The development of legal policy which can solve these equations involves the respect of general principles, known under the name of legislative political principles and considered "the natural laws of law-making"[11]. These principles are as follows: the law must pursue the attainment of the common good, law-making seeks to regulate only the external behaviour of individuals, the law must only intervene when the common good requires so and the scientific foundation of law-making and the guarantee of balance between dynamics and the lack of dynamics in the law.

2.1. *The objective of the law is to guarantee the common good*

Pursuing the "common good" or "the social purpose" as it has been called, is a vague demand, given the imprecise nature of this notion. Today it is considered a purely theoretic ideal, even though it does not manage to actually limit political power throughout the course of outlining legal policy, it nonetheless succeeds in establishing certain moral limits. The common good which we have mentioned is not a purpose onto itself and it does not refer to the creation of an ideal society, as imagined by communist sympathisers, for example, who promoted the creation of a new man and of a multilateral developed society, while ignoring the realities of the times. In fact it refers to all that can be accomplished "in a precise time and space, in a social environment and depending on the means and elements they actually have at their disposal."[12]The literature has shown that "this common good is oriented towards the development of civil society, the state being an instrument for the fulfilment of this goal. On the other hand, the progress of civil society must ultimately seek the wellbeing of individuals. Law-making must not be practiced randomly, like a work of art, but firmly keeping in mind the principles of reason. It is a work done with prudence with one practical goal in mind – organising the social relations as suitably as possible given the times."[13] Sadly, nowadays this "common good" which should help guide the legislator, and before him, all those involved in formulating legal policy, is quite often overlooked. Sometimes, it is used in elaborate political speeches, but only with the clear intention of impressing the voters. The laws will no doubt become ineffective if they conform to certain lesser rules of the existing morality in the collective conscience. The neglecting of this natural precept of law-making is one of the causes for the "crisis" of law and law-making currently facing Romanian society.

2.2. *The law must only regulate the external behaviours of individuals*

Another rule not to stray from while determining legal policy is that the law regulates only the conduct of individuals, since only the relations between the subjects of law are of interest in the social life and therefore, in legal order: "Law-making must not try to regulate only the external behaviours of individuals, barring any attempt at regulating a person's private thoughts, feelings and desires."[14]

2.3. *The law must intervene only if the social reality requires it and to guarantee a balance between the dynamics and the lack of dynamics in the law*

The development of a law is required only if the social reality warrants it. However, nowadays, law-making is less and less often the result of a real necessity, but rather is used to increase the political capital of their initiators. Each political group in power wants to impose their

own legal programme, each member of the lower or upper house of parliament seeks to tie their name to a normative act. Therefore, legislation has become more of a media spectacle used in acquiring popularity among the voters, and neglecting the true needs of law-making

Then again, society is evolving quickly, and it is for this reason that new laws are adopted. The lawmaker is facing various social pressures, economic, political, cultural or ideological. Quick changes intervening in society lead to shifts in social relations and even institutional transformations that require regulation. The legislative bodies cannot proceed to normative changes too often because frequent adaptations of the legislation affect their effectiveness, and consequently the efficiency and stability of the law. They must not forget J.J. Rousseau's statement which is valid no matter the nation or times, "the people will come to despise laws that change daily"[15] or even Montesquieu's idea that "Useless laws weaken the authority of necessary laws."[16] In this way, P.C. Vachide noted that "Inflexible laws separated from real life pose a danger. However, this does not mean they must change since an instable democracy could be more damaging than helpful, given the lack of stability of the legislative system which can decrease the value, prestige and confidence that the law should inspire. If the change too fast, they betray the uselessness of their role. The law can stay in force indefinitely on the condition that they gain in necessary flexibility through serious legal practice and doctrine paves the way for new scientific perspectives."[17] Therefore, "the lawmaker must maintain the balance within the law, ensuring through legal policy the natural stability of social relations regulated by the law. For this reason, the relation between the dynamics and the lack of dynamics of the law poses not only a question of legal policy, it pertains to the raison d'être of the law, its social purposes."[18]

2.4. *The elaboration of normative solutions must be scientifically founded*

In order to maintain the balance between the dynamics and the lack of dynamics of the law, it is necessary that the lawmaker start developing by acquiring knowledge of social realities with scientific precision. As such, a good legislative policy must have a starting point for its sound research of social realities, then identify the effects of the future law, estimate its acceptability by the public and the concrete possibilities of implementing this law. The scientific foundation of law-making constitutes a basic requirement in order to sanction the systematic preoccupation made up of scientifically motivated solutions for the new law. Since the lawmaker's decisions are backed up by the results of this research, they are then in accordance with the objective requirements of social evolution and the subjective requirements that form in the collective conscience. In this way, doctrine has shown that "legislative work must be inspired out of a deep and precise knowledge of social and national needs and out of a clear perspicacity capable of seizing the real facts, and only after all these steps have been performed, will normative solutions be formulated through the lawmaker's creativity."[19]Although scientific possibilities of discovering the social realities are extremely varied today, we are not seeing a regulated reality but a constrained one through the law. In many cases, the law is no longer capable of reflecting the social reality and therefore creates a parallel reality. Obviously, in consequence the law is unable to protect and guarantee the real rights of individuals which should form the true purpose of any law.

3. The importance of public policies in law-making

Taking into consideration the need for scientifically precise knowledge of the social reality, which involves preliminary economic, sociological and psycho-social investigations, the legal policy

[15] J.J. Rousseau, *Contractul social* (Prahova: Ed. Antet XX Press, 2005), 42.

cannot be the result of only one legislative body. For this reason, "administrations of all types supply the facts that the lawmaker requires to reach a decision. To transmit the information means to select it and therefore to decide. The administration therefore acquires an essential role in orientating legal policy."[20]

Nowadays, the socio-political contextualisation is observed more and more closely, meaning the sets of acts and measures which the public authorities decide to implement in different fields of activity. Whether in establishing objectives or the methods employed to reach them, the core of this idea is the attention given to "public policy".[21]

Pursuant to article 1 paragraph 3 from Law 24/2000 in its current form "the activity of law-making represents the main means of implementing public policies, to ensure the necessary tools to apply the solutions for economic and social development, as well as to exercise public authority", and article 6 paragraph 4 stipulates that "Normative acts that impact society, economy and environment, the consolidated general budget voted by the parliament or the government. The government defines the types and structure of public policy documents". Considering these aspects, the use of public policies in law-making is more than favourable.

Lato sensu, we understand by "public policies" all the actions aimed at solving problems of public interest[22]. The concept of "public policies" appeared and quickly instilled itself as a result of society becoming more conscious of its fast development, increasing complexity and their development improves the decision-making process. The meaning of "public policies" must not be confused with "politics", since public policies refer to concrete programmes and not to political ideology. Indeed, the strategy is established through political ideology, however the technical methods by which the strategy is implemented strictly pertain to public policies.

Contemporary society demands that politicians and crisis-managers find more effective ways of establishing objectives, in order to improve the quality of decisions and selections, as well as to optimize the use of human resources and materials meant for these actions. As a scientific discipline, public policies use theory and specific concepts of social sciences, economy, sociology and psychology etc., in general, offering politicians and jurists large volumes of specialised and structured scientific knowledge referring to a large variety of matters, from education and health, to urbanism and international relations as well as offering information concerning the concrete impact of the different types of public intervention.

Conclusions

By using public policies in developing the law, the lawmaker, the government's activity and the activities of public administration in applying the law are interconnected to ensure a better and quicker way to obtain knowledge of changes in society, at shorter or longer intervals of time, meaning the sources of evolution in society.

Scientifically obtained knowledge is nowadays closer to being "a science of action", since there is the possibility of offering a wide array of options to public authorities, politicians, jurists and administrators (policy sciences). Social sciences do not limit themselves to stipulating through rational sciences, what must happen, but what concerns the prior formulation of the best options for setting the objectives and what must be done in order to reach them[23].

In law-making, legal policy is an important part in establishing objectives, meaning the totality of guiding ideas influencing the direction of the law in its development and application which

materialize through the activity of all public institutions involved in developing and applying the law. Legal policy is understood in a way, which depends on the evolution of the legal system.

In its turn, legislative policy as a part of legal policy coincides with the representation that the lawmaker creates for himself with respect to the social goals of the regulation as well as with respect to specific forms of expression, given its higher degree of materialization. The concrete instrument of legal policy whereby priorities are set in law-making is the legislative programme. Moreover, through legislative technique the objectives set by legislative policy acquire a certain form.

In conclusion, legal policy and legislative programmes are components of the government's policy and they belong to state authorities who have the right to legislative initiative. As such, law-making involves a set of complex activities whose key factors include those of a political, economic, social, moral, historical, national and international nature.

However, in order to reform the law it is not enough to simply improve the activity of the lawmaker by using public policies and respecting the aforementioned principles of legal policy, what is necessary is a strong political will and constant efforts from all three national powers - legislative, executive and judicial.

GENERAL REMARKS REGARDING THE LAWYER PROFESSION WITHIN THE EUROPEAN UNION

AUGUSTIN FUEREA*

Abstract

Legal professions are generally regulated at national level. Although there may be natural similarities between them, these national regulations differ quite substantially from one country to another. The effective exercise by lawyers of the freedom to provide services is governed by the provisions of Directive 77/249/EEC. Lawyers established in the EU may offer their services on a temporary basis in any EU country. However, they must retain their home-country professional title, expressed in the language (or one of the languages) of that country.

Keywords: *European Union; EU law; European lawyer; lawyer profession; freedom of establishment for lawyers.*

1. Introductory aspects

One consequence with direct effects on short, medium and long term, of the recent accession of Romania to the EU is the freedom of movement. More specifically, it refers to the correct knowledge, understanding and application of principles and rules governing goods, persons, services, capital and payments in free movement from January 1st, 2007, inclusively on the territory of our country, but also the acquiring, or engaging in a number of mechanisms, not at all simple, which can give rise to exceptions, limitations, restrictions from the freedoms in question. Therefore, in terms of freedoms, the following aspects: norms, rules, knowledge, understanding and, above all, compliance, enforcement are extremely important. Why? Because in Europe too, freedom is seen as constituting what philosophers call "understood necessity", and not as chaos, chance, disorder. Freedom is for all, not just for some of us, under conditions of equal opportunities, but also of involvement in capitalizing, by assimilating a large amount of information in a time, why not recognize it, relatively short and, not least under conditions of competence, professionalism and competition, conditions specific to a market economy that we are already in.

The most important step of the moment/current (phase), for the field theorists and practitioners (lawyers, economists, philologists, and others) is that of scouring carefully, but above all understanding, assimilating and enforcing the legal instrument that connects directly Romania to EU, meaning the Treaty of Accession[1].

From the perspective of our rights and obligations deriving from the Treaty of Accession to the European Union, as European citizens, "one of the consequences that generates direct effects, including legal effects, on short, medium and long term [...], is the highlighting of the four freedoms of movement"[2]. Among these, a special place, as shown both in theory and in the field practice, is occupied by the free movement of people, with positive or negative influence on all the other freedoms of movement. The rule is, as we shall further see, that according to which, this freedom is analyzed together with the free movement of services. We shall operate with an exception to this

* Professor, PhD, "Nicolae Titulescu" University of Bucharest, Faculty of Law (augustinfuerea@yahoo.com).

[1] The EU Treaty of Accession is the legal act of accession of a State to the European Union.

[2] The freedom of movement of: goods, persons, services, capital and payments (the latter two are considered together). In this sense, the work of the French doctrinaires Gavalda, Christian, Parleani, Gilbert, "*Droit des affaires de l'Union Européenne*" may be consulted, Litec Publishing House, Paris, 1999.

rule, on the one hand, for reasons related to the great importance of each of the two freedoms[3], and on the other hand, for causes referring to the complexity of such an approach.

In fact, such an analysis, extremely generous, cannot be achieved, because of the multitude of angles and variations of approach, before reiterating the legal force of the Treaty of Accession (as primary source of European Community law) on national law (of Romania), the power conferred on it, even by the fundamental law of our country, namely the revised Constitution of 2003, Constitution which, in Title VI ("Euro-Atlantic Integration"), article 148 ("Integration in the European Union"), paragraph (2) refers to the fact that "[...] as result of the accession, the provisions of EU constitutive treaties [...] and other binding Community regulations take precedence over the contrary provisions of national laws, by complying with the provisions of the Act of Accession"[4] (our underlining). In the third paragraph, the same article 148 states that "The provisions of paragraphs (1) and (2) shall apply accordingly, also for the accession to acts of revising the constituent treaties of the EU" (i.e. to modifying treaties, as primary sources, as they are called in the specialty doctrine).

For these reasons, the analysis of the free movement of persons is reported both to the primary instruments (sources) of European Community law (founding and modifying treaties, including the Treaty of Accession to the EU), highlighting also the issue of transitional periods with exceptions and safeguard clauses and the instruments (sources), derivatives of the same European Community law (Directive 2004/38/EC of the European Parliament and of the Council of April 29, 2004[5]).

Trying to define the concepts, we see that, from the wording of the Treaties, the free movement of persons "presupposes the absence of any discrimination based on nationality between workers of the Member States concerning the employment, remuneration and other conditions of work and employment. In this sense, rights are conferred on people and these rights can acquire value in justice, in any Member State. Limitations on grounds of public order, public security or public health are, obviously, regulated"[6].

"The free movement of persons […] is a reality in the European Union"[7].

The free movement of persons is reflected, among other things, also in the free movement aiming at workers, in general, and lawyers in particular. Bernard Teyssié believes about this freedom that "it is a fundamental right that national courts must protect"[8].

2. The exercise of the freedom to provide services by lawyers

A. Directive 77/249/EEC relating to the facilitation of exercising the freedom to provide services by lawyers

The effective exercise by lawyers of the freedom to provide services is governed by the provisions of Directive 77/249/EEC[9].

---

[3] These are freedoms that condition (favouring or disfavouring) the recovery of the others, as already noticed. These were the first freedoms that generated a rich case law, including for states that recently joined the EU, Romania making no exception.

[4] Our underlining.

[5] Directive 2004/38/EC of the European Parliament and of the Council on the right to move and reside freely within the territory of Member States for Union citizens and their members, amending Regulation (EEC) no. 1612/68 and repealing Directives 64/221/EEC, 68/360/EEC, 72/194/EEC, 73/148/EEC, 75/34/EEC, 75/35/EEC, 90/364/EEC, 90/365/EEC and 93/96/EEC.

[8] Bernard Teyssié, *"Droit Europeen du travail"*, Litec, 2001, p. 74 (taken also by Ovidiu Ţinca in his work *"Drept comunitar material"*, Lumina Lex Publishing House, Bucharest, 2003, p. 92).

[9] Council Directive of 22 March 1977 on the facilitation of exercising the freedom to provide services by lawyers.

The Directive applies, "within limits and conditions contained therein, to the activities of lawyers exercised when providing services"[10]. Notwithstanding the provisions of this Directive, Member States may hinder certain categories of lawyers from issuing authentic acts, empowering them to administer assets of deceased persons or whose object is the creation or transfer of real estate rights. The activities of representation and defence of a client in legal proceedings or before public authorities shall be exercised in accordance with provisions of the Directive, in each receiver Member State under the conditions provided for lawyers established in that State, excluding any condition of residence or registration in a professional organization of that state.

It should be noted the fact that the Directive establishes to art. 4 paragraph (2), the concept of double deontology. Thus, the lawyer must comply with the rules of professional practice in the host country, remaining, however, bound by the rules of the Bar of his/her country.

Under art. 5, for exercising activities of representation and defence of a client in legal proceedings, each Member State may require lawyers to be introduced to the President of jurisdiction or to act in agreement with a lawyer who carries his activity under the Court of Justice applied to. Also, the competent authority of the Member State may require the service provider to prove his statute of lawyer.

The Directive of 1977 envisages both the lawyers employed, as well as the non-salaried lawyers. This aspect emerges from the content of art. 6, which provides that "each Member State may prohibit to lawyers employed, bound by an employment contract with a public or private company, to pursue activities of legal representation and defence of this company only if lawyers established in this state are not allowed to exercise them".

While exercising the profession within the host country, the lawyer must follow the rules of this state, regardless of their source of origin: incompatibility between the pursuit of the profession of lawyer and other activities in that State, professional secrecy, relations with peers, prohibiting the assistance by the same lawyer of parties with opposite interests, and advertising.

B. Directive 98/5/EC[11]

The Directive is intended, according to art. 1, "to facilitate the exercise of the legal profession with independent or remunerative title in a Member State, other than that where the professional qualification was obtained". Paragraph 2 of the same article provides a range of qualifications, such as: "lawyer" means any person who is a national of a Member State entitled to exercise professional activities under one of the titles mentioned[12]; "home Member State" means the Member State where the lawyer received the qualification; "the host State" is the Member State in which the lawyer is practicing in accordance with the provisions of this Directive etc.

Article 2 provides that any lawyer has the right to exercise under permanent title, in any Member State, under his original professional title, the following activities: he can offer legal consultancy in legal matters of the origin Member State, in Community law, international law and in the host Member State law.

A lawyer who wishes to exercise his activity in a Member State other than that, in which he obtained his professional qualification, is required to register with the competent authority of that Member State[13].

---

[10] Article 1 of the Directive.

[11] Directive 98/5/EC of the European Parliament and of the Council of 16 February 1998, aims at facilitating the permanent practice of the profession of lawyer in a Member State, other than that in which the qualification was obtained.

[12] In Belgium -Avocat/Advocaat/Rechtsanwalt, in Denmark – Advokat; in Germany – Rechtsanwalt; in Spain - Abogada / Avocat / Avocado / Abokatu; in France – Avocat; in Ireland - Barrister / Solicitor; in Italy – Avvocato; in Luxembourg - Avocat, in the Netherlands – Avocaat; in Austria – Rechtsanwalt; in Portugal – Advogado; in Finland - Asianajaja / Advokat; in Sweden – Advokat; in the United Kingdom - Advocate / Barrister / Solicitor;

[13] Article 3 paragraph 1.

The lawyer performing activities on the territory of a Member State, other than that in which he acquired his qualification, must, irrespectively of professional and deontological rules that he is subject to in his home State, to obey the professional rules of the host Member State for all the activities that he pursues on its territory.

The host State may require the lawyer in question to bring proof for an insurance of professional liability or to join a professional guarantee fund on its territory.

The Directive of 1998, as the previous, provides that if the lawyer, practicing in a state other than that of origin, does not comply with the rules required by the state, may be subject to disciplinary proceedings by the host state.

3. Council of Bars and Law Societies of Europe (CCBE)

Currently, the Council of Bars and Law Societies of Europe carries out its activity within the European Union. The main objectives of the Council are: promoting - through dialogue and discussions with the European Union - a progressive liberalization of lawyers' rights to establish and perform their activity similarly to that of Member States, other than their countries of origin and, as much as possible, a progressive harmonization of rules and conditions for the exercise of the lawyer profession in Europe.Over time, the CCBE was the one who has contributed to the total integration of lawyers appointed as full-fledged lawyers within the brother bar, and the recognition of the right to practice under the title obtained in their native country, with permanent statute in Member States, other than that in which they obtained their professional qualification.

To benefit from these advantages, the lawyer, among other provisions, must be registered by the competent authorities of that country and obey the rules of professional conduct of the host Member State, regarding all activities that he will pursue on its territory. Moreover, the lawyer must obey the rules of procedure, penalties and regulations to that effect, in the state that hosts him/ her. The Council plays an important role in the professional training of lawyers and is designed to provide a solid and intense professional training of European lawyers, in order to provide for clients, qualified legal assistance.

Lawyers in EU Member States have, currently, the right to provide legal services in all EU countries, almost freely.

Lawyers engaged in an activity outside the country whose citizens they are:

- cannot practice reserved activities, such as the drawing of documents for the administration of the deceased persons' businesses;
- must work with a local lawyer, only if the case does not require representation by a national lawyer;
- the asked lawyer uses his own title and complies with the ethics rules of his own Bar, while he also complies with those of the host state;
- if his visits become frequent, his statute under the Directive can be questioned and if the services provided continue from a job in the host country, then he will be considered as established, rather that providing occasional services;
- are subject to a "double deontology".

Lawyers from Bars and Lawyers' Associations who are members of the Council subscribe to some ordinary ethical rules and most of these Bars and Lawyers' Associations have implemented a code for the practice in foreign countries.

When Bars promulgate new internal rules, they are required to take into account the Council code and to make sure that any new provision does not preclude it.

Based on the provisions of Community Directives 77/249/EEC and 98/5CE, the Council has developed its own code. Thus, the following main ideas can be drawn from the Code[14]:

[14] For more details, see Cristiana I. Stoica, Janice H. Webster, *"The Romanian lawyer in the European legal system"*, All Publishing House, Bucharest, 1997.

a) Integrity and probity of the lawyer

All jurisdictions have rules that express the absolute necessity of personal integrity and probity. Thus, lawyers must submit, in most states, an oath before entering the Bar, which reflects this requirement.

The Code sets this rule under the name of "Trust and Integrity": *"Relationships of trust can only exist if the honour, honesty and personal integrity of a lawyer are undeniable. These traditional virtues are professional obligations of a lawyer"*.

b) Conflicts of interests

A lawyer should not work for both sides in a dispute at law or a transaction because their opposite interests might generate a conflict. If there is a conflict, the lawyer should withdraw and inform all his clients about the situation generated.

c) Service Quality and Competence

One of the essential obligations of lawyers is that no lawyer should engage in a work that he is not competent for, has not enough knowledge or experience for or for which he has not enough time to achieve.

The service that the lawyer provides, must be efficient and conscientiously achieved, paying special respect to the interests of the client who is entitled to expect a good service, performed in a reasonable time, at a fair retainer and being always rightly informed on all the details. BCEC code expresses this fact in art. 3.2.1 and 3.1.3.: *"A lawyer must advise and represent his client, promptly, thoroughly and in time. He will be directly responsible for the failure to follow instructions received and will always inform his client, in order to note the progress in the matter that has been entrusted to him. A lawyer shall not handle a matter of which he knows or should know that he is not competent to solve, without collaborating with a lawyer who is competent to do better.*

A lawyer should not accept instructions from a client if he cannot acquit for them on time, taking also into account the pressure exerted by performing another work".

d) Financial Issues

Level of retainers. In a number of jurisdictions, the retainers are established by law or regulations. Thus, for example Austria and Belgium have, for certain retainers, a fixed retainer system, and Germany and Italy have the same systems. Spain, however, has no mandatory system, but a system with character of recommendation;

In other countries, the so-called "rule of the market place" is functioning.

Free assistance. Regarding the free assistance, there are considerable variations across Europe on its availability, which represents the providing of legal services, free of charge or partially exempted, for those who are unable to pay retainer.

In jurisdictions where partnerships are allowed, retainers, profits and losses are shared between the partners, but sharing retainers with other persons than lawyers is not allowed. The Council Code provides it in art. 3.6.1 and 3.6.2, prohibiting a lawyer to share retainer with other persons than lawyers, but allowing the lawyer to pay a retainer, commission or other compensation to the heirs of a deceased or retired lawyer if their activity was taken over.

In relationships with their clients, lawyers must be liable for any funds deposited for them to keep, concerning any payment made for or on behalf of the client, and for any amount received. In some states, lawyers contribute with a sum of money, of which clients, who have suffered from the professional misconduct of a lawyer, can be compensated; this practice is known as the "guarantee fund" or "compensation fund".

e) Relations with the Court

The Code of conduct provides lawyers' relations with the court (including in art. 4:. Thus, lawyers should always have respect for the judge, act kindly and defend clients in a manner believed to be their good interest within limits prescribed by law and without giving false or tendentious information to the Court.

A lawyer pleading a case before the Court or Tribunal of a Member State must comply with the rules of conduct applied before that Court or that Tribunal.

f) Relationships and communication between lawyers

The Code deals with relationships between lawyers in art. 5, which refers to "the corporate spirit of the profession"; at section 5.1, it is provided: *"The corporate spirit of the profession requires a relationship of trust and cooperation between lawyers for the benefit of their clients, and avoiding unnecessary litigation. Placing professional interests against those of justice or of those concerned can never be justified".*

The rest of the article refers to correspondence, reference retainers, communication with opposing parties, lawyers' replacement, responsibility for other lawyers' retainers, training young lawyers, solving disputes between lawyers from different Member States.

g) Confidentiality/professional secrecy and privilege of the profession of lawyer

A lawyer's obligation is to keep the professional secrecy. This obligation is forever and is not interrupted with the disappearance of his client or after the mandate has ended;

The Code provides[15]:*The essence of a lawyer's function is that he can learn things from a client that he could not tell to other people and be the receiver of other information on a confidential basis. Without the certainty of confidentiality, there can be no trust. Confidentiality is, therefore, a primary right and a duty of the lawyer. A lawyer must, therefore, respect the confidentiality of all information entrusted to him by the client or received about the client or other persons, while providing services for him. The duty of confidentiality is not limited in time. A lawyer shall require his associates, his staff and any other employee in connection with his professional problems, to comply with the same obligation of confidentiality".*

h) Communication

The Code stipulates in art. 5.3: "*If a lawyer who sends a document to another lawyer from another Member State, wishes that this document remains confidential or without prejudice, then he should clearly express his intention at the same time when communicating the document."If the addressee of the communication is unable to provide its status of confidentiality or lack of prejudice, he should return the document to the sender without disclosing the content to other persons".*

i) Advertising

All Bars and Lawyers' Associations from Western Europe are favouring corporate advertising and promoting legal services. In the field of personal advertising, there are different views. Thus, in Denmark, the Netherlands and the United Kingdom, a liberal regime applies, while in Spain, Greece and Germany advertising is still highly censored, and France and Austria allow a degree of advertising which remains, however, quite limited.

The Code has tried to find a pragmatic solution, and the basic rule in this regard is "when you are in Rome, act like the Romans": If advertising is forbidden in the host state, then do not advertise.

4. Conclusions

This approach aims at clarifying some aspects, including of conceptual nature, but also at drawing attention to the fact that such freedom exists, that it must be respected, both in terms of rights and obligations, equally, regarding the regulation of limitations, restrictions or, even, exemptions which acquire the form and content of exceptions and safeguard clauses.

THOUGHTS ON THE REGIONALIZATION PROCESS IN COMPARATIVE LAW

CLAUDIA GILIA[*]
ADRIAN ŢUŢUIANU[**]

Abstract
Regionalization is a complex and smooth process in terms of territorial organization of the states which chose this form of organization, but also from the perspective of how the regional systems understood to exercise their competences. The regionalization process did not only yield profit for the inhabitants of those administrative entities, but it also caused problems to national governors (e.g. demands for the federalization of the state in question, proposals to gain independence from the state they are part of, issues related to state security – terrorists attacks etc.).
Our paper shall conduct an assessment over two states which chose this form of regionalization: The United Kingdom of Great Britain and North Ireland and Spain. Given the context of the upcoming constitutional and legislative changes envisaged by the Romanian government, we consider that our research can be regarded as a useful tool, designed to develop certain constitutional directives, which are intended to acquire the best solutions from European experiences.

Keywords*: regionalization, state, devolution, administrative reform, tasks*

Introduction

The aim of our study is to analyze the administrative-territorial organization systems within two regional states, that is UK and Spain, as well as the problems they have to face given the independence actions coming from some local entities.

The following paper is relevant because it displays an interdisciplinary approach on the regionalization issue. It also highlights the recent course of the transition to independence process in those two countries. In this paper, we used both the analytical and comparative approach in our attempt to provide quality and relevant information for the researched area.

In our study, we stressed the fact that the initiatives took by Scotland and Catalonia in their search of independence represent constitutional challenges of high importance not only for the central governments, but also for the European Union, who would face a new political and judicial situation in case the citizens in these two regions will share a positive vote during the referendums in 2014.

The study also manifests interest from the perspective of the upcoming administrative reform in Romania, because the political decision-makers must take into consideration the administrative-organizational role models in the states that chose regionalization, and also to pay attention to the risks of a strong regionalization, that may lead either to state federalization or recession.

1. How regionalism is reflected in the organization of the United Kingdom and Spain

Regionalism – is associated with a geographical, political, administrative, linguistic and spiritual situation, with roots in the history of development of a unitary state. Due to this situation, the unitary state chooses to merge the sovereign attributes of a centralized administration with the

assignment of a large autonomy over some regional collectivities[1]. A type of regionalism is political regionalism. Regionalism becomes political when the competences of a region transcend those of an average administrative district with local autonomy. A territorial-administrative area provided with political regionalism holds the prerogative of self-government within a preset constitutional frame.

Concerning the local administration in the United Kingdom, its modern structure dates back to the 19th century, and to a large extent is the result of the new conditions triggered by the industrial and agricultural revolutions. The United Kingdom is a unitary regional state that acknowledges the existence of four regional nations across its territory: England, Scotland, Wales and Northern Ireland. All these nations have their own decentralized institutions and dispose of important political and administrative tools. Despite its name, the United Kingdom of Great Britain and Northern Ireland have always cherished diversity.

Terms such as: "United Kingdom", "Great Britain" or "England" are often used as synonyms. But the term "United Kingdom" marks the whole territory of the Kingdom, while "Great Britain" stands for the island which integrates England, Wales and Scotland. England and Wales were politically united in 1536. In 1707, the Act of Union led to the creation of Great Britain. In 1801, there was the Union of Great Britain and Ireland under the official name of the United Kingdom of Great Britain and Ireland. In 1922, the Republic of Ireland becomes an independent state, thus leading to the United Kingdom of Great Britain and Northern Ireland[2].

Up until May 1997, Great Britain didn't have a decentralized regional level. There was a state secretary in charge with the issues of Welsh, Scottish and Irish men. But soon as the labourist Tony Blair became the head of the Government, decentralization blossomed into a reeling process, at the same time with other major political events: the reform of the House of Lords, the suspension and restoration of the Northern Ireland Assembly, the agreement of the Treaty of Nice[3].

Decentralization of authority means, on one hand, devolution of the state central authority at regional level by means of developing local parliaments and governments, endowed with real legislative and executive competences, thus the assignment of responsibilities won't be an easy task. On the other hand, decentralization of authority means administrative decentralization, in the truest sense of the word, by the reestablishment of the local councils and the election of mayors in each town and city, London included[4].

Through *British devolution*, the state actually redefined its policy, administration, economy, while the authonomy of Welsh, Scottish and Irish people led to an unusual regionalization, but highly effective[5].

One specific thing for the United Kingdom is the regulations concerning the local territorial collectivities which differ from one region to another. Other differences occur when talking about the territorial-administrative organization of these regions[6].

In UK, the government system is *unitary*, meaning that sovereignty consists only of one central government. Being elected by the Parliament, the Central Government has a constitutional authority at the highest level, so the local government body rather acts like an agent of the central government. Local authorities are supposed to get involve only in activities up to their competences and they have to carry out only those tasks they are being charged with. Their authority is assigned through statutes or the General Act which is applied to all local authorities. Their competences can also be established by in-house acts, of local interest, that can be applied only to individuals or

groups of individual authorities. Local authorities mainly consist of councils elected over a three years term of office, of which one third is annually reelected. Local councils must get together at least four times a year, but the number of meetings is usually higher. Local authorities are free to close their own agreements concerning the management of local problems. The cost control is exercised by the whole council, but there is also a professional control, exercised by the Finance and Treasury Board. At the fiscal year-end, the account control is carried out by the District Auditor, appointed by the Central Government. British specialists in political sciences notice there is a low interest in local elections and notes that the structure of the local system of administration is outdated because there are a lot of small authorities which develop light connections with modern economic and social units[7]. The evolution of the British local public administration is a historical process because well-organized local collectivities came in sight before the emergence of the central system. This explains why local government in England blossomed, especially after World War II, although there have been signs of reform inside this sector ever since 1834.

In the United Kingdom of Great Britain and Northern Ireland, the reforms that had been done over the century led to a slight connection between the citizens and the local structures. These local structures are perceived rather as a cluster of public services than certain elements of local democracy[8]. Despite having lots of debates over the upgrading of local administration, there haven't been drafted yet new organizational forms at local level designed to replace the already existing ones[9].

Devolution has been defined as *"an appointment of certain administrative responsibilities from central authority towards local authority, for the benefit of the elected representatives by the citizens of this province"*. Prime Minister Tony Blair considered the aim of the devolution process was to reinforce the state, not to undermine it. Devolution was a key element for the upgrading program of the constitutional system during the election campaign of the Labour Party led by Tony Blair. After winning the elections in September 1997, Tony Blair applied the program introduced during the campaign, holding referendums in Scotland and Wales. The laws regarding devolution have been voted by the Parliament in 1998 and the first elections for the Scottish and Welsh Parliament were held in 1999 for the first time. Devolution stood as a radical constitutional reform which led to a brand new form of government in the United Kingdom[10]. We are talking about the national entities who acknowledged the right to take part in the process of exercising authority on a free basis. Devolution thus created new constitutional relationships between different parts of the United Kingdom, looking pretty much alike those between member states of a federation. Devolution triggered a new balance between central and local authority. The first feature of devolution was its distinctiveness adapted to each nation. According to Tony Blair, Scotland was a proud historical *nation* of the United Kingdom, while Wales was appointed as a *region*.

Devolutive process has its own history. Wales, Scotland and Ireland have been gradually reunited with England, so that these three countries gave up their local parliaments by means of conventions which yet granted a remarkable autonomy of civil societies. This explains to a large extent the characteristics of the present judicial and educational system in Scotland, diversity of religion in Ireland, or the survival of dialects in almost all regions. Up until 70's, Great Britain acted as a strongly centralized state, that hardly appointed an Office for Scotland and one for Wales. But due to riots in Northern Ireland, its autonomy has been completely removed and the country was governed from London. In the early 80's, some reforms were made, but the conservative

[10] Except the Irish experience between 1921 and 1972. The Southern part of Ireland, following the succession in 1922, became the independent state of Ireland and adopted in 1937 the name of Republic of Ireland. The United Kingdom officially acknowledged the status as an independent republic through the Ireland Act in 1949.

governments at that time promised to appoint only a relative autonomy to historical regions of Great Britain. It was only back in late 90's when the first steps towards a genuine decentralization are taken, but in a different way in each province.

The legislative framework of devolution was regulated by the following documents:

1. Scotland Act 1998;
2. Government of Wales Act 1998;
3. Northern Ireland Act 1998.

The devolution system is different for each part of the United Kingdom of Great Britain and Northern Ireland. Devolutive process in Northern Ireland is linked with the peace process in this country, and the problems concerning this area triggered the suspension of the Northern Ireland Assembly on four occasions between 1999 and 2002.

In the framework legislation concerning devolution, the British Government clearly stated that the Scottish Parliament, the National Assembly of Wales and the Assembly of Northern Ireland are *subordinate to Westminster Parliament*. The parliaments of these parts of the Kingdom can only enact in the areas they were appointed to by the Parliament of Great Britain. This is the result of a basic principle that governs Great Britain for centuries: *the sovereignty of the Westminster Parliament*.

The Westminster Parliament extends exclusive competences in areas such as:

- constitutional issues;
- foreign policy, defense, the relationship of the United Kingdom with the European Union;
- macro-economic policy and taxes;
- overseas trading;
- labor legislation;
- social insurances;
- broadcasting etc.

When the Parliament issues norms for devolutive authorities, they have to take counsel with them beforehand.

Devolution is no longer just an institutional or organizational change. The new system appoints not only a mere decentralization process within a unitary state. Territorial entities have their own assemblies that hold deliberative authority, an executive body and they are enabled to adopt norms designed to govern people's businesses around those territories. The United Kingdom can be regarded as a *Union of Nations*, each one of them having its own identity and institutions[11].

It has been stated in the doctrine that "the Westminster Parliament became a federal parliament" [12] in terms of its organization and structure. Along with the devolutive process, Westminster experienced the extinction of certain areas from its legislative competence. In Scotland, all the areas that made the subject of the Scottish minister's competence are subject of the Scottish Parliament's competence since 1998. In Wales, the primary legislative power hasn't been transferred yet, but the delegated powers exercised before by the state secretary have been transferred to the Welsh National Assembly. Thus the majority of primary legislation that used to govern Scotland and the secondary legislation that used to govern Wales were no longer the responsibility of the Westminster Parliament.

Scotland and Welsh have their own national bodies and legislative and executive ways for self-governance. Although these nations understand to distinguish themselves from the "English partner", they are still members of the British Union and continue to be an integral part of the central decision-making process. Consequently these new relationships that emerged following the process of devolution have to be rearranged inside the multinational Parliament / the Westminster Parliament thus becoming the guardian of the Union.

---

[11] Frederique Roux, *La devolution*, 16.
[12] Frederique Roux, *La devolution,* 124.

As a guardian of the Constitution, the Westminster is the only one or at least the only legitimate one to represent the will of the Union of people or the Scottish, Welsh, Irish and English nation. In order to preserve this role, it has to turn into something else to become the Parliament of a Union that acknowledges territorial diversity of the United Kingdom and to take account of different territorial levels in the process of its reorganization.

Devolution involves redefining the powers of the British Parliament. By adopting the devolution laws in 1998 and the Welsh Act in 2006, the British Parliament has to revise its way of service in order to deal with the consequences that come out of this distribution of powers. From now on, its competences are limited and so is its influence on the Scottish legislation. From this point on, it has to enact in areas that belong to the British or English and/or Welsh resort.

The principle of absolute sovereignty, as it is provided by the laws concerning devolution, empowers the British Parliament to enact laws for Scotland and Wales as it think it proper. Thus the Parliament of Scotland and the National Assembly of Wales, from 2007 on, are able to enact laws in each area that is not intended for the British Parliament. The large diversity and quantity of areas intended for the British Parliament mirrors the power of the Westminster. Divided into two parts, the areas are classified on a tapering basis with respect to their importance. Thus:

Title I – *General reservations* – includes an image of the political responsibilities that are specific to a state. For instance: defense, foreign affairs, British Crown, the succession to the Throne and regency, the Parliament of the United Kingdom, the High Court of Justiciary etc.

Title II – *Specific reservations* – cover particular areas of transferred competences, listed under 11 "heads": economical, fiscal and budgetary policy, fiscal taxes, control over public expenditures in the United Kingdom, issues related to Bank of England, the energy field, transport, TV and broadcasting rules, the right to work, commercial right, trade, industry, the electoral system regarding the election of the House of Communes, the European parliament.

Although Scotland and Welsh have their own Parliaments, they are still represented by the houses of British Parliament.

On the last elections of 6th of May 2010, the representation of nations in the United Kingdom was as follows:

650 members of the House of Communes[13]			
England	Scotland	Wales	Northern Ireland
533	59	40	18

Devolution process also led to new relationships between the executives in Scotland, Welsh and the Central Government. Ever since the transfer of competences took place, the ministerial departments were those that kept in touch the devaluated institutions and the Central Government, while their secretaries act as territorial counselor in the British Cabinet. The Scotland Ministers – Scotland Office[14] - and the Welsh – Walles Office[15] - have been created to manage the governmental positions. The state secretaries are agents of the Central Government, in charge with keeping a direct representation bond inside the Scottish and Welsh territories of the Central Government. The Welsh and Scottish secretaries have become guardians and observers of the devolution process.

The United Kingdom has to preserve a common political structure, a common pedestal on which different theories should be grounded on and to preserve a certain political cohesion.

[13] Further details on: http://www.parliament.uk/mps-lords-and-offices/mps/, accessed March 13, 2013.

[14] *Scotland Office* has 50 employees.

[15] Wales Office consists of 48 members. Welsh ministers hold their office in 24 committees. They are in charge with introducing the primary legislation for Wales before the Parliament. As it is known, primary legislation is developed by the Westminster Parliament, and Wales Office is in charge with providing a bond between the British Department, on one hand, and the Welsh National Assembly, on the other hand.

Two governmental institutions have been charged to represent the interest of territories:

1. Joint Ministerial Committees – JMC
2. British/Irish Council

Joint Ministerial Committees – is made of ministers of the British government, Scottish ministers, members of the Cabinet of the Welsh National Assembly and ministers of the Executive Committee of Northern Ireland. The plenary meetings are chaired by the British minister in charge. JMC have been created to solve possible conflicts that may occur during intergovernmental negotiations. JMC convenes under three distinct formats:

1. The administrations meet once a year at least in a plenary meeting with the British Prime Minister, the Vice Prime Minister, the Scottish Prime Minister, a Scottish minister, Welsh Prime Minister, a Welsh minister, Prime Minister of Northern Ireland, Vice Premier and three territorial state secretary.

2. JMC's are also held under a functional form through the meetings between Ministers of Education, Health and Transport as well as the government from Scotland, Welsh and Northern Ireland.

3. Two JMC's have been created in order to put into practice an advice concerning the European matters. They are chaired by the minister of foreign affairs and the *Cabinet Office*[16].

The *Spanish regional state model* has been drafted for the first time in the Constitution of Spain of 1931, as an *integral statute*. The State is organized territorially into *municipalities*, *provinces* and the *Self-governing Communities* (Comunidades Autónomas)[17]. All these bodies shall enjoy self-government for the management of their respective interests.

Spanish Constitution recognize and guarantees the right *to self-government of the nationalities and regions of which it is composed and the solidarity among them all*[18].

Each Independent Community enjoys self-governing, having a Legislative Assembly, a Council for Government and a High Court of Justice. The Constitution appoints in each Self-governing Community, apart from its authorities, a delegate of the Government who is in charge with *running the state administration of those communities* and, whenever possible, he has *to synchronize* it with the administration of the Community itself. Self-governing communities are represented in the Senate of Spain[19], which consists of 250 members. Each province is assigned an equal number of offices, that is *4 senators*, no matter how many citizens does the province have[20].

The matters that are not clearly assigned to the State through Constitution can be assigned to self-governing communities, with the observance of their Statutes. The competence of the matters that haven't been committed through their Statutes of autonomy is assigned to the State, whose norms shall prevail in case of conflict over the norms of Self-governing Communities, in everything is not assigned to their exclusive competence. The state of law has, in all circumstances, a substitute nature comparing to the law of Self-governing Communities. The most important competences related to state governance are still in the hands of the central state. According to Section 149 of the Spanish Constitution, there are 32 fields that make the subject of the exclusive competence of the state. The State shall have *exclusive competence* over the following matters: regulation of basic conditions guaranteeing the equality of all Spaniards in the exercise of their rights and in the fulfilment of their constitutional duties; nationality, immigration, emigration, status of aliens, and

[16] Frederique Roux, *La devolution,* 164.

[17] In Spain are: 17 Selfgoverning Communities, 50 provinces, 8089 Municipalities.

[18] Section 2 of the Spanish Constitution.

[19] Section 69. 1 of the Spanish Constitution: "*The Senate is the House of territorial representation".*

[20] In order to elect the Senate, there are two systems in use: *a) 208 senators* are *directly* elected in the 52 multinominal electoral circumscriptions (each one with 4 senators). The voting system is limited. Each elector votes a number of 3 candidates at most, not a list with candidates. b) the *other senators (51)* are *indirectly* elected. They are appointed by the legislative Assemblies of the Self-governing Communities.

right of asylum; international relations; defence and the Armed Forces; Administration of Justice; commercial, criminal and penitentiary legislation; procedural legislation; Labour legislation, without prejudice to its execution by bodies of the Self-governing Communities; Civil legislation, without prejudice to the preservation, modification and development by the Self-governing Communities of their civil law, foral or special, whenever these exist, and traditional charts; legislation on copyright and industrial property; customs and tariff regulations; foreign trade; Monetary system; General financial affairs and State Debt; External health measures, etc.

According to Section 148 of Spanish Constitution: "*The Self-governing Communities* may assume competences over the following matters: organization of their institutions of self-government; changes in municipal boundaries within their territory and, in general, functions appertaining to the State Administration regarding local Corporations, whose transfer may be authorized by legislation on local government; town and country planning and housing; public works of interest to the Self-governing Community, within its own territory; railways and roads whose routes lie exclusively within the territory of the Self-governing Community and transport by the above means or by cable fulfilling the same conditions; ports of haven, recreational ports and airports and, in general, those which are not engaged in commercial activities; agriculture and livestock raising, in accordance with general economic planning; woodlands and forestry; management of environmental protection; planning, construction and exploitation of hydraulic projects, canals and irrigation of interest to the Self-governing Community; mineral and thermal waters; inland water fishing, shellfish industry and fish-farming, hunting and river fishing; Local fairs; promotion of economic development of the Self-governing Community within the objectives set by national economic policy; handicrafts; museums, libraries and music conservatories of interest to the Self-governing Community; The Self-governing Community's monuments of interest; The promotion of culture and research and, where applicable, the teaching of the Self-governing Community's language; the promotion and planning of tourism within its territorial area; the promotion of sports and the proper use of leisure; Social assistance; health and hygiene; the supervision and protection of its buildings and installations. Coordination and other powers relating to local police forces under the terms to be laid down by an organic act".

The Self-governing Communities shall enjoy financial autonomy for the development and exercise of their powers, in conformity with the principles of coordination with the State Treasury and solidarity among all Spaniards[21].

The Constitutional Court has jurisdiction over the whole Spanish territory and is entitled to hear the *conflicts of jurisdiction* between the State and the Self-governing Communities or between the Self-governing Communities themselves.

Although Self-governing Communities are given the authority to apply self-governance, thus making Spain to get really close to the federal state type, the Constitution of Spain clearly states that: **„***Under no circumstances shall a federation of Self-governing Communities be allowed*".

Nevertheless, Spain had to deal over the years with secessionist movements, ending with terrorist attacks.

2. Scotland and Catalonia – new nations in Europe?

The large autonomy that has been given to territorial collectivities in the above mentioned states triggered a number of consequences at political and administrative level. In certain areas of the regional state, both the United Kingdom and Spain have lately encountered an increasing tendency towards the beginning of a process whose aim is to regain the independence.

Despite being the region with the greatest autonomy in the United Kingdom, *Scotland* still aims to gain *independence*. In 2011, the Scottish National Party (SNP) won the parliamentary elections with the promise to properly govern this region.

[21] Section 56. 1. of the Spanish Constitution.

On the 9 January 2011, Alex Salmond announced that referendum from independence of Scotland would be held in autumn 2014. Alex Salmond, the First Minister of Scotland and David Cameron, The UK Prime Minister sign the referendum agreement[22] in Edinburgh on 15 October 2012 which will enable a vote on Scottish independence to take place in 2014. The UK government has given ground by allowing the referendum to be held in 2014 – London had originally favoured next year – and not blocking Salmond from allowing 16- and 17-year-olds to vote.

The Scottish Government proposes asking Scots: "*Do you agree that Scotland should be an independent country*?"

The Scottish National Party leader said: "*It is right that our young people should have the chance to play their part in decisions about their community and their country. Independence, in essence, is based on a simple idea: the people who care most about Scotland, that is the people who live, work and bring up their families in Scotland, should be the ones taking the decisions about our nation's future. No-one else is going to do a better job of making Scotland a success. No-one else has the same stake in our future. The people of Scotland should be in charge*."[23]

The opposition parties, except the Green Party, reject the idea of a referendum and believe the top priority in Scotland is to relaunch the economy after the financial crisis, not to set up popular debates.

In order to meet the targets appointed by the Edinburgh Agreement, there have been set the following steps:

- *February 2013* - The section 30 order, which amends the Scotland Act 1998 that originally set up the Scottish parliament in Edinburgh, will be agreed by the Privy Council in London, formally conferring that temporary power to stage the referendum to Holyrood.

- *Spring 2013* - The Scottish government will present a referendum bill to Holyrood, setting out the question, putting limits on campaign spending and confirming whether 16- and 17-year-olds will be allowed to vote.

- *November 2013* - After a final vote expected in October 2013, the Queen is expected to give royal assent to the referendum bill. The Scottish government will publish a white paper finally detailing its "prospectus for independence", setting out the Scottish National party's vision for an independent Scotland.

- *June 2014* - The final 16-week referendum campaign is expected to start, when both pro-independence and pro-UK campaigns will intensify.

- *Autumn 2014* - The Scottish independence referendum takes place, probably in October[24].

Spain, in its turn, had to deal over the years with several movements for independence coming from autonomous Communities, such as the Basque Country or Catalonia. In recent years, the loudest voice for separatism came from Catalonia. The question is: *Could Catalonia be the bonding agent for a new wave of separatism in the European Union?*

Spain is not facing only a major economic crisis, but also the perspective of a constitutional crisis. It is a constitutional crisis at large scale, with the survival of the Spanish state-nation within its present boundaries at stake. This situation occurs in the context of the problems and financial crisis in

the Euro zone. The Catalan Government wants to have the right to collect its own taxes, something that is already taking place in the Basque Country and Navarra. With an economy the size of Portugal, Catalonia gathered the largest debt load among the Spanish regions. The Catalan officials and economists say that the economy could regain its solvability if it would have similar conditions with the citizens living in the Bosque Country and Navarra, who transfer to central fiscal authorities a poll tax ten times smaller.

The fiscal agreement suggested by Artur Mas, the governor of Catalonia, which was rejected by the center-right government led by Mariano Rajoy, was a tactic gantry designed to spark a large movement for independence[25]. The wide scope of this movement has been revealed to Spain on 11th September 2012, which was taken by surprise on the National Day of Catalonia, when over one million of separatist activists crowded the streets of Barcelona. The manifestants' slogan was "*Catalonia, the new state of Europe*". Artur Mas generated a shock wave in Spain and on the financial markets when he called for anticipate regional elections at the end of 2012. He also promised a referendum on the independence of Catalonia from Spain in 2014. But the center-right group – Convergence and Union alliance (CiU), led by Artur Mas, lost 12 Parliamentary offices during the elections on 25th November 2012. So Mas was forced to call for an alliance with ERC (Republican Left of Catalonia), despite sharing a different ideology. As political opponents, but allies for the emancipation of Spain, the two political leaders, Artur Mas and Oriol Juanqueras, signed on 18th December 2012 an agreement designed to prepare a referendum that would edge Spain to split-up in 2014. On 23rd January 2013, the Parliament of Catalonia (Parlament de Catalunya) adopted a resolution[26] which states that this Self-governing Community is a "sovereign political and judicial topic" [27].

The central government tries to reject the Catalan movement for independence using the law, saying that Catalan nationalists have to observe the Constitution of the country. And according to the Constitution, a referendum over the independence is illegal[28]. The conservative government led by Mariano Rajoy claimed that it will appeal this "unilateral initiative" at the Constitutional Court[29]. The Catalan nationalism is very present among everything that means life in Catalonia. A vote for the independence of Catalonia from Spain may be a boost for other Self-governing Communities as well, who want the same thing (for instance, the Bosque Country – ETA) and may open Pandora's Box inside the European Union, where more and more regions want to be independent from the central states, on ethnicity basis.

[28] Catalonia has 7,3 millions Spanish citizens among a population of 47 citizens – and it is one of the richest region in the country. Losing this region would be a great shock for Spain.

[29] Deputy Prime Minister Soraya Sáenz de Santamaría said that: *"the assertion of autonomy by Barcelona infringes the indissoluble unity of the Spanish nation, and the only nation acknowledged by the Constitution is Spain.*

Conclusions

The analysis we have made shows that both the United Kingdom and Spain are facing not only economic problems, but also new constitutional challenges. The issue concerning the independence of those two local entities, Scotland and Catalonia, cannot be analyzed given only the internal background, but also with respect to the European Union[30]. *What is going to happen with the two local entities if they will gain their independence from the central state? Will they become member states of the European Union or they will have to negotiate with EU their future statute as a member of the Union?*

Given these equations in the political games, we must not forget about the citizens of these two regions. The opinion polls conducted in Scotland in 2012, have shown that a quarter of the population is for independence. In Catalonia, although it seems to be a higher interest regarding independence, we'll see the real results on voting day. The assessments conducted by specialists clearly state that these regions make the most of them within the regional states, not separately. In order to stop the separatist trend, central governments should find solutions to solve the financial problems which generated the struggle between regions and center, and they have to put the constitutional relationships in a new light that shall fit the economic, social and cultural realities and to provide these regions with wider liberties to express themselves if they want the unity of the state.

For the Romanian state, which is going to perform a deep administrative reform by introducing a new administrative level – the region – the way these two European states have succeeded or failed to improve the relationship between regions and the central government should be some food for thought when tracing the regions' boundaries or when their competences and resources are going to be assigned.

[30] We have to remind that other states also face the problem of independence of the regions, a real challenge for the central government. For instance, Belgium, that was more than once on the edge of split-up (the Flamands and Valons wanted the separation). Italy is another member state of the European Union that is fighting against separatism. The Northern League, one of the most influential Italian separatist movements, has recently given up to its claims regarding the independence of the industrialized North from the agricultural South. In France, the Corsican nationalist groups were extremely violent in their attempt to claim independence etc.

FROM THE NATIONAL COUNCIL FOR COMBATING DISCRIMINATION TO THE COURT OF JUSTICE OF EUROPEAN UNION – CASE C-81/12

CRISTIAN JURA*

Abstract
The scope of this research is to present and analyze national and European, jurisdictional-administrative procedural issues, if courts are notified related to certain discriminatory statements. The starting point of the research consists in some statements made during a radio show. During the research, the following are analyzed: notification of the National Council for Combating Discrimination (CNCD), decision of the National Council for Combating Discrimination, challenge of the resolution of the National Council for Combating Discrimination at the Court of Appeal Bucharest, notification of the Court of Justice of European Union by the Court of Appeal Bucharest and the beginning of the procedures before the Court of Justice of the European Union. The scientific demarche has as objectives a better understanding of the mechanisms of operation of every institution involved in this process, as well as the chronology of the terms necessary to settle this case.

Keywords*: discrimination related to sexual orientation, evidence task, national procedural norms, national sanctions, National Council for Combating Discrimination.*

Introduction

On February 13th 2010, Mr. GB made several declarations, during the show „*The League of Mitran*" broadcast on the Sport channel Total FM, deemed to be discriminatory based on sexual orientation. The declarations concerned a Bulgarian football player, considered to be gay. B. declared that he did not intend to bring a gay in his team.

On March 9th 2010, A. non-governmental association filed a complaint with the National Council for Combating Discrimination (NCCD), registered under the number 1811/09.03.2010 related to the discrimination in the field of labour and dignity right. The complaint was filed, both against GB, and against the football club, as employer.

The petitioner, A., declares that, during an interview related to a possible transfer of the Bulgarian football player, Ivan Ivanov and his potential sexual orientation, GB stated that, instead of buying a football player with another sexual orientation, he would prefer a player from junior team. "*I would not take a homosexual in my team not even if Steaua were dissolved. The rumours are rumours, but to write something like that if it isn't true and to publish it on the first page as well... Maybe it is a lie that he is homosexual. But what if it is true? –I said to an uncle of mine, who did not believe in Devil and in Christ. I told him: «Let's suppose that God does not exist. But what if He existed? What do you have to lose if you commune yourself? Wouldn't be good to go in Heaven?». And he agreed. One month before he died, he went to commune himself, to obtain the God's forgiveness. No gay is welcome in my family and Steaua is my family. We would better use a player from junior team than a gay,. In my case, this is not discrimination. I cannot be forced to work with someone. I have the right to work with whom I like, as they have rights as well*" (declaration made during the show "Mitran's League" from Sport Total FM).

From the National Council for Combating Discrimination to the Court of Justice of European Union – Case C-81/12

* State Secretary, Member of the Steering Board of The National Council for Combating Discrimination and Lecturer at "Dimitrie Cantemir" Christian University, member of GLCUE (EU Working Group on Litigation - Grupul de Lucru Contencios al Uniunii Europene); (cristianjura@yahoo.com).

The petitioner states that the journalistic suspicion appropriated by Mr. B. that this football player, included on the list of transfers were homosexual, determined a potential waiving to concluding a work contract with this player: "*I wouldn't take him not even for free*".

Considering the foregoing declarations, the petitioner claims that Mr. GB is discriminating directly based on the criteria of sexual orientation, breaching the principle of equality in the field of employment and affecting the dignity of the individuals with homosexual orientation from Romania. The sport practiced at S. Club cannot be for "*all*", definitely not for homosexuals, regardless their skills and professional capacity.

With respect to the introduction in the case of S. Club as plaintiff, the petitioners states that although the declarations were on the first pages of several journals, news websites, Sc Football Club S. did not deny not even form one moment such declarations. On the contrary, the lawyer of the company acknowledged the presence of this policy on the level of the company, in the field of employment at the football team, motivating that "*the team is a family*", the presence in the team of a homosexual "*would create tension in the team and public*". Also, the petitioner states that, on the date when Mr. GB made such declarations, he was still shareholder of Bucharest S. Club.

The plaintiffs state that the petitioner is confused since all Mr. B. did by his declarations was to exercise his right to free expression, these not confirming the existence of a constant rule or practice in the field of hiring the football players at S.C Football Club S., based on discriminatory criterion of the sexual orientation of players. Art. 10 of the European Convention for Human Rights guarantees to all the possibility of having and expressing an opinion, although it is in minority or shocking.

It is shown that, as long as, in fact, it was never considered to hire the player I. I. at S. Bucureşti SA, lacking any kind of negotiation between the player and the club, it cannot be appreciated that the declarations of Mr. B. were meant to breach the principle of non-discrimination stipulated on the level of European Union, these being related to the freedom of opinion, the construction and resistance of which being secured by the European Convention of Human Rights.

Also, the plaintiffs state that the declarations are given in the context of a journalistic demarche (issue noticed as well by petitioner), when the author of the interview approaches the issue of sexual orientation of such player and not the plaintiff, GB.

Simultaneously, it is shown that the declaration of Mr. GB. has to be regarded as well in relation to his deeply religious nature, being known that the Orthodox Church still criticises the homosexual relations, therefore the opinion of the plaintiff should be regarded as his right to exercise the freedom of thought, of consciousness and of religion.

With respect to the demand of the petitioner to introduce S.C. Fotbal S. in the case, it is shown that the burden of proof is incumbent upon the petitioner, and pursuant to analysing the contents of petition, by which it is demanded the introduction of the club in the case, the petitioner did not prove the existence of some constant rules or practices on the level of the club, adopted by its management, which refer to a discriminatory criterion based on sexual orientation.

Corroborated to the normative act which rules the prevention and combating of all forms of discrimination, as well as the duties and the field of activity of the National Council for Combating Discrimination (NCCD), the College of NCCD analyzed to what extent the object of petition is subject to the disposals of O.G. no.137/2000, republished, with subsequent amendments and completions. Thus, the College of NCCD analyses in close connection to what extent the object of a petition meets, in trial court, the elements stipulated by art.2 of O.G. no.137/2000[1], republished, included in Chapter I Principles and Definitions of Ordinance and, subsequently, the elements of the facts stipulated and sanctioned contraventionally in Chapter II Special Disposals, Section I-VI of Ordinance. If it is considered the meeting of discriminatory elements, as defined in art. 2, the conduct

[1] C. Jura, „*National legislation on combating discrimination"*, CH Beck Publishing House, Bucharest, 2003, p. 44.

in the case entails the contraventional liability, if the case, if the constitutive elements of contraventional facts stipulated and sanctioned by O.G. no. 137/2000, republished, are met.

The High Court of Cassation and Justice, by Decision no. 828 of February 16th 2009 considered in the economy of Ordinance no. 137/2000 the disposals of art. 2 which define that the discrimination forms (n.n.) are consecutive to those from article 1 par. (3), which determine the subject of the obligation to meet the principle of equality between citizens – secured by art. 1 par. (2) in exercising the constitutional rights of citizens: *„Any legal or national person has the obligation to meet the principles of equality and non-discrimination*". Pursuant to the corroboration of the same texts (art. 1-2) it results the object of discrimination: the holders of the constitutional rights enumerated mainly in art. 1 par. (2), tied or prevented in their exercise. Therefore, within the limits of its legal duties, the National Council for Combating Discrimination has the obligation to solve any complaint based on the disposals of art. 2 of O.G. no. 137/2000 by determining the existence of the three elements above mentioned.

From this point of view, the College of NCCD considered that the petitioner claims the breach of the rights of a community of individuals based on sexual orientation, related to the work field and personal dignity, correlatively to the disposals of art. 2 par.1 corroborated to art. 5 and art. 7 respectively art.15 of O.G. no. 137/2000 republished. In his opinion, the declarations of the plaintiff (Mr. GB) discriminate directly based on the criteria of sexual orientation breaching the principle of equality in the field of employment, affecting the dignity of individuals with homosexual orientation from Romania. The declarations in the case represent the expression of a discriminatory policy applied on employment at the football team S. Bucharest. The petitioner refers to the case of Bosman solved by the European Court of Justice, considering, by similarity, that the discriminatory policy of the club is presumed, in this case, through the declarations of the plaintiff, who is the manager of S. Club. In the opinion of the petitioner, S.C Football Club S. Bucharest S.A. did not reject such declarations and did not present clear explanations. In addition, the sexual orientation cannot be a specific occupational condition. The plaintiffs are liable, in the opinion of petitioner, for breaching the disposals of art. 15 considering the declarations made whereas the freedom of expression and religion is not meant to explain the prejudice of personal dignity.

The plaintiffs state that, for the existence of the offences ruled by art. 5 and art. 7 of O.G. no. 137/2000[2] republished, it is necessary to be met the constitutive elements which involve an action of effective conditioning of effective refusal based on sexual orientation. Similarly, the offence stipulated by art. 15 involves the material element, in the case the action with a chauvinistic nationalist propaganda character, the action with character of instigation to hate, actions having as scope or concerning the prejudice of dignity or creation of an intimidation, degrading, humiliating and insulting atmosphere. As for the burden of proof, in case of direct discrimination, it considers necessary to prove the existence of a rule or constant practice which refers to a criterion based on sexual orientation. Therefore, the declarations of the plaintiff stand for a simple exercising of the right to expression, in the context of a journalistic demarche when it was the author who approached the issue of sexual orientation and not the plaintiff. Between S. Club and the player referred to in the complaint, it was never discussed a potential employment, not being any kind of negotiation between the player and the club or any kind of practice appropriated by the management of the club related to the criterion of sexual orientation. The declarations of Mr. GB have to be regarded in relation with his deep religious nature, being known that Orthodox Church is still criticising the homosexual relations therefore they are correlative to exercising the right of free thinking, consciousness and religion.

In the analysis of this species, the College of the National Council for Combating Discrimination recorded the disposals of the Directive of European Union Council 2000/78/EC of

[2] C. Jura, *„National legislation on combating discrimination"*, CH Beck Publishing House, Bucharest, 2003, p. 44.

creating a general frame in favour of equal treatment related to the employment and recruitment of workforce. According to Art. 3 par.1, the Directive 2000/78/EC is applied to all individuals, both from the public and private sector, including the public bodies, with respect to: a) conditions of access to employment, to non-remunerated activities or to work, including the criteria of selection and the recruitment conditions, regardless the field of activity and on all levels of professional hierarchy, including in the field of promotion; b) access to all types and all levels of professional orientation and training, of perfection and changing the professional orientation, including the accumulation of a practical experience; c) conditions of employment and work, including the conditions of dismissal and waging; affiliation to and employment within an organization of workers or employers, or any organisation with members exercising o certain profession including the advantages obtained by this kind of organization.

According to Art.1 the scope of Directive 2000/78/CE consists in ruling the general frame for combating discrimination based on the criterion of religion or convictions, disability, age or sexual orientation in what concerns the field of work and recruitment, with a view to implement the principle of equal treatment in the member states of European Union. In conformity to art. 2 of the Directive 2000/78/CE the „*equality principle*" represents the absence of any direct or indirect discrimination based on one of the reasons stipulated by art. 1. According to par.2 lett. a of Art. 2: "*According to par. (1): a direct discrimination appears when an individual is treated less favourably that another individual is, was or will be treated in a similar situation, based on one of the reasons mentioned in art. 1*"(n.n. religion or convictions, handicap, age, sexual orientation). According to art. 2 par. (3) of Directive „*Harassment is considered a form of discrimination, based on paragraph (1), when it is manifested an undesired conduct related to one of the reasons stipulated by article 1, which has as scope or effect the prejudice of the dignity of an individual and creation of an environment of intimidation, hostile, degrading, humiliating or offending. In this context, the notion of harassment may be defined according to the national legislations and practices of the member states*".

The Romanian Labour Code[3] included as fundamental principle of work relations the principle of equal treatment of all employees and employers, forbidding any kind of direct or indirect discrimination (Art.5 of Labour Code). The disposals with principle value of Labour Code are approached in detail in the Government Ordinance no. 137/2000 related to the prevention and sanction of all forms of discrimination, republished, which provides, mainly, the transposing in the national law of the disposals of Directive 2000/78/EC and of Directive 2000/43/EC. According to art. 1 par.2 lett. i of O.G. no. 137/2000: „*The principles of equality of citizens, of exclusion of privileges and of discrimination are secured mainly in exercising the following rights: (i) right to work, to free selection of occupation, to fair and satisfactory work conditions, to protection against unemployment, to an equal wage for equal work, to a fair and satisfying remuneration*„ According to par.4 of art. 1: „*Any natural or legal person has the obligation to observe the principles stipulated by par. (2)". Also, „the disposals of the ... ordinance are applied to all natural or legal, public or private persons, as well as to the public institutions with responsibilities related to: a) employment conditions, criteria and conditions of recruitment, selection and promotion, access to all forms and levels of orientation, professional training and perfecting*" (art. 3 of O.G. no. 137/2000 republished).

According to art. 2 par.1 of O.G. no. 137/2000 republished: „*by discrimination is understood any difference, exclusion, restriction or preference, based on race, nationality, ethnicity, language, religion, social category, convictions, sex, sexual orientation, age, handicap, non-contagious chronic disease, infection with HIV, belonging to a disfavoured category, as well as any other criteria which has as scope or effect the restriction, removal of acknowledgement, use or exercising, under equality conditions, of human rights and fundamental liberties or of the rights acknowledged by law, in the*

[3] C. Jura, „*National legislation on combating discrimination"*, CH Beck Publishing House, Bucharest, 2003, p . 57.

political, economic, social and cultural field or in any other fields of public life". According to art. 2 par.5 of O.G. no. 137/2000, republished: „*It is a harassment act and it is punished contraventionally any conduct based on criterion of race, nationality, ethnicity, language, religion, social category, convictions, sex, sexual orientation, belonging to a disfavoured category, age, handicap, status of refugee or asylee or any other criterion which leads to the creation of an intimidating, hostile, degrading and offensive environment*". It is also necessary to state that the Ordinance no. 137 institutes a special chapter including, in section I, the interdiction of discrimination in the economic activity and in the field of employment and profession.

Considering the contradictory assertions of parties and the object of complaint, as formulated, the College considers that it is necessary to determine whether this case is to be analysed as incident to a potential specific work report under the aspect of subjects correlative to such report and legal consequences resulted or to the incidence of a potential unwanted conduct which leads to the creation of an intimidating, hostile, degrading or offending environment based on a forbidden criterion (n.n. sexual orientation) stipulated by the law in the field of discrimination.

The College of NCCD considered that the petitioner submitted only writs, excerpts of the articles published in the sport press as well as audio-video registrations of the declarations of plaintiff during some sport shows, not contested by the plaintiffs. Analysing the writs and registrations in the case, the College takes into account the declarations of the plaintiff as being made as a reaction to certain information from Bulgarian press and taken over by Romanian press related to a Bulgarian football player, Mr. I.I. Considering this issue, it is considered that the sport press reported that the "*Rumour according to which the Bulgarian full-back I. I. , that S. wanted to transfer, is drunkard, brawler and even homosexual, intrigued the manager GB*" (published in Adevărul on www.adevarul.ro). Similarly, "*The Bulgarian journalists confessed in the Romanian press that the football player wanted by S. Club, I. I., would be homosexual*". (published in Adevărul on www.adevarul.ro). Also, "*After Gazeta Sporturilor revealed in the today's edition that the Bulgarian I. I., wanted by S. Club, has a drunkard and gay reputation, the manager of red-blue team, GB, had a tough reaction*" (published by Gazeta Sporturilor on www.gsp.ro). In the interview offered to Sport Total FM, the plaintiff states: "*The rumours are rumours, but to write something like this if not true and to publish it on the first page....It may be a lie that he is homosexual*".

In the interview offered to Sport Total FM on 13.02.2010, the plaintiff declared: "*I will not take a homosexual in the team not even if S. Club is dissolved. The rumours are rumours, but to write something like this if not true and to publish it on the first page... It may be a lie that he is homosexual. But what if it is true? I said to an uncle of mine, who did not believe in Devil and in Christ. I told him: «Let's suppose that God does not exist. But what if He existed? What do you have to lose if you commune yourself? Wouldn't be good to go in Heaven?». And he agreed. One month before he died, he went to commune himself, to obtain the God's forgiveness. No gay is welcome in my family and Steaua is my family. We would better use a player from junior team than a gay,. In my case, this is not discrimination. I cannot be forced to work with someone. I have the right to work with whom I like, as they have rights as well", declared GB, in the show "Mitran's League". Also, in the interview offered to GSP TV on 13.02.2010, he declared: "If they wrote on the first page that he is gay? However, if he isn't gay and God tells me 100% tonight … it is 100% that he isn't … if they wrote this on the first page…I was called was well by Sport Total FM …that he is gay… bye-bye…I will not take him not even for free…I know that he is a very good player but I am not interested not even S. Club is dissolved…*"

Therefore, it is obvious that in the context of a journalistic context related to the Bulgarian football player I. I. about whom the press and media wrote, including about his potential sexual orientation, the plaintiff expressed its position providing an opinion about such player. It appears thus the legitimate questions, whether the expression of such position may be correlated to the quality of employer related to the policy of the company it is representing in terms of the potential work reports that the football players may enter as workers. Subsequently, it is asked the question whether such

declarations are enough to presume the existence of a discriminatory employment policy based on the criteria of sexual orientation which would involve the obligation to prove that the employment practice does not correspond to such declarations.

