scene, the penal authority will be able to draw the first conclusions about the operating mood - from the very moment of examining the crime scene - and make the first declarations referring to the nature of the deed and to its possible authors[12].

Special attention shall be granted to the negative occurrences which can result from certain theft simulations having the aim to dissimulate another infringement.

Hearing the injured person

Hearing the injured person has the aim to clarify the following aspects[13]:

- the characteristic features of the seized goods;
- the circumstances in which the theft has been committed or in which the victim has been menaced and hit by the aggressor;
- the description of the doer or, if a known person, his/her identification data;
- the sum of money with which he/ she is playing the plaintiff's part in the criminal trial;
- the wounds proved by medico-legal documents and the civil claims he/she has;
- the possibility of recognizing the doer or the goods that have been seized/stolen;
- the way the injured person spent his/her time before, at the moment of the theft and after.

In the case of hearing the victim of a robbery, the hearing shall be made immediately, especially if there might appear the danger of the victim's death. It shall also be taken into account the psychological excitement and confusion of the victim as she/ he might exaggerate or simply might not remember anything.

Hearing the witnesses

The source of the direct witness is the immediate original perception of the deeds and of the circumstances connected with the evolution of the illicit activity of the doer - that is, those information obtained by the witness by his/her own senses[14].

The main problems to be clarified when hearing the witnesses[15]:

- the distance from where the deed was seen or heard;
- the activities developed by the doers and by the victim;
- the description of the doers, their attire and, if known, their identification data;
- the wounds caused to the victim;
- the characteristic features of the objects stolen from the victim;
- the means of transport used by the offenders;
- the possibility of recognizing the doers if photos are shown;
- the connections existing between the doers and the victim.

The place of hearing - which is not definitely stipulated by the law - is, as matter of fact - the headquarters of the judicial authority, but it also take place at the office, at the crime scene, at the hospital, at the witness' home or residence.

The search

The search is a probative procedure consisting in the examination performed over the vestments of a person, her/his body, house and vehicle, with the aim to discover and raise objects or documents - known to the judicial authority - but not willingly delivered, and also to possibly discover certain proofs necessary for the solving of the penal cause[16].

[16] Ion Neagu; Mircea Damaschin; Bogdan Micu; Constantin Nedelcu, *Penal Procedural Law. Seminar Portfolio,* ed. II-nd (Bucharest: Universul Juridic Printing House, 2011), 128.

Searches are utterly useful and necessary, as they offer the possibility that the stolen goods might be discovered; they can also bring about other material proofs to be used as evidence in clarifying the case.

Once identified and caught, the doer shall be applied body search, home search, search at the working place or at the place he/ she has been caught; the search can also be applied to the persons who have hidden the goods.

As for discovering other proofs - except the instruments used by the author - there can also be found other bearing traces objects - especially on the vestments that can present material or biological traces belonging to the victim.

Identifying and catching the doers

For identifying and catching the doers, all the data obtained from the examination of the crime scene, from the hearing of the injured person, of the witnesses, from the technical and scientific conclusions, from the forensic reports or from other judicial reports performed in the case are used.

The operation mood will also be taken into account, as it can speak about the doers' real "marks"[17].

OTHER CRIMINAL PROSECUTION ACTIVITIES IN INVESTIGATING THE HOME LARCENY

In the case of a penal prosecution, among the most important procedural actions met with in the investigation of thefts and robberies are: hearing the accused or the defendant, producing the materials and the reconstitution for recognition, setting out the judicial reports.

Hearing the accused or the defendants

The persons engaged in illicit activities charged from the penal point of view are procedurally considered suspects/accused and later defendants, once the penal action has started[18].

The hearing of the accused or of the defendant will take into consideration his/her right to defence together with the application of adequate tactical methods.

The defendants shall be interrogated on regard to the way they had planned and prepared the infringement, to the methods they used in committing the deed, to the way they made use of the stolen values and goods and to the connection they had with the persons who helped them or who had supported them with information about the respective goods as well as to the possibilities of getting to the respective places[19].

A special attention shall be granted to the alibis. It has to be clearly proved the fact that the accused or the defendant was - at the respective date - at the place where the theft or the robbery has been reported.

Presentations for recognition and reconstitutions

The procedural activity of presentation for recognising persons or objects is made that the eye witness or the injured person be able to identify the doer or other participants in the crime, and to offer details about the values and goods that made the object of the theft.

The reconstitution is the probative procedure consisting in fully or partially reproducing the ways and circumstances the deed had been committed, with a view to check and underline certain information collected by the judicial authorities[20].

Its aim is to verify and prove the concrete conditions in which the crime had been committed. Reconstitutions can also involve the witnesses so as to enlarge the perception - in the given conditions - of certain episodes or of the whole deed; there are even cases when a dissimulated infringement is planned as to hide another real deed.

Judicial report ordinances

A very important role in establishing the truth is played by the technical and scientific conclusions as well by the forensic results; in case of a robbery it also important the medico-legal conclusion.

The technical and scientific conclusions are considered evidence to be used in the penal prosecution and they are based on the knowledge of a specialist or of a technician then when there might be the suspicion that some proofs disappeared and so, certain deeds or circumstances of the cause shall be urgently clarified[21].

The report is that form of evidence used in a penal prosecution then when the complexity of the cause imposes the presence of specialists representing different domains of activity[22].

The forensic report of the trace analysis is necessary for the identification of both the offenders and of the instruments they used in committing the crime, in the base of the traces found at the scene of the crime.

Conclusions

To assure the security of citizens and of their property, to guard over the peace and public order - these are the objectives that shall be of permanent interest for the public society and for the people as well, not only for the specialized institutions of the state. The citizens shall know and observe several elements of self-protection which, once mastered, become habits meant to prevent negligence, indifference, naivety and other aspects that enable the activity of the offenders.

In order to protect the homes from larceny, one shall take into account both the technical means and the preventive attitude of the individual: not to open the door and invite in the house unknown persons, to fix an alarm device, to buy - if possible - a metallic doors having several locks, to have interphones at the entrance of the block of apartments, to fix video cameras, etc. They shall not inform their neighbours, friends, acquaintances, relatives or mates about the working time schedule or about their vacation period, etc.

THE PLEA BARGAIN, A "NEGOCIATION" BETWEEN THE PROSECUTOR AND THE DEFENDANT?

NADIA CANTEMIR*

Abstract:
The new Code of Criminal Procedure brings a new institution among special procedures "the recognition agreement." Those who can conclude this agreement are the prosecutor and the defendant. Will it be a fair negotiation? It provides sufficient guarantees to avoid being violated the defendant's rights? With this study we want to introduce the new elements of this special procedure, comparative aspects with other institutions or rules of criminal procedure from other countries. Last but not least, with the necessary modesty, we will criticize and we will make a proposal for law regarding the chosen theme.

Keywords: *Plea bargain, new code of penal procedure, prosecutor, defendant, reduction of sentence boundaries with 1/3.*

Introduction

This study aims to open a door to a newly established institution in the Romanian criminal procedural law, namely the plea bargain, under the regulation of Chapter I of Title IV of the New Criminal Procedure Code, chapter dealing with special procedures.

This study is of particular importance as we attorneys, interns, theorists need to be familiar with innovative elements that are covered in the New Code. We find difficult this small scientific approach but hope to take a step forward to the "new".

The need for a new codification in the criminal procedure, presentation of the institution, to break through the buncombe in order to reach the legislator's judiciousness theologically interpreting the legal text, the aspects that are comparable to other countries and why not criticism and also feedback to this procedure are the goals that we want to achieve. Taking into consideration that the Law 135 of July the 1st 2010 on the Criminal Procedure Code, published in the Official Gazette no. 486 of July the 15th 2010, is for the ones who accede to knowledge and should have stir a strong effervescence, there is no relevant doctrine on this subject. Few but important works, together with the comparative law, the explanatory memorandum of the law the rules of criminal procedure that we will interpret are ways in which we will try to answer the set objectives.

I. The context of the new regulations. Definitions.

In the explanatory memorandum[1], the current legal realities have revealed the lack of prompt conduct of criminal trials in general, mistrusts of litigants in the act of justice and the substantial social and human costs, meaning a high use of time and financial resources. All these aspects have led to the establishment of a climate of distrust in the effectiveness of the criminal justice act. The main issues that the criminal justice current system are facing are related to the overcharging prosecution and courts, the excessive duration of the proceedings, the unjustified delay of the causes and failure to complete the cases due to procedural reasons.

Therefore a legitimate question arises: was the new codification necessary in terms of criminal procedure? A famous professor, member of the drafting of the new criminal procedure code committee answered this question[2], "No, it was not necessary. The abbreviations have though a big flaw, as it can sometimes distort the meaning of what was meant to be expressed. I actually wanted to

* Ph.D. candidate, "Nicolae Titulescu" University, (email: av.nadiacantemir@yahoo.com).
[1] *Statement of reasons,* www.just.ro.
[2] ''*Nicolae Volonciu despre noul Cod de procedura penală'',* www.juridice.

say that it was not only necessary, but I would say a wider need is required". The new criminal procedure texts are harmonized with Mike Farkas's aphorism, "*the key is the one which creates music",* meaning that the buncombe language of the legislator is reduced, giving priority on the podium to a more accessible speech.

Therefore behind the New Code's curtain occur elements of negotiated justice: mediation, plea bargain and trial if the guilt is admitted. The expression of negotiated justice or consensual justice, as it is used, may be at first sight a paradoxical, contradictory expression in the context of criminal law and criminal procedure [3].

Thus, by "negotiated justice", it is understood the procedure in which the parties are allowed to intervene in a smaller or larger extent, in a positive or negative way, within the criminal proceedings, affecting through their approach the outcome of these procedures. The possibility conferred to the defendant to refuse or to accept certain proposals, isolated seen, is not likely to confer a negotiated kind of procedures. The emphasis is on the ability of the parties to submit the discussed aspects of criminal proceedings, with the power that through mutual concessions, to at least partially influence the content of those proposals, leading ultimately to a decision that represents the outcome of negotiations[4].

We draw the conclusion that the procedure is marked by three aspects: simplicity, efficiency, celerity. The new institution not only reduces the trial, but also simplifies the activity within the criminal investigation. The advantage of this procedure is of economic nature favoring almost all parts of a process, but the state is the one that has the best benefit since it has the possibility to save monetary and human resources that are absolutely essential to the needs of justice. Without neglecting the rights of the aggrieved person, the defendant has the opportunity to negotiate the terms of the agreement with his lawyer and thus to participate to the court in in determining the penalty. Such participation promotes the individual's dignity.

The plea bargain is an innovative legislative solution which will ensure solving cases within an optimal and predictable time and is also a remedy for elimination of deficiencies in the Romanian legal system, namely the long term conduct of court proceedings.[5]

II. Special procedure analysis regulated by the legislator within the Title IV, Chapter I, art. 478- art.488.

1. Holder of the plea bargain and its limits.

Reading the provisions of Article 478 of the New Criminal Procedure Code we notice that the main actors who bring to life an act of a play in the trial (plea bargain institution) are the prosecutor and the defendant. Thus, during the criminal investigation, after the prosecution starts, the defendant along with the prosecutor may conclude a plea bargain agreement. However, in order for this agreement to be admissible, its effects are passed through the filter of a hierarchically superior prosecutor for approval. It thus provides a guarantee to the defendant since the agreement cannot be completed with a conviction solution according to this urgent procedure in the event that the hierarchically superior prosecutor would notify some irregularities. This control also implies the fact that the agreement's limits are set by prior and written approval.

According to paragraph 3 of the same article, the agreement may be initiated by both the defendant and the prosecutor. In theory, one of the negotiated justice's prerequisites, also of "contractual" nature, is equality between the parties. Considering this contractual nature, almost private of the agreement, equality of arms deals with a whole new dimension compared to the

[3] See, M. Nemeş, *Justiţia negociată în contextul dreptului penal din perspectiva Drepturilor Omului,* Revista Dreptul no. 7/2010, p.188.

[4] See, F. Tulkens, M. Van der Kerchove, *La justice penale,* Brussels, 1999, p.124.

[5] *Statement of reasons,* www.just.ro.

traditional procedure, given that the essence of an agreement is not only equality of arms, but also equality between the parties[6].

The principle of equality of arms enshrined in the European Court of Human Rights involving the obligation to enable each party for a reasonable opportunity to present its case on terms which do not place a net disadvantage compared to its opponent.[7]

In specialized literature[8], it is supported the idea that the analyzed procedure is applicable in case of crimes for which the law provides at least 5 years of imprisonment (the discrepancy will be discussed below), and those who commit such crimes often come from the poorest strata of society, and especially of ethnic minorities. The author argues that those who are better prepared and armed negotiate best, and a defendant belonging to such categories does not receive any benefit, thus such court is likely to become a privileged instrument of domination of the weak by the powerful, being likely to exacerbate inequalities between the parties.

We dare not embrace this point of view because it should be noted that under the new Penal Code the penalty limits were substantially modified in the sense that they were lowered for most of the crimes. By way of example, the crime of theft in simple form is penalized under the current penal code with a penalty of between one and twelve years and in the new penal code, according to the provisions of Article 228, is penalized by imprisonment from six months to three years or a fine. Therefore, a limit of seven years by reference to the provisions of the new Penal Code constitutes an imprisonment sentence for a medium to severe crime. What balances the procedure if we accept the idea of a weak "negotiator" is the defender, considering the fact that such a procedure the legal assistance is compulsory.

In case the criminal proceedings were started for several defendants, the legislature allows the conclusion of a separate agreement with every one of them, without prejudice to the presumption of innocence for those who have used this facility. Unfortunately, consider that this regulation will cause a series of problems in practice. For example, we will have as many agreements as defendants are, will be disjunctions regarding the civil side of the case, and the separately vested courts will be unable to resolve the civil side when the defendant's liability is solidary. An indictment will be formed with regard to defendants for whom the plea was not made. Therefore, in this situation we cannot talk about the economy and celerity, the only actions will be the multiple files, in various stages, cropped state of act.

According to paragraph 6 of Article 478 the juvenile defendants cannot conclude plea bargaining agreements. Also in the specialized literature[9] the opinion was stated that this procedure should also be applicable to minors, this procedure being easily done with the consent of the legal representative and in the presence of a probation officer. We appreciate that the legislature felt the need to regulate such a provision taking into account the new changes in the field of juvenile criminal liability regime of the new Penal Code. Thus, the social defense reaction against juvenile delinquency cannot be reasonably and effectively accomplished by the same type of crimes as in the adult crimes. Therefore to the juvenile offenders one should applied a separate system of criminal sanctions, made up mainly of predominantly educational sanctions and only alternatively of repressive sanctions such as penalties. The progress made in both criminology and in other criminal science such as penology have set new guidelines for the criminal sentencing system generally,

targeting the diversification of penalties, a strong focus on non-custodial penalties and the diversification of the means of penalties individualization and personalization. [10]

2.Subject, conditions, form and content of the plea agreement.

Pursuant to Article 479, the agreement's subject is the crime admitting and acceptance of the legal classification of the crime for which the prosecution was made and concerns the type and amount of penalties, as well as execution form. There seems to be a discrepancy between the way regulated by the legislature and the explanatory statement in the sense that the latter states that the agreement is subject to review by the court with regard to its object and conditions, and in case of plea the court will sentence the defendant to a penalty that shall not be greater than the one required by the prosecutor, by mutual agreement[11]. Reading Chapter I of Title IV we notice that there is no such regulation. We find that through this procedure the legislature gave the prosecutor, also the master of the following criminal investigation phase, more power, and in this manner could enter the judge's scope, setting the type, amount and form of penalty of the execution. In this respect, a notorious jurist argued that the prosecutor has become increasingly more forces, became increasingly powerful by unlimited and fast access to data and information, but this power was not balanced by increasing procedural safeguards, through the defense right and by strengthening the provisions on the innocence presumption. Unfortunately, the New Criminal Procedure Code further strengthens the power of the prosecutor.

Moreover, we notice that prejudice is brought to Article 6 of the European Convention for the Protection of Human Rights and Fundamental Freedoms, concerning the fact that the guilt of a person can be determined by an independent and impartial court of law. However, in this situation the master of the proceedings, in this case is not the judge as it is in a traditional court of law, but the prosecutor who does not comply with the objective impartiality requirements in the purposes of the Convention.[12]. We believe however that the judge's filter to which the agreement is presented, truthfully reflects on the principles governing the trial stage the contradictory and immediacy, is theoretically sufficient to compensate for any lack of impartiality of the prosecutor.

We consider that a state of law crowned by professionals serving altar of justice and bringing the contribution on both the prosecution and the defense side, may prove once again the mastery of the act of justice.

The first *sine qua non* condition concerns the special maximum penalty of imprisonment, namely seven years. Hence, no for any offense the defendant can "negotiate" his penalty, but with regard to offenses for which the law provides penalty of fine or imprisonment of up to seven years. This time we also find a discrepancy in the statement of reasons, in the meaning that the maximum limit is of five years. Given the above reasons regarding the penalty boundaries reduction in the new Penal Code, we consider that the majority of the crimes have a "vocation" through the defendant to be subject to this procedure.

This agreement may be concluded at an early stage of criminal investigations as it is necessary that out of the evidence showing the existence of sufficient data for which the criminal proceedings started regarding the defendant's guilt. The most important aspect to be mentioned is that the when concluding the plea bargaining agreement legal assistance is required. We meet therefore a new situation in which the defendant's legal assistance is mandatory, as provided in Article 90[13]. We

[11] *Statement of reasons,* www.just.ro.

[12] See, M. Nemeş, *Justiţia negociată în contextul dreptului penal din perspectiva Drepturilor Omului,* Revista Dreptul nr. 7/2010, p.194.

[13] *See article 90, new Code of Criminal Procedure, mandatory legal assistance of the suspect or defendant: a) when the suspect or defendant is a minor, admitted to a detention center or a center of education, it is detained or arrested in another case even when it was ordered to safety measure hospital care, even in another case, and in other cases provided by law, b) if the judicial body considers that the suspect or defendant could not defend himself; c)*

ask ourselves how the defendant could agree to this procedure taking into consideration the fact that we are in the midst of criminal prosecution phase, which is governed by the non-publicity principle, in this way not having access to criminal prosecution files. Also the new Code of Criminal Procedure, in Article 94 regulates the file consulting institution. Thus, during prosecution, the prosecutor sets the date and duration of consultation within a reasonable time. We consider that in order to give effective recognition of the institution, the defendant must be allowed to study the case together with a counsel and take a decision afterwards. To proceed in other ways would bring prejudice to Article 6, paragraph 3 of the Convention which stipulates the defendant's right to be informed, in detail, not only with regard to the cause of the accusation, namely the material facts of which he is accused and on which the accusation is founded, but also and with regard to nature of the prosecution, namely the legal classification of the case.[14] .

For the sincere attitude of the defendant, for the celerity of criminal prosecution phase conduct, it benefits from reducing by one third the limits prescribed by law for punishment penalty of imprisonment and one quarter reduction to the penalty limits provided by law in case of fine penalty. We notice that the defendant "takes benefit" of the same treatment as in the plea bargain case in the trial phase, according to Article 320 index 1 of the current Code of Criminal Procedure, similar institution.

The plea agreement must be concluded in writing and include the following elements: date and place where it is concluded, name surname and the capacity of those who conclude it, data regarding the defendant, description of the crime which is the subject of the agreement, the legal classification of the crime and the penalty provided by the law, the evidence and means of evidence, the explicit declaration of the defendant in which he recognizes having committed the crime and accepts the legal classification for which the criminal proceedings started, the prosecutor's demands, signatures of the prosecutor, the defendant and the lawyer.

3. Procedure in the law court: referral, adjudication, settlement.

Following the conclusion of the plea bargain, the prosecuting attorney approaches the Court to which belongs the authority to judge the respective case, and communicates all the material prosecution agreement hitherto investigated. The problem arises in a situation where we have more criminal acts of the same person and several defendants. |In this situation, the referral is made separately with regard to the defendants and other offences, but this time the prosecutor shall send the court of law the documents relating to criminal acts and those which were the subject of the agreement. We consider that in this situation, the idea of sending a truncated file trial to the court of law, out of which certain evidence cannot be taken in order to determine whether or not the defendant's guilt is mistaken. We consider that entire file must be sent to the court of law and not fragments of it, in order for the judge to give efficiency to the truth establishing principle and to take a judgment in relation to judicial truth.

With regard to the civil action performed in criminal proceedings, if the defendant, the civil party and civilly responsible party conclude a transaction or a mediation agreement, they are presented to the court of law by the prosecutor with the plea agreement. In our opinion, the transaction or mediation agreement should be integrant part of the plea agreement, meaning that the legislature may regulate the content of Article 482 regarding the agreement and aspects of civil action and way of termination at this stage of proceeding. We state this opinion because just the idea of plea with regard to a criminal offence, the defendant's regret and desire to compensate for the injury suffered by an individual are prerequisites in the conclusion of such an agreement. We do not share the idea [15] according to which the regulation that would have been more accurate if it was

---

during the trial in cases where the law provides for the offense penalty of life imprisonment or imprisonment of more than five years.

[14] See ECtHR., Judgement of 23rd March1999, in case *Pelissier & Sassi v.France, paragr. 51.*

[15] See, S. Siserman, *Proiectul noului Cod de procedură penală,* Revista de Drept Penal no. 3/2009, p. 41.

stated that the compensation for the injury is a prerequisite for acceptance of the agreement. Such a criminal procedure provision would have limited the defendant's possibility who could not afford, for objective reasons to settle the civil side, the title in concluding the plea agreement.

The procedure before the court of law is conducted as follows: if the agreement lacks one of the compulsory particulars referred to in Articles 481-483 of the form, content and notification of the court, the judge decides to cover the omissions within a time limit of 5 days. The decision of the court of law regarding the coverage of the agreement's irregularity notifies the head prosecution who issued the plea agreement.

The type of decision which given by the court of law is a judgment. The new aspect in the criminal procedures is that the court is acting by judgment, followed by un-contradictory proceedings, in open court, after hearing the prosecutor, the defendant and his lawyer as well as the civil party if present. Thus we talk about non-contradictory proceedings before the court of law. At first sight we could say that is an exception to the principle of contradiction, but we must not forget that we are in the first phase of trial, the prosecution, which is limited, among others, by the principle non-contradiction. Therefore, the legislature intended that the proceedings before the court of law to be a formal one, in which the judge shall be responsible only to entrench the defense and prosecution bargain or they can go through their own filter of the plea agreement? In our opinion, considering how the whole procedure is regulated, the judge appearance is a formal stage of this institution. Prejudice is brought to the truth establishing principle by this non-contradictory procedure, because if the defendant was under pressure in front of the prosecuting authorities and forced to recognize an act that was not committed, he cannot reconsider the agreement before the court of law. The possibility of different opinions before the court of law makes the procedure become inconsistent. The court must find the *ex propiis sensibus*, through the declaration that is made by the defendant and by analyzing all evidence that the plea agreement is an uncorrupted manifestation of the defendant and it is not about an occult "arrangement" between the prosecutor and the defendant, or between the participants to the criminal activity in order to hide more serious offenses or to hide the true perpetrator. The judicial compromise as a form of plea agreement cannot be conceived as a means for concealing the truth, but as a way to avoid prolonging the trial when the real culprit is largely identified through the already provided evidence.[16]

Analyzing the agreement, the court of law may issue one of the following solutions:

- accepts the plea agreement and sentences the defendant to a term of imprisonment or a fine whose limits were reduced with either a third or a quarter if they meet the conditions for substantive and formal regulated in Articles 480-482, on all the offenses incriminating the defendant who made subject of the agreement;

- rejects the plea agreement and sends file to the prosecutor for further prosecution, if the conditions for and formal regulated in Articles 480-482.

Also, the court may accept the agreement only with regard to some of the defendants, and also may reject its own motion agreement with regard to the defendant's arrest. In the same judgment the court of law also pronounces the legal costs.

We note that in this case the legal text runs counter with the explanatory memorandum [17] stating that the agreement is subject to review by the court of law regarding to its object and concluding conditions, and where admission sentencing court shall order the defendant to a term not may be greater than that requested by the prosecutor in agreement. It is deficient the regulation regarding the plea agreement and the imposition of a sentence whose limits were reduced, meaning that we do not know whether the court can "validate" understanding, but to act on the penalty proposed by the prosecution and the defense. For example, suppose that the defendant committed the

[16] See, G. Antoniu, *Observaţii la proiectul Noului cod de procedură penală (IV),* Revista de Drept Penal no. 3/2009, p. 12.

[17] *Statement of reasons,* www.just.ro.

offense of cheating punishable with imprisonment from 6 months to 3 years, according to new Criminal Code. The prosecutor is the one proposing a plea bargain, decides for a penalty of 1 year imprisonment with execution, taking into account that the offense penalty limits are reduced by one third. Afterwards the court of law is seized with this agreement, and the judge, according to regulation, accepts or rejects the agreement. If the court of law considers that the conditions are being fulfilled, but the punishment of 1 year imprisonment is too high and requires a smaller sentence, or chooses as means of implementation the suspension by supervision applies or rejects such penalty? Analyzing the code provisions it should be rejected. In our opinion, such an interpretation would be absurd, and the text should be amended so that the court of law could either fully accept and validate the agreement was concluded, or be partially accepted, being able to modify it only in favor of the defendant, or modify it if the conditions are not being met. We consider that this is a fair solution, because the judge is in top judicial bodies, watches and also contributes to the judicial truth, being the arbiter between the defense and the prosecution, due to its impartiality and its tenure. According to Article 2 Law 304/2004, justice is carried out in the name of law, is unique, impartial and equal for all, being accomplished through the courts of law.

On resolving the civil side in this special procedure, we find that through the court makes the sentence if a mediation or transaction agreement is concluded, or may decide the split of the civil action and send them to the competent court according to civil law, where its resolution would hold trial solution. We also notice that the presence of civil party does not make reference to the plea agreement in court but it can be heard, if present. Thus we can draw the conclusion that its presence is compulsory in court. The new aspect consists in that the criminal court can disjoin the civil action but which is competent to solve it but it is no longer a civil court, but a criminal one.

The judgment shall include in addition to the mandatory particulars listed for all decisions also the offence for which the plea agreement was concluded and its legal classification. We consider that the legislature would have to establish that the judgment should be also comprised of references concerning the conclusion of a mediation agreement or a transaction relating to a civil action.

To proceed against an accepted or rejected judgment of a plea agreement is by means of appeal. Thus, the decision may be appealed within 10 days from the notification. According to Article 407 of the new Code of Criminal Procedure, after delivery, a copy of the minutes of the decision shall be forwarded to the prosecutor, the parties, the injured party, and if the defendant is arrested in the administration of the detention, for exercising the appeal. After drafting the judgment, they shall communicate the decision as a whole.

III. The institution of plea agreement in light of other legal systems

In the explanatory memorandum it is stated that several European countries (Germany, France, Belgium, Greece) have adopted in their legislation procedures are similar to the plea agreement. The project took elements from the French and German criminal justice systems and adapted them to the Romanian judiciary system.

The most representative system in which the "negotiated justice" is applied can be found in United States of America law, doctrinaires preferring this procedure with a contract.[18] The origin of the institution is found throughout the American people, where in the early twentieth century, for pragmatic reasons, in order to facilitate the work of the courts of law, "the plea bargaining" was born. Formally recognized in 1960, this institution appeared in the common-law system and was also taken in the Roman-Germanic legal system. If the principles are the same everywhere - an agreement between the parties that is presented for consideration by a judge – the application techniques vary from one system to another.

[18] See, R. E. Scott, W. J. Stunz, *Plea barganing as a contract,* 1992, p. 101.

In the American system, the subject of negotiation may be a penalty, the *sentence bargaining,* in this case being a vertical agreement that requires the judge, the *change barganing*, in this case being a horizontal agreement between the accused person and the prosecutor, the latter being able to either drop the charges or amend charges.[19]. In the U.S., approximately 90% of convictions are based on this type of recognition. Regarding the offenses which may fall under negotiation, it is admitted that anything can be subject to that institution. There are still states that refuse to grant defendant's right to plead guilty if they had committed a serious crime for which imprisonment is applicable in perpetuity, or for sensitive crimes (use of firearms, driving under the influence of alcohol or drugs products), federal crimes (treason, espionage). The demand or supply can be expressed on the eve or the morning of the hearing, or immediately before delivery of the verdict by the jury.[20] The judge has the task of checking whether the plea was immediate, if the defendant understands all the implications it has this manifestation of will, and that he did not act under the influence of threat, force or promises.

In Japan, the negotiation is applied to 70% of cases. Given that this guilt is established in the criminal prosecution made by the prosecutor, the judge's role being much diminished, defendants often prefer to follow the path of negotiation.

This procedure had a strong echo in the European criminal law, which emerged within the Recommendation R (87) 18 of 17 September 1987 of the Council of Ministers of the Council of Europe concerning the simplification of criminal justice.

In Germany, the principle, inquisitorial, which requires the authorities of truth finding, seems at first sight incompatible with the idea of negotiated justice. However, the special procedure of plea agreement recently underwent an upward trend to accelerate procedures. The *informal arrangements, informelle Absprachen,* are established between the accused lawyer, prosecutor and judge, and in exchange for recognition of facts from the defendant, the judge is obliged to reduce the sentence, exempt from the duty to also establish the offenses based on the evidence and to ascertain the legality and credibility of the evidence means.[21]

In the United Kingdom, although there is no explicit legal regulation of the practice, the procedure follows the American model with two types *charge bargaining* and *sentence bargaining.*

In Italy, there are two special procedures based on legal recognition of understanding the effects that occur between the accused and the prosecutor. Therefore,[22] for the first procedure, if the person is accused of committing a crime for which the law provides an imprisonment sentence of less than two years, or this, the prosecutor can ask the judge to impose a penalty on which they mutually agreed. The second procedure *giudizio abreviato,* if the first procedure, if the person is accused of committing a crime for which the law prescribes a prison sentence of less than two years, whether or prosecutor can ask the judge to impose a punishment on which they agreed. Decision may be one of acquittal or of conviction, but the penalty is reduced by one third, without that last sentence to the convicted criminal record.

In the French law it is provided a special procedure consisting in the possibility of negotiations but only on minor offenses, *comparetion immediate*, of maximum 5 years or a fine. The offender is given a 10 days reprieve to accept or reject this offer. The judge has the right to modify the agreement, having only opportunity to approve it or not.

IV. Conclusion

"The negotiated justice", is without doubt an alternative to the conflict resolution in the context of too many courts of law. The special procedure of plea bargaining is perfectible but praised the legislature's intention to line up our laws to the European countries.

The U.S. Supreme Court recognizes the "negotiation" as an "essential component of justice which, if well managed, should be encouraged." On the contrary, if the provisions of criminal procedure violated the defendant's rights and the purpose of this procedure can be played by a Russian proverb "the pure way, sincere recognition, directly to jail."[23]

Through this special procedure will be solved the major problems the criminal justice system is facing namely the overloading of the prosecution and courts, the excessive length of certain proceedings, the unjustified delay of the causes and completion of the files on procedural grounds.

Every beginning starts with a handicap because the unknown is hard to decode. I look forward to bubbling in specialized legal literature on the institution of plea bargaining for students, practitioners and the curious who to understand both the letter and spirit of the law.[24]

As philosophers held that the touchstone of truth is practice[25], our wish is that the new Code of Criminal Procedure to take effect and that this new institution to overcome difficulties beginning and gradually open the way to European values leaving excessive nature of the inquisitorial exacerbated system of the communist period.

THEORETICAL AND PRACTICAL ASPECTS REGARDING THE NULLITIES IN THE ROMANIAN CRIMINAL TRIAL

MIRCEA DAMASCHIN[*]

Abstract
In the present study we are going to analyse the regime of the nullities in the Romanian criminal trial. This presentation will take into consideration the Criminal Procedure Code in force (adopted in 1968), the doctrine and the practice of the courts. Also, we took into consideration the new provisions of the Criminal Procedure Code which is going to enter into force in 2014. This study is focused on analysing the distinctive regime of the absolute and relative nullities and illustrating the situation in which absolute nullities do not lead ope legis to the annulment of the acts set up without respecting the requirements. In this way, we are going to analyse the situation in which in spite of absolute nullities existence, this sanction can be disregarded and the criminal trial will follow its course.

Keywords*: criminal procedural sanctions, criminal trial, absolute nullities, relative nullities, initiation of proceedings before the court*

1. Introduction. In the Romanian criminal trial, the most frequent situations which imply procedural errors are met in relation to the sanctioning of nullity, in both its forms, i.e. relative nullity, respectively, absolute nullity. It is true that there are numerous legal hypotheses which imply the sanctioning of delay or inadmissibility and which imply that, however, nullities represent the most frequent cases of sanctioning illegal pursuance of processual or procedural acts. Thus, in criminal trials, not only nullities, but also forfeiture of rights is *expressis verbis* regulated (forfeiture of rights sanctions delayed exercise of certain rights), as well as the sanction of inadmissibility (which takes into consideration the hypotheses that certain processual rights are exercised by persons who do not have a processual quality or the situation in which certain acts of disposal are appealed although there is not legal framework for exercising those means of appeal).

Nullity, as a procedural sanctioning, in its two regulatory forms, is provided by Article 197 of the *Criminal Procedure Code* (hereinafter referred to as *C. pr. c.*). The two categories of nullities are defined differently; thus, the criminal processual law points out a set of particularities that will be detailed in our study. In this section we only make reference to the fact that absolute nullities pose a nullifying character and are explicitly provided by the law, whereas relative nullities are not explicitly set forth and, in many circumstances, may be covered, which means that they actually produce no legal effects.

In the present research we intend to prove that even if absolute nullities cannot be covered, considering the presumption of damaging certain processual interests, in practice, in several hipotheses, the existence of absolute nullities does not lead to the annulment of the acts that were accomplished in this manner, while these acts continue to produce legal effects. In most cases, as we are going to see in our analysis, the possibility of "ignoring" the sanctioning of absolute nullity is legally grounded. Similarly, we are going to point out the existence of hypotheses that may convert absolute nullities into relative nullities (as regards the produced effects), cases in which processual damage, even if presumed, is effectless, while the trial continues; we are also going to point out hypotheses that may lead to the convertion of relative nullities into absolute nullities (as well as the consequences that derive from this convertion).

[*] Associate Professor, PhD, Faculty of Law, "Nicolae Titulescu" University, Bucharest (e-mail: damaschin.mircea@gmail.com).

2. Nullities: concept and classification. Particular aspects of absolute and relative nullities. According to Romanian specialty literature[1], nullities are the most important procedural sanctions and they may occur during the criminal trial (and even after the trial is over, through an extraordinary means of appeal) any time a processual or procedural act is pursued without strictly observing the law.

The sanctioning of nullities affect procedural or processual acts that were pursued without observing the law. According to specialty literature[2], the existence of nullities as procedural sanctions in Romanian criminal processual law is closely linked to an act of processual damage, which must have been produced by pursuing a particular act under illegal conditions. In this respect, Article 197 § (1) of the *C. pr. c*. stipulates that the infringements of legal provisions that regulate the pursusance of the trial produce the nullity of the act only when they result in damage which cannot be removed unless that act is cancelled.

Under these conditions, one can infer that not any infringement of the criminal processual law can lead to the annulment of the act that was pursued in an improper manner.

As we have mentioned above, nullities can be classified, in relation to the effects that they may generate, into absolute and relative nullities.

Absolute nullities occur in those cases that are explicitly provided by criminal processual law, i.e. by Article 197 § (2) of the *C. pr. c*. (from this perspective, they are also known as *express nullities*) and can be invoked at any time during the trial and by anyone. Absolute nullities can also be invoked ex officio.

Relative nullities are incidental, and they occur whenever a legal provision – apart from the ones stipulated by Article 197 § (2) of the *C. pr. c*. – is infringed, for they are not explicitly set forth by criminal law (under these circumstaces, they are considered *virtual nullities*).

Those presented above reveal a first particular difference between absolute and relative nullities. Thus, if absolute nullities are explicitly regulated – through a limitative enumeration – by Article 197 § (2) of the *C. pr. c*., relative nullities reflect any infringements of the criminal processual law apart from those mentioned in Article 197 § (2) of the *C. pr. c*.[3]

Thus, absolute nullity sanctioning is applied for: the infringement of norms regarding subject matter competence or the competence of the person, as well as the infringement of norms regarding the notification of the court of law and the composition thereof, the public character of the trial, the prosecutor's participation, the presence of the accused or of the culprit, the assistance offered to the accused / culprit by the defense counsel, whenever these are compulsory according to the law, and, finally the infringement of the norms regarding the drawing up of the assessment report in juvenile cases. Apart from these provisions, the regime of relative nullities lacks an explicit regulation in Article 197 § (1) *C. pr. c*., according to which the infringements of legal provisions regarding the pursuance of the trial (provisions that are different from the ones stipulated by § 2) generate the nullity of the act only when the produced damage cannot be removed except for annulling that act.

We would also like to underline that the Romanian lawmaker does not use, in Article 197 § (2), the expression "absolute nullity"; however, both specialty literature and judicial criminal bodies unanimously state that the norms which regulate the institutions provided by Article 197 § (2) fall under the category of absolute nullity.

Secondly, the regime set up for the damage caused through the infringements of legal provisions is a distinctive element as regards the two forms of nullity. Thus, absolute nullity leads to the identification *de plano* of the processual damage, which is presumed *juris et de jure.* Thus, the

---

[2] I. Neagu, *op. cit.*, p. 669.

[3] Gr. Theodoru, *Tratat de drept procesual penal*, Editura Hamangiu, Bucureşti, 2007, pp. 498-499.

one who invokes nullity does not have to prove the existence of the damage, while proving the infringement of the legal norm which falls under absolute nullity sanctioning regime is sufficient. If damage is presumed for absolute nullity and its existence is beyond doubt, damage must be proved for relative nullity. Thus, for the infringement of other legal provisions than the ones set forth by Article 197 § (2) to lead to relative nullity sanctioning it is necessary to adopt a supplementary measure whose role is to prove the existence of processual damage, which was caused either through the aggrievance of the parties' rights during the trial or through the wrongful pursuance of the trial.

Thirdly, the difference between the two categories of nullities is also due to the regime of the criminal processual law infringement. Thus, relative nullities are considered only if they were invoked by the person whose processual rights were aggrieved. The person who invokes nullity must prove the damage caused through the infringement of the law during the pursuance of the processual or procedural act. As regards absolute nullities, they can be invoked by any party in the trial and are taken in consideration even ex officio.

Last but not least, absolute and relative nullities are differently regulated as regards the moment when they can be invoked during the trial. Thus, relative nullities can be invoked only while the act is pursued, when the party is present or at the first trial date with full procedure. One can identify, consequently, a temporal confinement of the right to invoke the infringement of criminal processual norms, while it is presumed that by effectively getting over these processual moments the damage that could have been retained was covered by the silence of the party interested in invoking it.

On the contrary, absolute nullities can be invoked at any time during the trial and cannot be removed in any way.

3. Processual hypotheses in which procedural flaws provided under absolute nullity do not determine the occurrence of the sanction. In the next lines we are going to make reference to situations in which, according to the criminal processual law provisions, identification of absolute nullities does not determine the removal of the acts which were pursued improperly, while the trial continues and is not affected by absolute nullity.

3.1. Infringement of norms related to subject matter competence and the quality of the person. Defined as the fundamental form of competence whereby trials are distributed between criminal judicial bodies of different degrees, subject matter competence falls under absolute nullity, as a consequence of the fact that it must ensure a legal administration of the act of justice as regards the nature and seriousness of crimes.

As regards the competence in relation to the quality of the person, this is defined as the legal criterion according to which certain judicial bodies settle certain criminal causes depending on the qualities that the wrong-doers have[4].

The regime set up by Article 197 § (2) of the *C. pr. c*. as regards subject matter competence, respectively competence in relation to the quality of the person, is also provided by Article 39 § (1) of the *C. pr. c*., according to which the exception of material non-competence and the non-competence related to the quality of the person may be invoked in the whole course of the trial until the judgement is delivered.

The provisions that set forth subject matter competence are both the norms that regulate the jurisdiction of courts of law and the norms that regulate the competence of criminal investigation bodies. In consequence, when it is found that the criminal investigation and the judgement of the case infringed the norms related to subject matter competence, the acts pursued by the investigation body which lacked competence in the matter are subject to annulment.

[4] I. Neagu, *op. cit.*, p. 360.

However, even if processual damage is presumed *juris et de jure*, the Romanian lawmaker, in order to confer trials a more dynamic nature, has included in the criminal processual law provisions that are meant to render effectless the infringement of legal provisions related to subject matter competence. Thus, first of all, in conformity with Article 42 § (2) of the *C. pr. c*., if declining was due to subject matter competence or to the quality of the person, the court of law that is trying the cause may use the accomplished acts and maintain the measures imposed by the dismissed court. In other words, the acts pursued by the court of law that did not have subject matter competence will be maintained for the cause insofar as the competent court of law decides so even if absolute nullity occurs. The provision stipulates that criminal investigation bodies must apply these acts, as well, according to Article 45 § (1) of the *C. pr. c*. related to Article 42 § (2) of the *C. pr. c*.

In this respect, one can also analyse the provisions of Article 268 of the *C. pr. c*., which sets forth the procedure that is applied in case the file is sent by the prosecutor to the competent criminal investigation body if it is found that the criminal investigation was pursued by a non-competent body. Thus, in such cases, the measures that were taken remain valid, as well as the processual acts or measures that were confirmed or approved by the prosecutor; the same is true for processual acts which cannot be pursued again. In comparison with Article 42 § (2) of the *C. pr. c*., the context described by Article 268 *C. pr. c*. only maintains acts or measures that comprise the prosecutor's decision, respectively those measures and acts that cannot be pursued again. We also took into consideration the assurance measures that can be enforced only by the prosecutor during the criminal investigation stage.

The provisions of Article 332 § (1) *C. pr. C*. also set forth the legal hypotheses in which the occurrence of absolute nullity does not lead to the annulment of pursued acts or enforced measures. Thus, this legal text stipulates the possibility of dismissing the file of the cause by the court to the prosecutor insofar as it is found that in that cause the criminal investigation was pursued by another body and not by the one which had competence and on condition that judicial investigation is not completed. *Per a contrario,* if during oral debates it is found that the criminal investigation was pursued by infringing the norms regarding subject matter competence or the quality of the person, the sanction of absolute nullity cannot intervene. In this case, absolute nullity is covered through the complete pursuance of the judicial investigation.

We can notice, by analysing Article 332 § (2) of the *C. pr. c*., the inconsistency of legislation which makes it possible for a file to be dismissed and for the criminal investigation to be pursued again if subject matter competence or competence related to the quality of the person are not observed, even if the two cases of absolute nullity are regulate in § (1) of Article 332 *C. pr. c*. as well.

3.2. Infringement of norms related to the notification of the court of law. This instance of absolute nullity refers to the infringement of legal provisions that regulate the notification of the court of law [accomplished through indictment or the aggrieved person's complaint or through the complaint of any other person whose interests were aggrieved as provided by Article 278^1 § (9) of the *C. pr. c*.] or the supplementary notification of the court (which is accomplished by extending criminal action to new material acts).

According to specialty literature the following provisions on subsequent notification[5] are considered relevant for the hypothesis of „court notification": action for annulment [Article 379 § 2 letter c)]; declining of jurisdiction (Article 42); judgement for settling the jurisdiction conflict [Article 43 § (9)]; change of venue [Article 55 § (1)].

Subsequent to confirming the infringment of norms related to subject matter competence or to the quality of the person, there are regulated exceptions for court notification, according to which

[5] N. Giurgiu, *Cauzele de nulitate în procesul penal,* Editura Ştiinţifică, Bucureşti, 1974, pp. 242-245.

absolute nullity does not have an incidental nature even if norms regulating notification were infringed.

Thus, according to Article 300 of the *C. pr. c*., if the court finds that the notification was not legally conceived and that this inconsistency cannot be removed at once, neither by establishing a deadline for this purpose, the file is resent to the prosecutor for the latter to draw up again the notification act. In other words, absolute nullity does not intervene *ope legis*, since it is necessary for more chronological stages to be pursued: 1) identifying the improper nature of the notification act; 2) finding that it is impossible to remove the identified inconsistency at once (at the moment when the consistency of the notification act was discussed); 3) identifying the impossibility to remove the inconsistency by establishing a trial date. Absolute nullity is enforceable only if it is found that the procedure flaw cannot be removed unless the file is submitted again.

In this respect, in the Supreme Court jurisprudence we identify the same manner of settling appellate review in the interest of the law. Thus, it has been held, when enforcing provisions of Art. 264 § (3) of the *C. pr. c*., that the indictment must contain the reference „verified as regards legality and grounds". The lack of this reference makes the notification act inconsistent with the law, under Article 300 § (2) of the *C.pr.c*.; thus, the notification may be removed, as the case may be, immediately or at an established term. Consequently, in such a situation, the court will enforce the procedure set up by Article 300 § (2) of the *C. pr. c*.; absolute nullity can be invoked only insofar as the procedural flaw cannot be removed[6].

3.3. Infringement of norms regarding the drawing up of the assessment report for juvenile causes. The obligation to draw up an assessment report is one of the special dispositions which are enforced for the investigation and judgment of juveniles.

Prior to the modifications brought by Law no. 356/2006, the drawing up of the assessment report was compulsory both for the criminal investigation stage and for the trial stage. Thus, in the light of the provisions that had been set forth before 2006, the criminal investigation of juvenile crimes could not lead to a trial without the juvenile assessment report. The presumption according to which the lawmaker imposed the obligation to draw up the assessment report required that it was compulsory for the juvenile to undergo this assessment before being summoned. In other words, the prosecutor's decision to serve a writ of summons had also to be grounded on the results of this assessment process. If the criminal investigation file is submitted to the court in the absence of the assessment report, the court of law will have to deal with this omission and the judge has the obligation to impose the drawing up of the assessment report.

In conformity with Article 12 of the Ordinance no. 92/2000[7], the assessment report contains data about the accused or the culprit, his / her level of training, behaviour, factors that influence / might influence his / her behaviour, as well as his / her chances to be socially reintegrated. When the report is drawn up, the probation service may collaborate with psychologists, educators, sociologists, physicians or other specialists according to the recommendation of competent authorities.

The authority which has competence to assess the juvenile, i.e. probation services, is considered to lack the functional capacity to provide these reports to the criminal investigation bodies; according to Law no. 356/2006, the assessment report is compulsory during the trial, because it provides the court of law an instrument which individualizes the punishment. Consequently, the

---

[6] The High Court of Cassation and Justice, United Sections, Decision no. 9/2008, published in the Official Gazette of Romania, no. 831/2008.

[7] See Ordinance no. 92/2000 on the organization and functioning of social services for the reintegration of criminals and the surveillance of non-custodial punishments (Official Gazette of Romania no. 423/2000). This normative act was altered by Law no. 123/2006 on the statute of probation service personnel (Official Gazette of Romania no. 407 / 10th May 2006), in the sense that this institution was to have a different name (probation service instead of service for protection of victims and social reintegration of criminals, probation directorate instead of directorate for the protection of victims and social reintegration of criminals).

drawing up of the report for the assessment of the juvenile criminal has become facultative during the criminal investigation stage and its use depends on the prosecutor.

Subsequent to these modifications, one can notice that the violation of norms related to the drawing up of the assessment report for causes that imply juvenile offenders brings about the sanction of absolute nullity only insofar as the assessment report is absent during the trial. In consequence, according to the legal provisions (Article 482 of the *C. pr. c*.), criminal investigation for juveniles may be pursued in the absence of this assessment, and the sanctioning does not apply.

4. Hypotheses in which relative nullities are transformed into absolute nullities. According to the regime of relative nullities the sanction can be invoked whenever any legal provisions apart from those laid down by Article 197 § (2) *C. pr. c*. were infringed on condition that the produced damage cannot be removed outside the annulment of that act. Nullity can be invoked, as we have pointed out, only if it was invoked during the pursuance of the act, when the party is present or at the first trial date with complete procedure if the party was absent during the pursuance of the act.

However, the last part of Article 197 § (4) of the *C. pr. c*. stipulates that the court of law considers ex officio the infringements that occur at any time during the trial if the annulment of the act is necessary for finding out the truth and for fairly settling the cause.

According to this norm relative nullity can lead to invoking the application of absolute nullity. Thus, even if procedural flaws are not provided in the explicitly limited framework of Article 197 § (2) of the *C. pr. c*., absolute nullity of the act or of the measure can be invoked provided that *it is found that the annulment act is necessary for finding the truth and the fair settlement of the cause.*

In this respect, for example, procedural flaws – which are identified when the criminal investigation material is presented – fall under the sanction of relative nullity since this type of infringement is not provided by Art. 197 § (2) of the *C. pr. c*. However, insofar as the criminal investigation material is not presented to the culprit and this procedural flaw is corroborated with the extension of criminal investigation for a new crime and the culprit is not informed about it, one can invoke the aggrievance of the right to defence during the criminal investigation. In this situation, we appreciate that it is possible for the absolute nullity to be invoked.

5. Conclusions. In the present study we have attempted to prove that relative and absolute nullities may overlap as a consequence of the fact that the legal regime set up by the provisions of the Criminal Procedure Code is different for the two categories of sanctions that imply numerous particularities.

Thus, from a legal point of view it is possible – under certain conditions – for absolute nullity to be converted into relative nullity and, in other cases, for relative nullity to be converted into absolute nullity. By making reference to criminal processual norms and jurisprudence, we have proven that absolute nullity does not necessarily lead, even when identified, to the disposal of the performed acts or of the illegally adopted measures. From the same point of view, i.e. the perspective that points out the way in which relative nullity may be invoked under the regime of an absolute nullity, one can notice that there are situations (indefinite situations that are ruled by the need to settle the cause in a fair way and to find out the truth) in which procedural flaws that fall into the category of relative nullity lead to the disposal of processual acts or measures.

CONSIDERATIONS ON THE EFFICIENCY OF THE ROMANIAN NEW CRIMINAL CODE IN COMBATTING CYBERCRIME

MAXIM DOBRINOIU*

Abstract
The New Criminal Code addresses in an adequate way the challenges of the cyberspace, being a useful tool in the hands of law enforcement agencies involved in combating a large spectrum of communications and cyber-related offences. From a broad perspective, one could state that the changes made to the previous legislation are pertinent considering the real need of indictment outlined by the analysis of the judicial practice, while the new issues essentially contribute to the creation of a modern legal framework, capable of safeguarding the social values which will come up in the near future from the interaction of people with a booming information technology.

Keywords*: crime, computer system, computer data, illegal access, intercepting, computer-related forgery, computer-related fraud, child pornography, harassment, electronic vote, electronic payment instrument*

In what regards the crimes committed with the help or against computer and telecommunications systems, computer data or electronic payment instruments, the Romanian New Criminal Code preserves, in a considerable percentage and with certain „corrections", the provisions of the previous special legal acts (such as the 3rd Title – preventing and combatting cybercrime – from the Law no. 161/2003 – which, at the time, almost literally transposed the 2001 Budapest Council of Europe Convention on Cybercrime into Romanian national legislation, or the Law no. 365/2002 on electronic commerce), but also brought forward new elements, trying to provide legal solutions to certain facts or situations happened in real life (the local judicial practice).

Generally, the New Criminal Code groups in a natural way the computer-related crimes based on the traditional social values, which still need to be protected by criminal provisions, introduces new concepts (e.g. „theft with the purpose of use", „harassment", „fraud to electronic vote" etc.), reformulates relevant articles from the respective special laws, and modifies, in a way of decreasing, the quantum of the imprisonment time. On the other hand, the Romanian legislator inexplicable disposed of the definition of certain terms and expressions, although uses them in the legal texts and, moreover, and don't yet succeed to fully cover the situations, scenarios or cases which quite often occur in cyberspace.

Relevant aspects from the General Part of the Criminal Code

One could remark the definition of the *electronic payment instrument* (Article 180), with the legal text not modified from the previous one - from the Law no.365/2002 on the electronic commerce or from the Romanian National Bank Regulation no. 6 of 2006.

Also, by Article 181 one could find explained the concepts of *computer system* and *computer data*, while the texts are pretty much similar with those provided by the prior Article 35 of the 3rd Title of Law no. 161/2003. Compared to the above mentioned special law, the are no longer available the definitions of *automatic data processing* and *computer program*, elements which could have contributed to a better understanding of the computer systems functioning in the respective criminal context.

Surprisingly, there is missing a very important definition (currently existing within Law no. 161/2003), namely the phrase *without right* (or *illegal*). Most probably, this time the legislator's opinion was that the definition would be no longer needed, but, without providing instead any other explanation regarding the *illegitimate* conditions of the interaction between users/individuals and

* Lecturer, PhD in Cybercrime, Faculty of Law, "Nicolae Titulescu" University (email: office@e-crime.ro).

various elements of the virtual environment, there will be somehow difficult for prosecuting authorities to bring correct legal charges (indictments) and to request sentences in strict accordance with the real social threat.

In this context, the actors fighting cybercrime should use (and even understand) the concept of „illegal" at least in the light of the European legislators, as contained in the Explanatory Report of the CoE[1] Convention on Cybercrime, as any behaviour/act/action undertaken with no authority or without permission, irrespective if that permission is granted in a legal, executive, administrative, judicial, contractual or consensual form, and any behaviour/act/action which does not represent, according to the Code, a cause which eliminates its criminal nature.

Relevant aspects from the Special Part of the Criminal Code

By Article 208, the new Code introduces, for the first time in its existence, the crime of *harassment*, incriminating and punishing the making of phone calls or other communications by means of remote transmissions, which, by frequency or content, cause a fear to a person.

The provision comes happily to assist the prosecuting authorities which were confronted, in the past, and still have to face numerous cases like this in practice. By its form, the legal text succeed to cover most of the situations that could affect the right of a person to live his life in privacy (even when this person is present in cyberspace), without interferences or fear. Here, we are talking about defamation or making a sort of psychological pressure on webpages, forums, online chat rooms/groups, the creation of fake accounts in social media or hijacking the real account of an individual, transmitting large amounts of emails or instant messages (internet relay chat), posting defamatory messages on blogs, Facebook, Twitter or other social media, in order to achieve an „informational assault" on the victim or with the aim to produce her fear, anxiety, discomfort etc. Other methods may include the sign up of fake email accounts, by unauthorized or abusive takeover of the victim's identity, followed by sending email messages on behalf of the victim in order to discredit, defame, denigrate, undermine or intimidate her, the creation of fake profiles (by the use of real personal data and photos of the victim) on pornographic, online dating or sexual minorities' websites or blogs, so that the victim is shown in „hard-to-believe" situations or not-compliant with her real social status.

The *online harassment* concept also consists of other material acts, such as: monitoring the victim's online activity, by using electronic surveillance devices or spy-type applications, connecting to the victim's Wi-Fi router and performing illegal online activities (child pornography, computer-related fraud, even hacking), in order to intentionally mislead the authorities to wrongfully bring charges on her etc., but all of these acts can be indicted in a proper way using other legal provisions from the Criminal Code.

In other foreign legislations (ex. US, Canada etc.), but also in the specialized literature, this crime is known and referred to as: Cyberharassment, Cyberstalking or Cyberbullying.

Besides the major benefits in socio-economic environment, the new technologies also brought large number of judicial problems, one of them being the connection to public electronic communications networks or obtaining access to publicly available electronic communications services.

For that, the Romanian legislator created a distinct criminal rule, with no prior correspondent, namely *theft with the purpose of use* (Article 230 paragraph 2), which incriminates the unauthorized use of someone else's communications device or the use of a communications device illegally connected to a network, causing a loss of property. This new legal provision comes to solve controversial situations from real life or doctrine, chiefly regarding the „illegal" connections to communications networks or even to Internet using wireless-enabled electronic devices (IEEE 802.11 standard).

[1] Abbreviation: Council of Europe.

Another win resulted from this new legal text is bringing into the illicit context the situation of using someone else's communications device, while considering that, nowadays, due to technological developments, by *communications device* one could easily see a smartphone or even a personal computer, and most of the so called *voice or video communications* are now entirely based on the IP[2] technology and transmission protocol.

Computer-related fraud (Article 249) preserves almost entirely its original legal text (as in Article 49 of Law no. 161/2003) and now is placed in the large context of the „traditional" crimes against the property, but in a distinct section (Chapter IV – frauds committed by computer systems or electronic payment instruments). Compared to the previous special law, the imprisonment time was reduced (general trend), as from 3 to 12 years (in Law no.161/2003), to 2 to 7 years (in the new Criminal Code).

Same comments and notes shall apply also for the newly-shaped crime of *performing financial operations fraudulently* (Article 250), with the sole mention that the prior legal provision (Article 27 of Law no. 365/2002 on electronic commerce) contained a distinct paragraph incriminating the behaviour of the person which, according to his contractual or employment duties, conducts technical activities for producing and issuing electronic payment instruments (e.g. credit cards) or for performing specific financial operations, has access to the security measures applied to the fabrication of such instruments or has access to personal data or other security mechanisms required for performing specific financial operations, according to the law. The reasons for eliminating the above mentioned legal situations from the new Criminal Code are still unknown, and the new legal text punishes now the employee or contractual agent of credit card or financial institutions with the same imprisonment time as for the other culprits.

The *acceptance of fraudulently performed financial operations* (Article 251) represents an identical version of Article 28 of Law no.365/2002, the only difference being the decreasing of the imprisonment period (from 1 to 12 years - in Law no.365/2002 – to 1 to 5 years – in the new Criminal Code).

The privacy in the sector of electronic communications has also been protected by the new Criminal Code, where the legal provision of *violation of the secrecy of correspondence* suffers only minor changes from previous form (Article 195 of actual Criminal Code). The only aspect that draws attention is the legislator's decision to renounce to the aggravated situation when the incriminated actions are performed by an employee or official who has the legal obligation to preserve the professional secret and the confidentiality of the information he got in touch with or he got access to. In the case of the 2nd paragraph of Article 302, the crime of the *interception, without right, of a conversation or of any communication made by phone or by any mean of electronic communications* is likely to be committed in ideal concurrence with the crime of *interception, without right, of a non-public transmission of computer data* (as referred to in Article 361 paragraph 1 of the new Criminal Code), while the conversation or the communication takes place, from a technical point of view, through computer programs or *Voice over Internet Protocol (VoIP)*-type applications, a technology wide spread and largely used nowadays.

One of the most highly visible crime in the local mass-media, namely *forgery of the electronic payment instruments*, could also be found in the new Criminal Code, in the 2nd paragraph of the Article 311, along with the other „traditional" forgery-related crimes. Compared to the previous version (Article 24 of Law no. 365/2002), one could note the decreasing of the imprisonment period (the maximum of the prison punishment reduced from 12 years to 10 years), as well as the elimination of the aggravated situation when the act of forgery is committed by the employee or the contract agent of the financial or credit institution who's task is to conduct technical operations to issue electronic payment instruments or has access to personal (identification) data or to the security mechanisms associated to the respective electronic payment instruments.

[2] Internet Protocol.

Putting into circulation counterfeit values is a another crime which strengthens the gallery of forgery-related crimes committed against financial securities, bonds, values or electronic payment instruments, by two legal provisions included in the Article 313 of the new Criminal Code. In addition to the previous version (2nd paragraph of Article 24 of the Law no. 365/2002), the legislator brings new legal charges, such as *receiving* and *transmitting forged values*. Meanwhile, if the perpetrator is, in the same time, the counterfeiter, the punishment proposed by the new Criminal Code will be the same as for the initial crime of forgery, and the two crimes will be regarded as in real concurrence (according to the 2nd paragraph). A new and interesting aspect has been brought by 3rd paragraph of Article 313 of the Criminal Code, which states that is a crime the act of putting a forged value again into circulation by the person who received the respective forged value and realized that was a fake, while the punishment stays the same as for the crime of forgery, with limits reduced to half.

As regarding the crime of *possession of equipments with the purpose of forging values* (Article 314), the 2nd paragraph refers exclusively to the situation of *possession of equipments with the purpose of forging electronic payment instruments*, and, compared to the previous version of the legal text (Article 25 of Law no.365/2002), there are two new actions incriminated, respectively *receiving* and *transmitting of equipments*. Another novelty is represented by the 3rd paragraph of Article 314, which states that there will be no punishment for the person who commits the crime, if followed by handing over the equipments to authorities or informing the authorities on the existence of these equipments, but before the authorities discover the crime by themselves and the forging actions occur. Worth noting that, despite the general tendency of reducing the imprisonment period, in this case the legislator has chosen to punish more severely the committing of this crime and increased the maximum limit of the prison time with 2 more years (from 5 years, in the previous version of the legal text).

Another crime, intensively highlighted by mass-media, given its various forms encountered in the judicial practice, is the *computer-related forgery*. The legislator kept the original form of the legal text (according to Article 48 of Law no.161/2003), but decreased the quantum of imprisonment period, as from 2 to 7 years (in pre previous version) to 1 to 5 years now.

This crime has been used and, most probably, will still be used, as a „universal legal solution", to resolve all those complex situations, for that, although requests existed, the legislator did not take concrete actions to implement proper legal provisions. For example, is the case of so-called *Phishing*, that method where the culprits (con artists) send to the victims well-designed email messages (masquerading as trustworthy entities or persons), with the purpose to mislead them to click on spoofed hyperlinks in order to access spoofed webpages controlled by the attackers, where the victims are lured to provide their personal or financial information, passwords or access codes. Generally, this kind of criminal action is called *social engineering*. Although this *Phishing* is committed by multiple material acts, it is currently legally solved by the prosecuting authorities only using the *computer-related forgery* crime. But, a deep analysis shows that, technically, only one action could be regarded as forgery, namely the forgery of the webpage used by culprits to illegally obtain data from the tricked victims. In fact, this is the sole action that has all the constituents to be regarded as the crime mentioned in Article 325 of the Criminal Code.

In what regards the communication of personal information on the spoofed webpage, there is no legal provision to incriminate the actions undertaken by the victims themselves, and the less to incriminate the activity of the culprits. On the other hand, tricking or misleading a person in order to acquire his personal or financial information are for sure criminal-type activities but not yet formalized in legal provisions and then, not subject to proper punishment (*nullum crimen sine lege*). A possible legal solution would have been the creation of a distinct article (with the name *ID theft* or *ID theft by means of electronic communications*) in this new Criminal Code, with the following text (as example): *(1) the obtaining of any personal data, where there is no consent from the entitled person, or by deception, and if electronic communications means have been used, is a crime and*

shall be punished with imprisonment from <x> months to <y> years. (2) The same punishment shall apply for the crime mentioned at paragraph (1) if committed by the use of electronic or eletromechanical devices designed to capture and store optic, magnetic or electric-representations of data.

In Title VII of the new Criminal Code a distinct Chapter (VI) was created with the name „Crimes against the safety and integrity of computer systems and data", which groups the majority crimes previously existing in Title III of Law no.161/2003.

Illegal access to a computer system (Article 360) is one of the most common offences in our judicial practice and still one of the most controversial in doctrine. In the new Criminal Code, the legislator preserved, almost identically, the previous legal provisions (paragraph 1 and paragraph 2 of Article 42 of Law no. 161/2003), while in paragraph 3 tried to reformulate the previous legal text but in a way that doesn't succeed to cover the real need for incrimination.

Although had the possibility, strictly in what regards the formulation of the legal text, the legislator did not modify the Romanian correct translation for the phrase „*illegal access TO a computer system*", in order to make it compliant to the text of the CoE Convention on Cybercrime. So, again the legislator choose to protect the access AT a computer system (in the Romanian language) instead of protecting the illegal access TO (meaning INSIDE) that computer system. As stated also in the Explanatory Report on the CoE Convention on Cybercrime, the importance of the access resides only in *entering the whole or any part of a computer system*, and not the access of the culprit in the vicinity of or around the computer system.

With the reference to the paragraph 3, although the legislator's intention was the creation of a legal text to fit the incriminating needs required by the prosecuting authorities, offering in the same time adequate safety measures against any abuse by law, the respective legal provision does not bring anything new, and, moreover, does not succeed to eliminate the various interpretations formulated in the course of time by practitioners and academics on the topic of „*infringing the security measures*".

In this context, a sensitive issue that did not find yet its solving, not even by reformulating paragraph 3, is still generated by the situation when the access to a computer system protected by security measures is committed by a perpetrator already knowing or being in possession of the needed access credentials (e.g. username, password, access code etc.). For example, the attacker who knows the username and the password associated to a login interface, uses them, and then get access to the respective computer system, but, technically, this is done without „forcing" or „eliminating" that security measure (login). Similarly, there could also be scenarios when the computer system has by default certain security measures in place but they has not been modified by the legitimate user, and thus may be known (or guessed) by any other person.

Under these hypothetical (but possible) conditions, an eventual criminal charging using Article 360 paragraph 3 of Criminal Code would be inadequate, at least from the following considerations: a) from the beginning, the legal text shows that we face an unauthorised intrusion in a computer system; b) the simple existence of certain procedures, devices or applications designed to restrict or forbid the access to that computer system cannot be regarded as an aggravating circumstance, taken into consideration that, anyway, the culprit finds himself already in a „illegal", „unauthorized" or „without right" status/situation with regard to that computer system. In the previous legal text (Article 42 paragraph 3 of Law no.161/2003), and according to the CoE Convention on Cybercrime, the Romanian legislator wanted to punish more severely the action of the person who, being already in a „illegal" relationship with a computer system, chooses to continue his criminal behaviour and performs certain technical operations to overwhelm, infringe or eliminate the security measures he confronts. In other words, the previous legal provisions highlighted more clearly, as aggravated circumstance, the „aggression"-type situation against the security measures and not just the simple operation on a computer system that has in place procedures, devices or applications by which the access to that computer is restricted or forbidden, as stated in the new Criminal Code.

As for the sanctioning regime, one could note the existence of the same limits of the imprisonment period (as in the previous legal text) – for the aggravated circumstance mentioned in paragraph 3 (3 years to 12 years), a decreasing of the punishment limits – for the circumstance mentioned in paragraph 2 (6 months to 5 years – now, to 2 years to 7 years - in the previous legal text), and also the introduction of the fine, as an alternative sanction for the circumstance provided in paragraph 1.

In what regards the crimes of *illegal interception of a non-public transmission of data* (Article 361), and *data interference - or altering computer data integrity* (Article 362), the legal texts in the new Criminal Code preserved almost identically the legal provision previously provided by Article 43 paragraphs 1 and 2, and Article 44 of the Law no.161/2003. In these cases, the only difference is in the sanctioning regime, with the decreasing of the imprisonment period from 2 to 7 years – in the previous versions, to 1 to 5 years in the new Criminal Code.

To the crime of *system interference – or disrupting the operation of computer systems* (Article 363) there are also no modifications compared to the previous version of the legal text (Article 45 of Law no.161/2003). In this case, too, the legislator only spotted a decreasing of the imprisonment period, as from 3 to 12 years – previously, to 2 to 7 years in the Criminal Code.

By the creation of a separate legal provision, namely Article 364, the legislator succeeded this time to split the crime of *unauthorized transfer of data* from the previous wrong context of *data interference* provided by Article 44 paragraph 2 and 3 of Law no. 161/2003, with respect to a technical reality – so that, by transferring computer data between systems or different storage media, no data shall be altered, suppressed, deleted or damaged in any way, loosing only the confidentiality of the information contained. Consistent with his trend, the legislator also modified for this crime the limits of the imprisonment period, as from 3 to 12 years – in the previous legal text, to 1 to 5 years in the new Criminal Code.

We need to emphasize that also this time, the legislator fails to provide a representation of the phrase „unauthorized", situation which may lead to difficulties in bringing a rigorous (truth-close) legal charge. In this scenario (unauthorized transfer of data), the phrase „unauthorized" or „illegal" may be applied only in conjunction with the culprit operations against the respective computer data, with the emphasize on the permission he has (or not) or the authorization he got (or not) to dispose of these data in the way he wants to. In what regards the interaction with the computer system the data is stored in, there shall be applicable the legal provisions of Article 360 – *illegal access to a computer system*. On the other hand, if the targeted data is also protected by other legal provisions, the criminal charge should be bound to a concurrence of crimes only if the culprit's action gathers all the constituents of such an offence.

The *unauthorized transfer of data* is an interesting crime, that could be easily and successfully used in those situations the prosecuting authorities or the courts of justice failed in the course of time to offer legal solutions for certain actions, such as, for example, the *Skimming method* meaning the illegal obtaining of identification data associated with credit cards, when the victims use these cards at ATMs, by mounting fake plastic ATM interfaces which embeds micro-controllers capable of reading the magnetic stripe of the cards) – in this case the credit cards acting as data storage means.

Another legal provision with large impact in the judicial practice nowadays is Article 365 – *misuse of devices and applications (or the illegal operations with devices and computer programs)*, which also preserves, with just a few modifications, the previous legal text provided by Article 46 of Law no. 161/2003. This provision continues to offer solutions to the various real life scenarios, when, under the guise of a legitimate trade, merchants (and not only) provide interested persons with electronic devices, computer programs and applications, passwords or access codes with the purpose to be used to further commit other computer-related offences against data and systems. From the text provided by paragraph 2 of Article 365 one could note an exaggeration of the legislator in using the phrase „without right". And, again, there is no explanation for the term „without right". Thus, the legal text states that shall be a crime the *possession, without right, of a device, a computer program,*

a password, an access code or any similar data, with the purpose of committing one of the crimes provided by Articles 360-364. In other words, is hard to imagine a situation when the possession of a certain application with the intent to commit an illegal access to a computer system is carried out „with right"! Also, compared to the previous legal text, the quantum of the imprisonment period has been decreased, as from 1 to 6 years (previously) to 6 months to 3 years or a fine (for the crime mentioned in paragraph 1), respectively 3 month to 2 years or a fine (for the crime mentioned in paragraph 2).

Placed in the general legal context of Title VIII – Crimes affecting the relations of social life, the Article 374 gathers all the criminal actions committed by using child pornography materials. Compared to the previous version of the legal text (Article 51 of Law no.161/2003), there are new incriminations, such as *storage, promotion, exposure, distribution (sharing)* or *accessing* (of child pornography materials). Other changes aimed at: broadly incriminating the *production* of child pornography materials – whereas in the previous version of the legal text the same action was committed only *for the purpose of sharing*, putting the *possession* in conjunction with a certain purpose, such as: the *exposure* or the *distribution* of pornographic materials with children (compared with Law no.161/2003 which simply incriminates the *possession without right*). On the other hand, one could note that the phrase „without right" has been „moved" now just for the context of *accessing child pornography materials*, the legislator assessing that this action is the only one that could be carried out, in certain conditions, even „with right".

In what regards the sanctions, the legislator eliminated the complementary punishment of restricting certain rights to the defendant, and maintained the general trend of decreasing the imprisonment period limits, as from 3 to 12 years – in the previous legal text, to 2 to 7 years (for paragraph 2), respectively 3 months to 3 years or a fine (for paragraph 3).

Electronic vote interference (or electronic vote-related fraud), provided by Article 388 has no previous correspondent, being only mentioned as a possibility in the Government Emergency Ordinance no.93/2003 on casting the vote by electronic means to the national referendum for the revision of the Constitution. Formalized in a single legal provision, the crime consists of the printing and using false access data, illegal access to the electronic vote system, and forgery by any means of the digital ballots. As a general observation, these actions could be committed in ideal concurrence with other computer-related crimes, such as the *access to a computer system* or *computer-related forgery*. There have also been reduced the limits of the imprisonment period, as from 2 to 7 years (previously), to 1 to 5 years in the new Criminal Code.

The criminal context with regard to the electronic vote has been completed with Article 391 – *forging the electoral documents and records*, a crime previously comprised, by pieces, in Articles 60 and 61 of Law no.35/2008 – the electoral law. The text modifications are insignificant, and the quantum of the imprisonment period has been preserved in the same limits. Given the digital environment where such crimes occur, this offence might be subject of ideal or real concurrence with other computer-related crimes, such as: *data interference, system interference* or *computer-related forgery*.

Conclusions

The new Criminal Code answers in a proper way the challenges posed by cyberspace, providing useful legal tools to practitioners in combatting a wide range of criminal behaviour against computer data, systems and telecommunications.

Overall, worth to be underlined that the modifications brought to the previous Romanian legislation are relevant in relation to the actual need of incrimination resulted from the analysis of the local judicial practice, while the new aspects essentially contribute to the creation of a modern legal framework, fully able to protect in the future those social values that will not wait to emerge from the virtual interaction between individuals and a information technology in great expansion.

EXTENDED CONFISCATION IN THE NEW CRIMINAL CODE

MIHAI ADRIAN HOTCA*

Abstract
Through Law no. 63/ 2012 for the change and completion of the Criminal code of Romania and of Law no. 286/2009 regarding the Criminal code, in the Romanian criminal law, it has been introduced a new safety measure, that is the ***extended confiscation.***
Within the current article, we will analyze the conditions regarding the enforcement of this safety measure.
We will also examine if the juridical norms that regulate the extended confiscation, as well as their concordance with the fundamental law – the Constitution.

Key-words: *extended confiscation, unconstitutionality, safety measures, criminal law penalty, Criminal code.*

Introduction

In the final part of Law no. 63/2012, it is specified that this „*transposes in the national legislation art. 3 of Council Framework Decision 2005/212/JHA of February 24th, 2005 on confiscation of crime-related proceeds, instrumentalities and property, published in the Official Journal of the European Union series L no. 68 of March 15th, 2005*".

In art. 2 of Framework Decision 2005/212/JHA, it is stipulated „(*1) Each member state takes the necessary measures to enable it to confiscate, either wholly or in part, instrumentalities and proceeds from criminal offences punishable by deprivation of liberty for more than one year, or property the value of which corresponds to such proceeds.*

(2) In relation to tax offences, Member States may use procedures other than criminal procedures to deprive the perpetrator of the proceeds of the offence".

According to art. 3 paragraph (1) of Framework Decision 2005/212/JHA, each member state takes at least the necessary measures that would enable it, on the stipulated conditions, to confiscate, either wholly or in part, the property held by a convicted person for an offence of those mentioned within the current article.

According to art. 3 paragraph (2) of Framework Decision 2005/212/JHA, each member state takes the necessary measures to enable it to confiscate at least:

a) where a national court based on specific facts is fully convinced that the property in question has been derived from criminal activities of the convicted person during a period prior to conviction for the offence referred to in paragraph 1 which is deemed reasonable by the court in the circumstances of the particular case, or, alternatively;

b) where a national court based on specific facts is fully convinced that the property in question has been derived from similar criminal activities of the convicted person during a period prior to conviction for the offence referred to in paragraph 1 which is deemed reasonable by the court in the circumstances of the particular case, or, alternatively;

c) where it is established that the value of the property is disproportionate to the lawful income of the convicted person and a national court based on specific facts is fully convinced that the property in question has been derived from the criminal activity of that convicted person.

According to art. 3 paragraph (3) of Framework Decision 2005/212/JHA, Each Member State may also consider adopting the necessary measures to enable it to confiscate, property acquired by the closest relations of the person concerned and property transferred to a legal person in respect of which the person concerned — acting either alone or in conjunction with his closest relations — has

* Professor, PhD, "Nicolae Titulescu" University of Bucharest (mihaihotca@gmail.com).

a controlling influence. The same shall apply if the person concerned receives a significant part of the legal person's income.

In the recitals that accompanied the draft of Law no. 63/2012, it is shown that, although at present Romania benefits from a coherent and comprehensive legislative framework developed in accordance with the international standards in the field of crime- related proceeds, this framework has certain gaps reported to the European requirements in the field.

To be precise, at the level of the internal legislation, the above- mentioned Framework Decision is not totally transposed, as the transposition of art. 3 of the community act on the extended confiscation is missing from the national legislation. The measure of the extended confiscation has to be at least one of the three variants stipulated within article 3 paragraph (2) letters (a), (b) and (c) respectively. In all the cases, this allows the confiscation of the crime-related property that does not have a direct connection to the offence for which the person is convicted, more precisely, the direct connection between the offence that leads to the conviction and the property that is confiscated is not proved. It is a principle of the extended confiscation of the property of the convicted person. Letter (a) aims at that property if this derives from criminal activities during a period prior to conviction, while letter (b) aims at the property that derives from "similar" activities. With regard to letter (c), this aims at the disproportion between the value of the property and the level of the lawful income of the convicted person.

Further, it is pointed out that, on condition that the extended confiscation operates exclusively on criminal procedures, it aims at a list of particularly serious offences and it is applied exclusively to an already convicted person – the introduction of the extended confiscation is not incompatible with the presumption of the illicit character of the property in art. 44 item 8 of the Constitution of Romania, republished. This presumption is a relative one so that it will be turned around, depending on the case, by the administration of the evidences that create the belief of the court that the property held by the convicted person is obtained by committing offences.

In this context, the conditions stipulated within the draft and that have to be previously proved are enough to turn around the presumption without still infringing the mentioned constitutional principle.

The prosecutor would be then obliged to prove just the fact that a certain person, in a period of time, was involved in committing certain offences, such as, organized crime offences. For this reason, the judge can presume that the obtained property is the result of crime- related activities committed by the convicted person during a period prior to the conviction that is considered reasonable by the court. On this hypothesis, the task of the evidence regarding the illicit character of the obtained property would come to the convicted person. If the judge reaches the conclusion that the value of the held property is disproportionate to the lawful income of the convicted person, he can order their confiscation from the convicted person.

Further, it is specified that, in order to support those argued within the recitals, it can be invoked also the findings of the Constitutional Court that in Decision no. 799 of June 17th, 2011, made when delivering on the unconstitutionality of eliminating the presumption of the illicit acquirement of the property, pointed out also that the regulation of this presumption did not prevent the primary or delegated law giver to adopt in applying the provisions of art. 148 of the Constitution – Integration in the European Union regulations that should enable the full observing of the legislation of the Union in the field of the combat against crime.

In the end of the recitals, it is pointed out that the suggested normative deed pursues the transposition of art. 3 of Council Framework Decision 2005/212/JHA of February 24th, 2005 on confiscation **of crime-related proceeds, instrumentalities and property by observing at the same time the constitutional principles on the property right.**

The Constitutional Court delivered also on some attempts to review the same constitutional text.

Thus, through Decision no. 85/1996[1], the Court delivered on an attempt to review the Constitution through which it was suggested the replacement of the text that regulated this presumption with another one with the following content: "The property the licit acquirement of which cannot be proved is confiscated ". On this occasion, the Court retained that the presumption of the illicit acquisition of the property is one of the constitutional guarantees of the property right in concordance with the provisions of paragraph (1) of art. 41 of the Constitution [current art. 44 paragraph (1)], according to which the property right is guaranteed. This presumption is based also on the general principle according to which any juridical act or deed is licit until proved the contrary, ordering, with regard to the property of a person, that its illicit acquisition should be proved. Retaining that through the review suggestion it is pursued the turning around of the task of the evidence regarding the licit character of the property, in the sense that the property of a person is presumed to be illicitly obtained up to the contrary evidence made by its owner, as well as the fact that the juridical security of the property right on the assets that make the property of a person is indissolubly connected to the presumption of the illicit acquisition of the property and the removal of this presumption has the significance of the suppression of a constitutional guarantee of the property right, the Court found the unconstitutionality of this suggestion.

Also through Decision no. 148/2003[2], the Constitutional Court delivered the verdict on the constitutionality of the legislative suggestion of modifying the same text, change that has in view the circumstance of the presumption of illicit acquisition of the property. The suggested text established that the presumption did not apply "to the property obtained as a result of the capitalization of the offence- related revenues ".

Through Decision no. 799/2011, the Constitutional Court stated "*that it delivered the verdict also on some attempts of reviewing the same constitutional text, attempts that aimed basically the same finality: the removal of the presumption of illicit character of the property acquisition from the Constitution*"[3].

Then, regarding the issue in question, the Constitutional Court stated: "*Applying the provisions of art. 152 paragraph (2) of the Constitution, according to which no review can be done if it has as a result the suppression of the fundamental rights of the citizens or of their guarantees,* ***the Court finds that the removal of the second thesis of art. 44 paragraph (8) from the Constitution, according to which "The licit character of the acquisition is presumed" is unconstitutional, because it has as effect the suppression of a guarantee of the property right, thus infringing the limits of the review stipulated by art. 152 paragraph (2) of the Constitution*** (s.n.).

The court underlines within this context the ones retained in its jurisprudence, for instance through Decision no. 85 of September 3rd, 1996, mentioned, or through Decision no. 453 of April 16th, 2008, published in the Official Gazette of Romania, Part I, no. 374 of May 16th, 2008, in the sense that ***the regulation of this presumption does not prevent the examination of the illicit character of the property acquisition, the task of the evidence coming to the one that invokes this character. As long as the interested part proves the illicit acquisition of some assets, of a part or of***

[1] Published in the Official Gazette of Romania, Part I, no. 211 on September 6th, 1996.

[2] Published in the Official Gazette of Romania, Part I, no. 317 on May 13th, 2003.

[3] It regards Decision no. 86/1996 and Decision no. 148/2003. Therefore, for instance, through Decision no. 148/2003, the constitutional says that „this way of drawing up is criticizable and can lead to conclusions pointing out that from the way of drawing up paragraph (7^1) suggested to be inserted, it results that it is pursued the turning around of the purpose of the evidence regarding the licit character of the property, stipulating the illicit character of the property obtained through the capitalization of the revenues resulted from offence. Therefore, referring also to its Decision no. 85/1996, the Court has established that also in this case it has been aimed the suppression of a constitutional guarantee of the property right, which is against the provisions of art. 148 paragraph (2) of the Constitution [current art. 152 paragraph (2)]. On the same occasion, referring to the way of drawing up the examination norm, the Court has noted that, if the text has pursued to allow the confiscation of the licitly obtained wealth, but that was built on an amount of money coming from offences, its drawing up was incorrect ".

the whole property of a person, on those illegally obtained assets or property it can be ordered the confiscation within the law" (s.n.).

Analyzing the considerations of the Constitutional Court, we notice that this rightfully considers the presumption regarding the licit character of the property acquisition of a person as essential (fundamental).

1.What is the nature of the extended confiscation?

Out of the content of the juridical norms stipulated within Law no. 63/2012, it can be established the **juridical nature of the extended confiscation**[4]**.** More precisely, this characterization of the extended confiscation results from the provisions of art. III and IV of Law no. 63/2012.

Thus, according to art. III of the same law: "*Whenever through special laws, Criminal code or Criminal procedure code, it is made reference to art. 118 of the Criminal code, the reference will be considered to be made to art. 118 and 118*^{2} *and whenever through special laws, Criminal code or Criminal procedure code, it is made reference to confiscation as a safety measure, he reference will be considered to be made to the extended confiscation*"[5].

The introduction of the extended confiscation in the safety measure category is necessary, we say, even in the absence of some legal provisions such as those quoted above, because the juridical norms that regulate it were introduced in Title VI of the Criminal code, called the "Safety measures".

A first consequence of this characteristic of the extended confiscation is the incidence in the completion of the special provisions, general provisions on the safety measures. Only in case there are derogatory provisions, these will be applied.

On the other hand, this juridical character of the extended confiscation makes the analyzed safety measure to be considered as **criminal law penalty**, juridical category to which belong the penalties and the educative measures, besides the safety measures.

Conditions on which the extended confiscation can be ordered

1.1. Condition presentation

Analyzing the provisions of art. 118^2 of the Criminal code and those of art. 111 of the Criminal code, we consider that the analyzed safety measure can be ordered only if the following conditions are met cumulatively:

- capacity of offender of the doer;
- conviction of the offender;
- conviction for having committed one of the limitative offences stipulated by art. 118^2 of the Criminal code;
- value of the property obtained by the convicted person 5 years prior and, if the case, after the committing of the offence, up to the issuing of the document instituting the proceedings, obviously exceeds the revenues licit obtained by this one;
- conviction of the court that the property subject to the extended confiscation comes from offences of the nature of those for which the offender is convicted;

[4] For the analysis of the provisions regarding the extended confiscation introduced in the Romanian legislation through Law no. 63/2012, see also: *M. Gorunescu, C. Toader*, Confiscarea extinsă – din contencios constituţional în contencios administrativ şi fiscal spre contencios penal, in Law no. 9/2012; *F. Streteanu*, Consideraţii privind confiscarea extinsă, in Criminal law notebooks no. 2/2012, page 11.

[5] According to art. IV in Law no. 63/2012: „Whenever through special laws, Criminal code and Criminal procedure code, it is made reference to art. 112 of Law no. 286/ 2009 regarding the Criminal code, the reference is made to art. 112 and 112^1 and whenever through special laws, Criminal code and Criminal procedure code, it is made reference to confiscation as a safety measure, the reference is considered as made also to the extended confiscation".

- by ordering the safety measure to remove a danger and to prevent the committing of new deeds stipulated by the criminal law.

From of the content of the provisions of art. 118^2 and that of art. 111 of the Criminal code, it results the **personality principle of the safety measure of the extended confiscation**, which means that the penalty cannot be given to persons that have committed only simple illicit deeds that are not stipulated by the criminal law. Moreover, through derogation from the general rule existing in the field of the safety measures according to which these can be given also to persons that commit the deeds stipulated by the criminal law (no matter if they are or not offences), with regard to the extended confiscation, in order not to able to be ordered, the deed has to be an offence and it should be delivered the conviction of the person to whom the measure is ordered.

Also, the measure of the extended confiscation cannot be ordered to other persons, that have not committed offences, than the convicted person irrespective of the relationship between these persons and the persona of the offender, because the criminal law penalties are applied only to the persons that have disregarded the criminal norms of incrimination and are carried out also by these.

Besides the juridical considerations, the personality principle of the criminal law penalties is very important for any law system, because it is unnatural and non- educative that a criminal law penalty could be ordered to persons that have not had an involvement in committing an offence.

1.2. Condition analysis of the extended confiscation

2.2.1. Capacity of offender of the doer

The condition for taking the measure of the extended confiscation is that the deed committed by the person in question should be an offence, requirement that presumes the capacity of **offender of the person** in connection to whom it is to be taken. This condition results from the provisions of art. 118^2 paragraph (1) of the Criminal code according to which other property than the one mentioned by art. 118 of the Criminal code is also subject to confiscation if the person is convicted for having committed one of the offences listed within this paragraph.

The requirement that the deed should be an offence will not be considered as met unless one of the causes that cancel the criminal character of the deed is incident. In such a case, the taking of the measure of the extended confiscation is excluded *de plano*.

Considering the above mentioned, the general provisions on the safety measures stipulated by art. 111 paragraph (2) of the Criminal code – *according to which the safety measures are taken considering the persons that have committed deeds stipulated by the criminal law* – are not to be applied with regard to the extended confiscation.

The general rule stipulated by art. 111 paragraph (2) of the Criminal code is not incident in the case of the extended confiscation, because art. 118^2 paragraph (1) of the Criminal code derogates from the general rules applicable to the safety measures.

It results from here that, as long as the deed is not an offence, it cannot be ordered the extended confiscation. For instance, the extended confiscation cannot be taken in the case of an irresponsible person (according to art. 48 of the Criminal code), that has committed a deed of those mentioned within art. 118^2 paragraph (1) of the Criminal code

2.2.2. Conviction of the offender

Another condition to be able to order the measure of the extended confiscation is that the offender should be convicted. According to art. 118^2 paragraph (1) of the Criminal code, other property than the one mentioned in art. 118 is also subject to confiscation, if the person in question is **„convicted".**

Considering the derogatory character of the provisions stipulated by art. 118^2 of the Criminal code, the provisions of art. 111 paragraph (3) of the Criminal code, according to which: „The *safety*

measures cannot be taken if the doer is not punished (...)", will not be applied with regard to the measure of the extended confiscation, because the deed is not enough to be an offence, but it has to be met also the requirement that the person having committed the offence – offender – should be convicted.

Indeed, not in all the case in which a deed is an offence, the person having committed it is convicted. Among the situations that prevent the delivery of a conviction to the person having committed an offence, there are also the causes that remove the criminal responsibility. For instance, the prescription of the criminal responsibility.

According to art. 345 paragraph (2) of the Criminal procedure code, the conviction is delivered if the court finds that the deed exists, is an offence and has been committed by the defendant. Considering the provisions of art. 345 paragraph (3) of the Criminal procedure code, we will say that the situations in which the conviction of a person is delivered imply both the meeting of the conditions stipulated by art. 345 paragraph (2) of the Criminal procedure code, as well as the inexistence of the cases stipulated by art. 10 of the Criminal procedure code (situations in which the discharge or the termination of the criminal trial are delivered).

According to art. 345 paragraph (3) of the Criminal procedure code, the discharge or the termination of the criminal trial are delivered according to art. 11 pct. 2 of the Criminal procedure code

And, according to the provisions of art. 11 pct. 2 of the Criminal procedure code, during the trial, the court delivers:

a) the discharge in the case stipulated by art. 10 lit. a)-e);

b) termination of the criminal trial in the case stipulated by art. 10 lit. f)-j).

The court orders the discharge when [art. 10 paragraph (1) of the Criminal procedure code]:

a) the deed does not exist;

b) the deed is not stipulated by the criminal law;

b^1) the deed does not have the degree of social danger of an offence;

c) the deed has not been committed by the accused or defendant;

d) the deed is missing one of the constitutive elements of the offence;

e) there is one of the causes that cancels the criminal character of the deed;

The court orders the termination of the criminal trial when [art. 10 paragraph (2) of the Criminal procedure code]:

f) the previous complaint of the injured person, the authorization and the documents instituting the proceedings or other condition stipulated by the law necessary for setting into motion the criminal action are missing;

g) the amnesty, prescription or death of the doer or, depending on the case, the erasure of the legal person when it has the capacity of doer have occurred;

h) the previous complaint has been withdrawn or the parties have reconciled or have concluded a mediation agreement according to the law, in the case of the offences for which the withdrawal of the complaint or reconciliation of the criminal responsibility;

i) it has been ordered the replacement of the criminal responsibility;

i^1) there is a clause of non- penalty stipulated by the law;

j) there is force of res judicata. The prevention causes effects even if the definitively trialed deed was given a different legal framework.

When noticing the applicable legal provisions, we conclude saying that the court can not order the conviction of a person that has committed an offence, in the case when one of the causes that cancels the criminal responsibility is incident or in the other situations regulated by art. 10 lit. f)-j) of the Criminal procedure code, for instance, if the force of res judicata is incident.

2.2.3. Conviction for having committed one of the limitative offences stipulated by art. 118[2] of the Criminal code

Art. 118[2] paragraph (1) of the Criminal code stipulates that other property than the one mentioned by art. 118 is also subject to confiscation, in case the person is **convicted for having committed one of the following offences**, if the deed is susceptible to give him a material gain and the penalty stipulated by the law is 5- year imprisonment or higher:

a) pandering;

b) offences regarding the traffic of drugs and precursors;

c) offences regarding the trafficking in human beings;

d) offences at the state borders of Romania;

e) offence of money laundering;

f) offences in the legislation regarding the prevention and combat against pornography;

g) offences in the legislation regarding the prevention and combat against terrorism;

h) association to commit offences;

i) offence of initiating and setting up an organized crime group or of adhesion or support under any form of such a group;

j) offences against the patrimony;

k) offences regarding the infringement of the regime of weapons and ammunition, nuclear materials or of other radioactive and explosive materials;

l) counterfeiting of currency and other securities;

m) revealing of an economic secret, disloyal competition, infringement of the provisions regarding the import or export operations, embezzlement, infringement of the provisions regarding the waste and residue import;

n) offences regarding the gambling organizing and exploitation;

o) trafficking of migrants;

p) offences of corruption, offences assimilated to the offences of corruption, offences related to the offences of corruption, offences against the financial interests of the European Union;

q) offences of tax evasion;

r) offences regarding the customs regime;

s) offence of bankruptcy or fraudulent insolvency;

ş) offences committed through information systems and electronic means;

t) trafficking of human organs, tissues or cells.

If a person is convicted for having committed an offence that cannot be framed with the provisions of art. 118[2] of the Criminal code, the extended confiscation cannot be ordered. It has also to be met the requirement according which the deed *in concreto* (the one that has drawn the conviction) and not *in abstracto*, is susceptible to give the convicted person a **material gain**[6] and the **penalty stipulated by the law is 5- year imprisonment or higher.** For instance, in the case of the offence stipulated by art. 4 paragraph (1) of Law no. 143/2000, it cannot be ordered the measure of the extended confiscation, because the penalty stipulated by the law is imprisonment from 6 months to 2 years or fine.

2.2.4. Value of the property obtained by the convicted person 5 years prior and, if the case, after the committing of the offence, up to the issuing of the document instituting the proceedings, obviously exceeds the revenues licit obtained by this one

According to art. 118[2] paragraph (2) lit. a) of the Criminal code, the extended confiscation is ordered if the value of the property obtained by the convicted person 5 years prior and, if the case,

[6]See also *F. Streteanu*, quoted work, page 24.

after the committing of the offence, up to the issuing of the document instituting the proceedings, obviously exceeds the revenues licit obtained by this one.

In art. 118^2 of the Criminal code, there are more *specifications*, as follows:

- for the application of the provisions of paragraph (2), it is considered also the value of the property transferred by the convicted person or a third party to a member of the family, to the persons with whom the convicted person has established relationships similar to those between spouses or between parents and children, in case these live together with the convicted person, to the legal persons over which the convicted person holds control [art. 118^2 paragraph (3) of the Criminal code];
- through property it is understood also the amounts of money [art. 118^2 paragraph (4) of the Criminal code];
- when establishing the difference between the licit revenues and the value of the obtained property, it will be considered the value of the property when obtaining it and the expenses made by the convicted person and the persons stipulated by paragraph (3) [art. 118^2 paragraph (5) of the Criminal code];
- if there is property subject to confiscation, in its place it is confiscated money and property up to their value [art. 118^2 paragraph (6) of the Criminal code];
- it is also confiscated property and money obtained from the exploitation or use of the property subject to confiscation [art. 118^2 paragraph (7) of the Criminal code];
- the confiscation can not exceed the value of the property obtained within the period stipulated by paragraph (2) that exceeds the level of the licit revenues of the convicted person [art. 118^2 paragraph (8) of the Criminal code].

Regarding the sphere of the property considered by the provisions of art. 118^2 paragraph (2) lit. a) of the Criminal code, in doctrine, it was judiciously shown that the property obtained or produced by having committed offences for which it was ordered the special confiscation or the restitution in favor of the civil party can not belong to the sphere of property that is to be subject to the measure of the extended confiscation and in the case of the property transfer by or to the persons listed by the legal test, the value that is to be considered is the one at the moment of its obtaining because the property of the convicted person is reported to be taken into consideration also that date[7].

In doctrine, it is discussed whether the property fictively transferred by the convicted person can be considered when ordering the measure of the extended confiscation. For instance, when a friend of the convicted person acquires a property on his name but with money received from the convicted. The found solution is that, if it reaches to a conviction for money laundering, that property is the object of the special confiscation and contrariwise, that property will be assessed as property obtained by the defendant[8].

2.2.5. Conviction of the court that the property subject to the extended confiscation comes from offences of the nature of those for which the offender is convicted

According to art. 118^2 paragraph (2) lit. b) of the Criminal code, the extended confiscation is ordered if the court is convinced that that property comes from crime- related activities as those stipulated by paragraph (1). It is the conviction of the court that the property subject to the extended confiscation comes from having committed an offence that is necessarily among those for which the defendant is convicted.

According to art. 3 paragraph (3) of Framework Decision 2005/212/JHA, the national court has to be „***fully convinced**, based on some specific deeds, **that that property is the result of some similar crime- related activities of the convicted person***".

[7] Idem, page 24 and 25.

[8] See also *F. Streteanu*, quoted work, page 25.

By comparing the two provisions, we find that the intern legislation talks about the *„conviction of the court",* while in the Framework Decision it is used the syntagm *„fully convinced"*. On these conditions, there is the inevitable question: Is there any content difference between the two provisions?

Our „conviction", „based on arguments", is that between the two analyzed provisions there are content differences considering that the opinion of the court can be made in two ways: based on evidences or on something else. Indeed, we consider that, in fact, art. 3 paragraph (3) of Framework Decision 2005/212/JHA establishes that **„the court has to be convinced"** and the intern regulation stipulates that the court **„has the conviction"**.

Also, although it might be said that the expression *„fully convinced"* has a redundant or superfluous meaning, from the juridical point of view, it means that at the file of the process there are (it has to be) evidences *„above any doubt"* that that property is the result of some similar crime-related activities of the convicted person. Art. 3 paragraph (3) of Framework Decision 2005/212/JHA states, in fact, that the court has to be „convinced" based on some administrated evidences that should create the certainty regarding the origin of the crime- related property.

Considering the above, we think that the legal provisions that set the analyzed condition are qualitatively inferior to those within art. 3 paragraph (3) of Framework Decision 2005/212/JHA.

2.2.6. By ordering the safety measure to remove a danger and to prevent the committing of new deeds stipulated by the criminal law

This condition results from the provisions of art. 111 paragraph (1) of the Criminal code, according to which the safety measures have as purpose the removal of a danger and the prevention of committing deeds stipulated by the criminal law.

Although this condition is not stipulated within Law no. 63/2012, regarding the nature of the extended confiscation, we consider that the requirement stipulated by art. 111 paragraph (1) of the Criminal code is applicable also with regard to this measure. If it were derogation from the incidence of the condition set by art. 111 paragraph (1) of the Criminal code or if we concluded that this condition was not applied, it would mean that the measure of the extended confiscation does not have the nature of a safety measure.

Through its nature, any safety measure is taken **for the purpose of removing a danger and for preventing the committing of some deeds stipulated by the criminal law**. If it does not have this purpose, it means that the penalty that we analyze cannot be considered a **safety measure.**

The preventive purpose is that of a safety measure, which means that if, when giving a penalty, it is disregarded the **necessity of removing an effective state of danger**, this should be considered **penalty,** but not a safety measure.

3.Conclusions

When applying the lawfulness principle of the criminal law penalties expressed in the adage *nulla sanctio sine lege praevia,* we consider that the safety measure of the extended confiscation can be applied only with regard to the offences committed after the coming into force of Law no. 63/2012[9].

Analyzing the provisions of art. 118^2 of the Criminal code from the point of view of their constitutional provisions, we find that they contravene some norms of the fundamental law.

[9] For details regarding the applying in time of the provisions regarding the criminal law penalties, see also *F. Streteanu*, Tratat de drept penal. Partea generală, vol. I, C.H. Beck Publishing House, Bucharest, 2008, page 251 and the following one. Regarding the applying in time of the provisions regarding the special confiscation, see also *D. Niţu*, Modificările aduse în materia confiscării de prevederile Legii nr. 278/ 2006, in Criminal law notebooks no. 3/2006, page 66.

First, we consider that the constitutional and conventional provisions (stipulated in the European Convention on Human Rights) regarding the right to a fair trial as a result of the lack of clarity and predictability of the norms that regulate the extended confiscation are infringed[10].

Among the unclear provisions, there are[11]:

- the expression „*obviously exceeds the revenues licit obtained by this one*" that is found within art. 118^2 paragraph (2) lit. a) of the Criminal code. The norm is unpredictable when applied because there is very large dose of arbitrage regarding the significance of the syntagm **„obviously exceeds"**[12] and the sense of the syntagm **„revenues licit obtained"**[13];

- the expression „*the court has the conviction that that property comes from crime- related activities*" at is found within art. 118^2 paragraph (2) lit. b) of the Criminal code. This is unpredictable when applied because it is not clear on what basis the court builds its **„conviction"** that the property comes from **„crime- related activities"**, if it considered also the „*value of the property transferred by the convicted person or a third party to a member of the family, to the persons with whom the convicted person has established relationships similar to those between spouses or between parents and children, in case these live together with the convicted person, to the legal persons over which the convicted person holds control*".

Second, the provisions of art. 118^2 paragraph (2) lit. b) of the Criminal code infringe the provisions of art. 124 of the Constitution, according to which:

„(1) Justice is made in the name of the law.

(2) Justice is unique, impartial and equal for all.

(3) Judges are independent and submit themselves only to the law".

We consider that the provision that regulates the condition that the court should have the „*conviction that that property comes from crime- related activities similar to those stipulated by paragraph (1)*" is unconstitutional because the judge should submit themselves **„only to the law".**

Besides, through Decision no. 171/2001, the Constitutional Court found the unconstitutionality of some similar provisions within art. 63 paragraph (2) of the Criminal procedure code in its forma previous to the modification through Law no. 281/2003, considering that the judges should submit themselves *„only to the law"* and not to *„their own conviction"*[14].

---

[10] In its jurisprudence, CEDO pointed out that the law had to meet certain qualitative conditions among which it was also the predictability (Order of November 22nd, 1995, delivered in the case of *S.W. vs. Great Britain* or Order of November 15th, 1996, delivered in the case of *Cantoni vs. France*). In this sense, the Court remarked that it could not be considered as „law" only a norm stated with enough precision in order to allow the citizen to control its behavior. Appealing, if needed, also to expert advice on the matter, it must be able to foresee in a reasonable degree to the circumstances of the case the consequences which could result from a particular action (Order of January 25th, 2007 in the case of *Sissanis vs. Romania*). Or, the law provisions that form the object of the current exception of unconstitutionality do not meet these exigencies. Thus, it is to be noticed that this right is a complex one that has more components and in which it is included *lato sensu* also the right to an efficient defense. (...) The judge himself is in trouble, being in the situation of opting between more possible variants in the absence of a clear representation of the applicable sanctioning regime (Decision of the Constitutional Court no. 573/2011, published in the Official Gazette no. 363 of May 25th, 2011).

[11] For the opinion that the provisions regarding the extended confiscation are constitutional, see also *F. Streteanu*, quoted work, page 15 and the following one.

[12] The word *obvious* can be understood in different ways and the applying modality becomes even more uncertain if it is considered also the provisions of art. 118^2 of the Criminal code, paragraph (8), according to which: „*The confiscation can not exceed the value of the assets obtained during the period stipulated by paragraph. (2) that exceed the level of the revenues of the convicted person*".

[13] It is not clear what the evidence means through which it is set the licit character of the revenues are.

[14] Through Decision no. 171/2001, the Constitutional Court found that: „in the Constituent Assembly, during the debates on the articles of the draft of the Constitution and Report of the Drawing up commission (published in the Official Gazette of Romania, Part II, no. 35 of November 13th, 1991 and no. 36 of November 14th, 1991 respectively), it was discussed the amendment suggestion regarding the completion of the final thesis of paragraph (2) of art. 123 of the Constitution with syntagm «[...] and their own conviction». After debates, the Constituent Assembly rejected with

At the time of declaring the unconstitutionality, the text declared unconstitutional had the following content: „*The assessment of each evidence is made by the criminal pursuit body according to* ***its conviction*** (s.n.)*, made after having examined all the administrated evidences and guiding itself by its conscience*"[15].

We ask ourselves how and on what basis the court can build the conviction that that property comes from crime- related activities. In the legal provisions it is not mentioned regarding how one should establish the „ illicit character" of the propertied submitted to the extended confiscation. According to art. 44 paragraph (9) of the Constitution: „*The property designed for, used and resulted from offences or contraventions can be confiscated only according to the law*".

Regarding the extended confiscation, the law has in view **the property „resulted from offences".** This results from the content of the provisions of art. 118^2 paragraph (2) lit. b) of the Criminal code, according to which: „*the court has the conviction that that property* ***comes from crime- related activities*** *similar to those stipulated by paragraph (1)*".

The expression *„property that comes from crime- related activities"* is equivalent to the syntagm *„property resulted from offences".* There is still no reasonable answer to the question: How does the court establish that certain property comes from the committing of offences like those listed within art. 118^2 paragraph (1), without being informed about such an item? Besides the formal aspect – the existence or inexistence of a document instituting the proceedings –the substantial nature aspect, the content of the rules of evidence based on which it is established that the property comes from crime- related activities and the effects of such an establishing respectively, is more important. If in a trial it is found that certain property has a crime- related origin, this means that the convicted person to whom it is to be ordered the extended confiscation, has committed one or more offences of those listed within art. 118^2 paragraph (1) of the Criminal code. In other words, although the court has been instituted with the trial of some **„crime- related activities"**, this can find that the convicted person has committed such activities and order the confiscation of the property that comes from these.

The effects of an order through which it would be found that a convicted person has committed also other offences than the ones for which he has been sued are inadmissible in a lawful state because it is possible that other courts that would be instituted with the trail of the deeds from which comes the property that makes the object of the extended confiscation should not have a different opinion that that of the court that has ordered the extended confiscation. It will be raised the issue of the „authority" of an order through which it is found the committing of an „criminal- related activity" in the further cases the object of which is the proceedings of this „criminal- related activity".

Another important issue is that of *establishing a correlation between the provisions on the extended confiscation and those that regulate the special confiscation*. This correlation has to be underlined because it is necessary to demarcate the application field of the two penalties. From the reading of the juridical norms that establish the content of these safety measures results an unacceptable conclusion. Basically, all the hypotheses in which the measure of the extended confiscation could be applied are framed within the provisions of art. 118 of the Criminal code that regulates the special confiscation, which means that the provisions regarding the extended confiscation are useless because they have a redundant character.

---

majority of votes this amendment expressing in this way the will that the judges should be submitted only to «the law» and not to «their own conviction»".

[15] Regarding the provision that we consider as being unconstitutional, Prof. F. Streteanu points out that „the above- mentioned decision (Decision of the Constitutional Court no. 171/2001 – *n.n.*) has a whole different significance than it is tried to be attributed to it. We believe that the idea that was intended to be underlined by our constitutional administrative court is the one according to which the conviction of the judge should be the result of evaluating the administrated evidences and not a criterion in their evaluation".

To demonstrate, *we will place in the mirror the conditions of the two safety measures*:

- in order to be able to order the measure of the extended confiscation, it is necessary the condition that the deed should be an offence (quality of offender of the doer). In the case of the special confiscation, it is enough the condition of having committed a deed stipulated by the criminal law, which means that there is a species- gender type correlation;

- the conviction of the offender is a condition for the incidence of the extended confiscation, while in the case of the special confiscation this condition is missing; the measure could be ordered even in some of the cases where the deed is not actually an offence. In the case of these conditions there is also the same correlation (species- gender);

- the conviction for having committed one of the offences listed by art. 118^2 paragraph (1) of the Criminal code is a requirement for the extended confiscation, which makes this measure have a more limitary incidence sphere than the measure of the special confiscation that can be taken irrespective of the nature of the deed stipulated by the criminal law;

- the condition regarding the fact that the value of the property obtained by the convicted person 5 years prior and, if the case, after the committing of the offence, up to the issuing of the document instituting the proceedings, obviously exceeds the revenues licit obtained by this one, basically limits in time the application of the extended confiscation measure. For instance, it is possible that a person should have obtained the property that comes from the committing of offences more than 5 years prior to the committing of the offence for which he is convicted. In such a case, it cannot be applied the provisions regarding the extended confiscation, but, if the conditions stipulated by art. 118 of the Criminal code are met, the measure of the special confiscation can be ordered. It is noticed that, if there had not been the provisions regarding the extended confiscation, in all the case in which a convicted person would have obtained property from a criminal- related activity, this would have been to be confiscated irrespective of the period when it was obtained;

- the condition regarding the conviction of the court that the property subject to the extended confiscation comes from offences of the nature of those for which the offender is convicted [stipulated by art. 118^2 paragraph (1)], has to be considered as applicable *a fortiori* also in the case of the special confiscations, as long as it does not contravene the constitutional provisions;

- finally, in the case of both the safety measures – the special confiscation and the extended confiscation – by taking them, it has to be removed a danger state and to be prevented the committing of new deeds stipulated by the criminal law.

As a conclusion, from the above it results that the measure of the extended confiscation has as object only the **„property that comes from the committing of certain offences"**, while the measure of the special confiscation has as object the **„property designed for, used and resulted from offences"** (or from simple deeds stipulated by the criminal law – according to the drawing up of art. 118 of the Criminal code).

If this is the case, that is, if the law pursues to submit to the extended confiscation exclusively the property that comes (results) from the committing of offences, it means that the entire regulation regarding this penalty within Law no. 63/2012, is useless because there is no incidence hypothesis of this that could not be placed within the provisions of art. 118 of the Criminal code.

Considering the above, we think that the regulation regarding the extended confiscation is not only unconstitutional, but also useless because all the hypotheses in the application sphere are placed within the provisions of art. 118 of the Criminal code.

On the other hand, the provisions analyzed within this article can produce an effect contrary to the expected one because, regarding the offences listed within art. 118^2 of the Criminal code, through the passing of these provisions, the lawgiver did nothing but to limit the application of the confiscation measure regarding the property resulted from the committing of some offences (those that come from the offences stipulated by art. 118^2 of the Criminal code). Because of this, because through its regulation, it is limited the possibility of confiscating the property that results from the

committing of some deeds stipulated by the criminal law, the denomination of the extended confiscation measure is inappropriate[16].

No doubt that the provisions of Framework Decision 2005/212/JHA, according to which, in order to efficiently prevent and combat the cross- border organized crime, the efforts of the competent bodies have to concentrate on the tracing, freezing, seizing and confiscation of the proceeds related to the offence, transpose the principle that the „**crime brings** (it does not have to bring) **no gains"**[17].

As for us, we consider that the „place" of the regulation regarding the extended confiscation should not be that designed for the safety measures, but that for the penalties. Our support is based on certain provisions within the Constitution, in the Criminal code and in Framework Decision 2005/212/JHA.

According to art. 44 paragraph (9) of the Constitution: „*The property designed for, used and resulted from offences or contraventions can be confiscated only within the law*". From these provisions, it results as clear as possible that, irrespective if it is special or extended, the measure of the confiscation can be taken only if the property in question is „designed for, used and resulted from offences or contraventions".

Therefore, any „extension" of the measure to other property of a convicted person infringes the constitutional provisions. Or, the property „*designed for, used and resulted from offences*"[18] enters the category of those listed within art. 118 of the Criminal code and the property „*designed for, used and resulted from contraventions*" can be the object of confiscation – complementary contravention penalty[19].

Compared to the content of art. 44 paragraph (9) of the Constitution, it can be said that certain provisions of art. 118 of the Criminal code are contrary to the Constitution. We have mainly in view, but not only, all the provisions that enable the confiscation of a property related to simple „deeds" or „ deeds stipulated by the criminal law". For instance, art. 118 paragraph (1) lit. a) that stipulates that the „*property obtained by having committed a* ***deed stipulated by the criminal law***" is subject to confiscation. Known that not all the deeds stipulated by the criminal law are offences, it means that the property obtained through deeds stipulated by the criminal law that does not achieve the content of an offence cannot be confiscated. For instance, the committing of a deed stipulated by the criminal law by a minor that has no discernment.

In our opinion, besides the provisions that enable the confiscation from simple doers, the provisions of art. 118 paragraph (1) lit. c) second thesis, according to which: „*When* ***the property belongs to other person,*** *the confiscation is ordered if the causing, modification or adaptation was made by the owner or by the offender with the knowledge of the owner*" are also „suspect" of unconstitutionality.

Considering the above relevant realities, especially the provisions of the fundamental law, we consider that, *de lege lata*, the regulation „of the extended confiscation" as a safety measure is an „ impossible mission".

On the other hand, if through „extended confiscation" we understand a safety measure, consisting in the transfer into the state property of a property resulted from the committing of offences, we can say that Framework Decision 2005/212/JHA was „transposed" into our Criminal

---

[16] Based on the content of the regulation, the corresponding name could be „limited confiscation".

[17] http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=CELEX:52008DC0766.

[18] Of course, with regard to the extended confiscation, the law has in view only the assets „resulted from offences thing results from the content of the provisions of art. 118^1 paragraph (2) lit. b) of the Criminal code, according to which: „the court has the conviction that that property comes from crime- related activities similar to those stipulated within paragraph (1)".

[19] According to art. 5 paragraph (2) lit. a), one of the complementary contravention penalties is the „*confiscation of the property designed for, used and resulted from offences*". We notice that the formulation of the text is similar to that in the Constitution.

code a long time ago, since, in the hypotheses considered by art. 118 of the Criminal code, it is contained all the cases aimed by the provisions of this framework decision.

For instance, we render below the definitions given by art. 1 of Framework Decision 2005/212/JHA to some notions. Art. 1 of this document stipulates that, in the sense of the current framework decision:

- „proceed" means any economic advantage *from criminal offences*. This advantage can consist of any form of property;

- „property" includes *property of any description*, whether corporeal or incorporeal, movable or immovable, and legal documents or instruments evidencing title to or interest in such property;

- „ instrumentalities" means any property used or intended to be used, in any manner, wholly or in part, *to commit a criminal offence or criminal offences*;

- „confiscation" means *a penalty or measure ordered* by a court following proceedings *in relation to a criminal offence or criminal offences*, resulting in the final deprivation of property.

The confiscation – safety measure – existing in our criminal law, remains in question the regulation of the confiscation „as penalty".

Therefore, if the lawgiver wishes to enlarge the spectrum of the criminal penalties in the case of the offences from the committing of which the convicted persons pursue to obtain or even obtain certain property, the current regulation has to be reconsidered.

Agreeing with the idea that the persons that commit offences from which they obtain patrimonial advantages should support also certain pecuniary penalties, *we consider that the solution is the one stipulated by the new Criminal code*.

We consider the provisions of art. 62 paragraph (1) of the new Criminal code, according to which: ***„If through the committed offence it was pursued the obtaining of a patrimonial gain besides the imprisonment it can be applied also a fine"***. Such a text can be introduced after paragraph (5) of art. 63 of the Criminal code.

In order to achieve its purpose, such a regulation should, however, be accompanied by at least two changes.

The first one aims to considerably increase the fine limits that at present no longer achieve the preventive- deterrent purpose specific to penalities. Compared to the criminal fine, in many situations, the contravention fine is much higher than the criminal one.

The limits of the criminal fine from our criminal code are, if not the lowest in Europe, certainly among the lowest. We believe that the fine could be from RON 10.000 to 1.000.000.

A second change should consist in the rewriting of art. 63^1 of the Criminal code, in the sense of stipulating the possibility of replacing the fine penalty with the imprisonment, irrespective if the two are alternatively stipulated or the fine is the sole penalty.

THE RELATION BETWEEN THE CRIMINAL ACTION AND THE CIVIL ACTION

BOGDAN FLORIN MICU*

Abstract
In Romania, the free access to the law is considered a fundamental human right, enriched by the Constitution itself. In practice, the committing of an illegal act may cause prejudice, being described as a civil offense, but at the same time may create a report of criminal law, attracting the criminal liability, in which case it is called offense. This is how we find in the jurisprudence, both civil action and criminal action, so that, in this study we try to present some singularities of these two types of actions, and of the relation between them.

Keywords: *free access to law, legal action, criminal action, civil action, the Criminal Procedure Code*

1.The Legal Action

The Romanian Constitution, in art. 21 enshrines the right of every person to have free access to law for protecting the rights, freedoms and legitimate interests of the persons, such right being qualified by the constitute legislator as a fundamental human right. Internally, the free access to law is not provided only in the Constitution; we also find it in the Law no. 304/2004 on the judicial organization.[1] Law no. 304/2004 contains 4 articles in Chapter II entitled "*the free access to law*", from which contents is revealed the legal frame of the exertion of this right, namely art. 6-9. For example, art. 6 has the following content: "*any person can address to the law for protecting his rights, freedoms and legitimate interests in exerting his right to a fair trial*". Also we note that the access to law is also consecrated internationally, such as the Universal Declaration of Human Rights art. 10: "any person is entitled in full equality to a fair and public hearing by an independent and impartial tribunal, which will decide on his rights and obligations or on any criminal charge against him", European Convention on Human Rights in art. 6, the Charter of the Fundamental Rights in art. 47, paragraph (2). Thus, according to the European regulations, the free access to law requires the fulfillment of there conditions: the validity of law, the independence of law and the impartiality of law.

The procedure whereby any person may defend his harmed rights and interests is the legal action. From the perspective of the civil law, the legal action has been defined as: "the way of law, the ability, the faculty, the legal power, conceded to anyone, of obtaining with the forms and in the conditions required by the law, the recognition and realization of a personal right, thus, it represents his social protection in its most expressive and effective form[2]". According to another opinion, from the perspective of the criminal law, the legal action is "*the mean by which the law conflict is*

submitted to be solved by the justice[3]*".* As the quoted author rightly states "*the legal action may also be, as the case, civil action, criminal action or offence action, but it has to be delimitated the harmed right by the illegal perpetration of the legal demand as a mean of exploitation of the right of action".*

The two actions, the civil and the criminal one have been analyzed, both from the perspective of the legislator but also from the perspective of the legal literature, in terms of the common elements, namely the factual and the legal basis or the cause, the parties or the subjects, and the object of the action. In addition, the case of the criminal action is also analyzed as the *"functional ability of the legal action"*[4], which refers to all procedural documents that may be incurred by exerting the action within the legal frame, specific to the branch of law where this action is part of.

2. The Criminal Action

The criminal action has been defined in the doctrine of specialty as *"the legal instrument by which the conflict of criminal law is submitted to be solved by the criminal judicial bodies."*[5]

2.1. The Exerting of the Criminal Action within the Criminal Trial

The exerting of the criminal action in the criminal trial requires the clarification of general procedure issues such as: the object of the criminal action, the subjects of the criminal actions, but also the specific features concerning it performance in due time, such as: the initiation of the criminal action, the exerting of the criminal action, the termination and depletion of the criminal action. According to the doctrine[6], the criminal action is customized according to its specific object and the legal frame in which is performed through the following, is a social action, belongs to the society and is performed through the state bodies invested in this respect; it is obligatory and must be necessarily performed whenever a crime has been committed; is indivisible, and it is extended to all those that have participated in the offense; as a result of the personal criminal liability, the criminal action is individual.

In accordance with art. 9 paragraph (1) of the Criminal Procedure Code, the criminal action has as its object "the criminal liability of the persons that have committed offenses". In one opinion, "the object of the criminal action, namely the liability of the persons that have committed offenses should not be confused with the criminal trial purpose that concerns the trial and the punishment of those who are guilty of violating the criminal law".[7] In the specialty literature has been appreciated that "within the criminal procedural law, the lack of legal norms on the purpose of trial determines the arbitrariness and the uncertainty in the performance and the solution of the criminal trials; the legal rules relating to the purpose of the criminal trial have their own importance: they represent a summary statement of reasons for the need and the purpose of the regulations from the Criminal Procedure Code".[8]

Concerning the subjects of the criminal action, we also find in the case of the criminal action the active subject and the passive subject. As rightly stated in the doctrine, "the subjects of the criminal actions are in fact the main subjects of the criminal procedural legal report, namely the state as an active subject of the criminal action and the person of the offender, as a passive subject of this action".[9]

The performance of the criminal action is explained by the doctrine[10] in the sense that it means: "the performance of the procedural document provided by the law whereby the charge of committing an offense is made against a particular person and is triggered the criminal liability of this person." Thus, art. 9, paragraph 1 from the Criminal Procedure Code provides that the criminal action is performed through the act of indictment required by the law. The act of indictment required by the law may be: the decree, the indictment, the oral testimony, the court decision, according to the moment of triggering the criminal trial or to the moment of performance of the criminal action. As stated in the doctrine of specialty, "the criminal prosecution may be commenced *in rem*, it is said only on the offense even if the perpetrator is unknown, while the criminal action can be performed only within the criminal trial and is made *in personam".*[11] "The performance of the criminal action against a person confers this one the status of defendant, this procedural quality having specific resonance on the department of the rights and obligations within the criminal procedural legal report".[12]

In what concerns the exerting of the criminal action, according to art. 9, paragraph (3) the Rule of criminal procedure, this one "can be exerted all through the criminal trial", having the meaning of "*supporting it in order to achieve the criminal liability of the defendant (...) involving the implementation of activities related to the performance of the taking of evidence in the criminal case, taking certain procedural measures, application forms, the raising of exceptions, etc."*[13] Therefore, as shown from the Romanian legislator conception, the exerting of the criminal action in the judgment phase is done only by the prosecutor, and in the cases in which his participation in judgment is not mandatory, the criminal action is exerted by the injured person, in both situations the law allowing such holders, under certain situations and to waiver this right.

In what concerns the termination of the criminal action, the Romanian legislator has provided in detail the two points in time, namely before and after the performance of the criminal action. In what concerns the causes that prevent the performance of the criminal action or that terminate the criminal action, art. 10 the Criminal Procedure Code specifically details 11 cases, classified as impediments arising from the lack of cause of the criminal action (art. 10 letters a-e) and impediments arising from the lack of purpose of the criminal action (art. 10 letters f-j). The cases where the criminal action is unfounded are the following: the offense does not exist, the offense does not present the degree of social danger of an offense, the offense was not committed by the accused or the defendant, the offense lacks of one of the constitutive elements of the contravention and there is one of the causes that eliminates the criminal nature of the offense. The second group of cases, those relating to situations in which the criminal action may be exerting only in certain conditions or lacks of object, includes: the prior complaint of the injured person is missing, the authorization or notification of the competent body, or other condition required by the law, necessary for the performance of the criminal action; there have interfered the amnesty, the prescription or the death of the perpetrator or, if the case, the removal of the legal entity when it has the capacity of perpetrator; the complaint has been withdrawn or the parties have reconciled, in the case of the offenses for

which the withdrawn of the complaint or the reconciliation of the parties abolishes the criminal liability; it was disposed the replacement of the criminal liability with the liability which attracts a penalty with an administrative nature, there is a case of non punishment provided by the law; there is a judgment authority.

3. Civil Action

The civil action was defined in the literature of specialty as "all procedural means by which within the civil trial, is added the protection of the civil subject right – through its recognition or realization, if it is violated or challenged, or of legal situations protected by law".[14]

3.1. The Exerting of the Civil Action within the Civil Trial

The Romanian legal scenery is richer, in the sense that, since October 2011 it has new Criminal Procedure Code, which represents a new conception of the legislator on the institutions of law. Thus, the new Civil Code regulates a range of new institutions, such as for example the unification of the legislation on civil liability that includes both the civil tort liability (art. 1349) and the contractual liability (art. 1350), the defining of guilt, the introduction of new liability form, new forms of prejudice, such as prejudices by rebound (art. 1390-1393), prejudice for the loss of chance (art. 1385) etc.

If previous to the occurrence of the new Civil Code, the legal basis of the civil action was considered art. 998-999, nowadays we can talk about art. 1349. In what concerns the cumulative conditions of the civil tort liability, they are referred to in art. 1357 the new Civil Code which provides: the prejudice, the illegal offense, the causal and the guilt report of the perpetrator who has created the prejudice. We have also noted that the new Civil Code, for the determination of the subject that can be liable, in case of civil liability for the prejudice caused by animals (art. 1375) or things (art. 1376) has been defined the concept of legal security in art. 1377 the new Civil Code, which has the following content: "in accordance with the provisions of art. 1375 and 1376, *has the custody of the animal or the thing the owner or the person who, according to a legal provision or an agreement or even only in fact, exerts independently the control and the supervision of the animal and thing and use it for its own.*"

According to art. 19 the Criminal Procedure Code, the injured person who has not been constituted as a civil party within the criminal party, may introduce in the civil court an action to redress the prejudice caused by offense, and according to art. 20, paragraph (1) Criminal Procedure Code, the injured party constituted as civil party in the criminal trial may proceed an action before the civil court, if the criminal court, through a final judgment, has left unresolved the civil action. Also, the legislator expressly regulates the auxiliary exerting of the civil action in case that the claimant is a person without exerting capacity or with a limited exerting capacity, the court being obliged to auxiliary decide on the correction of the prejudice and of the moral prejudice, even if the offended party is not a civil party, according to art. 17, paragraph (3) Criminal Procedure Code.

Another problem that we have identified from the jurisprudence is the one questioning the relation between two types of liability; it refers to the situation where the liability is attracted by a traffic accident. Thus, in a case, the Huedin Court has decided that: "from the analysis of the legal provisions and of the law principles regulated by the Civil Code, the Criminal Procedure Code and the special Law no. 136/1995, issues that, in case of a traffic accident, that have resulted in a prejudice causation, for which it has been concluded a compulsory insurance contract of civil liability, coexists the civil tort liability, based on art. 998 from the Civil Code, of the person who, by

[14] V.M., Ciobanu, "*Consideraţii privind acţiunea civilă şi dreptul la acţiune*" (Considerations on the civil action an don the right of action), in S.C.J. no. 4/1985, p. 330; V.M. Ciobanu, 1996, *quoted work*, p. 250.

his offense, has caused harmful effects, with contractual liability of the insurer, based on the insurance contract, concluded under the conditions regulated by the Law no. 136/1995."[15]

As it has been revealed in the study of the jurisprudence, in case of the civil liability, the court allows the correction of the prejudice, both concerning the material side and the moral side, recognizing both forms of the prejudice, namely the *damnum emergens* and the *lucrum cesans*, of course, under the condition of proving them. Consequently, the applicable legislation of the civil action within the civil trial is the civil one.

3.2. The Exerting of the Civil Action within the Criminal Trial

The Romanian law allows that, within a criminal trial, the civil action may be joined to the criminal action, by way of constitution the offended person as a civil party. The Criminal Procedure Code details in art. 14 the object and the exerting of the civil action and in art. 15 the constitution of the civil party. Thus, the object of the civil action is the civil liability of the defendant, and of the responsible party from the civil point of view; the constitution of civil party can be done during the criminal prosecution but also during the court examination, until de reading of the act of referral. In this situation the civil action is exempt from the stamp duty. Another provision of the Criminal Procedure Code applicable to the subject in question is the one that regulates the situation in which the court has the obligation to call to be answered, the person who suffered an offense through a criminal action, and the responsible person from the civil point of view. "The offended person is put in mind that (...) Whether a material or moral offense has suffered, the person may be constituted as a civil party." As has been shown in the doctrine, for the exerting of the civil action within the civil trial, are required to be *cumulative* fulfilled the following conditions: "the offense needs to produce a material or a moral prejudice; between the committed offense and the claimed offense has to be a casualty relation; the prejudice has to be certain; the prejudice has not been corrected; it has to be a manifestation of will from the offended person in relation to his indemnity."[16]

The exerting of the civil action within the criminal object has been the object of the European Court of Human Rights jurisprudence. Thus, we note that, the optics of the Court concerning the applicability in art. 6, paragraph (1) when it constitutes as a civil party within the criminal trial, in case Perez versus France (Decision on 12.02.2004), for example, is in the sense that: "while the constitution as civil party equates a civil call in a lawsuit, it does not matter that there is not a formal request of correction of the caused prejudice. Even if the criminal procedure concerns the decision of criminal culpability of a person, through the constitution as civil part, the procedure has also a civil element. Consequently, although the Convention does not guarantee the right of any person of starting a criminal procedure, an area where art. 6 is not applicable, art. 6 becomes applicable if it has been started a criminal procedure and the victim of the offense has been constituted as civil party." Previous to the European Court f Human Rights, in the case Matthies Lenzen versus Luxembourg (Decision on 14/06/2001), has stated that: "once the constitution as a civil party within a criminal trial, the victim of an offense becomes party of a civil dispute." Also, on the same occasion, the court has concluded that: "once the constitution as a civil party within a criminal trial, the victim of an offense becomes party of a civil dispute. So that art. 6 is applicable, irrespective of the value of civil indemnities that the party requires. Therefore, the court considers, in this case art. 6 is applicable, even if the claimant has been constituted as civil party with a token amount of 1 franc."

4. The Relation between the Criminal Action and the Civil Action

The Civil Procedure Code in Chapter II, entitled "*the criminal and the civil action",* analyses the two types of actions, also observing the correlations between them. As we have previously mentioned, concerning the civil action which arises as a consequence of committing an offense that may be qualified both as crime and offense that produces civil prejudices, the two areas, the civil and the criminal are intertwined. It should be noted that, according to the legal provisions, the offended person has the right to opt, for the value of his civil claims, of the civil or the criminal way. In the following, we shall present several types of situations that may arise concerning the relation between the two actions.

4.1. The Exerting in Different Moments in Time of the Two Legal Actions

We distinguish two situations in which can be examined whether there is a relation between the two actions, as follows: the criminal action is resolved separately before the civil action, in which case, according to the doctrine[17] (there is no question about the relation between the two actions owing to the fact that the criminal action has been solved). On the contrary, there arises the question of existence of a relation between the two actions in case that the civil action is resolved separately and before the criminal action, according to the afore quoted author. The solving of the relation between the two actions is done according to art. 22 of the Criminal Procedure Code, in the sense that the final decision of the criminal court has authority before the criminal prosecution bodies and of the criminal court, concerning the existence of the offense, of the person who has committed it and of the guilty of this person.[18] The legislator also foresees the conversely situation, in the sense that the final decision of the civil court through which the civil action has been solved, does not have authority before the criminal proceeding body and of the criminal court, concerning the existence of the offense, of the person who has committed it and of the guilty of this person. In other words, the doctrine states: "even if the civil court has finally decided that the offense has not been committed by the defendant, this one may be sent by the prosecutor to the criminal court, a court that may convict him, bearing in mind that he has committed the offense incriminated as criminal offense if this thing arises from the evidence gathered in the criminal case."[19] Consequently, continues the quoted author, "as long as the offended party has appealed in the civil court and there is no criminal trial in which the offense that has caused the prejudiced is incriminated as criminal offense, the civil action has not any particularity; (…) it is addressed to the civil court, according to the civil procedural provisions and it is judged under the conditions of the same procedure." In what concerns the topic we are presenting, another author has stated that: "the authority of the fact judged in the criminal procedure on the civil, represents only the application of the positive effect of the criminal decision regarding the offenses discussed: the existence of the offense, the person who has committed the offense and the guilty of that person. In other words, according to the idea we have shared, in this case, it is also valid the imputability of the verification and jurisdictional debate on the common denominator between the two types of litigation."[20]

If, however, after the party has appealed the civil court, the criminal action is being started and the offended person, exerting his right of option provided in art. 14, paragraph (2), Criminal Procedure Code, understands that it has to follow the civil way for correction of the prejudice

[17] Neagu Ion, *quoted work,* p. 203.

[18] Damaschin M, *quoted work*, p. 139.

[20] Deleanu, I., "*Tratat de procedură civilă*", (*Civil Procedure Treaty),* vol. II, All Beck Publishing Bucharest, 2005, p. 93, Verdeş E.C., *quoted work,* p. 447.

suffered by criminal offense, and not to join the civil action to the criminal action within the criminal trial, the provisions of art. 19, paragraph (2), become conflicting and the trial in civil court is suspended.[21] The quoted author also states that: "after the criminal court has decided through a final judgment in the criminal trial, at the request at the parties the civil trial is resumed and the civil action is solved, within the limits of the compliance with the principle inserted into the text of art. 22, paragraph (1) Criminal Procedure Code". Moreover, through these provisions, the civil court is practically required to solve the case so that the solution is not in contradiction with the criminal judgment, concerning the existence of the offense, of the person who has committed the offense and of the guilty[22] of that person.

4.2. The Simultaneous Exerting of the Criminal Action and of the Civil Action:
4.2.1. Within the Same Procedural Frame

In this case, the incident texts from the Criminal Code are: art. 346, 347 and they refer to the situation in which the two actions are concurrently performed before the same courts or in two different courts. Thus, according to art. 346, entitled "*the solving of the civil action*", which concerns the situation in which the two actions are performed within the criminal trial, the court is required to decide also on the civil action, the cases expressly provided by the legislator refer to: conviction, exoneration, termination of the criminal trial. The legislator specifies when the court may call upon the correction of material and moral damage, namely: when the exoneration has been pronounced for the case provided in art. 10, paragraph (1), letter b^1, or because the court has observed the existence of a case that eliminates the criminal nature of the offense because one of the constitutive elements of the offense is missing. Civil indemnifies can not be awarded in the case that the exoneration has been pronounced owing to the fact that the alleged offense does not exist or has not been committed by the defendant. There can also be the case in which the court does not solve the civil action, case regulated by art. 346 paragraph (4), namely: when the court pronounces the exoneration for the case provided in art. 10, paragraph (1), letter b) or when the court pronounces the termination of the criminal trial for any of the cases provided in art. 10, paragraph (1), letter f) and j), but also in case of withdrawal of the prior complaint.

Another hypothesis regulated by the legislator concerns the civil action dissociating and the postponement of its judgment in another session, in case that the solving of the civil claims would cause the delay of the criminal action solving, according to art. 347 and under art 348^1, unless the constitution of the civil party, the court decides on the correction of the material and moral damage in the cases provided by art. 17 (the auxiliary exerting of the civil action) and in other cases only considering the reversion, the eradication of a register and the restoration of the situation previous to the offense. Consequently, in the doctrine, the legal action has been defined in terms of the two actions, the criminal and the civil one, as follows: "the legal mean by which the law conflict arisen from committing an offense is submitted before the judicial bodies, in order to determine the criminal and the civil liability of the guilty person and to apply the state coercion on that person, and the person's obligation to correct the prejudice committed by criminal offense, when the case".[23]

According to the High Court of Cassation and Justice, "the civil tort liability is governed by the principle of the full correction of the material and moral prejudice, caused by the offense committed, and therefore, the value of the indemnities can not be limited according to the payment possibilities of the defendant".[24] On the other hand, in the layout of the new Criminal Procedure

[21] Verdeş E.C., *quoted work,* p. 449.
[22] The same.
[23] Mateuţ, Gh., „*Tratat de procedură penală. Parte generală", (Criminal Procedure Treaty. The General Part).* C.H.. Beck Publishing, Bucharest 2007, p. 536.
[24] The High Court of Cassation and Justice, The Criminal Department, Decision no. 2617/July 9th 2009.

Code[25] is expressly provided that: "the civil action is solved within the criminal trial, if it is not overdrawn the reasonable duration of the trial, art. 19, paragraph (4)", therefore observing the tendency of the Romanian legislator to join the European legislator conception. Another novelty element in the new Criminal Procedure Code refers to: the waiver of the civil claims, the transaction, mediation and recognition of the civil claims by the defendant, these representing only some of the institutions regulated by this act.

4.2.2. Within Different Procedural Frame

Another situation existing in practice which may question the relation between the two actions refer to the situation in which the two actions are simultaneously, separately and in different courts regulated. In this sense, art. 19, paragraph (2) shows that the judgment before the civil court is suspended until the final resolution of the criminal case, this rule being known as: "the criminal action holds back the civil action".[26] The reason of this rule is to grant to the criminal court a complete independence in solving the problems submitted for judgment, in investigating and deciding without being influenced by what has been established before in the Civil.[27] In the Civil art. 244, paragraph (1), point 2, Criminal Procedure Code, provides a case of legal optional adjournment: when there appear the clues of a criminal offense, which determination would have a decisive effect on the decision to be given.

In what concerns the aforementioned articles, from the Civil Procedure Code and the Criminal Procedure Code, the Constitutional Court has noted in a decision (Decision no. 262/2002) that between the two texts, there is no identity from the point of view of the norm nature. Therefore, the court estimates that while the text from the criminal procedure art. 19, paragraph (2) includes a mandatory norm that requires the suspension of the civil case until definitely solving the criminal action, the text from the civil procedure – art. 244, paragraph (1) point 2 contains an optional provision, the court may suspend the solving of the civil action until the date of a final judgment in the criminal trial.

As stated in the doctrine, "in the content of art. 244, paragraph (1), point 2, Civil Procedure Code, there are three possible hypotheses: the civil and the criminal court have been notified at the same time with the solving of the civil action, respectively of the criminal action; before the performance of the civil action, the offended person has appealed to the civil court, prior to this, the criminal action has started; in what concerns the civil side, the person has chosen to promote a separate action after it has started the performance of the criminal action or has given up the capacity of civil party in the criminal trial and has formulated a separate action before the civil court, as enable the provisions of art. 19 Criminal Procedure Code or it has been decided the disjunction of the civil action by the criminal action, observing that the solving together the two actions would determine the delay of the judgment in the criminal case".[28] The practice of the Supreme Court is in the sense that, according to art. 224, paragraph (1), point 2, Civil Procedure Code, the court may suspend the judgment of the case if it is proved that the notification of the criminal proceeding body has been made for an offense that would have a direct effect on the solving of the pendent civil action, and not when simple assumptions are presented, without having been ordered the prosecution.[29] Given that, from the material point of view, for both actions the justification is the offense, it is natural that the criminal action to take precedence over the civil action, and the final judgment of the criminal court

[28] Verdeş E.C., *quoted work,* p. 438-439.

[29] The Supreme Court, The Administrative Disputed Claims Office, decision no. 392/1996.

to have authority before the civil court.[30] In the same sense, there is also another opinion, according to which, "the criminal action takes precedence over the civil action, the unique material cause of the two actions is the commitment of the offense, and on the other hand, the solving of the civil action is subject to the solving of the criminal case in what concerns the existence of the offense, of the person who has committed the offense an of the person's guilty."[31]

As stated in the doctrine, "if the civil trial continues and there is pronounced a final irrevocable judgment which is in contradiction with the decision pronounced in the civil action, it has to be submitted the solution of promoting a new civil action under the findings made in the criminal judgment."[32]

Conclusions

A very current problem discussed both in the doctrine and in the jurisprudence refers to the applicability of the rule "the criminal action holds back the civil action", situation regulated by the provisions of art. 22 Criminal Procedure Code namely, what happens when there is not possible to proceed the criminal trial from different reasons and when subsequently there will be performed a criminal trial, the civil court invested with authority concerning the civil tort liability for the same illegal act, to have irrevocably solved the civil action. The doctrine has also identified the answer to the question: "does the civil judgment have any effect on the criminal trial; the answer is being given by the limits of art. 22, paragraph (2) Civil Procedure Code."[33] Also in the specialty literature of law has been identified another situation concerning the following: what happens when the criminal court pronounces a judgment that is in contradiction with the civil judgment pronounced in what concerns the existence of the offense, the person who has committed the offense and the guilty of that person, owing to the fact that the criminal court is not entitled to cancel the judgment pronounced by the civil court. In this respect, the literature of specialty states that: "the contradictory of the two judgments can be solved at the request of the interested party, by promoting before the civil court an extraordinary way of appeal through a revision based on the provisions of art. 323 point 7, the Civil Procedure Code".[34]

Consequently, in this study we have tried to present the subtleties of both action, civil and criminal, promoted separately or together, both within the criminal trial, but also within the different procedural frame. The jurisprudence is the one that has observed the difficulties encountered in each concrete case, so that, at this point, we observe the significant efforts of the national legislator for updating the Codes, Civil, Criminal and Criminal Procedure. Not least, we note the excellent contribution of the European Court of Human Rights jurisprudence, in what concerns the topic, in fact, being the one that, in the recent years, has established itself as an active presence, likely to inspire the national judge.

THEORETICAL AND PRACTICAL CONCEPTS REGARDING THE EXECUTION OF COMPLEMENTARY PUNISHMENTS APPLIED TO NATURAL PERSONS WITHIN THE REGULATION OF THE NEW CRIMINAL LEGISLATION

CRISTINA DANIELA MUNTEANU *

„The criminal law without criminal procedure is like a knife without a handle,
And the procedure without criminal law is like a handle without a blade"
MOMMSEN, Droit pénal des Romains

Abstract
In this study we aim at analyzing the complementary punishments applied to natural persons as regulated by the new criminal legislation, our motivation being the numerous amendments brought by the new criminal legislation, respectively the increase of the number of complementary punishments, the change of their enforcement starting moment and such other changes that we intend to debate in this study. Considering the changes brought to the starting moment of the complementary punishment enforcement, we focused mainly on the enforcement and execution of complementary punishments applied to natural persons, exemplifying the execution manner of each punishment, respectively: in the context of applying the complementary punishment regarding the forbiddance of rights, military degradation or the newest complementary punishment to be applied to natural persons, the publishing of the judgment of conviction. The amendments to the starting moment of the complementary punishment enforcement were brought as a result of introducing the punishment by fine and criminal punishments which may be executed on probation, in addition to which a complementary punishment may be applied. Regarding the enforcement of judgments, we have to mention the fact that it constitutes an autonomous stage of the criminal trial, governed by the regulations provided under the Criminal Procedure Act. Nevertheless, not all activities related to the enforcement of judgments are included in this stage, but only the ones triggering the start of the judgment enforcement. Such aspect imposes itself, taking into consideration the distinction between the enforcement of a judgment and the actual execution of the punishment. Regarding the effective execution of a punishment, activity performed outside the criminal trial, it is subordinated, on one hand, to the regulations provided under the criminal law, and on the other hand, to the regulations regarding the execution of punishments and of measures settled by the legal authorities during the criminal trial.

Keywords: *complementary punishments, new regulations, the execution of complementary punishments, forbiddance of rights, publishing of the judgment of conviction*

Introduction

Although the current Criminal Code, adopted through Law no. 15/1968 and effective as of the 1st of January, 1969 was drawn up by the most remarkable doctrinaires of the time (among whom, professor Vintilă Dongoroz, who had a decisive contribution), who instituted significant legal dogmas, fact proven through the constancy of the Criminal Code throughout time, starting with 1990 there was a constant preoccupation for removing the regulations that were incompatible with the requirements under the rule of law, and the changes operated throughout time were not - nor could they be – qualified to determine a structural change in the Romanian criminal regulation.

The criminal sanction regime regulated by the Criminal Code in 1968, submitted to frequent legislative interventions on different institutions, lead to a non-unitary, incoherent enforcement and

* Assistant Lecturer, PhD candidate, "Nicolae Titulescu" University of Bucharest (email: av.munteanu_cristina@yahoo.com).

interpretation of the criminal law, which had repercussions over the efficiency and finality of the justice act[1].

Although the punishment categories in the new regulation are the same as in the current Criminal Code, a systematization is made, by using as criteria the order in which such punishments, once applied, are to be executed. This is the reason according to which, as a result of a natural classification of punishments, in relation to their enforcement and execution moment, the primary punishments, the accessory punishments and finally, the complementary punishments are initially incriminated.

The enlargement of the complementary punishments enforcement area, from 5 to 15 complementary punishments, proves the orientation of the criminal policy towards an accentuate individualization of punishments, by adding complementary punishments to the primary punishments, which are relevant in what concerns the type of punishment, the seriousness of the crime committed, the actual circumstances in which the criminal action was committed, but also the criminal, with their level of responsibility, understanding, education and training, previous experience in crime, or affiliation to the legal culture of a different country.

By enlarging the content of such punishment, a better appropriateness of the punishment, in relation to the actual circumstances of the case is accomplished, therefore substantially increasing its effectiveness. Part of the sanctions which, in the Criminal Code from 1968 were found in the safety measures material, were included in the content of the complementary punishment, respectively the interdiction of staying in various localities, the expulsion of foreigners and the interdiction of returning to the family home for a determined period, whereas through their nature, they have a strong punitive pattern, having the main purpose of restricting the freedom of movement and only indirectly, due to this effect, the threat removal and the prevention of a new crime can be achieved. The extension of the enforcement area is also given by the possibility of enacting such measure, both in addition to the punishment of imprisonment, irrespective of the time, and in addition to the punishment by fine.

The elimination of the decision regarding a punishment of at least two years, for the enforcement of a complementary punishment, shall make the criminal law more flexible and more adaptable, therefore it shall allow the thorough evaluation of the type, seriousness, circumstances of the action and of the person committing the crime.

The amendments to the starting moment of the complementary punishment enforcement were brought as a result of introducing the punishment by fine and criminal punishments which may be executed on probation, in addition to which a complementary punishment may be applied. Therefore, if the current Criminal Code conditions the existence of a sentence with the imprisonment for 2 years, in order to enforce the complementary punishment, in case of a fine or of suspension of punishment execution under supervision, the complementary punishment regarding the forbiddance of rights shall commence with the final judgment of conviction moment.

Regarding the enforcement of judgments, we have to mention the fact that it constitutes an autonomous stage of the criminal trial, governed by the regulations provided under the Criminal Procedure Act. Nevertheless, not all activities related to the enforcement of judgments are included in this stage, but only the ones triggering the start of the judgment enforcement. Such aspect imposes itself, taking into consideration the distinction between the enforcement of a judgment and the proper execution of the punishment.

Regarding the actual execution of a punishment, activity performed outside the criminal trial, it is subordinated, on one hand, to the regulations provided under the criminal law, and on the other hand, to the regulations regarding the execution of punishments and of measures settled by the legal authorities during the criminal trial. Also, within the activity of enforcement of criminal and judicial fines, the rules provided in the financial law are applicable.

[1] Elaboration of arguments, of the new Criminal Procedure Act.

1. The enforcement regime of the complementary punishment regarding the forbiddance of certain rights

The new legislative regulation brings two new moments from which the complementary punishment regarding the forbiddance of rights starts: from the final judgment of conviction to punishment by fine and from the final judgment of conviction through which the suspension of the punishment execution under supervision has been decided [art. 68 paragraph (1) letters a) and b) from the Criminal Code].

Therefore, the new Criminal Code provides that the execution of the forbiddance of rights punishment starts in three different moments during the trial: from the final judgment of conviction to punishment by fine; from the final judgment of conviction, through which the suspension of the punishment execution under supervision was decided; after executing the imprisonment punishment, after absolute pardon or pardon of the remaining sentence, after completing the limitation term for the punishment execution or after the expiry of the supervision term for probation.

The first starting moment of the complementary punishment enforcement is the **final judgment to punishment by fine.** In case of a judgment to the punishment by fine, the complementary punishment regarding the forbiddance of rights shall be enforceable starting with the final judgment of conviction. In this case, the convict shall be forbidden to exercise such rights immediately after the final judgment of conviction, although the primary punishment was not executed yet or shall be executed in time, through the deferred payment of an amount constituting the scope of the criminal fine. Such provision is justified through the type of primary punishment. The convict, by not being deprived of freedom, would have the possibility to move and perform any activity, to exercise a right, after all, including those for which the temporary restriction would be necessary[2].

The second starting moment of the complementary punishment enforcement is in the **context of a final judgment of conviction deciding the suspension of the punishment execution under supervision**. The suspension of the punishment execution under supervision interferes when the primary punishment is considered to have been executed, but not in the moment of the rehabilitation by right, as provided in the current Criminal Code. This regulation is justified in the context in which, until the repeal of the suspension of the punishment execution under supervision, the convict has already executed part of the complementary punishment regarding the forbiddance of rights. After executing the punishment of imprisonment, applied as a consequence of replacing the fine or after repealing the suspension of the punishment execution, the convict shall continue the execution of complementary punishments, out of which the duration of the already executed punishment shall be deducted. If the repeal of the suspension of punishment execution under supervision and the replacement of a fine with imprisonment shall be decided, for any other reasons than for committing a new crime, the part of the complementary punishment regarding the forbiddance of rights, which was not executed at the recall or replacement date, shall be executed after the execution of the punishment of imprisonment.

The third starting moment of the complementary punishment is after the execution of the punishment of imprisonment, after absolute pardon or pardon of the rest of the punishment, after completing the punishment execution limitation term or after the expiry of the probation supervision term. In this case, the execution starts after the primary punishment's execution or after the primary punishment is considered to have been executed.

[2] G. Antoniu and collaborators – *Explicații preliminare ale noului Cod penal* (Preliminary explanations of the new Criminal Code)– vol. II, "Universul Juridic" Publisher, Bucharest, 2011, pg. 64, Commentary Senior Lecturer PhD. Cristian Mitrache.

For the first time the legal text expressly provides that, under the complementary punishments' execution section, the fact that its execution also starts after the expiry of the probation supervision term, which was only implicit until now.

Such starting moment of the complementary punishments' execution is a natural moment, considering the nature and content of the complementary punishments. In the situation in which the complementary punishments would be executed during the execution of the primary punishment applied, than it would substitute itself with the accessory punishments, which have the same content, respectively the suspension of certain rights, but such punishments are executed at the moment of the final judgment of conviction and until the primary punishment regarding the depriving of liberty has been executed or considered to be executed [art. 65 paragraph (3) new Criminal Code].

Pursuant to art. 160 from the new Criminal Code, the pardon results in the total or partial elimination of the punishment execution or in its commutation to an easier one, but pardon does not affect the complementary punishments and the educative, non depriving of liberty measures, unless otherwise provided in the act of grace. For this purpose, Law no. 546/2002[3] on pardon and on the pardon grant procedure provides, under art. 5, that in the case of a legal entity, both the primary punishment and the complementary punishments provided in art.139 and 140 from the new Criminal Code can be granted pardon. The execution of complementary punishments shall be made after the absolute pardon of the punishment or in case of partial pardon, after the execution of the rest of the punishment to be executed.

The execution of the complementary punishment shall start after the completion of the limitation term for punishment execution, as during the entire limitation term for the punishment's execution the convict is submitted to the execution of accessory punishments. The execution of complementary punishments until the completion of the limitation term for the punishment execution would imply the execution, at the same time, of punishments having the same scope, namely the suspension of certain rights, their overlap leading to the impossibility of a parallel enforcement.

The execution of complementary punishments after the expiry of the probation supervision term is natural, both the effects of the primary punishment and the effects of the accessory punishment operating until that term. The probation supervision term is regulated by art. 106 from the new Criminal Code, which stipulated that, in the event that the convict did not commit a new crime until the expiry of the supervision term, if the probation annulment was not decided and no annulment cause was discovered, the punishment shall be considered to be executed.

In what concerns the complementary punishment's enforcement, together with the primary or accessory punishment, the law provides certain requirements that need to be fulfilled.

For this purpose, when there are extenuating circumstances, the complementary punishment, privative of rights, provided by law for the committed crime may be eliminated.

In case of a second offense, in case of multiple offenses and in other situations in which resultant punishments are applied, the enforcement of complementary punishments is performed based on the offenses constituting the plurality and the punishments settled for each offense. In case of a conviction for multiple offenses, the enforcement of the complementary punishment regarding the forbiddance of rights is performed, when applicable, for each offense, subsequently accompanying each primary punishment settled by the court[4]. In jurisprudence, it was shown[5] that the proceeding of attaching the complementary punishment regarding the forbiddance of rights only to the resulted punishments, which are a result of conflating the settled individual punishments,

[3] Published in the Official Gazette of Romania (Monitorul Oficial al României), Part I, no. 755 from October 16, 2002.

[4] M. A. Hotca – *Drept penal. Partea generală* (Criminal Law. General part) –C.H. Beck Publisher, Bucharest, 2007, pg. 581.

[5] Bucharest Court, 1st Criminal Section, Criminal sentence no. 410/1991, site Indaco lege.

pursuant to art. 33 and 34 letter a) from the Criminal Code, is wrong and the punishments need to be settled for each offense in part.

Art. 45 from the new Criminal Code stipulates that, if for one of the crimes committed there was also settled a complementary punishment, such punishment shall be enforceable together with the primary punishment. When several complementary punishments of different nature or even of the same nature, but with different content have been settled, such punishments shall be enforceable together with the primary punishment. If more complementary punishments of the same nature, with the same content have been settled:

a) in case of multiple offenses or in case of intermediate plurality, the hardest one shall be enforced;

b) in case of a second offense, the unexecuted part from the previous complementary punishment shall be added to the punishment settled for the new offense.

In case of successive convictions for multiple offenses, the part of the complementary punishment that was executed until the date of conflating the primary punishments shall be deducted from the term of the complementary punishment applied in addition to the resulted punishment.

The sanctioning treatment of multiple offenses shall be enforceable only when at least one of the offenses in the plurality structure was committed under the new law, even if for the other offenses the punishment has been settled according to the previous, more favorable law.

Regarding certain factors (foreign citizens, persons without children, persons not holding weaponry, etc.), the enforcement of such complementary punishment is useless, as they do not own the exercise of such rights, therefore they cannot execute the complementary punishment, and the enforced punishment does not fulfill its preventive and sanctioning role. We can offer as an example the case of persons without children, whose parental rights were suspended.

The conditioned suspension of the primary punishment does not wave the court's obligation to enforce the complementary punishment regarding the forbiddance of rights whenever provided by law for the committed crime.

In the event that the conviction of the defendant to life imprisonment was decided, the enforcement of the complementary punishment regarding the forbiddance of rights is mandatory if provided by law, as in some cases, the person convicted to such punishment may be set on probation or the punishment of life imprisonment may be replaced with incarceration[6].

Moreover, in case of amnesty after conviction, the criminal responsibility being waved, in consequence it will also waive the effects of the conviction. We consider this to be the only case in which the time of the complementary punishment regarding the suspension of certain rights ceases earlier than the time settled by law, namely for a period between one and 5 years.

As a transition situation, we consider that in case of succession of criminal laws, which interfered until the final sentence, the accessory and complementary punishments shall be applied according to the law that was identified as favorable in relation to the crime committed.

When the law provides the **forbiddance of the right of occupying a public position**, the court is obliged to pronounce the forbiddance of rights provided in paragraph (1) letters a) and b), namely the right of being chosen as public authority or in any other public offices and the right to occupy a position involving the exercise of the state authority. The forbiddance of the latter rights shall be cumulatively disposed.

The complementary punishment regarding the interdiction of the right of a foreign person to stay on the Romanian territory shall not be decided when there are grounded reasons to

---

[6] Luca A. – *Aplicarea pedepsei complimentare a interzicerii unor drepturi atunci când s-a aplicat pedeapsa principală a detenţiunii pe viaţă (Enforcement of the complementary punishment regarding the forbiddance of rights when the primary punishment of life imprisonment was enforced)*, Revista Pro-Lege nr. 3/1998, pag. 177; Lupaşcu R. – *Aplicarea pedepsei complimentare a interzicerii unor drepturi atunci când s-a aplicat pedeapsa principală a detenţiunii pe viaţă*, Revista Pro-Lege nr. 3/1998, pag. 179.

believe that the life of the expulsed person is in jeopardy or that such person shall be submitted to torture or to other inhumane or degrading treatments in the state where it is to be expulsed.

The complementary punishment's enforcement procedure regarding the interdiction of the right of a foreigner to stay on the Romanian territory is regulated under art. 563 from the new Criminal Procedure Act.

In the context in which, through the sentence of imprisonment, the complementary punishment regarding the interdiction of the right of a foreigner to stay on the Romanian territory is also applied, in the writ of execution of the punishment of imprisonment it shall be mentioned that on discharge, the convict shall be turned in to the police authorities, which shall proceed to the convict's removal from the Romanian territory.

The Government Emergency Ordinance no. 102/2005[7] regarding the free movement of citizens from the member states of the European Union and from the European Economic Area, on the Romanian territory provides, under art. 30, that in case of family members who are not citizens of the European Union or of a state in the European Economic Area, against whom an accessory punishment has been decided, respectively a complementary punishment regarding the interdiction of the right of a foreigner to stay on the Romanian territory pursuant to art. 65 paragraph (2) letter c), respectively art. 66 paragraph (1) letter c) from the new Criminal Code, the provisions of the Government Emergency Ordinance no. 194/2002[8], as republished, with its subsequent additions and amendments, regarding the taking into public custody and, as the case may be, the tolerance of remaining on the Romanian territory, shall be enforced accordingly.

If the complementary punishment does not join the punishment of imprisonment, the communication thereof shall be made to the police authority, immediately after the judgment was declared final.

Regarding the enforcement of the punishment of interdiction of a foreigner to stay on the Romanian territory, the police authority may enter the domicile or residence of a person without their consent, as well as the headquarters of a legal entity without the consent of its legal representative.

If the person against which the punishment regarding the interdiction of the right to stay on the Romanian territory is not found, the police authority shall record such fact in a protocol and it shall take measures for the prosecution, as well as for detaining orders at the border crossing points. A copy of the protocol shall be sent to the enforcement court.

In the event that probation was decided, the interdiction of the right of a foreigner to stay on the Romanian territory shall be executed on discharge. Therefore, art. 68 paragraph (2) from the new Criminal Code provides an exception regarding the starting moment of the complementary punishment's enforcement in the event that probation was decided. For this purpose, during probation, the convict shall be in the process of executing the accessory punishment having as scope the forbiddance of certain rights, except for the suspension of the right to stay on the Romanian territory, and the convict shall also be in the process of executing the complementary punishment having as scope the interdiction of the right of a foreigner to stay on the Romanian territory[9].

The interdiction of the right of a foreigner to stay on the Romanian territory shall not apply in case the suspension of the punishment execution under supervision was decided.

Also, in case of life imprisonment, punishment for which the convict can be set on probation, the execution of complementary punishments won't be necessary, as the person shall be expulsed from the country immediately.

---

[7] Published in the Official Gazette of Romania (Monitorul Oficial al României), Part I, no. 646 as of July 21, 2005 with its additions and amendments, through Law no. 260/2005, with its subsequent additions and amendments.

[8] Republished in the Official Gazette, Part I no. 421 as of 05/06/2008 and updated on 31/07/2011.

[9] G. Antoniu and collaborators – *Explicații preliminare ale noului Cod penal* (Preliminary explanations of the new Criminal Code) – vol. II, Ed. Universul Juridic, Bucharest, 2011, pg. 66, Comment Senior Lecturer PhD. Cristian Mitrache.

For an accurate correlation of the Criminal Code provisions to those of the extra-criminal laws containing criminal provisions, the Government's Emergency Ordinance no. 194/2002[10] regarding the foreign citizens' status in Romania, as subsequently supplemented, gets modified by the insertion of a new article, 143^1, which stipulates that 'In the content of the present ordinance, the reference to the expulsion safety measure is deemed to be made for the accessory and complementary punishment, applied in pursuance of the provisions of art. 65, par. (2), section c), or of art. 66, par. (1), section c), of the Criminal Code.'.

Pursuant to art. 562 of the new Criminal Procedure Code, the punishment of forbidding certain rights to be exercised is applied by the enforcing court's serving a copy of the ruling enacting stipulations to the Local Council in whose area is located the convict's residence and to the organism that monitors the exercise of those rights.

Upon receiving the copy of the enacting stipulations from the decision by which the complementary punishment of forbidding one of the rights foreseen by art. 66, sections a), d) and e), of the new Criminal Code will have been enforced, the Local Council shall notify it to the competent services, for recording purposes. Any organism invited to perform an action that involves the respective person's exercising one of the rights foreseen at art. 66 of the new Criminal Code shall ask that person to issue an affidavit according to which he/she has not been inferred any conviction by which the exercise of that right was restricted. Furthermore, if deemed necessary, the competent organism shall request information from the institution responsible for keeping the records of the convicted persons [11].

For the execution of the complementary punishment, the conviction decision needs to be final. The convict shall accomplish the obligations imposed on for doing or for refraining from doing something. The execution of the complementary punishment supposes a duration of the punishment execution, of the obligation set up for the convict, which means that the punishment execution begins at a certain moment and ends at another certain moment [12].

The complementary punishment is enforced according to a certain procedure, by the organisms specifically assigned by the law, namely by the enforcing organisms, and the administrative organisms shall monitor their enforcement.

In this context, in the event that the convict was forbidden the exercise of the rights stipulated by art. 66, sections a), b) and c), of the new Criminal Code, the decision excerpt shall be submitted to the Local Council in whose area is located the convict's residence or to the People Records Community Public Department, so that these institutions could make sure that the electoral lists do not contain candidates that have been forbidden those rights or that those persons are not included on the specially drafted lists for the people who will have been forbidden the exercise of those rights. In addition, a copy of the final conviction decision excerpt shall also be notified to the Criminal Records Department, for its being able to make the necessary specifications, so that, in case that the convict wishes to enjoy the right of being elected to be part of the public authorities or in any other public positions or to hold offices that involve the exercise of the State authority, the conviction could appear in his/her criminal record certificate upon the candidature submission.

In the event that the convict was forbidden the exercise of the right foreseen by art. 66, section g), of the new Criminal Code, namely the right to hold offices, to exercise the profession or the trade or to carry out the activity that he/she has used for perpetrating the felony, the decision excerpt shall be submitted both to the Local Council in whose area is located the convict's residence and to the institution that monitors the profession, trade or activity exercise. For instance, in case that the

[10] As republished in Romania's Official Journal – Part I, no. 421 from June 5th, 2008.

[11] Pascu I. – *Criminal Law. General Part* – 2nd edition – Hamangiu publishing house, Bucharest, 2009, page 444.

[12] N. Volonciu, R. Moroşanu – *Commented Criminal Procedure Code* – Hamangiu publishing house, Bucharest, p. 44.

prohibition of this right was decided for a solicitor, the decision excerpt shall be notified to the bar whose list contains the name of that solicitor, with an aim to strike it off from the solicitor profession. Pursuant to art. 58, section d), of the Solicitor Profession Status, the solicitor status ceases where the solicitor was finally convicted for a deed foreseen by the criminal law and that renders him/her unworthy to be a solicitor, in view of the law.

In case of forbidding the convicted person to exercise the parental rights and the right to be a tutor or a trustee, the decision excerpt shall be submitted to the Tutorial Authority department within the town hall or city hall in whose area is located the convict's residence.

The obligation execution, if performed according to the law, shall void the obligation set up by the sentencing decision.

We think that the provisions of art. 562 of the new Criminal Procedure Code have been righteously modified by the Law concerning the enforcement of the Criminal Procedure Code, from the viewpoint of the stipulation according to which thepunishment of forbidding the exercise of certain rights shall be applied by the enforcing court's appointed judge's serving a copy of the ruling enacting stipulations, subject to the rights whose exercise will have been forbidden, **to the public law or private law legal entity authorised to monitor the exercise of that respective right.**

In this way, the legislative body of the new Criminal Procedure Code included in the 'public law or private law legal entity authorised to monitor the exercise of that respective right' expression the totality of the public law or private law legal entities compelled to monitor the exercise of the right forbidden by the final conviction decision.

The Civil Code stipulates at art. 188 that the legal entities include the entities foreseen by the law, as well as any other legally incorporated organisations that, even though not declared as legal entities by the law, are independently organised and have their own patrimonial assets meant to reach a certain licit and moral goal, pursuant to the general interest.

The public law legal entities are incorporated by the law. As an exception thereof, public law legal entities may also be incorporated by virtue of documents issued by the central or local public administration or by some other means foreseen by the law.

The following can be included in this category : the Local Council, the People Records Community Public Department, the Criminal Records Department, the Tutorial Authority etc.

By 'private law legal entities', the new Civil Code defines at art. 190 any private law legal entities that can be freely incorporated in one of the forms foreseen by the law. This category may include any private law entity incorporated under the law and authorised to monitor the execution of a court order.

2. The manner of executing the complementary punishment of the military rank loss

Military rank loss is the complementary punishment consisting in the loss of the military rank and of the right to wear the uniform by the active military, in reserve or withdrawn, convicted for having perpetrated a felony punished by a freedom-depriving punishment, as per the legal provisions.

This punishment has got a restricted application from the standpoint of the perpetrator, the law naturally limiting the enforcement of this punishment only in case of military and reservists.

The enforcement of the military rank loss complementary punishment takes place in case of perpetrating highly serious criminal deeds.

The military rank loss punishment is a right-depriving one, which supposes the loss of the right to the rank and to the uniform, as compared to the complementary punishment of prohibiting certain rights, which is a right-restrictive punishment consisting in a suspension, in a restriction of exercising certain rights for a given period of time (from 1 to 5 years), but not in their loss. In this regard, the convict is withheld from enjoying certain rights expressly foreseen by the law.

From the point of view of its mechanism of execution], the military rank loss punishment has got a negative content, the execution of this punishment being materialised in a passive attitude imposed on to the convict by the law, in the sense that this one is not forced to do something ; on the contrary, he is withheld from certain rights [13].

Aiming at depriving from certain specific civic rights, this punishment may only be enforced to the persons that are exercising these rights upon conviction [14], namely to hired active military or to reservists.

The military rank loss punishment, even though enforceable from the moment when the sentencing decision remains final, has got an absolutely depriving character, as its duration is undetermined. The Law 80/1995[15] regarding the military status, stipulates at art. 71-72 the possibility for the military rank loss complementary punishment to be annulled by another court order that has ruled acquittal or by which this punishment is no longer enforceable ; in this case there is the possibility of regaining the rank and of re-booking the military in the records. Hence we can notice that the effect of the military rank loss and of the loss of the right to wear the uniform is applied all throughout one's life.

What is more, the military who is active, in reserve or withdrawn could not lose his military rank and the right to wear the uniform all throughout his life, as an effect of the military rank loss complementary punishment enforcement. Thus, in case of pardon, reprieve or rehabilitation after conviction, the convict may be relieved the restrictions entailed from the military rank loss enforcement. Pardon, which brings forth the relief of the criminal responsibility, will also relieve the other consequences of the conviction, including those of the military rank loss complementary punishment. In principle, reprieve does not have any effects on the complementary penalties, however the reprieve document may foresee the elimination of the complementary penalties effects [16]. Pursuant to art. 160, par. (2), of the new Criminal Code, reprieve does not have any effects on the complementary penalties, save where decided so in the reprieve document.

Given that the Court cannot separate the content of the punishment upon its enforcement, the military rank loss is a punishment in character and has an irreductible content, the rights foreseen in the legal text constituting an indivisible complex of rights.

Nonetheless we think that the perpetual effect of the military rank loss can only be kept in mind only as far as the loss of the right to military pensions is concerned, which lasts all throughout one's life unless this punishment gets rescinded by a final irrevocable court order.

In pursuance of art. 69, par. (2), of the new Criminal Code, military rank loss is mandatorily applied when this complementary punishment is enforced alongside the main punishment with imprisonment longer than 10 years or life detention.

The elective enforcement - art. 69, par. (3), of the new Criminal Code - can be decided by the Court in case of the military convicts that have wilfully perpetrated the felony, the main punishment being at least 5 years and 10 years at the most. The elective character of this enforcement manner is entailed *ex lege*, the text stipulating that the military rank loss 'may be applied'.

Please note that unlike the mandatory military rank loss, which is only conditioned by the quality of the felony subject and by the amount or the nature of the main punishment set up, the elective rank loss is conditioned by the subject's quality, by the nature of the felony and by the amount of the freedom-depriving main punishment established by the judge. In this regard, the

following imperative conditions should be met : the enforcement of a freedom-depriving punishment set up by the Court and its wilful perpetration.