By analyzing such issues, the College refers to the jurisprudence of the European Court of Justice. In the case C-415/93 claimed by the petitioner, Union royale belge des sociétés de football association ASBL v Jean-Marc Bosman, Royal Club Liégeois SA v Jean-Marc Bosman and others and Union des Associations Européennes de Football (UEFA) v Jean-Marc Bosman, the national court turned to the Court of Justice, among others, with respect to the interpretation of compatibility of the Treaty of transfer rules that were inducing a discrimination based on the nationality criterion. As it results from the judgment passed by the European Court of Justice on December 15th 1995, in the case Bossman, several national football associations adopted rules that restricted the possibility to recruit or align in competition players of foreign nationality. On a certain moment, UEFA undertook to suspend the restrictions of the number of contracts concluded by every club with the players from other member states and, on the other hand, to establish on two the number of such players who may participate to every game. In 1991, UEFA adopted the rule called ”3+2”, providing the national associations the possibility to restrict to three the number of foreign players that a club may align in a first division game of national championships, plus two players who played, continuously for 5 years, in the country of such national association, out of which 3 years as juniors. This restriction is applied as well to the games from the competitions for club teams organized by UEFA. (See the Judgment dated December 15th 1995 in the case C-415/93, parag. 25-27) With respect to the rules determined by sport associations of football, the Court ordered that ”considering the objectives of Community, exercising sports concerns the communitarian law to the extent that it represents an economic activity" according to art.2 of the Treaty (see the Judgment dated December 12th 1974, Waleave c. Union Cycliste Internationale, 36/74, Rec.p.1405, pct.5) "*This is the case of professional or semi-professional football players, as long as they exercise a remunerated activity or render remunerated services*" (see Judgment July 14th 1976, Dona c. Mantero, 13/76, Rec.p.1333, pct.12). The application of Art. 48 of Treaty is not excluded by the fact that the rules related to transfers dominate rather the economic relations between clubs than the labour relations between clubs and players. Indeed, the circumstance that the employing clubs have the obligation to pay allowances when recruiting a player from another club affect the possibilities of players to encounter a job, as well as the conditions of offering such job.(see Judgement dated December 15th 1995, Bossman, C-415/93, parag.72 and 74) the European Court of Justice stated with respect to the nationality clauses that these may not be deemed in conformity to art. 48 of the Treaty, subject to the punishment of depriving such disposal of its useful effect and of not depriving the particulars from the fundamental right to access freely a job offered by the Community. (see Judgement dated December 15th 1995, Bossman, C-415/93, parag.128)

On the other hand, in the case C-54/07, Centrum voor gelijkheid van kansen en voor racismebestrijding v. Feryin NV company, the national court turned to the Court of Justice to determine whether the public declaration of an employer represents direct discrimination after placing an ostensible job. Essentially, it referred to the public declarations of the manager of an enterprise, according to which, his enterprise was to recruit plumbers, but they wouldn’t hire „*allochthonous*”, due to the reticence of clients of allowing the access during the works in their private dwelling. In the Judgment dated 10.07.2008, the Court of Justice considered that "*the public declarations of employer about not having the intention to hire employees with a certain ethnic or race origin are meant to discourage seriously certain candidates to apply, being thus meant to prevent their access on the labour market and representing thus an employment discrimination*" (see the judgment dated 10.07.2008, parag. 25, device pct.1). On the other hand, on the question if such declaration is enough to presume a discriminatory policy, the answer of the Court was positive. The Court considered that in article 8 of Directive 2000/43 is stated that the defendant has the obligation to prove that the principle of equal treatment was not breached when certain facts allow to be

presumed the existence of a direct or indirect discrimination. The obligation to prove the contrary, incumbent thus upon the presumed author of a discrimination, does not depend but on finding a discrimination presumption, as long as it grounds of demonstrated facts. Such facts may be the public declarations by which an employer informs publicly that he does not intend to hire employees of a certain ethnic or race origin (see also judgment dated 10.07.2008, parag. 30, 31 device pct.2).

From the perspective of communitarian law, it is obvious that protection against discrimination based on the criteria of sexual orientation includes the sphere of work reports. The exercising of sports, mainly, in case of professional football players who are performing a remunerated activity or rendering remunerated services, concerns communitarian law, as long as it is an economic activity. In other words, the protection against discrimination covers this sphere of activity as well. However, Directive 2000/78/EC rules the general frame in favour of equality of treatment, with respect to employment and recruitment of work force, being transposed in the national legislation by O.G. no. 137/2000 concerning the prevention and sanction of all forms of discrimination republished.

Directive 2000/78/EC of Article 4 refers to the occupational conditions and rules that: "*Without breaching art. 2 par. (1) and (2), the member states may determine that a differentiated treatment based on a legal characteristic by one of the reasons indicated in art. 1 does not represent a discrimination when, considering the nature of a professional activity or the conditions to exercise it, such characteristic represents an essential and significant professional condition, so as the objective is legitimate, and the condition proportional. (2) The member states may maintain in their national legislation in force n the date of adopting such directive or may include in a future legislation (resuming the national practices existent on the date of adoption of this directive) disposals based on which, considering the professional activities of churches and other public or private organizations having a professional ethic based on religion or convictions, a differentiate treatment based on the religion or the convictions of an individual does not represent a discrimination when, based on the nature of such activities or in the context in which they are exercised, the religion or convictions represent an essential, legitimate and grounded professional condition concerning the ethics of organization*". This differentiate treatment has to be exercised by observing the constitutional disposals and principles of the member states as well as the general principles of communitarian law, and no discrimination based on another reason will be rightful. (3) Provided that the disposals are met in the other situations, this directive is the one which, without breaching the right of churches and of other public or private organizations having an ethic based on religion or convictions, acting in conformity to the national constitutional and legislative disposals, demands the staff working for them a good faith and loyal attitude towards the ethics of organization.

O.G. no. 137/2000, as amended by Law no. 324/2006, transposed the disposals of the two European Directives. From this point of view, the Ordinance stipulates in art. 9 that the disposals related to contravention in the field of employment and profession (art. 5-art. 8) „*cannot be construed in the sense of restricting the right of employer to refuse to hire an individual who does not correspond to the occupational conditions in such field, as long as the refusal does not represent an act of discrimination in terms of this ordinance and these measures are objectively explained by a legitimate scope whereas the methods of reaching such purpose are relevant and necessary*". Also, according to art. 11 par.5 of O.G. no. 137/2000 republished, the disposals related to the interdiction of discrimination in the access to education „*cannot be construed in the sense of restricting the right of the unit or institution to education for the training of the religion staff to refuse the enrolment of an individual with a confessional status which does not correspond to the conditions determined for the access in such institution*".

What concerns related to the case submitted for settlement is whether its object determines the materialisation of an actual or effective legal work report both in terms of subjects and consequences generated by such report. The College of NCCD took notice, based on the writs attached to the file by the petitioner and issued by the Trade Register Office that the Football Club S. Bucharest SA, by

the deed submitted under no. 48138 of 08.02.2010 registered with the Trade Register on 23.02.2010, based on the resolution no. 21980, operated some modifications with respect to the associates/shareholders, namely, Mr. GB withdrew from the company, his shares being assigned to a third shareholder. From this point of view, the College considers that, in the opinion of petitioner, the plaintiff was shareholder on the date of declarations, introducing himself as manager of the Club including after the date of sale of shares. On the other hand, on the hearing terms, the plaintiffs stated that Mr. GB is not manager, since such position does not exist in the company.

Beyond the contradictory assertions of parties, by referring to the jurisprudence of the European Court of Justice and the case submitted for settlement, the College considers a range of issues. For instance, in the case Feryn C-54/07 the active subject of declarations holds a specific capacity, being not only representative but also manager of the enterprise which brings into discussion an exercise of authority considering the role of such subject as employer. In the case Bossman C-414/93, the issue submitted to analysis is represented by an express rule existent on the level of football associations by which it is imposed a clause formulated sine qua non based on a nationality criterion. In the case Feryn, the Court considered that the declarations of the employer discourage the candidates to apply for the job, preventing their access on the labour market.

The College of NCCD considered that this case will be analysed beyond the sphere of application of a potential work report. The College considers that the declaration of the plaintiff couldn't be assimilated as coming from an employer/legal representative of employer or an individual in charge with employment although on the date of declaration he is manager of the Football Club S. Bucharest S.A. As for the consequences caused by the declaration in the case, unlike the case Feryn, this does not have the same reverberation over some potential candidates, since the recruitment process is not performed based on a public tender or direct negotiation, pursuant to a process of selection involving to apply for a job and presetting pursuant to analysis of it. As shown as well by the European Court of Justice, in case of professional football players, the recruitment process is atypical, since the possibilities of players to encounter a job and the tender conditions are correlative to some negotiations between the clubs and not to some negotiations between the player and the club. Similarly, considering the case Bossman, the burden of proof was assigned to the plaintiffs (defendants) with a view to provide objective explanations since the merits approached relied on demonstrated facts, in the case, the existence of some rules formulated sine qua non based on nationality. In this case submitted to settlement, it is discussed, essentially, the reaction of the plaintiff to the demarches of journalists related, among others, to the potential sexual orientation of a football player. Or, the potential material element of contravention stipulated by art. 5 (conditioning) or art. 7 (refusal) of O.G. no. 137/2000 is not circumstantiated in practice not materialised, it does not produce consequences over a community of individuals, as much as, if it had materialised, it would have concerned, indubitably, the particular situation of the player I. I. Or, if considered the object of complaint related to such fact, it would have been discussed the active legal standing of the petitioner, as long as it did not exist a petition of the individual deemed himself discriminated during the negotiation. On the other hand, as long as the subject of sexual orientation is indissolubly related to an issue of private life, it may appear the question whether a "*probatio diabolica*" had been assigned to the plaintiffs which would render impossible the burden of proof in demonstrating that employment does not interfere with the sexual orientation. On the other hand, however, the Football Club S. Bucharest S.A. declared that it did not initiate any negotiation procedure for recruitment therefore the employment was not discussed for any moment, related to the player I. I., which excludes the existence of some potential conditionings or of a potential discriminatory refusal.

The College of NCCD takes into account that according to art. 2 par. (3) of Directive 2000/78/CE „*Harassment is deemed a form of discrimination, when it is manifested an improper conduct related to some of the reasons stipulated in article 1 (n.n. religion or convictions, disability, age or sexual orientation) having as scope or effect the injury of dignity of an individual and the*

creation of an intimidation, hostile, degrading, humiliating or offending environment. In this context, the notion of harassment may be defined in conformity to the national legislations and practices of member". According to art. 2 par.5 of O.G. no. 137/2000 republished, which transposes Art. 2 par.3 of Directive 2000/78/EC „*It is an act of harassment and it is punished contraventionally any conduct based on criterion of race, nationality, ethnicity, language, religion, social category, convictions, sex, sexual orientation, belonging to a disfavoured category, age, handicap, status of refugee or asylee or any other criterion which leads to the creation of an intimidating, hostile, degrading or offensive environment*".

In the field of non-discrimination legislation, as it is transposed the acquis communautaire, in order to be in a situation of harassment, it is necessary to meet cumulatively the constitutive elements thereof. Therefore, the harassment act is circumstantiated in a conduct which may have different forms. The text includes the syntagm of „*any conduct*". The syntagm „*any conduct*" denotes the intention of legislator to include a wide range of conducts and not a restrictive one which allows to consider some different qualifications in practice and which may vary from case to case, circumscribed under the form of some assertions expressed in words, gestures, acts, or facts, actions etc. The reason or cause of conduct is determined by an inherent criterion, expressly stipulated by legislator, in a non-exhaustive list, considering that the law text presents in a determined enumeration the criterion of "*race, nationality, ethnicity, language, religion, social category, convictions, sex, sexual orientation, belonging to a disfavoured category, age, handicap, status of refugee or asylee*". The non-exhaustive character is provided by the syntagm itself "*or any other criterion*" attached to the criteria expressly enumerated in art. 2 par.5. The syntagm "*or any other criterion*", practically provides the possibility of withholding any other element not stated by law, but which it is materialized as determining fact in committing the form of discrimination called harassment.

The manifestation of conduct based on any of the criteria stipulated by law "*leads to the creation of an intimidating, hostile, degrading or offensive environment*". This constitutive element of harassment allows considering those conducts which, although not committed on purpose, produce the effect of performance of a definite environment as „*intimidating, hostile, degrading or offensive*". This issue is much obvious as the Directive of Council 2000/43/EC related to the application of the principle of equal treatment of individuals, regardless their race or ethnic origin, defines harassment in art. 2 par.3 as „*an unwanted conduct based on ethnicity or race which has as scope or effect the violation of the dignity of an individual and the creation of an intimidating, hostile, degrading or offensive environment*".

Including harassment as form of discrimination in the acquis communautaire and the transposition of it in the national legislation is extremely important. The discrimination does not manifest per se, but only as normative disposals or practices, as well as under the form of conducts which create an impact on the environment in general, ranging from physical violence and racist, sexist, xenophobe etc. remarks or assertions to general ostracism. This discrimination form affects psychically and emotionally the dignity of some individuals belonging to a minority or other[4].

The College of NCCD considered that, in the opinion of the plaintiff, his declarations have to be regarded related to his deep religious nature, as an act of exercising the freedom of thought, of consciousness and religion. From this point of view, the College notices that, indeed, the assertions assigned to him are placed within a context associated with the faith in God. During both the interview offered to Sport Total FM and to the channel GSP TV the declarations are rightful, to a great extent, based on reference to divinity and the importance of human-God relation. ("*I told him: «Let's pretend God does not exist. But what if it existed? What do you have to lose if you commune yourself? Wouldn't be better to go in Heaven?». And he agreed. One month before he died he had*

[4] See "A comparison between the EU Racial Equality Directive and the Starting Line" in I. Chopin and J. Niessen, "*The Starting line and the Incorporation of the Racial Equality Directive into National Laws of the EU Member States and Accession States*", 2001, pp.26- 27.

gone to commune himself, God forgive him. No gay is welcome in my family and Steaua is my family..."; "*And, although he is not gay and God tells me 100% this at night ... 100% he is not ... if this is written on the first page…and at Sport Total FM called me to say that …he is gay… bye-bye…I will no longer take him not even for free…I know that he is a very good player but he no longer interests me...* ")

In its jurisprudence[5], the College of NCCD took into account that, within the regional institutional system of protection of human rights, the European Convention of Human Rights ratified by Romania based on Law no. 30 of May 18th 1994, stipulates in Art.10 that: "*Every individual is entitled to freedom of expression. This right includes the freedom of opinion and the freedom of receiving or supplying information or ideas without the interference of public authority...*" however it determines expressly the limits of such right in paragraph 2 of the same article: "*exercising such liberties, (n.n. freedom of expression, of opinion and freedom of receiving or supplying information or ideas including duties and responsibilities), may be submitted to some formalities, conditions, restrictions or sanctions stipulated by law, which represent necessary measures in a democratic society, for ... protection of reputation or rights of others*". On the other hand, article 9 of European Convention stipulates that: „*Any individual has the right to freedom of thought, consciousness and religion; this right includes the liberty to change religion or conviction, as well as the liberty to manifest religion or conviction individually or collectively, in public or in particular, by religion, education, practices and accomplishment of rites. The liberty of manifesting religion or convictions cannot be subject to other restrictions than those which, stipulated by law, represent necessary measures, within a democratic society, for public safety, protection of order, health or public moral or for the protection of the rights and liberties of others*".

It has to be stated, first of all, that art. 10 of Convention secures as form of the liberty of expression the liberty of opinion, which is related, on its turn, by the liberty of thought, of consciousness and of religion, protected by art. 9. Any individual is entitled to form its own conceptions concerning social life, environment in general, as it may have a certain religious faith, to belong to a religion which it may practice. In other words, any individual is entitled to formulate an opinion on the phenomena among which he lives and which he analyses through the filter of its own thought[6].

Article 9 of Convention acknowledges to every individual the freedom of thought, religion and consciousness on the one hand, as well as the liberty to express convictions or religion on the other hand. We are in the presence of two components of the same right each having its own legal regime, natural consequence of the circumstance that such liberties have both internal character related to internal experiences of every individual and an external character represented by the external manifestations expressed as such or related to other similar rights and liberties secured by Convention[7].

On the other hand, the right to the freedom of expression is secured by Romanian Constitution[8] which stipulates in art. 30 par. (1) and (6) that *"(1)The freedom of expressing thoughts, opinions or faiths and the liberty of the creations of any kind, orally, in writing, by images, by sounds or by other means of communication in public, are inviolable*". However, the liberty of expression, in terms of par.1 of art. 30 has to be corroborated to par.2 of art. 30 which stipulates expressly that *„ (2) The freedom of expression cannot prejudice dignity, honour, particular life of an individual or the right to its own image*".

[7] Corneliu Bârsan, *op.cit.,* 2005, p. 738.

[8] C. Jura, "*Jurisprudence of National Council for Combating Discrimination*", *op.cit.,* 2003, p. 1.

Considering the declarations of the plaintiff, the College noticed that, in its opinion, the explanation of the fact that he does not work with certain individuals, in this case *„homosexuals*" is related to a personal element *„In my family no Gay is welcome and Steaua is my family*" respectively a purely subjective element *„no one can force me to work with someone. I have the right as well to work with whom I like*".

Based on these assumptions, it has to be stated that the legislation of European Union interdicts discrimination based on the criteria of sexual orientation in the field of work relations, and such disposals are applicable to all individuals both in the public and private sector. The member states of European Union transposed the European directives in this field, the Ordinance no. 137/2000 ruling the prevention and punishment of all forms of discrimination including in the work relations. Directive 2000/78/EC stipulates that a differentiated treatment based on sexual orientation does not represent a discrimination when, considering the nature of a professional activity or the conditions to exercise it, such characteristic represents an essential and determining condition. On the other hand, it stipulates that for the professional activities of churches and other public or private organizations with a professional ethic based on religion and convictions, a differentiated treatment based on religion or convictions of an individual does not represent a discrimination when, by the nature of such activities or the context where they are exercised, the religion or convictions represent an essential, legitimate or rightful professional condition related to the ethics of organization. The Ordinance no. 137/2000 stipulates in art. 9 that the disposals related to contraventions in the field of employment and profession „*cannot be construed in the sense of restricting the right of employer to refuse to hire an individual who does not meet the occupational conditions in such field, as long as the refusal does not represent an act of discrimination based on this ordinance and such measures are explained objectively by a legitimate purpose and the methods of reaching such scope are relevant and necessary*".

Or, although if accredited the idea that a football club represents a certain family, in the wide sense, of sharing and promoting certain values, traditions or faiths which would entail a certain organizational ethic, the employment of a professional football player is determined sine qua non by the meeting of some conditions related to performance and not by an indissoluble element related to the right to intimate, familial and private life. The act of inducing the idea that the simple supposition related to the sexual orientation of an individual determines ab initio the rejection of it within a potential economic relation, denotes obviously the arbitrary. The assertions of the plaintiff are in this respect the following: *„Not even if Steaua is dissolved I shall bring a homosexual in the team... No one may force me to work with someone. I have the right to work with whom I like, as they have rights too*".

In the context when the only exceptions allowed on a potential difference of treatment are given by the specific nature of a professional activity or the conditions of exercising this professional activity and the refusal of working with an individual is determined by a potential inconformity in terms of occupational conditions, the College considers that the assertions of the plaintiff represent a conduct placed in close connection with sexual orientation and, by their nature, they entail a hostile, intimidating and offensive environment affecting particularly the community of individuals, in this case, the individuals with a sexual orientation different from heterosexual. From this point of view, the College considers that the assertions of the plaintiff, based on the effect created, were meant to breach the dignity right of homosexual individuals according to the disposals of art. 2 par.5 of O.G. no. 137/2000 republished.

Finding that such assertions meet the elements of a discrimination form, according to O.G. no.137/2000 republished, stipulated by art. 2 par.5, the College considers that they meet subsequently as well the elements of the fact stipulated by Art. 15 of O.G. no. 137/2000 republished. In the opinion of College of NCCD the discrimination form from communitarian law defined by the European legislator as harassment was transposed in the non-discrimination legislation in Art. 2 par.5 and it

was ruled in the special part of law, in 5th Section, Art. 15 by which it is provided in terminis the protection of the right to personal dignity.

In this respect, according to art. 15 of O.G. no. 137/2000 republished: „*It is a contravention, based on this ordinance, an act subject to criminal law, any conduct manifested in public, with a nationalist - chauvinist propaganda character, of instigation to racial or national hate, or such conduct which has as scope or concerns the prejudice of dignity or the creation of an intimidation, hostile, degrading, humiliating or offending atmosphere, directed against an individual, group of individuals, or community and related to them belonging to a certain race, nationality, ethnicity, religion, social category or other disfavoured category or to its convictions, sex or sexual orientation*".

The College of NCCD considered that art.15 interdicts a wide range of conducts committed in public and with a material object circumstantiated in different hypostases. The wide margin of appreciation of conducts is given by the syntagm used by legislator "*any conduct*" which induces the idea that it may manifest by words, gestures, actions etc. This manifestations are performed in public and are concretized in a conduct with a nationalist - chauvinist propaganda character, in a conduct of instigation to racial or national hate, or such conduct which has as scope or concerns the prejudice of dignity or the creation of a determining atmosphere (degrading, humiliating etc.) related to belonging to an interdicted criterion stipulated by legislator. Therefore, the material element of contravention stipulated by art. 15 may be concretized in different hypostases, not only as a propaganda-like conduct or conduct of instigation to hate but also a conduct that has as scope or concerns the prejudice of dignity or the creation of a humiliating atmosphere for a group or community of individuals based on an interdicted criterion.

Or, from this point of view, it is obvious that the assertions of the plaintiff represent a conduct stipulated by art. 15. The assertions were made in public and were consequently spread in the public space, both based on the fact that the assertions were made through mass media, radio and television channels and by subsequent broadcast and reporting of these by mass-media (written press, television, news channels etc.)

In the opinion of the College of NCCD, such assertions are not included in the plan of a potential propaganda conduct or conduct of instigation to hate, however, by their nature, it is obvious that it is constituted in the material elements ruled by legislator, in this case, a conduct related to the creation of an atmosphere at least humiliating or offending for a community of individuals. Pursuant to the analysis of the assertions, it is clear enough that they referred to sexual orientation, this issue not being contested, but in terms of resorting to the exercise of freedom of expression. Or, in the context of exercising the constitutional rights, the freedom of expression, in terms of par.1 of art. 30 of Constitution has to be corroborated to par.2 of art. 30 which stipulates expressly that „(2) *The freedom of expression cannot prejudice the dignity, honour, particular life of an individual or the right to its own image*." Similarly, article 1 of O.G: no. 137/2000 republished orders that: „*In Romania, rule of law, democratic and social state, the human dignity, the rights and liberties of citizens, the free development of human personality represent supreme values secured by law*".

The Directing College of NCCD decided that the issues notified are under the incidence of a potential work report based on Art. 2 par.1 corroborated to Art. 5 and Art. 7 of O.G. no. 137/2000 on the prevention and punishment of all forms of discrimination, republished; that the issues notified are under the incidence of the disposals of art. 2 par.5 and art. 15 of O.G. no. 137/2000 on the prevention and punishment of all forms of discrimination, republished; and to sanction the plaintiff GB with a warning, based on art.2 par.11 and art. 26 par.1 of Governmental Ordinance no.137/2000 on the prevention and punishment of all forms of discrimination, republished.

The non-governmental association A. criticised, by an application in interpretation, the Resolution 276/October 13th 2010 of the National Council for Combating Discrimination at the Court of Appeal Bucharest and demanded the annulment of the administrative deeds, namely the Resolution 276/ October 13th 2010 of the National Council for Combating Discrimination. The

demand of A. non-governmental association was registered on December 21st 2010 at the Court of Appeal Bucharest.

On October 12th 2011 the Court of Appeal Bucharest ordered the notification of the Court of Justice with the preliminary questions drafted and ordered the suspension of the case until the settlement of the procedure.

Questions referred to the Court of Justice are:

1. Do the provisions of Article 2(2)(a) of Council Directive 2000/78/EC of 27 November 2000 establishing a general framework for equal treatment in employment and occupation apply when a shareholder of a football club who presents himself as, and is considered in the mass media as, the principal director (or 'manager') of that football club makes a statement to the mass media in the following terms:

"Not even if I had to close Steaua down would I accept a homosexual on the team. Obviously people will talk, but how could anyone write something like that if it's not true and, what's more, put it on the front page… Perhaps he's not a homosexual [X, a Bulgarian footballer] … But what if he is? … I said to an uncle of mine who didn't believe in Satan or in Christ. I said to him: "Let's say God doesn't exist. But suppose he does? What do you lose by taking communion? Wouldn't it be good to go to Heaven?" He said I was right. A month before he died he took communion. May God forgive him. There's no room for gays in my family, and S. Club is my family. It would be better to play with a junior rather than someone who was gay. That's not discrimination. No one can force me to work with anyone. I have rights just as they do and I have the right to work with whoever I choose.

Not even if I had to close S. Club down would I accept a homosexual on the team. … Perhaps he's not a homosexual, but what if he is? There's no room for gays in my family, and S. Club is my family. Rather than having a homosexual on the team, it would be better to play a junior. That's not discrimination. No one can force me to work with anyone. I have rights just as they do and I have the right to work with whoever I choose. Even if God told me in a dream that it was 100 percent certain that X wasn't a homosexual I still wouldn't take him! Too much has been written in the papers about his being a homosexual. Even if TSKA Club gave him to me for free I wouldn't have him! He could be the biggest troublemaker, the biggest drunk … but if he's a homosexual I don't want to know about him'?

2. To what extent may the abovementioned statements be regarded as 'facts from which it may be presumed that there has been direct or indirect discrimination' within the meaning of Article 10(1) of Council Directive 2000/78/EC of 27 November 2000 establishing a general framework for equal treatment in employment and occupation, as regards the defendant S.C. Football Club S. Bucharest S.A.?

3. To what extent would there be probatio diabolica if the burden of proof referred to in Article 10(1) of Council Directive 2000/78/EC of 27 November 2000 establishing a general framework for equal treatment in employment and occupation were to be reversed in this case and the defendant S.C. Football Club S. Bucharest S.A. were required to demonstrate that there has been no breach of the principle of equal treatment and, in particular, that recruitment is unconnected with sexual orientation?

4. Does the fact that it is not possible to impose a fine in cases of discrimination after the expiry of the limitation period of six months from the date of the relevant fact, laid down in Article 13(1) of Government Decree No 2/2001 on the legal regime for sanctions, conflict with Article 17 of Council Directive 2000/78/EC of 27 November 2000 establishing a general framework for equal treatment in employment and occupation given that sanctions, in cases of discrimination, must be effective, proportionate and dissuasive?

Conclusion

The procedure of preliminary ruling is based on the Chapter 9 Preliminary Rulings and other References for Interpretation, art. 103 – 104 from Consolidated Version of the Rules of Procedure of

the Court of Justice (2010/C 177/01)[9] and on Information Note on References from National Courts for a Preliminary Ruling (2009/C 297/01)[10].

Under the preliminary ruling procedure, the Court's[11] role is to give an interpretation of European Union law or to rule on its validity, not to apply that law to the factual situation underlying the main proceedings, which is the task of the national court. It is not for the Court either to decide issues of fact raised in the main proceedings or to resolve differences of opinion on the interpretation or application of rules of national law.

8. In ruling on the interpretation or validity of European Union law, the Court makes every effort to give a reply which will be of assistance in resolving the dispute, but it is for the referring court to draw the appropriate conclusions from that reply, if necessary by disapplying the rule of national law in question.

Under Article 267 TFEU[12], any court or tribunal of a Member State, in so far as it is called upon to give a ruling in proceedings intended to arrive at a decision of a judicial nature, may as a rule refer a question to the Court of Justice for a preliminary ruling

All national courts must therefore refer a question to the Court when they have doubts about the validity of such an act, stating the reasons for which they consider that that act may be invalid.

The Hearings in the Case C-81/12 at the Court of Justice of the European Union took place on January 23rd 2013. All the parties involved in this case are waiting for the answers of the Court of Justice of the European Union.

THE PROTECTION OF CULTURAL GOODS FROM THE ROERICH PACT TO THE HAGUE CONVENTION

MARIAN MIHĂILĂ*

Abstract

The study premises and objectives:
The idea found at the basis of the discovery of a real value of cultural goods is underlined by the knowledge of their origins and history and of an environmental frame in which these have been produced. This theory could also be applied in regulations provided with certain newly introduced elements as: the absolute interdiction of thefts; the interdiction of destruction and execution of enemy property; the warning of before a terrestrial bombing with naval forces of ports, cities, villages, buildings or houses which are not defended
The purpose on this paper *is based on the following question: "Which of the gaps of humanitarian international law regarding cultural goods are surfacing?"*
The research models *used are: the interpretative method, the structuralist-systematic method necessary for the knowledge of rules of organization and functioning of law as a system of social organization; the epistemological method, with an important role in the verification of an authentic meaning, fully manifesting the exigency regarding the protection of cultural property.*
The result of the study *is obtained by offering an answer which as argued in this paper, concluding on one side that the discrepancies appeared between provisions (or dispositions) of the Hague Convention of 1907 and the events of the First World War have led to an improved idea and to a completion of these norms.*
Conclusions*: The preoccupation for the protection of cultural goods, of the people's cultural patrimony, thus continues, even if, despite all acts adopted, we observe that certain states destroy willingly the treasures of other peoples. We have thus reached the conclusion that more drastic measures must be adopted more severe sanctions must be applied to states that neglect the norms of humanitarian international law and the existent gaps must be eliminated. For this reason the Second Protocol of The Hague Convention of 1954 has been promoted, regarding the protection of cultural goods in case of armed conflicts.*

Keywords: *cultural goods, protection, the Hague Convention, UNESCO patrimony, armed conflict.*

Introduction

The domain covered by the theme of this study refers to the judicial regime of cultural property, which represented since the 20th century an increasing preoccupation of the international society, while party states became more aware of the need of an universal production of culture and art, which represents the material expression of the cultural, spiritual and national identity of each people and at the same time, represents the sum of definite components of human civilization in its ensemble..

The importance of this study results from the general belief of states regarding the inseparable character between the notion of cultural and national identity and the patrimony notion, which separated gradually from a thinking school accepted by most, according to which cultural property represents the basic element of the peoples' spiritual personality and of the humanity's cultural patrimony.

The objectives of this study obey the idea of protection of the universal cultural patrimony, in times of peace and in times of armed conflicts, on the basis of international instruments that are sufficiently clear and through engagements assumed by party states, in order to make possible an efficient coordination of actions and measures to be taken.

These will be fulfilled by the use of research methods indicated in the abstract of this paper which will lead to the obtaining of assumed finalities.

* Professor, PhD, "Eftimie Murgu" University, Resita (e-mail: presedinte@uem.ro).

The protection of cultural property in the event of armed conflicts is insured nowadays by the following international documents:

1.The Hague Convention of 1907 (the 4th and the 9th);

2.The Roerich Pact – signed in Washington on 15th April 1935

3.The Hague Convention of 14 May 1954 for the protection of cultural property in the event of armed conflict;

4.a) The 1st Protocol of the Hague Convention of 14 May 1954;

b) The 2nd Protocol of the Hague Convention of 14 May 1954 (May 1999);

5.The 1st and the 2nd Protocol of Geneva of 8 June 1977.

These regulations are available for the other countries that do no represents parties to these conventions, because they have a customary character.

Preoccupation regarding the protection of cultural property in the event of armed conflicts have existed, in one measure or another, during all history ages, starting with the Antiquity and continuing until nowadays with the Hague Conventions of 1899 and 1907, in the regulation annexed to the Second Conference and, respectively the Fourth Conference regarding the laws and customs of terrestrial war, the firm law norms were elaborated to regulate the protection of cultural property in case of armed conflict..

1. THE PRESENT STATUTE OF CULTURAL PROPERTY

The history of culture started at the same time with the apparition of man, with the first tools which he build in order to live. From Antiquity until today, in all countries, works of culture and art were created. These have circulated and still do in the entire world, taking their message across borders. Of course, we are not speaking of a physical circulation, but a spiritual one. In time there have been preoccupations for the improvement of an international cultural collaboration.

According to the Romanian diplomat Mircea Malita "Culture represents not only an evening show, a TV show, a weekend museum, leisure reading… Without values there are no decisions. The culture is a place where values are created, preferences are elaborated and hierarchy is established."

Their real value is highlighted by the knowledge and recognition of origins and history, their ambient environment which produced them. From here we can draw the conclusion that every state has the duty to protect its national patrimony build from cultural goods found on their territory against theft, clandestine digging, of illicit export and in the event of armed conflict.

In the case of international law norms that refer to the protection of cultural property in case of armed conflict, new elements were introduced, as for example:

a) The categorical interdiction of theft;

b) The interdiction of destruction and distain of enemy property;

c) The authority advertisement before starting a terrestrial bombing and the interdiction of bombing with armed naval forces of ports, cities, villages, homes or buildings which are not defended;

d) The interdiction to attack or bomb, by any means, cities, villages, homes and buildings with are not protected;

e) The interdiction or pillaging any city of home, even the conquering of it.

In the text of the 1907 Hague Convention a difference is made between cultural goods situated in regions that aren't protected and those with military protection, the first ones being compulsory to being declared.[6] in the same manner, obligations and criminal sanctions have been introduced for the belligerent party which disobeyed this Regulation.

All these provisions were in fact trials to solve this problem of cultural properties.

The gaps which pressured the humanitarian international law regarding cultural property surface with the start of the First World War, in 1914. During this war, great value historical moments were destroyed with intent, as the Reims Cathedral and the central monuments from Louvain and art collections were robbed. Some states, in order to protect their goods from war risks,

have transferred them to treasuries of other states, which were no longer returned. The excuse given with this occasion was "military necessity"[1].

The discrepancies seen between the provisions (or dispositions) of the 1907 Hague Convention and the events of the First World War lead to the idea of improvement and completion of these norms. In these conditions, during the 1923 Washington Convention, a commission of legal advisers elaborated the "Rules of air war", which contain two norms regarding the protection of cultural property, these being listed in art. 25 and art. 26 of these regulations[2]. But these regulations haven't become international law norms, because these weren't accepted by the party states.

Before the Second World War another "Treaty regarding the protection or artistic and scientific institutions and historic monuments" (The Roerich Pact) was signed. It was signed in Washington on the 15th of April 1935. This is the first document consecrated especially to the problems of cultural goods, establishing a system of protection for the two situations: in peace and in the event of war. The pact had a regional character, referring only to the American continent. It was signed by 21 states, from which only 10 ratified it.

During the 2nd World War the rules provided by the Hague regulation of 1907, regarding open town and cities were obeyed. No other rule was obeyed, because some of the states weren't parties to the conventions, or just out of contempt for the regulation adopted.

The disinterest shown by the states involved in the war towards cultural properties of other states is proved by the fact that in Belgrade more public and cultural buildings were destroyed, together with the national library (thousands of books and manuscripts were burnt) and Russian monuments and work of arts were destroyed, which were the results of demolishing the Soviet Union culture: 427 museums, 1.670 orthodox churches, 237 Romano-catholic churches, 69 chapels, 532 synagogues and 258 other buildings were destroyed, 1.710 Soviet town, over 70.000 villages. Besides the property destroyed, a lot of goods were stolen, without ever being recovered (paintings of the Dutch, Italian, German schools, China collections etc.).

2. THE VIENA CONVENTION VERSUS THE HAGUE CONVENTION

In the content of the Vienna Convention the following are provided: "when a treaty provides that it is subordinated to an anterior or posterior treaty or that is mustn't be considered as being incompatible with the other treaty, its dispositions will apply mainly:

- when all states are parties of the anterior treaty and of the posterior one, without the first one being expired or his application being suspended, the anterior treaty is not applied but in the measure in which its dispositions are compatible to those of the posterior treaty.

When the parties to the anterior treaty are not all parties to the posterior one:

a) if two of the state are parties only in the Hague Convention, and the two are parties in the Protocol, the Protocol will be applied.

b) if the two states are both parties to the Protocol and to the Geneva Convention, the priority will be given to the latter one, as a result of the clause "without prejudice".

c) the states that aren't parties at either of the two documents, not to the 1907 Conventions, their provisions will prevail[3]."

[3] Idem.

The norms jus cogens have a special statute according to art. 53 of the Vienna Convention[4] which establishes that, no state can refer a practice or a treaty contrary to jus cogens even if it has an interest to do so[5].

The norms jus cogens have been perceived to be a part of positive law (the states practice). Thus, it is considered that if positive law represents the rules of a state then jus cogens is not positive law, but if, positive law represents law that are in force in the practice of international community, then jus cogens represents positive law.

In Prosecutor vs. Furundzija, International Criminal Tribunal or the Former Yugoslavia (ICTY) it has been declared that jus cogens cannot be violated by any state „*by international or local treaties or special customs or even general customary rules that are gifted with the same normative force*"[6].

Also, the Project of the International Law Commission (CIL) on the modifications of treaties through subsequent practices statute in art. 38 (which don't refer to jus cogens rules) that: „*a treaty can be modified through a subsequent practice in the application of the treaty with the approval of the parties to modify the provisions…*"[7] In *travaux préparatoires* CIL considered an implicit approval of the states which seems not to be an active practice but a silent approval. This article was erased by the Vienna Treaties Convention by art. 42[8] which confirm the possibility of treaty provisions that don't come from customs, and will become customs.

In the same manner, CIJ decided in the case *North See Continental* that it offers customary international law a prolonged and undisputed practice of the states. The frequency and the customary character are not enough to define customary international law, because "comity" also supposes frequent and repeated acts of courtesy (the same situation exists for international moral). The same case reappeared when CIJ decided in the *Lotus* case that the refrain to exercise a criminal jurisdiction on the actions realized on board of ships from international waters represented an international custom "*if such an except is based on the existence of their consciousness they have the duty to refrain*"[9].

In the Case Military *and Paramilitary Activities in and Against Nicaragua* (Nicaragua vs. U.S.)[10] CIJ established that there are other rules of international law than those accepted by the states. Besides the fact the role of state actors is growing in the forming process of international law, the states have remained the central subjects of this process, with their privileges in determining the fact that there is a new law[11].

The Committee of the International law Association regarding the realization of customary international law (general) has declared in its Final Report[12] a state superiority in determining

[12] The Final Report of The Committee, London Conference (2000) seen on www. ila-hq.org.

customary rules but the condition of the state consent as general precondition of customary international law. It has been sustained only the fact that a consent is compulsory for a corresponding rule of customary international law regarding the principle *pacta sunt servanda* thus *"the consent obliges the state that consented"* (the principle of protecting good belief). The states consent is not an obligatory precondition because the common belief says that the respective practice is legally obligatory and sufficient to create international customary law. The belief represents a sufficient precondition but not necessary, while opinio juris can be proved by any means or methods.

The preoccupation for the protection of cultural property continued even after that period, reaching the conclusion those more drastic measures must be taken; punishments more severe must be applied to states that neglect norms of international humanitarian law and the gaps still existent must be eliminated[13].

3. THE PROTECTION SYSTEM OF CULTURAL PROPERTY AFTER THE HAGUE CONVENTION OF 14 MAY 1954

The Hague Convention of 1954 for the protection of cultural property in the event of armed conflict is the main international instrument for the protection of cultural goods in the event of armed conflicts.

Holland, during 1939, presents a Convention project, elaborated under the management of the International Office of Museums. In 1948 the project was presented to a UNESCO sub-committee. Afterwards it has been submitted to the general Conference of 1952, which transmitted it to government for study. Between 21st of April and 14th of May, the Hague Conference has been convoked, where 56 states were presented, including Romania. At the conference the following were adopted:

- The Convention for the protection of cultural property in the event of armed conflict;
- The Convention Implementing Regulation;
- The Additional Protocol (recognized as Protocol I of the Convention, after which in1999 the second Protocol has been adopted).

The Convention entered into force on 7 August 1956.

Unlike the regulation of the 1907 Convention, the 1954 one establishes a sole criterion according to which cultural property is protected, their importance for the peoples' cultural patrimony.

According to the provisions of the Convention, the property protected was that expressly provided, with the exception of natural beauty sites[14] and cult places.

According to international law in this domain, the protection of cultural property has in sight two elements: defence and respect. Defence refers to the parties' obligation "to do", and this "to do" supposes the parties' obligation to take the necessary measures for the protection of cultural property. If a state hasn't taken these protection measures, this does not empower another state to destroy its goods. The adversary state has the obligation to respect the property of the contracting (party) state.

The respect of a state property devolves the obligation of "not do", which represent:

- The interdiction of using this property, of their protection devices and those near it for purposes that will expose it to destruction or deterioration;
- The abstention of any act of hostility towards them;
- The interdiction, prevention and in need, the imposing of termination of any vandalism act;
- The interdiction of requisitioning cultural property;
- The interdiction of repressions against these goods.

[13] Stanislaw E. Nahlic, La protection internationale des biens culturels en cas de conflit arme, în Recueil des Cours de l'Academie de Droit intenational, vol. 120, I, 1967, pp. 77-78.

[14] For their protection UNESCO adopted a special Convention in 1972.

The idea that results from these provisions is that cultural property must be respected in times of peace and in the event of war, by its own citizens and by the citizens of other states.

In article 5 of the 1954 Convention we can see the obligation of occupation power to support, if it is possible, of national authorities of the conquered territory to insure the protection and the guarding of the cultural property found on this territory. From this provision it results the idea that the authorities of a state have the obligation of taking necessary measures for the protection of cultural property. If these don't have the possibility to take emergency measures, the conquering state will take preservation measures for the treasures of the conquered state.

The Convention provides in articles 16 and 17 the recognition sign for protected cultural property. "Article 16. Emblem of the convention

1. The distinctive emblem of the Convention shall take the form of a shield, pointed below, persaltire blue and white (a shield consisting of a royal-blue square, one of the angles of which forms the point of the shield, and of a royal-blue triangle above the square, the space on either side being taken up by a white triangle).

2. The emblem shall be used alone, or repeated three times in a triangular formation (one shield below), under the conditions provided for in Article 17.

Article 17. Use of the emblem

1. The distinctive emblem repeated three times may be used only as a means of identification of:

(a) immovable cultural property under special protection;

(b) the transport of cultural property under the conditions provided for in Articles 12 and 13;

(c) improvised refuges, under the conditions provided for in the Regulations for the execution of the Convention.

2. The distinctive emblem may be used alone only as a means of identification of:

(a) cultural property not under special protection;

(b) the persons responsible for the duties of control in accordance with the Regulations for the execution of the Convention;

(c) the personnel engaged in the protection of cultural property;

(d) the identity cards mentioned in the Regulations for the execution of the Convention.

3. During an armed conflict, the use of the distinctive emblem in any other cases than those mentioned in the preceding paragraphs of the present Article, and the use for any purpose whatever of a sign resembling the distinctive emblem, shall be forbidden.

4. The distinctive emblem may not be placed on any immovable cultural property unless at the same time there is displayed an authorization duly dated and signed by the competent authority of the High Contracting Party."

International law norms refer to the social protection of cultural property represented by: refugees that shelter movable cultural property, movable centres, movable property of great importance that need to fulfil a few conditions:

- are found at a sufficient distance from any important military objective (aerodrome, radio station, institutions that work for national defence, railway station of a certain importance and channel of communication);
- not to be used in military purposes (for personnel movements or military material, even in transit), activities directly connected to military operations: Cantons of military personnel or the production of war materials. The following are not considered to be used for military purposes: supervision realized by armed forces of cultural property, not the presence near this property of police forces with the task of insuring public order;
- to be listed in the "International Register of Cultural Property under Special Protection", Kept by the general manager of UNESCO.

The contracting parties have the obligation of insuring immunity for these goods which enjoy a special protection. Is a party violates its assumed obligations, the other party insures immunity of these goods, but only if this violation situation exists.

The immunity of a cultural property may be lifted in exceptional cases, of unavoidable military necessity. These cases may be observed by the chief of an equal formation of superior one as importance of a division.

The 1954 Hague Convention is an important judicial instrument which determines the agreement between states and contributes to the keeping of international peace. At present, the 1954 Convention is ratified by 95 states, but its importance results from the fact that the principles mentioned in its text have become norms of international customary law. But all these Convention provisions will not reach their purpose if the party states won't respect them constantly. Information also plays an important role, because it offers data regarding theory, but especially regarding the lacunar practice in the domain[15].

Today, there is a struggle between the discoveries of an international "cultural identity", which is so necessary for the birth of a "New Europe". This vision of a New Europe represents a new "challenge" for UNESCO and implicitly, for the protection of cultural property.

The idea is that historical monuments and cultural property in general, represent factors of education. These goods are in fact the pride of a state.

Regardless of all these provisions, cultural property has been destroyed and rubbed, on many occasions being the preferred target of attacks. Sustaining examples for this statement are: during the Second World War, Luftwaffe received the order to bomb England, with retaliation, all the buildings with the sign referring to cultural property protection, and in return, the British have done the same thing to Germany. A recent example is represented by the situation in Afghanistan (the destruction of Buddha statues by Taliban leaders). The international public opinion was alerted by roomers according to which objects found in the patrimony of National Museum of Afghanistan were systematically destroyed. The Kabul authorities denied all accusation, but didn't allow access to foreign journalists in the museum, which was closed to public from 1992. Through unofficial means, occidental journalists have found out that 2000 years old Buddha statue has been destroyed inside the museum. In march, in Kabul, a delegation arrived formed of ambassadors from Italy, the Greece ambassador in Pakistan, a French representative and members of the Society for the Protection of Cultural Patrimony in Afghanistan. These were stupefied when the official of Kabul informed them that the destruction of cultural patrimony has become a matter of state politics in Afghanistan.

The Taliban Militias conquered Kabul and have taken control over the greatest part of Afghanistan in 1996, instituting a regime of terror. "Theology students" sustain that they have transformed this state in the "purest" Islamic state in the world. They apply a super-strict interpretation of Sharia (the Koran laws) in a country where the photos of living beings, movies, television and music are forbidden.

In Bamiyan we can still see the two tallest statues of Buddha in the world.

At the base of Ghorband mountain, in niches that overpass the height of 50 meters, two gigantic statues of Buddha have been sculpted. These statues, dating from the late Kuşana period, stand at the origin of the Buddhist statues from the East Turkestan and China and are connected by Indian origins, but also proto-Iranian. Mount Ghorband also hosted the home of king Kaniska. In these surroundings, the rocky walls that delimit the valley are pierced by numerous caves; most of them natural caves, but extended by man, where Buddhist monasteries were installed. The niches and the caves are richly painted, most of the times in the Gandhana style of Cusani.

The question asked was "how these destructions could be stopped?" (monasteries were riddled with gun bullets and gutted by bomb hits or grenade towers).

---

[15] Emeric de Vattel, Le droit de gens ou principes de la loi naturelle appliquees a la conduite et aux affaires des nations et des souverains, Guillaumin et Cie, Paris, 1863, p. 168, 169.

In the project "Code of crimes against the peace and security of human kind", the International Law Commission gathered a list of offences that can be considered crimes against peace and security and demanded that those responsible of these crimes to be judged. Art. 22 mentions the terms "exceptional crimes of war", thus introducing here "deliberate attacks on goods of an exceptional religious, historical and cultural value." Unfortunately, Afghanistan is not a party of the 1954 Hague Convention, completed by the two Protocols and not of the Convention regarding the protection of cultural and natural world heritage[16].

The supreme leader of Afghan Taliban Mulla Mohammed Omar, considering that he hasn't done everything to create a "pure Islamic" state in the Middle Orient, gave a wicked order, that left no room for interpretation. "All the statues in the country will be destroyed, because these were used as idols by the unfaithful. The statues are still respected and could become in the future object of idolatry".

Taliban chef declared that "the keeping of these statues would contradict the Islam (…) while their destruction is a demand of Moslem law".

Taliban militia found in Bamiyan proved their "braveness" and their "initiative spirit" by attacking the gigantic Buddha statues with all their weapons: tanks, anti-tank missiles, grenades and even automatic weapons. There were no concrete data, but is has been estimated that at least two thirds of the entire number of statues have been destroyed.

On 9 March 2001 the Buddha statues were entirely destroyed. An eye witness stated that the two statues were blown up and "made into pieces". Regardless of all this, the press agency from the Islamic Afghan announced that on 7 March only the head of a statue was destroyed.

Despite the waves of international protests, the Buddha statues were destroyed entirely. Unfortunately these could not be saved.

But besides these negative examples there are also a few positive ones: USA interdicted during the war with Cambodia in 1973 the use of the B-52 plane in bombing at less than one kilometre from localities and monuments, temples, pagodas and cult places.

In the Preamble of the UNESCO Protocol the following words appear: "If wars take birth in the men's mind, peace must also take birth in their mind". If each of us would keep in mind these words, nothing would stand in the way of the protection of cultural property. Each of us must respect these goods, because there represent our image over borders.

Conclusions

Studying the representative doctrine of this century and the jurisprudence of states we observe that all great authors have identified the existence of customary norms regarding the immunity of private property, the interdiction of the right to rob cultural property, the bombing of this property etc.

In front of an explosion of preoccupations and idea, the law couldn't have remained passive. Through judicial norms, internal and international, we have tried to obtain the protection of cultural patrimony. In times of peace, through norms of international laws, we desire the protection of the integrity of national cultural patrimony and in the case of war; the same objective is desired through norms of humanitarian international law.

The arguments presented in this study suggest the conclusion that, on one side, a particular action may take birth from a customary law, despite the fact that states don't agree with it as legal obligation. On the other side, a particular action, capable of creating customary international law may be undetermined by the states contrary opinions.

From the intersection of both theories (the facultative character of the state consent and of the belief opinio juris) it would result that opinio juris compensates to the relative absence of practice

[16] Marcheggiano Arturo, Protecţia bunurilor culturale în conflictele neinternaţionale care comportă dezintegrarea statelor, in the Romanian Journal of Humanitarian Law, Year IV, 1996, no. 4 (14), pages 15-16.

and vice-versa. But what happens if, in the case of a putative international customary law, when the state is kept by a practice based on false conceptions and information regarding the existence of a particular legal obligation? The theory "*more practice, less of a need for a subjective element"* regarding customary law shows us how powerful and long must this practice of the states be in order to deduce opinio juris. But less practice may be replaced by a strong opinio juris to give birth to international customary rules.

AMBIGUITY OF THE COLLOCATION "STATE SUBJECT TO THE RULE OF LAW"

IULIAN NEDELCU[*]

Abstract
This work has as purpose the analysis of the notion of "State Subject to the Rule of Law", considered within the doctrine as being ambiguous due to the fact that there are several methods to understand the base of state being subject to the rule of law, on one hand and on the other hand because, similarly to the concept of democracy, the abusive use of the concept to describe political and legal regimes which are completely different from one another voids it of any meaning.
The concept of state subject to the rule of law is a doctrinary creation. Although normativised by many current constitutions, its contents mostly remains uncertain, precisely due to its origin which makes it an incessant debate theme, a theme upon which a generalised agreement has not been possible up to presently.
The analysis of this notion shall approach the visions upon the state subject to the rule of law expressed within the doctrine: formalist, functionalist and material which provide three different types of organisation of the state subject to the rule of law which are complementary instead, not antagonistic ones.

Keywords: *stat subject to the rule of law, constitutionality, formalist vision, functionalist vision, material vision*

Introduction

The notion "*state subject to the rule of law*", within the doctrine, is appreciated to be ambiguous due to the fact that there are several ways of understanding the basis of subjecting the state to law, on one hand and on the other hand, because, as in the case of the concept of democracy, the abusive use of the concept to describe political and legal regimes which are radically different from one another, voids it of any meaning. Its symbolic charge renders its structure too fluid, and its contents too little determined. This is why we find it useful to very synthetically survey a few of the state subject to the rule of law theories, on this occasion shaping its features, so that subsequently we should see its functions.[1]

The state subject to the rule of law concept is a doctrinary creation. Although normativised by many current constitutions, its contents greatly stays uncertain, precisely due to its origin, which turns it into a continual them for debate, a theme upon which a generalised agreement has not rather been possible so far. Created in Germany, under the name of *"rechtsstaat"*, the concept has been taken over by the French doctrine under a critical but also constructive form under the name of *"l'etat* ***de droit"*** **and it has** penetrated even in the specific legal Anglo–Saxon world, even if the concept of *rule of law*, greatly stays distinct. We actually have three concepts, which although they seem to express the same thing, they are distinct in many regards, being tributary to a certain particularity of the legal culture using them.

If the objective of all theories which are the basis of these concepts is to enframe and limit the power of the state through law (this being the basic feature that we can find in all the theories), the manner to attain this objective is different, the state subject to the rule of law being for some people a state which acts through the law, that is under its legal form, for others a state which is subjected to law or, as a third category of doctrines considers, a state of which law shows certain inner traits. These three visions – formal, functional and material – provide three different methods of the state

subject to the rule of law organisation, but which are complementary instead, not antagonistic. If for the formalist vision, the state subject to the rule of law is reduced to a hierarchisation of the legal order, which has as purpose to limit random due to the fact that the different state's bodies can act only based on a legal empowerment given by a higher legal standard in the normative hierarchy as compared to those that the respective body can adopt, if for the functionalist vision the state not only that it acts using the law but also, it is subjected to it, although the basis of this subjection of the state to a law which is superior to it, is conceived in very different manners, for the material vision upon the state subject to the rule of law the law contents becomes more important than the form of the controlled normative hierarchy, the idea on which this vision is focusing being the one of freedom, and not the one of authority asserting organisation.

1.The concept of state subject to the rule of law

The concept of state subject to the rule of law was elaborated and substantiated by the German doctrine from the second half of the XIth century. The idea of state subject to the rule of law represented, beginning with the VIIIth century, the pattern of fundamental guarantee for the citizens' rights and liberties. The philosophic and legal doctrine on the human natural and imprescriptible rights[2] represents the primordial source of the principles of the state subject to the rule of law.

The state subject to the rule of law means the subordination of the state to law, the approaching of this notion being made from two perspectives:

- the power of the state as coercive force;
- relation between normality and power.

With regard to the state's power as coercive force, what it is interesting is the freedom-power relation.

The feeling of freedom appeared simultaneously with the human kind. For the human kind, freedom has been and will remain as natural and as legitimate as his very existence. Relation between freedom and coercion must be rational. Freedom without authority is altered[3] as authority without freedom is degenerated. Law models, through behavioural rules expressing the general will, human tendency, which is a natural one for that matter, to complete, unconditional freedom. It is still law that institutes and legitimates coercion, enframing it within a system of means and proceedings.

Power and normality are in a mutual interconditioning relation, thus power creates the standards which limit power. The problem of defining state subject to the rule of law or the legality state seems simple at a first view. Most of authors claim that the state subject to the rule of law is characterised through the fact that it accomplishes law reigning in its whole activity, either through relationships with the citizens, and either with the different social organisations on its territory[4].

2.Formalist vision upon the state subject to the rule of law

Formalist vision upon the state subject to the rule of law was imposed in Germany in the XIXth century, even if initially it encountered a substantial vision due to a liberal perspective and was consolidated under the impulse of the Kelsenian Normativism. Thus, the state subject to the rule of law is opposed to the police state. "*The police state is that in which administrative authority can, in a discretionary way and with a freedom of decision making more or less complete, apply to citizens all the measures they consider useful on their own authority, to cope with circumstances and to attain each moment the purposes they propose*".[5] Unlike this type of state, the state subject to the rule of

[5] Rene Carré de Malberg, Contribution à la théorie générale de l'Etat, Tome II, Sirey, Paris, 1920-1922, p. 488. Jacques Chevallier, *L'Etat,* (Paris: Dalloz, 1999), 17-18.

law is "*a state which, in its relations with its subjects and in order to guarantee their individual status, it is subjected itself to a law regime, because it enframes its action upon them through rules, some of them determining the rights reserved to citizens, some others establishing in advance the methods and means which can be used to achieve state purposes*".[6] **Which is in the centre of this theory of the state subject to the rule of law is administration being subjected to the laws**. The administration cannot act but ***secundum legem***, that is based on a legislative empowerment and, certainly, it cannot act ***contra legem***. **This fact entails on one hand that any administrative coercion should be accepted by citizens, for they participate in the laws creation through Parliament elections and, on the other hand, it should be predictable, non arbitrary, for laws are not only general, abstract and impersonal, but also presumed to be known by everyone.** This vision upon the legal enframing of the administrative action is doubled in Germany by a material understanding of the law, which requires to the constitution "*to ask for any « material law», - that is any prescription regarding a rule of law applicable to citizens* - a *«formal law», which excludes ordinances based only on the monarch's will or only on the administrative regulating power*"[7]. Therefore, contrary to the French vision, the administration actually misses its own regulating power. This is one of the reasons for which theory could not be fully accepted in the French legal environment which is generally attached to a formal vision of law and which reserves to the administration an own normative power. Therefore *"Rechtsstaat" means that administration not only that it cannot impose by its own force legal duties to its subjects, but also that it must be limited to making that application specific and individual of the legal rules, being limited to the law application: to create norms, would mean, indeed, intromission upon the legislative function; despite all this*, ***a contrario***, *administration has available a decision making and initial action power with regard to its own affairs, its internal organisation – field in which it can take the specific or general required measures, without being necessary to be based on a law text. Through this it is manifested the political force of the* Rechtsstaat *theory which at the same time represents a barrier in the way of random, requiring an intervention of* ***Landtag*** *for everything that cause prejudice to individual rights and keeps the Administration prerogatives, placing the state itself outside the law application*"[8].

This vision upon the state subject to the rule of law starts from a trust out of principle in laws and in representation which is not at all unanimously shared. On the contrary, for some people "*normativism does not produce, essentially, but one result: it carries at the legislative level the dynamism of adaptation of Law which otherwise would have made the state to act in the administrative field*". Overall, there will not exist either more or less change, as we find ourselves within a state subject to the rule of law or within a «*random*» one; there is only one difference of state's bodies obliged to make the adjustment in the two cases. This is not the essence of the Rechtsstaat (the state subject to the rule of law) to guarantee the predictability through a normative immobilism. What a citizen grains before inosculated administration, he/she will lose because of a law maker which «*breaks out within the norms*».

This theory settles the relation *state – law*, which is addressed in terms of priority/primordiality, claiming that the *state precedes law*. Therefore there is no previous right which is also superior to the state. If the state is subjected to law, it will make it voluntarily. The theory is based on an overreaction of sovereignty doctrine. A sovereign state does not know other limits apart from those placed by itself. Only prescriptions punished or ordered by the state can have the status of legal norms. Precisely due to the fact that the state is the only holder of the coercion force, it is the ***«only source of law»***. The contents of the legal order, which is structured so as to be organised as a state subject to the rule of law, is determined by the state. This does not mean that the

[6] Idem.

[7] Jacky Hummel, Etat de droit, libéralisme et constitutionnalisme durant le Vormärz, in Figures de l'Etat de droit, p. 144.

[8] Jacques Chevallier, *L'Etat,* (Paris: Dalloz, 1999), 17-18.

state's power does not have any limits, but that the state establishes itself limits within which its power is asserted through legal norms. It can amend these norms, but as long as they are in force, it is held to strictly comply with. And yet, law represents for the state a true coercion, even if not an external one.

A first coercion results from the fact that state cannot suppress the very legal order, that it is obliged to act based on a legal title. A second one results from the social pressure asserted on behalf of the idea of law which substantiates the feeling of affiliation to a state. These barriers that the self-limitation theory places in the way of the state's power are yet fragile. State creates a limit of its power assertion, creating a legal order which is structured, hierarchised, stable and coherent, but the contents of this order is indifferent, which makes that the state subject to the rule of law should remain a mere form, of which contents is too handiest for the ruling power.

3. Functionalist vision upon the state subject to the rule of law

In the functionalist vision upon the state subject to the rule of law, the state not only will act through law, but it is subjected to it. The nuance is very important, for law becomes not only a means of the state's action, but an outer limit of this action. From an instrument of power, law turns into a guarantee of freedom. Not only administration is limited by law, but the very law maker who finds his/her action enframed by the existence of a law which escapes to a certain extent to its direct and exclusive control. Therefore, this time it is about a limiting from outside of the state's power. The basis of this subordination of the state to law is instead conceived in different manners depending upon the basis found for this right which in order to limit the state, should be anterior and superior to the latter*: God, Nature, Reasoning, Society*. But regardless of the basis, the state is held to comply with this right, not based on its own will, but based on a will which is superior to it. Since the creating fact of this right is found outside the state, it cannot modify it. Essentially, it is the idea transposed into the constitutional revision procedures which implies the direct intervention of the people or into the procedure of control of the constitution revision projects constitutionality.

The state subject to the rule of law becomes more complex from the formal perspective. If formalist theories of German origin instituted only a law priority before the administration, instituting a legal state, the state subject to the rule of law institutes a priority of law before the state overall, not only before its bodies and it cannot be conceived without the Constitution's supremacy in relation with the laws. Thus, the constitutionality control becomes mandatory for the existence of the state subject to the rule of law. But the very Constitution does not have an indifferent contents, it is not a mere postulate as in the normativist theories, which requires from law a certain contents. Thus, this vision tends to become material, but it remains inaccurate, for the contents of the natural law, of the objective law, of social consciousness is too vague, too difficult to be transpose in accurate legal terms.

4. Material vision upon the state subject to the rule of law

For the material vision upon the state subject to the rule of law, *"if the state subject to the rule of law would be only a technical device which made the laws be subjected to the Constitution and which manifested the triumph of the norms hierarchy, it would not have at all a different excellence but to provide the intellectual satisfaction of Hans Kelsen's disciples"*.[9] For this vision the notion upon which the state subject to the rule of law is focused is that of freedom, not the norm one. Fundamental rights are in the centre of this construction, which keeps the benefits of the normative hierarchy, of the jurisdictional control of its compliance with the latter, but it gives them a new purpose, requiring the laws of the state subject to the rule of law the qualities necessary to guarantee the individual freedom by providing the legal security of the law subjects.

[9] Dominique Colas, *L'Etat de droit*, (Paris: P.U.F., 1987), p. VIII.

Conclusions

In the context of the state subject to the rule of law, "the state must be a state governed by the law. The state must establish with accuracy the limits of its competences under the form of laws, as it does with regard to the citizens' liberties, it must not act more than its legal competence."[10]

Romania's Constitution revised in 2003, proclaims in art. 1 paragraph (3) that Romania is a state subject to the rule of law, opting for the collocation "state subject to the rule of law", the literal translation of the word "Rechstaat" proposed by the German doctrine, and not for that of "legal state", preferred by the French doctrine, being considered that the legal state is only one of the levels of the state subject to the rule of law, which does not provide enough guarantees as compared to the random, the law-marking remaining uncontrollable.[11]

The laws of the state subject to the rule of law must first of all not only be structured as an hierarchy, but it must be certain, which requires the public character of the legal norms, a certain clarity of prescriptions, their non-retroactivity and stability, that is the predictability of the amendments that might be operated, qualities which make law provide the legal security of the subjects and their legitimate trust in the continuity of the state's action. Subsequently, law must be based, so as to be in the presence of a state subject to the rule of law, on certain values inherent to the human person (dignity, freedom), inherent to the democratic society (participation, pluralism) and to the liberal society (justice, compliance with the individual's rights and liberties, the state's intervention subsidiary and proportional). This axiological law subordinates its state through contents, the formal means being subordinated to the achievement of the values founding the juridical order.

SCENARIOS REGARDING THE FUTURE OF THE EUROPEAN UNION

PAUL-IULIAN NEDELCU*

Abstract
This work has as purpose to argumentatively identify the future evolution of the European construction, identifying a potential scenario which would settle the current contradiction within the European Union, namely the existence of a true "economic federation" and of only a "political quasi-confederation" , being notorious the fact that in Europe, federalism is mainly known as a specific solution of power assignment between the institutions of a central power and those of the member states (for federal states) or as a potential model of transnational integration (for the European Union) and even for regionalism within certain states (Spain, Italy, France).
It shall be tried the decryption of the philosophical and legal base of federalism as a doctrine able to provide a solution of state's organisation in the conditions of the European integration.

Keywords: *federalism, European Union, federal states, personalist thinking, regionalism*

Introduction

The future of the evolution of a certain system cannot be certainly foretold. This is a truth that has been scientifically proved. It's exactly this lack of certainty regarding the future of the E. U. that determined the projections of several scenarios among which the one that would solve the current contradiction in the E.U., which is the existence of a real "*economic federation*" and only a "*quasi-political confederation*"[1].

In Europe, federalism is mainly known as a concrete solution to spread power between the institutions of a central force and the ones belonging to the member states (in the case of federal states) or as a potential transnational integration model (in the case of the European Union) and even for regionalism within some states (Spain, Italy, France).

Thus, federalism existed as a political and social model but also as a philosophy and methodology oriented towards a future determined by the inevitable globalisation.

But, so as to choose this kind of model, it is imperative that we know its genesis, evolution and the perspectives of its adoption in the conditions that are totally different of what truly represents concrete federal models throughout history until this moment.

The first to have developed such a global concept of federalism was **Pierre Joseph Proudhon**[2] whose theory about a federal society inspired the personalism movement at the beginning of the '30s and later the ones who called themselves *"Global or integral federalists"*, a school founded by **Alexandré Marc**.[3]

1.Federalism as manner of organisation of a society

The archetype of the compound state is the federal state. The federal state is an association of states that freely decide, as per their sovereignty, to create joint bodies to which they grant a part of their competences, mostly in the military, diplomacy or financial field.

The federal state is formed of several state formations that have autonomy from the constitutional, legislative and legal point of view and are subordinated to it. In the international relationships, only the federal state has the quality of subject to the rule of law. The connection of association between the states is established with the Constitution. Thus, the federal state appears as an association of states that are subjected to a sole central power (the federal power) on one hand and, on the other hand, preserve a long constitutional, administrative and legal. The federal state preserved a multitude of constitutional frames subjected to the same superior constitutional frame (of the federal state).

In the speciality doctrine it is estimated that there are two ways to establish a federation: by integrating several states and constituting a state entity (the United States of America, Switzerland, and Germany) or by separating some regions of the unitary state and establishing a federation (Belgium).

The reasons to integrate some independent and sovereign states in a federal one are very different: common defence against an external threat; the preoccupation to insure (with the integration) a stable intern social order; the will to use economic resources more efficiently; the geographic context (it is the case of the European integration process).

Regarding the reasons to establish a federation by separating some provinces of the unitary state, they mostly consisted in trying to find a solution to conflict-like national problems. The federal state can be considered a synthesis between the unitary state – with its centripetal or centralising tendency and the co federal state – with its centrifugal tendency to push away its entities from the centre.

The federal state is different from the co federal one by its degree of integration of the federate entities, the Constitution being the one standing as grounds for its existence and not a Treaty. This is built of an assembly of states, federate states that transfer part of their primary sovereignty over to the entity formed of their grouping to the federal state. This sovereignty transfer can be considered a transfer of competences in the benefit of the federal state.

When the first federal constitution was elaborated in Philadelphia there had to be found a compromise between the two groups with the two apparently incompatible philosophies: the ones who wanted to replace the thirteen independent sovereignties with an American Government and Parliament and the ones who refused to replace any transfer of sovereignty to joint institutions and went for a confederation where joint institutions had no power at all over the sovereign member states.

The solution was found by Benjamin Franklin who suggested the bicameral federal system as a historical compromise: ***The Chamber*** – representing the people of the United States and the ***Senate*** – representing the interests of the member states.

Thus, federalism appears since the beginning as a combination between unity and diversity as seems to be the result of an integration process that tends to overcome autarchy without generating centralism and uniformity; it can be a process of decentralization without touching that specific autarchy we find today in the international society formed of the so called national sovereign states where some are actually "*more equal than others*".

Generally, federalism is associated to the historical experience of federal states. Nevertheless, the constitutional frame offered by the dualist split of power between the political federation and its member states can tolerate political regimes, social and economic systems, but also different philosophies such as the United States of America or the former Union of Soviet Socialist Republics, Switzerland or the former Yugoslavia, Brazil or Germany. We believe that the creation of the United States of Europe will not necessarily involve the option of a form named society even if the

reallocation of the authority, by splitting competences and transferring them to a European level, will contribute to great change.