The military rank loss complementary punishment is applied irrespective of the existence or non-existence of a connection between the felony and the military status and irrespective of whe-ther the perpetrator had or not the status of military on the felony perpetration date, the important thing being that the subject should have the status of a military when the conviction verdict is ruled. Unfortunately, in the case law there have been many contrary solutions where this punishment was automatically enforced in addition to the punishment of imprisonment longer than 10 years, irrespective whether the defendant has had the status of active military or of reservist or not [17].

Being conditioned not by the main punishment foreseen by the law, but by the main punishment established by the Court, military rank loss has not been specified in the special incrimination norms, as the interdiction of certain rights was.

The military rank loss complementary punishment may be ruled both by the military Courts and by the civil ones (when judging offences perpetrated by a convict prior to this one's having acquired the status of military).

Being conditioned by the amount of the main punishment to which is added, the legislative body did not also foresee military rank loss on account of the various offences whose perpetration brings in the enforcement of this punishment.

It should be noted that both the military rank loss and the prohibition of certain rights exercise complete the main punishment when the Court assesses the necessity of unifying the direct repression, which functions cumulatively with the main punishment, several complementary penalties being sometimes enforced for the same felony (for instance, in case of a real group of offences, the complementary penalties having a different nature or even the same nature but a different content, are applied alongside the freedom-depriving punishment that the convict is to execute). Finally, the complementary penalties, being criminal sanctions like the main penalties, perform the function of general prevention and of special prevention – the latter one to a larger extent – the convict that executes the complementary punishment being put in the position of no longer perpetrating any other criminal offence.

Unlike the complementary punishment of prohibiting the exercise of certain rights, the military rank loss punishment does not have a specific duration, as its execution takes place forthwith and immediately after the sentencing decision becomes final, the loss of the military rank and of the right to wear the uniform operating right from the moment when the sentencing decision acquires the power of a judged issue, which is a situation that appears to be an exception from the rule, according to which the complementary penalties come into action after the execution of the main freedom-depriving punishment to which it is added comes to an end.

Pursuant to art. 564 of the new Criminal Procedure Code, the military rank loss punishment is inferred by the enforcing Court's serving a copy of the ruling to the commander of the military facility to which the convicted person had belonged or to the commander of the military centre in whose area is located the convict's residence, with an aim to strike him off from the military records.

The law for enforcing the new Criminal Procedure Code modifies the provisions of art. 564 thereof, stipulating that the military rank loss punishment is inferred by the enforcing Court's serving a copy of the ruling enacting stipulations to the commander of the military facility in whose records the convicted person is included and also to the County or Regional Military Centre from the convict's residence.

[17] T.B. – Criminal Ruling no. 114/2009, unpublished ; Ploieşti Court of Appeals – Criminal decision no. 185/A/1998, commented upon by Crişu S. and Crişu E. in *The Criminal Code Annotated by Judicial Practice - 1989-1999* - Argessis Print publishing house, 1999, page 204.

In this context, the new regulation brings in little name modifications, in the sense that the enforcing Court is not to send a copy of the ruling to the commander 'of the military facility to which the convicted person had belonged', but to the commander 'of the military facility in whose records the convicted person is included'.

Out opinion is that this rephrasing is more appropriate, seeing that the military rank loss represents a complementary punishment, applied alongside the main punishment, and from the procedural viewpoint, upon the execution of the ruling provisions, the convict is already withdrawn his military rank.

In this regard, the enforcing Court should serve a copy of the ruling to the commander of the military facility in whose records the convicted person is included. The procedure is thus simplified, because the commander of the military facility to which the convict had belonged had the obligation, in his turn, of notifying the ruling enacting stipulations to the military facility in whose records the former military was included.

3. The manner of executing the complementary punishment of publishing the sentencing decision

The complementary punishment of publishing the sentencing decision is applicable both to willful offences and to faulty offences and it regards all the natural entities that are inferred their criminal responsibility, as there are no categories of relieved persons. For the Court, the sanction is elective in character, as it is to assess, depending on the case, whether its enforcement is necessary, subject to the offence nature and seriousness, to the circumstances in which it will have been perpetrated and to the potential impact of the negative publicity arisen in this way [18].

The Court may decide the publication in an excerpt, in a form where the content should be explicit and comprehensible for the public, with a presentation and impact form that should be as visible as possible (on the front page, with a certain printing format, with a certain letter size or in a frame) within the page of an either local or national daily newspaper. As concerns the displaying form, the legislative body obviously refers to how the natural entity is compelled to provide the displaying of the ruling enacting stipulations, namely the advertisement format, as its sizes should be as such as to enable the advertisement noticing and reading by the people that read the local or national daily newspaper. In order to reach the sanction goal, the publication should contain a short presentation of the actual circumstances, as the same had been taken note of by the Court, as well as the elements of the ruling enacting stipulations.

Unlike the complementary punishment of posting or publishing the sentencing decision in case of the legal entities, which takes place within a time frame ranged between one month and 3 months, in case of a natural entity it shall be published once. In this way, the legislative body characterises this complementary punishment as an absolutely defined punishment, even though it appears to be an undefined one.

The publication of the final sentencing decision shall be made on the convict's expenses, by one appearance in a local or national daily newspaper.

The publication of the sentencing ruling should not prejudice the victim's subjective rights, therefore the identity of the victim or of other persons in the file may not be revealed, save where there is their own consent or their legal representative's consent thereto. The law has also regulated the situation where there appear several persons in the case circumstances, as they are also protected from the standpoint of their right to private life and their identity is not divulged. The law has not foreseen a term for enforcing the complementary punishment of publishing the final sentencing

[18] Antoniu G. *et collab.*- *The New Criminal Code* - book III, C.H.Beck publishing house, 2008, page 189.

ruling, which means that its execution may take place right after the sentencing ruling becomes final[19].

As this complementary punishment for natural entities is a new one, the Courts' practice is to develop the situations where such a punishment may be inferred besides the main punishment. The efficiency of such complementary penalties for the legal entities represented by natural entities has led to the conclusion of enforcing the measure directly in charge of the natural entities.

As regards the execution of the complementary punishment of publishing the sentencing decision, art. 565 of the new Criminal Procedure Code stipulates that this can be executed by sending the excerpt, in the form set up by the Court, to a local newspaper belonging to the area of the Court that has ruled the sentencing decision or to a national newspaper, for publishing purposes on the expense of the convicted person.

Yet we think that the moment of this complementary punishment execution commencement coincides to the moment of sending the final sentencing decision excerpt to the local newspaper that is spread in the area of the Court that has ruled the sentencing decision or to a national newspaper, and that the actual execution takes place right when it is published.

Given that the provisions of the new Criminal Code stipulate the possibility of applying the complementary penalties both when the main punishment is imprisonment and when the main punishment is a fine, we think that the insertion of the stipulations regarding the interdiction of exceeding, by the publishing expenses, of the amount of the fine applied to the natural person for the act that he/she has committed (the source of inspiration could be the provisions of art. 131-35 of the French Criminal Code) is necessary.

In case of lacking of executing the punishment in *mala fides*, the judge assigned to enforce the same may ascertain that the constitutive elements of the offence related to the criminal sanctions foreseen and punished by art. 288, par. (1), of the new Criminal Code, which is an offence punished by 3 months to 2 years of imprisonment or by a fine, are present.

If upon enforcing the ruling execution or during the execution there appear something unclear or something hindering the execution, the judged appointed to enforce the execution may signal out the execution Court.

Where the Court rules the prohibition of one of the rights foreseen at par. (1), section n) - the right of communicating with the victim or with family members thereof, with the persons with whom he/she will have committed the offence or with some other people established by the Court, or of getting close to them – and section o) – the right of getting close to the dwelling, the workplace, the school or to other places where the victim carries out social activities, under the terms set up by the Court – this one shall actually particularise the content of that punishment by taking into account the case circumstances.

Seeing that the complementary punishment of publishing the sentencing decision is a newly inserted provision, we think that this should not applied in case of the criminal offences committed prior to its inuring.

Conclusions

The new Criminal Code aims at providing the judge with a wide range of measures that could enable optimal judicial particularisations, thanks to their flexibility and diversity. In this regard, the incidence scope of the complementary penalties was significantly extended, the number of rights contained by the punishment was enlarged and a new kind of punishment was introduced, namely the publication of the final sentencing decision.

As this complementary punishment for natural entities is a new one, the Courts' practice is to develop the situations where such a punishment may be inferred besides the main punishment. The

[19] G. Antoniu *et collab. – Preliminary Explanations of the New Criminal Code* – book II – The Legal Universe publishing house, Bucharest, 2011, page 70 – Comments : Cristian Mitrache, Univ. Reader PhD.

efficiency of such complementary penalties for the legal entities represented by natural entities has led to the conclusion of enforcing the measure directly in charge of the natural entities.

We think that the provisions set up by the new Criminal Code in terms of complementary penalties are meant to provide an optimal punishment particularisation, so as to avoid, to the maximum extent possible, the non-unitary solutions from the case law.

This field of research, even though debated upon by countless doctrine experts, will keep on representing a field of analysis, seeing the modifications that are to be introduced by the new incident criminal legislation.

ABOUT THE PUNISHMENT ESTABLISHED FOR THE CRIME COMMITTED DURING PROBATION

CĂTĂLIN ONCESCU*

Abstract
Probation represents a measure of trust as far as the convict is concerned and it is ruled by the court for the continuation of the execution of the rest of the punishment without being detained. Exactly for this reason it is considered that when a person on probation has committed a crime while on probation, the applied punishment should be oriented according to the manner of calculation of the punishment in the case of the post-release recidivism.In this article, certain aspects of the probation institution have been analyzed, the opportunity of revocation or the maintaining of probation in case a new crime is committed between the period of probation and that of the punishment's fulfillment, and also the manner the punishment is established for this case being further examined.

Keywords*: probation, subsequent crime, merging, rest of the punishment*

1.*The notion of probation.* Probation is a measure of criminal policy of great importance for the fulfillment of the imprisonment punishment's purpose. It is considered as a stimulus for the convicts who show signs of amendment and it consists in the reduction of the time of imprisonment, being meant to accelerate the process of re-education and social reinsertion of the convict[1].

In the judicial doctrine, probation has been defined as a complementary institution of the regime of the execution of the imprisonment punishment, a mean of administrative individualization of the punishment, which consists in freeing the convict from the place of detention before the entire execution of the punishment, on condition that until the fulfillment of this period the convict should not commit any other crimes[2].

According to art. 59 of the Penal Code, art. 59^1 of the Penal Code and art. 60 of the Penal Code, the convict can be put on probation before the entire execution of the imprisonment punishment if a series of conditions, which concern the form of guilt under which the crime has been committed, are fulfilled, conditions such as: the age, the punishment's span, the work done by the convict, etc.

Therefore, the convict who needs to execute a punishment that does not exceed 10 years for a crime committed wittingly can be put on probation after one has executed at least two thirds of the punishment's span, if one is constantly working, disciplined and shows clear signs of amendment. If the punishment exceeds 10 years, the convict can be put on probation after one has executed at least three fourths of the punishment's span.

At the same time, for the negligence crimes, the convict can be put on probation before the entire execution of the punishment, after one has executed at least one half of the punishment's span for the imprisonment that does not exceed 10 years or at least two thirds for the imprisonment exceeding 10 years.

As far as the calculation means for the fractions of punishment is concerned the part of the punishment which can be considered, according to the law, as executed on the basis of the work

[2] See V. Dongoroz and collaboratores*, Theorethical explanations of the Romanian Penal Code, vol. II*, the Academic publishing house, Bucharest 1970, p. 42.

performed[3] is also taken into account. In this case, however, the fractions of punishment which the convict should execute before being put on probation are more reduced, as art. 59 line (2) of the Penal Code and art. 59[1] line (2) of the Penal Code stipulate.

Similar examples of the aforementioned can be diversified in multiple ways, however, mandatorily taking into consideration the conditions described in art. 59 of the Penal Code, art. 59[1] of the Penal Code and art. 60 of the Penal Code.

As far as the procedure that should be performed before the court of law can rule a probation request, one also encounters a series of provisions in Law no. 275/2006 concerning the execution of punishments and of the measures ruled by the judicial bodies during the penal trial. Therefore, according to art. 77 of the law aforementioned, probation is granted by the court of law according to the procedure stipulated in the Code of Criminal Procedure[4], as a result of a request made by the convict or at the proposal of the committee for the individualization of the regime of execution of the detention punishments. In case the committee is the one that requests probation, it should enclose its proposal in a motivated summons, together with the documents which certify the issues mentioned in the summons, and it should forward it to the court of law in whose circumscription the detention place is located. In case the committee observes that the convict does not fulfill the conditions to be put on probation, in the summons it prepares it should establish a term for the re-examination of the convict's situation, a term that cannot exceed one year. At the same time, the committee should inform the convict about the summons and it should bring to the convict's knowledge, by signature, that the convict can directly address a probation request to the court of law. When the convict chooses to directly address the court of law, requesting probation, together with the request the convict should also send the summons compiled by the committee for the individualization of the regime of execution of the detention punishments, together with the documents which certify the mentions enclosed within.

In order to solve the probation request of the convict or the request made by the committee, the court of law can examine the personal file of the convict. In case the convict's request or the request of the committee for the individualization of the regime of execution of the detention punishments is considered well-founded, the court of law shall grant probation, the convict being immediately set free.

2.*Setting the punishment for the crime committed during the probation period.* As it has been aforementioned, after granting the request of temporary freedom, the convict is set free from the penitentiary, this being the immediate effect of this penal measure. However, the convict is being set free from the penitentiary conditionally. According to the provisions of art. 61 line (1) of the Penal Code, "the punishment is considered executed if during the time span since being set free until the fulfillment of the punishment's duration, the convict has not committed any other crime". From this statement it is understood that the person convicted is still executing the punishment, even though the convict has been set free.[5]

The same law also stipulates that if during the time span since being set free until the fulfillment of the punishment's duration, "the person put on probation has committed a new crime, the court of law, taking into consideration its severity, *can* rule for *maintaining* probation, or for its *revocation*. For the latter, the punishment established for the crime committed subsequently and the

[3] See art. 76 of Law no. 275/2006 concerning the execution of the punishments and of the measures ruled by the judicial bodies during the penal trial (published in the Official Gazette of Romania no. 627 of July 20, 2006)

[4] See art. 450 of Romania's Code of Criminal Procedure (republished in the Official Gazette of Romania no. 78 of April 30, 1997).

[5] Also see the provisions of art. 190 line (1) of the Implementing regulation of Law no. 275/2006 „Probation (...) is ruled for the continuation of the execution of the remaining punishment freely". (The Government's Decision no. 1897 of September 21, 2006 for the approval of the Implementing regulation of Law no. 275/2006 concerning the execution of punishments and of the measures ruled by the judicial organs during the penal trial, published in the Official Gazette of Romania no. 24 of January 16, 2007).

rest of the punishment that remained to be executed from the previous punishment is to be *merged*, *an augmentation of up to 5 years being applicable*." (author's note).

One cannot help observe the similarity between this situation and one of the hypotheses described in the provisions of art. 37 line (1) letter a) of the Penal Code: "There is recidivism for an individual in the following cases: a) when after the definitive conviction to imprisonment greater than 6 months, the convict wittingly commits a new crime, before beginning to execute the punishment, *during the punishment's execution* (author's note) or in escape state, and the punishment stipulated by law for the second crime is imprisonment for more than one year." Therefore, from the facts point of view and judicially speaking, it can be considered that committing a crime while on probation could constitute a case of recidivism after conviction.

However, the punishment that can be granted to a convict on probation for a crime committed between the period of probation and that of the punishment's fulfillment is similar to the punishment stipulated by the Penal Code[6] for *multiple crimes* committed by the individual, when there had been ruled only imprisonment punishments. There have been considered the provisions of art. 34 line (1) letter b) of the Penal Code according to which, in the case of multiple crimes, the court of law shall apply the hardest punishment which can be augmented up to its special maximum level, and when this maxim level proves to be insufficient, another augmentation of up to 5 years can be added.

Hence, in case more crimes have been committed *before* a definitive conviction has been ruled for the perpetrator, the hardest punishment shall be ruled, punishment *that can be augmented up to its maximum level* (author's note), and when this maximum level proves to be insufficient, another augmentation of up to 5 years can be added.

At the same time, there is the case when a convict put on probation commits a crime during the time span between the period of probation and that of the punishment's fulfillment, time span obviously chronologically situated after the definitive conviction decision, and also after the execution of a significant fraction of the punishment. In this case as well, according to art. 61 line (1) last thesis of the Penal Code, the court of law shall *merge* the rest of the punishment that has been left to be executed from the previous punishment with the punishment established for the crime committed subsequently, an augmentation of up to 5 years being applicable. (author's note)

In reality, "the mergence" consists in choosing which of the two punishments is harder: the rest of the punishment that has been left to be executed or the punishment for the new crime. Then, unlike the case of rival punishments, the hardest punishment chosen by the court of law shall not be augmented up to its maximum level, due to the fact that this procedure is not *expressis verbis* mentioned in the present Penal Code, and a clear definition of the "merger" is offered only in the judicial specialty literature. For this reason, the courts of law have the freedom to understand the verb "to merge" as an absorption procedure or as a judicial cumulative procedure.

According to the issues aforementioned, it can be observed that the Penal Code norms define "the mergence" by means of a systematic interpretation of the provisions of art. 36 of the Penal Code[7] in relation to art. 34 of the Penal Code and art. 35 of the Penal Code. Moreover, art. 39 line (1) contains the following provisions: "(1) In the case of recidivism stipulated in art. 37 line (1) letter a), the punishment established for the crime subsequently committed and the punishment applied for the previous crime are merged according to the provisions of art. 34 and 35." Nonetheless, at a closer examination of the legal texts mentioned hereinbefore, as far as art. 34 of the Penal Code is concerned there is a judicial cumulative system for the punishments of the same kind, while art. 35 of the Penal Code describes the absorption system for the punishments of the same kind and with the same content. It is true that art. 34 of the Penal Code concerns the main punishments that can be

[6] Romania's Penal Code, enacted by means of Law no. 15/1968, republished in the Official Gazette of Romania no. 65 of April 16, 1997.

[7] Art. 36 of the Penal Code is entitled "The merging of the punishments for rival crimes committed by the individual."

applied to an individual[8], and art. 35 of the Penal Code refers to the complementary punishments[9] and the safety measures[10], however, the fact there is room for interpretation cannot be denied. For this reason, we consider that for the issues aforementioned an exact definition for the "merging" procedure of the punishments is not offered by the legislator, as a result of an authentic interpretation, being possible for the court of law to use whichever system of punishment establishing and application for the plurality of crimes.

Moreover, the exact definition of the law for the procedure that should be followed has a greater impact on the effective way the punishment is established and applied by the court of law, this judicial body knowing exactly what steps it should follow. Much more intuitive and in the same time much more imperative is the text of art. 34 line (1) letter b) of the Penal Code[11] that that of art. 61 line (1) last thesis of the Penal Code [12]. As a result, it can be said that in the norms of art. 61 line (1) of the Penal Code, the existing statement of art. 34 line (1) letter b) of the Penal Code should be used, in such a way that not only the court of law but also the penal law's addressee to explicitly know the manner in which the punishment is established and applied.

For the interpretation of the provisions of art. 61 line (1) of the Penal Code it can be observed that the legislator's statement concerning the "rest of the punishment that remained to be executed from the previous punishment" is also scarce. To which remaining part does the legal norm refer to?! On one hand, one thinks about the rest of the punishment that has been left to be executed at the date of probation. However, the legislator also states, at the beginning of the same line, that the person put on probation is – legally- executing the punishment (even though the convict is not imprisoned any more), the punishment being considered executed only at the punishment's span fulfillment. Therefore, since the convict who is put on probation is still executing the punishment, it is possible for some courts of law to consider that "the rest of the punishment that remained to be executed from the previous punishment" to be calculated since the moment the subsequent crime is committed and not since the time the convict has been put on probation. Therefore, it is considered absolutely necessary for the legislator to specify exactly the moment that the court of law should consider when establishing the rest of the punishment that remained unexecuted.

The fact that the punishments' "merging" procedure and the augmentation of 5 years at most is just as important and it shall be applied only if the court of law *considers* that probation shall be revoked (author's note). Therefore, one can easily draw the conclusion that it is possible for probation not to be revoked, and for the second crime not to be considered even a rival crime. Since the legislator does not specify which is the regime of the subsequent crime, in case probation is not revoked, the principle of the indictment legality stipulated in art. 2 of the Penal Code does not offer the possibility to consider the subsequent crime as being neither rival crime nor the second term of a post – sentencing recidivism.

The possibility to revoke or maintain probation, left by the legislator to be interpreted by the court of law, also derives from the provisions of line (2) of art. 61 of the Penal Code, according to

---

[8] According to art. 53 point 1 of the Penal Code the main punishments are life imprisonment, imprisonment from 15 days to 30 years and a fine from 100 lei to 50.000 lei.

[9] According to art. 53 point 2 of the Penal Code, the complementary punishments are: the interdiction of some rights from one to 10 years and military degradation. Also see art. 64-67 of the Penal Code.

[10] According to art. 112 of the Penal Code, the safety measure are: compulsory medical treatment, hospital admition, interdiction to occupy a position or to exercise a profession, a job or another occupation, interdiction to be in certain locations, expatriation of the foreigners, special seizure and interdiction to return to the family's home for a determined time.

[11] "b) when there have been ruled only imprisonment punishments, the hardest punishment is to be applied, which can be augmented up to its special maximum level, and when this maxim level proves to be insufficient, another augmentation of up to 5 years can be added."

[12] "(…) in this last case, the punishment established for the crime committed subsequently and the remaining punishment that remained to be executed from the previous punishment are to be merged, an augmentation up to 5 years being applicable."

which "revocation is *mandatory* (author's note) when the act committed represents a crime against the state's safety, a crime against peace and human kind, a manslaughter criminal crime, a crime committed with intent which resulted in a person's death or a crime by means of which extremely serious consequences have been produced."

Therefore, in case the court of law reaches the conclusion that it is not necessary for probation to be revoked, the previous punishment, for which the convict is put on probation therefore virtually executing it, and the punishment applied for the crime committed once again should be considered distinct and are to be autonomously executed.[13]

One can presume that the legislator has taken into account the situation when the subsequent crime has been committed out of guilt, and for this reason it does not agist the revocation of probation. This theory can also be found at the level of recidivism, when in art. 37 of the Penal Code it is stipulated that the second period of the recidivism should consist of a crime wittingly committed.

At the same time, one should also observe that, as far as the situation of multiple crimes is concerned, the form of guilt under which the respective crimes are committed it is not considered to be relevant; therefore some of them may be wittingly committed and others with intent. Hence, even though under the aspect of the *punishment's establishing* for the crimes committed during probation there may appear to exist a similarity with the situation of the multiple crimes, it should be observed that the sentencing regime is visibly easier than in the case of the plurality of crimes committed *before* the perpetrator has been definitively convicted for one of these.

Furthermore, in the judicial specialty literature there have been expressed opinions according to which "probation can be maintained even if the punishment ruled for the new crime is imprisonment which is to be executed in a place of detention, if the ruling of the new crime has occurred after the fulfillment of the punishment's execution, or if the conviction decision has remained definitive with a few days before the fulfillment of the punishment's span."[14]

One cannot agree with this thesis because, even though the new crime's rulling has occurred after the fulfillment of the punishment's span or the conviction decision has remained definitive with a few days before the fulfillment of the previuos punishment's span, it is almost ceratin that the subsequent crime has been committed between the time span since being put on probation and the moment of the punishmnett's fulfillment. The syncronization mentioned is owed to the fact that until the subsequent crime's ruling or until the ruling as being definitive of the conviction decision, there has been a phase of the penal prosecution, as well as a phase of ruling, which can also unfold at least in first court ruling and in appeal.

Furthermore, according to art. 450 line (3) last thesis of the Code of Criminal Procedure, the court of law judging the defendant for the subsequent crime is obliged to also rule upon the revocation of probation, and this court of law will surely consider the penal antecents of the defendant since these are known from within the act of aprehenssion. According to art. 263 of the Code of Criminal Procedure, it should be mentioned that the indictment should contain the data concerning the defendant[15].

Taking into consideration the fact that is clear that the punishment's establishment procedure for the crimes committed during probation, described in art. 61 line (1) last thesis of the Code of

[13] See C. Bulai, *Penal Law Workbook. General Part*, the Judicial Universe publishing house, Bucharest 2007, p. 595; T. Dima, *Penal Law. General Part*, Hamangiu publishing house, Bucharest 2007, p. 630.

[14] C. Mitrache, *Romanian Penal Law. General Part*, the Judicial Universe publishing house, Bucharest 2010, p.428.

[15] It is considered that the legislator has considered the provisions of art. 70 line (1) of the Code of Criminal procedure, which of course should be verified by the prosecutor:"(1) The defendant, before being heard, is asked questioned about the first and last name, nickname, date and place pf birth, the parents' first and last name, citizenship, studies, military situation, place of work, job, address where one lives, *penal antecedents* and other information for establishing the defendant's personal situation."

Criminal Procedure, is faulty one can wonder if the legislator has not referred to the provisions of art. 40 line (1) of the Code of Criminal Procedure, concerning the intermediary plurality. Thus, it has been established that there is an intermediary plurality of crimes when after the defendant's definitive conviction for a crime previously committed, the convict committs a new crime before starting to execute the punishment, *during its execution* (author's note) or in state of escape and the conditions required by the law are not fulfilled for the existence of the recidivism state. Just as it has been previously mentioned, until the fulfillment of the punishment's span the convict put on probation is virtually executing it, albeit being released from the penitentiary[16]. Thus, the commitment of a new crime during probation can be considered similar to the intermediary plurality of crimes from all points of view.

Likewise, according to art. 40 line (1) of the Penal Code, the legislator has stipulated that for the intermediary plurality of crimes the punishment is to be applied according to the regulations for the *crime contest*. However, for the situation in which a crime is committed between the moment the convict has been put on probation and the fulfillment of the punishment's span, the provisions of art. 61 line (1) of the Penal Code allow the court of law judging the subsequent crime to maintain probation. The two texts of law contain obvious inconsistences, being discriminatory and in the same time biased in relation to the convicts who have benefited from the trust of the judicial system, being set free after the execution of a fraction of the punishment.

Moreover, if one also takes into account the moment when the convict has been put on probation being therefore released from the penitentiary, moment chronologically situated towards *the end* of the punishment established by the court of law, one can also observe the similarity between this situation and the post-release recidivism. The fact that the probation has been granted by a court of law as a sign of trust for the convict is not be neglected[17]. In such conditions, it can be said that the respective convict who has committed a crime during probation, due to the fact that one has betrayed the trust that has been granted not only by the court of law but also by the commission for the individualization of the regime of execution of the imprisonment punishments (in the case when this entity was the one that has proposed the probation), should serve a punishment at least just as severe as the one resulted from the application of the provisions of art. 39 line (1) of the Penal Code, concerning the post-release recidivism, can be easily oriented towards the punishment stipulated for the post-release recidivism. Consequently, it would be right for the augmentation indicated by the provisions of art. 61 line (1) last thesis of the Penal Code to be situated between the augmentation established for the post-sentencing recidivism (7 years)[18] and the one stipulated for the post-release recidivism (10 years)[19].

Besides, one should also take into consideration the trust granted to the convict by the court of law, in the sense that the convict can socially reintegrate and reform without actually executing the entire punishment for which the convict has been imprisoned. Accordingly, one can make a slight comparison with the provisions that regulate the conditional suspension of the punishment's execution, respectively art. 81 and following of the Penal Code. More precisely, one should refer to the legal norms which concern the revocation of probation in the case a new crime is committed during the probation period. Hence, it can be observed that in case the subsequent crime has been wittlingly committed, in art. 83 line (1) of the Penal Code the following solution is described: "If during the probation period the convict has committed a new crime, for which a new definitive

[16] Art. 61 line (1) of the Code of Criminal procedure: "The punishment is considered to be executed if in the time span since being put on probation until the fulfillment of the punishment's span, the convict has not committed another crime. (...)"

[17] See art. 190 line (1) of the Implementing regulation of Law no. 275/2006, approved by means of the Government's Decision no. 1897 of December 21, 2006, published in the Official Gazette of Romania no. 24 of January 16, 2007.

[18] See art. 39 line (1) of the Penal Code.

[19] See art. 39line (4) of the Penal Code.

conviction has been ruled even after the expiry of this term, the court of law revokes the probation, ruling for the *entire* execution, punishment which is ***not*** to be merged with the punishment applied for the new crime". (author's note)

3.*The revocation of the probation in relation to the provisions of the new Penal Code.* According to art. 246 of Law no. 187/2012[20], the new Penal Code[21] is to come into effect on Feburary 1, 2014. Subsequently, at least at a theoretical level, the analysis of the revocation of probation in case a new crime is committed is imposed by the future norms of penal law. Unlike the actual Penal Code, which regulates the revocation of probation in art. 61 (marginal name "The effects of probation"), the new Penal Code stipulates the provisions concerning the revocation of probation in a distinct article. Within art. 104 of the new Penal Code (entitled "The revocation of probation"), line no. (2) contains the following provisions: "If after being put on probation the convict has committed a new crime, which has been discovered during the probation period and for which a new conviction with the imprisonment punishment has been ruled, even after the expiry of this term, the court of law revokes probation and rules for the execution of the rest of the punishment. The punishment for the *new crime* is to be established and executed, as the case may be, according to the provisions of *recidivism* or *intermediary plurality*". (author's note)

Concerning the conditions required by the the new Penal Code for granting probation, one can esily observe that there are not stipulated other derogatory provisions for the reduction of the fractions of punishment which the convict should execute, on the consideration that the crime for which the convict has been convicted has been committed out of guilt or while being a minor. Thus, according to art. 100 line (1) of the new Penal Code, the only conditions that should be fulfilled for the court of law to grant probation for the imprisonment punishments are the following:

a) the convict has executed at least two thirds of the punishment's span, for imprisonment not exceeding 10 years, or at least three fourths of the punishment's span, but no more than 20 years, for imprisonment exceeding 10 years;

b) the convict is executing the punishment in open regime or semi-open regime;

c) the convict has fully fulfilled the civil obligations established by the imprisonment decision, except for the case when it is proved that it has not been possible in any way for the convict to fulfill them;

d) the court of law is certain that the convict is reformed and can be socially reintegrated.

Moreover, according to line (6) of the article aforementioned, "the time span between the date of being put on probation and the date of the punishmnet's fulfillment represents a *surveillance term* for the convict." (author's note)

Returning to the analysis of art. 104 line (2) of the new Penal Code, one can easily observe that the revocation of probation is mandatory, if a new crime has been committed, crime that has been discovered until the fulfillment of the surveillance period. In regard to these provisions, the new Penal Code does not make any distinction between the crimes for which the revocation of probation is up to the court of law [art. 61 line (1) of the actual Penal Code] and the crimes which mandatorily imply the revocation of probation [art. 61 line (2) of the actual Penal Code].

The mandatory revocation regulated by means of art. 104 the new Penal Code has been imposed as a result of the establishment of the new system of probation for which there exists a period of surveillance, measures and obligations, surveillance by the probation service and the possibility to modify or even cease the obligations, all these for the convict'social reintegration. In case the convict, regardless of all the support, control and institutional help granted, has a mala fide

[20] Law no.187 of October 24, 2012 for the implementation of Law no. 286/2009 concerning the new Penal Code, published in the Official Gazette no. 757/12.11.2012.

[21] Law no.286/2009 concerning the new Penal Code, published in the Official Gazette no. 510/24.07.2009.

behaviour or even commits a new crime, the law does not give the court of law the possibility to grant trust anymore, but is actually obliged to revoke probation.[22]

Concerning the nature and gravity of the crime, the form of guilt or participation with which it has been committed, one can notice that the new Penal Code does not contain any specification. Thus, in principle, the court of law is obliged to revoke probation regardless of the characteristics of the subsequent crime. In today's Penal Code, the court of law can rule for maintaining probation or for its revocation, "considering the gravity"of the subsequent crime. It can be observed that the version chosen by the future Penal Code is in full concordance with the requirements that the society should have in relation to a convict who has benefitted from probation. Nevertheless, there should be made a clear distinction between the punishment established for the wittingly committed crimes and that for the crimes committed unwittingly.

Then, in order for the revocation of probation to be ruled, the new law rules imply the fact that the discovery of the subsequent crime to be made during the surveillance term. One can notice that this condition was not stipulated by art. 61 of the actual Penal Code, being taken over by the legislator from the norms concerning the revocation of the conditional suspension of the punishment's execution in case a new crime is committed [art. 83 line (2) of the actual Penal Code[23]].

Unlike the actual reglementation, it is considered that the furture norms of penal law represent a step forward for the penal sciences' endeavors to prevent and combat the commitment of new crimes by the people who have already been definitively convicted and who have benefited the institution of probation. It is obvous that the future norms of penal law are much more severe than those in effect at the present time, mandatorily tightening the applied punishment, situation which is considered necessary as it results from the first part of the present article.

According to the future Penal Code, the first effect of the commitment of a crime during the surveillance term consists in the revocation of probation and in the coercion of the convict put on probation to execute the rest of the punishment. Therefore, in the future regulation, the legislator has adopted a different treatment: the punishment established for the crime subsequently committed and the rest of the punishment which remained to be executed from the previous punishment **shall not** merge anymore (author's note), yet the arithmetic cumulation procedure shall be applied.

This procedure is sustained by the provisions regulated by the future Penal Code concerning the punishment's establishing in the case of recidivism. Just as it is stipulated in art. 104 line (2) of the new Penal Code, the punishment for the new crime is established and executed, as the case may be, according to the provisions of *recidivism* or *intermediary plurality*. (author's note)

Art. 41 line (1) of the new Penal Code contains the following provisions: "(1) There is recidivism when, after an imprisonment punishment decision greater than one year has remained definitive and until the rehabilitation or the fulfillment of the rehabilitation term, the convict commits a new crime having intent or oblique intent, crime for which the law stipulates imprisonment punishment of one year or more."

Then, one should consider only the provisions that regulate the punishment which a court of law should apply in case of post-conviction recidivism, provisions described in art. 43 line (1) of the new Penal Code: "If before the previous punishment *has been executed* or *considered as being executed* a new crime is committed in recidivism state, the punishment established for this crime *is*

---

[22] I. Pascu, V. Dobrinoiu, T. Dima et alli, *The Commented New Penal Code, vol I, General part*, the Judicial Universe publishing house, Bucharest 2012, p. 601.

[23] Art. 83 of the actual Penal Code **Revocation in case a new crime has been committed**. (1) If during the probation period the convict has committed a new crime, for which a definitive conviction has been ruled even after the expiry of this term, the court of law revokes the conditional suspension, ruling for the execution of the entire punishment, which does not merge with the punishment applied for the new crime. (2) However, the revocation of the punishment's suspension doesn't take place if the crime subsequently committed has been discovered after the expiry of this probation period. (...)

added at the previous unexecuted punishment or at the rest of the punishment remained unexecuted". (author's note)

Just as it is shown above, according to line (6) of art. 100 of the new Penal Code, "the time span between the date of being put on probation and the date of the fulfillment of the punishment's span constitutes surveillance term for the convict". Moreover, according to art. 106 of the new Penal Code, "if until the expiry of the surveillance term the convict has not committed a new crime, the revocation of probation has not been ruled and the annulment cause has not been discovered, *the punishment is considered executed*". Thus, the commitment of a crime during the surveillance period of probation is included in the conditions of post-convicition recidivism due to the fact that the post-release recidivism interferes when a new crime has been committed *after* the previous punishment has been *executed* or *considered as being executed*[24]. (author's note)

However, the new Penal Code also stipulates that the punishment for the new crime is established and executed, in certain cases, according to the provisions of intermediary plurality. According to art. 44 line (1) of the new Penal Code, "there is an intermediary plurality of crimes when, after a conviction decision has remained definitive and until the date when the punishment has been executed or considered as being executed, the convict commits a new crime and the conditions stipulated by the law in case of recidivism are not fulfilled. (2) In the case of intermediary plurality, the punishment for the new crime and the previous punishment are merged according to the provisions of the institution of multiple crimes." (author's note)

Thus, when the recidivism conditions, established by art. 41 line (1) of the new Penal Code, are not fulfilled, the punishment for the subsequent crime committed during the surveillance term of probation is established according to the provisions of the institution of multiple crimes.

According to art. 39 of the new Penal Code, "(1) In the case of multiple crimes, the punishment for each crime is to be established and the punishment is to be applied, as follows:

a)when there has been established a life imprisonment punishment and one or more punishments of imprisonment or by penal fine, the life imprisonemt punishment is to be applied;

b) when there have been established only imprisonment punishments, the hardest punishment is to be applied, to which an augmentation of a third of the total of the other punishments is to be added;

c)when there have been established only punishments by fine, the hardest punishment is to be applied, to which an augmentation of a third of the total of the other punishments is to be added;

d) when there has been established an imprisonment punishment and one by fine, the imprisonment punishment is to be applied, to which the enitre punishment by fine is to be applied;

e)when there have been established more imprisonment punishments and more punishments by fine, the imprisonment punishment is to be applied according to letter b), to which the enitre punishment by fine is to be applied according to letter c)."

Taking into account all the provisions aforementioned, one must admit that the manner in which the punishment for the subsequent crime committed during the surveillance term, but which **does not** fulfill the recidivism conditions, is to be established, is very confusing. Firstly, the institution of multiple crimes, by definition, implies the commitment of two or more crimes by the same person, by means of distict actions or lack of actions. Moreover, according to art. 44 line (2) of the new Penal Code, "in case of intermediary plurality, the punishment for the new crime and the *previous punishment* are merged according to the provisions of multiple crimes" (author's note). However, in the present situation – the revocation in case a crime is committed – only a single subsequent crime, committed during the surveillance term, is encoutered. Which should be the "previous punishment"?

[24] Art. 43 line (5) of the new Penal Code: "If after the previous punishment has been executed or considered to be executed a new crime has been committed in state of recidivism, the special limits of the punishment stipulated by the law for the new crime is to be augmented with a half."

It is absurd to consider that the legislator has taken into account the rest of the punishment that has remained unexecuted, on one hand, and the crime subsequently committed, on the other hand, which will be merged according to the applicable rules of the multiple crimes. In art. 104 line (2) of the new Penal Code it is established that in case a misdeameanor is committed during the surveillance term and an imprisonment punishment conviction is ruled (even after the expiry of this term), the court of law should act in two very precisely delimited stages:

- in the first stage, the court of law – manadatorily - revokes probation and *rules the execution of the rest of the punishment* (author's note);

- in the second stage, the court of law establishes the punishment for the new crime, which has absolutely no connection with the rest of the punishment.

In the text of art. 104 line (2) of the new Penal Code the following disposition can be found: "The punishment for the *new crime* is established and executed, as the case may be, according to the provisions of recidivism and intermediary plurality" (author's note). There exists no formulation which should lead to the idea that the punishment for the subsequent crime is to be merged with the rest of the punishment that has remained unexecuted. Furthermore, in the phrase previous to the one stated above, the legislator very clearly stipulates that the court of law revokes probation and *rules the execution* of the rest of the punishment[25] (author's note). The court of law, as far as the revocation of probation and the execution of the rest of the punishment are concerned, mandatorily takes a decision, in all the cases, prior establishing the punishment for the new crime.

Probably, the legislator has taken into account the situation in which the convict put on probation has committed a new crime during the surveillance term, and this crime is not situated in the conditions of the second term of recidivism, precisely: "an intent or oblique intent crime, for which the law stipulates the imprisonment punishment of one year or more"[26]. Hence, the only crimes which cannot constitute the second term of the recidivism are those committed out of guilt and those for which the law stipulates the imprisonment punishment of less than one year. The punishment of fine cannot be discussed because the conditions stipulated in art. 104 line (2) of the new Penal Code, ("for which an imprisonment punishment has been ruled") would not be fulfilled.

Then, one should ask oneself: which was the legislator's intention in the case of the wittingly crimes and of those for which the law stipulates the imprisonment punishment of less than one year? It is possibile that, in the case of these crimes, the legislator could have thought at the following solution: the court of law revokes probation and rules for the merging of the rest of the punishment that has remained unexecuted with the punishment established for the crime subsequently committed, according to the provisions of the institution of multiple crimes.

The legislator's intention is considered to have been good and, in all the cases, the revocation of probation must be ruled. One makes this statement due to the fact that the person put on probation should give special attention to his/her actions, in such a way as it would be impossible to commit any crime out of negligence[27].

If this has been the legislator's intention and the legislator wished to make a distinction between the situation of committing an intentionate crime and the one of committing a wittingly crime, the transposition in judicial norm is inaccurate and extremely confusing. The formulation of the text of art. 104 line (2) of the new Penal Code does not allow such an interpretation, because, just as it has been proved before, in the same line, but in the previous phrase, it was exactly the legislator

---

[25] Art. 104 line (2) of the new Penal Code "If after being put on probation the convict has committed a new crime, which has been discovered during the surveillance term and for which there has been ruled a conviction of imprisonment, even after the expiry of this term, the court of law revokes probation and rules the execution of the rest of the punishment. The punishment for the new crime is extablished and executed, as the case may be, according to the provisions of *recidivism* or *intermediary plurality*."

[26] See art. 41 line (1) of the new Penal Code.

[27] According to art. 16 line (4) letter b) of the new Penal Code, "the deed is wittingly committed when the perpetrator does not foresee the result of one's action, even though one should and could have anticipated it."

the one who unconditionally coerces the court of law to rule the revocation of probation and the execution of the rest of the punishment.

Consequently, in relation to the actual regulation, it can be said that the application of the norms concerning the punishment's establishing for the institution of multiple crimes to the situation of the punishment's establishing for the new crime committed during probation is impossible, due to the troublesome formulation of the text of art. 104 line (2) of the new Penal Code. It is true that if more crimes shall exist, then the provisions of the institution of multiple crimes can be applied, however, only concerning the new crimes committed[28]. The rest of the punishment remaining unexecuted **shall never** be merged with the subsequent crimes, due to the fact that the legislator actually coerces the court of law "to revoke probation and to dispose the execution of the rest of the punishment". As a result, concerning the rest of the punishment that has remained unexecuted and the punishment established for the subsequent crime the artihmentic cumulative process shall always apply, and not the one of the judicial cumulation, which implies a mergence.

Besides, in relation to the provisions of art. 100 of the new Penal Code, it can also be observd that, in order for the conditions of probation to be fulfilled, the convict must have executed *at least* two thirds of the punishment's span, in the case of imprisonment not exceeding 10 years, or *at least* three fourths of the punishment's span, in the case of imprisonment exceeding 10 years (author's note). Consequently, the situation of a crime's commitment during the surveillance term is very similar – at a temporal level – to the post-release recidivism. One should also take into consideration the trust that the court of law gives to the convict when ruling probation, trust that the convict put on probation defies when committing a new crime. According to art. 100 line (1) letter d) of the new Penal Code, probation can be ruled if "the court of law is certain that the convict has made amendments and can reintegrate in society".

In regard to the issues aforementioned stipulated, the following formulation is considered to be better suited for the situation created by the commitment of a new crime during the surveillance term:

"(2) If, after being put on probation, the convict has committed a new crime, which has been discovered during the surveillance term and for which an imprisonment conviction has been ruled, even after the expiry of this term, the court of law revokes probation and rules the execution of the rest of the punishment together with the punishment established for the new crime, according to the provisions of recidivism [author's note, art. 43 line (1) of the new Penal Code]. In case the subsequent crime is wittingly committed or if the law stipulates for this crime the imprisonment punishment of one year at most, the rest of the punishment remained unexecuted together with the punishment established for the new crime are to be merged according to the provisions of the institution of multiple crimes. (author's note, art. 39 of the new Penal Code)."

4.*In conclusion*, it can be observed that the provisions of art. 61 line (1) of the actual Penal Code must be reconsiderd in such a way as not to contradict the norms that regulate the plurality of crimes. Moreover, taking into consideration the severity of the punishment established for the crime committed between being put on probation and the fulfillment of the punishment's span, it is believed that this should be equivalent with the one existing at the level of the crimes committed after execution, thus consisting in an express warning of the convict put on probation in order to refrain from committing a new crime, during probation.

To the same effect, even the simple fact that the convict benefits from the clemency and evident trust of the court of law which decides the free him/her, in certain cases even after the

[28] See art. 43 line (2) of the new penal Code: "When before the previous punishment has been executed or considered executed more rival crimes have been committed, out of wich at least one is in state of recidivism, the established punishments are merged according to the provisions of the institution of multiple crimes, and the punishment resulted is added to previous punishment or to the rest of the punishment which has remained unexecuted."

execution of just half of the time for which the convict has been definitively convicted[29], should identify an correspondent in the severity of the punishment which the convict put on probation should receive, in case the convict has wittingly committed a new crime during probation. Therefore, it is believed that for the subsequent crime, the court of law can establish a punishment to which an augmentation between the augmentation established for the case of post-sentencing recidivism (7 years) and and the one stipulated for the case of post-release recidivism (10 years) can be added, and the rest of the punishment that has remained unexecuted to be arithmentically added to the respective punishment.

In what concerns the future regulations of the Penal Code which regulate the revocation of probation in case a new crime is committed during the surveillance term, it can be noticed that these – in the existent formulation- cannot be applied because they do not make a clear distinction between the wittingly committed crimes and those committed out of guilt. Furthermore, the text of art. 104 line (2) of the new Penal Code is incoherent, situation which will lead to severe problems as far as its application is concerned. For this reason, the reformulation aforementioned proposed should constitute at least a starting point as far as the advisably solving of this issue is concerned.

THE REFLECTION OF PROCEDURAL GUILT IN THE CRIMINAL PROCEDURE PROVISIONS. LIABILITY FOR UNJUST CONDEMNATION OR FOR TAKING PREVENTIVE MEASURES UNLAWFULLY

ELIZA EMANUELA OPREA*

Abstract

In the criminal proceedings of some law states the wrongful sentencing of individuals is very rare, having a comprehensive system of procedural safeguards which prevent such a situation. The purpose of the criminal proceedings is to punish only the culprits, the Criminal Procedure code frontispiece being stated the idea that no innocent person should be held criminally liable. By achieving this aspect of purpose is ensured observance of legality and the rule of law. All the basic rules and the whole organization of the criminal trial are polarized around this major goal of justice. Also the professional qualification level of those summoned to administer criminal justice in the modern state to minimizes the risk of judiciar miscarriages. The deep humanism of our law requires though the regulation of those procedural arrangements, through which in the event of an act of injustice, the wrongly convicted is able to obtain prompt repairs that society owes them. A very important aspect related to the evolution over time of the regulation of this institution, is that in its doctrine of integration in the European Union, Romania has adopted a series of laws and regulations designed to ensure our legislation's alignment with the relevant legislation of the countries from the European community and to ensure the compliance with the European Convention on Human Rights. This process is still ongoing, therefore the establishment and the subsequent modification of the special procedure concerning the remedies for the material or moral damage in the event of unjust sentence or unlawful deprivation of liberty was based on the desire to avoid the conviction situation of the Romanian state by the international courts for failure to comply with the Art. 5 paragraph 5 of the Convention for the Protection of Human Rights and Fundamental Freedoms that 'any individual who is the victim of arrest or detention in conditions contrary to the provisions of this article shall have the right for remedy".

Keywords: *unjust conviction, deprivation or restriction of liberty, unlawful, material damage, miscarriage of justice*

Introduction

Through the complex of procedural safeguards accompanying the performance of criminal justice in our country it is ensured the achievement of the criminal process objective, which, inter alia, consists of not punishing innocent individuals**.** Through the compliance with this aspect of the purpose of criminal proceedings it is ensured the observance of legality and the rule of law. The way in which it is disciplined the criminal procedure and the level of professional qualification of those who are called to perform criminal justice generally exclude the risk of miscarriages of justice.

The person who has been unlawfully or unjustifiably subjected to restrictive measures involving deprivation of liberty has the right to seek material or moral remedies under the Constitution Article 52 line (3) and the Criminal Procedure Code Art. 504- 507.

The legal criticized provisions are part of Chapter IV " Remedies for the damage to property or moral damages in the case wrongful conviction or unlawful deprivation or restriction of liberty" of Title IV "Special procedures" of the Criminal Procedure Code and determine who has the capacity to benefit from compensation, namely the individual who has been finally convicted after the retrial was reached a final judgment of acquittal, as well as the person who, during the trial, was deprived of liberty or who has been unlawfully restricted.

* PhD candidate, "Nicolae Titulescu" University of Bucharest (email: oprea111@yahoo.com).

The European Court itself, when granting moral compensations, it does not operate with predetermined evaluation criteria, **but in equity judgments**. The provisions of Art. 505 of the Criminal Procedure Code established the criteria by which it determines the compensation for damages but does not establish the criteria to quantify them.

Liability for unjust conviction or for taking unlawful preventive measures - Special procedure Art. 504 -507 Code of Criminal Procedure

Established as a fundamental principle, the inviolability of an individual consists of the right of every person to be free to act, the achievement of these attributes can be made only in the cases and under the conditions provided by law.[1]

The current Constitution of Romania, revised in October 2003 has devoted in Article 23, individual liberty, indicating that the "Individual liberty and security of an individual are inviolable. Searching, detaining or arresting a person are allowed only in the cases and under the procedure provided by law"

However, in our view, the constitutional provisions included in Article 23 are partly too detailed and are practically substituted to provisions which, in this matter must find their place in the Criminal Procedure Code.

Guaranteeing personal freedom as a fundamental principle acquired a new regulation and the Criminal Procedure Code in force in 1990, regulation which anticipated the constitutional provision.[2]. In Articles 4 and 5 it is stipulated the possibility of the person against who was applied an unlawful or unfair preventive measure, to request remedies for the suffered damages.

Observing the rules with ranking principles of the Constitution and the Criminal Procedure Code, it follows that, according to the regulations of our country, deprivation of liberty or restriction of personal freedom in any other form is possible in right enforcement practice, but only following a judicial activity of criminal nature. The restriction of personal freedom may occur either as a preventive measure taken during the criminal trial, or as a custodial sentence placed at the end of the criminal case resolution by final judgment of the court.

If the restriction of freedom following the application of criminal sanctions as freedom depriving penalties is not evident outside the known outstanding issues in substantive law, regarding the restriction of freedom by taking preventive procedural measures were formulated numerous criticism.

Arguably no other institution of criminal procedural law has been challenged so strongly, especially in some doctrines as deprivation of liberty preventive measures.

The guarantees of freedom of the individual in criminal proceedings can be found in the regulations in which preventive measures may be stipulated, the competent authorities to require taking the preventive measures, the duration of preventive measures and checking the legality preventive measures.[3] Guaranteeing personal freedom is the fundamental principle stipulated in the Constitution, the European Convention and the Criminal Procedure Code according to which during the criminal proceedings no person may be detained, arrested or deprived in other way of freedom nor subjected to any form of restriction of freedom than that in the cases and under the conditions provided by law. Through the right to liberty it is understood the right to physical liberty of the person (the classic meaning of individual freedom *liberte d'aller et de venire),* which consists in the ability to move, to travel freely. An individual is deprived of liberty by ordering the detention, administrative management at the police station, preventive arrest, provisional arrest in the view of

[1] I.Neagu , *Tratat de procedură penală.Partea generală,* p. 90.

[2] The Law No. 32 was adopted in November 1990, one year before the Constitution.

[3] This convention was adopted in New York on 10 December 1980. România acceded to the Convention by the Law No. 19 of 10 October 1990, published in Official Gazette no. 112 of October 10, 1990.

redention or issuing an European arrest warrant, of security measure disposition of the internment, as well as in the case of the main penalty execution imprisonment or life imprisonment or the educational measure of admission into a rehabilitation center or a medical educational institute. There will be a restriction of freedom of movement of persons by forming the obligation not to leave the city or country.

If the person deprived of his liberty by preventive arrest or hospital admission, or one whose liberty has been restricted by imposing the obligation not to leave the city or country considers that the measure is illegal is entitled to make a complaint before an independent and impartial court body in which to challenge the legality of the measure to which it is subject. The final judgments taken by the the court in this matter can not be rated as force of res judicata, a new request for revocation or replacement of deprivation of liberty measure can be made at any time. The person under preventive custody may request throughout the trial a provisional release under judicial control or on bail. The person who has been unlawfully or unjustifiably subjected to restrictive measures involving deprivation of liberty has the right to seek compensation for material or moral suffered damage.

Both the Romanian Constitution, Article 52 paragraph 3 and Criminal Procedure Code, Articles 504-507 provide the possibility to initiate a civil action for damages against the Romanian state in the case of deprivation or restriction of liberty unlawfully or unfairly convicted. The compensation for the prejudice may be required in all cases in which the state authorities commit abuses of law or manifest negligence, because Article 52 of the Constitution points out excercising this right by those interested regardless the nature of the followed procedure, without refererence to conducting a criminal trial.

In case the remedies for the damage were awarded according to Article 506 and if the Romanian state was condemned by an international court of law, the recourse against those who, in bad faith or serious negligence, caused the damage generating situation is mandatory. The state may recourse against the official subjects (judges or prosecutors) whose responsibility will be held in relation to their procedural guilt.

As a result of amendments brought by Law 281/2003 the content Article 504-507 was fortified in order to increase the guarantees offered by the fundamental principles governing the criminal procedure, namely bringing the proceedings will take into account not only material damages, but also the moral damage, mental trauma caused by unjust conviction or unlawful deprivation or restriction of liberty. This extension of the special procedure object is the effect of the amendments to the criminal procedure law under which the compensation of moral damages caused by criminal offences was expressly stipulated.[4] The necessity of compensation for the moral damage can be observed in specialized literature[5] prior to Law no. 281/2003.

Conditions provided by Art. 504 -506 of Criminal Procedure Code to formulate the compensation action by the injured person by the committing a miscarriage of justice: In criminal matters, the cases of miscarriage of justice, respectively the cases in which the injured party is entitled to compensation for damages caused by miscarriage of justice in criminal trials are set by Article 504 of the Criminal Procedure Code: the person who received a final sentence is entitled to compensation for the suffered damage by the state, if following the retrial it was reached to a final judgment of acquittal. Is entitled for compensation the person who, during the criminal trial, he was deprived of liberty or he has been unlawfully restricted from freedom.

1. For the first case, of **unjust conviction**, the initiation of the compensation court implies the fact that certain conditions have to be met:

a)*the existence of a final judgment of conviction*. It cannot constitute grounds for exercising such action a criminal judgment of conviction which is not final. Judgment in question must be force

[4] I.Neagu *Tratat de procedură penală.Partea specială*. p.631.

[5] G.Antoniu, E.Dobrescu, T.Dianu, Gh. Stroe, T.Avrigeanu, *Reforma legislaţiei penale*,Ed. Academiei Române,Bucureşti, 2003, p. 280.

of res judicata and establish the existence of the offense, its commision with guilt by a natural or legal person to order its conviction either to imprisonment, or fine or penalty for individuals or the fine for legal entities. It is irrelevant whether the imprisonment penalty was ordered execution in detention or ordered with the suspension on parole or supervised suspension of penalty or its execution at the workplace. It is irrelevant whether the imprisonment was put into effect or not. *Promoting and accepting of extraordinary appeals after which it is ordered the originally convicted defendant'discharge*. The final conviction may be canceled by means of annulment appeal, be revision, or in case of rejudging the missing persons. The final conviction does not necessarily imply enforcing the judgment. Therefore, it can served as a basis for the exercise of redress, both final conviction not followed by execution and especially unjust condemnation followed by execution. The differences between these two situations, however, have implications in determining the extent of the damage, not admissibility of the application of the remedies.[6]

The restriction of initiation the special remedies procedure was mentioned in the specialized literature. [7] The same solution was definitive also for Constitutional Court[8], which stated that limiting the possibility of obtaining remedies for miscarriages of justice is inconsistent with the Romanian Constitution.

Through the declarative interpretation of the provisions of Article 504 paragraph 1 it is reached to the exclusion of the liability of patrimonial state for non-convicting solutions provided according to Article 10 letters f)- j), the judicial error will be withheld only in case of final convictions, provided that in that case the criminal proceedings were unfounded. The compensation right arises only after the cancellation or dissolution of the final conviction, the courts of law pronounce following a retrial a final acquittal decision based on any of the cases specified in Article 10 paragrapg 1 lines a) to e).

2. The second case- Remedies for the damage in the case of unlawful deprivation or restriction of liberty.

Unlawful deprivation or restriction of liberty should be determined, as appropriate, by order of the prosecutor to revoke the deprivation or restriction of liberty measure, by ordinance of discontinuing the criminal prosecution or termination the criminal prosecution for the cause provided for in Article 10. Paragraph 1 letter. j) or by court decision to revoke the deprivation or restriction of liberty measure by a final acquittal decision or by final decision of cessation of criminal procedures for the case provided in Article 10 paragraph 1 letter j). It is necessary that the preventive measure in question or the security measure of provisional admission to have been ordered with the violation of the laws under either the Criminal Procedure Code or the European Convention. And in a situation where deprivation of liberty was legal, but **unjustified**, the state may occur liable, as per E.C.H.R., since only the unjustified nature of the measure itself can be determined by the acquittal judgment or the cessation of criminal procedure.

In the case a finding of an unjust conviction or unlawful or unjustified deprivation or restriction of liberty, the injured person is entitled to claim compensation for material or moral prejudice from the Romanian state, represented by the Ministry of Public Finance by means of a civil action in tort.[9]

[8] Constitutional Court, Decision no. 45 of March 10, 1998 (Official Gazette no. 182 of 18 May 1998)

[9] The provisions 998-999 of the Civil Code on liability in tort shall not constitute grounds for engaging the state liability for miscarriages of justice. The legal regulation that establishes in what does the judicial errors consist of, for which the state can be held liable is Article 504 of Criminal Procedure Code compared to Article 52 paragraph 3 of the Romanian Constiturion, which states that the State bear patrimony liability for damages caused by miscarriages of justice. The liability of the state is a direct one, but only limited to the damages caused by judicial errors in criminal proceedings. Also the provisions of Article 504 paragraph 1 of Criminal Procedure Code does not constitute an application of Article 998-999 of Civil Code, such an interpretation could lead to the idea that the state, THROUGH the

In the event that, in criminal proceedings have occurred moral or material damage was caused by judicial errors, the patrimonial state will be held liable. It is about a tort liability law of the state which is legally based on Articles 998-999 of the Civil Code and also on the regulations of Articles 504-507 of the Criminal Procedure Code which provide remedies for the material or moral damages in the case wrongful conviction or unlawful deprivation or restriction of liberty.

The provisions of Articles 998-999 of the Civil Code refers to the obligation to repair of a damage caused by an unlawful act, without distinguishing whether it is a material or a moral injury. Although the law did not expressly provide, it was considered that if the legislature has used the concept of damage he wanted to protect all the rights of one individual who was harmed by committing an illegal act and has provided without distinguishing the nature of the prejudice, that any damage should be compensated, he made implicit reference to both physical damage as well as to moral damages. In order to avoid these discussions, the draft of the new Civil Code expressly states the provisions of Article 1095 paragraph 1 that the compensation obligation and the liability in tort is committed for all to material, injury or moral damage brought to a person's negligence.

In determining the extent of repairs it is taken into account the length of deprivation of freedom or restriction of liberty suffered and the consequences on the individual or family of the one deprived of his liberty or whose liberty has been restricted. The repair is the payment of a an amount of money or, taking into account the conditions of the entitled to compensation and the nature of the suffered damage, the establishment of a lifelong pension or the obligation that, on the state's expense, the one deprived of liberty or whose liberty was restricted to be assigned a social and medical assistance institute. To the persons entitled to compensation who, before deprivation of liberty were employed, are being calculated on seniority as established by law, and while they were imprisoned. The compensation is supported by the Ministry of State Finance.

It is noticed that from the title name of Chapter IV relating to deprivation or "unlawful restriction of liberty" and the content of Article 504 paragraph 3 according to which only preventive measures are taken into account as reasons for limiting the exercise of the right to freedom, there are obvious discrepancies.[10] We emphasize that the process of amending and supplementing the criminal procedure law, in general, and the analyzed special procedure, was particularly carried out having regard to the European Convention on Human Rights, which is established in Article 5 paragraph 5, that the individuals held prisoners against the law are entitled to compensation.

We consider that the present form of Article 504 paragraph 3 does not meet the requirements of the European Convention on Human Rights. Consequently, when developing a new Code of Criminal Procedure*, de lege ferenda* , either text in question will be completed to cover all situations in which the trial will operate an unlawful deprivation or restriction of liberty or will waive the rule in question. In the latter case, the jurisprudence solution for compensation is expected to be based on those procedural acts which have as their purpose finding the occurrence of the miscarriages of justice.

In these circumstances will be eligible for compensation the claims under Articles 504-507 in case the temporary release of the arrested defendant was rejected clearly unjustified.[11] Or for the case the revocation request of the precventive arrens was rejected, even though from the file results the disappearance grounds which led to taking the measure, which means that the continuation of legal proceedings involves the state of freedom of the one accused or convicted. In all cases,

---

Ministry of Public Finance, is limited and unconditional, situation in which legal rules governing the state liability in other areas are no longer justified since the principles of Article 998-999 of the Civil Code are generally applicable (High Court of Cassation and Justice, Civil and Intellectual Property Section, DECISION No. 422/2006, www.legalis.ro).

[10] I.Neagu *Tratat de procedură penală.Partea specială*. p.634.

[11] E.C.H.R., Decision of 27 August 1992 in the case Tomassi against France.

demonstrating the illegality committed leads to retention of the existence of a deprivation of physical liberty in an arbitrary fashion. [12]

The same legal system is to be applied against the assumption that the defendant it was ordered illegally a temporary security measure. Thus, if the measure of safety to hospital care in the absence of data showing that the defendant is mentally ill or drug addict and is in a dangerous condition to society, it can be initiated the remedy procedure, justified by its the restrictive nature of freedom of the procedural measures.[13]

It is entitled to remedies for the suffered damage also the individual who was deprived of liberty after inverting the prescriptio, amnesty or decriminalization act.

The action of remedy can be initiated by the person who has been deprived of liberty or whose liberty has been restricted and after his death, may be continued or started by people who were dependant.

The proceedings may be brought within an established framework of 18 months calculated from the date of the final, where necessary, by court decisions (The court of law unlawfully may order the deprivation or the restriction of liberty in what concerns the defendant in preventive arrest, the obligation not to leave town, the obligation not to leave the country, the unlawful rejection of the request for provisional release, medical admission.) or of the ordinance the prosecutor to revoke the preventive measures (the detention, obligation not to leave town and obligation not to leave the country) on the one hand, or the ordinance not to proceed to judgment (by ordering the removal of a criminal investigation or the termination of the criminal prosecution)

It is an action whose resolution is a matter court in whose district the entitled person is exempted from judicial tax.

Compensation is allowed for both actual damage (damnum emergens) and for the loss of earnings (lucrum cessans). The injured person can not sue along with the state the magistrate or magistrates who issued the judicial decisions through which the unjust conviction or the unlawful deprivation or restriction of liberty was ordered.

According to the practice of the European Court of Human Rights when a person's fundamental rights have been violated by any measures that have been proved to be unfounded, the person is entitled to full compensation for the damage caused, of both material damage and moral damages. Unlike damage claims for material prejudice, to which damage must be certain both in terms of existence and the extent, at the action or moral damages the certainty may be only about the existence of the damage, not the extent of it. **The amount of moral damage is assessed in terms of general criteria at the discretion of the judge.** This is fully justified by the fact that moral damages can not be determined by strict abstract rigors, since it varies from person to person, depending on the specific circumstances of each case. With regard to the moral damage, the literature and legal practice have pointed out that the court should not be limited to a determination of its existence as such, it is obliged to identify the elements that would determine the seriousness of the damage [14] The Former Supreme Court of Justice – The Civil Section decided that moral damage consisting in the honor or the reputation of a person or other psychiatric sufferings, justifies the granting of such compensation which shall be determined by general appreciation, but taking into account the criteria resulting from the specific case before the court of law.

---

[12] I.Neagu *Tratat de procedură penală.Partea specială*. p.635.

[13] M.Damaschin, Condamnare sau dispunere a unei măsuri preventive pe nedrept.Despăgubiri,în R.D.P., nr 3 , 2004, p.79.

[14] Ghe.Vintilă and Constantin Furtună – *Daunele morale – Stadiu de doctrină şi jurisprudenţă* – Ed.Allbeck,Bucureşti 2002, pag. 116-131).

The legislature has provided that the entitled persons, who before the deprivation of liberty were employed, they are being calculated, aside from the seniority established by law also the time in which they were imprisoned as remedies for the damage.[15]

The existence of moral damage should not be proven (unlike the material damage), but it is justified as a matter of discretion, taking into account non-property rights or interests affected, such as the right to liberty, bodily integrity, health, honor, reputation and so on, respectively the physical and mental suffering caused by the violations of these fundamental values of the human person - protected now by the Constitution and the E.C.H.R.. A quantification of moral damages or a "measuring" of the sufferings cannot be achieved by technical, accurate evidence, being a purely subjective matter, which must be concretely analyzed by taking into account the total of the circumstances related to the actual conviction (nature, duration, method of execution), as well as the adverse effects which it has produced both to family and professionally (ECHR, November 6, 1980, Guzzardi against Italy).

The European Court itself, when granting moral damages, does not operate with predetermined evaluation criteria, but **in equity judgment.** The provisions Article 505 of the Criminal Procedure Code establish the criteria by which it is determined the compensation for thesuffered damage but do not establish the criteria to quantify them.

The need to maintain the public order, including the protection of any accused is a reason that may justify the extension of imprisonment. However, it can not be considered relevant and sufficient unless it is supported by facts showing that the prisoner release would actually affect public order. Moreover, **the detention is not legitimate unless public order is indeed under threat.** [16]

In its jurisprudence, the Court set forth four fundamental reasons acceptable to the preventive arrest of a person suspected of having committed a crime: the danger that the defendant would escape (*Stögmuller vs Austria*, November 10 1969, seres A no. 9,); the risk that, once released, to prevent the administration of justice (*Wemhoff vs Germany* June 27 1968, 14), to commit new crimes (*Matzenetter vs Austria*, November 10, 1969) or to disturb public order (*Letellier vs France* and *Hendriks vs Netherlands* [Dec.], no. 43701/04, July 5, 2007). Moreover it decided that courts of law ruling with regard to the possibility of keeping the defendant in preventing arrest must consider all the specific relevant factors, which are able to confirm the necessity existence of this measure (*Mansur vs Turciei*, 8 iunie1995,).

According to paragraph (5), Artice 96 of Law no. 303, no person is entitled to compensation who, throughout the trial, **contributed in any way** in commiting a legal error by the judge or the prosecutor.

In the concept of the legislature, only the absolutely innocent person (who has not committed any unlawful act that would attract criminal and extra-criminal liability is entitled to compensation from the state - Opinion separated at the Constitutional Court, Decision no. 45 of 10 March 1998 on the plea of unconstitutionality of the provisions of Article 504 paragraph 1 of the Criminal Procedure Code, published in the Official Gazette of Romania, Part I, no. 182 of 18 May 1998). According to the ECHR jurisprudence, the specific danger to public order it is understood as a "collective response to the offense" which, by its resonance affects the natural social balance, creates a state of indignation and disapproval, of fear and social insecurity, stimulates the fear that justice does not act strongly enough against criminal manifestations of pronounced social danger and may encourage others to commit similar acts. The Strasbourg Court has principally stated that, in time, the national authorities have the positive obligation to indicate specific elements to justify the arrest, respectively in each case the public interest.

[15] Decision no. 1888/1991 – published in Rev.Law no. 7/1992, pag. 85).
[16] *Letellier vs France*, June 26, 1991, 51, series A, no. 207).

The national court of law must to verify whether it is not possible to resort to other measures with the aim ensure the smooth running of the trial. [17]

The recourse action. According to Article 507 if the remedies for the damage have been paid to the wrongfully convicted person and whom was unlawfully relieved or restricted from freedom, as well as in a situation where the Romanian state was condemned by an international court, the recourse action against the person who in bad faith or serious negligence caused tortious situation is mandatory. In both cases, the recourse actions may be directed only against a judge or prosecutor, guilty of the crime of unjust repression [18], misconduct in office, unlawful arrest [19] and abusive research or the settlement of a criminal case in violation of the international human rights instruments ratified by Romania (violated following which the Romanian state would issue a conviction).

The civil liability of the judge or the prosecutor in relation to the provisions of Article 507 Criminal Procedure Code, for miscarriages of justice committed during criminal proceedings.

The conditions stipulated in Articles 504-506 of Criminal Procedure Code for the action formulation of compensations by the injured person by committing judicial error.:

1 The state bears patrimony liability for damages caused by miscarriages of justice.

2 In criminal matters, the cases of miscarriage of justice, or where the injured party is entitled to compensation for the damage caused by judicial errors in criminal trials are set by Article 504 of the Criminal Procedure Code: the person who was finally convicted is entitled to compensation for the damage suffered by the State, if after retrial it has been reached to a final judgment of acquittal. It is entitled to compensation also the person who, during the criminal trial, he was deprived of liberty or has been unlawfully restricted of freedom.

3 The existence of a decision of the judicial body that establishes the existence of judicial error:

a) In case of incorrect conviction a final acquital judgment is necessary rendered following the retrial; given the previous criminal procedural provisions, the restriction of initiating special remedies was mentioned.

b) In the case of unlawful deprivation or restriction of liberty:

1 the prosecutor may observe the error by revocation ordinance of the restrictive measure or deprivation of liberty, discontinuing the criminal prosecution or terminating the criminal prosecution for the cause provided for in Article 10 paragraph 1 letter j (force of res judicata) of the Criminal Procedure Code.

2 the court of law may find the error by dismissing decision of a restrictive measure involving deprivation of liberty, by a final acquittal decision or final cessation decision of the criminal procedure of the case provided for in Article 10 paragraph 1 letter j) of the Criminal Procedure Code.

3 To compensate for the the damage, the injured party may take action only against the State, represented by the Ministry of Public Finance.

4 The limitation period of the right of action against the person who takes action against the state is of 18 months from the date of the final decision, if necessary, of the court decisions or the prosecutor ordinances, according to Article 506 Paragraph 2 of the Criminal Procedure Code.

5 The action is exempt from stamp duty.

---

[17] I.C.CJ., Decision no. 1345 of April 8, 2010.

[18] The unjust repression consists in the act of activating the criminal proceedings, or ordering the arrest, of prosecuting or convicting a person knowing that he is innocent Article 268 of Criminal Code.

[19] The offense of unlawful arrest and abusive research is provided in Article 266 of Criminal Code, which states inter alia that illegal arrest or detention shall be punished with imprisonment from 6 months to 3 years.

According to Article 96, paragraph 5 of Law 303/2004 regarding the the statute of judges and prosecutors, republished [20], is not entitled to compensation in the process the person who, during the trial, contributed in any way to the unlawful deprivation or restriction of liberty.[21]

The conditions stipulated by Article 507of Criminal Procedure Code for the recourse action made by the state against the judge and the prosecutor.

1 Only the state can make recourse action against the judge or prosecutor to recover the compensation paid to the injured party by committing the legal error.

2 Compensating the damage was granted by the State pursuant to a final judgment. This aspect excludes the possibility that during the trial, the state to which legal action was taken to call as a warranty the judge or the prosecutor who issued the solution that led to judicial error. Because the state can make a recourse action, the judgment should be pronounced against him is irrevocable and also to be executed.

3 The limitation period of the right of action for the state to make recourse action is of 1 year.

4 The person against whom the state is taking action, including the judge or the prosecutor, to have acted in bad faith or serious negligence. The Article 507 of the Criminal Procedure Code refers to any person who in bad faith or negligence caused a damage generating situation, which includes judges and prosecutors. The bad faith and serious negligence must be demonstrated during the recourse action brought by the state against the judge or the prosecutor.

By analyzing the conditions which have to be met in order to initiate the recourse action by the state against the judge or prosecutor result in two important **procedural safeguards**, namely:

1 **The direct inadmissibility of the action** filed by the injured person by committing the judicial error against the judge or the prosecutor. According to Article 504 of the Criminal Procedure Code and Article 96 paragraph 6 of Law 303/2004, an the compensation claim may be made only against the State, represented by the Ministry of Public Finance.

2 **The inadmissibility of the action under warranty** filed by the state, as owner of recourse action against the judge and prosecutor during the trial of the action for damages brought by the injured party by committing a legal error. Thus, according to the provisions of Article 507 of Criminal Procedure Code and Article 96 paragraph 7 of Law 303/2004, the state recourse may be made only after the delivery of a final judgment, and the damage was covered, so only after the decision was executed.

Conclusions

In summary, for the civil liability of judges and prosecutors (THE PROCEDURAL GUILT OF THE OFFICIAL SUBJECTS) for damages caused by judicial errors made in criminal proceedings shall be instituted, under the law, as appropriate, the provisions of Article 96 of Law 303/2004 or Article 504'-06 of Criminal Procedure Code, and secondly the recourse action (compensation) of the State against the judge or the prosecutor which it is subsequent action for damages, brought by the party. The Romanian legislator intended to regulate through a special procedure provided in Article 12. of G. D. No. 94/1999 the recourse of the Romanian state against the guilty persons led to its conviction at ECHR to pay certain amounts of money.The recourse may be exercised for any amount imposed on the state by the sentence of the ECHR, that not only provides sufficient amounts order any damage suffered as a result of human rights violations (moral and material damage) but also for expenses incurred by the injured party in the internal procedures and in the European court, in order to remedy the interference, the same as for the default interest rates established by the Strasbourg court decision in case of delayed execution. Considering that the text is states about "civil liability" that the exercise must be fulfilled regression of conditions a breach

[20] Official Gazette no. 826 of 13 September 2005, with subsequent amendments.
[21] M.Udroiu, *Procedură penală.*

of the Convention, there is a final conviction pecuniary Romanian state, the causal link between the act and the injury, the existence of guilt and payment of the amounts to which the state was required. In terms of guilt presence, because the rule does not distinguish, it can take the form of guilt and blame. According to Article 12 line 3 of G.D. No 94/1999 the "civil liability" of judges is determined under conditions which will be governed by the law of judicial organization. These conditions have never been regulated by Law no. 92/1992 of Law no. 303/2004, and in the absence of proper regulation in the law of judicial organization reference made remains enigmatic.[22]

In conclusion it is intended to amendment and complete the Law no. 303/2004 regarding the the statute of judges and prosecutors, and amending and supplementing the Code of Criminal Procedure, is structured on the following regulatory principles:

- ensuring the effective possibility for the person who has suffered damage to claim compensation
- determining the cases that are right to remedies for the damage.
- strengthening the state's role as guarantor of compensation for the damage suffered by individuals.
- ensuring the independence of of judges and prosecutors in discharging their functions
- determining the cases in which the recourse action can be made as well as determining its basis.
- the conceptual delimitation of the notion of "bad faith" and "serious negligence".
- the conclusion of civil liability insurance for judges and prosecutors.

The social impact that a new law project will have is that it will lead to an improved perception of the judicial system by increasing confidence in achieving work of justice and at the same time will increase the accountability of judges and prosecutors in discharging their function.

THE APPROACH OF THE EDUCATIONAL, NON-DETENTION MEASURES APPLIED TO THE MINOR, FROM THE POINT OF VIEW OF THE NEW CRIMINAL REGULATIONS AND THE ELEMENTS OF COMPARED LAW

MONICA POCORA[*]
MIHAIL-SILVIU POCORA[**]

Abstract
The criminal liability of the underaged criminals is a very delicate matter, in the sense of the criminal constraint imposed on them. The comparative approach of the sanctionary system from the point of view of the freedom of movement of the minor wishes to analyse on the one hand the regulatory framework, and on the other hand to underline the reason according to which one has to distinguish between penalties and educational measures.

Keywords*: judgement, minority, penalty, freedom, education*

Introduction

The minor charged criminally can either be applied an educational measure, or a penalty. The sanctionary system applied to the minors gives priority to the educational measures which by their action and completion are more appropriate to lead to the minors' re-education and to guide them to good conduct. The educational measures aim first of all to re-educate the minor by adequate means to people who have not reached yet their full psychophysical maturity. Unlike educational measures, penalties are intended to both the constraint and re-education of the underaged criminal. Generally speaking the safety measures mainly aim to remove the danger state, regardless if the criminal is a mature person or a minor[1].

Taking into account the aspects concerning the serving of the educational measures, the New Criminal Code considered the following instruments: The United Nations Convention regarding the child's rights, the rules of the United Nations Organization regarding the protection of the minors deprived of freedom, the minimal rules of the United Nations for the draft of some non-detention measures (The Tokyo Rules), the Protocol of the minimal rules of the United Nations concerning the administration of justice for minors (Beijing Rules), the Recommendation 87 (20) of the Committee of Ministers concerning the social reactions to juvenile delinquency.

The Beijing Rules provide that the meaning of the notion of criminal capacity has to be clearly defined and that the age for criminal liability should not be set at a too low a limit, taking into account the degree of emotional, physical and intellectual maturity of the child. The defining of the age for criminal liability has to be done in a legal framework considering the capacity, development skills and the contextual experience of a child.

According to art. 40 paragraph 3 letter a of the Convention regarding the child's rights, the Member State must establish a minimal age for criminal liability, under which children cannot he held accountable for the presumed committing of a crime.

The New Criminal Code erases the possibility of applying a penalty to the minor who committed a crime. Also, no other article provides the possibility to apply a penalty to the minor, as it

is done at the moment, the penalties that can be applied to the minor being: imprisonment and fine, their limits being reduced to half.

The educational, non-detention measures are sanctions of criminal law that apply to the underaged who committed a crime whose seriousness does not require freedom deprivation. These are: *the stage of the civic formation*, *the supervision*, *weekend confinement*, *daily assistance*. The court can impose the minor throughout the execution of the non-detention, educational measures one or more of the obligations provided in art. 121 Criminal code.

With regard to **the preventive measures that can be ruled for children who have violated the criminal law**, the new Criminal Procedure code contains some special provisions, suggesting as a general rule, the possibility to preventive detention, only if the effects of such a measure on their personality and development are not disproportionate to the legitimate purpose aimed by taking the measure, regulating at the same time the necessity to inform in writing the person subject to any preventive measure on all the rights the law grants him.

The new criminal Code provides that minors aged between 14 and 18, who committed a crime, to be applied only educational measures, these being **non-detention** (*the stage of civic formation*, *supervision*, *weekend confinement* and *daily assistance*), or **with freedom deprivation** (registration in an educational centre and internment in a detention centre), the rule being that the detention measures are to be taken only if the criminal minor is in one of the situations expressly provided here:

- the underaged has already committed a prior crime for which he was applied an educational measure which was executed before committing another crime;
- the crime for which he is trialled was committed by exercising violence or threats or ended with a person's death;
- the penalty provided by law for the crime committed is 10 years in prison or more, or life detention;
- the minor is trialled for committing a recurrent crime if by its nature, seriousness, number or frequency, the criminal's dangerous character is emphasized.

In Germany, ever since the beginning of the 20th century, a special status of the underaged criminal was adopted as opposed to the major one. In Germany, the status of the criminal minors is integrated in an ensemble of normative acts which make up a complex system of measures with social-educational and protection character, where the repressive aspects constitute an exception of the steady rules for a law well differentiated and adapted to the specific of this age group. In this sense, we should note that Germany is one of the few countries in the world where there is a Law regarding the youth welfare (Jugendwohlfahrtgesetz), which constitutes a reference act in the field of social treatment and of the measures that need to be taken so as to ensure some normal conditions of life to children and young people.

The status of the criminal minor and "young adult" (Herranwachsende) is provided in the Law of the youth court (Jugendgerichtsgesetzbuch) since 1923 with further amendments, which is completed by the provisions of the Criminal Code. Germany is one of the countries that have a distinct criminal law for minors in what concerns the general part.

The minor of up to 14 years old is considered irresponsible and he can only be punished by a social-educational measure, of protection and assistance, whose execution is placed on the competence of different institutions and authorized bodies or set-up local "youth offices" (Jugendamnt).

The minor of 14-18 years old is considered responsible, if on committing the deed he had a level of moral and intellectual development that allowed him to be aware of the illicit character of his conduct.

Towards the minor that proves he does not have this degree of maturity, there can only be applied educational and protection measures. In other words, the minor aged between 14 and 18 benefits of a relative presumption of irresponsibility that can be removed by proving his moral

maturity and the capacity of understanding the illicit character of the committed deed. This is a good thing because there are minors that develop more quickly, both physically and psychically, which allows them to become aware of the prejudicial nature of their deeds. The minor who committed a crime can basically be applied only educational measures. When these are considered insufficient, the underaged is punished with corrective measures or with a penalty. If the judge for minors thinks it is necessary, he can rule that instead of the penalty or corrective measures, the minor be placed in a psychiatric hospital or in a detention institution.

For the underaged offenders there can also be taken certain safety measures of "correction" with a preventive nature, provided by the common law, namely placing them into a psychiatric hospital, sending them in an institution with a detention regime or supervising their conduct, as well as the withdrawal of the licence to exercise a certain skill, such as driving a vehicle.

The safety measures may remain in force also after the coming of age[2] (*2011 OVERVIEW OF THE CHANCELLOR OF JUSTICE ACTIVITIES* 2012). Also, the judge may rule on the minor delinquent several educational or corrective measures, as well as educational measures associated with coercive measures.

The arrest for minors cannot be cumulated with the educational measure of the educational assistance (Fursorgeerziehung). As educational measures, "the guidance for behaviour" applies – there are some indications and prohibitions ruled by the judge for minors as to how the life of the minor should be organized and his education unfold, "educational assistance and placing under care." When the judge considers that the educational and coercive measures are not enough, the prison penalty applies. The prison penalty can be for a definite period of time or indefinite.

The system of justice for minors is based on the principle of subsidiary or of the minimal intervention (Subsidariatsgrunsatz)[3]. This means that the criminal penalties are to be ruled only if they prove irreplaceable. Moreover, these penalties are limited by the principle of proportionality.

In **France,** the current Criminal Code states in art. 122 the principle of the absolute lack of criminal liability, according to which "the minors capable of judgement are criminally liable for the crimes, misdemeanours or offenses they were acknowledged to be guilty of, under the conditions set by a special law which provides measures of protection, assistance, surveillance and education, for them.

At the moment, the legal status of the delinquent minors is regulated by the ordinance no. 45-174 since 2 February 1945 regarding minor offenders. According to art. 1, the minors who committed a crime were not sent to the common law criminal jurisdiction, but to the tribunals or jury courts specialized for minors. Art. 2 stipulates that the Tribunal for minors and the Jury Court for minors rule accordingly for protection measures, assistance or surveillance measures, protection or education ones.

When the circumstances and the personality of the minor demand it, an educational sanction can be ruled for the minor aged between 10 and 18 or a penalty for the minor aged between 13 and 18, taking into account the criminal liability. The Tribunal for minors cannot give a prison punishment, with or without suspending the execution, unless by accounting for it[4]. On the minor who did not reach 13 years of age, the measure of detainment cannot be ruled for unless on exceptional cases.

If a minor of 16 was said to be held, the prosecutor or judge has to assign a doctor that examines the minor. The interrogation of the minor is subject to an audio-visual recording. The recording in original is placed under seal and its copy is filed for the record. The dissemination of the recording by a person is punished with one year in prison or 15,000 euro fine.

The penalty regime. The minor criminals are applied a mixed penalty regime, made up of educational measures, measures for mediation-compensation and punishments, the selection of either one being left at the court's free will.

In the **Italian** legal system, in approaching the issue of the criminal minor, the main idea is that of a close connection between the criminal, substantial law and the criminal, trial law, placing on the first place the application of some compensation penalties and taking the pedagogical-educational factor, this being actually also the characteristic of the report between interest-duty of the state, imposing finally the search for the most adequate forms of re-education, with a structure entirely particular of unfolding the criminal trial[5].

The age for criminal liability coincides with the one for coming of age, meaning 18, but in certain situations it can drop to the age of 14. The sanctionary regime if made up of alternative measures and probation. The Tribunal for minors is the only competent instance. This and the magistrate for supervising the execution of the ruled measures, remain competent also after the minors reached the age of 18, up to 25 at the most.

The legal provisions state that youth are applied the same penalties as the adults, but in a subdued form[6]. With minors, the Criminal procedure code, by art. 169 gives the judge the possibility to rule for not sending to trial or give up the conviction (perdono giudiziale), if the law provides for the committed crime prison time which cannot exceed 2 years or fine. As a rule, this transferring of penalty cannot be granted more than once. The judge can replace the prison penalty exceeding 2 years with one of the following penalties: supervised freedom or semi-freedom. Also the judge has the possibility to suspend the trial for a period between 1 and 3 years, function on the seriousness of the deeds and to subject the minor delinquent to a probation period.

The provisions concerning minors are found in the **Spanish** Criminal Code and in Law no. 5/2000 concerning the criminal liability of the minors[7]. The criminal liability age coincides with the criminal coming of age. Among minors, we distinguish two categories, when applying the law and establishing the consequences for the crimes committed, from 14 to 16 and from 16 to 18. For the minors who have reached the age of 16, the law provides an aggravation in the case of committing crimes with violence, intimidation or placing the person in danger. When the committed crimes are qualified as misdemeanours (faltas), there can be ruled measures such as: reprimand, community service, with a maximal duration of 50 hours, confiscating the driver's licence and of other administrative licences.

When the deeds were done by using violence, threats or by endangering the life or physical integrity, the measure of placing in a closed-circuit institution can be ruled. When the deeds are committed in guilt, the measure of internment cannot be ruled, which underlines the main principle, of re-socialization of the law.

In **Portugal**, the Criminal Code in art. 19 sets the principle of the absolute lack of liability of the minor who has not reached the age of 16 and provides the application of a special law for young people between 16 and 21 years old. (Law-decree no. 314 from 7 October 1978 regarding the criminal status applicable to the youth).

In the case of the minors of 12 to 16 years old, who have not yet committed deeds provided by the criminal law, the provisions of the tutoring-educational law approved by Law no. 166/99 become applicable. Art. 1 provides that the present law-decree applies to all youth who have committed a deed qualified as crime. By *young person*, we mean any person who at the time of committing the crime is of 6 to 21 of age. The provisions of this decree do not apply to the young people who are not held accountable due to some psychic disorders.

As for the law for minors in **England and Wales**, it is to be found in the Law for preventing criminality and disturbance of Public order (Crime and Disorder Act) since 30 September 1998 and in the Police and Criminal Evidence Act since 1984.

The age of the criminal liability is 10, but the criminal coming of age is 18. According to art. 34 of Crime and Disorder Act, which abrogated the presumption of non-responsibility, minors are held accountable criminally since the age of 10. When the minor is of 12 to 14 years old, a special measure can be ruled on him, *secure training order*, lasting between 6 months to 2 years. During the execution of the first half of this measure, the minor is detained in a special centre, later is released, but is to be under the supervision of a probation agent.

The legal condition of the criminal minor in England highlights particularities that have to do with the specificity of the English system of law, based on tradition. What is characteristic to the English criminal law when it comes to the deeds committed by minors was the excessive harshness throughout time. Until the 19th century, over 200 crimes were punished with death penalty, and minors were considered after the age of 8, as adult offenders. The future growth of a legal system separated for minors, in England, constituted an answer to the threat represented by the juvenile delinquency to the order set in state, under the circumstances that the jury refused to convict them because of the penalties that were too harsh for minors to suffer.

It is no coincidence that the probation as a practice of courts to maintain the convicted defendant under surveillance and under the influence of community appears in the practice law of English courts ever since the beginning of the 18th century. At the moment, within the Ministry of Internal Affairs, that the penitentiary system belongs to, there is a probation system with offices throughout England. Among the objectives of the probation offices and the collaboration with the personnel in prisons where minors are held being the collaboration with the Establishments for minors.

In 1974 there was a breakthrough of this system by regulating the service for the use of the community. Within this programme, the minors participated in activities of carpentry, painting, gardening, maintenance of the youth clubs, helping in hospitals etc. These measures later entered into the law and practice of other states in Europe too.

A new measure is "the intermediary treatment", which is located between the supervised freedom and the placement in an institution and implies adopted programs to various categories of minors and young offenders (for example, programs for first-time offenders, for old offenders etc;) they comprise a multitude of activities which are to be unfold in the centres where the minors are summoned to spend their day; certain minors might be forced to spend their weekend there.

On avoiding, as much as possible the trial courts by the criminal minors help also "The Youth Contact Offices", which are made up of a probation officer, a police officer, a social worker and often a representative of the school system. They gather daily or weekly and assess the seriousness of each of the deeds committed by minors (or young people) on that day or in a week and decide on the corresponding educational measure.

The Criminal Justice Act of 1982 is in favour of applying the non-detention penalties to the minor offender, which establishes the principle that a sentence of the minor deprived of freedom is possible only if other forms of penalty would not work or for reasons of protecting the society in case of more serious crimes.

By the 1982 Law concerning the criminal justice, the English criminal law contains general principles of behaviour with young criminals, indicating in Title 1 the applicable penalties for them. According to these principles, the trial cannot set the prison punishment of the person that has not yet reached the age of 21 at the time when the crime was committed.

Conclusions

Regardless of the laws of the states we are talking about, the reference coordinate is the biophysical status, psycho-physical of the minor, the prison penalty being less appropriate for

attaining the purpose of the criminal law in relation to the minor offenders. This means of constraint tends to the reeducation of the major offender, while for the reeducation of the minor offenders, it would be necessary not a reeducation, meaning a recovery of the prior education, but an initial education with proper means. Moreover, the serving of the penalty in a penitentiary can affect the fragile psyche of the minor because of the harsh detention regime, as well as the negative influence of the other convicts.

ASPECTS OF COMPARATIVE LAW IN THE MATTER OF JUVENILE PRE-DELINQUENCY AND DELINQUENCY WITH TRENDS TOWARDS SANCTIONS AND PREVENTION

MONICA POCORA[*]
MIHAIL-SILVIU POCORA[**]

Abstract
This study aims to be an interdisciplinary, criminal-criminological approach of the minority institution in terms of criminal liability, with an evolutionary dynamic of the pre-offense and post-offense assumptions. The operative criterion is the notion of juvenile pre-delinquency (pre-deviance or potential deviance), because it refers to all the acts violating the norm of moral behaviour, which in certain circumstances may lead a teenager to appear before the court, and in other circumstances not.
The deviant conducts of minors do not necessarily have a criminal nature and not under all circumstances. If these different acts of them do not violate the criminal norms, representing only deviations from ethical rules of behaviour, they are not legally sanctioned, but only in moral forms. Thus, this approach is meant to be a criminological transition from the criminological plan to the criminal illegality.

Keywords*: criminal liability, sanction, deviance, behaviour, conflict*

Introduction

The behavioural deviations do not harm the normative-axiological system of society and at the same time act as a handicap for the perpetrator himself and the harmonious development of his personality. They cannot be classified as delinquent acts, because otherwise there is the risk to become equivalent to the worst crimes committed by an adult, thus harming relationships and the values of society as a whole. In order to go beyond the limits of the criminal norm criterion, one has to use other criteria as well in assessing the teen behaviour, not so much subjected to the moral or legal element, as to the social deviance in its widest sense. The finding that there are at least two kinds of rules - legal rules and non-juridical rules – makes it necessary to find a criterion to distinguish between delinquency and pre-delinquency, all the more so since sometimes identical behaviours are measured by different regulatory systems.

The study of juvenile pre-delinquency requires a change in the legal perspective and of the criminal or moral normative criterion with a multi and inter-disciplinary perspective of specific problems which the young person has to face, in his life environment and social existence. Such a study is useful as it suggests a multiple explanation of the "primary" causes that determine certain categories of pre-deviant teenagers to later commit acts of delinquency and of the conditions of development of the deviant minor's personality, while allowing at the same time a delineation between pre-delinquency and delinquency and between pre-delinquency and "normal" behaviour, as a sequence of acts that do not necessarily determine one another.

From this point of view, as already pointed out in other papers on the issue of juvenile delinquency, the pre-delinquent behaviours exhibited by some teenagers are not always a prelude to delinquent behaviour, as much as the latter does not represent the natural consequence of previous committing of pre-delinquent acts (*Anne-Marie*, 2012).

The relation between *pre-delinquency* and *juvenile delinquency* should not be treated solely based on the normative and sanctioning nature of rules imposed by the adult society. Many of the

[*] Lecturer, PhD, "Danubius" University of Galati (email: monicapocora@univ-danubius.ro).
[**] Assistant Lecturer, PhD candidate, "Alexandru Ioan Cuza" Police Academy, Bucharest (email: silviupocora@yahoo.com).

deviant acts committed by young people are actually their defending reactions in relation to adopting their new roles and social responsibilities and should not be interpreted as "symptoms" of an alteration of personality or as manifestations of psychopathological disorders.

Regardless of the perspective from which we approach and define juvenile delinquency, the statistics even if they cannot create a complete image, indicate that in Romania the measures of prevention and control do not have a huge impact, although at least theoretically the efforts have intensified in recent decades[1].

Juvenile law in Hungary

The Hungarian legal system is continental, which means that the guiding principles are not based on precedents, but on substantial and procedural provisions of law in jurisprudence. As for the age characteristic, the provisions of criminal investigation make a sole distinction between the authors of crimes. The convict, who at the time of the crime was already 14 years old, but did not yet reach the age of 18, is considered minor, and if he is already 18, is considered an adult. In the Hungarian system of penalties the concept of youth does not exist.

The Hungarian juvenile justice system meets the criteria prescribed in the international law in the field (the Beijing Rules, the New York Convention, and Riyadh Guidelines). These international acts define the guarantees of criminal law and criminal principles and establish the proof of criminal liability, qualifying prevention and social reintegration as a duty of the law enforcement organs involved in dealing with solving cases about participation of minors. The international agreements consider the legal consequences of the arrest as a decisive argument and specify – instead – to apply legal consequences that can replace imprisonment, the so-called alternative sanctions and the extralegal approach.

The confiscation of property cannot be applied to minors, and the fine is advisable only if the minors have independent income from salaries or corresponding property. The community service measure can be applied to a minor if he has reached the age at which the respective punishment may be imposed. If the criminal minor did not hire a lawyer, the state has to provide a defence attorney for him. During the trial, the parents or legal representatives of the child have the right to participate as witnesses. In Hungary, parents are not liable for the deeds committed by their children.

Hungary's judicial system is unitary. There are no special military courts or for minors. However there are councils for minors and military personnel, which in some relevant cases have judicial powers. There are some differences between penalties that may be imposed on juvenile offenders. The minimal and maximal duration of detention of minors is shorter. Therefore a juvenile offender can be imprisoned for a period of 15 years (Paragraph 110 Law IV of 1978 - Criminal Code). A juvenile offender cannot be put in the same cell with adults.

There are two types of correctional institutions, 14 national and 17 regional. One should note that the 12 correctional institutions include their own factories. The minor can be sent to a reformatory. The court decides the term to stay in the reformatory, ranging from one to three years (para. 118, section 2 of the Criminal Code). After a year of being in reformatory, the minor may be temporarily released following a court decision. In this case it is mandatory the supervision of the minor by a probation officer[2]. The imprisonment measure is applied if the detention in the institution is more favourable for a proper education.

Juvenile detention homes and reformatory schools are part of the Ministry of Youth, Family, Social Affairs and Equal Opportunities. On 31 December 2001 there were two houses of detention, a correctional school for boys and a home detention and correctional school for girls. The Ministry of Youth, Family, Social Affairs and Equal Opportunities should provide the necessary conditions for

[1] Barnett, R. (2009). *Restitution: A New Paradigm of Criminal Justice.* Devon: Willan Publishing.
[2] Shearing, C. (2000). *Punishment and the Changing Face of Governance*.

educating young people in these institutions, to ensure their supervision, together with the Ministry of Justice.

Juvenile Law in Estonia

If the minor comes in conflict with the law and justice, he finds himself under the supervision of police, prosecutors, probation officers and the court. In Estonia, the minor can be held criminally accountable since the age of 14. According to the law, all the police procedures on a minor (aged up to 14) has to be done with the mandatory presence of a social worker or a worker for the child's welfare. In Estonia, the prosecutors handle the cases involving participation of minors, but officially there are no judges or courts specialized in children's cases.

After the criminal investigation, a court decides the penalty for the offenders: imprisonment, probation or educational measures. The maximum penalty imposed on a minor (aged up to 18) is ten years imprisonment.

It is possible to terminate the criminal case by the prosecutor or judge if there is no public interest in the matter or the offense was done by reckless behaviour. In such cases the minor is sent to the committee for minors or has to serve from 10 to 240 hours of unpaid community service.

In 2011, there were 4,464 adults and 77 minors detained in the Estonian prisons. The male prisoners, aged from 14 to 21, serve a prison sentence in Viljandi penitentiary. The largest groups of juvenile prisoners are made up of minors aged from 14 to 18, as these people are serving a sentence for the first time. Most prisoners committed crimes against property. Viljandi Prison is the only institution in Estonia for juvenile offenders. Work within a prison for juveniles is specific as the personality of the minor is not formed yet. A young inmate is impulsive and can be easily influenced, which facilitates his re-socialization. However, 80% of male juvenile offenders commit crimes again.

Criminal minors who are not yet 14 years old or commit an illegal deed, as sanctioned by the Criminal Code or other law, are referred to the juvenile committee, court which exists in every region. This committee should be made up of people with expertise in education, social science and health, a police officer, an employee of the local government and a secretary of the committee for minors. Minors may be applied one or more of the sanctions listed below:

1). warning;

2). sanctions regarding the organization of the child's education;

3). his referring to a psychologist, social worker or other specialists in examinations;

4) counselling;

5) obligation to reside with a parent, a foster parent, a guardian, a family offering care or in an orphanage;

6) community service;

7) participation in youth programs, social or medical treatment programs;

8) sending him to schools for people with special needs.

The Estonian probation system was established on 1 May 1998. The average juvenile probation period is of up to 18 months. During this time, the probation officers have to make counselling sessions with the minors and their parents, visits to their places of residence, reports (ordinary and extraordinary), and also to conduct and develop programs of probation. For a better quality of work, the probation officers collaborate with various institutions: the police, the local municipality, work committee, school, orphanages, NGOs etc. The officer is the person that minors can trust and rely on, that will help them organize their lives so as to avoid further committing other crimes.

If the penalty of imprisonment is substituted with community service, the probation officers have to find work for the minor (usually in NGOs or local government institutions), to check on him at work and instruct the supervisor. The court may substitute community service with a penalty of up to two years imprisonment. A day of detention is considered equivalent to two hours of community service and usually takes twenty-four months before it is executed. The community service measure

can replace the imprisonment of the offender only with the offender's consent. Usually minors are applied a volume of 20 to 100 hours of unpaid community service.

Minors who are applied the probation are those with the suspended sentence (with a period of probation for 18 to 36 months); or released from prison on parole (with a probation period starting from one year); who perform community service (people whose prison term of up to two years was replaced by community service for up to 24 months) or minors who are freed from punishment. The court may exempt a person from punishment, applying probation for up to one year, period which may be extended).

Juvenile Law in Ukraine

In Ukraine there is a separate juvenile law system and specialized for the needs of minors; there are no specially appointed courts and no judges specialized in juvenile cases. The number of lawyers, social workers, social activists and officials working in the field of juvenile law in Ukraine is extremely low. There is no pedagogical approach in the juvenile court system; there are many gaps in the Ukrainian law on cases of juveniles breaking the law[3].

In Ukraine, the administration of juvenile justice is divided between various administrative and judicial bodies, which do not cooperate among themselves. Juveniles breaking the law are in conflict with society, and apparently, society is in conflict with them. State policy gives much more attention to minors who are victims of exploitation, violence, poverty and diseases. But most children in prisons are also victims: victims of exploitation, violence, poverty and disease. According to statistical data provided by the State Department of Ukraine for Execution of Sentences, in 2012 there were about 3,000 juvenile inmates in 11 institutions. More than 50% of them are convicted for theft, 25% for burglary and robbery and 10% for serious injuries. More than 13% of convicted juveniles are aged from 14 to 16, 28% are aged from 16 to 17 and 39% are of about 17-18 years. Almost every third child is sentenced to imprisonment for a term of 1-3 years, half of them - for a period of 3-5 years and about 18% - to more than 5 years.

Despite of the legal provisions in Ukraine, there were no specialized juvenile courts set up and there are no judges trained specifically for such cases. The number of lawyers, social workers, social activists and officials working in this field is very low. The long period of time from the detention to inform the detainee's family, the period from detention until hearing by the judge (72 hours) and the duration of the preliminary investigation period (18 months) are not justified. It is necessary to emphasize that responsible officials - law enforcement officials - are not yet ready to improve the situation, because of the gaps in the Ukrainian law.

Juvenile Law in Poland

In conformity with the Polish law, a minor is:

- a person from 13 to 17 years old, who commits reprehensible actions or certain law violations (illegal deeds).
- children and young people up to 18 years old who show symptoms of demoralization.
- a person up to 21 years old whom the correctional and administrative measures are applicable to.

There are criminally liable, the people who reached the age of 17. In exceptional cases, the minors aged from 15 to 16, who committed serious crimes, can be held criminally accountable as adults, according to the Criminal Code, if other conditions are also met considering the offender and offense[4].

---

[3] Yevgeniya, P. (2012). *Justiţia juvenilă: analiza situaţiei în Ucraina - Justiţia juvenilă în Estul şi Sud-Estul Europei.* Chişinău: Institutul de Reforme Penale.

[4] Wójcik, D. (2004). *O scrisoare din Polonia: Medierea în cauzele penale şi legislaţia juvenilă: Prevenirea infracţionalităţii şi securitatea comunitară* . Jurnalul Internaţional.

Usually, the minor does not commit a crime. The children above 13 years old may commit a "punishable offense", and when their age is under 13, they commit a "prohibited act" which is treated as a form of demoralization.

The basic rule of the juvenile justice system in Poland is usually the rule of the minor's best interest[5]Everything that happens during the procedure must obey this rule. So, every decision of the court has to be taken in the minor's best interest. The rule of the inquisition procedure provides that the proceedings in cases of minors cannot separate the role of the trial from the prosecution. In this case, both positions are held by the judge, as a person who conducts the prosecution procedure, and then the trial procedure. The next rule is that usually the case takes place in private session. Sometimes, if justified on educational grounds, the case can be examined in public session, but this occurs only in exceptional cases. Another rule is the competence of the juvenile court. The case may be examined under the Criminal Code only in two cases: if the minor, older than 15, committed a serious offense, as mentioned above, and committed an offense together with an adult. Please note that it is necessary to examine this issue without separating it, which is not contrary to the child's interests.

A minor who is older than 13 has full trial rights. According to the Polish law, a person, older than 13, has limited capacity of exercise, but he can appear in his own legal procedure. If under the age of 13, the child is represented by the parent. Sometimes this solution is inapplicable, because in fact parents are responsible for the crime committed by the child. As part of the process, the child is entitled to examine the case file, to give evidence and, at any stage of the proceedings may appeal against the sentence and court decisions. Theoretically, the minor has the right to participate in the trial, but here the situation is a bit complicated: according to the law, the presence of the minor is required throughout the process, but an article of the Law on treatment of minors provides that, after hearing the child, the minor can remain present in the courtroom only when it is advantageous to him, for educational reasons. In practice, after the hearing, the child is asked to leave the courtroom. The minor is entitled to one legal assistant, but in most cases parents have to pay him for services rendered. The presence of counsel is mandatory only if the minor's interests are in conflict with his parents, when the court decides how the correctional proceedings should take place or if the child is placed in a nursing home.

The parents of a minor (or his guardians) are parties in the trial. They have to be informed of the beginning of prosecution, to be present during the completion of the criminal investigation done by the police and be heard in court during case examination on trial, but their absence does not interrupt the procedure. Parents have the right to appeal against the court sentence.

The court may apply some measures to parents also. For example, a judge may force the parents to cooperate with the school or other institutions or to repair the damage caused by their child. In Poland, the cases of minor offenders are examined by courts on family cases. Judges in these structures solve each family case (custody, alimony, divorce, etc) and juvenile cases. In these courts, professional judges must have by all means psychological and pedagogical studies.

In accordance with the Law on the treatment of minors, family courts have a very broad competence. They decide all cases of vital importance for minors. After the judge is informed of the committing of an offense, he decides whether: the case is to be heard in court, is to be terminated, sent back to the school attended by the minor or to a social organization. The family judges coordinate all the procedural functions of family courts, perform the criminal investigation and examination of the case, coordinate different actions of the police and of the probation officers appointed by court, rule for the diagnosis examination, for educational, medical and correctional measures and supervise their implementation and if necessary rule for their change during execution. The family judge benefits of significant discrete capacities.

[5]Klaus, W. (2011). *Postępowanie w sprawach nieletnich – wybrane zagadnienia.* Warsaw.

The examination of the case begins with hearing procedures in order to determine whether the minor is demoralized, if indeed a crime was committed and what kind of measures should be implemented: guardianship or correctional. That stage of proceedings is also carried out by a judge. At this stage, probation officers make probation reports and the child can be examined by a psychologist. Later, the judge may decide to terminate the case, submitting it to a school or other institution, sending the case to the prosecutor, or starting the guardianship or correctional procedures.

Therefore, during the hearing procedure, the judge decides what measures shall apply to the minor: guardianship, educational or correctional. The judge may rule for the same penalties as part of the guardianship ones, or in addition, send the child to a juvenile correction centre.

Conclusions

Whether it is about a state law in criminal matters, or about criminological, pre-crime studies, one has to establish the effect-cause relationship and respectively the cause-effect one, in the sense of being necessary to set up a criminal-social-criminological committee especially in the analysis of illicit minority status. The role of the committee would be to determine the factors leading to the criminal status, in order to apply a correctional treatment, first of all as preventive and then for social reintegration.

CONSIDERATIONS ON THE CONCEPT OF PERSONALIZING THE PENALTIES

ION RISTEA*

Abstract:
The adaptation of the constraint related to the committed offence is a mandatory request of equity, of principles deeply rooted in the individuals' conscience namely that no sanction must overcome the gravity of the committed offence (suim cuique tribuiere – giving to each person what he deserves), principle that, in the concept of the Roman lawyers, was part of the fundamental principles of law (jus praecepta), along with other two principles: honestere vivere (having a honest life) and alterum non laedere (not harming another human being).

***Keywords**: offence, criminal liability, penalty, adaptation, individual reeducation.*

Introduction

Art 1 of the Criminal Code which has as "*nomen juris*" the purpose of the criminal law states that "the criminal law protects, against all offences, Romania, the sovereignty, independence, unity and indivisibility of the state, the human rights and freedoms, property, and the entire state of law". This disposal represents the basic norm of the ensemble of regulations of the Criminal Code, "it contains a fundamental orientation in order to serve to the understanding, explanation and appliance of all the other norms provided by the Code".

But, social protection, as a fundament of the criminal law and penalty, has not the meaning given by the doctrine or by the positivist school, which, by its illustrious members, Cesare Lombroso, Enrico Ferri and Rafaelle Garofalo, sustained among others, the principle of the offender's liability on the base of the social protection; nor the meaning given by the doctrine of "the new social protection", which, by its representatives, Adolphe Pins and Filippo Gramatica, claimed to avoid, if possible, the deprivation of liberty and re-socialization of the offenders with the appropriate treatment measures.

The modern criminal law's theorists have unanimously established that the fundamental institutions of the criminal law are offence, criminal liability and penalty, because around these three notions revolve all the legal criminal provisions, creating the pillars of the law system[1].

Content of the paper

Offence has been defined as being "any action incriminated by law and sanctioned by penalty"[2] or "action or inaction, which is considered a fault, and the legislator punished it by the criminal law"[3] or "material act stated and punished by law which can be imputed to its author"[4]. Reducing this legal category to its most simple and schematic form, Professor George Antoniu defined offence as being "a clash of wills, that of the offender and that of the legislator; as well as the result of this clash, the defeat (violation) of the legislator's will"[5].

[5] George Antoniu, *Vinovăţia penală*, Romanian Academy Publishing house, Bucharest 1995, p 53.

Traditionally, the Occidental criminal codes do not state regarding the offence, justifying this omission by arguing that the elaboration of this notion does not belong to the law maker, but only to the science of the criminal law. Thus, considering the special importance of this institution, the Romanian criminal code in 1968 stated in its Art 17 the essential features if the offence: social danger, guilt and its statement in the criminal code. From these essential features it results the idea that the offence is a complex, material, human, social, moral, political and legal phenomena.

But of these three key features, there is now a tendency to remove the social danger from the definition of offence. The idea is very bold and it can be argued by various controversies concerning the definition of this reality that constitutes a substantial aspect of the offence and therefore the difficulty to introduce such a factor in characterizing the concept of offence. Moreover, the legislator takes care to criminalize only those conducts that affect or threaten the social values protected and as a consequence, it is argued that social danger is not required in the definition of the offence.

Criminal liability, as a form of the legal liability, has been defined as the criminal legal relationship of constraint between the state and the offender, on the other side, a comprehensive relation whose content is given by law as representative of society to held responsible the offender and the obligation of the offender to be liable for his offence and to subject to the applied sanction[6].

The criminal liability is the judicial consequence of committing an offence, namely the immediate reaction of society against the offender.

Hence, the perpetration is the very cause of criminal liability and the resort to criminal law's penalties is the consequence of criminal liability[7].

The current criminal doctrine allegedly argued that criminal liability is only the logical consequence (not natural) of infringing the precept; criminal liability is not the product of the criminal offense in the meaning of a reality separated in time and space from the penalty, but a trial, a rational conclusion that the wrongdoer must suffer the consequences of his deed, to answer for it[8].

In the actual Criminal Code, the criminal liability concept is found in Art 17 Para 2, which states that "the offence is the only base of criminal liability".

Regulations regarding the criminal liability are found also in Title II, Chapter V, regarding the causes that removes the criminal character of the offence (Art 44-51) where the object of the regulation is the very existence of criminal liability, indissoluble related to the issue of criminal liability's existence.

Also, we find stipulations regarding criminal liability in Title VII regarding the causes that removes the criminal liability (Art 19, 121-124, 131-132), whose object are the situations in which an offence has been committed and therefore, exists criminal liability, but, subsequently, for certain considerations, is has been removed and the offender no longer bears the legal consequences.

Penalty, the third criminal law fundamental institution, is the legal sanction specific to criminal law, representing the consequence of non-complying with the criminal norms; in terms of the real content, penalty is harm, a sufferance to which the offender will be subjected to if he disobeys the criminal laws[9].

By its provision in the criminal norms, the penalty acts as a threat over the members of the collectivity for them to comply to the criminal law, thus as a mean of general prevention; by its effective appliance, the penalty acts a mean of the legal constraint; by its implementation, the penalty has a therapeutic character and function, of a severe, but necessary mean of redress[10].

[10] Vintilă Dongoroz et al., *quoted work*, 1st Volume, p 22.

The social, political and legal justification, namely the base of penalty, is confounded with the base of the criminal law, namely the protection of society against offences.

Social protection is a protection against offences, as socially dangerous acts, potentially repeatable and only against the offenders[11].

Art 52 of the actual Criminal Code states that penalty is a mean of constraint and reeducation of the convicted and has as purpose the prevention of committing new crimes.

From the analysis of this definition it results the features of penalty: penalty is a mean of constraint; penalty is a mean of reeducation; penalty is stated by the law; penalty is applicable only by the courts; penalty is personal and individual; penalty is applicable with the meaning of preventing new offences to be committed[12].

Regarding this last feature of penalty, we sustain that the prevention or forestall of new offences to be committed is made both as a special prevention (from the side of the penalty's subject), as well as a general prevention (from the side of other persons who have the intention of committing criminal acts).

Professor Vintila Dongoroz believes that the penalty exercises its general prevention action towards the persons who have a latent criminality, towards the victim and towards the entire collectivity[13].

It should be noted that penalty carries out the preventive purpose, the *antidelictum*. Before the crime to be committed, it is forestalled the committing of criminal acts by providing the penalty in the criminal law, warning over the consequences of breaking the law.

After the committing of the offence (*postdelictum*), the penalty exercises its preventive purpose on the one hand in the moment of its implementation by the court, and on the other hand, on the entire subsequent time of execution. In both cases, the penalty influences not just the behavior of the offenders, but also the behavior of those who, from the offender's sufferance, learn the necessary to their own behavior.

The penalty applied, directly, has the purpose of avoiding the relapse, and indirectly, by resonance and exemplarity can contribute to the correction of certain persons' behavior.

But regardless of the extent in which the appliance of penalty would increase the intimidation force of the penalty's threat over the public, the concrete punishment is meant, preponderant, to influence the offender and to modify his behavior[14].

To achieve its purpose, the penalty must perform the following functions:

- The constraint function, results from the nature of the penalty as a mean of constraint;
- The function of reeducation, consists of the influence over the offender's mentality and skills;
- The exemplarity function has an adjoining feature and consists of the influence which the penalty applied to an offender has over other persons;
- The elimination function, which assumes, is achieving its purpose, the temporary or definitive elimination of the convicted one from society[15].

Art 53 of the Criminal Code, with its subsequent modifications and completions, establishes the frame of the actual penalties, referring to the main, complementary and accessory penalties.

Noteworthy is the fact that by Law no. 278/2006 inserted in the Criminal Code a new chapter regarding the penalties applicable to the juridical person, containing rules regarding the fine (as main penalty), and rules regarding complementary penalties applicable to the juridical person.

[15] Costică Bulai, *quoted work*, p 286-288.

One of the fundamental principles of the criminal law that is placed at the base of criminal sanctions is their adaptability[16].

The principle contains the rule that the criminal law sanction must have the quality of being individualized, namely to be able to be proportioned qualitative and quantitative in relation to the nature and gravity of the act and according to the concrete circumstances of the cause.

A penalty is adaptable when it can be graded quantitative, namely divisible.

Also, a penalty is adaptable when it can be shaped qualitative, namely elastic.

Usually, are adaptable long-times penalties (imprisonment) and the amount ones (fine)[17].

The penalty is susceptible of a higher dosage, the more it will be proper to answer to a just repercussion[18].

From here results the idea that the adaptable punishment leads to the accomplishment of the penalty's purpose, desiderate which can only be achieved by the complete and efficient realization of the functions of the penalty and listed above.

But the main functions of penalty, i.e. the constraint and the reeducation functions lead to the accomplishment of its purpose only if are considered some basic elements of the offence.

The offences have a different degree of social danger and the offenders, are by their nature, morally and physically very different. The psycho-physical capacity, age, occupation, cultural level, behavior are features that individualizes each offender. A penalty which would not have in count these realities would not be able to exercise an efficiently preventive influence – educative and would represent more a revenge of society against criminal offenders.

The ability to be or not be punished, the higher or lower degree of guilt and the nature more or less dangerous of the offender depends on his status.

Raymond Saleills argued that the penalty must be adaptable to the nature of the person is addressed to. If the guilty one does not have a completely perverted base, the penalty itself must not contribute to its perversion; it must help him to rise. If the offender is irrecoverable, the penalty will be against him in the status of society and will represent a radical measure of defense and prevention[19].

The committed criminal act is an important element in establishing and measuring the penalty for several grounds: it indicates to which extent has the legal order been violated and to which extent must be acted (legal value); it indicates the intensity of the dissatisfaction created in the collectivity and thus the extent in which the social group waits for a satisfaction (social value); it indicates the presence of a person more or less dangerous (symptomatic value)[20].

Another argument regarding the necessity of individualizing the penalty is the fact that the social values susceptible of being harmed by antisocial facts do not have an equal value. One cannot state that the protection of the state is equal with the protection of the patrimony assets or with the protection of life and body integrity.

The objective existence of such differences between the social values protected by the criminal law colors differently also the abstract general danger of the social manifestations against these values, fact reflected in the way of punishing these facts.

Also, the actions and inactions that harm the same social values do not have the same gravity. Some are simple, some are more direct, some are insidious, more complex; some assume more conditions of achievement, some fewer conditions, some have a larger echo in the public opinion, some a limited one etc. These aspects too justify a certain difference in sanctioning each offence[21].

---

[16] Costică Bulai, *quoted work*, p 282.

[17] Vintilă Dongoroz, *quoted work*, p 468.

[18] Ion Tanoviceanu , *quoted work*, 3rd volume, p 110.

[19] Raymond Saleills, *L'individualisation de la peine*, Paris, Felix Alcon Publishing house, 1909, p 10-11.

[20] Vintilă Dongoroz, *quoted work*, p 233.

[21] George Antoniu, *Cu privire la reglementarea cauzelor de agravare şi atenuare a pedepselor,* Romanian Law Review, no. 4/1970, p 47.

These aspects were taken into account when it was settled in the Criminal Code a more shaped system of measures that can be taken against offenders by the different degrees of social danger presented by their actions and their person. This system of measures contains: penalties, safety measures, educative measures.

Also in the purpose of the different implementation of penalty, the criminal code provided for a minimal and a maximal duration of the penalties susceptible of being applied, adopting the system of the relatively determined sanctions, which allows for a better individualization related to the concrete circumstances of each cause.

Hence, for every guilty person, the penalty must be adapted to its purpose, thus it will give the maximum possible output. The penalty must not be fixed before, rigidly, nor regulated by the law, so that it will be invariable, since its purpose is individual and must be achieved by using a special strategy adapted to each case[22].

In the legal literature, the individualization of penalty was defined as being the operation of adapting the penalty and its execution to the individual case and the offender, so as to ensure the functional ability and the achievement of its purpose[23].

The definition emphasizes the fact that the individualization of penalty is, firstly, a mean by which the penalty is concrete determined.

Secondly, the definitions points out the fact that the individualization of penalty is a mean of adapting its nature and its quantum or duration to the individual case, to the committed offence and especially to the offender's person, to his danger and his aptitudes to correct himself under the influence of the penalty.

In the criminal doctrine there are opinions regarding the necessity of reconsidering the principle of individualizing the penalty, sustaining the necessity of replacing this concept with the one of personalizing the penalties.

The most important argument refers to the fact that the sanction should materialize around the accused, the equivalent of a man deprived of his freedom, not his dignity[24].

In other words, the respect of the human dignity becomes one of the key factors of the criminal intervention, giving the possibility for some alternative solutions in the implementation of the criminal policy. To the same effect, Raymond Saleilles argued that the penalty, to achieve its purpose, must not lead to the loss of honor, but, on the contrary, must help to its regain, thus the dignity can retake its place inside the conscience[25].

Moreover, the respect for human dignity is mentioned also in the Universal Declaration of Human Rights and subsequently recognized by numerous international documents; is has an absolute feature, promoting the idea of the necessity to protect against treatments that will harm his health, body integrity and dignity of the persons detained.

The protection of the human dignity which involves the personalization of penalties is an imperative that aims the ensemble of the criminal and execution process, but does not mean that from respect to human dignity, the offenders must not be punished. On the contrary, undertakes us to elaborate norms and structures to recognize and ensure this major goal, with the prospect that the human dignity gains a decisive place inside person's own conscience[26].

Another important argument lies in the changing of the regulatory framework. Law No. 278/2006 inserted in the Criminal Code regulations relating to penalties for the legal person. In this situation, no longer about an individual as such, the penalty applying to natural and legal persons,

---

[22] Raymond Saleills, *quoted work*, p 11.

[23] Vintilă Dongoroz et al., 2nd volume, p 119.

[24] Theodore Papatheadoru, *De l´individualisation, des peines et la personalisation des sanctions*, Revue internationale de criminologie ed de police technique, No 1/1993, p 109.

[25] Raymond Salleilles, *quoted work*, p 243-245.

[26] Ortansa Brezeanu, *De la individualizarea la personalizarea sancţiunilor*, Romanian Criminal Law Review, no.1/2000, p 47-50.

taking into count its specific features, it is natural that this concept be called or possibly even replaced with the personalizing the penalties.

Thus, French criminal law prefers the term of personalizing the penalty instead of individualizing it, on the ground that the latter term, valid for individuals, is no longer adequate for moral persons who, in the vision of the French criminal law, can also be criminally punished[27].

Conclusions

Any transformation of the principle of individualization of penalty into the principle of personalizing the penalty assumes a new way of approaching institutionally or doctrinaire the adaptation of penalty.

We believe that, though there are reasons to replace the expression of individualizing the penalty with another one able to accurately express the idea of adequacy of penalty in relation to all criteria used for this purpose, and compared both with the individual and the legal persons with the legal person, *the term of individualization should not be abandoned*, because on the one hand, the individualization is achieved not only in terms of the offender's persons, but also by his deed, and on the other hand, has a long tradition and entered into the criminal legal terminology.

SOME APPROACHES ON THE OFFENSE OF MURDER OR INJURY OF THE NEWBORN COMMITTED BY THE MOTHER, PROVIDED IN ARTICLE 200 OF THE NEW CRIMINAL CODE

MIHAELA ROTARU*

Abstract
In addition to the innovations included in the new Criminal Code, the legislator of this legal act makes a number of amendments to the existing institutions and offenses in the criminal law. Such a situation is encountered for the offense of murder or injury of the newborn committed by the mother provided in Art. 200 N.C.C., offense that partly corresponds to the offense of infanticide described in Art. 177 of the Criminal Code in force. The legislator considered it necessary to also criminalize in the new Criminal Code the act of injury of the newborn committed by the mother, along with the action of killing, a situation that rightly caused the change of the marginal name of the offense. Moreover, another interesting aspect that also constitutes the focus of our approach is represented by the two phrases which are different from those in the legal text in force, i.e. ,,immediately after birth but not later than 24 hours" and ,,state of mental disorder", which are designed to equalize the views expressed in the criminal literature regarding the analyzed crime and the practice in the field.

Keywords: *killing, injury, newborn, mother, disorder.*

Introduction

The objective of this study is to analyze two very important, even essential issues in order to characterize the offense of murder or injury of the newborn committed by the mother, referred to in Art. 200 of the new Criminal Code[1]. The first aspect is related to the choice of the legislator to limit the situation of being newborn for the passive subject of the crime to the first 24 hours after his birth. The second aspect relevant in supporting our approach is related to the active subject this time, represented by the mother of the newborn child, which should be in ,,state of mental disorder" in order to apply to her an attenuated punitive treatment, according to the legal provisions of the Art. 200 N.C.C., if she kills or hurts her newborn child.

The starting point in this study is represented by the provisions of the new Criminal Code and the issues raised in the Explanatory Memorandum[2] to the new Criminal Code which determined the form in which the text of the offense was written in the new Criminal Code, on the one hand, and the provisions of the Criminal Code in force and the jurisprudence and doctrine, on the other hand.

1. Approaches Regarding the Content of Art. 200 N.C.C.

The offense of murder or injury of the newborn committed by the mother is provided in Art. 200 N.C.C., of the Chapter III, called ,,Crimes Committed against a Family Member", of the title I of the special part of the new Criminal Code, entitled ,,Crimes against the Person".

---

* Assistant Lecturer, Ph. D. candidate, Faculty of Law, "Alexandru Ioan Cuza" Police Academy, Bucharest (email: mihaela.rotaru@academiadepolitie.ro).

[1] Represented by Law no. 286/2009, published in ,,The Official Gazette of Romania" no. 510 of July 24, 2009 and most recently amended by Law no. 187/2012, published in ,,The Official Gazette of Romania" no. 757 of November 12, 2012. Further N.C.C.

[2] "Explanatory Memorandum to the new Criminal Code", accessed: August 4, 2009, <http://www.cdep.ro/proiecte/2009/300/00/4/em304.pdf>.

We will not continue the existing discussion[3] in the doctrine whether it is appropriate or not to create this third chapter dedicated to the description of the offenses committed against a family member, which contains only two crimes, and which is not found in the Criminal Code in force, as it is not the object of this study.

Article 200 N.C.C. reads: „(1) killing the newborn immediately after birth, but no later than 24 hours, committed by the mother in a state of mental disorder shall be punished with imprisonment of one to five years. (2) If the facts set out in Art. 193-195 are committed to the newborn immediately after birth, but no later than 24 hours, by the mother being in a state of mental disorder, the special limits of the penalty shall be of one month and three years respectively".

For a better understanding of the option of the legislator of the new Criminal Code to draft in this way the legal text we believe that it is important to know the provisions set out in the Criminal Code in force related to the topic taken under consideration.

Thus, we can say that the variant described in para. (1) of Art. 200 N.C.C. corresponds to Art. 177 Criminal Code in force, where the crime of infanticide is described as „killing the newborn immediately after his birth by the mother which is in a state of disorder caused by the birth is punished with imprisonment from 2 to 7 years".

It is true that the variant described in para. (2) of Art. 200 N.C.C. has no counterpart in the Criminal Code in force. We consider appropriate to create this legal text because if the legislator chose to apply a lower sentence for the mother who, in a state of disorder caused by birth, kills her newborn baby, she is also entitled to a reduced penalty if, in the same conditions relative to her mental health, the mother causes harm to her newborn immediately after birth.

We agree with what it was stated in the Explanatory Memorandum to the new Criminal Code on this issue, that the desire was to „eliminate the gaps and the inconsistencies caused by the successive amendments of the criminal code in force".

Moreover, we believe the legislator made an inspired option to change the marginal name of the offense from "infanticide", as described in Art. 177 Criminal Code in force, to "murder or injury of the newborn committed by the mother" because the marginal name has to be consistent with the legal text in question.

Relative to the provisions of Art. 200 N.C.C. we believe that the legislator opted for the inclusion in the same article of the Criminal Code of two distinct offenses, namely: the offense of killing the newborn committed by the mother in para. (1) of Art. 200 and the offense of injury of the newborn committed by the mother in para. (2) of Art. 200.

An argument in issuing this hypothesis is the existing legal text of Art. 266 Criminal Code in force, which is called „Illegal Arrest and Abusive Investigation" and that, in fact, comprises two distinct offenses individually described in paragraphs (1) and (2) of the article in question.

Another argument in supporting the thesis is the very presence of the conjunction "or" in the marginal name of Art. 200 N.C.C. If the legislator used in the existing Criminal Code the conjunction "and" in stating the marginal name of Art. 266 Criminal Code in force, thus showing that in practice there may be a situation in which the offense of illegal arrest, contained in para. (1) of Art. 266, and the offense of abusive investigation, referred to in para. (2) of Art. 266, may be withheld in contest, the usage of the conjunction "or" in the marginal name of Art. 200 N.C.C. was required for reasons of logical order. Thus, in practice there cannot be a situation in which the provisions of para. (1) and those of para. (2) of Art. 200 to be withheld in contest as the legal classification of the offense is based on the immediate consequence of the action or inaction which is the material element of the

[3] Petre Dungan, Tiberiu Medeanu & Viorel Pasca, *Handbook of Criminal Law. The Special Part. The Offenses against the Person. Crimes against Property*, (Bucharest: Legal Universe Publishing House, 2010), 103-105. The authors believe that „the intention of the legislator to build a section with only two offenses is not very inspired" because „the concern of the legislator to create a separate legal framework will not lead to reducing domestic violence and especially to eradicate it".

offense, taken also into consideration the other requirements imposed by law. In that case the immediate consequence of the offense of killing the newborn committed by the mother, referred to in Art. 200 para. (1) N.C.C. is the death of the baby who was born alive, and the immediate consequence of the offense of injury of the newborn committed by the mother, referred to in Art. 200 para. (2) N.C.C., is the harm of the newborn. We can never withheld in contest the two offenses if we have the same passive subject, although it is true that killing a person inevitably involves producing injury and suffering to the passive subject in question, but they are inherent in the action of killing, which immediate results in the death of the passive subject.

2. Approaches regarding the phrase "immediately after birth but not later than 24 hours"

Another aspect that we intend to analyze is relative to the legislator's option on fixing two extremely precise time limits in characterizing the quality of newborn of the passive subject, namely the period between the end of the birth, because it is stated that the offense must be committed "immediately after birth", and the end of the first 24 hours following that moment.

Although medical opinions[4] about the condition of the newborn are not unitary, in the criminal literature[5] it is said that this state lasts a relatively short period, id est from the moment of the completion of birth by cutting the umbilical cord to 10-14 days, while the child's body still preserves the signs of birth[6].

In another opinion[7] it is stated that legally speaking "immediately after birth" has the meaning of the period in which the recent signs of the birth still remain on the baby's body and it can last up to three days after birth, although medically speaking the state of newborn is kept in the first 28 days of extra-uterine life of the child.

However, under the new Criminal Code, the literature[8] stated that the condition of the newborn remains only in the first 24 hours following birth. This time interval is in fact a condition to characterize the offense.

It is true that the expression „immediately after birth" of Art. 177 Criminal Code in force is ambiguous and has over time generated non-unitary solutions in the judicial practice, but we consider that the time condition required to be fulfilled in order to be in the presence of the offenses described in art. 200 N.C.C. is extremely limited, respecting of course the other requirements imposed by the legal text. Therefore we propose replacing for the future regulation the term „immediately after birth but not later than 24 hours" with the phrase „immediately after birth, but not later than 14 days", taking also into account the existence of a state of mental disorder for the mother.

However, the essence of the offense of killing or injury of the newborn is represented by the quality of newborn for the passive subject and by the condition of mental disorder of the active

---

[4] „Newborn" is the name for the baby from birth until the age of 28 days; accessed: December 23, 2012, http://www.romedic.ro/nou-nascutul-prima-luna-de-viata-0C429. In another opinion it is stated that „the newborn is the name given to the baby born alive in the first 30 days of life"; Dungan, Medeanu & Pasca, *Handbook of Criminal Law*, 110.

[5] Ioana Vasiu, *Criminal Law. Special Part*, volume I, (Cluj-Napoca: Blue Publishing House, 1997), 122, cited by Ilie Pascu & Mirela Gorunescu, *Criminal Law. The Special Part, 2nd* edition, (Bucharest: Hamangiu Publishing House, 2009), 115.

[6] In medical science it is stated that "the skin of the newborn may present edema which may resolve spontaneously within the first week with kidney involvement, (...) staining pink skin gradually becomes yellowish, physiological jaundice starting in the third day and gradually disappearing in 10 - 14 days, (...) umbilical stump to mummify and detach within 2 weeks (...) on the forehead, shoulders and back we can see very fine hair that falls in about 2 weeks (...)". subject. However, as described in Art. 200 N.C.C., given the maximum time limit of 24 hours after birth, if the mother being in a state of mental disorder kills her newborn baby within 30 hours after birth, the act would comply with the provisions of Art. 199 N.C.C., relative to the description of the offense of domestic violence, and the punishment would be more severe than that provided in Art. 200 N.C.C. In the judicial practice[9], it has been established that there was not committed the offense of infanticide, according to Art. 177 Penal Code in force, but the offense of murder under the Art. 174 and Art. 175 letters a), c), d) and i) Penal Code in force, in the case of a newborn killed 4 days after his birth by his mother, and this situation was not due to the lack of quality of the passive subject, but to not complying with the condition of the state of mental disorder of the active subject.

The existence of the state of mental disorder of the active subject is established by forensic means in each case held before the Court because it will be appreciated from person to person depending on certain factual data and this state may exceed the 24 hours following the child's birth.

It was stated in the criminal literature[10] that the introduction of this time condition ,,not later than 24 hours" will lead to ,,a more precise and uniform judicial practice".

This statement is correct, but at the same time, it seems unacceptable the situation where, the fact of murdering a newborn by his mother being in a state of mental disorder, according to Art. 200 N.C.C., at, say 30 hours after birth, to be assigned to the offense of domestic violence provided in Art. 199 N.C.C., and not to those of Art. 200 N.C.C., and applying a more severe punishment because the condition of time was not respected.

3. Approaches regarding the phrase „state of mental disorder"

Another important aspect that we want to analyze is that relative to the phrase ,,state of mental disorder", which is prerequisite for the active subject in order to find the hypothesis of the offenses described in Art. 200 N.C.C.

In Art. 177 Criminal Code in force, we find the phrase ,,state of disorder caused by birth". As shown in the criminal literature[11], this condition, which has to be established in the concrete conditions of each case brought before the Court, excluded the situations in which the state of disorder was pre-existing or has appeared after the birth by reasons such as fear of parental reaction, the public stigma, lack of subsistence, separation of the mother and father of the newborn and so on. For these reasons the legal practice was uneven.

In one case[12] the defendant was charged with the offense of murder referred to in Art. 174 and Art. 175 letters c) (of a close relative) and d) (taking advantage of the helplessness of the victim to defend herself) and not with the crime of infanticide, provided in Art. 177 Criminal Code in force, for the fact of hiding her pregnancy and giving birth alone in her parent's home, unattended by a physician, and killing the baby immediately after birth in order his cry not to be heard by the defendant's parents and hiding the body in a bag held under her pillow for 4 days until she got sick and, presenting herself to the doctor, the offense was discovered. When brought before the court the offense of infanticide could not be retained as the forensic examination established that the defendant did not show postpartum psychiatric disorders, and the offense was committed with discernment. The conflicts prior and with no connection to the birth such as the fear of parental reaction, the public

[10] Dungan, Medeanu & Pasca, *Handbook of Criminal Law*, 109.

[11] Dobrinoiu & Neagu, *Criminal Law*, 74-76, Pascu & Gorunescu, *Criminal Law*, 116.

[12] S.C.J., Criminal Section, Decision no. 4956 of October 9, 2004, cited by Lia Savonea & Daniel Grădinaru in *Crimes against Life, Bodily Integrity and Health. Jurisprudence*, (Bucharest: Hamangiu Publishing House, 2011), 51-56. The court noted that ,,the state of disorder caused by birth" within the meaning of Art. 177 Criminal Code ,,is due to labor, to the physical act of birth, and not to a general concern, due to educational deficiencies, the circumstances accompanying physiological process of birth, which leads naturally to the idea of concealing an act considered as illegal".

stigma, affecting the psyche of the defendant have the value of motives of the crime and not the meaning of a state of disorder caused by birth.

In another case[13], the defendant was acquitted because the attempted infanticide is not punishable. It was established that, at night, the defendant gave birth to a baby at home, unassisted, and immediately after that she introduced the newborn in a plastic bag and threw him through the garbage collection piping where he was found alive the next morning by the maid, who also alerted the authorities. The conclusions of the forensic report showed that the defendant was at the time of the offense in a state of disorder caused by birth, which affected her judgment. The evidence in the case showed that the defendant had decided to keep the pregnancy despite being in conflict with her concubine and she even was registered in the medical records of a specialist for monitoring her pregnancy and the fact she had not announced the birth was due to the lack of means of communication.

Bound to the state of disorder caused by birth to the mother the phrase „puerperal fever" is used, and it represents all the „mental disorders during pregnancy, childbirth and lactation"[14].

In an opinion[15] the psychiatric disorders caused by birth, may be in the form of „confusional states, anxiety, delirium" leading to denial of motherhood and the commission of the crime, and this states characterize the post-partum period lasting up to 42 days .

All these aspects found in the legal practice caused the legislator to choose for the new Criminal Code the phrase „state of mental disorder".

We believe that the scope of this concept is too broad because one can say that every mental disorder of the mother, even of pathological nature, which only diminishes her judgment, may be considered as part of the concept introduced by the legislator in the new Criminal Code. Assuming that at the time of the offense, the person could not realize the meaning of her actions or inactions or could not control them either because of mental illness or for other reasons, then the irresponsibility operates according to art. 28 N.C.C., which is a question of non-imputation.

We agree with the view expressed in the criminal literature[16] that the concept in question is „closely related to the pregnancy and the birth process and the implications they have on the pregnant woman psychologically and socially".

Criminal law is strictly interpreted and applied and in order to eliminate ambiguity of expression and support doctrinal explanations about the meaning of the term in question, we propose for the future legislation the addition of the phrase as follows „state of mental disorder generated by the pregnancy as a whole".

4. Approaches on the Comparative Law

4.1. Costa Rica

In the Second Book, „About Crimes", title I, „Crimes against Life", section I, „Homicide", of the Costa Rican Criminal Code we find Art. 113 para. (3), which reads: „the mother who by reasons of hiding the shame and maintaining her good reputation kills her newborn within maximum 3 days after birth is punished with imprisonment from 1 to 6 years".

As in the Romanian criminal law both the active subject and passive subject are qualified in the person of the mother or the newborn child. Although there is no indication on the mental state of the active subject at the time of the offense, it is interesting to note that the legal text refers to the mobile of the crime, the mother acting „to hide the shame and keep good reputation".

---

[13] S.C.J., Criminal Section, Decision no. 1948 of March 22, 2007, not published, cited by Savonea & Grădinaru, *Crimes against Life*, 131-133.

[14] "Puerperal fever", accessed: February 10, 2013, http://ro.scribd.com/doc/24915001/Curs-9-Medicina-Legala.

[15] "Mental disorder caused by birth", accessed: February 10, 2013, http://ro.scribd.com/doc/24915001/Curs-9-Medicina-Legala.

[16] Dobrinoiu & Neagu, *Criminal Law*, 74-75.

If the Romanian Criminal Code in force provides the temporal condition of the offense „immediately after birth" and the new Criminal Code narrowly defines this condition between the limit „immediately after birth" and the first 24 hours of life of the newborn, the Criminal Code under review provides a distinct temporal condition, id est, „within a maximum of 3 days after birth".

The minimum special limit of the penalty is the same in both criminal laws, namely one year, and only the maximum special limit varies, which is higher in the Costa Rican Criminal Code, namely 6 years, comparative to the Romanian Criminal Code and to 5 years in the new Criminal Code.

Compared with the existing Criminal Code, which provides the penalty of imprisonment from 2 to 7 years, in the new Criminal Code and the Criminal Code of Costa Rica there are lower limits, id est the minimum special limit is of 1 year and the maximum special limit is of five, respectively 6 years.

4.2. Dominican Republic

The Article 300 of the Dominican Criminal Code provides that „the one who kills a newborn baby is guilty of infanticide" and in Art. 302 of the same Criminal Code it is stipulated that „it is punishable by 30 years in prison the one guilty of murder, parricide, infanticide and poisoning".

In the Dominican Criminal Code we find the offense of infanticide and, as can be seen from the legal text, the active subject is not circumstantial, as in the Romanian criminal law, but it can be any person who meets the general conditions of criminal liability.

The passive subject, as in our law, is a newborn baby, but the Dominican legislator provided no time condition relative to the commission of the crime.

The Dominican legislator has a different perspective on this crime from the Romanian legislator, fact proven by the situation that the penalty imposed is 30 years in prison, also applicable for murder or for other crimes against the person. Thus, infanticide is not perceived as an attenuated version of the offense of murder.

4.3. Tunisia

In Article 211 of the Tunisian Criminal Code it is provided that „it is punishable by 10 years in prison the mother for killing her child at birth or soon after".

Unlike the Romanian criminal law existing or future, the Tunisian Criminal Code provides a bigger punishment for the analyzed offense, that of 10 years in prison.

As the Romanian Criminal Code, the active subject and the passive subject are circumstantial, in the person of the mother and the newborn. The Tunisian legislator makes no statement about the condition of the mother at the time of the offense, but he is only interested the act to be committed „at birth or soon after".

4.4. Canada

In Article 233 of the Canadian Criminal Code it is provided that „a woman commits infanticide when by a willful act or omission causes the death of her newborn child, if at the time of the action or inaction she may still feel the effects of child birth or those of early lactation and therefore her judgment is diminished".

In the Canadian Criminal Code we find the offense of infanticide, that can be committed by action as well as by omission, like in the Romanian criminal law, by the mother to her newborn child.

Although there is no time condition provided for the commission of the offense, the Canadian legislator is extremely precise about the causes that are likely to diminish the discernment of the active subject, causes that are related either to the birth process or to the physiological changes in the mother's body onset of lactation.

We believe that Canadian legislator's option to specify the exact causes that may diminish the discernment of the active subject of the analyzed crime is necessary because it leaves no room for ambiguity and it creates no problems in interpreting the legal text and in applying it to the concrete cases that have to be judged.

Conclusions

By criminalizing an act we protect certain specific social relations that emerge and develop on certain social values including the person with her attributes. The legislator considered it appropriate in the new criminal code to criminalize the injury of a newborn along with the infanticide, which is also found in the penal code in force in view of the fact that if the mother will receive a low sentence for killing her newborn child, much more she must have the same kind of punishment if she only harms him. The legislator of the new Criminal Code used an already known legal arrangement from the Art. 266 penal code in force, and he included two distinct offenses in the same article, describing in the first paragraph of Art. 200 the offense of killing the newborn committed by the mother, and in the second paragraph, the offense of injury of the newborn committed by the mother.

With regard to the second issue which is the subject of our study, we believe that the legislator provided an excessively limited time condition in characterizing the offenses described in Art. 200 N.C.C., as in the first 24 hours of life of the newborn, and we have proposed for the future legislation that the final limit of this time condition to be represented by the first 14 days of life of the newborn.

Considering that the term „state of mental disorder" that characterize the active subject of the crime is considered a concept with a broader range of coverage, we have proposed to improve the legislation by completing this formulation as follows „state of mental disorder generated by the pregnancy as a whole".

Since the Law no. 286/2009 for the new criminal code was amended in a single year, 2012, by three acts, although it is not yet in force, we should continue to observe this aspect and also how the regulations of the offenses listed in Art. 200 N.C.C. develop.

ELECTORAL CRIMES - CONCEPT AND EVOLUTION UNTIL 1990

MIRCEA CONSTANTIN SINESCU[*]

Abstract
Throughout this paper, the author tries to configure the concept of electoral crime, by presenting the legal, philosophical and historical opinions emerged centuries ago and also by drawing a line between political criminality and ordinary criminality. Furthermore, the study aims also to synthetically highlight the important moments of the legislative evolution in the specified area of interest, starting from the early nineteenth century, during the monarchical regime and ending with the totalitarian government of Romania until the Revolution in 1990. Taking into consideration the new incrimination of electoral frauds in the New Criminal Code adopted in 2009, examining the historical - teleological conditions of the former regulations of these crimes appears as a necessary intercession, in order to ponder upon the new Criminal policy of the legislator.

Keywords: *elections, democracy, political crime, legislative change, fundamental human rights*

I. The concept of electoral offense

In the universal doctrine was attempted, over the time, the emphasizing of a demarcation between the ordinary and political crime, where such offenses were also classified.

In the year 410 BC, Demofantes's Decree was engraved on a bronze column located near the entrance of the Senate, reminding all citizens that:

"If somebody threatens the democratic government of Athens, he will be considered an enemy of the Athenians, he may be killed without a trial, and his fortune will be confiscated. The one who will kill or support his murder will be presumed innocent and blameless. All Athenians shall make the following oath: I will kill, with my own hands, if I can, the one who will destroy the democracy in Athens ..., the one who will proclaim himself a despot or help someone to become a despot. If someone else will kill him, he will be presumed innocent and pure before the gods, like the one who killed at war an enemy of Athens"[1].

Finally, it should also be cited another political punishment, specific to the Ancient Greece: it is about ostracism.

This political measure was intended to remove all those who seemed to be dangerous for the established political order and it is applied when there was insufficient evidence for an actual indictment.

That measure was taken by the Assembly of the people, which could be seized by any citizen, and consists in removing the offender from the fortress for 10 years, without impairing his honor or goods; that measure was also revocable at any time within 10 years, also by the decision of the Assembly of the people[2].

The renowned Professor R. Garraud stated that what characterizes the political offense, in the objective opinion, is the nature of the right affected by it. Therefore, "the infringement to the two categories of rights is subject, in most of the modern Codes, to two categories of crimes: the crimes against the external security of the State (Landesverrath), the crimes against the internal security of

---

* Assistant Professor, Ph.D. candidate, Faculty of Law, "Nicolae Titulescu" University (email: mircea.sinescu@sinescu-nazat.ro).

[2] C. Lombroso, *Political offense and revolutions*, 2nd volume, pages 221-222.

the State (Hochverrath). Any aggression against the political order, provided that they are incriminated by the criminal law, has a political nature."[3]

Therefore, the purely political offense is the one which has not a predominant, but an exclusive and unique object, to destroy, alter or disturb the political order in one or more of the particulars thereof.[4] The political order is the ensemble of the powers holding the general interests of the country. It includes: on the outside, independently of the nation, the integrity of its territory and the relationships of the State with other States; on the inside, the type of government, the organization of public powers, their mutual relationships and finally the political rights of citizens. However, shall be acknowledged, without objection, the purely political offenses: to have relationships with the enemy; to bring weapons against their country; to conspire in order to change the type of government; to join illicit political societies; press offenses (except for the attacks against individuals); offenses to the rules concerning the political elections, public meetings; all these offenses do not violate the law and the political interest.

As a conclusion, Garraud appreciated that the political offenses are less directed against the bases of social life than against the established order: therefore, they have not the same nature as the common law offenses – "The reasons which impel us to act in political offense are, most of the times, disinterested, sometimes even commendable; the goal we want to achieve has not such a personal and selfish nature which inspire the ordinary perpetrator: the political offense has not the same immorality as the common law offense. A rational legislation will suppress these two kinds of offenses by different punishments."[5]

Thus, although, over the time, there were also opinions which placed such offenses in a range of deviant behaviors considered less dangerous to society, the consecration of importance of the fundamental political rights worldwide, especially from the second half of the twentieth century, led to an increased attention to such criminal acts.

Professor V. Dongoroz appreciated that "there is no intrinsic, overall difference between these two categories of offenses (common law offenses and political offenses – n.n.) – since, whenever, an ordinary offense may become a political offense, due only to the entirely intrinsic circumstances"[6].

This is what I. I. Haus firmly argue: "By political offenses we must understand the offenses and crimes hitting only the political order"[7].

A closer definition also suggests the great jurist Franz von Liszt who considers political offenses the ones affecting the existence and security of their own state or of a foreign state, as well as those directed against the head of the government and against the political rights of citizens.

Or, more synthetic and highly accurate: "the political offenses are the crimes and offenses hitting only the political order, either external or internal"[8].

Therefore,, I. Tanoviceanu has considered the electoral offenses "also a type of political offenses," an assertion also repeated by T. Pop in 1923.

But I. Tanoviceanu, soon after he made this statement, says that they (the electoral offenses) could be considered as a third category of offenses, besides the political and common law offenses, which obviously leads to a lack of clarity of the concept.

The French legal doctrine considers the political nature of the electoral offenses beyond any doubt, arguing his point of view with the jurisprudence[9]; they say it is about crimes and offenses against the Constitution and, in particular, electoral frauds.

The electoral offenses may be defined as "that category of acts provided by the criminal law having as object the social relations involving the normal conduct of political life."[10] Another definition of the electoral offenses was given by the Professor T. Pop, as follows "the electoral offenses are those offenses affecting the cleanliness and legality of elections for the legislative bodies"[11].

Thus, starting from the legal object of this category of offenses, it is found that they concern an essential attribute defining the notion of politics.

It stands to reason that these offenses affect precisely those essential elements by which is manifested the political composition of the society; the occurrence of violence, frauds, forgeries in the electoral process - so crimes -, denoting the actual existence of the sides which define, at least in terms of subjective criteria, the qualification as a political crime.

Given the foregoing, it is noted that the criminalization of the electoral offenses "protects the essential attributes of the free exercise of the political rights of citizens: the right to vote and to be elected, secrecy of the vote, correctness of vote, health and physical integrity of the electorate, defense against the electoral frauds"[12].

At least seven methods of election fraud populate the Romanian political imagination. From the fraudulent voting system (taking over of the sealed ballots by electors at the entrance to the polling station and handover, in exchange, of the unsealed ballots on exit), to the baton (the simplest version of the previous consisting of failure to submit some sealed ballots by some of the first electors and handing them to the representative of the party who distributes them to other electors then entering the logic of the fraudulent voting system), from the blue shirt (another version of the first method when the voter who declare that he is unable to focus on the vote requires the assistance of a particular member of the polling station - for example the one dressed in a "blue shirt") takes as much terrestrial the replacement (the substitution of the voted ballots and replacing them with other „properly" sealed ballots); the insecurity and handling of ballots play an important role in the mythology of the Romanian elections. On the other hand, the infiltration (the submission of some persons to a polling station, other than the one to which they belong, where, with the complicity of the representative of the party, they would vote on behalf of a systematically absent voter), hikers (a formula inspired by the existence of the special lists allowing the voting of the electors belonging to another station or from another place) or non-transportable (use of mobile ballot box to force the vote of older people who otherwise would not have participated in the poll) indicates another direction, that of multiple voting or administratively conditioned vote.[13]

Obviously, the punishment of the electoral offenses aimed to protect some values related to the state sovereignty, including, on the one hand, the social relations concerning the creation and compliance with the general organizational framework for conducting the electoral process, in complete safety and watching the democratic process for the election of the public authorities which must take place in complete fairness in order to confer legitimacy to the results of the vote of the electoral body.

II. Evolution of the regulation of the electoral offenses in Romania until 1990

The regulation of the electoral offenses was due to the electoral frauds existing right from the beginning of the organizations of popular consultations and of the first appointments of some governors for leading the Romanian countries in the nineteenth century.

[13] Pro Democracy Association – History of a disagreement: the uninominal vote, 2008, www.apd.ro, p.11.

Thus, in 1857, at the first elections in the Principalities for the ad hoc Divan also broke out the first scandal of fraud whose international impact marked the history of the Union. And, at that time, not the vigilance or organization of the unionists allowed the disclosure of counterfeiting of the elections in Moldova by the Caimacam Nicolae Vogoride, but the courage of his wife, Ecaterina (Cocuţa) Conachi, the stepsister of Costache Negri and the daughter of the famous chancellor - the poet Costache Conachi. She discovered the secret correspondence between the governor and his relatives of Phanar proving the intervention of the Gate for the falsification of the elections. Handed over to her brother and published in L'Etoile d'orient, edited in Brussels, the documents could justify the unionists' pressure for canceling the elections. Meanwhile, in Moldova this evidence circulated as an Extract of the secret letters sent to the Caimacam of Moldova by great political figures and contributed to the relaunching of the electoral process. This was the context which launched Alexandru Ioan Cuza on the first stage of the political life, a chief magistrate of Galati at that time, otherwise a relative of Vogoride (who appointed him and facilitated his rapid ascent in the army), whose resignation resulted in maximizing the scandal. Faced with the refusal of the Ottoman Empire to cancel the elections, France, Russia, Prussia and Sardinia broke the diplomatic relations with the power from Istanbul.

The tensions between England, Austria, encouraging the Gate not to accept new elections, and the other states participating in the Congress of Paris reached the brink of a war which was prevented only by the meeting in Osborne between Napoleon III and Queen Victoria after which the elections falsified by Vogoride were canceled.

After becoming a Lord of the United Principalities in 1859, Cuza did not hesitate to use, in the confrontation with the Opposition, some authoritarian methods and to influence the results of the elections. Introducing the Senate as a "balancing body" in the Developing Statute was a coup constitutionally intended to limit the role of the Chamber of Deputies. By the institution which this year celebrates its 140 years of existence, consisting of senators by law and senators appointed by the Lord, Cuza ensures his absolute control over the political life, so that not only the conservative majority, but also the parliamentarism was affected.[14]

In the Electoral Law voted in July 1866 there is a provision which foresees that any abuse of the electors shall be punished by fine or imprisonment, and five electors had the right to file a lawsuit for punishing the offenses committed during the elections, if the public ministry had no initiative.

During the monarchial period, the only elections not suspected of fraud are those of 1928 won by Peasants on the background of the Liberals' crisis after the unexpected death of Ionel Brătianu in 1927. The constitutional system inaugurated in 1866, kept after the constitutional changes of 1923, assumed the appointment firstly of the Prime Minister and then the convening of the elections. Any government which held elections in Romania, except for the Tătărăscu government in 1937, never lost such elections. The used means varied according to the size of the electorate. Until the imposition of the universal suffrage, in 1919, the control of the polling stations was sufficient to designate the winning party. Constantin Bacalbaşa in the "Bucharest of yesteryear", a witness and a victim of the electoral practices of the late nineteenth century and the early twentieth century, describes the *a la romaine* use of the electoral agents, actually some bullies paid to prevent the renowned electors of the adverse party to exercise their electoral right. The party which thus obtained the control of as many polling stations won the elections, and the complicity of the authorities was more than transparent. Miming the elective process has contributed to the undermining of the democracy and has provided an alibi for the extremist movements thriving after the First World War.

According to the law of 1918, the elector should remove or cut with a pencil the lists or the names of the candidates who did not want to choose and to make visible only the selected list or the name of the favorite candidate. The number of candidates who are not removed from the ballot could not exceed the number of mandates of that constituency, but the elector was allowed to vote for

[14] Pro Democracy Association – History of a disagreement: the uninominal vote, 2008, www.apd.ro, p.9.

fewer candidates. Nothing else could be added on the ballot, any sign being construed as an attempt at deception.

Since the introduction of the universal suffrage in 1919, the method of fraud was adapted. The falsification of the results could no longer be achieved by the contribution of the "street agitators", but in the regions under martial law, such as Bessarabia and the Quadrilater, the victory of the Government was assured.

The elections in 1922, organized and conducted by the Liberal government, by Ion I.C. Brătianu, were held, in the same manner for the Chamber, between 5 to 7 of March 1922, and for the Senate, during the 4 days - 1, 2, 9 and 10 of March 1922 (although the law provided only 2 days). The citizens who had certificates of elector were forced to vote in the section or subsection "to which belongs the village of residence"; those who did not exercise such right "without a legal basis" were sent to the competent justice of the peace and punished with a fine of up to RON 500.

A Peasant candidate exiled in a constituency of Quadrilater during the elections in 1926, Grigore Gafencu stated in "Political notes" the experience of his detention by the representatives of the Ministry of Interior, managed by Octavian Goga, in full campaign and his liberation once the results have been published.

The fragmentation of the political life and the emergence of the coalition governments justified the introduction of the electoral premium, another method of circumventing the vote and artificial insurance of absolute majority. Following the amendments to the Electoral Law of 1926, the party which achieved 40% of votes received, as a premium, 50% of mandates, and from the other half a number of mandates equivalent to the share of the obtained votes.

The vote based on qualification between 1866 and 1919 allowed a type of fraud, the proportional representation between 1919 and 1937, another, but the result was the same: the crisis of democracy. In 1937, Carol the Second believed that it was the time for a personal government, so that prevented the accomplishment of the 40% threshold by the Liberals who still occupied the first position with 36%. However, the government was set up by the National Christian Party, managed by Octavian Goga and A.I. Cuza, ranked the fourth with 9.15%. The coup of 10 February 1938 became justifiable, and the authoritarian government became possible. The plebiscite for the Constitution of 1938 was a simulacrum where underwent the open vote, only 5,483 Romanians having the courage to vote against, versus 4,300,000.

The last elections in the Kingdom of Romania of November 19, 1946 had been rigged by reversing the shares. The government of Groza, represented by the Bloc of Democratic Parties, claimed 70% of the votes, and the remaining 30% of the seats were divided to the other parties (the National Peasant Party - 13%, the Hungarian People's Union - 8%, the National Liberal Party - 4%). The repressive electoral campaign and the circumvention of the electorate's will reached its peak.

In the Criminal Code of Carol the Second was legislatively established the complex political offense, in the provisions of article 27, paragraph 1, being stipulated as follows: "when from the circumstances in which it was committed or due to the reason is found that an offense ... has a political nature, but it is sanctioned by law with common law punishments, the court shall replace the common law punishment with a political punishment".

Therefore, the Criminal Code of Carol the Second implicitly stipulated the political offenses by providing some punishments exclusively intended to this category of offenses. In the article 22, paragraph 2 and article 23, paragraph 2, of the Criminal Code of Carol the Second, establishing the punishments for the political offenses, provided the following grid:

a)Punishments for crimes in the political field:

- Hard life detention;
- Hard detention from 5 to 25 years;
- Rigorous detention from 3 to 20 years;

b) Punishments for each offense in the political field:

- Easy detention from 1 month to 12 years;

- Fine from RON 2,000 to 20,000, except when the law provides another maximum.

There was no political punishment in the correctional field.

In the articles 36, 37 and 38, the Criminal Code of 1936 explained in detail how the punishments were executed in the political field, essentially the difference between the hard and rigorous detention and easy detention, consisting in the fact that those convicted to the first two categories were subjected to the isolation regime during the night and forced to perform a work while the person convicted to an easy detention, besides he/she was not subject to the isolation regime and had other rights, quite large: free communication with the family members, the permission to receive books, magazines and journals, the possibility to support themselves on their own.

Regarding in terms of punishments, the Criminal Code of Carol the Second established as political offenses, among others: the crime of overthrowing the constitutional order (article 207); the crime of rebellion (article 210); the crime of military usurpation (article 212) etc., those referring to offenses against the internal security of the state, offenses against the security of foreign states, peace and good international relations law: offense against the good international relations (article 225); plot (article 227) and others; to the offenses against the exercise of the political and civil rights: the crime of electoral fraud (article 235); the crime of rebellion against the legislative assembly (article 258); the crime of clash of authority (article 331) and others.

Thus, we note that the electoral offenses enjoyed a special regulation: "in the second title of the Criminal Code of 1936, the electoral offenses were treated as *offenses against the exercise of the political and civil rights* and they were provided in the articles 232, 235, particularly referring to acts of violence or threat, preventing the exercise of the political and civil rights, as well as the electoral fraud"[15].

The law contains some inadvertencies, considering the same offense, when it is a political offense, when it is a common law offense. For example: the crime of hindering the political or civil rights is as such in the article 232, being punishable with an easy detention from 3 months to 1 year; while the qualified offense, provided in the article 234 is punishable by law with correctional imprisonment from 1 to 3 years.

The situation remained unchanged even after amending the Criminal Code in 1948 and its republishing in 1958, indicating that in the 60s, the Criminal Code has undergone a series of amendments which completely distorted the meaning and reason of criminalization of the political offenses, the punishments being applied with utmost severity, for minor or inexistent offenses.

Note that, with the advent of the Criminal Code in 1968, any difference between the common law offenses and political offenses disappeared, the Romanian law considering all the offenses as being common law offenses; consequently, automatically disappeared also the political punishments[16].

One of the debated issues concerning the electoral offenses of that time was related to the procedure, which was different from the common law offenses, namely "the limitation period for the criminal liability was unreasonably short, more precisely one month after the proclamation of the election results, an issue criticized by the theorists of that time"[17]. The same Professor Vasile Pantea said that in the legislation "was also provided an original way, suigeneris, implementing the criminal action, being stipulated that it can be triggered, besides the victim and prosecutor, by minimum 20 electors. Such offenses enjoyed a privileged sanctioning regime, both by shortening the punishments, and by the fact that, in this field, the preventive arrest was forbidden; as regards the jurisdiction, the electoral offenses were submitted to the Courts of assizes"[18].

[15] V. Pantea, quoted works, page 65.
[16] V. Pantea, quoted works, page 65
[17] T. Pop, quoted works, page 257.
[18] V. Pantea, quoted works, page 65.

The last legislative regulation in the field of electoral offenses may be found in the Law no. 67 of December 20, 1974, the electoral law of the Socialist Republic of Romania[19] which included, in the article 104, two offenses, as follows:

"(1) Shall be punished with imprisonment from 6 months to 5 years and the interdiction of certain rights:

a) hindering by any means the free exercise of the right to vote or to be elected;

b) falsification by any means of the electoral works or the outcome of the vote.

(2) Attempt shall be punished."

We note that the exposure of the regulations in the field of electoral offenses until the revolution of 1989 is required only for reasons of historical and teleological analysis, given that, during the period 1858-1938, the democracy in Romania was too early for implementing the compliance with the fundamental political rights, and after the reassessment of their importance worldwide, the insertion of certain criminal rules to protect such social values was strictly formal in the context of the Carlist and then of the totalitarian regime.

AGAIN ABOUT GENDER BASED VIOLENCE IN ROMANIA LEGISLATIVE MODIFICATIONS PROMULGATED ON MARCH 2012

LAVINIA MIHAELA VLĂDILĂ*

Abstract
The article continues our last year article, presented in the same conference, on the evolution of the legislation on domestic violence in Spain and in Romania. This new study shall approach only the legislative modifications of the Law No 217/2003 inserted in March 2012 after the shooting at "Perla" Hairdresser in Bucharest, which influenced not only the lives of those involved, but also legislative changes, as an attempt from the Government to offer a better protection for women, who are usually the victims of this type of violence. The present study is dedicated to these new modifications ad their social and legal impact.

***Keywords**: gender based violence, new regulation, restraining order*

I. Introduction. Regarding our preoccupation of the past few years in knowing and study the issue of gender based violence we drafted this article. Though in our previous study we have presented the evolution of the Romanian and Spanish regulation after 2000, we have not approached the latest modifications brought to the Law No 217/2003 after the shooting at "*Perla*" Hairdresser in Bucharest, inserted in March 2012. The present study is dedicated to these new modifications and their social and legal impact, especially the impact on those women subjected to gender based violence.

Despite that in Romania there are few statistics on gender based violence, and the existing ones are not very recent, it has resulted that this plague is one of the most present in Romanian society. According to the Statistical Bulletin on Labor and Social Protection – 2009, presented by the Ministry of Labor, Family and Social Protection[1], in South-Muntenia Region (formed by Argeş, Călăraşi, Dâmboviţa, Giugiu, Ialomiţa, Prahova and Teleorman counties) were registered most cases of domestic violence (3262), followed by South-East Region (formed by Buzău, Brăila, Constanţa, Galaţi, Tulcea and Vrancea counties) with 1759 cases, the fewest cases being registered in the Western Region (formed by Arad, Caraş-Severin, Hunedoara and Timişioara counties) with 1109 cases. From another Romanian study called "*National Research on Domestic and Work related Violence*", research conducted in 2003 by the Partnership for Equality Center[2] stated that between 2002-2008, 827.000 women were frequently subjected to acts of domestic violence in one of its many forms, thus:

- 695.000 women were insulted, threatened or humiliated;
- Over 316.000 women were physically abused and a similar number suffered different abuses resulted in forced restriction of social relations;

[2] The information was taken from the study *National Research on Domestic and Work related Violence* published on the Partnership for Equality Center official website: http://www.cpe.ro/romana/index.php?option=com_content&task=view&id=27&Itemid=48 p.132.

The research was conducted by the IMAS – Marketing and Polls in July-August 2003, on a representative sample group: 1800 persons aged 18 and above, from who 1200 were women and 600 men; 182 representatives with decision attributions in public institutions; 190 experts from local authorities, Police, Institutes of Legal Medicine, generalist doctors, emergency hospitals and NGOs. The PCE promoted this project with the support of the Center for Legal Resources, with funds from the Open Society Institute.

- Over 227.000 women had not their personal money or were striped of money without their consent by other family members;
- Over 70.000 women were abused in different ways, including sexually.

This shows that violence against women is a wide spread phenomenon which must be closely researched in order to be fully understood and to find the most adequate regulation, in the conditions of a deficient analysis and research, both from the deciders local and central public administration) as well as from the judicial system.

The analysis of the new regulation is a first important step in the understanding of this phenomenon, in order to evaluate the social and legal impact of the existent legislative modifications and inconsistencies even after they occurred.

II. Modifications promulgated on March 2012 of the Law No 217/2003 and their social and legal impact. The modifications of March 2012 were the result of a case which tends to become well known, namely the shooting at *"Perla"* Hairdresser in Bucharest. In this case, a woman noticed the police in many times regarding the possibility that her husband is trying to murder her, because they were separated and he continuously threatened her with physical violence, and the police did nothing. The silence of the police allowed her husband, who has a firearm license, to come at the victim's working place – a hairdresser – and, in broad daylight to fire without discrimination in all the persons who were there, employees and customers. The victim and other persons deceased, while others were seriously injured.

A human sacrifice not without result, but totally useless!!! In its aftermath the legislative adopted Law No 2/2012 which modified Law No 217/2003 on domestic violence[3].

The modifications are very important, but are still uncorrelated with other provisions, and sometimes inefficient. So, in a brief analysis we shall see the novelties brought by the modifications inserted in March in Law No 217/2003.

The concept of "domestic violence", as defined by Law No 217/2003, on its prevention and combat, is circumscribed, as shown in Art 2 *"...any physical or verbal action deliberately perpetrated by a family member against another member of the same family that causes a physical, psychological, sexual suffering or a material prejudice, including threats of such actions, arbitrary coercion or deprivation of freedom*". In our opinion, all these are forms of **direct violence** perpetrated by a family member against other members of that same family. Outside this form, the law states **a form of assimilated violence** namely, "*the hindering of the woman to exercise her fundamental rights and liberties*"[4]. From this definition were excluded the offences committed by negligence, being contradictory with the opinion of some authors, who include this type of offences in the definition of the concept[5].

Also, at a national level, the issue of domestic violence was defined as *a problem of public health*[6], which made the law to state its solving within the attributions of four (now five) ministries which must collaborate, but have specific roles, in this institutional mechanism: Ministry of Labor, Family and Social Protection, Ministry of Administration and Internal Affairs[7], Ministry of Public Health, Ministry of Education, Research, Youth and Sport.

In this context, the Ministry of Labor, Family and Social Protection received the attribution to draft the social assistance policy, to promote the rights of the victims of domestic violence, as well as

---

[4] According to Art 3 Para 2 of the Law No 217/2003 amended.

[5] Ortansa Brezeanu, Aura Constantinescu, *Violenţa domestică. Reflecţii*, in the Romanian Penal Law Review, No 2/2007, p.75.

[6] According to Art 1 Para 2 of the Law No 217/2003 amended.

[7] In the actual governmental structure there are two ministries: Ministry of Administration and Ministry of Internal Affairs. It would be desirable that the attributions be shared by both of them.

to draft and apply, by its central and territorial specialized structures, special measures to integrate the victims on the labor market[8]. In the actual structure of the Government, the Ministry of Public Health and the Ministry of Administration and Internal Affairs drafts and spreads documentary on the causes and consequences of domestic violence[9]. The Ministry of Education, Research, Youth and Sport implements educational programs for parents and children in order to prevent domestic violence, with the support of other ministries and in collaboration with different NGOs[10]. These attributions cover different sides of the phenomenon: the Ministry of Labor, Family and Social Protection creates the general policy and aims the labor reintegration of the victims; the two ministries, namely the Administration and Internal Affairs and Public Health aim to nationally recognize the cause-effect of the phenomenon by informing the population; the Ministry of Education, Research, Youth and Sport aims to stop from the root this phenomenon, in that after the causes and effects were discovered, the childhood education of citizens, especially in the relation with their parents, shall lead to its substantial diminish. So: application program, victims' integration, information on cause-effects, perseverance in canceling causes. We appreciate that such a vision is auspicious for stopping the phenomenon and healing the wounds it might have caused already.