Every state or any other federal-like type of organization have in common some principles that, even though in practice they are somehow unevenly or insufficiently applied, can be found in federalism and characterizes it: the political autonomy and self-government (self-management) of the federate states or member subgroups is insured with legal guarantees and adequate financial means; the litigations between federal autonomous states or member sub-groups are not solved with an illegal competition nor with the arbitrary decisions of an all-powerful centre, but with rules mutually agreed-upon or with conventions between the partners involved. This was called the principle of cooperative federalism; in a federal system, the power is split so that each level (both federal institutions and the ones belonging to the federate states or member sub-groups) require adequate means to solve their own problems.

The purpose of this principle called the subsidiarity is not only to obtain a higher efficiency but also for a higher degree of transparency and self-control; federalism aims to strengthen the democratic principle of participation not only for individuals but also for the member states or subgroups so as to take part to common decisions. The participation becomes efficient by also applying the other principles mentioned above. Some individual members of some small autonomous sub-groups know problems and people better and this is why they have greater possibilities to take part to decisions than the ones belonging to strongly centralized mass organizations. Solving conflicts with dialogue and agreements is more participative than a decision imposed authoritatively, by force.

2.Interpreting the philosophical and juridical fundament of federalism as a solution for state organisation

Founder federalism, but also father of anarchism and socialism, **Proudhon** describes in his latest work "*Du principe fédératif*", especially (but not only) the model of a society built of autonomous communities that are united (in a federation) according to some contracts freely complied with. The power must be split so that it can be as close as possible to the level of the problems that need to be solved. *"The power must be everywhere, even in the centre"*, **Alexandre Marc** states, interpreting Proudhon's federalist theory.

The grounds for Proudhon's society are the local communities, workshops and small plants; they are autonomous and are self-managed in a democratic way, then they unite in greater regions and production units which, at their turn, unite in federal nations (states) and, in the end, in a transnational federacy that includes everything. The basic principle of Proudhon's federal society is, thus, a sort of "*social contract*". Unlike **Rousseau**, applying this principle will not lead to the disappearance of the countless individualists in a collectivist mass of people.

Proudhon's social contract finds its expression in ***mutualism*** for instance, in the desire to truly limit and solve conflicts with understandings between the opposite groups of interests.

Proudhon's methodology is often described as "*an open dialectics*". In a federal structure, polarities, tensions and even conflicts are maintained but controlled. There is no need to dissolve regions in a centralized national state or nations in a centralized Europe: "*open dialectics*" is not a philosophy of "*either-or*" but of "*as well as*" (also)[4]. The essence of Proudhon's dialectic thinking consists in solving contradictions. The balance between all antagonisms must rely on justice, on righteousness – which Proudhon sees as a result of "*relativity and dialogue*", mutual recognition of opposite people and groups.[5]

Personalism, as a philosophy that pleaded for federalism and which might represent the basis of the European Union future configuration, developed and disseminated mostly, as we have shown at the beginning of this paragraph, in the '30 with the founders and partisans of the movement

[4] Alexandre Marc, *De la méthodologie à la dialectique*, Paris, 1970.
[5] Bernard Voyenne, *Le fédéralism de P.J. Proudhon*, Paris, 1973.

through the magazines *"L'ordre Nouveau"* and *"Espirit"*. Among the personalists of the '30s the can be included **Robert Aaron**, **Arnaud Dandieu**, **Alexandre Marc**, **Daniel Rops** and **Denis de Rougemont**[6], with us, **Constantin Rădulescu – Motru**[7]**.**

Synthesizing what we can remember is that personalists follow a certain doctrinal position which is the rejection both of individualism and of collectivism. Personalism opposes to individuals ideologies based on the idea that the sum of all selfish attitudes shall lead to general freedom and welfare. At the same time, personalism opposes the unilateral collectivist priority given to a society that controls everything in which the manipulated individuals are seen only as performers who must not build their own future but only contribute to the collective future.

A person's fulfilment firstly requires its autonomy and freedom but it can be reached only if the basic communities, groups of people (that allow personal relations) are also autonomous. On the other hand, one must notice that personalism does not aim to encourage the nostalgia of patriarchal isolationalism and that the principle of autonomy actually wants to mark the elimination of the aggressive centralism specific to great organisations, whether through a real decentralization of the power to take decisions, or even better by creating some new communities with human dimensions: neighbourhood organisations in the great city areas, regrouping autonomous team in plants, revalorizing trade union cells etc..

Each and one of these entities shall enjoy autonomy as long as it has its own statute and the necessary financial means to exert all its rights. But decentralization and creating new autonomous communities is limited by the need of autonomy from the neighbour groups, just as each person's freedom is limited by the others'. If somebody wants to avoid the atomization of an autarchic society, autonomy cannot mean absolute freedom and sovereignty.

The application of the autonomy principle objectively generates conflicts. The cooperation between independent centres to take decisions and restructure the entire society, both based on rules, laws and contracts freely accepted, constitutional, convenient, and generally agreed-upon, must lead to a civilisation of free and responsible people.

This restructuring on the vertical raises problems for the split of the political, economic, social and cultural power of all the European Union member states, as per real needs and requests. Thus, so as to follow the autonomy of the constituent communities, the federal power plays only an auxiliary part. When problems surpass the competence level of the "*subordinate*" levels, the autonomy of the federal communities is limited so that the management of the common interest problems is performed at the level of the federal authority.

The intervention of the individual in the society is insured with the principle of participation. The participation is conditioned by the need to follow the other principles of constitutional democracy, but in small communities a person can be knowingly totally fulfilled and can achieve his/ her goals in the community. Moreover, these communities must be capable to take part, at their turn, to solve the problems they share with others, whether by cooperating on the horizontal or with the relationships with the immediately superior level.

Conflicts and wars, hunger, sub-development, ethnic purification, ignorance and violence, radical nationalism, xenophobia and the lack of tolerance, tortures and other violations of the human rights, the destruction of the environment, etc. are only superficial manifestations of a deeper crisis currently affecting our world.

The nature of the crisis in this world can be described by the unbalanced relationships between man and nature, man and the technical world he created and with social relationships.

[7] C. Rădulescu – Motru, *Materialism and personalism in philosophy*, in the Romanian Academy Annals, series III, volume XIII, memoire May 04th 1947, very much commented upon by Corneliu Leu in *Studies, methods and hypotheses of personalist philosophy*, Realitatea Publishing House 2003, p. 65-68, 141-148, 221-298.

Our society is more and more dominated by organizations of greater dimensions, as, for instance, cities (megalopolis) with millions of people, corporations with hundreds of thousand employees, political parties, trade unions, public and private bureaucracies. Small groups like families, small enterprises or corporations, decayed beginning with the industrial revolution. Most of the people spend more and more of their lives in anonymous social structures lacking transparency.

The result of this *"massification"* is the more and more increased tendency towards individualism. The social commitment to the community becomes a rare virtue while the rule is represented by a selfish pursuit of individual goals. Beyond our acquaintances and friends, people appear only as globally labelled groups: we talk about women, Catholics, Muslims, orthodox, black, Chinese, Americans, workers, drivers, etc. as if they were all robots heading for a single direction and behaving in the same unique way. Actually, these labels describe only a dimension of a great group, neglecting all the others. By using one of these terms we ignore the high complexity of the real world.

Conclusions

Personalist thinking must not be seen as the final project of a perfect society that could rise within the European Union. The basic approach begins by recognising what in France is called "*la pluriapartenance de l'homme*" ("Man's pluri-partisanship). Each individual belongs to several groups and communities. Any limitation to only one of these different dimensions, nationality, social class, profession, etc. leads to the violation of freedom and the destruction of the great variety in the human life. E.U.'s integral federalism should acknowledge this variety by generally acknowledging self-government for all member states. Only that, if this condition is fulfilled, will it lead the unity to more freedom and solidarity? It would mean to go too far if we described in detail all the ideas of federalists, personalists and Proudhoniens. Nevertheless, we must mention some significant examples:

a) In the public field, the partial sovereignty transfer of the nation-state: within the territory, so as to allow a redefinition of the local authorities, also considering a loosening of urban centres that have become inadequate for being lodged; externally, by building a federal Europe and transforming the United Nations in a worldwide federation.

b) In the economic and social field, federalists have suggested a series of institutions meant to insure a person's autonomy and fulfilment. The most important is the minimum guaranteed wage to replace the current system. The excess of financial resources can be found in the civic service: each person should spend a year or two doing the work that is now left to a sub-proletariat formed of the emigrants in the third world[8].

c) In the cultural field nothing is more important for integral federalists that the respect for language and culture diversity forming the richness of the European inheritance. There is no "*raison d'Etat*" (State reason) justifying the enslavement of ethnical minorities whose fulfilment in autonomy does not oppose in any way to the unity of the federation. The case of Switzerland is convincing in this respect. The Swiss show that. If Berna applied the ideology of the unique and indivisible republic "*Republique une et indivisible*", Italian wouldn't be speaking in Lugano and French would be tolerated only as "*folkloric*" dialect at Geneva and Lausanne, with scarce radio programmes broadcast as a token of generosity[9]. The European culture has always had both unity and diversity.

If we see federalism as the ideological projection of an ideal society and not as a product of will but as a realistic orientation, it is legitimate to say that some of the major problems of the world will never find themselves adequate solutions without a federalist approach.

[8] Alexandre Marc, *Guaranteed social minimum (MSG) pour l'Europe*, L'Europe en formation, No. 268, p. 3-19, Nice -1987.

[9] Guy Heraud, *L'Europe des ethnics*, Paris - 1963.

But, despite some progresses as federalist solutions, federalism as manner of global approach of the world's problems remains a utopia. The reality is different. The first step towards federalization should be the acknowledgement of the difference between the current situation and the model. They will always be in terms of dialectic and conflict relations. It seems that our world will never be perfectly federalist. Still, we believe that the federal solutions, whether they are partial or global, are the best way to replace violence and oppression with freedom and responsibility, manipulation through participation. At the same time, realism means to partially accept pre-federalist solutions without losing the global objective out of sight. It also means to admit that partial solutions will never be enough. Realism cannot mean the simple acknowledgement of the *status-quo* and the naïve belief in its permanent continuation.

It is also good to know that federalists often contradicted themselves concerning the paths to follow. Some of them believe that administrations, parliaments and governments should be convinced, acting as a group of pressure – strategy generally known as ***lobby.*** Others want to create a mass move. A third group emphasizes on writing and speaking, meaning education.

Last but not least, one wonders if this concept about federalism will not complicate one of the simple ways for a united Europe and a united world. The answer could be that transnational unification cannot be a purpose itself. It is desirable if it protects diversity and if it contributes to solving transnational issues. Only then will people perceive the true transnational identity.

The reformation of the E.U. institutions is in current performance, but it is necessary that it continues until there will be found solutions so as to harmonize the structure and international mechanisms with the new E.U. formula extended to 27 states. There were and still exist a lot of issues that must be solved in the context of broadening and it was firstly necessary to considerably raise the E.U. budget so as to honour the additional obligations appeared as consequence of the countries in Central and East Europe adherence.

Thus, as it is described in the speciality doctrine, along the years many citizens in the member states have had a feeling of frustration not being able to understand or influence the procedure to adopt decisions within the E. U. the „*Democratic deficit*" seems to result mainly but not exclusively from the fact that the Council's decisional procedure is not made public. In the matter of decisional procedure, opinions were and still are different. European federalists generally accept an increase of the power of co-decision for the European Parliament, aim supported by Germany. The French and the British are in favour of a greater involvement of the national parliaments but some experts believe that this would complicate the procedures and it can be considered as a rebound of the current integration state.

The reformation of the E.U. states is a sine – qua - non condition regarding its broadening to 27 states and depending on "*open doors*" politics that seems to remain, even if not for the near future. This is why the debates about the political and juridical solutions that will be adopted for the complete integration of the E.U. member countries continue. Will federalisation be a solution?

CONSTITUTIONAL LANDMARKS OF POLITICAL PLURALISM

ERHARD NICULESCU*

Abstract
In order for democracy to result from freedom, the citizens' participation in the creation and exercise of democratic power must be structured in a pluralist way. Art. 8(1) of the Romanian Constitution firstly imposes the organization of the company in parallel with the State's organic structure as an indispensable requisite for the existence of democracy. In other words, there is no democracy without a civil society, distinct from the State. The organization of the civil society is necessary because the individual alone cannot determine a certain attitude of the political power: structuring gives weight to the action; the organization of citizens contributes to rendering their political participation more efficient. But the organization, structuring limits the freedom of people adhering to the structure.

Keywords*: constitution, pluralism, political party, democracy, political will*

A. Introduction

Pluralism - a condition and guarantee of constitutional democracy

The core issue of power in democracy is how the individual can remain free from political point of view, being however subject to the power of the *demos*. H. Kelsen gives the following answer to this issue: *the subject of a legal order, which takes part in the creation of such order, is politically free ... Democracy means that the will expressed in the state's legal order is identical to its subjects' will*.[1] The freedom of the subjects of a rule of law has therefore limited necessities, but guaranteed by the equal participation in the creation of the rules that limit it. Four ideas are determined so that the democratic power results from freedom: (1) freedom must be necessarily limited; (2) subjects of the rule of law must take part in its creation; (3) this participation must be equal; (4) the participation must be structured in a pluralist way.

Art. 8 paragraph (1) of the Romanian Constitution is a materialization of the fourth condition that makes democracy result from freedom and guarantees it: *pluralism.*

In order for democracy to result from freedom, the citizens' participation in the creation and exercise of democratic power must be structured in a pluralist way. Art. 8 paragraph (1) of the Constitution firstly imposes the organization of the company in parallel with the State's organic structure as an indispensable requisite for the existence of democracy. In other words, *there is no democracy without a civil society, distinct from the State*. The organization of the civil society is necessary because the individual alone cannot determine a certain attitude of the political power: structuring gives weight to the action; the organization of citizens contributes to rendering their political participation more efficient. But the organization, structuring limits the freedom of people adhering to the structure.

One must give up on a part of his/her freedom as a citizen in order to be part of a political party, just as it was necessary to give up on part of one's natural freedom in order to be part of the society. Whereas organizations facilitate participation, they also restrict it. Democracy bears this way a constant tension between the need of structuring the civil society and the limitation of individual freedom, due to the increase of the role of the structure and oligarchic tendencies within them.

The relative way out of this tension is given by the pluralism of the structures of civil society. First, *categorial pluralism*: a civil society implies the existence of political parties, pressure groups,

* Assistant Lecturer, PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest - (erhard.niculescu@yahoo.de).

[1] Hans Kelsen, *Théorie générale du droit et de l'Etat*, Bruylant, L.G.D.J. Bruxelles, Paris, 1997, page 333.

media etc., as structures independent from each other and with regard to the State. Then, *intercategorial pluralism*, which implies the possibility to create many structures within each associative category: several competing parties, pluralism of the pressure groups, pluralism of information.

Pluralism is, as expressed in art. 8 of the Romanian Constitution, a requisite and guarantee of constitutional democracy. A requisite and guarantee because the freedom of individuals is guaranteed on one hand by the State power limitation, due to pluralism of influence centres and eligible elites and on the other hand by the limitation of the power of the structures of the civil society themselves through mutual controls between categories and infra-categorial ones. Pluralist structuring is therefore an essential characteristic of liberal democracy, a characteristic that makes it different from totalitarianism. Totalitarianism implies a people as a deconstructed mass of individuals. Destructuring ensures the domination of the State. In order for the State to be limited, the people must be structured; only this way it can be ***demos***.

Art. 8 uses in its first paragraph the notion of pluralism with a very wide meaning. Not a certain type of pluralism, but pluralism in general is a requisite and guarantee of constitutional democracy. Art. 8 paragraph (1) does not only guarantee political pluralism, even if paragraph (2) refers afterwards only to political parties, combining, as any times in the text of the Constitution, a principle disposition with a particularization that makes it problematic. The scope of pluralism is therefore general and it does not only refer to the existence of several political parties.

The exigency of pluralism, deriving from the democratic nature of the Romanian state stipulated in art. 1 paragraph (3) has an express nature established by art. 8 paragraph (1). The Constitution restricts the scope of pluralism when it refers to it as a supreme value, as only political pluralism has this quality according to art. 1 paragraph (3). This must not lead to a restriction of the scope of art. 8. It refers to all spheres of civil society: political, economic, information, cultural.

The signification of this pluralism is not too easy to clarify. "*Pluralism is a conception about political and legal order that privileges the diversity of opinions, interests and their grouping in a civil society and makes the guarantee of their plurality a requisite of freedom*."[2]

Democracy is in this vision a society that not only admits diversity, but makes it a constitutive requisite. As Joh Stuart Mill stated already, diversity is not a bad, but a good thing. The passage from this philosophy to its institutionalization at the level of the State organization is first transposed in the separation of powers and relativization of the State unity, either by different degrees of decentralization that go as far as regionalization, or by federalization. This institutional pluralism forbids both the accumulation of powers and their concentration into the hands of the central powers and the creation of an inequality between powers that would make one of them dominant.

As Ion Deleanu stated back in 1992, in a composite and competitive society – as all societies are in fact – *institutional pluralism is logical and necessary*.[3] On the other hand, this fact of pluralism implies that none of the State institutions may determine the moral, social, political or legal values that are mandatory in the society based on a single comprehensive doctrine hypothesized as a truth. On the contrary, democratic society implies the fact of pluralism, namely it implies that it is impossible for a single doctrine to obtain the approval of all citizens.

The Democracy implies this way the fact that the diversity of conflicting doctrines cannot be reduced in any way by acts of will of the State or one of its powers. Article 8 of the Constitution ensures this way an additional guarantee to the constitutional dispositions that impose the separation of powers and decentralization of the State. It guarantees the quality between the State powers as only this way pluralism and democracy and State's ideological neutrality can be maintained.

[3] M. Constantinescu, I. Deleanu, A. Iorgovan, I. Muraru, F. Vasilescu, I. Vida, *Constituţia României comentată şi adnotată (Constitution of Romania commented and annotated)*, Regia Autonomă Monitorul Oficial, Bucharest, 1992, page 27.

Democracy seems therefore to be a society of conflict. Pluralism is its requisite because its guarantee preserves the contradiction within the structure of the civil society that feed the State institutions with social impulse. The contradiction is not overcome in a problematic general will or common interest, but is maintained by integrating the conflict in the political system. This means that the legislative system cannot cancel the social conflict by banning diversity.

What art. 8 imposes to the State is the obligation to preserve diversity by the implementation of conflict integration procedures. Basically this means that art. 8 paragraph (1) of the Constitution limits the type of consensus that is possible in the Romanian society. The main problem of the pluralist regime stipulated by art. 8 of the Constitution of Romania, is how to reach a balance between national approval and constant contestation. In other words, what are the restrictions of consensus that may be requested in a democracy and what are the limits of conflict so that it remains democratic?

The fundamental limits stipulated by art. 8 paragraph (1) to the State by the fact that it guarantees pluralism are given by the prohibition to transgress by the legislation of these limits of consensus. On the other hand, it has a positive obligation to ensure the procedures necessary for the integration of conflicts and their peaceful resolution.[4]

B. Paper content

Categorial pluralism

a. Categorial pluralism. The pluralism that the Constitution refers to, considering it a requisite and guarantee of constitutional democracy is first of all a categorical pluralism. The Romanian society must have a pluralist structure at all levels and all spheres of social relations. In principle any organization of citizens, created in order to carry out any activity, is allowed. The prohibition of a type of activity or a type of association must be express, made by law, according to the provisions of art. 53 of the Constitution without endangering pluralism. The pluralism that art. 8 refers to therefore, comprises political pluralism, economic pluralism, media pluralism, trade union pluralism, that of professional and employers' associations, cultural pluralism, religious pluralism and any other type of pluralism.

b.The associations' independence from each other. Categorial pluralism imposes the independence of these types of associations from each other. The first aspect of mutual independence of the associations is the *specialization of their purposes*. That is the reason why each type of association is restricted to exercise its own function. Thus, the parties contribute to the definition and expression of the *political will* of citizens, trade unions, employers' associations and professional associations contribute to the defense of the rights and promotion of the *professional, economic and social* interests of their members, the mass media ensure the *correct information* of the public opinion. It is prohibited to exceed the purpose that a type of association is authorized for. Parties cannot express the political will of a group, but of the citizens, trade unions, employers' associations and professional associations cannot defend the political interests of their members; the mass media cannot favour a political or social force against another, as information must be correct etc.

On the other hand, associations must be *functionally independent* among themselves. This means that their internal organization and their relations with other individuals or legal entities must be independent. Eventually, associations must be relatively independent from each other. That's why, for example, more and more systems build a mechanism of public funding of political parties or limit the level of their private funding.

c.The associations' independence from the State. Pluralism also imposes the independence of the associations of civil society with regard to the State. This implies the freedom of their creation. This freedom is not *absolute*, but the law imposes the framework without barring their creation apart

[4] Romanian Pandects, Wolters Kluwer Publishing, *Pluralismul şi partidele politice conform art. 8 din Constituţie (Pluralism and political parties according to art. 8 of the Constitution)*, no. 5 of June 2008, page 43.

from the reasons and limits established by art. 53 of the Constitution and art. 40 on the right of association. As a matter of fact, this right of association is the particularization of pluralism imposed by art. 8 paragraph (1). It stipulates that *citizens may associate freely into political* parties, trade unions, employers' organizations and other forms of association. This implies that in principle *any form of association is allowed, associations cannot be in principle subject to a prior* authorization *regime and no social sphere can be excluded from the domain of free association*.

Also, the independence of associations with regard to the State implies the *impossibility to suppress them for reasons different than the ones established by the Constitutions or the law within the constitutional limits*. Thus, the parties or organizations *are unconstitutional if they advocate against political pluralism*, the principles of the rule of law or sovereignty, integrity or independence of Romania [art. 40 paragraph (2)], and publications cannot be suppressed [art. 30 paragraph (4)]. The principle is however autonomous with regard to the applications enforced to it by the Constitution, having its own norms. This mains that in principle no type of association can be suppressed, even in absence of an express prohibition.

The possibility to suppress an association or another does not imply the possibility to suppress an associative category in its entirety. The suppression of a private association must then not be expressly banned by the Constitution and must be made for the reasons and within the limits of art. 53 of the Constitution. The independence with regard to the State implies that the latter cannot dissolve a legally incorporated association. Thus, the Constitutional Court decided that „the Government may not modify or invalidate by ordinance a Court resolution for the incorporation of an association, irrespective of its nature"[5].

According to the Decision of the Constitutional Court no. 33/2002 as well, the independence of the associations towards the State, also implies their *functional independence.* Thus, art. 9 stipulates that trade unions, employers' associations and professional associations carry out their activities according to their by-laws, art. 29 paragraph (3) stipulates that religions are organized according to their own by-laws, art. 30 stipulates the fact that all types of censorship are prohibited, and art. 32 paragraph (6) states that university autonomy is guaranteed.

But from the pluralism principle set forth in art. 8 results a general functional independence of any association within civil society, even in the lack of an express provision. The limitations of this functional independence can only be applied within the limits of art. 53 of the Constitution.

Intercategorial pluralism

a. Intercategorial pluralism. The pluralism imposed by the art. 8 is an *intercategorial* pluralism. This means that within each associative category several associations must exist. Sometimes, the Constitution imposes intercategorial pluralism expressly, as it does with political pluralism [art. 1 paragraph (2) and art. 152 paragraph (1)]. Some other times, this pluralism necessary inside each associative category does not expressly result from the constitutional provisions, but it is imposed in case of all associative categories directly by art. 8 of the Constitution as requisite of democracy. In principle, pursuant to art. 8 of the Constitution, the State may not create in a certain domain a single association under which it places the individuals or orders the mandatory membership of the individuals in one of the associations existing in a certain domain.

b.The banning of the creation or authorization of a single association in a certain sphere of social relations. The first rule imposed by intercategorial pluralism is the fact that the State cannot create nor authorize a single association in a certain sphere of social relations. This is the principle applied by the European Court of Human Rights in the case *Eglise Métropolitaine de Bassarabie et autres c. Moldova* when it shows that the measures of the State „meant to restrict the community or place part of it against its will under a single direction represents (...) a violation of the freedom or religion", in this case, Moldavia doing this by not recognizing the Metropolitan Church of Basarabia

[5] Decision no. 333/2002, published in the Official Gazette no. 95 of February 2003.

motivating the fact that there already is a church that gathers Orthodox believers recognized by the State.

The European Court shows that the freedom of religion can only be effective if „the right of the believers to the religious freedom that includes the right to express their religion collectively implies the fact that they can associate freely, without an arbitrary intrusion of the State" and this implies that the individuals are not forced to place themselves, against their will, under a single legal entity representing a religious faith, the State infringing the art. 9 of the European Convention of Human Rights as it deprives the Metropolitan Church of Bessarabia of moral personality.[6]

Extrapolating, we may say that any right exerted collectively, implies, in order not to infringe the European Convention of Human Rights or the Constitution of Romania, the freedom or organization of the individuals into several structures with legal personality, any limitation that would tend to create a single associative structure in a domain of free association, irrespective of the criterion, being unconventional and unconstitutional.

c. Banning of mandatory membership. Thus, article 8 bans the mandatory membership of the citizens in a single association, irrespective of its category. The association must result from the free adhesion of the citizen in any collective framework of exercise of the individual rights he/she wants. The mandatory membership in an association can only arise if the exercise of a profession is managed privately, but the profession also implies the exercise of a public service mission. The public service mission must not be mistaken for the public mission. The meaning of the notion is precise: it is a service of the State that it grants for exercise to individuals that do not hold a public function, being private-law individuals.

The Constitutional Court states that the public mission should not be confounded with the State mission[7]. Thus, political parties exert a public mission, not one of public service, as notaries public do, for example. The Court links the public mission to two criteria: the nature of the legal personality and nature of the interest of the association. Thus, the Court claims that as *„the party is a public legal entity – a fact not contested by the authors of the notifications – its mission can only be a public one, as it has public interest and its objective is to form a general political will that the representativeness and legitimacy necessary for the fulfillment of its political programme depend on*".

Conclusions

a. Pluralism - a requisite of democracy.

Pluralism is declared in art. 8 of the revised Constitution of Romania as a «requisite» of constitutional democracy. But democracy is a normative principle pursuant to art. 1 paragraph (3). This means that art. 8 does not only make a remark: it *imposes pluralism.* Without pluralism the democratic nature of the State is denied, consequently the disposition of art. 1 paragraph (3) is violated. Art. 8 paragraph (1) materializes the democracy principle, particularizing it as a «constitutional» democracy.

The meaning of pluralism in the constitutional law cannot be dissociated from the political sciences, as the principles of constitutional democracy, defined as substantiation of the democratic process on the Constitution or as a political regime in which the State serves the individual (Dominique Chagnollaud), gravitates around the idea of political, ideological, social pluralism, tolerance and mutual respect of the elements of the society. The life of democracy, substantiated on an essentially legal act, the Constitution, is however carried out mainly in the sphere of the political

[6] Pandectele române (Romanian pandects), Wolters Kluwer Publishing, *Pluralismul şi partidele politice conform art. 8 din Constituţie (Pluralism and political parties according to art. 8 of the Constitution)*, no. 5 of June 2008, page 45.

[7] Decision no. 35/1996, published in the Official Gazette no. 75 of April 11, 1996.

power and in the sphere of the political parties and groups, essential elements of any democratic society.[8]

b. Pluralism as a guarantee

The text of art. 8 paragraph (1) calls pluralism a «guarantee». It is not about stating the fact that without pluralism there is no democracy, but a right granted to the citizens to request pluralism. *The guarantee is granted to the citizens, not to democracy*. This means that pursuant to art. 8 citizens may request the notification of the Constitutional Court so that it imposes pluralism in case of possible abuses of the legislative power, even if no other fundamental right is directly involved. Article 8 of the Constitution therefore guarantees a different fundamental right: *a right to pluralism*.

Of course, this right is related to the freedom of association, but should not be confounded with it. For example, economic pluralism does not necessarily imply the right of association. A single person, as an individual, can invoke, if he/she wants to become a trader and the law unreasonably restricts this right, the violation of economic pluralism.

The true milestone for the democratization process is political pluralism. Political pluralism suggests the existence in the society of a plurality of parties or political groups created and acting in conditions of equal treatment form the State. Under these circumstances, *pluralism appears as a guarantee for each party or political force that another party will not be able to act secretly with illegal means, imposing its will and interests over the others*.

The coexistence between contrary political forces, tolerance, dialogue, competition to gain adepts represents the essence of pluralist societies, of constitutional democracy. Although art. 8 of the Constitution as a whole includes pluralism in its political side, namely in the activity of political parties, paragraph 1 of art. 8 contains the general conception of the constituent according to which *pluralism in Romanian society is a requisite and guarantee of constitutional democracy*.

c. Pluralism – a fundament and characteristic of constitutional democracy

Pluralism commonly means a variety of equivalent factors that cannot be reduced to a unity. In the social domain we often speak, in order to express pluralism, about "unity in diversity". Before representing anything else, pluralism represents the belief in the value of diversity, and in the diversity, dialectics is at the antipode of the confidence in the level conflict.[9] Consequently, what the democracy theory gains from the pluralist matrix is not and cannot be a praise of *conflict,* on the contrary, a dynamic processing based on the principle according to which anything meant to be fair or true must resist and be verified by criticisms and differences.

Liberal ambiance is indispensable for *constitutional democracy.* The reduction of the conceptions, ideas, opinions, options, aspirations, attitudes to the common denominator of a so-called *ideal,* prefabricated *model,* the standardization and therefore uniformization of the individualism in spite of the diversity of their opinions means totalitarianism. The spirit of democracy is first of all the *sense of dialogue.* Democracy is not compatible with monopoly, or with the privilege of a doctrine that by fact or by law, it tends to ensure its exclusivity and permanence. It refuses any form of ideological orthodoxy. Irrespective of the origin or quality of the opinion, it must enjoy the same opportunity; it must neither be labeled as irrepressible nor stigmatized. Equality, indispensable in the civil legal relations, can be interpreted in the sphere of the opinions, contradictory or just different, as obligations of the public authorities to ensure to all these opinions equality in fact.[10]

The majority principle is the generally-admitted rule regarding the adoption of the decisions in constitutional democracies. Another solution – compatible with democracy – does not exist. The

[9] Giovanni Sartori, *Teoria democraţiei reinterpretată (Theory of democracy reinterpreted)*, Polirom, 1999, page 104.

[10] Ion Deleanu, op. cit., page 398.

majority principle is the *pivot of democratic governance, an incontestable precept* deriving from pluralism, as essentially pluralism has tends to confer power to the many. For some of them the majority principle is therefore absolute, its application does not have restrictions or hesitations. There is here however the risk of a *majority dictatorship,* that cancels the meaning of pluralism. A more nuanced approach is therefore preferable. Majority must be formed in a climate of tolerance and respect towards the opinions of the minority that could virtually be tomorrow's majority. We may therefore consider that the majority rule is a conventionalism, it is rather an experiment than a solution, a temporary transaction formula, necessary but not arrogant and exclusivist.

The pluralism principle also opposes to the uniqueness of power, expressed – in totalitarian political regimes – by conferring the leading party in society to the single party. Institutions are only the background for the affirmation of the dictatorship of that party that subordinates all the other social structures. In a composite and competitive society – as all the societies are in fact – *institutional pluralism is logical and necessary*.[11]

MINISTERIAL LIABILITY IN THE ROMANIAN CONSTITUTIONAL SYSTEM

NICOLAE PAVEL*

Abstract

What seems relevant to us for highlighting in this study is the approach of the ministerial liability within the Romanian constitutional and legal system starting with the first document of constitutional value, namely the Developing Statute of the Paris Convention of 1858 until today, that is the Constitution of Romania, revised in 2003 and republished. Having in view that this is a generous study topic covering over 150 years of constitutional and legal evolution of ministerial liability in Romania, it is necessary to specify from the very beginning the need of a diachronic approach of this topic by identifying all Romanian Constitutions that have regulated the constitutional system during this period of time. Moreover, we have to specify that, during this period of time, Romania has experienced several forms of governance, namely monarchy, people's republic, socialist republic and semi-presidential republic. With this approach, the proposed study opens a complex and complete yet not exhaustive vision in the current scope of the ministerial liability. It is also the reason why the study begins with preliminary considerations in which the terminology used in the content of the study is justified. Following a key-scheme, there are successively examined the two major parts of the study, namely the general theory regarding the concepts of ministerial responsibility and liability and the Romanian constitutional, legal and doctrinaire milestones of the ministerial liability.

***Keywords**: liability, responsibility, constitution, statute, monarchy, republic.*

1. Introduction

The object of the scientific undertaking shall be circumscribed to the scientific analysis of its two major parts, namely: 1. responsibility and liability – the general theory; 2. Romanian constitutional, legal and doctrinaire milestones of the ministerial liability, which cover, in a doctrinaire, constitutional and legal approach, the scope of the study regarding the ministerial liability within the Romanian constitutional system.

In our opinion, the field under analysis is important for the constitutional doctrine, for the doctrine of Administrative Law and for the general theories of Law, because with this scientific undertaking, we intend to establish, through a diachronic and selective approach, a complex and complete yet not exhaustive reflection of the entire current scope of the ministerial liability. In order to entirely yet not exhaustively cover the scope of study, the relevant preliminary specifications shall be followed by the theorisation of the concepts of liability and responsibility from the point of view of the doctrines of the general theory of Law. This topic of the ministerial liability has been addressed in accordance with a logical scheme of the analysis of the contributions of Romanian and foreign authors in the field of the general theory of Law and with the contribution of the author and of other authors to the theorisation of the ministerial liability starting with the first document of constitutional value of 1858 until today.

From the point of view of the integral yet not exhaustive coverage of the scope of ministerial liability, a logical scheme has been introduced, regarding the diachronic and selective approach of the evolution of constitutional regulations on ministerial liability, including the indication of government forms specific to the Romanian State for each Constitution enacted in accordance with the particularities of each form of governance.

* PhD, Lecturer, Constitutional Law and Political Institutions, Bucharest Law and Public Administration Department of "Spiru Haret" University, Bucharest (e-mail address: nicolaepavel0@yahoo.com).

With this approach, we intend to identify the theoretical, constitutional and legal sources of Law regarding the ministerial liability within the Romanian constitutional system.

Even if the ministerial liability turns back to the enactment of the first Romanian Constitutions, the theoretical interest in resuming it results from the fact that, in the already existing dedicated literature, some theoretical aspects of the ministerial liability have not always been paid due attention.

Moreover, in the relevant literature under consideration, in our opinion, the complex and complete yet not exhaustive reflection of the entire Romanian constitutional evolution of the ministerial liability is not examined in a diachronic approach.

In addition, the study turns into a comparative value the evolution of constitutional and legal regulations in a diachronic approach regarding the ministerial liability, specific to the successive forms of governance covered by the Romanian State, namely monarchy, people's republic, socialist republic and semi-presidential republic.

2. Responsibility and liability – The general theory

2.1. Preliminary considerations

At the beginning of this study, some preliminary specifications appear as being necessary, given the fact that summarising the normative content of Art. 109 of the Romanian Constitution, as republished[1], established by the constituents, is entitled *Liability of the Members of Government*, and the same Art. 109 para. (3) includes the following specification: The cases of liability and the penalties applicable to the Members of Government are regulated *by a law on ministerial liability*. In our opinion, some terminological specifications are necessary as concerns the two terms, namely *responsibility* and *liability*.

2.2. Concept of responsibility

2.2.1. Addressed at general level by the Explanatory Dictionary of Romanian Language[2], the term „responsibility" has the following meanings: *the obligation to be responsible/accountable for something; conscience and responsibility; task, responsibility assumed by somebody*.

2.2.2. Addressing it *from the point of view of the general theory of Law*[3], we find the term *,responsibility"* examined *as a fundamental principle of Law.*

In supporting this theory, responsibility is regarded as a social phenomenon; *it expresses an action of commitment of the individual in the process of social integration*. Being closely related to a person's action, *responsibility appears as being intimately correlated with the ruling system*.

Although traditionally *the concept of responsibility* has been placed absolutely *in the area of Morals,* more recent research studies highlight *the need of outlining this concept also in the area of Law*.

It is also specified that social responsibility appears under various forms: *moral, religious, political, cultural, juridical responsibility*.

Starting from the idea that the *Law should not be regarded and assessed only from the point of view of the possibilities its has to intervene post festum, in the area of the bad things already done – a moment when a penalty is imposed*, the author mentions that it *has the possibility, through the content of its prescriptions, to contribute to the establishment of a cultural attitude of the individual*

---

[1] *** The Constitution of Romania, as revised in 2003, was published in the Official Gazette of Romania, Part I, No. 767, of the 31st of October 2003.

[2] Vasile Breban, *A Small Dictionary of Romanian Language*, (Bucharest: Enciclopedica, 1997), 568.

[3] Nicolae Popa, *The General Theory of Law*, (Bucharest: Actami, 1998), 123-125. The author *defines the Law* as being the assembly of rules assured and guaranteed by the State, aimed to organise and discipline the human behaviour in the main relations within the society, in an environment specific to the manifestation of the co-existence of freedoms, defence of essential human rights and establishment of the spirit of justice.

towards the law, an attitude that presupposes a concern assumed for the integrity of social values defended by legal ways, which implies the phenomenon of responsibility.

2.2.3. Addressing it also from *the point of view of the general theory of Law*[4], we mention that the term *"responsibility"* is examined as a *social phenomenon* and as *a fundamental principle of Law*. In author's opinion, the responsibility *appears as a social phenomenon*, since it expresses an action of commitment of the individual in the context of social relations and, eventually, responsibility *is assuming liability* for the outcome of the social action of a person.

Starting from these considerations, responsibility is defined as a fundamental principle of Law, which should be understood as being *the conscious linking of the individual to the values and norms of the society, because the degree of responsibility ultimately indicates the status of legality in a State and it is closely related to the overall progress of the society*. In addition, the author specifies that *the law may create the feeling of responsibility as a state of mind in the conscience of target individuals*.

2.2.4. Analysing the idea of responsibility from *the point of view of the positive Law*.[5]

As concerns the positive Law, they specify that, as it is usually understood, it comprises rules alleged as being Law, even when they do not always actually have this capacity. *These rules hence show what the target persons are entitled to do, or not*. Human actions are assessed from the point of view of the Justice. Juridical, general or individual rules are thus established. Their peculiarity is that *they do not automatically impose themselves as a law of the nature, they are breakable*; they therefore presuppose the character of rational beings of the target individuals and, consequently, their moral freedom.

Starting from these rational notions, they specify that the *idea of person* is thus established, in the form of a specific reality, to whom rights and obligations can be assigned.

The idea of subjective Law cannot be conceived further *than being correlative to the idea of obligation*, *a person's right meaning only the obligation of other person(s) to observe it*, and a person's obligation means only the right of other person(s) to demand its observance. *In its turn, the idea of obligations leads to the idea of responsibility*. Consequently, a right or an obligation includes the generic idea of object of a provision.

2.2.5. Analysing the idea of responsibility *from the point of view of the pure theory of Law.*[6]

We notice that the author examines *the responsibility* from the point of view of *the relation between juridical obligation and responsibility,* which, in our opinion coincides with the notion of *responsibility according to the Romanian Law*.

From the point of view of the pure theory of Law, the author *examines the concept of responsibility in close correlation with the juridical obligation*. This correlation is based on the idea that *the individuals are obliged to the conduct prescribed by the social order*. In other words, an individual *has the obligation to adopt a certain conduct* when it is prescribed by the social order. Saying that the conduct is prescribed, and saying that *an individual is compelled to such a conduct,* and *that s/he is compelled to behave that way, these are synonymous expressions*. It comes out that, since the juridical order is a social order, *the conduct to which an individual is compelled from juridical point of view is a conduct that must take place*, directly or indirectly in relation to another individual.

We are probably used to separate the juridical rule from the juridical obligation, and say that *a rule establishes a juridical obligation*. But we must understand well that *the juridical obligation*

[4] Ion Dogaru, *The General Theory of Law*, (Craiova: Sitech, 1998), 121.

[5] Mircea Djuvara, *Rational Law, Sources and Positive Law,* (Bucharest: ALL, 1995), 502-504. The author also specifies: the reasoning of the positive Law therefore appears in the form of a discursive thinking, which uses all special logical categories of the rational Law; these *categories derive from the ruling character of the logical idea of Justice*.

[6] Hans Kelsen, Théorie pure du droit, (Paris: Dalloz, 1962), 157-170.

related to a certain conduct, *far from being a juridical standard differing from the juridical rule imposing that conduct, is that juridical rule itself*.

The statement according to which *an individual is obliged from juridical point of view to a certain conduct* is identical with the statement according to which *a rule prescribes a defined conduct for a certain individual*. In addition, the juridical obligation has a general character as well as an individual character, just like the identical juridical rule.

2.2.6. Turning into value the above-mentioned issues, we retain the following components of the concept of responsibility, which we regard as essential in covering the scope of its content:

a) the concept of responsibility is studied, as it comes out from the issues presented above, from the general theory of Law, the theory of positive Law and the pure theory of Law.

b) the notion of responsibility is addressed as a fundamental principle of Law. However, starting from the premise that the Constitutional Law is a one of the branches of the unitary Romanian Law, as a main branch of the unitary Romanian Law, in our opinion, we can address the notion of *responsibility as a general principle of constitutional rank* established by the fundamental law of Romania. We support this analysis with the provisions of Art. 1 para. (5) of the Constitution of Romania, as republished, which proclaims: *In Romania, observing the Constitution, its supremacy and the laws is compulsory*. We have to mention that this general principle was introduced in the content of the fundamental law after the revision of 2003.

c) starting from the *definition of positive Law, which comprises all regulations in force within a State*, and from the *relation between the juridical obligation and the responsibility* established by positive Law, and mentioned above.

d) from the point of view of the general theory of Law, positive Law and pure theory of Law, the subject of Law is the subject of a juridical obligation or the subject of law. In this approach, it comes out that *a subject of law can only be a person entitled to rights and obligations*.

e) we will define the *responsibility as a general principle of constitutional rank, according to which observing the Constitution and all regulations in force in Romania is an obligation for all subjects of law, individuals and public authorities*.

2.3. The concept of liability

2.3.1. Addressed at general level by the Explanatory Dictionary of Romanian Language[7], the term "responsibility" has the following meanings: *a) the fact of being responsible; responsibility; the obligation to account (morally or materially) for the fulfilment or failure to fulfil actions. b) a consequence of the intentional failure to fulfil an obligation*.

2.3.2. Addressing it *from the point of view of the general theory of Law*[8], we find that the notion of *liability* is examined *in terms of juridical liability*.

Starting from the idea that *the Law could not act before the dangerous fact is done,* the author mentions the following: *in order to link the functioning of juridical liability*, as an institution specific to the Law, to the general purposes of the juridical system, there must be a belief that the law – the right law, the fair law - *may create the feeling of responsibility in the conscience of its targets, as a state of mind*.

At the same time however, the lawmaker pays attention every time also to the *possibility of breaching the rule by non-conform conduits*. Through his fact, the author specifies, *the person who breaches the provisions of juridical rules touches the rule of law, s/he disturbs the good and normal development of social relations, s/he affects the legitimate rights and interests of his community members, s/he endangers the co-existence of freedoms and social balance*.

Since those who break the rule of law can only be human beings, these are the reasons why they must be liable.

---

[7] Vasile Breban, *op. cit*. 551.

[8] Nicolae Popa, *op. cit*. 323-326.

In this regard, the focus is put on penalty, as a reparatory measure. From this point of view, the author specifies that *the juridical responsibility is a juridical constriction relation,* and *the penalty is the object if this relation*.

2.3.3. Addressing it also from *the point of view of the general theory of Law*[9], we notice that the notion of *responsibility* is examined in terms of *juridical liability*. The author highlights the fact that *responsibility in general and juridical liability in particular can only be understood when the individual is in a conscious relation with the values and norms of society since, eventually, the status of legality itself is a reflection of the degree of her/his liability*.

Underlining the fact that *juridical liability* and *penalty* are two faces of the same social phenomenon, they are different because the first – *the juridical liability* – is the juridical framework for the latter – *the penalty*. It is also considered that *the functioning of juridical liability*, as an institution specific to the Law, and the correlation of this institution with the general scope of the juridical system, are closely related to the belief that the law is right, it is fair.

2.3.4. Addressing it *from the point of view of the positive Law*[10], we retain that, in juridical terms, in our opinion, the author has in view the following hypotheses:

a) starting from the *notion of Law*, they consider that its rules *essentially comprise the idea of right and obligation*. Not all the rules of law so defined are included, in practice, in the positive Law. *The positive Law, namely the applied law*, comprises a very limited number of rules, as compared to all possibilities of juridical rules, which exist at a certain moment.

b) as concerns the *juridical relation*, we retain the following remarks: 1) among persons, by juridical action, regarding a certain object, *a certain specific relation is established*. This relation is essential and it is different from the other elements of the relationship. *The entire Law is therefore built on obligations, which are its simplest elements*. 2) since the juridical relation is normative, it represents a commandment, namely an order, moreover, they think all legal provisions represent such a commandment. 3) the juridical relation implies the idea of obligation. 4) the juridical commandment is breakable. 5) as concerns the right-obligation relation, they think it is absolute. 6) the idea of juridical relation leads to the idea of penalty. The penalty is applied by the State. 7) the juridical penalty is the second element of the positive Law.

2.3.5. Addressing it from *the point of view of the pure theory of Law*[11], we notice that the author examines *the juridical responsibility* in terms of *relation between juridical obligation and penalty,* which, in our opinion, coincides with *juridical liability in the Romanian Law*.

If we conceive the *Law as a restrictive order*, we cannot say that *a given conduct is objectively prescribed by Law* and that it can therefore be *regarded as being the object of a juridical obligation*, unless a juridical rule *attaches to the contrary conduct the penalty of a restrictive action*. Starting from the idea that *juridical obligation* is nothing but *the positive rule* that prescribes individual's conduct, by *attaching a penalty to the contrary conduct, u*nder these circumstances, the individual is *compelled* from juridical point of view *to the conduct so prescribed*, even when the representation of the rule does not *create in him/her any kind of impulse* towards that conduct.

Moreover, to the extent to which the positive Law consecrates *the principle according to which ignoring the law makes no exception as concerns the penalty established by Law*, individual's obligation exists even if s/he has no idea about the juridical rule aimed to oblige her/him, in other words, if s/he does not know it. In this context, the responsibility is for guilt and for outcome.

2.3.6. Turning into value the above paragraphs, we retain the following components of the concept of liability, which we regard as essential in covering the scope of its content:

a) as mentioned above: the lawmaker pays every time attention also to *the possibility of breaking the rule by non-compliant conducts*. As the author specifies, *the person who breaches the*

[9] Ion Dogaru, *op. cit*. 267-269.
[10] Mircea Djuvara, op. cit. 40-42, 213-224, 302.
[11] Hans Kelsen, op. cit. 157-170.

provisions of juridical rules by her/his action *affects the rule of law, disturbs the good and normal existence of social relationships, affects legitimate rights and interests of the people around her/him, endangers the co-existence of freedoms and the social balance*.

b) furthermore: if we conceive *the Law as a restrictive order*, we cannot say that *a given conduct is objectively prescribed de jure*, and that it therefore *be regarded as being the object of a juridical obligation*, unless a juridical rule *attaches the penalty of a restrictive action to the contrary conduct*. We start from the idea that *juridical obligation* is nothing but the *positive rule* that prescribes individual's conduct *by attaching a penalty to the contrary conduct*.

3. Romanian constitutional, legal and doctrinaire milestones of ministerial liability

3.1. *The developing statute of the Convention of 7/19 August 1858*[12]

From the systematic examination of the normative content of the Statute, we retain the following issues for this study: a) the Statute, in our opinion, can be regarded as a Constitution, given the provisions of Art. XVII, which stipulate that: All public officers, with no exception, upon their designation, *have to swear observance of the Constitution and laws of the country and faith to the God*. b) The Statute includes no provision on ministerial liability.

3.2. *Constitution of Romania of 1866*[13]

We have to mention right from the beginning that the Fundamental Law of Belgium of 1831 was a source of inspiration for the Constitution of Romania of 1866.

The systematic examination of the constitutional text reveals that the core of the ministerial liability is found in the normative content of the following articles:

a) Art. 92: *The person of the King is inviolable*. *His Ministers are accountable.* No act of the King can be enforced unless it is counter-signed by a Minister who consequently actually becomes liable for that act.

b) Art. 100: In no case *can a verbal or written order of the King exempt a Minister from liability*.

c) Art. 101: Each of *the two Assemblies as well as the King are entitled to accuse the Ministers and refer them to the High Court of Cassation and Justice*, who is the only one entitled to judge them in united Sections, except what will be stipulated by laws as concerns *the exercise of civil action and the offences committed by Ministers beyond the exercise of their powers*. Charges against the Ministers *can only be pressed by a majority of two thirds of the present Members*. *A law* introduced in the first session shall determine *the cases of responsibility, the penalties applicable to the Ministers and the manner of prosecution against them*, both as concerns the accusation admitted by the national representatives and as concerns the prosecution by the injured parties. The accusation initiated by the national representatives against the Ministers shall support itself. The prosecution initiated by the King shall be conducted through the public ministry.

d) Art. 102: Until the law mentioned in the previous Article is made, *The High Court of Cassation and Justice has the power to characterise the offence and determine the penalty*. However, the penalty cannot exceed detention, without prejudicing the special cases indicated by the penal laws.

e) Art. 103: The King can only forgive or reduce the penalty decided for Ministers by the High Court of Cassation and Justice *after the request of the Assembly who pressed charges*.

Turning into value the constitutional provisions mentioned in the Articles above, we retain mainly the following constitutional rules on ministerial liability:

---

[12] Ioan Muraru and Gheorghe Iancu, *Romanin Constitutions*, Texts. Notes. A comparative presentation, (Bucharest: Actami, 2000), 7-14.

[13] *Ibidem,* 31-59.

a) by proclaiming the inviolability of the person of the King, the liability is transferred to his Ministers, through the counter-signing of the official acts issued by him, acts that obtain a compulsory juridical power by being counter-signed.

b) verbal or written order of the King cannot exempt a Minister from liability.

c) either the King or the two Assemblies have the right to press charges against Ministers. Charges are pressed by vote of the 2/3 majority of the number of members of the two Assemblies. The prosecution initiated by the King shall be conducted through the public ministry. The High Court of Cassation and Justice has the competence to judge in reunited Sections.

d) A law introduced in the first session shall determine the cases of responsibility, the penalties applicable to the Ministers and the manner of prosecution against them.

e) The King can only forgive or reduce the penalty decided for Ministers by the High Court of Cassation and Justice after the request of the Assembly who pressed charges.

Regarding the ministerial responsibility, Professor Constantin Dissescu,[14] *contemporary with the Constitution of Romania of 1866, specifies the following*:

a) Ministerial responsibility is one of the bases of our constitutional system; it guarantees *King's inviolability*.

b) Ministerial responsibility is legitimate, right and necessary. It is *legitimate*, because there is nothing more rightful than the responsibility of each person for her/his actions within the State. The positive law, the entire social and political organisation is based on this idea, according to which the individual is free, and *the principle of human freedom leads us to the principle of responsibility*. It is *right*, because nobody can be compelled to be a Minister unwillingly. Since a minister counter-signs an act, s/he therefore acknowledges that s/he understands the utility and legality of that act. It is *necessary,* because only in this way we can ensure observance of the laws and Constitution. It is a natural fact against which nobody can complain.

3.2.1. *Law of the 2nd of May 1879 on ministerial responsibility* [15]

From the systematic examination of the normative content of the law, we retain mainly the following issues: a) the law comprises three parts: responsibility, judgment procedure, and rules on prescription. b) the first part, entitled *Responsibility* establishes the actions and facts for which the Ministers are responsible while exercising their mandate. According to the law, the responsibility can have a penal, civil or delictual nature. c) the judgement procedure comprises mainly the crimes and offences committed by a Minister and the previous authorisation of the Chambers and, if applicable, also of the King, for referral to the court and initiation of the penal instruction and preventive detention, also for civil liability towards the State. d) as concerns the prescriptions, the Common Law provisions are maintained.

3.3. *Constitution of Romania of 1923* [16]

The systematic examination of the constitutional text reveals that the core of ministerial liability is found in the normative content of the following articles:

a) Art. 87: The person of the King is *inviolable*. *His Ministers are accountable.* No act of the King *can be enforced unless it is counter-signed by a Minister who consequently actually becomes liable for that act*.

b) Art. 97: In no case *can a verbal or written order of the King exempt a Minister from liability*.

c) Art. 98: *Each of the two Assemblies as well as the King are entitled to request Ministers' prosecution and refer them to the High Court of Cassation and Justice*, who is the only one entitled

[14] Constantin Dissescu, *Constitutional Law*. (Bucharest: The printing house of SOCEC & Co. Bookstore, LTD, 1915), 826-842.

[15] *** Law of the 2nd of May 1879 on ministerial responsibility was published in „The Official Gazette - Journal of Romania", No. 98 of the 2nd of May 1879.

[16] Ioan Muraru and Gheorghe Iancu, op. cit., 63-91.

to judge them in united Sections, except what will be stipulated by laws as concerns the exercise of civil action of the injured party and as concerns the crimes and offences committed by Ministers beyond the exercise of their powers. *Charges against Ministers by the Lawmaking Bodies* can only be pressed by a majority of two thirds of the present Members. The instruction shall be conducted by a commission of the High Court of Cassation, consisting of five members randomly drawn in united Sections. This commission has also the power to qualify the facts and decide prosecution or non-prosecution. The defence before the High Court of Cassation and Justice *shall be conducted through the public ministry*. The law on ministerial responsibility determines the cases of liability and the penalties applicable to the Ministers.

d) Art. 99: *Any party affected by a decree or order signed or counter-signed by a Minister, which breaches an express text of the Constitution or of a law, may demand financial compensations from the State, in accordance with the Common Law, for the prejudice suffered.* Either during the judgment or after the establishment of decision, the Minister may be summoned before the ordinary courts, upon the request of the State, following the vote of one of the Lawmaking Bodies, *for civil liability for the damage alleged or suffered by the State*. Minister's illegal action does not exempt from joint liability the public officer who counter-signed, unless s/he had warned the Minister in writing.

Turning into value the constitutional provisions mentioned in the Articles above, we retain mainly the following constitutional rules on ministerial liability:

a) the ministerial liability itself is comprised in Articles 98 and 99 of the Constitution of Romania of 1923, which, in our opinion, have undergone essential changes, as compared to Articles 101, 102 and 103 of the Constitution of Romania of 1866. These changes are as follows:

b) according to Art. 98, the penal instruction shall be conducted by a commission of the High Court of Cassation, consisting of five members randomly drawn in united Sections. This commission has also the power to qualify the facts and decide prosecution or non-prosecution. In addition, the defence before the High Court of Cassation and Justice *shall be conducted through the public ministry.*

c) in accordance with Art. 99, *any party affected by a decree or order signed or counter-signed by a Minister, which breaches an express text of the Constitution or of a law, may demand financial compensations from the State, in accordance with the Common Law, for the prejudice suffered*. Under these circumstances, either during the judgment or after the establishment of decision, the Minister may be summoned before the ordinary courts, upon the request of the State, following the vote of one of the Lawmaking Bodies, *for civil liability for the damage alleged or suffered by the State*.

d) as concerns the joint civil liability, according to the same Article, Minister's illegal action does not exempt from joint liability the public officer who counter-signed, unless s/he had warned the Minister in writing.

3.4. *Constitution of Romania of 1938* [17]

The systematic examination of the constitutional text reveals that the core of ministerial liability is found in the normative content of the following articles:

a) Art. 44: The person of the King is *inviolable*. *His Ministers are accountable.* The Acts of State of the King shall be counter-signed by a Minister who *consequently becomes liable for those acts*. *The exception is the designation of the Prime Minister, which shall not be counter-signed.*

b) Art. 70: The King and any Assembly *may request Ministers' prosecution and referral to the High Court of Cassation and Justice*, who is the only one entitled to judge them in united sections. As concerns *the exercise of civil action by the injured party* and as concerns the crimes and offences committed by them beyond the exercise of their powers, they are subject to the Common Law rules. *Lawmaking Bodies' decision to prosecute Ministers* shall be made by a majority of two

[17] Ioan Muraru and Gheorghe Iancu, op. cit. 65-118.

thirds of the present members. *The instruction shall be conducted by a commission of the High Court of Cassation and Justice, consisting of five members* randomly drawn in united sections. This commission has also the power to qualify the facts and decide prosecution or non-prosecution. *The defence before the High Court of Cassation and Justice shall be conducted by the* Public Ministry. The Law on Ministerial Responsibility determines the cases of liability and the penalties applicable to the Ministers. *Ministers of Justice who have left the office* cannot act as lawyers for one year. *Out-of-office Ministers* cannot be members of the Managing Boards of a company with which they signed contracts during the next three years.

c) Art. 71: *Any party whose rights have been affected by a decree or order signed by a Minister, by breaching an express text of the Constitution or of the laws in force,* may demand financial compensations from the State, in accordance with the Common Law, for the prejudice suffered.

Turning into value the constitutional provisions mentioned in the Articles above, we retain mainly the following constitutional rules on ministerial liability, which have undergone changes, as compared to the similar regulations in the Constitution of Romania of 1938:

a) according to Art. 44, the designation of the Prime Minister by the King is exempted from being counter-signed.

b) there are new rules included in the content of Art. 70, as follows:

b.1. as concerns the exercise of civil action by the injured party and as concerns the crimes and offences committed by them beyond the exercise of their powers, they are subject to the Common Law rules. b.2.) Ministers of Justice who have left the office cannot act as lawyers for one year. b.3.) Out-of-office Ministers cannot be members of the Managing Boards of a company with which they signed contracts during the next three years.

c) a new rule is included in the content of Art. 71, according to which: Any party whose rights have been affected by a decree or order signed by a Minister, by breaching an express text of the Constitution or of the laws in force, may demand financial compensations from the State, in accordance with the Common Law, for the prejudice suffered.

3.5. *Constitutions of the People's Republic of Romania of 1948 and 1952* [18]

The systematic examination of the constitutional texts of the two Constitutions reveals the following: a) the core of ministerial responsibility is found in the normative content of Art. 73 of the Constitution of the People's Republic of Romania of 1948, in the following form: *The Ministers are liable for their penal facts committed while exercising their powers*. *A special law shall establish the manner of prosecution and judgement for Ministers.* b) The Constitution of the People's Republic of Romania of 1952 does not include constitutional rules on ministerial responsibility.

3.6. *The Constitution of the Socialist Republic of Romania of 1965, as subsequently re-published* [19]

The systematic examination of the constitutional texts reveals that the ministerial liability was formulated as follows: *The Ministers and the leaders of other central bodies of the State Administration are liable before the Council of Ministers for the activity of the bodies they lead*.

3.7. *Constitution of Romania of 2003*[20]

The systematic examination of the constitutional text reveals that the core of ministerial liability is found in the normative content of Art. 109, a content summarised under the title *Liability of the Members of Government*. The above-mentioned Article 109 establishes the following three relevant constitutional rules:

---

[18] Ioan Muraru and Gheorghe Iancu, op. cit., 123-138 şi 143-164.

[19] *Ibid*em, 169-198.

[20] *** The Constitution of Romania, as revised in 2003, was published in the Official Gazette of Romania, Part I, No. 767, of the 31st of October 2003.

Para. (1) The Government is politically liable only before the Parliament for their entire activity. Each Member of Government is politically liable together with the other Members for Government's activity and for their actions.

Para. (2) Only the Chamber of Deputies, the Senate and the President of Romania are entitled to demand penal prosecution for the Members of Government for facts committed while exercising their powers. When penal prosecution is requested, the President of Romania may order their suspension from office. Referral of a Member of Government leads to her/his suspension from office. Competent for judgement is the High Court of Cassation and Justice.

Para. (3) The cases of liability and the penalties applicable to the Members of Government are regulated by a law on ministerial responsibility.

Turning into value the above-mentioned constitutional provisions, we retain mainly the following constitutional rules regarding the liability of the Members of Government:

a) *As concerns the constitutional system of political liability*

a.1. we find out that, if the marginal title of the article under analysis is *Liability of the Members of Government,* the content of the text of Art. 109 para. (1) refers to the *political liability of the Government only before the Parliament* for their entire activity. Government's political liability only before the Parliament can be explained by taking into consideration the provisions of Art. 103 para. (3) of the Constitution, according to which *„Government's agenda and list are debated by the Chamber of Deputies and Senate, in a common sitting*. *The Parliament grants full confidence to the Government by the vote of the majority of Deputies and Senators",* and of Art. 85 para. (1) of the Constitution, according to which „*the President of Romania designates a candidate for the position of Prime Minister and appoints the Government based on the confidence vote granted by the Parliament"*. We notice that the appointment of the Government by the President of Romania is based on the confidence vote granted by the Parliament.

Also regarding Government's political liability, the second thesis of Art. 109 para. (1) of the Constitution establishes the rule according to which: *Each Member of Government is politically liable jointly with the other Members for Government's activity and actions*.

In our opinion, the joint liability is imposed since, in accordance with the provisions of Art. 103 para. (2) of the Constitution: „The candidate for the position of Prime Minister, within 10 days after designation, shall demand *Parliament's confidence vote for Government's agenda and entire list"*.

a.2. The political liability subsumes also the other manners of parliamentary control established by the Constitution, as part of the relations between Parliament and Government, as concerns: 1). the information provided to the Parliament (Art. 111), 2). The questions, inquiries and simple motions (Art. 112), 3). the censorship motion (Art. 113), 4). the commitment of Government liability (Art. 114).

The most severe penalty, established for Government's political liability, is *dismissal* under the circumstances established by the provisions of Art. 110 para. (2) of the Constitution, according to which: „*The Government is dismissed when the Parliament withdraws the confidence they granted or when the Prime Minister is in one of the cases stipulated at Article 106, except being revoked, or s/he finds it impossible for herself/himself to exert her/his powers for more than 45 days*".

b) *As concerns the constitutional system of penal liability*

b.1. the constitutional system of penal liability of the Members of Government is established by the normative content of Art. 109 para. (2) thesis I of the Constitution, which, as concerns *the penal liability* of the Members of Government, it specifies that: „*Only the Chamber of Deputies, the Senate and the President of Romania are entitled to request penal prosecution of the Members of Government for the facts committed while exercising their powers*".

b.2. according to Art. 109 para. (2) thesis II of the Constitution, „*When penal prosecution is requested*, *the President of Romania may order their suspension from office"*.

b.3. according to Art. 109 para. (2) thesis III of the Constitution, „*Referral to the court of a Member of Government incurs her/his suspension from office*".

b.4. according to Art. 109 para. (2) thesis IV of the Constitution „*The High Court of Cassation and Justice has the competence for judgement*".

3.7.1. *Law 115/1999 – Law on ministerial responsibility* [21]

In applying the constitutional provisions comprised in the normative content of Art. 109 para (3), which establish: „*The cases of liability and the penalties applicable to the Members of Government are regulated by a law on ministerial responsibility*", the Law 155/1999 was enacted, as amended, republished. The systematic analysis of the normative content of the law reveals that it is structured into four Chapters, from whose content we retain the following selective issues for this study:

a) Chapter I, entitled General Provisions, comprises the following general principles applicable to its entire normative content.

a.1. In our opinion, justified in the second section of the study on responsibility, Art. 1 of the Law *consecrates the principle of responsibility,* which establishes the following general juridical obligation for Government and its Members: *The Government, in its entirety, and each of its Members are compelled to fulfil their mandate by observing the Constitution and the laws of the country, as well as the Governing Plan accepted by the Parliament*.

This principle is an application and a development of *the constitutional principle of responsibility*, proclaimed in Art. 1 para (5) of the Constitution of Romania, republished, and it consecrates the following fundamental principle applicable within the Romanian State: „*In Romania, observing the Constitution, its supremacy and the laws is compulsory*".

As concerns observance of the Constitution and its supremacy, the constitutional doctrine specifies as follows: „*Observance of the Constitution and the other normative rules is a general obligation for all subjects of right, both public authorities and citizens*".[22]

a.2. enlarging on the constitutional principles from Art. 109 para (1) of the Constitution, it establishes the general principles regarding Government's political liability in the content of Art. 2, Art. 3 and Art. 4 of the law.

a.3. by extending the responsibility of the Members of Government, in accordance with Art. 5 of the law, a general principle is established, according to which: „Besides political liability, *the Members of Government may be also liable from civil, penalty-related, disciplinary or penal point of view*, as appropriate, according to the relevant Common Law, unless this law includes derogatory provisions".

a.4. in addition, in the content of Art. 6 of the law, *the understanding of the wording Members of Government* is established.

b) Chapter II of the law establishes the Penal Responsibility of the Members of Government.

c) Chapter III of the law establishes the Procedure for Penal Prosecution and Judgement of the Members of Government.

d) Chapter IV of the law, entitled Final Provisions, establishes additional procedure rules.

4. Conclusions

The main purpose of the study on ministerial liability within the Romanian constitutional and legal system, specific to the forms of governance covered by the Romanian State, namely monarchy, people's republic, socialist republic and semi-presidential republic, has been achieved. The main directions of study for achieving the proposed objective were as follows:

---

[21] ***Law 115/1999 - *Law on ministerial responsibility*, republished, in „The Official Gazette of Romania", Part I, No. 200 of the 23rd of March 2007.

[22] Coordinators Ioan Muraru and Elena Simina Tănăsescu, *The Constitution of Romania, Remarks by articles*, (Bucharest: C.H. Beck, 2008), 18.

1. Theorisation of the concepts of responsibility and liability from the point of view of the Explanatory Dictionary of Romanian Language and of various branches of Law having as an object of study the above-mentioned concepts. This section comprises two parts.

In the first part of the study, the constitutional regulations containing these two concepts are identified. The first part of the section is dedicated to the theorisation of the concept of responsibility.

The main Romanian and foreign documentation sources used for theorising the concept of responsibility were as follows: the Explanatory Dictionary of Romanian Language, the general theory of Law, the theory of positive Law, and the pure theory of Law.

The Explanatory Dictionary of Romanian Language defines the responsibility as an obligation to be accountable and as a liability assumed by a person. The general theory of Law examines the responsibility as a fundamental principle of Law, which is a social phenomenon that expresses an action of commitment of the individual in the process of social integration. The theory of positive Law examines the responsibility, as it is usually understood, namely as rules indicating what the target persons have the right to do, or not. The pure theory of Law examines the concept of responsibility in close correlation with the juridical obligation. This correlation is based on the idea that the individuals are compelled to have the conduct prescribed by the social order.

The second part of the section is dedicated to the theorisation of the concept of liability, using the same information sources as in the first section. The Explanatory Dictionary of Romanian Language defines the liability as an obligation to account for the fulfilment or failure to fulfil certain actions and as a responsibility. The general theory of Law examines the liability from the point of view of juridical liability.

The theory of positive Law examines the liability by starting from the idea of subjective Law that cannot be further conceived unless it is correlated with the idea of obligation, a person's right meaning only the obligation of other person(s) to observe it. In its turn, the idea of obligations leads to the idea of responsibility.

The pure theory of French Law examines the juridical responsibility from the point of view of the relation between juridical obligation and penalty, which, in our opinion, coincides with the juridical liability in the Romanian Law.

2. The Romanian constitutional, legal and doctrinaire milestones of ministerial liability comprise, in a diachronic and selective approach, the analysis of the entire scope of evolution of the concept of ministerial liability within the Romanian constitutional system.

The second part of this study begins with the identification of regulations on ministerial liability, in the normative content of the first document of constitutional value in Romania, namely the Developing Statute of the Paris Convention of 1858.

Following a pre-set scheme, there are identified all regulations on ministerial liability in the Romanian Constitutions enacted in Romania until nowadays, together with their revisions, as well as in the relevant secondary laws. In addition, the constitutional doctrine related to Romania's constitutional evolution during the mentioned period of time is quoted.

The two parts of the study can be regarded as a contribution to the extension of research studies on ministerial liability within the Romanian constitutional system, which cover over 150 years of constitutional and legal evolution in Romania.

Furthermore, we specify that the above-mentioned study opens a complex and complete yet not exhaustive vision on the area under analysis.

Given the selective approach of the ministerial liability, the key-scheme proposed may be multiplied and extended to other relevant subsequent studies, given the vastness of the area under analysis.

THE ECONOMIC ANALYSIS OF LAW - WILL THE ROMANIAN DOCTRINE FINALLY CATCH UP WITH IT?

MONICA-FLORENTINA POPA*

Abstract
Although a well-established presence on the international legal scene, the economic analysis of law is still an unfamiliar concept to most Romanian scholars. While worldwide, prestigious universities offer special courses on this topic and an impressive body of legal studies continues to add up, only scant traces of this important legal school can be detected in some recent Romanian doctoral thesis and papers.
This article explores the main concepts of the economic analysis of law, the recent spin-offs of this theory, especially in the area of comparative law, as well as some of the critiques addressed in the legal doctrine, concerning the consequences on law of overemphasizing "efficiency" to the expense of less quantifiable, moral and social considerations. Some explanations on why the Romanian doctrine is lagging behind with respect to the economic analysis of law will also be attempted, together with a tentative answer to whether this major legal theory will ever make an impact on local doctrinal developments in the near future.