With these ministries, the law understood to assign attributions also to the *probation service*, which has the possibility to manage the social reintegration of the *persons convicted for domestic violence*, closing the cycle of those involved in the phenomenon[11].

Another positive aspect of this law is the fact that it states *a series of principles* which should be as a "*bible on domestic violence*" for those who apply the law: principle of equality, principle of respecting human dignity, principle of preventing domestic violence, principle of celerity, principle of equal opportunities and treatment[12]. Even though nowadays human dignity is protected only by civil means (granting compensations in the limits of the Civil Code), other laws are adopted, beside the Constitution[13], declaring it as a reality which deserves to manifest and to be protected.

The framework for applying the law, according to Art 5, and in the meaning of the special law, refers to:

- *Close relatives*, as defined by Art 149 of the Criminal Code, namely ascendants, descendants, brothers and sisters or their children, as well as the persons who by adoption became such relatives. We can notice that Art 5 Point a) of the law on domestic violence *no longer states the condition that close relatives must live or household with the aggressor*, thus the term "family member" of the special law is broader than the one stated in the actual Criminal Code (Art 5 Point a)).

- *Husband/wife*, as well as *ex-husband/ex-wife* (Art 5 Point b)). Adding on the list of persons protected by law or authorities the ex-spouses, expresses the integration of the new ideas on domestic violence and on the persons who can be considered "*close*".

- To these categories are added those who have established a relation similar to marriage (*paramours*) or to those between parents and children, if they cohabit (Art 5 Point c)).

- The tutor or other person exerting, de facto or de jure, the rights in the name of the child (Art 5 Point d)). The provision aims to protect the child against violence manifested by his protectors. It is a novelty compared to the previous provision.

- The legal representative or other person who cares for the person mentally ill, with intellectual disability or physical handicap, except those who perform these as professional duties (Art 5 Point e)). It is a new concept that the law integrates showing the legislator's preoccupation for

[13] According to Art 1 Para 3 of the Romanian Constitution revised.

persons with disabilities against violence that may be provoked not only from blood or civil relatives, but also by those who must take care of them, a premiere in Romania.

A positive aspect of the law is that it encourages NGOs to support the programs for assisting the victims of domestic violence[14], as well as public-private partnership[15].

In order to assist the victims of domestic violence, also of the aggressors, the law created 4 types of institutions, called *units for the prevention and combat of domestic violence*, namely: domestic violence shelters (women's shelters), centers for the rehabilitation of victims of domestic violence, centers for assistance destined to aggressors and domestic violence awareness centers. All these types of units can be founded and sponsored by public or private funds or in a public-private partnership, the institution financing being responsible for spending these funds. Founding these units can be made only by social services providers, accredited according to the law. These units offer free assistance for victims of domestic violence, based on *a contract for performing social services*[16].

The centers for sheltering victims of domestic violence, further on called shelters, are social assistance units, with or without legal personality, which provide protection, accommodation, attendance and counseling to the victims of domestic violence, forced to resort to this social assistance service. Shelter units offer assistance both for the victim, as well as for the minors in his care, for free and for a determined period protection against the perpetrator, medical care, food, housing, psychological and legal assistance. The location of the shelter units is secret to the public[17]. Beside the shelter units, the law stated the foundation of *recovery centers*, which ensure, in addition to housing and care, social rehabilitation and reinsertion for the victims. The law does not forgot the aggressors, for whom it stated the foundation of assistance centers, created as units of social assistance with or without legal personality working as daycare centers, ensuring social rehabilitation and reinsertion for them, educational, counseling and family mediation measures. For them, the measures of family mediation are supplemented by specific treatment, namely psychiatric or rehab performed in medical units with who were concluded agreements. Regardless of the situation, the assistance and hospitalization of victims or aggressors in the above mentioned units is made only with their consent. For juveniles the consent belongs to the non-violent parent or legal representative[18]. The fourth type of assistance units are the *domestic violence awareness centers*, providing information and education services, social assistance and an emergency hotline for information and counseling.

The law states *mediation* as a mean of solving domestic conflicts, without being mandatory. In exchange, the law states for convicts for domestic violence to participate in special counseling and social reinsertion programs implemented by the institutions where they are executing their penalties[19].

Legally, for the first time in our legislation, the law states *the restraining order*, as a mean designed to estrange the victim from the perpetrator and to ease other legal measures, including solving the children's situation, if necessary.

The restraining order can be issued if the victim's life, physical or physical integrity, freedom are endangered by an act of violence from a family member.

It consists in the implementation of one of more measures:

- Temporary evacuation of the perpetrator from the family home, regardless if he is the owner;

[16] According to Art 15-16 of the Law No 217/2003 amended.

[17] According to Art 17 of the Law No 217/2003 amended.

[18] According to Art 16 of the Law No 217/2003 amended.

[19] According to Art 22 of the Law No 217/2003 amended.

- Victim's and his children reintegration in the family home, if they were cast away from the common home;

- Ordering the perpetrator to maintain a minimal distance from the victim, his children or other relatives, his residence, working place or school of the protected person;

- Banning all kind of contact, including by phone, mail or other type with the victim;

- Ordering the perpetrator to hand over the police any weapons he owns, even if are legally owned;

- Entrusting minors or establishing their place of residence elsewhere than the residence where they suffered or witnessed domestic violence;

- Ordering the perpetrator to pay the rent and/or maintenance of the temporary residence where the victim, children or other family members reside, or are about to reside due to the impossibility of remaining in the family home.

The *Recommendation Rec (2002)5 of the Committee of Ministers to Member States on the protection of women against violence*[20] splits these measures in two, the court may order two types of orders: a *restraining order*, which prohibits any contact of the aggressor with his victim for a certain period of time and a *protection order* aiming the other types of measures. Such distinction is necessary only in the hypothesis in which in first allowed to issue the restraining order for the protection of the victim against a possible physical contact with the aggressor, and after that, in a more elaborated procedure, to issue the protection order.

The procedure to issue the protection order should be performed with celerity. The competent court is the first instance tribunal; the procedure has short terms and can be appealed within 3 days from its issuance if the parties were summoned or from the communication, if the parties were not summoned. The prosecutor's presence is mandatory in both trials and also, the aggressor's legal assistance. The order can be issued for a maximum period of 6 months. The protection order is applied by the police and its non-abidance is the offence of non-abidance by court decisions, being sanctioned by imprisonment from one month to one year, for this penalty the conditional suspension not being possible[21].

III. Conclusions and proposals for a new regulation, correlated with a case study. Although all analyzed legislative modifications were major, they are also subjected to critics and to the need of improvement.

1. A first critic brought regards the way in which the texts referring to the Criminal Code are drafted. Due to the scanty legislative technique chosen by the legislator, this law is not considered a special criminal law. It is not even a civil law with criminal provisions[22], but just another law regarding a social area, tangential with criminal law. This is why it is not reflected in the Criminal Code[23], being only completed by it. These allegations are not hazardous. In the "*Explicaţii teoretice ale Codului penal român*" published under the auspices of the Romanian Academy and of its Legal

[20] The document is available on the Council of Europe official website: https://wcd.coe.int/ViewDoc.jsp?id=280915&Site=CM&BackColorInternet=C3C3C3&BackColorIntranet=EDB021&BackColorLogged=F5D383.

[21] According to Art 23-35 of the Law No 217/2003 amended.

[22] In accordance with the Romanian doctrine, the streams of the criminal law are: Constitution, Criminal Code, special penal laws, civil laws stating penal provisions. Lavinia Vlădilă, Olivian Mastacan, *Drept penal. Partea generală*, Universul Juridic Publishing-House, Bucharest, 2012, pp.33-35.

[23] V. Dongoroz, I. Fodor, S. Kahane, N. Iliescu, I. Oancea, C. Bulai, R. Stănoiu, V. Roşca, *Explicaţii teoretice ale Codului penal român. Partea specială, vol. IV*, 2nd Edition, Romanian Academy Publishing-House and All Beck Publishing-House, Bucharest, 2003, pp.859-861; the authors consider that a provision from a law other than the Criminal Code has penal feature only if it incriminates an offence punishable by a penal sanction, from those stated by Art 53-54 of the Code, or if that provision is expressly connected to one of the Criminal Code, which Law No 217/2003 does not state.

Research Institute, the authors consider that a provision from other law than the Criminal Code, has a penal feature only if it incriminates an offence for which Art 53-54 state a penal sanction or that provision is related to one of the Code, which Law No 217/2003 does not do[24]. In this context, Law No 217/2003, even after the 2012 modifications, must be in accordance with the Criminal Code, as well as with the new Criminal Code, so that such an atypical situation will cease to exist.

2. Another critic refers to the fact that even though the law states the offence of domestic violence convicting the aggressor, Law No 217/2003 amended does not state these offences; the previous regulation (before March 2012) stated over 25 offences from the Criminal Code[25]. With the legislator itself withdrawing the listing can we be able to relate to these? In the same context, it must be noticed that the actual Criminal Code does not define the offence of domestic violence nor connects it to a certain offence (in the meaning that there is no title, chapter or section regarding domestic violence or to have a similar name as it is – for example – in the new Criminal Code on 2009). There are only four offences committed with violence, which clearly refer to the subjects of the offence as family members (Art 180 Para 1^1 and 2^1 – hitting or other forms of violence and Art 197 Para 2 Point b) – rape) or to the spouse and close relatives (Art 175 Para 1 Point c) – first degree murder), but according to the definition of domestic violence – offences committed in these situations are many more, the range covered by the previous Art 1 Para 2 being wider. In addition, these four offences have as main object the social relations on the life and physical or psychical integrity or health of the person, and in subsidiary affect family relations, which in the case of a special regulation dedicated to domestic violence, the situation would be reversed.

3. The experience of a case in which I have studied the application of the new provisions on the protection order revealed the existence of other dysfunctions of the actual regulation. According to Art 17 Para 4 of the Law No 217/2003 amended, the state must endorse the setting up of secret centers for sheltering victims of domestic violence. In fact they are the same with the ones used for other social cases and can be found on the websites of the local Directions for Social Assistance and Child Protection or in Bucharest, the information regarding them being public.

4. Knowing the legislation in the area of domestic violence is limited and interpreted in a restrictive manner, without understanding the **urgent need of solving the cases**. Despite Art 27 Para 1 of the analyzed law, the case[26] had in view was delayed for over more than four month (was initiated at the end of August and the solution became irrevocable in mid-January next year), both in first instance and in appeal, which in the terms of a precarious situation of the victim would have made the legal provisions be ineffective. The pressures of the aggressor-defendant, the lack of a support from the state, of specialized free assistance determined the victim to call off the action.

The study "*Protecting women against violence*" published in 2007 under the auspice of the Council of Europe by two teachers from the German University of Osnabruck[27] determined

[25] Former Art 1 Para 2 of the Law No 217/2003 stated as forms of domestic violence the following types of offences: Art 175 – first degree murder, Art 176 – particularly serious murder, Art 179 – determining or facilitating suicide, Art 180 – hitting or other forms of violence, Art 181 – bodily harm, Art 182 – serious bodily harm, Art 183 – hitting or injury causing death, Art 189 – illegal deprivation of freedom, Art 190 – slavery, Art 191 – subjection to forced or obligatory labor, Art 193 – threat, Art 194 – blackmail, Art 197 – rape, Art 198 – sexual intercourse with a minor, Art 202 [*Art 205 – insult and Art 206 – slander – abrogated*], Art 211 – robbery, Art 305 – desertion of family, Art 306 – ill treatment applied to minors, Art 307 – non-abidance by measures for child custody, Art 309 - venereal contamination and transmission of the acquired immune deficiency syndrome (AIDS), Art 314 - jeopardizing a person unable to look after him/herself, Art 315 – leaving persons helpless, Art 316 – leaving persons helpless by failure to notify and Art 318 - preventing the freedom of the cults.

[26] The case was trialed by the Târgovişte First Instance Court, File No 7873/315/2012 and the appeal was trialed by the Dâmboviţa Tribunal.

[27] *Protecting women against violence – Analytical study on the effective implementation of Recommendation Rec (2002)5 on the protection of women against violence in Council of Europe member States,* study published in 2007 on the Council of Europe website http://www.coe.int//equality/, p.21.

immediate measures, in the so called "golden hours" after the conflict started. But it is necessary that the police are empowered to act, even in the absence of a court decision (for instance, separating the aggressor from the victim, evacuating him from the common house or supporting the victim in finding a shelter which provides psychical counseling). This study offers as a positive example the Austrian situation, which by a law in 2007 incremented the police powers, its actions being independent from the victim's consent, being able to issue a restraining order for maximum 10 days, the police managing the situation for the first three days. Based on the new law, the aggressor must hand over the police the keys from the common residence, and if he is caught violating the restraining order (which assumes his evacuation from the common residence) shall be punished by fine or can be arrested. If the victim allowed him to enter the common residence, she as well can be fined.

5. Despite the fact that Romania informs in some European reports[28] that it has ensured the training of magistrates, policemen, media personnel and social assistants on the phenomenon of domestic violence, in fact just a small number of magistrates enjoyed such training, and the next two categories did not. Regarding the training of magistrates, from our knowledge, it was a local project concluded in 2007, resulted from the cooperation of the American Bar Association with the Ministry of Labor, Social Protection and Family (with its previous name), together with other Romanian partners, which involved as a working group only two judges, two attorneys, one prosecutor and one representative from the National Agency for Family Protection, National Coalition for Domestic Violence and the Ministry of Justice and whose activity included complex seminars in Alba Iulia, Braşov, Bucharest, Craiova, Iaşi, Ploieşti and Timişoara. The trainers in the program were three judges from the Courts of Appeal of Bucharest, Braşov, Iaşi and a prosecutor from the Iaşi Territorial Office of the Directorate for Investigating Organized Crime and Terrorism[29]. But even so, there still are many professional categories with no training in this area such as: attorneys, medical staff involved in helping the victims, psychologists, teachers in schools, high-schools or universities. Until today in Romania there is not a master degree program dedicated to this subject, and the media, written or audio-video, has not promoted a commercial or a message informing about the dangers, effects and cases of domestic violence, just limited themselves in presenting news, unaccompanied by necessary legal comments. Regarding the police, they still consider the issue of domestic violence a private one, the simple draft of a criminal complaint solving the case from their perspective. Though the Criminal Code states their direct involvement, but just in cases of physical violence[30], in fact it is expected the "alarm signal" triggered by the victim, which is very rare, or just in extreme cases, when nothing can be done (as the case of the "*Perla*" Hairdresser in Bucharest).

6. From the medical staff's perspective, even though they provide immediate medical care for more serious cases for the victims of domestic violence, without discrimination or priority, they are not required to report milder cases (where the victim can file a prior complaint) to the police, social assistants or shelter units to take the victim and offer her specialized assistance, according to her case.

When medics face psychological violence the situation is vaguer, because without a qualification in this area, these cases are treated as usual, and the results are a partial efficiency and the waste of precious time waiting for the problem to be solved. In the case above mentioned, the victim, who requested a protection order against her husband, has been previously treated twice in psychiatry, the doctor recommending "*family support*" for her emotional state, knowing the fact that

[28] Ibid., Annex of the Table No 16, p.78.

[29] See the Final Report of the Project Domestic Violence in Romania: the law, the court system – American Bar Association, Central European and Eurasian Law Initiative and USAID.

[30] We are talking about the offences stated by Art 180 Para 1^1, 2^1 and Art 181 Para 1^1 of the Criminal Code, which state the initiation of the criminal proceedings ex officio, not just by the lodging of a prior complaint from the victim.

her psychic disorder was caused by relationship with her husband. The question was from where should the victim had family support, as long as the relationship with her parents was tensed, she rarely saw her brother to whom she sometimes talked about her family situation, she only had a close friend, and the conditions of her working place did not allowed to talk about her family situation? Only her children would have been a real support in this case, but the children who stayed with the husband started with his "help" to detach themselves from their mother unwilling for a relationship with her.

Thus, even though every possible professional category involved in this type of cases – medics, nurses, social assistants, police, magistrates, attorneys – can act as good professionals in their activity, the lack of coordination between these institutions determining the lack of efficiency in these cases.

7. From a procedural perspective, in the analyzed case in appeal was raised the issue of the mandatory presence of the defendant and of the plaintiff. In our standpoint, from the correlative interpretation of Art 27 Para 3 and 4 with Art 30 of the Law No 217/2003 amended, legal assistance is mandatory for the defendant only in first instance tribunal, not in appeal, and for the victim the law states the principle of legal assistance. The provisions of the law are interpretable regarding the situation of the defendant, this is why we consider that a clear and general statement – where Art 27 refers to first instance trial, and Art 30 to appeal – would be welcomed. In addition, as shown before, if the victim waved her defender, because she wanted to cease the litigation and filed a motion for withdraw, the appeal court ensured mandatory legal assistance and registering the motion for withdraw established the judicial expenses to be paid by the victim, though Art 6 Para 1 Point e) of the Law No 217/2003 states the principle of free legal assistance.

8. Another lack in the law is detailing the mean of allowing and administrating the evidences. The law should expressly state the possibility for the court to admit the interrogation of the parties or witnesses because in the lack of such a provision Art 189 of the former Criminal Procedure Code or Art 315 of the present Criminal Procedure Code is applicable. Due to the nature of the case often such cases are known first in family and sometimes by different friends of the parties. Also, regarding management of such cases the law should state the possibility of hearing the witnesses earlier than a week, in court in order to ensure both the celerity and continuity of the trial.

9. In procedural terms, another inconsistency with the existing legislation is found in the case of admitting the request for protection order, simultaneously with the file for divorce, very possible in these cases. Art 614 of the former Civil Procedure Code, still applicable for cases filed before 15 February 2013, the obligation of the victim to be present in first instance hearings could cause problems in respecting the protection order (because it states the mandatory presence of both parties in first instance hearings). The new provisions of Art 920 mostly reiterate Art 614 and state the representation by attorney without a special order in the four cases above mentioned (imprisonment, a serious illness, placing the plaintiff under interdiction, residing abroad), but does not entirely solve the special case stated by the special legislation on domestic violence. In the absence of an express text, we consider helpful Art 921 of the new Civil Procedure Code stating that the unjustified absence of the plaintiff, in first instance court, correlated with the presence of the defendant, can lead to the rejection of the file for divorce as untenable. Therefore, if the plaintiff (man or woman) can prove that his/her absence is justified by the protection order, the court can continue the hearings in his/her absence, only by legal representative.

10. Ultimately, but not less important, it must be mentioned that in May 2011, in Istanbul, the Council of Europe drafted and subjected for approval and ratification by the Member States a Convention on preventing and combating violence against women and domestic violence. Until today, Romania has not signed or ratified this Convention. But, in the case of a hypothetic ratification, its provisions may bring new legislative modifications, especially if our country has no reserves, though in some cases, would be grounded. The analysis of the compatibility between the actual legislation and the Istanbul Convention will be the subject of a future study.

All these observations have an exhaustive feature. The practice shall prove the logic of our arguments and the need to adopt the proposed improvements, but also the existence of other possible irregularities or misinterpretations of the current legislation.

TYPOLOGY OF ROMANIAN CRIMINAL TRIAL. REALITIES AND TRENDS

ANDREI ZARAFIU[*]

Abstract
The New Criminal Procedure Act that will soon become effective will also determine a transformation of the position and of the rights of the people involved in legal relations that are specific to the criminal trial. This study is meant to identify the main characteristics of the current criminal trials, as seen in the Romanian legal system. The lengthy process through which Romania became a full-rights member of the European Union caused a radical transformation of the existing criminal trial and it shifted it towards the European model. Identifying the essential elements of the Romanian criminal trial model allows us to frame it in a pattern that will determine the nature of the relations between state and citizen. Last but not least, the study tries to identify the current disruptions, in view of offering effective and precise solutions for overcoming the problems that may surface during the legislative process.

Keywords*: criminal trial model, system, features, elements*

Introduction

Unlike the private lawsuit, the criminal trial has its own legal nature and specific particularities and nature of its own, entailed by the importance of legal relationships it implies.

Currently, the trial model that circumscribes the Romanian criminal trial, which is on the verge of a radical change, may be classified in a certain general typology.

Establishing the correct legal nature and identifying the specific particularities allows the orientation of the trial type towards the European model.

At the same time, this operation brings forward serious advantages as well, designed to identify any procedural obstacles but also to propose practical and useful solutions to overcome them.

The core institution of the criminal procedure or criminal procedural law is undoubtedly the criminal trial. Beyond the theoretical implications involved in identifying the technical semantic scope of that concept, the practical, applied dimension of the institution is the having the uttermost relevance in reality.

Following an intensive use at the conceptual level, the term risks losing its identity as a concept and being confused with the subject (content) on which it relates.

Both repair and repression are required as a result of the imbalance in the legal order caused by committing an offense.

Discovering crimes, identifying and catching the perpetrators, gathering and administrating evidence, and criminal liability constitute a complex activity, carried out by specialized state bodies, called *criminal trial.*[1]

Therefore, a lawsuit filed by a company lies between the crime ascertained and the punishment, when the rule of law has been violated, against the offender, in order to enforce a judicial punishment provided by law.[2]

The criminal trial has also been defined as the activity required by law, carried out by competent bodies, with the participation of the parties and other individuals, aimed at ascertaining, timely and completely, the facts that constitute the offense, so that any individual having committed

[*] Lecturer, PhD, Faculty of Law, University of Bucharest (andrei.zarafiu@mnpartners.ro).

[2] *G. Stefani, G. Levasseur, B. Bouloc,* Procedure penale, 16[e] ed, Dalloz, Paris, 1996, p. 1.

an offense would be punished according to its guilt, and no innocent person would be held criminally liable.[3]

Furthermore, criminal trial has been defined as the activity carried out in a criminal case by the judicial bodies, with the participation of the parties and other individuals, as holders of rights and obligations, aimed at ascertaining, timely and completely, the crimes and criminal liability of those who have committed them, so as thereby to ensure the rule of law and protect the rights and lawful interests of individuals.[4]

All these definitions revolve around the essential elements of the criminal trial, setting out its specific features as well.

These basic elements are relevant for our analysis to the content as a whole, systemically creating a certain pattern. Over time, during the evolution of the criminal trial, three types or systems of criminal trial are known, different in their structure by development and basic rules. These are: *the adversarial trial, the inquisitorial trial and the mixed trial.*[5]

The oldest type of trial, *the adversarial trial*, assumed the existence of a prosecutor to make accusations against the person considered guilty. Originally, the victim of the crime could file the charges, and subsequently, especially for much serious crimes, other persons (accusers) could make charges.[6]

The criminal trial did not take place in the absence of the accusation made by the prosecutor, without the possibility of referral ex officio of those who settled the dispute.

Initially, those who made up the court were citizens of the community, and later on, after many years, professional judges performed the judgment. The trial within the adversarial court system is characterized by public debate, orality, adversarial character; the accuser is obligated to prove its accusation and the defendant its innocence. The judge had a limited role, without being able to intervene or act for knowledge and other situations, circumstances than those indicated by the parties, intervening in the trial only to ensure the compliance of judgment rules.[7]

The system has been criticized on the grounds that it offers the accused too many guarantees and too few to the prosecution, and does not create sufficient guarantees for social protection, many of the crimes not being brought to court due to lack of accusation.

The *inquisitorial* system emerged along with the creation of the state as authoritarian body, circumstances in which the interests of state power are much present against the individual ones.

In this context, it was considered that crimes affect both the state and the individual, which is why the state has undertaken to organize the procedural frameworks for the guilty individual to be punished. The intimation could be made both by the victim and ex officio, by the state representatives. Therefore, the support necessary for triggering the procedures for criminal liability of offenders is represented by the overall social interest, justifying state intervention in organizing criminal repression; the final enforcement of the punishment is perceived as the public reaction to the crimes committed by different individuals.[8]

Referral to the court in this system falls on an authorized person with the status of magistrate. Moreover, the designation of the trial type (inquisitorial) is given by the investigation procedure (*per inquisitionem*) used by these people.[9] Subsequently, the Public Ministry performs these tasks. Courts were composed of professional judges, appointed by the government, who were able to intervene in the trial, regardless of the position of the parties involved. Unlike the adversarial system, the trial was conducted in secret, written and non-contradictory (the accused was not allowed to argue the merits

of the evidence against it, and it could only appeal in writing), and the system of evidence allowed consisted of evidence whose value was predetermined by law.

From a historical point of view, this system originates from the canon law enforceable in the ecclesiastical courts, to be adopted subsequently by royal courts, and became in time the system of common law in many countries.[10]

The *mixed* criminal trial system is a combination of the two systems above, created by taking some features from the inquisitorial system consisting of the pre-trial phase, and other specific judgment-related features, common for the adversarial system.

However, it is different from the inquisitorial system, as specialized bodies carry on their activity in the preliminary phase (prosecutors attached to the prosecutors' offices, which form the Public Ministry) and conduct investigations, deciding in the end if the court needs to be intimated. There is a separation of the trial functions (research, prosecution, judgment). Hearings are public, taking place in oral and adversarial conditions, and the courts are composed of judges, and in some cases, other people without legal training (jurors), who decide in free evaluation of evidence, according to their intimate belief.[11]

This crime settlement system was originally present in France, through an interim legislation, and subsequently, knew its final consecration through the Criminal Training Code in 1808; later on, the model was adopted by most European countries, including the Romanian criminal procedure.

Which is the current typology of the criminal trial system in Romania?

Based on the qualifications set out above, we can consider the Romanian criminal trial model as principally being, in terms of guarantees and rights defended, a European model,[12] as it includes features and relies on principles arising from the European Convention on Human Rights. In the absence of European criminal procedural legislation, directly enforceable in the Member States, the European model is inspired by the binding case law of the European Court.

From a systemic point of view, the Romanian model has also an original character that corresponds to the mixed criminal trial system type, featuring elements such as inquisitorial and adversarial type. Composite features of this mixed type interfere, are not legally stable, meaning that they oscillate between adversarial and inquisitorial nature. The essence of such a system, however, is the existence of at least two phases: an instructive one (investigation) with predominantly inquisitorial elements, and an adversarial one (trial) with predominantly adversarial elements.

We can identify the following adversarial type elements in the Romanian criminal trial model:

- the existence during the trial procedure of a *super partes* judge, different from the rights and freedoms judge and the preliminary chamber judge;
- the formal legality between the parties (only during the trial phase);
- immediacy, adversarial character and oral debates;
- the evidence are assembled and administered contradictorily between the prosecution and the defense;
- fair trial;
- the regulation of the presumption of innocence;
- the exclusive jurisdiction of the judge, even during criminal prosecution phase in respect of the *status libertatis* of the defendant

The inquisitorial type elements concern:

- the prosecutor's status of "*dominus*" during the prosecution phase, and the supereminence of the prosecution against the defence at this stage;
- the judge's interference in searching and assembling the evidence;

---

[10] *Idem, p. 254.*

[11] *A. Crişu,* op.cit.p. 9.

[12] *M. Delmas - Marty,* Vers un modèle européen de procès penal, în Culegerea Procès pénal et droits de l'homme**,** op.cit., p. 291-303.

- limitations on the procedural rights of the defense in the criminal prosecution phase;
- pre-assembling the evidence, mainly in written and under secrecy, to be used by the judge hearing the debates;
- accepting the possibility of temporary detention as a form of compromise of the presumption of innocence

To summarize, without attempting a detailed analysis of the Romanian criminal trial model, we can acknowledge that although it corresponds to the mixed type, its character is balanced.

Thus, the elements defining the phases of a system are sometimes found in the other system. For example, we have shown that the existence of a preliminary phase, of investigation, with predominantly secret character and lacking contradictoriality is specific to the inquisitorial system. However, some stages of this phase comprise adversarial aspects, primarily characterized by *contradictoriality*. In Romanian criminal trial, contradictory aspects are found in the phase lacking publicity, and contradictoriality during the prosecution phase, [13] in proceedings concerning the settlement of the preventive arrest of the accused or the defendant (art. 146 and art.149^1 CPC), when the judge rules, after hearing the prosecutor and the accused or the defendant, with the possibility for the latter to consult the file which was held secret up to that moment.

Contradictoriality is also encountered in the procedure ordering an expertise in the criminal prosecution phase when, in consideration of the provisions of art. 120 of the CPC, the prosecution body sets a term when the expert and the parties are summoned, to let them know the objectives of the expertise; these individuals have the right to comment and ask the amendment or modification of the questions.

Furthermore, during trial, specific to the adversarial system, characterized by publicity and contradictoriality, inquisitorial type aspects are present in the form of secret and unilateral procedures. Such a procedure involves *changing the trial date* governed by the provisions of art.293 paragraph 3^1 CPC.

Some comments on changing the trial date are necessary.

First, regarding the scope of the institution, the changing of the trial date was expressly included in the trial general provisions (art. 287, 312), which constitute the common regulatory framework for conducting any trial, regardless of its level or type (in the first instance, in ordinary and extraordinary ways of attack).

Therefore, the changing of the trial date can occur in any activity of judicial nature covering the trial (settlement on the merits) of a criminal case after conferring, under the law, a panel of judges.

Per a contrario, changing the trial date time is an impermissible procedure within the other jurisdictional activities which have as object the settlement of claims, complaints or incidents of any such litigation, and do not judge on the merits.

As many of these activities involve a sequence of trial dates (solving the demands on interrupting the execution of sentences, appeals to enforcement, rehabilitation demands etc.) the enforcement by analogy of the institution in these matters would be useful to overcome procedural obstacles.

As for the general terms of changing the trial date, this occurs primarily ex officio or at the request of the parties.

Whereas it is not a party in the criminal trial, the prosecutor does not receive legal standing to that effect, so that its request must be dismissed as inadmissible.

The changing of the trial date may relate either to the first term or to the term taken cognizance of.

---

[13] *B. Micu,* Drept procesual penal. Partea Specială, Ed. Hamangiu, Bucureşti, 2010, p. 10-13.

Even if the law does not expressly provide it, I appreciate that changing the trial date may refer to any trial date whether it is received in full knowledge or not, as long as the obligation of summoning the parties on the new trial date was set up.

The only condition is that the changing of the trial date comply with the principle of continuity of the panel.

The grounds for changing the trial date are the impossibility of conducting the judgment, for objective reasons, on the initial term assigned or expediency resolution of the case.

Although following the vesting the court carries out its activity and fulfills its tasks in a panel under the law, within the legal department, the legal procedure of changing the trial date is conducted by graceful appeal.

In this respect, the law provides that the changing of the trial date is ruled by judge resolution in the counsel camera and without summoning the parties.

It is not clear whether if another judge of a panel of several judges aside the president could rule the changeover resolution.

In any case, if not a member of the panel hearing the proceedings, another judge may not rule the changeover, regardless of its administrative position (court or department president).

Even though the trial date was taken cognizance of, the parties shall be mandatorily and immediately summoned for new trial date.

The resolution to change the trial date hearing is not a legal solution, it does not take the form of a judgment, needs not to be reasoned (apart from indicating the grounds that generated the measure) and cannot be appealed either separately or with the merits.

Returning to the subject of this study, I consider that it is necessary to include a brief overview of future criminal trial model brought by the new Criminal Procedure Code of Romania.

After the adoption of the new Criminal Code of Romania [14], the issue of a new Criminal Procedure Code is no longer a matter of political choice but a matter of urgent legal fulfillment of a legal need.

In order to understand this assessment it is sufficient to invoke the organic, indissoluble connection between the substantive criminal law and procedural criminal law, regarded both as branches of law and as legal sciences.

This connection was pictured by the illustrious Romanist T. Mommsen who said, in the nineteenth century, that criminal law without criminal procedure is like a handle without knife, and criminal procedure without criminal law is like a knife without a handle.[15] The same author considered that separating legal rules from their enforcement, pursuant to the usual formula of law and procedure, generally scientifically regrettable, is not at all convenient for the Roman law and it is, at least in part, responsible for legal weakness of this matter.[16] Moreover, great authors [17] considered criminal procedure as far more important than prohibition and sanction (substantive criminal law).

The close connection between the criminal law and criminal procedural law is particularly highlighted by the correlation between the criminal law legal relationship and the legal criminal procedure legal relationship, given that the rights and obligations of the subjects within the criminal relationship is made only through the criminal procedure relationship.[18]

---

[14] Romania's new Criminal Code was adopted by Law 286/2009 and will become effective on a subsequent date to be set out in the law for its implementation.

[15] *T. Mommsen,* Droit pénal des Romains, T.I., pag. XIV din prefaţă, apud I. Tanoviceanu, Curs de Procedură Penală română. Atelierelele grafice Socec & Cp, Societate anonimă, Bucureşti, 1913, pag. IV din prefaţă.

[16] *T. Mommsen,* op. cit., p. 6, în acelaşi autor, pag. V din prefaţă.

[17] *F. Carrara,* Programma del corso di diritto criminale, 8-va edizione, Firenze, 1897, Sect. a III-a, T.II, p. 198 în acelaşi autor, pag. III din prefaţă.

[18] *I. Neagu,* op. cit., Partea generală, p. 34.

In this context, the construction and enforcement of the new substantive rules will be essentially conditioned by the viability of procedural rules.

In the explanatory memorandum of the draft of Code of Criminal Procedure (the form sent to the Parliament) the social and legal framework that determined the need for this normative act is illustrated.

Thus, the realities of current legal domain revealed a lack of expediency in conducting criminal trials, the mistrust of litigants in social justice and the significant human and material costs, translated into higher consumption of time and financial resources. All these aspects have led to the establishment of a climate lacking confidence in the effectiveness of the criminal justice ruling.

The main issues facing the criminal justice system are related to overloading current prosecution offices and courts of justice, the excessive duration of proceedings, unjustified tergiversation of cases and undue delay in settling cases on procedural grounds.

Among these, the aspects relating on the preventive custody, duration of proceedings, assigning competences and evidence in criminal matters were the subject of several cases before the European Court of Human Rights, to which Romania is a party. That being so, the need to eliminate the deficiencies that led to the repeated conviction of Romania by the European Court of Human Rights became obvious.

The current procedural system governed by the Code of Criminal Procedure, subject to frequent legislative intervention on various institutions, led to inconsistent enforcement and interpretation of the criminal procedure law. Therefore, the need to create the appropriate framework for the High Court of Cassation and Justice to carry out its role in the interpretation and application of the criminal procedure law is obvious.

Considering the shortcomings facing criminal procedural system, the necessity of thinking of a modern system, responsive to the imperatives of justice adapted to social expectations and enhancing the quality of the public service has emerged.

This being said, a legislative intervention is required, aiming at reducing the duration of trials and simplifying criminal proceedings by introducing new institutions, such as plea bargain, making the current evidence or evidence procedures consistent with the European standards thereon, reducing levels of jurisdiction, and regulating the appeal in cassation, as extraordinary way of appeal.

In this context, it appears imperative to adopt the new Criminal Procedure Code to ensure the creation of a uniform national jurisprudence, with observance of the highest international standards of criminal procedure, namely the European Court of Human Rights standards.

The draft of the new Criminal Procedure Code essentially aims at creating a modern legal framework in criminal procedure, fully responsive to the imperatives of running a modern justice adapted to social expectations and the need to increase the quality of this public service.

The provisions of the new Code of Criminal Procedure draft are designed to meet some current requirements as well as to speed up the duration of criminal proceedings, simplifying them and creating jurisprudence in line with the European Court of Human Rights.

Equally, the project aims to meet the requirements of predictability of legal proceedings arising from the European Convention on Human Rights and Fundamental Freedoms and therefore of the ones stated in the European Court of Human Rights jurisprudence.

The Government Decision 829/2007, published in the Official Gazette of Romania no. 556 of 14 August 2007, Part I, approved the preliminary theses of the Code of Criminal Procedure draft.

As noted in this document, which was the basis for the draft, it was not intended that the new Criminal Procedure Code contain original solutions at all costs, as compared with the existing solutions which have proven to be viable in practice, or whose use is a habit to practice, but to properly modify all the solutions that have become obsolete or have revealed a number of anomalies in practice, and introduce new solutions based on comparative experiences or targeting positive or favorable effects expected, all following the study of the criminal law doctrine of the internal and European systems.

Therefore, the draft of the new Criminal Procedure Code preserves its predominantly continental Europe, but as a novelty, it introduces many adversarial elements, properly tailored to our own legal system.

Thus, although the goal is to preserve all viable solutions in the current Criminal Procedure Code, a number of new solutions are introduced, which essentially focus on enabling a fast and efficient decision-making process in a criminal case, giving in full respect of fundamental rights and freedoms of all subjects of criminal proceedings.

Objectives pursued by the draft of the new Criminal Procedure Code are the following:

1. creating a framework in which the criminal trial is faster and more efficiently, thus significantly less expensive;

2. uniform protection of human rights and freedoms guaranteed by the Constitution and international legal instruments;

3. conceptual harmonization with the provisions of the new Criminal Code draft, with special attention being paid to the new definition of the act which constitutes an offense;

4. appropriate regulation of our country's international obligations regarding the normative acts of the procedural criminal law;

5. establishing a proper balance between the requirements for effective criminal proceedings, protection of basic procedural rights, and fundamental human rights of the participants in the criminal trial and uniform observance of the principles concerning the fair conduct of the criminal trial.

Analyzing the contents of the desiderata declaratively announced in this explanatory memorandum, but also a general and particular legislative framework to materialize the judicial activity, we may try to outline the typology (in systemic terms) of the future Romanian criminal trial model.

To begin with, it must be emphasized the observation concerning the model of inspiration for the future criminal procedural legislation. In this regard, the authors of the Code draft have abandoned the traditional Romanian normalization approach, preferring, in terms of the model of inspiration, the Italian system against the French one.[19]

This preference for the Italian model is expressively illustrated by regulating new procedural institutions, which do not exist in the current regulatory framework, and especially in the matter of individual liberty in criminal proceedings.[20]

In this regard, we can recall the introduction, along with the classical principles category, of new fundamental principles, amongst which one will produce major changes in the conduct of criminal justice, namely the principle of separation of judicial functions.

This principle declares and guarantees that four functions are exercised in the criminal trial: prosecution (by criminal investigators and prosecutors), ruling on the fundamental rights and freedoms during prosecution (by the judge of rights and freedoms), verification of the legality of prosecution or decision not to prosecute (by preliminary procedure chamber) and judgment (by the courts of justice).

Italian model also regulates the participants to a criminal trial, the institution to which the project makes several substantial changes compared to current regulation.

Thus, the judicial bodies, along with the courts and prosecution, include: the judge of rights and freedoms and the preliminary chamber judge, who will have specific responsibilities on human rights and freedoms of the suspect or defendant, respectively on verifying the legality of

[19] For French origins of ancient criminal procedure codes see *I. Tanoviceanu*, op. cit., Introducţiune, p. 1-14; *Gr. Theodoru,* op. cit., p. 64-65.

[20] In matters of individual freedom, a French-inspired institution is the provisional freedom, conceived as an alternative to preventive arrest.

administering evidence in the criminal prosecution phase and the legality of intimating the court by the prosecutor.

Furthermore, the parties in criminal trial have also been defined (the defendant, the civil party and civilly responsible party), with their rights and obligations. Along with parties, amongst the participants to a criminal trial are also the main procedural subjects (the suspect and the injured party) and other procedural subjects (the witness, the expert, the interpreter, the procedural agent, special ascertainment bodies etc.). Their specific rights and obligations are also highlighted.

The Italian model was chosen as inspiration in the matter of individual liberty. Thus, the absolute novelty for the Romanian criminal procedural law is the proposed settlement of a new preventive measure, namely the house arrest, pursuant to the Italian Code of Criminal Procedure, aiming, by entering this institution, at broadening opportunities for individualization of preventive measures in relation to the above-mentioned principles.

To ensure the observance of the eminently preventive character of the arrest ruled during a criminal trial in progress, the draft, inspired by the Italian Criminal Procedure Code, proposes the establishment of maximum limits of preventive arrest and the trial phase.

Considering the similarities between the criminal upcoming Romanian model and the Italian model, we may outline the typology of this model based on systemic findings made in this regard by the Italian doctrine.

Thus, the Italian model of criminal trial was described as being a mixed criminal trial type, of original character, that has vague similarities with the Anglo-Saxon type processes with prevailing adversarial elements.[21]

In conclusion, without attempting a detailed analysis of future Romanian criminal trial model, we may assert that although it corresponds to the mixed type, its character is primarily adversarial.

Conclusions

Based on the analysis presented, we may qualify the Romanian criminal trial as being a mixed type trial, with original character, featuring both inquisitorial type elements and adversarial type elements.

Systemically, the Romanian criminal trial model is primarily, from the point of view of defended safeguards and rights, a European model whereas it features characteristics and relies on principles arising from the European Convention on Human Rights.

In the absence of European criminal procedural legislation, directly enforceable in the Member States, the European model includes as source of inspiration the mandatory jurisprudence of the Strasbourg Court.

The Romanian criminal trial model also has an original character, its composite characters interfering, having no legal stability, meaning that it oscillates between the adversarial and inquisitorial nature.

THE IMPORTANCE OF VENTURE CAPITAL

IRINA ANGHEL-ENESCU*

Abstract
Created in the United States of America, Venture Capital is an asset class which attracted recently the attention of the policy makers all over the world. But the concept is still not clearly defined and understood. This paper attempts at introducing in the concept, its characteristics, and reviewing some of the benefits Venture Capital investments can bring at both the macroeconomic level, by looking at the correlation with the economic growth, and at the microeconomic level, for the portfolio companies.

Keywords: *venture capital, growth, macro-economy, impact, value-added.*

I. Introduction

Venture capital is a term used intensely in the United States, where it was invented, and where it became an important part of the culture, one of the buzz-words widely used and less understood. The truth is though that the Venture Capital model really worked in the United States: venture capitalists provided financing and added value to start-ups, and in the process contributed significantly to transforming entrepreneurs into rock stars of the start-up world and the companies into world famous multi-billion dollar brands like Microsoft, Google, Apple, Intel, Cisco Systems, Sun Microsystems, Dell Computers, Federal Express, Genentech, Home Depot or Starbucks, to name just a few.

II. Terminological clarifications: What is Venture Capital in Europe vs. United States

The two main organizations dealing with the venture capital industry on the two sides of the Atlantic (European Venture Capital Association in Europe and National Venture Capital Association in the United States) seem to have different definitions in terms of the stages of investment and in terms of inclusion in the category of private equity, which creates more confusion for the rest of the world, which becomes more and more interested in this phenomenon.

For the purposes of this study we will rely on the definition provided by EVCA in its Glossary[1] and understand Venture Capital as being "Professional equity co-invested with the entrepreneur to fund an early-stage (seed and start-up) or expansion venture. Offsetting the high risk the investor takes is the expectation of higher than average return on the investment. Venture capital is a subset of private equity."[2] In the US, private equity is generally equated to buy-outs, referring to investments in later stage deals. In order to avoid terminological confusion, we represented the two approaches in the table below, and for the purposes of this paper the term private equity includes venture capital investments.

* Lecturer, PhD, Faculty of Law, "Nicolae Titulescu" University (irina.anghel.law@gmail.com).

[1] http://www.evca.eu/toolbox/glossary.aspx.

[2] For another definition see for example Lerner 2009 "Venture Capital represents independently managed dedicated pools of capital that focus on equity or equity linked investments in privately held, high growth companies."

EUROPE	Private Equity	
	Venture capital Seed, start-up, Expansion	Buy-outs
United States	Venture Capital Seed, start-up, Expansion	Private Equity (Buy-outs)

The venture capitalists pool together capital for investing in private companies from various private and institutional investors who allow the investment process to be delegated to fund managers with significant experience and proper incentives to screen, evaluate and select potential companies with expected high growth opportunities, companies that develop new products and technologies. After making the investment, the venture capitalists have a hands-on approach and through mentoring and monitoring they add value to the portfolio companies, in order to realize significant capital gains on disposing of the shares during the exit process.[3]

Venture Capital is actually an asset class represented by a medium to long term investment, with a significant element the element of risk, and generally venture capitalists are investing in a portfolio of companies expecting some of them to fail, but hoping that the returns on the successful ones will not only compensate for the write-offs, but also generate significant returns for the investors. Considering this risk element, it becomes clear from the beginning the importance of the expertise of the fund manager in screening and selecting companies, and then in adding value throughout the administration phase and later on sourcing best exit opportunities.

It is generally accepted that Venture Capital is the only alternative for some companies which: (i) cannot be financed otherwise (due to risky growth options plus information asymmetry between the bank and the entrepreneur) or (ii) are founded by entrepreneurs who realize need and appreciate the opportunity to team up with professionals to reach faster to the next level (we refer to those who acknowledge their need for external support with extensive knowledge of the industry and managerial expertise, support brought by the experienced Venture Capitalists).

The table below presents the main characteristics and challenges of the early-stage investments done by Venture Capitalists.

Start-up and early stage investment characteristics and associated risks (adapted from Eggerz 2009)
For the target companies • An interesting idea but generally no income, only uncertain costs; • Customers and competitors are vague; • The technology is commonly high and the due diligence very complex; • Pricing is very difficult;

[3] For a literature definition, see Brander, J., Du, Q. & Hellmann, T., 2010 saying that: "Venture Capitalists are financial intermediaries that seek out and invest in high-potential entrepreneurial ventures, predominantly in high-technology sectors, and that often provide managerial assistance to enterprises that they invest in."

- Generally there is an one person team with "vision"; Hands on involvement of the Venture Capitalists is critical;
- Significant illiquidity;

For the investors
- Research & monitoring costs/deal size ratio is high;
- Historically poor rates of return in Europe compared to the US;
- More investment is needed to spread fund risk;
- Smaller deal sizes so more investment needed and monitoring is more difficult;
- Long term investment horizon;
- Outright failure considerations.

III. Why Venture Capital?

Thomas Friedman was writing in his New York Times Op-Ed (Friedman 2009) that instead of spending the 20 billion on supporting the auto-making industry, the United States government should use the bailout money to give 1 million dollars to each of the top twenty Venture Capital firms in America to fund the best ideas that come their way. But if Venture Capital is so risky as we described above, and it requires so much time and such specials skills, why is it still regarded as the secret sauce by so many people, including more and more governments and local administrations all around the world? The simple answer is that Venture Capitalists bring money but also entrepreneurial know-how to the table, and by using their market savvyness they are screening and selecting ideas and companies, are making educated bets on the most promising ones and are pushing them towards success through hands-on co-management and use their contacts for expansion and exit.

In this section we will have a look at the macro-level effects, as well as the impact at the level of the portfolio companies.

The macro-level benefits

By looking at the history, at its peak, in the year 2000, US VC investing reached the level of 1.1% of the country's GDP, and today United States of America are still the global leader, with less than 0.2% of its GDP. However, the impact of this small percentage is absolutely astonishing: according to National Venture Capital Association (2009) the venture-backed companies have revenues of 2.9 trillion USD, representing 21% of the gross domestic product of the United States of America, and employ 12.1 million people, which represent 11% of the country's private sector employment. In Europe as well, even though Venture Capital investments account for a far smaller percentage of the gross domestic product (0.053% in 2008 – information obtained in a telephonic interview with Zornitsa Pavlova, former head of research at the European Venture Capital Association), the impact on job creation is significant. In the absence of more recent studies, it is worth quoting the figures from the EVCA (2005), according to which employment in venture backed companies in Europe grew by an average rate of 30.5% annually over the period 1997-2004, which is nearly forty times the annual growth rate of total employment in the EU 25 member states between 2000 and 2004 and 73% of the surveyed venture-backed companies increased the number of employees by more than 25% on average per year. The same study points to some interesting findings in terms of research and development, showing that venture-backed companies when surveyed spent on average €3.4m per year on research and development activities, their average research and development expenditure by employee being €50,500, which is six times more than the research and development expenditure per employee of the 500 companies in the EU 25 with the highest research and development spending at €8,500. Moreover, every third employee in those

venture-backed companies when surveyed worked in research and development with 13% of the employees holding a PhD or equivalent degree. So Venture Capital is not only creating jobs, but it is creating jobs for the best educated people, preventing the brain drain or even generating brain regain.

Another documented effect of Venture Capital is that it tends to promote innovation, as Brander, Du, & Hellmann 2010 conclude after reviewing extensively the literature. Venture Capitalists are steering portfolio companies' innovation strategy towards commercial success and recent studies show that Venture Capital investments improve the absorptive capacity, and have a significant positive effect on innovation itself.

In terms of economic growth, the theoretic model according to which an analysis of the European Venture Capital performed by Deutsche Bank Research reports that an increase in private-equity investments by 0.1% of GDP is associated statistically with an increase of real economic growth of 0.2 pp if the investments are done at the buyout stage, 0.4 pp at the venture-capital stage and 1 pp if investments are done at early-stages – other things being equal (Meyer, 2006). The results of the analysis underline the economic potential of Venture Capital backed entrepreneurship. If Germany's Venture Capital investments were to rise to the European average, economic growth could increase by ¼pp – statistically speaking. However, this would require Germany to more than double the size of its venture capital market from 0.056% of gross domestic product to 0.113% of gross domestic product without compromising on the quality of financing, which is quite unrealistic in the short run.

Impact at the micro level

Besides the overall macro-level impact that has been demonstrated for Venture Capital, it is interesting to look also at its micro-level impact, at how do venture capitalists support the companies in which they invest. And there are two main directions in which their support is focused: providing capital and adding value to the portfolio companies. Providing money for growth is of the essence of venture capital investment. So much so that many still believe that this is all Venture Capitalists do, and this belief has important negative consequences, both for the venture capital industry (which misses out on opportunities due to the fact that its full benefits are unknown) and for the entrepreneurs, who might be in for a big surprise if they expect to be left alone with the money after securing venture capital financing. The reasonable expectation would be for the venture capitalists to be quite involved in the way the money they injected and then the money produced will be spent. And even though at times these "intrusions" of the venture capitalists will be regarded as uncomfortable by the entrepreneur (who by definition is used to decide by himself/herself), it is accepted more and more that good venture capitalists add more value with their mentoring and monitoring than with the money they are contributing as investment. But the entrepreneurs, who psychologically tend to be rather the "I know it all"-type perceive the need of capital far more acute than the need of guidance and mentoring, so they seek the venture capitalists for financing their companies, hoping to minimize the interventions and the rights the venture capitalists will have post investment.

Providers of capital

Many start-ups fail for lack of financing, since the banks are not lending them money and they never make it out of the "valley of death". Start-ups have few tangible assets that could serve as collaterals for bank financing, and the banks do not have the relevant expertise to assess the ideas, or the risk profile required to invest in such promising but incipient ventures. Therefore the Venture Capitalists are supporting entrepreneurs to finance their businesses in exchange of equity in the company, allowing them not only to survive, but also to grow.

Adding value to the portfolio companies

Even if the banks would finance such start-ups, as debt holders the bankers have lower incentives to push for innovation, for taking risks, for a more aggressive business strategy[4], while Venture Capitalists do push for all these, due to their "diversification across portfolio" and "few home runs" strategy (Senor & Singer 2009). And for early-stage investments, the services provided by the Venture Capitalists, their expertise and networks are at least as important as the financing component.

The approach of the Venture Capitalists varies from company to company and also from fund to fund, their contribution ranging from providing business contacts and brand-equity to strategic advice and to, in some cases, even integrating themselves to the day to day operations of the portfolio company and getting involved at all levels.

In an attempt to capture the recipe used by private equity investors to increase the value of their portfolio companies, Gadiesh & MacArthur from Bain Capital identify "six lessons from private equity any company can use", as follows (Gadiesh & MacArthur, 2008):

Lessons from Private Equity any company can use

- Define full-potential – How high is up? Focusing on the right/critical issue
- Develop the blue-print - Who, What, When, Where and How? Emphasis on measurable actions, milestones;
- Accelerate performance;
- Harness talent;
- Make equity sweat – eliminating unproductive and underperforming capital;
- Foster a result oriented mind-set – and developing a repeatable formula, demand accountability.

Source: Based on Gadiesh & MacArthur, 2008 (adapted)

It is important to note that Venture Capitalists are not adding value only during the administration phase, but also during the pre-investment activity (the due-diligence exercise helps entrepreneurs learn a lot about what is important for managing their business and also helps them organize the operations better) and at exit (when the rubber stamp of the Venture Capitalists has significant weight).

Moreover, a review of the literature points to the Venture Capitalists as investors adding value by other means, such as:

- Decreasing substantially the required time to introduce an innovation to market (Da Rin Penas 2007), speeding up product commercialization (Helleman and Puri 2000) and strengthening companies commercialization strategy (Gans, Hsu, Stern 2002, HSU 2006);
- Adoption of HR policies (Helleman and Puri 2000)
- Timing market conditions (Gompert et al 2007);
- Providing certification (Megginson and Weiss 1991);
- Leveraging the network of relationships (Hochberg, Ljungqvist, Lu 2007);
- Promoting export behaviour (Lockett, Wright, Burrows, Scholes, Paton 2008)

Venture capitalists are company builders, who influence innovation as much as they influence professionalization and innovation strategies (Da Rin, Penas 2007), and they have an active role as

[4] This is why the author of this paper strongly believes that entrusting the venture capital operation of a group to the people who have banking experience is a recipe for disaster, as it has been proved in Thailand. The bankers have a completely different risk profile based on their expertise, and would not have the skills to steer the entrepreneur in the right direction.

mentors and monitors of inexperienced entrepreneurs shaping management teams and boards, and giving them more credibility (Lerner 2009).

Impact on innovation

For a long while the literature has confirmed that Venture Capital is essential for bringing innovations to the market. More recently, research has proved that Venture Capital does provide support to the build-up of absorptive capacity. An interesting finding comes from the comparison of the effect of private venture funding with that of public funds. Da Rin & Penas found that venture capitalists selectively push portfolio companies towards choosing innovation activities which result in the accumulation of absorptive capacity, and towards more permanent in-house research and development efforts. They found a clear difference between the role of (private) venture financing and public funding, as the latter relaxes financial constraints but does not provide any additional strategic guidance. This provides novel evidence on the special role of venture funding in driving companies towards successful innovation strategies. (Da Rin, Penas 2007)

VI. Conclusion

Venture Capital continues to be a fancy term, insufficiently understood. In this paper, we made an attempt at clarifying the concept, by reviewing its definitions on both sides of the Atlantic, and we focused then on analysing the impact at the macroeconomic level (economic growth, development of entrepreneurial ecosystems) and at micro level (how the companies are benefiting by receiving not only financing, but also other type of value added services from the Venture Capitalists, and also how Venture Capital is impact positively the innovation capacity). Considering our findings, which lead to the conclusion that Venture Capital is an asset class which can contribute significantly to development, further research should be dedicated to what prevents Venture Capital funds from generating the sought after effects in some parts of the world.

THE PROHIBITION OF DISCRIMINATION OF ART. 14 OF THE EUROPEAN CONVENTION ON HUMAN RIGHTS IN MATTERS OF INHERITANCE AND AFILLIATION REGARDING THE PROVISIONS OF THE NEW CIVIL CODE

CARLA ALEXANDRA ANGHELESCU[*]
GABRIEL BOROI[**]

Abstract
Taking into consideration the provisions of the New Civil Code that has recently entered into force, the study focuses on the analysis of its provisions regarding matters of inheritance and affiliation in order to establish their compliance with the established case-law of the European Court of Human Rights in interpreting article 14 of the European Convention on Human Rights.

Key words: *Non-discrimination, inheritance, affiliation, European Court of Human Rigths, the New Civil Code.*

1. Introduction

The paper aims at establishing the rules stated out in the European Court of Human Rights' case-law regarding the application of the principle of non-discrimination in matters of inheritance and affiliation. After pointing out the principles set out by the Court, the study analyses the compliance of the provisions of the New Civil Code with the principle of non-discrimination as it was interpreted by the Court.

In this way, the study refers to both matters of inheritance and affiliation including by interpreting and applying the provisions of the New Civil Code to possible situations.

The universality of human rights recognition and necessarily requires the equal application to all individuals, all human beings are born free and equal in dignity and rights, proclaimed aspect of the first article of the Universal Declaration of Human Rights of 1948. This means that the rights and freedoms recognized all individuals without any discrimination, whatever its source, ie without any discrimination.

The non-discrimination principle is enshrined in virtually all treaties and international instruments for the protection of human rights. Article 2 par. 1 of the Universal Declaration states that everyone is entitled to all rights and all the freedoms it proclaims, without distinction of any kind, such as race, color, sex, language, religion, political or any other opinion, national or social origin to national, his wealth, birth or other status derives. This principle requires equal treatment of all before the law.

Article 14 of the European Convention provides that the exercise of all rights and freedoms that it recognizes them to be secured without discrimination on any ground such as sex, race, color, language, religion, political or other opinion, national origin or social origin, association with a national minority, property, birth or other status.

The European Convention does not contain a general prohibition of discrimination, which should be considered, therefore, all the rights and freedoms recognized in national legal systems of the Contracting States, being covered separately in Protocol no. 12 Additional to the Convention

[*] PhD candidate at the Faculty of Law, "Nicolae Titulescu" University, Bucharest (anghelescu_carla@yahoo.com).

concerning the general prohibition of all forms of discrimination, adopted by the Council of Ministers of the Council of Europe on 26 June 2000 and entered into force on 1 April 2005[1].

As a legal right to non-discrimination laid down in art. 14 of the Convention is a substantial subjective right, which has an independent existence in the system of European protection of human rights and fundamental freedoms on which it shall establish, as it can be invoked only by reference to them, but it may appear as autonomous by that in a given situation, it is possible that he may be breached without notice and an infringement on which has been invoked. Evidence of discrimination, therefore, a violation of art. 14 of the Convention can be done but only in relation to other rights protected by the Convention[2].

2. The prohibition of discrimination of art. 14 of the European Convention on Human Rights in matters of adoption

The Court held that art. 14 of the Convention aims to prevent discrimination on the rights and freedoms which it guarantees, in cases where there are different ways to comply with its provisions. Notion, discrimination "within the meaning of the text, generally encompasses cases in which an individual or group of individuals is seen, without adequate justification, treated better than another, even if the Convention does not require that they it be given more favorable treatment.

The difference in treatment is discriminatory within the meaning of art. 14 of the Convention only when the state, introduced distinctions between analog and comparable situations without it is based on objective and reasonable justification.

As consistently held the European court if this text provides protection against any discrimination in the exercise of rights and freedoms which the Convention guarantees, any difference in treatment does not mean, automatically, its violation. For such a violation to occur, it must be established that persons placed in situations analogous or comparable terms, receive preferential treatment and that this distinction cannot find any objective or reasonable justification. In this regard, the Court held that the Contracting States enjoy a certain margin of appreciation in assessing whether and to what extent differences between analogous or comparable situations are distinctions justify legal treatment[3].

The scope of this margin depends on the specific circumstances of each case, the fields and the context in question, as well as the presence or absence of a common legal system of the Contracting States in a given area may be a relevant factor in determining this margin.

The court also noted that European existence situations justify a different treatment of the same kind are to be assessed by reference to the purpose and the means used by the action taken in the light of the principles prevailing democratic INR. A distinction regarding treatment under the Convention right must not pursue a legitimate aim, art. 14 is violated when it is clear that there is a reasonable relationship of proportionality between the means employed and the aim pursued.

In matters of adoption, the Court applied this principle derived from case law domain consisting of equal rights for children born out of wedlock with one born in wedlock. Thus, in light of the case law of the European Court, when adopting a child, it acquires the same legal status at the child's biological adoptive parents, in all respects, including those relating to property rights derived from a difference of treatment will be justified only extremely well-founded reasons[4].

[3] Chiriţă, Radu, *Convenţia europeană a drepturilor omului. Comentarii şi explicaţii*, *Second Edition*, (Bucureşti: CH Beck, 2008), 611.

[4] CEDO, case *Pla and Puncernau v. Andorra*, 13.07.2004, par. 61, www.echr-coe.int.

From this point of view, the Romanian legislation on the matter this principle governed both by the provisions of the Civil Code and the law on children's rights.

In this sense, art. 471 of the Civil Code regarding the relationship between the adopter and the adopted child establishes that the latter has to adoptive rights and duties which every person has towards its natural parents.

Applying this legal text by the courts must be made on non-discrimination. European court ruled in Case Pla and Puncernau v. Austria, that although the law in matters testamentary succession does not make any distinction between biological children and adopted child by it, the courts have interpreted the provisions of the will in question in achieving a difference in treatment to the detriment of the applicant, who had been adopted, although the testator expressly does not remove the inheritance.

In the light of the circumstances of the case, the Court reiterates that a distinction is discriminatory for the purposes of Article 14 if it has no objective and reasonable justification, that is if it does not pursue a legitimate aim or if there is not a "reasonable relationship of proportionality between the means employed and the aim sought to be realized". In the present case, the Court does not discern any legitimate aim pursued by the decision in question or any objective and reasonable justification on which the distinction made by the domestic court might be based. In the Court's view, where a child is adopted (under the full adoption procedure, moreover), the child is in the same legal position as a biological child of his or her parents in all respects: relations and consequences connected with his or her family life and the resulting property rights. The Court has stated on many occasions that very weighty reasons need to be put forward before a difference in treatment on the ground of birth out of wedlock can be regarded as compatible with the Convention.

On this occasion, the Court reiterated that the Convention is a dynamic text establishes Positive obligations of the Contracting States and a living instrument which must be interpreted in the light of current conditions, emphasizing the importance given today by the Council of Europe Member States the principle of equality between children born in wedlock and children born out of wedlock as regards their civil rights. Therefore, if the testamentary provisions of national courts were subject to interpretation, that interpretation could only be done in accordance with the social realities of the time of writing the act or the date of death of the author, the more that these two points passed a considerable period of time, in this case about 50 years. If the course of a long period during which social realities, economic and legal were subject to change, domestic courts cannot ignore these new realities in interpreting and determining the effects of a legal act.

The same remarks are applicable if the will, any interpretation of its provisions shall subsume the testator and will be made for the purposes of its use and without overlook the importance of interpreting testamentary clauses in a manner corresponding to both domestic law and the Convention, as interpreted in the Court[5].

Consequently, the effect is remarkable disappearance adoption by small and keeping only the adoption of the new Civil Code in full effect, the institution under which the adopted child and coming, so the adopter wedlock acquires the same rights as a child of the adopter marriage, including rights derived from inheritance. Also, the application of the European Court judgment in relation to the provisions of the Civil Code concerning the institution of adoption, it follows that the courts have an obligation to respect the principle of non-discrimination enshrined in art. 471 para. (1) and (3) of the New Civil Code and the art. 448 Civil Code on the purposes of interpretation of art. 14 the European Court's case-law.

[5] *idem*, par. 62.

3. The prohibition of discrimination of art. 14 of the European Convention on Human Rights in matters of inheritance

Non-discrimination issues in the application presented in succession in cases of differential treatment of children born out of wedlock whose legal situation was governed by legal rules that establishes a system distinct from the situation of children born out of wedlock, with the latter legal status under which enjoy certain rights that were conferred and child out of wedlock.

In this respect, a first judgment of the Court relevant matter is the one given in the Case Marckx v. Belgium[6] the affiliation to the mother of a child born out of wedlock could not be established on the basis of the birth, as was the case of the married mothers, but only after an explicit recognition by the mother or a judicial declaration of adoption, in which case the period between birth and the time to establish filiation parent, the child did not have any legal relationship with family his mother could not be any legatee of his own mother.

In this case, the Court first identified the existence of differential treatment between children born out of wedlock to the mother for whom parentage can be determined only after explicit recognition or admission of the action with this object, and children born in wedlock, to the mother whose daughter was proven by simple phrases in the act of birth.

The existence of a legitimate aim, the European Court held that supporting and encouraging the traditional family concept is such a purpose worthy of consideration, but subject to this end by means which undermine family interests deemed illegitimate, and the present case. The Court accepts that, when adopting the Convention in 1950, the existence of differences in inheritance between family, self and illegitimate could be regarded as permissible and acceptable to most European countries. However, bear in mind the quality of the Convention to be a living instrument which must be interpreted in the light of present social realities, the Court emphasizing legislative changes made by the majority of the Contracting States in this matter in order to comply with equality of the two categories of children, especially in recognizing the principle already established, arguing east mater semper.

In conclusion, the Court found no objective and reasonable justification of the existence of differential treatment on the determination of parentage to the mother of the child born out of wedlock and therefore held an infringement on art. 14 in relation to Art. 8 of the Convention.

Regarding economic ties between the child born out of wedlock and his mother, namely those arising from the succession, there was a difference in treatment between children born in wedlock and those born out of wedlock in that first had intended to acquire more fewer rights through testamentary succession than those in the second category.

And on this difference in treatment, the Court did not accept the validity of any reasonable justification, finding a violation of Article. 14 in relation to Article 8 of the Convention on the legal status of both the mother and the child born out of wedlock.

The legal provisions of the New Civil Code in this matter conform to the ruling stated by the European Court. Thus, on the establishment of parentage to the mother, art. 408 para. (1) Civil Code establishes that it arises from the fact of birth, being able to establish and by recognition or by court order, while art. 409 para. (1) Civil Code provides that parentage is proven by the document of birth registered in the civil register, as well as birth certificate issued on the basis thereof.

It should also be noted that, according to art. 448 Civil Code, the equality of rights of children refers to children born out of wedlock relationships both to parents and to their relatives, their legal case is identical to that of a child born in wedlock.

A similar situation is one that has been Mazurek v. France[7] case in which the estate of the deceased, the mother of two children, one born out of wedlock, was divided unequally between the two situations are analogous, under the provisions of the French Civil Code in force at the time.

---

[6] CEDO, case *Marckx v. Belgiei*, 13.06.1979, www.echr-coe.int.

[7] CEDO, case *Mazurek v. France*, 01.02.2000, www.echr-coe.int.

Regarding the legal provisions governing the devolution, the Court concludes that a different treatment of the two brothers' inheritance rights, the difference could not be based solely on the presence of an objective and reasonable justification, that is, pursue a legitimate aim and involving have a relationship of proportionality between the means employed and the aim pursued.

In this sense, the Convention reaffirmed the position of being a living instrument subject to interpretation in the light of contemporary social relations and increased attention lately by contracting states equality between children born in wedlock and those born out of wedlock, including the adoption of the European Convention of 1975 that has this object and the Convention of Child Rights in 1989 within the United Nations that explicitly enshrines the principle of non-discrimination between the two groups on this criterion.

Thus, the Court held, finally, the possibility (however small) of the will of the state to protect the traditional family concept as being a legitimate aim.

The relationship of proportionality between the means employed and the legitimate aim pursued, it was considered that a child born out of wedlock does not attributable to that fact and, therefore, that fact cannot be relevant and sufficient reasons for this lie with a legal succession rate lower than that set by the law for a child in marriage, for which the Court found a violation of art. 14 in relation to Article 1 of the Additional Protocol no. 1. Inheritance rights are considered in this case as the goods under the Convention and therefore attracting the applicability of the latter text the law.

It should be noted that the provisions of the Romanian Civil Code in matters of legitimate meets the established guidelines set out by the European Court in the abovementioned judgment, art. 975 para. (1) of the New Civil Code establishing the right of inheritance of descendants, ie the children of the deceased and their survivors straight up forever, without making any distinction as they come in late or outside marriage. Also, the application of the text is achieved through systematic interpretation, in addition to art. 448 of the New Civil Code expressly stipulating equal rights of children, referring to the two categories.

With regard to testamentary succession becomes interesting analysis of the European Court in Case Merger and Gros v. France[8] and by reference to the provisions of the New Civil Code which establishes special the legal portion of the estate of succession available to the surviving spouse.

In that case, the plaintiff, a child born out of wedlock, was as universal legatee of his father, along with his other four children, but which had the status of children in marriage, and widow of the deceased. Under the statutory provisions of the French Civil Code on inheritance reserve and the possibility of the deceased to dispose of his assets through donations for the heirs, the applicant was afforded a smaller share of inheritance rights that could be acquired by testamentary because act as a child out of wedlock.

In that case, the Court concludes that differential treatment between persons in analogous situations, but found no reasonable or objective justification for this differential treatment, sitting, therefore, on a breach of art. 14 in relation to Article 8 of the European Convention on Human Rights.

This case brings into focus the provisions on special crankshaft available to the surviving spouse, institution maintained by the provisions of art. 1090 of the New Civil Code. According to it, the liberties of the surviving spouse who comes to inheritance in competition with other descendants than common ones that they cannot exceed one quarter of the progeny inherit or receive the least.

At first glance, one cannot find any different treatment depending on the circumstances offspring born out of wedlock with deceased spouse text realizing such a difference, or, where the law does not distinguish, we do not need to distinguish (*ubi lex non distinquit, nec nos distinquere debemus*). Thus, if the deceased had made some donations for the surviving spouse, children inherit both the book and the rest of what will be the difference between the total and the children's estate, the surviving spouse and the special cotitatea available will be divided deceased children equally, whether or not the quality of children from the marriage, and the art aspect provided. 975 para. (4) of the New Civil Code.

[8] CEDO, case *Merger and Gros v. France*, 22.12.2004, www.echr-coe.int.

However, it must be made certain clarifications on the differences between the situation of children born out of wedlock with deceased spouse who comes in competition with the latter, and assuming the child born of the marriage of the deceased spouse.

In the first case, if the deceased leaves entire inheritance by the surviving spouse, child out of wedlock shall be entitled to receive a share of 5/8 which is subject to the law of succession established in art. 1088 of the New Civil Code reported at 975 para. (3) of the New Civil Code, while the surviving spouse will only return a share of 3/8.

Paradoxically, if the child is common descendant of the deceased and the surviving spouse, thus coming out of their marriage, in the same case, the child will return only share 3/8, while the surviving spouse shall be entitled to receive a share of 5/8 of inheritance.

Such differential treatment cannot be justified even by reason often cited by the contracting states, namely the protection of the traditional family institution as if its existence, the child will receive a lower share of the inheritance of the would have received if they had the quality of a child born out of wedlock.

Another hypothesis is the statement of a surviving spouse who, although holding the quality of spouse acquires fewer rights than a person who, in practice, had the quality of life of the deceased partner. In this situation, to be applied on a case by case principles established by the European Court in the matter of family life provided for by art. 8 of the Convention which refers not only to the legal institution of marriage, but also to the specific circumstances of the case, the case in which a spouse of the deceased would be in a situation similar to surviving spouse.

In this case, under current rules, where the deceased would have a child, but it is not common descending and his life partner, the latter would inherit 4/8 of the estate, so half of the estate of the deceased, the other back half child. In contrast to this situation, if the deceased would have married, her husband would return only a share of 3/8 of an inheritance, and child of the deceased, a share of 5/8 of inheritance.

Thus, again paradoxically, both existing treatment difference if husband unlike spouse and if the deceased child, they get a different rate depending on how the deceased was married or not at the time of death, cannot be justified on the grounds of the will of the state to protect the institution of marriage and the traditional family because, as noted, his deceased person bequeaths his property by will to acquire more than the spouse who has the same universal bound, leading is that possibly more legacy to leave her husband to divorce it late in life. It should also be noted that the proportions Inheritance incumbent vary depending on a child element not be attributable to him, although, in fact, the situation is similar.

4. Conclusions

The study above presented underlines the major principles set out by the European Court of Human Rights in matter of inheritance and affiliation in accordance with the application of article 14 of the European Convention on Human Rights stipulating the general principle of non-discrimination.

As a result of the legal research set forth in the study in comparison with the provisions of the New Civil Code which entered into force in October 2011, there appears to be a compliance of the national legislation in matters of inheritance and affiliation with the principle of non-discrimination. Thus, the legal provisions do not establish any differences between the legal status of the children born in wedlock and those born out of wedlock.

A hypothetical question remains in matter of testamentary succession regarding the spouse of the testator and the persons who find themselves in similar situations as the spouse (for example, the partner of the deceased), topic that could form the subject of further theoretical and academic analysis regarding the interpretation set out by the European Court of Human Rights in this area according to the contemporary social developments.

THE CONSUMPTION LOAN AGREEMENT PARTICULAR ASPECTS REGARDING CONTRACTING CAPACITY OF PARTIES

DANA SIMONA ARJOCA*

Abstract
The study contains a short presentation of loan contract, with a special view of condition for the validity of the contract that refers to the capacity of the parties to conclude such contract. The study proposed to analyze the doctrine, jurisprudence and legal texts of the old and the new Civil Code regarding the capacity of parties to conclude a consumption loan agreement, the rule and the exceptions.

Key words: *loan contract, consumption loan, condition for the validity of contract, loan of consumption, anticipated legal capacity.*

Introduction

The paper covers aspects regarding Civil Law, Commercial Law, Consumer Law, and Civil Procedure Law

The importance of study is given by:

- The newness in civil law doctrine;
- The new regulations of consumption loan;
- The importance of knowledge of condition for the validity of contract to assure the stability of commerce;

For answering to these problems I will try to analyze the legal framework of consumption loan and, in particular, capacity of parties to conclude such contract, to analyze the Romanian and foreign doctrine, the jurisprudence, and to propose an interpretation of the new regulations regarding the capacity of physical and juridical person to conclude the consumption loan.

Content

1. The Loan Contract in Civil Code

Traditionally, a loan is defined to be the contract by which a person, called the lender, transmits the use or ownership of property to another person, called the borrower, under an obligation on the part of the borrower to return the property in kind or other goods of the same quantity and quality[1].

Unlike the former Civil Code[2] which regulated in Book III, Titles X and XI, the commodatum and the loan as two distinct contracts, the Civil Code currently includes the Book V. Of obligations, Title IX. Various special contracts, Chapter XIII. Loan contract. The chapter has three sections: general provisions, loan for use and loan for consumption, thus responding more

* Judge, Bucharest Court of Appeal – Civil Section; PhD candidate, "Nicolae Titulescu" University of Bucharest (e-mail: dana_mhlc@yahoo.com).

[1] See in this respect L. Stănciulescu, *Curs de Drept Civil. Contracte* (*Course of Civil Law. Contracts)*, Hamangiu Publishing House, Bucharest, 2012, p. 395, C. Hamangiu, I. Rosetti-Bălănescu, Al. Băicoianu, *Tratat de drept civil român (Romanian Civil Law Treatise)*, 2nd vol., Restitutio, All Publishing House, Bucharest, 1997, p. 622.

[2] Please note that throughout the paper we refer to the old Civil Code as to the Civil Code of 1864, published on 26.11.1864 and entered into force on 1.12.1865, and the phrase "Civil Code" shall mean the current Civil Code covered by the Law no. 287/2009, published in the Official Gazette of Romania no. 511 of 24.07.2009 and republished in the Official Gazette of Romania no. 505 of 15.07.2011.

accurately to the requirements of theoretical classification, since the essence of the two contracts is the same.

The Civil Code, in the general provisions of chapter XIII, by Art. 2.144, provides that there are two types of loans: the loan for use, also called *commodatum* (or free loan) and the loan for consumption (or *mutuum*).

Thus, at present, the hearth of the subject matter is constituted by Art. 2.158 – 2.170 of the Civil Code, The Book V. Of Obligations, Title IX. Various Special Contracts, Chapter XIII. Loan Contract, Section III. Loan for Consumption.

Art. 2.158 defines the loan for consumption as the contract by which the lender remits to the borrower an amount of money or other similar fungible and consumable goods, and the borrower binds himself to return, after a certain period of time, the same amount of money or quantity of goods of the same kind and quality.

Although the legislator has enlarged the legal definition, including elements outlined in the doctrine over the years by various authors, however, criticism has been aimed at the fact that no reference is made to the transfer, at least temporarily, of the ownership, considered essential in this context[3].

It is characteristic of loan for consumption that the good loaned shall be consumed by the borrower, who will not be able to return the identical property but instead of which he will return other property of the same kind, quality and quantity[4].

It may be noted that, unlike the provisions of the Civil Code of Québec, the definition of the Romanian Civil Code expressly refers to fungible goods (according to classification given by Art. 543), qualification of goods that is not found in the Canadian Civil Code.

The Romanian legislator has not assumed the provisions of Art. 1894 of the French Civil Code which expressly excludes from the category of goods that may be subject of a loan for consumption those immovable goods, individually determined movable goods or goods that, although are of the same species, varies by individual characteristics, the animals being given as an example[5].

II. The loan contract validity condition – The Capacity of Parties to conclude a loan agreement

As Section 3, Chapter XIII of Book V of the Civil Code, dedicated to the loan for consumption, does not contain special rules on the contract validity conditions, then the contract must fulfill the essential and general conditions for the validity of any contract, as provided by Art. 1.179 par. 1 of the Civil Code, though with some particularities regarding capacity of parties, their consent and the object of the agreement, which particularities are generated by the characteristic of the loan for consumption.

Sometimes, in the doctrine[6], the conditions of validity specific for the loan of consumption have been outlined, being estimated that the following elements must be met: lender should be the owner of the amount of money or of the other fungible goods that constitute the material object of the respective loan for consumption, the transfer of the ownership to the borrower which implies the effective delivery of the good, express assumption of obligation to restitute the exact amount received by the borrower, valid consent of the parties having legal capacity, legal object and cause.

[4] Frédéric Leclerc, *Droit des contrats spéciaux*, LGDJ, 2007, p. 287.

[5] Pascal Puig, *Contrats spéciaux*, 3e édition, Dalloz, 2009, p. 432.

[6] E.g. T. Prescure, A. Ciurea, *Contracte civile* (*Civil contracts),* Hamangiu Publishing House, 2007, p. 263.

The first condition for the validity of a contract provided by Art. 1.179 par. 1, point 1 of the Civil Code refers to the capacity of the parties to conclude contracts. In this regard, the rule is the capacity to conclude civil legal acts, the incapacity constituting an exception. The rule is contained implicitly, generally, in Art. 29, par. 1 of the Civil Code, according to which "nobody can be restricted in the capacity of use or deprived, in whole or in part, of the capacity of exercise, except in the cases and under the conditions expressly provided by law."[7]

Art. 1.180 establishes in principle that any person who is not declared incapable by law nor banned to conclude certain contracts may conclude contracts. Rules on the capacity to conclude contracts are regulated mainly in Book I of the Civil Code (Art. 1.181 of the Civil Code).

The loan for consumption, which is an act of transfer of property, was qualified as an act of disposition[8], an act that results in removing a good from the patrimony.

Therefore, considering the effects and the importance of such a contract on the patrimony of the lender, he must have the capacity, respectively to fulfill the conditions required by law regarding the acts of disposition, in principle full legal capacity and be the owner of the good that constitutes the object of the contract[9].

The loan for consumption is a as a gift contract, though it is not a munificence, but it is a simple disinterested act as long as the borrower has the obligation to restitute goods of the same kind, quantity and quality. Hence in this matter are not applicable the special incapacities provided for munificence's [10].

In the legal literature[11] it was also mentioned that the loan for consumption by onerous title is, for the lender, an act of transfer of property and an act of disposition by its content, but an act of administration of the patrimony by its effects. Although initially the lender transfers the ownership of the goods loaned from his patrimony, when the contract terminates the borrower shall restitute to him goods of the same kind, quantity and quality, so that no decrease of the patrimony of the lender is produced, per contra, in the case of the loan with interest, his patrimony shall increase according to the parties agreement.

The borrower must, in turn, have the legal capacity to conclude acts of disposition as long as he assumes an obligation to restitute the goods, which means that on due date he must restitute an equivalent value, being that the borrowed goods were consumed. Moreover, he becomes an owner and thus bears the risk of accidental destruction of the things borrowed[12].

Another argument justifying this requirement for the borrower is the legal equality of the parties in a civil legal act[13], neither party being able to impose its will on the other.

Free will of each party is however a matter of consent and how it is expressed, and the principle of legal equality of the parties when concluding a contract does not automatically imply that the requirements and qualities are identical (for example, in relation to donation, there are some

inabilities of disposing or receiving, different for donor and donee, without thereby considering it as violating the principle of equality of parties).

It is necessary that the borrower have the capacity to conclude legal acts of disposition as long as he actually concludes such a contract, which shall produce its specific effects in his patrimony.

Regarding natural persons, the acts of disposition may be concluded by persons with full legal capacity[14]. Full legal capacity begins on the date when the person becomes a major, respectively at the age of 18 (Art. 38 of the Civil Code).

As an exception, the minor who marries acquires from that date full legal capacity (Art. 39 par. 1 of the Civil Code).

We note that, in principle, according to Art. 272, par. 1 of the Civil Code, a marriage may be concluded if the future spouses have reached the age of 18. For solid reasons, however, the minor who has attained the age of 16 may get married on the basis of a medical advisory, with the consent of his parents or tutor and with the guardianship court authorization.

The 16 year old minor has full legal capacity. The basis for this exception is, on the one hand, the purpose of marriage, which is starting a family, so it would be unnatural for the members of a family that could become legal protectors of their own children, to be under parental care. On the other hand, the principle of equality between spouses must be respected, for it may happen that one of them be a major[15].

As a rule, cancellation or nullity of marriage will not produce retroactive result on the legal capacity of the spouses, so that to ensure the security and stability of the legal turnover.

Regarding the future effects, the law makes a distinction between the minor spouse's good or bad faith when concluded the marriage. Article 39 par. 2 of the Civil Code expressly provides, ending a vast polemic arisen in the doctrine under the former Family Code[16], that the minor who acted in good faith when concluded the marriage shall retain full legal capacity.

Per a contrario, the minor who acted in bad faith when concluded the marriage shall lose the full legal capacity in the event that the marriage is annulled, but only if he did not become a major until the date of the annulment, thus obtaining legal capacity under civil law.

Art. 39 par. 2 refers to the marriage "annulled", understanding that the legislator considered the dissolution of marriage for reasons of relative nullity. But since the effects of the two kinds of

[14] G. Boroi, C. A. Anghelescu, *op. cit.*, p. 113.

[15] Fl. A. Baias, E. Chelaru, R. Constantinovici, I. Macovei (coordinating), *Noul Cod civil, Comentariu pe articole art. 1-2664 (The New Civil Code, Comments on Articles art. 1-2664),* C.H.Beck Publishing House, Bucharest, 2012, p. 44.

[16] Putative marriage was defined as the marriage which, although invalid or canceled, nevertheless produces some effects towards the spouse who entered into in good faith (I. P. Filipescu, A. I. Filipescu, *Tratat de dreptul familiei (Family Law Treatise)*, 8th ed. revised and supplemented, Universul Juridic Publishing House, Bucharest, 2006, p. 223). According to the authors, if the declaration of the invalidity of a marriage occurs before the spouse who acted in good faith has reached the age of 18, he or she retains full legal capacity since this capacity is lost only in the cases and under the conditions stipulated by the law, and the law does not provide anywhere that the minor who acquired legal capacity by marriage and enjoyed it for a while may lose it afterwards. For the spouse who acted in good faith, nullity of marriage does not suppress the effects that marriage has produced in the past; the full legal capacity acquired as a result of a marriage is retained, independent of marriage, and returning to parental care of the respective spouse is out of the question (p. 223-224).

For the contrary opinion it is invoked Art. 23 para. 1 of the Family Code: "The spouse who acted in good faith when entered a marriage declared invalid or canceled shall be deemed to be in a valid marriage until the date when Court decision becomes final. "Conversely, this situation shall not be maintained after the decision of the Court to invalidate the marriage becomes final. The author agrees with *de lege ferenda* opposite thesis, considering that it is necessary to amend the legal provision, in terms of expressly providing that the full legal capacity acquired by marriage shall not be lost" (Gh. Beleiu, *op. cit.*, p. 286-287).

nullity are the same, such a distinction is not justified, the provision being applicable in the event of a marital dissolution, no matter whether this is due to relative or absolute nullity[17].

For the same reasons, the minor who acquired full legal capacity as a result of concluding a marriage shall not lose this capacity in case that the marriage is ended by divorce or upon termination of marriage by the death of the other spouse, if these situations occur before the respective minor has reached the age of 18[18].

A novelty of the present Civil Code is the anticipated legal capacity. Art. 40 establish a second exception to the principle of acquiring the full legal capacity when the minor becomes a major. For solid reasons, after hearing the parents or the tutor and with the accord of the family council (if constituted), the tutorship court may admit the full legal capacity to the minor who has reached the age of 16.

Such a possibility was regulated by the former Civil Code, but the provisions relating to emancipation were repealed by Decree no. 185/1949, the so called "express" emancipation not being recognized afterwards, until the entry into force of the new Civil Code.

Emancipation was a solemn act that had the effect of abolition of the parental authority or of the tutorship, conferring upon the minor the right to run his personal acts and to administer his patrimony within a limited capacity. He acquired the right to do certain acts alone, while for others had to be assisted by his curator, according to the categories of acts, considered more "serious", for which the law required the approval of the tutorship (for example, Art. 429 of the Civil Code of 1864 provided that the emancipated minor could not borrow without the authorization of the family council approved by the tribunal)[19].

The current law provides no limitation, and the text of the Art. 40 refer to acquirement of the full legal capacity. It is true that nowadays young people aged 16 have a high level of knowledge and benefit from facilities that contribute to their precocity, but their experience is still limited and the "temptations" are big, so that a minimum control over their acts was required.

Another deficiency of the regulation is the absence of a procedure for publicity, allowing third parties to take note of the change in the exercise capacity of minors; it is an issue that will create difficulties to third party contractors who will have to request to the minor the evidence of his emancipation and this will not always make them feel safe in this respect[20].

There are categories of people who may conclude acts of disposition only in certain circumstances, the law providing various limitations or restrictions. It is the case of the minor and the judicial ban or of the spouses who conclude acts with third parties. In addition, special rules regulate the acts concluded by legal persons.

a)The situation of the minor and the judicial interdiction

The Civil Code establishes special measures for the protection of minors and those who, though responsible, because of old age, illness or other reasons provided by law are not able to manage their properties and to defend their interests in appropriate conditions, the legislator considering that these persons lack discernment.

Protection of minor is accomplished by parents (common and ordinary way of protection), by establishing a tutorship, by placement commissioning or by other legal measures of social protection,

[20] C. M. Crăciunescu, D. Lupascu, *Emanciparea minorului în reglementarea noului Cod civil (The Emancipation of a Minor in the regulation of the new Civil Code)* in P.R. nr. 9/2011, p. 29, qtd by C. T. Ungureanu and others, *op. cit.*, p. 77.

such as those provided by Law no. 272/2004[21], special tutorship and judicial interdiction, and the protection of major is done by placing under judicial interdiction or establishing a tutorship (Art. 105-106 of the Civil Code).

Art. 502 of the Civil Code provides that the rights and duties of parents regarding the child's assets have the same legal regime as those of the legal tutor, the provisions regulating the tutorship being applicable accordingly.

The goods of the minor shall be administer in good faith, the tutor acting as

a manager charged with simple administration, with application of the new provisions of the Civil Code relating to the administration of the goods of another person contained in Title V of the Book III, unless otherwise provided by rules concerning the exercise of tutorship over the minor's property.

According to Art. 41 par. 1 of the Civil Code, except other cases provided by the law, have no legal capacity the minor under the age of 14 and the judicial interdiction[22]. For them, the legal acts of disposition shall be concluded on their behalf by their legal representatives, as provided by law[23], respectively with the accord of the family council (for the minor and when this council is established according to Art. 124 of the Civil Code) and with authorization of the tutorship court.

As an exception, the person lacking legal capacity may conclude personally acts provided by the law, acts of conservation and low-value routine acts of disposition that are carried out at the time of their completion. On the other hand, acts that a minor may conclude personally may also be made

[21] Law no. 272/2004 on the protection and promotion of children's rights, published in the Official Gazette of Romania no. 557 of 23rd of June 2004.

[22] Art. 164 Civil Code: „(1) The person without discernment necessary to mind his/her own interests, because of alienation or mental debility, shall be placed under judicial interdiction. (2) Minors with limited exercise capacity can also be placed under judicial interdiction." Art. 171 Civil Code: "The rules on tutorship of a minor who has not reached the age of 14 shall be also applied to the tutorship of a minor placed under judicial interdiction, insofar as the law may otherwise provide."

[23] In this regard, art. 144 of the Civil Code provides: „(1) The tutor may not, on behalf of the minor, make donations or guarantee someone else's obligation. Exception applies to common gifts that are given according to the minor's existing wealth condition. (2) The tutor may not, without family council accord and the tutorship court authorization, alienate, divide, hypothecate or encumbrance the minor's properties, may not renounce the minor's patrimonial rights or validly conclude any other acts beyond his right to administer. (3) Acts done in violation of the provisions of para. (1) and (2) are avoidable. In these cases, action for annulment may be exercised by a tutor, a family council or any member thereof, inclusive of a prosecutor, ex officio or at the request of the tutorship court. (4) However, the tutor can alienate, without the accord of the family council and without the authorization of the tutorship court, those properties subject to destruction, deterioration, alteration or impairment, as well as those that became useless for the minor."

Family Council is regulated by Art. 124-132 of the Civil Code and represents a novelty introduced by the new Civil Code, based on the Civil Code of Québec.

It is a voluntary body with an advisory function, while the tutorship court may constitute it whenever necessary for monitoring the activity of the tutor in exercising his rights and fulfilling his duties.

The tutorship court replaces the tutorship authority and is regulated by Art. 107 of Civil Code: "(1) Procedures provided by the present Code concerning the natural person protection come under the jurisdiction of the tutorship and family court established by law, hereby referred to as the tutorship court. (2) In all cases, the tutorship court shall resolve these requests immediately."

Law no. 134/2010 on the Civil Procedure Code, republished, stipulates in Art. 94 point 1, let. a that courts shall consider in first instance the request of the Civil Code under the jurisdiction of the tutorship and family court, except if expressly provided otherwise by the law.

Territorially, the competence belongs to the court in whose territorial jurisdiction the protected person's domicile or residence is located. In the case of applications for authorization from the tutorship and family court to conclude legal acts, when the legal act for which the authorization is requested refers to a building, it is also competent the court in whose jurisdiction the building is located, in which case a copy of the decision pronounced shall be communicated to the tutorship and family court in whose territorial jurisdiction the protected person's domicile or residence is located (Art. 114).

by his legal representative, unless the law would otherwise provide or the nature of the act would not allow him to do so (Art. 43 par. 3 and 4).

According to Art. 144, par. 4 of the Civil Code, the tutor may alienate, without the accord of the family council and without the authorization of the tutorship court, those properties subject to destruction, deterioration, alteration or impairment, as well as those that have become useless for the minor. The solution, taken from Art. 129 final par. of the Family Code is justified by the fact that although such acts are acts of disposition regarding the respective goods, taking into account the whole patrimony of the incapable one, they represent acts of administration[24].

The text refers specifically to "alienation", which leads to the idea of "selling", but we consider that, depending on the specific circumstances of the situation, a loan agreement for consumption may be concluded, provided that it meet the interests and needs of the one being guarded.

Minor who has reached the age of 14 has limited legal capacity (Art. 41 of the Civil Code). He may conclude legal acts of disposition with the prior approval of the parents or, where applicable, of the tutor and with the authorization of the tutorship court. The consent (which must be in writing according to Art. 146 par. 1 of the Civil Code, and not verbal or implied) or authorization may be given upon conclusion of the act at the latest.

Solutions still available in the application of the new Civil Code have been given under the influence of the Family Code to the issue of the use of monies belonging to the minor or concluding a borrowing agreement on behalf of the minor. It was considered that such acts go beyond the limits of the acts of administration, so that their performance is subject to the approval of the guardianship authority (currently the guardianship court) [25].

The same as the minor lacking legal capacity, the minor with limited exercise capacity may conclude personally acts of conservation, acts of administration which do not prejudice him, and low-value routine acts that are carried out at the time of their completion (Art. 41, par. 3 of the Civil Code).

Although Art. 41, par. 2 refers only to the authorization of the guardianship court, we consider that the text must be correlated with Art. 146 par. 2 of the Civil Code: "In the event that the act which is about to be concluded by the minor who has reached the age of 14 is one of those that the tutor is not allowed to conclude without the authorization of the guardianship court and the accord of the family council, both the respective authorization and the accord of the family council will be necessary" and with Art. 144, par. 2, whose per a contrario interpretation leads to the conclusion that a tutor may not, without the accord of the family council and authorization of the guardianship court, legitimately conclude acts of disposition.

We therefore consider that the minor who has reached the age of 14 may conclude a loan for consumption contract, but only with prior written approval of his legal protector and with the accord of the family council (if it has been established under Art. 124 of the Civil Code[26]) and with authorization of the guardianship court.

Regarding the accord of the family council, it is advisory and is validly taken by the vote of the majority members of the council (Art. 130 of the Civil Code).

With respect to the authorization of the guardianship court, Art. 145 require that it be granted only if the act responds to a need or presents an undoubted advantage for the minor. Authorization

---

[24] See in this respect Gh. Beleiu, *op. cit.*, p. 297.

[25] Al. Bacaci, V.-C. Dumitrache, C.C. Hageanu, *Dreptul familiei (Family Law)*, 6th ed., C.H. Beck Publishing House, Bucharest, 2009, p. 316, qtd by C. T. Ungureanu and others, *op. cit.*, p. 47.

[26] Art. 124 Civil Code: "(1) Family council may be constituted in order to monitor the activity of the tutor in exercising his rights and fulfilling his duties towards the person and the properties of the minor. (2) If the minor is under parental care, in placement commissioning or, as appropriate, protected by other social protection measures provided by the law, the family council shall not be constituted."

will be given for each act individually, establishing, where appropriate, the conditions of concluding the act.

Failure to comply with the legal provisions regarding the legal capacity of the natural persons is punishable by relative nullity of the act, even without proof of damage. It is the sanction expressly provided for in Art. 44 par. 1 (for minors without legal capacity or with limited exercise capacity), Art 144 par. 3 and Art. 146 par. 4 of the Civil Code relating to the guardianship.

The same penalty provided for in Art. 130 par. 4 of the Civil Code is also applied for the lack of advisory notice of the family council, while concluding the act without taking into consideration the advisory opinion attracts the liability of the guardian only.

Thus such acts as the loan for consumption contracts concluded by the person lacking legal capacity, irrespective of whether or not the act prejudices the incapable, shall be annullable; also, the act concluded by his legal representative without the advisory notice of the family council or the authorization of the guardianship court; the contract personally concluded by the minor who has reached the age of 14, without prior approval of the legal protector, without the advisory of the family council and without authorization of the guardianship court; the act concluded by the minor with limited legal capacity with the approval of his legal protector but without the advisory of the family council and/or prior authorization of the guardianship court.

The mere statement made by that one lacking legal capacity, by that one with limited legal capacity and by the judicial interdicted (the new Code extending the solution in the case thereof, unlike the old Civil Code, Art. 1.162), that he/she is capable, does not remove the fact that the act may be annullable (Art. 45 of the Civil Code).

Fraud, however, raises tort liability of the incapable one, an exception to the principle of *quod nullum est nullum producit efectum*. The incapable person that willfully committed fraudulent misrepresentation in order to determine another person to contract with him, misleading that person about his/her legal capacity status, is taken out of the protection of the rules regarding the presumption of his lack of discernment and may not invoke minority as a cause of the annulment of the juridical act concluded in this way[27].

Should fraudulent misrepresentation has been used, at the request of the party mislead the court may keep the contract when they say that this constitutes an appropriate civil penalty.

Nullity may be invoked by action or exception, Art. 44 par. 2 of the Civil Code providing that the person lacking the legal capacity or having limited exercise capacity may invoke personally, in his/her defense, the fact that the act is annullable for his/her incapacity resulting from minority or from placing under judicial interdiction.

Unlike the action for annulment, which is prescriptible, the defense by way of exception is indefeasible, the incapable person who is required to execute the contract being able to oppose at any time the relative nullity of the contract, even after the limitation period of the right to the action for annulment (Art. 1.249, par. 2 of the Civil Code).

Aiming at protecting the interest of the incapable person, notwithstanding the provisions of Art. 1.248 of the Civil Code, the action for annulment may be exercised by the legal representative, by the minor who has reached the age of 14, and by the legal protector, by the prosecutor, ex officio or at the request of the guardianship court, when the act was concluded without the authorization of the guardianship court required by law, or by the family council or by any of its members (Art. 46, par. 2 and 3, Art. 144, par. 3 of the Civil Code).

The person with whom the contract was concluded shall not be entitled to invoke the nullity of the contract on the grounds that the other party is a person lacking legal capacity or having limited capacity, this being banned by the provisions of Art. 46, par. 1 of the Civil Code.

---

[27] Fl. A. Baias, E. Chelaru, R. Constantinovici, I. Macovei (coordinating), *op. cit.*, p. 51.

To the extent that the court will invalidate a contract concluded in violation of the legal requirements regarding the capacity, the incapable person may be compelled to refund only within the limit of the benefit realized, considered at the date of the request for refund.

The burden of proving the enrichment thereof rests with the person who requests the refund, respectively to the lender in the case of a loan for consumption (as in the case that the incapable person acts as a lender, he/she will get full refund from the borrower capable, the rule being a special one and applying only to incapable persons, for their protection).

The incapable person will be held to the full refund when, intentionally or because of gross misconduct, has made the refund impossible (Art. 47 and 1.647, also applying accordingly the provisions of Art. 1.635-1.649 of the Civil Code regarding the refund of the benefits).

As the sanction applied for non-compliance with the legal provisions regarding the legal exercise capacity is the relative nullity, according to the general rule contained in Art. 1.248 par. 4 of the Civil Code, the annullable contract is likely to be confirmed (the conditions and effects being provided in Art. 1.262-1.265 of the Civil Code).

Confirmation may be express or implied, resulting from the voluntary execution of the obligation at the date on which it could be validly confirmed by the interested party, but must be certain and given knowingly. Moreover, confirmation may intervene only after concluding the legal act affected by a relative nullity cause, cannot take the form of a clause inserted in this and it is not possible to waive the right to invoke the relative nullity by even the annullable legal act[28].

Art. 48 of the Civil Code provide that the minor who has become a major may confirm the act concluded during minority, without the representation or assistance required by the law. After discharging the tutor, he may also confirm the act concluded by the tutor without complying with all formalities required for its valid conclusion.

Thesis III of the text refers to the possibility of confirmation of the annullable act during minority as well, but only under the conditions of Art. 1.263-1.264 of the Civil Code. According to Art. 1.263, par. 3, the person called upon by law to approve the minor's acts may, on behalf and for the interest of the minor, request annulment of the contract concluded without his/her consent or confirm the contract when this consent was sufficient to validly conclude it. There are provisions that apply accordingly to any acts concluded without the authorization of the guardianship court.

However, if the minor who became a major may confirm the annullable acts during his minority express or implied, the person called upon by law to approve the minor's acts is not able of doing anything else than express confirmations, as Art. 48, thesis III refers imperatively to the cumulative conditions of Art. 1.263 and 1.264, the latter text regulating the content of the confirming act[29].

In the professional literature[30] it was concluded, from interpretation of all the above mentioned legal provisions that may not be confirmed those acts concluded by the person placed under judicial interdiction.

It is true that both Art. 48 and Art. 1.263 par. 3 of the Civil Code specifically refers to the acts of the minor, but we consider that if the general and common conditions of validation of the legal act by confirmation are met, according to Art. 1263-1265 of the Civil Code, this possibility should be also recognized for acts of the judicial interdicted.

The rule is that an annullable contract is likely to be confirmed (Art. 1248 par. 4 of the Civil Code) without any distinction based on causes of annulment, or failure of confirmation would be an exception that should be expressly provided by law, as long as it cannot be deducted by way of interpretation.

---

[28] G. Boroi, C. A. Anghelescu, *op. cit.*, p. 263.
[29] See in this respect Fl. A. Baias, E. Chelaru, R. Constantinovici, I. Macovei (coordinating), *op. cit.*, p. 54.
[30] Ibidem.

On the other hand, the guardianship of the person placed under judicial interdiction is governed by the same rules as the guardianship of minors under the age of 14, as far as it is not otherwise provided by law (Art. 171 of the Civil Code), so we see no justification for the exclusion of the confirmation of the acts of the person placed under interdiction, the goods of the two categories of persons being subject to the same legal administration regime.

Moreover, the same as the minor who becomes a major and acquires full legal capacity, the judicial interdicted as well may reacquire full legal capacity by termination of the judicial interdiction, provided that the causes of the interdiction have been stopped (Art. 177). In such a situation, the error which affected the annullable juridical act, respectively the incapacity, could not exist after the termination of incapacity and the former incapable person could confirm the act, provided that the measure responds to his/her needs or interests and at this time all others conditions of validity are met, according to Art. 1.263 par. 1 of the Civil Code.

An additional argument is the fact that the interdicted is judicially without discernment, but in fact he/she can have moments when acting with discernment. This is the reason why Art. 172 of the Civil Code expressly provide that the juridical acts concluded by the interdicted are annullable, even if at the date of their conclusion he/she would have had discernment. The solution is justified; the interdicted being under a particular legal regime where the juridical acts should be subject to unitary rules, being difficult to determine in each case whether or not he/she acted with discernment.

However, if he/she concluded a contract when in fact acted with discernment and draws advantages of such a contract, all the more reason not to eliminate the possibility to renounce, under the law, to the right to invoke the nullity and thus confirming the annullable act.

b) Common-property goods

Property in shares (co-ownership) and condominium are forms of common property according to Art. 632 of the Civil Code.

Co-ownership was defined in the professional literature[31] as that form of joint ownership characterized by the fact that the property, undivided into fractions in its whole entity, belongs simultaneously to several owners, ownership of the property being divided into abstract ideal shares.

Art. 634 par. 1 of the Civil Code provides that each co-owner is the exclusive holder of a share of ownership and may freely dispose of it in the absence of a contrary stipulation. But the co-owner cannot freely dispose of the property in its whole entity.

Any legal acts of disposition regarding the common property (and other acts assimilated by the law due to their effects on the acts of disposition) may not be concluded without the consent of all co-owners (Art. 641 par. 4 of the Civil Code). Law takes into consideration the ”consent” of the co-owners, which can be expressed or implied (aspect resulting from the per à contrario interpretation of Art. 642 par. 1 of the Civil Code), and not the effective participation of all co-owners to the conclusion of such a juridical act[32].

Consequently, as the loan for consumption is considered an act of transfer, being that it transfers a property, concluding of the contract will require the consent of co-owners. No act of material disposition (modification of the property shape, consumption or destruction of the property substance, gathering of products) shall be made without the consent of all co-owners[33].

Regarding the sanction for failure to comply with this requirement, the solutions were different and controversial under the old Civil Code.

Filipescu, *Drept Civil, Dreptul de proprietate si Alte Drepturi Reale (Ownership and other real rights)*, Proarcadia Publishing House, Bucharest, 1993, p. 146.

[32] Fl. A. Baias, E. Chelaru, R. Constantinovici, I. Macovei (coordinating), *op. cit.*, p. 701.

[33] V. Stoica, *Drept civil. Drepturile reale principale (Civil Law. Principal Real Rights)*, 2nd vol., Humanitas Publishing House, Bucharest, 2006, p. 74, qtd by C. T. Ungureanu and others, *op. cit.*, p. 931.

Most authors[34] and jurisprudence have conditioned the outcome of the contract on the result of the partition. If after the partition the property was assigned to the disposer co-owner, as the partition was declarative and thus produced effects retroactively according to Art. 786 of the former Civil Code, this one was considered retroactive exclusive owner and the contract remained valid. But if the property was assigned to another copartner, the contract was considered terminated retroactively due to the lack of ownership of the person who concluded the contract.

In the event that the parties or at least the co-contractor was in error, considering that the disposer was the owner, it was admitted that the relative nullity for error occurred (vice of consent). If both parties knowingly enter into contracts, being a speculative operation with an illicit cause, the applicable sanction was the absolute nullity under Art. 968 of the Civil Code 1864[35]

From the date of concluding the contract and the partition of the properties, the act was considered valid between the contracting parties, but undemurable to the co-owner who did not consent. It was decided[36] that during this period, co-owners who did not consent have no right of action for annulment or nullity of the contract or of claiming/vindication, their rights could be defended only by an action in partition.

The new Civil Code could not take the solution created by doctrine and jurisprudence under the old Civil Code because, according to the new regulation, the partition is constitutive and therefore produces effects only for future (Art. 680 par. 1 of the Civil Code).

As such, it was imagined the sanction of unopposability: "Legal acts concluded violating the rules provided for in Art. 641 are unopposable to the co-owner who has not consented, expressly or tacitly, to the conclusion of the act."

Unopposability is a sanction different from nullity, which does not question the validity of the title. The effects of the legal act occur towards the parties, but the rights and obligations arising from the respective act cannot be opposed to third parties[37].

The unopposability of the juridical act concluded by a co-owner violating the right of the other co-owners to express their consent means both that it will not create rights and obligations in favor of or for the co-owner who has not consented to the conclusion of the act, according to the general principle of relativity of the juridical act, and that it will be ignored by the co-owner, as a legal fact in restricted sense[38].

Likewise, distinct from the solutions adopted under the old Civil Code, at present Art. 642 par. 2 of the Civil Code admits the injured co-owner the right to exercise, before the partition, possessors actions against the third party contractor who acquired the common good after concluding the act. Possessor action may be introduced within the limitation period of one year from the date of

---

[34] See in this respect F. Deak, *op. cit.*, p. 60, I. P. Filipescu, *op. cit.*, p. 148-149, P. M. Cosmovici, *Drept Civil, Drepturi reale, Obligatii, Legislatie (Civil Law, Real Rights, Obligations, Legislation),* All Publishing House, Bucharest, 1996, p. 47, High Court of Cassation and Justice of Romania – Civil and Intellectual Property Department, Dec. no. 965/2005, in Dreptul no. 4/2006, p. 280.

[35] Some authors (in this respect C. Bârsan, M. Gaită, M. M. Pivniceru, *op. cit.*, p. 101) who have started to resolve the problem from the distinction as the co-contractor had knowledge or not, when concluding the contract, that the disposer was not the exclusive owner of the property.

If the status of a copartner was known, the contract was considered subject to a resolutive condition, so that the property could not fall at partition into the lot of another co-owner. If the property had fallen into the lot of the disposer when making the partition, the contract would have been consolidated retroactively, and if the property was assigned to another co-owner, the contract would have been terminated retroactively, being decided. If the status of a co-owner was not known when concluding the act, the act was revoked. The theory of the act affected by the resolutive condition of including the properties in the lot of the co-owner who has not consented is also sustained by other authors, such as D. Chirică, *Studii de drept privat (Studies of Private Law)*, Universul Juridic Publishing House, Bucharest, 2010, p. 197.

[36] Supreme Court - Civil Department, Dec. no. 2603/1993, in *Jurisprudenta CSJ* , *(Supreme Court Jurisprudence)*, 1993, p. 39-41, qtd by F. Deak, *op. cit.*, p. 61, V. Stoica, *op. cit.*, p. 79.

[37] G. Boroi, C. A. Anghelescu, *op. cit.*, p. 242, Gh. Beleiu, *op. cit.*, p. 177.

dispossession (Art. 951 par. 1 of the Civil Code), after its expiration the action claim being disposable for the co-owner.

Restitution of possession of the property will be made for the benefit of all co-owners, those who participated at the conclusion of the act could be compelled to pay damages if thereby caused injuries to other co-owners.

From the rule of unanimity provided for in art. 641 par. 4 of the Civil Code, exception may be made by a co-ownership administration contract concluded with the consent of all co-owners. In the absence of other definitions specified in Art. 644 par. 1 of the Civil Code, we consider that such an administration contract is subject to the provisions relating to the administration of the properties of another person contained in Title V of Book III of the Civil Code.

The second form of the common property is represented by the condominium. According to the Art. 667 of the Civil Code, there is a condominium property when, by law or on the basis of a juridical act, the ownership belong simultaneously to several persons without any of them to be the holder of a share determined from the property ownership or common goods.

In the doctrine it was specified that in this case the share of each individual owner is not known, the good belonging to the common owners, without shares. Nor the ownership or the good on which bearing are not divided, the shares not being determined [39].

Relating to the juridical regime of the condominium, Art. 668 of the Civil Code provides that, if this arises by operation of law, is subject to the provisions of that law which shall be completed accordingly with the laws on the legal community regime.

Therefore, the legal community regime regulated by the new Civil Code in Art. 339-359 constitutes the common law in the matter of the condominium.

The current regulation establishes a mixed mechanism for the management of common goods: parallel management in case of the most juridical acts that concern the common properties of spouses, tempered by establishing a joint management for the conclusion of juridical acts considered serious for the community and that, in principle, require the consent of both spouses. For personal juridical acts (such as tying, deposits with credit institutions made only one spouse's name, etc..), Becomes operational mechanism exclusive management[40].

Parallel or competing management mechanism is established by Art. 345 par. 1 of the Civil Code and is based on the right of each spouse to manage personally, in principle, the common goods. Each spouse performs acts in relation to the common goods by virtue of his/her own power conferred by law and not as a representative of the other spouse[41], in this manner the new Civil Code abandoning the presumption of the reciprocal tacit mandate established by the former Family Code.

Art. 35 of the Family Code provided that spouses jointly manage and use the common goods and they dispose of them in the same way, any spouse exercising alone such rights being considered to have the consent of the other spouse. Exceptions were those act of disposition (but only of alienation or encumbrance, and not those of acquisition) regarding the real estate for which it was necessary the express consent of both spouses.

As a result, either of the spouses could conclude personally, under the reciprocal tacit mandate, a loan for consumption contract, which could only cover movable, fungible and consumptive goods. In the legal doctrine and judiciary practice[42] it was established that, in relation to community of goods, there are acts of administration and may be concluded by one of the spouses,

who is presumed to have the consent of the other spouse, the contract by which a spouse grants alone a loan to another person, from the very amount of money that is common property, and the action by which it is required the restitution of the good loaned.

If one of the spouses concluded a loan for consumption contract, as a borrower, the contractual obligation was common if it was assumed to fulfill ordinary needs of the marriage[43].

The presumption of the reciprocal tacit mandate was relative and could be rebutted by evidence to the contrary, respectively the fact that non-contracting spouse did not give a mandate to the other spouse, opposing to the conclusion of the contract. It was estimated in the doctrine and jurisprudence[44] that the opposition could be express or tacit but it did not constitute sufficient grounds for annulment of the act, being necessary to prove that the third party contractor did know or should have known the opposition of the other spouse to the conclusion of the act, thus protecting the bona fide third party.

There were some authors[45] who estimated, we find that not well substantiated (not considering that the distinction between relative nullity and the absolute one emerges from the nature of the interest protected by the violated statutory provision - generally or individually), that if there have been an express opposition of the non-borrower spouse, the loan for consumption contract was absolutely void because, on the one hand, the presumption of the reciprocal tacit mandate of the spouses was only relative and, on the other hand, when it was rebutted, it became an incident the principle established in Art. 35 par. 1 of the Family Code, according to which spouses may use, administer and dispose in common of their properties.

Currently, while Art. 345 establishes the right of each spouse to use the common property without the express consent of the other spouse, to conclude personally acts of conservation, acts of administration and acts of acquisition of common goods, Art. 346 reiterates the joint management mechanism in relation to the acts of alienation and encumbrance of common goods (other than ordinary gifts), these cannot be concluded without the consent of both spouses.

Exceptions are the acts of disposition, by onerous title, concerning movable common goods whose alienation is not subject, according to law, to certain publicity formalities.

As a result, a loan for consumption contract, by onerous title, regarding common goods, will be concluded only with the express consent (as resulting from the corroboration of Art. 346 par. 1 with Art. 347 par. 1 of the Civil Code) of both spouses, as borrowers, while a loan with interest will be possible to be agreed by either spouse, personally.

The sanction for non-compliance with the condition of both spouses' consent, when it is required by law, is the relative nullity of the act (Art. 347 par. 1 of the Civil Code), thus being established expressly the solution promoted by most of doctrine and jurisprudence developed under the former Family Code.

It was also assumed the thesis of protection of the bona fide diligent third party acquirer, in which case the spouse injured by non-expressing the consent can only claim damages from the other spouse.

However, in the doctrine[46] it expressed the opinion (to which we adhere) according to which the text of Art. 347 par. 2 of the Civil Code would concern only the protection of bona fide third parties for legal documents by onerous title. If one of the spouses had disposed of a common good through a gratuitous act, without the consent of the other spouse, the consequences of nullity would have to be borne also by the third party acquirer, even if he/she acted in good faith and gave all necessary diligence, as in this case it should prevail the community interests of the other spouse and

not the interests of the third party (non-participating spouse to the act seeks to avoid damage – *certat de damno vitando* - while the third party tries to keep hold of the benefit – *certat de lucro captando*).

In the event that one of the spouses concludes a loan for consumption, as a borrower, the contracted obligation shall be shared if it falls within one of the categories expressly and restrictedly provided in Art. 351 of the Civil Code.

III. The loan for consumption contract concluded by legal persons

Having legal personality, according to Art. 193 of the Civil Code, legal entities participate on their own behalf in the civil circulation/registry and are liable for the obligations assumed with their own property, unless the law would otherwise provide.

Legal entities have therefore distinct legal capacity which, like in the case of natural persons, includes the capacity of use and the capacity of exercise.

The content of the capacity of exercise is provided by Art. 206 of the Civil Code, which makes distinction between for-profit legal entities (with patrimonial purpose) and non-profit legal entities (without a patrimonial purpose)

According to par. 1, the legal entity (it results from the correlated interpretation of the first two paragraphs that it refers to the for-profit legal entity) may have any civil rights and obligations, except those which, by their nature or according to the law, belong only to the natural persons.

Non-profit legal entities may only have those civil rights and obligations that are required to fulfill their purpose established by the law, act of establishment or statute (par. 2).

Limited capacity of use of the legal entities established in civil law the specialty principle of the capacity of use, mentioned for the first time in Art. 9 of the Law 21/1924 and generalized in the Art. 34 par. 1 of the Decree no. 31/1954, which stipulated: "the legal entity can only have those rights which correspond to its purpose, established by law, act of establishment or statute"[47].

The current regulation preserves this limitation only for non-profit legal entities, but, as outlined in recent doctrine with regard to companies, though, by vocation, the capacity of use of the company is characterized by generality, it is nevertheless circumscribed to the company's object of activity. The company concludes those legal acts aimed at performing the object of activity established in the act of establishment, limitation reduced by setting a broad object of activity, providing the necessary flexibility to adapt to conjectural changes[48].

In achieving the purpose for which they were established, legal entities are sometimes constrained to conclude legal documents that exceed their object of activity. It was constantly estimated that such occasional transactions, related or adjacent to the object of activity, are valid precisely because what is sought is to achieve the purpose of the legal entity[49].

Regarding the particular situation of a loan for consumption contract, it should be considered that this contract is free by its nature. Exception is the loan of a sum of money presumed to be with onerous title. (Art. 2.159 of the Civil Code).

Virtually, legal entities may conclude such contracts by onerous title, both as a lender or as a borrower, in compliance with the specialty principle of the capacity of use, and according to their object of activity.

[47] Gabriel Boroi, *Drept Civil, Partea Generală. Persoanele (Civil Law, The Generic Part. Persons)*, 4th ed. revised and suplemmented, Hamangiu Publishing House, 2010, p. 444.

[48] Stanciu D. Cărpenaru, *Tratat de drept comercial român, conform noului Cod civil (Romanian Commercial Law Treatise, according to the new Civil Code)*, 3rd ed. revised, Universul Juridic Publishing House, Bucharest, 2012, p. 183.

[49] See in this respect Fl. A. Baias, E. Chelaru, R. Constantinovici, I. Macovei (coordinating), *op. cit.*, p. 195, C. T. Ungureanu and others, *op. cit.*, p. 241.

It is also accepted that gratuitous or occasional contracts may be concluded by legal entities that do not have as their object of activity credit operations, provided that such acts serve to achieve their statutory purpose.

Thus, in a case decision[50], it was recorded: "regarding the nullity of the loan contract between A.C.R. LLC and the debtor being that this would be an interest-free loan, taking into account that the lender is the borrower's shareholder, it cannot be considered that the loan is free of benefits, being a decision of business and opportunity, the company seeking to obtain benefits other than interest.

It is also invoked that the objects of activity of the creditor lacks the lending activity. First court correctly held that there was a sole loan transaction, which does not define a lending activity, and obtaining benefits such as dividends only comes out in support of the above, meaning that the company acted in its interest to achieve the purpose for which it was created".

A particular situation is that of legal entities under public law, respectively the state and territorial-administrative units. Art. 136 par. 4 of the revised Constitution of Romania establishes the inalienability of public property, provision reproduced in Art. 11 par.1 of the Law no. 213/1998.

Art. 861 par. 1 of the Civil Code provides that "public property is inalienable, indefeasible and intangible" while par. 2 stipulates that "ownership of these assets does not cease by non-use and cannot be acquired by third parties by acquisitive prescription, or by the effect of possession in good faith of movable goods".

Inalienability of property that is object of public property thus requires not only the solution of interdiction of their alienation, but also impossibility of their acquisition by third parties by any other mode of acquisition regulated by law[51]. Therefore, businesses that own public assets can not contract a consumer loan, which is a translate contract of ownership.

Interdiction is maintained for so long as the goods are in the public domain. If they are disabled and pass into the private domain of the state or territorial-administrative units, as the regime of the private domain is that of the common law (Art. 553 of the Civil Code) they will be eligible for consumption loans.

Since the loan for consumption is a contract of transfer of property, the lender should have the capacity, respectively to fulfill the conditions required by law regarding the acts of disposition and be the owner of the good that constitutes the object of the contract[52]. Although the last condition is not expressly stated in the legal regulation of the contract, it implicitly results from the real and transfer nature of the loan for consumption.

Actually the new Civil Code admits the possibility of trading the goods of other person, Art. 1.230 providing that "if the law does not provide otherwise, the properties of a third party may be subject of benefits, the debtor being required to purchase and transmit them to the creditor or, where appropriate, to obtain the consent of the third party. In case of default, the debtor is liable for damages."

The loan for consumption, however, being a real contract[53], is validly concluded only at the time of the relegation of the material good, which means that the parties, acting in good faith, cannot borrow another person's properties, such an agreement having a maximum value of a pre-contract, whose culpable non-performance gives rise to damages[54].

[54] Dalloz Civil Code, 108 e édition, 2009, p. 2124.

If the lender, although not the owner, loans the movable goods which he holds, the bona fide borrower will be able to defend against the true owner invoking possession in good faith in accordance with Art. 919 par. 3 and Art. 937 of the Civil Code[55].

These provisions correspond to Art. 1909 - 1910 of the former Civil Code, under which the doctrine constantly held that the bona fide borrower is protected against the true owner.

Lending an asset which does not belong to the lender will transfer however the ownership to the borrower, if he/she is acts in good faith and it is about movable assets[56]. Likewise, if the lender was not the owner, but the borrower acts in good faith, he/she can defend against the owner by the way of exception provided by Art. 1909 - 1910 of the former Civil Code[57].

As the previous Civil Code, the new regulation makes a distinction as the true owner relinquished jurisdiction over the good voluntarily or involuntarily.

If the owner has entrusted his movable good to a person and this one, in breach of its obligations, borrows it to a bona fide third party, who was not aware of the lack of ownership of the co-contractor, the action claim shall be rebutted according to Art. 937 par. 1 of the Civil Code.

Art. 938 of the Civil Code provides that "it is deemed as acting in good faith the possessor who was not aware or did not have to, as appropriate, be aware of the lack of ownership of alienator. (2) Good faith must exist at the date of entering into effective possession of the good", in our case at the date of the conclusion of the contract, being irrelevant the fact that the third party finds out afterwards that he/she did not contracted with the real owner.

Another essential condition imposed by Art. 937 par. 1 of the Civil Code is that the act of transfer of ownership completed on the property of another be by onerous title.

If the legal act is gratuitous, there is no more reason to prefer the bona fide third party and to sanction the owner for lack of diligence in choosing the person to whom he entrusted the property. In this case, that should be protected who strives to avoid damage (*certat de damno vitando*) and not the one that seeks to preserve a benefit (*certat de lucro captando*[58]).

On the supposition that the property has been lost or stolen, so the owner involuntarily relinquished jurisdiction, the action claim may be brought successfully even against a bona fide third party, within 3 years from the date on which the owner has lost possession of the object.

The plaintiff owner must prove his right of ownership over the good and over the loss or theft, without the need, in the latter case, of a criminal judgment by which to return to the offense of theft[59]. Moreover, it is not irrelevant whether the property loss was the result of negligence of the owner or of a fortuitous fact.

The term of 3 years is a limitation period, unsusceptible of suspension or interruption, at whose fulfillment the ownership ceases.

Loan contract whose object is the property of another person is hit by a relative nullity, sanction that may be invoked only by the borrower[60].

---

[58] Gabriel Boroi, Liviu Stănciulescu, *Institutii de drept civil în reglementarea noului Cod civil (Civil law institutions to regulate the new Civil Code)*, Hamangiu Publishing House, Bucharest, 2012, p. 68.

[59] Also see in this respect A. Baias, E. Chelaru, R. Constantinovici, I. Macovei (coordinating), *op. cit.*, p. 977-978. For the contrary opinion see Ovidiu-Sorin Nour, *op. cit.*, p. 224. The condition of a final criminal judgment would be excessive, what concerns in this case is that owner had lost possession of the property irrespective of his will, through a third party illicit deed or by misleading by a third party.

[60] A. Baias, E. Chelaru, R. Constantinovici, I. Macovei (coordinating), *op. cit.*, p. 2141, Dumitru C. Florescu, *Drept civil. Contracte speciale, Curs pentru învătământul la distantă (Civil Law. Special Contracts, Distance learning course)*, 2nd vol., Titu Maiorescu University Publishing House, p. 281. For the contrary opinion, according to which the sanction that occurs when lending the asset of another person is the absolute nullity, see Codrin Macovei, *op. cit.*, p. 272.

If after exercising the action claim by the true owner, the borrower was required to return the borrowed goods, he may claim from the lender damages for any damage suffered as the responsibility involved is a tort liability.

But the question arises on what are means of defense that the borrower may use if, although he returned the goods to the real owner, the lender claims him restitution of the goods or payment of interest according to the contract concluded.

There are authors who consider that the borrower may make use of the exception of non-performance[61]. We appreciate this as being inexact as long as exception of non-performance is a mean of defense available to the parties of a mutually binding contract and is founded on the reciprocity and interdependence of obligations, each of the obligations being the legal cause of the other. But the loan for consumption is a unilateral contract[62], the lender having, in principle, no contractual obligation, and as such the exception of non-performance cannot be invoked.

Although the exercise of any civil action is free[63], it requires certain conditions of exercise, respectively the assertion of a right, justification of an interest, legal capacity and quality.

To enjoy legal protection of the action, the asserted right must be recognized and protected by law, so it must not enter into a content of an illicit juridical report, must not contravene public order or morality, and the interest should be legitimate, not coming into conflict with the law.

There are conditions that are not fulfilled by such an action, by which the lender, who loaned a found or stolen good, requests its restitution from the borrower or payment of interest.

If both parties act in bad faith, unlike previous regulation, the new Civil Code establishes the indefeasibility of the movable goods claim action against the possessor in bad faith by the provisions of Art. 563 par. 2. The borrower in bad faith will be required to return the goods to the true owner, and if he/she consumed them, the same quantity of goods of the same kind and quality, the loan for consumption always having as object fungible goods. Only if it is not possible to return such goods, he/she shall be required to pay their value.

Regarding the sanction applicable to the loan contract, we consider that in this case the absolute nullity for illicit cause may occur (Art. 1.236 par. 2 and 1.238 par. 2 of the Civil Code).

LEGAL ASPECTS OF THE TRANSPOSITION OF DIRECTIVE 2001/23/EC REGARDING THE SAFEGUARDING OF EMPLOYEES' RIGHTS IN THE EVENT OF TRANSFERS IN THE ROMANIAN LAW

FELICIA BEJAN[*]

Abstract
The transfer of undertakings, businesses or parts of undertakings or businesses by legal transfer or merger determine important changes in the structure of the participant entities. The change of their juridical organisation has significant consequences on the employees' rights, reason why, both nationally and internationally, normative acts that would regulate appropriate safeguarding mechanisms have been adopted. The paper aims to analyse the transposition into national law of the communitarian norms in the field. As a result, the legal aspects with regards to which the legislator chose a restrictive transposition, as well as the additional rights established by them in favour of the employees, in comparison to the directive are identified. At the same time, the study emphasizes the aspects with regards to which the Romanian law requires to be changed and therefore makes some proposals de lege ferenda, so that the transposition of the communitarian normative act into national law would be a precise one and consistent to the other dispositions regarding national law.

Keywords: *transfer, employees, labour contract, enterprise, transposition.*

1. Introduction

The objective of the European regulations regarding the employees' protection in the event of transfers is that of offering them a juridical framework that would safeguard them from illegal measures affecting the rights they won, such as the modification of the working conditions, or the individual or collective dismissal.

The consecrated principle is that of the employees' labour contracts continuity, under the same conditions they were concluded, in the event of employer change as a result of a transfer process by legal transfer or merger. **The employees' safeguarding mechanisms in the event of the stock company reorganisation aim at guaranteeing the respect of the employees' rights, those previously gained, within the new juridical structure.** The dispositions regarding the maintenance of the employees' rights in the event of transfers of undertakings, businesses or parts of them by legal transfer or merger have to become legal guaranties for the stability of the labour report and the content of the labour contract between the employees and the employers involved in this kind of operations.

The Directive 2001/23/EC on the approximation of the laws of the Member States relating to the safeguarding of employees' rights in the event of transfers of undertakings, businesses or parts of undertakings or businesses[1] was transposed into national law by Articles 173-174 of the Law 53/2003 of the Labour Code[2] and the Law 67/2006 concerning the safeguarding of the employees' rights in the event of transfers of undertakings, businesses or parts of these ones[3].

[1] Published in the Official Journal, nº L 82/2001, p. 6-20.

[2] Republished in the Romanian Official Journal, 1st Part, nº 3445, the 18th of May 2011.

[3] Published in the Romanian Official Journal, 1st Part, nº 276, the 28th or March 2006. It entered into force once Romania became a member of the European Union. Previously, the regulation in the field was realised by the dispositions of Articles 169-170 of the Labour Code and the Government Ordinance 48/1997 regarding the establishment of measures of social protection for employees in the event of transfer of shares or social parts of stock companies, repealed by the Law 67/2006.

With regards to the relation between the two articles in the Labour Code and the norms of the Law 67/2006, the doctrine states that these are "general norms, placed at the same legislative level"[4]. The way in which the national framework regarding the employees' safeguarding in the event of transfer of undertakings leads to the same conclusion, being shown that "in accordance with the Directive 2001/23/EC, Articles 173-174 of the Labour Code and the Law 67/2006 concerning the safeguarding of the employees' rights in the event of transfers of undertakings, businesses or parts of these ones[5] have been adopted. As to what we are concerned, we agree with the current opinion and we consider that the provisions of the Labour Code, by their general content, are meant to complete the legal framework regarding the employees' safeguarding regime.

The Law 67/2006 is divided into three chapters, the number of legal norms present in its articles being rather few. Of course, the quantitative criterion cannot be determinant within the qualification of the regulation activity, but it might be an appreciation factor for this one, namely if it applies to a normative act whose role is to introduce into national law communitarian norms and, therefore, it can be the object of a comparative analysis.

The study of the provisions of the Law 67/2006 compared to those provided by the Directive 2001/23/EC emphasizes to which level the transposition into national of the communitarian norms, has a restrictive or an extensive character.

2. Aspects with regards to which the Law 67/2006 is restrictive compared to the Directive 2001/23/EC.

In accordance with the Directive 2001/23/EC that it transposes, the Law 67/2006 has as object of regulation the conditions under which the safeguarding of the employees' rights is accomplished, as provided in their individual labour contracts and in the collective labour agreement, in the event of transfers of undertakings, businesses or parts of these ones towards another employer, as a result of a legal transfer or merger process, according to the law (Article 1). Unlike the Directive, the national regulation is more restrictive under the following aspects:

a) If according to the Directive 2001/23/EC the juridical regime regarding the safeguarding of the employees' rights applies to any transfer of undertakings, businesses or parts of these ones, conforming to the Law 67/2006, the norms regarding the maintenance of the employees' rights are applicable only in case of a transfer resulting in the passage of the transferred unit property right from the cedent to the legal transferor.

It is true that according to Article 1, paragraph (1), letter (a) of the Directive 2001/23/EC, the provisions of the communitarian normative act "apply only in the case of any transfer of undertakings, businesses or parts of undertakings or businesses towards another employer, as a result of a conventional legal transfer or a merger".

---

[4] Uluitu, *Drepturile salariatilor in cazul transferului intreprinderii, al unitatii sau al unei parti ale acestora*, in Revista Romana de Dreptul Muncii nr. 1(2006),29. The author expressed this opinion in an analysis he wrote regarding a different point of view, contained by the doctrine, concerning the relevant provisions about the safeguarding of employees following the transfer of the undertakings in the former regulation prior to the Law 67/2006. Before, the regulation in the field was realised by the dispositions of Articles 169-170 of the Labour Code and the Government Ordinance 48/1997 regarding the establishment of social protection measures for employees in the event of transfer of the property right on shares or social parts of stock companies. The legal analysis is topical, although meanwhile there have been legislative modifications. The opinion we discussed stated that the juridical situations regulated by the Government Ordinance 48/1997 were different from those considered by the legal norms of the Labour Code, though both normative texts regard the employees' protection. (C.Galca-R*eorganizarea intreprinderilor. Analiza dispozitiilor noului Cod al muncii in raport cu legislatia europeana,* Editura Rosetti Bucuresti, 2005).

[5] I.T. Stefanescu, *Tratat teoretic si practice de drept al muncii*, (Bucharest: Universul Juridic Publishing House, 2012), 467.

Similarly to the Directive, the national law establishes that its provisions apply only in case of a transfer resulted from a legal transfer or a merger process, but, unlike the Directive, in a restrictive way compared to the transposed communitarian act (the above mentioned Directive), it defines in Article 4, letter (d) the notion of "transfer" as "the passage of undertakings, businesses or parts of these ones from the cedent's property to the legal transferor's property".

Such a limitation does not affect the employees' protection if the transfer takes place by a merger process. On the contrary, it can apply in case of an entity's legal transfer that doesn't result in a property transfer.

However, given that the underlying reasoning of the Directive is that the structural reorganisations by legal transfer, involving the employer's change, take place with the safeguarding of the employees' rights, and considering that such a structural modification happens in other juridical situations than those characterised by a property transfer, it is obvious that the Romanian law is contrary to the communitarian normative act.

On the other hand, the jurisprudence of the Court of Justice constantly showed in its decisions that the notion of "legal transfer" has a larger understanding than that of operation meant to ensure the transfer of an entity property right from one employer to another one. Thus, the Court stated that the communitarian directive applies not only when the owner of the enterprise remains the same, as it is the case of a rent contract, a legal transfer contract or a leasing contract. In one of the cases assigned to the Court, it was shown that "the Directive applies once the change of the physical or moral person responsible with the exploitation of the enterprise takes place, and which, under this consideration, assumes the obligations of the employer towards the employees working in the factory, whether the transfer of the enterprise ownership takes place or not[6].

It is true that these opinions of the Court of Justice were formulated with regard to the previous regulation in the matter (Directive 77/187/EEC), but the amendments contained in the Directive 2001/23/EEC do not change at all the given interpretation. Our conclusion is confirmed by the 8th consideration of the current regulation, according to which "Because of security reasons and legal transparency, it was necessary to clarify the notion of transfer, according to the jurisprudence of the Court of Justice. This clarification didn't change the application field of the Directive 77/187/EEC, as interpreted by the Court of Justice".

Thus, due to a deficient transposition activity, in full contradiction with the goal of the Directive and the jurisprudence in the matter of the Court of Justice, the Romanian legislator introduced an unacceptable limitation in the application field of the regulation[7]. The restrictive regulation of the transfer notion allows a limited protection to the employees in all the situations when, despite a transfer of undertakings, it doesn't result in a property transfer.

It is the role of the jurisprudence to provide a larger understanding of the notion of company transfer. The national courts, within their interpretation competency, are the ones responsible to apply the national law according to the text and the finality of the directive.

De lege lata, finding a solution to cases regarding juridical issues related to the application of the Law 67/2006 can be based on the principle of primacy of the European Law on the member states' national law, and on the principle of precise interpretation. Therefore, given the inconsistency of the Romanian law with the communitarian Directive, national instances are obliged to give priority to the latter and to leave the national law unenforceable. Additionally, according to the principle of precise interpretation, they "must do everything related to their competence, while taking into consideration the entire national legislation and applying interpretation methods it knows, in

[6] The *Allen* Decision from the 2nd of December, point nº 8 among the considerations, case C-234/98.

[7] For a more detailed analysis of the regulation regarding the employees' safeguarding according to the Law 67/2006, read O. Tinca, *Observatii critice la Legea nr. 67/2006 privind protectia drepturilor salariatilor in cazul transferului intreprinderii, al unitatii sau al unei parti ale acestora*, in Dreptul nr. 2(2007), 22-27.

order to guarantee the full effectiveness of the concerned directive and to reach to a solution in accordance with the final objective pursued by this one[8].

De lege ferenda, we propose the express abrogation of the provision of Article 4 of the Law 67/2006 stating that „the passage from the cedent's property in the legal transferor's property of undertakings, businesses or parts of these ones"

Of course, there is also the alternative of the quoted text reformulation, meaning that the enumeration of the juridical act or the juridical effects resulting from the transfer should be an illustrative, and not an exhaustive one.

We consider that such a regulation solution is useless and rather formal with regards to the inclusive notion of transfer, as it is provided by the Directive 2001/23/EC. Given the diversity of the juridical acts by means of which the transfer can be realised, and, implicitly, of the juridical effects it can generate, any terminological clarification can lead to a restriction of the application field of the norms concerning the employees. Moreover, the abrogation solution is consistent with the European principle of loyal cooperation.

b) If according to the Directive 2001/23/EEC, it can be considered as transfer of undertakings, businesses or parts of these one, the transfer of "an entity that preserves its identity, understood as organized assembly of means, whose objective is to undertake an economic activity, irrespective if that activity is central or auxiliary" (Article 1, letter (b)), the transposition of the communitarian disposition into the Law 67/2006 provides that the transfer's "aim is the continuation of the main or the secondary activity, regardless of whether it follows or not obtaining a profit" (Article 4, letter e).

The juridical literature expressed the opinion according to which the wording of the Romanian law is also more restrictive compared to that of the communitarian normative act. By defining the transfer, the national law provides that the cessionary's goal has to be that of developing the cedent's main or secondary activity, contrary to the directive which provides that the cessionary's objective has to be the undertaking of an economic activity, regardless if it continues the cedent's previous activity or not.

The faulty transposition of the directive is obvious, given that its dispositions didn't mention as an application condition the maintenance or the remission of the cedent's activity. *De lege ferenda*, the modification of the Article 4, letter (e), in terms of eliminating the condition of the development of the activity contained by the transfer notion, is required.

In our opinion, the interpretation possibility that the formulation of the legal text allows can lead to solutions contrary to the rationale of the regulation. More precisely, from the *per a contrario* interpretation of the transfer definition provided by national law, it appears that the provisions of the Law 67/2006 regarding the employees' protection don't apply if the legal transferor's activity is different, but similar to that of the cedent. The absence of the goal for a main or secondary activity to continue within a transfer realised by legal transfer or merger excludes the operation in question from the application field of the Romanian law. Therefore, the accomplishment of the transfer without any obligation on the cedent or the cessionary regarding the employees is perfectly legal, so it won't lead to any penalty. In other words, the text we analysed allows both the cedent and the cessionary to take unfavourable decisions towards the employees and to avoid therefore the rights protection norms that concern them.

On the other hand, from the legal transferor's perspective, that, by hypothesis, wants to follow exactly the law 67/2006, being part of a transfer procedure implicitly means taking upon itself the obligation of preserving the cedent's activity. Or, certainly, this solution isn't consistent with the communitarian legislator's rationale either.

[8] The *Konstantinos Adeneler and Others v Ellinikos Organismos Galaktos* (ELOG) Decision from the 4th of July 2006, case C-212/04.

c) The Romanian legislator excluded from the application field of the Law 67/2006 those cases in which the cedent is the subject of a juridical reorganization process or bankruptcy, without any derogation. According to the Romanian law, in such situations, the entire transfer of the cedent's rights and obligations resulting from the individual labour contract and the collective labour agreement at the moment of the transfer aren't applicable. The fact that the cedent's insolvency procedures are or not established in order to liquidate its goods is unimportant for the solution chosen by the Romanian legislator.

From a purely technical point of view, this transposition method is in accordance with the provisions of Article 5 of the Directive, which gives the Member States the freedom to establish by internal dispositions, the juridical regime applicable to those situations when the cedent is the object of a bankruptcy procedure or other similar insolvency processes.

On the other hand, we consider that the transposition is criticisable because paragraph (2) of Article 5 of the Law 67/2006 is not correlated with Article 238 (4) of the Law 31/1990, according to which "The merger or the division, as defined in paragraphs (1) or (2), can be made although dissolved companies are in liquidation, provided that they hadn't started the liquidation process".

Thus, although the Romanian legislator considers as acceptable a transfer by merger if the cedent stock company knows a liquidation process, the same legislator doesn't appreciate as necessary to establish a safeguarding procedure for the employees of that company in terms of obliging the participating parts to the transfer to inform and consult the employees, on the one hand, and of forcing the legal transferor to preserve the employees' rights, on the other hand.

However, the meaning of the directive transposition is precisely that of giving the Member States the possibility to answer to the object of the communitarian normative act, taking into consideration at the same time the particularities of the legal national system regarding the regulated matter. We tend to believe, nevertheless, that this lack of systematization of the Romanian legislator is due to the lacking harmonization experience at that moment, and to the fear of being wrong. We affirm this as from the entire regulation one can observe that the national law avoids to establish any rule for the atypical hypotheses, preferring to keep quiet or to offer a blurry interpretation in such cases.

De lege ferenda, the Romanian legislator has to correct the inconsistency between the two normative acts, so that their law subjects can benefit from a clear and coherent juridical framework.

d) With regards to the juridical responsibility, the Law 67/2006 states that the inobservance by the cedent or the cessionary of the obligations provided by the law represents a contravention and is sanctioned with a fine between 1,500 (RON) and 3,000 (RON).

The competency for the contraventions establishment and the fines impositions belongs to the labour inspectors. We are in presence of a single article that regulates a sanction for the breaking of a law.

It is true that the provisions of the directive regarding the sanctions are, in what they are concerned, generally expressed, the reason why we cannot talk about its improper application.

In the literature the opinion was expressed according to which the text writing requires a high degree of generalisation, which is inadequate for the sanction of some contraventions. On the other hand, we believe that the European legislator's intention was to allow the Member States the possibility of choosing the most suitable sanctions.

It is our belief that beyond the possible justifications concerning the incomplete character of the legislative text, the little quantum of the fine raises big questions with regards to the efficiency of such a sanction. *De lege ferenda,* we consider as necessary a clear description of the circumstances under which sanctions are applicable, a differentiation of the sanctions according to the importance of the contravention and a rise of the fine quantum.

3. Aspects with regards to which the Law 67/2006 is extensive compared to the Directive 2001/23/EC.

In the juridical literature it was considered that "the legislator didn't want to offer additional rights to the employees"[9]. Unlike this viewpoint, we identified some aspects with regards to which the Law 67/2006 offers an additional protection to the employees compared to the Directive 2001/23/EC:

a) The Romanian law does not provide any limitation to the employees' information and consulting obligation that the Directive provides. Under this aspect, the Romanian legislator understood to offer equal protection to all the employees concerned by the transfer.

Article 7, paragraph (5) of the Directive regulates the capacity of the Member States to limit the information and consulting obligations by the enterprises and units that, depending on the number of employees, fulfil the necessary conditions for the election or the establishment of a collegial body that would represent the employees.

Despite the possibility offered by the Directive, but also considering that, according to the Labour Code, in the units with more than 20 employees, workers' representatives can be designated, the Law 67/2006 doesn't introduce any difference regarding the content of the information and consulting obligations, depending on the number of employees. Thus, the information and consulting obligations have to be accomplished without any exception, both in the enterprises with less than 20 employees, and in those with more than 20 employees, and which fulfill therefore, from the point of view of the number of workers, the necessary conditions for the election or the establishment of a representative body.

Moreover, unlike the Directive, which established that in case there is no employees representative, due to causes independent from their will, the information process will be directly addressed to them, the Romanian law regulating the obligation to inform the employees, without making any distinction between the situation when the absence of a representative body is due to independent or dependent reasons from their will. Consequently, including the situations when the lack of a representative body can be attributed to the employees' choice, they have the right to be informed about the transfer process.

According to our national law, the employees' representatives are the representatives of the syndicates or, if there are no syndicates, the people chosen and delegated to represent the workers according to the law (Article 4, letter e) of the Law 67/2006). If the undertakings, the business or parts of these lose their autonomy following a transfer, the transferred employees will be represented, with their expressed agreement, by the representatives from the legal transferor's enterprise, until the establishment or the nomination of new representatives, according to the law (Article 10, paragraph 2 of the Law 67/2006).

b) The Romanian law provides a special term during which the obligation to inform and consult the employees' has to be accomplished by the cedent, respectively by the legal transferor, eliminating therefore the failures possibly generated by the expression "in due time", that the directive contains.

According to the provisions of Article 12 (1), informing the representatives of, or the employees themselves, by the cessionary or the legal transferor has to be performed at least 30 days before the transfer. Beside this certain term, the Romanian legislator expressly demands for a written form of the information to exist. Concerning the content of the information, apart the transfer date, or the date suggested for the transfer, the reasons of the transfer, the juridical, economic and social

[9] A.Uluitu, *Drepturile salariatilor in cazul transferului intreprinderii, al unitatii sau al unei parti al acestora*, in Revista Romana de Dreptul Muncii nr. 1(2006), 35.

consequences of the transfer for the employees, the envisioned measures concerning the employees as provided by the directive, the Law 67/2006 requires that the written form should also contain information regarding work conditions and work qualification.

Finally, according to Article 11 of the Law 67/2006, the same 30-day minimum term has to be respected also with regards to the obligation to consult with the employees' representatives, with the goal of reaching an agreement, whenever the cedent or the legal transferor envisages taking measures with regards to their own employees. In the juridical literature it was shown that the obligation of reaching an agreement is an obligation of means, and not an obligation of result, therefore this will be considered as accomplished irrespective of the conclusion of an agreement between the cedent, respectively the legal transferor, and the employees, agreement whose object should the envisaged measures[10].

c) The Law 67/2006 contains some provisions more favourable to the collective labour contract compared to the Directive.

Just like the directive, national norms regulate the legal transferor's obligation to respect the rights given to the employees through the collective labour contract existing in the moment when the transfer takes place and in force until its call-off or expiration, respectively the application of a new convention as a result of a new negotiation of the contract; a new contract cannot enter into force before a minimum of one year after the transfer, even if the contracting parts agree to renegotiate before the expiration of the one-year term.

In the juridical literature, there is an opinion according to which, as an exception to Article 133, paragraph 2 of the law 62/2011, according to which in every unit only one collective labour contract is to exist, in situations when both the cedent and the legal transferor apply a collective labour contract, " in the same unit will temporarily coexist two collective labour contracts (until the annual renegotiation of one of them)"[11].

Additionally to the directive, the Romanian law establishes rules in the matter in case the transferred entity doesn't preserve its autonomy. Therefore, according to Article 9, paragraph 3, if, as a result of the transfer, the undertakings, the business, the unit or parts of these ones don't keep their autonomy, and the collective labour agreement applicable to the legal transferor's level is more favourable, the transferred employees will benefit from the collective labour agreement that is more favourable to them.

4. Conclusions

The study of the transposition into national law of the communitarian norms regarding the employees' protection in the event of transfers of undertakings, businesses or parts of these ones revealed important disparities between the two normative acts. From this point of view, we consider the opinion expressed in the juridical literature according to which "the Law 67/2006 represents a proof of progress in the field, by catching up with the most important provisions of the Directive 23/2001/EC and having only one default, which is however an important one, that of including within its application sphere only the situations concerning the property transfer"[12], as being wrong

Unlike other harmonization normative acts, Law 67/2006 is rather an unsuccessful experience. If, commonly and naturally, national transposition laws are more practical and more detailed compared to Directives, in this case the contrary is true. For a better understanding of the national law, the prior study of the Directive is necessary; this most certainly is not the way to go for the beneficiary of the law. The Romanian legislator lost sight of the fact that Directives addresses

[10] I.T. Stefanescu, *ibidem,* p 473.

Member States, and that every Member State has the obligation to transpose it correctly, clearly in the interest of those benefiting from it. Furthermore, given that a directive's provisions can be invoked directly only in a limited number of situations and conditions, the transposition activity has to be characterized by rigor, and national norms have to be self-assured and efficient.

In our opinion, *de lege lata*, the criticised aspects can lead in practice to inequitable solutions, starting with the narrowing, for various reasons, of the application field of the dispositions contained in the Law 67/2006, up to an inefficient sanctioning when breaking its provisions. As we have shown in our *de lege ferenda* proposals, a future revision of the legislative text requires modifications, as to the purpose of the transposed Directive to be reached no matter the interpretation.

CASES IN WHICH THE PATRIMONIAL LIABILITY OF THE EMPLOYER CAN BE ESTABLISHED

ADRIANA ELENA BELU [*]
ELENA ALEXANDRA ILINCA [**]

Abstract
The employer's patrimonial liability can be triggered if the employee was subject to a moral or material prejudice. Most often, the material damage caused to the employee consists in the denial of material rights, case in which the employer also owes an interest. The moral prejudice represents a harmful consequence, with a non-economic content determined by the violation of the non-patrimonial personal rights, such as: harming the honour, dignity, prestige or reputation. In this context, between the guilty employer and the prejudiced employee there could be an obligational report.

Keywords: *patrimonial liability, the employer, the moral prejudice, the material damage, personal right.*

Preliminary

The situations in which the employee could be prejudiced from the material or moral point of view, from the employer's fault are numerous and this is why just a part of them have express provisions under the norms of the labor legislation. In many cases, the employer's patrimonial liability is triggered based on the interpretation of the existing texts from the normative acts which regulate the social relationships included in the object of the labor law or in the conventional sources (collective labor contracts, internal regulations, organization regulations, etc)

Irrespective of the nature of the provision (express or implicit) which has been ignored in the phases of the execution of the juridical labor report, we believe that the following cases in which the employer's patrimonial liablility can be established could present a theoretical and practical interest:

1.Forcing the employee to perform a certain work under threat

According to art. 4 align. 1 from the Labor Code[1], „The forced labor is forbidden". If the employer imposes an employee to perform an activity in a certain job by using the threat should the employee refuse (for instance, the employee is threatened that they will be fired), the instance may establish the patrimonial liability of the employer and oblige him to indemnify the employee for the material and/or moral prejudice suffered subsequent to the performance of that labor, for which he had not given the agreement. The employer's patrimonial liability is possible if all the below conditions are met:

a. the employee and the employer had conclused a written individual labor contract;

b. the employer asked the employee to perform another work, even in another job than the ones provided in the individual labor contract (according to the clauses „kind of labor" and „job/position");

c. the employee refused the employer's proposal;

d. the employer tried to determine the employee to perfom the work using the threat, even if the employee did not agree;

e. the employee performed a certain labor imposed by the employee for fear that the threat could be applied and have consequences;

---

[*] Senior Lecturer, PhD**,** "Spiru Haret" University, Bucharest (adyelenabelu@yahoo.com).
[**] Senior Lecturer, PhD**,** "Spiru Haret" University, Bucharest (alailinca@yahoo.com).
[1] Law 53/2003, Law 40/2011.

f. the employee suffered a prejudice, either material (for example, his payment was lower than the one negotiated) or moral (for example, he was obliged to perform an activity with an inferior level than his professional training or on a job with dangerous conditions which bring harm to his professional dignity or state of health) when performing a different activity than the one provided in the job description.

2.Establishing the amount of wage in a discriminating way

The employer is obliged, within the work relations, to respect the principle of equal treatment to all the employees, namely not to commit any direct or indirect discrimination in regards to an emloyee, based on gender, sexual orienation, genetical features, age, nationality, race, colour, ethnicity, religion, political opinions, social origin, handicap, familial situation or responsibility, union membership or activity.

In this case, art. 6 align 3 from the Labor code establishes as a necessity: „For equal labor or of equal value it is forbidden any type of discrimination based on gender regarding all the elements and payment conditions". Thus, if an employee received an inferior wage than the one of another employee from the same unit, who performs „equal labor or of equal value" based on gender discrimination, the employee will be patrimonially liable, being obliged to indemnify the employee whose right to equal treatment has been violated, both for the material prejudice and for the moral one. In this case, the material prejudice will be fixed by obliging the employer to pay an indemification equal with the difference between the two salary amounts comparable in the given situation, for the entire period in which the gender discrimination produced effects.

3. Establishing the amount of wage under the minimum level set by normative acts or collective labor contracts

The employer who is a legal entity, natural entity authorized to perform an independent activity, as well as the familial association have the obligation to conclude, in written, the individual labor contract prior to the beginning of the labor relationship. Before concluding the individual labor contract, the employer is obliged to inform the person he selected to hire about the essential clauses which he intends to include in the contract, among which the „basic salary, other elements that constitute the salary".

According to art 11 from the Labor Code, „the clauses of the individual labor contract cannot contain contrary provisions or right under the minimum level set by normative acts or collective labor contracts".

In conclusion, the employer is patrimonially liable if she sets for his employee a salary under the minimum level set by normative acts or, after case, by the collective labor contracts. The material prejudice suffered by the employee consists in the difference between the due salary according to the normative act or collective labor contract and the effective salary paid for the entire period.

The term in which the employee can lawsuit the employer in order to oblige him to pay indemnifications is 3 years from the date when the right to action appeared.

4. The denial of the non-competition monthly allowance

By this specific clause, the employee is obliged that „after ceasing the contract, he would not perform, in his own interest or for a third party, an activity that comes in competition with the one performed by his employer, in exchange of a non-competition monthly allowance paid by the employer during the entire non-competition period.

A specific of the non-competition clause is the fact that it is negotiated and mentioned in the individual labor contract only during the period when the juridical labor report is executed, but the effects of the respective clause take place subsequent to the moment when the individual labor contract ceased. According to the law, the period during which the non-competition clause takes place is of maximum 2 years from the date when the individual labor contract ceased.

5. The denial of the additional benefits established by the mobility clause

Among the specific clauses that the parties can negotiate and mention in the individual labor contract there is also the mobility clause, by which – according to art. 25 from the Labor Code – the parties establish, by taking into account the specific of the labor, that performing the job obligations is not done in a stable work place by the employee. In this case, the employee benefits from additional benefits cash or in kind[2, 3].

In case that the employer does not grant the employee the additional benefits cash or in kind, in the negotiated amount and in the presence of the mobility clase, he is patrimonially liable for the material prejudice he caused, under the provisions of art. 25 and art 253 align. 1 from the Labor Code.

6. The unilateral reduction of the salary amount

The unilateral reduction of the salary provided in the individual labor contract represents an illegal measure which may bring the patrimonially liability of the employer, if all the below conditions are met:

a. the employee benefited from a salary whose amount has been established through negotiation or, as appropriate, by law (if a written individual labor contract has not been concluded, the parties can prove the contract provisions and the labor performed by any way of proof);

b. the employer decided to reduce the salary amount without executing the obligation to inform the employee in written prior to the modification, regarding the intention to reduce the salary;

c. no additional act has been concluded to the individual labor contract within 15 days from the date of the employee's information in written;

d. the reduction of the salary amount does not prove to be possible, from the legal provisions or from the provisions of the applicable labor contract.

e. for the labor he performed in the same job or in another (subsequent to the employer's decision of unilateral modification of this element), the employee received a reduced salary.

If all these conditions are met, the employer will be patrimonially liable to pay the indemnifications equal to the difference between the salary rights established by negotiation or law and the reduced salary he received.

7. The unjustified suspension of the individual labor contract

The employer can be patrimonially liable if he decides the suspension of the employee's individual labor contract and the measure is proven to be unjustified. The employee could suffer a material prejudice in two situations of suspension of the individual labor contract from the employer's initiative:

a) during the prior disciplinary research;

b) in case that

- the employer has filed a criminal complaint against the employee or,

- the employee was sent to the court for criminal deeds incompatible with the position he held, until the juridical court decision.

In this view, art. 52 align 2 from the Labor Code established, by referring to the two situations we presented: „if the one in cause proves to be not guilty, the employee takes back the position and will be payed – under the norms and the principle of the contractual civil liability – an indemnification equal to the salary and the other rights from which he was restrained during the suspension of the contract".

---

[2] Alexandru Ţiclea, *Treaty of Labor Law*, Editura Universul Juridic , Bucureşti, 2008.

[3] Ion Traian Ştefănescu, *Treaty of Labor Law*, vol. II, Editura Lumina Lex, Bucureşti, 2004.

8. The denial of the rights in case the employee is delegated or detached.

The delegation is a measure disposed by the employer, based on which the employee will execute labors or fulfill labor tasks outside the work place provided in the individual labor contract during at most 60 days in 12 months. The duration of the delegation can be prolonged for successive periods of at most 60 days only if the employee agrees with this proposal formulated and argumented by the employer.

The detachment is the measure by which the employer disposes the change of the work place to another employer, for which the employee will perform activities in his interest and suborder.

The duration of the detachment is of at most one year, and it can be prolonged only for objective reasons and only with the agreement of the employee, every 6 months.

According to art 44 align 2 and art. 46 align. 4 from the Labor Code, the employees of the units who were sent in delegation (inside the country or abroad) or in detachment, benefit from the following rights:

a) the reimbursment of the transportation and accomodation expenses, according to the conditions established by the applicable collective labor contracts;

b) delegation or detachment allowance, whose amount is established by negotiation, the minimum level being the one established by the applicable normative acts from the public institutions.

Thus, the employer is obliged to reimburse the transportation and accomodation expenses, according to the employee's act of delegation or detachment, and the denial to execute this obligation triggers patrimonially liability[4].

9. The unjustified and unlawful dismissal

According to the legal definition, "The dismissal is the ceasment of the individual labour contract from the employer's initiative".

If the employer exerts his right to fire the employee and proceeds in an unjustified or unlawful way, the provisions of art. 78 align 1 from the Labor Code become applicable, according to which the instance will dispose the cancellation of the dismissal „and will oblige the employer to pay an indemnification equal to the salaries, raised and updated and with all other rights from which the employee would have benefited".

10. The denial of the rights for the over time and for the hours worked during holidays and free days.

If the employee performed over time, the employer has the following obligations:

- **the main obligation**, to compensate the duration of that respecive labor with free hours, paid in the next 60 days from its occurence (art 122 align 1 from the Labor Code)
- **the subsequent obligation**, in case that the compensation by free paid hours is not possible within the next 60 days, case in which he will pay the employee the over time he performed, by adding an increase to the salary, which is established by negotiation, and it cannot be lower than 75% of the basic salary (art 123 align 2 from the Labor Code)

At the same time, the employees who perform an activity during holidays benefit from compensations: 1st and 2nd of January, the first and second day of Easter, 1st of May, the first and second day of Pentecost, the Assumption, 1st of December, the first and second day of Christmas; 2 days for each of the three annual religious holidays, declared by the legal religions, other than the Christian ones, for the people belonging to them[5].

[4] Alexandru Athanasiu, Luminița Dima, *Legal regime regulating labor relations in the new Labour Code* – Partea I – Pandectele Române, nr. 2/2003.

[5] Alexandru Țiclea, *Commented Labor Code, Second edition revised and enlarged,* Editura Universul Juridic, București, 2011, 278 – 283.

In case that, from justified reasons, the employer cannot give the corresponding free time in the next 60 days, the employees will benefit for the work they performed during the holidays, from an increase of 100% from the basic salary (art 142 align 2 from the Labor Code)

11. The denial of the benefit for the night shift

In the Labour Code, we use the wording "night employee" to name (art 125 align 2):

a)the employee who performs the night shift for at least 3 hours from his daily work time or, as appropriate,

b) the employee who performs the night shift for at least 30% of his monthly work time.

The night employee benefits from:

a) either a work schedule reduced with 1h compared to the normal duration of the work day, for the days when he performs at least 3 hours of night shift, without leading to the reduction of the basic salary;

b) or a 25% increase to the basic salary for each night hour he worked.

12. The denial of the salary rights in the amount established by law or by negotiation

According to art 166 align 4 from the Labor Code: „The unjustified delay in paying the salary or the unpaid salary can oblige the employer to pay indemnifications – interests to repair the prejudice produced to the employee". This legal provision establishes a constraint to the employee, with a view to have the salaries paid **on time and fully[6].**

A THEORETICAL ANALYSIS OF THE SUBROGATION, AS PER THE AMENDMENTS BROUGHT BY THE CIVIL CODE OF 2009

GABRIEL BOROI[*]
BOGDAN NAZAT[**]

Abstract
Although extensively treated by the Romanian scholars in the past, the provisions of the Civil code of 2009 brought certain amendments with respect to the subrogation in creditor's rights by paying the debt.
Our main purpose is to outline the latest amendments brought to the institution under discussion by the Civil Code of 2009 and, in this respect, we will analyse the subrogation from a theoretical point of view, with some references to the existent Romanian jurisprudence.

Key words: *subrogation, obligation, Civil Code, transfer, creditor.*

I. Introduction

The actual Romanian Civil code[1] in force starting with 1 October 2011 regulates the ways of transferring and transforming the obligations in the same title, i.e. Title VI – *The transferring and transforming the obligations*, where the institution of subrogation is regulated among other important civil institutions, such as assignment of debt, assuming of a debt, novation.

The meaning of this institution arises mainly from its name and it means a replacement of one of the obligational relationship parties with another person.

It is our view that the subject proposed for this paper is important for the Romanian "civil life" due to the fact that, as stated in the doctrine, even if the operation of replacing a subject form an obligational relation can be performed by other civil proceedings (e.g. assignment of debts, assignment of contract), the institution under discussion is about that specific situation when a subject of the obligational relationship is replaced due to the performance of a payment (execution of the obligation)[2]. From the beginning we have to say that, under the Romanian civil legislation, the term "payment" is defined as being the operation of giving an amount of money or, as the case may be, performing a duty, object of the obligation[3]. Therefore, for the purpose of this paper, by using the term "payment" we will have in mind the definition offered by the legislation.

For the avoidance of any doubt, the problem of applicability of the new provisions regarding the subrogation was solved by Law No. 71/2011 for applying the Law No. 287/2009 regarding the Civil Code. Therefore, it was stated in the Article 117 paragraph 1 that the debt transmitted through subrogation after the Civil code entered into force is under the legal regime in force at the time the debt arisen.

In conclusion, by this paper, we will try to offer to the reader a concise and clear overview of the institution, by analysing the legal provisions of the Civil code with some references to the existent legal writings and jurisprudence.

[3] Article 1469 of the Civil Code.

II. Notion. Legal regulation[4]

As previously mentioned, the Civil code regulates the subrogation in its Title VI (*The transfer and transform of the obligations*), Chapter II (*The subrogation*), between Articles 1593 – 1598.

A brief definition of the subrogation is offered by the paragraph 1 of Article 1593 which states that "anybody paying instead of the debtor can be subrogated in creditor's rights, without being able to achieve more rights than the later". Further, paragraph 2 of the same Article establishes that the subrogation can be either conventional (based on an agreement) or legal. Therefore, the subrogation has two forms: conventional subrogation and legal subrogation (both of them will be detailed above).

The legal scholars offered us a more accurate definition than the one provided by the Civil code. Thus, the *subrogation in creditor's rights by paying the debts (also known as personal subrogation) is that way of transferring, either conventional or legal, the outstanding debts, with all its securities and accessories, to a third person who paid the original creditor*[5].

By analysing the two definitions, the one offered by the Civil code and the one offered by the doctrine, we can say that mechanism of the subrogation consists in replacing the creditor from an obligational relation (the original creditor) with another person who, by paying the debt of the debtor, becomes the creditor of the last, acquiring all the rights of the original creditor (also known as *solvens* or *creditor by subrogation*).

From a practical point of view, the subrogation has an important role; thus, there are frequent situations when a third person pays the debt of the debtor without the intention to gratify the debtor, e.g. guarantor, jointly held liable co-debtor. By such payment, the debt towards the original creditor ceases to exist but the debtor will be further held liable towards the payer, who will become the new creditor[6].

As an exception of the above mentioned, Article 1474 paragraph 3 provides that "the payment performed by a third person ceases the obligation if it is performed on behalf of the debtor. In this case, the third person will replace the creditor only when expressly mentioned by the law". Therefore, not any payment performed by a third person made with the intention to cease the debt of the debtor will conduct to a subrogation, but just that payment performed under certain conditions, expressly established by the applicable legislation[7].

III. Conventional subrogation

The conventional subrogation has its bases on the agreement concluded between the third person who pays the debt (the new creditor), on the one hand, and the original creditor or the debtor, on the other hand. Taking into consideration the fact that the conventional subrogation is an agreement, the parties are under the obligation to observe the legal provisions established by the applicable legislation for its validly conclusion.

In order for the conventional subrogation to operate, the Civil code establishes the obligation for the subrogation to be expressly provided in the agreement to be concluded between the *solvens* and original creditor/ debtor. Also, in order for the subrogation to be opposable to third parties, must be done in writing. Even if not expressly provided by the law, it was considered that the deed attesting the performance of the payment needs to bear certain date (*data certa* in Romanian language); contrary the parties will not be able to prove the moment when their agreement was concluded[8].

---

[4] The Civil code of 1864 regulated the subrogation between its articles 1106-1109.

[5] C. Statescu, C. Birsan, *Civil Law. The general theory of obligations. 9th Edition, revised and amended*. Hamangiu, 2008, page 368.

[6] L. Pop, I. Popa, S. Vidu, *cit. op.*, page 652.

[7] L. Pop, I. Popa, S. Vidu, *cit. op.*, page 653.

[8] Alexandru Beloanca in *The New civil code. Comments, doctrine and jurisprudence. Vol II. Articles 953-1649*, Hamangiu, 2012, page 966.

According to the provisions of paragraph 3 of Article 1593 of the Civil code, "the conventional subrogation can be agreed by the debtor or the creditor". Therefore, depending whether the agreement is concluded by the payer with the original creditor or the debtor, we can discuss about two types of conventional subrogation (i) subrogation agreed by the creditor or (ii) subrogation agreed by the debtor.

i. Subrogation agreed by the creditor

Pursuant to Article 1594 paragraph 1 of the Civil code, "the subrogation is agreed by the creditor when, by receiving the payment form a third person, assigns to the payer all the rights against the debtor". Further, paragraph 2 of the same Article provides that "the subrogation operates without the consent of the debtor. Any contrary provision is considered as not written".

By analysing the provisions of the aforementioned Article, it can be concluded that, apart the general condition, i.e. to be expressly provided, the subrogation agreed by the creditor must fulfil another condition: to operate simultaneous with the payment. This condition was consecrated in the past by a part the legal scholars; therefore, it was considered that if the replacement of the creditor is performed before the payment, we are not in the situation of a subrogation, but of an assignment of debt[9]. Moreover, it cannot be performed after the payment due to the fact that the debt ceased to exist[10].

This type of conventional subrogation operates exclusively based on the agreement between the *solvens* and the original creditor, the debtor not being involved in the operation. Moreover, any contrary contractual provision is considered not written and can be ignored by the parties.

ii. Subrogation agreed by the debtor

According to Article 1595 paragraph 1 of the Civil code, the subrogation agreed by the debtor represents that operation whereas the debtor borrows in order to pay the debt and, therefore, transmits to the lender the original creditor's rights.

Pursuant to the provisions of paragraph 3 of the same Article, the subrogation agreed by the debtor operates without the consent of the original creditor, if not contrary agreed. Therefore, the law allows to the original creditor to be part to the agreement between the debtor and the payer but only when this was expressly agreed by the original creditor and debtor.

The subrogation agreed by the debtor is valid only if the following conditions are observed:

a)the loan agreement and the acknowledgement of payment have certain date[11];

b) in the loan agreement is mentioned that the amount of money is borrowed for paying the debt; and

c)the acknowledgement of payment mentions that the payment was performed with the money borrowed from the new creditor.

IV. Legal subrogation

The subrogation operates *ex lege* (by law), without the consent of the original creditor or the consent of debtor to be required, in the following situations, expressly provided by Article 1596 of the Civil code:

a) *in the benefit of the creditor, even if it is an unsecured creditor, which pays to a preferential creditor, according to the law*. The doctrine and the jurisprudence stated that this is the case of an unsecured creditor who pays the debt to a secured creditor or the case of an inferior rank mortgagee who pays the debt to a superior rank mortgagee, the result consisting in the first replacing

[9] The assignment of debt is regulated by the Civil code between the Articles 1566-1592.

[10] C. Statescu, C. Birsan, *op. cit.*, page 370. There were also some legal scholars saying that there is no prohibition for the agreement between the payer and the original creditor to be concluded before the payment to be performed due to the fact that only when the payment effectively is performed, the subrogation operates.

[11] Until the Civil code of 2009 to be in force, it was requested for the loan agreement to be concluded in authenticated form.

the later. The first creditor has an interest to pay to the superior rank creditor due to the fact that, by selling the mortgaged asset, the amount obtained will cover only the debt of the superior rank creditor; therefore, by paying the debt, the inferior rank creditor subrogates in the rights of the superior rank creditor and can wait until the selling of the asset will cover both debts, the one paid to the superior rank creditor and its own debt[12].

b) *in the benefit of an acquirer of an asset who pays the creditor having a guarantee over the respective asset.* The interest of the acquirer is to avoid any fore-closure (enforcement) procedure to be commenced against the asset and to keep it in own patrimony.

c) *in the benefit of the person who, being jointly held liable together with or for other persons, has an interest to pay the debt*, such as the co-debtors jointly held liable, co-debtor in an indivisible obligation etc.

d) *in the benefit of the inheritor who pays the debts of the inheritance from his own assets.*

Besides the situations detailed above, there are some situations expressly established by the Civil Code when the subrogation operates by law, such as[13]:

a) Article 352 of the Civil Code states that if one of the husband or wife pays the common debts with his/ her own assets has the right to subrogate in the rights of the creditor for what it was paid from his/ her own assets;

b) Article 2210 of the Civil Code provides that "in the limit of the paid premium, the insurer is subrogated in all rights of the insurant or the beneficiary of the insurance against the person held liable for the damage, except for personal insurances"[14];

c) Article 1342 of the Civil Code provides that in case of a not owed payment when the repayment cannot be disposed, the payer has the right go against the real debtor based on the legal subrogation in the rights of the paid creditor;

d) Article 1813 of the Civil Code provides that "in the situations established by Article 1811[15], the acquirer is subrogated in the rights and obligations of the lessor from the lease agreement".

V. Effects of the subrogation

Due to the fact that the Civil Code does not distinguish between the two types of subrogation, it can be concluded that the effects of the subrogation are the same, irrespective of the type of subrogation (conventional or legal).

The main effect of the subrogation is that the new creditor acquires all the rights of the original creditor, i.e. the debt with all the rights and its accessories[16]. As a consequence, the new creditor will have the action the paid creditor would have had against the debtor in case of non-payment and also the guarantees of the debts, such as mortgage, lien etc[17]. This revealed form the interpretation paragraph 2 of Article 1597 of the Civil Code attesting the fact that "the subrogation produces its effects against the original debtor and those who guaranteed the obligation". Moreover,

---

[12] C. Statescu, C. Birsan, *op. cit.*, page 368.

[13] Alexandru Bleoanca in *The New civil code. Comments, doctrine and jurisprudence. Vol II. Articles 953-1649*, Hamangiu, 2012, page 971.

[14] According to a decision of Bucharest Court of Appeal, decision No. 256/2003 (Source: *The New civil code. Comments, doctrine and jurisprudence. Vol II. Articles 953-1649*, Hamangiu, 2012, page 972), the insurer subrogated in the rights of the insurant starting with the moment when the premium was paid as a consequence of producing the insured event. From the date of indemnifying the beneficiary of the insurance, the insurer's debt towards the person guilt for the accident became due.

[15] Article 1811 of the Civil code expressly establishes the situations when the lease agreement is opposable also to the acquirer in case the immovable asset object of a lease agreement is object of a sale purchase agreement.

[16] C. Statescu, C. Birsan, *op. cit.*, page 371.

[17] Alexandru Bleoanca in *The New Civil Code. Comments, doctrine and jurisprudence. Vol II. Articles 953-1649*, Hamangiu, 2012, page 973.

according to the same paragraph, the original debtor and the guarantors are allowed to defence themselves by using the same proceedings as the ones they would have been entitled to use against the original creditor, e.g. causes for termination or nullity of the debts claimed by the new creditor[18].

Besides the actions of the original creditor, the new creditor has also the right to perform some specific actions against the debtor grounded on legal institutions such as mandate, business management (*gestiune de afaceri* in Romanian language) or causeless enrichment (*imbogatire fara justa cauza* in Romanian language)[19].

As regards the moment the subrogation produces its effects, the Civil Code provides in its Article 1597 paragraph 1 that "the subrogation produces its effects starting with the moment when the third person performs the payment in the benefit of the creditor".

In case of partial subrogation[20], respectively the situation when the new creditor pays only a part of the debt, the subrogation will operate also partially, in the limit of the payment. Thus, the debts and its accessories will be divided between the original creditor and the new creditor accordingly.

As a general rule, in case of partial subrogation, the original debtor and the new creditor are allowed to ask the payment from the debtor proportionally with their rights and no priority being applicable between them. Nevertheless, according to the provisions of Article 1598 of the Civil code ("in case of partial subrogation, the original creditor, beneficiary of a guarantee, […]"), if the original creditor benefits of a guarantee (security) in the moment of the partial payment, than it is preferred to the new creditor. After the unpaid debt is paid by the debtor to the original creditor, the next entitled to receive the payment is the new creditor[21].

Although, this exception is not applicable when the original creditor undertook the obligation to secure the amount for which the subrogation operates, the new creditor having priority in recovering the debt.

VI. Conclusions

By approaching this subject, we intended to offer the reader the possibility to make an opinion of the legal provisions applicable to the institution of the subrogation, as amended by the Civil code of 2009. In this respect, we focused mainly on identifying the legal provisions applicable to this institution and, after, we tried to offer concise explanations by using the different interpretations restrained by doctrine and jurisprudence.

Due to the fact that this institution continuously represents a subject of interest for the legal scholars and practitioners, new interpretations and opinions will be formulated in the future.

THE UNDERTAKING CONTRACT AS REGULATED BY THE NEW CIVIL CODE

STANCIU D. CĂRPENARU*

Abstract
The present paper hopes to share a small but comprehensive analysis of the undertaking contract. This type of contract was scarcely regulated by the old Civil Code. Nowadays, the New Civil Code has dedicated a section especially for the undertaking contract.
The importance of this paper resides not only in the theoretical aspects but also in the practical perspective that it is hoped to be laid down. In the continuously developing world, despite the economic difficulties in the last years, enterprises and undertakings have continued to be a part of everyday life, and business still strive to maximize profits from this types of contracts.

Key words: *undertaking, subundertaking, agreement, work, New Civil Code.*

1. Preliminaries. The new civil code has comprehensively regulated the undertaking contract (articles 1851 - 1880).

The regulation includes new general rules of the undertaking contract, and special rules for the undertaking contract regarding construction works.

As conceived by the new civil code, the undertaking contract is a standalone agreement with its own features, and not a variant of the lease agreement as conceived by the regulation in the old civil code[1].

2. The general rules of the undertaking contract. Such rules regard the notion of the undertaking contract, and its delimitation from other agreements; the conditions regarding the capacity of the parties; the subundertaking contract; the workers' direct action; the ending of the agreement.

2.1. The civil code defines the undertaking contract as the agreement by which one party, the contractor, undertakes to, at their own risk, perform a certain work, either material or intellectual, or provide a service for the other party, the employer, in consideration of a price (article 1851 in the Civil Code).

Such legal definition includes the elements of essence of the undertaking contract.

The contractor binds itself to perform a certain work, or to provide a certain service for the employer.

The performance of the work, or the provision of the service, is done at the risk of the contractor. In performing the work, or providing the service, the contractor acts independently, and at their own risk; the employer is only interested in the result, the work or the service provided.

The new regulation expressly provides for that the work representing the object of the agreement may be a material work (constructions, manufactured items, etc.), or an intellectual one (expert examinations, advice, etc.).

For the performance of the work or the provision of the service certain materials are required. As the law conceives it, the same are to be procured by the contractor. The article 1857 in the Civil

* Professor, Ph.D, Law Faculty, "Nicolae Titulescu" University, Bucharest (e-mail: carpenaru_stan@yahoo.com).

[1] As regards the contract agreement as regulated by the old civil code, please refer to Fr. Deak, *Tratat de drept civil. Contracte speciale* (*Civil Law Treaty. Special Agreements*), 6th Edition, updated by L. Mihai and R. Popescu, Ed. Universul juridic, Bucharest, 2006, p. 188 and the following.

Code provides for that, unless it results otherwise from the law or the agreement, the contractor is bound to perform the work with their own materials.

Working with their own materials the contractor is liable for the quality of the same according to the rules of the sale agreement.

The rule established by the article 1857 in the Civil Code regarding the procurement of the materials required for the performance of the work or the provision of the service by the contractor raises the issue of delimiting the undertaking contract from the sale agreement for a future asset.

The New Civil Code, inspired by the doctrinal solutions in the past, establishes the legal criterion for delimiting the undertaking contract from the sale agreement[2]. According to the article 1855 in the Civil Code the agreement is a sale agreement, and not a undertaking contract, when according to the intention of the parties the performance of the work is not the main purpose of the agreement, being also considered the value of the assets supplied.

Therefore, when qualifying the agreement the main purpose considered by the parties upon concluding the agreement takes precedence, as well as the value of the materials procured by the contractor.

The agreement shall be qualified as a undertaking contract when, in the intention of the parties, the performance of the work is the main purpose of the conclusion of the agreement, while the procurement of the materials is an accessory clause of the agreement.

The agreement shall be qualified as a sale agreement when, in the intention of the parties, the main purpose was not the performance of the works, but the material for the performances of the contractor.

Should the employer have procured the materials the contractor is bound to keep and use them according to their intended use, and under the applicable technical rules.

The performance of the work or the provision of the service by the contractor is done in consideration of a price, which consists of an amount of money, or of any other goods or performances (article 1854 in the Civil Code). The price may be an estimated (quotation) price, or a fixed price set depending on the value of the works or of the services.

2.2. The validity requirements for the undertaking contract are those provided for by the article 1179 in the Civil Code for the validity of any agreement: the capacity to contract; the consent of the parties; a determined and licit object; a licit and moral cause.

As regards the requirement for the parties to have the capacity to conclude the undertaking contract the general rules regarding the civil capacity of the individual and of the legal entity should be considered.

The contractor should in all cases have full exercise capacity.

The employer needs to meet the legal capacity requirements depending on the nature of the undertaking contract as a legal instrument, an administrative instrument, or a disposal instrument.

The New Civil Code also establishes certain special rules regarding the capacity of the parties to conclude the undertaking contract. According to the article 1853 in the Civil Code the provisions of the article 1655 paragraph 1 shall be accordingly applicable to the undertaking contract.

The law considers the incapacities to sell regarding the persons that are provided for by the article 1654 in the Civil Code: proxies, for the assets they are authorised to sell; the parents, the guardian, the trustee, the temporary administrator, for the assets of the persons they are representing; the public servants, the receiver judges, the insolvency practitioners, the bailiffs, who could influence upon the conditions of the sale being made by their intermediation, or having for objects the assets they are administering, or the administration of which they are supervising.

---

[2] Please refer to C. Hamangiu, I. Rosetti-Balanescu, Al. Baicoianu, *Tratat de drept civil roman* (*Romanian Civil Law Treaty*), tome II, Bucharest, 1929, p. 987, Fr. Deak, the quoted work, p. 192.

Such persons cannot sell their own assets for a price consisting of an amount of money originated in the sale and the operation of the asset or of the patrimony they are administering, or the administration of which they are supervising, as appropriate.

We consider that the applying accordingly to the undertaking contract means that the persons mentioned within the article 1854 in the Civil Code may not conclude the undertaking contract in capacity of contractor[3].

The subject matter of the undertaking contract is represented by the legal operation agreed upon by the parties, i.e. the performance of a work, or the provision of a service (article 1225 in the Civil Code).

Since the undertaking contract is a mutually binding agreement the object of the obligation of the contractor is the performance of the work or the provision of the service, and the object of the obligation of the employer is the payment of the price.

As we stated the new regulation expressly provides for that the work representing the object of the obligation of the contractor, and implicitly of the undertaking contract, may have a material or intellectual nature.

The object of the obligation of the contractor should be determined, or at least determinable and licit (article 1226 paragraph 2 in the Civil Code).

The price, as the object of the obligation of the employer, consists of an amount of money, or of any other goods or performances (article 1854 in the Civil Code). The price should be serious, and determined, or at least determinable.

According to the law the price may be a fixed price set on aggregate as a fixed amount of money, or an estimated (quotation) price considering the costs for the materials and for the performances of the contractor, or a price determined depending on the value of the works or of the services.

Should the agreement do not include clauses regarding the price of the contract the employer shall owe the price determined under the conditions of the article 1854 paragraph 3 in the Civil Code.

2.3. The New Civil Code includes a better regulation, as compared to the old regulation in the Civil Code, of the obligations of the contractor and of the employer.

2.3.1. According to the law the obligations of the contractor in the undertaking contract regard the performance of the work, the notifying of the employer on the issues arising while performing the work, and the warranty for the defects of the work and the absence of the agreed qualities of the same[4].

a) The contractor is bound to perform the work or provide the service that represents the object of the agreement.

Unless it results otherwise from the law or the agreement, the contractor is bound to perform the work with their own materials (article 1857 in the Civil Code). The contractor is liable for the quality of the materials procured by themselves under the conditions provided for by the Civil Code regarding the liability of the seller for the defects of the sold asset.

Under the conditions provided for by the law or agreed upon by the parties the materials required for the performance of the work may be made available for the contractor by the employer. In such event the contractor, in capacity of holder, is bound to keep the materials they received, and use them according to their intended use, under the applicable technical rules. They have to justify

---

[3] As regards the applying of the provisions of the article 1655 paragraph 1 in the Civil Code to the contract agreement please also refer to T. Prescure, *Curs de contracte civile. Conform noului Cod civil* (*Course of Civil Agreements. According to the New Civil Code*), *Ed. Hamangiu, Bucharest, 2012*.

[4] For certain accessory obligations of the contractor please refer to L. Stanciulescu, Curs de drept civil. Contracte. Conform noului Cod civil (*Course of Civil Law. Agreements. Accordng to the New Civil Code*), Ed. Hamangiu, Bucharest, 2012, pp. 344-345.

the way the materials were used, and return to the employer what was not used for the performance of the work (article 1857 paragraph in the Civil Code).

According to the new legal regulation, during the performance of the work, the employer is entitled to, at their own expense, check the works, but without unjustified hindrance to the fulfilment by the contractor of their obligation. The employer is also entitled to notify the contractor on their comments regarding the performance of the work (article 1861 in the Civil Code).

Should the contractor fail to fulfil their obligation regarding the performance of the work or the provision of the service the employer may use the remedies regulated by the article 1516 in the Civil Code.

b) The contractor is bound to notify the employer should the normal performance of the work, its durability, or the usage of the work according to its intended use would be endangered due to the materials procured, or to the other means that under the agreement the employer has made available for the contractor, as well as to the improper directions from the employer. The contractor also has the same obligation to notify the employer in the event of circumstances existing or arising for which the contractor is not held liable (article 1858 in the Civil Code).

The obligation of the contractor to notify should be fulfilled without delay so the employer takes the required action.

Should the employer, having been notified by the contractor on a cause that endangers the work, do not take the required actions within a term to fit the circumstances, the contractor may terminate the undertaking contract, or may continue performing under the agreement at the risk of the employer, after notifying the employer (article 1859 in the Civil Code).

In the event that the work would be of nature to threaten the persons' health or bodily integrity the contractor is bound to ask the agreement to be terminated. Otherwise the contractor shall take over the risk, and shall be liable for the damages caused, including for the damages caused to third parties.

c) The contractor is bound to deliver to the employer the work performed under the conditions set within the undertaking contract.

For the fulfilment of such obligation the contractor has to notify the employer about the completion of the work, requesting them to accept, and when appropriate to take the work.

The civil code regulates the consequences of the work perishing before the acceptance and the delivery of the work (article 1860 in the Civil Code). The law distinguishes as to whether the materials were procured by the contractor, or made available by the employer.

Should the work, before the acceptance, perish or be damaged by causes that cannot be imputed on the employer, the contractor that procured the materials is bound to remake it at their own expense, *(correction in handwriting with the mention 'see overleaf' – translator's note)* account the rules regarding the fortuitous suspension of the performance of the obligation of the contractor, under the conditions of the article 1634 in the Civil Code.

Should the materials have been procured by the employer the expenses for remaking the work shall only be borne by the employer if the *perishing (correction in handwriting – translator's note)* was due to defects of the materials. For the other cases the employer shall be bound to procure the materials again, but only if the perishing or the damaging of the work is not imputable on the contractor.

It must be stated that, should the perishing or the damaging of the work occur after the acceptance of the work, the mentioned consequences shall not be applicable. The contractor shall be liable, if appropriate, based on the obligation to provide warranty against the defects of the work, and for the agreed qualities of the same.

d) The contractor is bound to provide warranty against the defects of the work, and for the agreed qualities of the same (article 1863 in the Civil Code).

The obligation of the contractor to provide warranty against the defects of the work, and for the agreed qualities of the same operates according to the provisions of the Civil Code regarding the

defects of the sold asset, which are applicable accordingly. There are considered the provisions of the articles 1707-1715 in the Civil Code that regulate the obligation of the seller to provide warranty for the defects of the asset and for the absence of the agreed qualities of the sold asset.

2.3.2. According to the law, the obligations of the employer in the undertaking contract regard the acceptance and the receipt of the work, as well as the payment of the price for the work or the service.

a) The employer is obliged to accept and take over the work (article 1862 in the Civil Code).

According to the law, as soon as they received the notice from the contractor by which they are informed that the work was completed, the employer is bound to accept the work, as well as, when appropriate, to take it[5].

The acceptance of the work should be done by the employer within a reasonable term according to the nature of the work and to the usages within the area.

Should the employer, without any reasons, do not appear in order to accept the work, or do not immediately notify the contractor on the result of the checking, the work shall be deemed accepted without reservations. In such event the employer having accepted the work without reservation shall no longer be entitled to complain about the apparent defects of the work, or the absence of the agreed qualities.

As the law provides for, after accepting the work the employer is bound to take, i.e. take-over, the work.

The New Civil Code provides for that, should the contractor have undertaken to perform a work with the material of the employer, or to provide a service on an asset the employer has hand over to them for such purpose, and the employer fails to take the asset, the contractor shall be entitled to sell the asset.

For the exercising by the contractor of such right two requirements need to be met: a) that the employer did not take the asset within 6 months counting since the day agreed upon for the acceptance, or when the work or the service was completed later, since the completion date; b) that the contractor has first notified the employer on the sale of the asset.

In carrying on the operation of selling the asset the contractor acts in capacity of proxy of the employer and should use the diligence of a proxy free of charge.

From the price of the sale of the asset the contractor shall retain the price of the work and the expenses for the sale, and the balance shall be consigned available for the employer.

It has to be stated that, under the law, the contractor may not sell the asset not taken by the employer if the employer has taken action in justice against the contractor by means of a claim based on the failure to perform, or the improper performance of the work (article 1868 in the Civil Code).

As one can notice the law regulates the consequences of the employer failing to take a work that was made with the material of the employer.

For the case where the work not taken by the employer was made with the material procured by the contractor, in absence of a special regulation, there are applicable the provisions of the article 1516 in the Civil Code that regulate the remedies for a failure to observe the contract conditions. We also do not exclude the applying accordingly of the provisions of the article 1726 in the Civil Code regarding the direct enforcement.

b) The employer is bound to pay the price of the work and of the service (article 1864 in the Civil Code).

---

[5] The article 1862 in the Civil Code provides for that the employer has "the obligation to... check it, and should the same meet the requirements set by the agreement, accept it"...

The wording of the text is pleonastic because by the acceptance of a work is understood the operation of taking over a work based on the quantity and quality checking of the same.

It is understood that such checking shall take into account the requirements set within the contract agreement concluded by the parties.

According to the law the employer has the obligation to pay the contractor the price of the work on the date and at the place of the acceptance of the whole work, unless otherwise provided for by the law or by the agreement.

The price to be paid by the employer to the contractor is the one agreed upon by the parties within the agreement.

Should a fixed (aggregate) price have been set within the agreement the employer should pay the price agreed upon (article 1867 in the Civil Code). In such event the employer may not ask the price to be reduced by reason that the work or the service required less working, or involved lower costs than those provided for within the agreement, and the contractor may not claim an increase of the price by reason that the work or the service required more working, or involved higher costs than those agreed upon by the agreement.

According to the law the fixed price set within the agreement remains unchanged even in the event that changes were made as regards the performance conditions originally provided for within the agreement, unless the parties have agreed otherwise.

If the price agreed upon within the agreement was an estimated (quotation) price, i.e. upon the conclusion of the agreement the price was subject to estimation, the contractor may justify any increase of the price (article 1865 in the Civil Code). In such event the employer is only bound to pay the price increase requested by the contractor if the same results from works or services that could not have been foreseen by the contractor upon concluding the undertaking contract.

Should a price set depending on the value of the performed works, of the provided services, or of the supplied goods have been agreed upon within the agreement the contractor is bound to, by request from the employer, account for the stage of the works, the services already provided, and the expenses already made (article 1866 in the Civil Code).

For the case where the undertaking contract does not include clauses regarding the price the employer shall owe the price provided for by the law, or calculated according to the law, or in absence of such legal provisions the price set in relation to the working done and the expenses required in order to perform the work or provide the service in considering the existing usages (article 1854 in the Civil Code).

The New Civil Code secures the right of the contractor to be paid the price of the work by the employer. The contractor enjoys a legal mortgage over the work, established and preserved under the conditions of the law (article 1869 in the Civil Code).

Related to the payment of the price the Civil Code regulates, as the old Civil Code also did, the workers' direct action (article 1856 in the Civil Code).

The law considers the cases where the performance of the work contracted by the contractor with the employer is done by certain persons, generally named workers, based on agreement concluded between such persons and the contractor.

Normally the price for such persons' working should be paid by the contractor, and in the event of a denied payment they have a contract action against the contractor.

In order to protect such persons, although they have no contract relations with the employer, the law acknowledges for such persons a direct action against the employer. According to the law they may claim the payment for their working, within the limits of the amount the employer owes to the contractor at the time the claim is submitted.

2.4. The Civil Code regulates the conditions for the ending of the undertaking contract. There are considered the death of one of the parties to the agreement, as well as the avoidance or the termination of the agreement.

In the event of the death of one of the parties the consequences are different.

The death of the employer only has for result the ending of the agreement if the fulfilment of the agreement becomes impossible or useless (article 1870 in the Civil Code).

In the vent of the death of the contractor, as well as in the case where the same becomes, without their fault, unable to complete the work or to provide the service, the agreement shall only

end if the same was concluded in considering the personal abilities of the contractor (article 1871 in the Civil Code).

Otherwise the employer is bound to accept the portion already performed, if they can use it, and they are bound to pay, in proportion to the price agreed upon, the value of the works performed and of the expenses made in order to complete the work, but only to the extent that such works and expenses are useful for them. Provided that they pay a proper compensation the employer is entitled to ask the materials prepared and the plans going to be acted upon to be handed over to them, in observing the intellectual property rights, under the conditions of the law.

As regards the ending of the undertaking contract by avoidance or termination the law distinguishes as to whether the same is imputable on the contractor, or on the employer.

The employer is entitled to obtain the termination, or as appropriate the avoidance of the agreement in the cases provided for by the article 1872 in the Civil Code (the observance of the term agreed upon for the acceptance of the work has become obviously impossible; the work or the service are not performed as agreed upon, and within a term set by the employer according to the circumstances; the contractor does not repair the shortcomings found, etc.).

The contractor is entitled to obtain the avoidance or the termination of the agreement if they cannot start or continue the fulfilment of the agreement due to an employer failing to fulfil, without justification, their own obligations (article 1873 in the Civil Code).

Apart from the avoidance or the termination of the agreement the contractor is also entitled to interest damages for the damage they suffered.

2.5. The Civil Code also regulates the subundertaking contract, which is sometimes used when performing complex works that represent the object of a undertaking contract (article 1852 in the Civil Code).

The subundertaking contract is the agreement by which the contractor entrusts to one or several subcontractors the performance of portions or elements of the work or of the services that represent the object of the undertaking contract concluded by the contractor with the employer.

The conclusion of the subundertaking contract is forbidden for the contractor in the case where the undertaking contract was concluded in considering the person of the contractor (*intuitu personae*).

By the conclusion of the subundertaking contract legal relations are established between the subcontractor and the contractor.

As a consequence, in relation to the employer, the contractor is liable for the deed of the subcontractor like for their own deed.

The subundertaking contract is subject to the stipulations provided for by the Civil Code for the undertaking contract.

3. Special rules regarding the undertaking contract for construction works. The New Civil Code, as well as the previous one, includes certain special rules regarding the undertaking contract for construction works.

The undertaking contract for construction works is the agreement by which the contractor undertakes to, at their own risk, perform works that according to the law require the issue of the construction authorization for the employer, in consideration of a price.

To the undertaking contract for construction works are accordingly applicable the provisions of the Civil Code regarding the undertaking contract, if compatible with the specific rules provided for in respect of such agreement (article 1851 paragraph 2 in the Civil Code).

As regards the undertaking contract for construction works there are also applicable the provisions of the Law no. 50/1991 regarding the authorizing of construction works[6], and those of the

[6] O.J. no. 163/07.08.1991. The law was modified, and then republished (O.J. no. 933/13.10.2004).

Law no. 10/1995 regarding the quality in constructions[7], the Regulation for the acceptance of construction works and of the installation works related to the same, approved by the G.D. no. 273/2004[8].

3.1. According to the Law no. 50/1991 the performance of civil, industrial, agricultural, or any other construction works is only allowed based on a construction authorization.

The construction authorizations are issued by the chairpersons of the county councils, by the General Mayor of the City of Bucharest, by the mayors of the cities, of the sectors of the City of Bucharest, of the towns and the communes[9].

3.2. In addition to the obligations that are usually on the side of the employer within the undertaking contract the employer within the undertaking contract for construction works also has certain specific obligation (article 1875 in the Civil Code).

Thus, the employer is bound to obtain all the authorizations required by the law for the performance of the work.

In order to meet such obligation the contractor has to cooperate with the employer by providing them with the required information they are holding, or should be holding considering their specialization.

Then, the employer is bound to allow the contractor, to the extent that the same are required for the performance of the work, to use the access ways, their own water supply installations, and other utilities servicing the building.

3.3. Considering the complexity and the specific features of the construction works representing the object of the undertaking contract for construction works the law regulates the right of the employer to check the performance of the work (article 1876 in the Civil Code).

During the fulfilment of the agreement, without hindering the normal activity of the contractor, the employer is entitled to check the performance stage, the quality and the aspect of the works performed and of the materials employed, as well as any other issues regarding the fulfilment by the contractor of the contract obligations.

The employer is entitled to notify the contractor in writing on their findings, as well as on the required directions.

In cases of "hidden works", i.e. of works to be covered by the subsequent performance of other works or by the mounting of construction elements, upon the completion of such works the contractor and the employer are bound to jointly ascertain the existence of the completed portion and the compliance of the same with the legal provisions and the clauses of the agreement.

Should the employer fail to appear for ascertainment on the term set according to the law the contractor may prepare the ascertaining document for the work to be covered by itself.

3.4. Should circumstances arise that would prevent the performance of the works the parties shall act according to the provisions of the article 1877 in the Civil Code.

Should the contractor, during the fulfilment of the agreement, find mistakes or shortcomings on the designing works based on which the undertaking contract was concluded they are bound to immediately notify the employer and the designer about their findings, along with the remediation proposals, of course to the extent that the same fall within the area of their professional education. The contractor should also ask the employer to take the required actions.

Should the employer, having also taken advice from the designer, do not immediately notify about the actions taken in order to remove the reported mistakes or shortcomings, or should the actions be improper, the contractor may suspend the performance of the works.

---

[7] O.J. no. 12/24.01.1995.

[8] O.J. no. 193/28.07.2004.

[9] Please also refer to L. Stanciulescu, the quoted work, pp. 349-351.

3.5. Upon the completion of the work the parties should proceed with the acceptance of the construction under the conditions of the law.

According to the law the acceptance of construction works is done by two phases: provisional acceptance, and final acceptance.

The provisional acceptance is carried on upon the completion of the works. On the date of the acceptance minute the title over the work and the risk are transferred to the employer.

The final acceptance is carried on upon the expiry of the warranty period. According to the law the warranty periods against the defects of the work are those set by the special law.

3.6. The New Civil Code regulates the principles of the liability for the defects of the work (article 1879 in the Civil Code). According to the law the liability for the defects of the work is on the side of the contractor, the designer, and the engineer[10].

The architect or the engineer is exonerated from liability for the defects of the work if they prove that the same do not result from the deficiencies of the expert examinations or the plans they provided, and if appropriate from any lack of diligence in coordinating or supervising the works.

The contractor is exonerated from liability if they prove that the defects result from deficiencies of the expert examinations or of the plans of the architect or of the engineer chosen by the employer.

Should a subcontractor have also participated in the performance of the construction work the same shall be exonerated from liability if they prove that the defects result from the decisions of the contractor, or from the expert examinations or the plans of the architect or of the engineer.

The architect, the engineer or the subcontractor may also be exonerated from liability in the case where they prove that the defects of the work result from the decisions imposed by the employer in choosing the soil or the materials or in choosing the subcontractors, the experts, or the construction methods.

The exoneration from liability in such case does not operate when such defects, although they could have been foreseen during the performance of the work, were not notified to the employer. In such event the provisions of the article 1859 in the Civil Code regarding the consequences of the employer not taking the required actions shall remain applicable.

The term of the statute of limitation for the entailing of the liability for the defects of the work is the general term of the statute of limitation, of 3 years (article 2517 in the Civil Code).

The limitation term for the right to action for the apparent defects of the work starts elapsing since the date of the final acceptance or as appropriate since the date of the expiry of the term granted to the contractor under the final acceptance minute for the removing of the defects found (article 1880 in the Civil Code).

The limitation term for the right to action for the hidden defects of the work starts elapsing since the expiry of 3 years since the date of the final delivery or acceptance of the construction, except for the case where the defects were found before, when the limitation term shall start elapsing since the date of finding the defects (article 2531 paragraph 1 letter b in the Civil Code).

The limitation term for the right to action for the defects of the designing work starts elapsing at the same time as the limitation term of the right to action for the defects of the work performed by the contractor. There is excepted the case where the defects of the designing works were found before, in which event the limitation term shall start elapsing since the date of finding the same.

USAGES – THE LEGAL REGIME IN NEW CIVIL CODE

EMILIAN CIONGARU[*]

Abstract
In the broad sense, the concept of law is represented by totality of acts that are elaborated by competent state authorities and their purpose is legislating. There are juridical situations are outside the scope of regulation of legal norms and they are stipulated by the New Civil Code, namely the usages: which are defined, in the broad sense, as rules of conduct for a long time, born of social practice. If the law sanctioned any usage, by a rule of reference, giving them, as such obligatory legal power, they are sources of law and the legislator has provided, as is source of civil law, only usages which are in conformity to public order and morality. This problem there was no in the case of legal rules because, they themselves are created with the purpose of to generate the public order and morality. In the situations not covered by law, the usages have a greater force than that of the legal dispositions regarding similar situations, so the broad interpretation of the rules of civil law is made, in the cases which are not covered by the law, only if such an interpretation is not contrary to the usages. An analysis and understanding of the juridical status of usages representing: the customs and the local habits which is accepted by the members of that community as well as the professional uses, as rules of development of professional activities, may result in to perceive the legal force of their but also to reduce, on as much as possible, some potentials confusions of interpretation and application of the law.

Keywords: *legal rules, usages, public order, sources of civil law, legal regime.*

Introduction

Harmonization of the national legislation with European Union legislation is a continuous process and is aimed at ensuring compatibility of national rules with the European Union legal system, by modifying or completing national normative legal acts in accordance with the European norms, in this manner the European legal rules they become component part of national law.

The New Civil Code is the result of significant and profound transformation of Romanian society, in the context of development of the current European realities. In its content it is aimed the protection some the new social values: morals, cultural, scientific and economics and the legal norm of civil law have as its task, in equal measure, to exigencies which resulting from the commitments assumed by Romania as a member state of the European Union. This New civil Code, in its entirety, promotes the monistic conception of regulatory of private law relations in a single legal norm, systematizing and incorporating, in a single legal norm, all regulations relating to persons, family relations and commercial relations as well as international private law provisions, what they did, up to this moment, the subject of a separate legislation. The provisions of this fundamental legal norm of private law contains principles from new and modern regulation, which exists and in other legislations – rules of substantive law – rules and principles that can resist in time and also aspects related to the dynamics of social life, of existing realities and ever changing.

The sources of law that are enshrined in the The New Civil Code, art. 1, par. (1): "Are sources of civil law usages and general principles of law", regulates, for the first time, usages as the source of law. It is noteworthy that usages are not primary sources of law but, secondary sources in the sense that, only in the absence of legal rules, usages along with the principles of law are be taken as a source of law – par. (2). Same article, in par. (5), also provides that, „Interested party, must prove the existence and content of usage. Usages published in collections elaborated by entities or authorized

[*] PhD, Associate researcher, Institute of Legal Research „Acad. Andrei Radulescu" of the Romanian Academy, Bucharest, Romania, tel. +4.0722.98.45.89 (corresponding author: emil_ciongaru@yahoo.com).

bodies in this field is presumed to exist, until proven otherwise." Thus, usages, after the law, can be invoked and called upon to contribute to solving of a state of facts through solving a problem of law.

Paragraph (6), provides that, the „The purposes of this code usage, is the habit (customary law) and professional usages." The risk of this situation consists in that, at this moment, does not exist collections of usages and simple habit, the social behavior that is generated for a short time, to be mistaken for a custom, which represents a legal habit, for the long time and with a high repeatability and stability in time. The New civil Code[1], shaded a bit the rules that are applicable with usages, such as the example provided in article 1272 through which to be provide that a contract obliges not only at what you expressly provides, as well as to all the consequences which the law, custom or equity, to give them to the obligation, after its nature.

Codification of usages, as source of law, can give to litigants the possibility to supplement the arguments in to introduce request for judgment to the court, with the impression that the law gives him more than up to now and, the number of civil legal disputes to be higher. But, the legal regime of usages can be and the primary source of law when there are no legal rules in a particular case, the legislator is the one who give legal effect to usages in this sense.

Content

As a rule, the usages are the unwritten secondary formal sources[2] of the civil law and apply only in the absence of legal texts – the written sources of law, to regulate a specific legal situation. In the situation when exists and the law and the usages in a particular cause of resolved, then will be apply the law and if the text of the law makes reference to the usages, only then usages they become exclusively applicable. Because, the usages are the unwritten sources, they may be the subject of collections elaborated by the authorized institutions or by the entities in a particular geographic area. According to the New civil Code requirements that are necessary for the usages to become sources of civil law, are those that shall conform with public order but and with good morals[3] just like the legal rules.

The interested party in invocation of usages, need to prove their existence having the right to use any mode of prove. The means of administration or of prove of usages, could be: knowledge of usages by the courts, questioning of the involved parties in the cause of resolved, hearing of the witnesses, the expertise.

The legal rules and the usages, established rules of behavior but, the usages have a more limited scope than of the law, on one hand, because usages are concerned of a more restricted field of social relationships, and on the other hand, because just laws limited field of action of usages.

In cases where, a legal rule has its origin in a spontaneous situation, when its occurrence is not linked to a specialized official institution, but clearly originates from the social group, when the legal rule comes from a general and prolonged practice, from a constant habit, which is based on consent of the whole social group, which a considered as complying with the law, the custom or the juridical object is born.[4]

The custom, the oldest source of law, named in the past, *the earth habit*, because was born by repeating of a legal ideas by members of a community, in a significant number of successive individual cases, by creating some precedents[5] that were aimed, meeting the needs of the members and without causing an personal or collective injury.[6]

Thus, in order for a particular rule of habit to become customary, it must fulfill the following requirements: to have an uniform character, to be applied over and over again, to have a certain duration. The simple customs is not than a factual element, if they are not recognized to be a real law which can be claimed as a law accompanied by sanctions.

First, the custom, is based on concrete cases that preceded the so called precedents. Such cases have had to be consecrated, namely to be recognize the legal value, just as it it recognize the legal value of a law. In each of these concrete cases, the juridical rationality analyzes complex of juridical relationship which it compose and find that some repeats. In this way, is constitutes a general notion by identifying what is common in some concrete cases this is form, the general rule thus consecrated by the custom.

The customs represent a practice such entrenched so, people consider that by they exerts himself a positive law. In cases where, the custom is not consecrated by the courts but, is finds from repeated actions of public law institutions, the custom constitutes the usages.

Classification of the usages is done according to several criteria but, the most important are: the criterion of the scope into space of usages and the criterion of juridical force.

Classification, according to criterion of juridical force is most important because, the juridical force constitutes the defining element of their. According to this criterion, the usages can be:

- the normative usages (the legal usages, the usages of law), also called customs, in the doctrine of private and public international law;
- the conventional usages, also called interpretatives[7], completives or of fact, that have the value of contract rules.

Normative usages

The normative usages have the first two juridical characters common for all usages, with some particularities of interpretation, but have, as specific element, the character of a source of law. The normative usage (the custom) includes two essential elements[8]:

- an objective element, represented by the behavior which must be followed as a result of the existence of a particular social practices. This objective part of the normative usages – of the custom – is expressed by the formula: *longa, inveterate, diuturna consuetude* – old, continue, evident practice;
- a subjective element, the psychological element, consists in convincing subjects of law that the rule which is prescribed by that usual law (the custom) is obligatory and constitutes the law[9] to be respected (*opinio juris sive necesiitatis*), *opinio,* is belief that the behavior in question is juridical and *necesiitatis* assuming an obligation that derives from an alleged preexisting legal norm, already established.

The existence of the general belief of juridical obligation[10] is a necessary condition, but not sufficient, so that a usage to acquire the character of the legal rules. It is necessary to be fulfilled and a legal requirement, namely that the system of law which constitutes *lex causae,* in this case to recognize the normative force of these usages in sense of the New civil Code art.1, paragraph (2) „In cases not provided for by the law is applied usages and in their absence, the legal provisions regarding to the similar situations, and when there are no such provisions, the general principles of law", in conjunction with para. (3), „In the matters governed by law, the usages shall apply only to the extent that the law refers as expressly to these." The juridical role of normative usages is to determine the rights and obligations of parties, just like the law.

[10] G.Del Vecchio, *Lessons of legal philosophy*, trans.I.C. Dragan, (Bucharest: Europa Nova), 226-228.

According to the New civil Code, this role to may manifest in any of the following ways: to regulate relations of law yet unforeseen of law (*consuetudo praeter legem*) of to interpret or supplement the provisions of the law (*consuetudo secundum legem*).

In relation with the contract, considering that the source of authority of normative usages is not the will of the parties, the usages of which reference is made is impose contracting parties, even if were not accepted by they and even if they are not have known. The parties may however, to remove application of normative usages, either by their express will or by only tacitly, through the fact that stipulate in the contract clauses that are contrary to usages.

Some examples from the New Civil Code where the usages are invoked as a source of the law

In the New civil Code, the role of usages in forming of the contract is given by the section what provides the rules for consent, art. 1186, which, with regard to moment and place of conclusion of contract, provided that: paragraph (2) „Also, contract is considered concluded, when the addressee of the offer committeth an act or a conclusively fact, without notice to the offeror, if pursuant to offer, of the practices established between the parties, of the usages or according to nature of the business, the acceptance can be done in this way.

In this way, the legislator establishes an alternative time in which, according to some previous practices that have been settled between the parties or of some other usages exists between these, the acceptance of the contract can be done and in this way.

Another the legal regime of usages is given of art. 1189, with regard to, "The proposal addressed to some determined persons", through which a proposal of to contract is done, usually, to determined persons. There are however, offers which are made and to indeterminate persons – the goods with displayed prices, that are exhibited in the windows of shops. In this sense, the legislator establishes that, in the principle, a such proposal addressed to some undetermined persons, cannot be qualified as an offer but, depending on circumstances, *the request for the offer* or *the intention of negotiating*. Paragraph (2), establishes however that, propose to these undetermined persons have value of offer if „this is apparent from the law, from the usages or in there is no doubt, from the circumstances."

In case of the irrevocable offer, provided by art. 1191, the legislator invokes usages but and practices established between the parties, through paragraph (1), „The offer is irrevocable as soon as its author commits itself to maintain a certain period. The offer is also irrevocable when it can be considered thus under the agreement of the parties, of the practices established between these, of the negotiations, of the content of offer or of the usages.

The offer shall be considered acceptable under the conditions provided in art. 1196, through „silence or inaction of recipient of the offer" in these conditions in which result from provisions of law, from the simple will of the parties but, also and in the conditions in that results from „the practices established between they, from usages or from other circumstances."

Regarding another essential element of the contract, *the consent*, art. 1240, concerning „Forms of consent" provides that, the will may be expressed, verbally or in writing but also and suitable, of practices established between the parties or „of usages, leaves no doubt about the intention to produce corresponding legal effects."

For the purpose of distinguishing of an unmistakable intention of producing specific legal effects of the initial contract, the New Civil Code provides a series of factors of reference: the law, convention of parties, practices established between these, the usages. Listing of these factors of reference, suggest prioritizing, the first priority situating himself the law but, only in absence of the law, the others sources of law.

Article 1272 regarding, „The legal ways to complete of content of the contract", paragraph (1), a first legal way to complete the contract consists in references to practices established between

the parties, the usages, the law or the equity, representing the factors of reference with the various degrees and increasing of generality or objectivity.

- in the first place, are situated the practices established between the parties, representing the particular factor or subjective factor of reference, in order to complete the contract, specific of the parties from the contract, used in their partnership relations;
- secondly, is situated the usages, which represents a factor of reference with a first degree of generality or of objectivity, according to the field of activity in which it activates the parties.

Article 1494, the New civil Code, mentions the following ways for determining of the place of payment which dispose, among other things and that, in the absence of express clause, the place of payment shall be determined in accordance with practices established between parties or of usages to which they have acceded.

Article 1495, the New civil Code, establishes the general provisions pointing methods for determining the date of payment and, in their absence, the suppletive rule of immediate chargeability of obligations. In this sense, the payment must be made at the time when the obligation has matured, that has become exigible.[11] According to para. (1), the chargeability of obligation or the date of payment is, first, established between the parties by indicating of a execution time. In the absence of express clause, the date of payment may result from the interpretation of the contract, and if nor this modality not its proves, to be useful will resort to the practices established between parties, respectively to the usages.

Article 1667, provides measures for „The costs of teaching", in the sense that „In the absence of usages or of contrary stipulation, if the good must be transported from one place to another, the seller has to take care of shipping by the expense of buyer. The seller is released when teaching the goods to the carrier or to the shipper. Cost of transport are the responsibility of the buyer." So, in this article, the usages have the juridical regime of the principal source of the law because, the New civil Code refers explicitly to the usages.

In any contract of sale, the problem is of establishing ways of delivery, the transfer of risks and of distribution between the seller and the buyer of expenditure related of transport of goods (the expenses of the insurance of goods, the value of transportation, etc.).

Is difficult to resolve these formalities every time by inserting in the contract, of the detailed clauses, containing the regulation of all these issues. Therefore, the practice, devised a method to shorten the way up to end of the contract, by resorting to commercial terms what condenses in a form more possible simplified, the most usual situations.

The commercial usages have been originally, own of the maritime sales[12] and their meanings was different depending of the place, of the port (of sea or of river), or of the country. This fact created difficulties in terms of their knowledge of the parties, who did not know exactly extent of their obligations, since the usages knew the varied acceptances depending on port in which were applied. For example, a sale FOB, involves in a port the obligation of the seller to load the goods on board of the ship, while in another port, it was necessary only to bring the goods to the quay, near the ship. Often these differences were uncomfortable and were sources of disagreement between the parties, being extremely difficult to determine, which was the original intention of the parties.

In order to remove these inconveniences, International Chamber of Commerce from Paris, beginning with 1920 year, had the initiative and has undertaken codification of most commonly used commercial terms. The first coding was made in 1936, was revised in 1953, completed in 1967, 1976, 1980 and 1990. The latest version dating from 1999 being published in 2000 under the title of *Incoterms 2000*.

[11] C.Statescu, C.Birsan, *Civil Law. The general theory of obligations*, (Bucharest: Hamangiu, 2008), 315.

[12] G. Buta, *New Civil Code and unity of private law*, in the volume of the New civil Code. Comments, Third Edition, revised and enlarged, (Bucharest: Legal Universe, 2011), 65.

Incoterms[13], contain a preamble, showing that the provisions of these rules does not impose to the will of the parties (so, they have not binding), the partners having the freedom to insert in the contents of the special contract, the adopted provisions. The two parties may refer to Incoterms as the basis of their contract but, may provide under the contract, the certain changes or additions depending on nature of the goods. Applying of Incoterms is optional is dependent on the will of the parties.

Adoption, by the parties, of the conditions of delivery, regulated by these usages not requires other formalities or other specifications than the simple registration in the contract of the international sales of the chosen clause, followed by the shortened name of the rule as: FOB[14] - Incoterms 2000; C.I.F.[15] - Incoterms 2000; F.A.S.[16] - Incoterms 1990.

Conventional usages

The conventional usages, have to their turn, the first two basic elements of all usages and constitutes a source of law in the conditions in which fulfill those conditions of repeatability and some older between the business partners.[17]

The legal force of the conventional usages is that of a contractual clause. The pursuant of authority of these usages is the agreement of the will. Applying of these usages shall be placed on the area of the freedom principle of the will of the parties.

The agreement on the application of the conventional usages may be, express or tacit:

- the most frequent situation is that of the express agreement of the parties, expressed by clause of reference provided in the contract. But, there are fewer cases in which by the contractual clause, the parties send to *the current usages* in this field of business. The sending is done, usually, to codified usages, either by neutral organisms or by the one of the parties, through the general conditions, the model contracts, the framework contracts, etc. In these cases, the usages fixed thus, are received contractually, with role of completing the content of contract;
- the usages can be incorporated contractually, applying as a contractual clause, and through tacit or implied will of the parties.

In some cases, the tacit character of manifestation of the will be deducted from some indices, which can be intrinsic or extrinsic of the contract. It is, in this case, of acts or of facts outside of the contract, for example, the reference to an usage in the framework of an additional act, from which is be concluded that the parties wished to implement the usages and to the principal contract. In other cases, the usages that fulfill some conditions are considerate, by the law, as being applicable tacitly in the contract, even in the absence of some indication of will of the parties.[18] The role of conventional usages is to determine specifically the rights and the obligations of the parties.

---

[13] *INCOTERMS* is an acronym for *IN*ternational *CO*mmercial *TERMS* which means *Terms of International Trade.*

[14] *Incoterms 2010, ICC publication 715 – Free On Board* (named port of shipment) – The seller must load the goods on board the vessel nominated by the buyer. Cost and risk are divided when the goods are actually on board of the vessel. The seller must clear the goods for export. The term is applicable for maritime and inland waterway transport only but NOT for multimodal sea transport in containers. The buyer must instruct the seller the details of the vessel and the port where the goods are to be loaded, and there is no reference to, or provision for, the use of a carrier or forwarder. This term has been greatly misused over the last three decades ever since Incoterms 1980 explained that FCA should be used for container shipments.

[15] *Incoterms 2010, ICC publication 715 – Cost, Insurance and Freight* (named port of destination). Exactly the same as CFR except that the seller must in addition procure and pay for the insurance. Maritime transport only.

[16] *Free Alongside Ship* (named port of shipment) The seller must place the goods alongside the ship at the named port. The seller must clear the goods for export. Suitable only for maritime transport but NOT for multimodal sea transport in containers. This term is typically used for heavy-lift or bulk cargo.

[17] D.Mazilu, *International Trade Law, General Part*, Ed. Lumina Lex, Bucharest, 1999, p.133-143.

[18] *The Vienna Convention* of 1980, Article 9, paragraph 2.

Assimilation of the conventional usages, in terms of their legal force, with the contractual clauses, arises a problem to the report of this usages with the law respectively with the contracts. In this respect, it is evident that the parties may exclude application of the conventional usages by their express or tacit will. This solution is explained by the fact that the role of the usages is to interpret and to complete the agreement of the will between the parties.

Professional usages

„The professional usages, are those rules which governing relations between the members of a profession or, where appropriate, between the members and the customers, during exercise of the profession." [19] The professional usages have been introduced, as the sources of civil law, because the New civil Code „it applies to the relationship between the professionals, as well as relations between they and any other issues of the civil law." The professionals are defined as „... all those who operating a company." [20]

Nor the New civil Code, nor the law of its implementing, does not contain a synthetic definition of the professional or the explicit criteria of establishing or of identification of this in relation of other participants to the civil legal relations. From the systematization and the spirit of law resulting, however that, the professional is defined by reference to the activities of operating of a company. The law of implementing of the New civil Code, no. 71/2011, art. 8, lists more categories of the professionals, including on *the trader* who is renamed by art. 6 of same law in *the professional*.

The professionals are usually[21]:

- *the physical persons,* such as: the traders, the authorized physical persons, the family or the individual entrepreneurs and the persons who exercise the liberal or the regulated professions;
- *the legal entities,* such as: the commercial companies, the cooperative organizations, the autonomes regies, the civil societies with legal personality, the groups of economic interests;
- *the public institutions,* who operates a company can be the professionals for the purposes of the New civil Code, regardless of whether obtain or not, the profit.[22] This category includes: the hospitals, the universities, the authorities of regulatory of supervision and of control;
- the holders of a company may be, however, even the entities without legal personality such as the simple societies, the civil societies without legal personality, governed by the special laws (the funds of pensions, the investment funds, the law firms, the notaries, the legal executors or the practitioners of insolvency) and the groups of companies because they too operates a company, and the operation of company can be an exercise of one or of more persons, united or in the associations with legal personality, or in yhe collectivities or the entities without legal personality.

If, the law does not provide, shall apply the usages (the habit or the custom and the professional usage). In their category, the professional usages are priority, especially since they are usually „coded" ie, united in the collections elaborated of the ability organizations, the reason for which they are presumed to exist, while the customs must proved by the party who them invokes.

Conclusions

In conclusion, moment of formation of a usage is found even in the agreement of the will of partners who have imagined that solution. Retrieving of this solution and of other partners and its observance by them in conducting of the legal relationship resulted to formation in time of a practice

---

[19] G.Boroi and C.A.Adreescu, *Course of civil law. General part - according to the New civil Code*, (Bucharest: Hamangiu, 2011), 8.

[20] Art. 3, *The New civil Code*.

[21] C.Florescu, *Romanian Pandectes nr.10/2011, Concepts and trends in relation with the company law*, (Bucharest: Wolters Kluwer, 2011).

[22] S.D.Carpenaru, *Commercial law under the conditions of the New Civil Code*, in the Judicial Courier nr.10/2010, (Bucharest, Judicial Courier, 2010), 543-546.

in this sense and the constancy with which that practice was followed by the participants from the locality or the geographical area where it was formed had as a result transformation of the initial solution in the rule of conduct which by compliance and enforcement repeated in the practice came into consciousness of the traders and has become by virtue of the tradition of the respect for all participants to the trade. By their character of generality and of impersonality, the usages approaches of the legal norm but in contrast to this which is generated and ensured by the state, the usages are the realization of the participants themselves to the specific legal relations. The usages, representing the most direct expression of the activity of the participants in the national and the international business, have a great capacity to adapt to the new circumstances arising in the different areas of the business, their role is just that, of to complete the eventually legislative and contractual gaps.

Identification, inventorying and codification of the usages, will be a challenge for all business partners but also and for the adepts of the science of the law, fair in order to the equitable realization of a justice of high quality, capable of to defend the legal order, the part of the social order.

"AGREEMENTS", "DECISIONS" AND "CONCERTED PRACTICES": KEY CONCEPTS IN THE ANALYSIS OF ANTICOMPETITIVE AGREEMENTS

CRISTINA CUCU*

Abstract

In their economic activity, undertakings conclude many agreements between them. But agreements between undertakings which can distort the competition -anticompetitive agreements- are prohibited. The Romanian and EU law prohibit "all agreements between undertakings, decisions by associations of undertakings and concerted practices which have as their object or effect the prevention, restriction or distortion of competition". However, the terms "agreements", "decisions" or "concerted practices" are nowhere defined in the EU Treaties or in the Romanian law. These terms are key concepts in the analysis of anticompetitive agreements which can distort the competition. In the lack of a legal definition, these concepts have generated a complex body of jurisprudence, which has to be identified. The analysis of these key concepts necessarily entails the conceptual delimitation of the notions. On this purpose, the relevant legal provisions will be identified in the Romanian and EU law, as well as the decisions of the European Court of Justice in this matter. The present paper intends to present the conceptual evolution of the analysed notions, paying special attention to concerted practices and to parallel behaviour in price fixing on the market.

Keywords*: anticompetitive agreements, agreements between undertakings, decisions by associations of undertakings, concerted practices, parallel behaviour.*

Introduction

The purpose of this paper is the analysis of the notions "agreements", "decisions" and "concerted practices", which represent key concepts in the analysis of the anti-competitive agreements which can distort the competition. The desire to maintain themselves on a particular market, at a higher level of profitability or at a reasonable level at least, can lead the undertakings to adopt an anticompetitive behaviour more easily. This may result from the existence of anticompetitive agreements and concerted practices, especially in light of recent economic crises. Agreements between undertakings which can distort the competition -anticompetitive agreements- are prohibited. The analysis of any anticompetitive practice begins necessarily with the identification of the conduct of undertaking and the verification whether or not the conduct at hand represents an "anticompetitive agreement" to which the competition rules address.

The Romanian and EU law prohibit all "agreements between undertakings", "decisions by associations of undertakings" and "concerted practice" which have as their object or effect the prevention, restriction or distortion of competition. The study of these notions is important because they are key concept in the analysis of anticompetitive agreements which restrict natural competition. Also, these notions are nowhere defined in the EU Treaties or in the Romanian law; as such, the concepts has generated a complex body of jurisprudence, which has to be identified.

With the purpose of determining the meaning of anticompetitive agreements, we will analyse the special significance of each of these three notions, "agreements", "decisions by associations of undertakings" and "concerted practices" in the context of competition law, we will identify and analyse the main normative dispositions with regard to these aspects, both at national and European levels, and we will present many jurisprudential solutions of the European Law Court, from which

* Ph.D. candidate, Law Faculty, "Nicolae Titulescu" University, Bucharest (e-mail: cristinaeremia@yahoo.com).

are resulted the criteria that have to be taken into consideration for the identification of anticompetitive agreements.

In comparison with other already existent specialty literature on competition law, the present paper intends to present the conceptual evolution of the analysed notions, paying special attention to concerted practices and to parallel behaviour in price fixing on the market.

Content

1. The notion of "anticompetitive agreements".

The existence of a competitive and undistorted milieu is a fundamental condition for the existence of a functional market economy. Thus, it is necessary to protect the market against acts or facts that could lead to the prevention, restriction or distortion of competition. Among these, the anticompetitive practices of undertakings are especially harmful, irrespective of the way in which they take place: anticompetitive agreements or the abuse of dominant position on a certain market.

There are two main types of anticompetitive practices: the anticompetitive agreements concluded between two or more undertakings in order to coordinate their market behaviour and the undertaking's abuse of dominant position on a certain relevant market. The object of the present analysis is represented by the anticompetitive agreements within the activity of undertakings as the main form of anticompetitive practice. In their economic activities, undertakings conclude naturally a large number of agreements between them, without becoming illicit in this manner. However, those anticompetitive agreements within the activity of undertakings whose object or effect is the prevention, restriction or distortion of competition are prohibited. In these circumstances, it is necessary to analyze the notion of "anticompetitive agreement" in order to determine whether or not the agreements concluded in the activity of undertakings become illicit from a competitive point of view. In order to become competitively illicit, the agreements between undertakings must regard a coordination of the undertaking's behaviour on the market, to the detriment of free competition.

In the European Union Law, The Treaty on the Functioning of the European Union (EU Treaties/TFEU)[1], contains the primary legal regulation with regard to competition, which applies to undertakings and associations of undertakings. According to article 101 TFEU, "The following shall be prohibited as incompatible with the internal market: all agreements between undertakings, decisions by associations of undertakings and concerted practices which may affect trade between Member States and which have as their object or effect the prevention, restriction or distortion of competition within the internal market".

Similarly, in the Romanian Law, the Competition Law no. 21/1996[2] prohibits "any agreements between undertakings or associations of undertakings, any decisions by associations of undertakings and any concerted practices, which have as their object or may have as their effect the restriction, prevention or distortion of competition on the Romanian market or on a part of it".

As a result of the abovementioned regulatory provisions, the European and national legislation prohibit, without expressly defining: agreements between undertakings, decisions of associations of undertakings and concerted practices. These are forms in which one can express the anticompetitive behaviour of undertakings prohibited by art. 101 paragraph 1 TFEU and art. 5 alignment (1) of Law no. 21/1996 which we will designate in a general concept of *anticompetitive agreement* that includes any and all forms of expression, whether it is an agreement/understanding between undertakings, a decision of the association of undertakings or a concerted practice of two or more undertakings.

[1] Consolidated versions of the Treaty on European Union and the Treaty on the Functioning of the European Union, Official Journal of the European Union C 83/1, 30.3.2010. *Brevitas causa*, throughout the present study, it will be indicate by the abbreviation TFEU.

[2] Official Gazette no. 88/30.04.1996.

Moreover, from the same regulatory provisions revealed we may conclude that an anticompetitive agreement is prohibited if the following conditions are met: i) the existence of an anticompetitive agreement between undertakings, whether it is an "agreement between undertakings", a "decision of an association of undertakings" or a "concerted practice"; ii) the anticompetitive agreement brings prejudice to the competition: through its object or its effect, the anticompetitive agreement hinders, restricts or distorts the competition; iii) if the anticompetitive agreement reached distorts the competition in the internal market thus affecting trade between Member States, the provisions of the TFEU become applicable.

Concluding, the **anticompetitive agreements** are *any agreements between two or more undertakings, regardless of their form of expression, concluded in order to coordinate their market behaviour and having as their object or effect the prevention, restriction or distortion of competition*.

2. Forms of expression of anticompetitive agreements.

The anticompetitive agreements may take various forms:

a) Depending on the undertakings' market level, whether or not they are competing with each other, we distinguish between: horizontal anticompetitive agreements and vertical anticompetitive agreements.

The *horizontal anticompetitive agreements* are agreements concluded between undertakings that operate on the same market level and compete with each other, for example the agreements between two manufacturers or two distributors.

The *vertical anticompetitive agreements* are agreements concluded between undertakings that operate on different levels of the manufacture - distribution chain and do not compete with each other.

b) Depending on the materialization of the agreement of the involved undertakings, we distinguish between express anticompetitive agreements and tacit anticompetitive agreements.

The *express anticompetitive agreements* are proper agreements concluded between undertakings for the purpose of meeting their expression of will, irrespective of their way to externalize the expression of will (it is irrelevant whether or not the expression of will is materialized through a document *ad probationem*).

The *tacit anticompetitive agreements* represent a coordination of the prohibited behaviour, concluded between two or more undertakings, such practice being initiated by an undertaking and subsequently followed precisely by another undertaking.

c) Other forms of expression of anticompetitive agreements.

No matter if they are express/tacit or horizontal/vertical anticompetitive agreements, the anticompetitive agreements may be represented in 3 main forms of expression: *proper agreements between undertakings, decisions of associations of undertakings or concerted practices.* Since they are fundamental concepts in the analysis of anticompetitive agreements, they will be specifically described below.

3. Conceptual distinctions between the forms of expression of the anticompetitive agreement.

The analysis of any anticompetitive practices begins necessarily with the identification of the conduct of undertaking and the verification whether or not the conduct at hand represents an "anticompetitive agreement" to which the competition rules address.

Both the European and the national legislators govern three main forms of expression of an anticompetitive agreement – "agreements between undertakings", "decisions of associations of undertakings" and "concerted practice of undertakings" – without, however, defining them. An extensive jurisprudence of the European Courts allows, however, the observation of the main definitive notes of these concepts and thus the determination of the scope of the interdiction governed by art. 101 paragraph 1 TFEU and art. 5 of Law no. 21/1996.

According to a general principle formulated in the jurisprudence of the European Courts, any undertaking must determine autonomously the behaviour it intends to adopt on the market[3]. Given this fact, the European Courts have defined the "agreements", "decisions" and "concerted practices" as European law concepts which allow a differentiation between the unilateral behaviour of an undertaking and the coordination of behaviours or the collusions between undertakings[4]. The unilateral behaviour falls under article 102 TFEU and art. 6 of Law no. 21/1996 on the abuse of dominant position.

The type of coordination of behaviours or collusion between undertakings that falls under article 101/1 TFEU consists in the situation in which at least one undertaking binds itself in relation with another undertaking to adopt a certain behaviour on the market or in which, following the relations between the undertakings, any uncertainty concerning their market behaviour is removed or at least significantly reduced[5]. The coordination does not have to be necessarily express but it may also be tacit. In order to be able to consider that an understanding has been concluded by tacit consent, an undertaking must expressly or tacitly invite another undertaking to achieve a common goal[6].

The forms of manifestation of an anticompetitive agreement can be extremely diverse. As suggestively underlined in the doctrine, the only important question is whether or not more undertakings had a common will to behave in a manner that would bring prejudice to competition[7]. In this context, we distinguish the main forms of expression of an anticompetitive agreement:

3.1. "Agreement between undertakings".

The concept of "agreement between undertakings" is not legally defined in the European law. In the Romanian law, article 5 of Law no. 21/1996 only prohibits it, however without defining it by correlation with article 49 of the same Law[8]. It appears that it regards "any commitments, conventions or contractual clauses that relate to an anticompetitive practice".

The European case law interprets extensively the analyzed concept. Thus, it includes any type of agreement, written or oral, conditional or gentlemen's agreement, the concept of understanding being centered around the existence of an expression of will between at least two parties, whereas the form in which it manifests itself is not important[9].

Considering the multitude of ways of expression of an agreement between undertakings, in the analysis performed on this concept we distinguish between:

3.1.1. Proper agreements.

An initial definition must be made in the analysis performed: any way to express an agreement between undertakings must be analyzed only if it has an anticompetitive object or effect. In this sense, the doctrine rightfully noted that the term of agreement between undertakings "involves in the competition law a more accurate content than the one in the common law (that includes any

[3] As an example, we will cite the Anic Partecipazioni Case, C-49/92, consideration 116; The Suiker Unie joined cases, C- 40- 48/73, consideration 173. This case, like the other to which we refer throughout this paperwork is published on the website of the European Union Court of Justice, *www.curia.eu.int*.

[5] Cimenteries joined cases CBR, T-25/95, considerations 1849 and 1852; British Sugar joined cases et al., T-202/98, considerations 58 – 60.

[6] Bundesverband der Arzneimittel-Importeure joined cases, C-2/01 and C-3/01, consideration 102.

[7] André Decocq, Georges Decocq, *Droit de la concurrence*, 4th edition, L.G.D.J., 2010, p. 305.

[8] According to art. 49 of Law no. 21/1996, "Any agreements or decisions prohibited by articles 5 and 6 herein, as well as by articles 101 and 102 in the Treaty on the Functioning of the European Union are null and void, i.e. any agreements, conventions or contract provisions concerning anticompetitive practices, as well as any acts which violate the provisions under article 9 herein".

[9] Bayer vs. Commission Case, T-41/1996.

agreement regardless of its purpose) and can only regard the agreements whose object or effect would be anticompetitive"[10] and that "therefore are kept in view the condemnable agreements that affect the freedom of the relevant market[11].

As regards the proper agreements, the Court of Justice of the European Union[12] set out a general formula, stating that "in order for art. 101/1 TFEU to be effective, it is sufficient for the agreement to be the parties' expression of will, without the need for it to constitute a valid and binding contract according to the national law"[13] and then underlined that "in order to have an agreement, it is sufficient for undertakings to have expressed their joint will to behave in a certain determined way on the market"[14]. The contract must not necessarily be concluded in writing[15].

Therefore we may conclude that a *proper agreement* represents a *contract* in the meaning of the Civil Code[16], materialized or not ad probationem in a document, in whole or in part (one or more contractual clauses) through which undertakings coordinate their behaviour on the market so as to restrict the competition.

Regardless of the form. The agreements concluded may be bi/multilateral and may be in any *form*: sale-purchase, rent, concession, memorandum of association, etc. Their common denominator is the monopolistic purpose pursued by the concerned undertakings[17].

Regardless of the nature of the contract in which the agreement is stated. Pragmatism - the essence of competition law – implies that the *apparent nature* of the contract must not be taken into account. Can therefore be qualified as proper agreements the statute of a company[18], the shareholders' pacts[19], an agreement on intellectual property rights[20].

The apparent nature of the contract does not matter. Thus, the convention on fixing the port services rates in the port of Constanţa, sanctioned by the Competition Council (vertical and horizontal agreements had been concluded between several manufacturers of chemical fertilizers and several service providers), was called "negotiation protocol"[21].

The Court of Justice held that an anticompetitive agreement can be inserted in a transaction, stating that "prohibiting the agreements between undertakings, the Treaty makes no distinction between agreements whose object is to end a dispute and agreements aimed at other purposes"[22].

Regardless of the validity of the agreement. Regarding the validity of the agreement between undertakings (of course, apart from its incompatibility with the competition rules), the Court underlined that it is not necessary for the parties' expression of will to represent a valid contract according to the national law[23]. In this respect, also the European Commission explained that "in a

secret agreement, the parties do not expect their collusive arrangement to have contractual force and no enforcement procedure is required, as a civil contract would have"[24].

3.1.2. Apparently unilateral agreements

The general framework of the business relationships between two or more undertakings may confer to a unilateral document, by its content and form, the features of a bi/multilateral agreement. This is the case of an apparently unilateral decision of an undertaking to which another undertaking (generally, part of the distribution network of the first) shall conform its behaviour. Since the conditions set by the issuing undertaking are accepted, usually in a tacit manner (however being put into practice) by the recipient undertakings, we may speak about an expression of will of the parties, so that in reality, there is a genuine anticompetitive agreement, subjected to the provisions of art. 101 TFEU and art. 5 of Law no. 21/1996. The distinction between agreements and unilateral behaviours is important to be made, because agreements fall under art. 101 TFEU, while unilateral behaviours are regulated by art. 102 TFEU.

The more common examples of apparently unilateral agreements met in practice are the documents (letters, circulars, invoices, invitations, etc.) addressed by a manufacturer to its distributors, containing various "directions" concerning the market behaviour, often tacitly accepted by its recipients and which were classified as agreements in the sense of art. 101 TFEU, such as: a circular addressed by Ford - Germany to its resellers, by which it informed them to no longer accept orders for right hand drive vehicles (to be sold in the United Kingdom)[25]; an invoice addressed by Sandoz to its distributors which had printed overleaf the annotation "prohibited for export"[26]; the "invitation" addressed by BMW to its distributors to stop delivering vehicles to independent leasing companies[27].

We may therefore conclude, based on a constant European case-law[28], that if we can demonstrate the express or tacit acceptance by the other parties of the measures adopted or imposed in an apparently unilateral way by an undertaking, an apparently unilateral behaviour of an undertaking in the contractual relations with its distributors can form the basis of an agreement between undertakings within the meaning of art. 101/1 TFEU. It is however essential to demonstrate the express or tacit accord of the addressee undertakings regarding the behaviour proposed by the issuing undertaking[29].

3.1.3. Informal agreements; gentlemen's agreements.

In order to have an anticompetitive agreement, it is not necessary for it to be legally binding under the applicable rules of the national civil law. What matters is that the agreement represents the parties' expression of will, under which they held themselves responsible. Consequently, simple moral commitments, promises, simple mission statements can therefore be regarded as agreements.

Both the doctrine[30] and the jurisprudence[31] acknowledged to the commitments of honour, *the gentlemen's agreements*, the features of anticompetitive agreements.

[31] The Quinine Cartel Case, C- 41, 44 and 45/69.

The term *gentlemen's agreements* (Anglo-Saxon specific term) designates an informal agreement, whether or not materialized in a document, between two or more parties, whose essence is that the fulfillment of the obligations assumed is based on the honour of the parties and not on the coercive force of the law.

The integration of the agreements of honour in the concept of anticompetitive agreement was justified in doctrine by the fact that every legal system governing the anticompetitive activity must have provisions to sanction the less formal types of agreements. If competition rules would work only when an express, official agreement is concluded then they would have little practical utility, since the undertakings will try to achieve their anticompetitive goals through less formal means[32].

A typical example of sanctionable agreement of honour was illustrated in the Quinine Cartel Case. A Dutch company manufacturing chemical, pharmaceutical and related products signed with other European manufacturers of such products an export arrangement on the price fixing and market allocation, which affected the trade with non-member states. They also concluded a gentlemen's agreement which extended the arrangement to sales within the European internal market and the parties agreed that the breach of the agreement represents, ipso facto, a breach of the export arrangement. The Court held the violation of the competition rules by the gentlemen's agreement concluded according to which the manufacturers were protecting their own national market and were restricting the competition within the internal market. The assertion that, in fact, the gentlemen's agreement ceased has been removed, because the analysis of the parties' behaviour demonstrated that they have complied with their agreement (even if it was informal)[33].

Consequently, informal agreements can be sanctioned under art. 101 TFEU and the mere fact that the parties claim to have abolished them will not be considered determinant. It is necessary to carefully analyze the facts in order to establish if it was plausible, in economic terms, for the market behaviour to be achieved in the absence of the secret agreement.

To the same effect, it was decided that informal agreements can be classified as anticompetitive agreements even if they are not compulsory by their nature and the absence of formal measures to monitor the implementation does not necessarily affect the gravity of the violation[34].

Concluding, we can remark that an "agreement between undertakings" means the joint expression of will between two or more undertakings through which they coordinate their market behaviour to the detriment of competition, regardless of the form of the joint expression of will, the nature of the contract in which the joint expression of will is included or the validity of the contract.

3.2. "Decision by association of undertakings".

The association of undertakings is a group carried into effect on professional criteria, of more undertakings that operate on the same relevant market, while its members keep their behavioural autonomy. The European case law held that a professional group will represent an association of undertakings if it adopts rules that are the expression of will of the representatives of members of a profession and that aim to obtain a specific behaviour from the members of the said profession within their business activity[35].

Bringing together undertakings under an associative form in itself is not prohibited by law. However, when, through the decisions adopted by the association of undertakings, the same restricts the competition, this behaviour falls under the rules of competition and is prohibited.

"The decision by association of undertakings" is one of the forms of expression of an anticompetitive agreement. As ensued from the provisions of art. 101 TFEU and art. 5 of Law no.

[34] Henbach vs. Commission Case, T-64/02.

[35] Wouters Case (J.C.J. Wouters, J. W. Savelbergh and PRICE Waterhouse), C- 309/99, the Decision of the Court of 19.02.2001regarding the Netherlands Bar Association, par. 64.

21/1996, *the decision by association of undertakings represents* any decision of the governing body of an association of undertakings whose object or effect is the restriction of competition. In order to have this object or effect, the said decision should have the power to impose certain behaviours to the association members in their economic activity on the market. The way in which the said decision is formally presented has no relevance and the title or apparent nature of the document is also irrelevant.

If the decision of the association is meant to impose upon its members a certain economic behaviour on the market, it represents a decision prohibited by the rules of competition law, even if formally it takes the form of a simple recommendation, with non-binding features[36]. The decisions of the association should guide the behaviours of its members as an understanding between undertakings[37].

The decisions by associations of undertakings may take various *forms*, such as directives, internal regulations, circulars, etc., which the adherent undertakings apply effectively, complying with the provision sent from the center[38]. Since such decisions (regardless of their name: decisions, protocols, minutes, etc.) of the governing body are mandatory for all the association members, we are virtually reaching a similar result to that generated by a proper agreement. The anticompetitive threat is equally serious, which explains the legal assimilation of decisions with the monopolistic agreements[39].

The foreign doctrine stated that the decision by association of undertakings may be also represented by the association's *articles of incorporation*[40]. The Romanian literature held to the contrary, that the monopolistic decision adopted by the governing body of an association of undertakings must be adopted during its activity, and not before its coming into existence; the decision is issued during the activity of the association of undertakings and should not be confused with the articles of incorporation itself, because if the articles of incorporation would have monopolistic features, it would represent a proper agreement[41].

In my opinion, the articles of incorporation of an association of undertakings may represent both a proper agreement (in the relationships between the undertakings that form the association) and a decision by association of undertakings (towards third party undertakings wishing to subsequently join the association).

In the European Union case-law, the concept of *decision by associations of undertakings* has been broadly interpreted.

A *regulation* such as the one adopted by the Netherlands Bar Association concerning the collaboration between lawyers and other liberal professions was regarded as representing a decision by an association of undertakings[42].

The *resolutions* adopted at a meeting of the association or the *recommendations* of an association may constitute decisions of the association of undertakings when they indicate the decision of the said association to coordinate the behaviour of its members[43]. An act qualified as recommendation can be regarded as violating the provisions of art. 101 of the Treaty, whatever the

legal status of this act, if it constitutes the expression of will of the association of economic agents to coordinate its members' behaviour on the market[44].

The *binding* decisions or resolutions of the Board of Directors, of the association or the rules belonging to the association's President that limit to a certain extent the commercial freedom of the members represent decisions by an association in the meaning of the competition law.

Moreover, a *recommendation* of an association of undertakings may constitute a decision of the association when, regardless of its legal status, it is an expression of its policy to coordinate the behaviour of its members[45]. Even if the *recommendation is not binding or it has not been fully applied*, it may constitute a decision of an association and will be prohibited if, in fact, its purpose was to determine, or was able to have the effect of determining the behaviour of its members. The non-binding recommendation represents a decision in the meaning under review, if it is implemented by the members of the association[46].

The European courts have ruled that a recommendation of the association of water suppliers addressed to its members, by which they should not have connected "unauthorized" applications (without a conformity tag provided by another association) to the main system, represents a decision capable to restrict competition[47].

In another case[48], the Commission found that the practice of the association to prepare and forward recommended rates to its members falls under the Treaty. Thus, while it is normal for an association/organization to offer assistance to its members, it must not exert any direct or indirect influence over the competition between members, particularly by sending rates applicable to all undertakings, regardless of the cost structure of each of them. An association's communication of recommended rates is a practice likely to determine the involved undertakings to align their own rates, regardless of their costs. Such method determines the undertakings that obtain reduced costs to drop the prices, thus creating an artificial advantage for those undertakings that do not have control over production costs. According to the decision of the European Commission in this case, a recommendation of an association on the application by its members of certain rates is anticompetitive if the following conditions are met: the association members have a common interest in influencing the market by increasing the prices; the nature of the recommendation, which, although described as non-binding, highlights, in binding terms, a collective increase of the rates; the association's statute allows it to coordinate the activity of its members.

Nationally, the Competition Council assessed that the decision of the Board of Directors of the Romanian Grain Storage Merchants Association represents a decision by an association of undertakings, having the object to influence the competitive behaviour of its members and to restrict the competition on the grain storage market in the South - South-East and West of Romania, by communicating certain rates to be applied by its members[49].

Furthermore, a decision adopted by the Board of Directors of the Dental Technicians National Association establishing certain reference rates for dental prosthetic works and their publication in the Association's journal, was regarded as representing a decision by an association of undertakings. It was noted that the recommended rates, even if classified by the association as reference rates, had as an object the coordination within the relevant market of the economic behaviour of dental technicians. And the publication of reference rates is likely to affect the competition on the dental

[48] The Decision of the Commission published in OJ no. L 181/28 of 1996.

[49] The Decision of the Competition Council no. 63 of 7 December 2009.

prosthetics market because it allows the players of this market to anticipate with a high degree of certainty the pricing strategy of their competitors[50].

Likewise, it was determined that the decision of the management and governing executives of the Body of Expert and Licensed Accountants of Romania (CECCAR) to adopt a Regulation setting out in mandatory terms virtually all the professional fees and its publication in the Body's journals and, starting with 2009 in the Official Gazette of Romania, part I, reflects their decision to coordinate the behaviour of CECCAR members in conformity with the provisions of the Regulation and represents a decision by association of undertakings within the meaning of art. 5 alignment (1) of the Law and art. 101 of the Treaty. It was held that, although CECCAR argues that the decision to adopt this Regulation represents a punctual work required by its members as a direction in order not to deviate from the quality standards and to protect on these lines the customers, in reality the Regulation represents more than a guiding methodology for setting the fees, its adoption decision being taken with the purpose of influencing the commercial behaviour of its members and thus falling under art. 5 alignment (1) and art. 101 of the Treaty[51].

Concluding, the "decision by association of undertakings" means any decision: i) originating from the governing body of the association and having an anticompetitive object or effect; ii) regardless of the form it takes and the apparent nature of the act (it may be a regulation, circular, directive, recommendation, protocol, minute, etc.); iii) which is intended to require from its members a certain market economic behaviour; iv) if it is not binding and if it does not have as object the restriction of the competition, it is reprehensible if actually implemented by the associated undertakings because only this way will be fulfilled the requirement that the decision of the association of undertakings must have the effect of restricting competition.

3.3. "Concerted practice"

3.3.1. Concept. The concept of "concerted practice" has its origins in the American antitrust law, section 1 of Sheman Act using the concept of "conspiracy", the name being afterwards widespread as "concerted actions". The concept was taken over by the European legislation and thus is also found in the Romanian law. The term "arrangements", with a similar meaning, is also found in the English law, in the UK Restrictive Trade Practice Act.

Neither the Treaty on the Functioning of the European Union nor Law no. 21/1996 defines the concept of concerted practice. Strictly etymologically, the concerted practice suggests a conscious and deliberate alignment of undertakings to a certain market behaviour.

The scope of the concept has been established in the European Union case-law. The analysis of the concept has its onset in two famous cases, called the "dyestuffs matter" and "European sugar industry", an interpretation that settled and was afterwards constant in the subsequent decisions.

In the Dyestuffs matter case[52], the Court defined the concerted practice as representing *a form of coordination between undertakings that, without reaching the level at which a proper agreement would have been concluded, knowingly substitutes the practical cooperation to the risks of competition*.

In the European sugar industry case[53], the CJEU defined the concerted practice in the same way and concurrently stressed the main principle of the European competition concept: any undertaking must determine autonomously its policy on the market, including the choice of addressees of its own offers and sales. In these circumstances, the Court concluded that that mentioned principle rigorously opposes any direct or indirect contact between undertakings, having

[50] The Decision of the Competition Council no. 19 of 26 March 2008.
[51] The Decision of the Competition Council no. 47 of 2 November 2010.
[52] Joined cases C- 48-49 and 57/69 I.C.I. vs. Commission (Dyestuffs), Decision CJCE of 14 July 1972.
[53] Suiker Unie Case, C-40-48, Decision of 16 February 1975.

as its object or effect either to influence the market behaviour of an actual and potential competitor or to disclose to the competitor its own market behaviour, as such established or only projected.

From the case-law highlighted defining notes, we can conclude that the *concerted practice is a form of coordination between undertakings of their economic behaviour in a certain market which, without reaching the stage of achieving a proper agreement, leads to the disappearance or reduction of the competition uncertainties that would have existed if undertakings would have established autonomously their market behaviour*.

The doctrine[54] emphasized that the concerted practice requires the gathering of objective and subjective elements, both with a negative condition. The objective element is given by the existence, at a certain time, of a similar and parallel behaviour of the undertakings concerned. Moreover, there must be also a subjective element: the parallel behaviour must be consciously adopted by each undertaking, in exchange for achieving a common goal; the intentions must be convergent and lead to an effective cooperation. The alignment to the common behaviour is usually achieved through the exchange of relevant information between undertakings. The negative condition implies, by assumption, the exclusion of the proper anticompetitive agreement as the basis of the similar behaviour, because otherwise we would return to the first assumption, the proper agreement.

3.3.2. Ways of achievement. The concerted practice results from the knowledge of the economical policy of the opponents and is usually achieved by organizing often secret meetings/*gatherings*, as it happened in the Polypropylene Case[55], or through the *exchange of information* accomplished in any way (through discussions between representatives, by telephone, by fax, by e-mail, even by professional press etc.)[56], without the necessity for the volume and quality of the information provided to be mutually equal[57].

It is however necessary for the exchange of information to be mutual (even if the information exchanged are not of equal value), because only this way we may hold the fraudulent "common arrangement", which, by definition, assumes the participation/involvement of all the undertakings concerned (any anticompetitive agreement, including any concerted behaviour, assumes by definition at least two undertakings), which by the mutual exchange of information on their future economic actions eliminate the risk of competition (when an undertaking knows the future strategy of the competitor, any competition risk is removed because it can "adjust" its behaviour by reference to the one expected by the adversary).

In the European case-law it was noted that the participation at meetings related to price fixing and sales volume level setting, during which information was exchanged between competitors regarding the prices they intended to charge, their profitability thresholds or sales figures constitute a concerted practice. This is because the participating undertakings were unable to disregard such information disclosed in determining their future market behaviour[58]. Furthermore, it was decided that the exchange of information between competitor undertakings regarding their deliveries represents a concerted practice[59].

[56] Mihai, Emilia, *Competition Law*, All Beck Publishing House, Bucharest, 2004, p. 73. The author cites a case in which the Romanian Competition Council assessed as "concerted behaviour" the exchange of information between two companies, in order to falsify an auction (Decision no. 66 of 28 Oct. 1998).

[57] Both the participation at meetings and the exchange of information between parties regarding the industrial sugar price were held by the Commission as forms of concerted practice in the sugar case (*above cited*), even if the effects of such anticompetitive behaviours could not be accurately quantified.

[58] Shell International Chemical Company Ltd. Vs. Commission Case, T-11/89.

[59] Trefilunion SA vs. Commission Case, T-148/89.

In the event that an undertaking participates in a concerted practice but, once informed about the future actions of its competitors, decides not to follow the agreed behaviour, the question arises whether it can be sanctioned for being a concertist? The answer is yes, because the concerted practice has removed for the said undertaking the uncertainty that it would have been given by the existence of normal competition.

If an undertaking is present at a meeting where the parties agree on a particular market behaviour, it may be guilty of violating the competition rules even if its own market behaviour does not correspond to the type of behaviour to which the agreement referred to[60]. The European case-law states that "the fact that an undertaking does not follow the decisions taken in meetings with a clear anticompetitive purpose is not of a nature to relieve it of full responsibility for the participation in the cartel, if it has not publicly distanced itself from the object of the agreement". Such delimitation should take the form of a withdrawal from the agreement and public distance from what has been established in the agreement so that the other participants can unequivocally understand the gesture of leaving the cartel[61].

3.3.3. Behavioural parallelism in price fixing – evidence of concerted practice?

As already shown, the concerted practice essentially involves a coordination of the undertakings' behaviours, a form of coordination which does not reach the level of a proper anticompetitive agreement. Therefore, even if we cannot hold the existence of a proper anticompetitive agreement, undertakings are punished for concerting their behaviours. One of the most dangerous anticompetitive agreements is the one whose object is price fixing, because it has particularly important harmful effects on the free competition, to the detriment of the final consumer. Repressed by the European Union legislation and condemned by any national legislation, such anticompetitive practice is generally hidden by its authors.

In this context, since the proper anticompetitive agreement cannot be demonstrated and *idem est non esse et non probari*, obviously, undertakings cannot be sanctioned for concluding a proper anticompetitive agreement on price fixing. Therefore, often, in order to sanction them, must be held the existence of a concerted practice, thus assessing that the fixing of an identical price or the simultaneous increase with the same percentage and in the same periods of time of the prices used by the competitor undertakings demonstrate a concerted practice.

In this sense, the doctrine[62] pointed out that undertakings can be sufficiently astute as to destroy the written evidence or to rely only on verbal agreements; the secret agreement remains however real and the construction of the concerted practice term must be flexible enough to include this fact of the economic life; on the other hand, it was also emphasized the danger of including the parallel price fixing in the concept of concerted practice, which does not operate in oligopoly.

If the price uniformity represents the result of the logical action within an oligopoly and there is no secret agreement, then sanctioning the undertakings is neither rational nor fair. The issue is no longer behavioural in the sense that the parties engage in a behaviour different from that which would exist under normal conditions within the same type of market, but the issue is structural, meaning that this type of market normally generates this type of response[63].

The theory of oligopolistic interdependence has generated criticism. Among the most vehement is the one arguing that the mentioned theory does not explain satisfactorily its essential affirmation, meaning that the members of an oligopoly can get supracompetitive profits without concluding an agreement. The assertion that it is being developed a price leading pattern by which an undertaking increases the price and this fact acts as a signal for the others to follow, is not a very

[60] Sarrio vs. Commission Case, T-334/94, par. 118.

[63] Craig, Paul; Grainne de Burca, *EU Law*, *op.cit*, p. 1194

convincing answer that prices remain thus parallel without a conspiracy between the members of the oligopoly[64].

In my opinion, the existence of a parallel behaviour of the competitor undertakings as regards price fixing cannot by itself, *de plano*, demonstrate the concerted practice.

Thus, when in a certain market there is a behavioural parallelism of undertakings in price fixing, there are two possibilities: i) this parallelism is a collusive alignment and if the collusion is demonstrated, we may hold the existence of a concerted practice; ii) it is only the expression of a conscious, intelligent and quick reaction of an undertaking to the challenge of its competitor, without becoming competitively illicit.

The second possibility may exist in several assumptions, such as:

- on a relevant market activates a powerful undertaking that practices a certain price and without any concerting, the other undertakings will practice a similar price, whether they follow the pattern of the first as it turned profitable or they will not be able to charge a price higher than the one of the first undertaking because it will not be paid by the consumers;

- on transparent markets where each undertaking knows the price of the competitors, prices will be equal or roughly similar, without the existence of concerting. The CJEU ruled in this respect in a case where market transparency was determined by the existence of a patent license[65].

- in the case of oligopoly. An oligopolistic competition market is characterized by the existence of a small number of competitors that hold close market shares, without being able to speak about a considerable force of one of them in relation to the others. In such market conditions (for example, the mobile operators market) there is a close link between the competitors behaviour, the action of one of them is followed by a corresponding response from the others and each change of strategy is achieved by taking into account the probable response of the competitors. Consequently, the specific features of the oligopolistic market *can* determine the price alignment (therefore without a concerted practice between competitors).

Especially in cases of oligopoly, it is difficult to determine if the price alignment is a natural result of the oligopolistic market or it represents a concerted practice. This difficulty can be also noticed in the analysis of the Court's decisions.

In the Dyestuffs case[66], it was noted that in the dyestuffs industry there were successive price increases, almost simultaneously, with identical percentages, without having occurred an agreement between the manufacturers. They defended themselves claiming that the price increase was due to the oligopolistic structure of the market in terms of dyestuffs. The CJEU rejected the argument, holding the following: "the successive increases in prices and the conditions under which they were made cannot be explained only by the oligopolistic structure of the market, but are the result of a concerted practice. It is not credible that, without a prior thorough concerting, the major manufacturers supplying the European common market would have increased several times, with identical percentages, the price of the same series of products, at about the same time and in many countries in which the conditions of the dyestuffs market are different:"

In the Wood-Pulp case, the Commission held that a large number of pulp manufacturers imposed similar prices and similarly and uniformly changed them, which proved the concerting and did not hold the argument that the price was given by the oligopolistic market on which they operated. The Court removed a significant part of the Commission's conclusions and judged[67] that the behavioural parallelism can be regarded as proof of concerting only if the concerting is the only plausible explanation for that behaviour. Noting that undertakings have the possibility to intelligently adapt their behaviour to the one of their competitors, furthermore the Court held that prices

[66] ICI Case, Decision of 14 July 1972, *above cited.*
[67] Decision 85/202, OJ no. L 85 of 1985.

parallelism and their evolution could be explained accordingly by the oligopolistic market trends. It emphasized that a rigorous economic analysis is necessary in order to determine if there is another plausible explanation for the parties' behaviour.

In conclusion, in the absence of concerting evidence, the simple behavioural parallelism in price fixing cannot be regarded as a concerted practice. The existence of a concerted practice could be held only when the analysis performed will reveal that there is no other plausible explanation for the behavioural similarity visible on the market, as it is impossible to determine, depending on the context, a reason other than concerting.

3.3.4. The concerted practice. The need to implement it on the market

The Romanian doctrine stated that it is not necessary for the illicit joint action envisaged by the concerted practice to be implemented[68]. As far as we are concerned, we believe that, given that the concerted practice is by definition a *behavioural* coordination, it can be observed only in the existence of a certain market behaviour of the undertakings, which implies the need for its implementation. The same conclusion results from the case-law of the Court, which indicated that the concept of concerted practice implies, besides undertakings concerting together, a market behaviour subsequent to this concerting and a cause-effect link between these two elements[69].

Conclusions

The anticompetitive agreements, namely those which have as their object or effect the prevention, restriction or distortion of competition, are prohibited. Therefore to become competitively illicit, the agreements between undertakings must regard, to the detriment of free competition, a coordination of the market behaviour of undertakings.

The European and national legislation, without expressly defining, prohibit: agreements/arrangements between undertakings, decisions by associations of undertakings and concerted practices. These are the forms of expression of the anticompetitive behaviour of undertakings prohibited by art. 101 paragraph 1 TFEU and art. 5 alignment (1) of Law no. 21/1996, which we describe by a general concept of anticompetitive agreement that includes any form of expression, whether it is an agreement/arrangement between undertakings, a decision by association of undertakings or a concerted practice of two or more undertakings.

The "anticompetitive agreements" are any agreements between two or more undertakings, regardless of their form of expression, concluded to coordinate their market behaviour and having as their object or effect the prevention, restriction or distortion of competition.

The forms of manifestation of an anticompetitive agreement can be extremely different, the main forms of expression of an anticompetitive agreement being: "agreement between undertakings", "decisions by associations of undertakings' or "concerted practice".

An "agreement between undertakings" means the joint expression of will between two or more undertakings through which they coordinate their market behaviour to the detriment of competition, regardless of the form of the arrangement, the nature of the contract in which the joint expression of will is included or the validity of the contract.

The "decision by association of undertakings" means any decision of the governing body of an association of undertakings which has as its object or effect the restriction of competition. In order to have this object or effect, the said decision should have the power to impose a certain behaviour to the association members in their economic activity on the market. It is not relevant how the said decision is presented in formal terms and the title or apparent nature of the act is unimportant.

The "concerted practice" is a form of coordination between undertakings of their economic behaviour on a certain market which, without reaching the stage of achieving a proper understanding,

[68] A. Fuerea, *op.cit.,* p. 220.
[69] Huls AG vs. Commission Case (Polypropylene), C-199/92.

leads to the disappearance or reduction of the competition uncertainties that would have existed if the undertakings would have established autonomously their market behaviour.

Future research would involve: identifying difficulties in establishing the autonomous behaviour on the market; determining the attribute of undertaking of certain entities that do not have autonomy of decision and act within groups of companies resorting to anticompetitive agreements, in order to establish who is to be applied the sanction; the analysis of the exchange of information as a possible concerted practice.

CENTRE OF THE MAIN INTERESTS

DIANA DELEANU[*]

Abstract
The centre of the main interests of the debtor is a legal tool meant to settle conflicts that can arise between jurisdictions in cross-border insolvencies, based on the principles of mutual recognition and co-operation.

***Key words**: insolvency, COMI, bankruptcy, debtor, creditor.*

Introductory considerations

Considering the increasingly cross-border nature of trade relations and their increasing complexity, a large number of insolvency proceedings include a cross-border element.

The international legal practice has recently recorded several cases of high legal, economic, social and political impact, which started from the collapse of certain multinational companies.

Hence a substantial number of cases on cross-border insolvency whose main focus was the identification of the debtor‘s centre of main interests (COMI). This will be the criteria which this study aims to review through an initial theoretical comment followed by a brief study of the case law of the Court of Justice of the European Union.

Regarding the international law, the main regulatory acts governing the conflict of jurisdictions in cross-border insolvency matters are the nr. 1346/2000 EU Council Regulation, UNCITRAL Regulation and Chapter 15 of the United States' Insolvency Code.

The EU Council Regulation No. 1346/2000 aims at harmonizing the practice in the area of conflict of jurisdictions, establishing thus the nationality of the competent court to open the main procedure depending on the location of the debtor's centre of main interests (COMI). However, the identification of the debtor‘s centre of main interests proves to be an increasingly difficult matter.

The practical consequences of determining the debtor's centre of the main interests in one jurisdiction or another may be particularly significant, such choice being sometimes the key to success or failure of the restructuring procedure.

Considering this, there have been quite a few cases in which, sensing a decline in business, the managers decided to move the centre of main interests from one state to another, precisely because, in the event of the opening the insolvency proceedings, the company would benefit from more favourable treatment.

Such measures taken in a time of economic recession are, however, inefficient as shown by the recent case law, namely PIN Group AG (Germany), their aim to avoid the competent jurisdiction being much too obvious.

In most situations, however, considering also the relatively short periods of appeal in insolvency matters, determining the centre of main interests is an already accomplished fact for the less diligent creditors.

This study aims to review the most important reference points of the recent legislation and case law on conflict of jurisdictions in the cross-border insolvency proceedings, with a focus on the matter of identifying the debtor's centre of main interests.

In addition to the conflict of jurisdictions, the referred to laws also establish the rules which will govern the transactions conducted by the insolvent debtor with its contractual partners located on

[*] Lecturer, PhD candidate, "Nicolae Titulescu" University of Bucharest (Dianadel@univnt.ro).

the territory of another member state, as well as the rules for recovering the assets of the insolvent debtor, should they be within the territory of another state than the state on which it operates.

Analyzing this problem from the macroeconomic perspective, the development of multinational companies, transnational companies, of groups of interests on the emerging European market, with business centres within the territory of two or more member states, necessarily required the creation of a collective instrument of standardization of insolvency-related proceedings.

The economic situation in this time of crisis made the managers of multinational companies create so-called "tax vehicles", to be able to report to the shareholders on the application of the controversial concept of tax optimization which is often on the limits of legislation.

Content

The notion is an EU law one and the legal framework is EU Regulation on insolvency proceedings No. 1346/2000 which became effective on May the 31st, 2002. As a rule, it should be applied automatically, prevailing over the national legislation, in case of conflict.

Its main purpose is to codify the manner in which a member state decides whether it has territorial competence to commence the insolvency proceedings and to avoid the so-called "COMI migration" or "forum shopping".

It is also aimed at unifying the way the applicable legislation is selected and the automatic recognition of the insolvency proceedings initiated in an EU member state, although, in practice, this recognition is not automatic and does require a substantial commitment of the insolvency practitioner.

Legal framework:

1. UNCITRAL Regulation
2. EU Council Regulation No. 1346/2000 of May the 29th, 2000 on insolvency proceedings; effective from May the 31st, 2002
3. Romanian laws on insolvency proceedings consists mainly of:

- 85/2006 law (as further amended and supplemented) on insolvency proceedings,
- 637/2002 law on the regulation of private international law on insolvency and
- Government's Emergency Ordinance (OUG) no. 86/2006 (as further amended and supplemented) which regulates the activity of insolvency practitioners;

According to art. 3 of no. 637/2002 law, foreign proceedings are the collective, judicial or administrative proceedings which are conducted according to the insolvency law of a foreign state, including interim procedure, in which the assets and business of the debtor are subject to control or supervision by a foreign court, for the purpose of restructuring or liquidation of the debtor's business.

The foreign main procedure is the foreign insolvency proceedings conducted in the state in which the centre of main interests of the debtor is located, whereas, according to the same article of law, the foreign secondary procedure is the foreign insolvency procedure, other than the main procedure, which is conducted in the state in which the debtor has an establishment.

According to art. 26, para. 1 of 637/2002 law, the Romanian courts will cooperate with the foreign courts and representatives in a more extensive manner, and the cooperation may be achieved directly or through the Romanian representative. Likewise, the courts are able to communicate or request information or assistance directly from the foreign courts or representatives.

Regarding the presumption of insolvency based on the recognition of the foreign main proceedings, article 32, para. 1 of the above-mentioned law states that the recognition of foreign main proceedings is, until proven otherwise, a presumption of the state of insolvency of the debtor, based on which the insolvency proceedings may be opened. These provisions do not apply if the recognized foreign proceedings is secondary.

The purposes of the regulation are:

1. achievement of a general satisfaction of the creditors' claims and/or a viable, effective recovery/restructuring

2. unitary recovery of the assets of the insolvent debtor, with the avoidance of territorial enforcements, detrimental to the maximization of the list of creditors

3. avoiding of "forum-shopping"

4. should not be taken as an attempt to unify the national legislations on matters of insolvency, but only as a legal outline of instruments likely to make the application of the basic institutions easier.

The main rules are:

1. The single state principle of the main proceedings: the main proceedings may be initiated only on the territory of the member state where the centre of main interests of the debtor is located.

2.The principle of automatic recognition: recognition and automatic application of the judgment opening the main procedure in all member states.

3.The subsidiarity principle.

4.The single law principle: the law of the member state where the main proceedings was initiated applies to the entire insolvency proceedings, with certain exceptions.

5.The cooperation principle: the designated office-holder in the main proceedings actively cooperates with the office-holder of the secondary proceedings.

A possible issue of the regulation might consist of the fact that this centre of main interests of the debtor does not treat the debtor as a corporate group, but as an independent legal entity, that is the legal entity identified as such by its own elements.

The competence field of the 1346/2000 EU Council Regulation is:

1. The centre of main interests of the debtor in the European Union, including the companies which were incorporated outside the European Union, but whose centre of main interests of the debtor is in an EU member state.

2. applies to collective insolvency proceedings, such as listed in Appendix A and B of the regulation

3. applies to various entities – but mostly trade companies

4. does not apply to credit institutions, banks, insurance companies or investment funds. These are regulated by two other separate laws.

TYPES OF PROCEEDINGS:

1. Main proceedings - definition
2. Secondary proceedings
3. Territorial proceedings

Concerning the coordination of several foreign procedures, art. 31 of 637/2002 law states that: "should several foreign proceedings be initiated for the same debtor, the court will take the cooperation and coordination measures, as stated in art. 26-28, with regard to the aspects mentioned in art. 2, and shall proceed as follows:

a) any measure with temporary execution approved based on art. 20 or 22 to the representative of foreign secondary proceedings, subsequent to the recognition of foreign main insolvency procedure, must be compatible with the development of the foreign main proceedings;

b) when the request for the recognition of the foreign secondary proceedings is admitted or only filed prior to the recognition of the foreign main proceeding, any measure with temporary execution admitted under art. 20 or 22 will be reviewed by the court, which will order the amendment or termination thereof, to the extent that it is incompatible with the development of the foreign main proceedings;

c) should there be several foreign secondary proceedings recognized successively, the court will approve, amend or order the termination of the measures with temporary execution in a manner which would enable the coordination of the respective proceedings."

The notion of European insolvency procedure is regulated by art. 3 para. g of 637/2002 law of 07/12/2002 concerning the regulation of private international law on insolvency as being "the collective procedure determined by the insolvency of the debtor, which is initiated in a member state of the European Union, consequently removing the administration rights completely or partially from the debtor and the appointment of a European insolvency practitioner."

The law does not indicate an exact definition of the notion of centre of main interests of the debtor (COMI), but also outlines a few hints to guide the practitioner in identifying the centre of main interests of the debtor:

- "the centre of main interests of the debtor will correspond to the location in which the debtor currently runs its business and for that reason it is recognized as such" (Paragraph 13 of the preamble); and
- "In case of a legal entity, the registered office shall be presumed to be the centre of its main interests in the absence of proof to the contrary". (Article 3(1)).

Considering the absence of guidance in support of the interpretation, there have been various practical solutions, leaving room for interpretation to the national courts.

In the absence of a clear definition of the centre of main interests of the debtor (COMI) the following factors are to be considered (but not limited to):

- the main registered office of the legal entity;
- the headquarters of the individual carrying out a business or an independent profession;
- internal accounting functions;
- business relations with clients;
- the law governing its main contracts;
- creditors;
- strategic control functions;
- IT systems;
- tax domicile and the domicile of its directors;
- board meetings;
- general supervision.

Three significant aspects are to be considered in this case, such as:

- administration of the interests of the debtor;
- consistency;
- opposability/recognition by third parties.

The attraction to a particular jurisdiction may be that it:

- has a good track record and is considered to be more transparent, sophisticated, efficient and flexible in the way it handles proceedings. New insolvency legislation in certain jurisdictions such as Spain and Germany which is geared towards addressing the current financial crisis may make those jurisdictions more attractive; however, new legislation will often be untested and its benefits may be outweighed by the perceived uncertainty over its interpretation and implementation;

-is more familiar to stakeholders;

- allows the debtor to impose a cram-down on dissenting secured or unsecured creditors;

- allows more pre-planning (in the UK, for example, the use of the Administration procedure allows sufficient pre-planning to permit an immediate sale of businesses or assets on terms negotiated by the insolvency practitioner before his appointment as administrator - a "pre-pack administration");

- allows the stakeholder(s) to choose who is appointed as officeholder, rather than an appointed by the relevant Courts;

- requires less court involvement;
- provides an opportunity to take advantage of DIP funding available to insolvent entities (for example, debtor-in-possession financing in Sweden and the US or Insolvenzgeld in Germany and Austria);
- avoids the application of employees' rights on a transfer of an undertaking[1].

Criteria for Identifying the COMI as Outlined in the Case Law of The Court of Justice of the European Union

The relevant factors in determining the nationality of the centre of main interests of the debtor are:

- The location in which the day-to-day management takes place and the management strategies are developed.
- The location in which the marketing and branding strategies & the defining the identity of the relevant entity are developed.
- Citizenship and residence of the directors and the location in which the meetings of the board of directors are held.
- Time spent by the employees of other entities (from other jurisdictions) in the management of the company.
- In case of entities holding ownership of (immovable) assets, the jurisdiction of the place in which they are managed is important rather than their location.
- Location in which the significant financial operations are carried out.

According to the Romanian legislation, art. 3, para. q of 637/2002 law, the state in which an asset is located is:

- for tangible property – the state within the territory of which the property is situated;
- for property and rights ownership of or entitlement to which must be registered – the state under the authority of which the register is kept;
- for claims – the state within the territory of which is situated the centre of main interests of the debtor of the claim;

Appealing to the Court of Justice of the European Union

The first significant request was made in the case Eurofood IFSC Ltd (Case C-341/04), a company incorporated in Ireland, a member of Parmalat SPA Group – Italy.

Two courts in two different jurisdictions claimed their competence, stating that the centre of main interests of the debtor would be in its own jurisdiction, thus leading to a positive conflict.

The Irish court justified its position based on the following elements:

• Eurofood IFSC Ltd. was registered in Ireland and was an Irish tax payer;
• The day-to-day management was carried out in Ireland, and the accounts of the company were also there;
• The meetings of the board of directors were held in Ireland;
• The presumption of the creditors was that the centre of main interests of the debtor was in Ireland.

The Italian court, on the other hand, claimed that the centre of main interests of the debtor was in Italy, arguing that:

• The company only applied the financial policy imposed by the parent company from Italy;
• The business of the company had as a sole reference the Italian company;
• The operational offices were in Italy;
• The central management was carried out in Italy.

Now, the certainty in relation to establishing the territorial competence is given only by the appeal to the Court of Justice of the EU. However, this takes a lot of time and is a somewhat expensive process.

[1] "Restructuring and Insolvency Briefing"- Macfarlanes.

Following the requests received to solve the conflicts of competence like the above-mentioned one, Court of Justice of the EU had the opportunity to give a few directions to guide the insolvency practitioners and the national courts, thus clarifying the issue.

We further summarized a few cases supporting the above-mentioned opinions.

Reference Cases in the EU Jurisprudence

Case no. 1: ENRON Directo Sociedad Limitada

- The company was incorporated in Spain under the name "Enron Directo Sociedad Limitada"
- Certificate of incorporation subject to the Spanish law, any disputes between partners are referred to the Spanish court for competent settlement
- Carries out operations, in particular tax operations, in Spain
- It cannot be clearly determined where the creditors presume that the centre of main interests of the debtor is located
- The head office was in the UK, directors of British nationality, management and leadership in London
- There was a relative presumption, determined by the provisions of art. 3.1, in the meaning that the registered office was the centre of main interests of the debtor.

Case no. 2: DAISYTEK (British approach)

In the Daisytek case there were several companies registered in France, UK and Germany, as subsidiaries of Daisytek multinational company, incorporated in US.

The parent company creates a holding-type entity, situated in the UK, which controls the activities of all the companies operating in the EU.

At the same time, an action is filed in the UK to initiate the insolvency procedure for all companies, even if four of them were not registered in the UK.

Separately, the court initiated the main proceedings in Germany in relation to the German subsidiary company. In the appeal, the German procedure was closed after finding out that the manager of the German company authorized the British procedure.

In France the court ruled that the centre of main interests of the French company was located in France, but the appeal did not confirm this ruling.

The question is whether the proceedings may be opened in the UK for legally independent companies, but which are economically dependent on a company incorporated in the UK.

Another question would be: where could we locate, on a scale of the main interests of the debtor, the criterion of legal independence from another company, on which it is dependent on in terms of decision-making and organization, and, respectively, if an extension of competence of the British judge can be accepted, meaning that (s)he could issue restructuring rulings, based on a plan, for companies not incorporated in the UK.

Case no. 3: EUROFOOD IFSC Ltd.

Eurofood is a company registered in Ireland, 100% owned by Parmalat SPA, an Italian company.

On January the 27th, 2004 Bank of America applied for commencing the insolvency proceedings concerning Eurofood at the High Court in Ireland. On the same day, the court appointed an insolvency practitioner as judicial administrator.

On February the 9th, 2004 the Italian government wanted to place Eurofood under extraordinary administration procedure and appointed an Italian insolvency practitioner (subsequently confirmed by the Italian court on February the 20th, same year).

In March 2004 the Irish court ruled that the Italian one was not competent and COMI was in Ireland because the company was registered there and the creditors were also convinced that the centre of Eurofood's interests was also located there.

The decision was challenged and two issues were submitted for settlement to the Court of Justice of the European Union:

a. If it was the Italian court or the Irish one which opened the main proceedings;

b. If the Irish court was entitled to claim the provisions of art. 26 of the Regulation.[3]

The question is to determine which of the two proceedings can be considered the main one and if the judge in the member state who opened the proceedings subsequently, may refuse the recognition and enforcement of the judgment ruled in the other member state on the grounds that the centre of main interests of the debtor is located in its jurisdiction.

It is also important to note whether a judge from a member state may decide to commence the main proceedings on the grounds that the centre of main interests of the debtor is located in their jurisdiction.

An important argument is the criterion of ownership of the company shares as being the most important in identifying the centre of main interests of the debtor.

It is considered preferable that, once the proceedings have been initiated, even if it is proven that the centre of main interests of the debtor is, in fact, situated within the territory of a member state other than the initiating one, the original proceedings should be continued as the main one.

It is debatable which is the better solution in the strictly chronological application of the criterion of the main procedure versus the secondary procedure, assuming that the national legislation gives retroactive effect to the proceedings initiation ruling, not from the time when it was adopted, but from the time when the petition was filed.

Case no. 4: PARMALAT

The Parmalat Group started from an Italian company with headquarters in Collecchio, engaged in food manufacturing (dairy) and which had an intensive acquisition policy for twenty years.

In December 2003 it was discovered that Parmalat Spa had a huge financial problem (of approximately $ 7 billion).

Parmalat Finance Corporation -owned by a group of companies from the Netherlands and Luxembourg- carried out commercial transactions with other companies in the Netherlands and had Dutch creditors who were aware of each other's claims.

Parmalat Finance Corporation is owned by the same group of companies which own Parmalat SPA, has issued bonds in the Netherlands, having intense relations with Dutch banks to guarantee new loans and other financial operations.

Parmalat SPA was placed under special administration procedure by the 347 Decree Law from December the 23rd, 2003.

Parmalat Finance Corporation filed for insolvency in Parma, Italy.

There is the opinion according to which it would be accurate to note that the centre of main interests of the debtor is in the Netherlands, considering there are certain creditors (banks and financiers) which granted loans regulated by the Dutch law and there is a scale of the most important creditors, whose positive presumption may become important in determining the location of the centre of main interests of the debtor.

In case that there is the assumption that the destination of the loans, in their various forms, was to support the Parmalat shareholders, it is claimed that it is correct to establish the location of the centre of main interests of the debtor in Parma, Italy.

One issue under discussion is the assumption that we consider the tax maximization policy as a relevant proof in rebutting the relative presumption that the centre of main interests of the debtor is in the member state where the registered office of the debtor is situated.

It is argued that the determination of the centre of main interests of the debtor depends (to a great extent) on the relationship between the parent company and its subsidiary.

Case no. 5: MG Rover Group Limited

- MG Rover Group Limited is a trade company incorporated in the United Kingdom of Great Britain and Northern Ireland;
- SAS Rover France is a company registered in France, wholly owned by MG Rover Group Limited. The French company has significant staff with employment relations with the French employer.
- The Birmingham High Court ruled in favour of the extension of the insolvency proceedings to the French company, acknowledging the fact that the centre of main interests of the debtor is in the UK.
- The Chief Prosecutor of France promoted the legal remedies to establish that the ruling of the British judge cannot be recognized in France, since it violates the French public order, using in the argument of placing the French employees in a less favourable position, since they have to participate in collective insolvency proceedings which take place in the UK.

The argument used is the amount of employees from another member state as a single criterion in the identifying the centre of main interests of the debtor. The same argument is also used for refusing the recognition of the main proceedings initiated in another member state.

When determining whether a ruling identifying the centre of main interests of the debtor observes or not the national public order, the degree and rapidity of satisfaction of the employees' claims are to be considered.

Conclusions

The purpose of this work was not to offer clear cut solutions in such a controversial area, but rather to bring arguments in favour of the flexibility which the national courts should show in determining the identification criterion of the territorial competence.

The centre of main interests of the debtor is one of the best examples of concepts clarified by the practice of the Court of Justice of the European Union.

This topic will surely stir many other debates in the international legal academic environment, taking into consideration the current economic context.

However, this is an issue where we might consider that the economic and social aspects prevail over the judiciary.

Determining the centre of main interests of the debtor becomes a matter of interdisciplinarity.

INSOLVENCY VERSUS BANKRUPTCY: ADVANTAGES AND DISADVANTAGES OF THE PROCEDURE

PAULINA DINA*

Abstract

The analysis of the development of the phenomenon in Romania has the role to highlight the trend that has been followed by the number of organisational entities that have been affected by the insolvency phenomenon in Romania, the distribution by counties and regions of the number of insolvency cases as well as the activity sectors that have been most affected by this phenomenon. At the same time, in order to provide an overall picture regarding the size of the insolvency phenomenon in Romania, organisational entities with extremely high turnovers have been given as examples, (legal entities) entities which, since 2008 up to the present moment, have been crossing one of the stages of the insolvency procedure. Some of them have been applied the simplified insolvency procedure, since they didn't have the possibility to reorganise, and others, fewer in number, have used insolvency as a „rescue boat", following the general insolvency procedure and entering a reorganisation process, in the attempt to avoid bankruptcy.

Key Words: *Insolvency, bankruptcy, debtor, creditor, collective insolvency procedure, judicial reorganisation.*

Introduction

From a legal point of view, insolvency is regulated by the Law no. 85/2006 – the law regarding insolvency and bankruptcy, consolidated in 2010. This law replaces Law no. 64/1995 regarding the procedure for judicial reorganisation and bankruptcy and it represented the introduction of a unitary regulation in this matter. At the same time, the close-out operations of enterprises are also included by the Law no. 31/1990[1] regarding trading companies, with subsequent modifications and amendments. The insolvency procedure is also applied in an appropriate manner to the economical groups of interest (EGIs) as associative forms with legal personality and patrimonial purpose, regardless of whether they do or do not have the quality of merchant[2].

Content

The insolvency procedure represents the collective procedure aiming at the "forced" recovery of debts from a debtor which is in the position of not being able to handle his debts, under the supervision of a syndic judge. Insolvency has become, especially since the economic and financial crisis has taken over the world, a phenomenon which affected a lot of companies, both outside the Romanian borders as well as within the country. Insolvency can be viewed from two angles, with both a positive as well as a negative side. The advantages that the use of this debt recovery method might have are emphasized on the one hand, both for the debtor as well as for the creditors, and the relevant negative aspects, through the abuses that might derive once this procedure has been commenced, on the other hand.

Art.2 of the law[3] stipulates that "the purpose of this law is the setting up of a collective procedure for the covering of the liabilities of the debtor which is in insolvency. The collective

[3] Law no.85/2006 - Law regarding the insolvency procedure, amended in 2010.

procedure is defined by the law[4], as being "the procedure through which the known creditors participate together at the monitoring and recovery of their debts, in compliance with the modalities stipulated by the legislation in force". The purpose of the procedure does not have the same significance for all those involved. The purpose of the debtor is reached when the latter has managed to redress and continue its normal activity. The interest of creditors is to maintain a business partnership with the debtor.[5]

The difference between the two notions, bankruptcy and insolvency, which are often presented as synonyms, is given by the fact that a debtor which is in insolvency has the possibility, if certain conditions, which are expressly stipulated by the law, are met, to enter an activity reorganisation phase, based on a reorganisation plan[6] approved by creditors and confirmed by the syndic judge.

If so reorganized business is profitable and allows payment of all claims, according to the terms and conditions set forth in the plan, the debtor gets out of insolvency, keeps its legal status and its activity is to continue without intervention of the judicial administrator or bankruptcy judge. If the reorganized activity does not comply with the plan, the debtor is out of the reorganization phase and gets into bankruptcy status. Bankruptcy, in the classical meaning of the word, had two precise purposes, complementary and tightly related to one another; an immediate purpose – constant in ensuring the payment of the creditors and the punishment of the bankrupt debtor, as well as a mediate one – which had as a purpose the reclamation of the commercial environments.[7]

At this point the debtor business goes under the judicial liquidator's command that will do the property assessment and recovery following to pay debts from the amounts so collected. After completion of the sale of goods, the debtor will be removed from the register where it's registered and therefore will cease to exist.

Among the advantages that entails entering insolvency proceedings and which must be known, here are some of them:

- Continue to work even if the payment due dates of some debts were exceeded;
- Application of simplification measures related to the reverse charge in terms of value added tax ;
- Stopping the flow effect of any interest, penalties or pecuniary damages for delay in performance of obligations to unsecured debts, meaning that the debts of the company freeze since the moment when insolvency id declared;
- Termination of any foreclosure proceedings since declaring insolvency, that any action of a creditor within the meaning of the debtor foreclosure is suspended;
- Recovery of any claims of the debtor against third parties is done without payment of duty stamp.
- Existence of these benefits involves also the possibility of abuses in the procedure application:
- The possibility of requesting the opening of proceedings to be filed not only by creditors but also by the debtor can lead to abuses such as, outsourcing a large chunk of assets under property, in order to avoid payment, this being done in bad faith by the debtor.

With all these advantages for the debtor which result from application of the insolvency procedure in accordance with regulations in force, Romanian companies (as borrowers) are sceptical

when requesting the insolvency procedure as a saving solution in difficult situations caused by lack of liquidity (cash)

Although they have liquidity problems, the main reasons that make companies not to declare their insolvency are:

- the shareholders of the company (as debtor) are those who lose money when it become insolvent because there is no profit and no dividend receipts, and if they decide to sell the company assets, they are sold under market price;
- experience shows that in Romania a very small percentage of firms that become insolvent managed to avoid bankruptcy eventually.

It is believed that entry into insolvency is a fact that affects the company's image, especially if it has a certain position in the market. Actual or potential customers can be influenced in a negative way, meaning that they reduce their expressions of interest for the products / services of the company. Therefore, it appears that insolvency is an area of which should have knowledge about not only the stakeholders (companies administrators, managers, insolvency practitioners, other stakeholders), but the general public in their capacity as clients (actual / potential) or employees, etc.

The legislation regarding bankruptcy, whose purpose is to regulate the condition of certain individual companies, cannot act in an efficient manner when a large part of the economy is facing major financial difficulties. For this reason, a distinction is made between the individual bankruptcy and the systemic bankruptcy. When a single company goes bankrupt, it is presumed that the company in question has committed a mistake (excessive debts, scarce management etc.) which has not been committed by other companies. In exchange, when there are several companies that cannot pay their debts, the mistake is no longer an individual one, but it is related to the system. The moment that a single company goes bankrupt, there is a wide range of offers for other management teams, but when a large part of the companies which are on the brink of going bankrupt, it is practically impossible to replace all the management teams. In addition, when there is a financial and economical crisis within the system, it is very difficult to establish what is the net value of a company, as well as to assess many of the financial outstanding debts, because some of the assets of the company which is basically going bankrupt, can be debts towards other companies which have also stated that they are about to go bankrupt or find themselves in the position of not being able to repay the debts in question. The macroeconomic effects of the systemic bankruptcy are extremely notable: mass unemployment, problems related to financial flows for the banking system, creating a vicious circle that also incorporates the limitation of production and eventually the decrease in economic growth and the acceleration of recession, respectively. As far as the size of the insolvency phenomenon is concerned within the Romanian organizational entities, it has known a consistent increase starting with the year 2008, which is a year that also marks the beginning of the manifestation of the effects of the financial and economical crisis, both at world as well as at national level.

This article aims to highlight both aspects regarding the insolvency procedure. One is related to the reorganization of organizational entities and one to their bankruptcy. Until 2006, when it was introduced Law 85/2006 related to insolvency and bankruptcy proceedings in Romania, the provisions of Law 64/1995 on the judicial reorganization and bankruptcy have applied. This law, according to several authors, insolvency practitioners (lawyers, engineers, and economists) had many shortcomings, which led to inconsistent enforcement of laws because allowed many interpretations. The tendency, at a European level as well as at an international level is to modify the legislation regarding the bankruptcy and insolvency procedure, in the sense of encouraging the judicial reorganisation process[8]. This was happening also in the other European countries and therefore the European Union asked to introduce a material to be applied uniform in this area. As a result, during

[8] Birchall Ana, *Procedura insolventei - Reorganizarea judiciara si procedura falimentului - Note de curs*, Ed. Universul Juridic 2007, pg. 190.

July 2004-April 2006 in Romania was developed the PHARE project, Support for improvement and implementation of legislation and case law regarding bankruptcy", involving the Ministry of Justice consultant experts who met within a consortium led by PricewaterhouseCoopers Management Consultants Ltd, which has led to appearance of Law 85/2006 on insolvency, having the role to improve the legal and institutional framework of the material.

Thus, the main conclusions that can be drawn may relate, on one hand to the changes in law made by the new law of insolvency, which were highlighted in the hereby paper, and on the other hand was considered presentation of the insolvency proceedings stages, especially by highlighting the possibility offered by law regarding reorganization.

In this paper we have shown that, legally, Law 85/2006 introduces several novelties in terms of:

- Introduction of a simplified procedure applicable only for certain categories of subjects ;
- Redefining the role of the bankruptcy judge, meaning that he only deals with the legality of acts and operations and doesn't question their opportunity;
- Increasing the role of the meeting of creditors and the creditors' committee;
- Increasing the responsibilities of judicial administrator / liquidator;
- Reducing the time to perform procedural acts, simplifying the procedures for citation, communication, notification by launching the Insolvency Bulletin[9];
- Strengthening the efficiency of reorganization procedure.

If the entry of companies on the market is made increasingly easier, taking measures to simplify their access, at least in terms of bureaucracy, of how to proceed, the law on bankruptcy responds to the need of companies to exit as rapid as possible out of the market. However, it is noted that the market exit of a company is not an easy process; it takes from a few months (or a year) to several years. The streamlining of the insolvency procedure is conditioned by the quickness of the procedural stages. The duration between the registration of the introductive request and the decision regarding the initiation of the procedure, gets out of control and its unjustified extension can provide the opportunity to elude the creditors' rights through deeds of the debtor, which could actually be irreversible.[10] However, in light of the new regulations, it is highlighted more and more the possibility of reorganizing those companies struggling with payment of due debts from funds available on the due date. In Romania, according to statistics, successful reorganizations have a very low percentage, most of open plan ending in failure or bankruptcy proceedings.

In the old legislation the reorganization costs were high and involved execution over long periods of time; for example, from the appeal action until the opening of insolvency proceedings had to undergo a period of 6 months, while the current legislation stipulates that immediately after opening procedure one will know whether it will enter the general procedure or the simplified procedure. Insolvency procedure involves also some accounting transactions made under Law 82/1991 on accounting.

During the procedure, business liquidation is performed based on the ongoing activity principle, the entire period of liquidation being considered as a financial year, as witnessed by the fact that both financial statements are prepared to initiate the procedure, which take data from the last financial statements prepared and submitted by the debtor, and final situations are prepared, for closing. So, insolvency is the procedure to discover another „World" different from the ordinary, in the sense that the concepts involved are not known, in most cases, but only by qualified persons trained in the field.

[10] Turcu Ion, *Tratat de insolventa*, Ed. C.H.Beck, 2006, pg. 299.

Insolvency proceedings may be used as a lifeline if the debtor denounces insolvency himself, in order to "freeze" time and do so that creditors will not to exert pressure on recovering their payments. This paper has offered an overview of the insolvencies situation in Romania, since the economic and financial crisis broke-up until 2011, statistics pointing the upward trend of the number of cases that were affected by the insolvency, the boom being recorded starting with 2008 and 2009, but also the sectors (fields of activity) most affected by this phenomenon. Also, it was found in statistics on firms with high business turnover in Romania that they are also the entities with most chances to avoid bankruptcy, as stage of insolvency proceeding.

They have goods in company assets and have a real opportunity to reorganize by restructuring the business or by selling some assets, based on a reorganization plan phased over several years (maximum three years as per insolvency law). For the business environment the purpose is achieved if the judicial procedure is transparent and predictable.[11]

As practice has shown, most reorganization plans fail, especially for small and medium businesses from the level of development activity point of view, and creditors, for the duration of the procedure, cannot recover claims. In these cases, insolvency is a method to save only the debtor, the creditor paying, in exchange, the price of the fact that he gave what is natural and necessary in any business, namely trade credit. From this perspective, there is attempt to find a way that insolvency to become a real escape way from the bankruptcy and not just a way to delay the proceedings, which can affect even the creditors who because they have accounts receivable may lack cash and, in their turn, can be threatened into insolvency by their business partners who can no longer collect money owed for the work done. We can say that insolvency and bankruptcy are two distinct notions which have a common goal: performance of the payment, meaning the execution of the obligations which have been assumed by means of a contract. That being in difficulty affects all contractual relationships in which it is involved together with its creditors, so that the legislator comes to its aid and does not consider it to be a "*fallitus ergo fraudator".* Therefore, it can be said that the objective of this law is to set up concrete criteria for operation and treatment towards the insolvent debtor. The general dispositions of this law regulate the effects of the economic phenomenon, regulations belonging to the laws regarding trading companies, labour legislation, taxation etc.

Conclusions

In this paper, I approached insolvency and bankruptcy viewed from two angles, with positive and negative parts.

On the one hand, it highlights the advantages it has appealing this debts recovery procedure for both the debtor and creditors, and on the other hand it highlights the negative aspects highlighted by the abuse that may arise with the opening of proceedings. In conclusion it can be said that the difficulties that a company may encounter can be a serious threat, which can be completed either by recovery of the company (the recovery term is found in the French law of 1985 as well as the Romanian law 503/2004 regarding recovery and bankruptcy of insurance companies)[12] or its bankruptcy and therefore exit from the market.

But these difficulties can disrupt and other economic actors and can get into a vicious circle, therefore it was necessary to improve legislation to shorten development time and reduce costs of the procedure. For the purposes of effective exercise of pleadings, based on the principle of celerity enunciated by the law, it is especially recommended, the high qualification of persons involved in the procedure and of organs applying the procedure.

I also believe that in business, as in life, we need to show fair play, to consider „ the rules of the game "and recognize what we did wrong in order not to affect other people, being allowed to do

LEASEHOLDS – AN ALTERNATIVE TO REGULAR OWNERSHIP TITLES

ELENA-RALUCA DINU*

Abstract

For property law, the system of estates represents the most obvious of many links between past and present. The very word "estate", drawn from and implying status, signifies the feudal origins of the system. So does the distinction, still current, between freehold and nonfreehold estates- the first referring to normal tenures of feudal times, the second to mere leases.

Leaseholds – or nonfreeholds or tenancies- are a part of the larger estates system. Like the freehold estates, leaseholds have roots that run deep into feudal times (hence the notion of a tenant who holds under a landlord). And again like freeholds, leaseholds have been fairly static over the years in term of their formal characteristics. In terms of relations between landlord and tenant, however, there have been regular and significant developments. The most important of these, together with the body of conventional American law in the background, make up the bulk of this paperwork. The article considers the incidents of leaseholds and then concludes with a selective look at the persistent problem of affordable rental housing.

Key words: *leaseholds, landlords, rent control, rental housing, government-assisted housing programs*

Introduction

Finding affordable housing of decent quality is a challenge to many Americans, not just, but obviously especially for the poor. The implied warranty of habitability and allied reforms are aimed to improve the situation. But wouldn't landlords in response to the higher costs imposed on them by such measures simply increase the rents they charge, such that housing might be more decent but even less affordable? Could rent control help allay this problem? What about government assisted housing programs? These are large and contentious questions of which the following debates are just a surface scratching.

Leaseholds – an alternative to regular ownership titles

In 1986 the Chicago City Council enacted a Residential Landlord and Tenant Ordinance which was not a rent control measure, rather it essentially codified the implied warranty of habitability and, beyond that, established new landlord responsibilities and tenant rights in respects described below.

A group of property owners challenged the constitutionality of the ordinance, but the district court denied a motion for a preliminary injunction, concluding that the plaintiff property owners did not have a reasonable likelihood of prevailing on the merits, thus the plaintiffs appealed. The court of appeals affirmed in an opinion by Cudahy J., holding, among other things, that the ordinance was sufficiently specific and, giving due deference to the legislative judgment, sufficiently reasonable in light of its stated purpose to promote public health, safety and welfare. Of interest to us is not the constitutional analysis in Judge Cudahy's opinion but the policy analysis in a separate opinion filed in the case, an opinion has moved Judge Cudahy to say "the economic critique of the Ordinance contained in the separate opinion has not been litigated here and is, at best, superfluous."[1]

---

* Ph.D. candidate of Doctoral Law School, "Nicolae Titulescu" University, Bucharest (dr_dinu_raluca@yahoo.com).

[1] Chicago Board of Realtors Inc. v. City of Chicago, United States Court of Appeals, Seventh Circuit, 1987, 819 F.2d at 737 n.2.

Posner J. with whom Easterbrook J. joins: "We agree with Judge Cudahy's opinion as far as it goes, and we therefore join it, but in our opinion it does not go far enough because it makes the rejection of the appeal seem easier than it is, by refusing to acknowledge the strong case that can be made for the unreasonableness of the ordinance. So we are led to write separately, and since this separate opinion commands the support of two members of the panel, it is also a majority opinion."[2]

The new ordinance rewrites present and future leases of apartments in Chicago to give tenants more rights than they would have without the ordinance. It requires the payment of interest on security deposits , it requires that those deposits be held in Illinois banks, it allows with some limitations a tenant to withhold rent in an amount reflecting the cost to him of the landlord's violating of term in the lease, it allows a tenant to make minor repairs and substract the reasonable cost of the repair from his rent, it forbids a landlord to charge a tenant more than 10 dollars a month for late payment of rent regardless of how much is owing and creates a presumption that a landlord who seeks to evict a tenant after the tenant has exercised rights conferred by the ordinance is retailing against the tenant for the exercise of those rights.

The stated purpose of the ordinance is to promote public health, safety and the quality of housing in Chicago, It is unlikely that this is the real purpose and it is not the likely effect. Forbidding landlords to charge interest at market rates on the late payment of the rent could hardly be thought calculated to improve the health, safety and welfare of Chicagoans or to improve the quality of the housing stock, but it may have the opposite effect. The initial consequence of the rule will be to reduce the resources of the landlords devote to improve the quality of housing, by making the provision of rental housing more costly. Landlords will try to offset the high cost, in terms of time value of money, less predictable cash flow and probably higher rate of default by raising rents. To the extent they succeed, the tenants will be worse off or at best no better off. Landlords will also creen tenants more carefully because the cost of renting to a deadbeat will be higher, so marginal tenants will find it harder to persuade landlords to rent to them. Those who do find apartments but then are slow to pay will be subsidized by responsible tenants who will be paying higher rents, assuming that the landlord cannot determine in advance who is likely to pay rent on time. Insofar as these efforts to offset the ordinance fail, the cost of rental housing will be higher to landlords and therefore less will be supplied, more of the existing stock than would otherwise be the case will be converted to condominia and cooperatives and less rental houses will be built.

The provisions of the ordinance requiring that the interest on security deposits be paid and that deposits be kept in Illinois banks are as remote as the provisions on late payment from any concern with the health or safety of Chicagoans, the quality of housing in Chicago or the welfare of Chicago as a whole. Their only apparent rationale is to transfer wealth from landlords and out-of-state banks to tenants and local banks making it an unedifying example of class legislation an economic protectionism rolled into one. However, to the extent the ordinance seeks to transfer wealth from landlords to tenants it could readily be undone by a rent increase, the ordinance puts no cap on rents[3].

The provisions that authorize rent withholding, whether directly or by subtracting repair costs, may seem more closely related to the stated objectives of the ordinance, but the relation is tenuous. The right to withhold rent is not limited to cases of hazardous or unhealthy conditions and any benefits in safer or healthier housing from exercise of right are likely to be offset by the higher costs to landlords, resulting in higher rents and less rental housing.

The ordinance in not in the interest of poor people. As is frequently the case with legislation ostensibly designed to promote the welfare of the poor, the principal beneficiaries will be middle-class people. They will be people who buy rather than rent housing (the conversion of rental to owner

[2] Chicago Board of Realtors Inc. v. City of Chicago, United States Court of Appeals, Seventh Circuit, 1987, 819 F.2d at 737 n.2.

[3] Coase, The Problem of Social Cost, 3 J. Law & Economy 1, 1960.

housing will reduce the price of the latter by increasing its supply), people willing to pay a higher rental for better-quality housing and a largely overlapping group more affluent tenants who will become more attractive to landlords because such tenants are less likely to be late with the rent or to abuse the right of withholding rent. The losers from the ordinance will be some landlords, some out-of-state banks , the poorest class of tenants and future tenants. The tenants are few in number, the out-of-staters can't vote in Chicago elections, poor people in society don't vote as often as the affluent[4] and future tenants are a diffuse and largely unknown class. In contrast, the beneficiaries of the ordinance are the most influential group in the city's population so the politics of the ordinance are plain enough and they have nothing to do with either improving the allocation of resources to housing or bringing about a more equal distribution of income and wealth[5].

A growing body of empirical literature dealt with the effects of governmental regulation of the market for rental housing. The regulations that have been studied such as rent control in New York City and Los Angeles are not identical to the new Chicago ordinance, though some regulations which require that rental housing be habitable are close. The significance of this literature is not in proving that the Chicago ordinance was unsound, but in showing that the market for rental housing behaves as economic theory predicts: if the price is artificially depressed or the costs of landlords artificially increased supply falls and many tenants, usually the poor and the newer tenants are hurt[6]. The single proposition in economics from which there is the least dissent among American economists was that "a ceiling on rents reduces the quality and quantity of housing available"[7].

Posner and Easterbrook pretty much capture the case against rent controls. Virtually all economists, as they point out right at the end of their analysis, regard them as counterproductive. All American economists, that is fewer than 2 percent of them dissented from the proposition stated by Posner and Easterbrook, but almost 44 percent of French economists did, along with almost 20 percent of Swiss economists and 11 percent of Austrian economists, down to 6 percent of German economists.

Defenders of rent control respond to such conclusions in two different ways, arguing either that they are unreliable or largely irrelevant. Finding "little research that systematically examines the differences between restrictive, moderate and strong rent controls in cities across the United States", the authors undertook a "comprehensive review of studies by economists, political scientists, planners and sociologists. Such a review suggests that neither moderate nor strong forms of control have caused a decline in either the quality or supply of rental stock. Although such findings do not, of course, prove that rent controls are without deleterious effect, they provide n warrant for drawing the conventional conclusions"[8]. They add: "Rent control has not, however, brought average rents down to affordable levels"[9]. On the other hand they wonder whether economists have overlooked important non-utilitarian considerations that might trump the conventional analysis and insist on the idea that existing tenants are usually the primary beneficiaries of the most rent controls, but perhaps that's the whole point: "rent controls make it possible for existing tenants to stay where they are, with roughly the same proposition of their income going to rent as they have become used to, a result that might be

justified in some circumstances than in others. From a moral point of view, then, judgments about rent controls must turn very much on context"[10]. They might be justified in the easy case where a landlord is earning monopoly rents, for example, but not where the landlord lives on the premises and rents a proportion to commercial tenants or transients who are not maintaining a home[11].

In respect of government-assisted housing programs, whatever the merits of the debates sketched above, it might be that decent housing is simply beyond the reach of the poor, absent government financial support, but this aid can take a number of forms: project subsidies tied to specific dwellings, in other words, traditional public housing and if the recipient leaves the dwelling, the subsidy is forgone; housing allowances distributed according to need and to be spent for housing only, the money is not tied to dwellings but to recipients which may take the subsidy with them where they move; income maintenance programs involving unrestricted cash payments to needy recipients who may spend the money as they wish. The following paragraphs consider American low-income housing policy in term of alternatives.

There has been a series questionmarkes raised[12]. If, as most analyses agree, the major housing facing low income households today is one of affordability, why do public policymakers treat the difficulties by low income renters as housing problems rather than as problems of income distribution? If the problems faced by these households could be solved by increased income, why not provide low income households with unrestricted income supplements rather than subsidies earmarket for housing expenditure? If the market for housing were free of market imperfections, and the only housing problem of low income households was affordability, elementary welfare economics would indicate that an unrestricted income supplement such as negative income tax would be the most efficient policy. Earmarket subsidies and in-kind redistribution are generally considered to be inefficient, since many households would not, if left to their own choice, spend each additional dollar of income on a dollar's worth of housing consumption. Instead, household would typically choose to spend only a portion of the increased income on housing and the remainder on other consumption items such as food and clothing. By providing low income households with in-kind assistance, the public sector's expenditure presumably results in less overall utility than would an unrestricted transfer payment.

The housing market, however, is not free from market imperfections and artificial constraints on supply. Tying public subsidies to housing is justified in circumstances where they can be utilized efficiently to overcome these market failures and constraints. Although most economists believe that housing markets are generally competitive with a large number of actual and potential consumers and sellers, absent government intervention, the housing market may fail to generate an optimal amount of housing. The supply of housing, although quite elastic in the long run, is relatively inelastic in the short run because of the length of time required for site selection, financing and construction. In addition, government regulation impedes the supply of housing, especially for low income households. Zoning and land use regulations, health and safety ordinances, as well as rent control and security of tenure laws, may restrict the supply of housing. Furthermore, discrimination against minorities in the housing market might limit their ability to purchase housing in certain neighborhoods.

Public intervention in the housing market may also be justified by the problem of substandard housing. Deteriorated housing sometimes poses an externally problem. The existence of dilapidated structures may reduce the value of neighboring homes and may lead to disinvestment in the

[12] Michael H. Schill, Privatizing Federal Low Income Housing Assistance: The Case of Public Housing, 75 Cornell L. Rev. 1990, pages 878, 890-900, 948.

neighborhood. Because the owner of the deteriorated structures does not have to bear all the costs generated by his or her property, public intervention such as slum clearance or renovation assistance might be appropriate. In much the same way that a deteriorated building might be considered a negative externality, a high quality building might be a positive externality or public good. The existence of such a structure might increase values and confidence in the community. Private entrepreneurs might avoid making the investment since they would receive only a portion of its benefits, with nearby owners free-riding on the remainder.

Another justification for government intervention in the housing market, as opposed to pure income assistance, is based on noneconomic factors. Although Americans typically accept inequality in most aspects of life, there is a rough consensus that "certain specific scarce commodities should be distributed less unequally than the ability to pay for them."[13] Society may be justified in preferring a minimum entitlement to housing, despite the desires of the recipient, for several reasons. People who prefer other goods and services to a minimum level of shelter may lack sufficient information or be unable to assess rationally the true worth of decent housing, thereby justifying social paternalism. Furthermore, in light of the increasing children born to unmarried, teenage parents, efforts to provide a minimum level of housing consumption may be justified as necessary to protect those who do not themselves have the power to make expenditure decisions. In addition, the knowledge that people are not living in desperately deteriorated and unhealthful accommodations may itself bring taxpayers positive utility and therefore serve as a consumption item for the donors rather the donnes.

The argument that government programs to provide housing assistance to low income households are justified on market failure, supply constraints or societal consensus does not lead to a simple answer to the question of how that assistance should be designed. Typically, housing policies are characterized as either supply or demand oriented. Programs in which the government supports the construction of new dwellings, either by building it itself or by subsidizing developers, are enacted to directly increase the supply of housing. Programs that provide the recipients of assistance with the funds to purchase housing services increase the demand for housing, and indirectly, its supply.

In the following paragraphs it will be dealt with a comparison between public housing, a supply oriented program, and houses certificates and allowances, a demand orientated subsidy.

Since the mid-1930s, the federal government has funded the construction of housing for low-income households. New Deal agencies such as Public Works Administration bought land, cleared slums and built almost 22.000 housing units. Direct federal provisions of housing was initially dealt a blow in 1935 when a federal appeals court upheld a lower court ruling that the federal government could not use its power of eminent domain to condemn sites for housing projects because housing was not a public purpose. In 1937, however, Congress passed the Wagner-Steagall Housing Act, establishing the public housing program. Under the Act, public housing would be built by local public housing authorities rather than by the federal government. In addition to the concern of comity, the program utilized public housing authorities because several state courts had held that cities and states had the power to condemn property for housing. Under the program, a public housing authority and the federal government excite an annual contribution contract which sets forth the parties' rights and obligations. The public housing authority funds the purchase of land and construction of housing by issuing long term bonds, typically with a forty year maturity. The federal government undertakes an obligation to make all debt service payments on bonds, effectively subsidizing all capital costs. The public housing authority, in turn, obligates itself to operate the public housing in a manner consistent with federal statutes and regulations during the term of the annual contributions contract. The municipality in which the project is located is required to grant an exemption from real property taxes for housing development. Unlike housing built by Public Works

[13] James Tobin, On Limiting the Domain of Inequality, 13 J.L. & Econ., 1970, pages 263-264.

Administration, public housing was, from the start, limited to low income households. Due to the onset of World War II, only a modest number of units were built under the 1937 Housing act. In 1949, however, Congress passed another housing act which provided federal subsidies for slum clearance and urban redevelopment. As part of the act, Congress authorized the construction of an additional 810.000 public housing units and established the national housing policy of a decent home and a suitable living environment for every American family. It was not until 1972 that all the housing units authorized by the 1949 Act were actually completed. Today, approximately 1.3 million units of public housing exist in the United States.

From its inception, public housing was controversial. In the 1930s, the private real estate lobby alleged that the program was socialistic and wasteful. Projects were frequently segregated by race and built in less desirable neighborhoods where their presence would not be offensive to community residents. Public housing was originally created for temporary occupancy by the submerged middle class. As soon as residents could get themselves on their feet, they were expected to move elsewhere. During the 1950s, however, the socioeconomic character of public housing changed. Federal government policies and programs such as mortgage insurance, tax preferences for homeownership and highway construction subsidized the movement of middle and moderate income households out of the city to the suburbs. At roughly the same time, black migration from the south to northern cities accelerated. As manufacturing jobs followed the migration of household to suburban locations, central cities increasingly became home to low income and black households. Public housing no longer served as a temporary haven for upwardly mobile households, but instead became a permanent home to very poor and disproportionately nonwhite population.

As the income of public housing residents plummeted and the age of public housing projects increased, the rents charged by the public housing authorities to cover operating expenses became increasingly burdensome. In 1969, Congress's action to assist tenants by limiting maximum rents chargeable further added to public housing authorities burdens. The federal government enacted subsidy programs to help the authorities pay for operating and modernization expenses. Neither of these subsidies, however, was fully funded, and many public housing authorities further cut back on maintenance which led to structural deterioration and, in some extreme cases, the demolition of uninhabitable buildings.

Public housing is only one of the several housing programs enacted by the federal government to assist low income households. Since the 1970s the government has increasingly relied on the private sector to deliver housing assistance. Although future federal housing assistance for low income households should rely to a greater extent on the private sector for delivery of services, that does not mean that the federal government should cut back its role in financing such assistance or abandon its already sizable investment in public housing. To the contrary, there remains a need for the public sector to assist low income households in obtaining adequate and affordable housing. By using the private sector to deliver these housing services, it is likely that the greatest number of households can be assisted for a given level of federal expenditure. There will remain for the foreseeable future, however, a role in American housing policy for publicity owned rental housing, especially in those circumstances where artificial constraints on supply or housing discrimination exist.

Conclusions

As a general rule, residential rent regulation makes economic sense if, and only if, two conditions occur simultaneously in the market and are both expected to last for some time. Demand for rental units must rise shapely at the same time that new construction of such units has been legally restricted in order to conserve resources. In the absence of these conditions, rent controls are neither an appropriate nor an effective response to perceived housing shortages, on the contrary they generally exacerbate such shortages.

As a general rule, the more an ordinance intrudes upon the market conditions that would otherwise prevail, the more likely it is to cause dislocations in a housing market. Controversially, less intrusive rent regulations appear to cause less severe dislocations.

Much evidence indicates that all rent controls, even temperate controls, transfer income from owners to tenants or between various classes of tenants. In addition, many of the short-term benefits of rent controls as affluent rather than poor households and some of the costs must be borne by very poor households. Where rent is eliminated as a basis for distinguishing among potential tenants, owners often use other factors such as credit-worthiness, race, sex or ethnicity in allocating scarce rental units, even though most such discrimination is illegal.

On the other hand, the defenders of rent control argue that the conclusions of the economists about rent controls have little application to gentrifying markets and that they will not lead to abandonment, conversion, inadequate maintenance or a decrease in future construction, but will reduce the social costs of poverty by increasing the supply of low-income housing.

I contend that in the future, the public sector should primarily subsidize demand, leaving the construction of additional housing to the private sector. Nevertheless, construction of public housing may be desirable under certain market conditions, including those markets subject to artificial entry barriers and discrimination.

Since many Romanians are in the same boat as the Americans and plead a saving policy to make their lives and their children's future more hospitable, this case study's purpose was to underline the rollercoaster of economic effects that the Romanian housing market would undergo and that we should learn from other's mistakes, having in mind that our economic treasurery doesn't even compare to that of the American people, and even so the aid program that they developed wasn't crowned with all that much glory as it was expected, so the Romanian experts should find a way to overcome the necessities of the poor population that cannot rent of the free market, but it should be one that wouldn't kick us, the others, out of house and home, due to the fact that we would have to support the subsidies that the poor would receive.

In the end, the remaining question is if the Constitution should be read or amended to guarantee each individual a right to some minimum level of housing. This is for us to determine and for our children to implement.

AMENDING REGULATION (EC) NO.1346/2000 ON INSOLVENCY PROCEEDINGS - SOLVING DEFICIENCIES OR ATTEMPT TO RESCUE COMPANIES IN DIFFICULTY?

GABRIELA FIERBINŢEANU *

Abstract
EC Insolvency Regulation claims, after more than 10 years, several changes imposed by some of the issues raised by the practice of its application but also by the need to promote economic recovery for enterprises in difficulty in the current economic crisis.
This paper analyzes the major segments of change and aims to determine whether these segments provide a coherent answer for the practical difficulties faced by the EC Regulation and whether extending its scope by revising the definition of insolvency proceedings may offer better chances of recovery for the enterprises in difficulty.

Keywords: *scope, insolvency proceedings, COMI, procedures publication, groups of companies.*

Introduction

Regulation no.1346/2000 on insolvency proceedings is no longer a subject of curiosity or debate. It has passed this phase long ago during the years of application. The problems raised by the practice during those years are not some abstract scientific notes but real questions having roots in the economic reality.

The actual need to rescue enterprises during the current economic crisis claimed a new approach of the Regulation and for this purpose, all existing debates generated mature ideas for changing the face of the Regulation. As professor Bob Wessels observed in his article "Revision of the EU Insolvency Regulation: What type of facelift?"[1], "The regulation has laid a basis for cross-border insolvency solutions. Some parts in the basis should be renewed, other parts should be added to create a European house in which one can live with some comfort".

This paper analyses the major segments of change by comparison with initial recitals and aims to determine whether these segments provide a coherent answer for the practical difficulties faced by the EC Regulation and whether extending its scope by revising the definition of insolvency proceedings may offer better chances of recovery for the enterprises in difficulty.

The offer of the Regulation no 1346/2000 on insolvency proceedings

The Insolvency Regulation is the product of a hard and long negotiation process having in mind that a body of substantive insolvency Law at EU level is not possible to achieve because of so many disparities between national insolvency laws. This reality was acknowledged also in the eleven Recital of the Regulation, being also the reason for not forcing the obvious truth by trying to introduce insolvency proceedings with universal scope in the entire Community.

Objectives that justified an action at EU level establishing a procedure applicable directly in Member States were also described in the Recitals of the Regulation and can be resumed in three ideas:

---

* PhD candidate, research assistant, Faculty of Law, "Nicolae Titulescu" University, Bucharest; Chief of Insolvency Service, Trade Register Office Bucharest (gabriela.fierbinteanu@gmail.com).

[1] Wessels Bob, "Revision of the EU Insolvency Regulation : What type of facelift?", article presented at the Conference "The future of the European Insolvency Regulation", 28 April 2011, Amsterdam, available at www.eir-reform.eu.

- proper functioning of the internal market requires efficient and effective proceedings
- the measures taken over insolvent debtor's assets must be coordinated
- forum shopping is to be avoided

We will summarize the content of the Regulation according to this ideas so that the next section of the paper regarding the changes to be made in the Regulation will be easier to follow.

The Regulation scope is to apply to collective insolvency proceedings involving the divestment of the debtor and the appointment of a liquidator(all the collective proceedings referred to are listed in Annex A of the Regulation). The international jurisdiction, as article 3 provides, can be divided in primary and secondary jurisdiction[2].According to article 3(1), "The courts of the Member State within the territory of which the centre of a debtor's main interests is situated shall have jurisdiction to open insolvency proceedings. In the case of a company or legal person, the place of the registered office shall be presumed to be the centre of its main interests in the absence of proof to the contrary" and article 3(2) "Where the centre of a debtor's main interests is situated within the territory of a Member State, the courts of another Member State shall have jurisdiction to open insolvency proceedings against that debtor only if he possesses an establishment within the territory of that other Member State. The effects of those proceedings shall be restricted to the assets of the debtor situated in the territory of the latter Member State".

Clarifying the scope of the proceedings, article 3(3) and article 3(4) qualified as secondary proceedings the proceedings opened subsequently under paragraph 2 of article 3, when insolvency proceedings have been opened under paragraph 1 of article 3(as winding-up proceedings) and as territorial insolvency proceedings the proceedings referred to in paragraph 2 of the article 3 that are opened prior to the opening of main insolvency proceedings only "where insolvency proceedings under paragraph 1 cannot be opened because of the conditions laid down by the law of the Member State within the territory of which the centre of the debtor's main interests is situated"(article 4a) or "where the opening of territorial insolvency proceedings is requested by a creditor who has his domicile, habitual residence or registered office in the Member State within the territory of which the establishment is situated, or whose claim arises from the operation of that establishment"(article 4b)

The Regulation stated the need to coordinate parallel proceedings so the realization of assets and a fair distribution to creditors can be offered. Recital 12, 16, 17, 19 provide proofs of the intention to protect diversity of interests - the courts are enable to order protective measures form the time of the request to open proceedings, preservation measures taken prior and after the commencement of the insolvency proceedings, protection of local interest, opening of secondary proceedings when the efficient administration of the estate requires in cases when the debtor's estate is complex.

Duty to cooperate and communicate information is a special but poor section in the Regulation(article 31) representing a transcription of common ideas about what cooperation is meant to do(liquidators in the main and secondary proceedings need to cooperate with each other, communicating information relevant to the other proceedings).

In the matter of forum shopping, the problems are strongly related with the concept of "center of main interests"(COMI), referred at in Recital 13 and in article 3 "In the case of a company or legal person, the place of the registered office shall be presumed to be the center of its main interests in the absence of proof to the contrary". This concept must be interpreted according to Recital 13 as "the place where de debtor conducts the administration of his interests on regular basis", being "therefore ascertainable by the third parties". As explained in Report on the Convention on Insolvency Proceedings by Miguel Virgos and Etienne Schmit in 1996, by using the term "interests" the intention was to cover all general economic activities not only commercial, industrial

[2] Omar, Paul J., The European insolvency regulation 2000 - A Paradigm of International Insolvency Cooperation,Bond Law Review, Vol15, Iss.1, Article 10, available at http://epublications.bond.edu.au/blr/vol15/iss1/100.

and professional activities so that the provisions could be applied also to the activities of private individuals and as a criterion for the cases where the interests include different types of activities run from different centers was used the term "main''.

Time and reason for changes

In 2009, an estimated 1.7 million jobs were lost because of business failures, according to Creditreform Economic Research Unit. In 2010, some 600 companies in Europe went into liquidation every day, pointed EU Justice Commissioner in Dublin, September 2012. According to the data published by the Insolvency Proceedings Bulletin, in Romania, in the first 8 months of the year 2012, the insolvency procedure began for a number of 16.481 companies, 7,59% more than in the same period in 2011, concluded Coface Romania. This are only numbers but all are reflecting the same idea - difficult economic times. The reform of the Regulation must be accommodated not only to concepts but also to practical needs. Article 46 stipulates that no later than 1 June 2012, and every five years thereafter, the Commission shall present to the European Parliament, the Council and the Economic and Social Committee a report on the application of this Regulation.

On the 23.03.2011, the Legal Affairs Committee held a workshop on "Harmonisation of insolvency proceedings at EU level" trying to identify the areas eligible for harmonization in national insolvency laws. The debated issues were structured in 4 categories to be considered in future legislative initiatives:

- harmonization where possible in the maters of opening insolvency proceedings, filling of claims, avoidance actions, liquidators, restructuring plan
- revision of the Insolvency Regulation regarding COMI, definition of the establishment, duty of cooperation for liquidators and for courts
- insolvency of groups of companies
- creation of an EU Registry in order to find information about the opening of insolvency proceedings and the deadlines and the form requested to fill in the claims.

In one of the papers[3] issued by the Directorate General for Internal Policies after the workshop, we can find also the practitioners point of view(INSOL Europe working Group) about the improvements needed to be made. In brief, the document added to the 4 presented categories some practical problems as follows: extension of the scope of the Regulation (including reorganization proceedings); recognition of the proceedings opened in the case when COMI is situated in a non EU country; the different treatment for pledged assets, having in mind article 5(1) regulating third parties right in rem; difficulty to challenge detrimental acts (article 13) by selecting the law applicable to the contract; effects of insolvency proceedings on lawsuits pending(coordination of article 4(2)f and article 15);the treatment of secured and non-secured claims in different insolvency proceedings regarding the same debtor; different contract approach when a territorial proceeding is opened, by contrast with the law of the Member State where the main proceedings are opened.

At this point is interesting to mention some of the suggestion made by the Committee on Employment and social Affairs to be incorporated by the Legal Affairs Committee in the motion for resolution - greater harmonization of insolvency proceedings will promote equality and may have a positive impact on Member State's competitiveness and also on potential employment opportunities; in the context of economic crisis, the issue of insolvency must be considered also from an employment-law perspective; considers necessary to be increased the priority of employees' claims relative to other creditors' claims; underlines the need for the timeframes for main and secondary proceedings to be harmonized and shortened in order to offer legal certainty to paid employees.

The European Parliament Resolution of 15 November 2011, having regard to the Report of the Committee on Legal Affairs and the opinions of the Committee on Economic and Monetary

[3] "The revision of the EU insolvency regulation", Directorate General for Internal Policies, Policy Department C:Citizens"Rights and Constitutional Affairs, 2011, available at http://www.europarl.europa.eu/studies.

Affairs and the Committee on Employment and Social Affairs, requested the Commission on insolvency proceedings in the context of EU company law to submit one or more proposals relating to an EU corporate insolvency framework. The detailed recommendations as to the content of the proposals requested was structured in 4 parts[4], as follows (we will insist only on some content of the recommendation).

1. *Harmonization of specific aspects of insolvency law and company law*

Opening of insolvency proceedings - insolvency proceedings can be brought against natural persons, legal entities or associations or can concern assets of entities without legal personality(European Economic Interest Grouping);proceedings are opened if the debtor is insolvent or if the request is made by the debtor if debtor's insolvency is imminent; the Member States must regulate the situations when the debtor is liable in the event of non-filing or improper filing.

Recommendation on the harmonization of certain aspects of the fillings of claims - creditors file in written form within a certain period of time and Member States are required to regulate this period of time within one to three months from the date of publication of the bankruptcy decision; the creditor must disclosure the documentation in support of the claim; after this period filings imply if verified but additional costs for the creditor .

Harmonization of avoidance actions

Harmonization in the field of qualification of liquidator

Harmonization of restructuring plans – "unimpaired creditors, or parties that are not affected by the plan, should not be entitled to vote on the plan or, at least, should not be able to impede it"; the plan must be approved before the relevant court.

2. *Revision of Council Regulation (EC) No 1346/2000* - scope of the Insolvency Regulation should be extended to insolvency proceedings in which the debtor remains in possession ; a clear definition of COMI must be included as to prevent forum-shopping; the Insolvency Regulation should include also a definition of 'establishment' as "any place of operations where the debtor carries on a non-transitory economic activity"; the Insolvency Regulation should provide for an unequivocal duty of communication and cooperation between liquidators and between courts; timeframes should be shortened ;"the review of the avoidance action rules should take into account that due to avoidance actions some healthy subsidiaries of a company are driven into insolvency".

3. *Insolvency of groups of companies* –The Member State where the operational headquarters of the group is situated must open the insolvency proceedings and an unique insolvency practitioner must be appointed; when ancillary proceedings are opened a committee should be formed to defend the interests of local creditors and employees; establishing rules to facilitate the use of the forms of cooperation between courts and insolvency practitioners to coordinate the insolvency proceedings.

4.*The creation of an EU insolvency register* - In the context of the European e-Justice Portal was proposed an EU Insolvency Register containing the relevant court orders and judgments, the appointment of the liquidator, the contact details and the deadlines for filling claims.

At the 1st European Insolvency & Restructuring Congress held in 9 February 2012 in Brussels, Vice-President of the European Commission, EU Justice Commissioner, Viviane Reding affirmed, mentioning that the Regulation does not accommodate the concepts of rehabilitation and reorganization, the need for a fresh start that must allow the surviving of honest enterprises during the difficult economic conditions "We must now focus on the fresh start that allows good honest businesses the chance to survive these difficult economic times. The Insolvency Regulation has proved to be very useful over the years, but it now needs a face-lift. First, we have to assess the efficiency of the current Regulation. To what extent has the initial objective been achieved, "to avoid forum shopping"? Second, we must ensure that the Regulation is consistent with other EU policies and legislation – I would mention developments in banking law, company law, and the rights of

[4] "Motion for a European Parliament Resolution" and "Annex to the Motion for a Resolution :Detailed Recommendations as to the content of the proposal requested",2011, http://www.europarl.europa.eu.

employees as well as entrepreneurs. Furthermore, we want to bring EU insolvency legislation in line with national best practices and the UNCITRAL Model Law on cross-border insolvencies. Third, the Regulation should enter into the internet era. With e-Justice, any court in the EU will have access to insolvency registers in other Member States. The Commission is supporting a pilot project with 9 Member States for the interconnection of these registers. Beyond that, the e-filing of claims would present advantages to liquidators and foreign creditors"[5].

The proposal amending Council Regulation (EC) No.1346/2000 on insolvency proceedings - is the future brighter?

At 12 December 2012 in Strasbourg, the European Parliament and the Council of the European Union adopted the proposal for a Regulation amending Council Regulation (EC) No.1346/2000 on insolvency proceedings. As seen from the brief presentation of the Regulation and from the detailed recommendations, there were identified some main shortcomings - the scope of Regulation does not cover pre-insolvency proceedings or the hybrid proceedings which leave the existing management in place ; determining the competent Member State to open the proceedings is difficult because of the problems raised in applying COMI concept in practice; opening of the secondary proceedings that moreover is a winding-up procedure is an obstacle in restructuring of the debtor's activities; the rules on publicity of insolvency proceedings and on cooperation between courts or insolvency practicioners are not mandatory ;lack of provisions for group insolvency.

In the next steps, we will try to follow the amendments in the new Regulation having in mind the presented shortcomings.

The *scope* of the Regulation was extended. Article 1 states now that the Regulation applies to collective judicial or administrative proceedings, including interim proceedings, which are based on a law relating to insolvency or adjustment of debt and in which, for the purpose of rescue, adjustment of debt, reorganization or liquidation, the debtor is totally/partially divested of his assets and a liquidator is appointed or the assets of the debtor are subject to court control(the initial content provided that the Regulation shall apply to collective insolvency proceedings which entail the partial or total divestment of a debtor and the appointment of a liquidator).

COMI concept was also clarified and through this the jurisdiction of the competent court. The Recital 13 from the Regulation was deleted and new Recitals, 13a and 13b are inserted. The Recital 13 a states that " The 'centre of main interests' of a company or other legal person should be presumed to be at the place of its registered office. It should be possible to rebut this presumption if the company's central administration is located in another Member State than its registered office and a comprehensive assessment of all the relevant factors establishes, in a manner that is ascertainable by third parties, that the company's actual centre of management and supervision and of the management of its interests is located in that other Member State. By contrast, it should not be possible to rebut the presumption where the bodies responsible for the management and supervision of a company are in the same place as its registered office and the management decisions are taken there in a manner ascertainable by third parties."[6].The new introduced Recital 12 a gives the court the possibility to examine ex officio whether the debtor's centre of main interests or establishment is located within its jurisdiction and also the possibility to require additional evidence or give the debtor's creditors the opportunity to present their views(proofs) on the question of jurisdiction.

In the matter of *secondary proceedings*, that may damage sometimes the efficient administration of the estate, new Recital 19a introduces provision according to which the court

[5] Taking Insolvency Law into the 21 st Century to Ensure Justice for Growth, speech of Vice-President of the European Commission, EU Justice Commissioner Viviane Reding at the 1st European Insolvency & Restructuring Congress held in 9 February 2012 in Brussels, http://europa.eu/rapid/press-release.

[6] Proposal for a Regulation of the European Parliament and of the Council amending Council Regulation(EC)No.1346/2000 on insolvency proceedings, http://ec.europa.eu.

opening secondary proceedings is able, to postpone or to refuse the opening if it is not necessary for protection of the interests of local creditors(but only on liquidator's request).Another different approach can be found in the new recital 20 that brings on strongly the idea of coordinated concurrent proceedings pending that can conduct to a effective realization of the assets and also gives the liquidator in the main proceedings a dominant role through several possibilities for intervening in the secondary insolvency proceedings proposing a restructuring plan or a suspension of the relaxation of the assets.

Cooperation and coordination seemed improved in the new Regulation by the provisions of new article 31 – "Cooperation and communication between liquidators" extended with the help of two new articles - 31a, "Cooperation and communication between courts" and 31b – "Cooperation and communication between liquidators and courts". For business consideration, the main content of the decision opening the proceedings should be published at the request of the liquidator and if there is an establishment in the Member State concerned, the publication should be mandatory until is established a system of interconnection of insolvency registers, composed of the insolvency registers and the European e-Justice Portal which shall serve as central public electronic access point to information from the system.

A new chapter - IVA – "Insolvency of Members of a Group of Companies" was introduced as a response to the need of coordination of the insolvency proceedings concerning different members of the same group of companies. The new Regulation defines in Article 2 the concept *group of companies* as a "number of companies consisting of parent and subsidiary companies" and parent company as a company which has a majority of the shareholders' or members' voting rights in another company (a "subsidiary company") or is a shareholder or member of the subsidiary company and has the right to appoint or remove a majority of the members of the administrative, management or supervisory body of that subsidiary or exercise a dominant influence over the subsidiary company. Referring at the opening of the procedure for several companies belonging to a group Principle 20b stipulates though that the "introduction of rules on the insolvency of groups of companies should not limit the possibility of a court to open insolvency proceedings for several companies belonging to the same group in a single jurisdiction if the court finds that the centre of main interests of these companies is located in a single Member State. In such situations, the court should also be able to appoint, if appropriate, the same liquidator in all proceedings concerned".

Conclusions

Premises are good and as we can see, the aim of the proposal is not only to solve the problems but also to modernise the provisions of the insolvency Regulation no.1346/2000 but the truth is that only the economic crisis opened the eyes. Many solved problems are old facts spoken about since Virgo-Schmit report in 1996. The idea to help continuation of business through pre-insolvency and hybrid proceedings although for a long time "many policies have focused on the necessity to "produce" more entrepreneurs and not so much on the necessity to preserve the stock of entrepreneurs"[7], is not a new born, it represents a change made in French law since last century. Cases as Rechtsbank's Gravenhage, when the court decision determined Dutch entrepreneur to apply for insolvency and have his business liquidated because the debt reorganisation procedure was not covered by the EIR[8] or the apparition of the risk in the matter of mutual trust between courts, as we can follow in the ruling of CJEU in the Eurofood case(Case C-341/04, Eurofood IFSC Ltd) are not abstract elements but realities. Also, postponing the creation of a set of rules for groups of

[8] Rechtsbank's Gravenhage, First instance court, Netherlands, judgment of 10 June 2010, www.insolvencycases.eu.

companies, for different political or practical reasons, was not a very good answer to the business evolution as professor Bob Wessels showed[9] "The lack of provisions concerning multinational groups of companies has been classified as an omission. However, not all critics take into account the fact that cross-border insolvency within Europe was discussed for over forty years before the Regulation finally enacted. The discussions concerned complex problems. At the time, the decision to postpone "group insolvencies" to a later date may have been considered both politically and practically prudent. Furthermore, the Regulation reflects thinking of the 1980s and 1990s, when the phenomenon of groups of companies was not as current as in the first decade of the 21st century and, moreover, in European domestic insolvency laws reorganisation or rescue of companies was not the prevailing option.". The notice that "technological issues, procedural issues and substantive issues of the Regulation are mutually dependent"[10] has a correspondent in the operational objectives of the amendments as are presented in the Commission Staff working Document, Impact assessment, accompanying the document Revision of Regulation(EC) No 1346/2000 on insolvency proceedings, Strasbourg, 12.12.2012[11]: regulate pre-insolvency and hybrid proceedings and clarify the rules relating to jurisdiction for opening insolvency proceedings without prejudice of the freedom of establishment in the European Union; reduce the number of cases in which determining the jurisdiction raised problems and also ensuring the possibility for judicial review in this cases; reduce the number of secondary proceedings; improved coordination between courts and practitioners; introducing mandatory publication of relevant decisions in each Member State so that transparency is increased; improved access to justice for SMEs through measures that facilitate the lodging of claims; introducing a legal framework for group insolvency.

Until the Regulation shall apply we can only trust the desire of improvement and continue to analyse in details in further materials each proposed action generally introduced in this paper.

PUBLICATION PROCEDURES AND COMMUNICATION MADE BY COMMERCIAL REGISTERS IN CROSS-BORDER COMMERCIAL ACTIVITIES

GABRIELA FIERBINŢEANU[*]

Abstract
Expanding companies' activities beyond state borders brings into existence the need to be established permanent cross-border access to specific legal regulations and formalities applicable to the performed operations .
Interconnection of companies registers and facilitation of the access to information from a national commercial register for any interested person, irrespective of its geographical location should represent an impossible to ignore objective at EU level and beyond, not only in considering a stable legal environment but also in considering the possibility of carrying out the activity in states other than their own.
In this paper we propose to capture the steps taken to this end in the European Union, pointing undesirable economic impact of the lack of such measures.

Key words
Commercial registers, Directive 2012/17/EU, Directive 2006/123/EC, internal market, cross-border commercial activities

Introduction

"What is needed above all is a clear-headed appreciation of how different institutions work, along with an understanding of how a variety of organizations – from the market to the institutions of state – can together contribute to producing a more decent economic world"[1]

We all think, in a simple manner of speaking, that doing business should lead to economic development and maybe we all believe that this can be reflected for every individual in a process that can be defined (as the title of a famous movie "Eat, Pray, Love") in three words - think, pray, work - but the truth is that complicated legal frameworks and sophisticated explanations are sometimes a burden for enthusiastic private enterprises and also for the public.

Businesses registration must be focused not only on the formal registration procedure but also on providing clear and trustworthy information for the business partners and for the third parties, creating a safe and user - friendly environment. Some keys for the business register reform process presented by the World Bank Group as recommendations can be: trust between representatives of the business sector and from the authority's with a role in business registration, clearly defined roles and responsibilities in business registration, an information strategy needed for building awareness, funding the reforms by the country governments.[2]

Returning to the process of doing business recently was shown in another World Bank Group material:" A number of recent studies have found that simpler registration processes translate into advantages for workers and employers, including greater employment opportunities, more productive jobs, and higher total factor productivity. In addition, society as a whole benefits from registration reform, which requires that businesses pay taxes, play by the rules, and provide productive, decent employment"[3] .

[3] Reforming Business Registration, A Toolkit for the Practitioners, January, 2013, Investment Climate, World Bank Group, https://www.wbginvestmentclimate.org.

After this short introduction about the process of business registration and the differences between what it is and what it should be, we will try to focus on the efforts made et EU level in the matter of publicity and cooperation in exchanging information through business registers.

1.EU legal framework in the field of publicity and cooperation between business registers

As the Article 2 from the consolidated version of the Treaty on European Union underlines[4] the Union has set itself as an objective, to promote economic progress through the creation of an area without internal frontiers promoting strengthening economic and social cohesion. "Trans-nationalization of companies"[5] increases competition between enterprises and that process has as a result higher performances, cooperation between firms, quality best practices and also a good dissemination of corporate information. In this part, a historical evolution of legal framework in EU legislation will be made.

First Council Directive of 9 March 1968 on co-ordination of safeguards which, for the protection of the interests of members and others, are required by Member States of companies within the meaning of the second paragraph of Article 58 of the Treaty, with a view to making such safeguards equivalent throughout the Community (68/151/EEC) (Official Journal L065, 14.03.1968 P.0008-0012)

The First Council Directive was a first step in the process of co-ordination of national provisions concerning especially limited liability companies and companies limited by shares, in consideration of the extended cross border activities of such companies. The Directive 68/151/EEC was structured in four sections regulating types of documents for which must be ensured compulsory disclosure, regime of the acts done by the representatives of the company before the companies acquire legal personality, the grounds for the nullity of companies and of course general provisions for Member States regarding amendments of the national laws. Was this the beginning of the globalization at this level as an "inexorable trend"[6]?