Key words: *economic analysis of law, efficiency, legal origins thesis, comparative law, legal reform*

Introduction

The economic analysis of law as developed by the Chicago school in the early 1960s can trace its origins to various preceding theories – like American realism and utilitarianism - that shaped the western legal thought long before concepts such as market economy, efficiency, transaction costs (terminology specific to this doctrine) and law as instrument for promotion of economic efficiency, could be coherently developed in one unifying theory. The impact of this doctrine that purports to measure the efficiency of legislation and court decisions with the conceptual tools provided by economics has not been negligible in common-law systems, mainly in USA, its country of origin, where traditionally positivism has held a preeminent place, with its emphasis on the autonomy of law and its legal phenomena. The latest spin-offs of the economic analysis of law can be found in the comparative law field, namely in the legal origins theories, that link economic performance to certain characteristics of a legal system, implying that some systems are better suited to economic development than others.

As stated in the abstract, this paper presents summarily the main concepts of the economic analysis of law, in order to better assess its today impact on the comparative law field. The paper also reviews the very few Romanian works that deal with the issue of law and economics (an alternative name for the economic analysis of law), even though two of these works are purely philosophical-speculative and hence have more to do with political economy than law. The scarcity of Romanian research on this topic highlights what we believe to be a certain cultural aversion towards such a realistic, harsh approach to law, aversion shared in fact by the many legal cultures from the continent.

Moreover, even our most comprehensive compendia on philosophy of law or jurisprudence[1] and its historical developments do not include the economic analysis of law in their presentation. Therefore, we consider that a research paper on this matter, that reviews not only the main theory, but also its current avatars in the legal field, will prove useful by the relative novelty of this theme in our

* Assistant Lecturer, PhD, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: monica.popa@univnt.ro).

[1] One of the most notable contribution on this subject is made by "The Philosophy of Law: Major Legal Theories", ("*Filosofia dreptului. Marile curente*") by N. Popa, I. Dogaru, Gh. Dănişor, D.C. Dănişor, ed. ALLBECK, Bucharest, 2002.

legal doctrine, and will perhaps spur an interest in the economic analysis of law that will go beyond narrowly-focused research papers on tort liability and collateral securities or speculative doctoral thesis in philosophy and political economy.

1. Brief presentation of the economic analysis of the law theory

In introducing this topic, some authors formulate the issues this theory purports to answer, such as "should law be primarily concerned with promoting economic efficiency?"[2] This theory is not politically-neutral, so "the answer will depend upon the political leaning of the reader. The believer in the free market and *laissez-faire* economics will answer the affirmative, whereas the more left-leaning individual will counter that law should be more about justice, rights and redistribution.(…) despite the fact that judges, lawyers and individuals appear to view the law in terms of rights and justice, there is a school of legal thought which not only advocates that the law ought to be concerned with economic efficiency, but also claim to put forward a descriptive theory in which law is concerned with promotion of economic efficiency and the protection of wealth as a value"[3].

This theory originates with the publication in 1960 by the economist Ronald Coase of the now famous article "The problem of Social Costs"[4] and uses economic concepts such as "efficiency" and "transaction costs" in conjunction with socio-legal concepts, such as "distribution of wealth", "equity", "allocation of rights" to assess the consequences of legal rules in practice. In a widely quoted book on this subject, "An Introduction to Law and Economy"[5], A.M. Polinsky defines *efficiency* as the relationship between the aggregate benefits and the aggregate costs of a situation (viewed in simplified terms of monetary loss or gain), while the term *equity* concerns the distribution of income among individuals, or "in other words, efficiency corresponds to the "size of the pie", while equity has to do with how it is sliced"[6]. Another concept advanced by R.H. Coase refers to the *transaction costs*, that include the costs of identifying and getting together with the parties one has to negotiate a particular situation, the costs of the negotiation process itself and the costs of enforcing the result of such negotiation. Initially, in his article Coase dealt with a specific theme, that of assessing those activities of business firms which have harmful effects on others[7] and the allocation of liability damages, drawing on a number of tort and nuisance cases adjudicated by the English courts. Challenging the conventional economic and legal wisdom that polluter has to pay, Coase brings a different angle to the classic dilemma: if A has inflicted harm on B, how should one restrain A (one of the examples given is that of confectionery maker whose noisy operating machine disturbs a practicing doctor). In this example, the choice is whether the confectioner should not be allowed to operate a noisy machine to make confectionery or the doctor should not be allowed to carry on with his practice. Coase suggests that this situation involves reciprocity and that the real question is whether A should be allowed to harm B or B should be allowed to harm A. This means that the initial allocation of rights (by courts or by law) might produce a different economic result, in a real world where transaction costs are positive (are not zero). The answer to this dilemma, Coase

Ronald H. Coase is a 1991 Nobel Laureate in Economics "for his discovery and clarification of the significance of transaction costs and property rights for the institutional structure and functioning of the economy."

[5] A. M. Polinsky, "An Introduction to Law and Economy", Wolters Kluwer, Law & Business, 4th edition, New York, 2011.

[6] Idem 6, p. 7.

[7] Idem 5, p. 1.

contends, lies in a cost-benefit analysis that should be taken into account by judges when adjudicating allocation of rights (and implicitly allocation of income), the transaction costs for each party being evaluated against the increase/decrease in the value of production, i.e. against value maximization. In the example above, the problem was if it was worthwhile to secure more doctoring at the expense of the diminished production of confectionary. According to what is referred to as Coase Theorem, "if there are positive transaction costs, the efficient outcome may not occur under every legal rule. In these circumstances, the preferred legal rule is the rule that minimizes the effects of transaction costs"[8]. Consequently to the publication of this article, the concept of wealth maximization assumes a central role for all ensuing theories based on Coase's work.

The concepts outlined above have been developed by many a scholar, creating different approaches within the economic analysis of law. The contributions of Calabresi and Melamed[9] in the field of tort liability and that of Richard Posner are the most significant in this respect. Calabresi has addressed some of the shortcomings of the Coase's analysis by moving the discussion away from the efficient outcome of a dispute between two parties and steering it towards the decisions that society through it legislative bodies has to make as to the nature of a right (entitlement) and its distribution. According to Calabresi, "the first issue which must be faced by any legal system is one we call the problem of 'entitlement'. (…) Hence the fundamental thing that law does is to decide which of the conflicting parties will be entitled to prevail. The entitlement to make noise versus the entitlement to have silence, the entitlement to pollute versus the entitlement to breath clean air (…) these are first order legal decisions"[10]. Entitlements can be those protected by a simple property rule (negotiated by individuals), those bought and sold at a price determined by the state (governed by so-called liability rules) and entitlements that are inalienable or that can be sold only under specific conditions (governed by inalienability rules). The authors list three groups of reasons for deciding in favor of one entitlement over the other: "economic efficiency, distributional preferences, and other justice considerations"[11]. Calabresi and Melamed make the case for entitlements protected by liability rules rather than property rules on the basis of their economic efficiency and claim that their analysis is a working framework for legal decision in tort liability cases. Their theory does allow aspects of justice into their economic-based approach, in terms of distribution of entitlements and of their designation as to which are to be protected by liability or inalienability rules[12], but their analysis is still centered on the issue of economic efficiency in a functioning free market economy.

Richard Posner is perhaps the most well-known exponent of the law and economic movement. In his seminal works, "Economic Analysis of Law", "The Problems of Jurisprudence" and "The Economics of Justice", Posner links the common-law bias for promotion of efficiency to the free-market principles that govern the Western countries and thus explains the judicial tendency to arrive at conclusions that maximize wealth. Posner contends that common-law judges do tend to base their decisions on efficiency considerations and provides a list of subject-matters where such decisions are well documented, especially in the contract law, property law and tort law. How these considerations apply to other legal field it is less clear, though, and represents one of the vulnerabilities of his theory. Posner does not limit the economic analysis of law merely to a descriptive tool for evaluating law, but purports to impose a normative dimension as well, stating that a few economic principles can be applied as formulas to the legal field and that judicial decisions could be evaluated against the overriding aim of wealth maximization, conceptually based on the model of voluntary market transactions. As was noted in the beginning of this section, this theory is

[8] Idem 6, p.15.

[9] The most quoted article refers to "Property Rules, Liability Rules and Inalienability: One View of the Cathedral" by G. Calabresi and A.D. Melamed, (1972),Vol. 85 Harvard Law Review, p. 1089-1128, available in pdf format at: www.amherst.edu/media/view/123372/original/CalabresiMelamed.PDF.

not politically-neutral, being steeped in a particular economic model, that promotes a minimal state intervention in the economy, that "rewards the traditional 'Calvinist' or 'Protestant' virtues and capacities associated with economic progress"[13] and is based on an unflinching belief in the self-regulatory forces of the free market.

The economic analysis of law has drawn widespread criticism from the more traditional legal scholars. The issues raised against this theory range from its failure to explain (with the possible exception of Calabresi) the initial allocation of rights in society to its sweeping assumptions that men operate solely for the purpose of wealth maximization or that wealth is a social value by itself, unrestrained by other considerations. The contention by Posner that "common-law is best (not perfectly) explained as a system for maximizing the wealth of the society. Statutory or constitutional as distinct from common-law fields are less likely to promote efficiency (…)"[14] points to its preference for common-law rules over state regulation. His opinions on the common-law legal system as a system that maximizes wealth have been taken over by a new generation of economists and, to a lesser extent, by jurists enthralled by the simplicity of the main tenant of the economic analysis of law school, that law should promote economic efficiency. The ensuing theories have impacted law in many an unpredictable way, affecting even those disciplines that traditionally escaped the scrutiny of economists or the imposition of economic influences, such as the comparative law.

2. The "legal origins" thesis – a 21st century avatar of the economic analysis of law

As was the case with the economic analysis of law, the legal origins thesis was initiated by a couple of economists borrowing core concepts from the field of comparative law, such as the classification of legal systems in civil and common-law systems, legal transplants and the function of law, and applying them to their own economically-focused analysis. This theory, whose main tenant claims that the common-law fosters economic growth better than the civil law, has proved to impact not only legal studies, but political and economic decisions worldwide, through its incorporation in the highly influential *Doing Business* reports issued by the World Bank.

The legal origins thesis can trace its beginnings to the work of a small number of economists, whose research focused initially on investor protection, namely Rafael La Porta, Florencio Lopez de Silanes, Andrei Shleifer and Robert Vishny, collectively referred to either as LLSV or LLS[15]. Believing in the transformational power of law as a tool to spur economic reform[16], LLSV set out to demonstrate the impact of good laws on development and in particular on economic growth. Since "good law" is not easily separated from the very fiber of society in which it operates so as to establish a causal link between good law and prosperity, and hence is not easily quantified, LLSV introduced a novel approach to this matter, analyzing those systems where the law was imposed exogenously, mainly through colonization by various European countries, and observing which country performed better in economic terms. This approach led them to the conclusion that legal origins matter[17], i.e. that countries with common-law systems performed better than those with civil law origins, due mainly to the fact that common-law systems are perceived to enjoy a greater degree of judicial independence from the executive compared to their civil law counterparts, and to its perceived adaptability to change, as a direct consequence of its limited reliance on codified law. In

[15] Ralf Michaels, "Comparative Law by Numbers? Legal Origins Thesis, *Doing Business* Reports, and the Silence of Comparative Law", vol. 57 The American Journal of Comparative Law, p.768.

[16] For some interesting historical insights on the idea that law is essential to economic development, see article by Curtis J. Milhaupt, "Beyond Legal Origins: Rethinking Law's Relationship to the Economy – Implications for Policy", vol. 57 The American Journal of Comparative Law, p. 831-832.

[17] Idem 16, p.769.

the wake of the enormous success this theory enjoyed, but also faced with a similar degree of criticism, the authors refined and expanded their theory beyond the investor protection field to encompass company law, bankruptcy law, labor laws and judicial independence. In essence, like its predecessor – the economic analysis of law, this theory is not politically-neutral, but is heavily influenced by the neoliberal political economy ideas prevalent in the decade spanning from the onset of the Asian crisis in 1998 to the 2008 global financial crisis (still influential, though to a lesser extent, today). It has been noted that countries hit by the global financial crises have all been given by international financial organizations a "fairly standard menu of legal reforms. The components of this menu, emphasizing shareholder rights and creditor protections and drawn predominantly from the US legal system, were influenced by the recent economics scholarship linking favorable economic outcomes to 'good' law. Since common-law regimes score well in this research, for many policy makers, 'good' has, not implausibly, meant Anglo-American (typically U.S.) law."[18]

As mentioned above, the main tenants of the legal origins thesis have made an impact on the international economic policies, through their incorporation by the World Bank in its *Doing Business* reports since 2002. "Beginning in 2004, the International Finance Group (IFC), a member of the World Bank Group, has been issuing reports that measure and compare the 'ease of doing business' in more than 130 countries worldwide. (…) the reports rely strongly (though not, of course, exclusively) on the legal origins thesis and its literature"[19]. Aimed at an international audience, these reports carry a different weight from the descriptive and analytical values of the legal origins thesis, introducing a quasi-normative perspective through its ranking of countries based on various benchmarks that purport to measure the attractiveness of a legal system for investment[20]. The main goal of these reports is to induce legal reforms in countries perceived to be deficient as to the ease of conducting business. Consistent with the legal origins theory, the top performers in this field belong to the common-law system, while civil law countries are lagging behind. Only Scandinavian countries and, lately, Germany, manage to make it to the top 10. In the 2012 report, for instance, the best performers were Singapore, Hong Kong and New Zealand, all countries with a common law system[21]. Since its first publications, countries engaged in a strong competition to improve their rankings, though the actual impact of the legal steps they took to make their business environment more investor-friendly is hard to evaluate in practice – perhaps by measuring the amount of new investment attracted by those reforms. Much criticism have been directed against these reports, ranging from its methodology and gathering of data, to the more substantive one "directed against perceived preferences for deregulation over other values – one being solidarity and justice, the other being culture"[22]. Another criticism have been directed towards the insufficient understanding of the law, either by misunderstanding or oversimplifying some traditional comparative law concepts, such as the division of legal families in civil and common law systems (selecting just two from all existing legal families) or by sheer ignorance as to the way legal transplants operate. The legal reform cannot be viewed in the simplistic terms of a legislation graft that will automatically induce economic growth.

The most vocal critique of the first *Doing Business* report have undoubtedly been voiced by the French legal profession, academics and leading practitioners alike, who joined forces in defending the values and merits of their civil law tradition, by establishing work groups, publishing

[21] Romania is ranked at 72 in the list (out of 185 countries), behind Trinidad and Tobago or the Kyrghiz Republic, but ahead of Italy. France is ranked at 34. For more information on the 2012 report, idem 21.

[22] Idem 16, p.773.

papers and making direct appeals to the World Bank institutions. The French reaction to the *Doing Business* reports with its implicit statement that common-law is better than civil should be, in our opinion, of great interest for the Romanian legal profession as well, and highlights some common issues. After the publication of the first *Doing Business* report, the president of the Cour de cassation has officially declared that "French law was thus brutally reminded of the requirement of efficiency by American schools of economic analysis of economic development factors"[23]. The discontent of the French with the assumptions and conclusions of the report have been explained as stemming from cultural factors, such as the difficulty for a country with a strong tradition of exporting law to accept legal transplants or by the unease with the values that underpinned the report, which seemed foreign to those on which French legal system is built[24]. The response of the French legal professions has been vigorous and constructive, with a mixture of well-argued critique against the reports and its underpinning legal foundations (i.e. the economic analysis of law and the legal origins thesis) and research projects centered on the economic efficiency of law. It has been noted that before the publication of the reports, these two theories were only marginally considered by the French academics, because the "idea of economic performance of law, which underpins an economic analysis, thus stands in contrast to the humanistic approach, characteristic of civil law systems"[25]. The French scholars and practitioners have so rapidly mobilized also in recognition of the increased global competition that unavoidably extends to the market for legal services and have benefitted from the support of leading politicians, including the former French president, Nicolas Sarkozy.

To summarize the main points of this incursion in the odyssey of the economic analysis of law and its modern avatar, the legal origins thesis, it seems that a consensus between legal scholars emerges on the deficiencies and on the benefits of these economic approaches. It would be undoubtedly useful if these approaches could be employed by comparatists in conjunction with the more traditional analysis of law, so as a broader, more comprehensive and accurate picture of a particular legal system could be generated and hence particular legal reforms could have a better chance of success.

3. The economic analysis of law and its reflection in the Romanian legal doctrine

The most accurate thing one could say about this subject is that the economic analysis of law is conspicuous by its absence, with the few exceptions of some recent doctoral thesis and articles, not all of them in the legal field. While researching this paper, I discovered very few Romanian sources, which will be mentioned below in a (hopefully) non-exhaustive manner.

A compendium of current political philosophy schools of the right side of the political spectrum contains two articles, on the economic analysis of law and, respectively, on the Austrian school of law and economics[26]. Another source would be the published doctoral thesis of one of the editors of the previously mentioned compendium, called "The Privatization of Justice"[27]. Its scope

[23] Bénédicte Fauvaque-Cosson and Anne-Julie Kerhuel, "Is Law and Economic Contest? French Reactions to the Doing Business World Bank Reports and Economic Analysis of Law", vol. 57 The American Journal of Comparative Law, p.812.

[24] Idem 24, p. 815.

[25] Idem 24, p. 826.

[26] "Dreapta Intelectuală.Teorii şi şcoli de gândire ale dreptei contemporane occidentale" (*The Intellectual Right Wing. Theories and Schools of the Contemporary Right wing of the Political Spectrum*), editors: Ionuţ Sterpan and Dragoş Paul Aligică, ed. Humanitas, Bucharest, 2011; the articles are "The Economic Analysis of Law", by Emanuel-Mihail Socaciu p. 279-291, and "The Austrian School of Law and Economics", by Mihai-Vladimir Topan and Tudor Smirna, p. 293-308. According to their résumés, none of these authors have legal training, and their articles do not go beyond the scope of the compendium, which is to broadly present current political theories.

[27] "Privatizarea justiţiei" (*The Privatization of Justice*) by Ionuţ Sterpan, ed. Ars Docendi, Bucharest University, 2012.

includes not only the economic analysis of law, but also extends to the theory of Robert Nozick on the role of the state and the extent of its legitimacy.

Finally, in the legal field, the economic analysis of law takes a central role in a fairly recent research paper on security interests in personal property[28], and - according to the author - is touched upon in some other Romanian works on property rights and contractual obligations[29]. It does not follow that the concepts of economic analysis of law were explicitly assumed by those legal scholars or, indeed, that the theory is even mentioned by them, but rather that the way they conducted their research agrees with the spirit of the economic analysis of law. In his article "*Security Interests in Personal Property: A Necessary Evil of a Useful Tool*?"[30], the author contends that economic analysis of law is no strange concept to the Romanian courts, which since the end of 1990s onwards chose to liberally interpret some legal provisions regarding secured interests and credit operations in order to help the banks recover non-performing debts more quickly and to extend them a better legal protection against fraudsters[31].

The most visible and uncontroversial application of the economic analysis of law in Romanian legal field is the creation of the (now repealed) legislation governing the secured interests in personal property, namely Law no. 99/1999. As noted by the author, the rationale behind its adoption was pure economic consideration. Moreover, the drafting of this legislation was entrusted to an American organization, called CEAL - Center for Economic Analysis of Law. "The drafting process was a particular one, whereas a private body (CEAL) from a foreign state (USA) has drafted the proposed Bill, which was later translated into Romanian language, hurriedly amended and passed through Parliament by the special procedure of Government assuming its political responsibility"[32]. The acknowledged aim of this legislation concerned the promotion of economic efficiency through simplified, less costly procedures for secured interests in personal property.

4. Conclusions

The sketchy section on the Romanian legal doctrine concerned with the economic analysis of law presented above mirrors closely the current lack of interest by the Romanian scholars in a legal development that has been around for several decades and continues to grow in influence due to the economic globalization. Unlike their French counterparts, our academics and practitioners do not have a tradition of legal export to defend, but rather a tradition of legal imports to assess. More often than not, the Romanian laws were a copy-paste (and sometimes a poorly translated copy-paste) of legal rules from other systems, than a coherent attempt to make the legal transplants successful.

The reasons behind this disinterest are manifold. On one hand, there is a cultural motivation, which can be traced to the legal origins of our law system – the French civil law, with its deeply held belief that law should be about justice, fairness, social harmony, and less about efficiency. On the other hand, efficiency cannot be pursued strictly in the legal field and court decisions alone, it has to permeate all aspects of society. An indicator of the efficiency of the legal rules and their impact on

[29] The author lists 2 such books: one on property rights - "Tratat de drept civil. Drepturi reale principale" (*Treatise on Civil Law. Property rights*), by O. Ungureanu, C. Munteanu, ed. Hamangiu, Bucureşti, p. 150-152, and the other on the general theory of contract – "Tratat de drept civil. Obligaţiile" (*Treatise on Civil Law. Obligations*), vol.II, by L. Pop, ed Universul Juridic, Bucureşti 2009, p. 379-381, "Garanţii reale mobiliare în dreptul comparat" (*Secured Interests in Personal Property – A Comparative View*), by Alandar Sebeni, doctoral thesis, University of Bucharest, 2005.

[30] Most of the ideas of this article were later included in his doctoral thesis on "Secured Interests in Personal Property", University of Bucharest, 2011.

[31] Idem 29, p. 166. Several court decisions are mentioned in this respect, such as Supreme Court of Justice (SCJ) decision no. 507/12.02.1998, SCJ decision no. 2536/16.06.1998, SCJ decision 5117/28.12.2005, etc.

[32] Idem 29, p. 237; translated from Romanian by the author of this paper.

economic development might lie in the stability/instability of a particular legal system. In fact, this would constitute an interesting application of the efficiency criterion to the Romanian law. Our legal system is characterized by a high degree of instability and our policy makers do not seem inclined to implement accurate measurement tools to assess the costs of this legislative instability on economic growth. Thus, the incentives for Romanian academics to engage locally in a meaningful debate on the economic theories are rather insignificant.

As to the question whether the economic analysis of law will ever make an impact on Romanian doctrine in the foreseeable future, my answer is moderately optimistic. The reason it might have an impact lies, in my opinion, on the external influences of the European Union, induced either through French or through German doctrinal prestige. One can only hope that the economic analysis of law leaves the niche of the secured interests and financial operations and becomes a meaningful tool in legal reform in our country. Predictability and efficiency are badly needed in our legal system, and hence academics and practitioners alike shoulder the responsibility to adapt these conceptual tools to foster economic development, without - of course - giving up the traditional approach to the law as a vehicle for justice and fairness. If the economists can make their voices count (overwhelmingly so, of late), so should jurists.

ILLEGAL MIGRATION-CONCEPTUAL DELIMITATIONS

CRISTINA FLORINA POPESCU (PANAIT)*

Abstract
Illegal migration is a mobile phenomenon, which ignores national borders, a threat that originates outside the community and extends to Western societies. This phenomenon is becoming larger and irregular migrants are often in a precarious situation and exposed to the criminals involved in various manifestations of organized crime. The future risk factors of the illegal migration are the demographic bomb, because the population is decreasing in European countries and increasing rapidly in poorer countries, droughts, floods, deforestation, that cause conflicts between climate refugees , extreme poverty, totalitarian regimes, epidemics, can trigger millions of people, the elderly and the working population imbalance which leads to the permanent import of immigrants
To combat this phenomenon, states must engage and cooperate with each other. Measures taken by states must balance their integration policy for immigrants, legally residents and asylum policy to comply with international conventions. Also, states must adopt anti-immigrant policies, consisting of subordination visa policy to the interests of international security and exchange of information and, not least, to continue the Schengen process, as a value of humanitarian law applied in the field. The aim of the research is to characterize this dangerous phenomenon for the society and the goal is to identify strategies to combat illegal migration.

***Key words**: migration, Schengen, European Union, human trafficking, strategy.*

Introduction

The domain of the study „Illegal migration'' is that of legal sciences and the branch is public law.

The importance of the study derives from the fact that nowadays, with the liberalization of borders, crime is evolving and its trends are influenced by numerous changes affecting the society, both in time and space. Disappearance of borders and the free movement of persons throughout the Community led to the emergence of clandestine migration issues.

The objective of the study is to discuss general aspects of illegal migration, which, along with economic causes and the ratio of free movement of persons, goods, capital and services, can increase crime in Europe. Crime is an inevitable product of any society and it is therefore necessary to consider the changes that have occurred in the world over the last decades in Europe. I could mention here, as an example, demographic imbalance, economic uncertainty and monetary distortions of rich and poor nations.

There are three factors that have clearly important influence in the development of cross-border crime in Europe: development of means of communication, increased mobility of people, goods and capital and the fall of the communism. Also, we must not forget that the growth of the criminality generally affects the cross-border crime.

The main threat is the illegal migration criminal organizations, such as guides and pimps who controlled directs immigrants and contribute to a demographic imbalance and generating crisis in the European space. That's why European Union should take measures by a strategy for preventing and fighting against illegal migration and human trafficking, so that to equilibrate the integration policy for the legal resident immigrants and the asylum policy in order to comply with the international conventions.

* PhD, "Alexandru Ioan Cuza" Police Academy (crystyle_16@yahoo.com).

The Spanish Felipe Vasquez Mateo defined migration as any conscious and voluntary movement of persons from one region or country to another, dictated by different reasons and for employment.[1]

Migration comes from the Latin word "migrare" and it is a term describing the population movement process within the frontiers of a State or beyond the frontier. The term used in order to describe the departure movement from a country in order to establish in other country is "emigration". Contrarily, when the movement is made in order to enter a country, the term used is "immigration".

The main characteristic of migration is the workforce exodus to economy attractive areas.

Forms of migration

International/internal

International migration refers to the movement of persons leaving their origin country in order to get established permanently or temporarily in another country. It implies crossing the State borders.

Internal migration takes place between different administrative units, but within the borders of the same national State.

Voluntary/Forced

Forced migration appears when the persons' movement takes place as a result of several external events, such as natural calamities, war etc. or in the context of pressures exerted by persons, institutions.[2]

Voluntary or economic migration has mainly material reasons.

Individual/mass

Persons' movement can be individual, when the movement is considered at the individual's level. It supposes that every person individually takes the migration decision and chooses the migration ways.

Permanent/temporary

Nations must respect and implement the principles of international law, of conventions they joined and the right to decide on ban of entry, expulsion, return or asylum, the migration control being of national interest and an attribute of sovereignty.

Permanent migration implies the definitive change of the country, while the temporary one implies only a residence present in other country than the country of permanent domicile (not later than 1-2 years or seasonal).

Uncontrolled or controlled, as the EEC situation, on a legal framework base.

Spontaneous/speculative designates the absence of any preparation form of the migratory process and especially of the integration process.

Masked

Masked migration means hiding the real aim of the travel in the destination country by misleading the authorities responsible for issuing and controlling the travelling documents and verifying the compliance with the legal terms, followed by the exceeding of the stay legal term.

Intercontinental/intracontinental

Intercontinental migration, between countries of different continents, for instance migration of the European and Asian countries to USA etc. and the intracontinental migration, between the countries of the same continent, such as migration between the European countries.

Legal/illegal

In the case of legal migration, the migrants comply with all the legal rigours[3] imposed by the migration process and the different aspects of integration within the societies they immigrate to[4].

---

[1] Spanish Institute of Imigration, Introduction al derecho migratorio, Madrid, 1976, p.14.l.

[2] Distinction can be made between the extreme forms of forced migration, slavery, Holocaust, Gulag, war refugees (Sudan, former-Yugoslavia refugees) and economic migrations.

Illegal migration is the migration which does not comply with the legal regulations of the States implied in migration[5]; it is continuously increasing and has no definition because the irregularity of migratory movements may be seen from different angles. This is seen from the destination countries point of view.

Migration factors

- economic factors, because of starvation, poverty, unemployment etc.

After the Romania integration with the EU, a workforce exodus is noticed, given the much lower standard of living than in the West-European countries, which provide higher work revenues. Work national market cannot keep the necessary workforce, being at a disadvantage in comparison with the EU market.

- demographic factors

The population of the developing countries will try on legal or illegal ways to move to industrialised countries.

- political factors

The political causes of some totalitarian States and regimes, which make several parts of the population to be menaced, migrate to other countries offering them security warranties.

Other factors refer to religious totalitarianism (e.g. Islam), where people's rights and liberties are seriously affected in the name of fundamentalism.

Migration is in the public limelight in the context of political, economic and social changes. The consequences of illegal migration have a negative impact; on one hand they oblige the State to additional costs caused by the social needs of immigrants, affecting the social life and the internal economy, and on the other hand they supply criminality, stimulating under the table work, illegal affairs and enhance transnational criminality. Illegal migration is also the source of conflict between the foreigners' communities with antagonist positions generated by material interests or misunderstandings between ethnic groups, for example between the Iraqi and the Iranians.

European cooperation in penal justice matters extended at present also over migration. Immigration, organised crime and terrorism was the subject of the EU third pillar activity. Since 1 December 2009, police and judicial cooperation in criminal matters (third pillar of the EU) is an area of intergovernmental cooperation, but to elaborate, with pillar (now Community pillar) a supranational domain.

The migrants issue must be approached by all the 27 Member States, both in the common framework and horizontally.

There are four economic theories announcing the main causes of the voluntary migrations:[6]

- classic economy, focusing on the revenues differences and on working conditions between the countries; it concerns a personal decision on the maximum revenue increasing

- new migration economy, highlighting the terms of different tendencies, not only conventions of work; it concerns migration as a decision taken by the family in order to reduce the family revenue related risks

- dual labour market theory does not consider decision evolution at micro-economic level; it connects immigration to structural needs of economies of modern industrial countries. According to this theory, modern economies are aware of a permanent demand of emigrant workers. There are four factors here, as follows: the officials are not disposed to increase the salaries of lower level persons, because the superior qualification workers may expect to increases, it is difficult to motivate

[6] US Commission for the Study of International Migration and Cooperative Economic Development (1990). Unauthorized Migration: An Economic Development Response. Washington, DC: Government Printing Office.

the nationals to accept inferior jobs in the hierarchy because of mobility absence on the superior stage, this duality creates permanent well paid jobs in the primary sector and unstable and worse paid jobs in the secondary sector.

- world-systems theory, considering immigration as a natural consequence of globalisation and of markets penetration. According to this theory, modern capitalism penetrated all the world economies and creates mobile workforce, being able to immigrate in order to benefit of the best jobs possibilities.[7]

There are 3 modalities permitting the common consideration of immigration and the asylum right, as follows: the first one is ideological: the European agencies redefined the threats related to internal security; the second one is instrumental, consisting of organised crime and imported terrorism: the ministries of justice and home affairs of the EU Member States negotiated the institution of compensatory measures and of control instruments, for example the visa issuing system, SIS. The third one consists of an institutional fusion; Trevi Group and Ad Hoc Group on Immigration were founded under the auspices of the coordination committee.

One of the most efficient police strategies of criminality prevention and fighting within immigrants was that of reducing the traditional differences between immigrants and refugees, process made by the difference between asylum applicants searching to enter a Member State territory for political reasons and the other arriving here for economic reasons. European Commission estimated that immigrants for economic reasons using the asylum right as alternative emigration source constitute a large category of persons.

The emigration specific crimes – extended stays beyond the dates allowed were very frequent, causing more serious punishments and consequences on the work permit. The criminologists analysing the organised crime phenomenon within the ethnic communities are confronting with a very big dilemma: they are aware of the fact that with no analysis between criminality and migration, their efforts will be incomplete; on the other hand, they would make an analysis between criminality and ethnicity.

The emigrants are very frequently perceived as enemies of social, political and economic stability of industrialised societies.

In a group of nations such as EU, which reunites various languages and cultures, the highlighting of security may act as a unification item against the other one.

In order to explain international organised criminality, there are used several concepts, noticing 5 relationships:

- the first one is the relationship between the origin country and the residence country and between illegal and legal;
- the second relationship is that between profit and investment, the former being realised in the residence country and the latter in the origin country
- the third one relationship is the mobility between the origin country and the residence country, the family relationships being in fact a screen for trafficking
- the fourth one consists in the social and economic integration absence in the residence countries, which provides possibilities for developing extremely profitable criminal activities;
- the fifth one supposes that an organised criminality is facilitates by a sub economy which is not joined by the autochthonous population.

The laws on immigration can be infringed only by foreigners. In some EU Member States, there are statistics showing a disproportioned participation of foreigners to the criminal activities. There are several delicate aspects which are specific only to foreigners:

- the former category includes for example the residence in a country after the expiration of the staying or work permit, the illegitimate complaint of the social benefits received by illegal immigrants, the under the table work or the accommodation of foreigners without valid permit.

[7] Sassen, S, Globalization and its Discontents. New York, New Press, 1998.

- the latter category includes the fraud related crimes of the marital status regime (identity documents, formal marriages)

These two groups of crimes are more and more numerous. The marital status crimes are perceived as connected to the human movements. In 1993, in Germany, it was estimated that 80% of the certificates showing the single status of a person were produces by third world citizens, being false. In the Netherlands, it was estimated that 30% of the marriages where at least one of the spouses was foreigner were fraudulent. Thus, the marital status crimes belong to organised crime, since there were specialised intermediaries in producing false documents or in arranging formal marriages. The third category of human trafficking was registered in the agenda monitored by Europol.

Immigration and crime share three characteristics: they are mobile phenomena, ignoring borders; they are seen as threats coming from outside the community, the third characteristic being their extension to the occidental societies.

EU issued restrictive laws on asylum right, decreasing considerably the number of applicants, but still persists though a crisis feeling. In the field of the judicial and police cooperation, there were institutionalised the legal instruments which do not need approval in the Member States Parliaments. There were enhanced the internal controls and the international control instruments.

The immigrant population within the EU Member States in 2001 goes up to 20.2 million of people. Almost 14.3 million of them were resident of an EU State, but they did not beneficiate of the citizenship of any EU State, representing 3.8% of the Union's total population at that moment in comparison to the 6 million citizens of one of the Member States and 1.6% residents of another State.[8]

The internal controls suppose the introduction of the identity card and the obligatory identification in certain situations, the introduction of hotel registration liability, enhancement of controls and modern detection equipment, such as heat detectors, night view devices etc., cooperation and information exchange between agencies, and introduction of police charges in the extended internal controls system. International control instruments provide the introduction of digital data systems: SIS and European Information System, taking digital prints, which are stored and centralised in EURODAC, the introduction of penalties to transporters, the cooperation between agencies and Member States in order to fight against illegal immigration, creation of a special police unit for supervising the human traffickers, bimonthly seminars on false documents etc.

Criminal documents, legislation infringement related to foreigners, crime can be used in order to justify an expulsion.

The immigration services, the customs and the frontier controlling agencies, as well as the police are also implied all in order to control immigration, from the first line control, when immigrants enter, to the others, after the arrival of persons in the country. The police officers have an administrative component (of registration) and a cooperation role (enhancing the laws on immigration in the residence area and in the area of workforce use) with the immigration services.

UE strategy for preventing and fighting against illegal migration and human trafficking

The measures taken must equilibrate the integration policy for the legal resident immigrants and the asylum policy in order to comply with the international conventions, especially with the Geneva Convention of 1951.

Future risk factors for illegal migration:

- demographic bomb: population is decreasing in the European countries and is solidly increasing in the poorer countries (for example, India will arrive to send on the work market 335 millions of workers, which means the gathered population of UE and US)

- the droughts, floods, deforestations of the recent years, which determine the increase of the climate refugees

[8] V. Drăgoi, Corneliu Alexandru, Migraţia şi azilul, Publishing Ministry of Interior, Bucharest, 2004, p. 43.

- conflicts, extreme poverty, totalitarian regimes, epidemic diseases may cause the movement of millions of people

- disequilibrium between old people and active population, which causes the "import" of permanent immigrants

- reception spaces are getting limited

UE action in this area is based on the following principles:[9]

- legitimate aspiration to a better life must be reconcilable with the EU and Member States' capacity of reception, and immigration must be performed in legal ways; the integration of the emigrants which are legally present on the EU territory supposes both the rights and obligations related to the fundamental rights recognised by the EU, the racism and xenophobia fighting being very important at this point.

- according to the Geneva Convention of 1951, it is important to provide to refugees efficient protection, taking into account the prevention of abuses and insuring that the persons with rejected asylum demands are repatriated as soon as possible.

The return is a complex measure which may be achieved by the cooperation between the destination areas, the transit countries and the origin countries of the migrants, in order not to affect or obstruction the persons' dignity and takes place when:

- the related persons resided in a State and are found with illegal stay on the territory of other States and in EU

- the stateless persons, the former citizens of another State, if they want to return in that respective State.

The readmission agreements do not solve the more and more acute issues created by the citizens' immigration of third States from the Central and Eastern Europe. Practically, it is experienced the need of support by the developed countries of the efforts made by the EU newly members in order to share the market economy.

The Commission's conclusions of June 2003 related to immigration, integration and work indicated the following aspects[10]

- within 2010-2030, it is expected that the number of persons employed to decrease with 20 million of workers in UE, following the demographic regress with direct consequences on the workforce deficit;

- achievement at the EU level of an efficient integration of migrants by enhancing the immigration legal ways;

- enhancing the Commission efforts for achieving a coherent framework in the area of migration at a European level.

The main measures used by the Community States to harmonise the efforts for fighting against illegal migration are:

- harmonising the Member States' regulations by adopting an anti-migratory policy, consisting of subordinating the visas policy to the security interests.

- applying international penalties for human traffickers

- implying the personnel of transport agencies in order to assume specific charges for fighting against illegal migration

- rapid return of all the foreigners who entered illegally or who did not received asylum

- international exchange of information

[9] Seville Summit, 21-22.06.2002.

[10] PhD Thesis Regimul juridic al străinilor şi fenomenul migraţiei în contextul integrării României în Uniunea Europeană Legal, PhD advisor Prof. PhD Dumitru Mazilu, PhD student Florin Viorel Virtici, Bucharest, 2005, p. 111.

- international collaboration with origin and transit countries
- enhancing the collaboration with these categories of countries by PHARE Programme (financial support system for fighting against migrants)
- continuing the Schengen process, as a humanitarian right value applied in this area

The orientation of the UE immigration policy may be summarised as follows:[11]

- external dimension: partnership with the origin and transit countries (classic readmission agreements, specific dialogues on different subjects)
- solving the issue of asylum applicants and of their status
- solving the issue of immigrants found in illegal situation: it is very important to make a clear distinction between the admission policy and the integration policy
- refining the community acquis and enhancing the democratic legitimacy of its construction and of its decision making system
- extending to other Non-Member European States
- confirming a coherent external approach, which may be perceived on the international stage as a specific identity

The population of immigrants within the EU Member States in 2011 was of 20.2 million of people. 14.3 millions out of them were residents of an EU State, but did not beneficiate of the citizenship of any of the EU States, representing 3.8% of the EU total population, in comparison to the 6 million, which are the citizens of one of the Member States and residents of another State.[12]

The highest percentage of immigrants related to the country population is registered in Luxembourg (36.9%), followed with a significant difference by Austria, Germany and Belgium, where the percentage is about 8-9%, then by Greece with 7%. In the other European countries, the percentage is of 3-6%.

Illegal migration is higher and higher and illegal migrants are frequently in precarious situations and at the command of several criminals implied in different forms of organised crime.

Conclusions

It is difficult to conduct a study to compare relevant by the crime properly before and after the fall of communist regime because these regimes were not very willing to recognize the existence of social problems. It is certain that the opening of borders between Eastern and Western Europe led to an increase in crime with international implications. Moreover, economic openness and the development of new laws to promote a market economy have generated serious internal problems.

Some Western observers fear that massive immigration Eastern European criminals would move to Western Europe. To compensate for the suppression of internal borders, it should be equally provision of mechanisms to support mutual assistance between Member States and cooperation between them.

The main risks arising from migration flows are to destabilize the existing markets of labor, the development of organized crime, economic destabilization, destabilization of the population, increasing corruption among public officials, destabilizing economic investments of foreign companies in the country

Attempting to decrease illegal migration through cooperation among states and by enhancing border control, visa policy restrictive candidate countries, legislative codification of them.

SYSTEM OF LOCAL GOVERNMENT IN SWEDEN

DOINA POPESCU[*]

Summary
Sweden is a unitary state with a history of strong local government involvement in public affairs. Local government has played an important role in the welfare state system with many responsibilities for the delivery of public services to citizens. Because of this important position in the welfare system, it has attracted local politicians of a high calibre. Swedish citizens have on the whole a positive view of Swedish local government and, partly because of the important policy and administrative responsibilities of the local authorities, there has been a high turnout in local elections, although this has been in some decline in recent years. The positive Swedish attitude to local government is also shared by the central government and parliament and Sweden signed and ratified the European Charter of Local Self-Government as early as 1989, just four years after its promulgation. The Instrument of Government (the Swedish Constitution), which came into force in January 1974, gives explicit recognition to the principle of local self-government and this has been further expanded in the Local Government Act (1991) which came into force in January 1992.

***Key words**: Local government, Swedish Constitution, Local Government Act, local authorities, European Charter of Local Self*

1. Introduction

The Swedish Constitution defines how the country shall be governed. It contains provisions on the relationship between decision-making and executive power and the basic rights and freedoms of citizens.Sweden has four fundamental laws which together make up the Constitution: the Instrument of Government, the Act of Succession, the Freedom of the Press Act and the Fundamental Law on Freedom of Expression.The Instrument of Government contains the basic principles of Swedens form of government: how the Government is to work, the fundamental freedoms and rights of the Swedish people and how elections to the Riksdag (Swedish parliament) are to be implemented. The adoption in 1974 of the Instrument of Government currently in force meant a considerable reduction in the powers of the monarchy. The King remained Head of State but with no political power whatsoever, while the Speaker of the Riksdag (Swedish parliament) was given the task of appointing the new prime minister in connection with changes of government.It is laid down in the Instrument of Government that Sweden shall have a King or Queen as Head of State, but the Act of Succession enacted in 1810 regulates who is to inherit the throne. [1]Until 1979 succession to the throne of Sweden was through the male blood line. Then the Riksdag decided that a woman could also inherit the throne.The most recent Freedom of the Press Act was adopted in 1949 although Sweden established freedom of the press by law as early as 1766 and was first in the world to do so. Freedom of the press means the right to disseminate information in printed form but with accountability before the law. Another feature of the Freedom of the Press Act is citizens right to study public documents, the principle of public access to official documents.[2]The Fundamental Law on Freedom of Expression was adopted in 1991 and is Swedens youngest fundamental law.In addition to the fundamental laws, there is the Riksdag Act which holds a special status between fundamental law and ordinary law. To amend this Act only one Riksdag decision is required but it must be adopted by a qualified majority (at least three quarters of votes and the support of more than half the members). The Riksdag Act contains detailed provisions on the Riksdag and its workings.

As a member of the European Union, Sweden is also covered by the EU acquis communautaire, which means that laws jointly enacted in the EU usually take precedence over members national laws. On joining the EU Sweden was therefore obliged to make a few minor adjustments to the fundamental laws.

2. The institutions of Local Government

Sweden has three levels of government: national, regional and local. In addition, there is the European level which has acquired increasing importance following Sweden's entry into the EU. At parliamentary elections and municipal and county council elections held every four years, voters elect those who are to decide how Sweden is governed and administered. At the national level, the Swedish people are represented by the Riksdag (Swedish parliament) which has legislative powers. Proposals for new laws are presented by the Government which also implements decisions taken by the Riksdag. The Government is assisted in its work by the Government Offices, comprising a number of ministries, and some 400 central government agencies and public administrations.

At the regional level Sweden is divided into 21 counties. Political tasks at this level are undertaken on the one hand by the county councils, whose decision-makers are directly elected by the people of the county and, on the other, by the county administrative boards which are government bodies in the counties. Some public authorities also operate at regional and local levels, for example through county boards.

Local level

Sweden has 290 municipalities. Each municipality has an elected assembly, the municipal council, which takes decisions on municipal matters. The municipal council appoints the municipal executive board, which leads and coordinates municipality work.

European level

On entering the EU in 1995, Sweden acquired a further level of government: the European level. As a member of the Union, Sweden is subject to the EU acquis communautaire and takes part in the decision-making process when new common rules are drafted and approved.

Sweden covers a vast area of around 450,000 square kilometres with a population of just over 9,000,000 people. The Instrument of Government (the Swedish Constitution) and also the Swedish Local Government Act, states that Sweden has municipalities and county councils. The constitution does not therefore recognise any further form of subnational government such as a region. Every county council comprises one county, failing express provisions to the contrary. There are 290 municipalities (*kommuner*) and 20 county councils (*landstingen*) which sometimes call themselves "regions"2. The island municipality of Gotland, combines the functions of the county council and the municipality. There are also 21 County Administrative Boards (CABs) that are a branch of the central administration and are headed by a state-appointed governor, with responsibilities mainly for economic planning and regional development. Their board members are, since 2003, appointed by the central government. The CABs are entrusted with paramount responsibility for co-ordinating activities at county level. They command a strategic view of relations between bodies at local, county and central levels and can therefore act as a connecting link between central and local authorities.

CABs have administrative duties in for example the following areas:

- civil defence and emergency and rescue services; - social welfare and community care; - communications; - agriculture; - fishing; - gender equality; - culture; - planning and conservation of natural resources; - nature conservation and environmental protection.

CABs are also responsible for ensuring that the county's development proceeds in such a way as to facilitate the achievement of national goals while taking account of specific regional conditions and requirements. Important elements of this task are the promotion of economic and other kinds of development in the county as well as the provision of information for government use on prevailing conditions, problems and opportunities in the region. This task entails co-ordination of the state's

regional development measures on a number of fronts, for example, business, infrastructure, agriculture, forest and fishing. The task of actively promoting regional development calls for continual dialogue with other government agencies, the county's local authorities, county councils and other organisations.[3]

Two county councils - Västra Götland and Skåne – also call themselves "regions" and differ from other county councils in that they have taken over planning and development responsibilities from the CABs on a trial basis .Their creation was preceded by the amalgamation of previously existing counties. They have taken over the health care functions of the amalgamated county councils3. Another development in recent years has been the creation of Regional Co-operation Councils (RCCs – *regionala samverkansorgan*). The RCCs are indirectly elected, drawing their members from county and municipal councils. Like the Västra Götland and Skåne, they, too, may take over some of the development and planning responsibilities from the CABs. In the Swedish system, there is no hierarchical relationship between the different levels of local government, that is, no one level can exercise control over any other. Furthermore, the two regions, constitutionally speaking, are no different from the other levels of local government and are regarded simply as larger county councils even if they have taken over, on a trial basis, some of the responsibilities of the CABs.

Local authorities in Sweden, but especially the municipalities, have a wide range of functions. Some of these are exclusive to the municipalities (all primary and secondary education, most social welfare functions, town planning, water and sewage, environmental protection, refuse collection, parks and open spaces). Others are shared with the county councils, the CABs and/or the central government (e.g. regional/spatial planning, some culture and leisure activities). The most important but also the most financially burdensome of these tasks are education and social welfare but constitutional laws give the local authorities the right to raise taxes to carry out these duties. There is, however, a division of labour between the different levels. Municipalities have a wide range of responsibilities in several policy fields, while county councils deal, almost exclusively with health care.

3. Local Finances

The Swedish Constitution (Instrument of Government) guarantees that local authorities may levy taxes to enable them to perform their tasks (Chapter 1, Section 7 (2)). Local taxes are entirely in the form of a local income tax that is paid both to the municipalities and to the county councils. These taxes are the most important source of income for the local authorities and represent 67% of the total budget of the municipalities and 69% for the county councils. Besides revenues raised through local taxation, local authorities also receive grants from the central state. These are divided into general grants and ear-marked grants. For the county councils, general grants come to 7% and ear-marked grants 14% of their total income. The main part of the ear-marked grants to the county councils is a specific grant covering the county councils' expenditures for pharmaceutical subsidies to households, a grant that the county councils have wished to be maintained as a specific grant at least in the foreseeable future. The county councils also collect fees paid by patients, which came to 3% and the sale of other services, which amounted to 7%. A few smaller sources of income amounted to 2%. With regard to the municipalities, general grants are 9% and ear-marked grants 3.2% of total income. Rates and charges are 8.2%.The "Funding Principle" stipulates that, if the central government by law lays new tasks on the local authorities, the central government must provide the initial funds to carry out these tasks. There is no obligation on the part of Government to continue with the financial support in the successive years.

4. The Equalisation System

Significant changes have been made in the equalisation system from January 1 2005. The purpose of the equalisation system, is however, the same, that is to create conditions of equal opportunity for local authorities across Sweden. The new equalisation system consists of five segments: revenue equalisation; equalisation for spending needs (cost equalisation); a structural grant; a transitional grant; and a per capita "regulation" grant or fee.The revenue equalisation has been changed from a horizontal equalisation to a mainly vertical equalisation, although still with a small horizontal component. Municipalities with a per capita tax base below 115% and county councils with a per capita tax base below 110% of the national average receive a revenue equalisation grant. Those with a per capita tax base above these levels have to pay a revenue equalisation fee to the central government. Since this fee only covers a small proportion of the revenue equalisation grant, the central government has to finance the main part of it, and is using the former general grant and to some extent previously ear-marked grants for this purpose.

The equalisation for spending needs or cost equalisation is maintained as a horizontal equalisation system, although some changes have been made. The cost equalisation is intended to equalise for costs relating to structural needs and cost differences due, for example, to differences in the age distribution of the population or to the fact that additional costs are incurred due to long distances in the local authorities concerned.Some of the components in the cost equalisation system have been removed from the horizontal equalisation scheme. Instead, a new structural grant has been introduced, financed by the central government. This grant covers, for example, costs for the promotion of business and employment and costs related to low population density.[4]

5. Swedish Local Government and the European Charter of Local Self-Government

It is clear that the Swedish tradition of local government is broadly in line with the spirit and provisions of the Charter. In Sweden, there is a long tradition that local self-government enhances democracy, effectiveness and efficiency in Swedish society. It is not surprising, therefore, that the Swedish parliament, with the full backing of the county councils and municipalities, should have ratified the Charter in 1989, just four years after its adoption. The Charter applies to the Swedish municipalities (*Kommuner*) as well as to the Swedish county councils (*Landsting*). Since the Instrument of Government (the Swedish Constitution), which came into force in January 1974, gives explicit recognition to the principle of local self-government the government stated in its Governmental Bill on Approval of the European Charter of Local Self-government (1988/89) that existing Swedish legislation did not require any further amendments. The Local Government Act (1991), entailed the further reinforcement local autonomy in line with the Charter. The previous Swedish Local Government Act (from 1977 and even previous ones) was also founded on the principle that municipalities and county councils should have the largest possible freedom to govern and organise themselves.

More specifically, several key articles of the Charter correspond with Swedish legislation. Article 2 states that the principle of local self-government should be recognised in the constitution. Chapter 1, section 1 of the Swedish Instrument of Government grants such recognition. This was further reinforced by the Local Government Act (1991). Article 3 of the Charter states that local authorities have the right, within the limits of the law, to regulate and manage a substantial share of public affairs under their own responsibility and in the interests of the local population. Both the Instrument of Government and the legislation on local government are based on these principles. Article 4, para. 6, requires that local authorities be consulted on all matters that directly concern them and the bill proposing approval of the Charter stated that the Swedish system was consistent with this. Article 6, recommends that local authorities should be able to determine their own internal

[4] Christian Diesen, Observations on the Swedish legal system, Stockholm's University,2010, pg.112.

administrative structures, was complied with when the Local Government Act (1991) abolished the requirement that there be specific committees.

Article 9 deals with local authorities' financial resources. It states (para.1) that local authorities shall be entitled, within national economic policy, to adequate financial resources, of which they may dispose freely within the framework of their powers. It also stipulates (para. 2) that their financial resources shall be commensurate with the responsibilities provided for by the constitution and the law. With regard to local government sources of revenue, these should be derived from local taxes and charges, which, within the limits of statute, they may determine themselves (para. 3) and should be sufficiently diversified and buoyant (para. 4). There should be a system of equalisation to protect financially weaker local authorities (para. 5). With regard to grants from central government, it is recommended that these should, as far as possible, not be earmarked and should not remove from local authorities the freedom of policy discretion (para. 7).

To some extent, the provision in the Instrument of Government that states that local authorities have the right to levy taxes corresponds to this principle. This was further strengthened in 1993, when the Swedish Parliament, in connection with the introduction of general government grants approved the Funding Principle, which states that the government must explain how a reform is to be financed if it involves new tasks for local authorities. If local authorities have no alternative but to finance the reform by higher taxes, the state must give them financial compensation.

In the light of these considerations, we acknowledge the efforts made by the Swedish national and local authorities to apply the principles underlying the Charter. Nevertheless, the local authorities themselves have called to the attention of the Congress a number of issues where they feel the principles are not being fully complied with. One danger is that the central authorities in Sweden, precisely because they have a strong tradition of local self-government, may feel that the Charter is being fully complied with in the present Constitution and legislation.

6. The Changing Context Of Swedish Local Government

The thirty-year economic boom, following the Second World War, together with moderate tax increases financed the Swedish model of the welfare state. When economic growth slowed in the 1970s, further expansion of the welfare state had to be financed by large tax increases. During the second half of the 1980s, favourable economic growth financed a further expansion of the welfare state. This came to an end with the crisis in the early 1990s, which affected Sweden particularly badly and resulted in a very large budget deficit. Two major structural reforms were introduced in the 1990s. The tax reform of 1991 reduced the high levels of taxation on income and capital. The defined benefit pension system was transformed to a sustainable defined contribution system in 1995. A programme of fiscal consolidation was introduced in 1994. This programme ran over several years and included both tax increases and cuts in welfare expenditure. The rather favourable economic development since the late 1990s, with low inflation and interest rates, has made it possible to revise most of the former cuts and even to introduce new reforms and tax cuts in the last few years.

The local government plays a very important role in the delivery of welfare services as well as in the taxation system, since the main form of direct tax paid by most Swedes was the local income tax. Neither the position of the local authorities nor the dominance of the local income tax was questioned during the period of reforms in the 1990s. What was questioned, however, already in the 1980s, was the high level of central regulation of the local authorities' activities. The free commune experiment was an attempt to resolve this problem in the direction of greater local freedom and this principle was incorporated into the Local Government Act (1991).

In last years, however, again economic constraints have been re-introduced partly as a result of the changing international financial scene, in which central governments are obliged to apply a strict fiscal orthodoxy (even countries outside the Eurozone, such as Sweden and the United Kingdom follow this approach). This means keeping a tight control over public finances and spending. To some extent, at least, it is the local authorities who are paying the price both financially

and in terms of the lessening of their autonomy over policy areas and also local administration. Central governments and parliaments are interfering more in local affairs through both increased regulation and through fiscal control.

6.1 The Committee on Public Sector Responsibilities

The Swedish Government set up the Committee on Public Sector Responsibilies to examine the division of responsibilities between different levels of government in order to respond to some of the challenges outlined above. The Committee produced its report entitled "Innovation capacity for sustainable welfare"Stockholm: Official Government Reports – SOU, 2012:123). The Committee recommended that the Government's ambition should be to provide an equivalent high level of public services through a system of public administration that has a high level of democratic legitimacy and closeness to citizens. This should be done by following three strategies:

a) a strategy for clarifying the division of responsibilities between different levels of the administrative system (where multi-level governance occurs) in cases where it is impossible or inappropriate to concentrate responsibility at a single level, and for enhancing innovation capacity;

b) a strategy for enhanced innovation capacity at local government level, building on a clear division of responsibilities between local and central government levels;

c) a strategy for enhanced innovation capacity at central government level, comprising intersectoral development of central government services and national level governance.

The Committee proposed that the following specific matters should be given special priority in the continued enquiry:

a) the overall task of local government, including more far-reaching co-operation at local government level;

b) the design of the regional system of public administration;

c) the framework for governance and supervision by the Government and Riksdag (Parliament);

d) country-wide equivalence in the provision of welfare services and the legal regulation of individual rights;

e) the consequences of alternative operational arrangements in the public sector for the welfare services concerned;

f) the impact of the EU on Swedish public administration.

The initial report of the Committee indeed recognises that trends within Sweden, occasioned by phenomena such as globalisation, europeanisation, new economic forms of growth and innovation and changing citizen's needs and expectations have changed the context in which regional and local democracy is exercised. They highlight the increasing trend towards greater centralisation and regulation: "Most the 17 public sector services transferred from central to local government level [in the period 1970-2013] were very small … and 28 services were transferred from municipalities and county councils to the central government domain".

Furthermore, "public sector services underwent *substantial change in the 1990s* [emphasis in original] … Most of the government bills that in 2003-2013 clarified the responsibilities of different parts of the public administration system also curtailed the freedom of municipalities and country councils, while only a quarter gave them more freedom." In addition, central government controls local governments in the following ways:

a) by the design and size of *central government grants* – in the 1990s, there was a trend towards eliminating especially ear-marked central government grants in favour of general government grants – in recent years, however, new specially ear-marked grants have been introduced;

b) by issuing provisions *requiring local governments to balance their budgets* and by drawing up rules for taxes and fees. Central government has also for periods frozen local government tax rates

and it determines the services for which fees may be charged. It has also decided on *maximum* charges for child-care services and care for the elderly;

c) the controversial *application of the "funding principle*";

d) by using the *financial co-ordination mechanism* whereby central and local government share a common budget;

e) through *national action plans* which often contain ear-marked grants for the implementation of the plan.

f) by means of *time-limited projects* sometimes combined with the above-mentioned co-financing arrangements.

6.2 Commission on the Constitution

The Swedish Government has also appointed a Commission on the Constitution, whose terms of reference are to conduct a comprehensive review of the Instrument of Government. The work of the Commission was primarily concentrate on and orientated towards improving and enhancing the Swedish government with a view to increasing the confidence of citizens in democratic institutions and increase their participation in elections. The Commission also, among other things, look into the issues related to the review of legislation and consider whether there is a need for a constitutional court. The Commission may also deal with issues relating to local government democracy.

7. Some Problems In The Implementation Of The Charter

7.1 Central regulation of local government

Sweden presents something of a paradox with regard to the practice of local self-government. On the one hand, there is a relatively strong constitutional and legislative recognition of the principle. On the other hand, Sweden is a unitary state with a long tradition of egalitarianism and generous social welfare provisions, largely delivered by the local authorities but in a standardised way and regulated by the national parliament. Special laws passed by the parliament specify and regulate tasks to be carried out by the local authorities. The Local Government Act (1991) does give a power of general competence to the local authorities while the special laws give special competences for municipalities and/or county councils. The Local Government Act makes reference to special laws and states that special provisions exist concerning the power and obligations of municipalities and county councils in certain fields. The question which arises here is whether these specific references undermine the autonomy of the local authorities in practice even though, in a legal sense, the Local Government Law is not in any way subordinate to the special laws. The financially important areas of activity are all regulated by special provisions, which can be quite detailed.

The Instrument of Government is, in fact, ambiguous with regard to local autonomy. On the one hand, as we have noted, it recognises the right to local self-government. On the other hand, it does not contain any provisions specifying the tasks and functions of local authorities. In Chapter 8, para. 5, it states that the principles governing the organisation and activities of local authorities, local taxation and local authorities' powers shall be governed by law, that is by Parliament. It is this part of the Instrument of Government that allows the Parliament to intervene in local authorities' affairs in sometimes a quite detailed way. This may contravene the principle of self-government also contained in the Constitution. It is true that Article 3, para. 1, of the Charter, to some extent, circumscribes the exercise of local self-government by adding the phrase "within the law". This phrase, however, should not be interpreted as meaning that the central authorities may undermine local autonomy through detailed legislation. The Swedish authorities, in their written comments on the first draft report, pointed out that the Instrument of Government is meant to be flexible. In their opinion, it allows the distribution of tasks between the Swedish state and the local government to shift over time. The regulation in Chapter 8, para. 5 is normative and protects local government by regulating who has the right to decide about the organisation, etc. It was clear to the Council of Europe

delegation that there is, at the very least, an ambiguity here in the Constitution, which may be interpreted in quite different ways.

During the period up to the 1970s, when the Swedish welfare state was being consolidated, local authorities, while occupying an important position in the political and administrative system, were seen as agents of the central government for the delivery of a variety of services. These were closely regulated by the parliament. There was a wide consensus in Sweden at the time as to the desirability of this system. In the 1980s, however, there was a feeling among many local authorities and the government that there should be some loosening of the controls. This led to the "free commune" experiment during that period, which began in 1985 and lasted until the Local Government Act (1991) came into force in 1992. The experiment involved selected local authorities applying to the parliament to be relieved of central controls in specified policy sectors. The selected authorities could also organise their committee structure as they wished, within broad limits. The 1991 Act incorporated the right to this self-organisation and thus continued one of the main features of the experiment. There is now a tendency to issue framework legislation, which enunciates the principles, rather than detailed specific regulations. Nevertheless, some commentators have claimed that the government and parliament are now intervening more in local government affairs. It has been claimed that in recent years there has been a greater tendency for central government to intervene in local affairs and this has provoked reactions on the part of the local authorities. We were informed by some of our interlocutors that this is partly because some issues, disability rights, for example, have become more highly politicised thus leading to great central involvement. The authorities, on the other hand, denied that such politicisation was occurring but rather that it was simply in the national interest that these services should be equal throughout the entire country and not vary between the municipalities. Another reason is that the costs of social welfare and health care have increased rapidly and local authority budgets have sometimes been unable to cope with the increases. This is especially true of the county councils who are responsible for health care and costs have risen partly because of an increase in the elderly population and partly because of new technological developments within medicine. One of the responses of central government to these changes has been to provide more grants thus increasing ear-marked grants for specific purposes.

7.2 The shift from general grants to ear-marked grants and the sale of municipal housing

According to Article 9, para. 7 of the European Charter of Local Self-Government, grants to local authorities should, as far as possible, not be ear-marked for the financing of specific projects. For a period during the 1990s, the Swedish government moved to increasing the amount of general grants to ear-marked grants. More recently, however, there has been a tendency to return to the ear-marked system.The issue arose with regard to the sale of municipal housing when the government sought to restrict this by reducing the level of general grants in a Draft Act Temporarily Reducing General Government Grants Following the Sale of Shares in or Dividends from Municipal Housing Companies. Although the Council on Legislation considered that this was an infringement of the constitutional principle of local self-government as "the management of housing supply and implementation of housing policy are primarily a matter for the local authorities", the Parliament did pass the Act which entered into force on 19 June 1999. The Act has now been repealed. The Municipal Housing Companies Act (2002), stipulates (Chapter 2, Sections 3 and 5) that local authorities, subject to some exceptions, must seek permission from the County Administrative Board before they sell, or lose their controlling influence over, a municipal housing company. There is a party political issue involved here as the ruling Social Democrat government favours this while the opposition parties (Moderate Party, Liberal Party, Christian Democrats and Centre Party) have reservations about From the point of view of the Charter, the reduction of the general grant by Government as a reaction to the sale of municipal housing by local authorities appears to be in conflict both with the stipulation that government grants should be general rather than ear-marked

and also that central government should not interfere in a task that has been assigned to the local authorities. Again, it would seem here that the grant system is being used for ideological purposes with regard to the sale of municipal housing although the central authorities claim that this was not the case. Although the authorities accepted the ruling of the Council on Legislation that there was an infringement of the principle of self-government, they argued that there is a reason for this, being that both the state and the municipalities share responsibility for municipal housing, which received state support and thus it is not only an issue concerning municipalities but how this public capital may be used.

7.3 The impact of "rights" legislation on local government

During the 1980s, there were several laws passed which gave rights to specific groups. The best-known is the Social Services Act (1980 and 2001). The Support and Service for Certain Categories of Disabled Persons Act came into force in 1993. Although few would dispute the underlying rationale behind these laws, the legislation itself was rather imprecise and they have imposed financial constraints on the local authorities, who are responsible for implementing them. Disputes between individual citizens who make claims on the basis of the legislative and the local authorities who must pay for them are adjudicated by administrative courts. In practice, the courts have determined the volume and quality of various social services, e.g. home-help services, care of substance abusers, accommodation in service apartments for the elderly, among others. The question is whether these measures, decided by the national parliament, but administered by the local authorities, are in conformity with Article 9 of the Charter, as the Swedish Funding Principle, which state that local authorities should receive adequate financial resources to carry out tasks which are required of them by the central authorities. During our visit in October, we raised this issue with the central authorities, who were convinced that the local authorities did have adequate resources, while the local authorities' associations were convinced of the opposite. One problem here is that the final arbiter in the matter is the Parliament, which is also one of the parties of the dispute. The administrative courts are merely applying the parliamentary legislation although their administrative decisions can be deemed an infringement of the autonomy of the local authorities to allocate their resources in accordance with local needs. In some cases, the courts' decisions on finances have meant cutting back on other policy priorities. Furthermore, in the case of delays in compliance with the courts' decisions, the local authorities may receive penalty payments, which is another drain on their financial resources. The Committee on Public Sector Responsibilities also highlighted this as a problem for local autonomy. The legislation as promulgated suffers from a lack of creating a fair balance between the rights of citizens and the duty of the local authorities to provide services according to priorities in the interest of the community at large.

7.4 Tax capping

Although the Instrument of Government and the Local Government Act grant local authorities fiscal autonomy, there are limitations on this autonomy. The local authorities can fix local tax rates but all other rules governing local government taxation, e.g. the tax base, are decided by Parliament. There is thus some ambiguity with regard to the actual practice of fiscal autonomy. This was evident when Parliament imposed a tax freeze during the years . The Standing Committee on the Constitution and the Council on Legislation both made statements on this. The Committee stated that the Constitution provided little scope for tax capping. However, the Committee also gave its approval for temporary restrictions on the local authorities' fiscal autonomy. The Council stated that certain restrictions may be imposed on fiscal autonomy. Although the freezes are not in operation now, they may be re-imposed at any point in the future. The Committee on Public Sector Responsibilities also highlighted this as a problem for local autonomy.

Conclusions

Sweden is a unitary state but with a strong system of local autonomy, which applies many of the principles of local self-government contained in the European Charter of Local Self-Government. There is constitutional recognition of the principle of local self-government as well as constitutional recognition of the right for local authorities to levy taxes to perform their tasks. The Funding principle states that central government will provide adequate funding resources if additional tasks are requested of them. In practice, Swedish local authorities have played a very important role in the welfare state system and have a high standing in the eyes of the population.

There are, nevertheless, problems with the implementation of the above-mentioned principles. The Instrument of Government itself is ambiguous with regard to the principle and this allows different interpretations. The two bodies which examine the constitutionality of legislation, the Council on Legislation and the Standing Committee on the Constitution, themselves seem to disagree on the interpretation of the principle as found in the Instrument of Government. There are also serious disagreements between the central and local authorities. To some extent, these disagreements are based on party political considerations but we were also struck by the fact that, among the local authorities, councillors of all parties were united in their defence of the principle of local self-government against what they regarded as encroachments by the central authorities. This unanimity was manifest between county councils and municipalities, and among county councils and municipalities right across Sweden whatever their size, geographical location, party political leadership or model (e.g. the trial project of Skåne). We felt that, at the level of the national government, there was a greater emphasis on the principles of equality achieved through uniformity than on recognising the importance of local autonomy and that this was at least in part a party political difference. Although we recognise that these two principles are not easy to reconcile in practice, we would recall to the Swedish authorities that they have signed and ratified the European Charter of Local Self-government and are obliged to take into account its provisions.

Although the principle of local self-government is given constitutional and legal recognition in Sweden, we feel that its constitutional position could be strengthened by obliging Swedish law-makers always to refer to the European Charter of Local Self-government when drawing up all legislation. At present, Swedish law-makers simply assume that, because the principle is mentioned in the Instrument of Government (the Swedish Constitution) and the Local Government Act, then it will be taken into account. In this regard, there should be a system of redress, referred to in the Constitution, to which local authorities could refer breaches of the principle. The European Charter of Local Self-government could then be the bench-mark against which such breaches would be judged. This might mean a Constitutional Court, although we understand that this option is not widely favoured in Sweden even among the local authorities themselves. Another option would be to strengthen the position of the local authorities vis-à-vis the Parliament which is currently the final court in interpreting the scope of local self-government in particular with regard to funding. This might mean creating a parliamentary committee on local self-government which could hear both sides of the case – the government and the local authorities.

THE ANALYSIS OF THE HUMAN RESOURCES MANAGEMENT IN THE ROMANIAN LEGAL SYSTEM FROM THE PERSPECTIVE OF THE COOPERATION AND VERIFICATION MECHANISM

VIORICA POPESCU*

Abstract
At 1st January 2007 when Romania joined the European Union was established a Cooperation and Verification Mechanism (further named "CVM") in order to support Romania to remedy certain shortcomings in the areas of judicial reform and fight against corruption, as well as to monitor the achieved progress through periodic reports. Though the reforms of the human resources management in the Romanian legal system were conceived in a coherent framework, the main changes in this area often did not complement each other, their implementation being sometimes inconsistent with previous measures taken.
In this context, the study aims to make a short analysis of the way in which the human resources management's reform was reflected in the European Commission's reports, pointing the measures adopted by the Romanian authorities.

Keywords: *legal system, human resources management, reform, Cooperation and Verification Mechanism, European Commission.*

Introduction

The adhesion of Romania to the European Union has drawn a series of significant mutations in the paradigm of political, socio-economic, cultural phenomena and not least in judicial system, which suffered changes in its functioning framework, expectations from citizens and civil society, attributions, responsibilities and raking the significance of the sources for performances.

In this context became very important that human resources be placed on the highest scale of values in the legal system.

The use of the entire potential of human resources can be ensured only by a performing management, based on strategic principles which would stimulate the permanent development of such potential.

The creation and management of the Romanian judicial system was more based on the normative framework and less on the processes of management and organization. It is obvious that the importance of the normative framework cannot be denied, but ignoring the need of a strategic perspective, the lack of constant preoccupations in management training of the members of the Superior Council of Magistracy has left its mark on the functioning of the judicial authority.

Today management training in justice is still neglected, judicial managers being less trained for their position. It often starts from the false idea that experience is the only teacher, and the character the only possible qualification, because there is not an effective managerial training based on scientific principles adjusted for this area. Training and perfection become even more important if we consider the evolutions of justice, the fact that it is in a continuous reformation, the accelerated rhythm of changes and pressures supported by it from the external environment rising serious problems for the courts.

Nevertheless, the complexity of the issue of human resources management for public organizations and for justice needs a rigorous approach, the purpose being the integration in the system of persons who will answer the exigencies imposed by the system, namely the performance of justice. Hence the importance of drafting and implementing in justice some strategies for

* Assistant Lecturer, PhD, Faculty of Law and Administrative Sciences, University of Pitesti, (viorica_r30@yahoo.com).

perfecting human resources management , because public organizations, as the judicial system, unlike private ones, do not have many resources available, and among those available the human resource is the most important and its performance is responsible for the efficiency of justice.

Romanian judicial system

The actual judicial organization is stated by Art 126 Para 1 of the revised Romanian Constitution[1] and is governed by Art 2 Para 2 of the Law No 304/2004[2], stating that justice is carried out through the following courts:

a) The High Court of Cassation and Justice;
b) The courts of appeal;
c) The tribunals;
d) The specialized tribunals;
e) Military courts;
f) The first instance courts.

The Public Ministry is also part of the Romanian judicial system, which according to Art 131 Para 2 of the revised Romanian Constitution corroborated with Art 1 Para 3 of the Law on judicial organization is formed by prosecutors organized in prosecutor's offices, representing its basic structure.

Art 89 Para 1 of the Law on judicial organization states that "attached to each court of appeal, tribunal, juvenile and family tribunal, a prosecutor's office shall operate". Also, attached to the High Court of Cassation and Justice operates a prosecutor's office led by a general prosecutor, assisted by a prime-prosecutor, a deputy and three counselors. The prosecutor's office attached to the High Court of Cassation and Justice coordinates the activities of the other prosecutor's offices, has legal capacity and manages the Public Ministry's budget.

The prosecutor's offices are headquartered in the place of residence of the courts to which there are attached to and have the same circumscription as these. The prosecutor's offices attached to the courts of appeal and tribunals have legal capacity and are led by a general prosecutor, and the prosecutor's offices attached to juvenile and family tribunals are led by prime-prosecutors. Nowadays in Romania there are 15 prosecutor's offices attached to the courts of appeal and 41 prosecutor's offices attached to tribunals.

Attached to every military court a military prosecutor's office shall operate. A military prosecutor's office is attached to the Military Court of Appeal, the Military Territorial Tribunal of Bucharest. Each military court has the statute of a military unit, with its own registration number.

Romanian judicial system management

Justice is, as already shown, a public service which is natural to enjoy a proper management in the conditions of the Law on judicial organization. This management aims only aspects regarding the organization and administration, not aspects regarding the trial. According to the law the most important administrative organ is the Superior Council of Magistracy.

The Superior Council of Magistracy was created by Art 133 of the Romanian Constitution of 1991[3] and acts as an authority with attributions concerning the statute of magistrates and the function of the courts.

Today, the Superior Council of Magistracy is a democratic organism with the attribution to guarantee the independence of justice, as stated by Art 133 Para 1 of the revised Romanian Constitution and Art 1 Para 2 of the Law No 304/2004.

According to the Law No 317/2004 on the Superior Council of Magistracy, it is independent and only subjects to the law in its activity. The members of the Superior Council of Magistracy answer only to judges and prosecutors for their activity performed in their position[4].

Regarding its attributions in the management of human resources of the courts and magistrates' careers, Art 35-36 the Law on the Superior Council of Magistracy established the following powers of the plenum of the Superior Council of Magistracy:

a) To propose to the President of Romania the appointment and dismissal of judges and public prosecutors, except for the probationary ones;

b) to appoint probationary judges and probationary public prosecutors, based on the results obtained by them in the National Institute of Magistracy final examination;

c) to order the promotion of magistrates to execution positions;

d) to dismiss probationary judges and probationary public prosecutors;

e) to propose to the President of Romania the granting of awards for magistrates, under the terms of the law;

f) carries out any other attributions established by the law or regulation

The Cooperation and Verification Mechanism and its reflection in the management of human resources in the Romanian justice

In 2006 the European Commission in its Decision No 2006/928/EC[5] established on 13 December the creation of a Cooperation and Verification Mechanism of progress in Romania to address specific benchmarks in the areas of judicial reform and the fight against corruption.

The first Report from the Commission to the European Parliament and the Council on Romania's progress on accompanying measures following CVM was published on 27 June 2007[6] and stated that: "*The situation of human resources in the Romanian judicial system, as well as the management capacity at central level and at court or prosecutor's office level, continue to challenge the authorities. The SCM and the General Prosecutor's Office (GPO) are addressing these tasks.*

---

[3] Art.133 of the 1991 Romanian Constitution stated: (1) The Superior Council of the Magistracy shall nominate Judges and Public Prosecutors for appointment by the President of Romania, except those on probation, in accordance with the law. In this case, the proceedings shall be presided over by the Minister of Justice, who shall have no right to vote; (2) The Superior Council of the Magistracy shall perform the role of a disciplinary council for Judges, in which case proceedings shall be presided over by the President of the Supreme Court of Justice.

[4] Law No 317/2004 published in the Official Gazette of Romania, Part I, No 599/2 July 2004, subsequently modified and completed by Law No 247/2005 regarding reform in the fields of ownership and justice, published in the Official Gazette, Part I, No 653/22 July 2005.

[5] European Commission Decision No 2006/928/EC of 13 December 2006 published in the Official Journal L 354/56 on 14 December 2006 and available at http://eurlex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:L:2006:354:0056:0057:EN:PDF.

[6] The Report from the Commission to the European Parliament and the Council on the progress in Romania under the Cooperation and Verification Mechanism published on 27 June 2007 available at http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=COM:2007:0378:FIN:EN:PDF.

Staff rationalization and institutional restructuring are currently under way. Judicial authorities are usually to decide, at conceptual level, what matters fall within the general term of "court management" and how various managerial tasks shall be distributed".

A bilateral program of technical assistance from Great Britain on the courts' management initiated an evaluation of the possible ways to improve their management. Moreover, a study on the volume of activity of the courts and prosecutor's offices served as base for an initiative of the Ministry of Justice and of the Superior Council of Magistracy to rationalize their staffing structures, with tasks far below average.

The Report also states that "in December 2006 the Superior Council of Magistracy approved a study on the work volume of the courts based on the 2005 ad 2006 statistics". The Report indicates a significant intensification of the work volume of tribunals and first instance courts in 2006, as well as the work volume of every judge, especially for those in tribunals. The same document states that the work volume of the courts continued to decrement. Romania aims to consider the main findings in completing the study regarding the optimal work volume for every judge. The draft conclusions of a study on small courts' activity, which is under analysis

by the SCM and Ministry of Justice confirm that many of the small courts require a rationalization of their staffing structures (for some even the discontinuation of activity); hence, the re-arrangement of human resources to better reflect the actual workload of each court requires a careful balance of administrative and legislative initiatives, which have not yet materialized.

Based on the principles set by the Commission Decision and on the conclusions of the first Report on CVM, the Romanian Government adopted the Decision No 1346 of 31 October 2007 on the approval of the Action Plan for the fulfillment of the terms within the cooperation and verification mechanism of the progress registered by Romania in the area of the reform of the judiciary and of the fight against corruption[7]. On this occasion it was stated that the improvement of the human resources policies is still a priority for Romania because the situation of human resources in the Romanian judicial system, as well as the management capacity at central level and at court or prosecutor's office level, continue to challenge the authorities. The criteria which had to be considered in establishing a real policy of human resources were:

- establishing the complexity degree of cases in courts and prosecutor's offices
- establishing the optimal volume of cases per judge
- analyzing the dynamics of filling vacancies
- progressive filling of vacancies
- priority filling the vacant execution positions in courts and prosecutor's offices with the highest deficit of personnel

Also in relation with other areas regarding the specificity of human resources were stated measures of improvement such as: the organization of seminars and symposiums for the improvement of the program of professional training and the unification of jurisprudence, the consolidation of the administrative capacity of the SCM.

A second Report from the Commission to the European Parliament and the Council on progress in Romania under the Cooperation and Verification Mechanism was published on 23 July 2008 stating that "The performance of the Romanian judicial system is hampered by legal uncertainty due to many factors, including an uneven application of the law and the excessive use of emergency decrees. It will take some time for the reform to take firm root. The need for verification and cooperation will hence continue for some time. Concerning the reform of the judiciary, the Superior Council of Magistracy (SCM), as guardian of the independence of the judiciary, has been

[7] Government Decision No 1346/31 October 2007 on the approval of the Action Plan for the fulfillment of the terms within the cooperation and verification mechanism of the progress registered by Romania in the area of the reform of the judiciary and of the fight against corruption published in the Official Gazette of Romania No 765/12 November 2007.

allocated the human and financial resources necessary to allow it to assume its core responsibilities for judicial reform including advising and acting on pressing human resource problems. Judicial reform is moving ahead but progress is uneven. The human resource situation in the judiciary is improving. The number of recruits in the National Institute of Magistracy has increased and the number of vacancies has dropped. New judges have been assigned to the Courts of First Instances. However, there are chronic and serious staff shortages in the public ministry and recruitment practices do not always work to guarantee quality of staff. The commitment to reform among key judicial institution needs strengthening: the Superior Council of the Magistracy has to take steps to foster the transparency and efficiency of the judiciary and to improve its own accountability. It must take an unequivocal position on the fight against high level corruption in the context of the current controversial political debate in Parliament. The Council still needs to develop credibility with the judiciary by offering sustainable solutions to staffing and management deficiencies. Serious staff shortages in the public ministry may call for emergency measures such as a temporary re-assignment of posts. Some elements of the recruitment procedure need to be improved to attract suitably qualified recruits"[8].

On 12 February 2009 an Interim Report from the Commission[9] stated that the rhythm of the reform was not maintained in relation to those stated in 2008 and there still are deficiencies regarding the deficit of personnel and the management of justice.

The same views were maintained by the Annual Report from the Commission to the European Parliament and the Council on the progress in Romania under the Cooperation and Verification Mechanism published on 22 July 2009. According to this document "a new human resource strategy for the judiciary was adopted but the situation remains a challenge for Romania in terms of the budgetary costs and in providing qualified personnel and support infrastructure. Despite these difficulties, some steps have been taken as regards the staffing situation in courts and prosecutors' offices at local level, however further improvements are needed. The Superior Council of Magistracy has intensified judicial inspections to improve the quality of justice notably with respect to ensuring uniform application and consistency across the court system. Appointment procedures and new competitions have been undertaken in line with the objectives set to provide for objectivity and high qualification. Nevertheless, the SCM must intensify its activity so as to ensure an efficient and flexible human resource policy. The impact of the new strategy cannot yet be fully assessed but increased awareness and better anticipation of problems can already be seen. Staffing constraints have been sharpened by the recent decisions of the SCM to alter the rules on secondments which in effect prevent the seconding institution to terminate the secondment of the judges or prosecutors concerned even if it faces a severe staffing problem. In addition the limited managerial possibilities of the General Prosecutor's Office with respect to promotion, disciplinary measures or transfer of staff render the restructuring of the prosecution service particularly difficult. Increased cooperation from the SCM is needed to reorganize the Prosecution Office effectively"[10].

In relation to these critics, the SCM established for 2009 by Plenum Decision No 307/26 February 2009[11] that some of the priority directions are represented by the improvement of the

[10] Report from the Commission to the European Parliament and the Council on the progress in Romania under the Cooperation and Verification Mechanism on 22 July 2009 available at http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=COM:2009:0401:FIN:EN:PDF.

[11] Superior Council of Magistracy Plenum Decision No 307/26 February 2009 available at http://www.csm1909.ro/csm/linkuri/06_01_2011__38006_ro.pdf since 31 October 2011.

human resources management, the organization of the courts and prosecutor's offices, as well as by the professional training of the magistrates, the following measures should be taken:

- the organization of new competitions in magistracy, according to a calendar established by the SCM;
- a rigorous analysis of requests for deployment to other courts or prosecutor's offices;
- redistribution of the vacancies in the system;
- a proposal for a legislative modification regarding the retirement of magistrates with at least 25 years of experience in justice;
- professional training of magistrates and auxiliary personnel for the proper application of the new codes' provisions;
- review of the initial training programs of the National Institute of Magistracy and of the National School of Clerks

On 20 July 2010[12] the Report from the Commission to the European Parliament and the Council shows that human resources are still a major challenge. "The recommendations of the Commission to apply emergency measures such as a transfer of vacant posts between court levels, where significant imbalances of workload occur, have not been applied but neither has Romania implemented adequate alternative measures. The Superior Council of the Magistracy (SCM) reacted to the net staff loss registered during 2008- 2009 with measures to increase both the yearly intake to the National Institute of Magistracy (NIM) and in particular through the direct recruitment of legal professionals with five years practice. Some initial steps to address the significant imbalances in workload between courts and prosecutors' offices through a structural reorganization of courts have also been taken. However, these measures are too limited in scope to produce a significant impact on the important capacity shortfalls within the judicial system and require additional measures to ensure that all new recruits meet minimum professional standards. Predictability of staff movements has not improved since July 2009 as several hundred magistrates eligible for retirement may still leave the magistracy at short notice as a legal solution to improve the predictability of retirements has not yet been found".

Considering the conclusions and key elements in the report on justice, the SCM according to its Plenum Decision No 841/30 September 2010[13], was preoccupied with combining the recruitment of new personnel with the support of transferring the vacant posts were needed and the redistribution of the existing personnel by stimulating mobility within the system to cover the urgent needs of personnel on short term. Also it was established as measure to reduce the deficit of personnel the organization of new competitions for admission in magistracy, according to a calendar established by the NIM and identifying new means for occupying the vacant posts and drafting proposals for a new legislative modification.

As a conclusion, this complex of actions assumed the correlation of the scheme of personnel with the workload in order to allow for new, promoted or transferred employees to be directed towards the courts or prosecutor's offices with the highest workload. Moreover, the SCM redistributed the vacant posts identified in the beginning of 2009, but were no longer identified new posts, and any other identification of posts for a horizontal redistribution was postponed despite the fact that there were vacant posts fit for reallocation. Regarding NIM it was decided the increment of its capacity regarding initial and continuous training, as well as adopting measures guaranteeing professional standards for all magistrates.

---

[12] Report from the Commission to the European Parliament and the Council on the progress in Romania under the Cooperation and Verification Mechanism on 20 July 2010 available at http://ec.europa.eu/cvm/docs/com_2010_401_en.pdf.

[13] Superior Council of Magistracy Plenum Decision No 841/30 September 2010 available at http://www.csm1909.ro/csm/linkuri/06_01_2011__38012_ro.pdf since 31 October 2010.

For the optimization of professional training it was ascertained the need to review the quality of training programs and the standards of recruitment.

According to the information offered by the Report from the European Commission on Justice on 22 July 2010, the SCM started to identify the courts and prosecutor's offices with the lowest workload for a potential closure and reallocation of their resources. Though, from the initial number of 41 courts and prosecutor's offices, the working group reduced the researches to a number of 9 courts out of function and 6 courts working below capacity.

In October 2010 was published the standpoint of the working group of SCM on the establishment of the proper workload and the insurance of quality activity in courts[14]. According to this document it was necessary the insurance of quality activity in courts because it balances the workload, dedicating adequate time for judges to solve every case, it reduces the risks of judicial errors. The implementation of this program was to be achieved starting with 2011 for a year.

Nevertheless, on 20 July 2011 in the Report from the Commission to the European Parliament and the Council on progress of Romania under the CVM[15], the European Commission stated that "little tangible progress has been made since last summer in addressing recommendations by the Commission to tackle pressing capacity imbalances of the judicial system: A proposal by the Government to close a smaller number of nonviable courts was diluted by the Parliament. In addition, the Commission's call for immediate measures to reduce capacity imbalances has not been followed up systematically. Likewise, proposals to strengthen the recruitment and training of magistrates which were also developed in autumn have not yet been adopted. The National Institute of the Magistracy (NIM) has not been strengthened despite its important role in preparing for the implementation of the new codes".

This Report and the concordance with the findings of the European Commission, the SCM Plenum Decision No 679/4 October 2011[16] decided the creation of a management of justice based on the principles of transparency and objectivity, in order to review the system of professional evaluation and promotion of judges and prosecutors. In order to improve the standards of training and recruiting magistrates, the SCM proposed as measures the specialization of the trainers, redistribution of posts for judges and prosecutors, and also for the other categories of personnel from the courts and prosecutor's offices which are about to be closed.

Regarding the consolidation of the institutional capacity of the NIM and the improvement of standards of recruitment and training, it was proposed the optimization of the infrastructure and logistic of the Institute, of the activity and scheme of personnel.

Even more, in 22 November 2011 the SCM approved the *Action Plan for the implementation of the Justice Sector Reform Strategy for the years 2011-2016*[17]. This Action Plan set the main course in human resources by pointing the measures to be taken:

- transparency and objectivity in the recruitment, promotion and evaluation

1. reformation of the means of recruitment
2. reevaluation and draft of the legislative framework for the improvement of the system of professional evaluation of magistrates:

- consulting the courts, prosecutor's offices and civil society

- organizing the evaluation commissions
- training the trainers
- improving the secondary legislation
- establishing the responsibilities of the courts' and prosecutor's offices' presidents if a magistrate is unable to perform his activity

3. improving the system of promotion in the High Court of Cassation and Justice

4. establishing a new mean of evaluation for the auxiliary personnel of courts and prosecutor's offices

• insuring an institutional effective management by creating an unitary framework of the management in courts assuming:

- unifying the jurisprudence
- improving the system of recruitment for the personnel in courts and prosecutor's offices
- establishing a system of objectively appoint members in different commissions

On 18 July 2012 the European Commission in its Report to the European Parliament and the Council on the progress in Romania under the CVM[18] stated that "*the level of performance in public administration in Romania is the least effective in the European Union according to the measures of the World Bank. The judicial system is affected by some of the same deficiencies. Despite certain improvements the global image is that of a lack of dynamism in approaching the issues with a real impact on the capacity of justice to solve cases quickly and consistently*".

Among these issues are the limited capacities and pressure of the workload of judges and prosecutors, which are generalized by imbalances in the resources and differences on the workload between geographical areas and levels of jurisdictions. Other issues are related to the high number of vacant posts, the insurance of an initial training and deficiencies in the internal structure and organization of the courts and prosecutor's offices. Such efforts were made in order to solve these issues. Among these we name the organization of periodical competitions for recruitment, rationalization of certain procedures and the adoption of certain decisions to consolidate the capacity of the NIM in insuring initial training.

In 2011 a little step was taken for rationalization by closing nine redundant courts and three courts with minimum activity, as well as of the prosecutor's offices attached to them. Despite all this, the impact of the measures is minimal. Key indicators for efficiency, such as the differences in the workload and the rate of vacant posts were not improved since 2007.

The pressures in the area of resources and a conflict between executive power and judicial system in 2009 slowed the reforms and led to a high number of retirements in a moment in which the workload was constantly increasing. The judicial system does not have or developed efficient indicators of performance in order to offer information on the total necessities in the area of resources and the allocation of resources in justice. Romania has recently admitted its deficiencies, which shall be approached within a project financed by the World Bank, which will use, by the beginning of 2013 reviewed pilot-indicators for the number of cases and workload.

The SCM was not able to draft a strategy for human resources to change the structures and systems, focusing on the request for numerous personnel and resources. The Parliament contributed to this state of inertia by diminishing the content of the proposals for the restructuration of justice.

In accordance with the standpoint of the European Commission on 29 March 2012 was launched the project "Independent analysis on the efficiency of justice" financed by the Structural Funds through the Sectorial Operation Program for Administrative Capacity Development and implemented by the World Bank as a consultant. The main objective of the program was an analysis of the efficiency in justice from the perspective of the organization and function of its institutions, of

[18] The Report from the Commission to the European Parliament and the Council on progress in Romania under the Cooperation and Verification Mechanism on 18 July 2012, available at http://ec.europa.eu/cvm/docs/com_2013_47_en.pdf.

human and material resources management and of processes supporting the system (i.e. the efficiency of the IT system) for the sustainable development of justice and the foundation of future policies in justice.

The SCM Plenum Decision No 709/23 August 2012[19] for the restructuration of the courts and prosecutor's offices in order to restore the balance between the number of employees and the workload was established a human resources policy based on the conclusions of the projects "Establishing and implementing an optimal workload for judges and clerks and the insurance of the quality activity of courts" and "Independent Analysis on the efficiency of justice". In this regard was established the need to create a monitoring group for the judicial reform formed by representatives of all state powers, professional associations and civil society. It was also established the support of all activities of professional training in ethics and deontology.

Even more, for transposing into practice the principles of transparency, objectivity and professionalism, the SCM modified the Regulation for the organization of the competition for promotion as judge of the High Court of Cassation and Justice[20] establishing the criteria for this promotion, namely by competition within the limit of the number of vacant posts, at least 15 years of service, the lack of disciplinary sanctions.

Also, Government Ordinance No 13/2012 on the budget adjustment on 2012[21] and Government Emergency Ordinance No 61/2012[22] established a series of measures on human and financial resources necessary in justice, by allocating funds to finance the occupation of 564 vacant posts in the system.

The SCM Plenum Decision 1114/13 December 2012[23] established the criteria for redistribution of vacant posts by reducing the number of vacant posts for judges in certain courts with minimal workload in correlation with the supplementation of the number of posts for judges in overload courts. These criteria are:

- the medium workload resulted from the statistics for the current year and the past 2 years – called reference average
- the distribution to the courts with a medium workload of 100 cases above the reference average
- exclusion from the supplementation of posts of the courts with over 3 vacant posts
- the redistribution is usually made in the same jurisdiction of a Court of Appeal; if this rule is not possible the redistribution is national
- the redistribution shall be made by granting each court with one vacant post in descending order of the workload, restarting the cycle in order to achieve the reference average

The Interim Report from the European Commission to the European Parliament and the Council on the progress in Romania under the cooperation and verification mechanism published on 30 January 2004[24] emphasized "the general pressure exerted by the workload on the Romanian justice and the need to restructure the courts and prosecutor's offices by rebalancing the number of

employees and the workload. The Government remedies the source of these issues by legislative modifications, approaching some of the special causes of a wave of new cases. Such efforts to reduce the workload in the system's pressure points can be more efficient than the tries to solve the issue by incrementing the number of judges and prosecutors, which could risk jeopardizing the recent improvements in the quality and training for the new practitioners. Another key element of reputation and responsibility of justice is the procedure of appointing the magistrates. The new provisions on the promotion of magistrates to the High Court of Cassation and Justice seem to have introduced a new strictness in the system: it seems more important to maintain the quality of competition than to remedy the gaps perceived which can be on short term".

Conclusions

The reform of justice in the area of human resources was and still is a major preoccupation of the Superior Council of Magistracy which established its priorities starting from the conditions mentioned in the verification mechanism for Romania.

The standpoints of the European Commission correctly and efficiently reflected both the progresses, as well as the vulnerabilities in justice, which determined the Romanian authorities to work together in order to continue the reforms started in 2004, despite the imminent legislative and financial obstacles.

Properly the measures proposed by the Superior Council of Magistracy aim the correction of the noticed imbalances, including the definition of a policy of personnel in accordance with the requirements of the European Commission, policy which shall consider:

- the dynamics of human resources on medium and long term reported to the actual competences;
- recruiting new judges and prosecutors using the criterion of quality;
- controlling the exits from the system and rationalize the deployments within or outside the system;
- a predictable and equitable development of career, by a transparent selection and improving the initial and continuous training programs, as well as their permanent adjustment

The need to improve human resources management in justice is a strategic objective by which to promote changes in the approach of human resources, approach which shall be achieved according to the following principles: to be realistic, coherent with the aspirations of the system and feasible.

FEATURES OF THE UNWRITTEN SOURCES OF EUROPEAN UNION LAW

ROXANA-MARIANA POPESCU[*]

Abstract
There are three sources of European Union law: primary law, secondary law and supplementary law. Besides the case law of the Court of Justice, supplementary law includes international law and the general principles of law. It has enabled the Court to bridge the gaps left by primary and/or secondary law. International law is a source of inspiration for the Court of Justice when developing its case law. The Court cites written law, custom and usage. General principles of law are unwritten sources of law developed by the case law of the Court of Justice. They have allowed the Court to implement rules in different domains of which the treaties make no mention.

Key words: *European Union; EU law; unwritten sources; case law of the Court of Justice; general principles of law.*

1. Introductive considerations

The sources of European Union law are specific ways by which the rules of conduct deemed necessary in the European structures, become rules of law by a will agreement of member states[1]. Narrowly, the preponderance of EU law sources, from quantitative point of view, is given both by the establishing treaties (as primary, principal sources) and by other rules contained in the documents (acts) adopted by the Union institutions in the implementation of these treaties (as derived, secondary sources).

More broadly, however, EU law is: all the rules (of law) applicable in EU legal order, some of them even unwritten; the general principles of law or the jurisprudence of the Court of Justice; the rules of law whose origin is outside the Union legal order, originating from external liabilities of the Communities, of EU, respectively, and the complementary law derived from conventional acts concluded between the member states, for enforcing the Treaties. Further, we shall analyze, in synthesis, the features of the unwritten sources of European Union law.

2. General principles of EU law[2]

Special attention, within the unwritten sources of EU law, should be paid to the general principles of law, because they have a considerable contribution to the process of establishing EU law.Established by the Luxembourg Court of Justice case law, the general principles of law are an important factor in strengthening and developing the EU legal system; this is possible due to their essential characteristic, namely the need to be consistent with the specificity of this legal system unique in the world.

Starting from the classification provided by the doctrine in the field[3], we shall further present and analyze the general principles of EU law, in the following structure:

---

[*] Senior Lecturer, PhD, "Nicolae Titulescu" University of Bucharest, Faculty of Law (rmpopescu@yahoo.com).

[1] Dumitru Mazilu, *"Integrare Europeană. Drept comunitar şi Instituţii Europene"*, Lumina Lex Publishing House, Bucharest, 2000, p. 69.

[2] For details, see Mihaela Augustina Dumitraşcu, "*Dreptul Uniunii Europene şi specificitatea acestuia*", Universul Juridic Publishing House, Bucharest, 2012.

[3] Denys Simon, *„Le Système juridique communautaire* ", 2nd Edition, PUF, Paris, 2000, pp. 251-255. The author classifies the general principles of EU law, as follows: fundamental rights; principles deriving from the

- fundamental rights;
- principles specific to EU law;
- principles derived from the national legal systems of member states.

A. Fundamental rights. The fundamental rights are all those essential and inalienable rights of the human being, valid in all circumstances and without any possibility of derogation. In the EU context, this formula is used as a synonym for the phrase "human rights" and covers a wide range of rights, including economic rights, similar to those recognized by the Constitutions of member states or international conventions, in general and the European Convention on Human Rights, of November 4, 1950, in particular.

Under art. 6, par. (1) TEU[4], following changes brought to the Treaty of Lisbon, the Charter of Fundamental Rights has the same legal value as the Treaties, although this legal instrument is not really a treaty, not being ratified by the member states. The Charter is not incorporated in the Treaty, but it is attached by means of a provision referring to that document. Among novelties introduced in this field, we see that the former "principles" become "values" in the Treaty of Lisbon and, for the first time, the rights of minorities are mentioned. Thus, art. 2 TEU, as amended by the Treaty of Lisbon states that the Union is founded on values of respect for the human dignity[5], freedom[6], democracy, equality[7], rule of law[8], as well as on the respect for human rights, including the rights of persons belonging to minorities. These values are common to the member states in a society characterized by pluralism, non-discrimination, tolerance, justice, solidarity and equality between women and men.As shown in the "Explanations on art. 52 of the Charter", Member states wished to emphasize the distinction between rights and principles. In order to prevent future judicial activism[9] of the Court of Justice, member states considered that the principles would be implemented by legislative and executive acts, when that thing[10] is wanted and would be known only in the interpretation of those provisions and by the jurisprudence referring to their legality[11].

From the point of view of its legal obligation, it should be mentioned that even before obtaining legal value, the Court of Justice had recognized the principle of respect for fundamental

---

European Union's quality of subject of international law, and the structural principles. In the same vein, see also Jean-Marc Favret, *"Droit et pratique de l'Union Européenne "*, 3rd Edition, Gualino Editor, Paris, 2001, pp. 237-242. According to Favret, general principles of EU law are classified as: general principles deduced from the nature of the Union, general principles derived from national legal systems, fundamental rights, and principles of international law.

[4] Article 6 (1) The Union recognizes the rights, freedoms and principles set out in the Charter of Fundamental Rights of the European Union of 7 December 2000, as adapted on December 12, 2007, in Strasbourg, which has the same legal value as the Treaties. Provisions of the Charter shall not extend in any way the competences of the Union as defined in the Treaties. Rights, freedoms and principles from the Charter shall be interpreted in accordance with the general provisions from Title VII of the Charter governing its interpretation and implementation and with due regard to the explanations referred to in the charter, that set out the sources of those provisions.

(2) The Union shall accede to the European Convention on Human Rights and Fundamental Freedoms. The Union's competences, as defined in the Treaties, shall not affect the membership.

(3) Fundamental rights, as guaranteed by the European Convention on Human Rights and Fundamental Freedoms and as they result from the constitutional traditions common to the Member States, shall constitute general principles of EU law.

[5] New specification introduced by the Treaty of Lisbon.

[6] Interesting to note is that in English, the Treaty of Lisbon replaces the term *"liberty"* (referring to rights) with *"freedom"* (referring to principles).

[7] New specification introduced by the Treaty of Lisbon.

[8] Specification made also by ECJ in its jurisprudence, *Environmental Parties - Les Verts vs. European Parliament*, 1986, 294/83: "Community based on the rule of law".

[9] *"The Lisbon Treaty"*, European Institute, Leiden University, Law Faculty, The Netherlands, March 19, 2008 (http://media.leidenuniv.nl/legacy/lisbon-treaty-summaries.pdf), p.33.

[10] Article 52 par. (2) Charter.

[11] Article 52 par. (6) Charter.

rights as part of the general principles of law protected by the Court. In this respect, the Court has recognized since 1969 "the fundamental human rights enshrined in the general principles of Community law whose compliance is provided by the Court"[12], following that, in 1974, this aspect to be developed, as follows: "As the Court has already stated, the fundamental rights are included in the general principles of law whose compliance is provided by the Court". To ensure protection of these rights, the Court is bound to draw inspiration from the constitutional traditions common to the Member states, and therefore it can not accept measures incompatible with the fundamental rights recognized and guaranteed by the Constitutions of those states. The international instruments on the protection of human rights to which member states have cooperated or acceded, can also provide guidelines that need to be taken into account in Community law"[13].

Under the Treaty of Lisbon, there are two sources regarding the human rights, namely: the Charter, under art. 6, par. (1) TEU[14], with legal value of treaty and, under art. 6, par. (3) TEU[15], the European Convention for the Protection of Human Rights and Fundamental Freedoms, as general principles of EU law.

Under art. 6, par. (2) TEU, the Union shall accede to the European Convention for the Protection of Human Rights and Fundamental Freedoms, but the Union's competences, as defined in the Treaties, shall not be affected by the membership. As for the accession to the Convention, "Protocol no. 8 on art. 6, paragraph (2) TEU" was annexed to the Treaty of Lisbon.

Regarding the content of the Charter, it contains in a single text, for the first time in EU history, all civil, political, economic and social rights of European citizens, as well as of all people living on the Union's territory. These rights are divided into six chapters as follows: dignity, freedom, equality, solidarity, citizenship, justice.

The Charter, unlike the European Convention on Human Rights, covers a broader protection field, beyond civil and political rights, referring to other issues, such as the right to good administration, workers' social rights, and protection of personal data or bioethics. In addition, the Charter takes into account the political rights of EU citizens which, by definition, cannot be included in the Convention.

The Charter resumes some rights, not explicitly outlined in the Convention of 1950 and, on the other hand, it provides a more detailed definition of certain rights (for example, the right to an effective judicial appeal that must be exercised before an independent judge, the appeal being possible for the defence of all rights protected by this law, even if it does not concern fundamental rights; the right to marry, which no longer considers the classical concept, but recognizes other ways to found a family; the right not to be on trial or punished twice, after a trial and for the same offence which applies not only within the same State, but also between the jurisdictions of several member states).

EU institutions must comply with the rights enshrined in the Charter. The member states have the same obligations when they implement EU law. The Court of Justice must guarantee the proper application of the Charter. Including the Charter in the Treaty does not modify the Union's competences, but it provides enhanced rights and greater freedom to citizens.

---

[12] Section 7 of ECJ Judgement of November 12, 1969, *Stauder*, 29/69.

[13] Section 13 of ECJ Judgement of May 14, 1974, *Nold*, 4/73.

[14] "The Union recognizes the rights, freedoms and principles set out in the Charter of Fundamental Rights of the European Union of 7 December 2000, as adopted on December 12, 2007, in Strasbourg, which has the same legal value as the Treaties. Provisions of the Charter shall not extend in any way the competences of the Union as defined in the Treaties. Rights, freedoms and principles in the Charter shall be interpreted in accordance with the general provisions of Title VII of the Charter governing its interpretation and implementation and with due regard to the explanations referred to in the Charter, that set out the sources of those provisions".

[15] "Fundamental rights, as guaranteed by the European Convention and as they result from the constitutional traditions common to the member states represent general principles of Union law".

We **conclude** by stating that the Charter of Fundamental Rights is an expression, at the highest level, of a democratically established political consensus on what today must be regarded as a catalogue of rights, catalogue that is part of EU legal order. The acquisition by the Charter of Fundamental Rights, of binding legal force, can be considered as the fulfilment of the promise of Brussels officials to put citizens at the heart of the European Union activities.

B. The specific principles of EU law

A number of various principles fall within this category, sharing the intrinsic, essential link to EU legal system, meaning that it marks its specificity in relation to other legal systems, of state or international. These include: the principle of institutional balance, the principle of conferral, with multiple consequences on the entire EU system, but also the principle of subsidiarity and proportionality.

a. The principle of institutional balance. With the ratification of constituent treaties, member states have decided to transfer part of their competences to the European Union. At EU level, they are exercised by institutions provided by treaties, institutions receiving specific tasks in the decision making, execution and control process. According to EU Treaties, each institution "acts within the powers conferred by (...) the Treaty"[16]. We are, therefore, facing a separation of powers between institutions, separation which, however, cannot harmonize with the model proposed by Montesquieu in the eighteenth century. Thus, the existing institutional machinery does not allow the separation of the legislative, executive and judicial powers. The European Parliament does not have the same powers of a national parliament, meaning that it does not have a real legislative power. The Council participates to the legislative function, as well as to the executive function, the latter being shared with the European Commission. However, even if the division of powers is not the same as in the national constitutional law, the role of this division might be comparable to that provided by the classical principle of separation of powers. It is about the need to avoid concentrating all powers in the hands of one body in order to prevent an abusive, arbitrary use of these powers.

It should be noted that, at EU level, most of the functions are concentrated in the Council, institution with an intergovernmental structure. This is because, the Union, despite its specificity, remains an international organization, and the authors of the Treaties have established an important role for the member states in EU structure. However, the powers conferred on other institutions tend to counterbalance those conferred on the Council in order to enable the Union, in the exercise of its powers, to take into account all the interests involved - those of the states represented by the Council, but also those of European citizens represented by the democratically elected body, namely the Parliament; the Union's interest, manifested in the independent institution - the Commission -, and the public interest in complying with the law, provided by the Court of Justice.

The principle of institutional balance combines two essential components, namely[17]: the separation of powers, respectively of tasks of institutions concerned, on the one hand and the collaboration, cooperation between institutions, on the other hand.

The first component presupposes the impossibility of delegation, transfer, acceptance or conferral of competences, from one institution to another. This separation requires the obligation of each institution not to obstruct the performance of tasks, by the other institutions. Consequently, no institution must be blocked to perform its duties. In this case, the principle of the favourable behaviour reciprocity is reflected.

This principle does not exclude, but rather involves the collaboration between institutions, in order to achieve the objectives proposed.

---

[16] Art. 13 par. (2).

[17] Augustin Fuerea, *"Manualul Uniunii Europene"*, Fifth edition, revised and enlarged after the Treaty of Lisbon (2007/2009), Universul Juridic Publishing House, Bucharest, 2011, p 87.

b. The principle of conferral. According to provisions of the Treaties, each institution shall act within the limits of powers conferred by the Treaty.

The principle of conferral can be understood as a translation into EU law, of the specialty principle of international organizations. This follows from the fact that, like all international organizations, the Union is an entity established by the member states and does not share with them, the quality of fundamental subject of international law.

Under art. 5 of the Treaty on European Union, "the separation of the Union's competences is governed by the principle of conferral". "Under the principle of conferral, the Union shall act only within the limits of competences conferred on it by the member states, in the Treaties, to achieve the objectives set out therein. Competences not conferred on the Union by the Treaties remain the domain of the member states"[18].

The importance of the principle of conferral is determined by the types of competences regulated by EU treaties. In this respect, the nature and characteristics of competences are reflected in the process of conferring them. Thus, we can distinguish two situations. In the first case, EU competences do not replace state powers. They remain, but will be surrounded by EU fundamental legal rules. In this situation, the EU institutions will have the task to exert a double action: on the one hand, to prescribe in accordance with treaties, rules that would detail and customize the limits set by them and secondly, to ensure compliance with those limitations, by the member states.

In the second case, the competences of the Union are intended to replace state powers. In this situation, the EU institutions have legislative powers, more important than those of the member states, due to the Community dimension of actions, having thus, the task to enact common rules, for the enforcement and execution of which, the member states acquire the quality of Community authorities (such situation is encountered, for example, in joint policies).

Under art. 3 of the Treaty on the Functioning of the European Union, "the Union shall have exclusive competence in the following areas:

(a) the customs union;

(b) establishing rules regarding competition, necessary for the functioning of the internal market;

(c) the monetary policy for member states whose currency is the euro;

(d) the conservation of marine biological resources under the common fisheries policy;

(e) the common commercial policy", but also for "concluding an international agreement when its conclusion is provided in a legislative act of the Union or is necessary to enable the Union to exercise its internal competence, or in the case when it may affect common rules or alter their scope".In all these cases, "only the Union may legislate and adopt legally binding acts, the member states being able to do so only if so empowered by the Union or for the implementation of the Union's acts".

Further, the Treaty sets out the areas in which the Union shall share competence with the member states, namely: (a) the internal market; (b) the social policy, for aspects defined in this Treaty; (c) the economic, social and territorial cohesion; (d) the agriculture and fisheries, excluding the conservation of marine biological resources;(e) the environment; (f) the consumer's protection; (g) the transportations; (h) the trans-European networks; (i) the energy; (j) the area of freedom, security and justice;(k) common safety objectives concerning public health matters, for aspects defined in this Treaty".

The following provisions are added to these above mentioned: "In the areas of research, technological development and space, the Union shall have competence to carry out activities, and in particular to define and implement programs, without the exercise of that power to prevent member states from exercising their own competence. In the areas of cooperation for development and humanitarian aid, the Union shall have competence to carry out activities and conduct a common

[18] For details, see Augustin Fuerea, *"EU legal personality and areas of competence according to the Treaty of Lisbon"*, ESIJ no. 1/2010 ("Lex ET Scientia International Journal").

policy, without the exercise of that competence to result in the member states' deprivation of the opportunity to exercise its jurisdiction. Also, "The Union and the member states may legislate and adopt legally binding acts in this area. Member states shall exercise their competence to the extent where the Union has not exercised it. Member states shall again exercise their competence to the extent where the Union has decided to cease exercising it".

Protocol 25 on the exercise of shared competence, contains a provision to the unique article, according to which "if the Union develops an action in a certain area, the scope of the exercise of competence covers only those elements regulated by that Union act, and therefore does not cover the whole area".

Declaration no. 18 concerning the delimitation of competences complements everything that we have described above, meaning, "in accordance with the division of competences between the Union and the member states, as provided in the Treaty on European Union and the Treaty on the Functioning of the European Union, any competence not conferred on the Union by the Treaties remains the domain of the member states. When the Treaties confer on the Union, competences shared with the member states in a specific area, the member states shall exercise their competence to the extent where the Union has not exercised its competence or has decided to cease exercising it. The latter situation may arise when the relevant EU institutions decide to repeal a legislative act, especially to ensure better constant compliance with the principles of subsidiarity and proportionality. The Council may request, at the initiative of one or more of its members (representatives of member states) and under article 241 of the Treaty on European Union, to submit proposals for repealing a legislative act".

In addition to these provisions, comes art. 6 TFEU, which, among other things, lists areas where the Union shall have competence to carry out actions to support, coordinate or supplement the actions of the member states, as follows:

"(a) protection and improvement of human health; (b) industry; (c) culture; (d) tourism; (e) education, professional training, youth and sport; (f) civil protection; (g) administrative cooperation". "The legally binding Union acts adopted under the provisions of the Treaties relating to these areas shall not entail the harmonization of laws, regulations and administrative provisions of member states. The scope and conditions for exercising the Union's competences are established by provisions of the Treaties relating to each area".

c. The principles of subsidiarity and proportionality. Under art. 5 of the Treaty on European Union, the exercise of the Union competence is regulated by "the principles of subsidiarity and proportionality". According to the principle of "subsidiarity, in areas which are not within its exclusive competence, the Union shall act only if and insofar as the objectives of the proposed action cannot be sufficiently achieved by the member states, either at central level or at regional and local level, but they can be better achieved at Union level due to the dimensions or effects of the proposed action". In addition to these provisions, there are to be found also those listed in art. 4, paragraph (1) TEU, namely: "any competence not conferred on the Union by the Treaties remains the domain of the member states".

d. Principles derived from national legal systems of the member states. Expressly provided by art. 340 par. (2) TFEU[19], in the context of extra-contractual liability, the general principles of law of the Member states are often used in the reasoning of ECJ judgements. Without making a simplistic comparison of national systems of law, but rather a synthesis which helps the Court to adopt the best solution in this case[20], the Luxembourg Court established, at EU level, a set of

[19] "In matters of extra-contractual liability, the Union is required to pay, in accordance with the general principles common to the laws of the Member States, any damage caused by its institutions or by its servants in the performance of their duties".

[20] Takis Tridimas, *"The General Principles of EU Law"*, 2nd edition, Oxford EC Law Library, 2006, pp. 20-21.

common principles inspired by the law of the member states, among which, by way of example: the principle of appeal against any decision of a national authority denying a right under the treaties[21], the right to defence[22], the principle of legal security[23], the principle of good faith[24], the principle of equality before the regulation[25], the principle of withdrawal of administrative acts[26].

According to Takis Tridimas[27], the two national legal systems that have had the greatest influence in setting EU administrative law and therefore, the general principles of law are the French and German systems; the reasons are of course, of historical nature. We shall, further, present some conclusions reached by the author during the study of the influence of German, French and English legal systems on the general principles of law, as sources of EU law. Thus, the author notes[28] that the German influence was present in creating the principles of proportionality, legitimate expectation and protection of fundamental rights. The French system also had a major influence, its public law tradition being the strongest in Europe, and the French administrative law has been a model for other countries on the continent. Examples of such influences for EU law are: the action for annulment and the organization of the Court of Justice, after the State Council model. Unlike the German and French influence, the English system did not have a significant impact on EU law and, in particular, on the development of law principles. This fact is explained by the relatively late entry of Great Britain and Ireland in the European Communities (1973) and, therefore, its absence in the period of establishing the EU law. However, we must notice the major influence on procedural safeguards that the Luxembourg Court case law has had. Findings highlighted by Takis Tridimas, following his short study are that: no system of law can claim an overwhelming influence on EU law. Also, according to the author mentioned, the influence occurs in both directions, the national legal systems being profoundly influenced by jurisprudential developments at EU level, leading thus to a *jus communae* that develops and evolves constantly.

3. Case-law of the Luxembourg Court

The influence of the case law on the development of EU law is considerable, which is explained by the fact that the Union faces a system of law in the process of developing[29]. At the same time, with the purpose of ensuring compliance with the law, the Luxembourg Court of Justice was asked not only to accurately define the law, but also to cover gaps by a creative, praetorian jurisprudence; the law has often prefigured the legislative evolution.

The Court of Justice is not a source of EU law in the sense known by the *common law* legal system, the judicial decisions not having *erga omnes* effect. Solutions given by the Luxembourg Court of Justice are required on how to interpret the provisions of EU law. So, although we cannot say that EU law is a "case law", we opine that the interpretation and application of EU law in accordance with the Treaties are possible only through the jurisprudence of the European Court of Justice.

It is also appropriate to remember that Treaties provide for the ECJ, as the main role, to ensure compliance with law in the interpretation and application of the Treaties. Thus, Treaties provide the possibility of initiating an action in interpretation, with prior title. Interpretation is useful, especially if EU law, in many respects, contains either gaps or provisions having general character or unclear aspects about the meaning of a provision.

[21] ECJ Judgement, May 15, 1986, *Johnston v. Chief Constable of the Royal Ulster Constabulary*, 222/84.
[22] ECJ Judgement, January 27, 1987, *Verband der Sachversicherer v. Commission*, 45/85.
[23] ECJ Judgement, June 16, 1993, *France v. Commission*, C-325/91.
[24] ECJ Judgement, March 22, 1961, *S.N.U.P.A.T. v. Haute Autorité*, 42/59.
[25] ECJ Judgement, November 12, 1969, *Stauder v. Stadt Ulm*, 29/69.
[26] ECJ Judgment, July 12, 1957, *Algera e.a. v. Assemblée commune*, 7/56, 3-7/57.
[27] Takis Tridimas, *op. cit*., p. 24.
[28] *Ibid*.
[29] Augustin Fuerea, *op. cit*., p. 147.

The usefulness of ECJ judgements is obvious in situations where some definitions for terms used in the Treaties and whose content was not determined enough, had to be given; we can take as example, the explanations on "charge having an effect equivalent to customs duties", "measures having equivalent effect to quantitative restrictions", "worker", "priority of Community law in relation to the member states", "autonomy of Community law" etc. Thus, according to the Court, the charge having an effect equivalent to customs duties means "any fee, regardless of its name or application, which, imposed on a product imported from a member state in order to exclude a similar national product has, by the price change, the same effect on the free movement of goods as a customs duty and can be regarded as a charge having equivalent effect, regardless of its nature and form"[30].

Since the concept of "measures having equivalent effect to quantitative restrictions" is not defined in the Treaty, the Court of Justice had the mission to clarify it. Therefore, the Court formulated the *Dassonville* judgement[31], opinion according to which "all trading rules imposed by the member states which may hinder directly or indirectly, actually or potentially, the intra-Community trade are to be considered as measures having an equivalent effect to quantitative restrictions"[32]. Subsequently, in the *Cassis de Dijon*[33] judgement, the Court extended this notion ruling that "a measure can be considered as having equivalent effect even without discrimination between imported and internal goods. In particular, the technical regulations of the importing state imposed on goods from other member states, can be considered as an equivalent measure, if not justified, because imported goods are penalized by the obligation to make changes in prices. The absence of Community harmonization cannot be used to justify this attitude, where it effectively prevents the freedom of movement. Thus, the Court established the principle according to which any product legally manufactured and marketed in a member state, in accordance with fair and traditional rules and manufacturing processes existing in that country should be allowed on the market of any other member state. This is the principle of mutual recognition by member states of those rules, in the absence of harmonization"[34].

The Treaty on the Functioning of the European Union establishes the free movement of workers, but does not define the term, which is why once again, the Court must cover the gap. By corroborating interpretations offered in several judgements[35], it results that, in the sense of EU law, worker is any person who performs work under an employment contract and for which he/she receives remuneration; the following aspects are not important: the legal nature of the contract, the remuneration amount, the contract duration, the time spent at work (full or part time); what is important is that the finality represents an economic activity.

4. Common law

In public international law, common law is particularly important and is the oldest source of both international law and law, in general[36]. International common law is, therefore, under art. 38, par. 1 letter b) of the Statute of the International Court of Justice, annexed to the UN Charter, "proof of a general practice accepted as law". Customary process elements are: the common law should be a

[36] Raluca Miga-Besteliu, *"Drept internaţional public"*, Volume II, C.H. Beck Publishing House, Bucharest, 2008, p 68.

general practice, relatively long and uniform considered by states as expressing a rule of conduct with legally binding force.

The common law is an unwritten source and can be defined, in the light of EU law, as a practice followed and accepted, becoming legally binding, a practice that adds or modifies the primary or secondary/ derived EU legislation. It must be said that EU law does not include customs in the sense described above with reference to customary international law. Contrary to public international law, where it represents a fundamental source of law, the custom is quasi-inexistent in EU law[37].

As arguments for what we have earlier stated, we present the following:

- firstly, there is a special procedure for amending the Treaties; it does not exclude the possibility of a custom, but sets some demanding criteria that such practice must meet in order to be applicable;

- another obstacle would be that the validity of any action of the institutions is checked in relation to the Treaties, and not to their practice, which means that from the point of view of Treaties, common law cannot be created in any case, by the Community institutions; at most, the member states can do this, and even assuming that – only under the strict fulfilment of conditions mentioned.

However, certain repeated practices that are part of the texts of EU Treaties, could have the propensity to form, on a long term, customary rules. The Court of Justice did not exclude that possibility, recalling that "in any case, a mere practice cannot prevail over the rules of the Treaties"[38]. A practice *contra legem* could not in any case be a source of law. On the contrary, a practice *praeter legem* which might intervene to complete texts of treaties in order to resolve an unexpected aspect, could lead to the creation of customary rules. It is, thus noteworthy that, at Community level, one single custom is, for now, in the process of being created: it is the practice of resorting increasingly more often to informal agreements[39] established between EU institutions.

5. Conclusions

The unwritten sources are considerably important among sources of EU law. It is up to the EU legal order to receive the unwritten law, consisting mainly of the Luxembourg Court of Justice case law, among other sources[40]. To this ability, it corresponds that not less remarkable, of the Court of Justice establishing the law.

The exercise by the Court, of this regulatory mission becomes singular, in particular, by using the methods of dynamic interpretation, as well as by widely resorting to general principles of law.

ASPECTS OF THE EVOLUTION OF HUMAN RIGHTS PROTECTION IN THE EUROPEAN UNION

NICOLAE PURDĂ*

Abstract
Human rights protection within the European Community and the European Union has developed judicially, the human rights being protected by the Community Courts as general principles of Community law.
The Treaty of Maastricht and the Treaty of Amsterdam have codified the Community law within the area of human rights. The codification of European Union's concept of human rights in a single document was realized by adopting the Charter of Fundamental Rights of the European Union, on 7 December 2000 in Nice, whose provisions acquired legally binding under the Treaty of Lisbon.

Keywords: *European Union, protection of human rights, Court of Justice of the European Union, European Convention on Human Rights, Charter of Fundamental Rights of the European Union.*

1. Preliminary views

The absence of legally binding instruments on human rights has been a problem both theoretically and practically, for a long time inside the borders of European Communities and later of the European Union.

Along with the diversification of the Communities' powers, there are questions regarding the relation between the Community law and the fundamental freedoms. To this end, the Court of Justice had a decisive intervention, which since 1969 has developed a jurisprudence which tended to effectively protect certain rights and freedoms. Initially, the Court of Justice refused to exercise the control of legality of Community acts in terms of fundamental rights guaranteed by the constitutions of the Member States on the grounds that "there shall be no responsibility for ensuring compliance with internal rules, even constitutional, effective in one or another of the Member States"(case Storck-1959).

Pursuant to the Court's position, some national Constitutional Courts (German and Italian) have expressed their determination to examine the constitutionality of a treaty and the Community rules derived in terms of human rights guaranteed by national constitutions, thus reversing in this field the report between Community law and national law (governed by the principles of primacy and direct effect).[1]

In the absence of a catalogue of rights enshrined by the Community law, the Court of Justice has undertaken the task of solving by praetorian means the gap problem Community's system of fundamental rights protection.

The Luxembourg Court emphasized that the protection of fundamental rights is a principle of Community law, in cases *Stauder*, November 12, 1969, *Internationale Handelsgesellschaft* of December 17, 1970 and *Nold*, May 14, 1974. The Court also resorted to "adopt" as standard rule on the constitutional traditions common to the Member States and to the "international instruments on protection of fundamental rights on which the Member States have cooperated or acceded"[2] . The International instruments to which the Court appeled in its case were: the International Covenant on Civil and Political Rights, European Social Charter, the European Convention on Human Rights.

[2] Decsion in the case *Nold*, no 4/73 of 14 May 1974, Rec., p. 491.

The Court's observation concerning the fundamental rights has gradually expanded from acts adopted by Community to those of institutions of the national with incidence in the area of the Community law.[3] Therefore, the Court has accepted that there are limits to the legislative activity of the European Community, arising from the need to respect human rights, which was gradually considered as a condition of the lawfulness of Community acts.

The encompassing of Fundamental Rights by the Court in Luxembourg was based on the constitutional traditions common to the Member States and the international human rights acts. Also the Community law contains specific provisions on free movement and non-discrimination. The Court of Justice, based on essentially economic provisions of the Community law, deduced by a liberal interpretation and an array of social rights.

In order to ensure an effective protection of fundamental rights, the European judge relates primarily to Community's texts. Except for the free movement of persons and non-discrimination, the economic and social rights have only a programmatic nature, they cannot be invoked in court other way than by means of provisions of secondary Community law.[4]

2. Principles deriving from community law (constitutive treaties) in the protection of human rights

The principle of free movement of persons and non-discrimination included in the Treaty establishing the European Community (EC Treaty) are "structural" fundamental principles of the Community.

2.1. The principle of free movement of persons

The freedom of movement is a fundamental principle of community's construction, since its objective is to create a common market so the four freedoms may be guaranteed -freedom of movement of persons, freedom of movement of goods, free movement of capital and freedom of movement of services.[5]

The principle of free movement is differentially applied according to whether they are citizens of the Member States or citizens of other States. The freedom of movement shall entail the right of States to exercise control over the entry of foreigners into their territory.

The freedom of movement was first recognized by the Treaty of workers, but rights related to freedom of movement have been extended to the worker's family members, regardless of their nationality. Article 48, par.3 of the Treaty establishing the European Community provides workers the right to move freely within the Member States, to establish themselves inside the Members States in order to continue to work and even after quitting the job. Also, workers have the right to reunite with their family inside the State they are working.

The free movement of Community nationals has a wide field of application, assuming the freedom of establishment within a State, and to choose a job in one of the Member States.

The Treaty on European Union provides Community members the right to move and to reside in the Member States, which is an attribute of the European citizenship.

For non-Community nationals, the Schengen agreements authorize them to enter and move freely in the Schengen area for a period of 3 months, after which national rules are applied and each Member State is free to regulate the issue of immigration in compliance with international commitments.[6]

[6] Ibidem, p.80.

2.2. The principle of non-discrimination

The Community law has no unique and general provision to enshrine discrimination in all areas. Therefore, the Court of Justice of European Union has made this principle one of the fundamental principles of Community law. The EC Treaty makes several references to discrimination, but only in two specific areas, citizenship and sex.

2.2.1. Restraint of discrimination based on nationality

The Article 6 of the EC Treaty prohibits widespread discrimination based on nationality. This prohibition is then resumed in special cases. A general provision provides greater efficiency to others, strengthening prohibitions and limiting exceptions under special provisions, especially the reserve of "public order" or the special case of employment in public administration. Special provisions are set out in the secondary legislation.[7]

EU law prohibits discrimination based on nationality only to citizens of EU Member States. Therefore, different treatments may arise for foreign citizens.

2.2.2. Restraint of discrimination based on sex

The constituent treaties do not contain general provisions on gender equality, but there are many texts that refer to it. For example art.119 of the Treaty establishing the European Community provides that States must ensure the implementation of the principle of equality of payment between men and women for equal work. This provision is directly applicable and has direct effect. Individuals can appeal it afore the national courts.

The area of the principle of equality is extended to professional equality, social security, access to employment, working conditions.[8]

The Court of Justice ruled that professional equality is incompatible with night work prohibition for women since it is allowed for men.

3.Concerns of the European Union and communities on human rights

Political institutions of the Communities have clearly expressed their position on human rights. In a Joint Statement of the Council, Parliament and Commission on 5th April 1977 on fundamental rights, the three institutions emphasized the importance it attaches to fundamental human rights and alleged that in exercising their powers and in pursuit of Communities' goals they observe and will continue to observe these rights.

In 1989, the European Parliament enacted a Declaration of Rights and Fundamental Freedoms, which sets forth a "catalogue" of rights without legal binding, since this document was not mentioned in subsequent treaties. Also, in 1989 was adopted the Community Charter of the Fundamental Social Rights of Workers, programmatic enforceable document in protection socio-economic rights.

The Single European Act of 1986 expresses the Member States' will to promote democracy based on fundamental rights.

The jurisprudential efforts of the Court of Justice had conventional consecration by art. F parag.2 of the **Treaty on European Union** (**Treaty of Maastricht** of February 7, 1992, entered into force on November 1, 1993), which states that "The Union shall respect fundamental rights as guaranteed by the European Convention on Human Rights of 1950 and as they result from the constitutional traditions of the Member States, as general principles of Community law".

The treaty introduced the institution of *European citizenship*, stating some of its specific rights: freedom of movement and residence within the Member States, the right to elect and be elected in local elections and European Parliament elections in their country of residence, the right to petition the European Parliament and the right to refer to the European Ombudsman, the right to

[7] Bianca Selejan-Guţan, op.cit., p. 244.

[8] Raluca Miga-Beşteliu, Catrinel Brumar, op.cit., p.81.

diplomatic and consular protection by any Member State when the State of nationality is not represented in a third country.[9]

The absence in a Treaty of the enumeration of fundamental human rights inevitably involves an appeal to the Court of Justice.

The **Treaty of Amsterdam** of October 2, 1997, entered into force on May 1, 1999 included important provisions on fundamental rights. Article 6, parag.1 of the Treaty enshrines the three principles which form the "common heritage of values" of Member States: human rights, democracy, the rule of law. These principles were undertaken from the Statute of the Council of Europe and became true constitutional principles of the European Union.[10]

For that matter, Article 49 of the Treaty achieves by the respect of these principles a condition of adherence in the Union. The Treaty enshrines the legal guarantee of respect for human rights by recognizing the jurisdiction of the Court of Justice in enforcing the fundamental rights of the European entities (Article 46, letter d).

The Treaty expressly authorizes the Council to take appropriate action to combat discrimination based on sex, race, ethnicity, religion, opinion, disability, age or sexual orientation, acting unanimously on Commission's proposal and after consulting the European Parliament.

The Treaty also enables the Council, on a proposal by one third of the Member States or the Commission, to suspend certain rights of a Member State which might be responsible for serious and persistent violations of these rights.

Social provisions of the Treaty provide the groundwork for the Community's legislative action in order to improve working and living conditions of workers, including equality between men and women in the labour market.[11]

TheTreaty of Amsterdam also aims at the recognition of new rights that are part of the process of integration of policies related to free movement of persons within the Community pillar and creating an area of freedom, security and justice.

The new rights introduced by the Treaty are: the right to employment, access to documents and the fight against discrimination. The right to access documents, as opposed to European "administration", guarantees each and every European citizen or legal persons resident or localized in a Member State, a right to access documents of The European Parliament, Council and Commission, to strengthen the principle of transparency. [12]

The **Treaty of Nice** of 25 February 2000 (which entered into force on 1 February 2003) completed the area of political control over the observance of fundamental rights by Member States, giving them both a preventive function, of alert and repressive, to sanction the given States.

The preventive role is exercised by determing a risk of inobservance of EU principles by a Member State, this role is exercised by the Council gathered in regular formation, with a majority of 4/5, by the reasoned proposal by one third of the Member States of the European Parliament or the Commission and with the assent of Parliament. Basically, the Council shall make recommendations to the State and then monitor the progress.

The Treaty provided the opportunity for the State in question that within one month from the moment of determining serious and persistent infringement of human rights by Council, it may appeal to the European Court of Justice but only on matters of procedure. The Court may assess the legality of sanctions adopted by the Council, but only for substantive reasons.

The idea of "coding" EU human rights concept in a single document to harness both the traditions of the Member States and previous experience of the organization, was achieved by the

[11] Ion Diaconu, op.cit., p.294.
[12] Raluca Miga-Beşteliu, Catrinel Brumar, op.cit., p.84.

adoption on December 7, 2000, the Conference of Nice, the **Charter of Fundamental Rights of the European Union**, which remained outside the treaty document, therefore it has no legally binding.

In an amended version, the Charter of Fundamental Rights was introduced in Title II of the draft **Treaty on a Constitution for Europe** which was signed in Rome on October 29, 2004 by the Heads of State and Government of Member States of the European Union, but remained only a project because it was rejected by referendum in France and the Netherlands.

Treaty of Lisbon, signed on December 13, 2007 and entered into force on December 1, 2009, invests with legally binding the Charter of Fundamental Rights, with some additions to the original (regarding personal data protection, the right to good administration, access to EU documents) without reduplicating the Charter. Hence, the Treaty extends the jurisdiction of the EU in general and the Court of Justice of the European Union to all provisions of the Charter. In addition, the Treaty reasserts the principle of human rights and fundamental principle of the EU and provides the accession states of the European Union to the European Convention of Human Rights and Fundamental Freedoms.

By these provisions, the Treaty of Lisbon marks the decisive step in putting the entire EU's activity based on fundamental human rights.[13]

The Treaty has brought some changes in the procedures to be followed in cases of human rights violations by a Member State. Thereby, the preventive procedure allows the Council to "establish that there is a evident risk of a serious inobservance by a Member State" of values such as respect for human dignity, freedom, democracy, equality, the rule of law and respect for human rights, including the rights of those belonging to minorities. Before acting such a determination, the Council monitors the State in question and may address recommendations, deciding at the same time.

The procedure with punitive purpose takes place within the European Council, which after the observation may decide by qualified majority the suspension of certain rights up against the State in question resulting from application of the Treaties, including the voting rights of the representative of the Government in the Council taking into account the consequences such a suspension of the rights and obligations of natural and legal persons. This way it was established a clear link between EU membership and common values including respect for human rights.

4.Court of Justice of the European Communities and the European Convention for the Protection of Human Rights and Fundamental Freedoms

The Court of Justice of the European described the Convention on Human Rights as being part of the international instruments capable of providing 'directions' to the Court for determing fundamental rights in the international legal order (Case *Nold* -1974). Accordingly, the Court of Justice in its resolutions referred, in particular, to the European Convention on Human Rights.

In its subsequent decisions, the Court referred to the European Convention on Human Rights on the right to property, the right to respect for private and family life, home and correspondence, the right to marry, freedom of association, freedom of thought, freedom of expression, the non-retroactivity of criminal law, the principle of legality of criminal offenses and penalties, the right to a fair trial. For example, the Court confirmed that Article 11 of the Convention on Freedom of Association is one of the fundamental rights protected by the Community legal order.[14]

In one of its decisions, the Court expressly stated that draws inspiration from the constitutional traditions common to the Member States and from the guidelines supplied by international instruments for the protection of human rights on which the Member States have

[13] Ion Diaconu, op.cit., p.295.

[14] Jean-François Renucci, *Tratat de drept european al drepturilor omului*, (Bucharest: Hamangiu, 2009), p.666-680 and 682-699.

collaborated or acceded and it has given a "special significance" to the European Convention in this regard.[15]

Then the Court's jurisdiction to review the compatibility of national measures implementing Community law with the European Convention on Human Rights was recognized and switched to direct invocation of European Court of Human Rights on the grounds of its resolutions.[16]

Regarding the implementation of these principles, the Court stated the following:[17]

- shall not accept actions incompatible with fundamental rights recognized and guaranteed by the constitutions of the Member States;

- international documents on human rights on which the Member States have cooperated on or acceded may give some indication of what is necessary to take into account within Community law, which allows the integration of the European Convention on Human Rights into EU law through general principles, as European minimum standard;

- fundamental rights should not be regarded as absolute, but taking into account the social function of property and protected activities by applying limitations justified by objectives of general interest pursued by the Community.

The Court considered human rights as a condition of the lawfulness of Community acts and agreed that specific measures can be taken to protect the Community's human rights without amending the Treaties and Community's objectives.

Although the European Convention on Human Rights is a prerogative source of inspiration for the Court in Luxembourg, it must report the European interpretation (carried out by the European Court of Human Rights and must be taken together with the Convention's provisions, with whom it has an inherent and common body) with Community judiciousness with specific Community construction.[18]

The European Court of Justice may invest the provisions of the European Convention on Human Rights with an autonomous interpretation and ensures the rights only a "protection by ricochet", namely the situations related to the application of Community law. Therefore, theoretically, it may arise in cases of discrepancies of interpretation.[19]

Although formally, the Convention does not affiliate the Court in Luxembourg, it cannot ignore the interpretation and application of the Convention by the Strasbourg Court, especially since some concepts of the Convention received autonomous meaning and interpretation by it.

The Court of Justice has sometimes exceeded borders imposed by the European Convention, inferring some fundamental rights which are not provided for this: the right to free exercise of economic activity, the right to export and right to family reunification.[20]

In recent jurisprudence, the Court in Luxembourg began to refer directly to the jurisprudence of the Strasbourg Court, adopting its interpretation.[21]

The two jurisprudences met especially in the protection against discrimination, and other rights such as property or freedom of expression. Most times, the positions of the two European Courts are converging, especially in the socio-economic measures taken by states (social contributions related to the age criteria for retirement, pension rights of teachers and so on). In the field of non-discrimination, the two Courts are located on different positions; the Community law is providing more extensive protection against discrimination than the European Court of Human Rights.[22]

5. Charter of Fundamental Rights of the European Union

The Charter was enacted by the European Council at the Summit in Nice on December 7, 2000, as inter-institutional agreement (joint statement of the European Parliament, the EU Council and the European Commission). Along with changes resulting from the 2004 IGC, the Charter was solemnly proclaimed in Strasbourg on December 12, 2007 and separately published in the Official Journal. Currently, it has the same legal value as the Treaties, in accordance with paragraph 1 of Article 6 of the EU Treaty as amended by the Treaty of Lisbon. The Charter of Fundamental Rights became, from the perspective of the Lisbon Treaty, a legally binding document of the European Union, which engages the EU institutions, the Member States when implementing Community law and, as far as it relates to individual acts of individuals is mandatory for EU citizens.

The Charter is the first international legal instrument which gives expression to the principle of indivisibility of human rights, including political, civil, economic, social and cultural rights, all being envisaged as shared values of the Union.

The rights presented in the Charter are grouped into six titles as: dignity, freedom, equality, solidarity, citizenship and justice.

Two articles of the Charter bring under regulation the relations with other documents in the field of human rights, in particular the European Convention: Article 52 paragraph 3 and Article 53. The Article 52, paragraph 3 provides that "Insofar as this Charter contains rights which correspond to rights guaranteed by the European Convention on Human Rights and Fundamental Freedoms, the meaning and scope are the same as those presented by the said Convention". At the same time, Article 53 provides that "Nothing in this Charter shall be interpreted as restricting or adversely affecting human rights and fundamental freedoms as recognized, in the fields of application, by Union law and international law and international conventions to which the Union or all the Member States are parties, and in particular the European Convention on Human Rights and Fundamental Freedoms, and the constitutions of the Member States".

Consequently, the international instruments are regarded as a *minimum standard* to which the protection provided by the Charter may be increased, but not decreased.[23]

The repeated references to the European Convention on Human Rights and the designation of its provisions as a source of fundamental rights is intended to substantially close in the two documents, in order to ensure their uniform interpretation and application.

However, full coherence makes the accession of the European Union its self-necessary in order to avoid a double standard in implementing the two documents and the decisions of the two Courts, keeping the autonomy of the Community's legal.[24]

A first step towards incorporating the Community legal system of rights protection under the European Convention on Human Rights was made by the European Court of Human Rights in the case *Bosphorus Airways v. Ireland* (2005).[25] In its decision, the Court asserted that any measures taken by Member States under other international obligations undertaken are justified as long as these organizations are considered to protect human rights, both on offered material guarantees and the mechanisms of control of their protection, in a way that it can be considered *at least equivalent* to that provided by the Convention.