Since the activities of companies were extending beyond national territories there was the need, as provided in the body of the act, to coordinate the national provisions concerning nullity and basic documents of a company that should be disclosed in order for third parties to have their interests and assets protected and to ascertain the content of basic company documents, especially the persons who are authorized to bind the company .For this scope, the act stipulates in Article 3 that in each Member State shall be opened a file in a central register, commercial register or companies register for each of the companies registered therein, regulating also that disclosure of the documents shall be effected by publication in the national gazette appointed for that purpose by the Member State.

According to Article 1, compulsory disclosure regards the instrument of constitution and the amendments made, the persons or the body authorized to represent the company , information about the subscribed capital, the balance sheet, the transfer of the seat of the company, any measures related to a winding up procedure, appointment of liquidators and the striking off from the register.

In regard with nullity of companies, Article 11 captures 6 grounds providing this sanction, in a restrictive manner, specifying that ordering of nullity is the attribute for courts of law : the legal formalities were not complied properly, the company object are contrary to public policy or not

[4] Treaty on European Union, Consolidated version, eur-lex.europa.eu.

[5] Maresceau Kristof, Tison Michel, Cross-border business in the European Union and statutory disclosure requirements - using IT as a a catalyst for further market integration, November, 2007, Financial Law Institute, University of Ghent, papers.ssrn.com.

[6] Guillen, Mauro F, Corporate Governance and Globalization: Arguments and Evidence against Convergence, 1999, http://knowledge.wharton.upenn.edu/papers/839.pdf.

according to the law, the statutes does not contain compulsory elements(name of the company, total amount of capital, duration), the minimum amount of capital was not paid according to national law, founder members are incapable or the number of founder members is less than two, contrary to the national law.

Second Council Directive 77/91/EEC of 13 December 1976 on coordination of safeguards which, for the protection of the interests of members and others, are required by Member States of companies within the meaning of the second paragraph of Article 58 of the Treaty, in respect of the formation of public limited liability companies and the maintenance and alteration of their capital, with a view to making such safeguards equivalent (Official Journal L 026 , 31/01/1977 P. 0001 - 0013)

As a next step in the coordination process provided for in Article 54(3) of the Treaty establishing the European Economic Community, whereas in order to ensure protection for shareholders and creditors of public limited liability companies and to make possible for any interested person to be acquainted with particulars of the company, including capital and the increase and reduction of the capital, the Directive, applicable to public companies limited by shares (die Aktiengesellschaft), prescribes in details the information that must appear in the instrument of incorporation or a separate document to be published according to a procedure laid down in the national laws-the registered office; the company name; the nominal value of the shares subscribed and conditions limiting the transfer of shares or governing the reducing or increasing of the capital; condition regarding assets acquisitions; rules for appointing the members which are responsible for de administration of the company; any special advantage granted during the time of the formation of the company, to anyone who has taken part in the formation and more important stipulates that minimum capital, "25 000 European units of account" must be subscribed in order to incorporate this type of company.

The two Directives were subject of debate at the Conference on Company Law and the Single Market held in Brussels on 15 and 16 December 1997, as a result of the consultation launched by a Commission's questionnaire in February 1997, having as the main goal the plan to design a path ahead in achieving the consensus in EU countries in the matter of the changes imposed by practice in company law area. As observed in the analysis of the received responses on the questionnaire, contained in the material presented at the Conference by Blanquet Francoise, "Analysis of the Responses received on the Questionnaire" the respondents felt that the provisions on disclosure contained by 68/151/EEC Directive need a facelift according to modern communication tendencies and also argued that a number of provisions in Directive 77/91/EEC must not be so rigid, because large contractual freedom should be allowed to businesses. The importance of modern internet technology allowing retrieving data's at any time and simple disclosure of the papers containing valuable information about companies(balance sheet, meetings and decisions of shareholders), enterprises publicity ensuring the transparency of company movements and the protection of possible partners and third parties, the need to establish if the publicity set off by the first Directive is constitutive or declaratory, development of the European Business Register Project[7], cross-border validity of statutory company information were only some of the topics at the Conference.

The first council Directive was repealed by the Directive 2009/101/EC of the European Parliament and of the Council of 16 September 2009 on coordination of safeguards which, for the protection of the interests of members and third parties, are required by Member States of companies within the meaning of the second paragraph of Article 48 of the Treaty, with a view to making such

[7] The European Commission initiated in 1992 the European Business Register (EBR) project as part of the European Nervous System (ENS) Program, within the 3rd Framework Program of Research and Technological Development (DGXIII).

safeguards equivalent(JO L 258/11, from 01.10.2009).The 2009/101/EC Directive contains provisions clearly drowned regarding some of the topics presented at the Brussels Conference in 1997 - compulsory disclosure by companies of specific documents, ensuring the filing of documents by companies or other bodies by electronic means, possibility to replace the publication in a national gazette with other effective means, the treatment of the acts done by the organs of the company that exceed the powers that the law offers, provisions concerning nullity.

The Second Council Directive was amended by Directive 92/101/EEC(OJ L347/28.11.1992) (discussions about the dominant influence of a public limited liability company in another company in which holds the majority of the voting rights), Directive 2006/68/EC(OJ L264/25.09.2006) (the right for the creditors who had claims antedate the publication of the reduction of the capital decision to obtain adequate safeguards, the permission for the company to acquire its own shares, re-evaluation of the assets under the supervision of the management body), Directive 2009/109/EC(OJ L259. 02.10.2009)(establishing alternative publication through company websites regarding mergers/divisions) and **finally repealed by Directive 2012/30/EU** of the European Parliament and of the Council of 25 October 2012 on coordination of safeguards which, for the protection of the interests of members and others, are required by Member States of companies within the meaning of the second paragraph of Article 54 of the Treaty on the Functioning of the European Union, in respect of the formation of public limited liability companies and the maintenance and alteration of their capital, with a view to making such safeguards equivalent.(OJ L315/74 from 14.11.2012).

As some basic steps were made, the following acts of the Council were taken in the direction of coordination the provisions in case of mergers of public limited liability companies, Third Council Directive 78/855/EEC of 9 October 1978 based on Article 54 (3) (g) of the Treaty concerning mergers of public limited liability companies (Official Journal L 295 , 20/10/1978 P. 0036 - 0043), Fourth Council Directive 78/660/EEC of 25 July 1978 based on Article 54(3)(g) of the Treaty on the annual accounts of certain types of companies, (OJ L 222, 14.8.1978), Directive 2005/56/EC of the European Parliament and of the Council of 26 October 2005 on cross-border mergers of limited liability companies(Official Journal L 310 , 25/11/2005 P. 0001 - 0009) introducing the obligation for the registry for the registration of the company resulting from the cross-border merger to notify the registry in which each of the companies filed the documents that the cross- border merger has taken effect so that deletion of the old registration is made.

Interesting problems were raised in the attempts to regulate the transfer of a registered office from one Member State to another and in the creation of the European Private Company. In the first matter, in 2007 the European Commission announced that the "14th Company Law Directive „is on hold. Different approaches of the Member states in the subject - principle of the place of incorporation and principle of the real seat - generated two ways to treat the transfer - moving the head office to another Member State without dissolution and without change of the legal regime governing the company is valid for the countries applying incorporation principle; the transfer of registered office under the real seat principle is not allowed unless the head office is also transferred. It was also suggested that a new construction can improve companies' mobility - European Private Company, legal form facilitating the operation of business in several Member States of small and medium enterprises.[8].As other voices noticed[9], the Commission's argument that there is no economic case for a Directive on cross - border transfer of the registered office having in mind the possibilities

[8] Impact assessment on the Directive on the cross-border transfer of registered office, Commission Staff Working Document, 2007, ec.europa.eu.

[9] Vossestein, Gert-Jan, Transfer of the registered office. The European Commission's decision not to submit a proposal for a Directive, Utrecht Law Review, 2008, http://www.utrechtlawreview.org.

are already offered through SE or cross- border mergers are not so strong, thinking that under a new Directive this transfer can be realized at lower costs and in a clearer manner. A new consultation on the cross-border transfers of registered offices of companies was launched by EU, Internal Market and Services DG, for a period from 14.01.2013 to 16.04.2013 having the purpose to get more in-depth information on the costs currently faced by the companies transferring their registered offices abroad[10].

2."The relationship between companies and society has become unbalanced in favour of the former. But companies need to serve society, rather than society serving the shareholders"[11].

In this section we will present two important EU regulations which try to cover simplification of procedures and to establish new horizons in the cooperation between business registers at this level.

Directive 2006/123/EC of the European Parliament and of the Council on services in the internal market (L376/36, Official Journal of the European Union, 27.12.2006)

In the context of this regulation there are few aspects to describe in connection with the paper:

● Simplification of the procedures - Member States must examine the procedures and formalities applicable to a service activity and examine the possibility to simplify them if the case

● points of single contact - Member States shall ensure for providers to complete some procedures and formalities through points of single contacts .The procedures regard ' declarations, notifications or applications necessary for authorization from the competent authorities, including applications for inclusion in a register, a roll or a database, or for registration with a professional body or association' (Article 6)

● right to information - the Directive completes the picture specifying also the categories of information accessible through the points of single contacts (Article 7)

"(a) requirements applicable to providers established in their territory, in particular those requirements concerning the procedures and formalities to be completed in order to access and to exercise service activities;

(b) the contact details of the competent authorities enabling the latter to be contacted directly, including the details of those authorities responsible for matters concerning the exercise of service activities;

(c) the means of, and conditions for, accessing public registers and databases on providers and services;

(d) the means of redress which are generally available in the event of dispute between the competent authorities and the provider or the recipient, or between a provider and a recipient or between providers;

(e) the contact details of the associations or organizations, other than the competent authorities, from which providers or recipients may obtain practical assistance."

Directive 2012/17/EU of the European Parliament and of the Council amending Council Directive 89/666/EEC and Directives 2005/56/EC and 2009/101/EC of the European Parliament and of the Council as regards the interconnection of central, commercial and companies registers(L156/1 Official Journal of the European Union, 16.06.2012)

Issues around the interconnection of business registers can be resumed in three categories[12]: failure in updating business information in the register of foreign branches, difficult cooperation

[10] "Consultation on the cross-border transfers of registered offices of companies – Consultation by DG MARKT", ec.europa.eu/internal market/consultations/2013/seat-transfer.

[11] Resolution - The Future of European Company Law, adopted at the Executive Committee of the European Trade Union Confederation, 6-7 March, 2012, www.etuc.org.

between registers in cross-border merger procedures and difficult cross-border access to business information.

Responding to the three segments the new adopted Directive establishes:

►A unique identifier for branches allowing them to be identified in a simple manner in communication between registers(the identifier shall comprise elements making possible to be identified the Member State, the domestic register of origin and the branch number in that register)(new paragraph added in Article 1 of the Directive 89/666/EC)

►The register for the registration of the company resulting from the cross-border merger shall notify, without delay, the registry in which each of the companies was required to file documents that the cross-border merger has taken effect and the deletion of the old registration shall be effected only on receipt of that notification (new Article 13 in Directive 2006/56/EC)

►The register of the company shall make available information on the opening and termination of any winding-up or insolvency proceedings of the company and on the striking-off of the company from the register, if this entails legal consequences in the Member State of the register of the company (Article 5a inserted in Directive 89/666/EC).

The new Directive aims to facilitate cross-border access to official information defining a set of dates about companies available to third parties in all EU languages; to develop a framework for cooperation between EU business registers; to ensure the up-date regarding branches is respected and completed in time; to develop an easier way of tracking legal entities introducing the unique company identifier composed of the national registration number and an international prefix; to introduce reasonable time frames for communication.

The interconnection represents a proposal included in the Commission's Communication on the Single Market Act, in the effort to create a business-friendly legal environment and also is in strong connection with the European e-Justice Portal which serves as the single access point for legal information in the EU, and will include also databases and information regarding commercial registers.

Continuing the innovation brought by Directive 2006/123/EC**,** the European Commission launched in May 2009 a pilot project, SPOCS - Simple Procedures Online for Cross- border Services - aiming to build the next generation of online portals Point of Single Contact. SPOCS develops an interoperability layer meant to foster the services economy in EU by facilitating the Service Providers to apply using Point of Single Contacts for businesses in the Member States[13].

Another interesting project[14], developed with the financial support from the Prevention of and Fight against Crime Program Directorate General Home Affairs European Commission, must be mentioned in sustaining the idea that cooperation between business registers is more than a simple dissemination of information, implications being larger than that. The project BOWNET (identifying the Beneficial Owner of legal entities in the fight against money laundering Networks) is a feasibility study having the role to determine what information can be used and must be developed to obtain a support system which can be used in the fight against money laundering and when investigating beneficial owners of suspicious corporate entities.

Conclusions

Facilitating access to information about companies for third parties, including public authorities or enterprises from different Member States was one of the goals of the Directive

[12] Proposal for a Directive of the European Parliament and of the Council amending Council Directive 89/666/EEC and Directives 2005/56/EC and 2009/101/EC of the European Parliament and of the Council as regards the interconnection of central, commercial and companies registers, http:// eur-lex.europa.eu.

[13] Simple Procedures Online for Cross- border Services project, http:// www.eu-spocs.eu.

[14] Beneficial Owner of legal entities in the fight against money laundering NETworks project, http:// www.bownet.eu.

68/151/EEC and since 1968 evolution of the EU legal framework determined constant improvement in the field of publicity and cooperation. Amendments in 2003 of the Directive 68/151/EEC stipulating the existence of the electronic business registers, cross- border mergers Directive 2005/56/EC or Directive 2012/17/EU of the European Parliament and of the Council are only few of the proofs of the fact that economic reality imposes cross-border procedures and transparency as a necessity. As the Internal Market and Services Commissioner Charlie McCreevy said when the public consultation on identifying better ways to cooperate between business registers was released by the European Commission: "The current financial crisis highlighted once again the importance of transparency across the financial markets. Improving access to up-to-date and official information on companies for creditors, business partners and consumers could serve a means to restore confidence in the markets. Business registers play an important role in ensuring transparency and legal certainty in Europe."[15] .Having in mind also the EUR 69 million savings brought by the Directive 2012/17/EU we can only trust, but it will be subject of analyses, that finally, administrative costs, waiting time and unreliable information on companies are history and all the money saved will go into economic growth.

CONSUMER'S RIGHT TO WITHDRAW

ANCA NICOLETA GHEORGHE[*]
CAMELIA SPASICI[**]

Abstract
The right of withdrawal (of a contract) belongs to the consumer, and is an essential means for the improvement of regulations that protect the consumer.. Right of withdrawal is not a recent creation and is not even specific to the consumer field. He was previously recognized in civil and commercial law (without special regulation).
The right to withdraw may even have as ground the parties will. Thus, based on the contractual freedom, the parties may agree that one of them has the right to terminate the contract unilaterally
The possibility of unilateral denunciation of the contract, gives the consumer, added protection by being able to reflect the decision and to check how the trader fulfil its obligations.
In this context, through its effects, the right of denunciation, forces the professional parties to conduct themselves as fair as possible to the consumer and to execute the contract properly. In the study of the consumer protection, the time of conclusion is essential because in this stage is manifested, the inequality between the consumer and professional.
Thus, the lack of information, the major of products and activities, commercial practices, influence the formation of consumer will, preventing the expression of a freely and knowingly consent.

Key words*: contract, consumer, unilateral denunciation, contractual freedom, obligations.*

Introduction

The regulations in the field of consumers law, have determined the occurrence of new ways of concluding the contracts between professionals and consumers. Thus, it has been settled the legal regime of distance and off-premises contracts[1]. The field concerning the effects of distance and off-premises contracts was seriously affected, inter alia, by a new institution, particular for consumptions law, the right to withdraw of the consumer. The most important regulations containing provisions concerning the right to withdraw are:

- O.G. no.106/1999 on contracts concluded off-premises;
- O.G. no. 130/2000 concerning the consumer protection in the conclusion and implementation of distance contracts;
- Law no. 296/2004 (Consumer Code);
- O.G. no. 85/2004 concerning the consumer protection, in the conclusion and implementation of distance contracts that provide financial services.

The right to withdraw – the concept

The right to withdraw (a contract) that belongs to the consumer is an essential means for the improvement of regulations that protect the consumer. Under this right, the consumer has the responsibility to decide on the existence and effects of the contract without being required, the consent of the contracting partner. The right to withdraw is not, however, a recent creation and is not even specific for consumer protection field. He was previously recognized in civil and commercial law (without a special regulation).

[*] Lecturer, PhD; Faculty of Law, "Nicolae Titulescu" University of Bucharest (av.ancagheorghe@yahoo.com).
[**] Lecturer, PhD, University of Bucharest, Faculty of Social and Administrative Science (av_cameliastanciulescu@yahoo.com).

For example, the Civil Code has express provisions regarding the existence of this right in the regulation of certain contracts. Thus, according to art. 1816 part. (1) NCC, if the rental was concluded without determining the duration, either party may terminate the contract by notice.

The doctrine qualifies the right of withdraw (provided by common law) as an exception from the irrevocability of the contract[2].Right to withdraw may even has as ground the parties. Will. Thus, based on contractual freedom, the parties may agree that one of them has the right to terminate the contract unilaterally[3].The possibility of unilateral denouncement of the contract, gives the consumer extra protection by being able to reflect the decision and to check how the trader fulfils its obligations. In this context, through its effects, the right of denunciation forces the professional to have a fair conduct as possible to the consumer and to execute the contract properly.

Legal nature of the consumer's right to withdraw In doctrine, the right to withdraw of the consumer was established by law and remains a subject of dispute. The main issue is related to this special institutions harmonization, to the general theory of contracts. In terms of its legal nature, the consumer's right to "withdraw" raises two issues:

a) the consumer's right to withdraw is related to the formation of the contract or its termination phase?

b) if the consumer's right to withdraw is related to the conclusion, then: What validity condition is affected (consent, capacity or cause)?.

Trying to answer the above questions we do brief clarification. The effects of the legal act are ordered by following three rules (with rank of principles): the principle of compulsory force, irrevocability principle and the principle of relativity. Based on the principle of compulsory force (*pacta sunt servanda*) the contracts legally concluded have legal effects (mandatory) for the contracting parties. According to the principle of irrevocability contract cannot be denounced unilaterally. Thus as a rule, once the subjects gave their consent and the contract was legally concluded, the parties cannot unilaterally return to the existence of the contract, being obliged to execute the contract terms. It follows that the right of withdraw constitutes an exception from the above rule (except as may be imposed by law or contract, through the will of parties).

In particular through acquis provisions, in order to protect consumers' interests, the right to withdraw of the buyer, was governed mainly for distance contracts, which provided products and services.

Thus, according to art. 82 of Law no. 296/2004 (Consumer Code) contract for purchasing products and services should require a specific clause about the consumer's right to withdraw the contract. Consumer's right to withdraw "cannot be cancelled by any contractual provision or agreement between the parties, in cases provided by law, it is considered null and void." In this case, the rights of the parties on a fair compensation will not be affected by the withdraw (art. 84 C. consumption).We mention, that right to withdraw, belonging to the consumer, received several qualifications in literature.

The French doctrine[4], has been argued that the signing of the contract by the customer is only a stage in the gradual formation of his will.

Thus, consumer will, is not final, because he, it is able to reflect in the period that time of denunciation offers him (hence, the right of denunciation does not affect the binding force of the contract, the exercise of the right being placed at a time when the contract is not finally completed[5]).In another opinion (this time given by the national doctrine), it was considered that we

[2] See G. Boroi, op. cit, (2008), p 211 (which makes direct reference to the termination of the rent agreement for an indefinite period).

[3] Obviously, in this case, we are in the presence of exceptions from the the binding force of the contract, but an expression of free will.

[4] See J. Goicovici, Progressive formation of the contract, Wolters Kluwer Publishing, Bucharest, 2009, p 29.

[5] The consumer's right to withdraw is not an issue of revocation of the contract, see G. Boroi, op. cit, (2008), p 208..

are in the presence of a faculty granted (*ad legem*) to the "purchaser" to "withdraw from the contract signing", which translates legal to the possibility of deny (return) the consent given in the concluding the contract[6]. In the above conditions, denunciation is not a way to terminate the contract, but a "withdrawal of consent". Therefore, in substance, the faculty given to the consumer translates into his right to return the consent previously given at conclusion of the contract. Please note that French law is also established a "time of reflection". Thus, it is compulsory; the contract may not be concluded only after the expiry of that period.

Although it is only right to withdraw regulated belonging consumer and professional it is possible that enjoy a similar right. Worth mentioning that the exercise of the right to withdraw can be made without the obligation of the consumer to justify his option . The right to withdraw is not susceptible of abuse of law and cannot be censored by the county court.

The judicial control can be exercised over compliance with the formal requirements, for example, deadline set by the law, the manner of communication the will of the consumer to the trader .The right to withdraw is a potestative right[7] .

Exercising the right of denunciation draws the retroactive abolition of the contract, with the consequent of the refund of benefits. Although the right of denunciation constitutes a better alternative for the consumer, it may resort to other means made available either by common law or by specific regulations in this area in order to protect their interests. Thus, it may request cancellation of contract for fraud of consent or the annulment of a clause as being abusive. Finally, we consider that in the study of consumer protection, the time of conclusion is essential because at this stage is manifested the inequality between consumer and professional. Thus, the lack of information, the improvement of products and activities, the commercial practices influence the formation of consumer will, hindering the expression of a freely and knowingly consent.

The withdraw in distance contracts

The main regulations on the right of withdraw of contracts are included in O. G No. 130/2000 on consumer protection in distance contracts the conclusion and implementation. The contract concluded in distance is a contract for the supply of goods or services concluded between a professional and a consumer, under an organized system by the trader who uses exclusively, before and at the conclusion of this contract, one or more away communication techniques [art. 2 par. (1). a) of the ordinance][8]. According to art. 7. (1) of the ordinance, in the distance contract, the term to withdraw the contract by the consumer is 10 working days.

We specify that it does not support penalties for late withdraw and does not require "invoking any reason". An only cost that may involve to the consumer is the direct cost of returning the goods.

The 10 days specified for the exercise of this right shall run differently in relation with the object of the contract:

- For products it begins from the date of receipt by the consumer;
- For services, from the day or after the conclusion of the contract or agreement, on condition that the delay does not exceed 90 days. The flowing of the term of withdraw is conditioned by providing the information's required by law to consumers.

---

[6] The period of reflection (of withdrawal, the penalty, etc.) should not be confused with the term of reflection (granted to the consumer ,prior to the conclusion of the contract, for example, for the purchase of a real estate) or grace period (granted by the court to the debtor for payment of the debt), see G. Boroi, L. Staniciulescu, Civil institutions, Hamangiu Publishing, Bucharest, 2012, p 398.

[7] Potestative rights assigns to the owner , the power to interfere unilaterally in existing legal situations to amend them, extinguish or create new situations, see I. Reghini Considerations on potestative rights in D.R.C. No. 4/2003, p 236.

[8] Remote communication technique can be "any means that can be used for the conclusion of a contract between the trader and the consumer and does not require the simultaneous physical presence of both parties" [Art. 2 par. (1). d) of the ordinance].

According to art. 3 of the ordinance before the end of the contract, in due time, accurate and complete, the professional must inform the consumer about :

- Identity of the trader, address and how to contact him, phone / fax, e-mail and the unique registration code;
- Essential characteristics of the product or service;
- The price of goods or services charges, all taxes included;
- The costs of delivery, if any;
- Arrangements for payment, delivery or performance;
- The right to withdraw the contract, except as provided in the present ordinance;
- The cost of the use of remote communications technology, where it is calculated other than the basic rate;
- The validity of the offer or the price;
- Duration of the contract, for contracts providing current or periodic supply of a product or service;

The deadline for execution of the obligations under the contract.

The above information's must be communicated in a clear, easily understood by the consumer, by any means adapted to the technique of distance communication used, taking into account the principles of good practice in commercial transactions and the principles governing the protection of minors and other persons without legal capacity, and the principles of good morals [art. 3. (2) of the ordinance][9].

According to art. 4. (1) of the ordinance, the consumer must receive, in writing or on another durable medium available and accessible to him in due time, during the execution of the contract and no later than the time of delivery, the following:

- the confirmation of the information's (if they have not been submitted prior to the conclusion of the contract) in that cases where goods are not for delivery to third parties;
- the conditions and procedures for exercising the right of withdraw. Contract clause to exercise the right of denunciation shall have the following formulation, drafted in bold type :

"*Consumers have the right to notify in writing the trader, the denunciation of the purchase without penalty and without giving any reason, within 10 working days of the receipt of the product or in the case of the services, of the conclusion of the contract*"

In case of omission of the unilateral denunciation clause , the product or service is considered delivered without request control from the consumer [art. 4. (1). b)].

Other professional data, to be transmitted to the consumer (during execution of the contract) are: address, telephone, e-mail, information on after-sales service and guarantees, conditions for withdraw the contract (if it lasts indefinitely or the period exceeds one year).

In the case of exercising the right of withdraw the contract by the consumer, the professional has the obligation to repay the amounts paid by the consumer, free of charge from the repayment of amounts. Reimbursement will be made within 30 days from the date of denunciation of the contract by the consumer (art. 8 of the ordinance). If case that for the product or service, subject of the contract, the professional credits the consumer, directly or under a merchant agreement with a third party ,with the right of withdraw the contract the credit contract will be ceased without penalty for the consumer. (art. 9 of the Ordinance).

According to art. 10 of the Ordinance, the consumer may denounce the following types of contracts, unless the parties have agreed otherwise:

a) contracts for the supply of services whose performance has begun, with the consumer's agreement, before the expiry of 10 working days;

[9] The above provisions do not apply to services which are performed by means of distance communication techniques, if these services are provided once and their billing is handled by the communication provider.

b) contracts for the supply of goods or services whose price depends on fluctuations in the financial market which cannot be controlled by the trader;

c) contracts for the supply of goods made to the consumer's specifications or clearly personalized products and those which, by their nature cannot be returned or are liable to deteriorate or expire rapidly;

d) contracts for the supply of audio or video recordings or computer software if they have been unsealed by the consumer;

e) contracts for the supply of newspapers, periodicals and magazines;

f) contracts for gaming and lottery services.

In case of dissolution of the contract, both contracting parties must repay benefits received. Because the contract is abolished retroactively, the retention of benefits is not possible (being concerned). Thus, the professional must return the amount received, within 30 days from the date of denunciation of the contract, and the consumer will have to return the product supplied to him and also to bear the costs of that refund. We specify that the law does not contain provisions on the state in which the good can be returned. In this case we consider that the good is returned in the state it is at the time of denunciation of the contract[10].

For services, the refund of benefits is not possible, however, the amounts paid by the consumer must be returned (in this case, the common law principles concerning the unjust enrichment cannot be applied because it would lead to the removal of the protection established by imperative rules for the benefit of the consumer.).

Cancellation of the contract takes effect also on the credit contract. Thus, the credit agreement by which the professional credits the consumer directly or under a merchant agreement with a third party, along with the unilateral denunciation, the distance contract shall automatically be terminated without penalty for the consumer (art. 9 of the ordinance).

The withdraw under the conditions of O.G. no. 85/2004

O.G. no. 85/2004 is governing the protection of consumers on the conclusion and implementation of distance contracts for financial services. It follows that, purpose of the regulation through the legal ordinance is the financial services that occur between financial services providers and consumers. The consumer has the right to withdraw the distance contract, within 14 calendar days without penalty and without any reason necessary. As an exception, in the case of distance contracts whose object are life insurance and pension contracts relating to individual transactions, the period during which the consumer may exercise right to withdraw is 30 days (art. 9 of the ordinance).

According to art. 10 of the ordinance, the period of 14 days (or 30 days) begins:
- from the day of the conclusion of the contract, unless the contract relating to life insurance covers, for which it will begin to run from the date when the consumer is informed that the contract is concluded;

- from the day the consumer receives the contractual terms, conditions and information's provided by law. According to art. 7. (1) of the ordinance, the supplier must inform the consumer, entirely, about his contractual terms, conditions and information's provided by law, in writing, on paper or on a durable medium available and accessible to the consumer, in due time before it can be bound arising from the signing of a distance contract or acceptance of an offer of such financial service remotely[11].

[10] Between the conclusion of the contract and its denunciation, the consumer can use the property, but to the legal provisions, the trader is obliged to receive it without charged and deducted from the price that must repay in full to the consumer.

[11] Before concluding a distance contract or at the time of the offer, the supplier is required to inform the consumer in the due time, accurate and complete on the following elements related to his identification ,concerning at

We mention that the failure to execute the prior information obligation has as result the delay of the denunciation term (and not its extension, as it appears under the regulation of the Government Ordinance no. 130/2000).According to art. 11 para. (1) of the ordinance, the right to withdraw the contract does not apply to financial services whose price depends on fluctuations in the financial market which cannot be influenced by the supplier, that may arise during withdraw the contract. Thus, are exempted from the reglementations of O.G. no. 185/2004: foreign exchange transactions, money market instruments, including government securities with maturity less than one year certificate of deposit, securities, units in collective investment, financial futures, including equivalent cash-settled final funds, forward rate agreements; interest rate swaps, currency and shares, options on any instruments, including equivalent cash-settled instruments (this category includes options on currency and interest rate).

According to art. 11 para. (2) of the ordinance, the right to withdraw the contract does not apply to:

- travel insurance policies for baggage or other short-term insurance policy with a maximum period of one calendar month;
- contracts fully executed by both parties at the express request of the consumer, brought before it to exercise the right to withdraw the contract;

Likewise, the right of denunciation does not apply to credit agreements bearing on acquiring a timeshare right of real estate [Art. 11 para. (1) of the ordinance].To exercise the right of withdraw, the consumer is bound by the arrangements that have been established and communicated by the supplier. Instead, the methods used by the supplier must give the consumer the opportunity to prove his right by any means, before the expiry of 14 days. In the situation that, to a contract for financial services joined another distance contract for services provided by the supplier, exercising the right to withdraw will cause additional the cancellation of the contract [art. 12. (2) of the ordinance].When exercising the right to withdraw the contract, the consumer may be required (by the provider) to pay, without undue delay, expenses related to the service already provided in accordance with the contract, without additional costs. In this case, the performance of the contract may only begin after the consumer has given his consent (article 13 of the ordinance).

Consumers have the right to request cancellation of the contract if the supplier does not communicate contractual terms, the conditions and the information's provided by law (without penalty and without charge - art. 20 of the ordinance).

Since cancellation is a penalty of the non-culpable contractual terms, it should be noted that under art. 20, cancellation occurs also for failure to fulfil pre obligations imposed by law.

Since the special law, does not specify a period within which the consumer may request cancellation, we consider that the incident in question is the 3 year period provided in art. 2517 of the Civil Code. We appreciate that cancellation of the contract may be requested by the consumer, even if he has not exercised his right to withdraw.

Given the above conditions, cancellation can occur because of the lack of information and also in the situation of fulfilling this obligation after the time established by binding law. Similarly, cancellation may be required if the provider has not complied with the practical arrangements for information, according to art. 7. (1) of O.G. no. 85/2004.

We conclude our concise doctrinal and legislative exposure about the right to withdraw of a contract by mentioning, that this right cannot be cancelled by any contractual provision or agreement between the parties. Any clause to the contrary, is considered null and void (art. 17 of ordinance no. 106/1999).

---

least: the name of the provider, representative or intermediary characteristics of the service provided, price, etc.. (art. 4 of the ordinance). The information's concerning contractual obligations must be provided to the consumer in the pre-contractual stage. The information's must be in accordance with contractual obligation resulting from the law applicable to the distance contract if it is concluded (art. 6 of the ordinance).

Conclusions

Through the present study, we aimed to tackle a topical issue for national practice and doctrine. Although it is regulated only as a right of the consumer, is not excluded that the professional benefit as well of a right of withdraw a professional and as a . The right of the consumer, to withdraw his consent, established by the Consumer Code and also by special laws is a legal right and free of charge way to withdraw the consent.

CONSIDERATIONS ON GOOD ADMINISTRATION

ANA-MARIA GHERGHINA[*]
ISABELA STANCEA[**]

Abstract
The concept of good administration has a double meaning, concerning on one hand the means of providing services by the public authorities, and on the other hand, measures concerning the relation between the public authorities and the citizens. We believe that good administration considers the manner in which the State structures holding powers in matters of administration acts within the limits of the law and using the social power entrusted on them, in order to carry out these tasks in the most reliable, ideal and flawless manner.
The principle of legitimacy is set out in the preamble of the European Convention on Human Rights under the words "rule of law", which, in public administration, means that the organization and activity of public authorities should be made on the basis of law and within the limits set by law

Keywords: *good administration, public authorities, citizens, Human Rights*

1. The concept of good administration

The concept of good administration has a double meaning, concerning on one hand the means of providing services by the public authorities, and on the other hand, measures concerning the relation between the public authorities and the citizens. In this sense, the right to good administration includes not only the right of the citizen so that the authorities observe a number of standing orders, but also the right to make sure that they generate the best results.[1]

Another opinion states that good administration has been defined as a fundamental principle of the Administration, which presumes the objective assignment of power at each level, with the well-defined specification of the manner of operating at these levels, an important role in its accomplishment being held by the involvement of the civil society in the act of government and making the society accountable for it[2].

Concerning the legal nature of the right to good administration in the doctrine, it has been shown that it represents a complex institution and has the legal nature of a fundamental right, with a wide-ranging content that includes a multitude of attributes relating to the organization and functioning of the Administration, acknowledged as independent rights[3].

[2] Ion Popescu-Slăniceanu, Diana Marilena Petrovszki, Cosmin Ionuţ Enescu, "A better conduct of the public officers for a better administration" (O mai bună conduit a funcţionarilor publici pentru o mai bună administrare), in the revue "Good administration, from vision to action" (Buna administrare de la viziune la acţiune), Comunicare.ro Publication, Bucharest, 2011, p. 180.

[3] Emanuel Albu, "Percepts of the right to good administration under the authority of the European Court of Human Rights" (Principiile dreptului la o bună administrare în jurisprudenţa Curţii Europene a Drepturilor Omului), in E. Bălan, C. Iftene, G. Varia, M. Văcărelu, "The executive contemporary right-towards an unitary notion of the Romanian doctrine and practice" (Dreptul administrativ contemporan-spre o concepţie unitară în doctrina şi practica românească), Comunicare.ro Publication, Bucharest, 2008, p. 128.

The right to good administration should be understood as a particularly complex legal institution that seizes the legal nature of a fundamental right which includes in its contents a series of aspects on the organization and functioning of the Administration; however, this right must be regarded also in the terms of the requirements the State has to organize and to guide as efficiently as possible the public administration and to guarantee the effectiveness of and compliance with the law of the whole activity of public authorities and institutions.

We believe that good administration considers the manner in which the State structures holding powers in matters of administration acts within the limits of the law and using the social power entrusted on them, in order to carry out these tasks in the most reliable, ideal and flawless manner. Only if these authorities fulfil properly their duties we can speak of a good administration. Beyond these limits, we refer only to a citizen's right in its relation to the public administration authorities.

2. The evolution of the concept of good administration in national legislation

Living in a given community requires knowing and keeping its fundamental values. It is also necessary the observance and enforcement of the rules of conduct imposed by the judicial norms accustoming to good discipline the human behaviour in social relationships formed in that community to create and protect these values[4].

The principles standing at the foundation of the relations between the administration and the administered ones are determined by a social communication style. The communication with the citizens is examined by reference to a bureaucratic administration, seen as an authentic caste, separated from the rest of the society and which, due to the prerogatives it disposes of, inflicts itself to the administration[5].

The Constitution of 1965 regulates very briefly, having rather a deductive character, in Article 34, the right of the citizens to good administration "right to petition is guaranteed. State agencies are required to resolve citizens' complaints concerning personal or public rights and interests", and in Article 35 "those injured in a right or a wrongful act of a state agency may request the competent bodies, in accordance with the law, the annulment of the act and the restitution".

Therefore, under the Communist rule, one could not speak objectively about good administration; all governments that have succeeded at the head of the Romanian State accused the disastrous legacy left by the previous government to justify the failure of a fair and consistent administration. The worse is that this administration crisis that has been perpetuated from a political stage to another had a very negative impact on the citizens and taxpayers who, ill-informed or, above all, for lack of other opportunities, chose those who were part of the public administration leadership.

Following 1989, a first regulation that could address citizens' right to good administration emerges from Article 51 of the revised Constitution which states that: "Citizens have the right to address public authorities by petitions formulated only in the names of the signatories. Legally established organizations have the right to forward petitions, exclusively on behalf of the bodies they represent. The public authorities are bound to respond to petitions within terms and conditions established by law".

We think that this statement is not comprehensive enough to entitle us to conclude that it would represent the right to *good administration*; we can say that this article only covers certain

[5] Dana Georgeta Alexandru, "Evaluating the right to a good administration in the context of the strategies concerning the implementation of the Charter of the Fundamental Rights" (Evaluarea dreptului la o bună administrare în contextual strategiilor privind implementarea Cartei Drepturilor Fundamentale), in the revue "The consolidation of the administrative capacity in the context of good administration" (Consolidarea capacităţii administrative în contextul bunei administrări), Comunicare.ro Publication, Bucharest, 2011, p. 275.

rights the citizen acquires in his/her relation with the government, as well as certain correlative obligations incumbent upon public authorities in regard to the citizens.

Moreover, the Basic Law states in Article 52 that "the person injured in his/her right or a legitimate interest, by a public authority, through an administrative act or an outstanding application in legal terms, is entitled to acknowledgment of those rights or the legitimate interest, the annulment of the act and the restitution".

In the same register, the Constitution stipulates in Article 54: "Citizens holding public offices, as well as officers are responsible to faithfully fulfil their obligations and, to this end, shall take the statutory oath".

In our opinion, these constitutional provisions are not such as to justify but the need to observe certain basic and fundamental rights of the citizen in his/her relation with public administration authorities, rights emerging from the purpose of establishing these authorities and not a right to good administration. Beyond these regulations - to be able to speak about the right to good administration - it is necessary that public administration authorities' powers of organization and of the practical implementation and enforcement of the law be self-fulfilled, without the intervention of the State's coercive force, without other forms of interference.

Following 1989, Romania has known a series of laws that regulate broadly or narrowly the activity of the public administration authorities in its relation with the citizens, but none of them define the concept of *good administration*. These laws can include:

- Law no. 188/1999, on the Statute of Public Servants, republished, amended and updated[6];
- Law no. 7/2004, on the Code of Conduct for public servants[7];
- Law no. 477/2004, on the Code of Conduct of the contractual staff of public authorities and institutions[8];
- Law no. 52/2003, on decisional transparency in public administration[9];
- Law no. 571/2004, on the protection of personnel in public authorities, public institutions and other units reporting violations of law[10];
- Law no. 161/2003, on a series of measures to ensure transparency in the exercise of public dignities, public functions and business environment, preventing and punishing corruption[11].

Law no. 188/1999 on the Statute of Public Servants counts as stated aims "to ensure, in accordance with the legal provisions, a secure, professional, transparent, efficient and impartial public service, in the interests of citizens, but also of the public authorities and institutions in central and local public administration"[12], which presumes providing a basic right of citizens and we can not speak about a definition of the concept of good administration.

Law no. 477/2004 on the Code of Conduct of contractual staff of public authorities and institutions, in Article 2, similarly to Law no. 7/2004, sets as main objective "improving the quality of public service, a good administration in achieving the public interest, as well as eradication of bureaucracy and of corruption in public administration". Therefore, without defining the concept of good administration, this Law establishes as objective the performance of good administration.

Law no. 52/2003 on decisional transparency in public administration is limited to determining the minimal procedural rules applicable to ensure the decisional transparency within public administration authorities.

[11] Published in the Official Gazette of Romania, no. 279/April the 21st, 2003.

[12] Article 1, align. (2) of Law no.188/1999.

Law no. 571/2004 on the protection of personnel in public authorities, public institutions and other units reporting violations of Law is to regulate measures concerning the protection of citizens having noticed violations of Law by public authorities and institutions.

Law 161/2003 establishes measures to ensure transparency in the exercise of public dignities, public functions and business environment, preventing and punishing corruption.

Therefore, not even the legislation that followed Law no. 188/1999 has defined the concept of good administration, limiting itself to only list the objectives that formed the basis of these regulations. These objectives, almost common to these laws, consider regulating the professional conduct rules of public servants in order to achieve social and professional relationships able to maintain to the highest level the reputation of the civil service institution, the knowledge of professional conduct that citizens are entitled to expect from public officials in the exercise of public functions and, not least, the establishment of a climate of trust and mutual respect between citizens and institutions or public administration authorities.

We appreciate that these laws issued separately have not fulfilled their designation to create a coherent reform in public administration and did nothing but to resume, to repeat the already existing resolutions without bringing an addition of quality in the administrative work and their accumulation in a single act (perhaps having the dimensions of a code) would be an ideal solution.

As noted, even after 1989, so much the less before that time, the concept of good administration has not been defined by a coherent law, even the constitutional legislator regulating only provisions concerning the rights and obligations that public administration has in relation with the citizens.

However, in Europe, the concept of good administration is shaped indirectly in Article 41 of the Charter of Fundamental Rights of the European Union, which, without defining it, states that this right includes:

- "The right of every person to be heard, before taking any individual measure which would affect him;
- The right of every person to have access to his file, while respecting the legitimate interests of confidentiality and of professional and business secrecy;
- The liability of the Administration to give reasons for their decisions"

As a result of Romania's accession to the European Union, it has been imposed the need to observe the rules of European institutions for the purposes of adapting national legislation to the EU. This activity of transposition in the national legislation concerning all areas, of the Community documents with provisions on the contrary, has generated the need for radical reforms in public administration and, naturally, a number of shortcomings, in the sense that the difficulty level of the tasks for staff in public administration has increased.

Therefore, as a result of these obligations established by the European community for Romania, but also for the necessity to create a document encompassing and ensuring the implementation of the principles underlying the exercise of a public function, the Code of Conduct for public servants was adopted pursuant to Law no. 7/2004. This code was created after developing the European Code of Good Administrative Behaviour based on the idea of MEP Roy Perry, idea stated in 1998.

On September the 6th, 2001, the European Parliament adopted a resolution on a Code of Good Administrative Behaviour which would be met by the staff in the EU institutions, in order to strengthen the relations between the EU and its citizens. Clear, short and concise drafting of the rules of this Code stands out. After the scope of the regulation is set out in Articles 1 and 2, one moves on to present the principles of good administrative behaviour in a direct manner, naming each article with the title of the regulated principle, the regulation itself containing no more than four paragraphs[13].

[13] Alina Livia Nicu, "The European Code of Good Administrative Behavior and the Romanian administrative phenomenon" (Codul European de bună conduită administrativă şi fenomenul administrativ românesc), paper published

This Code of Conduct is based on the following principles:

- The Constitution and the rule of law. This principle should underpin any non-legal document, as its establishment mainly ensures that the Basic Law is particularly observed. This principle appears as a normal aspect, well known, undisputed in the legal literature; the rule of the Constitution reveals its unique quality to base at the top of the hierarchy of the legal system in any state law. Consequently, in the given circumstances, by ruling one must understand the subordination of public authorities, public servants, to the Constitution, which gives it more efficiency, necessary to guarantee the fundamental rights and freedoms of citizens.

The principle of legitimacy is set out in the preamble of the European Convention on Human Rights under the words "rule of law", which, in public administration, means that the organization and activity of public authorities should be made on the basis of law and within the limits set by law[14].

- The principle of priority of public interest, whereby any public servant has the duty to place the public interest above the personal one while performing job duties;

- The principle of equal treatment of citizens before the public institutions and authorities;

- The principle of professionalism requires that the public servant performs his duties with responsibility, competence, promptness, reliability and efficiency, the public servant being responsible to thus fulfilling his work tasks, both in regard to his superiors, and to the public authority they represent.

- The principle of impartiality and independence states that public servants are required to show an impartial attitude towards any kind of interests in exercising their duties. The independence principle recurs in numerous regulations on the organization and functioning of national and European institutions, and its observance does not rule out the items of the relation of authority the public servant finds himself in regard to the institution or the authority he works for.

- The principle of moral integrity requires that public servants are prohibited to ask or to receive, directly or indirectly, for themselves or a third party, any material or moral advantage due to their exercise. According to the Explanatory Dictionary of Romanian Language, integrity includes the quality of being honest, fair and incorruptible. The concept of integrity is based on a solid set of principles which require that, in exercising their work, public servants must be fair, honest, just, act according to reality, treat people on an equal basis, without prejudice, consider the public interest and comply with the law in all his undertakings. In the case of civil servants, integrity should encompass a set of values necessary for him to be able to perform all duties he was vested with and to achieve the ultimate goal, which is to protect the fundamental rights and freedoms of citizens.

- The principle of freedom of thought and expression is to be respected also by those holding public office. According to this constitutional principle, public servants are entitled to express their opinions freely and this freedom cannot be achieved without observing moral norms, rules and laws of common sense. As shown, freedom is a fundamental right every man is born with and whose regulation should be reflected in the Basic Law of each democratic state, as well as in international and local documents. Analysed in the given circumstances, freedom is not physical, but spiritual, concerning thought and free speech.

Considering, however, the freedom of thought (inserted in numerous international legal or non-legal documents, including the Charter of Fundamental Rights, Article 10) as a whole, one finds that, as it is a specific human emotion so deep and personal, it could not be censored or restricted by

[14] Emanoil Albu, Percepts of the right to good administration under the authority of the European Court of Human Rights (Principiile dreptului la o bună administrare în jurisprudenţa Curţii Europene a Drepturilor Omului), in the revue "The executive contemporary right-towards an unitary notion of the Romanian doctrine and practice" (Dreptul administrativ contemporan spre o concepţie unitară în doctrina şi practica românească), Comunicare.ro Publishing, Bucharest, 2008, p.130.

any means. Prohibiting someone's freedom of thought means to deny the existence of the main feature of man: thinking. Therefore, any man is free and cannot be prevented from thinking and believing anything, and this faculty is not to be stopped by any law; only the free expression of his thoughts can/cannot be restricted or censored; in the case of the public servant, this expression must be done in compliance with the rule of law and morals.

Therefore, we consider that the principle of freedom of thought and expression should be rephrased as such – the principle of free speech or, as governed by the Constitution of Romania – of freedom of expression of thoughts.

On the other hand, the requirement to respect citizens' opinions is set up for the officials, even to promote a dialogue with the citizens, without letting be influenced by considerations of personal nature or by popularity.

- Honesty and fairness. This principle, implying that public servants must exercise their duties in good faith, seems to duplicate the requirements already outlined for the principle of moral integrity. Honesty and fairness are attributes that should be imposed on exercising any function or profession, not only the public one, but especially public servants are required to perform their tasks in good faith, with honesty and fairness, as, by the nature of their duties, they come in direct contact with citizens;

- The principle of openness and transparency means that "the activities of civil servants acting in their function are public and can be monitored by the citizens"[15].

The principle of transparency is that principle to be observed in applying of Law 544/2001 through which public institutions and authorities are required to operate in an open manner towards the public, where the free and unhindered access to public interest information is to be the rule, and limiting the access to information is to be an exception in the law[16].

Knowing from the experience of the years of communism that politicization of public administration is an obstacle to reform this area, as well as a means to politically violate the human rights, the Code of Conduct regulates that the public servants are not allowed to participate to collecting funds in order to support political parties or to work, even outside employment relationships, with people making donations or sponsoring political parties. This prohibition appears as necessary in order to keep the impartiality and independence principle, as well as the moral integrity requiring public servants an impartial behaviour concerning any political or other interest.

Precisely in view of the public positions they hold, public officials are not allowed to use their own image or name for advertising or elections. This prohibition completes the public servant's obligation not to become politically involved in any way and we appreciate that the rule should be implemented to other professionals, given the fact that the last parliamentary elections allowed the names of famous artists with good moral and professional conduct to be associated with logos of political parties, precisely in order to promote the interests of these parties and to win the sympathy of the voters.

Article 14 of the Code of Conduct for Public Servants regards directly matters concerning corruption in public administration; therefore, under the law, public servants are not allowed to accept gifts, services, favours, invitations or other advantages, for themselves or for their families or friends, which can influence their impartiality in carrying out tasks they hold or could become a reward for service already rendered.

This prohibition re-emerges an issue always hot - corruption in public administration. Starting from the expression "small attention", "gift", the issue took the dimensions of a phenomenon, a scourge that hinders the development of a people and puts a stigma on a nation.

As shown, although present even before 1989, this phenomenon did not have the same shapes and intensity, expanding and becoming more violent after 1990. For this reason, the Romanian

[15] Law no. 7/2004 on the Code of Conduct of Public Servants, Article 3, letter i).
[16] Article 2, letter a – The methodological norm of applying Law 544/2001.

legislation was not ready in this respect; only after 1996 the government began to turn their attention, virtually through political statements, to fighting corruption.

At that time, the Romanian Parliament considered that the Government, in carrying out its role and functions, must act more forcefully, with greater commitment and efficiency to fight corruption phenomena, consistently pursuing the State's laws in all cases, regardless of the function and social position of the persons involved in corruption. Moreover, The Court of Auditors, the Financial Guard, the Police, the Public Ministry and other agencies authorized by law to exercise control functions and prosecution were required to make full duty, in the spirit of Constitution and laws, and to increase efficiency in finding and investigating corruption, in researching, to the end, those among them who had great resonance in public opinion, to apply the legal sanctions to be taken[17].

As it can be seen, although there is a legislative abundance in corruption, no visible progresses appeared in stopping and controlling this phenomenon.

After integration into the European family, corruption in Romania seems unstoppable; if until this event it had lighter "forms", after that date it took the form of "attentions" for winning licenses, facilitating customs procedures, gaining priority in provisioning of government services, of public procurement contracts, diverting public funds for private use of these public servants, often seniors.

The even worse fact is that corruption has taken alarming forms also in the medical and legal domains, spheres of general interest to citizens and that can have major negative consequences, often irreversible, over the destiny of those involved.

Hence, we are talking about corruption whenever a holder of power, a public servant or any occupant of a public office is determined by financial or other rewards, such as the promise of a promotion, that are not required by law, to take actions that favour the one that offers rewards, thereby causing harm to the public and its interests[18].

To summarize, but keeping constant elements, in our opinion, corruption in public administration is an act, attitude or behaviour of a person who has acquired a dose of power in certain spheres of social life, political, economic, legal etc., or certain professional fields in which he meets/does not meet certain tasks and aims to obtain goods, benefits, services for himself or for his family. Thus, corruption is an example of maladministration and is directly related to holding power in a particular area.

We notice that corruption is a threat to democracy, rule of law, social justice and the judiciary, undermining the principles of an effective administration, disrupting the market economy and jeopardizing the stability of state institutions[19].

It is known that corruption is most commonly found in acts involving the misuse of public power, and to prevent or limit this phenomenon it is required a series of reform measures at the legislative and institutional level, higher living standards, higher wages in the public sector and observance of social principles and moral values.

Therefore, it is important to understand that the official-citizen relationship is not a relationship of subordination, but only of collaboration, thus the citizen has also a civic obligation to take appropriate and decent conduct when applying for a civil service, to suppress the temptation to facilitate that service by "small gifts", knowing that corruption cannot be eradicated unless the corrupted and the person that corrupts both discourage such acts.

Conclusions

Although good administration is a concept more and more used in the administration and beyond, representing one of the fundamental principles of the European Union, its definition is coherently elaborated neither at a national lever, nor at a European level, being considered only as an indicator of performance in the public administration.

So, if at a national level, the right to good administration includes improving the quality of public service, cutting bureaucracy and corruption from the Charter, apparently, the right to good administration is limited to these two rights of the person, together with government obligation to give reasons, and beyond these elements one can not speak of a good or a bad administration.

In our opinion, the right to good administration should be subject to uniform regulations both at national and European level and should include in its content overall activity of public authorities and institutions, regulations and administrative actions within their competence, explaining all rights a citizen holds in his relation with public authorities and its correlative obligations as echo of the citizens' problems. All these aspects should be accompanied by specific penalties applicable to infringements in one form or another of the right to good administration.

The lack of a generally accepted definition of the concept of good administration, both at national and European level, is matched with the regulation of a set of general and specific principles detailing the composing parts of this right.

As noted in the scientific endeavour, in our opinion, the right to good administration is not objectively set forth in special national legal documents, the revised Constitution of Romania limiting itself to delegate to the legislative power the prerogative to regulate the conditions under which individuals can exercise certain rights in relation to public institutions and claim compensation due to damages caused by illegal acts by public administration authorities.

We deem as necessary to implement a coherent and consistent framework, but also a consistency of the public function, of diversification and deepening of the stages of training public servants so as to modernize and emancipate strategies in the domain of public administration.

Thus, in order to improve the services provided by public institutions and authorities, training of public servants should be continuous, thorough, at all levels, but especially at the top, should cover the use of advanced technology, knowledge of law, languages, as well as extensive knowledge specific to the domain the respective officials are operating in.

Especially to ensure a more effective protection and promotion of a citizen's right to good administration, it is necessary to intervene more forcefully also concerning the corruption. One notices that the corruption phenomenon is found in all spheres of social life but it is stronger, larger and more dangerous in the public sector.

The Code of Conduct for Public Servants bases its objectives precisely on increasing the quality of public services by cutting bureaucracy and corruption. The principles governing the rules of conduct stated in the Code should be placed in the Rules of Procedure of any public authority and institution and, in specific terms, it should also include penalties for violations.

The principle of the freedom of thought and expression should be rephrased as provided in the Constitution: "the principle of free speech". This would take place in the context in which thinking is a human cognitive function that cannot be controlled, restricted or punished; that which can be controlled or restricted is the result of thought - expressed opinions, with regard to which man is responsible.

ROMANIAN "FIDUCIA" AND GEORGIAN "TRUST" (MAJOR TERMINOLOGICAL SIMILARITIES AND DIFFERENCES)

IRINA GVELESIANI*

Abstract

Globalization - a complex system of innovation, internationalization and rapidly growing interdependence – plays the greatest role in the formation of today's world. It enters different spheres of human life and stipulates the uniformity of economy, law, business and even, political life. In the framework of global processes, a lot of changes can be seen in the legal systems of European countries.

The given paper discusses the formation of the Romanian "fiducia" and the Georgian "საკუთრების მინდობა" (sakutrebis mindoba – means "trust") under the influence of Anglo-American "trust". The term "trust" generally nominates an institution of Anglo-American law, which is irreplaceable in the cases when the real owner of the property must be substituted by the nominal one (trustee) for carrying out civil relationships. This concept originated in the English Common law, but has been constantly rejected by the European continental legal systems (Civil law). The main obstacle laid in the fact, that Anglo-American legal system was based on the duality of ownership, which was almost unacceptable for the continental law-governed countries. However, in the recent years, the growing importance of the American capital markets popularized the utilization of "trust" and stipulated its insertion in some "rigid" European jurisdictions. Moreover, some world countries have already indirectly allowed mechanisms similar to the "trust". Among them are Romania and Georgia.

The given research is dedicated to the precise description of the Romanian and Georgian "trust instruments". It singles out major terminological units and underlines the fact that newly-established mechanisms have to undergo several stages for turning into faithful reflections of the original model of "trust".

Keywords: *globalization, fiducia, Georgian, Romanian, trust.*

Introduction

The concept "globalization" has rapidly crept into the consciousness of contemporary society and has acquired different interpretations. According to Merriam-Webster dictionary: globalization means the development of an increasingly integrated global economy marked especially by free trade, free flow of capital, and the tapping of cheaper foreign labor markets[1]. It is an inevitable phenomenon in human history that's been bringing the world closer through the exchange of goods and products, information, knowledge and culture[2]. Globalization refers both to the compression of the world and the intensification of consciousness of the world as a whole[3]. The existence of competing definitions of global processes indicates to the complexity of the given phenomenon. Some scholars speak about globalization of economy and culture, while others indicate to the law or politics. However, according to the existed data, globalization can be regarded as a complex system of innovation, internationalization and rapidly growing interdependence, which plays the greatest role in the formation of today's world. It comprises almost all spheres of life and aims at the creation of the "boundless" globe.

The given paper discusses globalization as an ongoing process, which changes the contours of law and creates new global legal mechanisms. One of them is the "trust" – a unique institution characterizing Anglo-American law, which occurred in response to the need to find solutions and to protect promises which had no binding affect, but which should have been compiled according to the equity principles: a good-faith and respecting one's word[4]. The concept of "trust" originated in English Common law during the Middle Ages. It was defined as a fiduciary relationship in which a person, called a "trustee", held title to the property for the benefit of another person. The agreement that established a "trust" consisted of three main elements: a "**grantor**" (also called a "**creator**", a "**donor**" or a "**settler**"), a "**trustee**" and a **"beneficiary**".

In the beginning of the 19th century, "trust" was established in the American business sphere. It acquired great significance, especially, through mutual and pension funds. The growing importance of its utilization in the American business law has influenced some European countries. However, the unique institution of "trust" has been constantly rejected by the continental legal systems (civil law). The main obstacle laid in the fact, that Anglo-American law was based on the duality of ownership, which was almost unacceptable for the continental law-governed countries.

The given research tries to answer the demands of the modern epoch. It describes the appearance of the European modifications of "trust", singles out major concepts presented in the Romanian and Georgian "trust mechanisms" and underlines their importance in today's globalized world. The given research is a presentation of the new outlook via relying on already existed small number of works, which are dedicated to the development of "trust-like" mechanisms of the world.

ROMANIAN "FIDUCIA" AND GEORGIAN "TRUST" – NEWLY ESTABLISHED MODIFICATIONS OF ANGLO-AMERICAN "TRUST"

The establishment of modifications of Anglo-American "trust" – this is a major challenge of today's Europe. Many European countries are trying to answer the demands of modern epoch via establishing "trust-like" mechanisms in their legal systems and business spheres.

It's worth mentioning, that the relationships similar to "trust" appeared in Roman law in the 1st-3rd centuries A.D. Under a fiduciary contract: one person (principle) transferred property to another (fiduciary) on the basis of a certain condition (fidei fiduciae causa), which obliged him (her) to use the property in accordance with the terms of the contract and to return it immediately after the emergence of the conditions specified in the contract[5].

However, according to the historical data, the original form of trust appeared in the English Common law in the Middle Ages. This irreplaceable institution derived from a system employed in that era known as "use of land" or "uses". The history of the emergence of "trust" states, that during knights' lengthy absence, their estates needed protection and preservation. For that reason, each knight transferred his legal ownership to a third party (a close friend) under a special agreement – the estate ought to be transferred back upon the knight's return. This transfer empowered the transferee to manage the "acquired" ownership and to enforce the rights of the estate against all parties while the owner was away. The given transference procedure preceded and at the same time, stipulated the emergence of today's institution of "trust", which is based on the duality of ownership (the property resulting from the legal estate is divided into the property of a trustee and the equitable interest – the property of a beneficiary). A "trust instrument" (a trust contract) is usually created inter vivos or on death at the direction of an individual (such type of a trust is called a "testamentary trust"). He (she) obligates certain persons to use and to protect entrusted property for the benefit of others. Therefore, an ordinary Anglo-American "trust" consists of three main elements:

[4] Luminița Tuleașcă, "The concept of the trust in Romanian law". Accessed January 12, 2013, www.rebe.rau.ro/RePEc/rau/journl/ SU11/ REBE-SU11-A13.pdf.

[5] Tariel Zambakhidze, "Trust (Historical Review)", Samartali (2000): 59.

- A "***trustor***" - a person who creates the "trust" (also called a "creator", a "grantor", a "donor" or a "settler").
- A "***trustee***" - a person or a legal entity which holds legal title to the trust property. Trustees have many rights and responsibilities. They vary from trust to trust depending on their type;
- A "***beneficiary***" – a beneficial (or equitable) owner of the property. It's worth mentioning, that a "grantor" can be even a "beneficiary". In this case, the "trust" involves a simple delegation of responsibilities.

Trusts are usually created orally or in a written form. An "oral trust" (a "parol trust") presents the grantor's spoken statement. It is an agreement formed between a grantor and a trustee without the usage of a written instrument. Generally, trusts of real property require a written form, while the trusts of personal property can be created orally[6]. In order to be valid, each trust has to meet three major certainties (the given requirement goes back to some words of Lord Langdale (1840)[7]):

1.The certainty of intention;

2. The certainty of subject-matter, which can be subdivided into:

a) The certainty of what property is to be held upon trust;

b) The certainty of the extent of the beneficial interest of each beneficiary;

3.The certainty of beneficiaries (in case of private trusts) or of objects (in case of non-charitable "purpose" trusts without human beneficiaries - i.e. trusts of imperfect obligation). This requirement does not apply to charitable trusts if there is a general charitable intention[8].

Since the beginning of the 19th century the institution of trust has become popular in the American business sphere. It has offered several economic and legal advantages, especially, through mutual and pension funds. At the end of the 20th century, the process of globalization stipulated the "internationalization" of trust mechanism. The starting step of this process was the conclusion of the Hague Convention on the Law Applicable to Trusts and on their Recognition (1 July, 1985) and its ratification by 12 countries (March, 2011). The evolution of regulations of trust at the European level directly pointed to the tendencies of the inclusion of this institution into the national laws of the EU member states. Moreover, the adoption of the Hague Convention was an obvious starting point of the unification of the laws of the European countries. However, the implementation of the given institution into the civil law jurisdictions has met several obstacles, namely:

- The continental law countries have been characterized by the lack of the concept of the duality of ownership i.e. by the absence of the concept of property division in ownership by law (right enjoyed by the trustee) and ownership in equity (right enjoyed by the beneficiary) and, therefore, by the existence of the principle according to which there must be only one owner at the time[9];
- The continental law countries have been characterized by the singleness of a person's patrimony: 1. each person has a patrimony; 2. each patrimony belongs to someone; 3. one person has only one patrimony[10].

Despite such obstacles, legal systems of some European countries underwent the process of modernization, which stipulated the creation of several modifications of trust, for instance, the institution of "fiducia" appeared in the newly created Civil Code of Romania, which entered into force on 1 October 2011.

[10] Valerio Forti, "Comparing American Trust and French Fiducie", The Columbia Journal of European Law Online (2011), accessed January 10, 2013, http://www.cjel.net/online/17_2-forti/.

According to Article 773 of the New Civil Code, "fiducia" is the legal operation whereby one or more grantors (in Romanian *constituitori*) transfer(s) various patrimonial rights or a group of such patrimonial rights, present or future, to one or more trustees (in Romanian *fiduciari*), who administer those with a given purpose, to the benefit of one or more beneficiaries (in Romanian *beneficiari*). These rights constitute an autonomous patrimony, separate from the other rights and obligations in the fiduciary's own patrimony[11]. Therefore, fiducia is a legal relationship oriented on the transference of present and future rights. It consists of three major elements:

- A "***constituitori***" - a person or a legal entity which creates "fiducia";
- A "***fiduciari***" - a person or a legal entity which holds legal title to the trust property. A "fiduciari" can be represented only by credit institutions, investment companies, insurance and reinsurance companies, investment management companies, public notaries and attorneys at law;
- A "***beneficiari***" – a beneficial owner of the property.

"Fiducia" must be expressly established by law or by authenticated contract. The contracting parties - a constituitori, a fiduciari and a beneficiari – make an agreement, which connects them by a common economic purpose. A "fiducia" is usually registered at the Electronic Archive of Security Interests in Personal Property. In order to be valid, it must explicitly state the following elements:

- the rights subject to transfer;
- the duration of transfer (not to exceed 33 years);
- the identity of the grantor, trustee and beneficiary;
- the purpose of the fiducia;
- and the extent of the trustee's management and disposal powers[12].

Therefore, a study of the New Romanian Law reveals the similarities and differences of the Romanian "fiducia" and Anglo-American "trust". Major differences between these legal institutions can be listed in the following way:

1.the "trust" divides trustor's ownership into the property of a trustee and the property of a beneficiary – an equitable interest, while "fiducia" divides and at the same time, separates the trust property from a trustee's individual property. Therefore, the Romanian law discusses a trust property and a trustee's individual property as two separate units;

2.the creation of a "trust" requires a trustor's intent presented orally or in a written form. For the creation of a "fiducia", a ***constituitori*** enters into a written and notarized contract with a ***fiduciary;***

3.the "trust" can be subject to a mortis causa deed, while "fiducia" is never subject to it. Therefore, the Romanian legal system is not familiar with the concept of a "testamentary trust".

It's worth mentioning, that during the end of the 20th century and in the beginning of the 21st century, the modifications of the institution of "trust" appeared not only in the Romanian law, but in other civil law jurisdictions. Among them is the Republic of Georgia. At the end of the 20th century Georgia adopted a new civil code, which significantly differed from the Soviet legislation (for several decades Georgia had been governed by the Soviet law). The newly established civil code was enriched with new concepts and terminological units indicating to the modernization of Georgia's legislation. One of the newly appeared Georgian institutions was "საკუთრების მინდობა" (sakutrebis mindoba), which has been regarded as a modification of Anglo-American "trust". However, a precise study of the Georgian "საკუთრების მინდობა" reveals major differences from its Common Law "predecessor".

[11] Luminiţa Tuleaşcă, "The concept of the trust in Romanian law". Accessed January 12, 2013, www.rebe.rau.ro/RePEc/rau/journl/ SU11/ REBE-SU11-A13.pdf.

[12] Trusts under Romania's new civil code, fiducia. Accessed January 10, 2013, http://www.hr.ro/digest/201203/digest.htm#contents0 .

Articles 724-729 of "The Civil Code of Georgia" present the essence of "trust" and the parties participating in trust relationships: a "trustor" (საკუთრების მიმნდობი /sakutrebis mimndobi) and a "trustee" (მინდობილი მესაკუთრე / mindobili mesakutre):

- ***"საკუთრების მიმნდობი"*** is a person or a legal entity which creates a "trust". At the same time, it is a person or a legal entity which is a beneficial owner of the property;
- ***"მინდობილი მესაკუთრე"*** is a person or a legal entity which holds legal title to the trust property.

Trust relationships take a form of a "trust contract" (საკუთრების მინდობის ხელშეკრულება / sakutrebis mindobis khelshekruleba). Under this contract: the principle (trustor) transfers the property to the trustee, who accepts and manages it in compliance with the principle's interests[13]. The specificity of the Georgian "საკუთრების მინდობა" presents the right of ownership in a "split" form: some rights of the owner – the management and the disposition of the property – belong to one person (trustee), while other rights – receiving income and profit from the exploitation of the property - belong to another (trustor)[14]. The motive of a "trust contract" can be the owner's wish to delegate the authorities of management ("to get rid of " the load of management) in order to profit from the exploitation of the property. In any case, the ownership must be entrusted in accordance with the trustor's interest. This interest may imply making profit, increasing the property, managing and maintaining the ownership, etc.

A precise study of the Georgian Civil Code reveals, that a trust contract must be created only in a written form. Oral trusts are unacceptable. The ownership is usually managed by the trustee at the risk and expense of the "trustor". In terms with third persons a trustee enjoys the owner's rights:

1.The trustee is bound to manage the property held in trust in his own name, but at the expense and risk of the trustor;

2.The trustee enjoys the owner's entitlement in relations with third persons. If the trustee, contrary to the interests of the trustor, is not acting in the same good faith as in managing his own affairs, he (she) will be obligated to compensate the damage thereby arisen[15].

A transferee is even entitled to make any kind of deal. However, he (she) has no legal rights to sell the property unless the agreement between the parties provides otherwise.

Therefore, a study of the new Civil Code of Georgia reveals the similarities and differences of the Georgian "საკუთრების მინდობა" and Anglo-American "trust". The major differences between these legal institutions can be presented in the following way:

1.the creation of a "trust" requires a trustor's intent presented orally or in a written form, while for the creation of "საკუთრების მინდობა", a trustor ("საკუთრების მიმნდობი") enters into a written and notarized contract with a trustee ("მინდობილი მესაკუთრე");

2.the Anglo-American "trust" can be subject to a mortis causa deed, while the Georgian "საკუთრების მინდობა" is never subject to it. Moreover, the Georgian legal system is not familiar with the concept of a "testamentary trust";

3.the "trust" nominates beneficial owners of the property ("beneficiaries") or simply implies the delegation of authorities in behalf of the "trustor" himself (herself). "საკუთრების მინდობა" considers only a simple delegation of authorities of management in behalf of "საკუთრების მიმნდობი" and underlines the fact, that the Georgian legal system identifies the concept of "trustor" with the concept of "beneficiary". Moreover, the term "beneficiary" has no Georgian equivalents.

Conclusions

All the above mentioned enables us to conclude, that today's global processes stipulate closer contacts of human societies and combine modes of living of their representatives. Globalization enters into different spheres of life: politics, economy, business, etc. It even changes the contours of law and creates new global legal institutions and norms. The given paper presented a study of Anglo-American "trust" and its European modifications – the Romanian "fiducia" and the Georgian "საკუთრების მინდობა". A comparative analysis of these institutions revealed the following:

- the Anglo-American "trust" and the Romanian "fiducia" consist of three major elements: the owner of the property ("trustor"; "constituitori"), the transferee ("trustee"; "fiduciari") and the beneficial owner of the property ("beneficiary"; "beneficiari"). The Georgian legal system identifies the concept of "trustor" with the concept of "beneficiary". Therefore, the term "beneficiary" has no Georgian equivalents;
- The creation of "trust" requires a trustor's intent presented orally or in a written form, while for the creation of "fiducia" and "საკუთრების მინდობა", a trustor enters into a written and notarized contract with a trustee ("მინდობილი მესაკუთრე");
- The Anglo-American "trust" can be subject to a mortis causa deed, while the Romanian "fiducia" and the Georgian "საკუთრების მინდობა" are never subject to it. Moreover, the Romanian and Georgian legal systems are not familiar with the concept of a "testamentary trust".

Therefore, the Romanian and Georgian laws have already indirectly allowed mechanisms similar to the Anglo-American "trust". However, it's obvious, that the resulting instruments do not present a faithful reflection of the original model. Further researches in the field of the development of "trust-like" mechanisms throughout Europe will fulfill the picture of the expansion of the utilization of "trust" and vividly depict the impact of globalization on the legal spheres of different countries. Therefore, the given study may play an important role in the solution of one of the urgent problems of today's world.

THE CONCEPT OF "TESTATE SUCCESSION" IN THE ROMANIAN AND GEORGIAN LEGAL SYSTEMS (TERMINOLOGICAL SIMILARITIES AND DIFFERENCES)

IRINA GVELESIANI[*]

Abstract

The death of an individual never causes an automatic termination of his (her) rights and obligations. They are transferred to his (her) descendants. The permanent connection of generations has inspired the world civilizations to create rules of succession for establishing people's obedience to them.

In the old times, the transmission of property of the Romanian people was governed by the legislation, which had been created under the influence of the Roman law. According to the conception of this legislation, a deceased person's property had to stay with his blood relatives i.e. within the same family. On the background of these circumstances, a surviving spouse suffered disadvantages. A widow's rights were limited in accordance with the old Georgian legislation too – the hereditary property was mainly divided between the male issue, while females owned only wedding gifts (dowry).

However, the area of family law has suffered crucial changes throughout the centuries. Nowadays, during the times of globalization, these changes are directed towards the internationalization of legal systems of the world. Juridical differences are becoming irrelevant and females' rights are equalized with the males' ones.

The given paper is dedicated to the precise study of the Romanian and Georgian "testate successions". It singles out major terminological units and discusses women's rights vis-à-vis men's ones.

Keywords: *Georgian, law, Romanian, testate succession, testator.*

Introduction

Throughout the centuries human societies of the world have progressively established closer contacts. However, the pace has significantly increased during the last decades. The "all-embracing" process of globalization has stipulated an international integration arising from the interchange of the experiences depicted in different areas of life. The latest advances in communication and transportation technologies have given capital, goods and services unprecedented mobility. The world has been gradually becoming a boundless space connected with the exchange of ideas, world views and advances. Besides offering significant innovations, the process of globalization has even changed the contours of law and has created new global legal institutions and norms.

The given paper is dedicated to the problems associated with the transference of a deceased person's property. This process acquires a pressing urgency in today's world. Special attention is paid to the countries, which undergo a transitional period from socialism to capitalism. All-embracing globalization with the accompanying historical processes changes the contours of their laws. The contemporary legal literature tries to depict the development of legal processes. However, it's obvious, that still a lot must be done in this direction.

The given paper makes an attempt to answer the demands of the modern epoch via comparing the Romanian and Georgian legal systems. The greatest emphasis is put on the major concepts and their nomination, which somehow reveals the impact of the contemporary globalizing processes.

[*] Associate Professor, *Ivane Javakhishvili* Tbilisi State University (e-mail: irina.gvelesiani@tsu.ge).

"TESTATE SUCCESSION" IN THE ROMANIAN AND GEORGIAN LEGAL SYSTEMS

Inheritance law – sometimes called wills and probate – is concerned with the distribution of a person's property after his (her) death. This may occur either in accordance with the provisions of a will which that person has made, or under the applicable rules relating to intestacy[1] - if a person dies without having made a will. Almost all civil law jurisdictions of the world distinguish two major types of succession: intestate succession (i.e. the legal inheritance) and testate succession (i.e. the inheritance established through the last will or testament).

The Romanian inheritance law has a long history of development. In the old law, the transmission of a deceased person's property was governed by the legislation, which was under the influence of Roman law based on the principle of blood relation to the defunct. In the conception of this legislation, the defunct's patrimony had to stay with his blood relatives, which means that it had to be preserved in the same family. The thorough application of the above mentioned principle and the fear of transmitting a family patrimony to the surviving spouse was an obstacle to the recognition of the direct succession right for a long time[2]. Therefore, in contrast to blood relatives, a surviving spouse faced disadvantages throughout the centuries - when the spouses had no children, a surviving spouse received only one sixth of the inheritance, while in cases of surviving children, a widow inherited only the right of usufruct over a portion of the inheritance equal to the child's portion. However, the adoption of the Romanian Civil Code of 1864, inspired by the French Civil Code of Napoleon of 1804, provided that the surviving spouse acquired the inheritance only after the last blood relative of the 12th degree defunct[3]. Later, under the law of 1944, the rights of a widower (widow) expanded. Therefore, he (she) acquired: a general inheritance right, a temporary right of the occupancy of the house and a special right over wedding gifts and movables of household.

Nowadays, according to the contemporary Romanian law, during an intestate succession, a spouse is regarded as one of the legal inheritors of a deceased person and has the right to at least ¼ of the inheritance. Moreover:

- In addition to the fraction of the inheritance established by law, the surviving spouse has a special inheritance right to furniture, domestic objects and wedding gifts;
- If the surviving spouse is not the owner of the house where he/she has lived for at least one year since the death of the deceased spouse, then he/she has a right of habitation to that house…;
- In the event of no inheritors, the surviving spouse inherits everything[4] .

Despite having the above mentioned inheritance rights, a surviving spouse is regarded as a "separate inheritor" in the contemporary Romanian Civil Code. He (she) stands separately and is not included in the major four classes of heirs nominated during the intestate succession. Therefore, a deceased parson's intestate estate is distributed in the following way:

1. The first class of inheritors – the deceased's descendants: children, grandchildren;
2. The second class of inheritors – the deceased person's privileged ascendants and collaterals: parents, brothers and sisters and their descendants until the fourth degree;
3. The third class of inheritors – the deceased person's ordinary ascendants: grandparents, parents of grandparents, etc.;

[4] What inheritance laws apply in Romania? Accessed January 5, 2013, http://www.globalpropertyguide.com/Europe/Romania/Inheritance.

4. The fourth class of inheritors – the deceased person's ordinary collaterals – relatives until the fourth degree, for instance: uncles, aunts, primary cousins, brothers and sisters of the grandparents.

During the intestate succession, the existence of more preferable classes of successors excludes the less preferable ones. However, in contrast to the testate succession, legal inheritance is less popular nowadays. Testate succession i.e. the inheritance established through the last will or testament is usually regarded as a distribution of the estate of a deceased in accordance with his or her will[5]. It comprises three major elements:

- ***Testator*** – a person who creates a will;
- ***Legatar –*** a person or an entity to receive property from the estate of a deceased, through a will or the operation of laws governing intestacy[6];
- ***Testament*** – a document created by the testator.

In cases of the testate succession, the distribution of the property depends on the testator, who makes a valid will. The Romanian Civil Code differentiates two major types of wills: *authentic* and *holographic*. "*Authentic wills*" are drawn up by the civil law notaries. They are usually recorded in the register, while "*holographic wills*" are written, dated and signed by the testator himself (herself). Both types of wills are kept by the civil law notaries. However, the existence of the testate succession does not mean the total freedom of a testator's wish. The concept of a "*reserved portion*" restricts the testator's rights of disposition. The given portion is transferred to the surviving spouse, the privileged ascendants and the descendants of the deceased. Moreover:

- The portion of the estate reserved for descendants varies depending on their number;
- The portion of the estate reserved for privileged ascendants is ½ - when the deceased leaves 2 or more parents (or ¼ - when only one parent survives the deceased);
- The reserved portion of the surviving spouse varies depending on the inheritance class he/she comes up against. If against the descendants, the reserved portion is 1/8. If against the privileged ascendants and collaterals of the deceased together, the reserved portion is 1/6. If against only the privileged ascendants or collaterals the reserved portion is ¼. If against the ordinary ascendants and collaterals the reserved portion is 3/8. If against any other inheritors, other that the legal ones, the reserved portion of the surviving spouse is ½ [7].

After the transference of all reserved portions, the remained part of the testator's property is called a *residue of the estate.* It can be freely transferred to anyone. However, sometimes certain restrictions regarding the ownership of the land by foreigners or non-residents of Romania occur.

Like other civil law jurisdictions, the Constitution of Georgia nominates the right of inheritance as one of the major rights of an individual. The legal mechanism of its practical realization is guaranteed by the law of succession, which is usually regarded as a complex of rules regulating a legal fate of a deceased person's ownership. The death of an individual has never caused an automatic termination of his (her) rights of property. They have been transmitted to his (her) descendants. However, like the Romanian women, the Georgian widows suffered hereditary disadvantages.

[6] Business dictionary. Accessed January 12, 2013, http://www.businessdictionary.com/definition/testate-succession.html.

[7] What inheritance laws apply in Romania? Accessed January 4, 2013, http://www.globalpropertyguide.com/Europe/Romania/Inheritance.

According to the old Georgian legal codex "Dzeglis Deba" (created during the reign of George V of Georgia (1286/1289 - 1346)), a surviving spouse inherited only a portion for her subsistence - the so-called "sasapkro". Another legal monument of the 11th-14th centuries - "The Law of Beka and Aghbuga" - stated, that a childless spouse inherited only a dowry. However, if there were children, a deceased person's armour was transferred to the children, while a wife inherited only sasakonlo[8]. In the old Georgian language, the term "sasakonlo" denoted inanimate movable property. Therefore, in contrast to the blood relatives, the widows suffered disadvantages during the 11th -14th centuries. They inherited only a portion for subsistence or an inanimate movable property. The childless widows were entitled to their dowry. The tendency of preserving a deceased person's ownership within the same family has existed throughout the centuries. However, the widow's legal rights have gradually changed.

Nowadays, according to the contemporary Georgian law, a spouse is nominated as the first order successor. She is a rightful and a privileged member of a five-storeyed hierarchy of intestate successors. The given hierarchy can be presented in the following way:

1. **First order successors** – a deceased person's child, spouse and parents. Grandchildren are considered as intestate successors if by the time of the opening of an estate their parent is not alive. They succeed in equal shares that portion of the estate to which their deceased parent would have the right.
2. **Second order successors** – a decedent's sisters and brothers (their descendants).
3. **Third order successors** – a decedent's grandfather, grandmother and their parents. The parents are considered as intestate successors if by the time of the opening of the estate grandparents are not alive.
4. **Fourth order successors** – a decedent's uncles and aunts.
5. **Fifth order successors** – a decedent's cousins.

The existence of at least one successor of the previous order excludes the succession of the following order. Moreover, an estate is distributed equally between the representatives of the inheriting order.

In contrast to the legal inheritance, a testate type of succession becomes more and more popular in today's Georgia. It is generally regarded as a distribution of the defunct's estate in accordance with the will and comprises three major elements:

- ***moanderZe (moanderdze)–*** a person who creates a will;
- ***anderZismieri memkvidre (anderdzismieri memkvidre)*** – a person or an entity, which receives property from the estate of a deceased through a valid will;
- ***anderZi (anderdzi)***– a document created by the testator.

In cases of a testate succession, the distribution of the property depends on the testator, who makes a valid will: a natural person may leave his (her) estate or its part by the will in the event of his (her) death to one or several persons from the circle of successors or outside it[9]. A person making a will must be a capable adult, who wisely justifies his (her) actions and clearly expresses desires during the process of the creation of the document. The Georgian wills are created according to the proper format. They must be in writing. A written will may be in a notarial form (the so-called *sanotaro anderZi* (sanotaro anderdzi) - a "notarized will") or without it.

A notarial form requires a will to be prepared and signed by the testator and attested by a notary, but if a notary is not available, the above mentioned function is executed by a local self-government body[10]. Generally, wills are prepared by testators, but in certain cases, it is permitted, that a will in words of the testator be written down by a notary in the presence of two witnesses. The

[8] Iv. Javakhishvili, Works in 12 volumes (Tbilisi: Metsniereba, 1982), 418.
[9] The Civil Code of Georgia (Tbilisi: Bona Causa, 2012), 294.
[10] The Civil Code of Georgia (Tbilisi: Bona Causa, 2012), 297.

usage of generally accepted technical means while writing down the given document is also permitted. A will written by a notary in words of the testator will be read by the testator and signed by him (her) in the presence of a notary and a witness[11]. "Notarized wills" (official wills) differ from unofficial or holographic wills (the so-called *xelnaweri anderZi* (khelnatseri anderdzi)).

"Holographic wills" or handwritten wills are made personally by the testator. The creation of a will through a representative is not permitted. The category of handwritten wills consists of a "domestic will" (the so-called *Sinauruli anderZi* **(**shinauruli anderdzi**))** and a "closed will" (the so-called *daxuruli anderZi* (dakhuruli anderdzi)). "Domestic wills" are made in the testator's handwriting and signed by him (her). In cases of a "closed will": at the request of a testator, witnesses will confirm the will so that they do not know its content (closed will). In this case, the witnesses should be present during the signing of the will. During the confirmation of a closed will, the witnesses have to indicate that it was made personally by the testator and that they did not become aware of the content of the will[12].

A will is usually executed by one person. However, the Civil Code of Georgia permits a joint creation of a will by two or more individuals. In such cases, only spouses are allowed to make a reciprocal will on joint legacy, which may be revoked by one of the spouses, but still during the lifetime of both of them. This type of a will is called a "joint will" (the so-called *saerTo anderZi* (saerto anderdzi)).

Like the Romanian legal system, the Civil Code of Georgia often faces the problem of the freedom of the disposition by will. Testators' wishes are usually restricted by the existence of the so-called "reserved portion" (*savaldebulo wili* (savaldebulo tsili)). According to Article 1371 of the Civil Code of Georgia: despite the contents of a will, a deceased person's children, parents and spouse are entitled to a reserved portion, which is equal to the half of the share transmitted to them in case of an intestate succession[13].

Conclusions

All the above mentioned enables us to conclude, that "all-embracing" process of globalization has stipulated an international integration arising from the interchange of the experiences depicted in different areas of life. Drastic changes have been seen in the laws of the countries of the former USSR. The given paper has presented a comparative analysis of the Romanian law and the Georgian legislation, which was formed on the basis of the legal system of the USSR. The major emphasis has been put on the concept of "testate succession" and terms related to it. The greatest attention has been paid to the Georgian and Romanian women's rights presented in the historical and contemporary legal monuments. On the basis of the carried out research we can single out the following outcomes:

1. The contemporary laws of Georgia and Romania make distinction between testate and intestate successions. The legal systems of both countries single out three major elements of testate succession: a testator *(the Romanian - testator; the Georgian - moanderZe),* an heir *(the Romanian - Legatar; the Georgian - anderZismieri memkvidre)* and a will *(the Romanian - testament; the Georgian – anderZi).*

2. The contemporary laws of Georgia and Romania nominate a "will" as the most commonly used legal instrument by which a testator regulates the rights of others over his (her) property after his (her) death. The legal systems of both countries differentiate official ("notarized will") and unofficial ("holographic will") types of wills. However, the major difference lies in the fact, that the Civil Code of Georgia recognizes domestic (*Sinauruli anderZi)*, closed (*daxuruli anderZi*) and joint (*saerTo anderZi)* wills, while the corresponding legal terms are not found in the Romanian law.

[11] The Civil Code of Georgia (Tbilisi: Bona Causa, 2012), 297.
[12] The Civil Code of Georgia (Tbilisi: Bona Causa, 2012), 299.
[13] The Civil Code of Georgia (Tbilisi: Bona Causa, 2012), 300.

3. The contemporary Romanian legal system singles out the concept of *a residue of the estate,* which is not especially distinguished in the Georgian law.

4. In the old Georgian and Romanian laws "non-blood relatives" - widows - faced significant disadvantages. In Romania childless spouses received only one sixth of the inheritance, while in Georgia they were entitled to the dowry. In cases of surviving children, widows had more hereditary rights. They inherited only the right of usufruct (in Romania), a portion for subsistence or an inanimate movable property (in Georgia of the 11^{th} -14^{th} centuries). The hereditary rights of widows have changed throughout the centuries. Nowadays, the existence of the concept of a testate succession enables a surviving spouse to inherit a deceased person's property according to his last will and testament. Therefore, a widow's hereditary portion may comprise the whole estate minus reserved portions of "obligatory heirs". In cases of disinheritance by the former spouse, a widow may receive a reserved portion, which varies depending on the inheritance class she comes up against (in Romania) or is directly equalized to the half of an intestate share (in Georgia) received by her in case of intestacy;

Finally, it's worth mentioning, that the comparative analysis of the Georgian and Romanian legal systems revealed their major differences and similarities. Obviously, the existed terminological and conceptual gaps will be filled during the flow of time via the influence of all-embracing globalization. The given study may play an important role in this process. However, the further investigation of the legal systems of other countries will fulfill the picture of the development of the European legal area.

THE PRINCIPLES OF CONTRACTUAL FREEDOM AND GOOD FAITH IN JURIDICAL CONTRACTS

MIHAELA IRINA IONESCU*

Abstract
The contract is the very heart of the Civil Code, and it is in fact also the cornerstone of any society, as without it relations and rapport amongst citizens could not occur nor unfold, and as such it is presently considered an effective legal instrument for organizing the behavior of all members of society.
The importance of contracts, the extent of contractual freedoms, the rapports that contracts entertain with laws, norms and other regulations and the means to properly frame and limit the State's intervention in the economy all hinge on the evolution of society and it's general ideological proclivity. The contract acts as the mirror of all this and it comes as no surprise that a society that has shortly left an organization based on the tenants of communism still bears the full weight of this ideology when it comes to contracts.
In the framework of the New Civil Code, the contract is viewed as based on a series of principles which are carefully drawn and well established in the general consciousness. As such, altering these principles would naturally cause important concern and uncertainty between the Parties to the Contract. Therefore, when times require repealing from a principle, this should be implemented with the greatest prudence by the legislature.
This paper contains a summary of the guiding principles of contracts from the provisions of the New Civil Code. For the first time in our legal history, these provisions regulate the two most fundamental principles of contracts; contractual freedom and good faith, which is why the author chose to insist on these new regulations

Key words: *Contract, contractual freedom, Civil Code, principles, good faith*

Introduction

There is no doubt that even since it's dawning the Civil Code has been „a mirror to any society as its norms have answered concrete needs and it constituted a modeling force for human relations and rapports, offering to the individual in relation to himself as well as others, principles by which to lead one's life, in all of its aspects, be it spiritual, material, biological, and particularly, social"

In the Romanian legal system, the Civil Code was drafted (in 1864) and entered into force (1865) under the reign of Alexandru Ioan Cuza. Hence, it has suffered numerous modifications both before and after 1947, in most part due to the changes of social relations.

The importance of the Civil Code, in a society, especially the Romanian one is unquestionable, as „all human life, flowing from birth or tied thereto and unto death or with regard thereto, as linked to succession and legacy, is governed by the tenants of Civil Law."

Institutions belonging to this this branch of law play an important part in regulating the life of legal entities, from their founding or tied thereto and until they cease to exist by reorganization or dissolution, and even unto the consequences following from these measures.

Based on these considerations we may say that it is important that in the norms of the Civil code the needs of society, in its current state, should be reflected, and this makes it necessary that the norms adapt themselves to new realities and new demands of the individuals that make up society.

The importance of contracts, the extent of contractual freedoms, the rapports that contracts entertain with laws, norms and other regulations and the means to properly frame and limit the State's intervention in the economy all hinge on the evolution of society and it's general ideological proclivity. The contract acts as the mirror of all this and it comes as no surprise that a society that has

* Assistant Lecturer, Department of Private Law, "Nicolae Titulescu" University (irina.cazimir@gmail.com).

shortly left an organization based on the tenants of communism still bears the full weight of this ideology when it comes to contracts

Thus, the emergence of the New Civil Code unfolded in response to a major Romanian legal necessity as naturally, the needs of 1864 no longer match the needs of today's society.

The contract stands as the very heart of the Civil Code, and it is in fact also the cornerstone of any society, as without it relations and rapport amongst citizens could not occur nor unfold, and as such it is presently considered an effective legal instrument for organizing the behaviour of all members of society.

More than any institution belonging to the Civil Code, the contract must be the best at adapting itself to the times it crosses.

Contract, as it is known is based on a series of carefully drawn and well established principles in all conscience and modification of these principles would create as natural uncertainty in relations between the Contracting Parties. Therefore, when the times require derogation from a principle, it should be implemented very carefully, very carefully by the legislator.

This is also the scope and object of this paper that holds a summary of the guiding principles pertaining to contracts, based on the regulations of the New Civil Code.

Content

For the first time in our legal history, the New Civil Code regulates the principle of contractual freedom as well as that of good faith.

In the system of the New Civil Code, the contract stands out as the main source of obligations, alongside other juridical documents[1], juridical acts in the narrow sense[2] and events[3]. Thus, as per art. 1.165 of the New civil code, obligations flow from contracts, unilateral acts, managing businesses, enrichment without just cause, payments undue, illicit actions, as well as any other act or fact to which the law ties the birth of an obligation.

Following the model of the French "Code Civile", the Romanian civil Code founds the institution of contracts on the principle of the autonomy of juridical will. This is the result of a concept of juridical philosophy that states that the contractual obligation originates exclusively from the will of the parties. Thus, the Contract is the agreement of wills between two or more persons with the intent to build, modify or extinguish a juridical rapport (art. 1166 of new Civil Code).

From the legal definition it therefore also results that the essence of the contract is the agreement of wills. No contract may be formed so long as the wills that concur to its creation have not found an agreement.

From the same legal definition, it results that the contract may be a bilateral or multilateral juridical act.

Juridical acts that necessitate the agreement of wills from two parties to be formed are bilateral; those requiring agreement of will from three or more parties are considered multilateral.

Thus the contract once completed implies the agreement of the parties and cannot be modified or cease without their consent (mutuus consensus mutuus disensus). The irrevocable nature sheds light – a contrario – that the will of a single party –unilateral will- cannot modify or terminate the contract except in circumstances specifically provided for by law or the contract itself. It then stands that, in principle, consent is the only means of resolution or termination of a contract.

[1] Defined in the doctrine as those manifestations of will in the sense of producing juridical effects consisting in the birth, modification or termination of civil juridical reports.

[2] Defined as those manifestations of will without intent to produce legal effects, effects which are produced under the law.

[3] Defined as those manifestations of will without intent to produce legal effects, effects which are produced under the law.

The history of contractual will is, at the same time, the history of the concepts regarding contractual freedom, in other words, it is the history of the principle of contractual freedom.

As we have mentioned, the forming of the contract requires manifesting an agreement of will between at least to participants whom, according to contractual freedom, must be able to choose each other and once the contract is completed, contractual freedoms is continued in determining the terms of the contract and its execution. The essence of contractual freedom with regards to determining the contents of the contract and its effects consists of that, abiding by the limitations set forth in the Civil Code, upholding public order, good morals, restrictions on the object and cause, the parties may set the terms of the contract in accordance to the interests they pursue, thereby binding it entirely.

Therefore we may conclude that, by its nature, the contract is the sum of the wills and interests of the parties, although in the doctrine not all authors consider it to be rigorously exact to speak of contract as agreement of will, as the contract embodies not only the will but also the interest (Ghe. Piperea). Thereby even the expression "agreement of wills" is not rigorously exact as the will of the parties are in most cases contrary one another, or at least substantially different from one another, and always remain theoretically independent "wills" and as such we cannot speak of a unique or even unitary contractual "will". The parties may pursue a common interest or goal, especially in multilateral contracts, but they will never make-up a unique or common will.

The wills of the parties concur in a single point: when the parties agree to generate a juridical rapport, which is to say rights and obligation, as by the contract all parties aim to achieve a result.

In the opinion of the same author (Ghe. Piperea), the contract, in a more holistic approach, built upon the wills and interests of the parties, is upheld by three pillars: contractual freedom, binding force, and relativity of effects. However, the contract cannot function correctly and justly unless these building elements are modeled to the principle of contractual solidarism, when upon, a contract is a conciliation of the interests of the parties and a partnership in which each of the parties is bound to realize their purpose, underlining the fact that a contract is not merely made for oneself but to materialize goals.

Insisting upon the fact that the juridical trajectory of a contract is governed by:

1.The principle of contractual freedom;

2.The principle of good faith

Detailing the contents thereof is in order.

1.The principle of contractual freedom

The parties are free to enter into any contracts and determine the contents thereof within the bounds imposed by the law, public order, and good morals (art. 1169 New civil code). As such, contractual freedom can only be brought to bear in a legal framework, and by respecting reasonable limits imposed for the safeguarding of legitimate public and private interests; if exercised outside this frame, with no bounds any freedom loses its legitimacy and tends to turn to anarchy. In other words, "Nothing imposes so many obligations on the individual as freedom" (Viekoslav Kaleb).

Therefore, the parties are free to choose the person with which they will enter into agreement and to set the content of the contract place of execution, currency of payment…etc. In older civil law doctrine this principle was thus synthesized[4] : "As a matter of principle, the parties are free to enter or to abstain from entering into juridical acts, they may choose their counterparties freely, may by mutual agreement determine the object of the contact and the terms and effects thereof, they may modify them or terminate them, may adopt or reject in full or in part the patterns set forth by law (so called named acts), they may merge elements of these typical documents or create new acts unforeseen by the law, they may express their consent in the form of their own choosing, the juridical will having the same effectiveness whether openly or silently expressed, as sometimes silence itself may cause juridical effects".

[4] D. Cosma, (Theory of contract)"Teoria generală a actului juridic civil", Ed. Ştiinţifică, Bucureşti, 1969, p. 63.

The principle of contractual freedom also induces the freedom to negotiate and absence of liability in the event of not completing the contract. The omnipotence of contractual freedom explains – and justifies – that the parties undergo a series of "saccades" in the process of forming the contract. If they are free to bind themselves to the terms of the final agreement, the parties are just as free to set forth, in the contract, the means to "sever" the legal bond that blossoms between them[5].

Of course, this principle has its own limitations. Thus, the dispositions that make up the "economic public order" affect the freedom to contract in varied way such as: by forbidding any contracts pertaining to a determined object that is thus removed from trade; forbidding the use of terms deemed abusive; imposing on one of the parties obligations to complete certain formalities before treating with its partners; making it mandatory to agree to contracts with any and all who manifest a will towards such; by modulating the content of the contract by either determining the duration in authoritarian fashion or setting limits that one cannot exceed…etc.[6]

Other restraints are brought to the parties' freedom in establishing the contents of the contracts or choosing the form for its validity. This is the case with contracts of adhesion, that have a pre-established content and are encountered more and more in our lives (i.e. in insurance, transport relations, retail telephone services, banking, etc). The content of these contracts is the exclusive work of one of the parties, the stronger party, which thereby effectively imposes its terms.

Gh. Piperea:

"Considering that the freedom to contract was never accepted by the lawmaker as being absolute and observing that those pressed by needs are forced to want what the strong of the economy are free to impose upon them, we can firmly state that the autonomy of will is but a legal fiction, further removing itself from the contemporary reality. In a modern, globalized world there are contracts in which the will of a party is missing, is altered, or limited to the option of signing the contract or not. Such a contract is guided, almost in its entirety, by the interest to sign the contract. Yet this does not mean we live an age of twilight of contracts as the instrument of human options."

In theory, the parties to a contract are free to contract, but also to set the terms of the contract themselves. Synthetically, contractual freedom means freedom to contract, to not contract, to choose the contractual partner and to set or negotiate the contents of the contract.

2.Principle of good faith

Good faith is first and foremost a fundamental principle of civil law and art. 1170 of the new Civil Code brings this solution home to the realm of contracts by targeting the pre-contractual period in which negotiations occur (this idea is expanded in art. 1183 of NCC) as well as the mechanism for completing and executing the contract.

Good faith in negotiations

Art. 1183 NCC

"1- The parties are free to initiate, conduct and break negotiations and cannot be held liable for their failure

2- The party that enters into a negotiation is held to uphold the demands of good faith. The parties cannot agree to limit or exclude this obligation

3- Amongst other things, the conduct of a party entering negotiations or continuing negotiations without intent to complete a contract is deemed contrary to the demands of good faith.

4- The party that initiates, continues or breaks negotiations contrary to good faith is liable for the damages caused to other parties. To account for such damage, the costs incurred by the negotiations will be held under advisement as well as other offers the parties may have waived due to such or any other similar circumstance.

---

[5] J. Goicovici, (The formation of contracts)"Formarea progresivă a contractelor", Ed. Wolters Kluwer, Bucureşti, 2008, p. 16

[6] See G. Farjat, "L'ordre public économique", Dalloz, Paris, 1965, p. 52 and foll. & p. 399 and foll.

Therefore, the New civil code regulates the negotiations phase, an exceptionally important step in the forming of a contract, during which the offer to contract is constructed and the potential agreement thereto as well. Indeed, in contemporary law, the actual closing of the agreement is sometimes especially complex and necessitates talks and discussions which serve to the final agreement of wills and outline the pre-contractual period (see. L. Pop, "Obligatiile", vol II, p. 203)

From the body of regulations of the new civil code derives the idea that, in the lawmakers' opinion, negotiations can be pre-contractual or post-contractual. As a general rule, negotiations imply certain actions unfolding to the point of determining the content of a contract, however, based on art. 1182 par. 2 of NCC, the contract can be completed only by establishing the key elements, which implies that for secondary matters the parties may continue negotiations. In such a scenario, the parties will still be in the process of defining the contents of the contract although it was already created and attributed binding force, it is then a post-contractual negotiation. In other words, post-contractual negotiation implies negotiating secondary elements regarding a contract that has been agreed upon and does not refer to designing futures contracts (even when these are but modified variants of an existing contract), in which case we are still face with pre-contractual negotiations.

The obligation to act in good faith implies that the parties take up a loyal behavior, and art. 1183, par. 3 of NCC holds a non-limited example as to what constitutes contrary behavior: the case in which a party initiates or continues negotiations with no intent of actually having a contract as a result. To the extent that there is a will to have a contract, but other aspects imposed by good faith regarding initiating, continuing or breaking negotiations are infringed upon, the infringing party will be faced with tort liability for the damage caused, based on art 1183, sec. 4 of NCC. For instance, breaking negotiations already in an advanced state, absent legitimate reason in a brutal manner by one of the parties can be considered to be an act of bad faith (see L. Pop, Obligatiile, Vol II, p. 208). Similarly, the holding of a partner in an extended state of uncertainty through long negotiations without a real and serious reason can also be thus considered (see Fr. Terre s.a., Les Obligations, p. 191)

Article 12, par. 2 of NCC establishes that good faith is presumed until proven otherwise, which imposes to prove behavior contrary thereto.

The lawmaker indicates some elements useful in determining the damages caused by initiating, continuing or breaking negotiations contrary to good faith. Costs incurred for the unfolding of the negotiations will be held under advisement as well as other offers from third parties the harmed party (/ies) may have waived due to such or any other similar circumstance.

Good faith when concluding the contract

Good faith is the expression of the general duty of loyal behavior and consists for each of the parties in not betraying the trust awarded by the other party or parties. Rightly, it was noted that this predictability is at the heart of the contract, and good faith represents and extension of binding force capable of upholding the contract to its full effectiveness.

Loyalty in concluding a contract imposes on the parties the duty to inform each other, which is to say to present all data and elements needed for the contract to be formed under good conditions. The duty to inform falls upon all parties to the contract with regards to both the rights and obligations borne by entering into it and their extent as well as any other facts that may be relevant for a party to know so as to act accordingly.

Good faith in the unfolding of the contract

The parties to the contract must fulfill the obligations undertaken, in spite of any difficulties that may arise in the unfolding of the legal relationship. While executing the contract, the imperative of good faith imposes a duty to initiative, cooperation and collaboration with the goal of efficiently executing the contract, and the party I denied behaviors which could bring harm to these aspects. In spite of this, the duty of good faith does not force to protect another's interests over one's own.

The parties cannot remove or otherwise exempt themselves from the duty to act in good faith, which implies the idea that good faith is imposed by public order, the sanction for infringing thereon being that the clause be considered null and void.

The absence of good faith

It was noted in the doctrine that the temptation may arise for a judge or arbitrator to take advantage of the elasticity of this concept of good faith to exert an uncontrolled and moderating power, and that to prevent such consequences limiting the application of the concept to the prerogatives accessory to the right to claim of the creditor (i.e. the right to Resolution). In any case, we must note the there is no sanction *per se* when good faith is absent from the negotiation, conclusion or execution of the contract. The form and extent of the liability is to be outlined based on the elements of the specific characteristics juridical situation in which good faith was breached; for instance, presence of dol can incur tort liability, while non-compliance in bad faith with a contractual obligation may lead to the Resolution of the contract – art. 1549 NCC "the right to Resolution or termination.

1- If enforcement of contractual obligations is not demanded, the creditor is entitled to the Resolution or, as the case may be, termination of the contract, as well as any liquidated damages due to him.

2- Resolution can occur for a part of a contract only when its execution is severable. Likewise, in the case of a plurilateral contract, the non-fulfillment by one of the parties will not incur Resolution towards the other parties, except when the non-fulfilled performance is deemed essential under the circumstances."

Conclusions

From the major importance that the Civil Code has in regulating the reports amongst members of society flows the necessity for such a juridical too reflect as well and accurately as possible the needs of society.

With the emergence of the new Civil Code, for the first time in Romanian legal history, the fundamental principles of contractual freedom and good faith have been introduced, reason for having to set very clear limits (imposed by law for reasons pertaining to safeguarding legitimate public and private interests) to which parties may conclude contracts, determine the contents thereof, negotiate, choose their partners, the object of the contract, means of its unfolding, etc. Furthermore the means by which the principle of good faith -fundamental to Romanian civil law- is applied to the matter of contracts for each stage in particular from pre-contract, negotiation, conclusion and execution must also be clearly stated in detail.

In this paper, we have set forth a summary of these notions striving to emphasize the practical implications thereof.

MATRIMONIAL CONVENTION

DAN LUPAŞCU[*]

Abstract
The matrimonial regime is ruled by two perspectives, the Roman law and the German one. The Romanian concepts were taken from the French law. The new Romanian Civil Code is characterized by the special attention it pays to the regulation of spouses' patrimonial relationships, ant it therefore abandons the exclusivist conception and enacts several matrimonial regimes, namely: a) the regime of legal community; b) the regime of separation of assets; c) the regime of separation of assets with participation to acquisitions; d) the regime of conventional community.
The matrimonial convention represents the legal document by which future spouses, or, as the case may be, current spouses, resorting to the liberty they have been conferred by the legislator, determine their own matrimonial regime or, as the case may be, modify their applicable matrimonial regime.

Key words: *matrimony, prenuptial agreement, preciput clause, spouses, under/over aged persons.*

1. Preliminary views

In time, the matrimonial regime has been subject to the influence of two dominant conceptions[1]. The first one was the conception of the Roman law conception, which consecrated marriage "*cum manu*", the wife being placed under the power of her husband, so that her fortune was also transferred into the patrimony of the latter. The normative evolution gradually leads to the separation of the wife's fortune from the husband's fortune, the latter being however in charge with the management of the assets that the dowry consisted of. The second conception, which is specific to the German law and which may be found in several western legal systems, maintained that the marriage conclusion resulted into a community of the assets belonging to the two spouses, community which may be modelled by the spouses convention and which is subject to the administration of the husband, acting as "leader of the marital partnership"[2]. In the absence of a convention, this community of assets represented the legal regime applicable to patrimonial relationships between spouses.

In the Romanian law, the regulations regarding the matrimonial conventions were taken over from the French Civil Code adopted during the reign of Napoleon Bonaparte, being introduced first of all in the old laws (in the Calimach Code, for instance), then in the Civil code adopted in 1864[3]. However, we must mention that the latter of the normative documents referred to in the previous sentence, although it regulated the dowry regime, the existence of this regime was subject to the condition that a dowry should be expressly constituted[4]; if this condition was not met, the wife's assets had no dowry character and were not subject to the husband's administration.

The convention (also referred to as "prenuptial agreement", "matrimonial agreement", "dowry deed", "dowry allocation", "marriage agreement") was mainly used by "blue-blooded persons", who

[2] Idem, p. 698.

[3] 3 In the sense that by the adoption of the new Civil code, "it is for the first time that matrimonial conventions are acknowledged the Romanian law system", see: A.F. Dobre - Convenţiile şi regimurile matrimoniale sub imperiul noului Cod civil, "Dreptul", magazine, No. 3/2010, p. 13.

[4] 4 See: art. 1227 of the 1864 Civil Code.

manifested a substantial concern for the material aspects of marital life and for the determination of convenient solutions in case of divorce.

After the communists seized power in Romania, a new outlook on the matter was gradually adopted, namely the idea that the conclusion of a marital convention is an immoral and degrading act, in contradiction with the goals of the state, which assumed, among other matters, exclusivity in the regulation of family relationships. Under these circumstances, when the Family Code[5] came into force, the possibility to settle the spouses' patrimonial relationships by means of a convention was eliminated, the only applicable matrimonial regime being the legal community one.

The new Romanian Civil Code is characterized by the special attention it pays to the regulation of spouses' patrimonial relationships, ant it therefore abandons the exclusivist conception and enacts several matrimonial regimes, namely: a) the regime of legal community; b) the regime of separation of assets; c) the regime of separation of assets with participation to acquisitions; d) the regime of conventional community.

The new legal provisions give one the possibility to choose from the variants set down in the preceding paragraph, and the choice thus made must be mentioned in the marriage statement. [6]

The parties' right to make a choice does not entitle them to combine the matrimonial regimes or to benefit from any derogation from the imperative rules of any of the said regimes, except for the cases when the law permits such an exception.[7]

To the extent that the parties choose a matrimonial regime different from the legal community one, they have the obligation to conclude a matrimonial convention.[8]

However, we do not exclude the possibility for a matrimonial convention to be concluded even when the option chosen is that of the legal community regime but the parties wish to include a *preciput* clause thereto or the convention contains other legal deeds as well.

This assertion is based, on the one hand, on the fact that the law does not deny such a solution. On the other hand, the opposite solution would create discrimination depending on the applicable matrimonial regime.

2. The notion of matrimonial convention

Since the legislator showed no concern in the sense of defining the matrimonial Convention, in the dedicated literature, under the effect of the 1864 Civil Code provisions, this convention was defined, for instance, as being "the convention through which the future spouses determine the matrimonial regime, in other words the condition of their current and future assets, in the pecuniary relationships arising from their marriage".[9]

In the recent legal doctrine, the matrimonial convention has been referred to, among other definitions, as being : "(...) the convention by which future spouses agree upon the matrimonial regime they shall be subject to"[10], "the legal document by which the parties regulate the essential

[5] That is on January 31st, 1954, when it was published in the Official Gazette of Romania, Part I, No. 9/31 January 1954, Decree No. 3271954 for the enactment of the Family code and of the Decree regarding individuals and legal entities.

[6] See: art. 281, paragraph (1) final thesis in the Civil Code.

[7] According to art. 332, paragraph (1) of the Civil Code: "No derogation is allowed by the matrimonial convention, subject to the sanction of absolute nullity, from the legal provisions regarding the chosen matrimonial regime, except for the cases expressly provided by law", in the sense that the parties have, in principle, a total liberty to determine the contents of their matrimonial convention, and they may combine alternative regimes or even create a new regime, different from the legal variants proposed: See: M. Revenco - Conventia matrimonialS in sistemul de drept continental si common law, Revista Romana de Drept Privat, No. 5/2009, p. 84.

[8] According to art. 329 of the Civil Code: "The choice of a matrimonial regime different from the legal community one shall be made by concluding a matrimonial convention".

[9] See: C Hamangiu, I. Rosetti-Balanescu, Al. Baicoianu - Tratat de drept civil roman, vol. Ill, republished All Beck Publishing House, Bucharest, 1998, p. 4.

[10] See: I.P. Filipescu - Tratat de dreptul familiei, All Beck Publishing House, Bucharest, 2000, p. 42.

patrimonial relationships existing between them during their marriage"[11], "a conventional, public and solemn legal document by which future spouses regulate, before the conclusion of their marriage, the essential patrimonial relationships existing between them during their marriage or the convention concluded during the parties' marriage and by which the spouses decide to substitute the current matrimonial regime by another type of matrimonial regime acknowledged by law",[12] or "the solemn legal act by which future spouses or current spouses, within the limits of the law regarding public order and morality, mutually agree to submit their patrimonial relationships to the conventional community regime or to the separation of assets regime and to objectify their patrimonial obligations during their marriage".[13]

In our opinion, the matrimonial convention represents the legal document by which future spouses, or, as the case may be, current spouses, resorting to the liberty they have been conferred by the legislator, determine their own matrimonial regime or, as the case may be, modify their applicable matrimonial regime.[14]

As to the clearness of the provisions of art. 330 paragraphs (2) and (3) of the Civil code, we do not share the opinion according to which the matrimonial convention is only "the one concluded in consideration of the marriage conclusion", the one concluded during marriage representing only "a convention of administration, preservation and partition of assets, applicable in the event of marriage dissolution"[15]

To sweep away the controversial issues regarding mainly the nature, the parties thereto or the contents of the matrimonial convention, we find it useful to provide a legal definition thereof.

3. The legal nature of the matrimonial convention

In our legal doctrine, starting from the interpretation of art. 1101 of the French Civil Code, a distinction is sometimes made between the term "agreement" (which may create or transmit rights and obligations) and the term "convention" (which may create transmit or terminate rights and obligations).[16]

Consequently, the convention represents the general and the agreement is the particular.

This opinion was justly criticized, considering that the two terms, although they have different roots, they express the same idea.[17]

Qualifying the matrimonial convention, we appreciate that we are in the presence of a legal document placed within the scope of family law, which beside the parties' agreement and the patrimonial relationships between the parties may also include other legal documents, such as donations made by other persons to spouses or only to one of them or acknowledgement of a child's parentage.

It was then absolutely righteous for specialists to assert that we have to do with a veritable "family covenant"[18], an act having a specific legal cause (*affectio conjugalis*).[19]

4. Legal characteristics of the matrimonial convention

The matrimonial convention has the following legal characteristics[20]:

a) It is fundamentally a bilateral legal deed[21], entered by and between future spouses or current spouse, as the case may be; this does not exclude the participation of third parties (as in case of donations, for instance);

b) It is a complex legal deed, which may include several legal deeds[22], each of them preserving its identity;

c) It is a solemn legal deed, in the sense that the law imposes a certain form for its conclusion;

d) It is a synallagmatic legal deed;

e) It is a legal deed accessory to the marriage, which means that it produces its effects only during the term of the marriage;

f) It is a legal deed subject to publicity formalities;

5

g) It is a legal deed which is incompatible, in principle, with the modalities of the common law. As an exception, the parties may stipulate, for example, that after a certain term they change, under the provisions of the law, the matrimonial regime or terminate the matrimonial regime they have chosen;

h) It is an *intuitu personae* legal instrument.

5. Terms of validity of the matrimonial convention

The validity of the matrimonial convention is subject to the condition that all the substantive and formal requirements prescribed by law should be met.

The first category refers to capacity, consent, object and cause.

The parties' capacity to conclude a matrimonial convention is subject to the "*habilis ad nuptial, habilis ad pacta nuptialia*" principle, which means that a person that is in a position to get married may conclude a matrimonial convention.[23] Consequently and as a rule, a person who has turned 18, may also conclude a matrimonial convention. At the same time, the underage person who has acquired with anticipation full capacity of exercise may conclude this convention without any restriction. An underage person who has acquired full capacity of exercise pursuant to a prior marriage is in a similar situation, to the extent that such person still enjoys full capacity of exercise.

As an exception, a minor who has not turned 16 yet may conclude a matrimonial convention provided he meets the following requirements: a) his legal tutor has consented thereto; b) he has the permission of the tutelary court of law.

We do not share the opinion that an underage person who wants to conclude or modify a matrimonial convention needs a double approval respectively "a medical favourable opinion and the parents; consent"[24], the only requirements imposed by the law being the ones stipulated hereinabove.

An underage person who has not turned 16 yet may not conclude a matrimonial convention and neither may a person placed under judicial interdiction. In this latter hypothesis, if one or both spouses has/have been placed under judicial interdiction, the conclusion or amendment of the

[24] See in this respect: A.F. Dobre, op. cit., p. 15.

matrimonial convention shall be achieved through the intermediary of the legal representative (tutor or curator, as the case may be).

Future spouses' or current spouses' consent to the conclusion of the marriage convention follows the general rules observed in the matter of legal documents.[25] It may be vitiated by error, fraud or violence, and note must be made that the said vices are not to be confused for the vices of consent upon marriage conclusion.

The object of the matrimonial convention aims at organizing the patrimonial relationships between spouses and respectively between them and third parties, by choosing or modifying the matrimonial regime applicable to the respective marriage.[26]

The parties may also introduce a preciput clause into their matrimonial convention.

This clause represents the wilful agreement of future spouses or of current spouses, as the case may be, reached and concluded under the terms of the law and incorporated in the matrimonial convention, by virtue of which the surviving spouse is entitled to take over, without paying any consideration, before the partition of the estate, one or more common assets held in joint indivisible ownership or in co-ownership.[27] This obviously refers to assets regarded as ut singuli and not to a universality of assets, which strongly requires that such assets be individualized or a presentation of criteria by which such assets may be identified, specifications that must be included in the matrimonial convention.[28]

Under the provisions of art. 367, paragraph d) of the Civil Code, the preciput may also make the exclusive object of the matrimonial convention.

The preciput clause generates the right to preciput, which is a contingent right subject to the suspensive condition of the beneficiary's survival. The stipulated beneficiary of such clause may be either one of the spouses or both of them.

Although the operation of coming in possession of certain assets takes place without payment of any consideration, we believe that this clause may be assimilated neither to a donation, nor to a testament or to clause of unequal partition of the spouses' common assets, having a configuration of its own and constituting a distinctive matrimonial advantage.[29]

In the absence of any restriction provided by law, any of the common assets, owned either in joint indivisible ownership or in co-ownership may form the object of the preciput clause.

The right of preciput is different from the special right to inheritance of the surviving spouse acknowledged by art. 974 of the Civil Code, as the furniture and the household appliances/objects meant for the common use of the spouses are due to the surviving spouse by effect of the law (in addition to the inheritance she/he is entitled to) and not by effect of the parties' convention.[30]

As regards the moment when the asset is taken over by the surviving spouse, the law stipulates only that it occurs before partition of the succession, without any reference to the partition of the common assets. De *lege ferenda*, we believe it is necessary to mention that the takeover of the

[29] See: D. Lupascu, CM. Craciunescu - Dreptul familiei, op, cit., p, 149-151.

[30] In the sense that "the assets of the household are not included in the consideration of the aggregate estate, while the assets making the object of the preciput clause, in the absence of the preciput clause, would be considered in the calculation of the aggregate estate", see: A.F. Dobre, op. Cit., p. 20.

assets also takes place before the common assets are subject to partition or, by the French model, "before any partition"[31].

If it is no longer possible for the respective asset to be taken over in kind, the preciput clause may be also applied by equivalent, from the value of the net asset of the community, an aspect with respect to which our Civil Code needs additional clarifications.[32]

The preciput is subject to reduction, which is made before donations, together with the legacies and commensurately.

As regards the deadline by which one may exercise his right of preciput, our law is "silent", and therefore the general term of prescription shall be applied, meaning a 3-year term as of the date of the other spouse's death.

This solution drives towards the partition of the common assets, even if the beneficiary of the preciput right does not want that.

Being a component of the matrimonial convention, the fate of the preciput clause depends on the fate of the main convention.

However, there is nothing to prevent the parties from stipulating in their matrimonial convention a term within which the preciput right may be exercised. [33]

The clause becomes null upon termination of the community during the spouses' lives, in case the beneficiary spouse died before the assigning spouse, when the spouses died at the same time as well as in case the assets that made the object of the said clause have been sold pursuant to common creditors' request[34].

The stipulation of this clause does not affect common creditors' right to claim the respective assets, even before the community comes to an end.

The matrimonial convention may also include other deeds, such as acknowledgement of a child or donations made to future spouses in consideration of the marriage to be concluded.[35]

The parties' free will is limited from a double point of view. First of all, the imperative provisions of the law and the morality, that is the "general limits", may not be disregarded.[3636] Secondly, under the title of "special limits", the Civil Code institutes the interdiction to violate the legal provisions regarding the chosen matrimonial regime and the interdiction to prejudice the spouses' equality, the parental authority and the legal devolution of the estate.[37] For instance, the matrimonial convention may not limit the right of either spouse to exercise freely his profession, it may not determine which of the parents the child will remain with in case of marriage dissolution, it may not institute incapacities for either spouse, it may not prejudice the legal provisions of the succession law, etc.

The cause of the matrimonial convention (*affectio conjugalis*) implies the will of the future spouses to get married or, as the case may be, the current spouses' will to amend the applicable matrimonial regime.

From a formal point of view, *ad validitatem,* the law[38] imposes the existence of a deed authenticated by a notary public.

Criticisms were made for good reason against the limitation of matrimonial convention authentication only by the notary public in case of people getting married abroad at Romania's

[32] See: D. Lupascu, CM. Craciunescu - Dreptul familiei, op. cit., p. 153-154

[33] OJ In the same respect, see: CM. Nicolescu - Regimurile matrimoniale conventionale reglementate de noul Cod civil roman, Abordare comparativa, op. cit., p. 135.

[34] See: art. 333, paragraph (4) of the Civil Code.

[35] See: M. Avram, C. Nicolescu, op. cit., p. 70.

[36] Idem, p. 84 and the suseq.

[37] Regarding these limits, see: T. Bodoasca - The regime of separation as regulated by the new Romanian Civil Code, op. cit, p. 59.

[38] See: art. 333, paragraph (4) of the Civil Code.

diplomatic missions or consular offices or before the competent local authorities, and the remark was made that the institution of the "notary public" does not exist in the respective country, the future spouses must travel back to our country in order to conclude the matrimonial convention.[39]

However, we do not share the critical opinion according to which "the fact that «all parties» is required generates ambiguity"[40] to the extent that we support the idea of the complex nature of this legal deed, which may imply the participation of third parties, too.[41]

Future spouses or current spouses, as the case may be, must express their consent before a notary public[42] either personally or by attorney appointed by a special and authenticated of attorney whose wording has been predetermined (in the sense that it must contain, in detail, the clauses of the matrimonial convention).[43]

In our opinion, the requirement regarding the "predetermined content" of the power of attorney is strictly limited to the will expressed by the future *or* current spouses, as the case may be.

6. Publicity of the convention

In order to assure the safety of the civil circuit, the law imposes that the following forms of publicity of the matrimonial convention be complied with:

a) mention made by the registrar on the marriage certificate;

b) registration in the Notaries' national register of matrimonial regimes;

c) note or, as the case may be, registration made in the land book, trade register or in other publicity registers required by law, depending on the nature of the respective assets.

As regards opposability against third parties, the Civil code makes a distinction based on the good faith or bad faith of such third parties. Thus, the matrimonial regime chosen by the matrimonial convention is opposable to third parties as of the date when the publicity formalities are completed; in the absence of such formalities, in relation the third parties in good faith, the spouses shall be deemed married under the matrimonial regime of legal community. In case of bad-faith third parties (namely the persons who have learned from the spouses themselves or from other sources of the applicable matrimonial regime), the matrimonial convention shall apply, notwithstanding the publicity default, the publicity system based on "effective knowledge" being thus consecrated.[44]

7. Simulation of the matrimonial convention

If the parties to the matrimonial convention have resorted to the operation of simulation, the Civil Code[45] prescribes inopposability of the secret deed against good-faith third parties. Between the parties to the matrimonial convention and in relation to bad-faith third parties the matrimonial regime agreed upon by the secret deed may be applied.

8. Caducity of the matrimonial convention

A matrimonial convention becomes invalid in the following circumstances: a) the parties have given up the marriage they were planning to conclude;

10

---

[39] See: T. Bodoasca - Aspecte privind reglementarea generala a regimului juridic matrimonial in noul Cod Civil roman, „Dreptul" Magazine, No. 5/2010. P. 60-61.

[40] Idem, p. 61.

[41] As regards the parties to a matrimonial convention, also see: M. Revcenco, op. cit., p. 91, note 37.

[42] The role of the notary public is not only to authenticate the respective convention, but as a specialist, also to give advice to the parties thereto, helping them to choose the most suitable solution.

[43] In the dedicated French literature we find the opinion that in case a matrimonial convention is concluded, the mandate is imperative, in the sense that it shall include all the clauses of the respective convention, see: L. Raucent, Y.-H. Leleh - Les regimes matrimoniaux. Contrat de mariage et modification du regim matrimonial, Larcier, 1997, p. 75.

[44] See: M. Avram, C. Nicolescu, op. cit., p. 102. 5

[45] See: art. 331.

b) the marriage was ascertained invalid or was annulled (except the putative marriage);

c) the tutelary court decided that the community matrimonial regime be modified and the regime of assets separation be applied.

The caducity of the matrimonial convention does not affect the deeds which have their own individuality (such as, for instance, a donation or a deed of acknowledgement of filiation).[46]

9. Modification of the matrimonial convention

A matrimonial convention concluded before marriage may be modified at any time. The spouses may modify the applicable matrimonial regime only after period of at least one year has elapsed since their marriage was concluded. [47]

A matrimonial convention may be modified totally or partially.

The operation of modification is subject to the same substantial, formal and publicity conditions applicable to the conclusion of a matrimonial convention.

To the extent that creditor third parties were prejudiced by the modification or liquidation of the matrimonial regime, they may resort to the following mechanisms in order to take advantage of their own rights:

a) they may file a revocatory action with the tutelary court, within one year as of the moment when the publicity formalities are duly completed or, as the case may be, as of the earlier date when they learned such facts from other sources;

b) they may invoke at any time the inopposability of the matrimonial convention modification.

10. Nullity of the matrimonial convention

Non-compliance with the substantial and formal legal requirements to be met in concluding a matrimonial convention shall lead to the sanction of nullity applied thereto. The facts listed hereinafter represent cases absolute nullity:

a) absence of consent;

b) inclusion of certain clauses representing derogations from the legal provisions regarding the chosen matrimonial regime;

c) inclusion of certain clauses which prejudice the equality between spouses, the parental authority or the devolution of the legal succession;

d) noncompliance with the form prescribed by law;

e) conclusion of the matrimonial convention by a minor who has not turned 16 yet;

The sanction of relative nullity shall apply:

a) in case the consent is vitiated by error, fraud or violence;

b) in case the matrimonial convention is concluded without the approval or the authorization prescribed by law.

Ascertainment of nullity or, as the case may be, annulment of the matrimonial convention leads to the application between the spouses of the legal community regime.

Good-faith third parties are protected in the sense that the rights they have acquired shall not be affected.

11. Conclusions

In this field of family relationships, the new Romanian Civil code restores the adequate efficiency of the traditional principle of matrimonial convention liberty, thus realigning our legislation with the modern judicial systems.

---

[46] See: C. Hamangiu, I. Rosetti-Balanescu, Al. Baicoianu - op. cit., p. 36 and the subseq.

[47] See: art. 369 of the Civil Code.

The possibility conferred to future spouses or to current spouses, as the case may be, to choose the applicable matrimonial regime allows an adequate adaptation of legal "patterns" to the parties' effective needs.

Being concerned to confer stability to the patrimonial relationships between spouses, in the due legal variant, the legislator has not ignored the interests of third parties either, imposing substantial, formal and publicity-related requirements which are meant to satisfy such requirements.

The solutions adopted in this matter are flexible and modern, and they are to prove their effectiveness in practice.

However, from certain points of view - which we have highlighted hereinabove -they are criticisable and necessitate legislative interventions.

THE LAND LEASING AGREEMENT IN THE NEW CIVIL CODE

LIVIA MOCANU*

Abstract
Since ancient time this type of agreement was thought to have a special utility in exploiting the land property. The land leasing agreement is a juridical instrument specific for exploiting agricultural goods at present time as well. Therefore, after 1990, the land leasing agreement was regulated by Law no.16/1996 of the land leasing, complemented by the dispositions of the Civil Code in 1864.
The new Civil Code regulates the land leasing agreement in art. 1836-1850 and although mainly keeping the old regulation which, it also comprises aspects of novelty referring to several notions that define the contract, as well as the form, duration, parties' ability, managing risks or termination of the land leasing agreement.
Thus, an improved and better adapted to the new realities juridical regime is shaped, and we aim at analyzing it in the present study.

***Key words**: land leasing, landlord, tenant, first refusal, sublease*

1. Introduction

In the present study we will approach the juridical regime of the land leasing agreement whose existance, especially in the current economical background, cannot be ignored from the juridical point of view.

The presence of the land leasing agreement in the juridical relations whose object is the use of agricultural assets, and especially land, must be encouraged, and knowing and understanding the issue regarding singning, performimg and terminating such an agreement will be really useful.

Until 1991, the institution of land leasing was prohibited[1] but after that, the role played by the land leasing agreement increased in importance as a consequence of elaborating and implementing land legislation[2], as the holders of the right to private ownership over agricultural land, who actually could not work their land, used the land leasing agreement.

In this context, the land lease agreement became the subject of the special regulation given by the Land Lease Law no. 16/1994[3], whose stipulations completed those of the old Civil Code[4].

---

* Associate Professor, PhD, Faculty of Law and Socio-Political Sciences, "Valahia" University of Târgoviște (mocanulivia@yahoo. com).

[1] On the institution of land lease in Romania see, Florin Scrieciu, *Drept agrar şi drept funciar,* Lumina Lex, Publishing House, Bucharest, 2000, p. 149 -152.

[2] Land Law no. 18/1991, Published in the Official Gazette of Romania, part I, no. 37 from February 20th 1991 and republished in the Official Gazette no. 1 from the 5th of January 1998; Law no. 1/2000 for the reconstitution of the right to ownership over agricultural land and forested land, required according to the stipulations of the Land Law no. 18/1991 and of Law no. 169/1997, Published in the Official Gazette of Romania, part I, no. 8 from the 12th of January 2000, with the subsequent changes and complements; Law no. 247/2005 regarding the reform in the domains of ownership and justice, as well as some adjoining measures, published in the Official Gazette of Romania, part I, no. 653 from the 22nd of July 2005, with the subsequent changes and complements.

[3] Published in the Official Gazette of Romania, part I, no. 91 from the 7th of April 1994, the Land Lease Law suffered several changes and complements by means of Law no. 58/1995, Law no. 65/1998, O.U.G. no. 157/2002, approved with its changes by Law no. 350/2003, Law no. 247/2005, Law no. 276/2005, Law no. 223/2006 and Law no. 20/2008, in agreement with the changes suffered by the land legislation.

[4] As a variety of the lease agreement, the land lease agreement had a general regulation in the old Civil Code comprised in title III, and called „ On the lease agreement" (art. 1410-1453) and a specific regulation, containing rules that are specific to the lease, in art. 1454 -1469. Once Law no. 16/1994 entered into force, the stipulations of Civil Code that were not compatible with the new regulation were abolished.

In the present study we aim at analysing the regulation of the land lease agreement in the new Civil Code, while emphasizing the novelty elements. The specific of this regulation will also be approached in the light of a comparative analysis, in relation to the in force norms until October the 1st 2011[5].

Considering the land lease a variety of the agreement for leasing assets , the new Civil Code Cod regulates it under all the aspects particularizing it, in relation to the other varieties of lease. In those cases where the particular regulation is not enough, the norms of the common law in the matter of lease will apply[6].

Following the traditional analysis structure we will consider aspects such as: notion, legal frame and juridical features of the lease agreement, parties to the agreement and object of the agreement, the effects and the termination of the lease agreement.

Until today, the lease agreement constituted mainly the subject of academic manuals elaborated for the students' study, withour exhausting the theretical and practical issue in the matter.

The purpose of the present scientific approach is to underline the features of the current regulation that will certainly not be ignored in the future either by the doctrine or by the juridical practice in the matter.

2. Content

2.1. Notion, regulation, juridical features

2.1.1. Notion

Similarly to the Civil Code in 1864, the new Civil Code does not define expressly the lease agreement. Taking into account the particularities in the new Civil Code regulation, we can define the lease agreement as the agreement by which a party called lessor gives the other party, called a lessee the right to exploit agricultural assets, for a determined period of time, in exchange of a price, called a premium[7].

According to the provisions of art. 1778 al. (1) the new Civil Code, the land lease contract is a variety of the lease, presenting both resemblances and differences compared to other contracts, such as sale contracts.

The object of the lease contract makes it particular compared to the lease of things, for instance, concerning the price, duration and even form[8].

2.1.2. Regulation

The lease agreement is regulated in the new Civil Code[9], Book V "On obligations", Title IX "Different special contracts", Chapter V "The lease", 3rd Section "Specific rules referring to lease", art. 1836 - 1850.

2.1.3. Juridical features

The lease presents the following juridical features:

- It is a *deed indented* contract*,* because it creates mutual obligations between both parties, the lessor binding himself to transmit the use of the agricultural assets for a determined period, and the lesser binds himself to pay the lease price;

---

[5] The date when the new Civil Code entered into force.

[6] In art. 230 let. r) of the Law no. 71/2011 for the implementation of the Law no. 287/2009 regarding the new Civil Code, it was purposely stipulated the abrogation of the Lease Law no. 16/1994.

[7] Regarding the other definitions of the contract, see Francisc Deak, Tratat de drept civil. *Contracte speciale,* ACTAMI Publishing house, Bucharest, 1998, p. 234; Stanciu D. Carpenaru, Liviu Stanciulescu, Vasile Nemes, *Contracte civile si comerciale,* Hamangiu Publishing House, Bucharest, 2009, p.152; Eugeniu Safta-Romano, *Contracte civile,* Graphix Publishing House, Iaşi, 1995, p. 136.

[8] This aspect will be developed in the following sections.

[9] Law no. 287/2009 regarding the Civil Code*,* published in the Official Gazette of Romania, part I, no. 511 from the 24th of July 2009, modified by Law no. 71/2011, published in the Official Gazette of Romania, part I, no. 409 from June 10th, 2011, republished, the Official Gazette of Romania, part I, no. 505 from July 15th, 2011, into force since October 1st, 2011, in this study called the new Civil Code, in order to distinguish it from the old Civil Code.

- It is an essentially *for good and valuable consideration* contract, as both parties pursue their own patrimonial interest. If the use transmission is free of charge, the contract is void from the aspect of land lease but it can be considered valid as a gratuitous loan[10];

- It is a *commutative* contract, as, when signing the contract, the parties are aware of the existence and the extent of the services they bind themselves to. Although the crops realized depend on natural factors, always existing some risks of loss, the land lease is not an aleatory contract, as both parties' obligations are determined from the moment of signing the contract[11];

- It is a *formal* contract. While regulating the conditions of form, art. 1838 in the new Civil Code expressly stipulates the formal character of the land lease. Thus, according to art. 1838 par. (1): „The land lease must be settled in writing, under the sanction of absolute nullity. One can notice that, compared to the lease, which is a consensual contract, the land lease is a formal contract, its written form being required *ad validitatem* under the sanction of absolute nullity. Contrary to the principle of consensualism governing the Civil Code of 1864, the formal character of the land lease is also set by Law no. 16/1994[12]. Art. 1838 in the new Civil Code puts in the lessor's charge the obligation to file a copy of the land lease to the local board or boards responsible for the area where the asset is placed, and in case the lessor does not observe this obligation, he will be forced by the court to pay a civil penalty, for each day of delay [art. 1838 par. (2)]. Compared to Law no. 16/1994, the new Civil Code does not set a dead line for the registration of the land lease, but its dispositions are much more efficient, as after the date of signing the contract, every delay in registering it to the local board forces the lessee to pay a civil penalty. The registration of the land lease answers another condition of form, which is also derogatory from the principle of consensualism, which is the form required for the *enforceability against third parties.* According to art. 1838 par. (5) in the new Civil Code, all expenses occurring for signing, registering and advertising the land lease are the lessee's charge. This is a similar disposition to those in the land lease law, a suppletive norm, and the parties can depart from it, meaning that they can introduce in the contract clauses referring to the equal charges or they can charge only the lessor for such expenses;

- It is a *call-off contract* as the parties' obligations are fulfilled in time, during the lease. In accordance to the law, the parties are free to set the duration of the lease, without legal dead lines and in case this duration was not determined, one will consider that the lease was set for the time necessary to the lessee, usually an agricultural year (art. 1837). These dispositions reflect the fact that, traditionally, in Romania, leases are generally set for a year, without constraining the parties, like in the regulation of Law no. 16/1994, to sign the lease for an excessively long period[13];

- It is a contract *that does not transfer any property rights*, because by signing this contract, one will only transfer the right to use some agricultural assets for a determined period. Similarly to the tenant, the lessee is a simple temporary custodian, and not a holder. As a conclusion, he cannot acquire ownership over the real estates in prescription or over movable assets by possessing them in good faith(art. 935);

- It is an *intuitu personae* character, from the point of view of the lessee's person. Given this feature of the lease, the law expressly prohibits the total or partial sublease, and the non-observance of this interdiction will be sanctioned with absolute nullity [art. 1847 par. (2)]. The consequence of the *intuitu personae* character of the lease is that the lessee's death, physical entity, or the dissolution of the juridical entity determines the lease termination. The regulation in the new Civil Code is

---

[10] Francisc Deak, *op.cit.,* p. 235.

[11] L. Lefterache, C.M. Crăciunescu, *Legea arendării nr. 16/1994, Comentata si adnotata,* All Beck Publishing House, Bucharest, 2000, p. 14.

[12] According to an opinion that remained unique, the land lease was considered a real contract. See, in this matter, Ioan Adam, *Contractul de arendare (I),* in Dreptul magazine no. 6/1995, p. 13.

[13] As for the duration of the lease in the system of Law no. 16/1994, see Romeo Popescu, *Contractul de arendare(II),* in Dreptul magazine no. 6/1995, p.18; Aspazia Cojocaru, Bogdan Patrascu, *Contractul de arendare. Noţiune. Părţi. Caractere juridice (I),* in the magazine Drept Comercial no. 1/1995, p. 122-124.

similar to that in Law no. 16/1994 contrarily to the old Civil Code, where only fruit lease was signed *intuitu personae,* but the parties could expressly stipulate the possibility of sublease, as the norm was dispositive[14]. In case of money lease, the sublease was allowed, as a rule;

- Leases signed while respecting the authentic form required under the sanction of absolute nullity and those registered at the local board are considered *enforceable* for the payment of the premium at the terms and in the ways set by the parties when signing the contract (art. 1845). It is a stipulation considered new in relation to the previous regulations, and one that makes foreclosure easier in case the premium is not paid.

2.2. Parties and object of the land lease

2.2.1. Contracting parties

The parties to the land lease are the lessor and the lessee (physical or juridical entities). The owner, the user or any other legal holder of agricultural assets can be lessors. The previous doctrine that recorded many opinions and quite different of the old Civil Code, regarding the content of the notion of *legal holder of agricultural assets*[15]. Thus, we consider that we can include in this category the holders of other real and main rights over agricultural assets, such as the holder of the superficies right[16]. If the user can be the lessee, the holder of the right to use the asset cannot have this position, given the strictly personal character of this right[17].

The lessee cannot be the lessor, as the dispositions of art. 1847 in the new Civil Code forbid, under the sanction of absolute nullity, the sublease of agricultural assets that are already leased, and the lessee's services are also forbidden[18].

But the law allows the land lease transfer. Thus, according to art. 1846 in the new Civil Code, the lessee can submit the land lease to certain categories of people, determined by the legislator, namely to the people actually participating to the use of the asset subject to the lease, and to the coming of age heirs, but only with the lessor's written consent.

As for the parties'ability, in relation to the dispositions of art. 1784 in the new Civil Code, in order to sign a lease for a period longer than 5 years, because an act of disposition is settled, both the lessor and the lessee must have complete exercise capacity. The people, who, according to the law, can only sign administration documents, will only be able to sign land leases that do not exceed a period of 5 years [art. 1784 par.(3)].

Beyond these aspects, the new Civil Code does not stipulate, concerning the contracting parties, special incapacities in the matter of the land lease, which leads to a broader use of this contract[19].

2.2.2. Object of the land lease

Being a synallagmatic contract, the land lease has a double object: *the agricultural assets leased and the price (the premium).*

The assets that can be leased are mentioned by the legislator in art. 1836 in the new Civil Code. Here, the legislator defines the agricultural assets, contrarily to the old Civil Code, which defined them as rural funds[20].

---

[14] According to art. 1467 in the Civil Code of 1864.

[15] Notion used by the Land Lease Law no. 16/1994.

[16] Gheorghe Beleiu, *Contractul de arendare(II),* in Dreptul magazine no. 6/1995, p. 25.

[17] For the notion and features of the right to use, see, Bujorel Florea, *Drept civil. Drepturile reale principale,* Universul Juridic Publishing House, Bucharest, 2000, p. 205.

[18] Intermediation in the matter of land lease is not allowed.

[19] Contrarily to the Land Lease no. 16/1994 which set a special incapacity for the lessors in art. 4 par. (1) and in. art. 18, as changed by Law no. 350/2003, it set a special incapacity for the lessees, incapacity that leads to the absolute nullity of the lease.

[20] The Civil Code in 1864 defined the land lease as *the lease of rural funds*, agricultural land being the main rural fund (art. 1413).

As a conclusion, the land used in agriculture and the assets destined to the agricultural exploitation can be considered object of the land lease. These are movable or immovable assets destined to the agricultural exploitation. This regulation determines the particularity of the land lease, avoiding the confusion with the assets that constitute the object of other lease contracts.

The assets subject to the land lease must accomplish the following conditions:

- To exist when signing the contract;
- To be individually or generically determined;
- To be legal and possible;
- To be the lessors'property or to be owned by the user or legal holder;
- To be in the civil circulation, according to art. 1229 in the new Civil Code [21].

The new Civil Code no longer stipulates as the parties' liability, the obligation to include in this contract a detailed description of all the agricultural assets under lease, their inventory and a situation plan for the land[22].

In exchange for the use of the agricultural assets, the lessee pays a price called premium. According to the law, the premium can be set either in money or in fruit[23]. The parties are free to set the ways to pay the premium as well as the elements that determine its amount. As for paying the premium, it will be made at the dates and place set in the contract, taking into account the type of products and the way they were obtained. If the parties do not set a place for the payment, common law will apply in this matter (art.1494).

Taking into account the juridical nature of the land lease and the purpose of the parties, the land lease must be real[24] and serious, which means it must not be enormous compared to the object of the contract and obligations assumed by both parties[25].

2.3. Effects of the land lease

2.3.1. The lessor's obligations

The particular rules provisioned by the new Civil Code in the matter of land lease do not concern the lessor's obligations on which we will make appeal to the general rules stipulated in art. 1786, in the matter of lease. As a consequence, the lessor has the following obligations:

a) The obligation to hand in the leased goods;

b) The obligation to warrant against total or partial eviction coming from own or third parties deeds and from the hidden vices of the leased goods;

c) The obligation to respect the right to first refusal of the lessee.

d) One of the lessor's main obligations is to hand in the leased goods at the term and place convened by the parties in the contract. The lessor has to hand in the agricultural goods according to the contract, in a state proper for agricultural exploitation. After the hand in, the lessee has the obligation to maintain the leased goods in a usable condition for the whole contract period, taking into account the nature of the good or the one conferred by the parties' will.

e) It is also in the lessee's duty the obligation to warrant referring to the quite and efficient use of the leased good[26].

---

[21] L. Lefterache, C.M. Crăciunescu, *op.cit.,* p. 5-6.

[22] Such obligations were stipulated in art. 5 lit. b) of the Land Lease Law no. 14/1996.

[23] The old Civil Code regulates the two ways to pay the premium, in nature and money, and Law no. 16/1994 added another one: the premium in nature and money.

[24] It is the honest price.

[25] In the system of the Land Lease Law no. 16/1994, setting the amount of the premium for each category of land use could be done according to: surface, production potential, land division structure, relief and degree of accessibility for mechanization, access possibilities, distance to the storage facilities, industrialization or commercialization, condition of buildings, land improvement facilities or other endowments (art. 14).

[26] The law no. 16/1994 refers exclusively to the warranty against eviction (art. 8), its rules being completed with the dispositions of the common law regarding the obligation to warrant against the hidden vices of a thing.

Because, mainly, the land lease refers to agricultural land, the parties may stipulate in the contract the solutions for the possible issues generated by their spread in the conditions in which the new Civil Code does not contain dispositions regarding the resolution of a conflict related to this aspect[27].

Of course it will be possible to apply the rules from the sale having as consequence the increase or decrease of the price (premium).

f) In the matter of land lease, the new Civil Code admits expressly and abstrusely that the lessee has the right to first refusal. Thus, art.1849 stipulates that: "The lessee has the right to first refusal in relation with the leased agricultural goods, which is exercised according to art. 1730-1739". From this text results that, on one side, the law institutes a right of first refusal in favor of the lessee, and on the other side, under the procedural aspect, for the effective use of the right just created, it send to the rules regarding the exercise of first refusal in the matter of sale, which are applicable accordingly. As a consequence, the lessee benefits from a right of first refusal when selling the goods which make the object of the land lease[28]. This is why we mention the lessor's obligation to respect the lessee's right of first refusal as an obligation correlative to the real right instituted by law in his favor.

2.3.2. The lessee's obligations

Corroborating the particular rules in the matter of land lease with the general provisions in the matter of the lease contract, we take out the following obligations falling in the lessee's responsibility:

a) The obligation to pay the premium. The most important obligation of the lessee is to pay the premium at the terms, location and manner set up in the contract. The premium is paid in money or products.

In contrast with the Land Lease Law no. 16/1994, the new Civil Code does not impose on the contracting parties special obligations for fixing the premium, neither when the premium is paid in money, nor when the payment is done in nature. Leaving this initiative to the parties, the new Civil Code make a progress compared to the old rule often criticized in the specialty doctrine[29].

When the payment is done in fruit, taking into account that these are perishable goods, the law stipulates that the lessee has to make the pay at the picking up time and the lessor has to make the reception of the picked up fruits at the date when he is notified by the lessee (art. 1844).

If the parties did not establish the place of the payment in the contract, the rules of common right will be applied.[30].

b) The obligation to take over the leased goods. Generally, the goods are handed in to the lessee and taken over from him based on an inventory which testifies their condition at the moment of contract closure. In the absence of an inventory it is presumed that the goods have been received in a good condition. This is the relative presumption (*iuris tantum)* which can be denied with contrary evidence[31].

c) The obligation to use the leased goods as a good owner and according to their destination. The lessee is compelled to use the leased goods with the care and skills which their owner would

---

[27] In this respect, the old Civil code, stipulated in art. 1454 that: "If, in the land lease, is shown a surface smaller or larger than the one it has in reality, the lease will neither decrease nor increase with the exception of the cases and rules enclosed in the selling title". From these dispositions the parties could derogate either purposely or tacitly.

[28] And land lease Law no. 16/1994 instituted a preemption right for the lessee in case of selling agricultural unincorporated areas which he received in lease. In this respect, see also, Adina Foltiş, *Dreptul de preempţiune,* Hamangiu Publishing House, Bucharest, 2011, p. 184-187.

[29] At large, on the dispositions regarding the determination of lease according to Law no. 16/1994, see also, Romeo Popescu, *cit. op.,* p. 22-23.

[30] According to the provisions of art. 1494 of the new Civil Code.

[31] Francis Deak, *cit. op.,* p.247.

have employed, seeking the preservation of their production potential and the execution of the needed work in this purpose. This way the lessee will be responsible for *culpa levis in abstracto*, by the type of prudent and mindful person[32]. The lessee behavior is evaluated more severely because he is a professional, the feature imposed by the specific object of the land lease, which are agricultural goods[33].

Even though the new Civil Code does not comprise a distinct disposition for the lessee regarding the obligation to preserve the use category of the land, this results implicitly from the dispositions of art. 1839, according to which, the lessee may change the category of use for the leased land only with the previous and written agreement of the owner. In this respect, the new Civil Code maintains the same conditions in which such a change may happen like in the system of Law no. 16/1994, being necessary the owner's previous and written agreement and not of some other persons which may lease it (ex. user)[34]. *Mutatis mutandis*, the obligation instituted for the lessee by the dispositions of art. 1839 in the new Civil Code may be extended to the other leased agricultural goods in connection with the change of their destination.

d) The obligation to ensure the leased goods. We find it again in the dispositions of art. 1840 of the new Civil Code according to which, the lessee has the obligation to sign an insurance contract to ensure the goods which form the object of the land lease. If the insurance is missing the lessee will be responsible before the lessor for the prejudice thus caused.

e) The obligation to defend the leased good against usurpation, under the conditions of common law (lease contract). Similarly to any tenant, the lessee will have to notice the tenant in the case the good is being usurped by a third party. Otherwise he will be responsible for the damages suffered by the lessor.

f) The obligation to give back**.** At the contract termination, independent of the reason, the lessor has to give back the leased goods in the condition he received them, according to the inventory issued at the hand over. In case of refusal, the lessor may request the goods restitution either through the promotion of a claim of request (which can be used only if the lessor is also the leased goods owner), or through the promotion of a personal action *ex contractu*. As we already pointed out, by the dispositions of art. 1847 al. (2), the new Civil Code forbids the sublease and in principle, the lessee cannot surrender the contract. As an exception, only with the written agreement of the lessor, the lessee may surrender the land lease to a category of people determined by the legislator, like the husband that effectively participate at the exploitation of the good, object of contract and the descendants who come of age (art. 1846).

g) The obligation to pay the expenses. It is provisioned in the last paragraph of art. 1838 from the new Civil Code, according to which, all the expenses caused by the land lease contract closure, registration and publicity, are the lessee's charge.

2.4. The risk in the matter of land lease

The contracting parties have the possibility to insert in the land lease contract some clauses referring to the risk charge. In the case they are missing or insufficient, the problem of risk charge will be solved following the rules dedicated in the provisions of the new Civil code.

For that purpose, we mention the following situations:

- the risk of losing, totally or partially, the leased agricultural goods as an act of God, is born by the lessor, in his position of owner, according to the rule *res perit domino (*art. 558). In such a case, the lessee must bring evidence that the loss occurred without any of his fault (but due to a

[32] In the previous regulation, in case these obligations are not respected by the lessee, the lessor had the right to request the reposition of the leased goods to their previous state or the termination of contract with interests-damages (art. 24 al. (2) of the Law no. 16/1994 and art. 1455 al. (1) of the Civil Code.

[33] See also, Francisc Deak, *cit. op.,* p.246.

[34] For argument, see also Gheorghe Beleiu, *cit.op.,* p. 26.

strange cause, such as force majeure or acts of God). In case the lessor is not the owner of the assets (for instance the user), he will bear the risk of losing the asset, „...in accordance to the right he has over the asset"[35]. In case he was delayed, although the asset loss was due to an act of God, the lessee will bear the risk as he is the debtor of the obligation to return the leased assets[36];

- in case the lease was set in money and during the lease the whole crop is lost or at least half of it is lost due to an act of God, the lessee can ask for a proportional deduction of the premium set in the contract [art. 1841 par. (1)]. In case the land lease was signed for a period of several years, the premium deduction can be made at the termination of the contract, by means of a compensation, and after calculating the crop harvested during the contract [art. 1841 par. (2)]. By exception, the lessee cannot be granted a proportional deduction of the premium if the crop loss was due to an act of God occurred after being harvested or in case he was aware of the damage when signing the land lease (art. 1842);

- in case the premium was set under the form of fruit share (percentage wise premium) the crop loss due to an act of God will be proportionally born by both parties, according to the dispositions of art. 1843 par.1 in the new Civil Code. Things are different in case the fruit are lost after being harvested, when the risk is born by the party that delayed handing over the fruit [art. 1843 par. (2)].

According to art. 135 par. (1) of Law no. 71/2011[37], in the cases stipulated by the new Civil Code at art. 1841-1843, if signing the insurance contract for the risk of losing the crop due to an act of God is mandatory, according to the law or to the land lease, the insurance indemnity will be born by both contracting parties proportionally with the parties' bearing the risk of crop loss due to an act of God. In case an insurance contract was not signed, according to the law or to the land lease, the party compelled to sign the insurance contract is liable before the other party for the damage thus produced [art. 135 par. (2)].

2.5. Termination of the land lease

Along with the general causes to terminate the lease, applicable in the case of the land lease, article 1850 in the new Civil Code stipulates a series of special situations for the termination of the land lease such as: death, lessee's incapacity or bankruptcy. These dispositions set the *intuitu personae* character of the land lease, compared to the lease, which does not have this characteristic.

Contrarily to the Land Lease Law no. 16/1994[38], the new Civil Code no longer stipulates the possibility to continue the land lease in case the lessor or the lessee die, which means that in such cases a new land lease must be signed. This will also be the situation in case of lessee's incapacity or bankruptcy.

In the land lease case as well, the expiry of the term leads to the contract termination. Especially referring to the land lease, the dispositions of art. 1848 in the new Civil Code stipulate, in case none of the contracting parties noticed the other, in writing, within the terms stipulated by the law, the refusal to continue the contracting relations, the land lease is rightfully renewed.

3. Conclusions

From the analysis realized in this study, regarding the novelty aspects comprised by the land lease, in the light of the dispositions in the new Civil Code, a reconfiguration of this particularly useful instrument in the civil relations.

---

[35] Francisc Deak, *op.cit.,* p.243.

[36] Delaying moves the risk in the debtor's charge [art. 1047 par. (2) Civil Code in 1864]. According to art. 1844 in the New Civil Code, when the premium is paid in fruit, *the lessee is lawfully late* to hand them in at the date of harvesting them, and the lessor is lawfully late to receive them from the date he was notified in writing by the lessor.

[37] Law no. 71/2011 to apply Law no. 287/2009 referring to the Civil Code.

[38] See art. 25 of the Land Lease no. 16/1994.

The new Civil Code mainly keeps the previous regulation, but it also brings important changes that we aimed at emphasizing in this study.

Consequently, regarding the current juridical regime of the land lease, we must point out the following novelty aspects brought by Law no. 287/2009:

- the new Civil Code does not stipulate, from the point of view of the contracting parties, special incapacities in the matter of the land lease, aspect that is meant to produce a wider use of this type of agreement;

- more eficient are the dispositions regarding the form and the registration of the land lease (art. 1838);

- the parties are free to set the lease duration, without legal bound, and in case this duration was not determined, the contract is considered signed for the entire period necessary to the lessee, such as an agricultural year (art. 1837);

- within the conditions stipulated by the law, the land lease acquires an enforceable character (art.1845);

- the obligation to insure the leased goods is a new aspect (art. 1840);

- bearing the risks is a specific regulation of the land lease (art. 1841-1843);

- lessee's death, incapacity or bankruptcy as well as renewal of the contract lead to signing a new land lease.

PREDECESSORS AND PERPETRATORS OF COOPERATIVE SYSTEMS IN EUROPE

ŞTEFAN NAUBAUER*

Abstract
The study hereby aims to bring forward afresh the cooperative ideas that have animated particularly the last two centuries of the past millennium. In the present context, labelled by the major difficulties the European labour market is facing, the proper knowledge and understanding of cooperative principles provide the premises for their implementation with the view to meet the current economic and social stability exigencies in today's Europe.

Keywords: *cooperative systems; cooperative principles; the European labour market.*

I. Introduction

The area covered by the subject matter of this study is the doctrine of cooperative property developed by the predecessors and perpetrators of cooperative systems in Europe. The study hereby is purposeful as it aims to bring forward afresh the cooperative ideas that have animated particularly the last two centuries of the past millennium. The manner in which we shall deal with the objective undertaken hereunder rests upon the detailed analysis of cooperative concepts that grounded the cooperative systems in Europe. With regard to the state of knowledge in matters dealt with and the contributions already established in the specialty literature, we argue hereunder that the status of legal relations existing within the cooperative system has been disregarded in the Romanian doctrine during the past decades, except for a monograph on labour relations in handicraft cooperative property published in 2012 by the author of this study and several issues reported in some papers released in the field of labour law, though not covering the matters reviewed hereunder.

II.1. France

In the valleys of the Pyrenees, dairy cooperatives[1] were initially established – the so-called "sociétés fromagères" or "les fruitières" - with the aim of jointly selling the milk, to process it into derivatives, respectively.[2] In the 17th century, these existed under this form, but later on were converted into real capitalist enterprises.[3] In addition to dairies, in France also emerged cooperatives – producers' cooperative societies - of viticulturists, with the aim of jointly retailing wine or grapes.[4]

In terms of cooperative ideas, a notable place is vested upon Charles Fourier (1772-1837), thinker who imagined utopia of human association in the so-called "phalanxes" (following the organization of armies led by Alexander Macedon) installed in common colonies, known as "phalansteries".[5] These "social palaces" would be gathering together people from all walks of life, the exponents of each and any human character, while conserving individual property and wealth

* PhD Lecturer, "Nicolae Titulescu" University of Bucharest, Faculty of Law, Private Law Department (stefannaubauer@yahoo.com).

[1] It was noted that traces of peasant groups established for milk processing have been discovered in France since the early part of the Middle Ages – see G. Mladenatz, *The History of Cooperative Doctrines*, The Romanian Cooperative System National Office, „Lupta" Graphic Arts Institute N. Stroilă, Bucharest, 1931, p. 11.

inequality, hence the conclusion that the phalanstery was not designed as a communist colony. [6] According to Fourier's theory, wage regime would have been replaced by associated work, owner of the means of production, which would be provided in series, each associate moving freely from one job to another, in accordance with the dictum: "harmony follows the series".[7] As it has been noticed, however, the Fourierist phalanstery was not purely cooperative, whereas it would be performed not based on shareholders' equity, but with the help of philanthropists – which, by the end of Fourier's life, failed to be achieved – and, moreover, it preserved equity income, that cooperatives do not accept.[8]

Philipe Buchez (1796-1865), considered the founder of the cooperative in France[9], envisaged a statist and hierarchical organization governed by the Christian belief[10] of love thy neighbour, where the associated work replaces the principle of competition among workers.[11] However, Buchez did not intend to restrain freedom of industry and fostered maintenance of competition, whereas this provided for "the impetus for progress in productivity".[12] Unlike the Fourierist concept, Buchez promoted the idea of the self-help working class, without the intervention of the State or of philanthropists, advocating for the establishment of a permanent capital[13] and the establishment of a "labour State bank".[14] According to his theory, "cooperatives are a kind of brotherhood, of industrial communities, formed by craftsmen within the same branch", Buchez seeking to achieve in industry the trinity of the French Revolution virtues: fraternity, liberty and equality.[15] In 1831, Buchez published a periodical entitled "The Social Sciences Journal", which later became "The European".[16] He himself established two producers' cooperatives: a carpentry (1832, though wound up shortly following its set-up) and a jewellery ("l'association des travailleurs bijoutiers en doré", in 1834, which operated until 1873, continuing to print the periodical named "The European" under the title "The Workshop").[17]

Louis Blanc (1813-1882) outlined his ideas in a booklet entitled "The Organization of Labour", putting forth that the settlement of the social problem related to the modern economic and social order rests with the organisation of labour by means of an association – term designating a real cooperative, in the modern sense of the word, whereas the term "cooperative" was not yet used by that time in France.[18] In his opinion, the economic system cell was represented by the so-called "social workshop" – an association (labour production cooperative) "resting on a democratic basis and on the spirit of fraternal solidarity, formed of workers sharing the same profession (*corporate-support system* – our parenthesis)".[19] Considering, however, that, at the beginning, the workers do not have the capital necessary for the establishment of such associations, Blanc argued that the State should provide finance in this respect, thus becoming the "banker of the poor", taking in charge,

however, the management of certain businesses.[20] Interesting is the fact that it was proposed that the workers should be paid out as per the formula "produced according to the abilities and amount of labour invested, and consumed according to their own needs", the solution being judged as a Communist principle in terms of the distribution of the "social product".[21] We should also note that Blanc has picked up the idea put forward by Buchez of setting up an inalienable and indivisible fund whose purpose was cooperative labour perpetration and cooperative system prevalence.[22]

At the end of 1848, a so-called "Chamber of Labour" (*chambre du travail*) was established in France, which served also as industrial court.[23] One year later, a federative of cooperatives was established in Paris (*l'Union des associations fraternelles de Paris*), in order to serve: the mutual exchange of goods between cooperatives; settlement of liabilities and receivables; the propagation of the concept of association; the guidance of cooperatives.[24]

Following the coup d'état dated December 2nd, 1851, and Napoleon III proclamation as Emperor, the cooperative movement is discontinued and a "complete silence stretches over the years, until 1863, when things change and new items make it start a new period in the history of French cooperative movement".[25]

In the Law of July 24th, 1867 on joint-stock companies has been inserted Title III (Articles 48-54) – "Dispositions particulières aux sociétés à capital variable", aiming to foster the development of cooperative societies.[26]

In 1894 was held in Lyon the first National Congress of Agricultural Unions.

Charles Gide (1847-1932), Professor at the Universities of Bordeaux, Montpellier, Paris and, finally, at the Collège de France, put forth the possibility of elimination of the employee regime within cooperatives, namely "a labour organization in which the worker would no longer be a completely passive production tool, but would take within the company his part of initiative, control, responsibilities and benefits, as well"[27]. This idea was developed by Hyacinthe Dubreuil (1883-1971), a member of the Administrative Commission of the General Confederation of Labour, which did not judge producers' cooperatives a solution to the social problem, but removing these cooperatives was not tantamount in his view to the rejection of the cooperative-like principle, but deemed necessary to identify a new form of cooperation – *the labour cooperative* (limited partnership workshop).[28]

The development of cooperatives was accompanied by strong political claims directed against capitalism and liberalism. Thus, in their theoretical and practical treatise on companies, Houpin and Bosvieux argued that, irrespective of their line of business, cooperatives always aim, eventually, to suppress the intermediaries in order to reduce costs or increase gains. They are characterized by the joining, in one and the same person, of two qualities, generally separate, between which there is a natural antinomy (employer and employee, vendor and consumer, banker and borrowing customer)

and by the flat supporting role the capital plays thereunder in relation to personal involvement and members' work.[29]

2. Germany

The oldest forms of cooperative societies of the old German Empire were "the insurance companies for cases of misfortune, death or illness".[30] Early forms of credit cooperatives have been identified since the time of King Frederick II of Prussia (1740-1786), on whose initiative many farmers have set up such companies with the view to get credit on favourable terms.[31]

The founder of the cooperative movement in Germany is considered, though, Hermann Schulze-Delitzsch (1808-1883), the father of a basically cooperative system adopted in other countries as well, in particular by the cooperative organizations of the urban middle-class - small craftsmen employers and traders.[32] Schulze was a supporter of the liberal-individualist economic concept, deeming the principles of the society's capitalist order immutable, the cooperative movement being, in its view, a means of combating state communism.[33] One of the most prominent of his followers – Professor Hans Crüger - stated that "the purpose of the cooperative organization is to offer small businesses the opportunity to enjoy as well the advantages of the modern capitalist system".[34] The first cooperative associations established by Schulze in his hometown - Delitzsch, located near Halle, in Saxony, subsequently incorporated to Prussia - were: a benefit home for sickness and death whose members had equal rights in the General Meeting; an association of carpenters for the supply of raw materials, based on the joint liability of its members.[35] In 1850, Schulze founded the first *credit union* in Delitzsch, which differed from the popular credit institutions previously established in Berlin by the fact that it claimed its members the payment of interest on loans granted, as well as the accumulation of a personal fund to be deducted from loans obtained.[36] The credit unions established by Schulze were not charitable institutions, but were grounded on the idea of the members' *self-help*, the aim of the association being pursued in terms of the paid-up capital of partners and based on a reserve fund set up by taking-overs of the net realized gain, consecrating at the same time the unlimited joint and several liability of partners: all for one and one for all.[37] In addition to credit unions, Schulze also created *consumer cooperatives*, called "associations to purchase the necessities of life", but the last stage of the co-op's development – "the system's peak", in his view, was to be a *producers' cooperative*.[38] A special resonance also had the works published by Schulze: *Assoziationsbuch für deutsche Handwerker und Arbeiter* (1853), *Vorschuss-und Kredit-Vereine als Volksbanken* (1855) and *Die arbeitenden Klassen und das Assoziationswesen* (1858).[39] In 1854, at his initiative was issued the first co-op periodical: Die Innung der Zukunft, later renamed *Blätter für Genossenschaftswesen*.[40] In June 1859 was organized in Weimar the first Congress of Schulze-Delitzsch credit unions, deciding upon the establishment of a Central Office (Zentral-Korrespondenzbureau) headed by Schulze, converted in 1864 in a General

Union of Self-Help Co-ops (Algemeiner Verband der auf Selbsthide beruhenden Erwerbs-und Wirtschaftsgenossenschaften), also under the leadership of Schulze, until his death (Potsdam, April 29th, 1883).[41] We also note that, in 1863, Schulze has developed a draft law on the cooperative movement, based on which, on March 27th, 1867, was enacted the first cooperative code of Prussia.[42]

As regards the *rural cooperative* type, it was established by the German Friedrich Wilhelm Raiffeisen (1818-1888).[43] In 1848(9) he set up the "Union in Aid of lmpoverished Farmers" in Flammersfeld, whose main activity was directed against usurious cattle trade, which later turned into a credit and savings institution.[44] In 1854, Raiffeisen founded an aid society in Heddesdorf (Neuwied), shortly replacing it with a credit company (Heddesdorfer Darlehnskassen-Verein), and in 1862 he set up four credit and savings institutions in different towns.[45] These companies were founded on the principle of benevolent assistance of people in distress and joint and unlimited liability: "the spirit of solidarity and love for thy neighbour".[46] Raiffeisen-type credit and savings institutions had a limited number of members[47] who neither submitted capital[48], nor did they receive dividends, the co-op's profit being directed to a reserve fund that preserved its indivisible character at the time of dissolution of the Company.[49] Within these societies, offices were held for free, with the exclusion of the accounting officer secretary, decision justified by the following three reasons: cooperative security, development of the solidarity spirit and economy in expenditure.[50] It is worth mentioning the fact that Raiffeisen intended to even set up a life insurance company, but did not receive an operating permit thereto.[51] In 1866, Raiffeisen published a book that has been successful also outside his country's borders, including on the territory of Romania[52] – *Die Darlehnskassen-Vereine als Mittel der Abhilfe der Not der ländlichen Bevölkerung, sowie auch der städtischen Handwerker und Arbeiter Praktische Anleitung zur Bildung solcher Vereine gestützt auf sechzehnjährige Erfahrung als Gründer derselben*, printed in five editions until his death, occurred in 1888.[53] In 1872 was established the first federal credit union in the Rhineland (Rheinische landwirtschaftliche Genossenschaftsbank), succeeded in 1874 by two similar federal unions for Westphalia and Hesse, and in 1876 the regional federal unions have been grouped in the central credit institute, in the form of a private company limited by shares (Landwirtschaftliche Zentral-Darlehnskasse für Deutschland, later Deutsche Raiffeisenbank A.-G.).[54] One year later was

established Raiffeisen Union of Agricultural Cooperatives (Generalverband der deutschen Raiffeisen-Genossenschaften).[55]

Karl Marx (1818-1883), though failing to give too much importance to co-op as a means of introduction of a new social order[56], admitted, however, that the cooperative movement has its own purpose, subordinated though to the political action.[57] In 1864, Marx brought forward before the International Workingmen's Association a reference document – "Inaugural address" – in which he envisaged cooperation as "a great social experiment", which proved that production on a large scale, and in accord with the behests of modern science, may be carried on without the existence of a class of masters employing a class of hands.[58]

Ferdinand Lassalle (1825-1864), influenced in his conception of cooperative property by the ideas of Louis Blanc[59], advocated for the workers' production cooperatives, through which they had the chance to become their own entrepreneurs and thus eliminate the so-called "brazen law of wages"[60]: "*to make of the working class its own master*, here's the way, the only way to repeal this cruel law, the law of brass which determines the salary."[61] As Blanc, Lassalle recognized the important role of the State played in financially supporting these producers' cooperatives, except that the first thinker admitted the State leadership for the period in which the workers were not yet prepared to manage their own "social workshops".[62]

Wilhelm Haas (1839-1913) – whose cooperative property concept has proven to be a compromise between the Raiffeisen and Schulze-Delitzsch systems – set up in Friedberg, in 1872, a rural cooperative called by him "consumer cooperative" – in reality this being considered rather a joint supply one for performing agriculture.[63] In 1879, it was established the Agricultural Credit Cooperatives Union of Hessa, later on converted into an Agricultural Cooperatives Union in southern and western Germany, led by Haas.[64] A few years later, in 1883, was established under the chairmanship of Haas, the Agricultural Cooperatives Association, which brought together cooperatives other than the credit ones, later on the Haas General Union of Agricultural Cooperatives, judged as "the most powerful Cooperative Union in Germany and in the whole world".[65] In 1904, Haas founded the first cooperative property school for training staff in the field of agricultural cooperatives.[66] Following the withdrawal of the Agricultural Cooperative from the International Cooperative Alliance after the Congress in Budapest in 1904, at the initiative of Haas was born a new International Association of Agricultural Cooperatives (1907), later named the International League of Agricultural Cooperatives, based in Berlin.[67]

[55] *Ibidem*, p. 77.