The European Court used for this particular decision a special criterion in order to determine the responsibility of the States: it shall not be engaged "if a State does nothing but to implement international legal obligations". Thence, the *discretion criterion* is decisive in this regard. If the State is provided with such power in the execution of its international obligations, then it remains

[23] Ion Gâlea, *Aderarea Uniunii Europene la Convenţia Europeană a Drepturilor Omului*, (Bucharest, C.H.Beck, 2012), p.34.

[24] Ion Diaconu, op.cit., p.302.

[25] Bianca Selejan-Guţan, op.cit., p.248.

responsible for its acts regarding the observance of the European Convention. For obligations arising from the Community law, however, the Court has created "immunity" from this point of view.

It was given a special role in human rights and community institutions to the Charter of Fundamental Rights of the European Union.

In 2001, the European Commission stated that any legislative proposals and regulatory act shall be subject, even during its development under normal procedures, of *a priori* compatibility control with the Charter. The EU Council has indirectly recognized the importance of the Charter by referring to it along with the European Convention, in the preamble to Directive 2003/86 on the right to family reunion.

The Charter has been regarded as the basis for a decision by the Court of First Instance[26], and also the European Court of Human Rights referred to the Charter in one of its decisions.[27]

The Charter was mentioned for the first time, once with the acknowledgement of its importance for Community law in a decision of the Court of Justice of the European Communities - *European Parliament v. Council of European Union*, June 27, 2006.[28]

The case was also related to Directive 2003/86, and the Court in Luxembourg, recognizing a wide margin of appreciation of States on granting the right to family reunion, which made a "symbolic recognition" of this document's role: "If this Charter is not a legal instrument with binding force, the Community legislature apprehended, however, to recognize its importance, by stating in the second consideration of the Directive that the latter observes the principles recognized by Article 8 of the European Convention, and also by the Charter".

In the same decision, the Court also displays its own view on the connections between the Charter and the European Convention: "the primary objective of the Charter (...) is to reaffirm the rights deriving mainly from the constitutional traditions and international obligations common to the Member States, the Treaty on the European Union and the Community Treaties, the European Convention on Human Rights, the Social Charters enacted by the Community and the Council of Europe and the case law of the Court (...) and the European Court of Human Rights".

6.European Union's Accession to the European Convention of Human Rights

The EU Council requested in 1994 a notification emanating from the Court of Justice regarding the possibility of the European Community to become a part to the European Convention on Human Rights, based on the Commission's proposal which had been submitted in 1979. The Court gave a negative opinion (Opinion 2/94), mentioning Community's lack of competence to accede to this Convention, and noting that the only solution would be adopting a special clause in the treaties. The Court affirms it cannot decide on the compatibility of accession to the 1950 Convention by the EC Treaty, in the absence of sufficient information on the institutional arrangements involved.

According to Article 6, parag.2 of the Treaty on European Union as amended by the Treaty of Lisbon, the Union shall accede to the *European Convention on Human Rights and Fundamental Freedoms*. *Union's competences as defined in the Treaties shall not affect the accession*.

The accession shall be accomplished according to the Protocol No. 8 appended to the Treaty of Lisbon, which provides that the Agreement on EU accession to the European Convention referred to in paragraph 2 of Article 6 of the Treaty on European Union shall reflect the necessity of preserving the specific characteristics of EU and EU law, in particular with regard to: a). specific arrangements for the Union's possible participation among the control authorities of the European Convention, b). mechanisms to ensure that proceedings of non-Member States and individuals actions are correctly directed against Member States and / or, where against the European Union.

---

[26] In case *Max mobil Telemkommunikation Service GmbH c.Comisia,* no. T-54/99, din 30 ianuarie 2002, Rec. 2-313.

[27] In case *Christina Goodwin c. Regatului Unit,* complaint no. 28957/95.

[28] Bianca Selejan-Guţan, op.cit., p.249.

Also, Article 2 of the Protocol states that this agreement should ensure that the accession of the EU shall not affect the powers of the European Union or the powers of its institutions. It shall ensure that nothing therein affects the situation of Member States with regard to the European Convention and the Protocols thereto, the measures taken by Member States derogating from the European Convention, in accordance with Article 15 of thereof and also diffidence regarding the European Convention enunciated by Member States in accordance with Article 57 of the Convention.

At the same time Protocol No. 14 to the European Convention of Human Rights, enacted on May13, 2004 and entered into force on June 1, 2010, contains an express provision allowing EU accession to the Convention (Article 17 paragraph 2).[29]

Following the entry into force of the Lisbon Treaty, the EU Council began negotiations in order to establish the negotiating mandate for the finality of the EU's accession Agreement to the Convention. The Commission was appointed as a negotiator of the European Union. After the enactment on June 4, 2010, the mandate given by the Council to the Commission to negotiate the accession to the Convention, the negotiations began between the EU and the Member States of the Council of Europe on July 7, 2010.[30]

Conclusions

Designed to decrease the democratic deficit of which the European Union was repeatedly accused, in order to approach the EU to its citizens, the Charter is integrated into the overall development of the European Union for the consecration and protection of human rights and fundamental freedoms. It is the expression of a political and legal consensus of Member States, the result of an evolution often difficult, but a starting point for new developments in this area.

EU's accession to the European Convention of Human Rights has clearly become a necessity, as long as Member States are parties to the Convention. In so far as they transfer some sovereign powers to the EU institutions, it is difficult to admit that during their exercise ths may act without complying with the Convention. There shall be a Europe of "two speeds" on human rights.

The accession of the EU to the Convention would avoid jurisdictional conflicts arising from the different decisions in similar cases or even in the same case, not on the existence of rights but of their contents, such situations are already arising.

INDIRECT EXPROPRIATION IN ROMANIAN BITs

LAURA-CRISTIANA SPĂTARU-NEGURĂ*

Abstract
Direct expropriations and nationalizations are rare nowadays, but the problem of indirect expropriation is far from being resolved. International legal texts provide very general and brief provisions regarding this issue. Usually, bilateral investment treaties contain general and brief provisions on indirect expropriation. The line between the concept of indirect expropriation and non-compensable regulatory governmental measures has not been systematically articulated.
In the last years, the expropriation claims arising out of regulatory measures have attracted the public attention like no other issue in international investment law. However, not all state measures which interfere with properties amount to expropriation. Moreover, it was suggested in the doctrine that the focus of debate in this area of law has shifted from the standard of compensation to the definition of expropriation. The delimitation is so delicate that the problem is not anymore if the compensation awarded was appropriate, but if there was an expropriation at all.
Since foreign investors' protection from uncompensated expropriations traditionally has been one of the main guarantees found in international investment agreements, the purpose of this paper is to analyse the indirect expropriation provisions in the most representative BITs concluded by Romania.

***Key words**: expropriation, investment, foreign investor, BIT, creeping*

Introduction

In practice the line between the concept of indirect expropriation and non-compensable regulatory governmental measures has not been systematically articulated.

Although we all know the general principle providing that a state may do whatever it wants on its territory, there are specific clear rules on compensation for expropriation and settlement of disputes through a court which is outside the state host. A well-known human right is the right to property which must be respected also for foreigners, therefore, if his property is taken, he must be compensated.

As mentioned in a previous paper[1], the *treatment of foreign investment* is defined as the set of principles and rules of international and national law governing the international investment, since its creation until its liquidation. Principles and rules of international law can be derived either from non-conventional sources and, in particular, from the general principles of international law or conventional sources, treaties and agreements, both multilateral and bilateral.

Since foreign investors' protection from uncompensated expropriations traditionally has been one of the main guarantees found in international investment agreements, the purpose of this paper is to analyse the *indirect expropriation* provisions in the most representative BITs concluded by Romania.

For this matter, we have selected 20 representative BITs concluded by Romania[2] (*out of the 82 BITs concluded by Romania as of mid-June 2012*[3] *- besides the 63 other IIAs*), in order to observe the legal provisions concerning this issue. Please have in mind that the order of the BITs is strictly alphabetical.

Paper content

I. The World of Bilateral Investment Treaties

Bilateral investment treaties (BITs) constitute the most important instrument for the international protection of foreign investment. Since the *adoption of the first BIT in 1959*, the number of such treaties has grown steadily and, by the end of 2011, reached a total of 2,833 BITs. The most *dramatic increase* took place during the 1990s, when their number quintupled. Initially, the BITs were concluded between a developed country and a developing country, usually at the initiative of the developed country. The developed country (i.e. a capital exporting country) entered into a BIT with a developing country (i.e. a capital importing country) in order to secure additional and higher standards of legal protection and guarantees for the investments of its firms than those offered under national laws. The developing country, on the other hand, would sign a BIT as one of the elements of a favourable climate to attract foreign investors[4].

The main provisions dealt within the BITs over the time are:

- the scope and definition of foreign investment;
- admission of investments;
- national and most-favoured-nation treatment;
- fair and equitable treatment;
- guarantees and compensation in respect of ***expropriation*** and compensation for war and civil disturbances;
- guarantees of free transfer of funds and repatriation of capital and profits; and
- subrogation on insurance claims; and dispute-settlement provisions, both State-to-State and investor-to-State[5].

In addition, some BITs include provisions regarding:

- transparency of national laws;
- performance requirements;
- entry and sojourn of foreign personnel;
- general exceptions; and
- extension of national and most-favoured-nation-treatment to the entry and establishment of investments.

Within these broad themes, the exact content of BIT provisions varies considerably, even between BITs signed by the same country, reflecting different approaches as well as bargaining positions. Over the years, as practice develops, some provisions in BITs have tended to become more elaborated.

From the information provided by UNCTAD, it appears that "*FDI inflows rose 16 per cent in 2011, surpassing the 2005–2007 pre-crisis level for the first time, despite the continuing effects of the global financial and economic crisis of 2008–2009 and the on-going sovereign debt crises. (...) A resurgence in economic uncertainty and the possibility of lower growth rates in major emerging markets risks undercutting this favourable trend in 2012. UNCTAD predicts the growth rate of FDI will slow in 2012, with flows levelling off at about $1.6 trillion, the midpoint of a range. Leading indicators are suggestive of this trend, with the value of both cross-border mergers and acquisitions (M&As) and greenfield investments retreating in the first five months of 2012. Weak levels of M&A announcements also suggest sluggish FDI flows in the later part of the year*"[6].

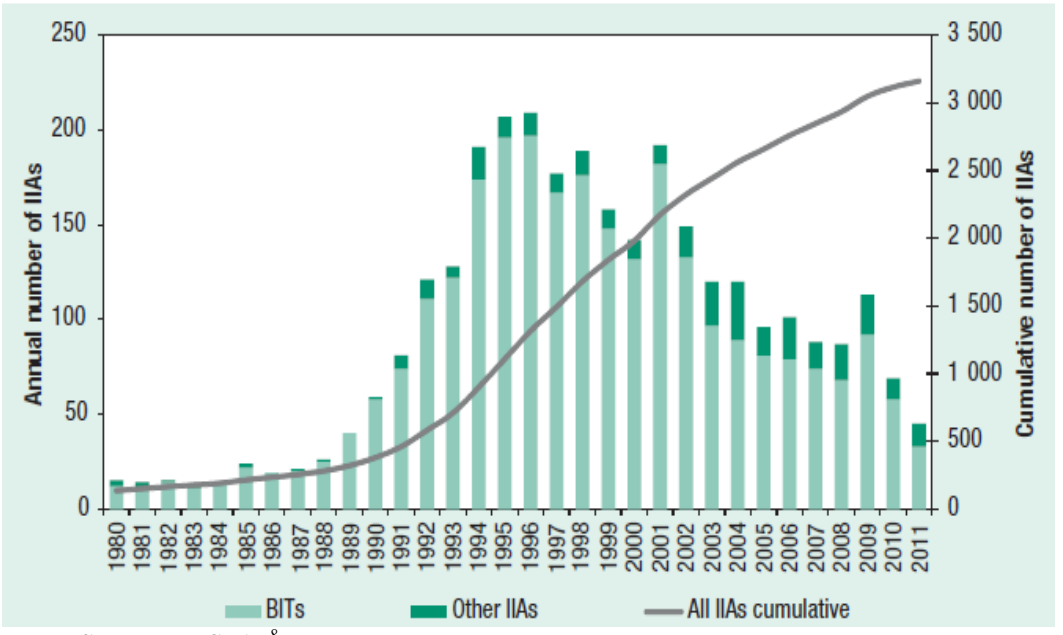
[6] UNCTAD, World Investment Report 2012, Towards a New Generation of Investment Policies, United Nations New York and Geneva, 2012, p. xiii, available at http://unctad.org/en/PublicationsLibrary/wir2012_embargoed_en.pdf (hereinafter "UNCTAD, World Investment Report…").

As UNCTAD statistics provide, by the end of 2011, there were overall 3,164 agreements international investments agreements (IIAs), which include ***2,833 bilateral investment treaties*** (BITs) and 331 "other IIAs", including, principally, free trade agreements (FTAs) with investment provisions, economic partnership agreements and regional agreements[7]. It appears however that the number of IIAs decreased in 2011 than in 2010 (in 2011 there were signed 47 IIAs - 33 BITs and 14 other IIAs, while in 2010 there were signed 69 IIAs). What can be the cause of this decrease? There may be several causes, like for instance, the tendency to conclude regional treaties or the controversies and sensitivities of IIAS.

Figure 1 Trends of BITs and "other IIAs", 1980–2011



Source: UNCTAD[8]

Although, in quantitative terms, BITs still dominate in terms of economic significance, *regionalism* becomes more important. "*The increasing economic weight and impact of regional treaty making is evidenced by investment negotiations under way for the Trans-Pacific Partnership (TPP) Agreement; the conclusion of the 2012 trilateral investment agreement between China, Japan and the Republic of Korea; the Mexico-Central America FTA, which includes an investment chapter; the fact that at the EU level the European Commission now negotiates investment agreements on behalf of all EU member States; and developments in ASEAN*"[9].

In most cases, these regional treaties are FTAs. What is the big advantage of these FTAs? They bring *consolidation and harmonization* of the investment rules, representing a step towards multilateralism.

We should keep in mind the fact that at the EU level, the European Commission is now negotiating not only regarding the liberalization of trade and investment, but also on conditions

[7] Idem, p. xx.
[8] Idem, p. 84.
[9] Idem, p. xx.

related to protection of investment on behalf of all member States. Taken together, EU member States account for about *half of the world's BITs*. Even though FTAs are pursued by the EU, at the same time, individual EU member states continue to conclude BITs with third States: since the EU Lisbon Treaty's entry into force, 45 such agreements have been signed, including 10 in 2011[10]. But what will happen to this BITs signed by the member states? They will remain in force until replaced by EU agreements, but they will have to be amended if they are not accordingly with the EU legislation.

Therefore, until FTAs are concluded, the BITs concluded by member states are very important and remain the relevant agreements providing investment protection and promotion.

II. Expropriation Legal Provisions from Selected BITs

Since foreign investors' protection from uncompensated expropriations traditionally has been one of the main guarantees found in international investment agreements, the purpose of this paper is to analyse the *indirect expropriation* provisions in the most representative BITs concluded by Romania.

As mentioned before, we have selected 20 representative BITs concluded by Romania[11] (*out of the 82 BITs concluded by Romania as of mid-June 2012[12] - besides the 63 other IIAs*), in order to observe the legal provisions concerning this issue.

The respective BITs were concluded with the following states (*please have in mind that the order of the BITs is strictly alphabetical*): Republic of Albania[13], Republic of Argentina[14], Australia[15], Bulgaria[16], Canada[17], People's Republic of China[18], Czech Republic[19], Finland[20], Federal Republic of Germany (*concluded with the Socialist Republic of Romania*)[21], Hellenic Republic[22], Hungary[23], Republic of Korea[24], the Lebanese Republic[25], Mongolia[26], Slovak Republic[27], Kingdom of Sweden[28], Republic of Turkey[29], United Kingdom of Great Britain and Northern Ireland[30], United Arab Emirates[31], United States of America[32].

We noticed that a typical provision on expropriation of these BITs would be:

Investments by investors of either Contracting Party shall not be expropriated, nationalized or ***subjected to any other measure the effects of which would be tantamount to expropriation or nationalization in the territory of the other Contracting Party*** *except under the following conditions:*

a) the measures are taken in the ***public interest*** *and* ***under due process of law****.*

b) the measures are ***clear and not discriminatory****, and*

c) the measures are accompanied by provisions for the payment of ***prompt, adequate and effective compensation****. Such compensation shall amount to the* ***market value*** *of the investments affected immediately before the measures referred to above in this paragraph occurred or became public knowledge and it shall be freely transferable in convertible currencies from the Contracting Party, at the official rate of exchange prevailing on the date used for the determination of value. The compensation shall be transferable without delay in a* ***freely convertible currency****. The compensation shall include interest until the date of payment at an* ***appropriate commercial rate*** *as determined by the* ***Central Bank*** *of the Contracting Party, and its amount shall be subject to* ***review by due process of law****, within the framework of the legislation of the Contracting Party in the territory of which the investment has been made.*

III. General Remarks on Indirect Expropriation

From the beginning, we have to emphasize that under public international law, the states have a sovereign right to take property held by nationals or aliens through nationalization or expropriation for economic, political, social or other reasons. In order that this taking to be lawful, the exercise of this right requires the accomplishment of some conditions that can be seen in all the above mentioned BITs:

(a) Property has to be taken for a **public purpose**;
(b) On a **non-discriminatory** basis;
(c) In accordance with **due process of law**;
(d) Accompanied by **compensation**.

Through these BITs, states have established a guarantee for foreign investors against the expropriation of their investments without compensation, and we must underline that "*today virtually all bilateral investment treaties contain an expropriation provision*"[33]. As regards the indirect expropriation, we realize that the indirect acts of takings are quite the same defined in the BITs analysed, although the doctrine and the arbitral tribunals' case law have still problems in defining this situation.

Well, indirect expropriation supposes ***total or near-total deprivation of an investment*** but without a ***formal transfer of title or outright seizure***[34]. UNCTAD states however that it can be argued that even when an IIA "*does not specifically mention indirect takings, the notion of expropriation is broad enough to cover relevant measures of both direct and indirect kind*"[35]. In our BITs, there are explicit references to indirect expropriation in one way or another.

As a general remark, we note that the articles on expropriation are placed quite at the beginning at the BITs, usually in article 3, 4 or 5. This fact is due to the high importance of this provision in the foreign investment protection.

However, the terminology is not fully uniform, although the idea is quite the same (e.g. "*tantamount to expropriation or nationalization", "any other measure having the same effect [to expropriation]", "effect equivalent to nationalisation or expropriation", "tantamount to expropriation or nationalization", "or indirectly, measures of expropriation, nationalization or any*

[33] UNCTAD, Expropriation, UNCTAD Series on Issues in International Investment Agreements II, p. 5, available at http://unctad.org/en/Docs/unctaddiaeia2011d7_en.pdf (hereinafter "UNCTAD, Expropriation …").

[34] Idem, p. 7.

[35] Idem, p. 8.

other measures having the same nature or the same effect", "measures of expropriation or nationalization, requisition or any other measures of like effects such as freezing compulsory sale of all or part of an investment").

We are surprised to observe that no subcategories of indirect expropriations are used, for instance *creeping, de facto, constructive, disguised, consequential, regulatory or virtual* expropriation. Of course that out of these, the subcategory most important is the so-called *creeping* expropriation that results in a deprivation of property or a loss of control, but which occurs gradually or in stages. The arbitral tribunal in *Generation Ukraine v Ukraine*[36] *qualified this special form of expropriation as coming "with a distinctive temporal quality in the sense that it encapsulates the situation whereby a series of acts attributable to the State over a period of time culminate in the expropriatory taking of such property"*[37].

We note also that these BITs do not include special exceptions regarding certain types of measures, for instance, compulsory licenses for intellectual property rights. Such an example could be the Article 13.5 of the Canadian BIT model (2004) which provides that: "*The provisions of this Article [Expropriation] shall not apply to the issuance of compulsory licenses granted in relation to intellectual property rights, or to the revocation, limitation or creation of intellectual property rights, to the extent that such issuance, revocation, limitation or creation is consistent with the WTO Agreement*"[38]. Of course, this exception ensures coherence between WTO law and international investment law.

For instance, in the UNCITRAL Partial Award *Lauder v Czech Republic*, dated 13 September 2001, the arbitral tribunal stated that an indirect expropriation "*does not involve an overtaking but effectively neutralises the enjoyment of property*". In the award dated 12 April 2002 on the ICSID case No. ARB/99/6, *Middle East Cement Shipping and Handling Co. S.A. v. Arab Republic of Egypt*, indirect expropriation was described as "*measures taken by a state the effect of which is to deprive the investor of the use and benefit of his investment even though he may retain nominal ownership of the respective rights*".

Another problem is that the expropriation provisions refer to the expropriation of "*investments*", but no definition of an investment can be found in the BITs, therefore the expropriation challenged under an investment treaty depends on how *narrow* or *broad* is the interpretation of such a term. Some recent treaties include however a clarification that "*an action or a series of actions by a Party cannot constitute an expropriation unless it interferes with a tangible or intangible property right or property interest in an investment*" (2004 US model BIT)[39]. The expression "*property interest in an investment*" can be however subject to interpretation, especially in light of the host state domestic law.

In 4 BITs analysed (i.e. the BITs concluded with Czech Republic, Hungary, Slovak Republic and with United Arab Emirates) we have discovered a special provision on the issue of taking of assets from a domestic company in which a foreign investor holds shares, for instance the article 5 paragraph 3 of the Czech Republic-Romania BIT: "*The provisions of paragraph 1 of this Article shall also apply where a Contracting Party expropriates the assets of a company which is incorporated or constituted under the law in force in any part of its own territory, and in which investors of the other Contracting Party own shares*". Article 6 paragraph (1) iv) of the BIT concluded with the United Arab Emirates is going even far: "*iv) When a Contracting nationalizes or expropriates the investment of a legal person which is established or licenced under the law in force in its territory and in which the other Contracting Party or any of its investors owns shares, stocks,*

[36] ICSID Case No. ARB/00/9.
[37] UNCTAD, Expropriation …, p. 11.
[38] Available at http://italaw.com/documents/Canadian2004-FIPA-model-en.pdf.
[39] UNCTAD, Expropriation …, p. 5.

debentures or other rights of interest, it shall ensure that prompt, adequate and effective compensation is received and allowed to be repatriated.

Such compensation shall be determined and paid in accordance with the provisions of Paragraph (1) (iii) of this Article".

Why would the above mentioned provision be important? It would be important because this type of provision would result in compensation paid to the foreign shareholders, even in the situations when just some assets are expropriated from the domestic company – situation when it would not result in the loss of full value of the shareholding. Several tribunals have chosen however to consider the whole business enterprise as an investment, and not the constituent parts.

As regards the requirements for a *lawful* expropriation, we noticed that the four crystallized criteria appear in every BIT - *public purpose, non-discriminatory manner, due process of law and payment of compensation* – even though the BITs display some difference in formulations.

However, there are some other BITs which add further conditions to assess the legality of an expropriation - for instance, the United Arab Emirates-Romanian BIT (1996) which provides that the expropriation "*does not violate any specific provision or contractual stability or expropriation contains in an investment agreement between the natural and legal persons concerned and the party making the expropriation*" (Article 6 paragraph (1) letter (d)). Another example would be the Netherlands-Oman BIT (2009) which sets forth that the expropriatory measures shall not be "*discriminatory or contrary to any specific undertaking which the former Contracting Party* ***may have given***" (Article 4 letter (b) of the Belgium/Luxembourg-Colombia BIT (2009) which provides that the "*measures shall be taken in a non-discriminatory manner, in good faith …*" (Article IX paragraph (1) letter (b)).

The criterion which has the bigger variation is the payment of compensation. The most used solution is the *Hull standard* - the standard of *prompt, adequate and effective compensation*. The compensation is considered to be *prompt* if it is paid without any delay, *adequate*, if it has a reasonable relationship with the market value of the investment concerned, and *effective*, if paid in convertible or freely useable currency.

In spelling out what constitutes an adequate compensation, several of the analyzed BITs refer to an investment's fair market value. The Australia-Romania BIT provide a back-up solution: "*Where that value* ***cannot be readily ascertained****, the compensation shall be determined in accordance with generally recognised principles of valuation and equitable principles taking into account the capital invested, depreciation, capital already repatriated, replacement value, currency exchange rate movements and other relevant factors*".

But Canada-Romania BIT opts for another type of calculating the adequate compensation: *"the* ***genuine value of the investment or returns expropriated*** *immediately before the expropriation or at the time the proposed expropriation became public knowledge, whichever is the earlier"*.

However, no references to *just compensation* (Chile-Tunisia BIT 1998) or *real value* (Slovenia-Turkey BIT 2004) are made in the analysed BITs.

Many older IIAs do not address the issue of *applicable interest*. The trend in recent treaty practice has been to explicitly provide for the payment of interest from the date of the taking until the date of payment, fact that we discover in our BITs. Most recent treaties contain guidelines on the applicable rate of interest and do so in a variety of ways, some of which are rather vague (e.g. "appropriate", "fair", "commercially reasonable" interest, "normal market rate", "usual commercial rate"), while others are quite precise (e.g. LIBOR rate).

Some BITs lay down the obligation to pay interest only in those situations when the payment of the principal amount of compensation is delayed, for instance, article 4 paragraph (2) of the Romania-Turkey BIT provides that "*in the event that payment of compensation is delayed, the investor shall receive interest for the period of any* ***undue delay*** *in making payment*" (emphasis added).

No reference to the *type of interest* – simple or compound – is made. As regards the *currency*, we noticed that many of the BITs analyzed provide that compensation must be paid in a "freely convertible currency" (e.g. the BITs concluded with the Republic of Czech Republic, Greece and Slovakia). The Australia-Romania BIT (1993) provides *that the "compensation shall be payable either in the currency in which the investment was originally made or, if requested by the investor, in any other freely convertible currency*".

Even though there are things that are not provided under this expropriation articles, all of the above mentioned provisions could be considered to be a "high protection model", instead of an "increased predictability" model and a "qualified" model. Under this high protection model, Romania and the other states seek to maximize the protective effect of the treaty. Therefore, such a typical clause contains "*a prohibition against direct and indirect expropriation of investments unless for a public purpose, on a non-discriminatory basis, under due process of law and upon payment of compensation, which shall be prompt (without delay), adequate (fair market value) and effective (freely convertible and transferable currency)*"[40].

Several BITs analyzed provide the possibility for a prompt review: "*The investor affected by a judicial or other shall have a right to prompt review, independent authority of that Contracting Party, of his or its case and of the valuation of his or its investment in accordance with the principles set out in this Article*" (the Czech Republic-Romanian BIT). There is one interesting provision on this aspect which deserves to be remembered here – article 3 paragraph (2) of the Germany-Romania BIT – but there are historic considerations to be had in mind: "***The legality*** *of any expropriation measure within the meaning of paragraph 2 (b) of the protocol to this Treaty* ***shall be reviewed at the request of the investor*** *in a legal proceeding of the respective Contracting Party:*

(a) In the Federal Republic of Germany: ***in all cases****;*

(b) In the Socialist Republic of Romania: ***only in those cases in which expropriation has not been ordered by law or by a decree of the State Council or by presidential decree***".

We consider that much more things could be said regarding the provisions of the above mentioned BITs, but for sure the decision whether a taking constitutes an indirect expropriation measure is taken on a case by case basis. There is not a magical solution, therefore the arbitral tribunals have to decide each time if the state has violated its obligations towards the foreign investor.

Conclusions

We noticed earlier that the balance is gradually shifting from bilateral to regional treaty making, thereby increasing the impact of regions in IIA rulemaking. In most cases, regional treaties are at the same time FTAs. As UNCTAD underlines, "*by comprehensively addressing the trade and investment elements of international economic activities, such broader agreements can better respond to the needs of today's economic realities, where international trade and investment are increasingly interconnected. It is also notable that investment chapters in new regional agreements typically contain more refined and precise provisions than in earlier treaties. This shift can bring about the consolidation and harmonization of investment rules and represent a step towards multilateralism. However, where new treaties do not entail the phase-out of old ones, the result can be the opposite: instead of simplification and growing consistency, regionalization may lead to a multiplication of treaty layers, making the IIA network even more complex and prone to overlaps and inconsistencies*"[41].

In a future research it would be interesting to analyse the provisions regarding expropriation in FTAs.

[40] UNCTAD, Expropriation …, p. 125.
[41] UNCTAD, World Investment Report …, p. 84.

The right to expropriate is an undisputed prerogative of sovereign States, and, as mentioned before, although the indirect methods of taking have not been identified with any certainty either in arbitral decisions or in the literature, it is unlikely that this deficiency of the law will be cured.

So we must ask ourselves what the foreign investor should do? How can a foreign investor know if the host's state conduct affecting the investment is compensated? How can a foreign investor know whether the host's state conduct affecting the investment is compensable? The law may provide a basis to answer those questions, but the circumstances which determine the question remain crucial for the determination. It is obvious that some governmental actions, in some cases, almost always, will give rise to indirect expropriation finding cases, and therefore to compensation. Other measures will not. Between the two categories will be the "*very brief and hard*" area about which the famous professor Dolzer was speaking, still full of gaps.

THE EUROPEAN CENTRAL BANK AND THE EUROZONE CRISIS MANAGEMENT

MONICA ŞAGUNA*

Abstract
The Euro is the single currency shared by 17 of the European Union's Member States, which together make up the Euro area. Since its introduction, in January 2002, it became the second most traded currency in the world after the United States dollar. With the launch of the Euro, the monetary policy became the responsibility of the independent European Central Bank, which was created for that purpose, and of the national central banks of the Member States, having adopted the Euro. However, the accumulation of massive and unsustainable deficits and public debt levels in a number of peripheral economies threatened the Eurozone's viability by the end of its first decade, triggering a Eurozone sovereign debt crisis. The institutional mechanisms surrounding the Euro have also been an integral part of the crisis. On this line, the European Monetary Union is supported on one side by treaties and multilateral agreements including the Maastricht Treaty, the Stability and Growth Pact and the Lisbon Strategy and, on the other side, by the European Central Bank. The combination of these institutions has produced a mix of monetary, fiscal and labour market policies with powerful social implications. And, what started as a debt crisis in Greece in late 2009 has evolved into a broader economic and political crisis in the Eurozone and European Union.
In this framework, the purpose of my paper is to analyze the roots of the Eurozone crisis, as the biggest challenge since the Euro adoption and the European Central Bank's response to it. Therefore the objectives are: identification of the reasons that stand behind the crisis, then observing how the crisis has affected the functioning of the European Central Bank and the Euro, and how it was forced to respond and, finally, focusing on the future and the challenges that lie ahead.

Key words: *Euro zone, Euro, crisis, European Central Bank, challenges*

Introduction

Since 2010, the Eurozone debt crisis triggered a growing scepticism about the future of the European Union and of the Eurozone. Across Europe, a fundamental debate is taking place upon this subject and many citizens are concerned about where Europe is heading.

Though, the crisis highlighted the economic interdependence of the European Union, while also underscoring the lack of political integration, needed to provide a coordinated fiscal and monetary response. Since the eruption of the sovereign debt crisis in the Euro area in May 2010, the European Central Bank (or for that matter the Eurosystem) has been in the spotlight of crisis management and resolution.

Having these premises, **my study focuses on the Eurozone crisis, as the biggest challenge since the adoption of the Euro and tries to make an objective analysis of its causes**.

The importance of my study lies in the fact that, only by understanding the reasons that stand behind a crisis, that had and still has deep consequences on the European Union as a whole and on its composing member states, we can learn some lessons, in order to avoid such event happening in the future.

In this highlight, the objectives are: identification of the reasons that stand behind the crisis, then observing how the crisis has affected the functioning of the European Central Bank and the Euro, and how it was forced to respond and, finally, focusing on the future and the challenges that lie ahead.

* Lecturer, PhD candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: angra121@yahoo.com).

To answer at these objectives, I will start by understanding the roots of the Eurozone crisis, in order to find out in the end the challenges that lie ahead.

Therefore, I will divide my paper in three sections:

- The reasons that stand behind the crisis;
- How the crisis has affected the Euro and the functioning of the European Central Bank and how it was forced to respond;
- The future and the challenges that lie ahead;

The existent specialized literature has widely debated this subject, but this paper will try to make an objective and understandable analysis of a matter that preoccupies and affects many countries and, in the end, many people, and implies a coordinated answer at the European Union level.

Paper content

1. The reasons that stand behind the crisis

The *Organization for Economic Cooperation and Development* (OECD)[1] announced the Eurozone debt crisis was the world's greatest economic threat in 2011, and things have only worsened in 2012. The crisis has festered since 2009, when the world first realized Greece could default on its debt. In three years, it's escalated into the potential for sovereign debt defaults from Portugal, Italy, Ireland and Spain.

The European Union, led by Germany and France, struggled to support these members with bailouts from the European Central Bank and the International Monetary Fund. These measures haven't been enough, allowing the crisis to threaten the existence of the Euro itself.

How did such a great crisis evolved?

The creation of the European Union and the founding of one of the most important central banks in the world – the European Central Bank – at the end of the 1990s was an historical accomplishment. Yes, there were sceptics that, right at the start, warned that the Economic and Monetary Union will not survive its first serious recession….but were they right? This is a question that preoccupied in the last years many sound voices.

The origins that stand behind this crisis are considered by the analysts to be multiple, as shown below.

Analysts note that the powerful original members of the European Economic Community, such as Germany, were eager to develop a large and competitive Eurozone, and so allowed less solvent European Union nations to adopt the Euro, even if they had failed to fulfil the criteria outlined by the Maastricht Treaty[2]. Today, all European Union member states - with the exception of the United Kingdom, Denmark, and Sweden - are required to join the Eurozone, only when they meet the criteria[3]. Entry to the Eurozone is controlled by the so-called Eurogroup, which comprises the seventeen Eurozone finance ministers; the group has been led by Luxembourg Prime Minister Jean-Claude Juncker since 2005.

---

[1] The Organization for Economic Cooperation and Development, (OECD) is an association of 34 nations in Europe, North America, and the Pacific. Its goal is to promote the economic welfare of its members, and coordinate their efforts to aid developing countries outside of its membership. Although it was originally based in Europe, it is broadening its scope to become more global. It is working to add six of the fastest growing countries in the emerging markets as members.

[2] The **Euro convergence criteria** (also known as the **Maastricht criteria**) are the criteria which European Union member states are required to meet to enter the third stage of the Economic and Monetary Union (EMU) and adopt the Euro as their currency. The four main criteria, which actually comprise five criteria as the "fiscal criterion" consist of both a "debt criterion" and a "deficit criterion", are based on Article 140 (ex article 121.1) of the Treaty on the Functioning of the European Union.

[3] The Eurozone in crisis, Cristopher Alessi, 23 July 2012.

This is where things have gone wrong. Let us first recall that the convergence criteria relate to government finance, long term interest rates, inflation and real exchange rates. In the year before the introduction of the Euro it was realised that compliance with the government finance criteria after the introduction of the Euro did require additional measures and procedures, so the Stability and Growth Pact was introduced. However, it is now abundantly clear that this Pact was not complied with and that government finance criteria are still not respected by many Euro area countries. The other criteria were more or less ignored. The interest rate criterion is closely related to the government finance criterion. At the moment, a number of Euro area countries no longer fulfill this criterion, which specifies that long-term rates should not deviate by more than 200 basis points from the average long term rate of the three best performing countries in terms of inflation.[4]

Following Maastricht, leaders of European countries with weaker economies tended to defer tougher budgetary measures because of domestic challenges. The effects were not immediately felt: the periphery states thrived in the first years of the Euro, propelled by large infusions of liquidity and unprecedented access to credit from other Eurozone states. At the same time, the "productive capacity" of the periphery was limited by rigid labour markets and a reduction of economic competitiveness.

The underlying structural issues in the Eurozone periphery became increasingly visible following the global financial meltdown of 2007-2008. Liquidity quickly dried up and several states were left with unsustainable deficits and public debts greater than their Gross Domestic Product. By 2010, a sovereign debt crisis - most pronounced in Greece - was spreading throughout the periphery and imperilling the future of the Eurozone. Between spring 2010 and spring 2011, the European Union and the International Monetary Fund acted to bail out Greece, Ireland, and Portugal.[5]

So, the sovereign debt crisis[6] that broke out in Greece at the end of 2009 is fundamentally due to the precarious integration of the peripheral countries[7] in the Euro-zone. Its immediate cause, however, lie with the crisis of 2007-2009. Speculative mortgage lending by the United States financial institutions, and trading of resultant derivative securities by international banks created a vast bubble in 2001-2007, leading to crisis and recession. State provision of liquidity and capital in 2008-2009 rescued the banks, while state expenditure prevented a worsening of the recession. The result in the Eurozone was a sovereign debt crisis, exacerbated by the structural weaknesses of the monetary union.

In this context, the crisis of public debt, thus, represents Stage Two of an upheaval that started in 2007 and can be called a crisis of "financialization[8]". Mature economies have become

[4] The European Central Bank in (the) crisis, Sylvester Eijffinger, Lex Hoogduin, CESifo DICE Report 1/2012.

[5] The Eurozone in crisis, Cristopher Alessi, 23 July 2012.

[6] The **European sovereign debt crisis** (often referred to as the **Eurozone crisis**) is an ongoing financial crisis that has made it difficult or impossible for some countries in the Euro area to repay or re-finance their government debt without the assistance of third parties.

[7] In World Systems Theory, the **periphery countries** (sometimes referred to as just **the periphery**) are those that are less developed than the semi-periphery and core countries. These countries usually receive a disproportionately small share of global wealth. They have weak state institutions and are dependent on – according to some, exploited by – more developed countries. These countries are usually behind because of obstacles such as lack of technology, unstable government, and poor education and health systems.

[8] *Barron's Finance & Investment Dictionary:* Concept associated with developments leading up to the 2008–2009 crisis and defined differently by various people, but referring generally to the dominance of financial services over industry as the primary creator of wealth. Whereas, traditionally, the capital markets made bank-based savings available to producers who created wealth, capital market systems became themselves the generator of profit making and wealth. Derivatives, such as futures contracts, swaps, and options, originally designed as tools for use in hedging and risk management, became widely traded financial assets.

The definition of financialization proposed by Gerald Epstein has been cited by many authors: "the increasing role of financial motives, financial markets, financial actors and financial institutions in the operation of the domestic and international economies".

"financialized" during the last three decades resulting in growing weight of finance relative to production. Large corporations have become to rely less on banks, while becoming more engaged in financial markets. Households have become heavily involved in the financial system through assets (pension and insurance) and liabilities (mortgage and unsecured debt). Banks have been transformed, seeking profits through fees, commissions and trading, rebalancing their activities toward household rather than corporations. Financial profit has emerged as a large part of total profit.

But financialization has unfolded in different ways across mature countries, including those in the European Union. Germany has avoided the explosion of household debt that recently took place in other mature countries and peripheral Eurozone countries. The performance of German economy has been mediocre for many years, while great pressure has been applied on German workers' pay and conditions. The main source of growth for Germany has been its current account surplus inside the Eurozone, resulting from pressure on pay and conditions rather than on superior productivity growth. This surplus has been recycled through foreign direct investments and German bank lending to peripheral countries and beyond.

The implications for the Eurozone have been severe. Financialization in the periphery has proceeded within the framework of the monetary union and under the dominant shadow of Germany. Peripheral economies have acquired entrenched current account deficits. Growth has come from expansion of consumption financed by expending household debt or from investment bubbles characterised by real estate speculation. There has been a general rise of indebtedness, whether of households or corporations. Meanwhile, pressure has been applied to workers' pay and conditions across the periphery, but not as persistently as in Germany. The integration of peripheral countries in the Eurozone, then, has been precarious, leaving them vulnerable to the crisis of 2007-2009 and eventually leading to the sovereign debt crisis[9].

Finally, the financial crisis of 2007-2008 had a very strong impact on the banking sector in some countries. Governments offered support to their banks in order to avoid a collapse of the financial system, which weakened government budgets and increased government debt. This negative impact was reinforced by the deep recession of 2009, which caused a sharp decline in government revenues. In countries like Ireland, and to a lesser degree Spain, this became a threat to fiscal sustainability. The fiscal sustainability crisis in individual countries became a threat to financial stability in the Euro area, because of high financial integration in the Euro area and due to (the threat of) contagion. High financial integration was reflected in the fact that, in many cases, a high proportion of the government debt of Euro area countries is held outside the country concerned.

Doubts about the sustainability of debt of a certain country therefore have an immediate impact on the solvency of banks across the Euro area. The discussion about private sector involvement in the case of Greece and as an element in the functioning of the European Stability Mechanism (ESM) enormously reinforced the potential and actual spill-over effects between countries and between government instability and financial sector instability.[10]

Last, but not least, the institutional mechanisms surrounding the Euro has been an integral part of the crisis. To be more specific, European Monetary Union is supported by a host of treaties and multilateral agreements, including the *Maastricht Treaty*, *the Stability and Growth Pact* and the *Lisbon Strategy*. It is also supported by the European Central Bank, in charge of monetary policy across the Eurozone. The combination of these institutions has produced a mix of monetary, fiscal, and labour market policies with powerful social implications.

2. How the crisis has affected the Euro and the functioning of the European Central Bank and how it was forced to respond

As we seen which were the main origins that stand behind this crisis, the next step is to find out how the crisis has affected the Euro and the functioning of the European Central Bank and how it was forced to respond.

[9] Crisis in the Eurozone, Costas Lapavitsas et al., Verso, UK, 2012, pg. 1-2.
[10] The European Central Bank in (the) crisis, Sylvester Eijffinger, Lex Hoogduin, CESifo DICE Report 1/2012.

The crisis is so severe that there are neither soft options, nor easy compromises for peripheral countries. The choices are stark, similar to those of developing countries confronted with repeated crisis during the last three decades.

The first alternative is to adopt austerity by cutting wages, reducing public spending and raising taxes, in the hope of reducing public borrowing requirements. Austerity would probably have to be accompanied by bridging loans or guarantees by core countries to bring down commercial borrowing rates. It is likely that there would also be "structural reform", including further labour market flexibility, tougher pension conditions, privatisation of remaining public enterprises, privatisation of education, and so on. The aim of such liberalisation would presumably be to raise the productivity of labour, thus improving competitiveness.

This is the preferred alternative of ruling elites across peripheral and core countries, since it shifts the burden of adjustment onto working people. But, there are several imponderables. First, it is the opposition of workers to austerity, leading to political unrest. Further, the Eurozone lacks established mechanisms both to provide bridging loans and to enforce austerity on peripheral members. There is also strong political opposition within core countries to rescuing others within the Eurozone. On the other hand, the option of forcing a peripheral country to seek recourse to the International Monetary Fund would be damaging to the Eurozone as a whole.

The second alternative is to reform the Eurozone. There is almost universal agreement that unitary monetary policy and fragmented fiscal policy have been a dysfunctional mix. The aim would be to produce smoother interaction of monetary and fiscal forces, while maintaining the underlying conservatism of the Eurozone.[11]

So, what about the Euro and the European Central Bank?

"*The European Central Bank's actions since the onset of the financial crisis have been bold, and yet firmly anchored within the medium-term framework of our monetary policy strategy."* (Trichet[12], 2009).

Before the crisis, the European Central Bank's success in achieving price stability was typically interpreted as testimony to the effectiveness of its underlying principles of central banking.

The main objective of setting up the European Central Bank was to maintain price stability in the Euro area as a whole. The European Central Bank has so far been very successful in achieving its main objective: since the introduction of the Euro inflation has on average been around 2%. That is lower than the average outcome for Germany in the era of the Bundesbank, and lower than in many other advanced countries around the world. The European Central Bank has also succeeded in becoming a very highly respected central bank in the international arena. Therefore, the Euro as such and the European Central Bank are not the problem.

As stated above, it is more a question of the sovereign debt crisis affecting the Euro and the European Central Bank through two channels.

The first channel is the creation of (potential) financial instability in the Euro area. This is an issue for the European Central Bank because one of its tasks is to contribute to the financial stability policies of the competent authorities without prejudice in terms of maintaining price stability.

The second channel is even more fundamental from the perspective of the Euro, because it affects the conditions for the existence of the Euro and the European Central Bank's capacity to maintain price stability in the Euro area.

The so-called convergence criteria are fundamental to the existence of the Euro and the possibility of running a single monetary policy for the Euro area. These criteria should not only be fulfilled as a condition for introducing the Euro and for entering the Euro area at the moment of

[11] Crisis in the Eurozone, Costas Lapavitsas et al., Verso, UK, 2012, pg. 8-9.

[12] Jean-Claude Trichet is the former president of the European Central Bank. On 1 November 2003 he took Wim Duisenberg's place as president of the European Central Bank.

entry, but should be complied with on a sustainable basis. The latter means that compliance must be ensured after adopting the Euro.

Nevertheless, the European Central Bank was immediately thrown into the spotlight after the sovereign debt crisis hit in May 2010. There were three aspects to its responsibilities: future prevention, crisis resolution and crisis management. In future prevention and final crisis resolution, the European Central Bank can only offer its analysis and views. The responsibility is in the hands of the politicians.

These are not areas that put pressure on the (cohesion of) European Central Bank Governing Council's decision-making. All Council members have a similar interest, although they may somewhat disagree on the precise content of the measures to be taken. Initially, however, resolving the crisis is a matter for the governments of the Euro area. It is in the area of crisis management that the European Central Bank and the cohesion of its Governing Council were quickly put to test. During the Greek sovereign debt crisis market turbulence increased to high levels and interest differentials against Germany went up sharply[13].

European Central Bank's main actions in the Eurozone crisis:
The Securities Markets Programme

In May 2010, the European Central Bank decided to start the Securities Markets Programme (SMP) in order to address tensions in certain market segments that hampered the monetary policy transmission mechanism. The latter refers to the process with which the European Central Bank aims to influence prices in the entire Euro area via its interest rates. Under the SMP, should this mechanism be disrupted by dysfunctional market segments and the European Central Bank's rate signal not be transmitted evenly to all parts of the Euro area, the European Central Bank could intervene by buying, on the secondary market (i.e. from banks and against market prices), the securities that it normally accepts as collateral. The last SMP purchases took place in February 2012 and the programme was terminated in September 2012[14].

The European Central Bank Governing Council found itself in uncharted territory. For the first time it had to take a decision on whether and how to intervene in government debt markets. This was, of course, no ordinary monetary policy decision. It could even be debated whether the decision was indeed a monetary policy decision, or whether it was about supporting financial stability measures taken by governments.

There was also a substantive argument against the Securities Markets Programme (SMP). By buying government bonds, the European Central Bank would relieve market pressure on the governments concerned to consolidate and adjust. This is the argument of induced moral hazard and why the European Central Bank stressed the temporary nature of all of its so called unconventional measures and thus also of the SMP.

The SMP was meant to be temporary, but governments did not take sufficient measures to end the market turbulence or to make it possible for the European Central Bank to (gradually) exit the programme. There was a period beginning in spring last year when tensions in the markets became smaller. The size of the SMP more or less started to stabilise at around 70-75 billion Euro and started to look like it would die quietly, until the crisis flared up again when Spain, and later Italy, came under pressure. A very rapid increase in the size of the SMP to well above 200 billion Euro was the result. The SMP purchases only came down when the European Central Bank, under its new President Mario Draghi, announced two three year LTROs with full allotment[15].

Addicted banks

In October 2008, following the collapse of Lehman Brothers, the financial turmoil turned into a global financial crisis. Growing uncertainty about the financial health of major banks worldwide led to a collapse in activity in a large number of financial markets. The virtual breakdown of the money market caused short-term interest rates to increase to abnormally high levels, both inside and outside the Euro area. During this period of great uncertainty, banks built up large liquidity reserves, while removing risks from their balance sheets and tightening loan conditions. The crisis also began to spread to the real economy, with a rapid and synchronised deterioration in economic conditions in most major economies and a free fall in global trade. The European Central Bank responded with several measures, the most important of which was a switch to a policy of full allotment and fixed rates. This meant that Euro area banks were able to get unlimited liquidity from the European Central Bank at the main refinancing rate provided they offered adequate collateral. The European Central Bank effectively took the place of the money market. Other measures (besides a substantial cut in interest rates) included widening the range of eligible collateral and lengthening the maturities of loans to banks[16].

This is perhaps the most important policy measure that the European Central Bank had introduced before the sovereign debt crisis. As a by-product of full allotment, a number of banks addicted to the European Central Bank credit had emerged. The purpose of full allotment was to provide funding to banks that could no longer rely on the professional funding markets, and the interbank market in particular, which almost completely dried up as a consequence of high uncertainty after the collapse of Lehman Brothers.

Three year LTROs and collateral measures

The European Central Bank then surprised everybody by announcing two long-term refinancing operations (LTROs) with a 3 year maturity and full allotment (against collateral). It also allowed seven national central banks to accept a wider range of collateral against European Central Bank refinancing operations.[17]

In December 2011, in response to severe market tensions that threatened the functioning of the money market and the flow of credit from banks to businesses and consumers, the European Central Bank decided to conduct two longer-term refinancing operations with a maturity of 36 months. The rate in these operations was fixed at the average rate of the main refinancing operations over the life of the respective operation. The first operation was allotted on 21 December 2011 and the second on 29 February 2012.

In addition, the European Central Bank decided to increase the availability of collateral by reducing the rating threshold for certain asset-backed securities and by allowing national central banks, as a temporary solution, to accept as collateral additional credit claims (bank loans) that satisfy specific criteria. The responsibility entailed in the acceptance of such credit claims will be borne by the national central bank authorising their use.

Thirdly, the European Central Bank decided to reduce the reserve ratio to 1% (from 2%) thus freeing up collateral and supporting money market activity.

In September 2012, to preserve the singleness of its monetary policy and to ensure the proper transmission of its policy stance to the real economy throughout the Euro area, the European Central Bank announced the possibility of Outright Monetary Transactions (OMTs). OMTs are interventions in secondary sovereign bond markets to address severe distortions in these markets which originate from, in particular, unfounded fears on the part of investors of the reversibility of the Euro. OMTs

[16] www.ecb.int.

[17] The European Central Bank in (the) crisis, Sylvester Eijffinger, Lex Hoogduin, CESifo DICE Report 1/2012.

provide, under appropriate conditions, a fully effective backstop to avoid self-fulfilling destructive scenarios with potentially severe challenges for price stability in the Euro area. In order to preserve the primacy of the European Central Bank's price stability mandate and to ensure that governments retain the right incentive to implement the required fiscal adjustments and structural reforms, a necessary condition for OMTs is strict and effective conditionality attached to an appropriate EFSF/ESM programme[18].

3. The future and the challenges that lie ahead

One of the main challenges that lie ahead is reforming the European Union.

The challenge is probably due to the fact that not all countries of the Euro area currently fulfil the convergence criteria; and this will probably the case for quite a number of years to come. Fiscal consolidation and restoring competitiveness in particular take time.

In the wake of the global financial and debt crisis, the European Union began to adopt measures for centralizing governance mechanisms and coordinating fiscal and economic policy. Most notably, in December 2011, European Union leaders agreed to the formation of a so-called fiscal union. Twenty-five European Union countries - all but the United Kingdom and Czech Republic - signed on to the German-engineered **fiscal pact,** which would allow the European Union to dictate the national budgetary policies of participating nations. European Union leaders also agreed to introduce the $650 billion **European Stability Mechanism** - the permanent bailout fund meant to replace the EFSF - a year earlier than planned, in July 2012.

Germany has resisted calls to issue joint Eurobonds to combat rising borrowing costs throughout the single currency zone. However, Eurozone leaders announced plans in the summer of 2012 to push forward with further integration by creating a **single banking authority**, situated in the European Central Bank, as a first step towards developing a **Eurozone-wide banking union**. When in place, such an oversight mechanism could ultimately allow the Eurozone's rescue funds to, for example, directly aid Spanish banks, rather than channelling the loans through the already indebted Spanish government.[19]

Conclusions

As a conclusion, the study focused on the Eurozone crisis, a long debated subject in the last years, from multiple points of view.

In the first part, there were analysed the main causes that are considered to stand behind the recent crisis.

Second part, tried to reveal how the crisis affected the functioning of the European Central Bank and the Euro, and, having this premises, how the European Central Bank was forced to response through its actions.

The last part was dedicated to some considerations about the future and the challenges that lie ahead in an uncertain economic context.

Passing through this topics, had a clear purpose: only by clearly understanding the reasons that stand behind a crisis, that had and still has deep consequences on the European Union as a whole and on its composing member states, we can learn some lessons, in order to avoid such event happening in the future.

As a suggestion for future researches, I believe that an interesting paper would consist into analysing the proposal for a banking union, as one the European leaders response to the crisis.

REFLECTIONS ON THE PRINCIPLE OF THE INDEPENDENCE OF JUSTICE

ELENA EMILIA ŞTEFAN*

Abstract
The independence of justice is no longer just a wish of the Constitution editors, it represents a reality, has a practical applicability and it is not at all just a state of mind. Moreover, the judicial independence is regulated by a number of international documentation which completes the whole picture of the national legislation.
Does the civil society represent only a pressure agent likely to influence the independence of law? So here is a question we will try to answer in this study, and we will present theoretical but also practical aspects on the principle of the independence of justice.

Keywords: *Constitution, law, the principle of the independence of justice, magistrates' liability, the European Court of Human Rights.*

Introduction

The social political changes but also the globalization of law has been focused on the concepts of the state, law, of society in general. By examining from the legal point of view the activity of the state, it was found that its strength of will and commandment, which is sovereignty, is accomplished through three powers: the legislative, the executive or administrative and the judicial power[1].

Can we still talk nowadays about a classic separation of the three powers[2] or can we identify their collaboration? Originally, the Romanian Constitution had not bee expressly governed by the theory of the separation of powers, this thing being accomplished by the European level events that have led to its revision in 2003. The form in which we find the separation of powers is provided in art. 1, (4), as follows: "the state is organized according to the principle of separation and to the balance of powers – legislative, executive and judicial power, within the constitutional democracy".

As shown in the dogma, the reason of the insertion of this paragraph was mainly the contribution to a better delineation of the relationship between the powers, representing the advantage that an express norm always represents towards that resulting from the interpretation, which is said the certainty, strictly, the undoubtedly predictability.[3] Basically, currently expressions such as "*state of law*", "*rule of law*", "*separation of powers*", "*supremacy of the law*", are concepts closely related with "*human and citizen rights*", so that we have o rich European law in terms of human and citizen rights.

We therefore do not propose to analyze the theory of separation of powers in relation to the political system, and neither to render the way how this theory is regulated in the Constitution of the world states, but the approach we propose aims to capture a single component, namely the law, analyzed in terms of its independence.

1.The legal frame of the independence of law

The analysis of the judiciary in our country includes undoubtedly the issue of magistrates' liability. This topic is extremely sensitive and for a real approach it has to be considered many aspects, such as: the legal and constitutional regulating of the system of liability of this socio-professional category, but also of the vulnerabilities resulting from daily activities of a magistrate related to the organization and functioning system of the courts and prosecutors' offices, the pace of solving the cases and other matters.

In our opinion, in order to talk about the independence of justice, we have to consider the independence of the magistrate, the two concepts being closely related.

The revised Romanian Constitution expressly regulates the principle of the independence of the judicial power in relation to the executive and the legislative power, as previously mentioned in the introduction to this study. The constitutional provisions related to the independence of justice are contained in Chapter VI entitled "Judicial Authority", art. 124-134. So that, according to art. 124, (3): "Judges shall be independent and subject only to the law" and related to art. 125, (1): "The judges appointed by the President of Romania shall be irremovable, according to the law". We also mention that the institution called "the Superior Council of Magistracy" is the guarantee of the independence of law, according to art. 133 and. 134 from the Constitution. Moreover, the organic law on the status of the magistrates[4], as amended and supplemented, has provided the principle of the independence of the judges and their obedience only to the law and the principle of the independence of the prosecutors. Another article refers to the fact that the justice is carried out in the name of the law, it is unique, equal and impartial for everyone. To these provisions, we can state that in our country, the independence of justice is constitutionally established.

Considering art. 6 of the European Convention on Human Rights, the fundamental principles of the United Nations Organization on the independence of the magistrates, approved by the United Nations General Assembly in November 1985, The Council of Europe (…) indicates that: "the governments of the Member States should adopt or reinforce all necessary measures to promote the role of the judges, individually, and also of the judiciary as a whole and should improve their independence and effectiveness (…)"[5]

On the European level, there is the Recommendation 94 (12) of the Committee of Ministers[6] to the Member States on the independence, efficiency and role of the judges, adopted on October 13th 1994, that wishing to promote the independence of the judiciary, has developed several rules having the value of principles.

The same Recommendation under the Principle IV entitled "The Legal Responsibilities", in paragraph 3 b) states that "the judges should have the following specific responsibilities: to solve cases in an impartial manner in accordance with the evidences presented and the interpretation of law, to ensure that a fair hearing is given to all parties in the process and the procedural rights of the parties are being complied with in accordance to the provisions of the Convention".[7]

This is how, according to the above mentioned, the independence of justice is both nationally and internationally regulated.

2.The criteria for assessing the independence of a Court in the Jurisprudence of the European Court of Human Rights.

Closely related to the analysis of the concept of independence of the magistrates, in our opinion, is the concept of independence of the court. In order to identify what practical significance was given to it, we bring to mind that the European Court of Human Rights has a rich jurisprudence on establishing the compliance with the principle of independence.

Thus, in a case the European Court of Human Rights has stated the criteria for assessing the independence of a court, as follows: the independence of the executive as a party; the designation; the term of office; the warranties against pressure; the appearance of independence.[8] Also the Court notes that in terms of art. 6 and 8, the impartiality must be assessed according to a subjective approach, trying to determine the personal conviction of a judge in a particular occasion, and also, according to an objective approach, reaching to ensure that there were enough warranties to exclude any legitimate doubt in this respect.

In another case, the Court in *case Maszni versus Romania* easily reaffirms that that in order to establish whether a court may be considered "independent" within the meaning of article 6 § 1, should be taken into account, in particular, the designation and term of office of its members, the existence of a protection against outside pressure and the fact of knowing whether or not there is an appearance of independence.[9]

If in relation to the judges, in the practice of the European Court of Human Rights, things are solved in terms of the signification of the warranties of independence, in the sense that we have already raised with regard to the prosecutors, things are slightly different. For example, in the *case Pantea v. Romania*[10], the Court stated that the Romanian prosecutor, acting as a representative of the Public Ministry, subordinated in accordance to the law to the General Attorney but also to the Ministry of Justice, does not meet the condition of independence in relation to the executive, as required by art. 5, paragraph 3 of the Convention.

Also in case *Vasilescu v. Romania*[11] case, starting from the practice of the Court, Corneliu Bârsan stressed the idea that the text of art. 5, (3) of the Convention, lets the contracting states to choose between two types of authorities that cannot be confused, which is said judge or another magistrate.[12]

Also in terms of impartiality, the European Court of Human Rights in its jurisprudence defines it as "the absence of any prejudice or preconceived idea about the solution of a process and it reflects an important element of the rule of law, namely the sentence of the court is binding, unless it is invalidated by a higher court…"[13]

3.The Civil Society and the independence of justice

As expressly provided in the text of the Recommendation 94 (12) of the Committee of Ministers to Member States, on the independence, efficiency and role of the judges, the independence of judges is firstly and foremost linked to the maintenance of the separation of powers, namely, the executive and legislative bodies must refrain from taking any measures that could undetermined the independence of the judges. Moreover, the Recommendation states that "the pressure groups or other interest groups should not be allowed to undetermine this independence". The question regarding this provision is the following: "Does the Civil Society represent a pressure factor likely to influence the independence of justice"?

In our opinion, a warning sign is the excessive media coverage of the cases pending in courts, situation in which we consider the defense claims of professional reputation by magistrates to be extremely justifiable. The practice of the Superior Council of Magistracy has plenty of these applications of magistrates.

The report[14] on the Superior Council of Magistracy activity in 2012 states that: "according to the provisions of Law no. 303/2004 on the status of the judges and prosecutors, republished, with subsequent amendments and completions, the Superior Council of the Magistracy defends the judges and prosecutors against any act that could affect their independence or impartiality or would create suspicions about them".

Thus, in a case[15], it was noted that: "in a newspaper article published in a central daily, there were made assessments on the fact that the prosecutor, although he was in the possession of conclusive evidence in a case that he was prosecuting, he did not want to find the truth because of the political and money power, being <<sponsored>> together with a police officer by an investigated defendant. Towards those exposed the Superior Council of Magistracy Plenary estimated that the demand for professional reputation defense by the prosecutor P.D. is justified, as the articles published in the central daily in the period in which the research were about to come to an end, were likely to affect the professional reputation of the prosecutor." Essentially, concludes the Superior Council of Magistracy Plenary "the professional reputation is closely linked to the independence, impartiality and integrity that must be shown by every prosecutor in his work", this representing "the opinion that the magistrate creates in the collective consciousness about how he carries his profession" etc.

"To the extent that the trust of the society in the existence of these features is affected, and the public opinion becomes unfavorable, the lack of credibility of the magistrate results in the impairing of the professional reputation of the magistrate.[16] Also, "the debate within a TV show of an evidence given in a civil case that is still pending in court, in appeals, and only the presentation of the opinion of the losing party, are likely to affect the professional reputation of the judge, doubly so as the program moderator made allegations about his professional training and moral probity."[17]

Moreover, in another case, it was noted that: "the specific act of law accomplishment cannot be subject of public debate, motivated by the fact that it is the exclusive attribute of the judge and

[16] The judgement of the Superior Council of Magistracy Plenary no. 295 on March 27th 2008, *The Superior Council of Magistracy, The defense of the independence, impartiality and professional reputation of the judges and magistrates*, work quoted, pp. 64-66.

[17] The judgement of the Superior Council of Magistracy Plenary no. 479 on May 29th 2008, *The Superior Council of Magistracy, The defense of the independence, impartiality and professional reputation of the judges and magistrates*, work quoted, pp. 73-75.

prosecutor, as stated in the constitutional principle of separation of powers, and in the provisions of the organic laws on the administration of law."[18]

Not in all cases where the parties of a process make use of the right of petition provided by the Constitution whereby notify the Superior Council of Magistracy on the committing of a disciplinary offense by a magistrate does not mean the prejudice of the professional reputation of the magistrate. Thus, it was considered by the Superior Council of Magistracy Plenary that "the assessments of the petitioner M made in the statement addressed to the Superior Council of Magistracy and the prosecution requests submitted in the file, on the validity of the measures taken by the panel of judges and the compliance of the judges with the obligation of impartiality, is a manifestation of the freedom of expression as enshrined in art. 30 of the Constitution, of the exertion of the procedural law and of the right of petition." "To the extent that the limits of the freedom of expression and the exertion of subjective civil rights have not been violated, and the assessments of professional activity of the judges have not been publicly exposed in a manner which is likely to create a negative image on the way of exertion of profession, it has been noted that the professional reputation of the judges C and S has not been prejudiced.

As shown in the Report on the Superior Council of Magistracy activity in 2012, during the year, within the Judicial Inspections Department, there were recorded 21 papers seeking the defense of the independence, impartiality and professional reputation of the judges, or, as the case, the defense of the independence and impartiality of the judiciary. As it concerns the prosecutors, the same report shows that, between 01.01.2004-14.11.2012, at the Judicial Inspections Department were recorded 20 papers seeking the defense of the independence, impartiality and professional reputation of the prosecutors, or, as the case, the defense of the independence and impartiality of the judiciary.

Conclusions

Through this study, we tried to capture in a personal manner, the peculiarities of the principle of the independence of law, starting with the legislative regulations and ending with the jurisprudence. That the law is independent is stated by the Constitution itself and by the international regulations. That the law is functioning emerges from the consultation of the jurisprudence. Moreover, as we have shown, the European Court of Human Rights, within its jurisprudence, has stated that the criteria for assessing the independence of a court, as presented. In conclusion, in our opinion, the independence of justice is functioning at the moment, it is not just a wish of the editors of the Constitution.

We believe that we have answered the question in the preamble of this study, namely if the Civil Society represents a pressure agent likely to influence the independence of law. From our perspective, it is not recommended and the Civil Society should not become a pressure agent on the principle of the independence of law, but at the most a balance agent. The excessive coverage of some topics has created the false impression that the law is influenced by the media pressure, which otherwise would be very dangerous if it happens in a democratic society in which each institution should operate according to well established rules on legislative.

Henceforth we anticipate a decrease of the demands for the defense of the professional reputation of the magistrates as long as there will not be a real liability of the media. Thus, in our opinion it is imperative to be established the law of the media so that the principal of the independence of law functions effectively.

BRIEF CONSIDERATIONS ON THE DISCIPLINARY LIABILITY OF THE MAGISTRATES

ELENA EMILIA ŞTEFAN[*]

Abstract

The recent amendments in the applicable law on the disciplinary liability of the magistrates have induced many debates regarding the increase of holders that own the right to initiate the disciplinary action against a magistrate and also regarding the area of disciplinary offenses. The conferring of the status of holder of the disciplinary action to the Minister of Justice, the President of the High Court of Cassation and Justice and to the General Attorney of the Prosecutor's Office of the High Court of Cassation and Justice, has conferred us the opportunity to present the impact of these legislative amendments on the legal environment.

Therefore, the theme proposed through this study will be done by presenting the relevant legislation and the relevant constitutional jurisprudence.

Keywords: *magistrate, disciplinary liability, Constitutional Court, Minister of Justice, Superior Council of Magistracy.*

Introduction

In several texts of the Constitution is present the notion of public office or service, and therefore the notion of officer[1]. The legal system of public office also includes its liability, whose purpose is the suppression of errors made by public officials, which represents only one of the liability purposes.[2] In this context of public servants, in the doctrine was stated that: "legal liability applies to the magistrates too, being obvious that, in a democratic society, the magistrate can not be under the protection of absolute immunity when he seriously breaks the obligations of impartiality and fairness".[3]

In the case of the magistrates, the multiplication of facts that may represents misconducts, made them furthermore to be in front of a reality that can no longer be ignored, namely, the magistrates, the judges, the public servants in general, may interfere at some point in time with a possible disciplinary action promoted against their activity. Therefore, here is the fact, at least theoretically but also practically, the disciplinary action against a magistrate is a predictable action within the context of the legislative amendments, but also undesirable in the activity of a magistrate.

1. The holders of the disciplinary action against a magistrate

In our opinion a controversial issue that will raise many problems in practice is related to the amendments to the legal system al the liability of the magistrates. Thus, the amendments to Law no. 303/2004[4] on the status of the judges and prosecutors are on: the extending of the disciplinary offenses area; the increase of the holders of the disciplinary action; the amendment of legal provisions that regulate the disciplinary sanctions applicable to judges and prosecutors, including the introduction of disciplinary sanction of suspension from office for a period of up to 6 months, the

definition of the exertion of the function with serious disregard or bad faith; the introduction of the condition of good repute as a requirement of access and office sustentation.

Concerning the exception of unconstitutionality on new amendments on the law regarding the status of the judges and prosecutors, the status of the magistrates and the law on the Superior Council of Magistracy,[5] Romanian Constitutional Court, through the decision no. 2/2012,[6] was rendered a judgment on its constitutionality, as we would briefly present it, *a point of view that we disagree*. The criticism has been focused on several issues, but we will analyze only those concerning the conferment of the status of holder of disciplinary actions to the Minister of Justice, the President of the High Court of Cassation and Justice and the General Attorney of the Prosecutor's Office attached to the High Court of Cassation and Justice.

Thus, the criticism refers to the conferment of the status of holder of disciplinary actions by including together with the Judicial Inspection represented by the judicial inspector, the Minister of Justice and the President of the High Court of Cassation and Justice in case of misconduct committed by judges, and the status of holder of disciplinary actions to the General Attorney of the Prosecutor's Office attached to the High Court of Cassation and Justice, for disciplinary violations committed by prosecutors. Essentially, the criticism of unconstitutionality in this respect points out that these amendments determine the decrease of the autonomy of the Judicial Inspection, it is violated the independence of law and of the principle of the separation of power owing to the fact that they allow the executive to have an influence on the triggering of the mechanism of the disciplinary liability of the magistrates and in this case we refer to the provisions of art. 44, paragraph 3-5 of Law no. 317/2004.

The Romanian Constitutional Court considers that the law is constitutional owing to the fact that, we must distinguish between the participants to the disciplinary procedure and the disciplinary research court, so in this case we refer to the Superior Council of Magistracy. In its jurisprudence,[7] the Constitutional Court states that "a dimension of the Romanian state is represented by the constitutional law accomplished by the Romanian Constitutional Court (…), its role being to ensure the supremacy of the Constitution, as a fundamental law of the state of law. Thus, in accordance with art. 142 (1) of the Constitution, the Romanian Constitutional Court is the guarantor for the supremacy of the Constitution".