[56] The following reasons of Marx's perception on the cooperative movement were identified: the first, in that there were not by that time enough experiments in the various categories of cooperatives to be able to wittingly appreciate the cooperative role in settling the social problem; the second, in that Marx could not be objective in the theoretical research of the cooperative movement, as it had already formed the doctrine of expropriation – Ed. Bernstein, *Die Voraussetzungen des Sozialismus und die Aufgaben der Sozialdemokratie*, IX[th] Edition, Stuttgart, 1920, *apud* G. Mladenatz, *op. cit*., pp. 138-139.

3. Italy

Giuseppe Mazzini (1805-1872), politician and hero in the struggle for independence and unification of Italy, reckoned as the forerunner of the cooperative movement, established in 1842 the "associazione nazionale degli operai", the concept of cooperative property in his opinion being expressed by "voluntary free association, organized by people who know, love and look up to each other, not a forced association, not agisted by the governing authority".[68]

Luigi Luzzatti (1841-1927), politician, Professor, and author of works in the field of economy and finance, esteemed rhetorician, is considered "the real founder of the Italian credit union movement".[69] In 1864 and 1865, Luzzatti establishes the first popular banks in the cities of Lodi and Milan, following the Schulze-Delitzsch model[70], which it has adapted, though, to the Italian realities – more precarious than in Germany – diminishing the value of the shares, but giving more importance to the reserve funds.[71] Unlike Schulze-Delitzsch, Luzzatti campaigned to ensure free cooperative governance - idea which approaches him for Raiffeisen[72] - and introduced the interest-free small loans system, "by word of honor"[73]. We also note the fact that he initiated the setting up, in Rome, of a central credit institute, with the participation of the State and of the co-op.[74]

Leone Wollemborg (1859-1932) established in 1883, in the village of Loreggia, Italy's first Raiffeisen-type credit union, without carrying forward the moral and Christian precepts involved.[75]

In terms of international concern, it is worth mentioning that, in December 1929, the "Confederazione cooperative italiana" convened the first International Conference in Rome, followed in 1930 by the conferences held in Innsbruck and Zürich, where it was decided upon the establishment of the International Confederation of Cooperatives, also known as the "International White Cooperative".[76]

The inter-war period also saw the development in Italy of a form of labour unions – "di braccianti cooperatives", for the purpose of self-help and savings institution.[77] Their members only performed work, collected capital of small monthly contributions and executed works pertaining to the State and the territorial-administrative units.[78]

4. Great Britain

England is deemed as being the first State to have specifically enacted for cooperative societies, implementing thereof from the outset an autonomous situation (under bills dated 1852, 1867 and 1871); however, until 1893 when it was adopted the "Industrial and Provident Societies Act", England has not had a cooperative encoding in the real sense of the word.[79]

Within the framework of outlining cooperative ideas, we note hereby that, in 1659, Peter Cornelius van Zürickzee (Pieter Cornelios Plockboy on his real name) – Dutch settled in England, published a pamphlet in which he imagined an economic association appreciated as integral

---

[68] *Ibidem*, pp. 40-41.

[69] In 1863 he published in Padua a work entitled *La diffusione del credito e le banche popolari*, carrying forth his primary ideas in respect of credit unions – *ibidem*, p. 88.

[70] See *supra*.

[71] Thus, if the share in Schulzer popular banks in Germany amounted to at least 100 marks – but, as a rule, ranged between 300 and 500 marks – in Italy the amount was fixed, usually to 25-50 pounds – G. Mladenatz, *op. cit*., pp. 88-89. See *supra*.

[72] See *supra*.

[73] G. Mladenatz, *op. cit*., p. 89.

[74] *Ibidem*.

[75] Luzzatti, who was himself Jewish, however, proved unlike Wollemborg a moral and Christian precept; in the meantime, the agricultural cooperatives in Italy came under the influence of the Catholic clergy - *ibidem*, pp. 89-90.

[76] G. Mladenatz, *op. cit*., p. 114.

[77] *Ibidem*, p. 165.

[78] *Ibidem.*

[79] C.C. Zamfirescu, *op. cit*., pp. 14-15.

cooperative, in order to meet the needs of its members, *i.e.* a "socialistic community with limited private property".[80] Another theorist concerned with the cooperative-related ideas was John Bellers, who in 1695 published a statement that promoted the so-called "cooperative labour colonies" ("a College of Industry"), designed to produce – unlike the entity described by Plockboy - over the members' consumption needs, the proceeds realized by the sale of surplus assets to others being employed for the expansion of the colony: "[…] will make *Labour,* and not money the standard to value all Necessaries by".[81]

The oldest English cooperative associations are consumer stores, the so-called "cooperative shops", which had more of a capitalist nature, established in Gova - 1777, also the birth date of the tailors' cooperative (producers' cooperative) in Birmingham - and in Mongewel (in 1794).[82] In 1795 was established a producers' cooperative – the mill in Hull, in which case, as in the case of those mentioned above, earnings were divided in proportion to the capital paid up by each co-op member.[83]

Robert Owen (1771-1858), regarded as the father of English cooperation and modern cooperation in general, became aware of the fact that the great plague of mankind was – and is – the chase after gain, what makes economic goods to be sold at a price higher than the cost, the latter being reckoned as the fair price.[84] In his view, the profit thus obtained is unfair, and this gain tool – money – had to be removed, for which Owen has set up a labour exchange of goods, based on cooperative principles, which provided to depositors of goods so-called labour notes which amounted in value to the one of the products submitted for sale.[85] Within this labour exchange, the price was firm in relation to the number of hours of work judged as being required for the production of the property, in consideration of the fact that the value of an economic good is determined by the labour and skills employed, and the purchaser paid the same amount in consideration for labour notes obtained in the exchange for its products offered for sale.[86] This institution was established in London in 1832, but was shut down two years later, in particular due to the fact that speculators, in exchange for goods of questionable quality, took from the exchange worthy goods which they sold on the market at a higher price, thus obtaining profits that Owen sought to remove.[87] From the perspective of international cooperative organizations, it is worth mentioning that Owen formed in 1835, in London as well, the Association of all Classes of all Nations, in order to transpose its social system in lifestyle.[88]

Rated as the foremost theorist of the cooperative movement, William King (1786-1865) established in 1827 a consumer cooperative in Brighton, called "The Co-operative Trading Association", and during the period 1828-1829 he published a monthly periodical called "The Brighton's Co-operator".[89] In his view, deeply Christian – which is why he was considered a forerunner of the social Christians[90], the emancipation of the working class had to be carried out exclusively by its own means, the idea of self-help being thus emphasized and regarded as a fundamental element of the cooperative action programme.[91] According to his theory, the social and economic basis of the cooperative movement is labour organization in the interest of those who

provide work, the co-op giving the possibility to the labour factor to be released from the state of dependency relevant for the capital factor.[92]

The most famous substantiation of the cooperative idea remains though the "Rochdale Society of Equitable Pioneers", founded in 1844 by the will of 28 poor flannel weavers, who, in December of the same year, opened the shutters of a consumer store "in the laughter of merchants and street romps gathered to see the "booth of old weavers".[93] This moment remained but one that glitters even today in the history of modern cooperative.[94] The famous system in Rochdale was characterized by the following rules: the sale for "ready money", including to its members, justified by the irrefutable argument that "if the associates would take goods on credit from the common store, it would mean that they lend money to themselves, which naturally is not possible" [95], and, on the other hand, if a cooperative with a modest capital[96] would practice selling on credit as well, "it can easily occur that it may find itself at one point with no cargo and no money"[97]; the sale of goods at the current, retail market price, with the aim that the members achieve savings that were distributed to the same, at the end of the year, in the form of the so-called "consumption bonus" (rebate)[98] representing the difference between the market price[99] and the cost price: "an economy achieved by members of the co-op, on account of the fact that, jointly procuring the necessities of life and by direct means, they appropriate the profit that would otherwise revert to intermediate traders"[100]; each shareholder has the right to one vote, no matter how many shares are purchased: one man – one vote;[101] non-restriction of access within the society, whereas in the Rochdalean cooperative the interest was that "the number of members, therefore of certain customers, be as high as possible, the surplus being distributed in proportion to their transactions;[102] the election of the members was however very carefully undertaken, each newcomer – who was expected "to make prove of a high sense of moral rectitude and perfect honesty" – being recommended by a member and subsequently accepted by the General Meeting;[103] neutrality in politics and religion;[104] the social labour, substantiated by the establishment of a provident sick and burial society, propaganda against alcoholism, care for the unemployed or low-waged, the establishment of a construction company for the benefit of associates,[105] the creation and development of a cooperative library, the establishment of schools for the children of the co-op members.[106] It should also be stressed that the Rochdale Pioneers have established, six years after the opening of the consumer store, a *producers' cooperative* – a cooperative mill, which, however, due to lack of profitability, was sold in 1860 and replaced by a more powerful one – and in 1854-1855 they founded two spinning factories, these cooperatives being established based on the principle of *the participation of personnel in benefits*.[107]

However, in 1862, the General Meeting ruled upon, by 502 votes for and 159 against – the removal of the participation to profit of workers within the companies' factories, "with all the arduous opposition of the elderly pioneers".[108]

After the success reported at Rochdale, E. Vansittart Neale (1810-1892) became the leader of the consumer cooperative movement, holding, during the period 1875-1891, the office of Secretary General of the English Cooperatives Union.[109] Vansittart-Neale contributed to the first draft law on cooperatives, and the first cooperative code – "Industrial and Provident Societies Act" was passed by the British Parliament in 1852.

The first International Cooperative Congress was held in London, in 1895, on which occasion it was decided the establishment of the International Cooperative Alliance.[110]

In 1906, Arthur Penty (1875-1937) published in London the paper entitled "The Restoration of the Guild System", advocating for the restoration of the old medieval guilds, upgraded and generalized in all branches of economic business.[111] The said author also sought the establishment of an "orderly economic regime, organized on cooperative bases with the view to exclude the economic market and price fixing by economic corporations".[112]

In 1915, George Douglas Howard Cole (1889-1959) founded the Association "The National Guilds League" – branch of guild socialism, according to which the industrialization of the economy was a reality which could not be removed any longer, but laid the stress on the organization of production of the initiative and with the participation of the professional union.[113] In summary, the purpose of guild socialism relates to the "removal of the employee regime, in that the employer is suppressed, and the working class organised on the basis of the principle of self-management".[114] The practical application of this concept resulted in the construction guilds grouped in 1921 into a national organization, and one year later, in an international federation, following the Congress of Vienna.[115]

III. Conclusions

In the present context, labelled by the major difficulties the European labour market is facing, the proper knowledge and understanding of cooperative principles provide the premises for their implementation with the view to meet the current economic and social stability exigencies in today's Europe.

SOME CONSIDERATIONS RELATING TO THE UNFAIR TERMS WITHIN THE BANK CONTRACTS IN REGULATING OF THE LAW NO. 193/2000

VASILE NEMEŞ [*]

Abstract
In this study, we intend to make a brief analysis of some issues relating to the unfair terms within the contracts concluded in the banking activity by the credit institutions with the consumers.
The contracts concluded by the credit institutions with the consumers are contracts containing pre-formulated standard terms, meaning that they are set out prior to the conclusion of the contract and submitted to the consumer, substantially reducing the possibility to negotiate them.
On the other hand, due to the highly technical nature of the banking regulations and the terminology used by them, in the bank contracts there are several terms for whose understanding the consumer needs specialized knowledge.
Precisely for this reason, the legislator regulates a number of conditions relating to the negotiation and conclusion of the contracts between the professionals and the consumers, as well as the identification and finding of the unfair terms within the contracts.
At the same time, in the content of the bank contracts may also be identified certain terms that are part of the examples listed in the Appendix to the Law no. 193/2000.

Keywords: *credit institution, consumer, unfair term, bank contract, professionals*

1. Preliminary considerations

By the Law no. 193/2000[1] relating to the unfair terms within the contracts concluded between professionals and consumers have been introduced more regulations which are fully applicable within the contracts concluded between the credit institutions[2] and their customers having the capacity of consumers.

According to the provisions of article 3 of the Government Emergency Ordinance (G.E.O.) no. 99/2006, the credit institutions, Romanian legal entities, may be set up and may operate in one of the following categories:

a) banks;
b) credit cooperative organizations;
c) saving and lending banks in the housing sector;
d) mortgage loan banks[3].

According to the Law no. 193/2000, the consumer[4] means any natural person or group of individuals set up in associations which, pursuant to a contract covered by the law, are acting for purposes outside its commercial, industrial or production, crafted or liberal business.

[1] Published in the Official Gazette no. 1014 of December 20, 2006.

[2] The main issues regarding the credit institutions are regulated by the G.E.O. no. 99/1996 relating to the credit institutions and the suitability of the capital published in the Official Gazette no. 1027 of December 27, 2006.

[3] For details on the organization and operation of different categories of credit institutions, see Lucian Săuleanu, Lavinia Smarandache, Alina Doocioiu, Banking Law, Academic course, Legal Universe Publishing, Bucharest 2009, page 39 and the following; Rada Postolache, Banking Law, C.H. Beck Publishing, Bucharest 2012, page 45 and the following.

[4] For a detailed analysis of the principles of the consumers' protection, see Anca Nicoleta Gheorghe, Camelia Spasici, Dana Simona Arjoca, Consumption Law, Hamangiu Publishing, Bucharest 2012, page 14 and following.

In regulating of the same Law no. 193/2000, professional means any authorized natural person or legal entity who, pursuant to a contract covered by this law, is acting within its commercial, industrial or production, crafted or liberal business, as well as any person acting for the same purpose, in the name or on behalf thereof[5].

Transposing the content of the article 1, paragraph 1, of the Law no. 193/2000 in the bank lending activity, it means that any contract concluded between the credit institutions, as they are set up and operating according to the G.E.O. no. 99/2006 and their customers with a professional status, for the purposes of the law, will include "clear contractual terms, unequivocally, for whose understanding shall not be required specialized knowledge" (article 1, paragraph 1, of the Law no. 193/2000).

2. Particulars regarding the content and the form to express the terms within the bank credit contracts

As seen above, the legislator requests to the credit institutions to insert within the contracts clear terms, unequivocally, for whose understanding shall not be required specialized knowledge.

In order to comply with the legal requirements, it means that the legal expressions, such as "the debtors and the guarantors are jointly liable and they waive the benefit of discussion and the benefit of division" should be explained to the meaning of a person who has no legal specialized knowledge.

The fact that certain terms are ambiguous and for whose understanding is required specialized knowledge does not automatically entail the nature of unfair terms thereof.

According to the provisions of the article 1, paragraph 1, of the Law no. 193/2000, a contractual term which has not been negotiated directly with the consumer will be considered unfair if, by itself or together with other provisions of the contract, creates, to the detriment of the consumer and contrary to the requirements of good faith, a significant imbalance between the rights and obligations of the parties.

It follows that a strong clue regarding the unfair nature of a term is that it was not negotiated directly with the consumer. Therefore, such a term is not the result of the manifestation of will of both or all parties, as appropriate.

According to the law, a contractual term shall be deemed as not being negotiated directly with the consumer if it was determined without enabling the consumer to influence its nature, such as the pre-formulated standard contracts or the general conditions of sale applied by the traders on the market of that product or service (article 4, paragraph 2).

The Civil Code, in the article 1202, paragraph 2, legislates that the stipulations set up in advance by either party in order to be generally and repeatedly used and which are included in the contract without having been negotiated with the other party shall be deemed standard terms.

The credit institutions belong to the category of professionals who, according to the applicable law, are required to establish their own lending conditions and policies which will be communicated to the National Bank of Romania and which, obviously, are inserted in the contracts concluded with different customers.

---

[5] According to the article 3, paragraph 2, of Civil Code, are considered professionals all those who operates an enterprise. And according to the article 3, paragraph 3, of Civil Code, the operation of an enterprise represents the systematic exercise, by one or more persons, of an organized activity consisting of production, administration or alienation of goods or provision of services, whether it is or is not for profit. For details concerning the legal meaning of the professional and enterprise concepts in regulating of the current Civil Code, we recommend St. D. Cărpenaru, Romanian Commercial Law Treaty, in compliance with the new Civil Code, Legal Universe Publishing, Bucharest 2012, page 29 and the following; Gh. Piperea, Commercial Law. Enterprise in NCC regulating, C.H. Beck Publishing, Bucharest 2012, page 31 and the following; V. Nemeş, Commercial Law, in compliance with the new Civil Code, Hamangiu Publishing, Bucharest 2012, page 15 and the following.

Therefore, in the context of the above mentioned regulations, the professional - credit institution is required to explain and to negotiate each term inserted in the contracts concluded with the consumers.

In case the consumer claims that some terms have not been negotiated, the credit institution is required to prove the contrary. This requirement is stipulated in the article 4, paragraph 3, the final thesis of the Law no. 19/2000 which provides that if a professional claims that a reformulated standard term has been negotiated directly with the consumer, is his duty to submit evidence to that effect.

Therefore, the clues leading to the unfair nature of the terms of a bank contract are those containing ambiguous terms, for whose understanding is required specialized knowledge or/and which have not been negotiated directly with the consumer, such as the pre-formulated standard terms.

In order to confer the nature of unfair terms, is not enough that these terms to be ambiguous or have not been negotiated directly with the consumer, but they must create, eventually together with other provisions of the contract, to the detriment of the consumer and contrary to the requirements of good faith, a significant imbalance between the rights and obligations of the parties.

Unfortunately, the legislator does not regulate, by way of indication, some criteria to appreciate that a term or more create(s) a "significant imbalance" between the rights and obligations of the parties.

Failing any other legal issues, is up to the exclusive discretion of the court to find the existence of such significant imbalance between the contracting parties.

Examples of such terms creating a significant imbalance between the rights and obligations of the parties in the banking field may be those which set up an obligation incumbent to the consumer without any consideration from the credit institution, as well as the payment of a fee that is not covered in the contract.

3. The identification and finding of the unfair nature of the terms within the bank contracts

The law establishes the way to identify and to find the unfair terms within the contracts concluded between professionals and consumers.

In this respect, the article 6 of the Law no. 193/2000 stipulates the principle according to which the unfair terms may be found either by the consumer of banking products and services or by the bodies authorized by law.

In the category of bodies authorized by law are found the authorized representatives of the National Authority for Consumers' Protection, as well as other authorized specialists of other public administration bodies, according to their competencies.

4. The effects of identification and finding of the unfair terms

As a principle, the law provides that those unfair terms will not affect the consumer and the contract will be carried out further, with the consumer's consent, only if it can continue after their disposal.

Therefore, (the article 6 of the law) the preservation of the contract concluded between the credit institution and the consumer, if it contains unfair terms, is up to the sole discretion of the consumer in that it will continue to have legal effect only if the consumer expresses his consent in this respect, provided that these terms to be removed and thus the contract may have legal effects.

It is possible that the operation of finding the unfair terms within the contracts to be carried out without the knowledge and consent of the consumer. In this regard, the article 12, paragraph 1, of the Law no. 193/2000 provides that, if it finds the use of some adhesion contracts containing unfair terms, the supervisory bodies foreseen by law shall notify the court related to the domicile or, where

appropriate, the premises of the professional, requiring to him to change the ongoing contracts by eliminating the unfair terms.

Likewise, the associations for the consumer's protection meeting the conditions provided in the articles 30 and 32 of the G.O. no. 21/1992 regarding the consumer's protection, may sue the professional who uses adhesion contracts containing unfair terms, so that the court may order the cessation of their use, as well as the amendment of the ongoing contracts by eliminating the unfair terms (the article 12, paragraph 3, of the Law).

It is therefore noticed a genuine exception to the principle of the binding force of the contract regulated in the previous Civil Code, in article 969, as well as in the current Civil Code, in article 1270, paragraph 1, according to which the validly concluded contract has the force of law between the contracting parties.

We have argued that it is a genuine exception because, as shown in the above mentioned text of law, if the court finds the unfair nature of some terms, it may require the professional to amend the ongoing contracts.

From this legal norm does not result that the amendment must be made with the consent of each consumer, meaning that the credit institution will unilaterally amend the ongoing contracts.

Such behavior of the credit institutions is also an exception to the binding force and to the principle of the expressed contractual freedom in that only the parties who concluded the contract can amend it, not just one of them.

The principle is provided by the article 1270, paragraph 2, of Civil Code according to which the contract shall be amended or terminated only with the consent of the parties or for reasons authorized by law.

Corroborating the two categories of regulations, we may conclude the amendment referred to in the article 12 of the Law no. 193/2000 is made "for reasons authorized by law", according to the article 1270, paragraph 2, of Civil Code.

This situation governed by special rules is not only an exception to the principle of relativity of the legal act and of the binding force thereof, but also cause deep legal consequences from procedural law prospects.

This is because the article 13 of the Law no. 193/2000 stipulates that the court, if it finds the existence of unfair terms within the contract, may require the professional to amend all the ongoing adhesion contracts and to remove the unfair terms from the pre-formulated contracts intended to be used within the professional activity.

We show that we met a genuine exception also in terms of the procedural law since from the above legal regulation follows that the decision of the court is compulsory for all the ongoing contracts, even if by hypothesis the consumers were not a party in the process by which was found the existence of the unfair terms within the contract.

Therefore, the professional shall be required to amend all the ongoing contracts without consulting the consumers, meaning that the judgment will take full legal effects also relating to them.

Such an effect is a genuine exception to relativity of the effects of the judgment[6], knowing the fact that, according to the Code of Civil Procedure, a judgment cause legal effects only between the parties to the process.

As concerns the amendments to the articles 12 and 13 of the Law no. 193/2000 arises the question of what happens if the consumer in the direct process with the financer obtains from the court an unfavorable judgment, meaning that shall be set up, by res judicata, that the terms have not

[6] For the detailed analyze on the effects of the judgments, see Ilie Stoenescu, Graţian Porumb, Romanian Civil Procedural Law, Didactic and Pedagogic Publishing, Bucharest 1966, page 271 and the following; Gabriel Boroi, Dumitru Rădescu, Code of Civil Procedure commented and annotated, All Publishing, Bucharest 1995, page 371 and the following; Viorel Mihai Ciobanu, Theoretical and practical Treaty of Civil Procedure, 2nd volume, National Publishing, Bucharest 1997, page 268 and the following.

an unfair nature, thus remaining binding on the consumer, and subsequently another court seized this time by the bodies authorized by law finds the opposite, namely that the professional's contracts contain unfair terms.

This is especially since the legal texts require the professional to amend all the ongoing contracts and to remove the unfair terms without making any statement, as they were or were not subject to a previous judgment.

Compared to the imperative and unconditional expression of the legislator arises the conclusion according to which will be amended all the ongoing adhesion contracts, even if some of them were subject to a previous judgment in which the courts have rejected the requests for finding the unfair terms.

The main argument for such a conclusion is the article 13 of the law requiring the professional to amend "all the ongoing adhesion contracts" without distinguishing any condition or circumstance.

In supporting the text argument may also be brought the principle of the consumers' protection, meaning that a judgment favorable to a consumer within a category of contracts should take advantage to all the consumers-parties within that category of contracts.

5. Analysis of some common terms within the bank contracts

In the following lines we shall make a brief reference to two of the examples of unfair terms covered by the appendix to the Law no. 193/2000.

Specifically, it is about the letter l and the letter n from the Appendix to the law.

According to the letter I, shall be deemed unfair terms those contractual provisions requiring the consumer to pay some disproportionately high amounts in the event of failure to fulfill his contractual obligations, compared to the damages suffered by the professional.

Within the content of such a term may be included the situation in which the credit institution assigns the debt to a recovery company at a price considerably lower than the amount of the debt (between 20-60% of the nominal value of the loan).

More specifically, it is about the fact that, if we consider the professional - credit institution, the amounts are "disproportionately high" compared to the damages suffered by him as long as he receives a price pursuant to the assignment and if we consider the professional - recovery company, the amounts are "disproportionately high" compared to the damages suffered, since the consumer shall have to pay the entire debt, not just up to the price paid by the recovery company.

Such a term also brings the invocation of the litigious retract by the consumer to the institution for selling the litigious rights between the credit institution and the recovery company.

Another example of term is the one from the letter n which entitles the professional (credit institution) to transfer the contractual obligations to third persons - agent, attorney-in-fact etc. - (recovery companies) without the consumer's consent, if such transfer is performed in order to reduce the guarantees or other liabilities towards the consumer.

Specifically, the consumer could invoke the loss of the guarantee for the repayment term considering that within the contract he had a repayment period (of 10, 20, 30 years), and following the transfer of the contractual obligations by the recovery company, the consumer shall be required to repay the loan at once.

THE ROLE AND IMPORTANCE OF THE FIXED-TERM INDIVIDUAL EMPLOYMENT CONTRACT

CARMEN CONSTANTINA NENU *

Abstract
The emergence of new forms of employment contracts, which do not materialize all the classic elements of an employment contract, has remained inevitable. European governments have responded to the problems of lack of activity caused by repeated economic crises, through the approval of new forms of employment, which are more flexible and less protective. These new forms of employment contracts must not create differences and discrimination between employees on the ground of the type of contract. In consequence, an analysis of one of these types of contracts, such as the fixed-term employment contract, is required, in terms of union and national rights. Such an analysis is important for a correct understanding of the role and necessity of employment relationships flexibility in a competitive economy.

Keywords: *employment contract, flexibility, fixed-term, protection, unional law.*

Introduction

All categories of employees should enjoy the same rights and obligations in the employment relationship, regardless of the employment contract under which they perform their work. This principle is the main reason behind all actions in this field. Elimination of discrimination between these contracts and the classic ones is the real challenge of European legislation in this area, so that labor market flexibility and its legal framework is consistent with the principle of protection of workers' rights, on equal terms, without being affected by the types of individual labor contracts whose parties they are.

Such an employment contract is also the one concluded for a definite period of time. Therefore, it was considered necessary to analyze both the normative aspects of such a contract and its role on the labor market, in terms of union and national law.

Paper content

The typical employment contract means the contract governing the legal relationship created between an employer and an employee, concluded for an indefinite period and for a full time, as the work is carried out in an area belonging to the employer, under its control and direction. Atypical employment contracts are by definition those that do not meet one or more of these elements.

Emergence of atypical employment contracts in European legislation was a result of successive economic crises that affected the labor market on the one hand, and on the other hand, a response to the need to create new jobs through flexible content adaptation of work relationships to new demands and requirements of economic operators. These operators do not always need a continuous and steady supply of labor and any activity taking place only on the premises. Atypical employment contracts are the result of social developments in terms of increased employment in the labor market of people who want to supplement their current occupations with others of a different nature.

Therefore, the Community institutions have adopted a series of initiatives aimed to analyze, motivate and regulate, at Community level, some of these atypical employment contracts. Paragraph 7 of the Community Charter of Fundamental Social Rights of Workers provides, inter alia, that achieving an internal market must lead to improved living and working conditions of employees in

* Lecturer, PhD, University of Pitesti **(**e-mail: carmennenu2006@yahoo.com).

the European Community. This will be done by adjusting these conditions by improving them, especially in the forms of employment contracts, other than permanent ones, such as fixed-term contracts, part-time work, work at residence and temporary work.

Considering these aspects, the Romanian Labor Code, which entered into force on March 1, 2003, approached the need for flexible types of contracts, covering the following types of employment contract:

- The employment contract concluded for an indefinite period;
- The employment contract concluded for a fixed period;
- The individual part-time employment contract;
- Temporary work agency employment;
- Work at home;
- Apprenticeship work contract.

Each of the above mentioned contract types has specific legal regulations that complement those applicable to the typical employment contract, to which the Labor Code allocates most of its rules, which shows that, in general, the characteristics of the standard individual labor contract are also found in its atypical forms. To emphasize this, in what follows, each type of employment contract will be examined.

The typical individual employment contract

The current legislation maintains, as a rule, concluding full-time individual contracts of indefinite duration, where work is provided in locations belonging to the employer. This regulation aims to legally protect an employee to whom this type of legal work relationship provides stability.

The Labor Code in force exhaustively governs the institution of the classic individual employment contract, to which it devotes 69 articles. These articles contain provisions relating to the conclusion, performance, amendment and termination of the individual employment contract. In order to clarify the various legal nuances of the typical employment contract one must consider that its elements should be reviewed, that is, the indefinite duration for which it is concluded, the full time work and the work place.

Indefinite duration The indefinite duration of an individual employment contract does not mean that it is completed by the appearance of old age social risk but that the duration of that contract is not known at the time concluded. As shown in the literature[1], by the indefinite duration of the contract it should not be understood that the employee is required to work all his life for that employer or that the employer is required to keep the employee in service to death, but the duration is not known during the time the contract was concluded.

Obviously, an individual labor contract concluded for an indefinite period may be terminated at any time whether the limiting conditions specified by the law are met. The indefinite contract may be terminated at any time by the employer or by the employee, provided that the employer is restricted in the ability to fire the employee by the fulfillment of conditions imposed by the legislature.

Full time employment To qualify as typical employment contracts of indefinite duration a contract must be completed full-time, or for a full time job. The normal working hours for employees with labor contracts, according to Art. 109, paragraph 1 of the Labor Code, are, on average, 8 hours per day and 40 hours a week. For young people aged up to 18 years working full time means, according to paragraph 2 of the same Article, 6 hours per day and 30 hours a week. Distribution of working hours in a week, according to art. 110, paragraph 1 is usually uniform, 8 hours per day for five days, two days of rest, the parties being able to opt for an unequal distribution in days subject to the limit of 40 hours a week.

[1] E. Cristoforeanu, *Teoria generală a contractului individual de muncă,* Editura Curierul Judiciar, Bucharest, România, 1937, p. 84.

The work place . A typical employment contract requires that the place of work belongs to the employer, who is obliged to provide the necessary working conditions for employees, according to his own rules set out in establishing and organizing documents and in internal regulations.

The number of typical employment contracts concluded for an indefinite period and full-time in our country is overwhelming. This form of contract still responds best to the state of current social relations of work, being an incentive for employees that, in terms of a certain stability of employment, are interested in professional development and professional fulfillment of duties – a beneficial attitude towards the employer.

Also, with indefinite contracts, employees are defended against possible abuses by employers, the legal rules governing dismissal. Also, the typical individual employment contract is a legal instrument favorable to employers, who need constant work provided by individuals with certain training. Moreover, the employers are directly interested in investing further in training order to obtain benefits. Employees with an employment contract for an indefinite period demonstrate more responsibility, being stimulated, depending on the organizational culture, to contribute directly to the growth and development of the activity for an employer where they intend to work for an indefinite period of time, to be promoted professionally.

Measures to adapt to change in the labor market led to the appearance, besides the full-time work relationship with an indefinite duration, of other types of work relationships which are more flexible: fixed-term employment, part-time work, work at home and labor through temporary employment agency. These employment contracts are characterized by a decrease in the employee guarantees.

The need to make flexible forms of employment compatible, compatibility required by employers, with employee rights protection ensured, is the challenge that must be confronted by the social policy and labor legislation in the national law.

The national regulation of the individual employment contract of limited duration.

An employee with a fixed-term individual employment contract is the employee whose work contract is directly concluded with an employer. Termination of this contract is caused by objective conditions such as completion of the period on which it was concluded, the ending of the activity, service or production.

Termination cannot be caused by the will of the contracting parties[2].

Regulation of the individual employment contract of limited duration conducted in the Labor Code deals with this type of contract as an exception to the rule of conclusion of permanent and full-time contracts. The material is included in art. 82-87 reprinted in the Labor Code. According to art. 83 of the Labor Code, cases where fixed-term employment contracts may be concluded are exhaustively and expressly provided, as follows:

- To replace an employee on account of suspension of his contract, unless that employee participates in a strike. This is the so-called replacement contract or interim agreement in other legislation and it proved an effective means of creating and distributing jobs where an employee has the right to suspend the employment contract under the laws and under the collective agreement;

- For growth and / or temporary change of the activity structure of the unit; the contract is called in other legislations contract for production reasons. These reasons, be it an unexpected

[2] See on the analysis of this type of employment contract, IT Stefanescu, S. Beligrădeanu, *Prezentare de ansamblu şi observaţii critice asupra noului Cod al muncii*, in „Dreptul" no. 4/2003, p. 5 et seq.; Al. Athanasiu, L. Dima*, Regimul juridic al raportuilor de muncă în reglementarea noului Cod al muncii,* in „Pandectele române" no. 4/2003; I. T. Athanasiu, M. Volonciu, L. Dima, O. Cazan, C.H.Beck, Publishing House, Bucharest, 2007, p. 424 et seq.

number of orders or unusual reasons such as excessive absenteeism, preclude the possibility of the employer to meet production requirements;

- For development of seasonal activities, the contract is designed especially for agricultural campaigns;
- To temporarily favor certain categories of unemployed persons, under legal provisions issued for this purpose;
- To employ a person seeking a job, that within 5 years from the date of employment qualifies for old-age pension;
- To fill an eligible positions in trade unions and NGOs during the mandate;
- For employing pensioners who, under the law, can benefit from both salary and pension;
- In other cases expressly provided for by special laws, or for performing different projects or programs.

The maximum period for which an employment contract of limited duration may be concluded is 36 months. The parties may also conclude the contract for a shorter period and extend it within the maximum of 36 months, with no limit to the number of extensions. An individual labor contract extension must take place before the expiry of the original period for which the contract was concluded, because the individual employment contract is terminated at this time and, therefore, it cannot be extended since it is no longer valid.

During the 36 months, between the same parties, that is, employer and employee, no more than three successive fixed-term contracts can be concluded. Thus, if the employer has concluded an individual contract of employment with a person for a period of 2 months for the execution of certain work, they may conclude other two contracts with the same person, up to the maximum period of 36 months. One must consider as successive only fixed-term contracts whose duration cannot be longer than 12 months, without a break longer than three months between the first termination date and the date of conclusion of the next contract.

The individual fixed-term employment contract is concluded in written form, according to art. 82 paragraph 2 of the Labor Code. The content of the individual labor contract was approved by Ministry of Labor Order no. 64/2003, amended by Ministry of Labor Order no. 76/2003 and Order 1616/2011. It includes minimal provisions, and can be adapted to each type of employment contract. Obligation to register individual employment contracts in special registers for recording employees applies for any type of employment contract.

The fixed-term individual employment contract follows the same rules and procedures for conclusion in writing and for recording as the indefinite contract. Moreover, according to art. 87 par. 1 of the Labor Code, employees with fixed-term individual employment contracts will not be treated less favorably than comparable permanent employees, in terms of employment and working conditions, unless different treatment is justified on objective grounds. A'comparable permanent employee' refers to the employee whose individual employment contract is concluded for an indefinite period and who performs the same or a similar activity in the same unit, taking into account their qualifications, skills or training.

The fixed-term contract differs from the classical contract by conditions for termination, generally reaching the term and being terminated on the expiry date of the period for which it was concluded. Exceptionally, the employee may terminate the fixed-term contract, but only for justified reasons, which exclude his fault, otherwise risking paying some compensation to the employer for damages caused by improper exercise of his right to resign.

Limitations that the law requires for the conclusion of fixed-term employment contracts are intended to maintain the rule of conclusion of the indefinite duration employment contract. Thus, if the number of successive contracts had not been limited, one could notice some chain employment of the same employee. This chain employment is possible when each of the fixed-term contracts concluded by the same person has different objectives (e.g. replacement of the employee and fulfillment of a certain task).

Unnional legislation of the individual fixed-term employment

For rules on the conclusion of fixed-term individual employment contracts the provisions of Directive 99/70/CE, referring to the Framework Agreement of 18 March 1999 on fixed-term work concluded by ETUC, Confederations of Industry and of employers in Europe and the European Centre of Enterprises with Public Participation were considered. The signatories of the Framework Agreement recognize that the contracts of indefinite duration are and remain the general form of labor relations between employers and employees, but admit that these fixed term contracts respond, in certain circumstances, to labor market needs.

The Framework Agreement establishes the general principles and minimum requirements relating to fixed-term contracts, emphasizing the fact that their detailed application must take into account specific national realities[3]. It illustrates the will of the social partners to establish a framework in order to ensure equal treatment for fixed-term workers by protecting them against discrimination. For the purposes of the Community directive, a fixed-term worker means a person who has a contract or a fixed-term employment relationship concluded directly between an employer and a worker, where termination is caused by objective conditions such as reaching a specific date, fulfilling a specific task or the occurrence of a specific event.

Clause 4 of the Framework Agreement establishes the principle of non-discrimination, whereby workers with fixed-term contracts should not be treated differently from comparable workers with employment contracts concluded for an indefinite period, except to the extent that such different treatment is justified on objective grounds.

The Agreement establishes the general principles and minimum requirements relating to fixed-term work, recognizing that for their implementation one must consider realities of national, sectorial and seasonal situations. The main concern of the Community institutions and of the European social partners was to establish a framework that would ensure equal treatment and non-discrimination of employees with fixed-term contracts, protecting them against discrimination, given that more than half of those who signed these contracts are women.

The agreement applies to community employees who have a fixed term employment contract, excluding jobs available to a company through a temporary work agency, and is capable of not being applied to employment contracts of apprenticeship if so decided by the Member States and by the social partners.

1. The concept of fixed-term employment contract in accordance with Directive 99/70/CE[4].

According to clause no. 3 of the Agreement, the employee with the fixed term contract means 'an employee with an employment contract or employment relationship concluded directly between an employer and an employee, when the termination of work or employment relationship is caused by objective conditions such as the established date, completion of the activity or service or of production'.

Thus, as the intention of the Directive is to prevent discrimination, it establishes the concept of comparable employee with permanent contract, that is, 'an employee with a contract or employment relationship of indefinite duration, in the same unit, which performs work or an activity that is identical or similar, given their qualifications and the tasks they perform', and emphasizes that 'if there is no comparable permanent employee during the same unit, the comparison shall be made with reference to the collective agreement applicable or, where there is no applicable collective agreement, in accordance with legislation, collective agreements or practice'.

---

[3] **See A. Popescu**, "*Dreptul internaţional al muncii",* C.H.Beck publishing House, Bucharest, 2006, pp. 352-353.

[4] The analysis is based on the provisions of Directive 99/70/CE selection of information presented in *Relaţii de muncă. Modul de curs,* published by the Labour Inspection, Romania, Labour Inspection and Social Security, Spain, RO-03/IB/SO-01 PHARE Project, Oscar Print Publishing House, Bucharest, 2005, p 89-93.

In systems of the EU member countries there is no uniform regulation of fixed-term employment contracts. Given the main forms of different national legislations, they can be classified as follows:

- Fixed term contracts whose duration is determined according to a specific time;
- Fixed term contracts whose duration depends on achieving a specific fact, such as the completion of a job or return of the job holder.

The most important characteristic of these contracts in European legislation is usually causation. Besides offering the employee the chance to perform an activity or service, the fixed-term contract must have a specific reason that in some jurisdictions may be just one of those provided by law, while in other legislation any reason may be allowed, provided that it is not abusive.

2. Employment conditions for employees with fixed-term employment contracts.

The Directive highlights everything that is related to ensuring equal treatment for fixed-term contract employees and classic contract workers.

a. The principle of non-discrimination (clauses 4 and 6). The Directive establishes the general principle that 'employees with fixed-term contracts will not be treated in an unfavorable manner in relation to employees with comparable fixed contracts, solely for the fixed-term reason, unless there are objective grounds'.

The provisions for the implementation of the above mentioned clause must be defined by the Member States in consultation with the social partners and / or by the social partners, according to the Community law and the national law, to applicable collective agreements and to national practice. The Directive sets some provisions for the implementation of this clause on non-discrimination of employees with fixed-term employment contracts as compared to the employees with contracts of indefinite duration, namely:

- When deemed necessary, the pro rata principle will apply;
- Criteria relating to conditions of work experience will be the same for fixed-term contract employees and for employees with fixed agreements, unless different seniority criteria will be justified by objective reasons;
- Professional promotion: employers will inform employees on fixed term contract on vacancies in the unit, in order to guarantee equal chances of employment in permanent positions as for other employees. This information will be made available through a public notice displayed in an appropriate place in the unit.
- Access to training: as far as possible, employers will facilitate access of fixed-term contract employees to appropriate training opportunities to enhance their professional skills, career development and occupational mobility.

b. The rights to information and consultation (clause 7), in the following forms:

- Employees with fixed-term contract will be taken into account when determining the minimum number of employees to form representative bodies of employees under the national law and the Community law. Implementing provisions of this clause shall be defined by Member States in consultation with the social partners and / or by social partners according to national legislation, collective agreements and national practice.
- As far as possible, employers will try to facilitate appropriate information to employee representation bodies on fixed-term work in the unit.

c. Measures designed to prevent the misuse of fixed-term contracts. (Clause 5)

The directive states that, in order to prevent abuses resulting from the use of successive contracts or of fixed-term employment relationships, Member States, will introduce one or more of the following measures (consulted by social partners and by the law, collective agreements or practice, and / or the social partners, when there are no equivalent legal measures to prevent abuse, in order to consider the needs of different sectors and / or categories of workers):

- For objective reasons justifying the renewal of such contracts or of employment relationships;

- The maximum total duration of successive employment contracts or fixed-term employment relationships;

- Number of renewals of those contracts or employment relationships.

Member States in consultation with the social partners must decide under what conditions employment contracts or fixed term employment relationships are considered successive or are deemed concluded for an indefinite period.

3. Temporary chain employment. This type of employment is about the use of temporary contracts continuously and on just the same employee. Using chain employment contracts is permitted when each contract has a different focus (for example, replacing an employee and subsequently accomplishing a certain task) but not when the goal of all contracts is actually the same.

Employment without a reason or with a simulated reason. When temporary employment is aimed at achieving a specific activity, the activity must be well defined and have specific basis as related to the normal activities of the company. If an employee is hired to perform some work that is a regular and repeated activity of the company, a fraud would be witnessed. It is also a case of fraud in temporary employment when the cause of conclusion would be unreal or imaginary and would not really match a factual situation - such as the situation when the employee who is supposed to be replaced does not exist.

The misuse of temporary contracts for regular activities. Concluding fixed-term contracts may constitute a fraud in the case of exceptional circumstances of production during peak periods or periodic or seasonal activities. On the one hand, if the economic operator typically uses these contracts, then it is an obvious fraud, the contracts only being used in exceptional circumstances. On the other hand, the use of fixed-term contracts for seasonal work and regular activities such as agriculture, fisheries and tourism, has clearly determined that the courts law would consider the most appropriate in this case the so-called discontinuous fixed contracts. The employer, under this regime of contracts, would be forced to appeal to a seasonal employee at the beginning of the season.

Conclusions

In conclusion, the objectives of the Community Directive on fixed-term employment contracts are to create jobs, to avoid discrimination and differentiation between employees with employment contracts of indefinite duration and those with fixed-term employment contracts and also avoid abuse of the employer in the use of this type of contract. These objectives should, in principle, be reflected in the national legislation of Romania, as a Member State of the European Union.

NOTARY PROCEDURE AND JUDICIAL PROCEDURE FOR THE DIVORCE WITH SPOUSES' AGREEMENT

ANDREEA DIANA PAPA[*]
IULIA FLORINA ŢĂPUŞ[**]

Abstract
Compared to the old divorce procedures, the dissolution of marriage analysed according to the provisions of the New Civil Code (art.373-404) and the New Code of Civil Procedure (914-934) represents a real legislative innovation.
Taking into consideration the judicial procedure, the legislator settles the amicable divorce, referring to spouses' consent on the divorce, as well as to the divorce caused by one of the spouses' poor health, and the divorce through no fault of their own.
According to the new legal matters, the dissolution of marriage does not come exclusively under court jurisdiction. Thus, as far as the amicable divorce is concerned, even if the spouses have minor children, either of their own or adopted, they have at their disposal not only the judicial procedure, but also the notarial one. If the spouses do not have minor children, they can go to court, but they can also go to the notary public or to the registrar in order to certify the dissolution of marriage of their own accord.
The legislator's preference of the amicable divorce is obvious, especially as the dissolution of marriage of spouses' own accord does no longer depend on either the length of marriage, or on their not having minor children.

Keywords: *divorce, juridical procedure, New Code of Civil, the dissolution of marriage, New Code of Civil Procedure.*

1. THE NOTARIAL PROCEDURE REGARDING THE DIVORCE

1.1. Preliminary Information

Seen as a legislative innovation, the divorce procedure before a notary public was initially stipulated in the Civil Code adopted in 2009 and subsequently undertaken by Law no. 202/2010. Through this law (namely through the introduction of articles 38^1-38^4), the Family Code was modified in such a way that it could only be applied to the collaborative divorce, in which case the spouses did not have minor children and they had to personally come before the notary public in order to file for a divorce – legal representation was not allowed.

In the new Civil Code, the relevant provisions are the legal matters stipulated in art. 375 - 378.

1.2. The Notary Public's Competence

On receiving the divorce petition, the notary public must check his non-exclusive jurisdiction.

1.2.1. The Notary Public's Territorial Jurisdiction

When determining his territorial jurisdiction, the notary public shall check whether the place of spouses' marriage or their latest home address are in located in the territorial jurisdiction of the court he has the notarial office in and also if they have not seen another notary public before.

In this respect, the proof of marriage shall be done via the Certificate of Marriage, and the proof of their latest home address shall be done via their ID cards – if it was the home address of at least one of them or via the contract which proves ownership or total utility. If the spouses lived in a house they did not have any act upon (for example one of their parents' or other relative or acquaintance) the proof shall be done through the legal declaration of them both, hereby declared

[*] Senior Lecturer, PhD, "Spiru Haret" University, Bucharest (papa.andreea1980@yahoo.com).
[**] Senior Lecturer, PhD , "Spiru Haret" University, Bucharest (fetita.iulia@yahoo.com).

under the penalty of perjury and registered both the in divorce petition and in the County Court decision, based on which the Certificate of Divorce shall be issued[1].

1.2.2. The Notary public's Subject Matter Jurisdiction

1. The collaborative divorce when the spouses have no minor children either of their own or adopted during their marriage, established through the provisions of art. 375 paragraph 1.

The following conditions must be totally satisfied in order for a notary public, under the subject matter jurisdiction, to ascertain the divorce taking into consideration the conditions stipulated in paragraph1:

a) spouses' consent on the divorce;

b) no minor children either of their own or adopted during their marriage;

c) the spouses decided upon the surname each of them shall have after the divorce, and the surname they had when they got married and during their marriage;

d) neither spouse is mentally incompetent;

e) both spouses expresses their free and uncorrupted consent.

When completing the consent, the notary public applies the provision of Notary Public Law no. 36/1995 and its implementing regulation, if one or both spouses are deaf, mute, deaf-mute or if they cannot speak Romanian. In such cases, the interpreter, via whom the consent is registered, shall sign the divorce petition next to the two spouses, and the County Court decision regarding the acceptance or dismissal of divorce next to the notary public.

The spouse' identification shall be made by the notary public only via their ID cards they bring when they file for divorce, as follows: for Romanian citizens resident in Romania – the ID card, the provisional identity card, the identity card, and for Romanian citizens who are resident abroad, the passport which clearly shows their home address.

The notary public shall check the identity cards issued by Romanian authorities with the Directorate for Persons' Record and Databases' Management, which is subordinated to the Ministry of Internal Affairs, according to the agreement between the U.N.N.P.R. (National Union of Public Notaries from Romania) and the Ministry of Internal Affairs.

As far as spouses' own accord on the divorce is concerned, it must also contain the effects of the divorce regarding the surname they shall have after the divorce (either to keep the surname they had during their marriage, or to take the surname they had before their marriage). It must be mentioned that the lack of accord shall lead to the dismissal of the divorce petition and to the spouses' guidance towards court (art. 376 paragraph 5 the New Civil Code).

Although the notary public does not have material competence to give a judgement on contentious matters regarding the other effects of divorce[2], if the spouses agree on the other effects of divorce, such as the maintenance obligation between them, common home, compensation payment, etc., the notary public may certify this agreement in a transaction contract in accordance with art. 2267 - 2278 Civil Code, fact also stated by the authors of the commented New Civil Code.

As far as the end of the state of being married is concerned, the provisions of art. 385 the New Civil Code stipulate that the marriage between the two spouses is over starting with the day they file for divorce.

In this respect, in accordance with art. 386 paragraph (1), the New Civil Code, the notary public shall mention the date when the divorce petition was filed for in the Certificate of Divorce.

---

[1] Instructions regarding noraries public's fulfillment of the divorce procedures, page 3, adopted theough .Decision no. 15/2011 of the Executive Bureau of UNNPR (National Union of Public Notaries from Romania)

[2] Flavius-Antoniu Baias, Eugen Chelaru, Rodica Constatinovici, Ioana Macovei , *The New Civil Code. Observation on articles* - CH Beck Publishing House, Bucharest, 2012, page 417.

We mention the fact that the provisions of art.386 are only applicable in case the divorce petition is made after the Civil Code has come into force, and the legal documents are signed by one of the spouses against the other spouse after the day the divorce is filed for.

Paragraph 2 of art. 385 of the New Civil Code stipulates that the spouses may ask the court to ascertain that the matrimonial regime was over on the day of the factual separation.

According to the opinions stated in the legal literature[3], the notary public may also authenticate a transaction contract if the spouses agree on this aspect.

Regarding the liquidation of the community regime, the provisions of article 355 NCC are applicable, in the sense that when community ends, it shall be liquidated via an authentic notarial deed, a complex deed, which has two phases: the first phase – the spouses' share of common assets is first determined (based on how much each of them contributed to their acquisition), and also the fulfilment of common duties; and the second phase is represented by the distribution of joint assets and debt settlement.

The state of marriage chosen liquidation deed shall be communicated by the notary public to the Notarial National Register of States of Marriage with the purpose of information, and to the other advertising registers stipulated by law, taking into consideration the nature of assets: for real estate – the Real Estate Register, and for the personal estate – Electronic Archive of Real Movable Guarantee and Trade Register.

As compared to the comments above, we do not share the opinion stated by the authors of the new commented Civil Code[4], naming that the liquidation of the matrimonial regime might be done via a transaction contract.

We must also mention the fact that, according to the provisions of article 356, until the liquidation of the matrimonial regime, the ex-spouses remain condominium co-owners of joint assets until the share entitled to each of them is decided.

2. In light of the statement stipulated by article 375 paragraph 2, the notary public is competent to ascertain the dissolution of marriage on the spouses' own accord also when there are minor children born during the marriage, out of the marriage, of both spouses or adopted by both spouses.

In this case, the notary public may ascertain the divorce only if the following cumulative conditions are fulfilled:

- the surname each of the spouses shall bear after the divorce;
- the obligation of both parents towards their children;
- the decision about children's home after the divorce;
- the way of preserving the personal relationship between the separated parent and each child;
- the decision upon parents' contribution to children's upbringing, education, school and professional development.

If the psychosocial investigation report shows that spouses' own accord regarding shared parenting or the one regarding children's home is not in the child's interest, the provisions of art. 376 paragraph 5 (NCC) shall be applied. In the case, the notary public shall dismiss the divorce petition and shall guide the spouses towards the court.

Although under the provisions of art. 375 paragraph 2, the legislator does not use the notion "child's best interest", the phrase "child's interest" must be interpreted in accordance with the provisions of art. 3 Law 272/2004 regarding the protection and promotion of children's rights, and with the provisions of art. 1 of the Convention regarding children's rights.

Furthermore, this principle constitutes a part of the right of respect for one's family life, stipulated in art. 8 of the European Convention on Human Rights (see: *C. Bîrsan,*Convention, p. 651; CEDO, *Ignaccolo-Zenide vs. Romania,*the decree of 25 January 2000, published in the Official

[3] E. Florian, *Family Law*, IV[th] Edition, CH Beck Publishing House, Bucharest, 2011, page 105.
[4] Flavius-Antoniu Baias (Coordinator), *quoted operas,* page 417.

Gazette no. 6 of 8 January 2001, when it was decided that state authorities have the duty "de a depune eforturi rezonabile pentru ca atunci când interesele părinţilor sunt în conflict, iar copiii nu sunt suficient de maturi pentru a-şi exprima ei înşişi, în mod clar, propriile preferinţe, interesele superioare ale acestora să fie promovate")[5]

Under the procedure of the amicable divorce, when there are minor children, it is compulsory that the tutelary authority should carry out the psychosocial investigation report and interview the minor who is 10 years old.

The procedure of interviewing the minor shall be carried out by the notary public, under the conditions stipulated in art. 264 the NCC.

If parents cannot agree upon one or all these aspects, the notary public issues the dismissal of the divorce petition and sends the parties to the court of law.

The provisions of art. 376 paragraph 4 the NCC were incorrectly interpreted in the legal literature[6], without taking into consideration the cumulative fulfilment of the conditions stipulated in art. 375 paragraph 2. These conditions state that the notary public may ascertain the divorce also in the case that the psychosocial investigation report shows that spouses' agreement is not in the minor's interest, with the argument that "the parties have no other solution but to go to court since they have agreed on child custody and since their main purpose, the dismissal of their marriage, has anyway been accomplished". We think this opinion is in complete contradiction with the legal provisions which settle the notary procedure of divorce.

1.3. <u>The divorce procedure when minor children are involved is</u>:

The divorce petition has to be personally submitted to the notary public by both spouses together.

Although the legislator does not mention the content of the divorce petition, the National Union of Public Notaries from Romania via its issued instructions, the notary guide and the notary guidebook, has outlined some professional notary routines and has contributed to the development of a common notary practice concerning the divorce (regarding the divorce petition, pronunciation and rejection of divorce, divorce certificate, etc.)

As an exception, the divorce petition can also be submitted by a mandatary having a special power of attorney.

As far as the notarial procedure divorce is concerned, representation is admitted but only when the divorce petition is submitted, case in which the mandatary (the special authentic power of attorney) shall contain the represented spouse's accord (principal) on all elements mentioned in the petition. When submitting the divorce petition, the fact that the represented spouse is aware of the hearing shall be mentioned in the trust mandate, according to art. 376 of the Civil Code. The lack of one of the mentioned elements from the trust mandate shall lead to the rejection of the divorce.

Representation is also admitted when submitting the divorce petition without minor children.

We reiterate the fact that the authentic representation procedure must contain investiture essential elements and state the fact that spouses' own accord has been reached regarding all elements which make the notary public's competence authority.

After the notary public confirms that he has been legally invested, he shall allow a 30-day period of reflection and shall request the fulfilment of the necessary formalities regarding the minor: the psychosocial investigation, the minor's interviewing.

The 30-day period of time is calculated according to the Civil Procedure Code, in the sense that the first and the last day are not taken into account.

---

[5] *Ibidem*, page 432 „spare no effort to have children's best interests promoted when parents' interests are in conflict, and the children are not mature enough to clearly state themselves their own preferences").

[6] E. Florian, *quoted operas.*, page 108.

If the report of the psychosocial investigation has not been submitted in due time and, on probable cause, the minor has not been interviewed, and both spouses insist on the divorce petition, other hearings can be allowed only with regard to the fulfilment of the two conditions.

In conclusion, the decision upon the scheduling of another hearing may only be because of the lack of the psychosocial investigation and/ or the impossibility of interviewing the minor.

We mention that, as compared to the divorce with minor children, for the divorce without minor children only one hearing can be scheduled.

In accordance with the provisions of art. 264 the NCC, the notary public shall interview the minor who is 10 years old, taking into consideration the following conditions:

- He/ she shall be accompanied by both parents;
- the interviewing shall be done in the presence of both parents;
- the notary public shall write down the minor's declarations.

In the case of divorce with minor children, the spouses must agree upon the following aspects:

-the obligation of both parents towards their children;

- the decision about children's home after the divorce:

-the way of preserving the personal relationship between the separated parent and each child;

-the decision upon parents' contribution to children's upbringing, education, school and professional development.

In order to certify the spouses' own accord upon the above mentioned, the notary public shall authenticate the spouses' settlement, which shall be stated in the divorce certificate.

As compared to the previous settlement in the Family Code, the legislator of the new civil code has provided the modern solution according to which the both parents together are responsible for the child's upbringing, thus the parental rights and responsibilities regarding both the child's person and assets are equally shared by both parents (art. 483 paragraph 2 the NCC).

Parents' agreement regarding the contribution of each of them to the expenses concerning the upbringing, education, learning and professional development may have various aspects and must take into consideration the minors' needs and the parents' possibilities.

We have to mention that the parent in whose house the minor lives cannot deny the other parent's contribution because the beneficiary of this right is the minor and not the parent.

The criteria for establishing the alimony are settled by art. 529-533 the NCC.

If after analysing the divorce petition and the documents submitted, the notary public sees that the legal provisions are not cumulatively satisfied, he shall dismiss the divorce, and shall guide the parties towards the court, according to the provisions of art. 374 Civil Code. In this case, the dismissal of the divorce shall compulsorily contain the reason of the divorce dismissal, as well as the parties' guidance towards the court.

The notary public issues the divorce dismissal in one of the following cases:

a) he does not have the legal competence to settle the divorce;

b) one of the spouses is under interdiction ;

c) one of the spouses cannot express his/ her free and uncorrupted consent;

d) if when the divorce petition is submitted one of the spouses is not present, or not represented, or the trust mandate does not contain all compulsory elements stipulated in art. 375 Civil Code, and the present spouse insists on having his/ her petition registered;

e) one of the spouses refuses to sign the petition personally in presence of the notary public;

f) the spouses refuse to fill in the official forms stipulated by the present regulation;

g) the spouses cannot decide upon the surname each of them shall bear after the divorce;

h) when they submit the divorce petition, the spouses do not submit the original certificate of marriage;

i) the spouses have minor children, either of their own or adopted during their marriage, and have not decided upon:

- the obligation of both parents towards their children;

- the decision about children's home after the divorce;
- the right of preserving the personal relationship between the separated parent and each child;
- the decision upon parents' contribution to child/ children's upbringing, education, school and professional development.

j) one of the spouses comes in front of the notary public within the term of 30 days, according to art. 376 Civil Code, and declares that he/ she does not want to proceed with the divorce petition;

k) one of the spouses does not proceed with the divorce petition because he/ she has not come in front of the notary public within the term of 30 days, according to art. 376 Civil Code, in order to declare that he/ she wants to proceed with the divorce petition;

l) the petition remained without an object as the marriage between spouses has been dissolved by another competent authority;

m) the spouses make up;

n) the spouses withdraw their divorce petition;

o) one of the spouses died before the closure of the divorce procedure, the marriage thus ending;

p) the lack of the psychosocial report;

q) the impossibility of interviewing the minor who is more than 10 years old;

r) the conclusions of the psychosocial investigation state that the spouses' agreement regarding the sharing of their obligations towards their children or regarding their decision about children's home after the divorce is not in the latter's best interest[7].

Paragraph 2 of the art. 378 the NCC stipulates the fact that there is not any way to attack the divorce dismissal by the notary public, but the lack of motivation or the improper argumentation of the divorce dismissal shall lead to his/ her tort liability, according to the provisions of art. 378 paragraph 3, the NCC.

If after the period of reflection, the spouses come personally and insist on divorcing, all the conditions stipulated in art. 375 the NCC being fulfilled, (and, in the case of the divorce with minor children, the psychosocial investigation report and the minor's testimony) the notary public shall write the divorce acceptance and shall issue the certificate of divorce, without mentioning any fault.

According to the provisions of art. 87 of the Notary Public Law implementing regulations, with subsequent modifications, after the issuance of the certificate of divorce, the notary public shall immediately send a copy to the town hall of the city where the marriage was registered or where the Certificate of Marriage was rewritten in order to add the specifications about the divorce in the certificate of marriage, and another copy to the Register of Births, Deaths and Marriages, kept by the County Directorate for Persons' Records. Together with the issuance of the Certificate of Divorce, the notary public shall give the spouses the Certificate of Marriage with the mention *The Marriage has been ended through the certificate of divorce no. ....*

Both in the case of admittance and in the case of dismissal of the divorce petition, the notary public shall immediately communicate the solution electronically with the purpose of the closure of the position in the National Register of Records for the Divorce Petitions.

The date when the marriage ends is the date when the Certificate of Divorce is issued, according to the provisions of art. 382, paragraph 3, the NCC, and the heritage elements of the divorce become opposable to third parties on the day the advertising formalities are fulfilled[8].

2. JUDICIAL PROCEDURE FOR THE DIVORCE WITH SPOUSES' AGREEMENT

2.1. Preliminary Information

The annulment of the marriage with spouses' agreement has been initially mentioned in the Family Code (art. 38, paragraph 2). According to it, only the judgment instance could pronounce the divorce based on the agreement of both spouses and only if there have been accomplished the following conditions: at least one year had passed since the conclusion of the marriage, no minor children resulted from the marriage at the introduction date of the divorce request.

The Law no. 202/2010 concerning some measures for the acceleration of the judgments, anticipating big changes that will be determined by the New Civil Code, has modified the art. 38 and it has introduced the art. 38^1-38^4, dispositions by which there have been eliminated the cumulative conditions concerning the duration of the marriage and the inexistence of minor children resulted from the marriage, this dissolution form of the marriage not having any obstacle excepting the interdiction of one of the two spouses[9].

In the New Civil Code, the main material is constituted by the dispositions of the law mentioned in the art. 373 letter a, and in the art. 374 from the Chapter VII –The Second Book.

The new dispositions concerning the divorce are applicable no matter the conclusion moment of the marriages, before or after its application.[10]

The judicial procedure of the divorce by reciprocal agreement observes the special dispositions mentioned by the code of civil procedure that is in force at the moment when the request had been handed in, conclusion resulted from the interpretation of the dispositions of the art. 24-25 from the New Code of civil procedure and of the art. 3, paragraph 1 of the Law no. 76/2012[11]. As a consequence, after the entering into force of the New Code of Civil Procedure[12], the judgment instance will apply two codes of civil procedure, as it follows[13]: The code of civil procedure from 1865 will be applied for the cases in judgment and the New code for the trials introduced for judgment after its application.

The special procedure of the judicial divorce is mentioned in the old Code of civil procedure in the Book VI, Chapter VI, art. 607-619. In the New Code of Civil Procedure, the main material concerning the common dispositions is in the Book VI, Title I, Chapter I, art. 914-927, while the divorce by agreement, a form of the remedy divorce, is regulated in the Chapter II, art.928-931.

2.2. The Judicial Divorce by Spouses' Agreement. Notion. Forms. Conditions.

The Judicial Divorce by spouses' agreement has two forms depending on the moment when there appears the common agreement concerning the annulment of the marriage: the consensual divorce itself, when the divorce request is formulated by both spouses and the imperfect consensual divorce, when it happens at the request of one of the two spouses, accepted by the other one[14].

Concerning the incidence of the dispositions concerning the imperfect consensual divorce, the provisions of the art. 374 NCC are applicable in all the cases when the spouses- the accused person, agrees with the divorce asked by the claimant, no matter if the divorce is based on the separation in fact for a bigger period than 2 years (art. 379 paragraph 2 -art. 373 letter c) or if the divorce is promoted from the spouse's guilt (the accused person), who recognizes his facts, situation when the

---

[9] *Ibidem*, page 100.

[10] Art. 39 paragraph 2 of the *Law 79/2011.*

[11] *Law no. 76/2012 concerning the application of the Code of civil procedure.*

[12] The New Code of Civil Procedure has been applied on the 15th of February 2013.

[13] Ghe. Piperea (in group), *The New Code of civil procedure. Notes. Correlations. Explanations*., CH Beck Publishing House, Bucharest, 2012, page. 24.

[14] E. Florian, *quoted operas* , page. 104.

claimant agrees, the instance pronounces a decision for the annulment of the marriage by agreement without a serious analysis of the reasons of divorce[15] .

So, although legislatively, in the art. 373 letter a) it generically refers to the possibility of marriage annulment by agreement, with both spouses' agreement, or with the agreement of one of them (obviously based on the another one guilty), request accepted by the accused person- spouse, and at the letter c) it mentions the divorce at the request of one of the spouses for a separation in fact bigger than 2 (taking into consideration the claimant's guilt), the instance can pronounce the divorce based on the art. 373 lit. a) any time the accused person agrees with the divorce request promoted by the spouse -claimant, independently of the mentioned reason[16].

Now the divorce by agreement is not anymore conditioned [17] under the aspect of the marriage duration and nor under the aspect of the inexistence of minor children resulted from the marriage, the art. 374 NCC expressly mentioning that the divorce can be pronounced no matter the marriage duration and the existence or the inexistence of minor children resulted from the marriage. The syntagm „children resulted from the marriage" reefers to the children born from the marriage and also to the children born from the common life of the two before the marriage, and also to the children adopted by the two spouses during their marriage[18].

Although, according to the art. 373 paragraph 1 and to the art.374 NCC, the judgment instance can pronounce for the annulment of the marriage by agreement, only if:

- both spouses have formulated a divorce request or just one of them, the request being accepted by the accused persons- spouse
- both spouses have full exercise ability, none of them being subjected to a judgment interdiction
-both spouses personally express their agreement for the annulment of the marriage
-the common agreement is free and not corrupted

Concerning the reasons of the divorce request, if the divorce by the agreement itself, does not interferes the judgment instance and is not necessary to be indicated. If the divorce by the imperfect agreement, the request being formulated by a spouse against the another one that accepts then the divorce by agreement, the reasons are not verified anymore, even if they are mentioned in the request addressed to the judgment instance, resting just simple affirmations[19].

2.3. Procedural Aspects

2.3.1. The Competence for the Solution of the Divorce Request

According to the art. 914 NCPC, the divorce request is the competence of the law court belonging to the circumscription of the last common house of the spouses. If the spouses did not had a common house or of none of them does not live anymore in the circumscription of the law court where their last common house had been, the competent law court is the one from the circumscription of the house of the accused person (spouse), and if the accused person has no house in the country and the Romanian judgment instances are also internationally competent, it is the competence of the law court from the circumscription of the claimant's house.

---

[15] Art.613[1a] of the old Code of civil procedure (applicable for the divorces in judgment in the application moment of the New Code of civil procedure). The dispositions are also mentioned by the New Code of civil procedure in the art. 931 paragraph 1.

[16] Gabriela Frenţiu, The observations of the New Civil Code. Family. Hamangiu Publishing House, Bucharest, 2012, page. 284.

[17] Art. 38 of the Family Code , before its modification by the Law 202/2010 put a condition for the annulment of the marriage by spouses' agreement: till the introduction date of the divorce request, there should be passed at least 1 year since the marriage conclusion and there should not exist any minor children resulted from the marriage.

[18] The New Civil Code. Observation on articles - Coordinators Flavius-Antoniu Baias, Eugen Chelaru, Rodica Constatinovici, Ioana Macovei – CH Beck Publishing House, Bucharest 2012, page 401.

[19] Gabriela Frenţiu, quoted operas, page 283.

The new dispositions have taken from the old regulation the law text referring to the material and territorial competence concerning the divorce, replacing only the syntagm „domicile" with the syntagm „ house", that refers to the place where the person effectively and stably lives, even if this does not correspond to the domicile.

2.3.2. **The Divorce Procedure by the Agreement Itself**

The divorce request will comprise, besides the mentioned stipulated by the law for the summon request, also specific mentions concerning the names of the minor children resulted from the marriage or adopted. If the two spouses have no minor children, this mention will be done. If the spouses have reached to an agreement concerning the solution manner of the accessory requests, they will mention this in the divorce request.

The accessory requests of the divorce concern the names of the spouses after the annulment of the marriage, the realization of the parental authority, the parents' contribution to the expenses for children' growth and education, the children' house and the parents' right of having personal connections with them, the family' house.

The requests having as an object the payment of expenses for the moral or material prejudices suffered after the divorce, as well as those concerning the compensatory performance are incompatible with the consensual divorce, because they have as a basis exactly the excusive guilt of one of the two spouses.

According to the art. 929 NCPC, the judgment instance receiving the request will proceed to the verification for the existence of the free and uncorrupted consensual agreement of both spouses and it will fix a term for the solution of the request in the Council Chamber.

The divorce request formulated by the two spouses together should be signed by both spouses or by a common mandatory with a special authentic power of attorney, but if one of the spouses had not signed, this aspect can be completed in the first judgment term. If till this moment the divorce request is not signed by both spouses, the judgment instance discuss about this aspect, having the possibility of reconsidering the request in a common law one[20].

In the first judgment term, the judgment instance will verify if the spouses still want to annul the marriage based on their agreement, and if not so, it will retains the parties' reconciliation, and in case of a positive answer, it will pronounce the divorce, without administrating proofs concerning the reasons for divorce.

Concerning the accessory request for the exercise of the parental authority there has been considered that in order to solve it, it is obligatory to exist in the file an psycho- social enquiry report from the part of the tutelary authorities, the pronunciation upon the request without this report being excluded[21].

According to the art. 930 paragraph 1, by the same decision the judgment instance will take into consideration the parties' agreement concerning the accessory requests. The Art. 396 NCC disposes that the judgment instance will decide upon the reports between the divorced parents and their minor children, taking into consideration the interest of the minor children, the conclusion of the psycho- social enquiry report and the parties' agreement.

In the sense of the art. 264 paragraph 1 of the NCC it is obligatory to hear the child that has reached the age of 10 years, but it is possible to also hear him even if he had not reached the age of 10 years, but the judgment instance considers necessary for the solution of this case even taking into consideration the interest of the minor child.

If the spouses had not reached to an agreement upon the solution manner of the accessory requests, the judgment instance will proceed to the administration of the tests in order to solve them, being obliged to also pronounce upon the requests concerning the names of the spouses after the

[20] Ghe. Piperea (in group), *quoted operas*, pages. 902.
[21] Gabriela Frenţiu, *quoted operas*, page. 287.

divorce, the exercise of the parental authority, as well as the parents contribution to the children's expenses for growth and education.

This decision is definitive and irrevocable concerning the divorce, and it cannot be subjected to an attach mean.

The dispositions of the art. 930 paragraph 3 stipulate that, if there it will be case the judgment instance can continue the judgment concerning the other accessory requests, pronouncing a decision subjected to the attack means, in the legal conditions.

2.3.3. The Divorce Procedure by Imperfect Agreement

According to the art. 931 NCPC, if the divorce request is based on the guilt of the accused person- spouse, and this one recognizes the facts that have lead to the destruction of their life together, the judgment instance, with the claimant's agreement, will pronounce the divorce without a serious analysis of the divorce reasons and without making any mention concerning the guilt for the marriage annulment, the divorce being pronounced based on the art. 373 letter a).

The simplified procedures applied only if there have been cumulatively accomplished the following conditions:

1. the summon request should be based on the guilt of the accused person- spouse

In the introduction moment of the divorce request, the claimant cannot have the certitude that the accused person will recognize, sense when all his tries belong to the classical model of the divorce by guilt[22].

2. the accused persons should recognize the mentioned facts that have lead to the destruction of their life together

According to the art. 931 paragraph 1 the accused person can recognize the facts determined by him, and the judgment instance, if the claimant also agrees, will pronounce the divorce without a serious verification of the reasons of divorce. In this sense, the opinion[23] is that the accused person can recognize the facts determined by him and mentioned by the claimant till the end of the judgment research.

The accused person can recognize the facts determined by him by appeal or by the answers given to the interrogatory addressed to him

3. the claimant should agree with the divorce without administrating proofs and without indicating in the divorce decision the guilt of the accused person

The judgment of the divorce request initially introduced by a spouse and accepted by the accused person- spouse, not having a special legal derogatory disposition concerning the judgment of such request in the Council Chamber, will take place in a public session according to the art 213 NCPC.

As in the case of the divorce by agreement itself, the decision pronounced by the judgment instance concerning the marriage dissolution, is definitive and irrevocable and it will not comprise references to the guilt of the accused person- spouse.

The accessory requests will be solve taking into consideration the parts' agreement, without being necessary to administrate proofs. Also, the requests concerning the payment of damages for the moral and material prejudices suffered after the divorce, as well as those referring to the compensatory performance are incompatible with the imperfect consensual divorce, for the same reasons that have been previously mentioned referring to the divorce by agreement itself.

The decision concerning the accessory requests is subjected to the attack means, in the conditions of the law (art. 930 alin.4-art. 931 paragraph 2).

No matter the form of the agreement by which the divorce appears, agreement itself or imperfect agreement) , the marriage will be annulled since the date when the decision upon the main

---

[22] E. Florian, *quoted operas,* page. 112.

[23] Ibidem, page.113, Gabriela Frenţiu, *quoted operas*, page. 284.

request had remained definitive, so since the pronunciation date according to the dispositions of the art. 382 paragraph 3 NCC.

The Art. 927 paragraph 4 NCPC mentions that the judgment instance, in order to accomplish the publicity forms, will send the definitive decision, by itself, towards the Civil Status Service where the marriage has been concluded, towards the national Register of the matrimonial regimes, as well as towards the Trade Register, if one of the spouses had been a professional.

As a conclusion, according to the new regulations, the divorce by the spouses' agreement, with or without minor children resulted from the marriage of the two spouses or adopted, represents a true legislative innovation, being clear the legislator's preference for the divorce in this manner, because the annulment of the marriage by agreement is not conditioned anymore by the marriage duration, nor by the inexistence of minor children, but also by the institution of the simplified procedure of the divorce initiated by the guilt against the accused person and consensually ended, without administration of proofs.

If both spouses reach to an agreement concerning the annulment of the marriage they can address to the public notary or to the judgment instance, and if they don't have minor children resulted from their marriage they can also chose the administrative procedure of marriage annulment.

If the parties also beneficiate of extrajudicial procedures, the reason for the existence of the possibility for the dissolution by agreement consists in the facts that the parties that have agreed upon the divorce, cannot agree upon the accessory requests of the divorce[24]. Based on the art. 930 paragraph 2 NCPC, if the spouses do not reach to an agreement concerning the accessory requests, the judgment instance will administrate the proofs admitted by the law for their solution, and based on the parties' request, it will pronounce a decision concerning the divorce, also solving the requests concerning the name taken by the spouses after the divorce, the exercise of the parental authority, as well as he parents' contribution to the expenses necessary for the minor children' growth and education. The paragraph 3 of the same article also mentions the possibility of the judgment instance of continuing the judgment of other accessory requests, pronouncing a decision subjected to the attack means, in the legal conditions.

NEW MULTIANUAL FINANCIAL FRAMEWORK: PRIORITIES FOR THE EUROPEAN UNION, PRIORITIES FOR ROMANIA

ROXANA-DANIELA PĂUN*

Abstract
This article proposes a brief foray into the situation of the European economy, but especially of the banking system of the Member States affected differently by the current world economic crisis, or recession, but especially for a detailed analysis of the New Multiannual Financial Framework for the period 2014-2020, with the priorities which appear to be distinct for the EU and for Romania. After a comparative analysis of European regulations on the agreements of the previous financial negotiated for the period 2014-2020, and Delors I (1988-1992), Delors II (1993-1999), the Agenda 2000 (2000-2006) and multiannual financial framework (2007-2013) and ultimately the provisions of the Treaty of Lisbon (which convert multiannual financial framework in an essential act from a legal point of view); express personal opinions on Romania's priorities and on the challenges and perspectives in the actual European and global context.

Keywords: *Multiannual Financial Framework, budget deficit and current account deficit, fiscal capacity of the Euro area, the budget of the European Union.*

Introduction

At the time of Romania's accession to the European Union, the institutional structure and the European economic and political framework had another structure. Even if economic and financial policies of the European Union seem the same, with small changes, in fact realities makes European decision-makers to change many of the items that seemed stable at the economic, financial and banking level.

The dynamic of the realities is quite different, causing need for regulations and more elaborate of the way of forecast the national budgets, but most of all of the way to spend European money and not only.

Many specialists in the fields of finance- banking came in the course of time with scenarios in which they have came up with solutions with solutions for specific situations encountered in the different European states once with installation and generalization of the current world economic crisis.

Such renowned economists are also theoreticians pleading for this subject and practitioners of relevant field who have offered solutions after relevant and detailed analysis of the phenomena.

These solutions were analyzed by the union interests and political decisions that have been taken, unfortunately for some, out of happiness for others have generated consequences more or less commensurate in the short term, but with negative consequences for some states.

In the year of 2013, which began under the auspices of growth crisis in some member states and recession in the others, the perspective unfortunately remains less than optimistic, as long as, in my opinion, they do not unlock the functioning of the internal economies and as long as the banking sector remains lacking in the release and waiver of the liquidity in the system the use of true "financial engineering and banking".

Those financial instruments that have led to the bankruptcy of some banks of renown, in the USA (ex Lechman * Brothers) and of some companies that have sold illusions to the investors (eg: bankruptcy of the reputation American Enron company ...) and examples are many….

* Associate Professor, PhD, Faculty of Law and Public Administration, "Spiru Haret" University, Bucharest (mail address: roxanadpaun@yahoo.com).

These financial instruments have produced damages whereas they had been used and the renowned European banks and thus they have lost all the money investment and they have remained without liquidity.

In this way, financial and economic crisis that seemed to remain on American land has been propagated quickly in Europe and here has expanded gradually on the big European financial empires.

2. European Context prior to the adoption of new multiannual financial framework of the European Union.

The current economic crisis of the world started in the United States of America in 2008 and has been propagated at the speed of light in Europe. (Unlike the previous price crisis of 1929-1933, which has been started in 1929 in USA, but overcame the financial and banking system only in European 1933).

This has generated different approaches with respect to the evolution in crisis management in general, although each from the previous crisis has had different origins, different reasons, but especially different developments.

European Union has to react to a crisis whose evolution has not been until now stopped, and the solutions offered are far from being relevant, in order to put an end to crisis and minimise the effects global recession.

With all that, this global economic crisis is has differently feel in the Member States, at European level is attempting the adoption of solutions in the medium and long-term to boost and to restart economies of the member states.

3. The Multiannual Financial Framework of the European Union, priority in the Irish presidency. (MFF)

Up until the present time it have been concluded four such agreements: Delors I (1988-1992), Delors II (1993-1999), the Agenda 2000 (2000-2006) and Multiannual Financial Framework- MFF (2007- 2013). MFF became an essential from a judicial point of view in the Treaty of Lisbon. Currently they are debating the future multiannual financial framework after 2013[1].

In the 1980s, the balance of political and institutional community of the financial arrangements has been subjected to an increase pressures, having in essence three types of troubles: a conflictual climate in the institutional relations, budgetary imbalances problem, dealt with differently in the member of the Euro area and not only; a growing disparity between resources and requirements.

Accordingly, the european institutions have been driven to agree on a procedure designed to enhance budgetary procedure to ensure budgetary discipline, to decide on an programming in the medium term the main priorities of the EU budget for the next period and, eventually, to transpose these priorities into a financial framework in the form of an financial perspective.

In 1988, this allowed EU to develop and implement programs of policy yearly with more strictly observed.

First agreement, concluded in 1988, has included financial perspective for the period 1988-1992, also known under the name of the package Delors I, which was aimed at to provide resources for budget of the ”Single European Act”.

A new Agreement was agreed on 29 October 1993, including financial perspective for the period 1993 to 1999 - the package Delors II, a fact which allowed doubling of the structural funds and fare being raised ceiling of its own resources.

The third agreement on financial perspective for the period 2000 to 2006, a well-known and under the name of Agenda 2000, was signed on 6 May 1999, one of its main challenges consisting of

[1] http://www.europarl.europa.eu/ftu/pdf/ro/FTU_1.5.2.pdf, Fabia Jones, 01/2012.

the ensuring the financing required for the extend EU. The fourth agreement, relating to the period 2007-2013, was agreed on 17 May 2006.

MFF was included in the Lisbon Treaty, in which the 312 article is mentioning that MFF was adopted "for a period of at least five years", "aimed at providing the evolution ordered of the Union expenses within the limits of resources and reserves", and that the "annual budget of the Union shall comply with multiannual financial framework", thus laying the foundations of the financial discipline.

Lisbon Treaty stipulates that MFF: 'It shall establish the annual ceilings on the appropriations for commitments on categories of expenditure and of the roof of annual credits for payments, and also "provides for any other provisions helpful proper conduct of the annual budgetary procedure", thus meeting, to a large extent, the main objectives of the current loan agreement.

Interinstitutional Agreement (AII) currently has three pieces: Part I contains a definition and a series of provisions for the application for financial framework..

That section includes several tools that provides greater flexibility (the EU Solidarity Fund, the european adjustment to globalization, reserve for emergency aid and the flexibility instrument), in addition to ceilings MFF review "in the case of unforeseen circumstances" (point 21). Part II refers to improve collaboration in the interinstitutional budgetary procedure. Part III contains provisions relating to good financial management of the EU funds.

Financial framework itself is presented in Annex I to the Agreement. The adopted MFF on 17 May 2006 was reviewed in four rows of then, in order to:

- Galileo (* 4.8.6) and European Institute of innovation and technology (EIIT, * 4.14.0) (Decision of 17 December 2007)
- the plan european economic recovery 1 (May 2009)
- the plan european economic recovery 2 (December 2009)
- the project ”International Thermonuclear Experimental Reactor” (ITER) (dec. 2011)

MFF 2007-2013

A. The current agreement was agreed after a series of intense negotiations. On the whole, the agreement agreed has guaranteed that EU budget will be well managed and will standstill legislative and budgetary powers of the European Parliament during the period 2007-2013, for example, by means of providing greater flexibility in the context of the budgetary procedure, of some reactions improved and faster to catastrophes, of some obligations more clear for the Member States, the improved financial planning, as well as of some better controls for setting up of new agencies.

The European Parliament played a role in a review MFF essentials in order to ensure sufficient budgetary means to launch Galileo, the system of sailing by satellite from the EU, and European Institute of innovation and technology (EIIT), as well as with a view to finance the European Plan to economic recovery and the ITER.

B. Regulation of MFF in accordance with the Treaty of Lisbon, MFF becomes an compulsory act from a legal point of view, adopted by a special legislative procedure which involves adoption by the Council, acting unanimously, after obtaining the approval, which shall be decided by a majority of the members.

The role of the European Parliament is reinforced by article 312 paragraph (5) of TFUE (Lisbon Treaty). It provides that "during the entire procedure leading to financial framework, the European Parliament, the Council and the Commission shall take all necessary steps in order to facilitate the adoption".

The Commission published on 3 March 2010 a draft regulation on MFF, a new draft of the Agreement and changes in financial regulation it deemed to be necessary for full implementation of the course contents current agreement within the legal framework post-Lisbon.

The Council has adopted its position relating to the draft regulation on MFF and to the draft Interinstitutional Agreement, on 18 January 2011. On 6 July 2011, European Parliament has refused to give their approval to Council’s proposal, since this was much less flexible than the current

Arrangement and does not taking into account for none of the requests had expressed in oral questions, in a parliamentary rezolution and towards the trilateral discutions related to the budget for 2011.

In july 2010, European Parliament set up a special commission for a period of 12 months of political challenges and budgetary resources for a sustainable EU after 2013 (SURE), which has been requested to submit on a report prior to the submission of a proposal by the Commission following MFF figures. SURE Commission has been responsible for the:

1. Definition of priorities of the political to MFF after 2013 under domestic and budget point of view;

2. The estimated financial resources which the Union need to achieve the objectives and to implement the policies, for the period commencing on 1 January 2014;

3. determination of the duration of next MFF;

4. the proposal, in accordance with the mentioned foregoing priorities and objectives, of a structure for the future MFF, which indicate the main areas of activity of the Union;

5. Presentation of guidelines for an indicative distribution of resources between and within the framework of the different items of expenditure to the MFF, in accordance with proposed priorities and structure;

6. The connection between a reform of the financing system by the EU budget and a review of the expenses, to give the Commission on budgets a solid base for the negotiations on the new MFF mode.

On the basis of these works, the adopted on 8 June 2011 a rezoluţie entitled "The investment in the future: a new multiannual financial framework for a Europe competitive, sustainable and favorable to inclusion"[2]

The multiannual financial framework, presented by the European Commission "focuses on the financing priorities which generates added value real. For example, a facility to connect european - which will finance cross-border projects in the field of energy, transport and information technology, with the aim of strengthening internal market"

In addition to new fund created - "Connecting Europe Facility" – Press release issued by the European Commission more recalls that are allocated to "significantly more funds for research and innovation as well as for the area to youth. The Budget means, in terms of commitment appropriations 1,025 billion euros (1.05 % of GNI- Gross national income- and EU integration) and concerned at 972.2 billion euros (1% of GNI the EU) in terms of credits of payments.

The pressure of the sovereign debt crisis and external instability continues to be attention European officials all the more so as far as they affect the rich member states, and they have noticed the effects of the generalized economic crisis.

The only difficulty seems to be however, the different approach of the same problem. So, Alain Lamassoure, the head of the Commission budgets of European Parliament considered that: "there is no save today without budgetary austerity and it will not increase tomorrow without investing in the future."

During this time., member states, which are feeling plenty of both crisis and recession, (Greece, Spain, Portugail and France, Italy) to consider that we can not talk about a revived economy, if we can not fully power up the economy of each one of these states, by unlocking financial resources (Liquidity) and fare being raised of the internal consumption.

It is found so that Commission proposals reflect main priorities of the European Parliament: to spend more where necessary and thus to save in other areas, and find new sources of financing in such a way that national contributions to be reduced, is a priority for European leaders.

[2] Opinion expressed by Fabia Jones, 01/2012, http://www.parlamentor.ro/news/noul-cadru-financiar-multianual-2014-2020-al-ue-propune-un-nou-fond-dedicat.

Public debate on this topic is a new feature designed to streamline the process of fostering of new solutions to produce the expected effects from all over the world.

In this respect, much of information relating to the multiannual financial framework, remitted by the Department of European Affairs in the government of Romania, retrieve data published by the European Commission:

❖ European Commission also propose the strengthening programs of education and training vocational training. In the view of the Commission, investing in young people is one of the best business plans. In this respect, the said institution shall be pronounced for the creation of an integrated program of 15.2 billion euros for education, training and youth, with an emphasis on developing skills and mobility.

❖ At the same time, is provided for and a significant increase in investment in research and innovation. It is a strategy of the EU headed "Horizon 2020 ", worth 80 billion euros, which is to stimulate the competitiveness Europe at the global level to support the creation of new jobs.

❖ European Commission proposes investing of 4.1 billion euros in European security to fight crime and terrorism and 3.4 billion euros in policies of the migration and asylum. These two policies are considered crucial for the competitiveness and social cohesion of the European Union.

❖ Also, the Commission wishes to make the EU a influential actor at the global level, in the context of budget increase for external relations of the European Union, which will reach 70,2 billion euro. Shall be allocated to significant amounts of money for policy on the vicinity, so that it can be promoted around Europe democracy and prosperity. In addition, other amounts will be used for eradication of poverty.

❖ As regards the financing EU budget, the Commission proposes introduction of a system of own resources more transparent and equitable as possible, while allowing the reduce and simplify contributions required of the member states. Particular stress is to use innovative tools, as well as the addition of new its own resources, such as tax on financial transactions.

Common Agricultural Policy is still the most important in the EU budget, receiving consistent financing that is to say, by the amount of 371,72 billion euros, to which is added a additional margin of maneuver of 15.2 billion euros. In total, 386.9 billion euros in the period 2014-2020 for agriculture. Practically, the expenditure for the common agricultural policy (CAP) will be maintained at their level in 2013.

It is a good basis for the reform that they propose and allows you to maintain a solid structure for PAC, in terms of both direct payments, as well as rural development program. It is also a budget that allows reduce differences between east and west, between payments they receive farmers of the old and the new Member States

This sector is strategically important to the economy, for the development of the rural communities, but also for the environment. In fact, it is expected that 30% of direct aids granted farmers are subject to organic growth of farms.

4. Conclusions on the New Multiannual Financial Framework. (MFF)

The document is trying to include solutions to claims made by some states more strongly affected by the crisis, which up until the present time they have been expected, each Member State as he had been recommended to take the necessary measures in such a way as to diminish the effect crisis before the entry into force of the new multiannual financial framework.

The new regulatory framework introduces a partnership agreement between the Community and the Government of each Member State, between which, in this mode, it is relations shall be laid down more concrete and more pragmatic, which up until now they have been expected especially by the member in difficulty (and the list is getting longer as the recession is worsening).

In connection with the partnership contracts, conditions have existed and up until now. The news refers to the fact that these conditions for the future multiannual financial framework will be covered by a contract of partnership between the Community and the Government of each Member State and they will be more concrete, more pragmatic.

There will be no more generic quantification and will no longer provide an opportunity for interpretations, which in the end that is attracted in a manner effective and which do not permit different opinions from the initial point of view, from the persons who has undertaken the government concerned. Will be contractual relations, not of a political nature - will be contractual relationships of the kind 'will you take the money, but you must realize this in the following conditions'. These contractual terms are sometimes very tough one. Strengthens the relationship from this perspective, a tougher relationship may take between the Community and the governments of the member state.[3]

In this context, interesting is the point of view of Mrs. vice ambassador Blythe, opinion which is the point of view of Great Britain and who appreciate that it is necessary a freeze on EU budget in real terms, it's essential in the actual context of European economic and fiscal situation.

Although at the moment EU is facing with an acute crisis of the sovereign debt, the crisis in the long term, of a chronic nature - is that of growth and competitiveness. The most important strategic challenge the following budget must not exceed that of economic growth, is considering the UK through the voice of Mrs. Vice- ambassador Blythe.

In this context, interesting is the opinion of Mrs. vice ambassador Blythe, which is the point of view of UK, who appreciate that it is the point of view is expressed in conditions in which the budget of the United Kingdom has increased by two times in the period from 2000 to 2011.

Beyond the words and diplomatic exchanges of ideas and points of view, relevant is the fact that recession extended over the all Western Balkan area, the Czech Republic, Hungary, Slovenia, Slovakia, etc, except for Germany, that, in countries such as Bulgaria, Romania, Latvia, Hungary, and Spain, Portugal, poverty is increased and includes broad category of the population.

However, according to the estimates, 2013 desired to be a year for the increase in the GDP (except Slovenia), and the year 2014, in the optimistic version, may represent an "oasis of hope" for European economic fare being raised by stimulating Euro area.

With all these difficulties, it is assumed that Euro area shall not enter into collapse, (such as like some), especially in conditions in which European funding for developing member states, according to statistics, each 0.6 % of every euro spent is going back in the Member States, so it's a policy "win-win" and not charities, how would allow some people to understand!

THE "NEW LOOK" OF ACCESSION IN THE ROMANIAN LAW, A SOURCE OF INSPIRATION FOR ITS REGULATION IN THE COMMUNITY SPACE

ADRIANA IOANA PÎRVU*

Abstract

Although the trend is to interpret legal texts directly, regarding each legal regulation as a freestanding text, many times legal norms have to be correlated and interpreted ones by means of the others. Thus the legislative technique plays a very important part in drawing up an efficient legislative act whose enforcement should not generate any difficulties caused by the misinterpretation and misunderstanding of the norms.

It is obvious why the lawmaker has given such attention to accession, bearing important changes which have taken shape into a regulation much higher than the previous one.

If the lawmaker's attention to details is generally appreciated, i.e. it is useful to cover legislative lacunae by new regulations, sometimes excessive regulation is regarded critically by legal councillors, generating a poisonous inflexibility in enforcing the law. Also, the lawmaker's attempt to define some terms within the code is regarded critically, too, by legal councillors, considering that it is not pertinent to define some terms within a civil code.

We consider that by the regulating way the lawmaker succeeded in surpassing its old pattern, the French civil code adjusting better to the situations arising from practice. Also, the Romanian lawmaker evolved from the point of view of systematization of norms, compared to the French lawmaker which keeps on treating immovable accession, including the movable one, as conglomerates of norms.

The new accession regulation is a progress from the point of view of enforcing the norms of legislative techniques. It can certainly represent a pattern for the regulation of the accession in the law of other EU Member States, and not only them.

Key words: *accession, legislative technique, interpretation, ownership right, good faith.*

Introduction

Although there is a frequent tendency to interpret legal texts in a direct manner, regarding each legal norm as an autonomous text, regulatory texts should be often correlated and interpreted by means of each other. Thus, the legislative technique plays a particularly important role in the preparation of an efficient regulatory act, the application of which should not generate any difficulties, caused by the erroneous interpretation and understanding of the norms.

"Law was and will always be intimately connected with its language of expression, being rightfully named the necessary extension of legal concepts". The terms used within each system of law by means of the language, "the vocabulary specific to legal professions" truthfully expresses both the political options of the national lawmaker, his historical, cultural, religious traditions, and the influences of other regulations".[1]

Unfortunately, the legislative technique aspects have never been too much in the attention of the law researchers. Their criticism could be a very useful instrument for the legislator. The aim of this study is to bring to the attention of the law researchers that a regulation could be improved by simply using efficiently the legislative technique.

Any regulatory act should comply with the requirements of legislative technique, as the role of these requirements is to "ensure the systematization, unification and coordination of legislation, as well as the legal contents and form adequate to each regulatory act".[2]

The lawmaker from 1864 regulated accession by using the model of the French Civil Code.

Taking over this model, the Romanian lawmaker treats accession in Book II, more precisely in Chapters I and II of Title II, which dealt with the regulation of property,

The regulation of accession has a leading role within the norms regarding ownership, as the lawmaker probably considers that such order is natural, since the article preceding the chapters on accession (that article which concludes the general presentation of ownership) deals with the right to accession. We consider, however, that the regulation of accession should have been included in that part of the Code which deals with the different ways of obtaining the ownership right, our criticism aiming also at the new Civil Code, which maintained the same positioning of the texts regarding accession.[3]

In this way, after the lawmaker tries to define property in Art. 480, attempting to underline its importance under Art. 481, which provides it with a special protection, Art. 482 provided that "ownership over a movable or immovable asset gives a right to everything that merges, as an accessory, with the asset, in a natural or artificial manner." Probably this is the reason why the lawmaker, instead of developing the notion of ownership, its contents and effects under various regulations, intended to further treat the matter of accession.

Accession was regulated in two chapters: the first chapter regarded the right to accession over those working products, and the second chapter regarded the right to accession over those merged with and incorporated with the asset.

In this way, in full compliance with the French model, the first chapter which regulated accession also dealt with the matter of fruits. Art. 483 provided the fact that "Natural or industrial fruits of the land, civil fruits, animals' offspring (progeny), shall be due to the owner on the strength of the right to accession". With good reason, this provision was criticized in the specialty literature, being considered that "fruits are due to the owner, as prerogatives of its ownership right, and not on the strength of its right to accession, as Art. 483 erroneously provides".[4]

In the French legal literature[5], the following idea was developed: the right over the fruits of an asset derives from the accession right of the owner of the main asset over such asset. It is considered that accession should be viewed in terms of two stances: natural accession by incorporation (where the natural immovable accession would be classified and, depending on the stance, the movable accession cases) and natural accession by production, the latter referring to the fruits and products of the asset. In the Romanian legal literature, there are authors who supported this point of view; however, their opinion remained marginal, and it was not appropriated by the majority of authors.

In a general formulation, the Swiss Civil Code establishes that the owner of an asset is considered the owner of all that is an integral part of such asset, according to the custom of the place.[6]

[2] Art.2 para.1 of Law No. 24/2000 regarding the legislative technique norms for legislation elaboration, as republished in The Official Gazette, Part I, No. 260, of April 21, 2010.

[3] "It was said, with good reason, that the place of accession was in Book III, where the lawmaker regulates the ways in which ownership can be obtained." (D. Alecsandresco, Explicatiunea teoretica si practica a dreptului civil roman, vol.III, Atelierele Grafice SOCEC, Bucharest, 1909, p.284), O.Ungureanu, C.Munteanu, Tratat de drept civil, Bunurile. Drepturile reale principale, Ed. Hamangiu , p.609.

[4] E.Chelaru, Drept civil. Drepturile reale principale, Ed. C.H.Beck, Bucharest, 2009, p.30.

[5] Ch Larroumet, Droit civil. Les Bienes, Ed. Economica, p.369, quoted by O. Ungureanu, C. Munteanu, op.cit., p. 608 "the fruits and products of an asset are only accessories to this asset, and the economic function of property is precisely to allow the owner to fructify its asset and, therefore, to become the owner of such fruits and products. (…) this is, therefore, an obtainment of property by natural accession; production is a natural function of the asset, even if it implies the intervention of the human being, for instance, for industrial fruits and products."

[6] O.Ungureanu, C.Munteanu, op.cit., p.608.

The criticism made to this opinion seems to have been taken into account by the lawmaker of the new Civil Code, since the new regulation no longer refers to the obtainment of fruits as an effect of accession, but as a natural effect of the ownership right over the fruit-bearing asset. This new insight of the lawmaker is reflected into the inclusion of the obtainment of fruits as an effect of possession exerted in good faith among the methods of obtaining the ownership right. The good faith holder, the one who acts like a true owner, owning both animus, and corpus, shall retain the fruits produced by the asset exactly due to the assimilation by the lawmaker of this possessor, from the point of view of certain legal consequences, to the rightful owner of the asset.

By doing so, the lawmaker distanced itself from the model of the French Civil Code, which continued treating the obtainment of the ownership right over the fruits as an effect of the accession right.

However, we can say that the change in the lawmaker's insight occurred in the last minute, since Art. 435 of the draft new Civil Code defined accession as follows: "All that is produced by the asset, as well as all that merges with or is incorporated in the asset, as a result of the deed of the owner, another person or a fortuitous case shall be due to the owner unless otherwise provided by law."[7] We deem as opportune the lawmaker's brave attitude to take a distance from the traditional French doctrine and to adhere to the vision of the Romanian doctrine.

The second chapter on accession dealt with "the accession right over those merged with and incorporated into the asset". The chapter opened with a general provision, which preceded its two sections. Art. 488 had a general vision, according to which "all that merges with and is incorporated in the asset is due to the owner of the asset, according to the rules established below." This provision created the opening for a distinct treatment of the conditions and effects of accession, which had as its main asset either an immovable asset (Section I "On the Accession Right Related to Immovable Assets"), or a movable asset (Section II "On the Accession Right Related to Moving Assets").

In these sections, the lawmaker did not make any separation in subsections regarding the accession that occurred naturally and the accession that occurred artificially. For more legal rigor, the lawmaker of the new Civil Code dealt real with natural immovable accession and artificial immovable accession in separate sections. It is possible that such aspect is the result of the fact that the Romanian lawmaker drew his inspiration from the model of the Civil Code from Quebec. Moreover, due to the numerous controversies generated by the legal provisions regarding artificial immovable accession, the lawmaker of the new Code created several subsections regarding immovable accession to capture in a manner as exact as possible the aspects generating legal effects which occurred in practice. Using the regulation of the lawmaker from 1864, but particularly the experience generated by the judicial practice, the lawmaker of the new Code refined the regulation to simplify its application. In this way, they highlight again the advantages of observing the legislative technique norms, requiring, as a necessity in the elaboration of a new regulatory act, the documentation stage for substantiation purposes. The lawmaker of the new Civil Code has obviously gone through this stage, in which it examined the "practice of the Constitutional Court in the field, the practice of the courts of law as far as the application of the regulations in force is concerned, as well as the relevant judiciary doctrine."[8]

The new regulation includes in the situation of artificial immovable accession the same two primary situations: the situation in which a work is performed by the owner of the main asset, using the materials belonging to another owner and the situation in which works are performed by a third party, with its own materials, on the main asset. This latter situation is, however, distinctly regulated, based on new categories, introduced by the lawmaker, namely **autonomous** works with a durable nature and **added** works with a durable nature.

[7] http://www.just.ro/Sectiuni/PrimaPagina_MeniuDreapta/Proiectulnouluicodcivil/tabid/985/Default.aspx, accessed on 10.12.2012, 17.00 hours.

[8] Art. 21 of Law No. 24/2000.

As a novelty by comparison to the former regulation, the Civil Code in its new form contains not only general provisions, but also special provisions. In addition, the new code contains also an article entitled "the meaning of certain terms" (Art. 586). If, in general, the lawmaker's attention to details is appreciated, in the sense that it is useful to cover legislative gaps by new regulations, sometimes excessive regulation is critically regarded by jurists, as it generates a bad inflexibility in the application of the law. Also critically is regarded by jurists the lawmaker's attempt to define certain terms in the code, considering that defining certain terms is not opportune in a civil code.

Nonetheless, we consider that the specification of the meaning of the notion of "good faith" in the law of accession is opportune, as this notion is liable to have several interpretations, depending on the different fields in which it is applied.

Specifying the "meaning" of this notion, the lawmaker does nothing else but complying with the corresponding norms of legislative technique. In this respect, the article provides that "if a notion or term is not consecrated or can have different meanings, its significance in the context is established by the regulatory act instituting such meanings, within the general provisions or in an annex designed for the respective vocabulary, and it becomes mandatory for the regulatory acts from the same field". [9]

The scope of the regulation contemplated by the lawmaker of the New Code, in its attempt to update and correct all the flaws in the former regulation, caused the final result to differ from the expected result. Thus, the new regulation generated certain "legislative events", as such are conceived by Art. 58 of Law 24/2000 regarding the legislative technique norms for legislation elaboration. According to this article, in well-grounded situations, the regulatory acts having a particular importance and complexity can be amended, supplemented or, as applicable, repealed by the issuing authority also in the period comprised between their date of publication in The Official Gazette of Romania, Part I, and the date provided for their coming into force, on condition that the proposed interventions should come into force on the same date as the regulatory act subject to the legislative event". In this way we can explain the issue of Law No. 71/2011 for the application of Law No. 287/2009 on the Civil Code, having as "its primary object the reconciliation of the existing civil legislation with the provisions of such code (the Civil Code – our note), as well as the settlement of the conflict of laws resulting from the coming into force of the Civil Code"[10].

Although for accession is reserved an entire chapter in the new Civil Code, the vision of the contemporary lawmaker is not very different from the vision of the lawmaker from 1864, the regulation being realized by suppletive norms. However, as the lawmaker may have wished to ensure a higher safety for the civil judicial circuit, it expressly applies the principle of the non-retroactivity of the civil law, by Law No. 71/2011 for the application of Law 287/2009 on the Civil Code. In this way, Art. 58 of this law establishes that "in all the cases in which the artificial immovable accession implies the exercise of an option right by the owner of the immovable asset, the effects of accession are governed by the law in force on the date when the work began". An application of the same principle can be found also in case of Art. 576 regulating natural accession over animals, law 71/2011 specifying that such principle shall apply only to "the situations occurring after the coming into force of the Civil Code". (Art. 57).

An important objective that the new lawmaker had mostly to achieve in terms of the legislative technique was to update the used terminology. It is generally acknowledged the fact that the terminology used by the Civil Code from 1864 no longer matched with reality in many situations, the terms used being obsolete and, sometimes, even hilarious. When drafting the new Code, the lawmaker tried to use the words in their current meaning from the modern Romanian language,

[9] Art. 37 para.2 of Law No. 24/2000.

[10] Art.1 of Law No. 71/2011 for the application of Law No. 287/2009 on the Civil Code, published in The Official Gazette No. 409 of June 10, 2011.

avoiding regional phrases, taking into account the fact that "drafting is subordinated to the desideratum represented by the easy understanding of the text by its recipients"[11].

We consider that, by its regulation manner, the lawmaker managed to exceed the former model, the French Civil Code, being better adapted to the situations occurring in practice. Also, the Romanian lawmaker, unlike the French lawmaker, evolved in terms of the normative systematization, as compared to the French lawmaker, which continues treating the immovable accession, movable accession in the form of normative conglomerates. Systematization was necessary for "the insurance of a logical succession of legislative solutions (…) and the achievement of an inner harmony of the regulatory act (…), this being realized by grouping the ideas (our note) in accordance with their connections and natural relationship, within the general conception of the regulation"[12].

Taking these aspects into consideration, we could say that the new regulation of accession, in the Romanian Law, could become a source of inspiration for it's regulation in the Community Space.

The preparation of an efficient regulatory act requires the knowledge and appropriate application of regulation technique, although it does not seem so spectacular. In order to obtain a certain social or individual behavior we must first learn how to ask for it.

BRIEF OVERVIEW OF THE RULES GOVERNING THE CONFLICT OF LAWS IN SUCCESSION MATTERS ACCORDING TO THE NEW ROMANIAN CIVIL CODE

MONICA-FLORENTINA POPA*

Abstract
The new Romanian Civil Code, in force since 2011, has introduced considerable changes from the previous code in a wide range of aspects concerning our private law, as a response to the significant social developments that took place in the past two decades. Adopting a "monist" view, this code is a vast and ambitious undertaking to institute a coherent treatment of all areas of the private law that have previously been regulated in separate laws or codes, including those regarding the international private law.
The present article endeavors a brief analysis of the rules governing the conflict of laws in succession matters as set out in the new Romanian Civil Code, with comparative references to the previous applicable law, i.e. Law 105/1992, and to the new EU Regulation in this subject-matter. In the present context of ever-growing EU integration and increased global interconnectivity, a better understanding of the various national solutions to the conflict of laws can only benefit scholars and practicians alike.

***Key words**: conflict of laws, succession, private international law, EU Regulation, European Certificate of Succession.*

Introduction

The entering into force on October, 1st, 2011, of the New Civil Code (hereinafter referred to as NCC)[1], is without a doubt, one of the most important legislative reforms that took place in our country in the past two decades, reform that has stirred up a lot of controversy in the Romanian doctrine due to the rather unorthodox manner of its adoption – the Government assumed its political responsibility on this piece of legislation in front of the Parliament – and by the absence of impact studies on its effects, that should have preceded its adoption. As mentioned in the abstract, the code is an ambitious undertaking aimed at bringing together -for better or for worse- all legal norms pertaining to our private law, including those applicable to the international private law, previously regulated by Law 105/1992. The NCC has restated unchanged many provisions of this law, but at the same time, as a result of our EU membership, it has introduced novel legal solutions in some areas, such as the area of conflict of laws regarding succession. It is therefore useful, in our opinion, both for theoretical and practical purposes, to critically compare the new regulations in this subject-matter with those previously found in Law 105/1992.

Moreover, the legislative reform in Romania has entered a new stage with the coming into force at 15th of February 2013 of the New Civil Procedural Code (hereinafter referred to as NCPC)[2], which repeals in full the Law 105/1992, and replaces its procedural norms on conflict of laws in international private law with the provisions of the NCPC, Part VII, concerning "The international civil case".

My analysis concerns the current legal framework, with references -if appropriate- to the relevant jurisprudence based on the previous legislation. The overview of the relevant provisions on succession with an extraneous element will take into account not only the rules governing the law

* PhD, Assistant Lecturer, Faculty of Law, "Nicolae Titulescu" University (monica_popa@yahoo.com).

[1] Law 287/2009 concerning the Civil Code, re-published in the Official Journal of Romania no. 409/10.06.2011, Part I, on grounds of subsequent modifications after its first publication in the Official Journal of Romania no. 511/24.07.2009.

[2] Published in the Official Journal of Romania no. 465/15.07.2010, Part I, as Law 134/2010.

applicable to the devolution of property by cause of death according to the NCC, but also the provisions of the New Civil Procedural Code and the provisions of the EU Regulation 650/2012 on jurisdiction, recognition and enforcement of decisions and authentic instruments in matters of succession and on the creation of a European Certificate of Succession[3], due to fully come into force in 2015. Some of its provisions regarding preparatory measures incumbent on Member States as to the implementation of this new EU Regulation are already in force since 2012. As both national and European regulations mentioned above are fairly recent, this study may bring an interesting and useful perspective on a very important subject-matter of the international private law.

1. EU Regulation no 650/2012 – a new benchmark for Member States national legislations in area of cross-border successions within EU

Traditionally, states have closely guarded their national regulations on succession matters, since this area of law is in many instances associated with the family law[4], and hence it is deemed to posses a highly sensitive, culturally and sometimes even religiously charged nature. Moreover, the devolution of property by cause of death does imply significant issues such as transfers of property rights over land and other immovable assets, meaning that nation states have a direct stake in establishing rules for dealing with such transfers, especially when an extraneous element is involved.

It is therefore no mean feat for the European Commission to have drafted and passed a Regulation in such a sensitive matter, given the diversity of national legal solutions within EU. According to the European Commission data, made public on its website, almost half a million (450 000) cross-border successions occur every year in the EU, adding up to a considerable value, estimated to be in excess of 120 billion Euros[5]. The objectives the EU Regulation set out to achieve are the removal of obstacles within EU for citizens who face difficulties in asserting their rights in the context of a cross-border succession (Paragraph 7 of the Preamble)[6], the avoidance of parallel proceedings and conflicting judicial decisions, and hence faster, easier, cheaper procedures. The above-mentioned paragraph also states that citizens must be able to organize their succession in advance and the rights of heirs, legatees, creditors to the succession etc. must be effectively guaranteed. To this end, the Regulation institutes several rules, such as a consistent legal treatment of a given succession, dealt with as a whole, under a single law and under a single authority, the possibility for citizens to choose the law applicable to their succession between either the law of their habitual residence or of their nationality and the creation of a European Certificate of Succession, as an instrument by which the powers of the heirs, legatees, executors of the will or administrators of the estate can be demonstrated in any of the Member States jurisdictions.

In its carefully worded Preamble (Paragraph 9), and in Articles (1) and (2), the new Regulation defines the scope of its applicability as including "all civil law aspects of succession to the estate of a deceased person" and excluding revenue, customs and administrative matters of a public-law nature, matrimonial property regimes, the creation, administration and dissolution of trusts, transfer of property rights, interests and assets created or transferred otherwise than by succession, for instance by way of gifts. Furthermore, the new Regulation expressly states in Article (2) that the substantive law of the Member States does not fall within its area of applicability: "This Regulation shall not affect the competence of the authorities of the Member States to deal with matters of succession". Article (1) enumerates in a manner which, in our opinion, should be

[5] http://ec.europa.eu/justice/civil/family-matters/successions/index_en.htm.

[6] All provisions of the EU Regulation 650/2012 quoted in this article are taken from its English version available in html format at http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:L:2012:201:0107:01:EN:HTM.

construed as limitative, the exceptions to the applicability of the Regulation, including, *inter alia*, the status of natural persons, the legal capacity of natural persons, questions related to the disappearance, absence or presumed death of a natural person, issues regarding the matrimonial property regimes, maintenance obligations other than those arising by reason of death, questions governed by the law of companies and other bodies, corporate or incorporate, the nature of rights *in rem*.

Given the fact that this Regulation does infringe on the traditional jurisdiction of the national courts, by introducing the principle that a given succession will be subjected to one single law and one single authority, thus removing the conflict of competence based on the immovable/movable assets distinction, it is hardly surprising that Denmark, Ireland and United Kingdom have decided to opt out from the adoption of this Regulation and therefore are not bounded by its provisions[7]. Their decision has fragmented the unification movement of the international private law in Europe, though it is not likely that this movement towards ever greater legal integration will actually halt. In fact, the European Parliament has commissioned a study as to the "*Current gaps and future perspectives in the European private international law: towards a code of international private law*?"[8], aimed at identifying current gaps in the European legal framework concerning international private law and debating whether a European code of international private law can be achieved. The study suggests that an incremental policy by individual regulatory acts is preferable to one single piece of legislation, in order to prevent a further fragmentation of the unification agenda.

Since our country is bound by this EU Regulation, that will be applicable, after a transition and preparatory period, according to Article 83, "to the succession of persons who die on or after 17 August 2015", the current provisions of the Romanian code on conflict of laws in succession matters will also be evaluated by taking into account the provisions of the Regulation. The creation of the European Certificate of Succession will be dealt with separately, at the end of this paper.

2. Preliminary considerations on the concept of "succession"

NCC defines the notion of "succession" in Article 953 as "the transmission of the patrimony of a deceased natural person to one or more persons in existence"[9], which implies the fact that the rules governing succession apply only in the event of death of a natural person, and do not apply in the event of the disappearance of a legal person, in whichever way this disappearance may have occurred[10]. To the same effect are the rules instituted by the EU Regulation no.650/2012, which expressly stipulates in Paragraph 1 Section (2), (i), that its provisions do not apply to "the dissolution, extinction and merger of companies and other bodies, corporate or unincorporated". NCC adopts a unified terminology, utilizing consistently the term of "succession", in lieu of "succession" and "inheritance", used alternatively in the previous regulation. The definition set out in Article 953 NCC, is -despite its brevity- in agreement with the definition of "succession" in Article 3 of the new EU Regulation, which stipulates that "succession" means "succession to the estate of a deceased person and covers all forms of transfer of assets, rights and obligations by reason of death, whether by way of voluntary transfer under the disposition of property upon death or a transfer through intestate succession".

---

[7] This does not mean that there is no preoccupation in UK, for instance, for evaluating the possible effects of the British opt-out of this EU Regulation on UK law. The new EU Regulation and the consequences of its rejection by UK were the object of an international conference organized by the *British Institute of International and Comparative Law* in November 2012, suggestively named "*Out of the frying pan into the fire*? *The UK's rejection of the new EU Regulation on international successions"*, http://www.biicl.org/events/view/-/id/730/.

[9] All NCC provisions in this article are quoted from "The New Civil Code and the Previous Regulations", published under the supervision of dr. Mona Pivniceru, Ed. Hamangiu, 2012, Bucharest, p. 214 - 262 and p. 531-562.

[10] Fr. Deak, "Treatise on Succession Law", ed. Universul Juridic, 2nd edition, 2002, Bucharest, p.5.

Article 955(1) NCC stipulates that "the patrimony of the deceased is transmitted through succession by operation of law, insofar the deceased did not stipulate otherwise through a will", indicating the two classic forms of succession in our law – by operation of law and testamentary. These two forms are not mutually exclusive, but, according to section 2 "a part of the patrimony of the deceased can be transmitted through testamentary succession and the other part through succession by operation of law". Both forms fall within the scope of the NCC provisions concerning the determination of the law applicable to international private law relationships.

3. General provisions of the law applicable to succession, with references to the previous Romanian legislation and to the new EU Regulation in this subject matter

The current provisions of the NCC concerning the law applicable to the devolution of property by cause of death with an extraneous element has departed from the previous regulation as set forth by Law 105/1992, being in accordance with the new EU Regulation. Article 2633 NCC stipulates that succession is subject to the law of the State in which the deceased had his habitual residence at the time of death, unlike the legal regime instituted by Law no. 105/1992, which had regulated the succession in a different manner, based on the movable/immovable distinction of the assets forming part of the succession property. Article 66 of Law 105/1992[11] stipulated that a) as regards movable assets, wherever they may be located, the succession will be subject to the law of the State whose nationality the deceased possesses at the time of death and b) as regards immovable assets and goodwill, to the law of the State where each of these assets is located.

The new provisions are consistent with the EU Regulation 650/2012, which lays down as general rule in Article 21 that "unless otherwise provided for in this Regulation, the law applicable to the succession as a whole shall be the law of the State in which the deceased had his habitual residence at the time of death". Section 2 of this article institutes an exception from the general rule, allowing for the application of the "proper law" method: "if it is clear from all the circumstances of the case that, at the time of death, the deceased was manifestly more closely connected with a State other than the State whose law would be applicable under Section 1, the law applicable to the succession shall be the law of that other State". In our opinion, the current NCC regulation in this subject matter is in agreement with the general objectives pursued by the European Commission, namely, that a given succession is treated coherently, under a single law and by one single authority, and parallel proceeding and conflicting jurisdictions regarding the same given succession are to be avoided. This holds true in respect to the applicable substantive law, but not in respect to procedural law, insofar as the provisions of the New Civil Procedure Code (NCPC) institute exclusive jurisdictional prerogatives for the Romanian courts to decide upon cases that involve an extraneous element as regards either 1. immovable assets situated on Romanian territory and/or 2. (movable) assets located in Romania, left by the deceased person with its last residence in Romania[12]. These special provisions, though imperative in nature, will have to be construed in accordance with the rules laid down by EU Regulation no. 650/2012, upon its coming into force in 2015, which institute in Article 4 a general jurisdiction in favor of "the courts of the Member State in which the deceased had his habitual residence at the time of death (…) to rule on the succession as a whole". The importance of this article should be viewed by taking into account the above-mentioned objectives of the Regulation, as explained in Article 37 of its Preamble: "… For reasons of legal certainty and in order to avoid the fragmentation of the succession, the law should govern the succession as a whole, irrespective of the nature of assets and regardless of whether the assets are located in another Member State or in a third State".

[11] Published in the Official Journal of Romania no. 245/1.10.1992, Part 1.

[12] All NCPC provisions in this article are quoted from the "Code of Civil Procedure", edition coordinated by dr. Viorel Mihai Ciobanu, ed. C.H.Beck, no.500, Bucharest 2013, p.332-354.

The meaning of "habitual residence" of a natural person is furthermore defined by Article 2570

NCC as being in the State where a natural person has its primary lodgings, even if they did not complete the legal registration requirements. The habitual residence of a natural person exercising its professional activity is the place where that person has its primary establishment. The primary lodgings are to be determined also by scrutinizing the personal and professional circumstances indicating lasting connections with the State or the intention to establish such connections. Similar provisions regard the habitual residence of a legal person, presumed to be located in the state where this entity has its principal establishment, i.e. its headquarters.

The applicable law determined in accordance with the Article 2633 NCC provisions will thus apply to all forms of transfer of assets, rights and obligations by reason of death, whether by way of a voluntary transfer under a disposition of property upon death (*testate* succession) or a transfer through *intestate* succession. However, Article 2634 NCC stipulates that a person can choose as law applicable to his estate as a whole the law of the State of which he was a national. Should this right to choose the applicable law not be exercised, then the applicable law shall be the law of the State in which the deceased had his habitual residence at the time of death. The law institutes special formalities a person should fulfill for the existence and validity of the said choice of law. The former provisions contained in Article 68 of Law no 105/1992 were to the effect that a testator may subject the transfer by cause of death of his/her assets to a different law than the one indicated in Article 66 (mentioned above), without having the right to circumvent its imperative provisions (*evasion of law* or *fraud a la lois*). As regards the *testate* succession, the NCC institutes an alternative and optional regime that governs the formal requirements of a will[13]. Thus, according to Article 2635 NCC, the drafting, amendment or revocation of the will are deemed to be valid if the will complies with the applicable formal requirements, either on the date of its drafting, amendment or revocation, or on the date of death of the testator, in accordance with whichever of the following laws: a) the law of the State of which he is a national; b) the law of the testator's habitual residence; c) the law of the State where the will has been drafted, amended or revoked; d) the law of the status of the real estate which is the subject matter of the will; e) the law of the court or of the body that fulfills the procedure of transfer of the inherited assets. The only change introduced in this matter from the previous reglementation is that the law of testator's domicile (Article 68 s.3 (b) Law 105/1992) has been replaced with the law of testator's habitual residence, in accord with the new EU Regulation.

The conditions as to the validity of wills are set out in articles 1034-1085 NCC and concern, *inter alia*, formal requirements as regards the disposition of property upon death made in writing – holograph will (art. 1040 NCC), the disposition of property upon death made in front of a competent public authority (art. 1043 NCC), as regards privileged wills (art.1047 NCC), etc. These formal requirements are to be completed with those concerning the substantial validity of the will, such as the testamentary capacity (art. 988 NCC, which also sets forth special incapacities concerning those not allowed to dispose of their property by cause of death) and the consent of the person who disposes of his property (art. 1038 NCC)[14].

As to the scope of the law applicable to succession according to NCC, pursuant to Article 2636 (section 1), the law of succession, determined in accordance with the provisions analyzed above, shall apply to a) the time and place of the opening of the succession; b) the persons entitled to succeed; c) the capacity to inherit; d) the exercise of possession rights over assets forming part of the estate; e) the conditions and effects of the acceptance or waiver of the succession; f) the determination of the heirs' obligation to bear the liabilities; g) the conditions for the validity of the will, the amendment and revocation of a testamentary disposition, as well as special incapacities in

[13] Dan Lupaşcu, Diana Ungureanu, "International Private Law", ed. Universul Juridic, Bucharest 2012, p. 211.

[14] For a detailed presentation of these conditions under the provisions of the previous applicable law, see I.P.Filipescu, A.I.Filipescu, "Treatise on International Private Law", ed. Universul Juridic, Bucharest, 2008, p. 416-417.

order to receive or transmit an asset through a will; h) the partition of succession and (Section 2) the right of the State to claim a vacant estate as an heir. These main coordinates of the scope of succession law[15] belong to the substantive law, Romanian authorities being solely entitled to regulate these areas that do not fall under EU Regulation 650/2012. The old provisions did not expressly mention the conditions for the validity of the will and the partition of succession, although in practice these two categories were included in the scope of the succession law. An interesting change from the previous regulation is the replacement of the lapidary reference to "the rights of the state to a vacant succession" with an entire section stating that "in case that, according to the law of succession, a given estate is vacant, the assets situated or located on Romanian territory will be appropriated by the Romanian state under its own law according to the law of succession on vacant estates". One commentary on this article has interpreted this provision as limiting the rights of the Romanian state to claim a vacant estate only to those assets located on its soil[16], so if the vacant estate is formed in part by assets located on the territory of other states, the Romanian state will not be entitled to them. Romanian courts have recognized the right of a foreign state to claim movable assets part of a vacant estate left by its national on Romanian soil[17], the consensus being that the immovable assets should be appropriated by the Romanian state, though the now repealed law did not make this distinction. It is still too early to decide which way the new provision will be interpreted by our courts.

The EU Regulation leaves the matter of determining the rights of the state to a vacant succession to the discretion of the Member States, the only condition stipulated in Article 33 being that the creditors of the estate are to be allowed to seek satisfaction on their claims out of the estate as a whole.

Based on our comparative analysis between the new regulations of the international private law, the previous legislation and the EU Regulation no. 650/2012, we can conclude that the NCC provisions are in accordance with the European law and, at the same time, preserve most of the legislative solutions of the repealed Law 105/1992. One area where the NCC might have to be amended in the near future in order to comply with the EU Regulation regards the certificate of succession, currently regulated by Articles 1132-1134 NCC, as to its meaning, effects, issuing authority and annulment conditions. The related legislation, especially Law no. 36/1995 regarding the public notaries[18], will have to be amended, too.

4. The creation of European Certificate of Succession - a promising instrument to ease up the legal and administrative tangle for the European citizens

The EU Regulation dedicates Chapter VI to this new legal instrument it introduces for the purpose of speeding up the settling of successions with cross-border implications. The European Certificate of Succession (hereinafter referred to as "the Certificate") is, according to Article 62 corroborated with Article 64, an instrument which shall be issued in the Member State whose courts have jurisdiction in a given succession matter (either as general jurisdiction, by choice of law or subsidiary jurisdiction) for use in another Member State and shall produce the effects set out in Article 69. This Certificate is an instrument that has evidentiary effects (Paragraph 71 of the Preamble) as to the status and/or rights and powers of the heirs, legatees, executors of the will or administrators of the estate in another Member State, for instance in a Member State in which the

[17] The case of a Greek national leaving a vacant estate on Romanian soil, in R.D.D. no.3/1973, quoted by I.P. Filipescu, A.I. Filipescu, idem 5.

[18] Public notaries are the competent authority to issues certificates of succession or certificates of recognition as heir/legatee in our legal system. The procedures regarding successions are set out in Law 36/1995, published in The Official Journal of Romania no. 92 from 16/05/1995.

succession property is located. Its use is not deemed mandatory and is in no way going to take the place of the internal documents used for similar purposes in the Member States. The competence to issue the Certificate is, according to Article 64, either a court as defined in Article 3 (2) or another authority which, under national law, has competence to deal with matters of succession. In our law, this competence will belong to the public notaries. The procedures for the application and the issuing of the Certificate are set out in Articles 65-67, issues regarding the rectification, modification and withdrawal of the Certificates, suspension of its effects, being dealt with in Articles 72-73.

As stated at the beginning of this paper, The EU Regulation no. 650/2012 will fully come into force on 5th of July 2015. However several of its articles already apply from 5 July 2012, including Article 78 that states, *inter alia*, the obligation of the Member States to provide the relevant information regarding the authorities competent to issue the Certificate and the redress procedures against decisions taken by the issuing authority.

The creation of the European Certificate of Succession is an important practical measure to ease up the difficulties involved in settling cross-border successions. Our recent court rulings in this field have dealt with the thorny issues of establishing the status and/or powers of heirs, legatees, etc. and hence the validity of their claims on a given estate. For instance, the Supreme Court ruled on a case of a succession involving property rights over an immovable asset located in Romania, left by a German citizen, where the certificate of succession proved to be a highly contentious issue. The court decided that, even if the deceased was a German national, it is not mandatory for the certificate of succession to be issued by the German authorities, since the succession concerning immovable assets is governed by the Romanian law and hence the certificate of succession can be validly issued by the Romanian competent authorities[19]. Another case decided by our Supreme Court highlights the difficulty of finding the right equivalent in Romanian law of an authentic act issued by a foreign authority as to the status, rights and obligations of the heirs/legatees. The case involved the testamentary succession of an Italian national that included immovable assets on Romanian soil and the issue of interpretation of an authentic act issued by the competent Italian public notary as being the equivalent of a certificate of succession[20]. In this case, an authentic declaration of the main plaintiff in and of two other witnesses in front of the public notary does not constitute a certificate of succession, but merely a declaration of assuming responsibility, due to the provisions of Italian substantive law concerning the effects of testamentary dispositions on legatees and their rights.

These two cases exemplify the practical difficulties that should be smoothed away in settling cross-border succession matters, after the implementation of the European Certificate of Succession.

5. Conclusions

The New Civil Cod does not significantly depart from the previous legislation in the manner of regulating the conflict of laws on succession matters with an extraneous element, and its provisions are consistent with the EU Regulation 650/2012. However, several procedural aspects will have to be addressed after the Regulation will come into force, to fully meet the general objectives of removing legal and administrative barriers that hamper citizens in the assertion of their rights in the context of a cross-border succession. Thus, the newly adopted Civil Procedure Code will have to be amended, so as to allow that a given succession is treated as a whole, subject to a single law and to a single authority. Other pieces of legislation will have to be amended as well, as to include the new legal instrument created by the Regulation, i.e. the European Certificate of Succession, such as Law 36/1995 regarding the public notaries and the notarial activity. It is too early to analyze court rulings

[19] Decision no. 4097/2003 of the Supreme Court of Justice, Civil and Intellectual Property Section, quoted from www.legalis.ro. by Dr. Dan Lupaşcu, Nicoleta Cristuş, in "Judiciary Decisions and Legislation in the Area of the International Private Law", ed. Wolkers Kluwer, 2009, Bucharest, Romania, p.41-46.

[20] Decision no. 503 from 31/01/2012 of the Supreme Court of Justice, Civil Section, quoted from www.legalis.ro.

in this subject-matter based on the NCC, due to the period of time involved in settling out a case, especially if it goes through all appeal stages. In most instances, the past rulings still have a persuasive effect and prove to be important study tools as to the established mode of deciding on a specific issue in cross-border successions.

Taking into account that most of the relevant legislation analyzed in this paper is very recent, and hence both doctrinal analysis and court decisions are scant or lacking entirely to this date, we hope that his paper will have started a debate as of the future developments in the conflict of laws regarding succession matters.

UNFORESEEABILITY ACCORDING TO THE REGULATIONS OF THE ROMANIAN CIVIL CODE. LEGAL NATURE

RADA POSTOLACHE[*]

Abstract
Unforseeability is regulated for the first time within the Romanian legal system, by the Civil Code, at article 1271, which integrates it to the effects of the contract between parties. On the basis of the legal norms included by the Civil Code, specialized doctrine and legal literature, the present study aims to carry out a monographic approach, aiming to determine the specific legal nature of unforseeability – considered exception from the "compulsory force" of a contract, cause authorized by law for adapting or terminating a contract, reason for revising the effects of contracts concluded, subject to the restrictive regime instituted by article 1271 of the Civil Code, having to respect the requirements of special law, when they exist; although unforseeability is a cause for adapting a contract, it is nonetheless subsidiary to the legal will of the parties. It must be stressed the usefulness of the present study with a monographic character, under the circumstances in which legal doctrine approaches unforseeability mainly from the perspective of its legal effects, which overcome here the theme of the study.

Key words: *pacta sunt servanta, adaptation of a contract, cause authorized by law, excessively onerous, legal regime.*

1.Introduction

Unacknowledged from A legal point of view, unforeseeability has been invoked throughout time on the basis of the general provisions of article 970 of the former Civil Code[1]. In the absence of clear common regulations, the legal literature in the field has been contradictory, prevailing the solutions which admitted unforeseeability as reason for revising the effects of the contracts concluded.

Unforeseeability is currently regulated by the Civil Code[2] in Book V ("Duties"), Title II ("Sources of duties"), Chapter I ("The contract"), Section 6 ("Effects of the contract"); article 1271 constitutes the general legal ground for unforeseeability, subject to analysis in the present work. Unforeseeability is integrated to the issue regarding the effects of a contract between the parties, its acceptance having the role to insure a balance of losses and benefits within a contractual legal relation.

Being placed in the area dedicated to the effects of a contract, but separately from the provisions regulating the "enforceability of a contract" (there are two articles in the Civil Code with clear distinct names: articles 1271 is named "Unforeseeability", whereas article 1270 is named "Enforceability"), unforeseeability has a legal nature subject to discussion: is it a cause integrated to

[*] Associate Professor, PhD, "Valahia" University of Târgovişte, Faculty of Law and Social-Political Sciences (radapostolache@yahoo.com).

[1] According to article 970 of the 1864 Civil Code, "Conventions must be accomplished in good faith. They are not compulsory only when it comes to their clear constituent elements, but also to all the consequences generated upon their duties by equity, customs or law". See for that matter also the commercial sentence of the Supreme Court of Justice, No. 21 of January 25th 1994, in Constantin Crişu, Nicorina Crişu Magraon, Ştefan Crişu, *Repertoriu de doctrină şi jurisprudenţă română*, volume I (Bucharest: Argessis Publ. House, 1995), 211. In this case, the court ruled that the plaintiff – the lessor – was entitled to demand a higher lease in relation to the change of circumstances – liberalization of prices and growth of inflation following the conclusion of the contract – being taken into account the provisions of article 970 of the Civil Code. This case involves basically a revision of the price, within a contract with successive execution, which was for 5 years.

[2] Law no. 287/2009 on the Civil Code, republished, Romanian Official Gazette, Part I, No. 505 from July 15th 2011, subsequently called the Civil Code.

the enforceability of a contract, is it an exception from the enforceability of a contract and thus a cause for adapting or terminating a contract?

Taking as point of reference the provisions of the Civil Code, articles 1270-1271, the legal literature and practice within the field, we aim to present unforeseeability as an exception from the "enforceability" of a contract and, consequently, as a cause authorized by law to lead to the adaptation or termination of a contract, having a legal character and being subsidiary to the legal will of the parties.

2. Definition and ground

2.1. Definition of unforeseeability

Unforeseeability signifies the significant change of the conditions which have been essential for a contract and established when it was concluded, when during the execution of the contract occurs an event independent from the deeds and will of the contracting parties, unpredictable and insurmountable by them, making the further execution of the contract extremely onerous for one of them[3].

There must be made a difference between unforeseeability and the legal institutions close to it (damage, force majeure, "alea" element, resolutive condition, unpredictable prejudice, indexing, guilty lack of execution of a contract, error), which are similar to it, either from the perspective of causes or from that of affects.

2.2. Ground of unforeseeability

By *lege lata* are synthetically used the criteria of cause and effect for the application of unforeseeability, without further explanations. In other words, it is mainly taken into account the "exceptional change of circumstances" considered at the conclusion of the contract, having as consequence an "excessively onerous" obligation and, eventually, an unbalance of the amounts of the money owed, which clearly and unfairly obliges the debtor to make such payment; the acceptance of unforeseeability has the aim of precisely "distributing the losses and benefits resulting from the change of circumstances in a fair way between the parties" or the termination of the contract, as the case may be [art. 1271 paragraph (2) letters a) and b)].

It is considered that the new regulations justify unforeseeability based on the idea of equity[4], dealing with the conflict either on favor of the debtor, when costs rise, or on the favor of the creditor, when the value of the amounts of the money which he has to receive back has excessively decreased.

We consider that unforeseeability concerns "contractual justice", imposing that, in the absence of specific contractual provisions, expenses and costs determined by an unpredictable situation[5] are not transferred only to one party's responsibility, this being eventually the idea of equity.

Irrespective of the ground on which is based, the acceptance of unforeseeability as reason for adapting or terminating a contract is conditioned by the compliance with the requests instituted by law, among which the expressed will of a party in regard to it or the so-called "negotiation in advance".

3. Legal nature of unforeseeability

3.1. Enforceability of a contract

The legal classification of unforseability needs first of all taking into account the principle of the enforceability of a contract – *pacta sunt servanda* – with its corollary *mutuus consensus, mutuus dissensus.*

---

[3] See for that matter Brânduşa Ştefănescu, *Dreptul comerţului internaţional*, *Note de curs* (Târgovişte: "Valahia" University,, Faculty of Law and Social-Political Sciences, 2004), 50.

[4] Paul Vasilescu, *Drept civil. Obligaţii. În reglementarea noului Cod civil*, (Bucharest: Hamangiu Publ. House, 2012), 457.

[5] According to the regulations of the Civil Code, article 1271 paragraph 2 letter b), "the unpredictable situation could not be reasonably considered at the moment when the contract was concluded".

a) Pacta sunt servanda. According to article 1270 of the Civil Code, (1) "The contract validly concluded has legal power between the contracting parties", legal provisions acknowledging that the principle of the enforceability[6] of a contract has a mandatory value (*pacta sunt servanda*). The Civil Code, just like former regulations - article 969 - assimilates the force of the contract to the force of law, in a metaphoric way, of course.

b) Mutuus consensus, mutuus dissensus. According to article 1270 paragraph (2) of the Civil Code, "A contract can be modified and terminated only with the agreement of the parties or for causes authorized by law". Thus, legal provisions reconfirm, just like the former law, the rule of the symmetry, or the principle *mutuus consensus, mutuus dissensus,* pointing out at the same time another basic effect of a contract, namely its irrevocability, which is integrated to its enforceability. Therefore, besides the will of the parties, only the causes authorized by law can exceptionally lead to the modification or termination of a contract.

Modification of a contract. Modification regards the expansion or restriction of the enforceability of a contract. Expansion signifies the prorogation of the effects of some legal acts, through the effect of law, beyond the term agreed by parties, for instance the prorogation at every 5 years or other periods of time of some lease contracts; an example is the hypothesis instituted by the provisions of article 1[7] of Law No. 17/1994 for the extension or renewal of the lease contracts concerning certain dwelling areas[8] or by the provisions of article 7 paragraph (1)[9] of Law No. 112/1995 for the regulation of the legal situation of certain buildings serving as dwellings and transferred to state property[10].

Unilateral denunciation of a contract. The provisions of article 1276 of the Civil Code – "Denunciation of a contract" – take into account the "right to denunciate the contract acknowledged to one of the parties", which constitutes the general legal ground of the "causes authorized by law" and refers at the same time to the special situations regulated by the Civil Code but also by other special normative acts, such as: termination of the lease contract due to the total or considerable loss of the profit [article 1818 paragraph (1) of the Civil Code]; termination of a lease contract within 30 days from the death of the tenant [article 1834 paragraph (1) of the Civil Code]; termination of the contract of mandate due to the death, incapacity or insolvency of the agent or principal [article 2030 letter c) of the Civil Code]; unilateral denunciation of a credit facility, for solid reasons regarding its beneficiary [article 2195 paragraph (1)].

Placed after the "enforceability" of a contract and doing nothing else but reconfirming it and acknowledging the will of the parties also in this field, "The provisions of the present article are applied in the absence of any other contrary convention" [article 1274 paragraph (4) of the Civil Code].

---

[6] Regarding the ground of the enforceability of a contract, see Cristina Zamşa, „Art. 1271 – Impreviziunea", in collective, *Noul Cod civil. Comentariu pe articole*, (Bucharest: C.H. Beck Publ. House, 2012), 1328.

[7] According to which, "Lease contracts, irrespective of the owner, regarding dwelling spaces serving as houses, subject to legal norms and lease according to Law No. 5/1973, but also dwelling spaces serving as socio-cultural-educational headquarters or which are used by political parties, labour unions and NGO-s, which are being enforced from the entrance in force of the current law, are extended for a period of 5 years, in the same conditions."

[8] Romanian Official Gazette, part I, No. 100 from April 18th 1994.

[9] According to which "Lease contracts concluded on the basis of Law No. 5/1973 on the management of dwelling areas and regulation of relations between owners and dwellers, for the apartments in the buildings provided for by article 1, are extended by law for a period of 5 years from the moment when the decision of the Commission provided for by article 15 last paragraph rests definitive".

[10] Romanian Official Gazette, part I, No. 279 from November 29th 1995.

3.2. Unforeseeability – exception from the "enforceability" of a contract

Specialized literature presents as another exception from pacta sunt servanda[11] the revision of the effects of some legal acts, due to the fact that the contractual balance has been affected, as a result of a considerable change of the circumstances considered when the contract was concluded – the so-called theory of unforeseeability.

In order to establish the exception from the principle *pacta sunt servanda* and, implicitly from *mutuus consensus, mutuus dissensus,* we will take into account the provisions dedicated to unforeseeability by the Civil Code, at article 1271. Being integrated to the effects of a contract between the parties, unforeseeability is distinctively regulated from the "enforceability" of a contract, instituted by article 1270 of the Civil Code. Did the lawmaker want to take unforeseeability out of the area of *pacta sunt servanda,* by providing an obvious exceptional character to it? Or, taking into account the specific character of unforeseeability, did the lawmaker want to provide a well defined legal regime to it, and a clear legal one at the same time – the provisions of article 1271?

According to article 1271 paragraph (1) of the Civil Code, "the parties are bound to fulfill their duties, even if such fulfillment has become more onerous, either due to the raise of the costs for one fulfilling his duty or due to the diminishment of the value of the counter-performance". In other words, law brings again in discussion the compulsory character of the clauses to which the parties of a contract commit themselves, even when the onerous character – one of the basic elements of a contract – changes. Yet, law takes into account here the raise of the costs for one fulfilling his own duty or, as the case may be, the diminishment of the value of the counter-performance, which are naturally integrated to the contractual risk[12], – which is dealt with by the debtor or creditor of the duty to be fulfilled, according to the case and in the absence of any contrary provision; any contract also involves risks, law accepting them within the limits of normality or "reasonability". In other words, "the affected party must deal with the risk of such changes of circumstances taking place".

The text above, which is quite particular, was necessary. Being placed in the area of unforeseeability, it has the role of separating the elements concerning contractual risk ("the fulfillment of duties has become more onerous"), which the lawmaker obviously leaves in the area of the enforceability of a contract, from the elements concerning unforeseeability, characterized by a fulfillment of duties which has become "excessively onerous".

According to article 1271 paragraph (2) of the Civil Code, "If the fulfillment of a contract has become excessively onerous, due to an exceptional change of circumstances which would obviously and unfairly force the debtor to pay back the due amount of money, the court can rule: a) the adaptation of the contract, so as to distribute the losses and benefits resulting from the changes of circumstances fairly between the parties, b) the termination of the contract, at the moment and in the conditions that it establishes".

Unlike the provisions of article 1271 paragraph (1), the lawmaker institutes above unforeseeability - exception from *pacta sunt servanda* – in the given conditions, by providing a well defined legal regime to it. By maintaining the contract in the area of changes, unlike the previous hypothesis, the lawmaker takes here into account an exceptional change of circumstances, capable to make the fulfillment of a contract excessively onerous, while forcing the debtor to give back the due amount of money would become clearly unfair. In other terms, in order to characterize a change as unforeseeability and not as a mere contractual risk, the lawmaker establishes a threshold, a limit, which are characterized from the perspective of cause and effect: exceptional changes, making the

[11] See for that matter: Gabriel Boroi, Liviu Stănciulescu, *quoted works*, 151; T.V. Rădulescu, „Art. 1271 – Impreviziunea", in collective, *Noul cod civil. Comentarii, doctrină, jurisprudenţă*, volume I, (Bucharest: Hamangiu Publ. House, Bucharest, 2012), 586.

[12] The relation between risk and unforeseeability is not precise, the change of circumstances being excluded form the area of risks, amendments being determined by interpreting the convention, according to the nature of the contract. See for that matter the commercial sentence of the Supreme Court of Justice, No. 1122 from February 21st 2003.

fulfillment of a contract excessively onerous and creating unbalance between the due counter-performances, making so that a party is excessively favored or "clearly and unfairly forcing the debtor to give back the due amount of money", according to law.

Although article 1271 paragraphs (2)-(3) of the Civil Code only refers to the debtor of the duty to be fulfilled, due to an omission made by the lawmaker, the unfairness of fulfilling the duty can concern any of the parties of the "excessively onerous" contract, as it also happens in the hypothesis provided for by article 1271 paragraph (1) of the Civil Code; the "excessively onerous" character concerns both the raise of the costs for one party fulfilling his duty, but also the diminishment of the value of the counter-performance. Just as a debtor cannot be forced to accept a counter-performance which has become excessively onerous, the creditor cannot be forced either to accept a counter-performance which has become moderate, due to the exceptional change of the circumstances considered when the contract was concluded.

The two texts presented above are well harmonized, both having the role to distinguish between the maintenance of the effects of a contract if a normal or natural change of the circumstances considered when concluding it occurs and the modification of the effects of a contract, including its termination, when the new circumstances have an exceptional character.

In fact, our statements do nothing but reinforcing the fundamental principle of law - „*pacta sunt servanda*", if „*rebus sic stantibus*", on which the mechanism of unforeseeability is based.

In the form it has been regulated, unforeseeability constitutes, in the given circumstances, an exception from the enforceability of a contract, which is well characterized from a legal point of view and aims to bring back the balance between the counter-performances owed by the contracting parties.

There are however authors considering that the involvement of a judge in a contract, by using unforeseeability, "is not an assault to the principle regarding the enforceability of a contract, but on the contrary, is capable to render full force and efficiency to it"[13].

3.3. Unforeseeability – cause authorized by law for adapting/terminating a contract

Instituted for the aims of contractual justice and the idea of equity, unforeseeability is only described by law as "cause authorized by law", having as effect the adaptation or termination of a contract. Before being a cause authorized by law, unforeseeability can be assigned, as a rule, to "conventional mechanisms", its scope being contractual.

On the ground mentioned above, the parties themselves can negotiate right at the conclusion of the contract an unforeseeability clause, integrated to the contract and basically functional, subject to the principle *pacta sunt servanda.* From this perspective, specialized literature mentions unforeseeability as a cause for adapting the value of a contract[14] or, according to us, as an application of the provisions of article 1270 paragraph (2) of the Civil Code, hypothesis I ("a contract is modified or terminated only with the agreement of the parties…")

In our opinion, the parties must consider the adaptation of a contract only when relevant changes take place, culminating either with "the raise of the costs of one's obligation or the diminishment of the counter-performance"; in other words they must consider a certain result, briefly described as "excessively onerous", otherwise the unforeseeability caluse can be interpeted and confounded with other similar ones, for instance the indexing clause[15].

---

[13] See for that matter Liviu Pop, *Tratat de drept civil. Obligaţiile*, volume II (Bucharest: Universul Juridic Publ. House, 2009), 503.

[14] Together with: clause of the customer befitting from more advantages; clause of the competitive offer; clause of negotiation of price; clause of the first refuse; clause of the first and last refuse. See for that matter B. Ştefănescu, *quoted works,* 50.

[15] When parties inserted in their contract *the indexation clause*, integrated to the "clauses for *maintaining* the value of the contract", unforeseeability does not operate, such clauses being subject to distinct rules. Being stipulated quite often, the indexation clause provides that a price can vary according to the fluctuations of an index or agreed

The parties have the possibility above even after the conclusion of the contract, when the exceptional change of circumstances has already occurred, negotiation concerning the hypothesis instituted at article 1271 paragraph (3) letter d) of the Civil Code – "the debtor has attempted in reasonable terms and in good faith to negotiate the reasonable and fair adaptation of the contract". Negotiation refers here to the adaptation of the contract, according to the circumstances created. Moreover, law itself speaks about the unforeseeability of conventional mechanisms, the negotiation attempt being a condition prior to addressing the court.

The expression "cause authorized by law for adapting/terminating a contract" is an application of the provisions of article 1270 paragraph (2) of the Civil Code, hypothesis II ["a contract can be modified or terminated (…) for causes authorized by law"], corroborated with the provisions of article 1271 paragraphs (2) and (3) letter d) of the Civil Code.

Unforeseeability – "cause authorized by law for adapting/terminating a contract" operates if the following conditions provided for by law are met:

a) an exceptional change of the circumstances existing at the conclusion of the contract occurs.

b) there has been an attempt to negotiate the reasonable and fair adaptation of the contract, in a reasonable term and in good faith. This second condition, which is distinct from the exceptional change of circumstances, places the adaptation of the contract under the will of the parties, providing to the legal revision of the contract only a *subsidiary* character.

Generally speaking, unforeseeability is a cause authorized by law for adapting/terminating a contract, with a subsidiary character, operating in the presence of conditions clearly provided for by law.

3.4. The legal character of unforeseeability – cause authorized by law

If when it comes to the unforeseeability clause negotiated by parties, the court appealed can only take act of the will of the parties, by interpreting it, when it comes to unforeseeability regarded as cause authorized by law, the court appealed must establish the exceptional character of the change of circumstances, taking into account the legal criteria, mentioned at article 1271 paragraph (3) of the Civil Code ant to order the adaptation or termination of the contract, in relation to their gravity.

According to law, any change must be out of the will of the parties. Law does not establish reference points for the change in question, these being the product of the specialized literature, which is different from a case to another.

Unforeseeability has a judiciary character only when the attempt to negotiate the reasonable and fair adaptation of the contract did not succeed and the parties could not reach an agreement about it.

4. Conclusions

The Civil Code institutes unforeseeability, for the first time in the Romanian legal system, readjusting the solutions proposed in legal and contractual practice or by legal doctrine.

Simplified and essential, the provisions of article 1271 of the Civil Code constitute the general ground and the substantial legal field for unforeseeability, having the role of shedding light upon its legal nature and facilitating at the same time its separation from other similar legal institutions. By regulating some "applications" of unforeseeability, both the Civil Code and some special provisions do nothing but enforcing and reconfirming its specific character.

---

benchmark, for instance the oil price; the enforcement of such clause involves a certain automatism, being easier to do than *legally revising a contract* and leading to the avoidance of conflicts. When it comes to indexation, parties can revise the contract, in certain circumstances and according to the existing clause, therefore abiding by the enforceability of the contract. If appealed, the court applies the provisions of the contract, abiding by its enforceability.

The provisions of article 1271 of the Civil Code concern unforeseeability – seen as ground for judicial revision of a contract – establishing the conditions in which is applied and making an exception from it.

By "obligating" the parties to attempt negotiation, law does nothing else but enforcing the autonomy of the will expressed by parties, in the spirit of principles *pacta sunt servanda* and *mutuus consensus, mutuus dissensus;* the reasonable and equitable adaptation of a contract, as well as its legal termination, as the case may be, constitute only a subsidiary or exceptional measure. Before being a cause authorized by law, unforeseeability is subject, as a general rule, to "conventional mechanisms", its scope being contractual.

Finally, unforeseeability is "a cause authorized by law" for *subsidiarily* adapting a contract, but also for terminating it, at the moment when, as a result of the contractual balance being broken, the parties could not reach an agreement or the court ruled for an exception from the rule *pacta sunt servanda* to be applied.

THE ROLE OF THE ROMANIAN NATIONAL BANK IN APPLYING THE BANKRUPTCY PROCEDURE OF THE BANKING CREDIT INSTITUTIONS

RARES-SEBASTIAN PUIU-NAN*

Abstract
The article examines the role of the National Bank of Romania in the insolvency procedure of the banking institutions. The most important regulations regarding this issue consist in the Government's Order 10/2004 regarding the bankruptcy of credit institutions. According to it, the following officials are to be appointed in the insolvency procedure of banking institutions: insolvency courts of justice, insolvency judge and liquidator. Although the National Bank of Romania is not considered a participant, it has a very important role in this procedure.
My article presents in the beginning the Status of the National Bank of Romania. The next chapters are dedicated to the role of the National Bank of Romania in insolvency: withdrawal of the operating license of the credit institution, taking part in the insolvency procedure as an active participant or as a creditor side, appointing and dismissing of the interim administrator, mandatory or advisory opinion, role of information.

Key-words: *insolvency, National Bank of Romania, Banking Credit Institutions, judge, liquidator.*

Introduction

My paper work is about the role of the Romanian National Bank in the bankruptcy procedure of the banking credit institutions participants in insolvency.

The banking credit companies have a very important role in the economy of a nation. They represent the force, the "engine" that sustains the economy, the bases for the future development and a source of stability. Any masive decline of one the banking credit companies could produce a "chain reaction" and could compromise the national economy. For these reasons, based on legal previsions, it is extremely important to avoid the bankrupcy of such companies and its consequencies. Thus, it is very important for each legal system to adopt a clear and efficient legislation in this matter. It is also important to create and maintain a mechanism to supervise and prevent the insolvency of the banking credit companies.

The purpose of this paper is to realize a detailed analysis of the contribution of Romanian National Bank in applying the bankruptcy procedure of the banking credit institutions , its duties and powers. The analysis of this issue will help the persons involved in such procedures or which are about to be involved to have a concrete role of RNB in insolvency.

This issue, based on present regulation, tries to synthesize the role and the duties of the RNB in the insolvency procedure of the banking credit institutions.

Paper content

Chapter 1: General Issues. History

Starting with the second half of the 19th century, the specialty literature[1] discussed the development of the Romanian economy on modern bases. The dynamics of the economy strongly

* Assistant Lecturer, PhD candidate, Faculty of Law, "Nicolae Titulescu" University, Bucharest (e-mail: raryseb@gmail.com). The study is elaborated within the frame of the project "CERDOCT – PhD scholarships to support doctoral research in technical and human areas, in environmental health, in national, European and global legislation with eco-economic and socio-economic impact", ID 79073, under the observance of Professor St. D. Carpenaru and Conf. Vasile Nemes.

encouraged credit organization which was weakly developed until then. In this period there was a group of money lenders within which there were five categories: the banks, the bankers, the exchange agencies, the lenders and the money changers. Their activity had a hard time developing because of the lack of adequate instruments and of modern regulations in the field.

To eliminate these flaws and to stop the financial chaos of that time, on April 10th 1867 a law was adopted on "the incorporation of a new national financial system and the manufacture of the national currency" by means of which the financial system of the Latin Financial Union was introduced, on grounds of the gold and silver bimetallism that promulgated national sovereignty on the currency. Yet, the war of 1877 hindered the enforcement of this law provisions, the government being obliged to issue mortgage notes for supplying for the lack of cash and treasury bills[2].

Another essential issue of the development of the financial system of that period consisted in the creation of an issue institute. The idea of creating an issue institute was formulated ever since 1832 and resumed in 1848. In 1857 this idea was put into practice by the incorporation of the National Bank of Moldavia with the assistance of lord Al. I. Cuza. Later, in 1860, I. Brătianu submitted for the first time to the Parliament a bill to this end. All these trials were unsuccessful in that period because of the opponents to such an idea.

In February 1880, the govern presided by I. Brătianu submitted to the Parliament a bill for the incorporation of a discount, circulation and issue bank, referred to as "The National Bank of Romania", law promulgated on April 17th 1880. Among the main causes that determined the incorporation of the National Bank of Romania, we mention:

-the need, for new creating class – the bourgeoisie, to procure "cheap money" to be able to develop;

-the needs of the state that had to resort to foreign capital, in the absence of a national bank to support in difficult periods and which might act as intermediary between the foreign capital and the internal market;

-the need to put into practice the financial reform that the war interrupted and created further difficulties by issuing mortgage notes that the further issue authority had to withdraw;

-the demands in the agricultural field that suffered great losses because of the lack of a discount and issue authority;

-the need to state the economic independence, by creating a national institute of issuance, imposed by the conquest of politic independence after the Independence War of 1877.

Second Chapter: The Status of the National Bank of Romania

The National Bank of Romania is governed by a special regulation, Law no. 312/2004 on the status of the National Bank of Romania and benefits from well featured legal status and identity, which firmly distinguishes it from the credit institutions. According to Law no. 312/2004, art. 1 paragraph 1, the National Bank of Romania is the central bank of Romania and it is a legal entity. Its structure comprises a main head office in Bucharest and it may have branches and agencies in the capital city as well as in other cities in the country. The main objective of the National Bank of Romania consists of the insurance and the maintenance of the prices, and finally of financial stability[3].

[1] D.D. Saguna, C.F. Donoaica, *Banking and Financial Law,* Prodarcadia Publishing House, Bucharest, 1994, p.37-42.

[2] I. Bostan, M. Avram, O. Filimon, *Financial and Banking Law,* Universitaria Publishing House, Craiova, 2010, p. 182.

[3] R. Postolache, *Banking Law,* Cartea Universitară Publishing House, Bucharest, 2006, p.28.

The National Bank of Romania is a public law legal entity, an independent public institution; in accomplishing its tasks and attributions, the National Bank of Romania and the members of the management do not request nor receive instructions from the public institutions or other institutions or authority. The National Bank of Romania is a state capital institution, its patrimony belonging to the public field of state property.

According to the economic doctrine[4], the independence of the central bank is approached from two points of view:

-relative independence, taking into account that its activity is subordinated to the executive authority;

-absolute independence, the central bank being coordinated by the legislature, but the financial policy is accomplished within the state macroeconomic wide frame.

It is considered that[5] a bank is independent if its main objective is to ensure the stability of the prices, benefiting from the full discretion in using the specific instruments for reaching this goal, if needed even against the will of the executive authority. Even if regulated, the law includes issues that might lead to the conclusion of partial autonomy:

- Shared capital entirely belonging to the state;
- Its members are appointed by the Parliament;
- Obligation of the National Romanian Bank governor to present a yearly report to the Parliament concerning the financial statements and the credit situation;
- Profit distribution
- The position of the National Bank of Romania as an agent on the account of the state and the circumstances it acts on the behalf of the state, according to the law;
- The National Bank of Romania supports the general economic policy of the State without prejudicing its fundamental goal concerning the insurance and the maintenance of prices stability" (art. 2 paragraph 3) and consequently, the natural question – how can an entity (the National Bank of Romania) support the general economic policy of the state without affecting its independence ?

The independence does not exclude the collaboration or the cooperation, regulated by art. 3 and 4 of the Law.

The main duties of the National Bank of Romania are:

a) drafting and applying the financial policies and the exchange rate policy;

b) authorization, regulation and prudential supervision of the credit institutions, promotion and monitoring the smooth operation of the payment systems to ensure financial stability;

c) issuing bank notes and coins as legal payment means in Romania;

d) establishing the financial regime and monitoring its observance;

e) administration of the international reserves of Romania.

The National Bank of Romania supports the general economic policy of the state, without prejudicing the fulfillment of the fundamental goal concerning the insurance and the maintenance of the prices stability.

As I previously mentioned, in fulfilling its attributions the National Bank of Romania and the members of the management body will not demand nor receive instructions from the public authorities or from another institution or authority. Any bill of the central public authorities on the fields the National Bank of Romania has attributions in shall be adopted after previously requesting the opinion of the National Bank of Romania. The opinion shall be provided within maximum 30 days from the request.

For its own needs, the National Bank of Romania drafts studies and analyses on the currency, the exchange rate, the credit and the payment systems' operations and the credit institutions.

To observe the undertaken obligations arising out of the agreements, treaties, conventions Romania is part of the National Bank of Romania collaborates with the authority in the country and abroad, by providing information, adopting adequate measures or in any other way compatible to the law.

The National Bank of Romania plays a major role in the bankruptcy proceedings of credit institutions, as I shall further present.

Third Chapter: The Role of the National Bank of Romania in the Bankruptcy Procedure of the Bank Credit Institutions

According to the provisions of art. 3 of the Government Order no. 10/2004, the authorities enforcing the bankruptcy procedure to the credit institutions are:

•the law courts

•the bankruptcy judge and

•the liquidator

Even if the Government Order no. 10/2004 does not include the National Bank of Romania among the participants in the bankruptcy procedure of the credit institutions, the National Bank of Romania has various attributions and roles in the bankruptcy procedure of the bank credit institutions, namely:

- May determine the opening of the bankruptcy procedure, by withdrawing the operating license of the credit institutions;
- May have an active procedural role in the bankruptcy procedure, being able to file the proceedings' opening petition, or, as a creditor, being entitled to take part in the distribution of the amounts obtained from the winding up;
- May play an active role and may have duties within the procedure by:
  - Appointing or revoking an intermarry administrator;
  - Approving the offers of assets purchase;
  - transfer of the available funds of the bankrupt credit institution in the accounts opened by the liquidator;
- may be summoned within the bankruptcy procedure;
- might issue different opinions within the procedure;
- information attributions

1. The National Bank of Romania is entitled to withdraw the operating license of the credit institution, according to the legal provisions, as a consequence of the impossibility of financial adjustment of a credit institution, whose consequence is the determined insolvency of the credit institution (art. 2 letter h).

2.a. The law (lato sensu) acknowledges the active procedural quality of the National Bank of Romania, as:

a) this may file the petition of opening the bankruptcy procedure of a credit institution. Thus, according to art.11, *The Bankruptcy Procedure starts on the grounds of a petition filed by the debtor credit institutions or by their Creditors or by the National Bank of Romania and according to* art. 14, paragraphs 1 and 2, *the National Bank of Romania, as banking supervision authority, will file a petition for opening the bankruptcy procedure against the credit institutions in one of the cases provided in art. 2 paragraph (1) letter h). The petition of the National Bank of Romania will be accompanied by the Decision of the Board of Directors of the National Romanian Bank of Romania*

to withdraw the operating license of that particular credit institution and by any other necessary actions to justify the deed the Court was informed by.

b) might notify the bankruptcy judge, according to art. 41 of the Government Order no.10/2004, so that this one orders that a part of the liabilities of the insolvent credit institution is borne by the members of the Board of Directors, censors, financial auditors, execution personnel and/or having control duties, who held those particular positions 3 years before the opening the procedure, provided that they contributed to the insolvency by one of the facts mentioned in art.39.

2.b. The National Bank of Romania may have the quality of creditor within the procedure and may take part in the distribution of the funds obtained from the winding up. Thus, according to art. 38 of the Government Order 10/2004:

In case of bankruptcy, the receivables shall be paid in lei, as it follows:

1. the taxes, stamp duties and any other expenses afferent to the bankruptcy procedure, including the necessary expenses for preserving and administrating the assets of the debtor credit institution patrimony and also the payment of the employed persons remuneration according to the law, including the liquidator.

2. the receivables resulted from the guaranteed deposits, including those of the Bank Deposit Guarantee Fund resulted from the payment of the indemnities to the guaranteed depositors and/or the financing, including by the issuance of securities, of certain operations that involved the transfer of guaranteed deposits of the debtor credit institution, as well as of the receivables arisen out of the employment relationships maximum 6 months prior to the procedure opening;

3. the receivables resulting from the activity of the debtor after the opening of the procedure;

4. budget receivables, receivables of the Bank Deposit Guarantee Fund, others than those at point 2, and also the receivables of the National Bank of Romania resulting of the credits granted by it to the credit institution ;

5. the receivables resulting from the treasury operations, inter-banking operations, clients operations, securities operations and other banking operations, and those resulted from products delivery, services or other works execution, rents and other chirographer debts etc.

3.a The National Bank of Romania appoints (and revokes, if applicable) an intermarry administrator – natural personal or legal entity to take conservatory measures to prevent the diminishing of the assets and the increase of the liabilities of the credit institution, from the moment of filing a petition to open the bankruptcy procedure until the appointment of the liquidator. Thus, according to art. 15 of the Government's Decision 10/2004:

(1) *After registering the petition filed according to art. 12, 13 and 14, the bankruptcy judge shall immediately notify it to the parties mentioned in these articles.*

(2) The National Bank of Romania shall appoint an intermarry administrator and shall establish his/her remuneration when submitting its demand or when receiving the notification mentioned in paragraph (1). If the credit institution is under a special administration procedure, the attributions of the intermarry administrator are exerted by the special administrator, according to the herein Order.

(4) If the credit institution was not under a special administration, the attributions of the Board of Directors of the debtor credit institution are duly suspended when appointing the temporary administrator until the expiry of his/her mandate. The Board of Directors may contest the filed petition, according to art. 13 and 14 also during the suspension.

As a consequence of the principle of the equability of the judicial deeds, the temporary administrator appointed by the National Bank of Romania, may be revoked by the National Bank of Romania.

3.b The National Bank of Romania approves the offers received by the liquidator from other credit institutions considered eligible by the National Bank of Romania to take part in the transactions for purchasing assets and undertaking liabilities. Thus, according to art. 28 of the Government Order 10/2004, after the bankruptcy judge approved the winding up procedure provided at art. 5 letter n) point1, the liquidator immediately organizes, provided that the approved winding up method stipulates it, the negotiation on the assets purchase and the undertaking of liabilities; this way the liquidator organizes an information session with all the credit institutions considered eligible on grounds of the previous evaluation of the National Bank of Romania that shall take into account the effects of the transaction on the financial statements of the purchaser credit institution and of its ability to observe the prudential requirements, in order to present the conditions and the terms of the negotiation.

As soon as possible the liquidator analyses the received offers and chooses according to the lowest cost principle, with the approval of the National Bank of Romania that shall take into account the criteria provided in art. 28, the offer of the tendering credit institution / institutions with which it is going to conclude the assets purchase and liabilities undertaking convention.

3.c The National Bank of Romania has the role of transferring in the bankrupt credit institution accounts opened by the liquidator all the availabilities of the credit institutions recorded in its registers. Thus, according to the stipulations of art. 5 of the Government's Order no. 10/2004, when the legal decision on the opening of the bankruptcy proceedings is received, it shall openwith a bank, Romanian legal entity or a branch of a foreign bank licensed to operate on the Romanian territory, two accounts, one in lei and another one in foreign currency, mentioning bankrupt credit institution account type, with exclusive right of disposal in the interest of the bankruptcy proceedings. In the bankrupt credit institution type accounts the amounts existing in other accounts of other financial – banking institutions shall be transferred at the order of the liquidator. The liquidator shall immediately inform the National Bank of Romania on the name of the commercial bank and of the accounts opened there and afterwards the National Bank of Romania shall immediately transfer in these accounts the available funds of the credit institution in its records. The operations of the bankrupt credit institution shall be still carried out through these accounts.

4. The National Bank of Romania may be summoned for:

a) the ruling of the last appeal if the National Bank of Romania filed the petition for the opening of the proceedings, it shall be summoned according to the conditions of art. 86 - 94 of the Civil Procedure Code.

Thus, according to art. 4 paragraph 2 of the Government's Order no. 10/2004, *the last appeal shall be ruled within 15 days from the registration of the case at the Court of Appeal. The parties shall be summoned observing the conditions of art. 86 – 94 of the Civil Procedure Code for the Bank Deposit Guarantee Fund and for the liquidator and by advertising in two national newspapers for the other parties. When the National Bank of Romania files for the start of the proceedings, it shall be summoned in terms of art. 86 - 94 of the Civil Procedure Code.*

b) Solution of the challenge drafted by the representative of the shareholders of the debtor credit institution and the creditors' committee against the measures adopted by the liquidator

In this case, according to art. 8 of the Government's Order no. 10/2004, *the bankruptcy judge shall rule the challenge within 10 days from its registration at the Counsel Chamber, summoning the challenger party and the liquidator and, if appropriate, being entitled to suspend the execution of the challenged measure. The bankruptcy judge shall also summon the National Bank of Romania if it filed the statement of claim.*

5. The National Bank of Romania provides a mandatory or an advisory opinion during the proceedings.

a) Mandatory opinion

If the petition of opening the proceedings is filed by the debtor credit institution or by its creditors it must be accompanied by a previous endorsement of NBR to be registered at the Court of Law.

On the grounds of art.12 paragraph.2, *In advance, the debtor credit institution must request the National Bank of Romania, within 10 days from the date the insolvency, a prior approval for filing the petition of bankruptcy proceedings opening.*

According art.13 paragraph 2, *the creditor shall not be entitled to file the petition without proving the prior approval of the National Bank of Romania of filing the petition of bankruptcy proceedings opening. The National Bank of Romania passes a verdict on the creditor's petition within 10 days from its reception making a motivated decision.*

The National Bank of Romania is entitled to reject the petition of the debtor credit institution or of its creditors if it considers that it is not insolvent as per the definition of art. 2 paragraph (1) letter h) point 1 or /and 2. In these circumstances, the National Bank of Romania is entitled to decide the creation of special administration if the legal provisions for the creation of this procedure are complied with. The decision of the National Bank of Romania to approve or reject the petition shall be motivated and it may be challenged in court observing the stipulations of the Emergency Government's Order no. 99/2006, approved with additions and amendments by Law no. 227/2007, with further additions and amendments.

b) Advisory Opinion

The National Bank of Romania must express its point of view whenever requested by the bankruptcy judge or by the liquidator, either by expressing a point of view or providing information whenever it considers appropriate during the proceedings. Thus, according to art. 6 of the Government's Order 10/2004, *in the execution of their attributions, the bankruptcy judge and the liquidator and entitled to request the point of view of the National Bank of Romania, as prudential supervision authority, on any prudential issue. During the bankruptcy proceedings the National Bank of Romania may send its point of view or other information considered relevant to the bankruptcy judge and to the liquidator whenever necessary.*

6. National Bank of Romania has information attributions:

a) of a bank supervision authority from a different country on the opening of the bankruptcy proceedings of the credit institution having branches opened in that country. According to art. 16 paragraph 5 and 6 of the Government's Order 10/2004,

(5) *If the credit institution has branches in other countries, the National Bank of Romania shall immediately inform the bank supervision authorities of the country where the branch is located on the opening of the bankruptcy proceedings according to the stipulations of this order.*

(6) The bankruptcy judge shall inform the National Bank of Romania on the opening of the bankruptcy proceedings of the debtor credit institution the day of its passing by fax, e-mail or phone. The National Bank of Romania shall immediately close, after the settlement of the payments of that day according to the applicable regulations, the accounts of the debtor credit institution opened as per its records. The available funds shall be transferred in the accounts of bankrupt credit institution type opened at a commercial bank according to art. 5.

b) on the bankruptcy proceedings of credit institutions, Romanian legal entities and their branches of other member states. This way, the competent court which is the only authority

authorized to decide the enforcement of bankruptcy proceedings of a credit institution, Romanian legal entity, including its branches of other member states, shall immediately inform by means of the National Bank of Romania the competent authorities of the host member states on the decision to open the bankruptcy proceedings, including on the practical effects such procedure may have.

c) on the bankruptcy proceeding of a credit institution and its Romanian branch when the credit institution has its registered office in a different state than the member state and it has branches opened on the territory of other member states as well

The National Bank of Romania shall immediately inform the competent authorities of the host member states on the reorganization measures or on the decision to open the liquidation proceedings adopted in non member state related to the credit institution and its Romanian branch, when the credit institution has the registered office in a different state than a member state and it has branches opened on the territory of other member states as well.