In order to support our arguments, contrary to the view of the Romanian Constitutional Court, we will present below the relevant legislative texts, both form the Romanian Constitution and from the two laws in question. According to art. 3 letter c) of Law no. 317/2004: "The President of the High Court of Cassation and Justice, representing the judiciary, the Minister of Justice and the General Attorney of the Prosecutor's Office attached to the High Court of Cassation and Justice are members of the Superior Council of Magistracy" and according to art. 4 (1) : "the Members of the Superior Council of Magistracy shall be elected among the judges and prosecutors appointed by the President of Romania".

In what concerns the Minister of Justice, the designation and appointment procedure is closely related to the executive. Thus, according to the provisions of the revised Constitution, the Minister of Justice may eventually hold the function of minister:

a) through the procedure of forming a new Government , as a member on the list of the members to be of the Government, proposed by the candidate for prime minister and voted by the

[5] Law no. 314/2004 on the Superior Council of Magistracy, published on the Official Gazette no. 599/2004.

[6] The Constitutional Court Decision no. 2/2012 on the objection of unconstitutionality of the provisions of Law for the amendment and supplementing of Law no. 303/2004 on the status of the judges and prosecutors and of Law no. 317/2004 on the Superior Council of Magistracy, published in the Official Gazette no. 131/2012.

[7] The Decision of the Romanian Constitutional Court no. 727/ 2012, published in the Official Gazette no. 477/12.07.2012.

Parliament, in block together with the rest of the proposed ministers, procedure called "the investiture of the Government".

b) or due to the vacant position by "Government reshuffle", when the Minister of Justice is proposes by the Prime Minister and appointed by decree of the President.

In connection with the Superior Council of Magistracy, as shown, the Minister of Justice is a member of the Superior Council of Magistracy. Basically, the method of appointment and his status as a member of the Superior Council of Magistracy, the law conferring the right to take disciplinary action against a magistrate is, in our opinion, an obvious breaking of the separation of powers by mixing the executive in the judiciary, affecting also the independence of law. We therefore agree with the criticism of unconstitutionality in what concerns the Minister of Justice, holder of the disciplinary action, being obviously, as stated previously, the political character of this institution.

What concerns the President of the High Court of Cassation and Justice, although is part of the judiciary, he is appointed by the President of Romania and member of the Superior Council of Magistracy. In our opinion, the President of the High Court of Cassation and Justice, when exerting the disciplinary action against a magistrate, he cannot be considered impartial if the judge is considered guilty in the disciplinary procedure, he will appeal the measure taken by the Superior Council of Magistracy, the appeal will be solved by the High Court of Cassation and Justice, the panel of 5 judges, it is said the same court that, indirectly through its president, has triggered the disciplinary action. Furthermore, as what concerns the Minister of Justice, we state that by this appointment is violated the principle of the independence of law, we argue that if the President of the High Court of Cassation and Justice, holder of the disciplinary action, this contradiction between his status and the legal attributions is very visible, leading to questioning his impartiality.

The third holder of a disciplinary action against a magistrate is the General Attorney of Romania. We state that the General Attorney of Romania (judiciary power), according to the Romanian Constitution, appointed by the President of Romania (executive power!!!) on the proposal of the Minister of Justice (executive power!!!), with the opinion of the Superior Council of Magistracy, depends on the executive power, politically influenced, so that when exerting the disciplinary action against a prosecutor, he determines the violation of the separation of powers and of the law state. Moreover, according to art. 132, paragraph 1 of the Constitution," prosecutors operate according to the principle of legality, impartiality and hierarchical control, under the authority of the Minister of Justice". Can it be in this case about impartiality or independence since the status of the prosecutors provides the hierarchical control and their subordination to a member of the executive power, namely the Minister of Justice?

In our opinion, the holders of the disciplinary action, as presented above, once they have triggered the disciplinary action, we are no longer interested in the position of the Superior Council of Magistracy in those concrete cases, in this case disciplinary court, in the scope of solving the disciplinary action, owing to the fact that the prejudice has already been produced by promoting the action. These considerations above lead us to believe that the decision of the Constitutional Court through which the amendment of the law system of the disciplinary liability of the magistrates was considered to be constitutional, is not inspired.

As shown in the Report[8] on the Superior Council of Magistracy activity in 2012, "although the legislative amendments occurred during 2012 concerning the holders of the disciplinary action have displeased the judiciary as a whole, is to be reported that, by the end of the year, the Minister of Justice has not used the legal privilege that has been conferred to him". The same report points out that, in disciplinary matter, the Department for judges in disciplinary matters delivered by the end of 2012 a total number of 16 decisions and the Department for prosecutors a total number of 9 decisions.

[8] The Report on the Superior Council of Magistracy activity in 2012, http://www.csm1909.ro/csm/index.php?cmd=24, accessed on February 16 th 2013.

2. The extending of the disciplinary offenses area

The disciplinary liability of public servants is defined in art. 77 [1] of the republished law no. 188/1999, according to which: "the guilty violation by the public servants of their public office duties and of the professional and civic conduct provided by the law, represents a disciplinary misconduct and results in their disciplinary liability".[9] In the doctrine of the administrative law, the disciplinary offense represents the act committed with guilt by the public servant through which he violates the obligation arising from the report of public office or in connection to it and which affects his socio-professional and moral status.[10] Coming back to the magistrates, according to art. 99 of Law no. 303/2004, amended in 2012, a large number of actions are considered to be disciplinary offenses.[11]

The new legislative amendments are focused, in case of the disciplinary offenses, on a number of actions related to the moral conduct of the person who acts as a magistrate, actions that may prejudice the prestige of law. For example, *in case of the magistrates, the disciplinary offenses* may be: the events affecting the honor and professional integrity or the reputation of law, committed when exerting or outside of the exerting of duties; the violation of the legal provisions on incompatibilities and prohibitions on judges and prosecutors; *undignified attitudes* while exerting their duties of service, *the unjustified refusal to perform a service duty;* the failure of the prosecutor to comply with the provisions of the superior prosecutor, given in writing and in accordance to the law*; the repeated failure* and for attributable reasons of the legal provisions regarding the solving without delay of all the mattes or the *repeated delay of works*, for attributable reasons; *the total lack of motivation* of the prosecutor's judicial judgments or actions; the use of *inappropriate expressions in the prosecutor's judicial judgments or actions* or the motivation which is manifestly contrary to the legal reasoning, likely to affect the prestige of law or the dignity of the magistrate office. Also, in the case of disciplinary offenses is situated *the failure of the Constitutional Court decisions, too or of the decisions of the High Court of Cassation and Justice* in the solving of appeals for the convenience of law; the exerting of office with *bad faith or serious inadvertence.* We can note that after a long time, there are defined in this area the notions of *bad faith or serious inadvertence.*

In the recent jurisprudence of the Superior Council of Magistracy has been noted that, "in order to find the serious inadvertence, it is necessary for the judge to show a conduct of violation of some basic professional duties, with serious consequences for the accomplishment of the act of law. The Department observes from the administrated probation in question that there are accomplished the conditions required by the law because the defendant judge has flagrantly violated the procedural rules, by not preparing the device of the judgment, in the cases in which he has disposed the termination of debates, being obvious to any judge that takes part in the solving of a case, the obligation of drawing the minute, as a result of the deliberation".[12] In another disciplinary case, it is noted that "the guilt of the defendant prosecutor G. V. G. and takes the form of the bad faith and arises from the fact that he has unduly disposed the taking over of a criminal case from a Prosecutor's Office local drive, if the prosecutor of the case had concluded the criminal investigation and had started the drafting of the indictment."[13] "If there is charged the misapplication of the procedure rules as a result of their interpretation by a judge, he cannot be liable of disciplinary liability, as it is not a

[9] Rodica Narcisa Petrescu, *quoted work*, p. 562.

[12] Decision no. 10J/2012, The Department for judges – the disciplinary matter, http://www.csm1909.ro/csm/linkuri/03_09_2012__51190_ro.pdf, accessed on 16.02.2013.

[13] Decision no. 7P/2012, the Department for prosecutors – disciplinary matter, http://www.csm1909.ro/csm/index.php?cmd=0301&tc=s, accessed on 16.02.2013.

serious violation of the procedure rules"[14], it is noted in a case. "In order to be a prejudice, the violation has to be unquestionable and to be lacked of any justification, elements that have not been revealed in this case, yet. Thus, there is noted from the probation material in question that the legal requirements to attract disciplinary sanction are not accomplished owing to the fact that the judgment given by the defendant judge in the case is not the expression of the serious inadvertence in exerting the office, by disregarding the legal provisions on the notification of the court (…) but it reflects the interpretation of the defendant judges for the probation material in question"…

As shown in the Report of the Superior Council of Magistracy in 2012, "between 01.01.2012-25.05.2012 (until the abolition of the commissions for discipline), the *Commission for Discipline for judges* has ordered the disciplinary investigation in 19 cases and the Commission for Discipline for prosecutors has ordered the disciplinary investigation in 6 cases and after the abolition of the commissions for discipline, the disciplinary investigation has been ordered by the judicial inspectors in 4 files. As of 24.05.2012 the disciplinary investigation has been ordered by the *judicial inspectors*. Thus, the judicial inspectors have ordered the commencement of the disciplinary investigation in 16 cases.

At the same time, the Report of the Superior Council of Magistracy activity in 2012 has also revealed some abnormalities in the activity of the magistrates. For example, it is reminded the difficulty of complying with the deadlines of drawing the works, in the context of a large number of vacancies for inspector and staff, the finding of the fact that some legal provisions contained in Law no. 317/2004 on the Superior Council of Magistracy refer to concepts which are not sufficiently well defined. In this context, it was noted that "the notion of good reputation does not meet the requirements of foresee ability of the law, not being correlatively provided the desirable behavior of the magistrates in exerting their duties, thus they objectively do not know which parts need circumscribe their behavior in order to enjoy the good reputation".

Conclusions

As we have proposed, this study has brought into discussion a topical issue in terms of the disciplinary liability of the magistrates, namely legislative amendments on the extension of the holders of the disciplinary action. In the same time the study has conducted a brief presentation of the amendments on the disciplinary offenses, by presenting a selection of several cases solved by the Superior Council of Magistracy. In what concerns the holders of the disciplinary action, although the Constitutional Court has described as constitutional the law that has provided these amendments, in our opinion it has been created the legal frame for the violation of the constitutional principles that aim the independence of law and the separation of powers.

Furthermore, the widening of the disciplinary offenses area, by the presenting of the selected cases, has revealed some abnormalities of the Romanian judiciary concerning not only the actual activity of a magistrate but, in our opinion, related with the system. Thus, unless we note a real reform of the judiciary, we cannot have fewer cases of disciplinary liability of the magistrates.

THE PUBLIC PENSION POINT - A GOVERNMENT BUSINESS

MĂDĂLINA TOMESCU*

Abstract
Each of us pays every month a percentage of his/her salary for receiving a public pension after a certain age. As a percentage, this amount of money varies depending of salary. But retirement means a number of pension points. Where is the business? Pension point is determined by the Government as a percent of medium salary. This article aims to make an analysis of pension point as a government business.

Key words: *public pension, pension point, government business, human rights, the right to pension.*

Introduction

This paper brings into question the theme of granting public pensions based on a scoring and the existence of pension point as a great business of any government.

The Pension right represents a very important right for all of us. Throughout the working life we contribute (without the possibility of choice) obligatorily at the constitution of state social insurance budget. Because of this contribution we benefit, at retirement age, sometimes earlier, of a real ownership of pension. This represents a form of respect for human dignity.

Therefore, political decisions must take account respecting the elderly without violate their dignity. Ensuring a decent life, a financial independence of these categories of persons must be an important goal for every government.

Unfortunately, the granting system of public pension based on score and, implicitly, by means of pension points confirmes a great injustice. This injustice refers at the fact that pension point value is set at the political level. Therefore, it is at the discretion of any government, because there is no minimum value confirmed by law .Therefore, I decided to analyze this injustice with the hope that it will draw attention on it in order to be removed.

1. Brief considerations on social insurance over time

Industrial development in the late nineteenth century led to the appearance of working employees class in industrial enterprises, which occurred as a result of economic development in most European states. The appearance of working employees class generated new social relations and new risks on the income achievemnt necessary for support. Simultaneously with these, was increasingly reduced the social role of three generation family agrarian type in ensuring a protection for elderly or sick members and as well as the church's role in providing social protection for the poorest members of society[1].

The appearance of working employees class generated thus, the need to ensure against new risks such as disability risk, the risk of losing working capacity due to an accident at work, maternity risk, the risk of loss of employment, old age risk, the risk of death breadwinner, and so on, generically called social risks . Under these conditions, the social partners, namely **employees** and **entrepreneurs – employers**, and also the state as guarantor, **have agreed to establish a social insurance system** in which the social partners have to pay social insurance contributions in relation with the salary incomes achieved in the active period, and in the case of appearance of one of the

* Associated Professor, Ph. D., Faculty of Legal and Administrative Sciences, "Dimitrie Cantemir" Christian University (madalina.tomescu@gmail.com).

[1] Nistor, Ioan - *Romanian public pension system - between reform, social equity and financial sustainability. Considerations and recommendations*, article available on the website http://www.aipensie.ro/?page_id=420.

recognized social risks, the insured will benefit of a **replacement income** troughout the period of manifestation of the insured risk, income **that will be calculated relative proportional with the contributions paid in all active period.**[2]

Public pension thus represents the most important social insurance service and involves ensuring a decent and equitable replacement income for life after retirement due to old age.

At the end of the XIX century (1880-1890), German Chancellor Otto Von Bismarck and his government conceived and proclaimed several laws, of reference, in the field of social insurance. Many of the principles regulated then are valid today, the reason for which Germany is considered the "cradle of European social security" and its system of social insurance and pensions is considered as one of the best and most efficient in the world. His public pension system is "pay as you go" is considering intergenerational solidarity (between generations), which presumes that from the contributions paid by active generations are paid the pensions of the retired generations removed from the activity as a result of old age, the pensions being calculated proportionally with the contributions paid throughout the active period. This system, based on the foregoing principles, is working properly for over 130 years. Currently it works independently and is based on compulsory social insurance contributions 19.10% of monthly salary incomes, compulsory social insurance contributions 19.10% of monthly salary incomes, paid by employers and employees equally, as well as indirect contribution of the state that supports 25% of the cost of public pension payments. The German model of social insurance [3]and pensions, was taken over by most European countries, adapted and qualified according to national specificities and concrete social and economic conditions of each state.[4]

In Romania, the social insurance system is forming and developing in the interwar period, after the appearance of National State. Its historical evolution can be divided into three periods, namely: the interwar period, the communist and post-revolutionary or current period.

In the interwar period, appear the first laws of regulation of compulsory social insurance, after the appearance of Nation State. One of the most important social insurance laws of that time was called the Insurance Law of Unification, also called “Ioanitescu Law” from 1933, by which were regulated for the first time, some basic principles namely: the principle of compulsory, the principle of contribution or principle of solidarity and involvement of the state by guaranteeing social insurance system and subsidize public pension fund, if necessary. Public pension system organized on these principles included the state officials and employees of public or private undertakings. For other social categories was encouraged appearance and development of private insurance systems. Thus, in interwar period, in Romania was founded over 100 private insurance companies, many of them being organized on occupational or professional criteria (lawyers, writers, artists, religious representatives and so on). It is noted that agricultural and forest land owners (small farmers and large landowners) and agricultural workers of all categories or small craftsmen in rural area were not included in the public pension system[5].

With regard to military retirement system, we find **that this was functioning since 1830** under the old Rules of the Soldiers which established "**soldierly Rights of Officers, pensions and**

[2] NISTOR, IOAN – op.cit.- http://www.aipensie.ro/?page_id=420.

[3] We cannot bring here a story recently published in the press, namely that Germany considers that maintenance of many old (some being sick) in hearths is too expensive on its territory. Therefore began to seek solutions to care outside the country, specifically in the territories of the former communist countries of Southeast Europe, where their maintenance is cheaper. How great is the economic interest, to uproot their citizens and to "export" them because they reached the third age, they are for no use to you??? See this: http://www.mediafax.ro/externe/germania-acuzata-ca-isi-deporteaza-pensionarii-in-europa-de-est-si-asia-10414470

[4] Ibidem.

[5] Nistor, Ioan – op.cit. - http://www.aipensie.ro/?page_id=420.

other budget calculations[6]". Therefore, military pensions were not introduced in the public pension system, being considered service pensions, non-contributory and funded from the state budget. Military service pensions were set according to the length of military service, and also the pay owned at the date of withdrawal or transfer to reserve.

The period 1945-1989, corresponding to the period of glory of communism is characterized by modifying from foundations of social insurance system in general and especially the pension system. Thus was legislated the social insurance system and state pension in which were included only employees of enterprises and institutions, as well as the assimilated, namely the beneficiaries of employment contracts. Free Pensions Houses were dissolved and over 100 private Pensions Houses, their funds being abusively taken to the state budget. Also, unemployment benefits and social assistance have not been recognized, being abolished[7], due to the introduction of the compulsoriness of all people to "get a job".

The reform of state social insurance system began with the adoption of Law 10/1949 by which are introduced new regulations regarding setting up pension funds and their redistribution to the new criteria established by law. Social contributions have been established in the task of state enterprises, institutions and employers (also of State) in general. Social insurance fund management was taken over by the state, through the state budget and pension rights were established on the principle of distribution according to length of service and average salary from last 12 months of activity.[8]

The pension system reform continued through Law no. 27/1966 and then by the Law no. 3/1977, and the adoption of other laws by which were taken in state social insurance system and members handicraft cooperatives, farmers from cooperative system and areas that are not collectivized and independent craftsmen or artists, composers and members of cults etc., thereby integrating in state pension system over 90% of the active population of the country.

Viewed as a whole, this period may be considered a reformist period and a development of state social insurance system, with significant results from this point of view. Thus, the unique system of social protection only managed to include at some point, almost the entire population of the country. Brutal economic reform characterized by the abolition of private property led inevitably to a reform of social insurance system, as brutal and unjust. Brutal economic reform characterized by the abolition of private property led inevitably to a reform of social insurance system just as brutal and unjust[9]. New social class appeared - the working class - was favored by the new social security law. So, all the social costs of the reform were supported by social categories disliked by the new arrangement (peasants, landowners, former industrial owners, former government officials capitalist).

Peasantry (small and large farmers) was the unjustified social category[10]. In the process of abolishing private property in land and forced collectivization, the peasants were dispossessed of all goods necessary support [11](land properties, agricultural machinery, animals, etc.) and were left out of the new system of social protection and public pensions a long time. Barely in 1966, by Decree no. 535/1966 was established a retirement home for peasants and a pension fund financed by CAP's determined by a contribution rate of 8% of global production and individual contributions of farmers in areas that were not collectivized, but rights of pension of retired farmers were regulated

[6] This is one reason why it seems to me a little misplaced the endless discussion on pensions for military and policemen!!!

[7] Ibidem.

[8] Ibidem.

[9] Ibidem.

[10] Ibidem.

[11] Moreover, it was also talked about this issue, because many of them were forced to provide "rules" to CAP to have enough to live.

differently, leading to much lower pensions compared to pensions of employees in state undertakings.[12]

A regulation unusual for the time, considered a measure of reform of the state pension system was Law no. 6/1967 concerning the establishment of supplementary pension in 1967, law which became separate chapter in Pension Law nr.27/1966, with effect from 01.01.1967 and held on in Law no. 3/1977 also as a separate chapter is in effect until March 31, 2001.[13]

This regulation concerning supplementary pension had all the characteristics of mandatory pensions managed private today (current Pillar II) except that the funds made up of mandatory contributions retained to all employees and their incorporates were stored at Romanian National Bank or C.E.C., being the interest carrier. Supplementary pension is granted separately from the state pension, based on the number of years of contribution to the supplementary pension fund and the average salary which constituted the basis for calculating the state pension. The contribution to supplementary pension was paid by employees and their incorporates in 1967-2001 period and the social insurance contribution for public pensions (CAS) was paid entirely by employers (companies, institutions, private employers and so on). Individual contribution for supplementary pension was fixed by law at the rate of 2% (optional 4%) between 1967-1986 and then 3% between 1986-1998 and 5% between 1998-2001, compared to the monthly salary of framing and to permanent increases. These individual contributions, stored National Bank of Romania then at CEC or at banks were interest accrues and from the total amounts accumulated were paid the adequate supplementary pensions. It can be assumed that this additional pension fund had a surplus important considering the large number of employees – contributors and their assimilated ones, comparatively with the number of pensioner – beneficiaries of supplementary pensions. These funds were subsequently "confiscated" from the state budget in 1998 by Government Ordinance nr.31/1998. According to art. 2 paragraph 2 of this act, *"The revenue budget for supplementary pension funds managed by institutions from national defense, public order and national security, as established by the regulations in force* ***are state revenues****."* It should be noted that neither on this occasion nor before or after this date was ever presented a balance sheet or public information about the funds accumulated from individual contributions (private) retained to all employees and their included ones and from interest income, or how to spend these funds.[14]

In early 1990 the Romanian public pension system was regulated by Law no. 3/1977 standard retirement age of 62 for men and 57 years for women, the opening pension rights being conditioned by a minimum length of 10 years . At the same time, the retirement age upon request (in advance) was 60 years for men and 55 for women, conditioned by the achievement of full length of 30 years for men and 25 years for women. Pension rights were determined as a percentage from average tariff wages calculated from five consecutive years, chosen from the last decade of activity. The worth percentage was differentiated by the size of average salary from the last five years elected, and also depending of group work experience. For the lowest average wage, equal to minimum wage, the percentage for granting the pension was the highest, namely 75% in the case of group III, 80% in the case of group II and 85% in the case of group I, and for the highest average salary, the percentage of granting the pensions was the lowest, namely 54% for the group III, 56% for group II and 58% for group I. The retirement before reaching the standard age provided by law was achieved only in the case of employees from higher work groups, the number of beneficiaries being small because of the small number of jobs. Before reaching standard retirement age provided by law only to be achieved if employees work from superior groups, the number of beneficiaries being small due to the small number of jobs appointed in superior groups. According to statistics, in 1989 were recognized approximately 300,000 jobs in special conditions (Group I and Group II labor) jobs that

[12] NISTOR, IOAN- op.cit.- http://www.aipensie.ro/?page_id=420
[13] Ibidem.
[14] Ibidem.

allowed to those employees to benefit of a retirement age reduction with up to 12 years. Also, the total number of taxpayers employees was more than 8.3 million persons, and the total number of pensioners was about 2.5 million people (employees and pensioners ratio being about 3.4 of employees to one pensioner). Social insurance contribution (CAS) required by law was 15% of salary fund, with its payment obligation by the employer. Employees were required to pay for additional pension contribution of 3% and 5% of monthly income (consisting of tariff wage of framing and increases regulated by the remunerate law). Contributions for supplementary pension was retained by employers and then transferred into an account opened at CEC or other banks being bear of interest.[15]

Pensions established under Law no. 3/1977 (basic pension and supplementary pension) together accounted for about 70% of monthly income had on the retirement date.

2. Pension rights - a way of ensuring respect for human dignity

Pensions are the most important social insurance benefits provided under the public system. Any type of pension is granted at the request of the person entitled, the mandatory appointed by it with special proxy, guardian or custodian of its.[16]

It can therefore be said that due to contributions paid by each person employed throughout his active life**, pension becomes a won right.** Thus, citizens exercise a ownership right over pension and over the right of pension. Also, **pension, as a law itself and as part of private property, represents a claim that the state is obliged to pay and protect it[17].** From this perspective, the pension amount is considered that cannot be changed in a negative way, because it is a won right. Even in field of criminal law, exists the principle of the more favorable criminal law, therefore, much more, in determining the amount of pension of a person, when making a recalculation it will be kept the pension more favorable (with the highest amount). It is natural to be so because it is proper that the society to thank so to those who contributed in their own way, at the society development.

At the same time, in compliance with Resolution no. 3137/XXVIII from 1973 (Romania was a member the United Nations at that time.), the state's obligation was to ensure the elderly, on the one hand, a decent pension - which ensure their financial independence and a decent life, and on the other hand, to ensure job opportunities according to their needs with discouraging discriminatory policies and measures. However, they recommend that when developing national policies and programs take into account the following principles:

• To develop programs for the welfare, health and protection of the elderly, including measures that ensure their full economic independence and social integration;

• Develop social security measures to ensure sufficient income;

• To reinforce the contribution of older people at economic and social development;

• To discourage discriminatory attitudes, policies and measures based exclusively on age that exists in practice in employment;

• Encourage cooperation agreements on social security in favor of the elderly;

• To encourage the creation of employment opportunities for older people according to their needs

Between July 26 and August 6, 1982, in Vienna was held World Assembly specifically dedicated to elderly and convened with the aim to form a stand to launch a program of international action to ensure economic security for the elderly and social development in their country. This is

[17] http://www.facias.org/documente/Petitie%20ONG%20Romania%20-%20abuzurile%20guvernului%20Boc.pdf.

because the Assembly considered that the number of these people will increase dramatically over the next 20 years[18], but these people are precious human resources both in economic and social field and in the transmission of cultural heritage.[19]

These measures are designed to promote and ensure **respect for the dignity of older people** because their brutal removal from labor system and the disregard of their creative capacities on the grounds of age, have disastrous effects on society as a whole.

3. Contemporary regulations of pensions. Introduction based on pension points

3.1. The pressure of "*the street*" ...

The 1990 was essentially a year of "street pressure". It was a year in which people - freed from the yoke of communism - have considered exit in the streets represents the best way to solve problems. They got up and fell governments, public order was "restored" not by police but miners - for example, "the authority of" authorities depended on who and what comes out in the street ...

Therefore, nothing was found shifted when they were issued, even in pension legislation without financial impact studies, opportunity or legal advice. These documents created, some still create legal effects inconsistent with temporal moment. Thus is, for example, controversial **Government Decision No 267/14.03.1990** by which was established retirement age of **45 years from mining personnel**, who subsequently applied to other industrial companies (such Sometra SA Copsa Mica). Although the Government Decision no. 267/1990 **WAS NOT PUBLISHED** in Official Gazette of Romania to receive official character (it was published only in the Government Information Bulletin No. 9 of 01.10.1991 (so over about 11 months from the date of issue) has produced important legal effects since 03/14/1990 (date of issue) for over 10 years. It was then taken into another form of regulation by the Law no. 19/2000 and applied along with it starting on April 1, 2001. So this Government Decision **never published in Official Gazette** produce ever actually legal effects and now because the provisions on retirement age set by the Government no. 267/1990 are set out in Law no. 263/2010 and shall apply from the date January 1, 2011. In addition to the effect of reduced retirement age, HG 267/1990 also influenced the size of pensions for some employees retired after 01.04.2001 under Law no effect. 19/2000. It also created inequities between members of the same categories of policyholders, respectively mining personnel in the sense that in the recalculation of all pensions determined before 1 April 2001 pensioners from mining before publication date HG no. 267/90, 14.3.1990 respectively, received smaller pensions recalculated by about 30% compared to their peers who retired after 14.03.1990 and obvious to those who retired after 01.04.2001[20].

Another famous normative act was *Order no. 50/1990 for the specification of jobs, activities and professional categories with special conditions are fitting in Groups I and II of work for retirement* issued by the National Commission for Work Protection, by which have been reframed, over 2.5 million jobs in normal conditions (grade III of work) in special conditions (groups I and II of work). In this way, a lot of employees who knew that they worked under normal conditions (working group III suddenly) found that they can become pensioners for the limited age and that they benefit of reducing the retirement age up to 12 years, motivated by the fact that their job was reframed in Group I or group II of work and was retroactively recognized such as from 1969[21]. These normative

[18] From 1982 until now (2013), the elderly population has increased dramatically indeed, fact evidenced by current statistics.

[19] Ionel Cloşcă, Ion Suceavă, *Human Rights Treaty*, Europa Nova Publishing House, Bucharest, 2003, p. 201.

[20] See Nistor, Ioan- op.cit.- http://www.aipensie.ro/?page_id=420.

[21] In these circumstances, to obtain demonstrative certificates of occupation s jobs reclassified into higher labor groups were given real fight, but they exercised "pressure" of any kind directly or indirectly to the employer or liquidators empowered to issue and certificates. Sometimes were found documents contradictory (for instance the

acts achieved, paradoxically and a discrediting of real activity carried out under special conditions (heavy, harmful, toxic, etc.) by opening the possibility to take advantage of employment in superior groups of work for some employees whose work does not had nothing to do with what the law calls "special conditions".[22]

The duplication of the number of pensioners in the period 1990-2000 have contributed other normative acts, some with limited application term, as Law-Decree 60/07.02.1990 which allowed the retirement of men at the age of 55 years and retirement of women at the age of 50 years, with ridiculous justifications as a *"collective work agreement because the employee concerned low-yield activities".*[23]

All these normative acts, and other similar, all with reparatory character, but often without that reparation to be needed, have contributed to the transformation of the public pension system into a false social security system, unfairly and without real financial support.

3.2. Introduction of public pension based on pension points

The Romanian Constitution from 1965, art. 20, established the right of citizens to material security for old age, illness or disability. Under this Article, the right to material security for workers and clerks through pension and sickness benefits provided under the state social insurance system, and for members of cooperative organizations or other community organizations, trough insurance forms organized by it.

In applying this constitutional provision was adopted Law no. 3/1977 on social insurance pensions and social assistance. According to this law, the State guarantees every citizen, regardless of gender or nationality, the right to a pension based on the contribution to society.

The pension is determined in relation to the quantity, quality and social importance of the work submitted, being provided the principle of achieving an equitable report between income from salary and pension.

The criteria for distinguishing the pension level were formed by the length in work, the salary had and the group of work.

If initially Law. 3/1977 provided the method of calculation, in terms of salary criterion, as an average monthly tariff wages, through modifications made after 1990 was foreseen as a calculation basis for this criterion, the average salary for a period of 5 years, elected by retirees in the last 10 years of activity[24].

The necessary funds for the payment of pensions consisted in contributions paid by units and amounts allocated for this purpose from the state budget. Employed persons contribute 2-4% from monthly tariff for the additional pension contribution. By law, pension **right was imprescriptible and pension was not taxable**.

The pension right, at the time in which the conditions were met, was materialized through "Decision" in which was quantified the proper monthly amount under this law.

The law no. 3/1977 was correct one - but that because was not adapted to the new financial and economic conditions (inflation, unemployment, changing labor laws and wages etc.), led to flagrant inequities.

In these circumstances, the retired general situation has deteriorated continuously, that is why in 2000 the real average pension has come to represent less than 50% of the real average pension in 1989.

---

workbook was written the quality of legal counsellor and on the certificate was written that most of the activity took place in an industrial building (sic)), reason why so many of these certificates were rejected by officials pension funding in determining pensions, but they were later reconfirmed by the court and then recovered, which encouraged the process of issuing such certificates below. [23] Ibidem.

[24] Băjan, Doru - ***a****bout entitlement to public pension* - item available on the website http://www.consultingreview.ro/articole/despre-dreptul-la-pensia-publica.html.

On the other hand, massive restructuring of state enterprises, in fact removing them for sale as "privatization" and closing them because it represents competitors extremely serious even for those who have purchased, meant not crossing to unemployed the workers, but ... the retirement at a reduced age. Under these conditions, there was an unprecedented phenomenon in Romania, namely increasing the number of pensioners at the expense of workers – taxpayers at the social insurances budget. Relationship between employees and pensioners came to be the lowest from the last half century, and governments that have succeeded at the helm of the country did not only increase social insurance contributions from 15% to 30% and those supplementary pensions to 5%.[25]

However, the incomes at state social insurance budget HAD NOT INCREASED. But was recorded **"one of the most treacherous forms of tax evasion" referred to framing a large number of employees with minimum wage. This form of tax evasion is practiced today and it should be noted that it is almost impossible to refute, since employment contracts by which are established all rights (including salary) and employee obligations, constitute the law of parts.** Therefore, the contributions received dropped dramatically, and the consequences have been seen. They will be more evident when the current minimum wage employees will be pensioners with pension smaller than the current minimum pension[26].

Under these conditions the Romanian Parliament adopted Law no. 19/2000 on public pension and social security normative act, which came into force on 01.04.2001. The new law differs substantially from the Law no. 3/1977. The first difference is represented by principles underlying public pension system namely uniqueness, equality, social solidarity, contribution, distribution, autonomy. **The law was based on mandatory contributions and pensions were based on a score for contributions paid throughout the active period.**

The newness it was represented by the way how was established the pension amount, determined by multiplying the annual average score achieved by the insured during the period of contribution with a pension point value in the month of retirement.

The pensions would have been calculated by the method of calculating a score correlated with wages had in the whole period of activity of the insured (employees), with the desire declared to result "equal pension for equal contributions[27]."

The contributions were owed by policy holders and their employers, being differentiated in relation to working conditions, rates being approved annually through state social insurance budget law.

Social insurance contributions were finally set to represent 35% of the gross monthly salary for normal working conditions, 40% for special conditions (the former group II) or 45% for special conditions (formerly group I). These were to be paid as follows: 11.66% from monthly income of the employee and the difference up to 35%, 40%, or 45%, as applicable, by the employer, which was required to withhold employees' individual contributions of 11, 66% due and to remit social security budget with the employer contribution payable each month. In this way, for additional pension contribution of 5% was converted to individual contribution and employer's contribution of 11.66% was reduced to 30%, 35% or 40% as appropriate, at 23.32%, 28.32 %, or 33.32% by case.[28]

4. Pension point - a for any government

According to Law no. 19/2000 and the law in force at this time, Law no. 263/2010 the pension is a performing of social insurance and represents an income replacement for professional income loss due to old age, which is an insured risk.

[25] See NISTOR, IOAN- op.cit.- http://www.aipensie.ro/?page_id=420.
[26] Ibidem.
[27] Nistor, Ioan- op.cit.- http://www.aipensie.ro/?page_id=420.
[28] Ibidem.

The pension right, at the time when the conditions were met, was materialized through "retirement decision" that sets the average score achieved. **This score is multiplied by the value of the pension point, resulting a person's pension amount.**

The very introduction of the idea of "pension point" is a form of business for the government, because so, deliberately, it can control the incomes of a category of people about which knows for sure they would have a hard time to even find a job to complete their income.

In its original form, Law no. 19/2000 **provides that a pension point value representing at least 45% of the average gross wage per economy,** forecast for the year and is approved by state social insurance budget law and in the case of a deviation greater than 10% between average gross monthly wage economy achieved compared to the predicted one, it will fallow to recalculate the pension point value based on a new forecast of average gross monthly wage in the economy.

Trough Government Emergency Ordinance no. 41 of 17.04.2000, but changed the art. 80 of Law no. 19/2000, referring to the value of the pension point. **Thus, the order forecasts that the value of a pension point represents NO MORE than 45% of the gross average wage projected used to substantiate the social insurance budget.** How the law was fallowing to be applied in 2001, so by another government because the 2000 was an election year, the amendment passed without being seen by unions or organizations of pensioners. We believe that it was not observed, and not that it was accepted by them, as if they had an interest. In my opinion, successive electoral campaigns that came after a nearly catastrophic governances had more importance for trade unions and also for organizations of pensioners.

This Government ordinance represents a first manifestation of "government businessmen" on the point of pension, because it represents a brutal limitation of pensioners income towards the contribution paid during their working lives. By modifying Article 80 of Law no. 19/2000, the pension could be reduced as much, because it was not estimated any minimum threshold, and the principle of contribution was respected only in what concerns the COMPULSORINESS to pay contributions, but not in the assignation and payment of pension for equal contributions[29].

The inequities created in the pension system and due either to incomplete or incorrect provisions of law or of some discrimination among employees from state and private companies, or simply due to populist changes and inobservance of the principle of contribution led to recalculations which are, as far as it can be seen, repeated periodically, as long the governors either needed the votes of elderly people, or want to implement a new "government business" and they need the support of civil society.

Referring to the value of the pension point quantification, according to Law no. 19/2000 but also the current Law no. 263/2010 is up to the state, **losing the touch with the person's contribution at social insurance budget over the working life. The concrete value, the pension amount, thereby becomes dependent on the state's financial resources allocated by the State for this purpose through the Government, which draws up the annual budget bills, but also by the majority of parliament, which approves the annual budget laws.**

Concrete proof of manipulation at the pleasure of parties or alliance being at the governance is the increase or decrease of percentage pension point value from the average gross wage in the economy. So, the value of the pension point was decreased from 37.35% of the average gross wage in December 2004 to 32.9% of the average gross wage in 2005, then to 30% in 2006 and 31.2% in in 2007. In 2008, is returned to the coefficient for calculating the pension point 37.5% of the average gross salary expected, due to the occurrence of Law no. 250/2007 which amended again, Article 80 of Law no. 19/2000, in an attempt to reduce the pension point value at the coefficient of 45% of projected gross average wage, as foreseen in the original text of the law. Since 2005, the outgoings with farmer pensions payments, and since 2006, the outgoings with paid short-term benefits (sick

[29] Ibidem

leave) were transferred to the State Budget to reduce annual deficits bigger and bigger of the state social insurance budget[30].

Law no. 263/2010 regarding unitary public pension system provided in art. 102 that: *"At the date of entry into force of this law, the pension point is 732.8 lei."*

In other words, although The Romanian Constitution has enshrined equality in rights and about the equal right to a pension, according to the principle of contribution - so often mentioned by actual politicians and stated by Law no. 263/2010 - establishing by law or government decision of the point pension, without any clear justification of the calculation manner, it turned out that practically it exists only on paper! Therefore, we can talk about the principle of contribution??

There is a responsibility of the State which, to ensure the realization of fundamental rights foreseen in constitution, has handy the public and private property that belongs, being the largest landowner in Romania. Financial resources depend only on the ability of the political class in power / govern to administer this estate[31]. Therefore, the taxpayer, although he contributed long at Social Insurance budget, has no control over the money which had been suspended monthly, from the gross wage. **This raises the question: If the pension point should not get ahead of a percentage of max. 45% of the average gross wage in the economy, what it happens to the rest of the money contributed by citizens?**

At an empirical and utopian analysis on the contribution of a citizen with a gross average wage on economy throughout the active period and whose score would be 1, anyone can see that our citizen instead to receive back all his contribution , he only receive 49.59% of that amount. And what happens to the rest of the money???

The answer is clear. From my point of view the principle of contribution theory is unreal, as in fact, is not taken into account the value of this contribution, as long as there exists a pension point whose amount is set at the **political level**. From my perspective, this way of calculating the pension of citizens, far from be equal in rights is actually an equalization of pension rights. I argue this point of view stating that the pension point is established in the same way for all of us, without taking into account the value of labor, how necessary is it to the society. The only issue considered is the one of "working conditions". But, as I said above, even in these circumstances, the right taxpayer citizen is stung, being lacked with more than half of the money with which he contributed to social insurance budget.

5. Instead of conclusions ...

Pension system and, generally, social insurance system in general, needs to take a share of reform. This reform does not mean political decisions without cover in real life. **It must, in my opinion, to target a direct link between the contribution that each active person submits along life and his pension.**

The principle of contribution, which is still spoken, is a very important principle, but in the same time is one that gives the measure of fairness and equality in the rights of determining the pension citizens who worked for 35 years or, according to the "special conditions" of less work.

We appreciate that a well done law must attach the pension amount to a salary amount which a person had during the activity. It will be argued that it is not possible, because from social contributions it is paid other activities, such as tickets free treatment. However, going all the way up of our analysis, it can be easily found that free tickets treatment. or "social" tickets is not received by all pensioners, but only those whose pension has a certain amount and which .... still have the power to raise these tickets.

[30] Ibidem

[31] Băjan, Doru - *About entitlement to public* - article available on the website http://www.consultingreview.ro/articole/despre-dreptul-la-pensia-publica.html.

It is impossible not to think in which way is going more than 50% of the contribution that each of us work and pay every month in the hope that when reaching old age, we can live without worrying about tomorrow, **but especially without worrying that a government more or less irresponsible will think primarily in its own interest and not its citizens, without which no country could not exist, or there are too many pensioners in the country, or that they live too long. .**

In the spirit of respect the Resolution no. 3137/XXVIII from 1973 (Romania was a member the United Nations at that time**.), the state's obligation is to ensure the elderly, on the one hand, a decent pension - which ensure their financial independence and a decent life, and on the other hand, job opportunities according to their needs discouraging discriminatory policies and measures.**

Clearly, these measures are designed to promote and **ensure respect for the elder's dignity,** because their brutal removal from labor system and the disregard their creative capacities on the grounds of age, have disastrous effects on society as a whole.

This is why I think that as the young generations and national trade union organizations should be more involved in knowing the pension legislation, since the passing of time, all of us get at the third age. The acceptance of "black" work " as an acceptance by a large percentage of employees of a minimum wage can only create an imbalance in the state social insurance budget, whose consequences extend over time increasingly longer.

In addition to these business "impulses" of any party or alliance who comes to power and who cares about more of his own pocket than citizens. This explains not only introducing the idea of the pension point, but even "juggling" with its value, without thinking about someone and the effects that these "juggling" have on the lives of millions of people who have no other fault than that they live under one government or another ...

ONLY STATE PRESIDENT?

MARIUS VACARELU*

Abstract
Last 4 years showed to Romania that is impossible to deny the national feeling of passionately activism in politics: for sure, we are Latin and we remain Latin. All this big debate was related to a person and to his position in Romanian state.
However, no one was able to be totally independent in his/her analyze, and, if he/she was totally independent, the press take hundreds of attacks against every person who wrote any opinion in this special problem: what kind on republic want we? Politicians want to change this year our Constitution, but I believe they won't be able to do this.
In this context, we must start a real national debate of public law specialists, about this institutional problem: we want one president and one prime-minister with powers, or a prime-minister with powers and a president like a puppet?
This kind of speech appears now because in 2012 and the key-word of our politics was the legitimacy. In this case, when this political concept become too strong, it is necessary to offer a legal answer. Our text tries to be one of them.

Key-words: *President of Romania, Constitution, state institutions, legitimacy, government.*

Introduction

For Romania, the 2012 year was one of the hardest, since the movements of December 1989 brought us the liberty.

That year was not very dangerous because of snow, but it becomes more dangerous because in Romanian legislation are not settled some specific regulations against the politicians, cause their power to make bad for the society is not limited. In this case, even the small medical examination - mainly psychiatric - will be able to stop some "characters" who perform now, without any control, in national and sometimes European politics.

Romanian Constitution is not very good of its institutional part, because the purpose of its regulations was made by the same president, on 1991 and 2003, who had a strong influence on the commission who wrote the project. Thus, the main problem is that no institution is completely well defined by the constitutional norms, and starting with this truth, we can watch that the their functioning was bad from the beginnings.

The author try to analyze and describe where is the limit of state president powers in Romania and abroad, trying to understand what is the main solution for Romanian state and society.

The author intends to answer underlining few ideas who are still available in legal science, especially in their relation with new socio-political paradigm. In the same time, we must offer a perspective for the future: the dispute between national ideas about state framework and world ideas about the executive power must be finished in one way; we must choose one direction and step forward.

On a normal society, this kind of scientific articles are analyzed with deep attention, because it might offer some directions for future, just because - for example - one of the authors can become after a while judge on Constitutional Court and his/her ideas about state framework can produce a lot of result for the daily practice of executive institutions.

* Lecturer, PhD, National School of Political and Administrative Studies, Bucharest, Romania (marius123vacarelu@gmail.com).

We try to answer to all these question *sine ira et studio*, remembering the historic facts and some specific characteristics of Romanian nation. A real comparative description - which are the regulations on Romanian Constitutions, but also on another ones. After that, we made a small conclusion: in fact, this debate cannot be solved in 10 pages or less, it is necessary to write a treatise about public law and its dimension.

There is a lot of literature for this subject: less in Romanian doctrine, more in Western Europe and other developed part of the world. What is bad - is mainly written by the political scientist, and less by the lawyers, or, in the best cases, professors of law are read, but not followed. And is almost unanimously proportion, politicians don't read law professor's work, because they can find there the legal obstacles against their wishes - which are not always according with the law.

The author believes that is time to come back to normal logic in public law and politics, because the good ideas cannot be replaced by propaganda.

Paper content

1. If we want to remember the constitutional year of 2012, we must note that lawyer had spoken about the legal framework of state stronger than in any other year, because the context was in that way, but they was not listen - the public agenda on constitutional law solutions was made by the politicians and foreign journals.

There is a problem: Constitution of every state is translated into English - so, if the internal debate of Romanian regulation is quite complicate for foreigners, because they don't know Romanian language, the fundamental law is easy to analyze by anyone.

The consequence is related to the national public image, because a bad image affect the national economy, foreign investments and offers a bad image, which is not good for citizens and state. A bad image today means unemployment, means lost of a lot of money and if forced state institutions to make age of lobby and PR to solve this problem.

In the same time, we must understand that the Constitution means "the rule of law" and its dimension is huge now, when internet is able to describe very fast the main activities of politicians. As we can see, in many countries the main public enemy for citizens are the politicians and their unlimited power; just one example, on Cyprus, where the banks was hit and controlled by the politicians, and all society must pay now for the ruler's mistakes.

2. Last year for Western Europe press was full with subjects about Romanian problems, that the executive branch of powers feel even today the power of any articles published by The Economist, by Spiegel, Le Figaro or The London Times, as example. Their article described Romanian Constitutions and the political facts made by some stupid categories of people, who was almost able to send back to the anarchy times the Romanian state.

Few examples are here:

a) "Romania is divided into two political tribes," says Dimitar Bechev, who runs the Sofia office for the European Council on Foreign Relations. "It isn't a principled political disagreement, it is a dirty war. And it has become very personal."

The nationwide vote on whether Basescu should be allowed to remain in office became necessary after the Romanian parliament suspended the president from his office in early July. The Ponta government accuses Basescu of overstepping his authority to interfere in the daily running of the country and preferring loyalists when making important judiciary appointments.

Disregard for the Constitution

But Ponta's energetic efforts to discredit the president have landed him in hot water with the European Union. Indeed, the prime minister was called to Brussels early this month for a dressing down from European Commission President José Manuel Barroso. Specifically, the EU is concerned with what critics have described as Ponta's disregard for his country's constitution.

For one, Ponta ignored a high court decision regarding who was constitutionally authorized to represent Romania at European Union summits. After the court ruled that the president alone was

authorized, Ponta travelled to Brussels for a summit anyway. In addition, Ponta has indicated that he intended to defang the Constitutional Court and replace some of the justices.

"Events in Romania have shaken our trust," Barroso said two weeks ago, underlining his concern. "Party political strife cannot justify overriding core democratic principles." The EU's progress report on Romania was likewise scathing, saying that "exceptional events" in the country were a "major source of concern."

Ponta had likewise attempted to change the rules governing national referenda of the kind that took place on Sunday. He issued a decree casting aside the requirement that half of registered voters take part in referenda before it became valid. Under EU pressure, however, he reversed course recently.

Still, Ponta seems intent on seeing the back of the president. In a recent interview with SPIEGEL, in which the prime minister was eager to present himself as a committed democrat, he was asked: "If only 45 percent turn out, but there is a clear majority against Basescu, do you think he should remain in office?" Ponta replied: "That would then be his decision if he remains in office or not. He would have to ask himself in such a situation who he represents, but certainly not the majority of the people."[1]

b) Is Romania worse than Hungary?

Victor Ponta, the prime minister, ignored a ruling of the Constitutional Court on who should represent Romania at EU meetings. The court was stripped of its powers to overrule the parliament's decisions, judges were threatened, and the ombudsman, Gheorghe Iancu, replaced with a party loyalist. The official journal, which publishes court rulings and laws, was moved under government control to delay inconvenient rulings by the Constitutional Court - such as the one about who represents Romania at EU meetings.....

Nobody in Brussels really understands why the Ponta government is so blatant in ignoring current legislation and in moving swiftly to get institutions - especially the judiciary - under party control. It is even more difficult to comprehend as Mr Ponta is poised to win the general elections later this year. "We were flabbergasted. But it is a mistake for them to think they can pull it through, these are not the 1990s," the EU official said. Romania is still under EU monitoring for guaranteeing an independent judiciary and for effectively fighting corruption and other crimes. A report is due later this month .....

Another sanction against Romania that is envisaged in Brussels is a freeze of EU funds. Payments are already suspended since July 1st on technical grounds such as faulty public procurement rules. This could be made permanent and linked to the political situation.

The most likely outcome of all this is that Romania's bid to join the borderless Schengen area will be completely derailed. The Netherlands were the only country opposing the move so far. Earlier this year the Dutch indicated they may lift their reservation if the EU commission's report is positive. (The decision to let Romania has to be taken with unanimity among member states.) Now the Dutch position seems to gain Germany's support. On July 8th, Guido Westerwelle, Germany's foreign minister, said "serious violations of the letter and spirit of EU values may raise question about the last steps to Romania's full integration in the EU."[2]

c) The ruling coalition, of Social Democrats and Liberals, had passed a law earlier this week to ease the impeachment procedure. They had also replaced the heads of both chambers of Parliament, (both allies of Mr Băsescu) with politicians close to the Prime Minister, Victor Ponta. One ally, the Liberal leader Crin Antonescu, was appointed president of the Senate. That move will make him the country's interim president if Mr Băsescu is suspended.

[2] http://www.economist.com/blogs/easternapproaches/2012/07/romanian-politics-2, consulted on 27th of March 2013.

In another important move, an emergency ordinance shifted control of the Official Gazette, a bulletin that gives formal publication to laws and regulations, from parliamentary to government. Civil society groups are concerned that this could enable instant lawmaking. .....

The Cabinet also replaced the Ombudsman with a former Social Democrat lawmaker. That has sparked another round of controversies. The Ombudsman is the only Romanian public body who can challenge the emergency ordinances of the Government before the Constitutional Court.

Mr Ponta has also tried to change some of the judges from the Constitutional Court, accusing them of political bias. According to the Constitution, the judges are irremovable during their time in office. The Court said Mr Ponta's government is trying to threaten its independence with such potential dismantling acts.[3]

As we can see, the main vectors of Western Europe press presented state institutions - mainly the government - as an aggressor, who don't respect the Constitution and who lost its respect abroad. In fact, even a single article about this problem can create problem for a weak economy, but on June, July and August the number of articles was huge; a map from that time underline that Romanian case of war between President and Parliament + Government - with all legal context described - was present of 98% of states.

3. Is not our job to solve the image problems, there are a lot of institutions able to do that, a lot of PR companies ready to work for this subject.

We must analyze which are the main conditions to put in form on Romanian Constitution, to fulfill the main purpose of state: increasing its power, offering satisfaction to every citizen.

For this, we must imagine a real and coherent legal framework for our country. On this hypothesis, we must imagine a national way of solving problem, but watching carefully to other states examples - good practices are always necessary to be known, because their importance is huge of juridical battles of arguments.

There are two global models in fact, because both of them are the main expression of a special kind of legal culture:

French one, who is a representation of former times, when Paris was the intellectual center of the world, and where the ideas were followed with passion. Its role was huge for many countries, because the cultural domination of XIX corresponds to the national state creation on many continents; in this case, the global time of ideas was good not only for writers, but also for lawyers, and many codes and constitutions had as main influence French legislation.

The second example is the United States of America's example, because after World War II its power becomes the single pillar of democracy - and, for this, their legal concepts started to be spread on world: first, on the commercial branch, after that, one many other cases.

There is something very special on both cases: France is based by the national and historical loyalty, but the US are based by the loyalty for Constitution.

4. French president powers - which are closer by the Romanian regime - are described by few articles, as they are:

Article 5:

The President of the Republic shall see that the Constitution is observed. He shall ensure, by his arbitration, the proper functioning of the public authorities and the continuity of the State.

He shall be the guarantor of national independence, territorial integrity and observance of treaties.

Article 8:

The President of the Republic shall appoint the Prime Minister. He shall terminate the appointment of the Prime Minister when the latter tenders the resignation of the Government.

---

[3] http://www.economist.com/blogs/easternapproaches/2012/07/romanian-politics-1, consulted on 27th of March 2013.

On the proposal of the Prime Minister, he shall appoint the other members of the Government and terminate their appointments.

Article 9:

The President of the Republic shall preside over the Council of Ministers.

Article 10:

The President of the Republic shall promulgate Acts of Parliament within fifteen days following the final adoption of an Act and its transmission to the Government.

He may, before the expiry of this time limit, ask Parliament to reconsider the Act or sections of the Act. Reconsideration shall not be refused.

Article 11:

(1) The President of the Republic may, on a proposal from the Government when Parliament is in session or on a joint motion of the two assemblies, published in either case in the Journal Officiel, submit to a referendum any government bill which deals with the organization of the public authorities, or with reforms relating to the economic, social, or environmental policy of the Nation and to the public services contributing thereto, or which provides for authorization to ratify a treaty that, although not contrary to the Constitution, would affect the functioning of the institutions. .....

Article 12:

The President of the Republic may, after consulting the Prime Minister and the Presidents of the assemblies, declare the National Assembly dissolved.

A general election shall take place not less than twenty days and not more than forty days after the dissolution. The National Assembly shall convene as of right on the second Thursday following its election.

Should it so convene outside the period prescribed for the ordinary session, a session shall be called by right for a fifteen-day period. No further dissolution shall take place within a year following this election.

Article 13:

The President of the Republic shall sign the ordinances and decrees deliberated upon in the Council of Ministers. He shall make appointments to the civil and military posts of the State. [...]

Article 14:

The President of the Republic shall accredit ambassadors and envoys extraordinary to foreign powers ; foreign ambassadors and envoys extraordinary shall be accredited to him.

Article 15:

The President of the Republic shall be commander-in-chief of the armed forces. He shall preside over the higher national defence councils and committees.

Article 16:

Where the institutions of the Republic, the independence of the Nation, the integrity of its territory or the fulfillment of its international commitments are under serious and immediate threat, and where the proper functioning of the constitutional public authorities is interrupted, the President of the Republic shall take the measures required by these circumstances, after formally consulting the Prime Minister, the Presidents of the assemblies and the Constitutional Council.

5. United States president is considered - by the force of the American economy and military power - the most powerful man in the world. For sure, from the military point, but the legal doctrine underline other things:

The basic features of the U.S. presidency noted above are part of what distinguishes presidential systems of government from other systems. By definition, in a presidential system the president must originate from outside the legislative authority. In most countries such presidents are elected directly by the citizens, though separation of origin can also be ensured through an electoral college (as in the United States), provided that legislators cannot also serve as electors. Second, the president serves simultaneously as head of government and head of state; he is empowered to select

cabinet ministers, who are responsible to him and not to the legislative majority. And third, the president has some constitutionally guaranteed legislative authority: for example, the U.S. president signs into law or vetoes bills passed by Congress, though Congress may override a presidential veto with a two-thirds majority vote in both houses[4].

Article II, Section 1. The executive Power shall be vested in a President of the United States of America. He shall hold his Office during the Term of four Years, and, together with the Vice President, chosen for the same Term, be elected, as follows: .....No Person except a natural born Citizen, or a Citizen of the United States, at the time of the Adoption of this Constitution, shall be eligible to the Office of President; neither shall any Person be eligible to that Office who shall not have attained to the Age of thirty five Years, and been fourteen Years a Resident within the United States. .....

Section 2. The President shall be Commander in Chief of the Army and Navy of the United States, and of the Militia of the several States, when called into the actual Service of the United States; he may require the Opinion, in writing, of the principal Officer in each of the executive Departments, upon any Subject relating to the Duties of their respective Offices, and he shall have Power to grant Reprieves and Pardons for Offences against the United States, except in Cases of Impeachment.

He shall have Power, by and with the Advice and Consent of the Senate, to make Treaties, provided two thirds of the Senators present concur; and he shall nominate, and by and with the Advice and Consent of the Senate, shall appoint Ambassadors, other public Ministers and Consuls, Judges of the supreme Court, and all other Officers of the United States, whose Appointments are not herein otherwise provided for, and which shall be established by Law: but the Congress may by Law vest the Appointment of such inferior Officers, as they think proper, in the President alone, in the Courts of Law, or in the Heads of Departments.

The President shall have Power to fill up all Vacancies that may happen during the Recess of the Senate, by granting Commissions which shall expire at the End of their next Session.

Section 3. He shall from time to time give to the Congress Information of the State of the Union, and recommend to their Consideration such Measures as he shall judge necessary and expedient; he may, on extraordinary Occasions, convene both Houses, or either of them, and in Case of Disagreement between them, with Respect to the Time of Adjournment, he may adjourn them to such Time as he shall think proper; he shall receive Ambassadors and other public Ministers; he shall take Care that the Laws be faithfully executed, and shall Commission all the Officers of the United States.

Section 4. The President, Vice President and all civil Officers of the United States, shall be removed from Office on Impeachment for, and Conviction of, Treason, Bribery, or other high Crimes and Misdemeanors.

Analyzing these disposition, we can see that the French president is much close by the royal powers of history, because - we must remember, France is the country of monarchic absolutism.

6. Romanian history is connected - as almost good part of the European continent - to this paradigm. In fact, we can see that only after strong wars, where the national power was deeply affected, European states renounced to the absolutist power for chief of state.

Romania is a territory where wars were too much present, only in the last century we participated on 4 wars. Everyone was strong and with deep traces on Romanian map and Romanian citizen number, because our neighbors were not very positive in their attitude related to Romanian interests.

---

[4] Brian Duingan, *The executive branch of the federal government: purpose, process, and people* (New York: Britannica Educational Publishing, 2010), 34.

Thus, it appears the main and single question, who speaks about also about the president legitimacy against the government legitimacy: for what is he elected: mainly for economic powers or mainly for military dimension of presidential position?

The answer is very simple in Romania, and somehow it is shown by the public social investigations about the trust for state institution, when the church and the army are on the first position.

The church and the army are the state pillars (with the family). In this hypothesis, we must note that the citizens want to see a strong president, able to protect the state against any other aggression. This answer is the consequence of history and not of a paternalist mentality, because every state teaches its pupils national history. The Romanian history is complicate, but if offers a red wire: when the ruler was strong, the borders and citizen's life was better defended.

The legitimacy is given not only by the elections, there is more important to understand the history, to understand why a state acts in its way (for example, the Hungarian politics is almost no woman policy) - and laws cannot change in one day of vote (the referendum for Constitution approval) decades and centuries of history.

In the same time, the same social research wants to see the prime-minister more involved in economic problems - in fact, his career depends in almost complete proportion by the economic results, rather the military aspects.

In the same time, Romanian citizens watch every day without too much satisfaction to the borders, and they are not satisfied - they always consider that the main dangers come from the power and hate of some neighbor countries rather than the internal state framework.

For these arguments - who must be developed on a special book, but only after 2014 elections - we consider that is much better to not have a prime-minister, because, however, two important positions occupied means - naturally and without any other hesitations - an institutional conflict between persons (first) and institution (after).

Conclusions

Our text tried to describe better the main issues for a new regulation of executive power in Romania, presenting the French and United States regulation on this case.

In the same time, we presented some ideas about legitimacy and constitutional framework of Romania, underlining that the whole context is more close by the strong position for president, because the Romanian history send us to this conclusion, who don't show much options for prime-minister.

These kind of ideas are not totally welcomed today and a good part of readers will accuse me as being a partisan in internal politic war. In the same time, if the angry people will try to think with a "cold mind", they cannot ignore two things: history and map of Romania, especially our neighbors.

On this context, we consider that is necessary to understand much better the future on a correct line of history; if we cannot ignore geography and history, is better to deep our research on this part of public law. For sure, the author will continue this study, trying to present the best results for Romania and its nation.

CROATIA: THE 28th MEMBER STATE OF THE EUROPEAN UNION

DAN VĂTĂMAN*

Abstract

In an enlarged European Union of 27 Member States, convinced that the successive enlargements have been a success both for the European Union and the Member States which acceded to it, thus contributing to stability, development and prosperity throughout Europe, the leaders of Member States considered that this process must continue, ensuring the success of future enlargement of the Union, for a better response to the many challenges they face. Croatia completed its negotiations on the European Union membership in June 2011 and the European Council has designated 1 July 2013 as the date of Croatia's accession to the European Union, provided that all the procedures required for full membership are completed by that date. Therefore, this study aims to analyze the progress made by Croatia in its preparations for accession to the European Union and if this country continues to meet the Copenhagen criteria and has the ability to take on the obligations of membership.

Keywords: *Croatia's Accession to the European Union, enlargement, European integration, membership negotiations, Member State of European Union.*

1. Introduction

After sixty years of evolution marked by successive waves of enlargement, the European Union today is a successful model based on values of respect for human dignity, freedom, democracy, equality, rule of law and respect for human rights, values were common to the Member States in a society characterized by pluralism, nondiscrimination, tolerance, justice, solidarity and equality between women and men. According to Article 49 TEU, any European State which respects these values and is committed to promoting them may apply to become a member of the Union. The conditions of admission and the adjustments to the Treaties on which the Union is founded, which such admission entails, shall be the subject of an agreement between the Member States and the applicant State and this agreement shall be submitted for ratification by all the contracting States in accordance with their respective constitutional requirements.

Nowadays when the European Union faces major challenges and significant global uncertainty and gains new momentum for economic, financial and political integration, enlargement policy continues to contribute to peace, security and prosperity on our continent. The current enlargement agenda covers the Western Balkans, Turkey and Iceland. The European Union has consistently proclaimed the inclusiveness of its policy towards the Western Balkans, with successive European Councils confirming that the future of the whole region lies within the European Union. The enlargement process is by its very nature inclusive and necessitates wide stakeholder participation. In the enlargement countries, broad political consensus and support of the population for the reforms required contributes significantly to the transformation necessary for progress on the European Union path.[1]

Taking into account the progress made by Croatia on the path of European Union integration and the forthcoming accession of Croatia to the European Union on 1 July 2013, through this study we will try to highlight the efforts made by Croatia on the road to accession and analyze the commitments undertaken by Croatia in the accession negotiations. This approach is necessary because in the specialized literature there are few studies on this issue, given the relatively recent date

* Senior Lecturer, PhD candidate, Faculty of Economics, Law and Administrative Sciences - "Gheorghe Cristea" University of Sciences and Arts, Bucharest, Romania; PhD candidate - Faculty of Law, "Titu Maiorescu" University, Bucharest, Romania (e-mail: danvataman@yahoo.com).

of signature of the Accession Treaty of Croatia to the European Union. Therefore we intend to answer to these issues based on our research on the most recent documents of the European institutions and the recent progress reported even officials from Croatia.

2. The first steps of Croatia to the European Union

The beginning of relations between Croatia and the European Union was marked by the signing of the Stabilisation and Association Agreement (S.A.A.) on 29 October 2001[2]. Croatia was the second country to sign a Stabilisation and Association Agreement (S.A.A.) with the European Union and that agreement represented the first formal contractual step in institutionalising the relationship of Croatia with the European Union. The Stabilisation and Association Agreement (S.A.A.) provides the contractual framework for relations between the European Union and Croatia until the accession of the latter to the European Union and it covers areas such as: political dialogue; regional co-operation; the four freedoms, with the creation of a free trade area by 2007 for industrial products and most agricultural products; approximation of the legislation of Croatia to the European Union *acquis*, including precise rules in the fields such as competition, intellectual property rights and public procurement; wide-ranging co-operation in all areas of European Union policies, including in the area of justice, freedom and security[3]. From January 2002 until the entry into force of the Stabilisation and Association Agreement (S.A.A.), an Interim Agreement on trade and trade-related matters was applied[4].

On 21 February 2003, Croatia formally applied to join the European Union. In April 2004, the European Commission issued a positive opinion on this application and recommended the opening of accession negotiations[5]. This recommendation was endorsed by the June 2004 European Council who decided that Croatia was a candidate country and that the accession process should be launched. The December 2004 European Council requested the Council to agree on a negotiating framework with a view to opening the accession negotiations with Croatia on 17 March 2005 provided that there is full cooperation with the International Criminal Tribunal for the former Yugoslavia (I.C.T.Y.). After a positive report by the then I.C.T.Y. Chief Prosecutor, the Council concluded that conditions for starting negotiations had been met and negotiations were officially launched on 3 October 2005[6].

3. Accession negotiations between the European Union and Croatia

Following the results of the analytical comparison of Croatian legislation and the one of the European Union (so called screening), the negotiations between the European Union and Croatia as a candidate country started in 2005, where the candidate country first presented its negotiating position

---

[2] The Stabilisation and Association Process conditionality for the Western Balkan countries was defined by the Council on 31 May 1999 and includes cooperation with the International Criminal Tribunal for the Former Yugoslavia, and regional cooperation.

[3] *Stabilisation and Association Agreement between the European Communities and their Member States, of the one part, and the Republic of Croatia, of the other part - Official Journal L 26 , 28/01/2005.*

[4] The Stabilisation and Association Agreement (S.A.A.) entered into force on 1 February 2005.

[5] Communication from the Commission COM(2004)257 final, *Opinion on Croatia's Application for Membership of the European Union*, Brussels, 20.4.2004.

[6] The text of conclusions which the EU ministerial council adopted at their session in Luxembourg, warmly welcomes "the report to the Croatia Task Force by the ICTY Chief Prosecutor that Croatia was now co-operating fully with the ICTY, as well as the clear commitment by the Croatian Prime Minister that full cooperation would be maintained until the last remaining indictee was in The Hague, and as long as required by the ICTY". The Council confirmed that "sustaining full co-operation with the ICTY would remain a requirement for progress throughout the accession process" – *Press Release - 2678th Council Meeting, General Affairs and External Relations, Luxembourg, 3 October 2005.*

in which it specifies how it plans to adopt and implement the European Union *acquis*, in each 35 chapters of negotiations covering the whole range of European Union policies and rules [7].

Negotiating positions were adopted by the Croatian Government and submitted to the European Union. After that, the European Commission prepared the draft of European Union common negotiating position, which is finally adopted by a unanimous decision of the Council of Ministers. In its common position, the European Union set benchmarks which the candidate country had to meet before opening each chapter. After the opening benchmarks for individual chapters were met, the European Union and the candidate country discussed and negotiated at intergovernmental conferences which were held at the same time as everyday expert consultations between Croatia and the European Union. Once the preconditions for closing individual chapters were met (so called closing benchmarks), a negotiation chapter was considered to be provisionally closed.

The first chapter in Croatia's accession negotiations to European Union, Science & Research, was opened and temporarily closed on Monday, 12 June 2006, at the Intergovernmental Accession Conference held in Luxembourg between Croatia and the European Union.

After successful six-year process of negotiations, on 30 June 2011, the meeting of the Accession Conference with Croatia at Ministerial level closed negotiations on remaining four chapters thus closing the accession negotiations with Croatia, which allowed for the signature of the Accession Treaty. [8]

4. Accession Treaty of the Republic of Croatia to the European Union

4.1. Signature of the Accession Treaty

In light of the decisions taken on 30 June 2011, the the European Commission has received a strong mandate to closely monitor Croatia's fulfilment of the commitments undertaken. In line with Article 49 of the Treaty on European Union, the European Commission gave its formal favourable opinion on Croatia's accession on 10 October 2011[9].

After the Commission's favourable opinion, the European Parliament gave its consent to Croatia's European Union membership, in a vote on 1 December, with 564 votes in favour, 38 against and 32 abstentions[10].

Final approval was given by the General Affairs Council in its meeting held on 5 December 2011 in Brussels, when the Council adopted conclusions on enlargement and on the stabilisation and association process. With regards to Croatia, the Council concluded that Croatia has reached a high level of preparedness for membership and encourages Croatia to continue in its efforts in addressing all the issues identified therein, notably in the field of judiciary and fundamental rights, justice, freedom and security and competition policy. Consequently, the Council adopted a decision

---

[7] The negotiation chapters are: Chapter 1: Free movement of goods; Chapter 2: Freedom of movement for workers; Chapter 3: Right of establishment and freedom to provide services; Chapter 4: Free movement of capital; Chapter 5: Public procurement; Chapter 6: Company law; Chapter 7: Intellectual property law; Chapter 8: Competition policy; Chapter 9: Financial services; Chapter 10: Information society and media; Chapter 11: Agriculture and rural development; Chapter 12: Food safety, veterinary and phytosanitary policy; Chapter 13: Fisheries; Chapter 14: Transport policy; Chapter 15: Energy; Chapter 16: Taxation; Chapter 17: Economic and monetary policy; Chapter 18: Statistics; Chapter 19: Social policy and employment; Chapter 20: Enterprise and industrial policy; Chapter 21: Trans-European networks; Chapter 22: Regional policy and coordination of structural instruments; Chapter 23: Judiciary and fundamental rights; Chapter 24: Justice, freedom and security; Chapter 25: Science and research; Chapter 26: Education and culture; Chapter 27: Environment; Chapter 28: Consumer and health protection; Chapter 29: Customs union; Chapter 30: External relations; Chapter 31: Foreign, security and defence policy; Chapter 32: Financial control; Chapter 33: Financial and budgetary provisions; Chapter 34 – Institutions; Chapter 35 - Other issues.

[9] Commission Opinion on the application for accession to the European Union by the Republic of Croatia COM(2011) 667 final, Brussels, 12.10.2011.

[10] www.europarl.europa.eu/news/en/pressroom/content/20111201IPR32926/html/Croatia's-EU-accession-green-light-from-Parliament.

approving Croatia's admission to the European Union and the Treaty of Accession was scheduled to be signed in Brussels on 9 December 2011.