The notification shall be immediately after the National Bank of Romania withdrew the branch operating license or as soon as it is informed on the adoption of reorganization measures of the branch. The notification shall also mention the fact that the operating license of the Romanian branch was withdrawn.

Fourth Chapter: Conclusions

Following the accession of Romania to the European Union, the National Bank of Romania, focused more on the regulations that cover the quality management of the banks, on the fulfillment of every banking company of some key indicators in banking activity, on the internal control performed in each banking company and less on the individual banking supervision.

Consequently, the National Bank intervenes indirectly in the business of the banking companies, through policies and general regulations, particularly in the monetary field, so the banks have to adapt their activities and capital according to the general regulations stated by the National Bank of Romania.

Therefore, the National Bank of Romania changed the responsibility to the management of the banking companies, so that the banks are obliged to transpose these general regulations in policies and in the internal rules of each banking company.

By means of the role and duties which have been conferred, the National Bank of Romania has the responsibility to ensure stability of the banking circuit, to supervise the credit institutions and to prevent their decline. If this purpose could not be achieved, the only solution is to open bankruptcy of the credit institutions, the Law conferring among others, the capacity to pursue the proceedings.

We consider the solvency and liquidity indicators, calculated by the banking companies according to NBR Regulation no. 1/2005 regarding the payment systems which ensure funds clearing, published in Official Gazette no. 265/2005, republished in 2007, in the Official Gazette no. 596/2007, respectively NBR Regulation no. 24/2009 on the liquidation of credit institutions, published in the Official Gazette nr.891/2009.

Even if at the European level there is a unity approach on the insolvency of the credit institutions, there is no effective cooperation between national authorities in case of financial crises of credit institutions operating cross borders. We believe that a first step to this end would be the creation of responsibility for serious lack of supervision for the national supervision authorities that may endanger the European financial market by their negligence[6].

THE PRE-CONTRACT OBLIGATIONS REGARDING THE FRANCHISING AGREEMENT

DAN-ALEXANDRU SITARU[*]

Abstract

The current paper puts into context the Government Ordinance no. 52/1997 regarding franchising with the new concepts of the Civil Code. Thus, under the old Civil Code there were no specific regulations that could be applied to a pre-contractual obligation of the parties. During any negotiation, because the parties sent each other a series of offers, counter offers, and in the end decided whether to agree or not, some parts of a professional secret, know-how, or any other important information for one or both might be revealed to the other. Under international laws, such as the one in France, or by using internationally established unwritten law, such as the Franchising Model Contract by the International Chamber of Commerce and Arbitration in Paris, such a disclosure of important or secret information is protected from future unauthorized usage by any party or affiliate if the contract is not signed. In the view of the new Civil Code, this stage in the development of an agreement, not yet binding, is now regulated and protected.

Keywords: *franchising, franchisor, franchisee, business model, professional secret*

Introduction

The new civil code did not also include to its regulations the franchising agreement. Despite the same includes most of the civil and commercial agreements, the franchising agreement remains specifically regulated by the Govern Ordinance no. 52/1997 regarding the legal treatment of the franchising.

Under the law the franchising is a trading system based on continued collaboration between individuals or legal entities that are financially independent, by which a person named franchisor grants another person named beneficiary the right to operate or to develop a business, a product, a technology, or a service[1].

By encompassing the particularities set by the lawmaker the franchising may be comprehensively defined as the economic and legal operation by which a professional trader, the franchisor, being an individual or a legal entity, who is holding the title over tangible and/or intangible assets and the title over a successful business, allows another person or several persons, the franchisees (beneficiaries), to manufacture goods or trade them under their mark, using the know-how developed by the same, within a franchise network wherein the parties are independent from a legal perspective, but are operating the franchisable concept in a homogenous and collective manner.

As we stated in previous works[2] the conclusion of the franchising agreement involves going through three stages. The first of them, which also represents the subject matter of our study, is the pre-contract stage. The same is followed by the contract or proper stage, and after the expiry of the term set by the parties, or as result of a unilateral termination or of a cessation by fault of the agreement, respectively, for a period of maximum 5 years, the parties are bound by certain specific

obligations such as the non-competition one. Such period subsequent to the cessation of the effects of the agreement is the post-contract stage.

Contents

1. The contents of the pre-contract stage

Based on the franchisor's right to choose and select their beneficiaries, they need to first conduct a market survey, choose the franchising method and form they shall apply within the new territory, check the competence and the professionalism of the potential future partners, all in accordance with the already existing franchising network, or in order to create a new one. For such issues to be possible to apply the franchisor needs to know the economic, social, and legal situation within the contemplated geographical area according to their requirements and with their economic interest. However, quite often, the franchisor would approach a beneficiary precisely in order to be able to enter a market where, on their own and directly, they could not have access.

Broadly, the pre-contract period consists of determining such elements, which are of essence for developing a franchising network[3], and which confer the importance and the necessity for such period. Such period is one of high legal importance as regards the rights and the obligations of the parties, being the stage of essence the future franchising agreement shall be built upon. This is the period when the information exchange occurs that shall, on one hand, allow the franchisor choose the best partner to entrust with the secret of the franchisable concept, and on the other hand allow the potential beneficiary (we shall call them so as they only gain the legal status of a beneficiary at the time the agreement is signed) check the reliability, the profitability, and the accuracy of the franchise network they are going to join, assess whether they could materially and professionally meet the requirements imposed by the franchisor, etc.

Summarising, both parties need to examine the convenience of the business they wish to conclude, and following the negotiations become convinced that they are making a choice being fully aware, i.e. to lawfully form their consent[4].

2. The obligation to inform

The key element during this phase is the one of the mutual obligation to inform. It arises from the article 2 paragraph 1 in the G.O. no. 52/1997, wherein it is stated that the purpose of the pre-contract phase is to allow the parties to form a decision to collaborate. It is common for all the franchise types and methods set out, being an obligation with a general nature. We shall discuss such obligation, and we shall examine its legal nature, its contents, and its penalty, each in its turn.

2.1. The legal nature of the obligation

The New Civil Code sets within the article 1,183 paragraph 1 that the parties have the freedom to initiate, carry on, and break the negotiations, and they may not be held liable for the failure of the same. Therefore, any legal act is preceded by a negotiation wherein the elements of the offer are debated and may be agreed upon or not by the parties involved. A significant part of such

[3] For the definition of the franchising network please refer to Stanciu. D. Cărpenaru, *Tratat de drept comercial român* (Romanian Commercial Law Treaty), Ed. Universul Juridic, 2012, p. 584; Liviu Stănciulescu, VasileNemeş, *Dreptul contractelor civile şi comerciale în reglementarea noului Cod Civil* (The Civil and Commercial Contract Law as Regulated by the New Civil Code), Ed. Hamangiu, 2013, p. 593.

[4] Article 1,182 in the Civil Code, paragraph (1) The agreement is concluded by negotiation between the parties, or by the acceptance without reservations of an offer to contract. Paragraph (2) It is sufficient for the parties to agree upon the elements of essence of the agreement even though certain secondary elements are left to be agreed upon subsequently, or the determining of the same is entrusted to another person.

negotiation is represented by the mutual informing the parties are carrying on as regards their person, the object of the future act, and the incumbent rights and obligations, respectively.

The article 2 paragraph 2 and 3 in the G.O. no. 52/1997 sets the legal nature and the contents of the prior informing obligation that is especially incumbent on the franchisor. Unlike the Deontological Code of the French Franchise Federation, which was the inspiration source for the Romanian lawmaker, such article in the Romanian law did not also take over a final paragraph in the Code that expressly provided for that the list and the listing included by the paragraph 3 are not exhaustive. This is where the first issue arises from when determining the legal nature of the obligation to inform, namely to answer the question whether within the Romanian law such list is provided for in a limiting manner, or in a merely illustrative one.

In partial accordance with the doctrine, but in our opinion closer to the spirit of the law, the listing provided by the lawmaker, although expressly provided for, is however not limitative. Thus, it is consistent with the spirit of the law that certain clauses should be express, due to their importance, but we are not yet on the contract ground, but at the level of negotiations of nature to form the future contract consent. It is not an accident that the Romanian lawmaker chose to regulate such agreement as a mixed agreement, with clauses imposed by the law, but also with provisions expressly left at the discretion of the parties. In the case of the listing we are referring to, the lawmaker, being aware of the fact that within the Romanian law the mere obligation to inform may lead to penalties, has expressly regulated the contents of the obligation, but nothing prevents the parties from also debating and mutually communicating a series of other information. It is tempting to say that the law would be limitative in order to protect the franchisor, but this is not the case as they are expected to show a conduct that is specific for any professional trader, who should be able to cope with the competition, and adapt to the issues and the speed of the market activities.

An issue that arises when the laws in force are looked at appears to be the border, or the limit the obligation to inform should have.

To set a limit within the negotiations between the parties would be a serious interference by the lawmaker, which would be completely unjustified. It is also impossible for the lawmaker to quantify which information is, or is not, relevant and fundamental for the forming of the will of one of the parties. It is the duty of the franchisor, who is required to be an experienced trader, to best choose which partner they shall collaborate with, and as regards the beneficiary the same enjoys a series of legal provisions protecting them should they be a novice. Between the parties should exist, from the very beginning, within the spirit of the franchising agreement, a collaboration based on trust and good faith. Let us not forget that the future agreement shall have as a fundamental feature the fact it is concluded *intuit personae*, wherefrom arises the idea that both parties should act accordingly.

Another argument may also be brought for the idea that the list provided for by the law is not a limiting one, by construing it systematically. Thus, at the level of the whole law the obligations of the parties are the only ones provided for in a limiting manner, which is justified, while the other notions are defined with the mere purpose of clarifying a conceptual issue. The same is the case here, where the list within the paragraph 3 represents a clarification and at the same time a minimum of information that needs to be communicated by the franchisor, all for the purpose of protecting the beneficiary. Such fact however does not reduce the exigency of the fact that the failure to inform according to the paragraph 3 may entail penalties.

The paradox arising from such situation however devolves from the practice. On the theoretical level the things are clear, but when the two planes meet the following dilemma arises: how important is such information for the franchisor and whether the same are not subjecting themselves to a risk this way. Should they communicate more than the law provides for, they could transfer part of the secret of the franchisable concept. Let us assume that the beneficiary is acting in bad faith, and aims to fraud their good faith partner.

A limit may be set however, which is stated by the doctrine, which shows that the secrecy of the business, and the nature and the contents of the know-how, respectively, are limits for the extent of the obligation to inform. A certain "proportionality" of what is disclosed should be maintained in order to keep the secrecy of the fundamental elements.

While under the old legislation no legislative consecration existed as regards the good faith the parties are bound to show when negotiating an agreement, within the New Civil Code is regulated, for the first time, as a general rule, the requirement of good faith for the negotiations. Thus, according to the article 1,183 paragraph 2, the party entering a negotiation is bound to observe the good faith requirements. From this arises the legal obligation to negotiate upon the offer, the counteroffer, the refusal, or the possible acceptance, with firmness, seriousness, and within the spirit of the diligence of a good professional.

It is within the same law text, within the second thesis, that it is stated that the parties may not agree upon limiting or excluding such obligation. Therefore, the parties are free to conclude any additional agreement that would guarantee, for example, the confidentiality of the negotiations, namely to protect them from the situation described above when one party, as a rule the beneficiary, may only have the intention to obtain information, and not to conclude an agreement. They shall however never be able to derogate, by an express or tacit clause, from the requirement of good faith in conducting the discussions.

Within the paragraph 3 of the same article in the Civil Code the lawmaker states, generally, which the main deed or situation that would lead to a breaching of the obligation to observe the good faith negotiations is. Thus, it is against the good faith requirements, among other things, the conduct of the party that initiates or continues negotiations without the intention to conclude the agreement.

We feel that this law text comes to complete the previous paragraphs and perfectly fits the situation the old Civil Code was not covering. It was acknowledged the importance of the pre-contract phase, of the existence of the risk that by negotiations essential information may be disclosed without a possibility to hold liable the person taking advantage in bad faith by attending the negotiations without any intention to conclude the agreement.

It is also the New Civil Code that regulates, in order to avoid the situation previously described, the interdiction to disclose the confidential elements a person may become aware of during the negotiations. The obligation of confidentiality within the pre-contract negotiations is included to the article 1,184, which states that when information is communicated by a party during the negotiations the other party is bound not to disclose the same, and not to use the same for their own interest, notwithstanding that the agreement is concluded or not. The breaching of such obligation entails the liability of the party at fault.

Several important points result from this[5]. In the first place, the law does not require the parties to conclude a special agreement for the purpose of protecting the confidentiality of the information disclosed on the occasion of the negotiations. This, however, does not prevent the parties to, by their express will, conclude such an agreement. The Civil Code only covers the situation where no such agreement was concluded, by expressly stating that a confidentiality clause is presumed between the parties irrespective of their expressed will.

In the second place, for such presumption to operate the opposed party should be notified about the confidential nature of the information they received. We feel that in absence of such a notice the parties may apply the good faith principle, but the concerned party may not invoke, and may not impose the other party to be aware of the confidential nature. Even in the case of the franchising agreement, where arguments could be brought that both parties should have already been

[5] Please also refer to the comments on the article no. 1184 in the work: Flavius-Antoniu Baias, Eugen Chelaru, Rodica Constantinovici, Ioan Macovei, *Noul Cod Civil - Comentariu pe articole* (The New Civil Code – Comments by Articles), Ed. CH Beck, 2012.

aware that what involves the franchisable concept is confidential, we feel the presumption of confidentiality may not be held in absence of a clear, specific, and prior notice.

Finally, the New Civil Code specially regulates the situation where one party considers a certain element to be of essence for the conclusion of the agreement. Such element of essence may lead to refusing to reach a valid agreement. Thus, according to the article 1,185, when during the negotiations one party insists that an agreement is reached upon a certain element, or upon a certain form, the agreement shall not be concluded until an agreement upon the same is reached.

The law text perfectly applies as regards the franchising agreement. Often the elements of the franchisable concept are not negotiable, the franchise network is strictly controlled and regulated by the franchisor, and any transgression may entail the exclusion from the same and interest damages. This is precisely why the lawmaker allows from the very beginning that the elements of the future agreement on which in the opinion of one of the parties the formation of the same essentially depends should be clearly delimited, and in the event of one of the same being refused the continuation of the negotiations may become pointless.

The second issue regarding the legal nature of the obligation to inform is to determine whether it is an obligation of means (of caution and diligence) or one of result[6]. Following the majority line of the doctrine we state that this is an obligation of means, with all the consequences arising from this fact.

In keeping with the spirit of the law and of the future agreement, we state that the obligation to inform should go two ways, namely both from the franchisor towards the beneficiary, and, to a smaller extent, from the beneficiary towards the franchisor. Doubtlessly, the main obligation is on the side of the franchisor, and it consists of the provision of concrete data regarding the financial conditions, the exclusivity clauses, the term of the agreement, the termination, the renewal, etc. This however does not mean that the franchisor should make the future beneficiary also understand the information. They are bound to use all diligence for those listed by the law to reach the beneficiary in a clear and correct manner, but not also explained or detailed.

It may be construed that such a detailing or attempt to explain would lead to exceeding the protection limit of the secrecy of the franchisable concept mentioned above, meaning that it would be an exaggeration to construe the article 2 paragraph 3 in the Ordinance to the effect that the franchisor should guarantee the result, i.e. the debtor should understand the information. The information should be intelligible and concrete, and only an emphasis may be accepted for the purpose of drawing attention on certain major elements such as the duties, the volumes of goods to be sold, etc. On the other hand, a passive attitude from the beneficiary of the obligation to inform may not be excused later, as they also have the obligation to choose who they can and wish to enter a legal relation with.

By reference to the requirements the offer to contract imposes under the Civil Code, namely to be specific and complete, we feel that the same are not breached. The legal nature of the offer to join a franchise network is limited to stating the general elements of the franchisable concept, and not to actually teaching the concrete elements to the beneficiary. Such stage shall be completed in order to observe the franchisor's obligation to provide technical support and information after the contract was signed, therefore during the contract stage.

As regards the term the obligation to inform should be fulfilled within, unlike the French legislation that requires a document to include all the information to be prepared and submitted within 20 days after the agreement was signed, the Romanian law does not set a specific term. The mere submission of the contract offer to be read does not work instead of the obligation to inform, notwithstanding that the same may include or not the list provided for by the G.O. no. 52/1997 unless the submission manner is specific and complete.

[6] Article 1,481 in the Civil Code (1) In the case of the obligation of result the debtor is liable to procure for the creditor the promised result. (2) In the case of the obligations of means, the debtor is liable to use all the required means in order to achieve the promised result.

As regards the time the informing should take we feel that the same should be sufficient for the beneficiary to form their consent, being fully aware, as regards the conclusion of, and then the performance under the agreement.

2.2. The contents of the obligation

The contents of the information is expressly provided for within the paragraphs 2 and 3 of the article 2 in the G.O. no. 52/1997. Thus, the paragraph 2 provides for that the franchisor shall provide the future beneficiary with information to enable the same to participate, being fully aware, in the performance under the franchising agreement. Doubtlessly, the text once again shows the care of the lawmaker for the protection of the beneficiary. However, we feel that the same article may also be applied in order to protect the franchisor within the hypothesis that the same would have every interest to have the beneficiary join their network.

Concretely, the article 2 paragraph 2 sets the general requirement for the franchisor to provide all the information required for the formation of the future beneficiary's consent.

The article 2 paragraph 3 lists the categories of information the franchisor may discuss with the beneficiary[7]. We feel that the same, within the context of the old Civil Code, appeared to be the only information required and possible to be provided. The listing however is not limitative. Within the context of the New Civil Code, along with the regulation of the obligation of good faith during the negotiations, such listed elements are an orientation for the parties within the negotiations.

2.3. The penalty for breaching the obligation

As any legal obligation, the obligation to inform also needs to have a penalty attached.

The first issue we need to determine consists of determining whether the breaching of the obligation to inform may entail the civil contract liability, or the tort liability.

The agreement represents the manifestation of will arising from the offer to contract meeting the acceptance of the same. Or, in our case, since we are within the pre-contract period, it may not be stated that a legal act was validly concluded. The pre-contract stage represents a negotiation in order to conclude a franchising agreement. This is equivalent within the Romanian law with the franchisor submitting an offer to contract and the negotiations with the potential beneficiary in order to have the same enter the franchise network. As a conclusion we identify as applicable, in the event of breaching the obligation to inform, the civil tort liability.

The civil tort liability is regulated by the New Civil Code within the article 1,349. From the contents of the same also arise the elements of such form of liability. The illicit deed may consist either of entering a negotiation without observing the good faith requirements[8], or of providing inaccurate or false information. The damage is the result of the wrong fulfilment, or of the failure to fulfil the obligation to inform, and of the initiation or continuation of the negotiations without the intention to conclude the agreement, respectively, and needs to be proven. The damage should be the

---

[7] The article 2 paragraph 3 provides for that: The franchisor undertakes to provide the beneficiary with information regarding:

- their acquired and transferable experience;
- the financial conditions of the agreement, namely the initial royalty or the network entry fee, the periodical royalties, the advertising royalties, the determining of the tariffs regarding the provision of services and of the tariffs regarding the products, the services and the technologies, in the case of the contract obligations to purchase;
- the elements enabling the beneficiary to calculate the forecasted result and to prepare their financial plan;
- the goals and the area of the granted exclusivity;
- the term of the agreement, the renewal, termination, assignment conditions.

For a detailed analysis please refer to Mihaela Mocanu, *Contractul de franciză* (The Franchising Agreement), Editura C.H. Beck, Bucharest, 2008; D.A. Sitaru, *the quoted work*, p. 47 and the following.

[8] Please also refer to the article 14 in the Civil Code, which provides for that: Any individual or legal entity should exercise their rights and fulfil their civil obligations in good faith in accordance with the public order and the good morals.

direct result of the illicit deed, and the absence of a causality relation between the two elements may lead to the inexistence of the tort liability. Not in the last place, the fault also needs to be proven.

The New Civil Code, within the article 1,183 paragraph 4, brings to attention a special case. In the case where the party that initiates, continues, or breaks the negotiations against the good faith, as we examined above, shall be liable for the damage caused to the other party.

In such case it is about the party that either attends the negotiations without the intention to become legally bound but possibly with an illicit purpose, namely it is about that unlawfully breaks the negotiations. Such a person might be the one that took a legal commitment towards another person and continues the negotiations being aware that they could not reach the conclusion of a new act since they would then be breaching their first commitment.

In such special case, in order to determine such damage shall be taken into account the expenses engaged in order to conduct the negotiations, the renouncing of the other party on other offers, and other such circumstances.

It is very possible for the franchisor to make a series of expenses in order to be able to concretely negotiate with a potential beneficiary, these including for example the transport expenses, those generated by the ceremonial, etc. The lawmaker's solution to allow the party that was harmed as result of the conduct exercised in bad faith by the other party to claim damages is equitable. The most serious case is when one party, being in good faith convinced by the immoral and illicit conduct of the other party, renounces on one or several other offers regarding the same object the same agreement. We feel that it is imperative that, as regards the renouncing on other offers made by third parties, as the law text states, the same should regard the same issue brought to negotiation, and the party acting in good faith should have renounced on them because they felt, or had all the elements to feel that they had reached an agreement with the other party, which would have initiated, or would be continuing the negotiations without the intention to conclude the agreement.

3. Conclusions

The pre-contract stage has taken shape in view of the legislation, but not sufficiently. The lawmaker has covered part of the previous gaps, but for similarity with the international legislations a stricter determining of the concept, and of the applicable penalty especially, would have been required.

We are seeing this stage more and more often on various agreement categories, such as the exclusive distribution agreement, the agency agreement, etc., but within any of them it does not have such an important weight as within the franchising agreement. It represents the birth of the agreement, the time the basis for a long-term collaboration is set, since as it is already known the franchising agreement is concluded for at least the period required for the beneficiary to cover their expenses.

HARMONISATION OF EUROPEAN CONTRACT LAW: SLOWLY BUT SURELY?

GEMA TOMÁS*

Abstract

This paper deals with the harmonisation of European Contract Law from a gradual point of view. The main objective is to show the different academic and official steps carried out in this field. The so called Commission on European Contract Law under the leadership of Professor Ole Lando was the starting point in 1982. Some international research teams set up by European scholars and lawyers have been devoted to this aim for two decades. Time and effort have been made in the academic level to get a serious advance on bringing closer contractual national rules. This bottom-up approach met a stronger support in the last years although the European Parliament had "requested" the creation of a European Civil Code already in 1989. The momentous time comes in 2010 with a Green Paper from the European Commission on policy options for progress towards a European Contract Law for consumers and businesses. This Green Paper opened a public consultation period in 2011 and afterwards an expert group was appointed to draft a feasibility study for a future Instrument in European Contract Law. After all, a Proposal for a Regulation of the European Parliament and of the Council on a Common European Sales Law was adopted in October 2011 arising not few doubts, worries and misgivings from different points of view. This will be not the last step in this process.

***Keywords**: Harmonisation, European Contract Law, Private Law, Common Sales Law, Consumer Acquis.*

Introduction

In the next pages we will try to give an overall impression of the harmonisation of European Contract Law from a gradual perspective from the beginning to the current proposal for a Common of European Sales Law. Academic works and European official rules have paved the way for more than two decades since the well-known Principles of European Contract Law were published. These Principles were drafted by an international research team under the leadership of Professor Ole Lando. It started in 1982 and later on some international research teams set up by European scholars and lawyers have devoted time and effort to this aim in several projects. We will track these academic works interrelated with the European Commission initiatives. The paper deals with the most relevant academic literature on these initiatives.

This issue is relevant now, more than ever, because it is drawing the attention of every European Private Law jurist since a Green Paper from the European Commission on policy options for progress towards a European Contract Law was published in 2010. A public consultation period was launched for a short period of time. In a few months European Commission decided to appoint an expert group to draft a feasibility study for a future Instrument in European Contract Law and soon we all could read a Proposal for a Regulation of the European Parliament and of the Council on a Common European Sales Law in the European Official Journal (October 2011). It is the first time we are before an initiative of this kind: a set of European Common rules on sales law (including related services such as instalment or repair, and digital content supply). As a Regulation the Proposal is considered a relevant step forward in this field. This Proposal offers a single set of rules for cross-border contracts in all 27 EU countries. CESL will work as a second national legal system in all European countries, not as the 28th regime and Member States could be able to extend it for domestic contracts.

This Proposal is currently under debate. The voting during the Justice and Home Affairs Council meeting held in 7-8th June 2012 was the starting shot and it is still on-going. Eleven

* Associate Professor, PhD, Faculty of Law, University of Deusto (Bilbao, Spain); (gema.tomas@deusto.es).

Member States were for and 10 against in that meeting. This implies that Member States look at the Proposal as a controversial issue. Great divergences among the European traditions may complicate its success. Even more, the optional instrument itself arises so many doubts and misgivings that its future is by now uncertain.

1. - First steps in European Contract Law harmonisation

The background of the European Contract Law harmonisation began in the eighties with two important projects. First and most important were the "Principles of European Contract Law" (PECL). The PECL were prepared by the Commission on European Contract Law under the leadership of Professor Ole Lando since 1982. These Principles are divided in three parts and they have been published between 1995 (Part I and II, revision in 1998) and 2002 (Part III in 2002). The harmonisation work in Europe has an important weight of academic work (bottom-up) from the very beginning. This perspective helps to understand the way harmonisation tries to make progress in a multilevel framework, official and no official or academic. On the other hand, the insight of the Contract Law harmonisation from this first approach does not deal with special rules on consumer rights. This will change in the future.

Secondly, and with lower influence, the "Contract Code" drawn up on behalf of the English Law Commission by Professor Harvey McGregor must be mentioned. In this case, it was a personal commitment, not a team work, which was published in 1993 and it has been translated into different language.

In 2001 a Communication on "*European Contract Law"* by the European Commission launched a process of extensive public consultation on the problems arising from differences between Member States' Contract Laws and on potential actions in this field. This moment may be considered as the "official starting point" for European Contract Law harmonisation although the European Parliament had "requested" the creation of a European Civil Code already in 1989.

In the light of the responses the European Commission issued an "*Action Plan*" in 2003 proposing on one hand, to review the *acquis* in the area of Consumer Contract Law, to remove inconsistencies and to fill regulatory gaps. On the other hand, to improve the quality and coherence of European Contract Law by establishing a Common Frame of Reference (CFR) containing common principles, terminology and model rules to be used by the Union legislator when making or amending legislation. We can say that this is the moment when both, Consumer Law versus Contract Law harmonisation, take two different tracks:

2. - Consumer *acquis*: review and harmonisation

To start with the consumer acquis review, it was important to make a comparative analysis of the Member States legislation on Consumer Law in order to know how Directives had been implemented in (then) 25 Member States. It was an academic work known as Compendium prepared for the European Commission by an international research group directed by Prof. Schulte-Nölke in co-operation with Dr. Christian Twigg-Flesner and Dr. Martin Ebers (University of Bielefeld, Germany, February 2008)[1]. The scope of the study was not arbitrary. It covered eight of the most important Directives:

- The Doorstep Selling Directive (85/577/EEC);
- The Package Travel Directive (90/314/EEC);
- The Unfair Terms in Consumer Contracts Directive (93/13/EEC);
- The Timeshare Directive (94/47/EC);
- The Distance Selling Directive (97/7/EC);
- The Price Indication Directive (98/6/EC);
- The Injunctions Directive (98/27/EC); and

[1] http://ec.europa.eu/consumers/rights/docs/consumer_law_compendium_comparative_analysis_en_final.pdf

• The Consumer Sales Directive (1999/44/EC).

Apart from that, from 2004, another academic group, the "Acquis Group", was created to focus on existing European Community Private Law. Its work has been published under the title Principles of the Existing EC Contract Law (*Acquis Principles*) in three editions already, *Contract I* (2007); *Contract II* (2009) and *Contract III* (2013).

In October of 2008, the European Commission submitted a Proposal for a Directive on Consumer Rights[2], a measure designed to boost the retail internal market focused only on four Directives:

- Doorstep Selling Directive 85/577/EEC
- Distance Selling Directive 97/7/EC
- Consumer Sales Directive 99/44/EC
- Unfair Contract Terms Directive 93/13/EEC

The planned Directive merged these four Directives (and only these four, not eight, as it was the original aim) into one single horizontal instrument regulating common aspects (such as the definition of "consumer" and "trader", information duties and rights of withdrawal) in a systematic way. In contrast to the existing Directives, the proposal moved away from the minimum harmonisation approach introducing instead the controversial principle of full harmonisation. It means that Member States could not maintain or adopt provisions diverging from those laid down in the Directive.

But after four years a Directive on Consumer Rights was published in 2011[3] merging in the end only two Directives:

- Doorstep Selling Directive 85/577/EEC
- Distance Selling Directive 97/7/EC

Therefore the scope of the proposal had been limited in a huge proportion compared to the original purpose and not maximum harmonisation, except for some aspects, had been implemented. It is not difficult to understand the disappointment.

Perhaps because of this unsatisfactory result and also owing to the effort to increase confidence in the Digital Single Market about consumer protection when acceding and using online services, a kind of "code" of online rights was published in December 2012. The "Code of EU online rights" is one of the 16 initiatives of the Digital Agenda for Europe. This "Code" is not a real Code. It only summarizes the existing digital consumer rights scattered across various European rules in a more clear and understandable way. The complexity of the legal framework makes many online consumers not be aware of them. This is the way to make citizens aware of their rights and principles recognised in EU law when entering into contracts online.

3. - Contract Law harmonisation on "bottom-up effort"

On the other hand, the Communication of October 2004[4] that followed the Action Plan 2003, abovementioned, outlined the plan for the development of a CFR intended to be a "toolbox" for the European Commission when drafting proposals to improve the Contract Law. Once again, an international academic network was created by the Study Group on a European Civil Code (successor of the Lando Commission) and the Research Group on EC Private Law (Acquis Group) in 2004 to carry out a preparatory legal research in view of the adoption of this Common Frame of Reference (CFR)[5]. The research work was the "Draft Common Frame of Reference" (DCFR). It was handed in 2008. The final version was published in 2009 as an outline edition and as a full edition of six volumes containing comments and notes by national reporters. It is an overwhelming work which

[3] OJ L 304/64, 22.11.2011.
[4] 11.10.2004, COM (2004) 651 final.
[5] The European Commission financed it through a grant under the 6th Framework Programme for Research.

is being translated into some European languages. The DCFR covers principles, definitions and model rules of Civil Law including not only Contract Law but also Tort Law. DCFR contains provisions for both B2B (Business-to-Business) and B2C (Business-to-Consumer) contracts.

The DCFR was built on the several projects previously undertaken at European and international level. Not only PECL but also the UNIDROIT Principles drafted by the International Institute for the Unification of Private Law for international commercial contracts and strongly inspired by Vienna Convention 1980 (CISG), a creation by the United Nations Commission on International Trade Law (UNCITRAL), the almost worldwide standard for commercial contracts of sale. This CISG applies only by default whenever the parties have not chosen another law (opt out). At the moment there is no mechanism (i.e. supranational Court) to ensure their uniform interpretation.

Meanwhile, the *Association Henri Capitant des Amis de la Culture Juridique Française* and the *Société de législation comparée* joined the academic network on European Contract Law in 2005 to work on the elaboration of a "common terminology" and on "guiding principles" as well as to propose a revised version of the PECL (see supra).

Another important project was outlined since 1999 to 2004: the "Code européen des contrats" drafted by the *Accademia dei Giusprivatisti Europei*. It was the Pavia Project directed by Prof. Giuseppe Gandolfi[6]. This Code contains no principles but "only" 173 articles strongly inspired in the Roman and civilian tradition and outlined as a Civil Code. There is no specific regulation for consumers unlike DCFR. It is currently «rot in oblivion».

In addition to all these projects, we should mention the "Common Core of European Private Law"[7]. The first general meeting held in Torino in 1995 and annually over two decades European lawyers and scholars have been working together, and still they are, on different topics related to Contracts, Tort and Property. They try to seek the "common core" of European Private Law. The methodology is inspired by Schlesinger's monumental work on formation of Contract in the seventies based on cases and discussion and it is a very good example of the informal European approach in the harmonisation task.

4. - Green Paper on policy options for progress towards a European Contract Law: A "toolbox" or anything else?

A momentous time comes in 2010. A Green Paper from the European Commission on policy options for progress towards a European Contract Law for consumers and businesses[8]. This Green Paper opened a public consultation period (from 1 July 2010 to 31 January 2011) on seven options:

Option 1: Publication of the results of the Expert Group to be used by European and national legislators as a source of inspiration when drafting legislation and by contractual parties when drafting their standard terms and conditions, also useful in higher education or professional training as a compendium drawn from the different contract law traditions of the Member States. However, if there is not endorsement at European level, the divergences would not be significantly reduced.

Option 2: An official "toolbox" for the legislator. This could be seen as a "toolbox" for the European Commission when drafting proposals for new legislation or when revising existing measures. Such an instrument would be effective immediately upon adoption by the Commission, without the approval of the Parliament and Council. It could be seen also as an inter-institutional

[8] COM (2010) 348 final.

agreement on a "toolbox" between the Commission, Parliament and Council to make consistent reference to its provisions when drafting and negotiating legislative proposals bearing on European Contract Law.

Nevertheless, a "toolbox" does not provide immediate, tangible internal market benefits since it will not remove divergences in Law and it cannot ensure a convergent application and interpretation of Union contract law by the courts.

Option 3: Commission Recommendation on European Contract Law addressed to the Member States, encouraging them to incorporate the instrument into their national laws. In this case, the disadvantage comes from considering a European Recommendation not having any binding effects on the Member States.

Option 4: Regulation setting up an optional instrument of European Contract Law. The Green paper considered a regulation setting up an optional instrument as "a second regime" in each Member State, thus providing parties with an option between two regimes of domestic contract law. It would insert into the national laws of the Member States as a self-standing set of contract law rules which could be chosen by the parties as the law regulating their contracts. It may be applicable in cross-border contracts only (internal market primarily, also useful in international private law), or in both cross-border and domestic contracts. Two important challenges arise from this solution: the rules must be very clear to the average user (consumer, specially) and secondly, it should provide legal certainty.

Option 5: Directive on European Contract Law. This option could harmonise national Contract Law on the basis of minimum common standards. Nevertheless, harmonisation through directives based on minimum harmonisation has not led to uniform implementation so far. The existing consumer *acquis* shows that. Therefore, harmonisation should be pursued through Regulations because directives can help decreasing legal difference among national legislations but this is not enough to get a major degree of European convergence.

Option 6: Regulation establishing a European Contract Law. This option would replace the diversity of national laws with a uniform European set of rules, not upon a choice by the parties, but as a matter of national law and for cross border transactions and domestic contracts. Subsidiarity and proportionality principles may be a problem in order to justify this option because replacing national laws on domestic contracts does not seem at least initially a proportionate measure to deal with the obstacles to trade in the internal market.

Option 7: Regulation establishing a European Civil Code. A Code includes not only Contract Law but also other types of obligations such as tort Law or benevolent intervention. A Civil Code is always a very extensive instrument. Subsidiarity and proportionality principles may be even more serious handicaps than for option 6.

Some of these options were ruled out at the first moment (i.e. European Civil Code). Other policy options, as we have said, were presented as binding or non-binding "toolbox" for European politicians or legislators to be used in the adoption of new rules ensuring a more coherent and better regulation. The final option was done for setting up an optional instrument of European Contract Law (option 4) in 2010. An Expert Group was appointed by the European Commission in April 2010 to draft a Feasibility Study for a future Instrument in European Contract Law (published in May 2011)[9].

5. - The choice for an optional instrument: CESL

Finally, a Proposal for a Regulation of the European Parliament and of the Council on a Common European Sales Law (CESL) was adopted in October 2011[10]. The Proposal includes an

[9] http://ec.europa.eu/justice/contract/files/feasibility_study_final.pdf. A second non-official version was uploaded in the European Commission website in August 2011.

[10] COM (2011) 635 final. 2011/0284 (COD).

Annex (I) of 186 articles focused only on sales, related services (installment, repair) and digital content supply. Not every contract or other civil rules are included. After a voting during the Justice and Home Affairs Council meeting held in 7-8th June 2012[11]) the debate on this Proposal started and it is still on-going. Eleven Member States were for and 10 against in that meeting.

This Proposal offers a single set of rules for cross-border contracts in all 27 EU countries. Member States will be able to extend it for domestic contracts. This may be very convenient otherwise sellers will have to be available in two models of contracts. CESL will work as a second national legal system in all European countries, not as the 28Th regime.

Some worries, doubts and misgivings arise from this optional instrument. For instance,

1. - The *material scope* is very limited.

Many important contracts for consumers like service contracts; leasing and insurance contracts are not included. On the other hand, sales are already regulated in CISG, therefore ¿what need for more rules on sales? However, CESL implies maximum harmonisation and incorporates the regulation of the whole life of the contract and a regulation of contractual damages. We can say that CESL scope is broader than CISG (e.g. defects of consent, period of time and unfair terms control – these three aspects were not regulated in CISG) and it has an added value.

2. - The *personal scope* is for Business-to-Consumer (B2C) and Business-to-Business (B2B) where at least one party is an SMEs (small and medium enterprises)[12].

This is the way to break down trade barriers and to benefit consumers by providing increased choice and a high level of protection. CESL contains a high level of consumer protection, it implies maximum harmonisation usually higher than the consumer national Law of most European countries. Nevertheless, the choice for the Common European Sales Law requires an agreement of the parties to that effect (opt-in, unlike CISG) and the choice in B2C contracts is valid only if the consumer's consent is given by an explicit –written- statement separate from the contract indicating the agreement to conclude a contract. This is strongly criticized because it might complicate the legal environment by adding a parallel system[13]. In addition to that, can consumers choose CESL given that consumer contracts are usually standard term contracts? Consumers will not be able to choose for CESL, only if business gives them that option. Therefore the legal contract system will be likely be chosen by the trader (*take it or leave it*). And at last and non least, to think that consumers are able to choose between two legal systems is not real.

3. - The consistency with Rome I Regulation provisions (Art.6)[14]:

The Rome I Regulation will continue to apply and will be unaffected by the CESL. Under the conditions of Article 6(1) of the Rome I Regulation: If the parties in B2C transactions do not choose the applicable law, that law is the one of the habitual residence of the consumer under the normal operation of the Rome I Regulation. However, if the parties choose the law of another Member State than the consumer's law, such a choice may under the conditions of Article 6 (1) of the Rome I Regulation not deprive the consumer of the protection of the mandatory provisions of the law of his or her habitual residence according Article 6 (2). Therefore where the mandatory consumer protection provisions of the consumer´s Law provide a higher level of protection, these rules need to be respected. As a result, traders will need to find out in advance whether the law of the Member State of the consumer's habitual residence provides or not a higher level of protection and ensure that their contract is in compliance with all requirements. If the parties choose CESL within the

[11] http://europa.eu/rapid/press-release_PRES-12-241_en.htm.

[12] Maximum 250 persons or annual turnover not exceeding EUR 50 million or an annual balance sheet total not exceeding EUR 43 million.

[13] If the contract is concluded by phone, consumers will not be obliged. The contract will not be binding.

[14] Regulation (EC) no 593/2008 of the European Parliament and of the Council of 17 June 2008 on the law applicable to contractual obligations (Rome I).

applicable national law, this will be by definition the same in every Member State and only in very few occasions CESL consumer rules give not so high level of protection than the national rules.

In consequence, Member States should agree the level of protection really wanted for their national consumers and how to ensure the same (and high, of course) level of protection. A high level of consumer protection considering his/her position as the weaker party does not mean the same at the moment for all Member States.

4. - Language

Not a minor problem is the language because legal terminology is rooted in every national legal tradition. This may be a very important handicap to Private Law harmonisation. A major effort will be done in the next future on this issue.

5. - The legal basis

Legal basis is also controversial on the provisions of the TFEU such as Article 114.

Conclusion

It is plain to see that European Commission tries to meet its economic goals and recover from the economic crisis[15]. A European Contract Law instrument can help the Single market of more than twenty million companies open to five hundred million consumers. The abovementioned projects and combined efforts have paved slowly the way.

A strategy for making easier and less costly for businesses and consumers to conclude contracts may work with European model contract rules and clauses such as the abovementioned CESL. However, many doubts arise from this proposal and it must be said without any doubt that European Contract Law harmonisation is after three decades a work still in progress but more attractive than ever. The future optional instrument is a step forward towards a future unification of European Contract Law but for sure not the last one. Its future is uncertain and we will see which will be the next stage.

REPARATION OF THE MORAL PREJUDICES IN ROMANIAN LABOR LAW

AURELIAN GABRIEL ULUITU[*]
IOANA PĂDURARIU[**]

Abstract
Recent decisions issued by national labor Courts contain interesting references to the problem of the moral prejudices' reparation (especially suffered by the employee). During the application of Romanian Labor Code – Law no. 53/2003[1], the Courts offered a poor practice regarding the above mentioned problem. Usually, the employees' claims having as object the material reparation of a moral prejudice caused by the employers were rejected. The Courts considered that the claims were not founded, because the employees did not prove the irregularity and/or the existence of a moral prejudice.
The present paper is trying to identify the situations (as categories) which confer to the employees the right to ask for the moral prejudices' (material) reparation and the procedural mechanism in order to obtain a favorable solution (especially from the proves necessity point of view).

Keywords: *labor law, employee, employer, liability, moral prejudice, material reparation, labor court, court case, evidences*

Introduction

The juridical liability of the labor individual contract's parts is one of the most sensitive issues regarding the labor relation. Romanian Labor Code stipulates four categories of labor contract parts' different liability – disciplinary (art. 247 – 252), patrimony (art. 253 – 259), contraventional (art. 260) and criminal (art. 261 – 265). From these categories, only the disciplinary liability is a Romanian Labor Law specific form of liability[2].

The possibility to determine the occurrence of a moral prejudice for one or the other contractual part exists in case of each form of liability, but the most cases are linked to the disciplinary and patrimony liabilities.

It is important to observe the framework of discrimination regulation (the principle of the equal treatment for all employees and employers) – art. 5 from Romanian Labor Code, Government Ordinance no. 137/2000 on the prevention and punishment of all forms of discrimination[3] and Law no. 202/2002 on equal opportunities and treatment for women and men[4].

Observing these regulations, it is possible, in principle, to identify situations which imply a moral prejudice for one of the labor contract part, caused by the unfulfillment of one or more specific obligations.

The labor individual contract's part who claims the moral prejudice and its material reparation by the other part has to address to the Labor Court in order to obtain a favorable decision. The trial will follow the special rules of Labor Jurisdiction (art. 266 – 275 from Labor Code and art. 208 – 216 from Law no. 62/2011 on Social Dialogue[5]).

[3] Published in the "Official Gazette of Romania", 1st part, no. 431 of 2 September 2000.

[4] Republished in the "Official Gazette of Romania", 1st part, no. 150 of 1 March 2007.

[5] Republished in the "Official Gazette of Romania", 1st part, no. 625 of 31 August 2012.

Art. 266 from the Romanian Labor Code disposes that the object of the labor jurisdiction is to solve labor conflicts concerning the conclusion, execution, amendment, suspension, and termination of individual or, as applicable, collective labor contracts stipulated in the present code, as well as the requests concerning the legal relationships between social partners, set forth under the Labor Code (and Labor legislation).

The cases having as object the (material) reparation of the moral prejudice are included in the labor jurisdiction, because they are often related to the execution or the termination of the individual labor contract.

For both theoreticians and practitioners in Labor Law, it is important to determine the specificity of this kind of cases, at least the one regarding: the conditions for the occurrence of the part's liability and special limits of liability, the determination of the moral prejudice, the prove of the prejudice, the reparation of the prejudice.

1. A) Art. 253 Paragraph (1) from Romanian Labor Code stipulates that the employer indemnifies the employee, pursuant to the norms and principles of contractual civil liability, if the latter has undergone material or moral damage because of the employer's fault during the performance of his job duties or while performing a job-related activity.

In case of employee's patrimony liability, art. 254 Paragraph (2) form Labor Code stipulates that the employees are patrimony liable, according to the norms and principles of contracting civil liability, for the material damages caused to the employer because of their fault and in relation to their work.

The first conclusion is regarding the different solution regarding the status of the two individual labor contract's parts: while the employers are possible liable for both material and moral prejudice, the employees are liable *only for the material prejudice* caused to their employer[6].

The multilateral protection of the employees had determined such solution, which represents a limitation of their liability in relation with the employers. It is a positive discrimination, which does imply the following observation: the moral prejudice is possible to be suffered by the employer as a consequence of an employee's action, but *the employer doesn't have the right to claim its reparation*. If the parts of the contract agree to generalize the liability conditions (in order to determine even for the employee to respond for the moral damages caused to the employer), such contractual clause is null, based on the provisions from the art. 38 Labor Code: employees may not waive the rights acknowledged to them by the law; any transaction the aim of which is to waive the rights recognized by the law to employees, or to limit such rights shall be null.

In conclusion, only the employees are able to ask the reparation of the moral prejudice caused by the employer.

B) The regulation of the patrimony liability (art. 253 – 259 from Romanian Labor Code) establishes a particular form of civil contractual liability. The provisions of the Romanian Civil Code – Act no. 287/2009[7] – are the common law for the patrimony liability. Art. 278 Paragraph 1 from Romanian Labor Code stipulates that the provisions of Code are completed by the other provisions in the labor legislation and, unless inconsistent with the typical labor relationships stipulated in the Code, *the provisions of the civil legislation*.

So, in the Romanian Civil Code will be founded the specific provisions regarding the employer's liability in case of a moral damage caused to their employees.

Art. 1350 paragraph 1 from Romanian Civil Code stipulates that any person has to fulfill its contractual obligation. When the person, without any excuse, doesn't fulfill its obligation, will be responsible for the prejudice caused to the other part of the contract and is obliged to repair that prejudice (paragraph 2).

---

[6] See I.T. Ştefănescu, *op. cit.*, p. 773.

[7] Republished in "Official Gazette of Romania", 1st part, no. 505 of 15 July 2011.

Art. 1531 paragraph 3 from Romanian Civil Code stipulates that the creditor has the right to ask the reparation of the moral damage, but this damage has to be certain (art. 1532 paragraph 1 Civil Code).

As general rules, the creditor has to prove that he had suffered a moral prejudice and this prejudice is certain.

2. A. The dynamic of labor relations shows that the most of the cases when the employees are entitled to ask from their employer the (material) reparation of the moral damages are linked to:

- Discrimination, the equal treatment for all employees and employers, the equal opportunities and treatment for women and men regarding the execution of the individual labor contract;
- Termination of the individual labor contract, especially in case of dismissal;
- Labor health and safety;
- Disciplinary liability, when the employer applies a disciplinary sanction to the employee.

B. As a specific rule in the labor court procedure, art. 272 from the Romanian Labor Code stipulates that the employer shall be responsible for providing evidence in labor conflicts, being obliged to submit evidence in his defense by the first day of trial.

By exception, when the employee is claiming for the reparation of the moral prejudice, the above mentioned rule doesn't apply. The employee has the procedural obligation to prove the existence of the entire employer's liability conditions:

- Existence and the nature of the prejudice; regarding the moral prejudice, this kind of damage
- Fact that the prejudice is certain;
- Fact that the prejudice is the direct consequence of an unjustified or culpable action of the employer;
- Estimate value of the material reparation and its determination.

C. There is no legal framework to quantify the material value of moral prejudice's reparation. The judge has the freedom to appreciate about the amount that express the reparation value, independent of the amount asked by the employee. It is possible to have a huge difference between the amount claimed by the employee (by example, 100,000 euros) and the amount accepted by the Court (1,000 euros). This fact doesn't transform the employee's claim in an abusive one, because:

- Employee has the freedom to estimate the value of the moral prejudice (and is important to notice that the court cases having as object aspects of the labor relations are free of stamp tax);
- Courts are free to appreciate the value of the moral damage's material reparation, when the conditions of the contractual liability are fulfilled.

3. In the situations mentioned above, at the 2nd point of this paper, regarding the cases when the employees are entitled to ask from their employer the (material) reparation of the moral damages, the moral prejudice is determined by the injury caused to the person (to the employee).

This negative consequence which is the object of the moral prejudice is regarding the harm of the personal rights of the person. The object of these rights is regarding the life of the person, its health, corporal integrity, honor, dignity, social and/or professional status of the employee.

The moral prejudice could represent the death of the employee (as a result of an accident related to his work or activity), the injury or the harm suffered by the employee, the decrease of the professional or social reputation of the employee, the injury of another personal employee's attribute which define the human condition[8].

In case of death of the employee, its successors could claim the material reparation of the moral damage they had suffered. Because of the death of the employee, its successors loose an important material and moral support. They are obliged to modify their life conditions. The successors have the right to obtain the full cover of their prejudice. This right is obtained directly by them (as assurance, by example), or by the effect of the inheritance. In case of inheritance, the rights

[8] See M.N. Costin, C.M. Costin, *Civil Law Dictionary from A to Z*, 2nd Edition, Hamangiu Editor, Bucharest, 2007, p. 771.

of the victim are transferred to the successors. These rights were born between the moment of the accident and the one the death occurred. The right of moral prejudice's reparation is born directly in the successors' patrimonies when they prove that this kind of prejudice was determined by losing of the person which had provided them material and moral support.

In case of the employee physical integrity's or health's harm, the prejudice could by material and moral also. In moral form, the prejudice consists in losing or decreasing the work capacity, or losing or decreasing the work benefits (wage and other form of remuneration).

4. Once the moral prejudice is born, the way it should be repair is, as a rule, also moral. But, the prejudice's victim has also the right to estimate the value of the moral prejudice. So, there is no any incompatibility between the forms of the reparation. The moral prejudice's victim has the possibility to choose between the two forms of reparation. Of course, the interest of the victim – the employee – is to determine a higher material value of his moral damage, accepted by the Court.

Anyway, the author of the moral prejudice (the employer) and the victim of the prejudice (the employee) could agree an amiable solution having object the amount's determination which they evaluated the prejudice. In this case, the agreement is legal and the provisions of art. 38 from the Romanian Labor Code are observed.

When the prejudice is covered by an assurance, the victim has the right to claim any difference between the amounts he consider the prejudice is valued and the one he received through assurance.

5. One recent decision of a Court case offers new interesting elements regarding the way of perception by the national Courts of the matter we are analyzing.

In February 2008, the parts had signed the individual labor contract. The employee had occupied the position of TV presenter at a local specialized TV network.

The employer had the initiative of termination the individual labor contract. The employer had issued the individual dismissal decision (its first decision) in April 2009. The employee asked the Court (Bucharest Tribunal, Section no VIII, Labor and Social Insurances Conflicts) to dispose the cancellation of the decision and to oblige the employer of reinstatement the employee in his former workplace.

We mention that the Labor Code – in Section no. 7 ("Control of and sanctions for unlawful dismissals") from the 5th Chapter ("Termination of the individual labor contract") – stipulates the consequences of the dismissal decision's cancellation.

Art. 78: "The dismissal ordered in non-compliance with the procedure stipulated by the law is struck by absolute nullity".

Art. 79: "In the event of a labor conflict, an employer may not resort, before a court of law, to other de facto or de jure reasons than the ones stated in the dismissal decision".

Art. 80:

- Paragraph (1): "If the dismissal has not been based on good grounds or has been unlawful, the court shall order its cancellation and force the employer to pay an compensation equal to the indexed, increased and updated wages and the other rights the employee would have otherwise benefited from".

- Paragraph (2): "At the employee's request, the court having ordered the cancellation of the dismissal shall restore the parties to the status existing before the issuance of the dismissal document";

- Paragraph (3): "In case the employee does not request the reinstatement in the situation previous to the issuance of the dismissal document, the individual labor contract shall be rightfully terminated at the date when the judgment remains final and irrevocable".

By the decision issued by the Court in April 2010, the employee's complain was partially accepted. The Court decided that the employee has to be reinstatement in the former workplace and the employer to pay the compensation, but it was rejected the claim having object the moral prejudice

(the employee had asked for an amount of 10,000 euros as material reparation of the moral prejudice caused by the unilateral act of dismissal).

After the appeal issued by the employer was rejected by the Bucharest Court of Appeal (in February 2011), the employer had sent an address (issued in July 2011) to the employee inviting him to come at work starting with the date of 19th of July 2011.

But, the employer did not modify the organizational structure of its position in order to reestablish the position occupied by the former employee. The reinstatement was only formal, because at the beginning of August 2011, the employer had issued the second individual dismissal decision (at 3rd of August 2011).

This second time, the employee asked the Court to dispose the cancellation of the second individual dismissal decision and to oblige the employer to pay 15,000.- euros (in lei equivalent, at the National Bank of Romania's official exchange rate in the day of the effective payment of the amount).

The Court – Bucharest Tribunal, Section no VIII, Labor and Social Insurances Conflicts – had accepted the claim of the employee and had obliged the employee to pay a "record" amount of 3,000.- euros as material reparation of the moral prejudice caused by the employer through its second individual dismissal decision[9].

Regarding the moral prejudice, the Court had mentioned that based on art. 253 Paragraph (1) from Labor Code, the employer is obliged to repair the material and/or moral prejudice caused to its employee because its fault.

The Court had retained that an individual dismissal ordered by the employer in non-compliance with the conditions and procedure stipulated by the law is able to determine by itself to the employee a moral prejudice. This moral prejudice consists in:

- Loosing the work place occupied by the person based on an individual labor contract with unlimited period of execution is able to affect the employee's stability previsions; it is well-known that the labor is done by the employee in order to cover the living necessities;
- Lock of an occupation, of a workplace based on an individual labor contract, in a society which promotes the active living and obtaining of the living means by work is able to induce to the dismiss person a social inferiority feeling and an image prejudice in relation with the other members of society.

Such moral damages are emphasized by the particular fact that the employee, as a consequence of a previous court case in relation with the same employer, had obtained a favorable decision which was not respected by the employer.

The moral prejudice is the direct consequence of the employer's unlawful and guilty actions, consisting in the unfulfillment of the contractual obligations. The employer's guilt in the matter of contractual liability is a relative presumption and the employer did not invoke any cause in order to exclude or to decrease the guilty. Furthermore, such manner of action proves that the employer had acted with direct intention, which represents the most serious form of guilty. The employer had wondered and accepted the consequences of its action, its will being to not allow the employee to work.

Conclusion

The legal framework of the reparation of the moral prejudice in the Romanian Labor Law is determined by two categories of legal provisions: the one stipulated in the Labor Code (art. 263 Paragraph 1) and the second stipulated in the Civil Code (art. 1350, art. 1531 Paragraph 3).

The most of the cases when the employees are entitled to ask from their employer the (material) reparation of the moral damages are linked to discrimination, the equal treatment for all

[9] Bucharest Tribunal, Section no VIII – Labor and Social Insurances Conflicts, Decision no 9250 of 2nd November 2012.

employees and employers, the equal opportunities and treatment for women and men regarding the execution of the individual labor contract; termination of the individual labor contract, especially in case of dismissal; labor health and safety; disciplinary liability, when the employer applies a disciplinary sanction to the employee.

Once the moral prejudice is born, the way it should be repair is, as a rule, also moral. But, the prejudice's victim has also the right to estimate the value of the moral prejudice. There is no any incompatibility between the forms of the reparation. The moral prejudice's victim has the possibility to choose between the two forms of reparation.

If the creditor and the debtor did not agree about the way or the amount of the reparation, the Court is able to verify the fulfillment of liability conditions and the amount of reparation.

COMMISSION CONTRACT UNDER THE NEW ROMANIAN CIVIL CODE

DAN VELICU*

Abstract
The adoption of the new Civil Code and its entry into force on October 1st 2011 has involved an extensive reform of the private law.
The new Code has aimed primarily to achieve a unification of the private law, the largest part of the land commerce regulations from the commerce code adopted in 1887 being absorbed into the new text and, secondly, to harmonize the basic institutions of the private law with the European regulations and directives.
This study is preliminary and aims to highlight the inspiring models of the new Civil Code and to analyse the functionality of the newly used concepts.

***Keywords**: new Civil Code, commission contract, mandate contract, Code of Commerce, professional contract*

1.The concept of the commission agreement under the rule of the new code.

The current definition of the commission agreement is significantly different from that promoted by the Code of Commerce in 1887.

On the one hand, the commission is conceived as a kind of mandate, the text of art. 2043 NCC highlighting this aspect, unnecessarily, in our opinion, and on the other hand, the object of the contract is limited by the same norm upon "the purchase or sale of goods or service delivery on account of the principal and on behalf of the commissioner".

The provisions from art. 2043 NCC present, superfluously, the mechanism of the mandate without representation, based on the assumption of rights and obligations in one's own name, but on account and behalf of another person.

The differences suggested by comparing art. 2039 and 2043 NCC would consist in the nature, at least apparently professional, of the activity unfolded by the commissioner on behalf of the principal and onerous of the contract.

This onerous nature, emphasized by reference to remuneration and its designation as commission resulted however by applying the provisions of art. 2010 paragraph 1 NCC.

One of the requirements listed by art. 2043 NCC is that, in the projected activity, the trustee should act "on a professional basis".

The usage of this expression by the legislator, usage with no accidental nature, since it is later mentioned in the definition of agency, raises an important issue of interpretation.

Obviously, if the commissioner is a self-employed person or a legal entity whose object of activity includes practicing such brokerage, the requirement presented in art.2043 NCC is accomplished.

In the event that the trustee does not have this professional status, recognized publicly and based on constant activity, and one faces an accidental brokerage, one can wonder whether the term "on a professional basis" would cover this situation and the generated legal report would fall, as a consequence, under art. 2043 et seq. NCC.

In support of a positive response, it will be argued that, if the legislator used the phrase "on a professional basis", he acted in derogatory way, because the alternative would have been the possibility to indicate, as in other cases[1], that within the agreement mechanism the commissioner is a

* Lecturer, Ph. D., Faculty of Social and Administrative Sciences, "Nicolae Titulescu" University, Bucharest (email: dan.velicu@univnt.ro).

[1] See art.1709 paragraph 2, art.1778 paragraph 3, art. 2107 paragraph 2, art. 2172 paragraph 2 NCC.

"professional", with reference to the summarized content of art.3 NCC, a person who "exercises systematically an organized activity, which consists either in the management or disposal of goods or in service delivery".

Therefore, the phrase "on a professional basis" would imply both the assumption that the broker is a professional within the meaning of provisions from art.3 NCC and the one when he acts accidentally, as an intermediary, under the appearance of a professional.

Conversely, given that, under the rule of the Code of Commerce, the mandate and the commission were agreements considered "acts of commerce" – whether the trustee or commissioner had the status of trader, by applying art.3 c.com., they are covered by the commercial law – one will claim, however, that, under the new civil Code, the concept "fact of commerce" has disappeared and, therefore, relating exclusively to the professional status of the contracting party or at least of one of the parties, the legislator has imposed that the derogatory rules which usually come from the commercial code, to be based on a single criterion, namely the subjective criterion, the "professional" status of the person.

Consequently, in the situation referred to, the provisions relating to the commission agreement will only apply if the trustee has a professional quality and, under this status, becomes a subject endorsed by the norm.

2.The features of the contract.

Being a variety of the mandate contract without representation and thus of the mandate, the commission is a consensual, bilateral and a synallagmatic agreement.

Since the activity unfolded by the principal is a professional activity, along with the previous rules of the code of commerce, the commission agreement is an essentially onerous agreement.

3.Effects of the contract.

A. Obligations of the commissioner

The main obligation of the commissioner is to execute the mandate entrusted by the principal. Since the trust between the two parties is the essence of the mandate, once the empowerment is accepted the trustee may not exceed the *limits set by the mandate* (art. 2017 paragraph 1 NCC).

Under the rule of the Code of Commerce, although exceeding the commissioner from the content of the committed obligations was regulated, there is no reference to the instructions given by the principal.

The explanation was simple. If in the case of the commercial mandate the trustee would "comply with the instructions received from the principal" (art.381 Romanian Code of Commerce, art.356 Italian Code of Commerce), in the operations where the trustee was a trader, in other words, a professional, since he was an agent acting in his own market, he was conferred the ability to decide how and by what means to fulfil his obligations assumed towards the principal[2]. Precisely the presumption of the commissioner as being a good expert of the market mechanisms and the prices evolution limited, by the provisions of art.408 c.com., the penalization of the limits outreach only in a few particular cases, where the negligence or lack of professionalism of the commissioner were obvious.

In the mandate's current general regulation, as already noted, the second paragraph from art. 2017 NCC enables, in an exceptional way, the outreach of the received instructions only in the event when the prior notification of the principal is "impossible" and provided that there are certain facts that can be proven, which would establish the assumption that the principal would have approved the limits outreach if he had known the circumstances justifying it.

[2] See Agostino Ramella, *Del contratto di contocorrente, del mandato commerciale, della commissione*, (Torino: Utet, 1928), 185.

The term "instructions" is borrowed in the scope of the commission as a benchmark in establishing how professionally the commissioner has acted in relation to third parties.

With regard to the general provision, which may have found its application *ex* art. 2039 paragraph 2 NCC, art. 2048 NCC imposes to the commissioner, on the one hand "the responsibility to comply precisely with the *express instructions* received from the principal", and on the other hand, it enables him to act, by moving away "from the *instructions* received from the principal only if the following requirements are cumulatively complied:

a. there is not enough time to get prior authorization in relation to the nature of the business;

b. one can reasonably consider that the commissioner, knowing the changed circumstances, would have given his authorization, and

c. the alienation from the instructions does not fundamentally change the nature and scope or economic requirements of the empowerment received.

First of all, by *instructions*, we believe that one can usually understand those explanations given by the principal – which can be contained even in the mandate agreement – that seek requirements and ways for a better execution of the mandate.

Assuming that these instructions are sent following the conclusion of the agreement de mandate, they may not consist of new obligations or duties other than those agreed by contract and of other tasks, which do not fall into the specifics of his professional activity [3].

The principal may however require to the commissioner to begin talks with certain potential customers, not to arrange the legal acts taken into account with different persons, may materialize the requirements of the contracts or a certain form of these contracts.

The notion of *express instructions*, unknown including to the previous mandate regulation, seems to have its origin in the Swiss code of obligations, used as parameter in the assessment of the consistent execution of the mandate contract[4].

The way art. 2048 NCC is drawn clearly shows the code's authors' intention that this norm should be a waiver.

If in the case of the mandate with representation, drafting the power of attorney was absolutely necessary to bring to the attention of third parties the powers or empowerments conferred to the trustee, in the case of the commission agreement, the terminology used raises several problematic concerns.

Between the principal and the commissioner a written document may be signed, document containing the powers granted; in this case, by *express instructions* we understand the empowerments that arise from the contract or, at least, the purpose intended by the parties.

After the conclusion of the contract and the document preparation, the principal may issue new *instructions* to be communicated in writing or verbally to the commissioner; in the latter case, the issue of probing the *instructions* will raise.

The new regulation from the Civil Code limits the scope of the sanctions envisaged by the Code of Commerce and, implicitly of the protection provided to the principal, to the unique hypothesis of accepting a term in favour of the third party to pay the price.

Therefore, according to art. 2047 paragraph 1 NCC, upon the request of the principal the commissioner is personally liable, being responsible to immediately pay the loans with interest and other benefits that would appear if in the absence of authorization the principal has performed credit sales agreements.

---

[3] *Ibidem*, 185-6.

[4] **Art. 397 Exécution conforme au contrat.** Le mandataire qui a reçu des *instructions précises* ne peut s'en écarter qu'autant que les circonstances ne lui permettent pas de rechercher l'autorisation du mandant et qu'il y a lieu d'admettre que celui-ci l'aurait autorisé s'il avait été au courant de la situation.

Lorsque, en dehors de ces cas, le mandataire enfreint au détriment du mandant les instructions qu'il en a reçues, le mandat n'est réputé accompli que si le mandataire prend le préjudice à sa charge.

The norm taken into account is similar to art.1732, paragraph 2 Italian Civil Code[5]; an essential difference is that, similarly to the previous regulation of the Code of Commerce, the Romanian legislator did not retain the exception, based on the normative commercial uses, as the Italian legislator had acted, thus recognizing their primacy[6].

The second obligation of the commissioner is to give account to the principal regarding the way he has fulfilled his mandate.

3. Obligations of the principal

3.1. The principal have to provide the commissioner with the necessary means for the execution of the mandate.

As we have noticed, in view of fulfilling the granted power, the principal is required to put at the trustee's disposal all the necessary tools.

Since the commission is a variation of the mandate without representation it seemed logic that this rule should also apply to the relation between the principal and the commissioner.

Therefore, under the rule of the Code of Commerce, in the absence of a contrary convention, the provision according to which the principal was assigned to provide the trustee with the necessary means to fulfil the mandate was applicable to the commission agreement (art. 385).

In the current regulation, based on art.2039 paragraph 2 NCC, art.2025 paragraph 1 NCC is applied, paragraph that, in the absence of a contrary convention, imposes the principal the obligation to provide the trustee with the *necessary means for the execution of the mandate*.

The notion of *necessary means* is, obviously, very large. If the principal's obligation is outlined by the fact that in the lack of these means the trustee could not complete his proposed activity, in the commission matter, we believe that this notion should be interpreted in a very narrow sense.

The mandate with representation, whether it has or not a commercial objective, targets in principle the conclusion of one or more legal acts (art.2009 NCC). In comparison, the relation between the principal and the commission intends to conclude contracts with obvious economic content, by virtue of the professional nature of the commissioner's activity, which clearly implies a long-term non-accidental activity.

From such a perspective, the obligation to provide the *necessary means* can only focus on those tools absolutely necessary for the purchase and sale of goods or service delivery. Thus, if the sale of goods is conditioned under the law by the buyer's delivery of certificates with different indications or of special packaging, the principal is required to issue those certificates or to send the requested packages, since otherwise the commissioner will not be able to perform his activity under the law.

By *necessary means* we will not however retain different methods and tools for promotion of the goods, even if these, engaged in the commissioner's activity, would obviously lead to an increase in turnover, in the number of customers or to the quick unfolding of the sent goods.

3.2. The principal have also the obligation to pay the commission for the commissioner.

For this purpose, the provisions from art. 2049 paragraph 1 NCC are completely unnecessary. According to this norm, the principal is not entitled "to refuse to pay the commission when the third party executes exactly the contract signed by the commissioner in compliance with the received empowerment".

Unless otherwise stipulated, the commission is due even if the third party does not execute its obligation or conjures the breach of contract exception.

If the empowerment for the sale of property was given exclusively to a commissioner, the commission remains payable by the owner even if the sale was made directly by him or through a third party.

---

[5] According to art.1732 paragraph 2 of the Italian civil code.

[6] Il commissionario si presume autorizzato a concedere dilazioni di pagamento in conformità degli usi del luogo in cui compie l'operazione, se il committente non ha disposto altrimenti.

Logically, the counterperformance for the activity performed is usually established in terms of the amount within the contract signed with the principal.

For exceptional cases, where contracting parties have not determined an amount, art. 2049 paragraph 4 NCC provides that it is to be established according to the provisions from art. 2010 paragraph 2 NCC.

Including this reference is unnecessary because, in the absence of contractual provisions regarding the amount of the commission, the application of art. 2010 paragraph 2 NCC would have been applied, pursuant to paragraph 2 NCC art.2039.

Therefore, determining the amount of the due commission will be made by reference to any statutory provision, failing such provisions by reference to usage or by value of carried out services.

The principal have to reimburse all expenses incurred by the commissioner for carrying out the assignment received.

As the commissioner acts to meet certain commercial interests of the principal, if the fulfilment of the mandate required a series of charges, these will be reimbursed by the principal to the commissioner, upon termination of the activity or at a period determined by the parties.

Therefore, as in the section dedicated to the mandate without representation there is no provision in this regard, under art.2039 paragraph 2 NCC, the provisions on obligations of the principal to cover all expenses incurred by the trustee for the execution of the mandate will apply.

In the matter of the mandate with representation, as we noted above, art. 2025 NCC provides that the principal will reimburse to the trustee *reasonable expenses advanced* by the latter *for the execution of the mandate*, together with statutory interest thereon, calculated from the date of expenditure (paragraph 2).

4.Revocation of commission

Similarly to the mandate contract, the principal may revoke the authority given to the commissioner.

However, art. 2051 paragraph 1 NCC, identical in writing with the counterpart provisions of the Italian Civil Code, allows only the proxy revocation until the commissioner has concluded the act with the third party.

Anyway, the principal have the obligation to pay the commission for the commissioner's activity previous revocation.

5.Conclusions

The new regulation of the commission contract manages to offer a legal frame for this kind of professional intermediation.

However, on the one hand we consider that the new regulation is not an innovative one and, on the other hand it targets only the commercial relations, regulated by the previous Code of Commerce.

FREEDOM OF CONTRACT AND ITS LIMITATIONS IN THE ROMANIAN CIVIL CODE

EUGENIA VOICHECI*

Abstract
This study aims to present the vision of the Romanian Civil Code about the freedom of contracting.
The Romanian legislator has restated in terminis that the principle of contractual freedom is a fundament of the conventions but has also established its restraints: the law, the public order and the moral values.
In order to attain the stated goal of this research, the effort was directed toward: presenting the freedom to contract as a principle of the private law, evoking the autonomy of the will theory as a fundament for the freedom to contract and toward systemically enunciating the competing theories and the decline of the actual autonomy of the will theory.
The effort was also directed toward presenting the restraints of the freedom to contract, as they are stated in the Civic Code and the different categories of contracts which are the consequence of those restraints.

Keywords: *the freedom to contract, legal restraints, moral values, good faith, adhesion contracts, law enforced contracts*

A . Introduction: freedom of contract – the private law principle

Art. 1169 of the new Civil Code has the merit of consecrating *in terminis* the freedom of contract principle, stipulating that parties are free to enter into any contracts and determine content of the same. The legal text also stipulates the limitations of this freedom: law, public order and morality.

The provisions of art. 1170 of the Code add to the freedom of contract principle the requirement of good faith which must be met both in contract negotiation and execution, and contract implementation, and which can neither be conventionally removed or restricted.

The legislative consecration of the much debated contractual freedom principle may be considered "revenge" in its own right. The question is whether it is equitable reparation or not?

A traditionally caution-based conduct makes us postpone the time when we state our complete victory and further seek for reasons that might shade this victory as we have become accustomed to regulations that, in the next article, make previously proclaimed rights *tabula rasa* or almost that.

In reality, we can but wonder what and, especially, how much of the splendid principle of contractual freedom is left available by "law", "public order" and "morality".

Are all these limitations cases of the ineffectiveness of the freedom of contract? And why not, what and how much remains of this principle?

We valiantly and hopefully face these questions and attempt, by scientific arguments, to outline the area of application and consequences of the freedom of contract principle as are nowadays given the circumstances for the enforcement of the new Civil Code, and also other legal provisions, as we attempt to define the limitations for the application of said principle as regulated by law and also imposed by our social and economic reality.

B. Freedom of contract – a corollary of the autonomy of will

An examination of the provisions of art. 1166 of the new Civil Code leads to the conclusion that the Romanian lawmaker established the parties' agreement as a basis of a contract. Equally, the provisions of art. 1169 of the Code result in the fact that the Code has acknowledged the freedom of

* PhD Candidate, "Nicolae Titulescu" University (eugenia_voicheci@yahoo.com).

contract principle; the logical conclusion is that the freedom of contract is based on the autonomy of will and it is a necessary consequence of the autonomy of will and its utmost achievement.

The freedom of contract is acknowledged to all persons, except for the cases of incapacity and prohibition laid down by law. This is the conclusion of the provisions of art. 1180 of the New Civil Code that stipulate that "any person who is not declared unable by law and stopped to enter into certain contracts may contract". As the right to contract is the rule, it has been rightfully stated[1] that the freedom of contract is part of the content of the natural and legal entities' civil capacity.

C. Consequences of the freedom of contract principle

Bringing back to mind the provisions of art.1169 of the New Civil Code, we note that the Romanian lawmaker has defined two of the coordinates of the freedom of contract principle: the parties' freedom to enter into any contracts and the freedom to establish contract content.

In the area of commercial contracts, the freedom of evidence and the freedom to settle disputes by arbitration were mentioned[2] with the same status besides the two aforementioned consequences.

Also, in close connection with the freedom of contract principle, one must separately consider the principle of consensualism and formalism, also in consideration of the relation f their forces, as this is influenced by the effectiveness of the new Civil Code.

Thus, we should highlight the fact that another consequence of the freedom of contract principle is the freedom of contract form, known in the doctrine as principle of consensualism.

Art. 1178 of the new Civil Code equally consecrates the autonomy of will theory and the principle of consensualism, underlying the fact that the parties' mere agreement is required for contract execution, showing its limitations – formalities required by law.

Therefore, the contracts entered into as *solo consensu* are the rule, whereas formal contracts are the exception.

It has been shown[2] in specialised literature that in the area of commercial contracts the multitude of such contracts and the necessity to enter into the same with rapidity lead to the fact that they are entered into in the form the parties consider best: verbally, by phone, via electronic means, in writing.

It has also been highlighted[2] that, for contracts entered into *inter absentes* (or remotely), the contracting parties' manifestations of will may take various forms, e.g. simplified contract (or order followed by immediate execution), as laid down in article 36 of the former Commercial Code and taken over in art. 1186 para. 2 of the new Civil Code.

When manifestations of will are expressed in various forms, it is required that their interpretation result in the idea of convergence which, in fact, is the agreement such manifestations of will should reach.

The doctrine[3] has also highlighted the distinction between civil contracts and commercial contracts. In the former case, the focus is placed on the identification of the parties' actual will whereas in the latter case it is placed on declarative will in connection with the fact that often professionals resort to standardized forms, conventions referring to general, framework contract terms and conditions.

D. Limitations of the freedom of contract principle

We have shown in the preceding rationale that, given the provisions of art. 1169 of the new Civil Code, the freedom of contract is the rule, however, this principle should not be considered absolute as the legal text itself also states its limitations: law, public order and morality.

---

[1] Adam , Ioan , - Drept civil . Obligaţiile . Contractul , Bucharest, C.H.Beck Publishing House, 2011, page 28.

[2] - idem.

[3] Pătulea, Vasile; Turianu, Corneliu – Curs de drept comercial român. 2nd edition, Bucharest, All Beck Publishing House, 2000, page 74.

The provisions of art. 1170 of the new Civil Code stipulate, if not a limitation of the will to contract, at least a conditioning thereof, which is, in fact, a good faith obligation – good faith that the parties should meet both in the negotiation and execution stages of the contract, and during contract implementation.

The law as limitation of the freedom of contract

We estimate this analysis has four lines of interest: 1) limitations laid down by law concerning the capacity to contract, also known as incapacities; 2) incompatibilities and termination of rights concerning certain persons; 3) prohibition laid down by law to enter into certain types of contracts; 4) prohibition to enter into contracts with certain subject matters.

1) Incapacities are strictly related to the capacity to exert a right, defined by art. 37 of the new Civil Code as a person's capacity to enter into civil legal documents on his/her own.

The sanction for the failure to comply with the capacity to exert a right is the cancellation of the document, as results from the interpretation of provisions art.44 para.1 of the new Civil Code.

Pursuant to art. 28 of the New Civil Code, the rule is the existence of the capacity to use which no person can be prevented from exerting according to art. 29 para. 1 of the Code and the existence of the capacity to exert which people can be fully or partially deprived of only in the cases and under the conditions laid down by law, according to the same art. 29 para. 1 of the Code.

Art. 43 para.1 of the new Civil Code states that, except for other cases laid down by law, children under the age of 14 and the mentally disabled have no capacity of exertion, therefore these are the cases where the natural person cannot enter into legal documents on his/her own.

As concerns legal entities, the legal regime of their capacity to use is provided by clauses of art. 205-208 of the new Civil Code, whereas the legal regime of the capacity to exert is provided by the clauses of art. 209-211 of the same law.

It is worth signalling that, as concerns membership to administration and control bodies, art. 211 speaks about incapacities and incompatibilities and includes in these categories those deprived of the right to exert a position within these bodies and those declared unable to occupy such position by law or under the articles of association.

In reality, the legal text should have marginally taken into consideration the fact that it speaks of incapacities (which have a legal origin), termination of rights (of the same origin) and incompatibilities (that can be of legal or conventional origin).

In this case as well, the sanction for the failure to comply with the provisions of art. 211 of the new Civil Code is cancelation of the deed(s) entered into under these conditions.

2. a Incompatibilities

With strict reference to commercial activities[4], a long list of incompatibilities, all required by law, has been drafted in connection with certain positions or professions that should remain within the limits of their specific dignity and prestige:

- judge, prosecutor and judge of the Constitutional Court – art.125, 132 and 144 of the Romanian Constitution;
- deputy, senator, member of the government, especially local public official – art. 81, 84, 87 and 94 of Law No. 161/2003, alongside clauses of Law No. 188/1999 on the status of public officials;
- officer and diplomat – clauses of Law No. 80/1995 and Law No. 269/2003;
- lawyer – art.15 letter c of Law No. 51/1995 ;
- public notary – art. 69 letter e and f of Law No. 36/1995.

The sanction for breach of incompatibility is not deed cancelation, but a professional and/or disciplinary sanction.

[4] Cărpenaru, Stanciu D. – Tratat …, 2009 edition, pages 93-94.

2b. Termination of rights

Sanctions are laid down for commercial activities upon breach of the legal provisions concerning public order and morality.

Provisions of Law No. 12/1990 on the protection of population against illegal commercial activities are laid down, however it has been estimated[5] that the sanction of termination of right does not operate under the law and that such termination could be determined by a criminal conviction sentence, i.e. by enforcement of termination as complementary sanction.

3. Prohibition to enter into certain types of contracts

Still in relation to commercial activities[6], it has been decided that, for the purpose of protecting some general interests of society, with economic, social or moral content, there are activities that cannot be scope of trading companies, which activities are expressly laid down in the Government's Decision No. 1323/1990.

Also, by virtue of Law No. 31/1996 on the regime of state monopoly, as well as under the Government's Decision No. 1323/1990 on some measures for the enforcement of the Law on trading companies, it has been decided that the activity conducted by traders in relation with certain economic activities should be subject to limitations in the form of licences, approvals and agreements.

The sanction for failure to comply with the legal requirements on the approval of competent bodies is particularly drastic and leads to the cancelation of the memoranda of association.

4. Prohibition to enter into contracts of certain subject matters

The major prohibitions are related to the sale-purchase contract, more accurately, the assets that are the subject matter thereof. The legal texts prohibiting the execution of these contracts require it in consideration of a certain quality of the contracting parties, either to protect a social interest, or in the interest of a person placed in a certain legal relation with the person the prohibition concerns.

Thus, in order to ensure dignity typical of certain positions and professions, but also in order to provide a general feeling of trust related to the exertion of said positions and professions, art. 1653 para. 1 of the New Civil Code stipulates that judges, prosecutors, court registrars, judicial executors, lawyers, public notaries, legal advisors and insolvency experts cannot buy, directly or by intermediaries, litigious rights that fall under the competence of relevant courts of law, otherwise the sanction is absolute nullity.

Art. 1654 para. 1 of the new Civil Code stipulates both a prohibition to buy, and a series of incapacities related to the buyer. Thus, the following are unable to buy, directly or by intermediaries, even by a public auction:

a) attorneys-in-fact – for the assets they are authorized to sell, except for the case laid down in article 1304 of the new Civil Code, i.e. contract with oneself and double representation as agreed by the person appointing his/her attorney-in-fact or who is not in a situation of conflicts of interests with the attorney-in-fact.

The sanction is relative nullity.

b) parents, tutor, custodian, provisional administrator – for the assets of the persons he/she represents.

The sanction is relative nullity.

c) public officials, syndic judges, insolvency experts, judicial executors, as well as any such persons (Attention: not positions or professions!) that could influence the conditions of the sale done through them or whose objects are the assets they administer or the administration of which they supervise.

---

[5] - *Ditto*, pages 95.

[6] - *Ditto*, pages 95-97.

The sanction is absolute nullity.

Article 1655 para. 1 of the New Civil Code also rests upon the same persons the prohibition to sell one's own assets for a price consisting of a sum of money resulting from the sale or use of the asset(s) that he/she administers or the administration of which he/she supervise, as the case may be.

Paragraph 2 of the same article extends the area of prohibitions to other contracts as well (not named) where, in exchange for an activity promised by the persons laid down in article 1654 para. 1, the other party undertakes to pay a sum of money.

If the freedom of contract principle may authorise the persons laid down in article 1654 para. 1 letters a and b of the Code to perform a legal activity, it is unclear what the case is with „activities" that may be promised, and particularly performed by the persons laid down in article 1654 para. 1 letter c, given that the legal system of these persons' professions and positions is strictly regulated by special laws that stipulate the types of activities that may be carried out, which activities have nothing in common with the freedom of contract.

Public order – limitation of contractual freedom

When it comes to public order, the existence of a system of rules is essential, that aiming at the political and administrative organisation of society within the state, ensure the activity of political institutions, i.e. the prevalence of the collective entity over the individual.

The doctrine is almost unanimous to consider there is no definition of the public order concept, which means, however, that the preeminence of this concept over the concept of individual is questionable.

In time, given the ongoing economic changes, there appeared a need that the state quit the "laisser faire, laisser passer" position and have a say in this area by means of imperative legal provisions that have alleviated the autonomy of will principle.

This attitude of the state has been known as contractual dirigisme, a phenomenon that was not manifest in the economic area only, but in the area of civil and employment contracts.

Some authors[7] believed that contractual dirigisme replaced liberalism by creating and extending commercial public services (mail, telecommunications, banks, railroads) and by what is of interest in this analysis, i.e. restricting contractual freedom, by prohibiting the inclusion of abusive clauses, requiring the inclusion of consumer protection clauses, legal obligations to contract or creating prior administrative authorisations.

In the same context, it has been estimated[8] that the decline of contractual individualism was manifest by the recognition of standard contracts by the public authorities and the legality of adhesion contracts.

Other authors[9] agreed to the concept of contractual dirigisme, which dramatically limited in time the freedom of contract, the widening of the public order notion that penetrated both the economic, and social areas.

It is constantly acknowledged that public order is a concept with an economic dimension, apparent in monetary and price policy, loan policy and economic planning, a fundamental dimension that influences the existence and evolution of contractual relations with economic content.

Also, the social dimension of public order is acknowledged, having an impact particularly on the regulation of legal relations (hence, contracts) of labour.

---

[7] Turcu , Ion; Pop , Liviu – *Contracte comerciale . Formare şi executare* , vol.I, Bucharest, Lumina Lex Publishing House, 1997, pages 15-16.

[9] Stătescu , Constantin; Bîrsan, Corneliu – Drept civil . Teoria generală a obligaţiilor, 9th edition, Bucharest, Hamangiu Publishing House, 2008, pages 20-21.

At the same time, public order acquired a professional dimension, and a European one as well, the latter being focused on the consumer protection requirement and manifest in the prohibition of abusive clauses in the contracts consumers enter into.[10]

In any case, the state's intervention in the economy and contract dynamics, known as contractual dirigisme, has evolved from the vision of planned economy[11], an expression of the political public order acknowledgement to the goal of removing social inequities that the autonomy of will theory determined as this was the extent of its lack of contact with the reality it affirmed.

Contractual dirigisme is considered[12] an instrument to correct social inequity that autonomy of will generates, a mechanism that is at the disposal of the state that undertakes the role of arbitrator of social justice.

It appears of significance to recall that this goal of "social justice" seems to reach limits that should represent a shield intended to protect not only the consumer exposed to the professionals' abuse, but also the vulnerable entrepreneur, trapped in the mechanism of a contract marked by apparent disbalance.

In the Italian legal order at least, the theory of the third contract[13] is spoken of, which means that the contract is entered into in an egalitarian fashion, aspiring to the maximum freedom and that it requires the need to cover a legislative gap, characterized by lack of discipline that should grant protection to the "weak" entrepreneur involved in a disbalanced contractual relation.

The goal of the "contractual justice" of public order is thus extended from the individual consumer considered a vulnerable (disfavoured) contractor in its relations to the professionals to the "weak entrepreneur", involved in the same type of legal relations, which protection is legislatively acknowledged for consumers.

Morality as a limitation of the freedom of contract

A concept that seems to "say" everything from the very beginning, but that is as evanescent as smoke and the institution of "good faith", morality has always censored the extent and even the substance of contracts entered into individuals, being mentioned in the former Romanian Civil Code with the same purpose (article 5).

No code or legal provision has defined "morality" that were intended and even managed to maintain the parties' agreements within the limitations set by moral precepts. Even if there is no (legal, jurisprudent or doctrinary) concept definition available, law practitioners must acknowledge the minor percentage of litigations where the validity of contracts was objected to on the grounds that it presumably was contrary to morality.

However, as they are considered a legal limitation of contractual freedom, morality should be paid attention to at least by the theoretical determination of the concept.

Some authors[14] believe morality is "the totality of conduct rules shaped in society's conscience, the compliance of which became imperatively compelling by extensive experience and practice, for achieving the general interests of a given society".

In that respect, it has been estimated that morality has a religious aspect, impregnated by the moral norms of Christian dogma, morality that, in its turn, is public and personal.[15]

---

[14] Adam , Ioan – quoted work, pages 33-35.

[15] *Ditto*.

At the same time, it has been estimated[16] that the other side of morality is empirical, based on sociological rules regarded as natural habits or habits acquired by tradition and education, centered on the idea of "good" and "bad".

The same author[17] believes this concept of "morality" is at full speed and includes rules concerning morality, habits or customs that society deems fundamental principles. The judge summoned to decide any violation thereof will determine, in reality, their importance.

However, it must be highlighted that the execution of a contract in breach of the law, public order and morality leads to various sanctions that are laid down, in principle, in art. 1247 and 1248 of the New Civil Code:

Art. 1247 of the New Civil Code states the sanction of absolute nullity of a contract executed in breach of a legal provision laid down for the protection of a general interest.

Art. 1248 of the Code states the sanction of relative nullity (i.e. cancelability) of a contract executed in breach of a legal provision laid down for the protection of a general interest.

As the Code does not establish criteria to determine general and individual interest, the actual analysis of this aspect lies with the court of law.[18]

Good faith and the freedom of contract

In the above, by the interpretation of the provisions of article 1170 of the New Civil Code, good faith was estimated to be not a factor limiting contractual liberty, but a factor conditioning the exertion of this principle, which turns it into an intrinsic element thereof. There are no *in terminis* sanctions for the violation of this obligation that is not simultaneous with the contract negotiation stage, is at the basis of contract execution and accompanies the contract like an actual „guardian angel" to the date it is terminated.

However, the provision of article 1170, final thesis, of the new Civil Code, that consecrates the inherent, irremovable and insurmountable nature of the good faith obligation leads to the fact that the breach of this obligation be sanctioned by nullity, absolute nullity, we dare say, as good faith has acquired, via this regulation, the role of instrument defending a general interest.[19]

Adhesion contracts

It has been shown[20] that an adhesion contract is a non-negotiable, hence non-negotiated, contract. The entire contract is devised exclusively by one of parties, whereas the other does not have the power to discuss or change it. The only possibilities are to accept the contract as a whole, adhering to all its clauses, or to refuse to contract.

Worryingly, nowadays quite a few contracts are adhesion contracts: utility contracts (electrical power, gas, water supply, waste management), bank contracts, leasing and insurance contracts etc. These are dictated contracts and are explainable by the fact that one of the parties has great economic power, sometimes the actual monopoly of the provided service, which renders it unavailable for negotiations.

Good examples are contracts based on exclusive[21] or selective distribution agreement, as well as franchise contracts that, in practice, attach the parties and forbid them to provide typical services in any other context than the one set by contract. They are also known as dependency contracts[22].

[22] Piperea, Gheorghe – quoted work, page 71.

Equally, mention must be made of contracts that hospitals and family GP's are obliged to enter into with the health authorities, which contracts are executed in the context of a framework agreement signed by the Ministry of Health and the National Authority of Health Insurance[23].

Law-imposed (forced) contracts

The distinction resides in that their execution is mandatory under the law.

It is most often the case of mandatory asset (housing) insurance contracts or third party liability contracts or health insurance (the latter being mandatory when travelling abroad).

We should say that the law imposes exclusively the type of contract and the obligation to enter into the same, but it is the parties who actually agree on the contractual clauses.

Special debate should be associated with the cases where, under the law or according to the parties' agreement (actually manifested as a preliminary contract), an obligation to enter into the contract is generated, but either party refuses to meet such obligation.

In the context of Decree No. 144/1958 on regulating the issue of construction, construction repair and demolition permits, as well as those concerning alienation and sharing of land, with or without constructions on it, the refusal of any of the parties to be present before a public notary for the authentication of the alienation document may be sanctioned by a court of law.

The provisions of art. 12 para.1 of Decree No. 144/1958[24] granted the party having met its obligations the right to address the court of law in order to get a decision to substitute the authentic alienation deed, this way the court replacing the promissory seller's consent.

Decree No. 144/1958 was abrogated by Law No. 50/1991 on the construction permits and some measures for housing, and the abrogation law no longer contained the trial remedy made available in the old text. In this context, though there was no other legal text of similar content concerning real estate alienation, with or without constructions on it, the practice of making decisions to replace an authentic alienation deed was maintained in certain courts of law that, this time, went back to the legal grounds of the provisions of art. 1073 of the former Civil Code, which provisions grant the creditor the right to obtain the **exact** fulfillment of the relevant obligation.

We estimate this option is debatable in the absence of an express legal provision granting the court of law the right to substitute a party's consent in the execution of a contract. The contractual freedom principle focuses on agreement and autonomy of will, and its limitations should be expressly laid down by law.

In the given situation, we believe the creditor of an unfulfilled obligation was not left with no legal protection whatsoever as long as it is still art.1073, final thesis, in the old Civil Code the one to stipulate its right to indemnification for failure of the exact exertion of the contracted right.

The Romanian lawmaker has remained constant in its options to make a decision to replace a contract.

Thus, it is worth mentioning the provisions of art. 16 of the Government's Ordinance No. 51/1997 on leasing transactions and leasing companies, stating that, if the lessor/lender fails to comply with the lessee's/user's right of option, as laid down in the ordinance, the former owes damages equal to the total prejudice caused by the breach of this obligation, and the court of law authorized to determine the damages *will be able to make a decision to substitute a deed of sale.*

In the same context, mention must be made of the provisions of art. 5 para. 2 of Title X – Legal circulation of land in Law No. 247/2005 on the reform in property and justice, as well as some adjacent measures. These provisions follow the tradition of those of art. 12 of Decree No. 144/1958 and stipulate that, if, after the execution of a preliminary contract concerning land, either party later

---

[23] Ditto, page 70-71.

[24] Chirică, Dan – "Acţiunea întemeiată pe art.12 din Decretul nr.144/1958 şi hotărârea judecătorească de admitere a acesteia" in the quoted work, pages 127-128.

refuses to enter into said contract, the party having met its obligations may notify the competent court that may make a decision to substitute the contract.

Law No. 287/2009 on the Civil Code abrogated the provisions of Title X of Law No. 247/2005, however, the new Civil Code continued the previous solution, stipulating with regard to sale, in art. 1669 para. 1, the following: when either party having entered into a bilateral sale promissory deed refuses, with no justification, to enter into the promised contract, the other party may request the court to make a decision to substitute the contract if all the other validity requirements are met.

In relation to the aforementioned legal provisions, that are the most recent in the researched area, two observations must be made:

The first concerns the fact that the substitution by the court of ether party's consent no longer predominantly occurs in alienation deeds for which the law requests an authentic document, as previously was the case of land with or without constructions on it.

The second is related to the fact that, in order to submit an action before a court of law, the requirements of art. 1669 para.1 of the new Civil Code, the beneficiary of the promissory sale no longer has to prove that, in his turn, has met the obligations undertaken by he promissory deed, but only that all the other validity requirements have been met.

Again with regard to law-imposed contracts, the provisions of two laws are worth mentioning, both concerning small and medium enterprises (SME's).

Law No. 133/!999 on stimulating private entrepreneurs to establish and develop small and medium enterprises stipulated in art. 12 the access of SME's to the available assets of trading companies and national companies with predominantly state capital, as well as those of autonomous administrations, also establishing access conditions as well.

In addition, the second paragraph of the same article stipulates the obligation of trading companies, national companies and autonomous administrations to enter into sale contracts, and ensure priority access respectively to the lease, concession or leasing of the assets laid down in the previous paragraph.

There are similar provisions in art. 12 of Law No. 346/2004 on stimulating the formation and development of SME's, a law that abrogated Law No. 133/1999.

The two aforementioned laws do not grant SME's the right to request the court to make a decision to substitute an authentic deed, hence, in practice, these enterprises submitted requests to courts via which they requested obliging the other party to enter into the contract. In this case, one can notice that, if the SME's were granted favorable decisions, they had no guarantee that the relevant contracts would be entered into even when the obligation to enter into said contracts was stated by the court under the civil sanction of comminatory damages.

As a general conclusion, as concerns law-imposed contracts, one may notice that the legal limitation to contract merely consists of the obligation imposed on the execution of the type of contract, not the selection of the co-contracting party or the actual contractual clauses, which allows for the freedom to negotiate that is higher than typical of an adhesion contract.

Contracts containing law-imposed clauses

Strictly referring to commercial contracts, in the first years after the 1989 Revolution, the lawmaker intervened in the contractual balance by passing Law No. 76/1992 on measures to refund loans derived from compensation, system of payments for merchants, prevention of incapacity to pay and financial blockage.

The provisions of this law stipulate the parties' obligation to state late-payment penalties in the contracts they execute, the minimum threshold of these penalties, as well as the limitation of the total penalties to the sum for which they are calculated (art. 7 of the law).

The provisions concerning late-payment penalties similar to those in Law No. 76/1992, abrogated by the Government's Emergency Ordinance No. 10/1997 on the reduction of the financial

blockage and losses in the economy, could be found in Law No. 469/2002 on some measures for the consolidation of contractual discipline[25].

These provisions have sparkled fierce debate[26] as concerns the obligation to include the clause concerning the obligation to pay the penalties, which clause, in the absence of all sanctions, was estimated to serve as mere recommendation.

The same law resulted in critical reactions[27] as concerns cumulated penalties and damages, and the limitation of the penalty amount to the level of the main debt, and, in the absence of a contrary agreement between the parties[28], the provision was estimated to contrary to the principle of full prejudice reparation as a result of the failure to comply with contractual obligations [29].

Mention must be made that Law No. 469/2002 was abrogated by Law No. 246/2009 and was no longer replaced by a similar law.

The provisions of art. 46 of the Government's Emergency Ordinance No. 50/2010 on loan contracts for consumers should be mentioned still in the category of law-imposed clauses.

Included in *Section II – Information that must be included in loan contracts*, the provisions of art. 46 of the Government's Emergency Ordinance No. 50/2010 stand for as many clauses that the parties' contract must include, however, the content of which remains at the parties' discretion.

Contracts containing law-prohibited clauses

We highlighted in the above the community lawmaker's intervention mostly in the area of contracts entered into by consumers, wherein the purpose of said intervention was to protect the consumer – an individual regarded as a "weak", vulnerable contractor in his/her legal relations with professionals.

This tendency could also be found in the Romanian law, as the Romanian lawmaker passed Law No. 193/2000 on abusive clauses in contracts entered into between merchants and consumers.

Consumer protection imposed as a measure intended to limit abusive contracts. As concerns the notion of abuse, the following were suggestively shown[30]:

"In the latter decades, qualifying a conduct as abusive extends to all areas of law. Thus, for example, the clauses of a contract may be classified as abusive as regards the consumer, a dominant position-imposed abuse is forbidden, economic dependency is reprehensible, the termination of the employment contract or contract of mandate are sanctioned, majority abuse is consecrated to the trading company-related area of expertise in terms of jurisprudence and legislation, and some price unilateral establishment clauses are qualified as abusive in order to prevent the stipulation of abusively high or low prices".

As concerns contracts entered into with consumers, the state's intervention taking the form of prohibition of abusive clauses is justified by the pressing need to prevent a significant disbalance of the contract[31] and is based on the good faith obligation in contracts.[32]

[29] A comprehensive study of the topic belongs to university professor Stanciu D. Cărpenaru, Ph.D., in article "Consideraţii asupra noii reglementări privind întărirea discuţiei contractuale" in Curierul judiciar, issue No. 11/2002 – page1-9.

[30] Turcu, Ion – Tratat teoretic şi practic de drept comercial – vol. III, Bucharest , C.H. Beck Publising House, 2009, page 105.

[31] Jeannin, Marie-Véronique – "Le désequilibre significatif au regard de la liberté contractuelle" – http//www.avocats-fourgoux.com/Droit-des-affaires. For the topic of contractual balance and disbalance, please also see Turcu, Ion – Tratat … vol. III, quoted work, pages136-156.

The doctrine[33] has drafted real inventories of clauses deemed abusive and even spoke of presumption of abuse.[34]

In terms of contractual freedom, however, the prohibition to include presumably abusive clauses, as laid down in Law No. 193/2000, in consumer contracts, the applicable sanction, absolute nullity respectively, as well as possible enforcement of an offence sanction to the merchant having made use of such clauses is of interest.

One should note that absolute nullity applies to the abusive clause only, not necessarily to the entire contract[35], and the latter may stay effective if this is possible in the absence of the relevant clause.

The provisions of the Government's Emergency Ordinance No. 50/2010, as amended to date, are significant as concerns consumer loan contracts via which the lawmaker established a series of forbidden clauses depending on the type of loan, the most significant being the provisions of art. 35 and art. 36 on fees chargeable by the bank.

Speaking of the same law, mention must be made of the provisions of art. 40 para. 1, that prohibit the inclusion in a contract of clauses entitling the creditor to unilaterally amend contractual clauses, without entering into an addendum agreed on by the consumer

Recently, the European Court of Justice decided in favour of the national court's right to *ex officio* investigate abusive clauses in consumer contracts, if any.

E. Conclusions

For the time being it is difficult to establish if the contractual freedom principle still owns the supremacy. The multitude of contracts that the common citizen is required to enter into as well as the discrepancy generated by the different economical position of the contractual parteners lead to the conclusion that the contractual freedom is rather a desideratum. This proves, more often than not, that the freedom of contracting resides solely in entering into a contract with preestablished clauses or not entering into it al all .

TRANSITIONAL JUSTICE AND DEMOCRATIC CHANGE: KEY CONCEPTS

ELENA ANDREEVSKA*

Abstract

This Article proposes a genealogy of transitional justice and focuses on transitional justice as one of the key steps in peace building that needs to be taken to secure a stable democratic future. Transitional justice is a response to systematic or widespread violations of human rights. It seeks recognition for victims and promotion of possibilities for peace, reconciliation and democracy. The paper focuses on key concepts of transitional justice before addressing its traditional components: justice, reparation, truth and institutional reform. This Article meeting point on the transitional process in a society which has experienced a violent conflict and needs adequate mechanisms to deal with the legacies of the past in order to prevent future violence and cover the way for reconciliation and democratic consolidation. It provides key stakeholders with an overview of transitional justice and its different components, while examining key challenges faced by those working in this area. The present paper concludes with some remarks that challenge the traditional concept of transitional justice and its processes in order to initiate important debate on where future work in this field is needed.

Keywords: *Transitional justice, democracy, human rights, institutional reforms, democratic consolidation.*

Introduction

The presumption in much of what has been said about transitional justice is that we can speak in general terms about these real-world practices. Some commentators have spoken explicitly of one common theory of transitional justice.[1] These generalizations concern the dilemmas of dealing with massive human rights abuses and ways to assess and evaluate the practices utilized when confronting such legacies of violence and injustice. Nonetheless, in a diverse world one risk of constructing a general theory is that it can lack sensitivity to different and nuanced circumstances. In particular, it is problematic to utilize a common normative framework that presupposes the liberal democratic nature of an incoming regime, or law's ability to generally further such values. While some case studies of transitional justice have argued that law can also serve to restrict democratization,[2] and while objectives such. As reconciliation, peace, and victims' healing are now increasingly examined in the general literature[3], the fact remains that the scholarship is dominated by the conception that transitional justice is about applying a number of legal and quasi-legal processes in democratic political transitions, and that dealing with the past will help consolidate liberal values.[4]

There are significant problems connected to understanding the complex and very diverse instances of transitional justice by depending on a theoretical framework that is heavily influenced by ideas about transitions from authoritarian rule to democracy that were developed in the late 1980s and early 1990s. Though the scholarship analyzes cases that are radically different from "transitions to democracy," the conceptual underpinnings of transnational justice as an academic field continue to be heavily influenced by values and understandings of dilemmas that connect intimately to liberal

transitions. In a world where systematical dealing with serious abuses can take place in democratic transitions, in non-liberal transitions, as well as in highly diverse contexts of non-transitions, there is a clear need for "updating" transitional justice theory.

A genealogy of transitional justice indicates that from the post-World War II tribunals at Nuremberg and Tokyo to the proliferation of tribunals and truth commissions in the present, the field of transitional justice has both expanded and normalized. The burgeoning of transitional justice is often associated with the post-Cold War political climate in which a significant number of authoritarian, oppressive and frequently violent nation-states began to transition towards peace and procedural democracy. Particularly, since the end of the Cold-War, the field of transitional justice has metamorphosed from an initially narrow focus on justice and retribution to a much more complex study of how human rights abuses, genocide and other mass atrocities are confronted by societies emerging from violent conflict or transitioning to democratic forms of governance. Transitional justice emerged as both a field of practice and field of scholarly inquiry in the 1980s and 1990s in response to dramatic political changes occurring in Latin America, Central and Eastern Europe, and South Africa. In each case, the transition to democracy included public demands to acknowledge and redress human rights abuses committed by former regimes.

This paper focuses on transitional justice as one of the peace building steps that needs to be taken to secure a stable democratic future. Since the field of transitional justice is very broad and complex, this paper focuses on its key concepts.

1. Defining Transitional Justice

Transitional justice can be defined as the conception of justice associated with periods of political change,[5]characterized by legal response to confront the wrongdoings of repressive predecessor regimes.[6] The origins of modern transitional justice can be traced to World War I.[7] However, transitional justice becomes understood as both extraordinary and international in the postwar, phase of transitional justice. The second, or post-Cold War, phase associated with the wave of democratic transitions and modernization that began in 1989. Toward the end of the twentieth century, global politics was characterized by acceleration in conflict resolution and a persistent discourse of justice throughout law and society. The third phase of transitional justice is associated with contemporary conditions of persistent conflict which lay the foundation for normalized law of violence. [8]

The International Center for Transitional Justice (ICTJ) defines transitional justice as "a response to systematic or widespread violations of human rights. It seeks recognition for victims and to promote possibilities for peace, reconciliation and democracy."[9] This approach emerged in the late 1980s and early 1990s, mainly in response to political changes in Latin America and Eastern

Europe—and to demands in these regions for justice. At the time, human rights activists and others wanted to address systematic abuses by former regimes but without endangering the political transformations that were underway. Since these changes were popularly called "transitions to democracy," people began calling this new multidisciplinary field "transitional justice."

[8] See Ruti G. Teitel, *Transitional Justice Genealogy, Harvard Human Rights Journal, I Vol. 16* (2003):. 69-70. Also, there is a rich scholarship on transitional justice. Early analyses reflected mostly Latin American and Southern European experiences of democratic transition. But current thinking about transitional justice is informed by a much broader range of experiences, including post-socialist transitions in Eastern Europe and various post-conflict settings, many in sub-Saharan Africa and Asia.

[9] ICTJ website, http://www.ictj.org/en/tj/. Accessed January 4, 2009.

It is important to be emphasized that four processes are believed to constitute the core of transitional justice, even if there is disagreement about what each of them entails and the relationship that should exist between them. Usually, a transition encompasses a *justice process*, to bring perpetrators of mass atrocities to justice and to punish them for the crimes committed; a *reparation process*, to redress victims of atrocities for the harm suffered; a *truth process*, to fully investigate atrocities so that society discovers what happened during the repression/conflict, who committed the atrocities, and where the remains of the victims lie; and an *institutional reform* process, to ensure that such atrocities do not happen again (OHCHR, 2009).[10] In addition to these core processes, others have become part of the transitional justice agenda: primarily, *national consultations*, which have been strongly recommended by the Office of the High Commissioner for Human Rights (OHCHR) and the Peacebuilding Commission, which emphasize that "meaningful public participation" is essential for the success of any transition[11]. National consultations should take place in relation to different aspects of transitional justice. Finally, *Disarmament, demobilization and reintegration* (DDR), which usually take place in parallel rather than as part of the transitional justice processes, actively interact with and complement transitional justice mechanisms and policies.[12]

As the field has expanded and diversified, it has gained an important foundation in international law. Part of the legal basis for transitional justice is the 1988 decision of the Inter-American Court of Human Rights in the case of Velázquez Rodríguez v. Honduras,[13] in which the court found that all states have four fundamental obligations in the area of human rights. These are:

- To take reasonable steps to prevent human rights violations;
- To conduct a serious investigation of violations when they occur;
- To impose suitable sanctions on those responsible for the violations; and
- To ensure reparation for the victims of the violations.

Those principles have been affirmed explicitly in later decisions by the court and endorsed in decisions by the European Court of Human Rights and UN treaty bodies such as the Human Rights Committee. The 1998 creation of the International Criminal Court was also significant, as the court's statute enshrines state obligations of vital importance to the fight against impunity and respect for victims' rights.

In spite of this impressive evolution, there are still many questions in need of answers. One such question revolves around the role of international organizations, especially United Nations and European Union, in promoting transitional justice.

2. United Nations Approach to Transitional Justice

Over the years, the United Nations has acquired significant experience in developing the rule of law and pursuing transitional justice in States emerging from conflict or repressive rule. Experience has demonstrated that promoting reconciliation and consolidating peace in the long-term necessitates the establishment or reestablishment of an effective governing administrative and justice system founded on respect for the rule of law and the protection of human rights.

For the United Nations system, transitional justice is the full range of processes and mechanisms associated with a society's attempt to come to terms with a legacy of large-scale past abuses, in order to ensure accountability, serve justice and achieve reconciliation.[14] Transitional

justice processes and mechanisms are a critical component of the United Nations framework for strengthening the rule of law.

Transitional justice consists of both judicial and non-judicial processes and mechanisms, including prosecution initiatives, truth-seeking, reparations programmes, institutional reform or an appropriate combination thereof. Whatever combination is chosen must be in conformity with international legal standards and obligations. Transitional justice should further seek to take account of the root causes of conflicts and the related violations of all rights, including civil, political, economic, social and cultural rights. By striving to address the spectrum of violations in

integrated and interdependent manner, transitional justice can contribute to achieving the broader objectives of prevention of further conflict, peacebuilding and reconciliation.[15]

The normative foundation for the work of the UN in advancing transitional justice is the Charter of the United Nations, along with four of the pillars of the modern international legal system: international human rights law, international humanitarian law, international criminal law, and international refugee law. Specifically, various UN instruments enshrine rights and duties relative to the right to justice,[16] the right to truth,[17] the right to reparations,[18] and the guarantees of non-recurrence of violations (duty of prevention).[19] In addition, treaty bodies and court jurisprudence, as well as a number of declarations, principles, and guidelines[20] have been instrumental in ensuring the implementation of treaty obligations.

To comply with these international legal obligations, transitional justice processes should seek to ensure that States undertake investigations and prosecutions of gross violations of human rights and serious violations of international humanitarian law, including sexual violence. Moreover, they should ensure the right of victims to reparations, the right of victims and societies to know the truth about violations, and guarantees of non-recurrence of violations, in accordance with international law.[21] Without doubt, transitional justice processes and mechanisms do not operate in a political vacuum, but are often designed and implemented in fragile post-conflict and transitional

---

[15] United Nations rule of law and transitional justice activities include developing standards and best practices, assisting in the design and implementation of transitional justice mechanisms, providing technical, material and financial support, and promoting the inclusion of human rights and transitional justice considerations in peace agreements.

See also E/CN.4/2005/102/Add.1, Principle 19.

[17] See International Covenant on Civil and Political Rights, article 2, International Convention for the Protection

of All Persons from Enforced Disappearance, article 24. See also E/CN.4/2005/102/Add.1, Principles 2-5.

[18] See Universal Declaration of Human Rights, article 8, International Covenant on Civil and Political Rights, article 2, International Convention on the Elimination of All Forms of Racial Discrimination, article 6, Convention against Torture and Other Cruel, Inhuman, Degrading Treatment or Punishment, article 6, International Convention for the Protection of All Persons from Enforced Disappearance, article 24, the Convention on the Rights of the Child, article 39. See also A/RES/60/147.

[19] See International Covenant on Civil and Political Rights, article 2, Convention against Torture and Other Cruel, Inhuman, Degrading Treatment or Punishment, article 2, International Convention for the Protection of All Persons from Enforced Disappearance, article 23. See also LaGrand Case (Germany v. United States), Judgment of 27 June 2001, I.C.J. Reports 2001. See E/CN.4/2005/102/Add.1, Principle 35.

[20] Inter alia, founded on the 1948 Universal Declaration of Human Rights.

[21] These international standards further set the normative boundaries of UN engagement, for example: the UN will neither establish nor provide assistance to any tribunal that allows for capital punishment, nor endorse provisions in peace agreements (See Guidelines for UN Representatives on Certain Aspects of Negotiations for Conflict Resolution ,1 Dec. 2006) that include amnesties for genocide, war crimes, crimes against humanity, and gross violations of human rights (gross violations of human rights include torture and similar cruel, inhuman or degrading treatment; extra-judicial, summary or arbitrary executions; slavery; enforced disappearances; and rape and other forms of sexual violence of comparable gravity).

environments. The UN must be fully aware of the political context and the potential implications of transitional justice mechanisms. The question for the UN is never whether to pursue accountability and justice, but rather when and how.[22]

Finally, transitional justice programmes include the following elements:

- Prosecution initiatives;[23]
- Facilitating initiatives in respect of the right to truth;[24]
- Delivering reparations;[25]
- Institutional reform;[26]and
- National consultations.[27]

Taking into account the emerging developments in international law, the principles and needs of UN, including its field presences, the following approaches should be incorporated into transitional justice activities of the UN:

- Adopt an approach to transitional justice that strives to take account of the root causes of conflict or repressive rule, and address the related violations of all rights, including economic, social, and cultural rights in a comprehensive and integrated manner;
- Take human rights and transitional justice considerations into account during peace processes;[28] and
- Coordinate disarmament, demobilization, and reintegration (DDR) initiatives with transitional justice processes and mechanisms, where appropriate, in a positively reinforcing manner.[29]

United Nations rule of law and transitional justice activities include developing standards and best practices, assisting in the design and implementation of transitional justice mechanisms, providing technical, material and financial support, and promoting the inclusion of human rights and transitional justice considerations in peace agreements.

3.The EU and Transitional Justice: A comprehensive approach to justice and peace building

The UN has led the field in developing norms and standards regarding human rights and peacemaking, and in practice, EU mediators are already actively engaged in these issues. Yet despite

---

[22] The UN cannot endorse provisions in peace agreements that preclude accountability for genocide, war crimes, crimes against humanity, and gross violations of human rights, and should seek to promote peace agreements that safeguard room for accountability and transitional justice measures in the postconflict and transitional periods.

[23] See The Rule of Law Tools for Post-Conflict States, http://www.ohchr.org/EN/PublicationsResources/Pages/SpecialIssues.aspx.

[24] See E/CN.4/2005/102/Add.1, Principles 6-13 and E/CN.4/2004/88 and E/CN.4/2006/91.

[25] The General Assembly has reaffirmed the right of victims to reparations in the Basic Principles and Guidelines on the Right to a Remedy and Reparation for Victims of Gross Violations of International Human Rights Law and Serious Violations of International Humanitarian Law. See A/RES/60/147.

[26] Public institutions that helped perpetuate conflict or repressive rule must be transformed into institutions that sustain peace, protect human rights, and foster a culture of respect for the rule of law. Also See E/CN.4/2005/102/Add.1, Principle 36.

[27] National consultations are a critical element of the human rights-based approach to transitional justice, founded on the principle that successful transitional justice programmes necessitate meaningful public participation, including the different voices of men and women. Effective outreach must address both specific groups affected by the particular mechanisms involved as well as the broader community. It requires careful planning during the design phase and adequate resources.

[28] See the study on human rights and transitional justice activities undertaken by the human rights components of the United Nations system (E/CN.4/2006/93) and the progress report on human rights and transitional justice (A/HRC/4/87); and the Human Rights Council Resolution, Human Rights and Transitional Justice, No. 9/10.

[29] Guidance Note of the Secretary-General (2010). 'United Nations Approach to Transitional Justice', p.p. 1-10.

this emerging normative framework, the extent to which peace and justice issues are brought to the fore depends very much on the conflict and on the personality and personal experience of the mediator, regardless of his/her institutional affiliation.[30]

Transitional justice is a relatively new area of concern for the European Union (EU). Indeed, until recently it was largely absent from EU policies promoting democracy, the rule of law and human rights. But that does not mean that it was ignored.[31] Moreover, there is no specific reference to transitional justice in the corpus of treaties establishing the European Union. Also, the EU does not have a common definition of "transitional justice" despite its support for and engagement in transitional justice processes in Europe and beyond.[32]On the other hand, transitional justice can contribute to the rule of law by strengthening the legitimacy of public institutions and the processes by which laws are made, including through promoting public participation. Transitional justice can also contribute to changing social norms which in turn strengthen legitimate rule of law and democracy. Transitional justice contributes to public recognition that the abuse suffered by victims was and remains wrong; this recognition can help strengthen inclusive citizenship, enabling the excluded and marginalised more generally to become fully rights-bearing citizens who participate in a common political project.[33]

According to the treaty on European Union, 'The Union's aim is to promote peace, its values and the wellbeing of its peoples'.[34] In Stockholm in December 2009, the Council of the EU declared: 'The Union is an area of shared values, values which are incompatible with crimes against humanity, genocide and war crimes'.[35] Moreover, the EU has provided extensive political and financial support

to the ad hoc tribunals, including the International Criminal Tribunal for Rwanda (ICTR), the International Criminal Tribunal for the former Yugoslavia (ICTY), the Extraordinary Chambers of the Courts of Cambodia, and the Special Court for Sierra Leone. It also supports the trial of the former Chadian president Hissène Habré in Senegal,[36] and the Special Tribunal for Lebanon.[37]

Some of the strongest commitments to international criminal justice are found in the EU's Enlargement policy. The European Council meeting in Copenhagen in 1993 laid down conditions for EU membership, which included 'stability of institutions guaranteeing democracy, the rule of law, human rights and respect for and the protection of minorities'[38] and provided financial assistance for countries in the region to strengthen democratic institutions and the rule of law as a way to 'advance regional cooperation as well as reconciliation'.

Cooperation with the ICTY became a condition for membership candidacy, as spelled out in the Thessaloniki Agenda for the Western Balkans:

'The EU urges all concerned countries and parties to co-operate fully with the International Criminal Tribunal for the former Yugoslavia. Recalling that respect for international law is an essential element of the SAP [Stabilisation and Association Process], the EU reiterates that full co-operation with ICTY, in particular with regard to the transfer to The Hague of all indictees and full access to documents and witnesses, is vital for further movement towards the EU'.[39]

Missing a consistent overarching framework, legal or otherwise,[40] the EU approaches transitional justice from primarily two perspectives. First, transitional justice mechanisms are nested in various policies that promote human rights, development, democracy, and enlargement under what is known as the Community Pillar (First Pillar) of the EU.[41]

Additionally to the Community Pillar, the EU promotes transitional justice as part of its Common Foreign and Security Policy (Second Pillar), filtered through the prism of the European Security and Defense Strategy (ESDP). From this vantage point transitional justice mechanisms are embedded with other peace-building and security-oriented tasks, such as crisis-management, security sector reform (SSR), and disarmament, demobilization and reintegration (DDR).

The EU is committed to promoting peace, to the protection of human rights and to the strict observance and the development of international law.[42] One of the objectives of the Union's common foreign and security policy (CFSP) is 'to consolidate and support democracy, the rule of law, human rights and the principles of international law'.[43]

The Concept on Strengthening EU Mediation and Dialogue Capacities states that:

'Issues such as holding human rights violators accountable in justice for their actions, reparations to victims, reintegration of ex-child soldiers, restitution of property and land … have to be tackled during the peace negotiations and the drafting of peace agreements. Although it is widely acknowledged that it is only through justice to victims that enduring peace can be achieved, there are

often tensions between these two objectives, and the EU should consider on a case by case basis how best to support transitional justice mechanisms, including addressing impunity. EU mediation efforts must be fully in line with and supportive of the principles of international human rights and humanitarian law, and must contribute to fighting impunity for human rights violations'.[44]

Peace-building and human rights agendas are pushed by activist Member States (usually Sweden, Denmark, Finland, the Netherlands, Belgium and sometimes the United Kingdom, plus others depending on the issue) and by activist officials in the national capitals and in Brussels. The extent to which these issues are prioritised in dealing with third countries depends on Member States' other interests there, or indeed the interests of third countries. In the Western Balkans, by

contrast, human rights and justice are seen as integral to the EU's interests in the region and cooperation with the ICTY is a condition of furthering relations with the EU. Yet even there, Member States set the bar at different heights.

Moreover, civilian crisis management is a central focus of the European Security and Defense Policy (ESDP) and is now considered the "core" of a human security based approach (Dwan 2006: 265). Increasingly, the most overt expression of the EU's support for transitional justice occurs in the context of EDSP, but without additional support provided by communitarized programs "winning the peace" would be that much more difficult. In examining how the EU's ESDP capabilities and missions have evolved, as well its first pillar instruments dedicated to the promotion of democracy, development and human rights, we observe an expanding EU international role that explicitly integrates the importance of ethical and normative concerns in formulating foreign policy, particularly in the areas of human rights and the security of individuals. Such concerns animate, indeed permeate, the EU's newly launched efforts in the area of transitional justice. The ethical power Europe model emphasizes what the EU does, and what the EU does in promoting transitional justice is to help establish the conditions for legitimate political authority, legitimate institutions, and the rule of law, all of which are preconditions for ensuring human security.

Lastly, transitional justice is recognised as an important policy area in the Mediation Support Concept, and indeed, the transitional justice element of the concept was the subject of most substantive debate during the drafting process. The concept also states that 'the EU should consider on a case by case basis how best to support transitional justice mechanisms, including addressing impunity'.[45]

Conclusion

Justice, peace and democracy are not mutually exclusive objectives, but rather mutually reinforcing imperatives. Advancing all three in fragile post-conflict settings requires strategic planning, careful integration and sensible sequencing of activities. Approaches focusing only on one or another institution, or ignoring civil society or victims, will not be effective. The approach to the justice sector must be comprehensive in its attention to all of its interdependent institutions, sensitive to the needs of key groups and mindful of the need for complementarity between transitional justice mechanisms.[46]

justice sector must be comprehensive in its attention to all of its interdependent institutions, sensitive to the needs of key groups and mindful of the need for complementarity between transitional justice mechanisms.[47]

Furthermore, despite the fast development of transitional justice as a field and of the processes described, such mechanisms are not always based on consistent normative foundations, simply because in periods of radical change different political forces and goals can be incompatible.[48] Also, the goals of each individual process (truth, justice, reparations and institutional reform) are not always achievable in parallel.

New practical challenges have forced the field to innovate, as settings have shifted from Argentina and Chile, where authoritarianism ended, to societies such as Bosnia and Herzegovina, Liberia and the Democratic Republic of Congo, where the key issue is shoring up peace. Ethnic cleansing and displacement, the reintegration of ex-combatants, reconciliation among communities and the role of justice in peace-building have become important new issues.

Ultimately, there is no single formula for dealing with a past marked by large-scale human rights abuse. All transitional justice approaches are based on a fundamental belief in universal human rights. But in the end, each society should—and indeed must—choose its own path.

THE PRINCIPLES OF LAW. PHILOSOPHICAL APPROACH

MARIUS ANDREESCU*

Abstract
Any scientific intercession that has as objective, the understanding of the significances of the "principle of law" needs to have an interdisciplinary character, the basis for the approach being the philosophy of the law. In this study we fulfill such an analysis with the purpose to underline the multiple theoretical significances due to this concept, but also the relationship between the juridical principles and norms, respectively the normative value of the principle of the law. Thus are being materialized extensive references to the philosophical and juridical doctrine in the matter. This study is a pleading to refer to the principles, in the work for the law's creation and applying. Starting with the difference between "given" and 'constructed" we propose the distinction between the "metaphysical principles" outside the law, which by their contents have philosophical significances, and the "constructed principles" elaborated inside the law. We emphasize the obligation of the law maker, but also of the expert to refer to the principles in the work of legislation, interpretation and applying of the law. Arguments are brought for the updating, in certain limits, the justice – naturalistic concepts in the law.

Key words: *Principles of the law/ / "given" and "constructed" in the law / Moral value / juridical value/ metaphysical principles/ constructed principles.*

I. Introduction

In philosophy and in general, in science, the principle has a theoretical value and an explanatory one as it is meant to synthesize and express the basis and unity of human existence, of existence in general and knowledge in its diversity of manifestation. The discovery and the assertion of the principles in any science concedes the certitude of knowledge, both by the expression of the *prime element*, that's exist by itself, without having the need to be deducted or demonstrated, as throughout the achieving of cohesion within the system, without which the knowledge and scientific creation cannot exist.

The principle has multiple significances in philosophy and science, but for our scientific approach, one keeps in mind this one:" as element, idea, basic law on which a scientific theory is grounded, a norm of conduct or the totality of laws and basic concepts of a discipline"[1]. The common place of the meanings of the term of principle makes the essence, a common category important both for philosophy as for the law.

The principle represents the *given as such*, that may have a double significance: a) what existed before any knowledge as aprioric factor and ground for the science; b) theoretical and resulting element of the synthesis of the phenomenon diversity for the reality of any type. The distinction, but also the relationship between "given" and 'constructed" are important in understanding the nature of the principles in science and mainly in law. In his work "*Science et tehnique en droit positif"* published at the beginning of XX century, François Geny[2] analyzes for the first time the relation between science and juridical technique starting from two concepts" the 'given" and the 'constructed". In his opinion Geny one thing is "given" when it exits as an object outside the productive realities of human. On this meaning the author distinguishes four categories: the *real given, the historical given; the rational given;* the ideal given. From our researching theme's

[1] *Romanian explanatory dictionary*, Publishing House of the Socialist Republic of. Români, Bucharest, 1975, p.744.

[2] Author quoted by Ion Craiovan, in the Monography *Introduction into Law's Philisophy,* Publishing House All Beck,Bucharest, 1998, p.63.

perspective two of these categories are of interest, namely:" the rational given" that consists of those principles that come out from the consideration that needs to be shown to the people and human relationships, and the "ideal given" throughout which is being established a dynamic element, respectively the moral and spiritual relationships of a particular civilization.

One thing is being "constructed" when being achieved by man, as reasoning, a juridical norm, etc. The "given" is relative in the meaning that is being influenced by a 'constructed", by human activity. Regarding the "given", man's attitude consists in knowing it by the help of science. Regarding the "constructed" the man is by hypothesis the "constructor", he can make from this respect, art or technique. The sphere of the constructed stretches out onto the social and political order.

The question that arises is if the law is "given", object of science, in other words for a finding, recording or it is "constructed, as technical work? From historical perspective, the law is obviously "given", object of science, such as it appears in the old law, in the international or national contemporary law. The drafting of the positive law yet assumes a "construction" and the juridical rules are the work of technique on this respect.

In the juridical literature this distinction has been retained, in compliance with which the science explores the social climate that requires a certain juridical normality, and the technique is aiming towards the modalities through which the law maker transposes them into practice, "builds" the juridical rules. It was emphasized nevertheless upon the relativeness of this distinction, having into consideration that the juridical technique also assumes a creation, a scientific activity[3].

Therefore the principles represent the "given" as ideal or background for the science and the 'constructed" in situation they are developed or transposed into a human construction, included by juridical norms.

A good systematization of the meanings which the principle notion has is done in a monography[4]: "a) the founding principle of a field of existence; b) what would have been hidden to the direct knowledge, and requires logical-epistemological processing; c) logical concept that would allow the knowledge of the particular phenomenon."

This systematization, applied to the law means: a) the discussion referring to the substance of law; b) if and how we may know the substance; c) the efficiency of placing into the phenomality of the law, related or not with the substance."[5]

The need of the spirit to raise up to the principles is natural and mostly persistent. Any scientific construction or normative system must relate to the principles that will guarantee or substantiate them. This regressive motion towards unconditioned, towards what is prime in an absolute way is for example of the motion that Platon follows in the Book VII of the Republic[6], when he puts the essence of the "Good" as a prime and non-hypothetical principle. In the same meaning another great thinker[7] speaks about the "first principles" or the eternal principles of the "Being", non-demonstrable, a ground for any knowledge and of any existing one, beyond which is nothing else but ignorance.

The question then is to know if what seems necessary, in the virtue of logics of knowledge is necessary also in the ontological order of the existence. In the "Critic of the Pure Reason",[8] Kant will show that such a passing from the logic to the existing (the ontological argument) is not legitimate. If the unconditioned, as a principle, is put in a necessary way by our reasoning, this fact cannot and

must not lead us to the conclusion that this unconditioned exists outside it and independently of any reality.

In consequence, as the principles aim the existence in all its fields, they cannot and must not be immutable, but are the outcome of the becoming. They are a "given", but only as a result of the existential dialectics or as a reflection of becoming into the phenomenal world and of the essence.

II. Paper content

Since the law is assuming a very complex relationship, between the essence and the phenomena, and also a dialectics specific to each of the two categories in the plane of theoretical, normative and also social reality, cannot be outside the principles.

The problem of the statute of the principles of law and their explaining was always a concern for the theoreticians. The natural law school argued that the source, origin, and therefore the grounds of the juridical principles are of human nature. The historical school of law, under Kantianism influence. The law historical school, under Kantianism's influence, opens a new view in researching of juridical principles' genesis, presenting them as products of the people's spirit (Volkgeist) which shifts the grounds of law from the universe of pure reasoning, to the junction of some historical origins scattered in a multitude of transient forms. The versions of the positivist school claim that the principles of law are generalizations induced by the social experience. When the generalization covers a series of social facts, in a sufficient number, we are in the presence of principles. There are authors such as Rudolf Stammler that deny the lastingness of any juridical principle, considering the contents of law diversified in space and time, lacking universality. In the author's concept the law could be a cultural category.[9]

Referring to the same problem, Mircea Djuvara asserted: "All law science does not consist in reality, for a very serious and methodical research, but merely in releasing out of a multitude of law dispositions, their essential, which are precisely these last principles of justice of which other dispositions derive from. In this way the entire legislation is of a large clarity and what it is called the juridical spirit comes into being. Only thus the scientific drafting of a law is being done. "[10]

In our opinion this is the starting point for understanding the principles of law.

In the specialized literature there is no unanimous opinion regarding the definition of the principles of law[11]. A series of common elements are identified, which we mention below:

- The principles of law are general ideas, guiding postulates, fundamental provisions or bases of the law system. They characterize the entire law system, constituting in the same time features specific to a certain type of law;
- The general principles of law configure the entire structure and the development of the law system, provide the unity, homogeneity, balance, coherence and its development capacity;
- The authors differentiate between fundamental principles of law, that characterize the entire law system and which reflect what is essential within the respective law type and the principles valid for certain law branches or juridical institutions.

Thus in the doctrine were identified and analyzed the following general principles of law: 1) providing the juridical bases for state's functioning; 2) the principle of liberty and equality; 3)

principle of responsibility; 4) principle of justice[12]. The same author considers that the general principles of law have a theoretical and practical importance that consists in: a) the principles of law are drawing the guiding line for the juridical system and orientates the activity of the law maker; b) these principles are important for the administering of the justice as "The man of law must ascertain not only the positiveness of the law, he has to explain the reason of its social existence, the social support of law, its connection with the social values"; c) the general principles of law take the place of the regulating norms when the judge, in the silence of the law, solutions the cause based on law general principles[13].

One of the main problems of the juridical doctrine is represented by the relation between the law principles, law norms and social values. The opinons expressed are not unitary they differ pending on the juridical conception. The natural law school, the rationalists, the Kantian and Hegelian philosophy of law admit the existence of some principles outside their norms, positive and superior to them. The principles of law are grounded on the human reason and configure valorically the entire juridical order. Unlike this, the positivist law school, the Kelsian normativism considers that the principles are expressed by the norms of law and in consequence there are no law principles outside the juridical norms system.

Eugeniu Speranţia established a correspondence between the law and law principles:"If the law appears as a total of social norms, mandatory, the unity of this totality is due to the conseqvence of all norms related to a minimum number of fundamental principles, themselves presenting a maximum of logical affinity between them. "[14]

In connection to this problem, in Romanian specialized literature was emphasized the idea that the law principles are fundamental provisions of all juridical norms[15].In another opinion, it was considered that the law principles orientate the drafting and enacting of the juridical norms, they have the force of some superior norms, that are found in the text of normative acts, but they can be deduced from the "permanent social values" when they are not expressly formulated by the positive law norms[16].

We consider that the general law principles are delimited by the positive norms of law, but undoubtedly there is a relationship between these two values. For instance, the equality and liberty or equity and justice are valoric foundations of social life. They need to find their juridical expression. In this way appear the juridical concepts that express these values, concepts that become foundations (principles) of law. From these principles derive the juridical norms. Unlike the norms, the general principles of law have an explanatory value because they contain the grounds for law's existence and development. [17]

Besides other authors[18] we consider that the juridical norms relate to the law principle in two meanings: the norms contain and describe most of their principles; the functioning of the principles is achieved by putting into practice of the conduct provided by the norms. In relation to the principles the juridical norms have an explanatory, teleological narrower value, the purpose of the norms being to preserve the social values, not to explain the causal reason of their existence. The principles of law are the expression of the values promoted and defended by the law. One can say that the most general principles of law coincide with the social values promoted by the law.

For a correct understanding of the problematic of the values in law and their expressing by the principles of law some brief comments are needed in the context of our researching theme. The different currents and juridical schools, from antiquity up to the present, have tried to explain and substantiate the regulations and juridical institutions by some general concepts appreciated as being special values for the society. The law is grounded on judgments of value. Indeed by its nature the law implies an appreciation, a value rendering of human conduct in relation to certain values, representing the finality of juridical order such as: justice, common good, liberty etc [19]

The values are neither of a strict nature nor of an exclusively juridical nature. On the contrary, they have a larger dimension, moral, political, social, philosophical, in general. These values must be understood in their historical-social dynamics. Though some of them are to be found in all law systems, for instance the justice, nevertheless the specific and historical particularities of the society leave their print on them. The values of a society must be primordially deduced from philosophy (social, moral, political, juridical) which leads and guides the social forces in the respective society.

The law maker, in the enactment process, oriented be such values, expressed mainly in the general principles of law, transposes them into juridical norms, and on the other side, once these vales "enacted" they are defended and promoted in the form specific to the juridical regulation. The juridical norm becomes both a standard for the appreciation of the conduct pending on respective social value, or a means to ensure the achieving of the exigencies of such a value and the prediction of the future development of society. Needs to be added that the juridical norms substantiate the juridical values in a relative way because, either as a whole or individually, they don't show totally a juridical value, they do not exhaust its richness in contents.

In regard to the identification the values promoted by the law, the oppinions of the authors do not coincide, yet they stay in closed related spheres. Thus, Paul Roubier named few such values *the justice, juridical security and social progress*[20]. Michel Villey named four large finalities of the law: *justice, good conduct, serving people and serving society*.[21] François Rigaux speaks about two categories, namely: the primordial ones called by him formal, *order, peace and juridical security* and the material ones *equality and justice*.[22]

The undeniable value that defines the finality of the law, in the concept of the most distinguished thinkers, yet from the ancient times, is the *justice.* The most complex concept *justice* was approached, explained and defined by numerous thinkers – moralist, philosophers, counselors, sociologists, theologians – that start in defining it from the ideas of *just, equitable*, in the meaning to give everyone what deserves. The general principle of law, equity and justice is the expression of justice as a social value. Many concepts about the law would be suitable, be it on a rationalist line or in a realistic one. The rationalists argue that the principle of justice is innate to men, it holds onto our reasoning in its eternity. The realists argue that the justice is an elaborate of history and human general experience.

Regardless of theoretical orientation, the justice undoubtly constitutes a complex ground of the juridical universe. Giorgio del Vecchio asserts that the justice is a conformation to the juridical law, the juridical law being the one that contains the justice. According to Lalande the justice is the owner of what is just; Faberquetes considers the law as a unique expression of the principle of justice, and the justice, as, naturally, the unique content of the expression of law. It has been said that the justice is the will to give everyone what it is his; is the balance or proportion of the relationships between people, is the social love or the harmonious fulfilling of the human being essence. [23] For enlarging the topic see Gheorghe C. Mihai, Radu I. Motica *Fundamentele dreptului. Teoria şi filozofia dreptului*, *Law Fundamentals. Theory and Philosophy of Law* Publishing House All,Bucharest, 1997, p.128.

The justice as a value and principle of the law exists throughout the juridical norms contained in constitutions, laws etc. This does not mean that the objective law, with expressings, carries on entirely and unavoidably "justice": not all that is lawfully in force is just. On the other side there are juridical norms, such for instance, the technical ones that are indifferent to the idea of justice. There are circumstances when the positive law is inspiring more utility considerents than the justice ones, in order to maintain the order and stability in society.

In our opinion, the justice, as social value and also as a general principle of law, dimensions itself in the ideas of just measure, equity, lawfulness and good faith. Mainly the concepts of just measure and equitly express the proportionality.

The principle of justice has a guidance contents on the cognitive-acting line: to give each one what deserves. A law system is unitary, homogenous, balanced and coherent if all its components "provide, protect, establish" in such a way that every physical and juridical person be what it is, to have what he deserves without injuring one another or the social system.

The equity is a dimension of the principle of justice in its consensuality with the moral good. This concept moulds the formal juridical equality, makes it human, introducing into the law systems in force the categories of the moral from the perspective of those for which the justification is a making for good and for liberty." Thus considered, the equity disseminates till the farthest spheres of the juridical norms system, fructifying even the strictly technical or formal fields, apparently indifferent towards the axiological concerns" [24]. Understood by the idea of proportionality, the equity regards the diminishing of the inequality there where the establishing of a perfect equality (also named formal justice) is impossible due to the particularity of the situation in fact. In other words, in relation to the generality of the juridical norm, the equity suggests to take into consideration the situations in fact, personal circumstances, unicity of the cause, without falling into extreme.

The idea of justice develops under the influence of the social-political transformations. Thus, in the contemporary democratic states, in order to underline the economic, social, cultural rights, one speaks about the *social justice.* The achieving of the social justice is mentioned as a requirement of the lawful state in the document adopted at the Conference for European Security and Cooperation, Copenhague 1990.

Another problem of the juridical doctrine is to establish the relationship between the principles of law and those of the moral. Christian Thomasius in his work *Fundamenta juris naturae et gentium ex sensu comuni deducta* (1705)[25], dinstinguished between the mission of the right to protect the external relationships of human individuals through provisions that form perfect and sanctionable obligations and the mission of the moral to protect the inner live of individuals, only throughout provisions that form imperfect and unsanctionable obligations. This difference between morals and law has become classic.

Undoubtedly, the law cannot be mistaken with the morals, for several reasons analyzed in specialized literature[26]. However, law and morals are from ancient times in a closed relationship that cannot be considered as accidental. The respective relationship is axiological. The juridical and ethical values have a common origin, respectively the conscience of the individuals living in the same community. The theory of justrationalism – the modern form of justnaturalism – tried to argument that there is a background of universal and eternal justice, because they are written within

[24] Ibidem, *quoted works. p.133.*

[25] Quoted by Ion Dobrinescu în *Dreptatea şi valorile culturii, Justice and Values of Culture,* Romanian Academy Publishing House, Bucharest, 1992, p.95.

[26] See also Giorgio del Vecchio, *Lecţii de filozofie juridică*, *Lessons of Judicial Philosophy* Publishing Europa Nova,Bucharest, 1995, p.192-202; Ion Dobrinescu, *quoted works*, p. 95-99; Gheorghe Mihai, Radu I. human reasoning where they connect with the principles of good and truth. Therefore, as law is rational, it is natural and because it is natural, it is also moral.

Of course, the law is eminamently governing the outer conduct of human individual. Nevertheless the law is not disinterested by the morals, "by the fact that by means of equity it seeks the good acting to harmonize the exterior with the inside of the individual, throughout the same equity"[27]

We consider that indeed the morals and law have a common valoric structure and it can be deducted only from the assertion pretty often met and according to which "the law is a morals minimum" but also from the observation that there isn't a moral assertion to be denounced as unfair, yet sometimes are being discovered juridical assertions in disagreement with the moral principles. It is noticed the tendency of the law to make appeal to values with a moral character so that they can be introduced into juridical regulations. In this respect Ioan Muraru stated that: "the moral rules, though usually are closer to the natural rights and customary laws, they express ancient and permanent desires of mankind. The moral rules, though usually are not fulfilled, in case of need by using the coercive force of the state, they need to be juridically backed up in their fulfilling when they defend human life, freedom and happiness. Therefore, in Romania's Constitution the referring to moral hypostasis is not missing. These constitutional referring provides efficiency and validity to the morals. Thus, for example, item 26, item 30 protect « good habits », item 35 mentions the « public morals » also the « good faith » which is obviously first a moral concept consecrated by item 11 and item 57[28]. Therefore the general principles of law and those of the morals have a common background of values. The norms of the law can express values that at their origin are moral and are to be found in the contents of the general principles of law, such as is for example the equity or its particular form, the proportionality.

The principles of law have the same features and logical-philosophical significances as the principles in general. Their particularities are determined by the existence of two systems of dialectical relationships specific to law:

a) principles – categories – norms;
b) principles – law, as social reality.

Few of the most important features of the principles of law can be identified, useful in order to establish if the proportionality can be considered a principle of law:

A) Any principle of law must be of the order of essence. It cannot be identified with an actual case or with an individual assessment of juridical relations. The principle must represent the stability and balance of the juridical relations, regardless the variety of normative regulations or particular aspects specific to juridical reality. In consequence, the principle of law must be opposed to the aleatory and should express the necessity as essence.

However, the principle cannot be a pure creation of the reasoning. It has a rational dimension, abstract of maximum generality, but is not a creation of metaphysics. Yet of substance order, the principles of law can neither be eternal nor absolute, but they do reflect the social transformations, they express the historical, economical, geographical, political particularities of the system which they contain and at their turn, which they substantiate. [29] The principles of law develop so that the realities they reflect and explain be subject to improving. The scientific improving of the juridical

analysis could never be ended. But in law, one needs to give immediate solutions so that the practical life does not wait"[30].

Being of the substance order the principles of law have a generalizing character, both for the variety of the juridical relationships as for the norms of law. At the same time expressing the essential and the general of the juridical reality, the principles of law are grounds for all other normative regulations.

There are great principles of law that do not depend on their consecration on the juridical norms as it is the juridical norm that determines their concrete contents in relation to the historical reference time.

B) The principles of law are consecrated and acknowledged by constitutions, laws, customary, jurisprudence, international documents or formulated by the juridical doctrine.

The principles must be accepted internally and must be a part of the national law of each state. The general principles of law are consecrated in constitutions. The characters of the state's juridical system influence, and even determines, the consecration and acknowledging of the principles of law.

The work of consecration of the principles of law in the political and juridical documents is in full progress.

Thus, in the international documents such as U.N.O Charta or the Declaration of U.N.O. General Assembly in 1970, are consecrated principles [31] that characterize the democratic international law order. The regional law systems had known and acknowledged their own principles. For example, the community law consecrates the following most important principles : principle of equality, protection of the human fundamental rights, principle of juridical certitude, principle of subsidiarity, principle of authority of res judicata and principle of proportionality[32]. Most democratic constitutions consecrate principles such as: principle of sovereignty, principle of juridicality and supremacy, constitution, principle of democracy, principle of pluralism, principle of representation, principle of equality etc.

The jurisprudence has a significant role in the consecration and applying of the principles of law. There are situations when the principles of law are acknowledged by jurisprudential ways, without being formulated in the text of normative acts. Thus, the Italian Civil Code recommends to the judges to decide in the absence of some texts, in the light of the general principles of law.

There are systems of law in which not all principles have a normative consecration. We refer mainly to the great system known by the name of *common law*, consisting in essence of three normative, autonomous and parallel subsystems: common law (in a narrow meaning); equity; and statute-law. Equity represents a set of principles coming out from the practice of the instance and is a correction brought to the common-law rules.

With all variety of the consecratation manner and the recognition of the principles of law, comes out the need at least for their recognition in order to be characterized and enacted in the system of law. This consecration or acknowledging is not enough to be doctrinary, nevertheless it must be realized throughout norms or jurisprudence. However, a distinction between the consecration and acknowledging of the principles of law must be made, and on the other side, in their enacting.

C) The principles of law represent values for the law system, because they express both the juridical ideal, as the objective requirements of society, have a regulating role for the social relations. In situation in which the norm is not clear or it does not exist, the solving of the litigations can be

[31] Alexandru Bolintineanu, Adrian Năstase, Bogdan Aurescu, *Drept internaţional contemporan, Contemporary International Law* Publishing House All Beck, Bucharest, 2000, p.52-71. ONU Charta specifies the "General Principles of Law Acknowledged by Civilized Nations" as source of law.

[32] Ion Craiovan, *quoted works* p.211.

achieved directly based on the general or special principles of the law. As ideal, they represent a coordinating ground for the work of law making.

D) In classifying the principles of law it is started from the consideration that between them there is a hierarchy or relation from the general to particular[33]. Starting from this observation one can distinguish:

1. General principles of law which form the contents of some norms with universal application with a maximum level of generality. These are acknowledged by the doctrine and expressed by the normative acts in the internal law or internationally treaties as having a special importance. As a rule these principles are written in constitutions having thus a superior juridical force in relation to the other laws and all law branches. Referring to the theoretical and practical importance for studying the law branches, Nicolae Popa remarks: "the general principles of law are fundamental provisions that cumulate the creation of law and its enacting…. In conclusion the action of the principles of law has as a result the conceding of *certitude of law* – the guarantee granted to individuals against the unpredictability of the coercive norms – and the congruence of the legislative system, namely the concordance of the laws, their social character, credibility, and opportunity."[34]

The general principles have a role also in the administering of justice, because those in charge with the law enforcing must know not only the letter of the law, but also its spirit, and the general principles' make up of this spirit. As part of them one can include: principle of lawfulness, principle of consecration, respecting and guaranteeing human rights, principle of equality, principle of justice and equity etc.

2. The specific principles that express particular values and as a rule have a limited action to one or several branches of law. They are mentioned in codes or other laws. In this category can be included the principle of lawfulness of penalties, binding of contracts, presumption of innocence, principle of compliance with international treaties etc. The special principles have their source of values in the law's fundamental principles.

For instance the proportionality is one of the oldest and classic principles of law, rediscovered in the modern age. The significance of this principle, in a general meaning, is that of an equivalent relation, balance between phenomena, situations, persons etc., but also the idea of just measure.

Ion Deleanu specifies that: "At the origin, the concept of proportionality is outside the law; it calls up the idea of correspondence and balance, but also of harmony. Appeared as a mathematical principle, the principle of proportionality was developed also as a fundamental idea in philosophy and law receiving different forms and acceptions: "reasonable". "balance", "admissible", "tolerable", etc.[35]. Therefore, the proportionality is a part of the content of principle of equity and justice, considered as being a general principle of law. At the same time by its normative consecration, explicit or implicit, and by jurisprudential applying, the proportionality has particular significances in different branches of law: constitutional law, administrative law, community law, criminal law etc. This principle definition, understanding and applying, in the above shown significances result from the doctrinary analysis and the jurisprudential interpretation.[36]

III Conclusions

An argument for which the philosophy of law needs to be a reality present not only in the theoretical sphere but also in the practical activity for normative acts drafting or justice

---

accomplishing, is represented by the existence of the general principles and branches of law, some of them being consecrated also in the Constitution.

The principles of law, by their nature, generality and profoundness, are themes for reflection firstly for law's philosophy, only after their construction in the sphere of law metaphysics; these principles can be transposed to the general theory of law, can be consecrated normatively and applied to jurisprudence. In addition, there is a dialectical circle because the "understandings" of the principles of law, after the normative consecration and the jurisprudential drafting, are subject to be elucidated also in the sphere of the philosophy of law. Such a finding however imposes the distinction between what we may call: *constructed principles of law* and on the other side *the metaphysical principles of law.* The distinction which we propose has as philosophical grounds the above shown difference between 'constructed" and "given" in the law.

The constructed principles of law are, by their nature, juridical rules of maximum generality, elaborated by the juridical doctrine by the law maker, in all situations consecrated explicitly by the norms of law. These principles can establish the internal structure of a group of juridical relationships, of a branch or even of the unitary system of law. The following features can be identified: 1) are being elaborated inside law, being as a rule, the expression of the manifestation of will of the law maker, consecrated in the norms of law; 2) are always explicitly expressed by the juridical norms; 3) the work of interpretation and enacting of law is able to recognize the meanings and determinations of the law's constructed principles which, obviously, cannot exceed their conceptual limits established by the juridical norm. In this category we find principles such as: publicity of the court's hearing, the adversarial principle, law supremacy and Constitution, the principle of non-retroactivity of law, etc.

Consequently, the law's constructed principles have, by their nature, first a juridical connotation and only in subsidiary, a metaphysical one. Being the result of an elaboration inside the law, the eventual significances and metaphysical meanings are to be, after their later consecration, established by the metaphysic of law, at the same time, being norms of law, have a mandatory character and produce juridical effects like any other normative regulation. Is necessary to mention that the juridical norms which consecrate such principles are superior as a juridical force in relation to the usual regulations of law, because they aim, usually, the social relations considered to be essential first in the observance of the fundamental rights and of the legitimate interests recognized to the law subjects, but also for the stability and the equitable, predictable and transparent carry on of juridical procedures.

In case of a such category of principles, the above named dialectical circle has the following look: 1) the constructed principles are normatively drafted and consecrated by the law maker; 2) their interpretation is done in the work of law's enacting; 3) the significances of values of such principles are later being expressed in the sphere of metaphysics of law; 4) the metaphysical "meanings" can establish the theoretical base necessary to broaden the connotation and denotation of the principles or normative drafting of several such newer principles.

The number of the constructed principles of law can be determined to a certain moment of the juridical reality, but there is no pre-constituted limit for them. For instance, we mention the "principle of subsidiarity", a construction in the European Union law, assumed in the legislation of several European states, included in Romania.

The metaphysical principles of law can be considered as a 'given" in relation to the juridical reality and by their nature, they are outside law. At their origin they have no juridical, normative, respectively jurisprudential elaboration. They are a transcendental 'given" and not a transcendent of the law, consequently, are not "beyond' the sphere of law, but are something else in the juridical system. In other words, they represent the law's essence of values, without which this constructed reality cannot have an ontological dimension.

Not being constructed, but representing a transcendental, metaphysical "given" of law, it is not necessary to be expressed explicitly by the juridical norms. The metaphysical principles may

have also an implicit existence, discovered or valued throughout the work for law's interpretation. As implicit "given" and at the same time as transcendental substance of law these principles must eventually meet in the end in the contents of any juridical norm and in every document or manifestation that represents, as case is, the interpretation or enacting of the juridical norm. It should be emphasized that the existence of metaphysical principles substantiates also the teleological nature of law, because every manifestation in the sphere of juridical, in order to be legitimate, must be suited to such principles.

In the juridical literature, such principles, without being called metaphysical, are identified by their generality and that's why they were called "general principles of law". We prefer to emphasize their metaphysical, value and transcendental dimension, which we consider metaphysical principles of juridical reality. As a transcendental 'given" and not a constructed one of the law, the principles in question are permanent, limited, but with determinants and meanings that can be diversified within the dialectical circle that contains them.

In our view, the metaphysical principles of law are: *principle of fairness; principle of truth; principle of equity and justice; principle of proportionality; principle of liberty*. In a future study, we will explain extensively the considerents that entitle us to identify the above named principles for having a metaphysical and a transcendental value in respect to the juridical realities.

The metaphysical dimension of such principles is undeniable, yet still remains to argument the normative dimension. An elaborate analysis of this problem is outside the objective of this study, which is an extensive expose about the philosophical dimension of the pruinciples of law. The contemporary ontology does not consider the reality by referral to classical concept, in substance or matter. In his work *„Substamzbegriff und Funktionsbegriff"* (1910) Ernest Cassirer opposes the modern concept of function to the ancient one of substance. Not what is the "thing" or actual reality, but their way of being, their inmost make, the structure concern the modern ones. Ahead of knowledge there are no real objects, but only "relations" and "functions". Somehow, for the scientifical knowledge, but not for the ontology, the things disappear and make space for the relations and functions. Such an approach is operational cognitive for the material reality, not for the ideal reality, that 'world of ideas" which Platon was talking about.[37]

The normative dimension of juridical reality seems to correspond very well to the observation made by Ernest Cassirer. What else is the juridical reality if not a set of social relations and functions that are transposed in the new ontological dimension of "juridical relations" by applying the law norms. The principles constructed applied to a sphere of social relations by means of juridical norms transforms them into juridical relations, so these principles correspond to a reality of judicial, understood as the relational and functional structure.

There is an order of reality more profound than the relations and functions. Constantin Noica said that we have to name an "element" in this order of reality, in which the things are accomplished, which make them *be*. Between the concept of substance and the one of function or relation a new concept is being imposed, that will maintain the substantiality without being dissolved in functioning, to manifest the functionality[38].

Assuming the great Romanian philosopher idea, one can assert that the metaphysical principles of law evoke not only the juridical relationships or functions, but the "valoric elements" of juridical reality, without which it would not exist.

The metaphysical principles of law have a normative value, even if not explicitly expressed by law norms. Furthermore, such as results from jurisprudence interpretations, they can even have a supernormative significance and thus, can legitimate the justnaturalist conceptions in law. These conceptions and the superjuridicality doctrine asserted by Francaise Geny, Leon Duguit and Maurice

[37] For more details see also, Constantin Noica, *Devenirea întru fiinţă*, *Becoming into Being* Publishing House Humanitas, Bucureşti, 1998,p. 332-334.

[38] Constantin Noica , *quoted works. p. 327-367.*

Duverger, consider that justice, the constitutional justice, in particular, must relate to rules and superconstitutional principles. In our view, such standards are expressed precisely by the metaphysical principles which we referred to. The jurisprudential conceptions were applied by some constitutional courts. It is famous on this meaning, the decision on January 16th 1957 of the Federal Constitutional Court of Germany with regard to the liberty to leave the federal territory. The Court declares: "The laws are not constitutional unless they were not enacted with the observance of the norms foreseen Their substance must be in agreement with the supreme values established by the constitution, but they need to be in conformity with the *unwritten elementary principles* (s.n.) and with the fundamental principles of the fundamental Law, mainly with the principles of lawful state and the social state"[39].

One last thing we wish to emphasize refers to the role of the judge in applying the principles constructed especially the metaphysical principles of law. We consider that the fundamental rule is that of interpretation and implicitly of enacting any juridical regulation within the spirit and with the observance of the valoric contents of the constructed and metaphysical principles of law. Another rule refers to the situation in which there is an inconsistency between the common juridical regulations and on the other side the constructed principles and the metaphysical ones of the law. In such a situation we consider, in the light of the jurisprudence of the German constitutional court, that the metaphysical principles need to be applied with priority, even at the expense of a concrete norm. In this manner, the judge respects the character of being of the juridical system, not only the functions or juridical relations.

THE EQUALITY PRINCIPLE REQUIREMENTS

CLAUDIA ANDRIŢOI*

Abstract

The problem premises and the objectives followed: the idea of inserting the equality principle between the freedom and the justice principles is manifested in positive law in two stages, as a general idea of all judicial norms and as requirement of the owner of a subjective right of the applicants of an objective law. Equality in face of the law and of public authorities can not involve the idea of standardization, of uniformity, of enlisting of all citizens under the mark of the same judicial regime, regardless of their natural or socio-professional situation. Through the Beijing Platform and the position documents of the European Commission we have defined the integrative approach of equality as representing an active and visible integration of the gender perspective in all sectors and at all levels.

The research methods used are: the conceptualist method, the logical method and the intuitive method necessary as means of reasoning in order to argue our demonstration. We have to underline the fact that the system analysis of the research methods of the judicial phenomenon doesn't agree with "value ranking", because one value cannot be generalized in rapport to another. At the same time, we must fight against a methodological extremism.

The final purpose of this study is represented by the reaching of the perfecting/excellence stage by all individuals through the promotion of equality and freedom. This supposes the fact that the existence of a non-discrimination favourable frame (fairness) represents a means and a condition of self-determination, and the state of perfection/excellency is a result of this self-determination, the condition necessary for the obtaining of this non-discrimination frame for all of us and in conditions of freedom for all individuals, represents the same condition that promotes the state of perfection/excellency.

In conclusion we may state the fact that the equality principle represents a true catalyst of the Romanian law constitution phenomenon, succeeding not just in entraining significant modifications of the legislation, but also determining an obvious acceleration of his phenomenon, an enlargement and in the same time further studies.

Keywords: *equality, privileges, interpretation, perspective, evolution.*

Introduction

The domain covered by the subject of the study refers to the incursion in the history of philosophic and religious ideas, which allows us to also observe a gap between what the great thinkers expressed through their ideas, contained by true thinking systems, and what the social reality has underlined. The importance of the study results from the fact that it is somewhat difficult to follow the problem of equality between people in abstract, by not taking into consideration the facts that generated the respect of disobedience of human rights. Still, it is easy to observe that in the entire modern history the efforts to prove the need of an exercise of human rights and freedoms was a permanent battle to affirm and to invoke human reasoning, in the name of which different institutions took birth, national and international organisms and, which by their activities and the documents emitted tried to establish a social order in which peace and social harmony rule.

The objectives of this study are formed on the basis of an analysis of equality between all citizens in front of the law, an equality in judicial treatment and of connections with other realizations of the process of human thinking which have found some mirroring in the national and international regulations.

These will be fulfilled through the use of research methods indicated in the abstract of the paper, which will lead to the obtaining of assumed finalities.

* Assistant Lecturer, PhD, "Eftimie Murgu" University Resita (e-mail: andritoiclaudia@yahoo.com).

In this paper I have made references to scientific papers relevant for the specialty literature, thus indicating the state of knowledge of the principle of equality in internal and international law. The idea of freedom, equality and human dignity is materialized in basic law principles which govern the entire law process. These aspect are mentioned in contributions of known authors, thus starting our scientific analysis Rousseau, Djuvara, Deleanu and reaching the Beijing Platform[1] and the position documents of the European Commission, which define the integrative approach of equality as representing and active and visible integration of the gender perspective in all sectors and at all levels.[2]

1. The intercalation of the equality principle between the freedom and the justice principles

Equality, like freedom and justice, can be examined from a double perspective. A perfect equality (ideal) which is the real one and an imperfect equality ("earthling") which in fact doesn't exist, but aspires towards an ideal. Platon shows in "The laws" that equality and proportion are not based on the perception of senses, nor on the pleasure that can be found in them, but first of all on truth and almost, on nothing[3]. The foundation of equality is underlined through this sentence: the non-perennial human spirit through which we are equal in front of the Absolute (Supreme Reasoning). The great Greek recognizes the fact that "… truth and perfection is not easy to be known: only Zeus and very few people have this notion"[4] .

In fact, humankind exists due to great ideas of freedom, equality and brotherhood, said E. Roerich. If these ideas will be considered utopian and on for this reason humankind will separate from them, then this will be the equivalent for the death of humankind. Without the assimilation of great ideas in our hearts, mankind will be invaded by unseen crimes and lust, the consequence of which will be human decomposition and death. The principles of equality, justice and freedom represent the ideational trinity of law. Ch. Montesquieu considers that "freedom is the right to do anything permitted by laws and if a citizen could do what is forbidden, he would lose his freedom, because other could do the same thing."[5] The principle of justice according to the containing area encapsulates the principles of freedom and equality. Equality is not just a form of justice, the first being subordinated to the latter.

Platon said that justice is just the equality between unequal things, according to their nature and that there isn't equality between unequal things, but in the measure in which proportion is being kept. Continuity in thinking regarding the rapport equality-freedom has been sustained over centuries by Nicolae Popa, for example. The doctrinaire has the conviction that "there can't be equality but between free humans and not freedom but between humans the equality of which is enshrined from a judicial point of view. Equality refers to the balance of life and freedom looks at humans' capacity to act without obstacles"[6].

The main unit of equality and freedom is materialized from a judicial point of view in the Universal Declaration of Human Rights. "All human beings are born free and equal in dignity and

The platform identifies 12 intervention domains on the women's condition at the world level, from being poor to human rights, health and education. This document and the CEDAW Convention represent beacon-manifests regarding women's situation and are report permanently their legal activity and their practical action of UN and European Union member states.

rights. They are endowed with reason and conscience and should act towards one another in a spirit of brotherhood." is stipulated in art. 1 of the Universal Declaration of Human Rights. This principle results from the inalienable rights of people as human being[7]. All human beings are gifted with the same basic rights and must be treated with respect and dignity regardless of numerous differences that nature and the surroundings of life create. The human being is considered a lawful person, individually or as a group, and represents the purpose of law, in insuring and guaranteeing the most appropriate judicial conditions for the affirmation and realization of freedom and equality in a society. The values on which law is based on indicate the human being as the main landmark and at the same time as purpose, the judicial norms not being able to find substance, respectively genesis without a plenary affirmation and a judicial guarantee of individual's freedoms and rights.

In this context, J.J. Rousseau stipulates that the process of governing must be realized on law norms provided in a ***Social Contract***, which should contain the rights and obligations of governors and of the ones governed, so that the principles of justice and equity will be fulfilled according to the following commandments. **"***No one must be so rich so he could buy another***"** and **"***No one so poor that he will be obliged to sell himself*"[8]

This aspect refers to equality in rights and in dignity. It doesn't refer to uniformity. Contrary, it allows the foundation of respect of differences. This principle of "equality in dignity and rights" represents a basic pedestal for the law edifice. These ideas receive viability at a subjective level, being consecrated as rights and basic freedoms. A special merit for this is offered to French revolutionaries, who affirmed the principles of freedom, equality and justice as fundaments of the state.

The principle of equality is intercalated between the principles of freedom and justice, equality being manifested in positive law in a double state, as a general idea of all judicial norms and as requirement of the subjective law owner towards the applicants of objective law.

According to the professor Mircea Djuvara, equality represents the means to realize a social equity, one of the "logic elements of justice".

The rejection of uniformity based on the difference of situations is consecrated in the Romanian constitutional jurisprudence for the first time in a decision of 1993[9], in which the law referred to the Court aimed the students' transfer from private faculties to public ones; thus being forbidden the students' transfer from private faculties to public ones, while the contrary was possible at any moment. The judge's reasoning is supported by a comparison of situations, found from an objective point of view as being different, being motivated by the fact that allowing students' transfer both ways would be the equivalent of a privilege for private faculty students which even if they didn't sustain an admission context as all public education students, will benefit from all the rights they have. Thus, we deal with different situations in which the students of the two types of institutions are found, fact which determined different solutions from the legislator, without this breaking the constitutional principle of equality, which doesn't refer to uniformity. But, the legislator's will to respect the principle of equality is hardened by the fact that for certain aspects that are common to the two institutions the law provides identical solutions.

Remarkable is the fact that the Romanian judge has observed not only the variant of relative equality, but also its possible evolutions in time, so that the distinctions which are not discriminatory today will become as so tomorrow. The contrary may also be valid.

2. The judicial configuration of privileges and discriminations

In a traditional conception, discrimination as notion, supposed an ascendant of the party that applies the discriminatory treatment on the other party, of a discrimination essence considering it to

[9] Decision no. 70/1993.

be (even if only implicitly) a certain subordination. In other words, we can speak about discrimination in the plan of judicial rapport of public law and less or at all in the judicial rapport characterized by the parties' judicial equality.

Equality in front of the law and in front of public authorities can not involve the idea of standardization, uniformity, of enlisting all citizens under the mark of the same judicial regime, regardless of their natural situation or their socio-professional one. The principle of equality supposes that in equal situations the equal judicial system will be applied. But, at the same time, and apparently paradoxically, the equality principle also involves the right to differences in a judicial treatment, because, in the measure in which equality is not natural, the imposing of an equal judicial treatment would mean discrimination. In other words, equal situations must correspond to equal judicial treatment; to different situations, the judicial treatment cannot be but different. Still, for this action there must be an objective and reasonable motivation, in order to avoid reaching a disproportion between the purpose desired through an unequal judicial treatment and means used[10].

Today, the non-discrimination and the interdiction of arbitrary principles has crossed the borders of a rapport with public authorities and has begun to enter every days life, in judicial rapports characterized by a judicial equality of the parties, in the most frequent of the contracts signed (buy-sell agreement, credit contracts, property contracts etc.) and even in extra-contractual social rapport (addressing formulas, behaviour, attitude).

Starting with the year 2000 the protection against discrimination is no longer realized in Romania, but on the grounds of constitutional provisions and of international regulations, and on the basis of detailed internal regulations, that aim (even expressly) work rapports. Thus, more than a self-standing right, non-discrimination appears to be o concrete modality of exercise for other rights. Besides the equality principle has always been understood as representing a "right to rights equality", being added to fundamental rights that need to be strictly respected, but also exercised in conditions of full equality.[11]

Reporting at such a definition, Romanian legislation regarding the gender equality domain is far from retaining and promoting an integrative approach of gender equality. From this point of view, the investigation of Romanian legislation in the domain offers the image of a punctual initiative on segments of problem regarding gender equality. Principles regarding the affirmation of equality, consecrated by the Constitution, the Labour Code and other laws, are taken punctually in normative acts destined to regulate aspects connected to anti-discrimination, labour rights, social protection in a general belief, maternity protection and family violence. The respective normative acts represents in most cases the expression of Romania politic commitment to adopt standards conform to the community acquis.

An equality of chances supposes the solving of all existent discrepancies between individuals, fact resulted from the deficit of individuals' capacities and opportunities for which many circumstances of personal, social and economic nature are outside their control, and which lead to inequality through an inequality of chances[12]. In order words, inequality is a problem derived from perspectives and unequal chances of success in the employment process and the fulfilling of their own goals, thus the reaching of an optimum level of self-determination. This situation leads to losing control over life circumstances, and in the end of their own lives.[13]

The theory of equal opportunities justifies the correction of social injustices (*social redress*) in the favour of those found in a disadvantageous situation, affirming that all individuals have the right

to self-determination, while psychological and social conditions derived from the experimenting of freedom determines that some individuals and some groups experiment incorrect advantages in the determination of their own future, in comparison to others, to diminish their chances of self-determination of those found in a disadvantageous situation, fact resulted from social forces found outside their control and as a consequence of these declines/diminution, it is mentioned the collectivity duty to promote the improvement of success chances in the process of self-determination for those in disadvantage.[14] For this reason, the collective action must include an optimization of chances of success in the process of self-determination through the improvement of autonomy *capacities* in thinking and acting, through the enlargement of the spectrum of *opportunities* of choice and effective action and through an optimization of the *rapport* (*match*) between the individual's capacity and the social opportunity, through the elimination of obstacles and the building of opportunities that encourage in a more accentuated measure and more frequently the expressing and experimenting of self-determining.

But are there equal chances for all individuals?

For this question we have found four answers:

(1) the first results from a dominant ideology of social layering which equals a correct chance and an equal opportunity – in consequence, the lack of chance of some is due to their failure in profiting from opportunities available to all in an equal manner;

(2) the second answer derives from the justice theory as Rawls' *favourability/opportunity* (1971)[15], who affirms that "equal opportunities" refer to an equal splitting of the surplus created, in other words with the redistribution of well-being from those that have more to those that have little;

(3) the theory of justice as Nozick's *empowerment* (entitlement) (1977)[16] – a correct chance means a free exercise of the power of self-determination, minimally restraint only when this expression breaches the self-determining of other;

(4) a theory which is a mix of the three already presented and which takes into consideration three basic factors: capacity, opportunity and final result (*outcome*). The variation of capacity affects and is affected by the results of self-determination in thinking and acting.

The process measurement in the realization of social equity demands a different approach of this concept, the citizen being considered as being interdependent and variable, when referring to him as a person or at the environment, depending on the optimization of values that he attaches to himself in judging correct chances for the reaching of relative different goals of self-determination.

The outcome is represented by the reaching of a state of perfection/excellency by all individuals, by promoting equality and freedom. This supposes the existence of a favourable non-discriminative frame (*fairness*) represents a *means* of self-determination and the state of perfection/excellency is a *result* of this self-determining, and the necessary condition for the obtaining of a non-discriminative frame for all and in conditions of freedom for all individuals, represents the same condition that promotes the state of perfection/excellency.

The promotion of the concept of equality of chances supposes automatically that at the social system level some discriminative actions are manifested at the address of some individuals, damaging actions in general, for the entire society. For this reason, the most affected social groups are minorities (ethnic, religious, sexual), women, old people and disabled persons and in a quasi-general manner – *poor people*, people in general with modest jobs and incomes who don't have the capacity and are not found in the position of influencing and negotiating different structures of power formed in the social system frame. For this reason, two complementary concepts have been launched – *positive discrimination and affirmative action.*

[16] Nozick Robert, 1977, *Anarchy, State and Utopia,* Basic Books, New York, web page.

Positive discrimination/affirmative action refer to the promotion and application of programs that desire to solve the effects produced by certain discriminations manifested in the past, suffered by different individuals, in the labour sphere, the education one etc., and to prevent the re-apparition and re-manifestation of these discriminations. Affirmative action was promoted especially in the labour and education spheres; *The Civil Rights Act* promoted by the USA Congress in1964 which interdicts discrimination in the employment sphere and an equal treatment from this point of view between men and women. Other legislative documents have forbidden discrimination in employment of old people (*Age Discrimination Act* – 1967) and of disabled people (*Rehabilitation Act* – 1973). Positive discrimination/affirmative action is distinguished from self-discrimination or the laws that promote equal opportunities (which interdict an unequal treatment), because it proposes *positive corrective measures* focused expressly on persons/groups that have suffered in the past from different discriminations.[17]

The adopting of the EU legislation regarding equality between citizens was an indispensable condition for the adherence to the European Union, representing an integrative party of the politic criterion regarding human rights and being necessary for a proper institutional capacity. During the enlargement process, the European Parliament has appealed to an economic support in order to help future member states in adapting procedures and their statistic methods to the European Union standards. The purpose is to develop and to publish gender statistics which are in accordance with the ones used by the European Union, fact which will allow to underline problems and to facilitate comparisons, and to continuously monitor situations regarding equality.[18]

In 1975 the Rome Treaty introduced, in community law, the principle of gender equality regarding the remuneration obtained for the work realized. The European integration process has stimulated the creation of new instruments for the insurance of an equal treatment by developing the provision of the Rome Treaty.

The Amsterdam Treaty stipulated that the promotion of equality between men and women is one of the Union basic tasks, and inequalities had to be eliminated from all activities. A step forward was also represented by the introduction of a new article on the basis of which EU could take measures regarding fighting all forms of discrimination based on sex. The European Charter of Fundamental Rights signed in 2000 and included in the Constitutional Treaty reaffirmed and completed these principles. Persons who were victims of gender discrimination may appeal institutions established in member states according to EU legislation. Beyond the legal frame, Central European institutions are assisted by structures that represent the interest of women, do lobby in their favour and assist the Commission in formulating and implementing measures in this domain. The oldest structure of this type is the Consultative Committee on the equality of chances, established by the Commission in 1981 (representatives of ministries and of different structures of member states which are connected to the subject).

3. Equality - reference norm for the control of constitutional law

Jean Jacques Rousseau mentions the fact that force always tends to destroy equality and legislative force must do its best to maintain it.[19] Direct guarantees offered to individuals under the shape of subjective rights underline a dimension of objective law in the measure in which this represents a condition of exercised of fundamental rights. For this fact, the objective law has been

qualified in the French doctrine as "guardian" right, also mentioning the fact that the equality principle represents a support for all other fundamental rights.[20]

The democratic principle strictly implemented will need rights of economic equality and politic equality. Lucien Sfez speaks about democracy in correlation to the equality principle, sustaining that democracy doesn't resume only to a normative model, or to a social inclusion or exclusion rapport. The democratic state, in his belief, represents an ensemble, a finite unity, in which equality and freedom pretended to be able to realize they don't find their application field in a well determined circle. Democracy has always been "just one, the democracy of all, of many".[21]

The constitutional principle of equality authorizes differences in treatment, so that equality is susceptible from derogations, the Constitutional Council announcing that "the equality principle in front of the law involves the solving of similar solutions through identical solutions; this doesn't mean at all the fact that different solutions cannot make the objective of different solutions."[22] I

Even before the apparition of the Constitutional Court, in the Romanian judicial plan, equality didn't represent the object of proper analysis; it was studied in a more general context of citizens' rights.

The doctrine as the constitutional jurisprudence constantly underlines that the equality principle doesn't pretend uniformity, so that to equal situations an equal treatment must correspond, and to different situations there may exist a different treatment.

In **Decision no. 90/2005**, emitted on 10.02.2005, regarding the waiver of unconstitutionality of the dispositions written in article 15, paragraph 1 of the Law no. 80/1995 regarding the Statute of military personnel, the Constitutional Court was notified by the civil section with an exception of unconstitutionality of the dispositions of article 15 of the Law no. 80/1995 regarding the Statute of military personnel, exception which was risen by Gabriel Hulea after obtaining a solution for the appeal formulated against the Civil Sentence no. 17 of 16 January 2004, pronounced by the Bacau Court in the Case no. 8.304/2003. The representative of the Public Ministry states rejection conclusions of the exception as being ungrounded. Thus, he shows that the equality principle mustn't be interpreted according to uniformity, so that when situations are objectively different, as in the case presented, the application of a different judicial treatment is justified.

In motivating the waiver of unconstitutionality the author sustains, in essence, that the dispositions of the art. 15 of the Law no. 80/1995 contravene the constitutional principle of equality in rights, because these have a discrimination character. For this reason it has been shown that, contrary to general regulations regarding the public pensions system and other social insurance rights, the criticized law text allows the approval of a paid leave for child care until the age of two only for women which are active military personnel. This being the case, unlike all other categories of employees, active military personnel men cannot benefit from this right and, in consequence, they are discriminated in rapport to civil persons and in rapport to women active military personnel.

The Appeal Court from Bacau – Civil Section appreciated that the dispositions of article 15 of the Law no. 80/1995, which refer to the approval of a child care leave are unconstitutional in comparison to the provisions of article 16 paragraph (1) of the Constitution.

The Ombudsman appreciates that the criticized law text doesn't contravene the criticized legal dispositions. Thus, in his opinion, "the establishment of leaves, in a different manner, for persons – active military personnel – in comparison to those that don't have the same statute, is not generated by supposed discriminations between citizens on arbitrary criteria, but is due to the specific of military activity, which imposes to certain professional categories certain obligations and

---

[20] F. Melin –Soucramanien, *Le principe d'egalite dans la jurisprudence du Conseil Constitutionnel,* Economica –PUAM, 1997, p.251-252.

[21] L.Sfez, *Leçons sur l'Egalité,* Presses de la Fondation Nationale des Sciences Politiques, 1984, p.24.

[22] François GILBERT, *La discrimination positive en France,* in La revue pratique de droit français, no. 20/11/2005.

interdictions". The government appreciates that the waiver of unconstitutionality is grounded. For this reason, it is shown that the law text criticized is in contradiction to the dispositions of the Law no. 19/2000, which provides that the persons insured by the public pension system have the right to a leave and to an allowance for the care of a sick child, and from this allowance benefits, optionally, one of the parents, if the claimant fulfils the conditions of fee stage provided by the law..

After examining the seizure closing, the Government and the Ombudsman's points of view, the rapport written by the reporting-judge, the prosecutor's conclusions, the criticized law dispositions in comparison to the Constitution provisions and the dispositions of the Law no. 47/1992, the Court retains the following: the object of the waiver of unconstitutionality is represented by the dispositions of article 15 of the Law no**.** 80/1995 regarding the Statute of military personnel, published in the he Official Journal of Romania, Part I, no. 155 of 20 July 1995, with subsequent amendments, dispositions according to which: "Women, active military personnel, have the right to a maternity leave and to a leave for child care in the conditions established by the order of the National Defense Ministry, on the basis of legal dispositions applied at a national plan.

Also, women, active military personnel benefit from pauses for child nursing and child care and from other rights provided by the law regarding employed women from public administration."

In sustaining the unconstitutionality of these law texts, the authors of the waiver invoke the breach of provisions from article 16 paragraph (1) of the Constitution, according to which:

- Art. 16 paragraph (1): "Citizens are equal in front of the law and of public authorities, without privileges or discriminations."

By examining the waiver of unconstitutionality the Court observes that, even if its author entirely attacked art. 15 of Law no. 80/1995, in reality his criticism addresses only the dispositions of the first paragraph of this article, dispositions that regulate the granting of a child care leave. In consequence, the Court will examine only the conformity of provisions of article 15 paragraph 1 of the Law no. 80/1995 with the constitutional provisions invoked.

Regarding active military personnel, the Court observes that, indeed, under the aspect of conditions of admission, of attributions, or rights, of incompatibilities and of interdictions, these are in a different situation than other categories of employees. Regardless all these, as insured employees, active military personnel are not different from other categories of insured people, thus the institution of a different judicial treatment, which deprive them of the benefit of a social insurance form provided by the law for all insured persons, it appears as being discriminatory.

Keeping in mind that the right to a leave for child care is granted, according to the criticized law text, only to active women military personnel, with the exclusion of the other parent, also belonging to military personnel, the Court appreciates that article 15 paragraph 1 of the Law no. 80/1995 must also be analysed from point of view of equality in judicial treatment that our state must insure between men and women. For this reason, the solution pronounced by the European Court of Human Rights appears as relevant in the case Schuler-Zgraggen against Switzerland (1993), when it was agreed that an equality between sexes is an important goal for member states of the Europe Council and only very strong reasons may lead to the appreciation that the instauration of a differentiated treatment is compatible to the Convention. Moreover, the Strasbourg Court has underlined the need of an objective and rational justification for the institution of such a treatment.

The Constitutional Court appreciates that, in the case of the text subjected to a constitutionality control, the ideas kept in mind by the legislator cannot be considered to be strong enough to justify, in an objective and rational manner, the institution of a differentiated treatment between women and men, active military personnel, in the granting of a leave for child care. In conclusion, because the two categories of persons have the same professional status, this leads to the conclusion that the only identification of a difference in treatment is based on sex.

According to the reasons exposed, on the ground of article 146, letter d) and of article 147 paragraph (4) of the Constitution, articles 1-3, article 11 paragraph (1) letter A. d) and of article 29 of the Law no. 47/1992, with a majority of votes, the Constitutional Court, in the name of the law, has

decided the admission of the waiver of unconstitutionality raised by Gabriel Hulea in the Case no. 4.089/2004 of the Bacau Appeal Court – Civil Section and observes that the dispositions of article 15 paragraph 1 of the Law no. 80/1995 regarding the Statute of military personnel which contravene the provisions of article 16 paragraph (1) of the Constitution.[23]

In the Decision no. 173 of 22/03/2005[24], regarding the waiver of unconstitutionality of the dispositions of article 1, article 2 paragraph (1) and of article 19 paragraph. (1) letter a) of the Government Emergency Ordinance no.102/1999 regarding the special protection and labor admission of disabled persons, a waiver raised by in the Case no. 563/2004.

The cause being judged, the representative of the Public Ministry states conclusions of rejection of this waiver as being ungrounded. For this reason, he shows that the criticized legal provisions do not represent a differentiated judicial treatment between disabled persons in rapport to age or the date at which the disability appeared. Regarding the difference between the sums of the allowance, for seriously disabled persons, according to article 19 paragraph (1) letter. a) of the Government Emergency Rule no. 102/1999, it has been shown that this is justified by a different situation in which these persons are found under the aspect of incomes realized. In motivating the waiver of unconstitutionality its author sustains, in essence, that the provisions of article 1, article 2 paragraph (1) and of article 19 paragraph (1) letter a) of the Government Emergency Ordinance no.102/1999 **contravene the constitutional principle of equality in rights** and the constitutional dispositions which consecrate the states obligation to grant a special protection to disabled persons. Also, he appreciated that the law texts subjected to control of constitutionality are found in contradiction to the provisions of article 25 paragraph 1 of the Universal Declaration of Human Rights, thus also referring to the dispositions of article 20 of the Constitution, which consecrate the priority towards internal laws of international instruments in the domain of human rights, to which Romania is a party of. For this reason, he has shown that, though the definition offered to this notion of disabled person and through the establishing of social protection granting criteria, the criticized law texts create discrimination between disabled persons, under the aspect of special protection from which these benefit from.

Thus, keeping in mind that the admission in the category of disabled persons is conditioned by a cumulative fulfilling of two demands, respectively the fact of needing support in admission to a social life, and in a professional life, it is considered that persons who have the standard age for retirement and those which gained this affection that determined the disability after the standard age of retirement, are excluded from receiving special protection.

The President of the Deputes Chamber appreciates that the waiver of unconstitutionality is not grounded. The government appreciated that the author's support regarding the unconstitutionality of dispositions of article 1, of article 2 paragraph. (1) and of article 19 paragraph (1) letter a) Of the Government Emergency Ordinance no. 102/1999 are ungrounded. The Ombudsman appreciates that the provisions of article 1, article 2 paragraph (1) and of article 19 paragraph (1) letter a) of the Government Emergency Ordinance no. 102/1999 is constitutional. In sustaining the unconstitutionality of these law texts, the author of the waiver invokes the breaching of provisions of articles 16 paragraph (1) and 50 of the Constitution, according to which:

- Article 16 paragraph (1): "Citizens are equal in front of the law and of public authorities and without discriminations";
- Article 50: "Disabled persons enjoy a special protection. The state insures the realization of national politics of equality in chances, of prevention and of disability treatment, for an effective participation of disabled persons in community life, respecting the rights and duties of parents and tutors"

[23] Decision no. .90/2005, pronounced by the Constitutional Court during the meeting of 10 February 2005.
[24] Published in the Official Gazette, 1st part, no. 447 of 26/05/2005.

- Also, the author of the waiver appreciates that the criticized law texts breach the dispositions of article 20 of the Constitution, because these contravene the provisions of article 25 paragraph 1 of the Universal Declaration of Human Rights.

The Court concludes that the author's support for this waiver cannot be retained, according to which provisions of article 19 paragraph (1) letter a) of the Government Emergency Ordinance no. 102/1999 contravene the constitutional principle of right equality, so that this law text doesn't make a difference between adults according to their ages not in rapport to the period in which the disability appeared. The difference established by this law text is between the sum of allowances offered to seriously disabled persons, which is justified by different situations kept in mind by the legislator, that is, these persons realize or not incomes from salaries or pensions. Thus, the criticized law text is in full agreement to the constitutional principle of equality in rights, as it has already been stated in the jurisprudence of the Constitutional Court and doesn't suppose uniformity, so that different situations justify the institution of a different judicial treatment.

Conclusions

The main directions approached in this paper analyse equality as autonomous norms with a proper structure found under the label of "constitutional principle of equality" – a reference norm for the control of constitutionality of laws, but hiding a large frame of judicial origins the constitutional judge has the freedom to use according to circumstances. The equality exigency is contained by many articles of the Constitution, but also in numerous dispositions of international pacts and treaties[25], the manner in which the Constitutional Court uses all these reference norms depending especially in their normative content.[26]

Another analysis circumscribes the ideal of equality which was born as a demand of natural law, being justified by religious, psychological and philosophical argument, but all proved to be unsustainable. It is real that people are gifted by nature so that the demand that all people are to be treated equality cannot be based on a theory that we are all alike.

If we desire to understand this principle we must begin from a historical examination, as we have done. During modern times, as in ancient times, this principle was used as means of destroying feudal differentiation of individual legal rights. As long as the individual development and the development of important sections of population are stopped by barriers, social life will be troubled by violent uprisings. People without rights are always a threat for social order.[27] Their common interest for the removing of these barriers unites them; they are prepared to use violence when they cannot obtain what they want by peaceful means. Social peace is reached only when all members of the society are allowed to participate in democratic institutions. And this means everyone is equal in front of the law.

The impact of the analysis realized on the principle of equality is represented by the affirmation of the equality principle in internal and international law, fact which was realized in a small measure as a result of doctrinaire constructions realized and more on the basis of a jurisprudence of constitutional jurisdiction. This jurisprudence allowed the identification of all constitutional origins of equality in Romanian law, the stating of all beneficiaries of the constitutional principle of equality and the observing of rapports equality maintains with other fundamental rights consecrates by fundamental law.

[25] The 1991 Constitution refers to the term equality in the following articles: 4,6,16,38,41,44,53 and 59.

THE REGULATION. THE DECISION. THE DIRECTIVE. LEGISLATIVE DIFFFERENCES

GABRIEL ANDRONACHE*

Abstract
The article is set to establish the elements that determined the European legislator, within the Lisbon Treaty, to conclude that for certain regulatory domains a specific type of legislative act is to be used (regulation, directive or decision), as well as to define the juridical dissimilarities between the 3 types of secondary legal acts.

***Keywords**: regulation, decision, directive, Lisbon Treaty, Council and European Parliament*

I. Introduction

The entire European Union's legal creation included in institutive treaties could have remained a dead point of law if it didn't exist the juridical instruments to develop and generate its application in the Member States.

The juridical instruments that are held through institutive and modifying treaties, made available for the European co-legislators in order to fulfill their mission, are called legislation.

According to the provisions of the Treaties[1] the legislative acts include:

1.the Regulation;

2.the Decision;

3.the Directive.

II. Content

The differentiation of EU[2]'s legislative acts from non-legislative acts results from the legal force conferred to them. Thus, the legislative acts have a compulsory legal force, their direct or indirect application being imperative for all Member States. Non-legislative acts (opinions and recommendations) are not binding, Member States having the possibility not to apply in their national legislation the rules contained therein.

The regulation is the most powerful legislative act of the European co-legislators[3] made available through the EU treaties. Under the provisions of the TFEU "the regulation is a federal regulatory document with general application, binding in its entirety and directly applicable in all Member States. It is an integration instrument aiming at the unification of the applicable legislation within Member States".

The regulation has the following characteristics:

a)"It is general: it contains general requirements and impersonal, generally stating the same way the law into domestic law does"[4];

It is customary that regulations are seen as similar to primary or secondary legislation issued by Member States. The analogy is not entirely unsubstantiated, since there is this feature of the regulations that are meant to be generally applicable across Member States.

[4] Fabian Gyula, Institutional law of the European Union, Ed. Hamangiu, Bucharest, 2012, p 121.

Moreover, the Court[5] concluded that the regulations are abstract normative measures that are not addressed to a particular person or group of persons[6]. These considerations confirm the similarity between the Regulation, as a European legal instrument, and legislation, especially the primary one, the national legislation.

In relation to the generality of the Regulation "it frequently happens that a natural or legal person to claim that a measure called regulation is actually a decision. This happens most often when the person seeks the annulment of a measure as art. 263 TFEU[7] limits the right of private individuals to arraign measures that take the form of regulation, ruling in this regard that << any natural or legal person may, under the conditions laid down in the first and second paragraphs, institute the proceedings against any act which is of direct and individual concern and also against any legislative act which is of direct interest and does not entail implementing measures>>[8]. The criterion for determining whether a measure is a regulation or not is one of substance, not form"[9].

b) "It has a compulsory legal power", meaning that Regulation is compulsory in its entirety to all EU member states and union bodies, its non-compliance entailing the defying of obligations assumed by the States through the Treaties. The selective and incomplete application of the regulation is prohibited, respectively not enforcing the regulation by invoking national provisions or practices;

c)"It has a direct application, meaning that the regulation is automatically valid throughout the Union without the interposition of national legislative power, and is, therefore, apt to confer rights and impose obligations on Member States, their bodies and individuals, as national law does"[10]; "the term has a meaning connected to the manner in which international norms penetrate national legal systems. In some Member States, this happens by transforming the measure into a national law by the internal system or by a shorter enactment act of the international act. These methods would be cumbersome when more such international measures would have to be integrated into national legal systems. The European Union issues thousands of regulations. If each of them should be incorporated separately in each national legal system before they can be applied then it would reach a jam. The expression <<directly applicable >> removes this difficulty"[11]; "any form of transposition is, in fact, prohibited, because it would question the origin of the obligations provided by the Regulation same as the date of the enforcement". Direct applicability implies that the regulation immediately creates rights and obligations upon which individuals can build relationships with both national (vertical direct effect) and in relation to other individuals (horizontal direct effect)"[12].

d) "It is intended for states and individuals" (the rule is that it is addressed to Member States);

e) It has full legislative power as the union legislative authority can prescribe through the regulation not only an outcome, but enforce all the rules considered appropriate for the implementation and enforcement.

Two of these characteristics have generated discussion in the doctrine and especially generated jurisprudence. We refer here to the implementation of regulations and their direct applicability. The two issues are closely related to the concept of delegation of sovereignty. A close analysis shows that the regulation, by its direct applicability, appears as a supranational legal framework which, by contrary does not allow any national interference in changing the regulatory object, the desirable result to be achieved or even the provisions contained therein. From this

perspective it was expressed in the doctrine[13] the idea that "in those sectors in which the legislating process is realized through regulations, one can talk about a real delegation of sovereignty from Member States to the European Union".

"The direct applicability means that the Regulation comes into force and is applicable for or in prejudice of the subjects of law without being necessary measures of taking-over national law. European Union's Member States are obliged to respect the direct application of the regulations. Scrupulous observance of this obligation is a prerequisite for the unitary and simultaneous application of regulations throughout the Union. By taking into national law, the Regulation will receive an uncertain status regarding the judicial body that is qualified to construe it. The legal acts whose enactment rules are requested by the regulation does not contravene the taking-over interdiction. For example, within the Romanian national legislation it was issued a Government Emergency Ordinance no. 122/20120 establishing penalties for violation of Regulation no. 1272/2008 of the European Parliament and of the Council of 16 December 2008 on classification, labeling and packaging of substances and mixtures, amending and repealing Directives 67/548/EEC and 1999/45/EC and amending Regulation no. 1907/2006, published in Official Gazette no. 892 of 30 December 2010"[14].

There are, however, situations in which such take-over rules distort the original meaning of the Regulation settlements. In this case, the Court of Justice of the European Union immediately intervened to defend supremacy of the federal law in relation to the national law. For example 'Court in the case Tachograph, concluded that Great Britain has defied its obligations under the EEC Treaty[15] because, although the legislative power enacted implementing rules imposed by Regulation no. 1463/70 amended by Regulations no. 1787/73 and 2828/77 regarding the assembly of a tachograph on each truck, the implementing rules left the decision of assembling and of using control equipment at the exploiters choice, based on volunteering, thus practically neutralizing the provisions of the Regulation"[16]. The annunciation of national standards for the enforcement of the provisions of a European regulation is the only permissible situation of transposition. In all other cases the transposition is "unnecessary and is unlawful because it leads to the failure of a simultaneous and uniform application of rules across the European Union"[17].

Once again, the Court of Justice of the European Union intervened and confirmed the direct applicability of regulations and therefore, the prohibition of transposition, whenever there were violations of this character caused by national regulations.

We illustrate this through Case 34/73 Smallpox c. Amministrazione delle Finanze[18] when "the Court was asked by a national court whether the provisions of a regulation may be introduced into the legal order of a Member State national measures that reproduce the content of European standards to the extent that the rule's subject is brought under national law. The European Union's Court of Justice ruled that the direct applicability of the Regulation means that its enforcement and its application in favor or to the detriment of subjects of law happen independently of any measure of reception into national law. European Union Member States are committed, on the strength of the obligations that arise from the Treaty and assumed through its ratification, not to obstruct the direct effect inherent to the regulations and other community legal rules.

Strict adherence to this requirement is a prerequisite for the simultaneous and uniform regulations throughout the European Union. More specifically, Member States are not allowed to take measures that might affect the Court's jurisdiction to rule on any question of interpretation of

federal law or validity of a European Union act, which means that no proceeding that would hide the community nature of a legal rule is admissible. The Court remains fully competent, despite national provisions aimed at transforming a national standard into a European one"[19].

"The field of application of the regulation is very vast, starting with the harmonization of national laws in order to create the internal market, up to the establishment of mechanisms concerning the formation of agricultural markets or of the provisions on competition rules"[20].

Regulations can take many forms:

a) Basic regulations or

b) Implementing regulations usually enacted in order to detail a basic regulation or a directive's provisions.

The decision is the legislative act of the European Union which can be considered a pseudo-regulation because it has all the characters of a regulation apart from the field of application which is restricted to concrete recipients (individuals or legal entities, states or groups of states).

"The decision is governed by art. 288 TFEU[21]. Under these regulations, the decision is binding in its entirety. Whenever the recipients are indicated, the decision is binding only to them. Decisions are characterized by the following features:

a) They are not of general application; they are addressed to precise recipients, designated or identified, usually in the final article. Decisions may apply to different legal subjects other than states, especially when they refer to competition, which is of particular interest for traders.

These decisions might require certain obligations or impose sanctions to subjects to whom they are addressed. They do not have to be completed with implementing measures taken by the state[22]. Furthermore, "decisions could be the chosen method to introduce a new federal policy[23] area or to establish general procedures, such as the case of the decision regarding comitology "[24].

b) "For their enforcement, decisions must be notified to the addressee; the absence of the addressee deters the enforcement of the decision. The fact that they cannot be notified does not lead to their invalidity, but to the situation that they are not opposable, even if they were published in the Official Journal of the European Union.

c) The decisions must be reasoned clear and valid, and those that rely on a constant practice can be summarily justified;

d) Decisions are compulsory in their entirety for all their recipients.

Decisions taken by the Council and Parliament, through the ordinary legislative procedure take effect on the date fixed by the enactment or in 12 days after publication.

According to the Functioning of the European Union European Treaty the Central Bank has the right to take decisions and publish them"[25]. Considering these decisions one can wonder whether they have the characteristics of a legal act or not. Our opinion is that decisions taken by the European Central Bank have a legal character because the Treaty makes available to this institution almost all the legal instruments necessary to enact legal rules. This way the European Central Bank may enact, dependent on the considered situation, regulations, decisions, opinions or recommendations strictly in the banking field. The only tool that is not available to the European Central Bank is the directive due to reasons that regard the indirect character of directive's regulation.

Another aspect that should be detailed refers to the decisions adopted by the European Council or the Council in the field of security and defense policy and also foreign policy. These decisions are not laws as expressly provided in article 31 TEU. Therefore, we consider that they have

[19] Paul Craig, Grainne de Burca, op. cit., p.10.

[23] Socrates program established by Decision 819/95, published in OJ L 87, 1995, p.10.
[24] Paul Craig, Grainne de Burca, op. cit., p.107.
[25] Nicoleta Diaconu, op.cit., p.87.

primary legal power through their own regulation in the treaty, but they do not follow the procedures that a legislative act does so they cannot be arraigned or contested.

Moreover, the Treaties provide that such decisions are to be enacted with unanimous consent. Exceptions are allowed but are specifically regulated.

Those decisions are enacted in situations governed by:

a) Art. TUE 22 of the European Council decision on the EU's relations with other countries than the European Union's member states;

b) Article 27. (3) TEU decision on the organization and functioning of the European External Action Service;

c) Article 28 par. (1) TEU - Council decision on a EU's operative action if the international situation requires;

d) Article 29 TEU - EU Council decision on defining positions on external issues a geographical or thematic nature;

e) Article 31 par. (2) TEU - European Council or the Council decision on the definition of an action or EU external positions;

f) Article 39[26] - Council decision on the establishment of rules on the protection of individuals with regard to the processing of personal data by the Member States (notwithstanding the ordinary procedure provided for in Art. 16 line (2) TFEU);

g) Article 41. (2) and (3)[27] - decision of the Council relating to expenditure on the activity of foreign policy and security policy of the European Union;

h) Article 42 par. (4) TEU - Council decision on launching joint missions of EU Member States;

i) Paragraph 43. (2) TEU - Council decision on the common mission objectives;

j) Article 45 par. (2) TEU - Council decision on defining the statute, seat and operational rules of the European Defense Agency;

k) Article 46 par. (3)[28] - Council Decision on the participation of Member States in cooperation in the defense;

l) Article 48 par. (6) - European Council decision amending treaties;

m) Article 48 par. (7) - European Council decision amending legislative procedure by the European Council in the special legislative procedure to the ordinary legislative procedure adopted legislative acts in the field of security and defense policy and foreign policy.

The directive is the legal instrument used by the European institutions. Testimony to this is the number of directives issued by the Commission, Council and Parliament in comparison with the number of regulations or decisions.

"Directives are different from regulation in two essential aspects. They must address to all Member States and they are compulsory as to the result to be achieved, whilst leaving Member States the choice of form and methods. Generally, European institutions have a considerable freedom of choice whether they legislate by regulation or directive. There are express provisions in the treaty[29] governing the use of directives. A careful study reveals that legislating through directive, imposed by the Treaty, is closely linked to special legislative procedure[30] while regulation is used as a binding legislative instrument for the ordinary procedure[31].

As R. Kovar[32] noted, "the directive intrigue, disturb. And the reason for all these is its uniqueness. "

[26] Treaty on European Union (TEU), adopted in Lisbon in 2007.
[27] Idem.
[28] Ibidem.
[29] Treaty on the Functioning of the European Union, signed in Lisbon in 2007.
[30] Article 29 of the Treaty on the Functioning of the European Union.
[31] Art.14 from TFEU.
[32] Observations sur l`intensite normative des directives – 1987.

"In order to try to elucidate the real reasons that explain the difficulties posed by this original legal instrument, we must analyze ... the characters and functions of the Directive within the European law"[33].

"Unlike union regulation, which is an integration tool, the directive is more of a tool for harmonization"[34]. "The Directive appears as a tool used at a union level to harmonize national laws, to overcome the differences, the contradictions, most of the time substantial, in internal regulations of the various EU member states"[35].

In this respect, the European legislator states that without prejudicing the article 114, the Council, acting unanimously in accordance with a special legislative procedure and after consulting the European Parliament and the Economic and Social Committee, enacts directives for the approach of laws, regulations and administrative provisions of Member States which directly affect the establishment or the functioning of the internal market[36]. "The Directive is a compromise between the existing need within the European Union for regulation and state sovereignty. The Directive creates an enactment obligation for the receiver states.

This obligation results from art. 288 under TFEU and also from the loyalty clause provided by art. 4 under TEU which stipulates that "under the principle of sincere cooperation, the Union and the Member States respect each other, assist each other in carrying out tasks which flow from the Treaties or resulting from those institutions of the Union. Member States facilitate the achievement of the Union's tasks and refrain from any measure which could jeopardize the attainment of its objectives"[37].

The most important legal characters of the Directive are the following:

a) "It is compulsory in the aim that it appoints[38] "'from the analysis of the directive's definition in the Treaty[39] one can see that it is considered a two-story legislative method: at a union level it establishes the policy guidelines and the legislative model, it is then for the Member States to transpose this model, pliers second level is therefore the national level. As such, the directive is compulsory only regarding the ultimate goal, which is set at European level ..."[40]

b) "It has general content";

c) "It is intended for a State or several Member States";

d) "It has an incomplete normative character, since it requires national legislative power, the means and form needed to achieve the target set at the sovereign discretion of each state; by means one must understand the legal institutions likely to achieve the stated objective[41]; from this perspective one can say that "a directive is a rule that follow the framework law's technique rounded by the infliction decrees. Thus, unlike regulation the directive is more flexible, given the realities in the Member States. As such, receiving states retain some judicial discretion in the transposition of directives. However, the directive retains its normative character. Therefore, theoretically, the directive can contain only an obligation of result, not one of means, and states have absolute freedom regarding legal act transposing and designation of responsible institutions to implement these rules. It can be noted however, that in time, the directive's normative intensity experienced a major advance and the judicial discretion of States has declined accordingly, withdrawing, due to the fact that the objective to be achieved was precisely defined.

[33] Augustin Fuerea, op. cit., p.109.
[34] Gyula Fabian, op. cit., p.124.
[35] Augustin Fuerea, idem note 32.
[36] Article 115 of the Treaty on the Functioning of the European Union.
[37] Gyula Fabian, op. cit., p.124.
[38] Idem.
[39] Art 288 din TFEU (former 249 TCE).
[40] Augustin Fuerea, op.cit., p.111.
[41] Idem note 36.

This legislative technique has been questioned especially by doctrine and, in some cases, by states, being considered that the letter and spirit of the Treaty's[42] provisions are violated, and the Directive aims to be an alter ego of regulation. The Court of Justice of the European Communities[43] dismissed through a decision rendered in the Enka[44] case this point of view, stating that a directive may have a variable regulatory intensity, and this variability depends by the outcome that the Council and the Commission want to achieve. Therefore, we cannot discuss about a single scope established by the treaty[45], it rather fluctuates from very large to very small or even inexistent, so it all depends on union-wide target. This practice lead to the reduction of the differences between the directive and the regulation, as the Court recognized that the directive can also be binding in its entirety (objectives and means to achieve them), the same way the regulation is, if this is necessary to achieve the goal set at union level. The regulatory technique in question has not met strong opposition from the Member States, as the situation is likely to beneficial for them. States themselves are interested in such directives since the reduction of national judicial discretion diminishes the risk of removal from the European objectives and proportionally decrease the danger of assuming the liability of a state for ignoring EU rules"[46].

e) "It is indirectly applicable because the receiving State must transpose the directive within a certain period (usually between 1 and 3 years) until it creates rights and obligations for refugees. But the state is obliged not to take action that would contravene the Directive, even before absorbing it into national law. The Directive have to be transposed or implemented (through national measures[47]) within the specified period"[48]. "It should be mentioned that these national measures don't intend to introduce the directive into national law as it is understood in the dualistic theory which considers that an act of an international character cannot be applied in the domestic law unless it is <<nationalized>> thus, transformed in a domestic law by processing the act by the latter. Under European Union's law there even exist a ban against any type dual process. Transposition is merely the implementation of this act through internal measures, the process being similar to the situation in which the government decides to apply a law or ordinance.

The first condition of national transposition measures is its existence. The demonstration of its uselessness comes to the state which cannot claim any legal impediments such as national contrary provisions, be they constitutional or materials.

In addition, states cannot invoke the direct effect of the Directive to exempt the adoption of an accordingly internal act. The only situation when the lack of transposition is not sanctioned is when there are already national provisions similar to those of the Directive. On the contrary, a state can assume liability before the Court of Justice of the European Union's on the ground of non-fulfillment of the union obligations.

When a directive is only the synthesis of previous directives already enacted, the so-called consolidation directives, it doesn't have to be implemented if those directives whose synthesis represent have been already implemented. Regarding the internal document's characteristics Court[49] ruled in the 1976 Royar decision that Member States are obliged to choose between the means at their disposal those that lead to the aims of the Directive, so the state must choose the most appropriate forms and methods to ensure the effectiveness of the Directive. According to the equivalence theory[50] "the transposition of the directive must be equivalent to an act that would have

[48] Gyula Fabian, op. cit., p. 124.
[49] Court of Justice of the European Union.
[50] ECJ decision (cur CJEU) in 1986 Commission v. Belgium.

been normally adopted in the internal law for achieving the same result"[51]. Returning to the transposition's deadline, we mention that it is extremely important because "until its completion the State cannot be held liable for the transposition's delay". For example, in the case Kolpinghuis Nijmegen[52], a coffee house owner has been indicted for selling an assortment of mineral water containing a supplement banned by Directive no. 777/1980, but which had not been taken over by Dutch law and had not been published. Court held that such a directive cannot take effect.

However, there is an exception from the indirect applicability rule, namely the direct application of the directive when the following conditions are met:

1) the State did not respect the terms of acquisition or wrongly implemented the Directive; 2) the content of the directive is sufficiently precise and unconditional to create rights for individuals; 3) the Directive creates benefits for the union citizen;

4) can be invoked by an individual up against the state, meaning in relation with the state's institutions "[53](so-called direct effect).

The Directive comes into force within 20 days after the publication in the Official Journal of the European Union "when enacted through the ordinary legislative procedure and is addressed to all States". The directives that address only to some member states don't always have to be published, but just brought into notice to the receivers. We emphasize that it is important to make a distinction between the term "come into force" and "implementation deadline"[54].

III. Conclusions

Through founding treaties, the European Union have a number of legal instruments which help it realizes its goal of generating an accelerated integration at a legal level between Member States. These instruments have been described in the article's content. It is clear that the regulation is the representative instrument of the union integration concept and of the application of the supremacy of the European law towards national law of the member states principle. In this context the Directive can be considered as a method of harmonization of legislation in the fields that carry a national sovereignty. We should appreciate the strive of the treaties authors'[55] to strengthen the principle of mutual control between European institutions in the matter of enactment in which supranational enactment is most often established through ordinary legislative procedure, while indirect legislating (through Directive) is established often via special legislative procedure. As a proposition of law ferenda, we consider necessary to indicate the legal instrument to use in all areas of regulations (regulation, decision or directive), the dismissing of unnamed acts from the treaties and clarifying the legislative procedures applicable to the European Council or Council decisions which currently do not comply with legal proceeding

REFLECTIONS ON THE JURIDICAL SYSTEM

ELENA ANGHEL[*]

Abstract
It is professor Ion Craiovan`s opinion that law is an inherent condition of social life, fact of culture and civilization, expression of legal thinking, specific normative system, entity in the world of values or contemporary reality[1].
In this study, we aim to highlight the systemic nature of law. Related to the societal system, the juridical phenomenon is a subsystem, interdependent to other subsystems: the moral, economic, political, religious and scientific phenomenon. In his turn, law is only a part of the juridical phenomenon, which evolves depending on the other components: legal conscience and juridical relations.
If defining law by relating it to its essence implies "to find what is permanent, stable and defining for the reality named law", in terms of descovering „an universal underlying of juridical, an universal law concept, arising from the very nature of things by means of a meta-historical vision"[2], *we believe that the unity of the whole law system, its clarity, coherence, consistency and completeness are due to the general juridical principles.*
In our opinion, the whole law system is held by this assembly of guiding ideas which, having a privileged position in the positive juridical order, direct both the legislator and the law practitioner.

Key words*: juridical system, essence, juridical principle, unity of the law system, completeness of the law system.*

Introduction

The aim of this article is to emphasize the law's systemic character, detect the influences it sustains from some external factors and emphasize the features of the law system by analyzing them from the perspective of general legal theory. Following the research's line we will notice on a spatial axis the existence of not just a single law system but that of variable law systems that occasionally are consistent in certain common aspects. These we shall name the constants of law. The analysis of juridical systems reveals a community of sources, principles and institutions that mask their apparent diversity.

Through its origin, evolution and features, the Romanian positive law is part of the Romano-Germanic law system (meta-system). In specialized literature it has been highlighted that the Romanian positive law "has the same mode of expression, universal for the contemporary Elder law: law inscribed in normative acts and unwritten, customary, stipulated through oral tradition law"[3]. The formal origins of Romanian positive law are the normative act, normative contract and, as we will notice, the controversial jurisprudence.

In the first analysis we can observe that the law principles are not included in the origins' hierarchy through which the law is expressed. They are considered guiding law regulations that give the system's measure and have as subordinates the structure as well as the system of law's development[4]. It is unanimously admitted that the principles are those that insure the unity, cohesion, equilibrium and development of the law's system. However, are the principles formal origins of law?

Are they exterior to the positive juridical order? Should we place them in the "given" of law? And what is hiding behind the principles of law? We are aware that behind law and jurisprudence exist institutions and people; behind doctrine, savants and law schools; behind common law lays the entire society; behind the Muslim law's revelation is the prophet or church. How about behind law's principles? Are they autonomous origins of law or do they result from the other origins already assigned? Are they premises or extensions of formal origins?

These questions constitute in fact an invitation to continue reflecting on the law's formal origins because, as Hayek said, "it is the great lesson which science has taught us that we must resort to the abstract where we cannot master the concrete".

Content

The idea of a system exists since Greek and Roman antiquity, its wording being, however, tributary to modernity. In general, it is considered that the system designates an ensemble of methods organized in the base of a methodology or a complex of interacting elements, these interactions having an organized character. Society itself is a complex and progressive system that self-organizes the structures, components and functions under the influence of internal and external factors. Multiple connections exist between the components of any system.

The systemic analysis is being used even on the level of law by emphasizing law's specificity, the ensemble's coherency, its logic and finalities as well as the subsystems that compose it and the realities to which is gives expression. The juridical norm, law's basic cell, cannot be conceived isolated; law is a system of conduct rules detached from the juridical conscience through the mean of the state's will. In the law system we notice other two subsystems: the objective and subjective law. The objective law is also a system composed of juridical branches, sub-branches and institutions. Among the objective law it is also distinguished, from a diachronically perspective, between the "out-of-date law" and the actual law. The present objective law is called positive law.

Law's systemic character was detected by Pierre Pescatore in the following way: going from simple to complex the individual regulations are reunited in institutions which are reunited in branches, among which some have been codified; the branches, in their turn, are coordinated in a national juridical system which in its turn is integrated in a universal juridical order whose expressions are the nations' law and the legislations conflicts' law, the private international law[5] especially.

The law's system is defined as the totality of juridical norms existing at a given moment, bounded between each other by common features made to point out their unity and relatively separated by some particularities in rapport to the object and method of juridical regulation[6].

Other definitions emphasize the fact that juridical norms are assembled in an organic way by forming a unit that is not reduced to its component parts, thus conferring an internal coherency to the system that ensures its functionality and applicability; simultaneously, the multiple interdependencies that exist between juridical norms are highlighted[7].

Also, our attention is drawn towards the fact that the law's system does not constitute the arithmetic, mechanical, static and constant sum of the present juridical norms but the unity and ensemble of the norms that are structured, juridical and systemically organized based on certain

criteria and principles[8]. The law's system cohesion is assured through the interdependency of the elements that compose it.

Depending on the influences supported from some external factors, Alexandrina Şerban distinguishes between the closed systems, which are insensible to the outside pressures, and the open systems, that accept the confrontation with other competitive systems, under the conditions of social life's complexity. The author shows that Kelsen as well as Luhmann imagined juridical systems closed from a normative point of view: for Kelsen the juridical system is purged by any ideological, political, sociological influence, and for Luhmann, the juridical system represents a self-organized and self-determined system that produces its own structures and frontiers through its own mechanisms and without accepting any external determination[9]. In the author's opinion "the juridical system must be in relation to the exterior thus it cannot be completely closed".

As far as ***the features of law's system*** are concerned, these have been analyzed from the branch juridical sciences' position as well as from the perspective of the general legal theory.

Ion Deleanu considers that in the law's system the juridical norms behave as parts in relation to the whole but also as subsystems in relation to their own structure. Law's system is an open and dynamic system that support the influence of social environment and influences, in its turn, the development of social relations; it arises as a complex of interactions with all the other phenomena of the superstructures, conditioned by it through the possibility of resorting to the state's constraining force. On the other hand, interactions are also established between its composing parts and the branches of law as well as between these and the whole. Simultaneously, the author points the law's system characteristic as being an organizing ensemble through the mean of normative activities developed by the state's bodies[10].

Dan Claudiu Dănişor, Ion Dogaru şi Gheorghe Dănişor extract from the systemic character of law two consequences: no juridical norm can be understood while isolated since it is necessary to refer to the juridical order's coherency in its ensemble and, on the other hand, reports of formal classification exist between the juridical norms, hence, with the exception of the Constitution, each norm must be supported on a superior norm[11]. In the opinion of the said authors, the law's system should be defined through *clarity, coherence, consistency and completeness*.

Clarity presumes the system's feature of being logical, axiomatic and formalized. Given that juridical thinking implies and requires valuable judgments, the perspective of a perfectly logical law is purely "enticing". "What matters is not the logical beauty of laws, but the social value of the result. If the law is defective, misfit, anti-economic or even unjust, a perfectly logical reasoning will only serve by amplifying the premises' or the initial rule's defect. Consequently the material criterion prevails in law in relation to the formal one". Therefore, the law's logical character remains to be desired.

The coherency of law's system is translated by the non-contradiction of its internal elements. Seeing as the law is not missing antinomies, it intervenes itself by creating certain "conflict rules that will repair these incoherencies".

The consistency implies the existence of a system based on correct deductions. However, the law is full of inconsistent areas caused by its linguistic nature, but also of the reality's complexity to which it must answer. Some concepts are imprecise, susceptible to multiple and even divergent interpretations. Nevertheless, the law requires a certain dose of inconsistency and flexibility thus often deliberately creating imprecise notions that will lead to flexible precautions.

The completeness of a system is translated through the lack of gaps. In our law system the laws oblige the judge to statute even in the absence of some dispositions applicable in the species (speţă) under the sanction of justice denegation. Thus it is considered that the law cannot have gaps, and in the absence of regulations the judge must resolve the cause under the light of general principles of law.

For the reason that a "system of law can be assimilated to a three-dimensional plan, with a temporal, spatial and infinite cote axis"[12], we will distinguish, on a temporal axis, between *the "non-elderly" and elderly law.* Although the savage man had the quality of human, a rational creature, he "did not have the values guide marks, he did not coexist, instead he lived in herds". Consequently, the first form of social organization is considered to be the tribe, in which people led themselves under an ensemble of rules; nevertheless, "the old rules did not have the purely juridical, moral or religious character but a syncretic, moral-juridical-religious one". The state did not invent community, however it related to the past by creating new forms of organization and using everything that seemed useful from the unorganized society.

"Society's history is that of the law's historical systems included in the history of social juridical phenomenon"[13]. In society's history the following forms of elderly law succeeded themselves: the positive law of slavery, the feudal positive law, the bourgeois positive law and the socialist positive law. The right of a society is a historical phenomenon, meaning that on every step of evolution its structural elements gained a certain configuration, certain specific features.

On the spatial axis we have shown at the beginning of this paper that not just one system is submitted, but variable law systems that sometimes are in accordance in certain common points. These we have mentioned to be the constants of law. The analysis of juridical systems reveals a community of principles and institutions that mask their apparent diversity. Through its origin, evolution and features, the Romanian positive law is part of the Roman-Germanic law system (meta-system).

When we analyzed the form of law we evoked the opinion of professor Nicolae Popa, according to which a double possibility of formulating the origin of law exists[14]. The genetic conception aims at discovering the factors that stand at the basis of the juridical norm's emergence and existence, and the gnosiological conception proposes to put into value the indications through which the juridical character of norms of conduct can be recognized.

Regularly, the distinction is made between ***real origins of law***, a "given" of law and ***the formal origins of law***, under the meaning of legal criteria of validity that are respected by the said juridical system.

The picture for law's formal origins includes the juridical habit, judicial practice and the judicial precedent, doctrine, normative contract and normative act (the law). All these form "a systemic virtual unity: it is that which is named the origins' law"[15]. Given the historical-spatial diversity of law, these formal origins are converted on the level of each law system. Furthermore, the form-content dialectics specific to law has determined and continues to generate modifications in the structure of these origins from one historical phase to another in the same law system.

As far as the Romanian positive law is concerned, "it has the same forms of expression which are universal for the contemporary elderly law: the law inscribed in normative acts and the unwritten,

[15] Mircea Djuvara, *Teoria generală a dreptului (Enciclopedia juridică),* All Publishing House, Bucharest, 1995, page 463.

customary and stipulated through oral tradition law"[16]. The formal origins of the Romanian positive law are the normative act, normative contract and as we will notice, the controversial jurisprudence.

In the first analysis we can observe that the law principles are not included in the origins' hierarchy through which law is expressed. They are considered guiding law regulations that give the system's measure and have as subordinates the structure as well as the system of law's development[17]. It is unanimously admitted that the principles are those that insure the unity, cohesion, equilibrium and development of the law's system, but including them in the picture of formal origins of law is avoided. Other times they are defined as super-legislative formal origins.

Law's principles still have an ambigous statute. Are the principles formal origins of law? Are they exterior to the positive juridical order? Should we place them in the "given" of law because they are "a permanent and universal inspiration for law"[18]? What is hiding behind the principles of law? We are aware that behind law and jurisprudence exist institutions and people; behind doctrine, savants and law schools; behind common law lays the entire society; behind the Muslim law's revelation is the prophet or church. How about behind law's principles? Are they autonomous origins of law or do they result from the other origins already assigned? Are they premises or extensions of formal origins?

Upon analyzing the report between origins' law and positive law, Mircea Djuvara has raised a very interesting problem: **can we say that the effective law practiced in a country coincides in a necessary and absolute manner to the law formulated through its origins?** In his opinion the answer can only by negative. A country's positive law can only be the law put into practice, regardless of the legal prescriptions left unapplied. A state's real constitutional law is not "the one solemnly inscribed on paper but the law practiced effectively by the recognized political organs in their efforts to order and lead the interests of that specific society". The author shows that the real positive law, the "live" law, is the jurisprudential law[19].

Moreover, throughout his research Djuvara was led by an important distinction of law in rational and positive law. The rational law is that "live" law which needs to correspond entirely to society's real life; it is not a universally and eternal rational law as the natural law School thought would find, but a rational law variable in time and place. The rational law exists under the form of principles which are logically ahead of the positive law they are founding; they constitute a "substratum of positive law". Thus, the positive law, as an ensemble of norms expressed through formal origins that apply at a certain time in a society, must develop and apply the rational law's principles.

Conclusions

A state's totality of juridical norms is integrated in a system whose unity, clarity, coherency, consistency and completeness are owed to the general principles of law. The entire law system is sustained by an ensemble of directing ideas which constitute reference points for the legislator as well as for the practitioner. However the following question arises: does the law science create these principles or does it only discover and formulate them?

From the ensemble of opinions expressed in specialized literature result the following ideas for configuring the place that the principles occupy in the system of law:

1.Law's principles cannot be dissociated by the evolution of human society.

The existence of law principles is strongly connected to the existence of a society

[16] Gheorge Mihai, *Fundamentele dreptului,* volumes I - II, All Beck Publishing House, Bucharest, 2003, page 204.

[17] Nicolae Popa, *Teoria generală a dreptului,* 3rd edition, C.H. Beck Publishing House, Bucharest, 2008, page 90.

[18] Jean louis Bergel, quoted paper, page 114.

[19] Mircea Djuvara, quoted paper, page 470.

system. With the role of its subsystem, the law permanently interacts with the other components of society: moral, religion, politics, economic. Law cannot restrain the laws of evolution and neither can it ignore the traditions and social reality. Law's principles thus evolve strongly connected with the general principles that govern the human activity.

Law and society cannot be separated: *ubi societas, ibi jus.* If law is society's creation, as Durkheim affirmed, and society is a nature *given,* law's principles should exist since society started to exist as well. Gheorghe Mihail considers that "to assert the contrary implies asserting that society can exist outside the normative order, in anarchy to be more exact"[20]. The archaic society was led by a complex of rules founded on juridical, moral and religious values; these incipient rules were transmitted through tradition and influenced, in a certain manner, the following elderly laws. Even if the state instituted its own organizational forms and more adequate instruments for regulating social relations, the essential values have been kept and constitute a permanence in society's evolution.

In general the evolution of law "does not reside in legislation, jurisprudence or doctrine, but in society itself". Consequently, a part of the social order that is regulated by the official legislation exists, nevertheless a spontaneous social order exists as well, which is regulated by "live norms" and represents the creation of society's juridical conscience[21].

2.The principles compose the substratum of positive law.

Objective law is universal. Nevertheless, within social reality, the objective law is distributed in systems of positive law, relative normative orders, which are conditioned by the vigor of time factor. The principles are not subjected to this sort of conditioning, instead they are situated in the universal space of objective law: the principles precede and establish positive law.

The principles of law's origin, which are universal concepts with an axiological dimension, is *extra legem*; their source of inspiration was searched in natural law, in moral, equity and in the political history of civilization. Despite the statute ambiguity, the principles represent the keystone of the juridical edifice. The principles are directives, logical premises of elaboration of positive law, they are situated upstream the norms built by positive law. Because they impose as mandatory for the juridical norms, a normative character is attributed to the principles in report not only with the social reality but with the positive juridical system as well[22]

3.Law's principles constitute "the spirit" of laws.

Law must carry within equilibrium between the letter and spirit of laws. The entire official legislation, instituted or sanctioned by the state, in other words "the letter of the law", must be went through by the "spirit" of law's principles. The necessity of overcoming the rigidity of the law's text application has been felt even since the time of the Romans since the law was seen as an art of equity.

The principles constitute reference points for the legislator, as well as for the practitioner, in the process of elaborating and applying the norms of positive law. They assume the function of harmonizing the positive law system. The law's support orientates the legislator's will: "the normative act's text acknowledges about that certain will the legislator has, resonant with the law's spirit, itself configured in the value principle of justice and, on a wider scale, in the century's spirit"[23]. It is emphasized that the law's spirit, in its universal meaning, is situated above the legislator's spirit; such an abstract spirit has a metaphysical character[24]. Law is creation, not invention, and the creation belongs to the spirit. Thus, we were saying that the general theory of law only *discovers and formulates the principles* which belong to law's spirit.

[24] Gheorghe Mihai, *Fundamentele dreptului,* vol. I - II, All Beck Publishing House, Bucharest, 2003, page 489.

4. The principles ensure the normative system's unity

Granted that the principles have a normative character in report to the positive law system, we must identify the place it occupies in the hierarchy of this system. However, can the principles be formed on the hierarchical system? The principles proclaim values; could we consider these values to be more important and others less important? In doctrine, the opinions vary from including the law principles in the category of formal origins of law until they are considered to be super-legislative sources, super-constitutional, forgoing and superior to the positive constitution.

In the field of juridical norms, the hierarchy is established through the norms' report to one another, in order to make possible the analysis of validity, conformity and the possibility to depart from them. Such a hierarchy is possible because of the necessity to establish law in a logical and systematic manner.

As far as the hierarchy of law's principles is concerned, such an operation is difficult and, in my opinion, voided of practical reason. Most of the times, the justice ideal is considered to be the ultimate principle from which all the others derive. But what is a justice outside its equity or, worse, legality? As far as I am concerned, I consider that the general principles of law, universal real cause of the judicial, occupy together the same floor within the juridical top of the pyramid, from which it is transmitted and gains specificity on the positive law's level.

The general theory of law is the synthesis of all principles that dominate law. The entire law science consists in reality of "emitting from the multiplicity of law dispositions in their essence, namely these exact ultimate principles of justice from which all the other dispositions derive. Thus, the entire legislation becomes intensely cleared and is caught in what is called juridical spirit"[25].

THE RECONFIGURATION OF THE JUDGE`S ROLE IN THE ROMANO-GERMANIC LAW SYSTEM

ELENA ANGHEL[*]

Abstract

The role assigned to the judge varies from one legal system to another. In the Anglo-Saxon legal systems, in the context of the absence of an independent legislative body, judge is the one who creates law; his mission consists in solving a specific case, given the existing judicial precedents; if he can not find an appropriate rule of law, the judge has to create one and to apply it. On the other hand, in the continental system, creation of law is the mission of the legislator. Evolving under the influence of Roman law, the continental law systems differ from the Anglo-Saxons by: the assuming of Corpus iuris civilis; the tendency to abstraction, leading to the creation of a rational law; the rule of law, with the consequence of blurring the role of jurisprudence.

In spite of these essential differences, the last decades of the twentieth century have found out the convergence of the written coded system and the common law system. Thus, the increasing of the legislature`s role in common law system is accompanied by the reconsideration of the judge`s role in the Roman-Germanic legal system. While Anglo-Saxons accept the "compromise" of coding, Continentals shyly step towards rethinking the status of law source of the jurisprudence. History has shown that, one by one, law and jurisprudence have disputed the the role of prime creator of law.

Emphasizing the creative force of jurisprudence, Vladimir Hanga wrote: "The law remains in its essence abstract, but the appreciation of the jurisprudence makes it alive, as the judge, understanding the law, examining the interests of parties and taking inspiration from equity, ensures the ultimate purpose of the law: suum cuique tribuere"[1].

However, as we shall see below, in the Roman-Germanic law system, the creative role of jurisprudence still raises controversy.

***Key words**: creative role of jurisprudence, controversy, common law system, continental system, judicial precedents.*

Introduction

By analyzing several opinions of academic commentators on the expansion of the role of continental jurisprudence in postmodernism, we notice that the phenomenon is often qualified as a danger threatening the rule of law. Thus, amongst the symptoms of the crisis of the current juridical universe, Ioan Vida also includes the government by judges, who transfer their own decision in legal precedents, creating legal regulations (norms established by way of appeal in the interest of the law) or removing from the legal system certain norms declared as unconstitutional. All these, shows the author, "undermine the fundamental architectonics of the law and its enforceable nature" and render the reconstruction of the law, "the rebuilding of the legal universe", necessary[2].

Dana Apostol Tofan notices that the interpretation of legal texts, with such confuse and imprecise renditions, has become difficult, and blames the judges for an increased consideration margin, which also increases their discretionary power[3]. In the same train of thought, Sofia Popescu

[*] Lecturer, PhD, The Faculty of Juridical Sciences, "Nicolae Titulescu" University of Bucharest (e-mail: elena_comsa@yahoo.com).

[1] Vladimir Hanga, *Dreptul şi tehnica juridică*, Lumina Lex Publishing House, Bucharest, 2000, pag. 80.

[2] Ioan Vida, *Orientări post-moderniste în procesul de creare a dreptului*, in Studii de Drept Românesc, year 12 (45), no. 1-2/2000, page 28.

[3] Dana Apostol Tofan, *Puterea discreţionară şi excesul de putere al autorităţilor publice*, All Beck Publishing House, Bucharest, 1999, page 350.

deems the current role of judges as paradoxical, considering that, sometimes, they must settle cases "near the limit of the mandate granted to them by the position they fill"[4].

From the above considerations, it would result that the Romano-Germanic legal system is still anchored under the domination of the law, and any additional consideration given to judges seems to open the way to their discretionary power. Within this orientation, an "abusive" nature seems to be ascribed to jurisprudence.

However, as one will further notice, this theory does not constitute *communis opinio doctorum*. The postmodernist law is a controversial law. Today, an extensive part of the doctrine considers that jurisprudence can no longer be denied the nature of formal sources in the Romano-Germanic legal system. Since the purpose of law resides in aligning the aspirations to fairness with society's exigencies, the presence of judges in the legal order is absolutely necessary. While the moral relation unfolds within an individual's innermost self, and the religious relation involves two entities, man and God, the legal relation is triangular in nature: it requires the presence of a judge[5]. Thus, the judge has evolved from a mere servant of the law to that "impartial and detached" servant, authorized to construe the law in a creative sense.

The ***formalist school*** founded by Kelsen placed law in a strictly normative area, the only entity which may be associated with law being the State. The reduction of law to a system of hierarchized norms, within which each norm draws its compulsory force from its compliance with the next higher norm, resulted in the exclusion of jurisprudence and common law from the sources of law.

In the 19th century, the so-called "interpreters" of the French Civil Code raised against the normative formalism, creating, however, a theory as formalist as the Kelsian one. They believed that the law is the only source of law, thus, neither the common law, nor jurisprudence can introduce in the legal order new regulations, derogating from the legal provisions. All the other sources, which didn't derive from the law, were ignored. By exaggerating the importance of codification, these jurists claimed that the entire civil law could be found in the Napoleonic Code, which succeeded in covering all legal situations. By identifying the law with the statute, a perfect, complete, faultless statute, the role of the judge was exclusively limited to interpreting the statute. However, interpretation was seen as a purely logical action, beyond any political or moral considerations, the only duty of a judge being that of extracting legal consequences from legal texts.

In time, the exegetic interpretation proved to be overpowered by the practical necessities: Paul Roubier asks himself what purpose could an interpretation which, although it is in harmony with the lawmaker's view, is in complete disagreement with the judicial practice, serve?[6]

The first steps to freeing the judge from the strict letter of the law were taken by the ***School of Free Will***. In the paper *Méthodes d'interprétation et sources en droit positif*, Gény reacted against the doctrine at that time, which considered the law as the sole source of law. Through its scientific works, Gény wished to put an end to the "fetishism of written law" and to the belief in its sufficiency, considering that it is incomplete and that "no matter how much sharpness we assign to it, the mind of an individual is not able to completely grasp the image of the world in which it moves"[7]. Thus, the lawmaker must examine the given, in order to create the construct. The given of law means that reality external to the positive law, which confers upon it the substantiality need to exist. The given

must "phrase the legal norm as it results from the nature of things and as much as possible in rough form".

The school of free will explained the sources of law from a sociological perspective, in complete opposition to the Kelsian normative school. The formal sources of law, the law and jurisprudence, are only means of ascertaining the law. They are static in nature because the law precedes them. The law is, first of all, that living, spontaneous, dynamic law, product of social forces. It is the work of society and not of the state[8]. It stems from the social reality, hence, it cannot be deemed as being the creation of certain state authorities. The state holds the monopoly of coercion due to its superior public power. However, it does not hold monopoly over the creation of the rules of law.

The law cannot satisfy all the requirements of the social life. It cannot keep up with the dynamics of society. Therefore, when the law fails to offer any solutions, the judge, helped by the doctrine, must discover them through a free scientific research, in custom and in what Gény called "la nature des choses positives". Philippe Malaurie writes about Gény: "No work and no author symbolized an intellectual revolution so profound in the existence of law. From the Revolution and until him, the law represented exclusively the statute; according to him, the law no longer represented only the statute"[9].

In the free will doctrine, there are several alluring aspects, shows Paul Roubier, especially the reaction against "this outrageous fiction" according to which the judge is a mere interpreter compelled to abide by the law[10]. This school overstates, however, the role of a judge, assigning to it as main duty a real work of creation of law and establishing that this is the rule and not the exception. If it were to be accepted that the judge is entitled to thrust aside the law and jurisprudence, for the mere reason that such sources are static, the notion of rule of law itself would be altered. Therefore, the author concludes that we cannot believe that the law may be completely free, because the need of security, which commands the entire social order, requires, to some extent, that the normative power of a judge be restricted.

According to Paul Roubier, the law expresses itself through formal and informal norms. The authority of the formal norms stems either from the legislation or from jurisprudence. Informal norms are divided into two categories: customary rules based on experience and rules "based on rationality, which correspond to a certain ideal of justice"; the latter are the general principles of law, rules which Roubier calls "doctrine rules", since they are discovered by doctrine[11]. The system of legal norms founded on formal sources is, to some extent, virtual in nature; there can't be an absolute overlapping between the law of the sources and the actual practiced law. The real sources exist behind the formal sources of law, and the validity of the formal sources of law depends on their compliance with the real sources[12].

A judge's main duty consists in applying the formal sources. At the same time, a creative role must be given to the judge, if there is no rule of law applicable to the dispute pending settlement: "he/she must find the best solution and, thus, to release a rule of law which may constitute the principle of a new jurisprudence"; this issue, shows Roubier, is not a subject up for debate, since the law itself forces him/her to adjudicate the case, regardless of its silence or insufficiency. The difficulty occurs when the law of formal sources, being static in nature, no longer meets the needs of society or the ideal of justice of that era. How is the renewal of the law possible, when a greater freedom of consideration is not granted to a judge?[13]

William Dross proposes the examination of the sources of law from a Jusnaturalist perspective as well, as manifestations of the law and not causes thereof[14]. From a philosophical point of view, the law cannot be a source of law, but a manifestation thereof, thus, the true source of law is found way upstream. Since any source of law is essentially an authority which constructs legal phrases, the author analyzes the sources of law based on the authority which creates them. The main issue here is finding an answer to the question: **which authorities are legitimately authorized to create law**? The real source of law, reveals Dross, is the sovereign, i.e. the Nation. Behind the apparent trilogy of the sources of law, law, jurisprudence and custom, comes into prominence the monist ideology of the sovereignty of the Nation, the only one authorized to create the law. In this light, the law is undoubtedly the source of law, since it derives from the sovereign, expressing the general will of the nation.

But the time of exegetic interpretation has ended in the era of Gény, says the author. Today, no professor can teach civil liability, without taking into account the decisions delivered by the Court of Cassation. Jurisprudence protrudes *in fact* as a source of law, and those who qualify it as "abusive" may criticizes its legitimacy, but not its nature of formal source of law.

Therefore, if the normative power of jurisprudence is undisputable, its legitimacy gives rise to controversy. Certain authors consider that the principle of separation of powers in the state transforms the judge into a mere "servant" of the law, the creation of law being the exclusive preserve of the Parliament and Government. In this light, the creation of law by a judge would represent usurpation. Other authors believe that, pursuant to the principle of delegation of powers, the judicial power, being a key element of a state's organization, is legitimated to create law.

In the same train of thought, François Terré notices that debates on the status of jurisprudence of formal source of law have outlined two orientations[15]. As a first mindset, based on the revolutionary ideologies and on the principle of separation of powers in the state, it is believed that a judge cannot participate in the act of creating law, since it would acquire a power which pertains only to the nation's chosen ones. Since the written law is able to foresee all situations, the judge must only apply it. To this effect, the Court of Cassation was established for the purposes of protecting the law against the usurpations of judges, and not of imposing the law interpretation unit.

As another mindset, the opposite is revealed. The law cannot cover all legal situations, sometimes being obscure, at other times incomplete or even obsolete. Portalis is one of the people who emphasized the undisputable role of a judge, consisting in interpreting, supplementing and adapting the law: "When the law is clear, it must be followed, when it is obscure, its provisions must be further refined. If there is no law, one must turn to custom and equity. Equity is a return to natural law, in the silence, obscurity or opposition of the laws".

For that matter, the lawmaker expressly admits the possibility of the law's insufficiency and implicitly acknowledges the power of the judge of supplementing the law, of extensively interpreting it and even of changing its meaning, when this is required for dispute settlement. The obligation imposed on the judge by Article 4 of the French Civil Code, reveals the author, has a general scope; it is not set forth only in the interest of the litigant, nor to fill in the voids of the law or to characterize the legal system as being closed or open; this obligation contributes to the definition of the law: "this obligation to adjudicate certifies, as concerns the judge, the presence of an immediate given of the law"[16].

As concerns us, we believe that the interpretation given by a judge does not consist in the mechanical application of certain methods and procedures; it is an act of creation, within which the interpreter lays the entire extent of its creative spirit. A judge cannot be restricted to the literal

[14] William Dross, *Retour aux sources*, in Pandectele Române no. 2/March 2007, pages 183 and the following pages.

[15] François Terré, *op. cit.*, page 283 and the following pages.

[16] *Idem*, page 48.

application of the law. He/she must reveal its spirit. Each case is unique and requires innovative solutions, and the judge must possess the art of distinguishing the meanings of the objective law. He/she must feel the law, so that he/she may resort to general principles, to mysterious presumptions and fictions, to other regulations referring to similar cases and last, but not least, to the values he/she introduces into the rule of law, because any interpretation implies an objective consideration, a valorization.

The judge interprets the law and applies it to real cases. This is his/her key purpose. However, by way of interpretation, the judge does not accomplish a mechanical action, in fact, he/she reveals the truth, adapts and particularizes the law, shapes it according to needs, fills in its voids, remedies its various obscurities, so that the law becomes more supple. When the texts no longer meet the requirements of a particular time, the judge attempts to elude the law and to apply the solutions imposed by the new circumstances of social life. When interpreting the laws, the judge must refer not only to the meaning of words and the intention of the lawmaker, but also to the spirit of the law. Otherwise, supreme justice would only be a supreme injustice: *summum jus, summa injuria*. Since the Roman age, one knew the principle according to which "it infringes the law to remove its spirit, only by considering the words used by the lawmaker", principle included in the *Code of Justinian*.

Jurisprudence is, undoubtedly, the formal source of law. However, its creative nature sparked many disputes. Terré emphasizes the fact that jurisprudence exercises an overwhelming influence on creation in law, however, it cannot be self-legitimating. Although it offers innovative solutions to various law issues, jurisprudence cannot directly create rules of law, fact which clearly differentiates the judge's power from the lawmaker's power. Therefore, jurisprudence remains subordinated to the law.

We notice that one of the arguments underlying the theory of those who refuse to designate jurisprudence as a source of law, is the principle of separation of powers in the state, developed by Montesquieu in its work *L`ésprit des lois*, published in 1748. Montesquieu was distrustful of judges, with "their frightful power over people", insomuch as it chose to subordinate them to the law: judges are only "the mouth that speaks the words of the law, lifeless beings who cannot temper its force or its severity"[17]. After the French Revolution, pursuant to the principle of separation of powers, the law was predominantly asserted as stemming from the Nation and the right of judges to deliver decisions by way of general and regulatory orders denied.

The exegetic approach, identifying the law with the statute, the revolutionary theory of the separation of powers, as well as the codification phenomenon, have minimized the role and natural evolution of jurisprudence in the Romano-Germanic legal system. By postulating on the uniqueness of the law as a source of law and its completeness, the law was kept on hold, and the creative role of jurisprudence denied. According to Robespierre, "the word jurisprudence must be removed from the language set; in the new regime, it stands for nothing. In a state which holds a Constitution, a legislation, jurisprudence is none other than the law itself"[18].

We believe that the separation of powers cannot be brought up as an argument today, since the lawmaker itself understood to implicitly empower the judge to interpret the law in a creative manner, when the law is silent, obscure or insufficient. For the authors of the French Civil Law, the law is not infallible, perfect, on the contrary, it is a human creation, imperfect by definition. Therefore, custom and jurisprudence will cover the gaps of the law. The idea of the authors of the Code is expressed in the preliminary Book, which was suppressed: the judge, in the absence of a precise text of law, is a "minister of equity", hence, his/her power to supplement the law, by resorting to customs and equity, is acknowledged[19].

[19] Quote from Alexandru Vălimărescu, *op. cit.*, page 364.

On the European continent, we also find such "empowerment" in the Italian, Belgian, Austrian, and, of course, Romanian Civil Code. Complete freedom of consideration is granted to judges by Article 1 of the Swiss Civil Code, according to which: "The law determines all matters to which the letter or spirit of one of its provisions refers. In the absence of applicable legal provisions, judges issue a decision based on the customary law and, in the absence of a customary law, based on the rules they would establish, if they were to act as a lawmaker. They draw upon the solutions established by the doctrine and jurisprudence". Acknowledging the imperfection of the legislative work, the Swiss Code expressly proclaims the creative role of judges. In spite of this generous regulation, which was applied in the first 30-40 years upon their drafting, the federal court of law found it convenient to considerably reduce the creative power of the Swiss judges, placed under the continuous pressure of the doctrine.

Another argument, whereby it was attempted to discourage jurisprudence as a creative source of law, was that, given the principle of separation of powers, only the Parliament represents the nation, hence, judges, not being empowered to this effect, have no legitimacy in creating laws. This argument was argued against in the specialized literature through the fact that: justice presents a certain form of representativeness, since the judges of supreme courts of law, as well as those of constitutional jurisdictions, are appointed by a court established through vote, fact which grants them a certain degree of legitimacy; by ensuring free access to justice and by the publicizing of hearings, the courts ensure the representation of the interests of the citizens, a minority class from a political point of view; through the control of the constitutionality of laws, exercised *a posteriori*, justice guarantees the "participation" of citizens to the law-making process[20].

"In theory, one may easily discuss the legitimacy of the actions of the courts of law, when they drift away from the sources of law", writes Mircea Djuvara. However, "to the extent that such debate is not effective and a difference remains between the *proposed* law and the *practiced* law, surely only the law applied to real life is the positive law. The order of sources remains a mere desideratum. If it is not listened, it remains only at a theoretical level until it succeeds in asserting itself: until then it is yet to be a real law"[21].

J.L. Bergel believes that, today, the creative role in law of judges can no longer be denied[22]. Beyond the application, interpretation and filling out of legislative voids, a judge's mission also consists in adapting, animating or obscuring it, sometimes being able to ignore or argue against it. Even if judges must remain subordinate to law, they must also ensure its effectiveness. Although court orders contain rules of law only binding upon the parties participating in a trial, nevertheless, given the hierarchy of courts of law, precedents "may have a certain authority and, in fact, cannot be ruled against by lower courts".

Conclusions

In the Roman-Germanic system, the pursuit of knowing to what extent jurisprudence contributes or does not contribute to the creation of law, still sparks controversy. History has shown that, successively, law and jurisprudence have fought over the role of first creator of law. Those who acknowledged the creative force of jurisprudence have based their opinion on its more receptive nature compared to the law. While, as Ihering noticed, "in the field of law, as anywhere else, history never stops", jurisprudence has the ability to promptly meet the needs of social life, while the law has a slower rhythm, disconnected from the evolution of law.

[22] Jean - Louis Bergel, *op. cit.*, page 311.

From the matters discussed above, it results that jurisprudence is undoubtedly a formal source of law, the debates being about its creative nature. By emphasizing the creative force of jurisprudence, Vladimir Hanga wrote: "The law remains essentially abstract, but the consideration of jurisprudence makes it a natural law, because judges, by understanding the law, taking into account the interests of the parties and taking inspiration from equity, ensures the final purposes of the law: suum cuique tribuere"[23].

In our opinion, the paradox of post-modernism does not reside in the creative power of the continental judges, in full expansion. The paradox consists in the fact that judges is trapped between the obligation to pass judgments in strict compliance with the letter of the law, on the one hand, and the absolute requirement to settle the case, under the penalty of denial of justice, irrespective of its insufficiency. It would seem that we would rather hide behind certain theoretical and traditional rigors, instead of attempting to expand our horizons to a free drafting of the law, by means of jurisprudence. Similarly, judges, meeting the needs of the age, also maintain the appearance of fully abiding by the letter of the law. However, in reality, they depart from it or create new legal norms. For these reasons, the doctrine rightfully places continental jurisprudence, in terms of creative role, between two limits: ***de jure* denial** and ***de facto* acknowledgement**[24].

SHORT COMMENTARY ON THE RECOMMENDATION CM/REC(2010)1 OF THE COMMITTEE OF MINISTERS TO MEMBER STATES ON THE COUNCIL OF EUROPE PROBATION RULES[1]

SILVIU GABRIEL BARBU[*]
LORENA EPURE[**]
GOGA ALEXANDRU SILVIU[***]

Abstract
The present paper has the purpose to analyze the Recommendation of the Committee of Ministers to member states on the Council of Europe Probation Rules adopted in the 1075th gathering on the 20th of January 2010. This recommendation has a very important role in the construction of the probation systems in the European states, having a great contribution in the harmonization of the legislation of the member states in the field of criminal sanctions. Its goal is to better criminal justice and strengthen public safety by deterring and reducing criminal behavior.
In the present paper we will analyze more than 100 rules introduced by this Recommendation, outlining the frequently used terminology and the most important regulations.
The objectives of the paper are to make a summary of the new regulations within this Recommendation, to make a comparative analysis with all the existing laws and rules in this field, the paper also giving some conclusions on the matter.

Key-words: *recommendation, Council of Europe, probation rules, criminal justice, reoffending*

1. Introduction

The field covered by the present study is represented by a the provisions, regulations and content of the Recommendation mentioned in order to give a better understanding of the European understanding and application of sed legal act.

The importance of this study can be understood from different point of views. First of all it can be regarded important by the scientific community that can benefit from an authorized commentary of a Recommendation. Another point of view can be regarded from the view of legal practitioners, and authorities that have to enforce the laws regarding criminal offences and probation. And last, but not least, another way in which the study can be significant is that of the students that have to study criminal executional law in Law Faculties, Police Academies and so on, or the future agents in probation agencies that have to be very knowledgeable with the subject.

Some of the objectives of the present paper are to make a short outline of every rule in the Recommendation, analyze them, explain them in a brief paragraph, and give comparisons if any to the current status in our country. Other secondary objectives are that of creating an instrument that can work together with the Recommendation to be easily used by any interested person. In the end, the study will make some conclusions and recommendation upon the subject.

We, the authors, have analyzed the recommendation and other commentaries and we will pursue the challenge to give every rule a short explanation or just mention an important aspect important to remember or relevant to discuss.

---

[1] Adopted by the Committee of Ministers on 20 January 2010 at the 1075th meeting of the Ministers' Deputies.

There have been other commentaries done by NGOs that work in the field, and also by other practitioners, but these have been done right exactly after the enactment of the recommendation or in a very exhaustive manner.

It is clear that the phenomenon of criminal offences is a constant in human history, with periods of increase and decrease, but the very existence of criminal behavior requires of us to take institutional and regulatory measures to ensure public safety. It is mandatory to establish a balance between the coercive force of the state through its institutions on the one hand, and the protection of individual human rights. Thus, the fundamental rule is that of guaranteeing individual freedom and the development of personality, in the sense that freedom cannot be taken away only in exceptional cases, and even after that we have to take into consideration special provision such as probation in order to make the criminal justice system be functional and humane.

2. Content

Firstly we have to address the structure, the role and the place of probation agencies in the European justice systems. The term "probation" should be defined as broadly as possible.

While *probation* is not easy to define simply or precisely, it is a familiar term understood widely and internationally to refer to arrangements for the supervision of offenders in the community and to the organizations (probation agencies, probation services) responsible for this work. In many countries, the ***statutory supervision of offenders*** in the community is the main characteristic of probation.

If people offend or commit crime again or fail to comply with certain conditions, they may be taken back to court and be liable for punishment. The definition adopted in the Recommendation we are analyzing puts an emphasis on especially the *statutory* basis of probation in the implementation of sanctions and measures in response to criminal offences; *supervision,* which involves guidance and support as well as control in appropriate cases; and the *purpose* of its work, which is to enhance both the social inclusion of offenders and community safety.

We have noticed and it is mentioned in other commentaries that the EU has adopted the broad term *probation* to encompass the diverse range of work undertaken by probation agencies across Europe, taking account of different probation traditions, institutions and practices across the continent, not only in those countries where probation is well-established, but also new services are emerging and being developed.

It is important to mention that the notion of "Probation agencies" includes probation services and criminal justice social work services, whether organized at national, regional or local level. These rules apply to other organizations in their performance of the tasks covered in these rules, including other state organizations, non-governmental and commercial organizations.

Probation agencies are here defined with reference to their responsibilities and the tasks they have to accomplish.

It has been noticed that all around Europe, probation agencies perform a wide and diverse range of tasks, reflecting the various origins and developments of probation practice in different countries, as well as legal, social and cultural differences. We understand that this definition refers explicitly to the most common encountered tasks in the national legislations. These and other tasks are discussed in more detail later in the rules and the present and others commentaries. While most probation agencies were originally established to work with offenders, in many countries the responsibility to work with victims as well has been assigned to these agencies. [2]

[2] The general duties of states to victims of crime are set out in Recommendation Rec(2006)8 of the Committee of Ministers to member states on assistance to crime victims and in many countries probation agencies make an important contribution to fulfilling those duties.

2.1. Basic principles

1. It is a general fact that probation agencies work as part of a system of criminal justice. They have to implement the decisions of the courts and other authorities and work with other agencies to try to reduce crime. Probation agencies can be distinguished by their emphasis on assistance, guidance and persuasion in working with offenders.

Probation agencies do all they can to reduce reoffending and, where interventions providing help and support are insufficient to protect the public or are rejected by the offender, measures of control may also be necessary and are applied. In the meantime, probation agencies also deliver monitoring and control.

Taking into consideration the belief that people can change, probation aims to achieve rehabilitation through working with offenders to help them and to encourage them to lead law-abiding lives. This has to include the creation of opportunities that are meant to help them acquire the skills they need to make good use of these opportunities and motivating them to do so. Social inclusion is a requirement of justice and is a key objective of probation practice. Probation's commitment to promoting social inclusion can contribute to reducing offending.

2. Probation staff must always have regard to the human rights of offenders. A principle of *minimum intervention* should apply.

The human rights should not be jeopardized simply because of their offending behaviour. In the attempt to reduce the risks of reoffending and in particular any risk of serious harm, offenders' rights may sometimes have to be constrained. In particular, there are circumstances in which the right of *freedom of movement* may be limited and the *right to privacy* may also have to be curtailed. It is understand at a European level that the respect for the rights of offenders is also a necessary condition for their social inclusion and supports their rehabilitation.

3. It is noted that in some European states probation agencies offer services directly to victims of crime. In others, they often work in co-operation with other organizations or individuals who offer support to the victim. We note that this rule requires probation agencies to protect the human rights of actual and potential victims and also respect their interests in all their work. [3]

4. The same services are not appropriate to everyone. For example, supervision arrangements that are thought to be suitable for men may not always be suitable for women. Unfair discrimination may also be based on other considerations, including sex, race, colour, disability, language, religion, sexual orientation, political or other opinion, nationality, social origin, association with a national minority, property, birth or other status. The recommendation states that in order to ensure that everyone is dealt with appropriately and equitably, services must take full account of **individual** circumstances and needs.

5. Rights may be restricted as punishment for offences and / or to protect the public. Where rights are restricted in order to protect the public from future offending, this must be guided by a proper and rigorous assessment of the risks that offenders pose, by making use of the best available methods of assessment[4]. *While giving effect to a judicial decision, the probation agency must not restrict the rights of offenders beyond the necessary consequences and implications of the lawfully imposed sanctions or measures.*

6. Wherever the offender's formal consent to probation involvement is required, probation staff must ensure that offenders understand their rights and the full implications of granting (or withholding) consent. This must be explained clearly to offenders and care must be taken to make sure that they understand. Even where consent is not formally required, probation staff shall do all they can to secure the offender's understanding of and, so far as possible, consent to any decisions that affect them. While the duty of probation staff to prevent offending will sometimes require them

[3] The responsibilities of probation agencies towards victims are set out in Part VI of these rules.

[4] See Rule 66and Commentary on that Rule.

to take action against the offenders' wishes, this must be explained to offenders and the attempt made to gain their acceptance of the legitimacy of the decision.

7. Although probation's involvement before guilt has been established is limited in some jurisdictions, in other jurisdictions the judicial authorities may instruct the probation agency to become involved *before* or *instead of* prosecution and trial. This principle states that defendants must be presumed innocent and therefore any probation intervention in such circumstances must depend upon their informed consent.

8. The agencies' responsibilities and tasks must be founded on a sound legal basis to establish their authority and their accountability, in order to be able to alter even human rights.

9. In some jurisdictions probation tasks are delivered by other agencies, including other public authorities, independent, charitable or non-governmental organizations. Commercial companies also sometimes participate in such work by hiring people that have been given the punishment to do community work, or hire prisoners as cheap workforce. Others have mentioned, and we agree there have to be robust and adequate systems of scrutiny and accountability.

10. According to all the opinions in classic criminal legal doctrine and more modern commentary probation work should be recognized as a key element in a just and humane criminal justice system. Such work requires considerable knowledge and skills and must be accorded a status that recognizes its value and the expertise of practitioners. Probation too can be "overcrowded" such as prisons and this constrains its potential to protect the public and to work to rehabilitate offenders successfully.

11. The deciding authorities should recognize and value the knowledge and skills of probation staff which can help them take just and effective decisions. Rule 11 requests the deciding authorities to respect the expertise and experience of probation agencies and to consider attentively the advice they offer. We have to note that in many jurisdictions probation staff can and sometimes must report back to the competent authorities on the progress of their work and may, in some circumstances, seek further guidance or instruction from these authorities.

12. This rule mentions if the social inclusion of offenders is to be achieved, probation must work in close co-operation with a wide range of other agencies, such as Workforce Placement Agents, Re-qualifications centers. We have to understand that the complex needs of many offenders also require a coordinated and complementary inter-disciplinary work.

13. Probation agencies have to appraise their work whilst respecting the regulations, principles and standards from their national law. It is important to mention that the international community, especially through the UN, EU and Council of Europe, sets standards, respective to human rights, which gives the possibilities to countries to compare their own practices with those of other countries and to use this as a check against disproportionate or otherwise unethical intervention.[5]

14. It is an imperative that probation agencies can be held accountable not only by the public authorities, but also by the former offender or others that use their services. Everyone should be informed about how to complain and straightforward and impartial procedures should be made available. [6]

15. We look at this rule in correlation with Rules 8 and 9. We can have independent monitoring, and agencies must be open to question and scrutiny through independent inquiry. This monitoring can be done with the help of an Ombudsman or human rights defendants are among the ways in which this may be achieved. There have to be 'progress reports' on individuals under supervision.

---

[5] Recommendation No. R (97) 12 *on staff concerned with the implementation of sanctions and measures* in its Appendix II sets out many of these ethical standards.

[6] This is considered more fully in Part VII of these rules.

16. It is believed and we have to concur with this belief that the best probation practice should be evidence-led. Research should investigate all consequences of policies and practices, some of which may be unintended. Research should be rigorous and impartial and the participation of universities and other centres of research can ensure impartiality and give authority to such inquiries. The findings of research should be made public as it is essential that research findings are used to guide the development of policy and practice.

17. Other NGOs have found it to be quite common, in a great number of countries that the public has little knowledge or understanding of what probation agencies do. Usually prisons attract public attention. In order for the media to be interested probation should be imaginative and creative to enhance public understanding of and confidence in probation work.

2.2. Organization and staff

18. We have to note that Rule 18 affirms that a well-ordered and adequately resourced organization is required if the importance and value of probation are to be recognized.

19. It is important to mention that service delivery is managed in different ways in different countries. Instructions and the delivery of them based on clear rules should be reviewed and updated as necessary.

20. While many probation agencies are part of the public sector, this Rule recognizes that there are private agencies (non-governmental, charitable and commercial) involved in the administration and delivery of probation tasks and services in many countries.

21. Just as the work of the probation agencies in general[7] is poorly understood, other professionals and members of the public often have an insufficient understanding of the distinctive expertise of probation staff.

22. It is important that all recruitment and selection procedures to be fair and rigorous and in all other ways respect the principles of good employment practice. Probation agencies should be as clear as possible about what qualities and characteristics are required and it is these that should be tested in the selection process. We believe that is very important to have intellectual abilities and appropriate educational level selection procedures. Recruitment and selection should respect the best principles of equality of opportunity. Equality of opportunity has many criteria that have to be upheld.

23. Different staff has different roles to play in probation and therefore different levels of education and training would be required. Access to education and training at different stages of their career should be made available to all staff in order to ensure the best quality of service provided. It should be linked to their tasks and responsibilities and useful for their professional development.

24. When starting the training there should be a curriculum. This must be based on a clear understanding of the skills, knowledge and values required to do the work. Attendance at training events or 'on the job' training, while often are very important they are definitely not enough: staff must be assessed to determine that they have achieved the standards required. It is also important that staff have access to qualifications that confirm the level of competence achieved.

25. Initial training should prepare staff to work reliably in their new professional role. In-service training should also be available to all staff. This is needed to take account of new legislation, policy, practices and other relevant developments. At the same time, there should be training to enable staff to move into new roles as the agency may require and to develop their own continuous professional development.

26. Probation work involves making judgments and taking decisions. While the actions of staff are circumscribed by law and by agency policy, staff shall be trained and encouraged to exercise their professional judgment to take valid decisions whilst recognizing the need for accountability.

[7] See comment on Rule 10.

27. This Rule deals with the particular case of offenders who tend to commit particular kinds of offences (for example, sexual offences, violent offences) and / or whose offending behaviour is associated with persistent difficulties (for example, drug or alcohol misuse, offenders with mental health problems). The extent to which work is devolved to specialized sections of the agency will vary from country to country.

28. This Rule is in relation with the Rule 4 and recognizes that training must attend to diversity and individualization. Initial training should prepare all staff to work with diverse offenders and to take account of the distinctive skills needed to work with particular offenders or victims. For example, to work effectively with young people may require rather different skills from those needed to work with adults. Women may have particular needs as well.

29. An adequate staff complement is essential to the agency's effectiveness and efficiency. If staff workloads are too large, then the probation agency will not be able to work as it should. Workloads should be assessed in a holistic way with an assessment made of the demands of individual cases and not simply on the number of cases or offenders under supervision. An overall shortage of resources constrains an organization's potential and excessive workloads will prevent individual members of staff from achieving their best practice.

30. It is essential that management staff provide leadership and guidance. Regular meetings between individual members of staff and their line managers should take place for supervision/ detailed case discussion. They also allow the line manager to consider what the organization needs to do to support staff in what is often extremely demanding and complex work.

Just as the probation agency is accountable to public authorities[8], individual members of staff must be in a position to account to their managers for their practice. One important part of this is keeping and updating records – a record of contact with the offender, of significant communications and decisions relating to their case. This will be retained on the case file and will be drawn upon as and when the agency reports back on progress to the judicial authority. Case records must be accurate and up-to-date and available for inspection by line managers. Case records will be subject to monitoring and may be used as evidence in the investigation of complaints.[9].

31. This Rule states that, while all members of staff play a part in inter-agency work, managers have a distinctive responsibility to establish these working partnerships and to ensure that they are set on a sound basis.

32. Some issues are appropriately dealt with in individual meetings[10], but consultation with the staff group is a critical responsibility for managers. Professional associations, trade unions and more informal arrangements may all have a contribution to make here in the effective liaison between staff and their managers. As well as consultation about conditions of work and employment, there must be opportunities for staff to influence the agency's policies in other respects as well: staff are uniquely placed to inform policy makers about the results of putting policies into practice and their experience is a large part of the evidence that should lead policy and practice[11].

33. This Rule affirms that salary and conditions of service should reflect the standing of the profession (Rule 21), the particular set of tasks and responsibilities they are entrusted with and the expertise of managers and practitioners.

34. This Rule applies to volunteers who work on behalf of probation agencies and not to those who, independently or in other organizations, work as volunteers with offenders. In many countries, probation evolved from voluntary work and volunteers still make an invaluable contribution to the work of the agency and to helping and supporting victims and offenders.

---

[8] Rules 8 and 15.

[9] These matters are discussed more fully in Rules 88 – 92, in Part VII and in the associated commentary

[10] see Rule 30 above.

[11] Rule 16.

Volunteers, just like probation staff, have a duty to protect the public and their relationship with offenders therefore may not be completely confidential.[12] Offenders themselves, as well as staff and volunteers, must understand the rights and responsibilities involved in the working relationships.

2.3. Accountability and relations with other agencies

35. Rule 35 refers to specific account to and liaison with the judicial authorities in respect of particular cases. These authorities are entitled to receive such information and only in this way will they be enabled to have confidence in probation.

36. Probation agencies should produce regular reports providing information on their work. These reports should be published and be made available to judicial authorities, other authorities making decisions on offenders and the general public. The scope of the information to be provided should be defined by national law (see basic principle contained in Rule 8) in accordance with regulations concerning professional confidentiality. The reports should enable the competent authorities and the general public to make judgments about the overall performance of the probation agencies in achieving their aims.

37. Offenders often have complex needs associated with their offending. Rather than trying to create or deliver all services to meet these needs, probation agencies should work in co-operation with other organizations which have the relevant expertise and resources. This includes not only agencies of criminal justice and law enforcement, but organizations of the wider civil society. Enabling fair access to services is a key component of social inclusion. This approach also allows probation agencies to concentrate their resources on their principal tasks.

38. Probation agencies shall encourage and support community agencies to undertake their inherent responsibilities regarding taking care of offenders as members of society. This Rule should not be interpreted as imposing an obligation on probation agencies to sponsor private associations, but rather to help, advise and assist them in their work with offenders and, as appropriate, with victims of crime.

39. In some countries, prison and probation form part of a single organization. Even where this is not the case, the work of probation inevitably calls for close working relationships with the prison service. Probation staff in some countries deals with prisoners while in prison and not only for preparing their release. Probation is often responsible for supervision after release and probation staff should be actively involved in preparing prisoners for their release and in working towards their resettlement[13].

40. Partner agencies need a general framework to be set and agreed in order to achieve an appropriately high standard of intervention with offenders.

Where probation is commissioning work to another organization, it incurs a responsibility to make sure that this organization works effectively and justly. Accountability for the results achieved and, if appropriate, for the money spent is a minimum prerequisite of such relations.

41. Rule 41 stipulates that inter-agency agreements should include protocols about the exchange of information, based on the relevant national data protection legislation. .

2.4. Probation work

We have to take into consideration every national legal system and we can determine that all the probation agencies may be entrusted with one or more of the following tasks split into two categories:

a) tasks involving supervision and guidance to offenders

[12] General principles of confidentiality and information exchange are set out in Rules 41, 88 – 92 and explained in the associated commentary.

[13] see also Rule 7, the European Prison Rules and Recommendation Rec(2003)22 on conditional release (parole).

b) Tasks without supervisory element

42. Any work relating to the preparation and presentation of pre-sentence reports must fully respect the procedural rights and safeguards provided by Article 6 of the European Convention for the Protection of Human Rights and Fundamental Freedoms, which affirms the presumption of innocence.

This Rule also requires probation agencies to communicate regularly with the judicial authorities about the circumstances in which reports are to be prepared. A report is neither possible nor necessary in every case. Where the court is likely to impose an immediate custodial sentence, but is willing to consider alternatives, a report would be of particular value.

43. The report shall be as up-to-date and accurate as possible. Reports are written in respect of specific offences and old reports that may have been retained on file should not normally be submitted again. Although interview(s) with the offender are an important source of information, report writers should use other sources as well to try to corroborate information.

44. The offender's *involvement* here means that the purpose of the report, its significance and consequences must be fully explained to the offender. There may be circumstances in which the offender is unwilling to cooperate and this may have to be accepted.

45. As well as pre-sentence reports, probation staff prepare other reports, especially in connection with proposals for early release from prison or other forms of detention. These reports will be based on a careful assessment in each individual case. Their distinctive contribution here will be to inform the authorities of the community context to which the prisoner will be returning, the risks and protective factors to be taken into account and how these will be managed, and the need to impose any particular conditions on the terms of release.

Where there has been contact with the victim(s) of the original offence, their views should be reflected in the report. When their views are being sought, it is important that they should be made aware that while their views may be one important consideration, they will not be decisive[14].

46. As before, the offender's *involvement* here means that the purpose of the report, its significance and consequences must be fully explained to the offender. There may be circumstances in which the offender is unwilling to cooperate and this may have to be accepted. The member of staff responsible for the report should make sure that the offender understands the consequences of withholding co-operation and that this will be made clear to the deciding authority. The offender should be given an opportunity to express an opinion about the content of the report, although it is for the author of the report to decide on its final content. Offenders or their legal representatives have a right to challenge the content of the report.

47. Community service involves undertaking unpaid work for the benefit of the community as a response to an offence. In some countries, this sanction may only be imposed with the offender's consent; while in other countries it is for the court alone to decide upon this and the offender has to follow the judicial decision.

48. Since community service constitutes real and/or symbolic reparation, work undertaken must be of genuine benefit to the community. Agencies shall seek out tasks in the community and shall strive to ensure that all community members have an opportunity to nominate appropriate tasks. In no circumstances shall this work be used for the profit of agencies or individual members of staff or for commercial profit. Although the position may vary in different jurisdictions, so far as possible community service must not displace people from gainful employment.

49. Community service workers shall be subject to risk assessment like all others under probation supervision[15]. Minimizing risk to the community will be paramount in determining an appropriate work placement.

---

[14] see Rule 95.

[15] see Rules 66-71 and associated commentary.

50. Probation agencies have a responsibility to safeguard the health and safety of community service workers. General safety regulations should be respected and public liability insurance schemes should be arranged to indemnify offenders assigned to community work. Probation agencies and their staff should also be adequately insured in order to be able to address compensation claims in case of accident.

51. Community service tasks can take many forms and agencies should be imaginative in identifying suitable work. Differences of ability and of personal circumstances should be taken fully into account to make sure that the scheme can accommodate anyone for whom this is considered to be an appropriate sanction or measure. In some jurisdictions, community service may be used as a direct alternative to custody and no one should be sent to prison solely because appropriate work tasks have not been found.

52. As with other aspects of offender consultation, Rule 52 does not mean that offenders take the decision about the work they will undertake. Community service is widely recognized by offenders, as well as by the public, as a fair penalty and one aspect of this is that offenders should be consulted about it. Offenders should be asked about their experience of the work they are undertaking and this should form part of the periodic assessment.

53. Community supervision takes place in a number of different circumstances. While there are differences in the legal basis of these modes of supervision and, for example, in the consequences of non-compliance, the following rules prescribe general standards of supervision.

54. The nature and intensity of the supervision[16] should depend on the individual offender and be subject to revision depending on changes in the offender's the personal circumstances and in progress towards the objectives of supervision. Probation agencies shall do all they can to promote compliance with the formal requirements of supervision. This includes taking full account of personal circumstances that might make compliance more difficult and working with the offender to see how such difficulties can be overcome. For example, so far as possible, people should not be required to attend appointments that may conflict with their responsibilities as carers (including, but not only, parents of young children) or as employees. People who are homeless or itinerant may also face particular challenges in complying with some of the formal requirements.

55. This Rule recognizes that probation should arrange for relevant interventions to take place. These may be provided not only by probation staff, but by other agencies and individuals as well. The Rule offers some examples – educational or skills-related training and treatment, such as may be provided for people who need psychiatric help or treatment for misuse of alcohol or other drugs.

56. Sanctions and measures affect not only offenders, but also their families and dependents. This is especially likely where a custodial sentence has been imposed, but also in the case of other sanctions or measures. Where this is provided for in law, probation agencies should offer support, information, advice and assistance to families affected by the offender's crime and punishment.

57. While traditionally probation has worked through personal relationships to bring about change, many jurisdictions in Europe are making increasing use of newer technologies. Electronic surveillance – especially the 'tagging' that can monitor the presence of an individual at particular times and places and the 'tracking' made possible through global positioning system technology - has a strong political appeal. It seems to dispense with any need for the offender's consent or active co-operation and suggests a possibility of comprehensive and up-to-the-minute information.

58. Some methods of surveillance, including electronic monitoring, have the potential to intrude significantly on people's rights of privacy and perhaps other rights as well. Not only offenders, but in some circumstances their families and friends may be affected as well. This Rule insists on a level of surveillance and personal intrusion that is proportionate to the seriousness of the offence(s) and to the need for community safety.

[16] for example, the frequency of required reporting to the supervising officer.

59. Basic principle 6 of the European Prison Rules[17] states *"All detention shall be managed so as to facilitate the reintegration into free society of persons who have been deprived of their liberty."* In many countries, probation agencies are responsible for supervision of offenders after release. This Rule requires agencies who will be undertaking this role to work actively during the term of detention to prepare for release. This is likely to involve contact with the offender, by letter, visits, video conferences; liaison with the prison authorities; contact with friends or family to whom the offender might be returning; and approaches to community agencies that may need to offer services and support after release.

We believe that successful resettlement work requires a case-management approach to ensure that the contributions of all responsible agencies are properly coordinated and managed. Positive changes and achievements made during the term of imprisonment are at risk of getting lost at the time of release and the need for continuity is paramount.

Resettlement work should not be confined to the assessment and management of risks and offending-related needs.

In many circumstances, release is subject to one or more formal conditions and the supervising agency, often probation, has a responsibility to ensure that the offender complies with these conditions.

60,61 As already stated in the commentary to Rule 59 above consistent finding of research in many countries shows that constructive work undertaken in prison is often lost on release. For example, learning from treatment programmes is not followed up and any benefits soon disappear.

62. Desistance from offending has been described as a *process* rather than as an event and offenders may need continuing support and encouragement long after release. This Rule recognizes that, once the formal period of post-release supervision has ended, the offender has no formal obligation to keep in touch with the probation agency. At the same time, where national law provides for this and where resources permit, probation agencies should offer support for as long as they can so that no one commits an offence because they feel they have nowhere to go for help. Provision should also be made where possible for the very large number of prisoners who are released from prison without any formal resettlement obligations, but who are often likely to need advice, assistance and encouragement.

63. For a number of social, economic and political reasons, there has been an increase in the movement of people across the European continent. People arriving in other countries may be 'in crisis', having few resources and few or no contacts when they arrive in the country. Probation agencies have a strong ethical obligation to make sure that such vulnerable people are dealt with fairly and well. In some countries, however, non-nationals lack many of the legal rights of nationals and find themselves excluded from the services they need. This is a prominent challenge for many countries.

Probation's main objectives – for example, community integration, social inclusion, resettlement – have a quite different significance to people who have few or no connections within the country and, indeed, may be required to leave it because of their offence(s).

64. For member states of the EU, a Framework Decision has been adopted that allows for the transfer, in certain circumstances, of probation supervision from one jurisdiction to another – typically where offenders convicted in another country are returned to their own country for supervision[18].

65. This Rule addresses the exact same problems as Rules 63 and 64, but from the point of view of the state to which offenders are to return. Offenders and ex-offenders returning to their country of origin are also likely to be poorly supported and vulnerable and agencies must ensure that their needs are met.

---

[17] Recommendation Rec. (2006) 2 of the Committee of Ministers to the member states.

[18] Council Framework Decision on the application, between Member States of the European Union, of the principle of mutual recognition to decisions on supervision measures as an alternative to provisional detention.

2.5. Process of supervision

66. We acknowledge that his Rule does not interfere with the criteria provided by national law related to judging the need of carrying out assessments of offenders at different stages of the criminal procedure. It is there to guide the probation services themselves in their everyday work with offenders. The efficiency of the implementation of community sanctions and measures is greatly enhanced by prior assessment of each individual case. The Rule brings to the attention of the probation agencies some important principles in carrying out good assessment.

It is important to remember that assessment must also include a review of the resources that might be available to tackle the identified problems.

67. The process of assessment – *how* it is undertaken – is as important as the outcome. The member of staff may have a very clear idea of the offender's problems, but offenders must be enabled to make the discovery for themselves. There are skills – for example, motivational interviewing – that may be used to help offenders recognize some of their difficulties. But supervision will not be successful unless there is sufficient agreement between the supervisor and the offender.

68. Assessment should be the product of discussion and exploration between staff and the offender. Where there is disagreement between them, this should be noted and may in itself be a focus of work, as we have seen in the commentary to Rule 67.

69. Assessment should be undertaken periodically to check progress and to ensure its continuing accuracy and relevance. Supervisors also need to be alert to the possibility of changes in offenders' lives that make a difference. Since community safety is a priority for probation agencies, changes in the level and nature of risk should particularly be emphasized here.

70. We have to note that there are some important 'milestones' during supervision when assessment needs to be reviewed. These are specified in this Rule.

71. Modes of risk assessment are usually distinguished as either 'clinical' (individual, person-by-person) assessment or 'actuarial' assessment, based on statistical techniques for assessing probability, where a probability 'score' (of re-offending, or of the risk of harm) is usually produced. Actuarial techniques, using 'static' factors (e.g. age, type of offence, criminal record, which cannot be changed) are said to be more reliable, but these are based on aggregates and have limitations in predicting the risk-levels of individuals.

72. Supervision should be put into effect in a planned way. Once assessment has taken place, the supervisor, in discussion with the offender, must decide how the identified problems are to be tackled. Objectives should be specific and measurable (so that progress can be monitored). They must also be achievable and have a clear time frame.

73. As with assessment, a work plan that the offender does not understand or (does not understand sufficiently well) agree with is unlikely to be implemented. We should try to make the process of planning to be negotiated as far as possible and explained in a way that the offender can understand.

74. There must be a strong and natural connection between the assessment and the plan, as the commentary on Rule 72 explains.

75. Rules 69 and 70 emphasize the importance of regular reviews of assessment.

76. Interventions are structured and planned pieces of work with offenders aimed at their rehabilitation and their desistance from offending. The nature of the interventions by probation agencies shall depend on and be limited by the sanction or measure and the conditions imposed by the deciding authority. Interventions thus will often aim at social and family support through employment schemes, educational programmes, vocational training, budget management training and regular contact with probation staff, or will include o*ffending behaviour programmes*, often based on the principles of cognitive behavioural psychology.

77. Other skills will be deployed by probation staff themselves and Rule 27 refers to the specialized training that some staff will need.

78. Offenders must be prepared by their supervising staff member for the interventions in which they are to participate. Sometimes offenders will be unsure or even unwilling to attend and the supervisor will need to work hard to enhance their motivation. An offender who understands the reason for the intervention is very much more likely to attend and to gain from the experience.

79. This is a corollary of Rules 37 and 77. Engaging services based in the community promotes social inclusion and also allows offenders to benefit from a broad range of expertise.

80. This is an important principle of working with offenders. An inter-agency and multi-modal approach is most effective, but the involvement of different agencies – and often several staff within the same agency – can lead to confusion of roles. This Rule commends that there should be a single responsible member of staff who undertakes assessment, decides on the work plan and coordinates the interventions. Research has shown that the offender's experience of involvement with probation should be characterized by continuity, consistency, providing opportunities for consolidation and staff commitment. Without such coordination, the experience of supervision can be fragmented, disorganized and confusing for everyone – especially the offender. This case manager or offender manager, as the role is often called, will also be responsible for ensuring that the terms of the sanction or measure are fulfilled and for taking action in response to noncompliance. *Evaluation*

81. We believe that the evaluation of the progress by the individual offender is a continuing process throughout the period of supervision. The supervisor's and the offender's view of the period of supervision should be summarized, recorded and retained on the records of the agency. In some countries, reporting to the deciding authority on this progress must be done periodically, in others probation agencies only report at the end of the supervision or in case of a breach of conditions

82. It is important to note that this Rule refers to the need for legal possibilities for staff to apply to the judicial authority to change the conditions of supervision. Where good progress has been made, where a condition no longer seems relevant or has proved impracticable, or where assessment indicates that a lower level of supervision may be used, the probation agency should be able to make application for the conditions to be amended or for the order to be ended early. This is partly a question of resources – resources should be focused on those offenders most in need of supervision – but it is also important to recognize and acknowledge formally that offenders have often made significant achievements during their supervision.

83. The offender's experience of the value of the service received should be an important part of the (periodic and final) evaluation. Probation agencies should consider collating information from these evaluations to see if any general themes emerge, suggesting the agency's particular strengths and ways in which they might improve the quality of their services.

84. We know that any kind of supervision during probation must be concluded with a full review and evaluation of what has been achieved, what has been less successfully managed and what might have been done differently, whether by any party.

85. This Rule mentions that probation agencies have a responsibility to give effect to the sanctions and measures ordered by the judicial or other deciding authorities. Fairness is very important also. It is a known fact that people are much more likely to cooperate when they feel they are being dealt with fairly.

86. It is the nature of the sanction or measure that must be fully explained to offenders: they must know what is expected of them. Even our probation agencies have understood that supervisors should not rely solely on threat of further sanction to gain compliance. There are occasions when supervisors will offer advice to offenders – which they may choose to accept or not.

87. Non-compliance must always be taken seriously and professional judgment exercised within the standards set by national law. Non-compliance is unacceptable; the supervisor shall discuss with the offender what shall be done to bring about compliance in the future.

One must remember that probation hopes to encourage and enable changes in people's lives. Some of the changes we have to mention– notably obtaining regular employment – are likely to make a significant difference to the individual's future behaviour.

An offender who is at work all day may find it difficult to report to the probation officer.[19]

88. We understand the importance of keeping records. Keeping these is a significant part of the work of probation agencies. Records also communicate information between the agencies and authorities to whom they must give account. Records typically include personal and other important information. The file also retains information about an offender's previous convictions and earlier experiences of supervision or imprisonment.

89. Principles of confidentiality must be renounced for the need to share information among responsible agencies, particularly where there is a high risk. The basis of information exchange must be clear and confidentiality must be respected as far as this is consistent with the need to ensure community safety.

90. It is important for records to be scrutinized in used in monitoring and inspecting.

91. Rule 35 refers to the responsibility of the probation agency to give account to judicial and other deciding authorities in particular cases.

92. Obviously offenders have a right of access to their records. Should one offender dispute the accuracy of the record, there shall be an exact procedure in place to respond to their concerns.

2.6. Other work of probation agencies

93. There are very many instances in which victims of crime often report that they not feel well supported by the agencies of criminal justice, which typically give priority to detection and prosecution and, in general, focus their work on the offender rather than the victim. It is mentioned in other commentaries that some probation agencies are involved directly in offering support to victims;

Take into consideration that principles of non-discrimination and individualization (see Rule 4) have to apply as much to victims as to offenders.

94. In some countries and in even in ours, NGOs, have been established to offer support to victims. Some national law provides, probation agencies shall do all they can to support this work and respond positively and cooperatively to approaches from victim support organizations.

95. In some jurisdictions, probation agencies contact victims of serious crimes and keep them informed about the circumstances of the offender. We should remember always that probation staff must be aware of the offender's right to confidentiality and recognize that some information need not and should not be divulged. A victim may prefer, for example, that an offender should not be permitted to live in the same neighbourhood. But the desire of victim is not necessarily that of the probation agency.

96. We have to mention that this Rule recognizes that rehabilitation requires offenders to take responsibility for their own behaviour and this includes their recognition of the harm they have done. There is work to be done to enhance victim awareness allows them to be assured that their distress will be recognized and respected in the work that probation agencies undertake with offenders.

97. We have to mention that rule 97 refers to *restorative justice* interventions which typically involve work with offenders, victims and the community. We acknowledge that restorative practices can take many different forms. A United Nations Handbook explains *"Restorative justice approaches and programmes are based on several underlying assumptions: (a) that the response to crime should repair as much as possible the harm suffered by the victim; (b) that offenders should be brought to understand that their behaviour is not acceptable and that it had some real consequences*

[19] Rule 10 of Recommendation No. R (92) 16 of the Committee of Ministers to the member states on the European rules on community sanctions and measures states *"No provision shall be made in law for the automatic conversion to imprisonment of a community sanction or measure in case of failure to follow any condition or obligation attached to such a sanction or measure."*

for the victim and community; (c) that offenders can and should accept responsibility for their action; (d) that victims should have an opportunity to express their needs and to participate in determining the best way for the offender to make reparation, and (e) that the community has a responsibility to contribute to this process."[20]

Restorative approaches include **mediation services** – for example, mediation between victim and offender to explore how amends can be made and how those affected can manage the consequences of the crime. Mediation can also be used to prevent crime – for example by working to reduce neighbourhood disputes before they lead to crime. Recommendation Rec (99) 19 on mediation in penal matters sets out standards for mediation. This is not yet applicable in Romania.

Restorative justice approaches call for distinctive skills and probation agencies should ensure that staff are trained to undertake such work appropriately.

98. This Rule refers to the need for probation agencies to share their experience and knowledge and to participate in partnerships with other organizations to reduce offending and make the community safer.[21] Probation agencies should participate actively in such endeavours.

2.7. Complaint procedures, inspection and monitoring

99. It is a clear fact that due to the nature of probation work, it can lead to disagreement and dispute between staff and offenders. Sometimes disagreement can give rise to formal complaint.

There must be a clear procedure available for offenders and other service users who wish to complain. There have to be several levels of resolving a complaint.

100. Those investigating complaints should be impartial and should avoid any assumptions that might prejudge the outcome of their inquiry. In some cases, it will be sufficient for the line manager of the member of staff who is subject to the complaint to undertake the investigation. There is a role too for an independent authority[22] to respond to complaints, but normally this process should be invoked only when other mechanisms have failed to bring a satisfactory resolution. The procedure is always checked to be fair and impartial. It is also important to distinguish between complaints against members of staff and, on the other hand, dissatisfaction with the agency's policy.[23] 101. Any complaint must be duly investigated and given a solution. It is important to mention that probation agencies should respond undefensively to complaints.

102. We acknowledge there has to be a system to be able to check performance against the required professional standards. All the internal audits should focus not only on individual performance, but should also take into consideration if staff are adequately trained and have all the necessary support and resources to do their work. Statistics are very important also.

103. We have to mention that monitoring from various independent monitoring bodies is very important for ensuring high quality of professional standards of probation work. In other countries this is done by the ombudsman, in others national supervising committee such as the case of Romania, etc. Any competent authority, should also take the opportunity to learn more about the realities of probation practice and to advocate as necessary on the agency's behalf for changes in policy or in levels of resourcing.

---

[20] Handbook of Restorative Justice programmes, Criminal Justice Handbook series, United Nations, 2006.

[21] If, for example, probation staff become aware that many of the offenders under supervision are drug-users, this should prompt them to encourage other authorities (perhaps, in this case, the health service) to see if educational or treatment services could be devised to prevent offending – not only to reduce re-offending by offenders under supervision, but to prevent or discourage people from starting to offend in the first place.

[22] Usually the Ombudsman or another institution.

[23] For example, an offender may wish to complain about a decision to recall him to prison, but, if the agency is satisfied that this decision was taken and implemented properly, it should be prepared to support its members of staff.

2.8. Research, evaluation, work with the media and the public

104. We believe that the most important criterion of effectiveness is the *reducement of reoffending*. Different countries apply different probations methodologies, such as strengthbased approaches or social work approaches. Any probation methodology should always be open to change and reconsideration. Established methods of intervention may need to be revised. There are always new methods that are likely to emerge and their effects should be investigated. We and other commentators of this Recommendation have analysed this Rule and we have found that it recognises the value of research and recognises that resources must be made available for this to take place as an investment in the improvement of services.

105. It is a fact that politicians in many countries are under considerable pressure to introduce effective measures to reduce crime. All policies created by politicians should be supported by research, reason and argument.

106. Probation agencies should work actively to explain their work to the public. Examples of the achievements and successes of probation should be announced through the media such as television, radio and especially Internet.

107. This Rule is a corollary of the last one. Probation policy and practice develop and these developments should be explained to the public. It is also important that the public sees a probation agency as an active, responsive organization which is always keen to enhance the quality of its work.

108. We have to have for probation clear and realistic statements of its purposes and real transparency. This Rule further emphasis the value of international exchange of ideas and practices.

3. Conclusions

The present article tries to do as complete as possible an analysis and commentary of the Recommendation. The results we have accomplished is to have a tool in the form of this present that can help any person in relation with probation, even if it is an offender, a victim or a probation worker. Practically, this present paper can be used alongside with the Recommendation to clarify all the rules and to give a short glimpse on the exact application of sed rules.

The desired impact of this paper is to be a starting point for further analysis and commentary, and also to determine other scientific minds to create such commentaries, and give even more insight on these aspects. Also we believe that we have to create a paper of a more considerable dimension that can take into consideration other recommendations also.

Probation is actually very important and necessary for the proper function of the criminal justice system and in the absence of such rules and regulations it cannot give the necessary support and aid to courts, victims, offenders and eventually society.

We can suggest and give indication that future papers should take into account the legislation from other countries also. Countries can learn from one another's experience – not only from successes, but also from mistakes.

This present paper is also a starting point for any person that desires to study and begin an understanding of probation and probation services. One should first read the recommendation then the present commentaries and after that we can happily say that a minor understanding of the european perspective of probation has been achieved.

THE ACTION IN TIME OF THE CONSTITUTIONAL COURTS' DECISIONS

VALENTINA BĂRBĂŢEANU[*]

Abstract
The effects of the decisions of the constitutional jurisdictions may sometime disturb the balance of the normative system. This is the reason why, in different countries, the constitutional courts have modulated in time the impact of their decisions. In some cases, they are postponing the effects of their decisions (e.g. Italy) or they are establishing a precise moment in time up until the legislative power has the duty to change the normative provision declared inconsistent with the Basic Law (e.g. Germany, Austria). In other cases, they point out the way their decisions affect different juridical situations (e.g. Romania). This study intends to analyze the action in time of the decisions of some European constitutional jurisdiction.

Keywords: *Constitutional review, constitutional jurisdictions, effects of the decisions, action in time, retroactivity (retrospective laws).*

1. Introduction

The normative system of every state is influenced by a multitude of elements. One of them consists in the effect of the decisions rendered by the authorities of constitutional review. They have the main power to check the compatibility of various normative acts with the provisions and principles enshrined in the Basic Laws. Whenever they detect a deviation from the observance and the respect owed to the constitutional values, they sanction the respective normative act by eliminating it from the legal order.

Each state has provided a specific mechanism in this regard. Usually, the annulment takes its effects as from the day the decision is officially published. In some other cases, the Basic laws have established an interval of time that has to flow until the annulment starts producing its effect. There are also several constitutional jurisdictions that are entitled to determine by themselves this moment in time. In this manner, the annulment is postponed and the effects of the unconstitutional normative act are prolonged even after the declaration of its unconstitutionality. The authorities of constitutional review can also impose to the legislative power a term within which it has to adopt a new regulation.

This issue made the object of some studies[1] and also was briefly taken into discussion, among many other major topics, on the occasion of the XV[th] Congress of the Conference of European Constitutional Courts[2]. However, a comparative view of the way some of the most representative authorities of constitutional justice are dealing with the entrance into force of their annulment decisions may be helpful for understanding the benefits or the shortcoming of the diverse mechanisms chosen by the national legislators.

[2] Organized by the Constitutional Court of Romania and held in Bucharest, on 23th-25th of May 2011, with the theme „Constitutional Justice: Functions And Relationship With The Other Public Authorities". All the national reports, along with the General Report, were published in the book of the Congress: *Justiţia constituţională. Funcţii şi raporturi cu celelalte autorităţi publice – Drept constituţional comparat*, (Bucureşti: Universul Juridic, 2012).

2. General considerations regarding the constitutional review of normative acts

The constitutional review of normative acts is an essential dimension of the States which are governed by the rule of law. Its purpose is to ensure and grant the supremacy of the Constitution as basic, fundamental law of the State, placed on the very top of the normative hierarchy established within the juridical system of the State[3]. This task was entrusted by the legislative power to different authorities of constitutional review which were created in most countries. These authorities reveal their contribution in defending the democratic values enshrined in the constitutional provisions and they help increasing the level of protection offered by the Basic laws to human rights and freedoms.

The supremacy of the constitutional norms over the entire normative ensemble is the central idea that triggers the mechanism of constitutional review. The acknowledgement of the prevalence of the Basic law over every normative act represented a dramatic evolution towards authentic democracy[4]. The constitutional justice has gained its position when the absolute sovereignty of the Parliament has been balanced and confined to the requirements imposed by the Basic laws regulations[5].

The constitutional review is performed in the so-called 'European model' by special authorities that are empowered by the constitutional legislator itself to ensure the constitutional review. They are usually especially created authorities, independent and separated of any other public authority, which are not subject to any influence coming from any of the state's branches of power – nor the legislative, the executive or judicial authority[6]. They can be called 'constitutional council', like in France, or 'constitutional court', as it is in Germany, Austria or Romania or 'constitutional tribunal', as Spain has, for instance. They can also be the highest courts in the judicial hierarchy in the state, situation met in Estonia or Greece. In all these cases the review is 'centralized' or 'concentrated'. On the contrary, the 'American model'[7] is characterized by a 'diffuse' judicial review, fulfilled by every ordinary court whenever it is confronted with an alleged un-constitutionality of a legal provision which may determine the result of the judicial trial[8].

Regardless of their appellation and the classifications offered by the scholars, the fore-mentioned authorities have the main prerogative to check whether the lower level norms comply with the provisions of the Basic laws of each respective State. The authorities of constitutional review have consolidated over the time their role of grantors of the supremacy of the Basic law, becoming essential pillars of the primacy of law in the democratic States.

Their functions, regulated and assigned by the Basic laws and specific normative acts, vary from one state to another, due to the different historical circumstances and ideological tendencies that have marked out their creation.

There are two important categories of constitutional review that one can meet in most countries endowed with such a review. There is the **preventive constitutional review**, which is also

---

[3] According to Hans Kelsen, the reason of validity of every legal norm resides in a so-called *Grundnorm*, which is a hypothetical fundamental norm considered to be the foundation of the entire legal system. See Hans Kelsen, *Doctrina pură a dreptului*, (Bucureşti: Humanitas, 2000), 272.

[4] For theoretical and historical details regarding the developing of the constitutional supremacy, see Ioan Deleanu, *Instituţii şi proceduri constituţionale în dreptul român şi în dreptul comparat*, (Bucharest: C.H. Beck, 2006), 227-257.

[5] In the context of the amendment of the French Constitution in 2008, with the aftermath of the consecration of the *a posteriori* review of constitutionality of the statutes which are already in force, professor Guillame Tusseau noted that that moment represented the end of what have been called the ‚rousseauist legicentrism' that governed the French legal order for a very long time. See Guillame Tusseau, „La fin d'une exception française ?", *Pouvoirs* 137 (2011), 5.

[6] Louis Favoreu, *Les cours constitutionnelles*, coll. „Que sais-je?", la 2eme edition, (Paris: Press Universitaires de France, 1992), 3.

[7] Florin Bucur Vasilescu, *Constituţionalitate şi constituţionalism*, (Bucureşti: Naţional, 1997), 40-42.

[8] The so-called 'American model' has been invented in the United States of America, but it is not specific exclusively to the American Federation. It has been adopted also by South American states and even some European countries, like Greece and Cyprus.

called preliminary or *a priori* review and regards the statutes before their entrance into force. Such a preventive review is performed by most of the constitutional authorities[9]. The aftermath of the *a priori* review is the fact that the normative act declared inconsistent with the Basic Law will not enter into force, thus avoiding the occurrence of unconstitutional provisions in the legislative system.

There is also a **repressive constitutional review** that concerns the normative acts which are already in force. It can be both abstract and concrete. This distinction is based on the origin of the alleged unconstitutionality. When the conformity of a normative act with the constitutional provision has been questioned by a political subject, like the members of the parliaments, the chief of the state or the chief of the government or other high authorities, like the general prosecutor, the president of the Supreme Court or the Ombudsman, we talk about an abstract constitutional review. It is considered to be an **abstract review** because it has no connection with a real conflict. On the contrary, the so-called **concrete constitutional review** has its roots into a judicial trial pending in front of a judicial court. A preliminary question of unconstitutionality can be raised whenever the interest of the justice requires that. The right to refer a question of unconstitutionality to the constitutional courts is given to the parties in a trial as an expression of the right to free access to a court and the right to a fair trial, but also as a testimony of the principle of rule of law. That's because the purpose intended to be touched is the resolution of the lawsuit on the basis of regulations whose constitutionality is beyond any doubt and the removal from legislation of the provisions infringing upon the texts or principles inscribed in the Basic Law[10].

The concrete (or incidental) review of constitutionality is specific to those states that have a diffuse system of judicial review, as it is, for instance, in the Unites States of America[11] or Portugal[12].

The procedural means are different in those countries where it has been adopted the centralized system of constitutional review. The question of unconstitutionality is referred by the ordinary courts to the constitutional authority entitled to perform the review of constitutionality. Romania, Italy[13], Lithuania[14] and Turkey[15] are some of the countries that have regulated such a mechanism.

Some constitutional courts have the ability to review the constitutionality of existent normative acts or of the acts which are about to enter into force, but also the unconstitutional legislative omissions[16]. The disregard of the provisions or the principles enshrined in the Basic Laws

---

[9] Up until the constitutional amendment in 2008, the French Constitutional Council was often considered representative for this kind of review, taking into consideration the fact that it controlled only the constitutionality of the laws prior to their promulgation by the President of the French Republic.

[16] This issue was the main theme of the XIVth Congress of the Conference of European Constitutional Courts held in Vilnius in 2008. The national reports on this subject were gathered in the collection *Problems of Legislative Omission in Constitutional Jurisprudence*, published by the Constitutional Court of Republic of Lithuania, Vilnius, 2008.

can be entailed by the lack of regulation where the Constitution provides the obligation of the legislator to enact certain rules. The most illustrative example in this regard is offered by the German Federal Constitutional Court[17].

3. Brief presentation of the other powers of constitutional authorities

Beside the constitutional review of normative acts, the authorities of constitutional justice are assigned to perform a wide range of powers that highlights their important role played in granting the supremacy of the Constitution.

Many constitutional courts are asked to decide on legal disputes of a constitutional nature between public authorities. Such a distinctive power is especially significant in what concerns the federal or regional states[18]. There are also states that have empowered the constitutional courts to settle the conflicts between the central and the local or regional authorities[19].

In Romania, this power is limited at the conflicts raised between the central authorities of the state[20]. Inspired by the experience of other States in what concerns the problems generated by this kind of conflicts, the delegated constituent legislator in Romania has amended the Basic Law in 2003 and has enlarged the powers of the Constitutional Court of Romania. From that moment on, in some of the most critical moments of the social and political life, the Romanian authority of constitutional justice has been asked to resolute intricate and delicate conflicts. It turned into a referee that had to deal with intense clashes of vanities and tried to reconcile strong and stubborn ambitions[21].

The authorities of constitutional justice - constitutional courts or other equivalent bodies – are also entitled to solve the appeals introduced in the electoral matters[22].

The compliance of the political parties with the constitutional standards is, in some states[23], assessed as well by the constitutional courts, which decide consequently on the dissolution or even banning of the political party that was proven that conducts contrary to the constitutional values.

There are also other multiple powers that are given in the constitutional courts competence in different states, but a complete overview would exceed the theme of the present study which, from this point of view, intended to highlight some of the most important functions of the authorities of constitutional jurisdiction.

4. The effects of the constitutional jurisdictions' decisions

The Romanian Constitution is one of the few basic laws in Europe that firmly and explicitly regulates the effects of the Constitutional Courts decisions. Article 147 par.1 of the Constitution stipulates that the provisions of the laws and ordinances in force, as well as any of the regulations

---

[17] See Article 93(1),(3) and (4)(a) of the German Basic Law.

[18] Like Austria (Article 138 of the Constitution), Germany (Article 93(1)(1)(4) and (4)(b) of the Constitution) or Italy (Article 37 of Law N^{o} 87 of 11 March 1953).

[19] This is the case of the constitutional courts from Bulgaria (Article 149(1)(3) of the Constitution), Czech Republic (Article 87(1)(c) of the Constitution) or Hungary (Article 1(f) of the Law on the Constitutional Court).

[20] Article 147 letter e) of the Romanian Basic Law provides that the Constitutional Court decides on legal disputes of a constitutional nature between public authorities, at the request of the President of Romania, the President of either of the Chambers, the Prime Minister, or the President of the Superior Council of Magistracy.

[21] See, in this regard, Mihai Constantinescu, Ioan Muraru, *Constituţia României revizuită - comentarii şi explicaţii*, (Bucureşti: All Beck, 2004), 232.

[22] France (Articles 58-60 of the Constitution), Austria (Article 141 of the Constitution), Lithuania (Article 105 par.3 subpar. 1 of the Constitution), Greece (Articles 58 and Article 100 paragraph 1 letter (a) – (b) of the Constitution), Bulgaria (Article 149(1)(6)-(7) of the Constitution), Italy (Article 33 of Law N^{o} 352 of 25 May 1970), Portugal (Article 225(2)(f) of the Constitution), Hungary and Romania.

[23] Czech Republic (Article 87(1)(j) of the Constitution), Germany (Article 21(2) of the Constitution), Poland (Article 188(4) of the Constitution), Portugal (Article 225(2)(e) of the Constitution), Slovak Republic (Article 129 (4) of the Constitution), Slovenia (Article 160(1)(10) of the Constitution), Turkey (Article 69(6) of the Constitution) or Romania (Article 146 Letter (k) of the Constitution).

which are held as unconstitutional, shall cease their legal effects within 45 days from publication of the decision rendered by the Constitutional Court where Parliament or Government, as may be applicable, have failed, in the meantime, to bring these unconstitutional provisions into accord with those of the Constitution. For this limited length of time the provisions declared unconstitutional shall be suspended as of right.

A similar provision can be found in the Constitution of the Slovak Republic[24]. Article 125 Paragraph 3 of the mentioned Basic law affirms that whenever the Constitutional Court holds by its decision that there is inconformity between legal regulations, the respective regulations, their parts or some of their provisions shall lose effect. The bodies that issued those legal regulations shall be obliged to harmonize with the Constitution, with constitutional laws and with international treaties promulgated in the manner laid down by a law, and in cases stipulated by the Constitution also with other laws, governmental regulations and with generally binding legal regulations of Ministries and other central state administration bodies within six month from the promulgation of the decision of the Constitutional Court. If they fail to do so, those regulations, their parts or their provisions shall lose effect after six months from the promulgation of the decision.

Prior to the constitutional amendment in 2003[25], the Romanian Basic law adopted in 1991, the effects of the Constitutional Court's decision has been disputed, due to the fact that the initial formulation of the constitutional norm was vague and equivoque. The Constitutional Court itself had to underline in its case law the generally binding effect of its decisions that declare the inconsistency with the Constitution of the normative acts[26]. It has noted that if one accepts the idea that the Court's decisions of unconstitutionality do not produce *erga omnes* effects, it would be unacceptable the possibility that a certain legal provision which has been declared incompatible with the Constitution to be, on one hand, un-applicable within the judicial trial that was the framework of the objection of unconstitutionality solved by the Constitutional Court, and in the same time, on the other hand, to be unimpeded applicable in any other judicial trial. The Constitutional Court stated that this kind of consequences would be un-doubtfully contrary to the principle of the equality in front of the law and of the public authorities enshrined in the Article 16 paragraph 1 of the Romanian Basic Law and it would also ignore the duty to observe the Constitution, enshrined in the Article 51 of the Basic Law.

The Court also highlighted that the Parliament has the liability to take necessary action in order to amend or abrogate the normative act or the legal provision declared unconstitutional. Still, even if the legislator remains passive, the Constitutional Court's decision will, nevertheless, produce its abrogative effects[27].

---

[24] The full text of the Slovak Republic's Constitution can be found at http://portal.concourt.sk/download/attachments/3604914/ustava_a.pdf.

[25] The Constitution of Romania was amended and supplemented by the Law on Revision of the Constitution of Romania, No. 429/2003, published in the Official Gazette of Romania, Part I, no. 758 of 29 October 2003; republished, with updated designations and new successive numbers for the texts, in the Official Gazette of Romania, Part I, no. 767 of 31 October 2003. The Law on Revision of the Constitution of Romania, No. 429/2003, was approved by the national referendum of 18-19 October 2003 and came into force on 29 October 2003, the date of publication in the Official Gazette of Romania, Part I, of the Constitutional Court Ruling no. 3 of 22 October 2003, confirming the results of the referendum held on 18-19 October 2003 as to the Law on Revision of the Constitution of Romania. The Constitution of Romania, in its initial form, was published in the Official Gazette of Romania.

[26] Decision no.98 of the 5th of April 2001, published in the Official Gazette of Romania, Part I, no. 256 of the 18th of May 2001, Decision no.169 of the 2nd of November 1999, published in the Official Gazette of Romania, Part I, no. 151 of the 12th of April 2000.

[27] The Constitutional Court has stated that the declaration of unconstitutionality is a sanction more severe that the abrogation of the norm. See Decision no.1039 of the 5th of December 2012, published in the Official Gazette of Romania, Part I, no.61 of 29th of January 2013.

The Court has stated that it hasn't got the power to abrogate a legal provision, but the effect of its decisions that declare the inconsistency with the Basic Law is similar to the effect of a genuine abrogation performed by the Parliament[28].

5. The *ex nunc* or *ex tunc* effect of various constitutional courts' decisions

According to Article 147 paragraph 4 of the Romanian Constitution, as from the publication of the Constitutional Courts' decisions in the Official Gazette of Romania, they shall be generally binding and take effect only for the future. In its case law, the Constitutional Court has stated that this *pro futuro* effect of its decisions owes its consecration to the respect of the non-retroactivity principle, which is enshrined in the Article 15 par.2 of the Basic Law. This fundamental rule is a powerful safeguard of the legal certainty and an effective way to strengthen the citizens' confidence in the legal system. It also can be seen as a major prerequisite of the observance of the check and balance rules of the states' powers, concurring at the reinforcement of the essential character of the Romanian State as a state governed by the rule of law.

As a proof of the diversity of the legislative choices within the European model of constitutional review, the effects of the decisions of some other constitutional courts have been regulated from a different point of view. Thus, the decisions of some constitutional courts are governed by the principle of retroactive application. The most representative examples in this regard are offered by the German and Belgian system of constitutional review.

According to the tradition of the German public law, a provision which violates higher-ranking law shall be null and void *ipso jure* and *ex tunc*[29].

In Belgium, the annulled legal provision will be erased from the legal order, as if it had never been adopted[30]. The idea on which is based such a solution derives from the fact that the annulled provision has been unconstitutional from the very beginning, meaning from the moment it has been adopted by the legislative body. Accordingly, the legal provision will be abolished *ex tunc*. In order to temper the drastic effects of retroactive application of its decisions, the Constitutional Court of Belgium indicates the effects of invalidated provisions that shall be considered final and those that shall be temporarily maintained for a period of time which is expressly specified[31].

There is a mixture of retroactive and non-retroactive application of the decisions of annulment in Austria. In most of the cases, the decisions of the Austrian Constitutional Court take effects only for the future, but, in some cases, the Court may choose to declare inapplicable a general normative act with retroactive effect[32].

It has to be noted that, in any situation, the retroactive application of the annulment of the normative acts jeopardies the legal stability and puts under question the authority of *res judicata* of the decisions that have been rendered by the ordinary courts.

6. The ability of the constitutional courts to modulate in time the effects of their decisions

In **Belgium**, the annulled legal norm can be still applied in some certain situations[33]. The Court will use this legal possibility on the basis of opportunity, in the virtue of its sovereign power[34]. When the Court decides to maintain the effects of an annulled legal provision, it takes into consideration not only the interests of the plaintiff, but also the requirements of the needs of the whole justice system.

Preservation of the effects of the annulled norms can be final, or temporary, for a certain period of time, established by the Court. In this situation, the Court can decide to keep the effects of the annulled legal norms up to a precise moment in time, which can be either prior or subsequent to the decision of annulment[35].

In **Italy**, the situation is different, because the temporal effects of the decisions of unconstitutionality are rigidly fixed[36]. Article 136 of the Italian Constitution states that when the Constitutional Court declares the constitutional illegitimacy of a law or enactment having the force of law, the law ceases to have effect from the day following the publication of the decision[37]. The loss of effectiveness of the measures affects all pending cases, which means that the Court's decisions have retroactive effect, since they apply to events which materialized previously too, with the exception of those circumstances which are part of legal relationships that have already been conclusively settled[38].

Nevertheless, the Italian Constitutional Court can limit the retrospective effects of unconstitutionality by the means of decisions pronouncing a so-called "intervening unconstitutionality". Typical for this kind of decisions is the fact that the Court declares that a particular legal provision which was compatible with the Constitution upon its entry into force became unconstitutional only later, when certain events arose[39]. In other words, the norm is not nullified *ab initio*, but only from the moment at which it becomes defective. An illustrative example would be the occurrence of a change in the economical or financial environment, in social attitudes or a more general change in conditions that leaves a norm incompatible with the Constitution[40].

Another technique that allows the Constitutional Court of Italy to modulate in time the effects of a declaration of unconstitutionality is to postpone them. Eloquent in this regard would be the case of those judgments that lead to expenses for the public treasury. The Court offers the legislature a fixed amount of time to act before the statute is nullified. The decisions of this kind are called decisions of 'deferred unconstitutionality'. The Court itself, based on the balancing of various constitutional values, pinpoints the date on which the law is nullified[41].

In case of judgments affirming 'established, but not declared unconstitutionality', no deadline for Parliamentary intervention is fixed. The assumption is, however, that such intervention shall take place as soon as possible. Certain cases do arise in which the Court sets a deadline; this happens when it is possible to identify a specific moment in which the situation of incoherence with the Constitution will become so serious as to be intolerable (for example, the deadline set for implementation of an European directive may be relevant in this sense)[42].

It has been said that „the highly political nature of some issues, combined with the need to balance the defense of social rights against the state's financial crisis, have obliged the Constitutional Court to modulate the temporal effects of its decisions that strike down laws as unconstitutional. In this way, the Court tries both to assure that the Government and Parliament have the time needed to fill the gap created by its nullification of a statute, and to strike a balance between the constitutional rights central to the social welfare state and the scarcity of economic resources"[43].

Actually, there are several other constitutional courts that have the possibility to postpone the entry into force of their decisions of unconstitutionality and to set a deadline for the law-maker in order to bring the normative act into line with the Constitution. As for the terms established by the decisions of Constitutional Courts, their purpose is, in most cases, to grant the legislator the time necessary to take the measures required for eliminating a legislative gap or to regulate a specific issue in accordance with the Constitution[44]. It is also important to note that the principle of separation of powers prevents the constitutional court to force the legislator to adopt a law or to set terms for this purpose.

Germany is one of the countries that use this mechanism in order to modulate in time the effects of its decisions. The Federal Constitutional Court[45] sets a deadline in the event of a mere declaration of incompatibility for the temporary further application of the provision. The Court can also fix a date up until the legislature has to create a new regulation within a certain period. The length of the said period is set according to aspects like the gravity of the violation or other urgencies, the complexity of the necessary new provision and special requirements of the matter[46].

These deadlines vary from one to two years. But sometimes they can be even longer[47]. For instance, the legislator was given a deadline of almost three years to adopt a new regulation regarding the election scrutiny procedure consecutive to the declaration of unconstitutionality of one of the provisions of electoral law[48]. Deadlines of less than one year are also sometimes set. Thus, the legislature was set a deadline of less than eleven months for the new regulation of social benefit provisions which the Court declared to be unconstitutional because the envisioned amounts for safeguarding the subsistence minimum required by the Constitution had not been ascertained in a procedure that was transparent and expedient[49].

In a case of a law regarding the property tax, the Federal Constitutional Court ordered its continued application, avoiding in this manner the unwanted legal consequences that could occur if the legislature failed to comply with the demand to create provisions or did not do so within the deadline set for it. The Court had explicitly ordered that the Property Tax Act should continue to

apply until 31 December 1996 "at most"[50]. Had no new provision been created by then, it was clear that on expiry of this deadline the provisions of the Property Tax Act in question could no longer apply and that this tax could no longer be levied[51].

Still, it has to be mentioned that there is no explicit constitutional or statutory provision to ascertain the possibility of the Court to set this kind of deadlines. However, the Court is entitled to impose deadlines to the legislator on the basis of and in the context of its power to review the constitutionality of statutes[52] and it is customary for the legislature to comply with such a mandate to create provisions in a timely fashion[53].

The French Constitutional Council also has got the possibility to determine the moment that represents the starting line for the effects of its decisions. There has to be made a necessary distinction between the *a priori* and the *a posteriori* review of constitutionality.

In what concerns the constitutional review of the laws before their promulgation, this ability was very seldom used. The Council has postponed the effects of the decision of unconstitutionality, for instance, in the case of the Law regarding the genetically modified organisms[54]. The law has been promulgated and it has entered into force, but the Council has set an interval of time of six months in order to give the Parliament the chance to redress the constitutionality of the law. The Parliament has very soon fulfilled this obligation, adopting the law in accordance with the constitutional requirements[55].

The constitutional amendment in 2008 has opened the path to the *a posteriori* review of constitutionality[56]. This kind of review concerns the laws that are already in force. It has been described as a true revolution in comparison with juridical traditions of the French Republic[57]. Beginning from the 1st of March 2010, the French Constitutional Council has entered into a new era of evolution. In this context, Article 62 Paragraph 2 of the French Constitution[58] states that a provision declared unconstitutional following the *a posteriori* review shall be repealed as of the publication of the said decision of the Constitutional Council or as of a subsequent date determined by said decision. The Constitutional Council shall determine the conditions and the limits according to which the effects produced by the provision shall be liable to challenge.

Thus, a decision of unconstitutionality entails the abrogation of the legal provision declared inconsistent with the Constitution. On the basis of the fore-mentioned constitutional norm, the Constitutional Council can decide to alter in time the effects of this abrogation[59].

The Constitutional Council has already make use of this ability and, in several occasions, has established a future moment in time up until the norm remained in force. In this way, the Council offered the Parliament the opportunity to modify the legal provision and to avoid, in this manner, a legislative vacuum. Only if the legislative power does not fulfill this duty within the fixed deadline the legal provision ceases its effects.

For example, regarding the legal provisions that regulate the pensions paid to the former combatants who have lost the French citizenship due to the decolonization, the Council has stated[60]

[60] In the Decision 2010-1 QPC of the 28th of May 2010. The so-called "crystallization of the pensions" decision is the first decision rendered by the French Constitutional Council on the basis of its new power.

that they have to be abrogated starting from the 1st of January 2011. By another decision[61], the Council has postponed up until the 1st of July 2011 the abrogation of the legal provisions regarding the preventive custody.

Unlike the fore-mentioned states, there are also some other states where the constitutional courts do not have the legal habilitation to postpone the moment when the norm declared unconstitutional cease its effects. This is the case of Portugal or Romania.

In the dawn of the **Romanian Constitutional Court**'s activity, there was a situation[62] when it has been imposed a deadline to the Parliament for adopting a new regulation regarding the protection of the public property. The legal provision at stake was comprised in the Criminal code and offered a superior protection to the public property of the State in comparison with the private property of natural or legal persons. The legislator was urged to bring the regulation in accordance with the new constitutional regime which granted an equal protection and contrasted with the former communist manner of property protection. The panel of three constitutional judges[63] has fixed a deadline to which the Parliament, as the sole legislative power, to regulate in a proper way this unconstitutional aspect.

This solution was considered adequate at that moment, taking into consideration the fact that the decision stating the inconsistency with the Basic law provisions produced its abrogative effects from the very moment of their publication in the Official Gazette. Such a rule entailed sometime undesired consequences like the occurrence of a legislative void generated by the passive attitude of the legislative power. Nor the Parliament or the Government had any expressly mentioned obligation to elaborate a new regulation when the Constitutional Court declared the unconstitutionality of various legal provisions. On that occasion, the Court stated that if the Parliament did not proceed at the modification of the unconstitutional legal provisions by the date of the 30th of November 1993, the abrogation would have taken effect beginning from the 1st of December 1993 and, along with it, all the negative consequences intended to be avoided in the interest of the society and of the rule of law. Thus, the Court has decided to maintain in the legal system unconstitutional norms, until the mentioned deadline established for the Parliament.

It has to be underlined that this solution was strongly criticized and, eventually, appealed. The same solution regarding he deadline was adopted once again[64], but based on a very fragile majority within the panel of five judges. It's been said, in this concern, that such a solution raised serious question marks regarding its constitutional grounds.

The contradiction was finally resolved by the Plenum of the Constitutional Court[65] which has decided that the Parliament cannot be pushed to action in a certain manner and, consequently, the Constitutional Court is not entitled to establish any deadline until when the legislative power has to fulfill the duty to change the unconstitutional norm. In addition, the decision was blamed for the fact that it would abusively confer to the Constitutional Court the power to prolong the effects of abrogated legal provisions, disregarding in this way the requirements of the principle of the separation of powers in the State. Taking into consideration the fact that the Parliament is the supreme representative body of the Romanian people and the sole legislative authority of the country, it's been also said that the Constitutional court cannot force it to carry on any activity, no matter how important would be the issue at stake.

[63] Which decided in the first instance according to the provisons of the Law 47/1992 in the initial formulation.

[64] Decision no.38 of the 7th of July 1993, published in the Official Gazette of Romania, Part I, no.176 of 26 of July 1993.

[65] Plenum Decision no.1 of the 7th of September 1993, published in the Official Gazette of Romania, Part I, no.232 of the 27th of September 1993.

Thanks to the constitutional revision in 2003, the problem has been clarified through the Article 147 of the Basic law, as it has previously shown.

7. Conclusions

This comparative approach proves that the constitutional authorities in some countries have reached the conclusion that it is appropriate to offer some flexibility to the temporal effects of their decisions that affect the existence of normative acts or legal provisions. The final goal would be a more efficient legislative activity. That is because the constitutional judge could offer the legislative branch a margin of appreciation and an adequate period of time to adopt a new regulation instead of the one that has been declared contrary to the Basic Law. Such a delay of entering into force of the abrogative effects of constitutional courts' decisions can sometime be used when a smoothly redress of the unconstitutionality is preferable to a sudden abrogation. Situations like this are preferable if in the absence of a gradual transition from an unconstitutional state of law to a constitutional one a situation even less constitutional would be created. The constitutional courts that practice this postponement of the effects of their decisions are taking into consideration the possible risk that might appear along with the annulment of the unconstitutional norms. The balance that has to be kept between various constitutional values is always taken into consideration and the preservation of legal stability with the aftermath of the enforcement of the human rights and freedoms safeguards is a constant and permanent goal of the constitutional jurisdictions.

THE RIGHT TO KNOW ONE'S BIOLOGICAL IDENTITY

VERONICA DOBOZI*

Abstract
In the last decade, European Court of Human Right case-law evolution revealed a new component of the right to private life, protected by the Human Rights Convention, Article 8. Existence and limits of the right to know one's biological identity were set out in a long line of cases, starting with Mikulic c. Croatie (2002) until the very recent Godelli c. Italie (2012). The Court jurisprudence established that birth, and in particular the circumstances in which a child is born, forms part of a child's, and subsequently the adult's, private life guaranteed by Article 8 of the Convention. Respect for private life requires that everyone should be able to establish details of their identity as individual human beings and that an individual's entitlement to such information is of importance because of its formative implications for his or her personality. This includes obtaining information necessary to discover the truth concerning important aspects of one's personal identity, such as the identity of one's parents. Having regard to the margin of appreciation left to the member states, the Court sticks between taking priority over the third parties' right to privacy – for example, mothers in the cases of X births, donors sperm, unknown fathers – to recognition of the child' right to know his/her biological roots and identity. Following the bioethics and bio-law progress, case-law evolution had influence member states legislation and disseminated progressive ideas, as the recent official United Kingdom legislative modifications which remove anonymity for sperm, egg and embryo donors. In view of the above, future analysis of private life respect throughout Europe should include this new element, the right of any person to know his/her biological identity, not only for medical aims.

Keywords: *biological identity, human rights, filiation, paternity, maternity*

Introduction

In the last decade, the European Court of Human Rights (ECHR) case-law developed in appliance of art. 8 of the European Convention on human rights (the Convention) which consecrates the right to respect for one's private and family life, revealed a new component of private life concept. The European court's research report named "Bioethics and case law of the Court" describes the case law concerning this aspect under the title "The right to know one's biological identity?", keeping a question mark which seems to rise certain questions regarding the birth of a new human right.

This particular aspect of the right protected by art. 8 of the Convention is a concrete result of the intersection of concerns in Europe in the domain of the child's rights protection, on one side, and the prevalence of the legal biologic reality, on the other side.

In its law case, ECHR addressed the issue similarly both in the cases concerning descendants wishing to find the identity of genitors, and in the situations when the fathers contested or requested the establishment of paternity[1], consequence of the revealing of the biologic truth.

Even if they were placed in a common basket, which was called by the doctrine *freedom to develop one's own identity*[2], we find that the right to know the biologic identity should be treated separately.

First, the identity, both in the common meaning of the term, and in the one explained by the ECHR's case law, includes the biologic identity, but is not reduced to it. From this perspective, the

[1] This is also the case in the ECHR report concerning the "Bioethics and the Court's case law".

[2] Jacobs, White, Ovey, The European Convention on Human Rights, ed. a 5-a, Oxford University Press, pp. 377-379.

plaintiffs who complained to the Court of the infringement of their rights in the context of the legal impossibility to establish the filiation according to the biologic truth revealed under various forms, even if they invoked the right to private or family life, were not searching their biologic identity. They only followed the legal recognition of a truth, they did not live in incertitude regarding their origin.

On the contrary, the plaintiffs who intend to obtain information on their origin, their genitors and their genetic inheritance, are motivated by the real will to answer to certain tormenting questions which weighted significantly on them during the childhood, teenage years and sometimes their adult period, considering that these answers are many times capable to sketch an important part of one's personality, helping to the identification to the cultural and moral values of their predecessors or of the population to which one belongs .

The Court recognized that there is a direct relationship between the establishment of the filiation and the private life of these plaintiffs[3], as it recognized, *de plano*, also the existence of certain long term moral and psychical sufferings in the case of the plaintiffs who wish to discover the identity of their genitors[4]. Moreover, the European Court exempts these plaintiffs from the charge of proving the interest of the request, presuming that it exists as component element of the constitution of an individual identity, socially integrated, notion protected by the Convention[5], art. 8.

Even if the interruption of the biologic relation between the parents and the children and its substitution with relations created artificially by the law – for example the adoption – is very old, the interest for the establishment of the biologic truth increased progressively during the last decades, enhanced by the progress of the biomedicine, which allows the accurate establishment of the blood relation, other times almost impossible to detect. ECHR vacillated during the case law to catalogue this aspect of the right guaranteed by art. 8, considering it either a component of the private life, either one of the family life[6].

I. The Court's case law in this topic

In the last case in which it used this aspect, Godelli c. Italie, ECHR clarified the issue, mentioning that the right to know one's own biologic identity enters in the domain of the private life notion, as long as between the child searching the truth of its blood relation and its genitor/s were not already established the specific relations of the family life, logical conclusion in the light of the current case law of the European court, which considers that art. 8 protect the continuity of the family life, only if its existence is previously demonstrated.

The DNA test allows now the establishment of the maternity and paternity relation with a 99.99% precision. As regards the need to find the truth on the biologic ascendance or lineage, ECHR gave priority to the reality. Simply, people wish to know where they come from, biologically speaking, and not knowing his aspect can cause psychological suffering, with important impact on the normal development of a child.

The first step in the recognition of the right to know one's biological identity was made in the case Mikulić c. Croatie. The case starts from a classical factual situation, the plaintiff being a child born outside the marriage, wishing the establishment of the paternity to the man she considers genitor. She complains, among others, of the infringement of her right to private life, in lack of a court decision in her file, which leaves her with an incertitude regarding the identity of the father. To establish if there was or not an infringement of the plaintiff's private life, ECHR considered her right to know her biological identity and the supposed father's right to refuse to be subject of the DNA

[5] Decision of February 7, 2002, case Mikulić c. Croatie, request no. 53176/99, par. 46.
[6] Jacobs, White, Ovey, op. cit., p. 377.

test[7], right which is also protected by the Convention, art. 8, which protects one's physical integrity against the state's arbitrary interferences. Establishing that the Croatian state infringed the plaintiff's right provided by art. 8 by not keeping a just equilibrium between the two rights analysed – implementing procedural measures which allow the settlement of the case and the surpassing of the impasse of the refusal of the DNA test – ECHR sketched the grounds of the plaintiff's right, re-used subsequently in all the decisions of the Court on the same aspect.

The court considered that the persons in the plaintiff's situation have a vital interest, protected by the Convention, to obtain the information needed to discover the truth concerning an important aspect of their personal identity, the one of knowing their genitors[8].

Subsequently, in case Odièvre v. France[9], the High Chamber decided[10] that art. 8 of the Convention were not infringed, in a similar case, but which opposed other interests. Thus, the plaintiff complained that she could not obtain the communication of the identity elements of her natural family and of the impossibility to know, as a consequence, her own personal history. Although in the grounds ECHR reminds elements of its prior case law which highlight the legitimacy of the right to know one's biologic identity, as the fact that art. 8 protects a right to identity and personal development, right which could not be effectively practiced without protecting the mental stability[11], as well as the vital interest to obtain information regarding the genitors[12], the plaintiff's request was rejected.

In the case, the issue being a birth on which the mother's anonymity was kept, at her request, the Court's analysis had in view, on one side, the child's interest to know the true identity of the mother, and, on the other side, the public interest to maintain this form of renouncing to the parental rights[13], which is at the same level as the mother's interest to do not divulge her identity[14]. The just equilibrium between the two interests was considered by most of the judges of the High Chamber as being complied with by the French state, since the plaintiff was allowed access to certain information on her family[15], even though it were not identification information.

The French state specified that starting with 2002[16], it has a new law regulating the issue, which institutes a National Council for access to personal origins, independent organism, formed of magistrates, representatives of the associations concerned by these aspects, as well as professionals with good practical knowledge of these aspects. It is difficult to believe that this legislative modification did not have importance when most of the judges decided the lack of infringement in the case of art. 8.

Few months later, on July 3, 2003, ECHR issued another decision in the case Jäggi v. Switzerland[17], noting an infringement of art. 8 by the defendant state, in a case similar to Mikulić case. The plaintiff complained to the Court that he could not perform a DNA analysis on a defunct

[7] Since the defendant refused to subject to the DNA test requested to the Croatian courts, and they did not have a legal mean to compel him to do so, the case could not be settled by elucidation of the blood relation between the daughter and the defendant.

[8] Mikulić c. Croatie, par. 64.

[9] Decision of 13.02.2003, case Odièvre v. France, request no. 42326/98.

[10] With a very tight vote, 10 votes against the infringement of art. 8 and 7 votes for the infringement of the article.

[11] Decision of February 6, 2001, case Bensaid c. Royaume-Uni, request no. 44599/98.

[12] Mikulić c. Croatie.

[13] The anonymity of birth, existing especially in the countries with catholic tradition, intends to stop the mothers who do not want to undertake the responsibility of motherhood from radical actions, as the killing of the new born.

[14] In France, as well as in Italy, the declaration signed by the mother at birth through which she requests to remain anonymous, constitutes a perpetual inability cause for the disclosure of her identity to the child thus born.

[15] The plaintiff found out in this manner only that she has three brothers.

[16] The new law entered into force on January 22, 2002.

[17] Decision of July 3, 2003, case Jäggi v. Switzerland, request no. 58757/00.

person, his assumed father, to establish the biologic truth. The Court reminded that is in the charge of the state, by virtue of the appreciation margin they enjoy, to establish the adequate measures for the guarantee of the compliance with the provisions of art. 8 of the Convention in the individual relationships, there are various manners to insure the respect one's private life, and the nature of the state's obligation depends on the aspect of private life implicated in the case.

Consequence of the Mikulić, the Court re-stated the existence in the analysis of two interests protected by art.8, respectively the vital interest of any person to know its biologic identity, as opposed to the interest to preserve the intangibility of the defunct person's body and the respect for the dead persons, both menaced by the idea of certain forced DNA tests. The Court took in consideration also the public interest of the legal security, menaced by the possibility of change of the filiation.

Removing the government's arguments, ECHR noted that, although the plaintiff has 67 years and is obviously to have constructed a personality even in lack of certitude regarding his biologic father, his long term steps to find out the blood relation reveal that he has a real interest in this regard, and the lack of certitude caused him moral and physical suffering, even if they cannot be medically ascertained.

As regards the interest regarding the intangibility of the defunct person's body and the untroubled rest of the dead, the Court notes the lack of any religious or philosophical interest of the family members of the defunct person who opposed to the obtaining of the sample needed for the DNA test, as well as that the exhumation of the defunct will be compelling in 2016 when expires the free use of the grave, thus, the peace of the defunct, invoked by the family is anyway a temporary issue.

Analysing the obtaining of this sample also from the perspective of the private life protection – the defunct person's one – ECHR also notes that this aspect would have been complied with by taking the sample in order to find the truth in the case, making reference to its case law, respectively the decision in the case Succession Kresten Filtenborg Mortensen c. Denmark[18], in which it decided that the defunct person whose DNA should have been taken could not have been affected in his right to private life by such operation.

A new case Odievre, this time from Italy, gave ECHR the possibility to rephrase discreetly its prior case law, keeping differentiation arguments between the situations of the two plaintiffs. Thus, in the case Godelli c. Italie[19], ECHR noted an infringement by the defendant state of the provisions of art. 8. The plaintiff, who was subject to an anonymity birth and was subsequently adopted, complained to the Court that the Italian authorities refuse her access to information regarding the identity of her mother, giving priority, without respecting an equilibrium, to her mother's right to conceal her identity.

ECHR starts its analysis by explaining that the protection offered by art. 8 of the Convention regards both the child and the mother, on one side existing the child's right to know his biologic identity, on the other side, the interest of the women who gave birth in anonymity to protect her health thus giving birth under adequate medical conditions[20]. On the same part of the barricade, ECHR notes that there is also a public interest, if the Italian law governing these aspects is in line with the state's obligation to protect the mothers and the children during the pregnancy and birth, in order to avoid clandestine abortions or "savage" abandonment".

---

[18] Decision of May 15, 2006, case Succession Kresten Filtenborg Mortensen c. Danemark, request no. 1338/03.

[19] Decision of September 25, 2012, case Godelli c. Italie, request no. 33783/09.

[20] In a dissident opinion, the Hungarian judge expressed a different opinion on the interests under discussion. According to his grounding, the anonymity of the mother is related to the right to life, which is an absolute right. Even if its protection is indirect by the guarantee of the anonymity of births, it should prevail, therefore in the case would not exist an infringement of art. 8 of the convention.

The facts which leaded to favouring the plaintiff were determined by the lack of any possibility in the Italian legislation to annul the mother's decision regarding the keeping of the anonymity, which infringed the rule of keeping a just equilibrium between the interference of the measure and the interest protected by the Convention, which is over the margin of consideration of the states, in ECHR's opinion.

II.A modern vision in favour of children's rights

People donating sperm and eggs will no longer have the right to remain anonymous, under the law which came into force on March 2005. Children conceived in this way will now be able to identify their genetic parents once they reach 18. The new rules will not be retrospective, so people who have already donated will not be affected[21].

Some experts in genetics and human fertilization are concerned that the removal of anonymity will deter donors from coming forward in the future and the British Fertility Society has warned that couples who do want eggs or sperm from anonymous donors may choose to go to unlicensed "backstreet" clinics, or travel abroad to countries with less strict regulations. The change in the rules means that children conceived using donor eggs or sperm will be able to trace their biological parent in the same way as children who are adopted[22]. So forth, the UK legislation seems to be a national image of the general principles setting out in the above mentioned case-law evolution.

While children will be able to access more information about the donor's genetic origins, they will have no financial or legal claim. The first time children born in this way will have the option to ask for the identity of their donor will be when they turn 18 in 2023.

Following the Odièvre case instructions from European Court of Human Rights, an official authority - the Human Fertilisation and Embryology Authority – is entitled to release the specific information.

The donor will not be able to trace a child, a "natural" option in the context of ECHR jurisprudence. Recognizing the priority of child interest is a natural choice to let in a secondary plan the rights of the biological parents.

The situation is similar in other European countries: Sweden, Switzerland, Norway, Netherlands and Germany.

UK legislative evolution in the area of third party reproduction is a very good example of ECHR case law influence and efficacy, integrating the right of any person to know his/her biological identity into the previous legal context.

Basically, positive obligations of member states, described in Odièvre and Mikulić cases, i.e. maintaining a fair balance between confidentiality of third party and applicant interests, in the first place, than assuring an official and independent view of the request for information regarding the biological origins, in the second place, determined a new political and legal approach of genetic and biomedical cases regarding third party reproduction. The legal anonymity for sperm and eggs donors' era ends, and a new era of everyone right to know his/her biological origins begins.

Conclusions

As a conclusion, from the analysis of all these aspects, we can determine the limits, influence and importance of this right.

Outlined in ECHR jurisprudence as a new aspect of the right to privacy protected by Article 8 of the Convention and strengthened over the last decade by the European judges, the right to know his/her biological identity imposed changes in the laws of European countries, causing even changes in state policies regarding genetics and biomedicine. Future approach of private life violation in the

[22] Ibidem.

frame of national law throughout Europe should include this new element, the right of any person to know his/her biological identity.

One of the notable and sinuous effects of ECHR jurisprudence at the national level of implementation was the end of anonymity for biological material donors in the reproductive process with third donor.

BRIEF CONSIDERATIONS ON ESTABLISHING OBJECTIVES IN LAW-MAKING

RAMONA DUMINICĂ[*]
ANDRA PURAN[**]

Abstract
Society is quickly developing, but this process warrants the appearance of new laws, thereby putting the lawmaker under the pressure of regulating ever more diverse social aspects such as economic, political, cultural or ideological. The fast changes in society lead to shifts in social relations and even institutional modifications, which require regularization.
Establishing objectives in law-making involves the participation not only of jurists specialized in this field but also defines a broader outlook including significant interventions from the political class. The law is the product of a compromise between the various political tendencies which clash in order to obtain a parliamentary majority. Starting with these main points, the present article seeks to stress the relation between legal policy, law-making policy, the legislative programme as well as the role of public policies in law-making.

Keywords: *law-making, legal policy, law-making policy, the legislative programme, public policies.*

Introduction

Law-making has been a constant topic for debates of a doctrinal nature and a field of continuous study for political and legal sciences, because it constantly poses new and complex questions. This same subject is always tackled for a different reason or seen from different points of view, therefore making it of permanent interest.

The literature presents law-making as a complex activity of the legislative bodies of the state. Through a series of scientific methods, they discover the social realities that require regulation, which they do afterwards, by using specific rules, and which they adopt in the form of a law, in accordance with a preset procedure.

However, at present, within our own legal system, the law and law-making are going through a difficult period, a time of crisis created firstly by neglecting to follow the essential rules of a sound legislation – a good knowledge of social realities and the reality reflected in the content of the law. By having an unsound foundation, neglecting the social realities and imposing his own realities, the lawmaker creates an unstable, incomplete law, over-technical and quite often impractical.

In this context, it has become necessary to reclaim the specific and essential qualities of the law, which it has lacked for so long. For this precise reason, in our present study we seek to analyse the principles to which the lawmaker must adhere in his activity. This must be scientifically grounded, in the sense that, it must determine first of all the necessity and purpose of the law.

1. The role of politics in establishing the legislative objectives

In establishing the objectives of law-making involves the participation of more than jurists specialised in this field. Its scope is larger, including the politicians as well.

[**] Assistant Lecturer, PhD candidate, Faculty of Law and Administrative Sciences, University of Pitesti (e-mail: andradascalu@yahoo.com).

In principle, it is the politicians who make the law[1]. In current society, the law is the result of a compromise between the various political tendencies which clash to form the parliamentary majority. In these conditions, the relation between law and politics appears extremely complex, given the tendency of the political authority to use the law for its own ends and that of the state to limit their authority. Although the political class is subject to the law, this only partially resolves the matter of that the law depends on the priorities of the political party or parties in power. This is made clear by the fact that only a part of the political institutions are sufficiently regulated.

Law-making does not represent a spontaneous activity which randomly comes about. On the contrary, it is a conscious, well organised activity, the purposes of which correspond to certain well established political goals. It consists of building a system of socially recognised legal norms, which have certainly been influenced by cognitive, informational, axiological factors. Therefore, law-making is integrated in the political system governing society[2].

The act of governing represents a social process that takes place in a social-organisational framework, the structure of which is built to fulfill certain objectives. This government is political in essence because of its objectives and is defined as the line of action (the direction, the principle) and the forms of putting these into practice (the political dimension of the action), carried out in an, organised and structured framework[3].

The literature[4] has shown that "this definition is perfectly applicable in legal policy, since the objectives of law-making is to assimilate the political ones and since the notion of objectives is common to all organisations and its members. Objectives represent a defining element of any organised system by which the desiderata, meaning the desired purposes which must be attained in a certain period, are outlined"[5].

Therefore, the concepts of "legal policy", "juridical policy" and "legislative programmes" are part of the political system governing society, and the way in which legal policy is understood depends on the evolution of the legal system.

Legal policy is made up of all the guiding ideas that determine the direction of the law in the process of its development and practice, ideas which are integrated in the system of political concepts within society, based on which the social forces in power govern society. Legal policy is seen as both an art and a science, that the capacity to come up with and formulate leading ideas which determine the direction of the law[6]. This is made evident by all the public authorities that take part in shaping, applying and developing the law. Therefore, legal policy is also made by the courts, less visibly perhaps, but real nonetheless, especially in the current period when jurisprudential law has developed considerably. The social or economic conceptions and ideologies outlined by this kind of law are subsequently reflected in the legislation. The indirect intervention of an apolitical public authority entrusted with serving the public can only have a positive effect, given that the tendency of the public power to divert political policy is tempered.

A part of the general policy and implicitly of the juridical policy, legal policy represents a complete system of ideas and concepts, with a higher degree of stability, based on which the legal norms are elaborated or in other words, it is the lawmaker's representation of the social purposes of the law as well as of the forms and specific methods of expressing it. E. Zitterman correctly states

that a century ago "law-making was a part of politics, appearing as an art form which had two sides: the content and the technical side. The content involves the matter of purpose, aspirations, since the law-making had to relate to true values of culture. The relation between legal policy and positive law represents a point of compromise between law and life. Within its framework, all intellectual human aspects must be considered in order to find the solution considered as most suitable." Therefore, legal policy is the one that ensures the end purposes of legislation, by establishing its guidelines, objectives, whereas legislative technique is used to shape the law in accordance with the points set out by the legal policy. Conceived as an ensemble of technical procedures and methods whereby laws are created, the legislative technique therefore differs from legal policy.

The exact instrument of legal policy is the legislative programme, which is used to establish the priorities in law-making, selecting and spreading a number of legislative projects or sets, during a period of time, which were conceived of course to fit a certain political agenda[7]. In a state under the rule of law, there is a variety of legislative programmes imposed or not at a given time depending on the democratic machinations. The legislative programme includes a set of objectives, priorities and options of certain political parties and it is put into practice only if these parties form a majority in parliament. Obviously, if the majority is lost, the new political formations who gain power will back up their own legislative programme.

Legislative programmes are not only mandatory but they maintain a certain amount of uncertainty. Not even when the projects are marked down in the order of the day of the legal authority, there is no certainty that they will be debated. Quite often there are legislative emergencies which modify the established order. Therefore, the legislative programme, a document which categorically has a particular importance towards outlining the legislative policy, can never have a mandatory character[8].

Consequently, legislative policy and programmes are parts of governmental policies which pertain to state authorities that have the right to legislative initiatives. Besides having to meet certain other conditions, this initiative belongs equally to political parties, the population as well as to other initiators. Law-making involves a set of complex activities which cannot be overlooked, of a political, economic, social, moral, historic, national and international nature.

2. Respecting the general principles of legislative policy – a condition of carrying out the specific objectives of the law through legislature: unity, stability and legal security

Besides combining the legal, political and organisational, we must keep in mind the series of objectives or final goals specific to the law and which must be legislated and which are legal unity, stability and security.

Therefore, "the activity of law-making must meet with the contradictory demands which fall in certain broad categories: legislation must ensure the security and certainty of those answerable before the law, which means going into details and may indirectly lead to a decline of the law; the lawmaker has the task of contributing to the foundation of a new society (to its permanent renewal), therefore a creative activity, which apparently goes against the conditions of stability and durability. These conditions are dependent on acquiring a certain amount of experience in law-making as well as on the wisdom of those that use it; legislation must be in accordance with the constitution, political objectives (public policies), but in the same time it must keep its autonomy (be it a relative one); even if they must be identified, respected and included into the juridical system and the rules and regulations representing a guarantee of stability, since at the same time they must be reunited or

assembled in a whole unit."[9] Therefore, law-making has the difficult role of solving this system of united equations[10].