As agreed, the Treaty of Croatia's Accession to the European Union was signed in Brussels at a separate ceremony preceding the 9 December 2011 session of the European Council. The treaty was signed by President Ivo Josipovć and the then Prime Minister Jadranka Kosor on behalf of Croatia and by heads of states or governments of the European Union Member States[11].

The signing of the Treaty has marked the end of the lengthy process of preparations for the accession completed with the end of the six-year negotiations in June 2011, during this period Croatia has been asked not only to adopt new laws and regulations to comply with European Union standards, but also to implement them, thus proving the reforms has taken an irreversible course of action.

4.2. Content of the Accession Treaty of Croatia to the European Union

Accession Treaty of Croatia to the European Union contains only four articles which covers the following aspects:

a) Article 1 provides that Croatia hereby becomes a member of the European Union and of the European Atomic Energy Community. Also, Croatia becomes a Party to the Treaty on European Union, the Treaty on the Functioning of the European Union and the Treaty establishing the European Atomic Energy Community as amended or supplemented. In addition, this article provides that the conditions of Croatia's dmission to the European Union are set out in the Act annexed to the Treaty, and the provisions of this Act are an integral part of the Treaty.

b) Article 2 provides that the provisions concerning the rights and obligations of the Member States and the powers and jurisdiction of the institutions of the Union, as set out in the Treaties to which the Republic of Croatia becomes a Party, shall apply in respect of the Accession Treaty.

c) Article 3 states that the Treaty shall be ratified by the High Contracting Parties in accordance with their respective constitutional requirements, and the instruments of ratification shall be deposited with the Government of the Italian Republic by 30 June 2013. In this case, the Treaty shall enter into force on 1 July 2013 provided that all the instruments of ratification have been deposited before that date.

d) Article 4 stated that the Treaty was written in a single original in 24 languages (Bulgarian, Croatian, Czech, Danish, Dutch, English, Estonian, Finnish, French, German, Greek, Hungarian, Irish, Italian, Latvian, Lithuanian, Maltese, Polish, Portuguese, Romanian, Slovak, Slovenian, Spanish and Swedish) and the texts in each of these languages being equally authentic, shall be deposited in the archives of the Government of the Italian Republic, which will transmit a certified copy to each of the Governments of the other Signatory States.

The *Act concerning the conditions of accession of the Republic of Croatia and the adjustments to the Treaty on European Union, the Treaty on the Functioning of the European Union and the Treaty establishing the European Atomic Energy Community* (provided in Article 1 paragraph 3 of the Treaty), contains 55 Articles distributed into 5 parts as follows: Part One – Principles; Part Two - Adjustments to the Treaties; Part Three - Permanent Provisions; Part Four - Temporary Provisions; Part Five - Provisions relating to the implementation of the Act.

Croatia's accession Treaty contains 9 annexes, each addressing a particular issue as follows: ANNEX I - List of conventions and protocols to which the Republic of Croatia accedes upon accession (referred to in Article 3(4) of the Act of Accession); ANNEX II - List of provisions of the Schengen acquis as integrated into the framework of the European Union and the acts building upon it or otherwise related to it, to be binding on, and applicable in, the Republic of Croatia as of accession (referred to in Article 4(1) of the Act of Accession); ANNEX III - List referred to in Article 15 of the Act of Accession: adaptations to acts adopted by the institutions; ANNEX IV - List referred to in Article 16 of the Act of Accession: other permanent provisions; ANNEX V - List

[11] The treaty was published in the Official Journal of the European Union L 112/10, 24.4.2012.

referred to in Article 18 of the Act of Accession: transitional measures; ANNEX VI - Rural development (referred to in Article 35(2) of the Act of Accession); ANNEX VII - Specific commitments undertaken by the Republic of Croatia in the accession negotiations (referred to in Article 36(1), second subparagraph, of the Act of Accession); ANNEX VIII - Commitments undertaken by the Republic of Croatia on the restructuring of the Croatian shipbuilding industry (referred to in Article 36(1), third subparagraph, of the Act of Accession); ANNEX IX - Commitments undertaken by the Republic of Croatia on the restructuring of the steel sector (referred to in Article 36(1), third subparagraph, of the Act of Accession)

In addition, at the Treaty was attached a Protocol on certain arrangements concerning a possible one-off transfer of assigned amount units issued under the Kyoto Protocol to the United Nations Framework Convention on Climate Change to the Republic of Croatia, as well as the related compensation.

4.3. Ratification process of the Treaty of Croatia's Accession to the European Union

In accordance with Article 3 of the Accession Treaty, after signing the treaty must be ratified by each Member State of the European Union, this process must be completed by 30 June 2013, once the Treaty is ratified by all Member States, Croatia's membership in the Union will be formalised as of 1 July 2013.

So far, the Treaty of Croatia's Accession to the European Union has been ratified by most Member States of the European Union and there is belief that the ratification process will be completed by the due date.[12]

With regard to ratification of Croatia's Accession Treaty by Romania, on 26 June 2012 took place a joint session of the Chamber of Deputies and the Senate, on this occasion was passed the law on ratification of accession of Croatia to the European Union with unanimity of the 378 MPs[13]. After that, Romanian President signs the ratification act on 29 June 2012[14].

5. The progress made by Croatia in its preparations for accession

In the course of the negotiations, Croatia has agreed to a number of commitments, which have to be implemented by the date of accession, at the latest, unless specific transitional arrangements have been agreed.

Article 36 of the Act of Accession requires the Commission to closely monitor all commitments undertaken by Croatia in the accession negotiations focusing in particular on competition policy, judiciary and fundamental rights, and freedom security and justice. The Act further provides for the Commission to present a Comprehensive Monitoring Report to the European Parliament and the Council in autumn 2012.

As a result, on 10 October 2012, the European Commission presented a report to the European Parliament and the Council on the main findings of the Comprehensive Monitoring Report on Croatia's state of preparedness for European Union membership[15]. The report assesses Croatia's

---

[12] This results from statements of the Irish Prime Minister Enda Kenny, who said that the completion of the ratification of Croatia's Accession Treaty with the European Union will be one of the priorities of Ireland's presidency of the Council of the European Union. Also, the Programme of the Irish Presidency of the Council of the European Union shows that: "In 2013 the Irish Presidency will continue to prioritise a credible enlargement policy based on the principle of conditionality. While the Presidency will work intensively to advance enlargement and support states as they prepare for membership, much will depend on the progress made by the states themselves. Firstly, the Presidency will oversee consideration of the final monitoring report on Croatia and looks forward to Croatia's accession to the EU on 1 July 2013" - http://www.eu2013.ie/ireland-and-the-presidency/about-the-presidency/programme-and-priorities/.

[14] Decree No. 431 of 29 June 2012, published in Romanian Official Gazette no. 436/30 June 2012.

[15] *Communication from the Commission to the European Parliament and the Council on the Main Findings of the Comprehensive Monitoring Report on Croatia's state of preparedness for EU membership, COM/2012/0601 final* - http://eur-lex.europa.eu.

state of preparedness on the basis of the political and economic criteria for membership and of the requirement to adopt and implement the European Union *acquis*, as laid down by the Copenhagen European Council in 1993.

As reflected in the report of the European Commission, Croatia continues to meet the **political criteria**, and in all areas covered by the political criteria (stability of institutions guaranteeing democracy, the rule of law, human rights and respect for and protection of minorities) work has continued and results are becoming tangible. In the field of judiciary, efforts to strengthen the independence, accountability, impartiality and professionalism of the judiciary have continued. With regard to the fight against corruption, an adequate legal and institutional framework remains in place and a track record of implementation continues to be developed. Law enforcement bodies remain pro-active, especially on higher-level cases. Local level corruption needs attention, particularly in public procurement. With regard to human rights and the protection of minorities, human rights continue to be generally well respected, and protection of minorities has continued to improve, through the implementation of measures for the protection of minorities, including the Constitutional Act on the Rights of National Minorities. With regard to war crimes, Croatia continues to cooperate with the International Criminal Tribunal for the former Yugoslavia (ICTY) and to process war crimes cases, but efforts to address impunity for war crimes should be intensified, as the majority of crimes have yet to be successfully prosecuted.

As regards the **economic criteria**, the European Commission report shows that Croatia is a functioning market economy and vigorous implementation of urgently needed structural reforms should enable Croatia to cope with competitive pressures and market forces within the Union in the near term. Despite the fact that there is a large political consensus on the fundamentals of a market economy, structural reforms progressed slowly in some areas, not least with respect to privatisation and the restructuring of loss-making enterprises, and were almost non-existent in others. In the area of labour markets in particular, where already low levels of employment and participation declined further, reforms are still at a very early stage and need urgently to be stepped up. The investment climate continued to suffer from a heavy regulatory burden, lengthy procedures, uncertainties in the legal environment, unpredictability of administrative decisions, and a high number of non-tax fees. Social transfer payments, which represent a relatively high share of public budgets, remained not well-targeted. Considering the need to achieve medium-term fiscal sustainability, the budgetary process could be improved further. Enhancing the efficiency of public spending remains a key challenge.

Regarding the **ability to take on the obligations of membership** (one of the Copenhagen criteria), the European Commission said that Croatia has continued to make progress in adopting and implementing European Union legislation and is now completing its alignment with the *acquis*. Nevertheless, the Commission has identified a number of issues requiring continued attention. The Croatian authorities need to take all necessary measures to ensure that the country is fully prepared for membership by 1 July 2013, including with regard to the administrative capacity for the implementation of the *acquis*. In accordance with Article 36 of the Act of Accession, particular focus is given in this section to competition policy, judiciary and fundamental rights and freedom, justice and security.

However, in its report the European Commission has identified areas where further efforts are necessary and a limited number of issues where increased efforts are required. These issues relate in particular to: the preparations for future European Union structural funds in order to ensure their proper management; the restructuring of the Croatian shipbuilding industry; the strengthening of the rule of law through continued implementation of Croatia's commitments to further improve public administration, the justice system; preventing and fighting corruption effectively, as well as; the management of external borders. Without prejudice to the importance of addressing all issues underlined in the Comprehensive Monitoring Report, the Commission considers that particular

attention should be paid by Croatia in the coming months in some areas such as: competition policy, judiciary and fundamental rights, and freedom security and justice.[16]

At its meeting on 11 December 2012, the Council welcomed the communication from the Commission of 10 October 2012 on the Enlargement Strategy and Main Challenges 2012-2013, as well as the comprehensive monitoring report on Croatia's state of preparedness for European Union membership and the accompanying monitoring tables, and takes note of the findings therein. The Council has assessed thoroughly the monitoring report and tables, and notes with satisfaction that Croatia has continued to make progress in adopting and implementing European Union legislation, is completing its alignment with the *acquis*, and has achieved substantial results in a number of areas. It is essential that Croatia sharpens its focus on the ten key issues highlighted by the Commission, in the fields of competition policy, judiciary and fundamental rights, and justice, freedom and security. At the same time, the Council notes that there are also a number of commitments undertaken by Croatia during accession negotiations in these and other chapters, where further or increased efforts are required from Croatia. In line with Article 36 of the Accession Treaty and with relevant European Council conclusions and Council conclusions, the Council reiterates the importance it attaches to close monitoring of Croatia's fulfilment of all its commitments undertaken in the accession negotiations, including those which must be fulfilled before accession. In this regard, the Council endorses the specific recommendations in the Commission's report and urges Croatia to address without delay the concerns highlighted in order to ensure that its preparations are successfully completed, and that this can be reflected in the Commission's final monitoring report on Croatia's preparations to be presented in 2013, in line with the provisions of the Accession Treaty. Bearing in mind the importance of good neighbourly relations and the implementation of legally binding international agreements, the Council encourages Croatia to continue addressing all outstanding bilateral and regional issues, including succession issues, building on progress achieved so far. Further efforts are needed to tackle impunity for war crimes through impartial handling of outstanding cases and through continued full cooperation with the International Criminal Tribunal for the former Yugoslavia[17].

Also, 18-month program of the Council (1 January 2013 - 30 June 2014) shows that monitoring of Croatia's fulfilment of all commitments undertaken in the accession negotiations will continue until Croatia becomes a full Member. Pending the successful conclusion of procedures for ratification of the Accession Treaty, Croatia will become the 28th Member State of the EU on 1 July 2013[18].

6. Conclusions

After 40 years since the first enlargement of the European Communities (accession of the Denmark, Ireland and United Kingdom) the enlargement policy remains a priority for the European Union.

However, there are some who wonder why we continue the process of European Union enlargement? Especially in the context of the recent global financial crisis, the difficulties currently facing the euro area and instability in certain areas of our neighbourhood. Do not already have enough problems without taking additional charge of European Union integration of new members?

On these legitimate concerns of European citizens we can argue that in the year 2013, at a time when the European Union faces major challenges and significant global uncertainty and gains new momentum for economic, financial and political integration, enlargement policy continues to contribute to peace, security and prosperity on our continent.

---

[16] COM(2012) 601 final.

[17] *General Affairs Council meeting, Brussels, 11 December 2012* - http://www.consilium.europa.eu.

[18] http://www.eu2013.ie/media/eupresidency/content/documents/Trio-Programme.pdf.

In addition, we believe that the extension serves both the interests of the Union and those countries wishing to join, thereby contributing to stability, development and prosperity throughout Europe, for this reason we believe that the enlargement process should continue, but not in any conditions. In this respect, the countries involved in the accession process should adopt political and economic reforms, the aim being to bring these countries up to European standards in all areas covered by the European treaties, which would support the European Union in achieving their goals in a number of key areas for economic recovery and sustainable growth, such as energy, transport, environment and efforts to tackle climate change.

In the last decade, Western Balkan countries have made substantial progress in terms of stability and regional cooperation, however, a number of problems stemming from conflicts in the region remain unresolved and affect both the internal workings of states and the relations between them. Therefore, the European Union is working with parties in the region to overcome these problems, with the conviction that lasting reconciliation requires efforts at all levels (of government, the judiciary and civil society), reconciliation is linked also to solving problems related to poverty and social exclusion.

Accession of Croatia to the European Union on 1 July 2013 will be an event with a significant resonance both for Croatia and for the whole region, specifically illustrating vocation of Western Balkan countries belong to the European family gathered through constant effort and decided to achieve democratic reforms and alignment to the principles and values underlying the European project. However, the accession of Croatia to the European Union will encourage other states who want to join the European Union to continue the reforms required to make their European journey, thus contributing to strengthening democracy and stability throughout the region.

In this context, Croatia is expected to continue playing an active role in regional cooperation in the Western Balkans, and is encouraged to address the remaining open bilateral issues with its neighbours.

TRADE NAME, FIRM, DENOMINATION SOCIALE AND RAISON SOCIALE. ARE THEY ALL THE SAME?

PAUL-GEORGE BUTA*

Abstract
The present study intends to point out the different designations used to indicate business identifiers and verify whether they facilitate the minimization of the two types of transaction costs usually mitigated by such identifiers.
Even when the Paris Convention for the Protection of Industrial Property was being drafted in the 19th century there were ample debates regarding the need for an international protection for trade names. And even then the reports presented to the Congress then mentioned the fact that national protection for trade names was provided for under various designations and with different scope in the countries that were analyzed.
Since the determination of the various designations used has as its starting point the provisions of the Paris Convention an analysis starting from the designations used in France is necessary. A comparison with the terms used in Germany and France is then provided so as to offer a wide array of models for business identifiers that are to be later assessed as against their ability to mitigate transaction costs.

Key Words: *Trade Name, Firm, Dénomination sociale, Raison sociale, Firma, Business identifiers, transaction costs*

Introduction

The present study deals with the protection of business identifiers defined as names benefitting from legal protection and used so as to primarily identify a trader. Business identifiers are at the intersection of company and intellectual property law and thus are the object of debate as to their nature and scope of protection. Since company names are mandatory in modern jurisdictions for the incorporation of any trader and similar protection is afforded to traders acting as natural persons and to other associative organizations, they are normally dealt with by either company law or the law relating to such associative organizations. Trade names are, on the other hand, protected as industrial property rights by the 1883 Paris Convention for the Protection of Industrial Property and should thus be offered protection under the special provisions of national and international law dealing with the protection of industrial property.

The economic dimension of industrial property protection concerning distinctive signs is traditionally anchored in the assumption that such rights allow for the minimization of transaction costs for the consumers. Trademarks especially have been evaluated in what regards the scope of protection according to their ability to fulfill their economic function of minimizing such transaction costs.

The present study aims to point out that business identifiers can be themselves evaluated by their ability to mitigate such costs under two dimensions. However there are differences in the names under which such business identifiers are protected under national law and not all of them allow for mitigation of all these costs.

The study undertakes to identify the categories of transaction costs normally expected to be mitigated by such business identifiers and then to determine, by means of verification of their legal content, categories of business identifiers which although have a different name share the same important characteristics.

* Assistant Lecturer, PhD Candidate, "Nicolae Titulescu" University, Bucharest (paul.buta@univnt.ro).

There is little literature on the subject, although the various names of business identifiers have been the subject of some analysis[1] while in economic scholarship there has been research concerning transaction costs[2] and the effects of reputation[3]

The economic benefits of business identifiers

William Blackstone claimed that the invention of companies "belongs entirely to the Romans"[4] since it is the Romans who have created the *societates* of the *publicani* and the *collegia* and *corpora* of the lower classes. One of the most important features of the Roman innovation was the idea that such associations would have a collective identity separated from those of its individual human components, i.e. the separation of identity between the company and its members taken either collectively or individually[5]. This was a major step forward from earlier forms of commercial associations in Mesopotamia, Phoenicia and ancient Athens.

The benefit a company brings is, as Ronald Coase put it in his seminal 1937 work "The Nature of the Firm"[6], the minimization of transaction costs[7] concerning the coordination of a particular economic activity. Such decrease in costs would normally result in an increase in both parties' surplus which would then be reflected in the market where the company is to sell its products or services. This Pareto improvement would result in a part of the surplus being further shared with the consumers of said products or services.

Transaction costs are traditionally divided into three categories: search and information costs, bargaining costs and policing and enforcement costs[8]. Another, more recent, classification identifies four categories of transaction costs: search costs, contracting costs, monitoring costs and enforcement costs[9]. Under the latter classification search costs "include the costs of gathering information to identify and evaluate potential trading partners"[10].

Therefore one of the cost components that the firm would normally mitigate is the cost of gathering information to identify and evaluate potential trading partners. These costs would be costs incurred by the firm (in order to secure investment, employment, supply) and by the potential investors/employees/suppliers. These costs are different than transaction costs incurred by customers when making purchase decisions regarding the products or services on the market. These transaction costs are mitigated by the trademarks available to entities at all levels (i.e. including firms, investors, employees, suppliers) as demonstrated by Landes and Posner[11].

Therefore business identifiers (such as trade names, emblems and the like) are useful in that they minimize transaction costs in the firm's contracting relating to issues non-related to the offering of its products or services on the market as opposed to trademarks which act as identifiers of the originator of the product or service to consumers.

Business identifiers encompass the name of the trader (be it called firm, raison or designation sociale, corporate name or business name), the name of the trader as used in his commerce (trade name, nom commercial, assumed name), his emblem and his Internet domain name (which we will not analyze in the context of the present study).

All these business identifiers serve to mitigate the search category of transaction costs by clearly indicating the identity and allowing for the evaluation of a business partner.

As shown by Dyer[12], there is a correlation between the search costs measured above, the other categories of transaction costs and the means used for their mitigation when one adopts a longitudinal perspective of costs. Thus the safeguards for transactions normally used (i.e. contracts) are complemented by alternative safeguards such as self-enforcing agreements including informal safeguards such as relational or goodwill trust and reputation[13]. These are considered safeguards requiring set-up costs and which pay their dividends over time thereby being more relevant in repeated-round games than on the short-term, where contracts appear to be preferable.

We may therefore proposition that two components are essential to business identifiers when perceived as safeguards lowering transaction costs: (1) a default (base) component allowing the firm to be identified as such by any transactor (and therefore lowering transaction costs in that a single identity is used by the same firm in all transactions and also allowing for the firm to accrue reputation, goodwill and trust under that identity) and (2) a complex component reflecting the reputation, goodwill and trust that firm has accrued over time and allowing not just the more rapid identification of said firm (thereby lowering costs more than the default component and therefore acting as an enhanced first component) but also the minimizing of the other types of transaction costs

(contracting, monitoring and enforcement) by allowing for compensation in repeat orders, economies of scale and scope, lower information asymmetry and increased unilateral defection costs[14].

These two components which we might, for present purposes, name the identity component and the reputational component of business identifiers need to be afforded protection by the law in order to allow for the beneficial effects to be reflected on the market.

But various national laws protect business identifiers under various names and therefore it is important to understand whether the different names under which such business identifiers are protected bring about differences in the level and content of the protection and whether under the complex framework for national protection the two components identified above are both protected by the protection afforded to the identifiers under a given name.

The purpose of the present study is to identify some of the names under which business identifiers are protected in some EU jurisdictions and to find whether the so-protected identifiers allow for both components identified above to be protected.

The terms identified

In the 1883 *Paris Convention for the Protection of Industrial Property* article 8 of the authentic French text indicates that "Le nom commercial sera protégé dans tous les pays de l'Union sans obligation de dépôt, qu'il fasse ou non partie d'une marque de fabrique ou de commerce". Thus textual reference is made to the "nom commercial". The official English translation indicates the article to state that "A trade name shall be protected in all the countries of the Union without the obligation of filing or registration, whether or not it forms part of a trademark". Thus "nom commercial" is meant to be the equivalent of a "trade name".

However, the Report[15] prepared by Le Comte Maillard de Marrafy for the International Congress regarding Industrial Property held in Paris from the 5th to 17th of September 1878 indicated that in Germany the law provides for the protection of *firms* – "La firme […] est une raison de commerce, transmissible comme une marque et soumise a l'enregistrement, soit lors de la création, soit lors des transmissions, modifications, etc.". Therefore the firm would be a transferrable *raison de commerce* that needs to be registered in order to be offered protection.

In France[16] *firm* is used both *as* having a wider meaning – it is a synonym for the company (*enterprise)*, commercial establishment (*etablissment)* or trade name (*nom commercial*) – and in a narrow sense – as a company name (*raison sociale* or *dénomination sociale*). In Germany *firm* is normally used only in the narrow sense[17], thereby excluding the meaning of *nom commercial*.

The same author indicates that the French *nom commercial* is the corresponding name for the German *Firmenname* or *Handelsname* whereby it would designate „a commerce, whichever the form under which it takes place"[18].

The German term *firma* on the other hand is said to be used as an equivalent of the French *raison sociale* or *dénomination sociale*, to which the direct German correspondent would be

[14] Jeffrey H. Dyer, „Effective Interfirm Collaboration: How Firms Minimize Transaction Costs and Maximize Transaction Value" in *Strategic Management Journal*, Vol. 18:7 (1997), pp. 544-550.

[15] Le Comte Maillard de Marafy, « Rapport présenté au nom de la section des marques de fabrique et de commerce » in *Congrès international de la propriété industrielle tenu à Paris du 5 au 17 septembre 1878*, Imprimerie Nationale, (Paris – 1879), pp. 101 – 103.

[16] Yves St-Gal „La protection comparée de l'enseigne, de la raison sociale et du nom commercial" – Report at the Congress of the International League against Unfair Competition in Istambul (11-15 august 1953) in *Annales de la Faculté de Droit d'Istanbul*, vol. 2 nr. 3 (1953), pp. 448-516.

[17] Idem, p. 470.

[18] Idem, p. 466 – „les législations allemande, belge, française désignant ainsi un commerce en général quelle que soit la forme sous laquelle il est exercé".

Personalfirma[19]. The latter would be the one defined by art. 17 of the 1897 German Commercial Code indicating that „The trade-name of a mercantile trader is the name under which he carries on business and which he signs. A mercantile trader can sue and be sued under his trade-name"[20]. The German Commercial Code of 1861 contained as well, in article 15, similar provisions – The firm of a trader is the name under which he carries on business and which he signs[21].

Mention must be made of the fact that both the 1861 and the 1897 German Commercial Code contained the provisions relating to trade names in a separate section entitled *Von handelsfirmen* (in the 1861 Code) and *Handelsfirma* (in the 1897 Code). St-Gal indicated *handelsfirma* to be a synonym for *raison de commerce* or *raison commerciale*[22], which were in their turn considered to be synonyms for *nom commercial*[23].

It would thus appear that at least on a linguistic level the differences between the terms appear to be cancelled out by the numerous interconnected references. However subtle differences may be yet observed when analyzing the normative content associated with those terms.

Dénomination sociale and nom commercial

St-Gal presupposes that a subtle but fundamental difference exists between *raison sociale* on the one hand and *raison commerciale* and *nom commercial* on the other. By reference to French provisions of law he indicates that *raison sociale* designates a legal person (only being applicable to such persons) and as such would be an indicator of the company's personality[24] and the equivalent of a natural person's name[25].

Raison sociale would thus be „the name or pseudonym designating the owner or owners of an undertaking or enterprise"[26]. Moreover he indicates that *raison sociale* is to be differently adopted by different types of companies[27]. In time however most companies in France came to be able to use a *dénomination sociale* (except for professional civil partnerships still required to use a *raison sociale*) even if non-commercial, thus indicating that *raison sociale* has become „a designation of only residual use in [French] company law"[28].

Raison commerciale on the other hand is considered to be a synonym of *nom commercial* and a designation of the very undertaking it identifies[29]. It can be made up of a name, a *raison sociale* or a *dénomination sociale*[30].

[30] Idem, p. 467.

The *nom commercial* on the other hand is shown to „tie (*rattache*) the individual to the goodwill just as his last name ties him to the family or state that he is part of"[31]. The classic definitions provided by St-Gal have, almost unanimously, as a common element the strong link between the *nom commercial* and the goodwill of the trader[32].

Other definitions refer to the *nom commercial* along the same lines. Maunoury suggests this would be a designation adopted irrespectively of any distinctive form as a term to indicate his commercial establishment (*maison*)[33]. *Nom commercial* would thus designate the goodwill of the trade or the trade itself rather than the personality or identity of the trader or owner of the trade/goodwill.

Maillard de Marafy quotes the Report of the French Senate Committee defining *nom commercial* as being „the simple or compound name under which traders, industrialists, producers or entrepreneurs carry on their business, industry or enterprise"[34].

To Azéma şi Galloux *nom commercial* is the name under which a natural or legal person carries on his business; it therefore distinguishes a certain goodwill from any similar other goodwill[35]. *Dénomination sociale* would be the name individualizing the legal person and thus be for a company what the name is for a natural person[36].

Philippe Bessis suggested *nom commercial* identifies (*désigne*) a company in its trade, being the name most familiar to third parties[37] while *dénomination sociale* would indicate (*désigne*) the company itself[38].

Paul Mathely, quoted by Bessis, defines *nom commercial* as "the designation by which a natural or legal person identifies (*désigne*) the undertaking or the goodwill in order to identify it in his dealings with customers"[39].

The definition that Yves Reboul quotes approvingly is that *nom commercial* would be an expression distinguishing a goodwill from any other identical or similar goodwill[40]. The same author quotes jurisprudential definitions of the term such as: "nom commercial is the designation by which the goodwill is known and utilized and which is the rallying sign of custom"[41] and *nom commercial* identifies the goodwill in the dealings with the customer[42].

[42] Yves Reboul „Le nom commercial et la marque" in *Melanges offerts à Albert Chavanne*, Litec (Paris – 1990), p. 283

Jérôme Passa indicates that *dénomination sociale* "identifies a natural person [while] *nom commercial* identifies a goodwill"[43].

In a more recent study it is shown that *nom commercial*, which had been a synonym of *raison de commerce* "identifies the goodwill in what concerns (*a l'égard*) the customers"[44].

The difference, under French law, between *dénomination* (or *raison*) *sociale*, on the one hand, and *nom commercial* and *raison de commerce* on the other, is now evident. While *dénomination* (or *raison*) *sociale* designates the owner, the company or the trader himself, *nom commercial* and *raison de commerce* designate the goodwill, the trade or the undertaking.

The differences are even more evident once we take into account that the right in *dénomination sociale* is born by its adoption on the Articles of Association[45], that the claim for its protection is admissible since its registration with the Commercial Registry[46] and that its protection spans the national territory[47] no matter whether it is well-known[48] or effectively used on all the territory[49].

The right in a *nom commercial*, on the other hand, is obtained not by registration with the Commercial Registry but by means of public[50] and honest[51] use. In order for such to be opposed to the registration of a trademark it must have been used in all the territory of the state of application[52] even if it is not required that it meets the criteria for being well-known[53].

Firma* and *dénomination sociale

From the above we might conclude that, given *Firma*'s definition in the German Commercial Code, it would more likely be the correspondent of the French *dénomination sociale* than of the *nom commercial*.

This conclusion is further strengthened by the fact that while for *Firma* and *dénomination sociale* the law provides for very strict rules[54] relating to the components of such while French law contains no similar provisions relating to *nom commercial*.

Moreover, the German Commercial Code section concerning the *Firma* does not apply to fantasy names used to designate trade (*Geschäftsbezeichnungen* or *Establissementsnamen*), these

[54] Alexandra Mendoza *Les noms de l'entreprise*, Presses Universitaires d'Aix-Marseille (Aix-en-Provence – 2003), p. 70.

being protected under Unfair Competition rules[55], the same being true[56] for *nom commercial* (but also for *dénomination sociale*) in France[57].

Mention should also be made of the fact that almost all authors[58] agree that *nom commercial* is optional while *dénomination sociale* is mandatory, just like the German *Firma*.

The similarities between the German *Firma* and the French *dénomination sociale* also include the fact that the German Commercial Code specifically indicates that the *Firma* is the name that the trader signs. In France it has been shown that the sign the trader signs is not the *nom commercial* but the *dénomination sociale*[59].

As a short conclusion of the above we propose that the German *Firma* is the equivalent of the French *dénomination sociale* and is different (as the *dénomination sociale* is as well) from the *nom commercial*.

Trade name* and *firm

According to St-Gal[60], *raison sociale* would be the equivalent of both firm name (when used as *raison sociale* for a partnership) and a *company name* (when used to designate a company differently incorporated).

Black's Law Dictionary defines *firm* as "The title under which one or more persons conduct business jointly" and "The association by which persons are united for business purposes" [61] but mention is made of the fact that "Traditionally, this term has referred to a partnership, as opposed to a company. But today it frequently refers to a company".

A *Business Name* is the designation under which a person or an association not required to be registered does business. A Business Name could be the last name of the trader, either alone or with his first name or initial[62] or, in the case of a partnership, all the partners' names either alone or with their first names and/or initials[63].

A Company Name is the name of the incorporated company having its own legal personality and, once adopted, cannot be changed as easily as a natural person's name[64].

A Trade Name is defined by the *Stroud Juridical Dictionnary*[65] as the name under which a person or company does or usually did its business and by which it is known in the world of business to which it belongs. A Trade Name thus distinguishes the nature, quality and renown of his goods and of his activity.

[65] Daniel Greenberg (ed.) *Stroud's Judicial Dictionary of Words and Phrases*, ed. 7, Sweet & Maxwell (London – 2010).

It would thus appear that the equivalent to the German *Firma* would be *firm* while would most easily be translated by *Company Name* and *nom commercial* by *Trade Name.*

Business identifiers and transaction costs

The conclusion that we would like to propose here is that there are generally two types of business identifiers: those that normally serve only as a default safeguard and thus mitigate transaction costs with little consideration for investment over time (*Firma*, *firm, dénomination sociale, Company Name*) and those akin to *nom commercial,* translated in English as *trade names*, which act as safeguards on both components and derive most value from being developed and consolidated over long periods of time.

Therefore it is evident that most transaction costs are mitigated not by the first type but by the second which is not to say that the second type is of a greater importance. The fact that the first type of business identifier is generally mandatory and the fact that it is used as main identifier in more numerous transactions (albeit possibly of lesser value) and with a more varied group of transactors comes only to emphasize its importance in modern economic life.

Conclusion

The present study has proposed to identify business identifier categories based upon the transaction costs they mitigate. An economic approach to the understanding of regulation of commercial life is not uncommon, but on the contrary, rather welcome. Given the omnipresence of business identifiers and the lack of a specific understanding of their purpose and the function to be fulfilled by their legal protection, some conceptual framework anchoring their importance in economic terms is likely to give more impetus to efforts aimed at deconstructing legal institutions which seem to have lost, in part, their meaning.

Future research should clarify and quantify the effects and value of such business identifiers and requalify their status of protection as either rights in names or intellectual property rights.

COMMUNITY DESIGN PROTECTION: PARTICULAR ASPECTS OF THE PROCEDURE BEFORE THE COURT OF JUSTICE OF THE EUROPEAN UNION

ALINA MIHAELA CONEA*

Abstract
The Court of Justice of the European Union (CJEU) has the opportunity to decide on the Community design and interpretation of the rules governing this matter in actions that can follow two different procedural paths.
In the first case we refer to the action brought before the Court against a decision of the Office for Harmonization in the Internal Market (OHIM). In this situation we must distinguish between actions that may or may not be led by a proceeding before the Board of Appeal of the Office. In a second case, we are in the presence of the preliminary procedure raised by national courts. Regarding action against the decision of OHIM the approach will be different, taking into account several reasons. First, we have to identify the nature of the action: are we in the presence of an action for annulment in the ordinary sense? The second reason is imposed by the existence of specific differences related to intellectual property rights litigation, compared to other European court procedures.
This paper is considering CJEU case law and implications of the new Rules of Procedure of the Court of Justice.

Keywords: *community design, new rules of procedure, action in annulment, Court of Justice of the European Union.*

Introduction

Invalidity proceedings against registered Community designs (CDR) are at utmost importance, as CDR are not examined for novelty and individual character prior to registration. A CDR can be declared invalid by means of two different procedures: directly, by bringing an invalidity action before OHIM or by a Community design court on the basis of a counterclaim in infringement proceedings. The appeal proceedings against an OHIM decision can imply three stages: the proceeding in front of the Boards of Appeal of OHIM, of The General Court and of the Court of Justice.

The present paper analyse the specific characteristics implied by the proceedings in front of the Court of Justice of the European Union.

The importance of this studied matter is based on the complexity of systematization of the procedural framework of the Community design protection. The reason is the institutional interference of protection afforded at the Union and national level. The analysis of specific questions regarding the enforcement of intellectual property rights is thus a contribution to clarifying Community design protection.

Thus, we have considered in the content of this material the specificity of the subject matter regarding the action before the Court of Justice against decisions of OHIM, the parties, the proceedings, terms and effects of the action.

Given that, seemingly, European primary law does not confer to the European level legislative competence of in the field of intellectual property law, the Court of Justice jurisprudence maintains its central importance as the foundation of Community intellectual property law. The specifics of the relationship between the Court and the field of intellectual property were outlined by legal literature from different perspectives. We are considering approaches centred on the interaction

* Assistant Lecturer, PhD, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail:alinaconea@gmail.com).

of intellectual property rights with EU primary law (David Keeling, 2003[1]), with the internal market and competition rules (Inge Govaere[2]; Valentine Korah, 2006[3]; Catherine Barnard, [20074]), issue of "judicial activism" (Vlad Constantinesco, 2000 [5)] and normative significance of "case law" (Anthony Arnull , 2006[6]). Thus, it was shown the need to develop a coherent jurisprudence of intellectual property in the interest of the Union legal unity and its independent intellectual property policy (Hanns Ullrich, 2010[7]). It has also been stressed the coherence of EU judicial system that does not rely solely on the courts of the Union, but rather, on the articulated system of jurisdiction between the EU Court and national courts (Koen Lenaerts, 2007 [8]).

Preliminary Issues

The Court of Justice of the European Union is able to rule on the Community design and the interpretation of rules governing the matter in actions that come on two different procedural paths.

In the first case we refer to the action brought before the Court against a decision of the Office. And, in this case, it must be distinguished from actions that may or may not be preceded by a proceeding before a Board of Appeal of the Office. In a second case, we are in the presence of the preliminary procedure raised by national courts.

Preliminary procedure has no special features regarding intellectual property rights. Is the same, irrespective of the subject matter. In this respect, we believe that an analysis of the preliminary procedure it would go beyond the selected object of our study. However, the issue is of particular interest in the dynamics of the relationship between national courts and the Court of Justice. As far as procedural aspects are relevant, they will be the subject our presentation.

Regarding *action against the decision of OHIM* approach will be different, taking into account several reasons. First, we must establish the nature of the action: are we in the presence of an action for annulment in the ordinary sense? Or the action has a different nature?

The second reason is imposed by the existence of specific differences related to intellectual property rights disputes, compared to other European court procedures. It should be mention that the latter does not apply to actions brought directly against Office, without a proceeding before a Board of Appeal of OHIM. In the following, we present the procedural way in which action before the Court is preceded by an action before a Board of Appeal of the Office.

According to Regulation no. 6/2002 on Community designs "actions may be brought before the Court of Justice against decisions of the Boards of Appeal on appeals"[9]. Under art. 61 of the

[9] Art. 61 (1), Council Regulation (EC) No 6/2002 of 12 December 2001 on Community designs, *OJ L 3, 5.1.2002, p. 1–24.*

Regulation no. 6/2002, the Court of Justice has jurisdiction *to annul* or *to alter* the contested decision[10].

From the perspective of the nature of this form of procedure, according to an opinion, which we share, the appeal before the Court of Justice is not a form of appeal, but a judicial review of decisions of the Office[11]. The effect of that new legal remedy is, however, similar to an appeal since, for example, all parties in proceedings before the Office can take part[12].

Moreover, the right to request review by a judicial procedure is guaranteed by the TRIPs Agreement if the OHIM Boards of Appeal are considered administrative and not judicial bodies. Art. 41 (4) from TRIPs Agreement stated that: "*Parties to a proceeding shall have an opportunity for review by a judicial authority of final administrative decisions and, subject to jurisdictional provisions in a Member's law concerning the importance of a case, of at least the legal aspects of initial judicial decisions on the merits of a case. However, there shall be no obligation to provide an opportunity for review of acquittals in criminal cases".*

In the case of *ex parte* proceedings, the action is similar to review of any other decision of a Community institution. In the case of *inter partes* actions, the Office has the identity of the defendant and, in fact, replace the party in whose favour has decided. To enable all parties in proceedings before the Office to behave independently in the action before the ECJ, it have been operated a number of changes to procedural rules of the court in Luxembourg. Consequently, the part for which the Office has decided can not only intervene alongside the Office but it can present their own arguments, and can introduce their own appeal against the court decision.

Subject of proceedings before the Court of Justice against decisions of OHIM (preceded by a proceeding before a Board of Appeal)

The subject of proceedings before the Court of Justice is represented by decisions of the Boards of Appeal of the Office through which they adjudicate on an appeal.

Under article 61 of the Regulation no. 6/2002, the Court of Justice has jurisdiction *to annul* or *to alter* the contested decision[13]. Therefore, in addition to its power to annul a decision of the Board of Appeal of the Office, the Court has unlimited jurisdiction *to alter* the Board`s decision and replace it with its own[14]. Accordingly, the Court has no jurisdiction to rule on a request presented for the first time before it[15].

Article 61 (2) of the regulation provides that an action against a decision of the Board of Appeal of the Office may be brought on grounds of lack of competence, infringement of an essential procedural requirement, infringement of the Treaty, of the Regulation or of any rule of law relating to their application or misuse of power. It follows that the General Court has jurisdiction to conduct a

[14] Judgment of the Court (Fifth Chamber) of 18 September 2003, Albacom SpA (C-292/01) and Infostrada SpA (C-293/01) v Ministero del Tesoro, del Bilancio e della Programmazione Economica and Ministero delle Comunicazioni, Joined cases C-292/01 and C-293/01, *European Court reports 2003 Page I-09449* reported by Koen **LENAERTS**, Procedural law of the European Union, London: Sweet & Maxwell, 2006, p. 495.

[15] **Judgment of the Court of First Instance (Second Chamber) of 2 July 2002, SAT.1 SatellitenFernsehen GmbH v Office for Harmonisation in the Internal Market (Trade Marks and Designs) (OHIM), Case T-323/00,** *European Court reports 2002 Page II-02839*, para. 18.

full review of the legality of OHIM's assessment of the particulars submitted by an applicant[16]. The General Court is called upon to assess the legality of the decisions of the Boards of Appeal of OHIM by reviewing their application of Community law, having regarded, in particular, to the facts which were submitted to them. Thus, the Court can carry out a full review of the legality of the decisions of OHIM's Boards of Appeal, if necessary examining whether those boards have made a correct legal classification of the facts of the dispute or whether their assessment of the facts submitted to them was flawed[17].

Admittedly, the General Court may afford OHIM some latitude, in particular where OHIM is called upon to perform highly technical assessments, and restrict itself, in terms of the scope of its review of the Board of Appeal's decisions in design matters, to an examination of manifest errors of assessment[18].

Those documents, produced for the first time before the Court, cannot be taken into consideration. The purpose of actions before the General Court is to review the legality of decisions of the Boards of Appeal of OHIM as referred to in Article 61 of Regulation No 6/2002, so it is not the Court's function to review the facts in the light of documents produced for the first time before it. Accordingly, the abovementioned documents must be excluded, without it being necessary to assess their probative value[19].

Parties

The defendant

In the case of *inter partes* actions, the Office has the identity of the defendant and, in fact, replace the party in whose favour has decided.

The applicant

The action shall be open to any party to proceedings before the Board of Appeal adversely affected by its decision[20]. The parties to the proceedings before the Board of Appeal other than the applicant may participate, as interveners.

For the purposes of determining whether an applicant is entitled to challenge a decision of the Board of Appeal before the Court, the view must be taken that a decision of a Board of Appeal of OHIM does not uphold the claims of a party when it rules on an application filed before OHIM by that party in a manner unfavourable to it. This case must be regarded as including the situation where the Board of Appeal, after having rejected an application the admission of which would have ended the proceedings before OHIM in a manner favourable to the party which made it, remits the case to the lower department for further prosecution, irrespective of the fact that that re-examination could give rise to a decision favourable to that party[21].

Interveners

Privileged interveners in the matter of intellectual property rights

The Rules of procedure of the Court of First Instance admits that the parties to the proceedings before the Board of Appeal other than the applicant may participate, *as interveners*, in the proceedings before the General Court by responding to the application in the manner and within the period prescribed[22].

The interveners have *the same procedural rights* as the main parties. They may support the form of order sought by a main party and they may apply for a form of order and put forward pleas in law independently of those applied for and put forward by the main parties.

Thus, an intervener may seek an order *annulling* or *altering* the decision of the Board of Appeal *on a point not raised* in the application and put forward *pleas in law not raised* in the application.[23] However, such submissions seeking orders or putting forward pleas in law in the intervener's response shall cease to have effect should the applicant discontinue the proceedings.

The role granted to intervener is reemphasized in case of impossibility of applying the proceedings by default under certain conditions. Therefore, in derogation from Article 122 of the Rules of procedure of the Court of First Instance[24], the default procedure shall not apply where an intervener has responded to the application in the manner and within the period prescribed.

Ordinary interveners

According to the Statute of the Court of Justice of the European Union, "Member States and institutions of the Union may intervene in cases before the Court of Justice"[25]. Member States and institutions of the Union are, according to the general rules of procedure before the Court of Justice, *privileged* interveners in the sense that they do not have to establish an interest in the outcome of the case[26]. An application to intervene shall be limited to supporting the form of order sought by one of the parties. This category of interveners is not able to put forward pleas in law independently of those applied for and put forward by the main parties.

The special provisions, as shown above, in the contentious intellectual property rights constitute an *exception* to this general rule. For this reason and in this context, we call *ordinary* the interveners that are generally *privileged*.

The proceedings

The competent court

Regarding the jurisdiction between the instances of the Court of Justice of the European Union, art. 256 (1) TFEU[27] and art. 51of the Statute of the Court of Justice of the European Union confer this jurisdiction to the General Court. *An appeal* to the General Court decision may be brought before the Court of Justice. As provided by the Statute of the Court, an appeal to the Court of Justice shall be *limited to points of law*. The appeal shall lie on the grounds of lack of competence of the

General Court, a breach of procedure before it which adversely affects the interests of the appellant as well as the infringement of Union law by the General Court[28].

Particular aspects of the written procedure

The application

According to article 132(3) of the Rules of procedure of the General Court, the application shall contain[29] *the names of all the parties* to the proceedings before the Board of Appeal and the addresses which they had given for the purposes of the notifications to be effected in the course of those proceedings. Consequently, the contested decision of the Board of Appeal shall be appended to the application. It also must be indicated the date on which the applicant was notified of that decision.

If the application does not comply with these aspects, article 44(6) of the Rules of procedure of the General Court shall apply[30].

The Registrar will *inform* the Office and all the parties to the proceedings before the Board of Appeal of the lodging of the application. He will arrange for service of the application after determining *the language of the case*[31].

The application shall be served on the Office, as defendant, and on the parties to the proceedings before the Board of Appeal other than the applicant. Service shall be effected in the language of the case.

With regard to the communication of the application, the Rules of procedure stated that it will be served on *the Office, as defendant*, and on *the parties to the proceedings before the Board of Appeal* other than the applicant. Service shall be effected in the language of the case[32]. Once the application has been served, the Office shall forward to the General Court *the file relating to the proceedings before the Board of Appeal.*

---

[28] Art. 58, Statute of the Court of Justice of the European Union.

[29] Without prejudice to Article 44 Rules of procedure of the Court of First Instance of the European Communities of 2 May 1991 *OJ L 136, 30.5.1991, p. 1–23*, as amended to *22.6.2011*.

[30] „ (...) the Registrar shall prescribe a reasonable period within which the applicant is to comply with them whether by putting the application itself in order or by producing any of the above-mentioned documents. If the applicant fails to put the application in order or to produce the required documents within the time prescribed, the General Court shall decide whether the non-compliance with these conditions renders the application formally inadmissible".

[31] „ The language in which the as application is drafted shall become the language of the case if the applicant was the only party to the proceedings before the Board of Appeal or if another party to those proceedings does not object to this within a period laid down for that purpose by the Registrar after the application has been lodged. If, within that period, the parties to the proceedings before the Board of Appeal inform the Registrar of their agreement on the choice, the language of the case, of one of the languages referred to in Article 35(1) that language shall become the language of the case before the General Court. In the event of an objection to the choice of the language of the case made by the applicant within the period referred to above and in the absence of an agreement on the matter between the parties to the proceedings before the Board of Appeal, the language in which the application for registration in question was filed at the Office shall become the language of the case. If, however, on a reasoned request by any party and after hearing the other parties, the President finds that the use of that language would not enable all parties to the proceedings before the Board of Appeal to follow the proceedings and defend their interests and that only the use of another language from among those mentioned in Article 35(1) makes it possible to remedy that situation, he may designate that other language as the language of the case; the President may refer the matter to the General Court.", Art.131 (2) Rules of procedure of the Court of First Instance of the European Communities of 2 May 1991 *OJ L 136, 30.5.1991, p. 1–23*, as amended to *22.6.2011*.

[32] „Service of the application on a party to the proceedings before the Board of Appeal shall be effected by registered post with a form of acknowledgment of receipt at the address given by the party concerned for the purposes of the notifications to be effected in the course of the proceedings before the Board of Appeal.", Art.133 (2), Rules of procedure of the Court of First Instance of the European Communities of 2 May 1991 *OJ L 136, 30.5.1991, p. 1–23*, as amended to *22.6.2011.*

Acts of procedure

The Rules of procedure of the General Court provides the possibility of the lodging of pleadings not only on behalf of the plaintiff and the defendant.

Therefore, the other parties may, within a period of two months of service upon them of the response[33], submit a pleading confined to responding to the form of order sought and the pleas in law submitted for the first time in the response of an intervener. That period may be extended by the President on a reasoned application from the party concerned.

The application and the responses may be supplemented by replies and rejoinders by the parties, including the interveners, where the President, on a reasoned application made within two weeks of service of the responses or replies, considers such further pleading necessary and allows it in order to enable the party concerned to put forward its point of view. The President shall prescribe the period within which such pleadings are to be submitted[34].

The Court clarified, in its judgment of 9 February 2011, Case T-222/09 Ineos Healthcare v OHIM - Teva Pharmaceutical Industries[35], the Court its case-law on the examination by the Board of Appeal of *facts which are well known*.

According to the Court, the Board of Appeal, when hearing an appeal against decision terminating opposition proceedings, may base its decision only on the facts and evidence which the parties have presented. However, the restriction of the factual basis of the examination by the Board of Appeal does not preclude it from taking into consideration, in addition to the facts expressly put forward by the parties to the opposition proceedings, facts which are *well known*, that is, which are likely to be known by anyone or which may be learnt from generally accessible sources[36].

Oral part of the procedure

According to the Rules of Procedure of the *Court of Justice*, on a proposal from the Judge-Rapporteur and after hearing the Advocate General, the Court may decide *not to hold a hearing* if it considers, on reading the written pleadings or observations lodged during the written part of the procedure, that it has sufficient information to give a ruling[37].

The Rules of Procedure of the *General Court* do not contain a similar provision. In other words, the General Court proceedings will *always* contain the hearing stage.

The contentious matters on intellectual property benefits, however, for an exception to the normal conduct of proceedings before the General Court.

After the submission of pleadings and, if applicable, the General Court, acting upon a report of the Judge-Rapporteur and after hearing the Advocate General and the parties, may decide to rule on the action without an oral procedure. If one of the parties submits an application[38] setting out the reasons for which he wishes to be heard then will take place also the hearing stage.

Reasoning of the action

Article 61 (2) of the Regulation provides that "the action may be brought on grounds of lack of competence, infringement of an essential procedural requirement, infringement of the Treaty, of this Regulation or of any rule of law relating to their application or misuse of power."

---

[33] The defence include: the name and address of the defendant; the arguments of fact and law relied on; the form of order sought by the defendant; the nature of any evidence offered by him. Art.46 (1), Rules of procedure of the General Court.

[34] Art.135 (3) **Rules of procedure of the** General Court.

[35] Judgment of the General Court (Fourth Chamber) of 9 February 2011, Ineos Healthcare Ltd v Office for Harmonisation in the Internal Market (Trade Marks and Designs) (OHIM), Case T-222/09, *European Court reports 2011 Page II-00183.*

[36] Judgment of the General Court (Fourth Chamber) of 9 February 2011, Ineos Healthcare Ltd v Office for Harmonisation in the Internal Market (Trade Marks and Designs) (OHIM), Case T-222/09, *paras 28-29.*

[37] Art. 76 (2), Rules of Procedure of the Court of Justice, *OJ C 337, 6.11.2012, p. 1–42.*

[38] The application shall be submitted within a period of one month from notification to the party of closure of the written procedure.

These reasons are similar to those established for the action for annulment under art. 263 TFEU [39].

The doctrine distinguishes between the first two grounds of appeal, *lack of competence* and *infringement of essential procedural requirement,* aspects of external legality of the act ("la légalité externe") and the last two grounds of appeal, *infringement of the Treaty*, *of this Regulation or of any rule of law relating to their application* or *misuse of* („la légalité interne")[40].

The distinction is relevant from the perspective that the external legality reasons of the contested measure may be raised by the court on its own initiative. The last two reasons must be raised by the parties.

In the judgment of 16 May 2011, case T-145/08 Atlas Transport v OHIM - Atlas Air [41],

the Court was able to clarify, first, the applicable requirements as regards the obligation to set out the grounds of an appeal before the Board of Appeal. The Court concluded from this that an appellant wishing to bring an appeal before the Board of Appeal is required, within the prescribed time-limit, to file with OHIM a written statement setting out the grounds for its appeal, failing which his appeal is to be dismissed as inadmissible, and that those grounds involve more than an indication of the decision appealed and of the fact that the appellant wishes it to be amended or annulled by the Board of Appeal.

Special features of the action

It is considered[42] that the particulars of the proceedings before the Court regarding the action that we present come from the following specific issues:

1) Connection with *Article 263* of the Treaty on the Functioning of the European Union regarding the grounds of appeal;

2) *Revision of the contested decision* - The legality of a decision of the Board of Appeal cannot therefore be called into question by pleading new facts before the General Court. So it must be evaluated according to the facts and law existing at the time the decision was taken[43];

3) *The application must refer to a decision of the Boards of Appeal* - actions may be brought before the Community judicature only against decisions of the Boards of Appeal. Accordingly, in the case of such appeals, it is only pleas directed against the decision of the Board of Appeal itself which are admissible in such an action. In so far as it relates to a decision of a unit of the Office, giving a ruling at first instance, a plea of infringement of a legislative provision must, in consequence, be rejected as being inadmissible[44].

4) *The pleading should not change the subject-matter of the proceedings* - Art. 135 (4) of the Rules of procedure of the General Court states that the parties' pleadings may not change the subject-

[39] Art. 263 (2) TFEU „It shall for this purpose have jurisdiction in actions brought by a Member State, the European Parliament, the Council or the Commission on grounds of lack of competence, infringement of an essential procedural requirement, infringement of the Treaties or of any rule of law relating to their application, or misuse of powers".

matter of the proceedings before the Board of Appeal[45]. Pleas which have not been raised by the applicant before the departments of OHIM are not admissible before the Court [46].

Deadlines

Actions may be brought before the Court of Justice against decisions of the Boards of Appeal on appeals[47].

Effects of the action

The General Court has jurisdiction *to annul* or *to alter* the decision of the Board of Appeal of the Office. The annulment of the judgment has the same characteristics as the declaration of invalidity made pursuant to art. 263 TFEU[48]. Consequently, the effects will be retroactive, *ex tunc*, and will apply erga omnes.

According to Regulation no 6/2002, The Office shall be required to take the necessary measures to comply with the judgment of the Court of Justice[49]. Moreover, this provision of the Regulation was correlative to Art. 266 TFUE: "The institution whose act has been declared void or whose failure to act has been declared contrary to the Treaties shall be required to take the necessary measures to comply with the judgment of the Court of Justice of the European Union".

Conclusions

Under article 61 of the Regulation no. 6/2002, the Court of Justice has jurisdiction *to annul* or *to alter* a decision of the Board of Appeal of OHIM. From the perspective of the nature of this form of procedure the appeal before the Court of Justice is not a form of appeal, but a judicial review of decisions of the Office. The effect of that new legal remedy is, however, similar to an appeal since, for example, all parties in proceedings before the Office can take part.

In the case of *ex parte* proceedings, the action is similar to review of any other decision of a Community institution. In the case of *inter partes* actions, the Office has the identity of the defendant and, in fact, replace the party in whose favour has decided. To enable all parties in proceedings before the Office to behave independently in the action before the ECJ, it have been operated a number of changes to procedural rules of the court in Luxembourg. Consequently, the part for which the Office has decided can intervene alongside the Office. This category of interveners has *the same procedural rights* as the main parties. They may support the form of order sought by a main party and they may apply for a form of order and put forward pleas in law independently of those applied for and put forward by the main parties.

In addition, the specific features of the proceedings before the Court regarding the intellectual property contentious matters come out from the following: the legality of a decision of the Board of Appeal cannot be called into question by pleading new facts before the General Court, the Court may decide to rule on the action without an oral procedure, the actions may be brought before the Community judicature only against decisions of the Boards of Appeal, the pleading should not change the subject-matter of the proceedings.

TERM OF THE PATENT. PREMISES FOR THE CREATION OF THE SUPPLEMENTARY PROTECTION CERTIFICATE

BUCURA IONESCU*

Abstract

The legal nature of the rights derived from the patent was object of numerous theories and discussions in literature. Their main features represent recognized characteristics for the property right, nevertheless the limitation in time, in space and the ubiquity make the difference. Especially for new medicinal or plant protection products, due to the limitation in time, the period of effective protection under the patent is insufficient to cover the investment put into the research. There exists a risk of research centres situated in the Member States relocating to countries that offer greater protection. The uniform solution at Community level was created in form of regulations, as the most appropriate legal instrument to prevent the heterogeneous development of national patent laws affecting the free movement of products in the internal market. The duration of the protection granted by the patent may be extended to additional 5 years, by a supplementary protection certificate, granted, under same conditions provided by the regulation, by each Member State. The Community regulations created a legal form of a new national sui generis right, belonging both to the intellectual property right, namely patent right, and the administrative right of the marketing authorization. The main objective of the paper consists in informing the Romanian specialists in the field about the latest evolutions in intellectual property rights, especially in protection of the inventions, as a consequence of Romania's accession to the European Community.

***Key Words**: Patent rights- Legal character-Term of the patent- Medicinal products- Plant protection products- Extension of term- Uniform legislation-Supplementary Protection Certificate- Council Regulations.*

Introduction

The supplementary protection certificate, a new industrial property title concerning the inventions in the field of medicinal products or plant protection products, appeared in Europe at the end of the last century. The supplementary protection certificate is currently seen as one of the great challenges faced by both the national industrial property offices and, especially, the law courts, due to the complexity of this field characterized by the coexistence and combination of two different fundamental law norms, namely the norms relating to the patent and the norms relating to the authorization for medicaments and plant protection products. Although this sub-field of the patent was established more than 20 years ago, we may say that the number of supplementary protection certificate applications filed within the EU Member States is negligible in comparison with the number of patent applications, nevertheless their economic importance is huge. It is proved by the numerous trials that have been on the roll of the Court of Justice of the European Union and, last but not least, on the roll of the national courts of the Member States, Romania included.

Council Regulation (EEC) No 1768/92[1] concerning the creation of a supplementary protection certificate for medicinal products created, within the European Union, the legal framework for regulating the situations in which a pharmaceutical company, owner of a patent for a medicament and authorized to place the said medicament on the market, may benefit by an extension of the duration of its exclusive rights based on the grant of a „supplementary protection certificate". Another highly important economic field, in which the investment made in the identification, creation, research and development of new active substances is huge, is the field of plant protection

* PhD, engineering and law degree, Director of the Patent Directorate, State Office for Inventions and Trademarks, Romania (bucura.ionescu@osim.ro).

[1] Council Regulation (EEC) No 1768/92 of 18 June 1992 concerning the creation of a supplementary protection certificate for medicinal products (OJ L 182, page 1, Special Edition, 13/vol.11, p.130).

products. A legal framework was also created to regulate, at the Community level, the grant of the supplementary protection certificate for these active substances or combinations thereof intended to be placed on the market, in particular, as pesticides, i.e. the Regulation (EC) 1610/96[2].

This paper aims at presenting the premises which led to the creation of this new protection title, with a special emphasis on the importance thereof in the internal market of the European Union, and, at the same time, at analyzing the legal characteristics of the supplementary protection certificate, as compared with the patent, in the light of the modern patent right doctrine, under the conditions of Romania's accession to the European Patent Convention and to the European Union, too. Given the ascertained scarce interest, in Romania, for the patent literature and given the fact that, before Romania's passing to the market economy, the law courts did not face many cases of patent-derived rights, we intend to present the conditions and premises of the creation of the supplementary protection certificate, with a view to clarifying certain aspects relating to the interpretation of Community regulations articles and the effect of the rights they establish.

At the same time, it is worth mentioning that the Romanian specialized literature includes a very low number of articles concerning the supplementary protection certificate and, although in the foreign literature there are many articles and reviews on this topic, a single important work on this subject is currently known, which comments the articles of the Community regulations while exemplifying them by national or Community case law; it was published in 2011, in Germany, and it was consulted and cited within this paper.[3]

Legal nature of the right arising from the patent. General considerations.

The specialized Romanian literature shows various approaches regarding the nature of the right conferred by the patent. It is unanimously agreed that the patent granted by the competent authority, i.e., in Romania, the Romanian State Office for Inventions and Trademarks, is an intellectual property title which confers exploitation and prohibitory rights to its owner who may be the creator of the invention – the inventor, or other person to whom the right to the patent has been assigned.

Retrospectively, it can be ascertained that, during the period of the French Revolution, the legislation established for the first time, in a modern form, similar to the current meaning of the term, the inventor's right in his creation as a property right.[4] The French Revolution laws deal with it as a type of property which is different from the concept of property in the civil law. This approach is still valid, the property is different as far as it is limited in time and richer in content. Starting therefrom, the subjective industrial property right arising from the patent as the recognized patent owner's prerogative of exclusively using the protected invention, has the following legal characteristics: an absolute *erga omnes* right, a patrimonial right, an alienable right (alienability which regards the patrimonial rights). Besides these general property right legal characteristics, there is a series of specific features which have led to extensive criticism concerning the legal nature of the right conferred by the patent, as a property right.

Such specific characteristics of the right arising from the patent are:

-temporariness representing a time limitation, i.e. a certain duration of the property titles,

-territoriality or space limitation, as the patent is granted for the territory of a certain country or region established by international treaties or conventions,

---

[2] *Regulation* (*EC*) No *1610/96* of the European Parliament and of the Council of 23 July 1996 concerning the creation of a supplementary protection certificate for plant protection products (OJ L 198, 8.8.1996, page 30)

NB: The terms "plant protection products" and "phytosanitary products" have the same meaning and, consequently, both of tem will be used throughout this paper.

[3] Brückner C, von Czettritz P, Ergänzende Schutzzertifikate mit Pädiatrischer Laufzeitverlängerung, Carl Heymanns Verlag, Köln, 2011.

[4] Ştrenc A.C., Ionescu B., Gheorghiu G., Dreptul brevetului, vol. I, page.52, Ed. Lumina Lex, Bucureşti, 2005.

-ubiquity, namely the invention capacity of being simultaneously present in each and every object in which it is materialized. For instance, an invention which represents a technical solution to a problem relating to a motor vehicle gear box, shall be present in each and every gear box carried out based on said invention.

The criticism showed that, although features common with the property on tangible goods exist, i.e. the exclusive and *erga omnes* features, there are major differences, such as the acquisitive prescription of rights and the fact that the specific defense is not the action for the recovery of possession, resulting in the patent right not being classifiable in the category of property rights.

In time, a series of solutions were stated within the universal doctrine, such as considering the intellectual rights as a separate fourth category of patrimonial rights, besides the rights *in rem*, rights to receive payment of a debt and rights *in personam*. Another solution was to classify the inventors' rights in a distinct category named „monopoly rights", the essence of which is represented by the prerogative of making and economically exploiting the invention, as well as the right to prevent third parties, who occasionally acquire the same, from reproducing, multiplying and selling it.[5]

We do not intend to insist within this paper on conceptions regarding the legal nature of the inventor's subjective right in the Romanian post-war doctrine. As, in relation with the intellectual creations, both non-patrimonial and patrimonial rights arise, the right resulting from such creations, inventions included, is a complex right consisting of a number of distinct rights which neither appear nor become extinct at the same moment. For example, there are non-patrimonial personal rights such as: the right to authorship of the invention, the inventor's priority right, the right to make the invention public, while there are patrimonial rights, as well, such as: pecuniary rights resulting from the direct exploitation and from the indirect exploitation of a patent, by assignment and license, or the right to damages due to the unauthorized use of the patented invention. As regards the arising and extinction of invention-related rights at different moments, a good example is the right to the authorship of an invention which arises upon its creation, while the right to exclusive exploitation arises upon the grant of the patent.

Having in view that, in Romania, the doctrine established the term „rights arising from the invention" which is a generic one, intended to cover the entire diversity of rights, we will simply retain the conception according to which the right in the invention is ***a right in rem over an intangible asset, meant to be used in industry***[6]. It is worth mentioning that the phrase „to be used in industry" relates, in fact, to the „industrial application" whose meaning does not need to be analyzed in this paper. The rights arising from the invention were intended to comprise the patent owner's rights, the rights of the inventor who is not at the same time the patent owner and the rights of the company which is not at the same time the patent owner[7].

It should be mentioned that, after Romania's accession to the European Patent Convention in 2003, and, even more, after Romania's becoming a member of the European Union, the patent legislation, the practice of the State Office for Inventions and Trademarks and of the Romanian law courts, and, last but not least, the doctrine, have been highly influenced by these events. The European patent system is deeply anchored in the German patent law which thereby influenced the Romanian legislation harmonized with the European Patent Convention. At the same time, the complexity and the number of rights arising from an invention have defined a branch of the intellectual property rights, i.e. the patent right, concept which was introduced into the Romanian specialized literature in 2005.

The patent right (in Romanian *dreptul brevetului*, in German *Patentrecht*, in French *droit du brevet*) comprises all the rights arising from the moment of creating the invention until they lapse, and it is divided, according to the German patent literature[8], into three categories:

- ***the right in the invention***, the so-called general inventor's right, arises from the very act of creation, the same as the copyright. It is a right *in rem* which comes into existence at the moment of finalizing the invention and making it available to third parties, in a simple measure, allowing it to be recognized, which does not mean publication or communication within a specially organized framework. This right could be assimilated to the „right arising from the invention" existing in the Romanian doctrine; however its components show significant differences. The inventor's right in the invention has two components that confer it a double legal nature: the right to the patent and the right to inventorship, of a personal non-patrimonial nature[9].

-***The right to the patent or the right in the patent*** is an absolute and incomplete patrimonial right concerning an intangible asset, the active subject thereof being the inventor, i.e. the creator. As one of the components of the right over an invention, it comes into existence at the moment of creation, the same as the copyright. This is the subjective material right opening the inventor's way to the granting of the patent and, this way, unlike the copyright which arises and is recognized without any formality, it needs to be recognized by a national or European administrative act, materialized in a property title. It is an absolute right because it is an *erga omnes* right, as its owner can act against any third party. It is incomplete because it does not confer the prerogative of the exclusive use or of prohibiting the use by third parties, these prerogatives being only accorded after the patent is granted or, with certain restrictions, after the patent application is published. It is considered, by the specialists in the field, an authentic property right;

-the right to the grant of the patent, a right of procedural nature which comes into existence for the first applicant, namely the first person who files an application for the grant of a patent (*first to file*) with the competent authority. The active subject of the right is the applicant for a patent, a legal fiction which is exclusively used in respect of the patent granting procedure;

-the right resulting from the patent is a material right which is distinct from the right to the grant of the patent and consists of the prerogative of exclusivity and of prohibition of unauthorized use. The active subject of this right is the patent owner which most of the times differs from the inventor, the author of the intellectual creation. The right comes into existence upon the grant of the patent and becomes extinct upon the expiry of the patent. The right arising from the grant of the patent is a private intellectual property right by which the inventor, by means the patent owner as his successor in title, is rewarded by the State for making his invention available to the public and thereby enriching the prior art. The reward consists of the positive right of exclusive expoitation, namely the prerogative of exclusive use of the patented invention conferred by the patent to its owner. Said positive exploitation right has a negative correspondent in the owner's possibility of preventing third parties from using the patented products and processes without his authorization.

The right arising from the patent may be subject to assignment or license, either total or partial. As it can be ascertained, this right is a full right *in rem* which confers to its owner the three attributes: *usus*, *fructus* and *abusus*.

Romanian legislation in the field, namely the Patent Law 64/1991, as republished, establishes these categories of rights, wherefrom a series of other rights derives[10].

---

[8] Schulte R., Patentgesetzt mit EPU, Kommentar 8. Auflage, page 295 and the following, Karl Heymanns Verlag, 2008.

[9] For those inventions which are created within the company, the so-called employees' inventions, the right in the invention generally belongs to the employer, the legal system which regulates these inventions being the labour law, not the patent law (Benckard G, Patentgesetz und Gebrauchmustergesetz, C.H.Beck'sche Verlagsbuchhandlung, Munchen 1993).

[10] Patent Law No. 64/1991, as republished, Art. 45 (1): „The right to the patent, the right to the grant of a patent and the rights deriving from a patent shall be transferable, either wholly or in part."

A newer characteristic, which is specific to this right, is the fact that the patent confers to its owner the possibility of extending the duration thereof under the conditions set by the Community Regulation concerning the medicaments and the Community Regulation concerning the plant protection products, which shall be analyzed below.

Patent duration

As we have previously shown, the property right arising from the patent is characterized, besides the general characteristics of property rights concerning material goods, by a series of features specific to the property rights concerning intangible assets: temporariness, territoriality and ubiquity. The temporariness is given by the limited duration of the patent, **generally 20 years from the application filing date**.

This time limitation of the exclusive right of exploitation of the protected invention comes from the high economic importance of the patent. Firstly, the patent documentation, i.e. the description of the invention and the claims, provides, by publication, the exceptional informational contribution to the prior art, with the advantage of making highly actual and detailed documents available to the public. These documents permit to specialized persons who consult them to start research and developments in the field from a certain already explored level, thereby sparing important intellectual and financial efforts. The so disclosed information reduces long and costly parallel efforts made nationally or internationally for finding original solutions to problems that need to be solved. Secondly, the patent is granted for a technical creation complying with the conditions of worldwide novelty, inventive step as compared with other solutions available to a person skilled in the art and industrial applicability. Protected novelty and originality represent the base of the innovation and create a suitable environment for economic growth in a country. The inventor having found a new solution to a certain problem is rewarded with a „monopoly" for exploitation that the State grants him in exchange for his contribution to the society development[11]. But this monopoly cannot be a perpetual one, as the novelty becomes obsolete in time, and the solution once new must be an incentive for newer and newer better and more creative solutions permitting the development and growth of an economy. This is why it was considered that a 20 year-term would be an equitable reward for him to exploit the invention, a period long enough for the expenses made for applying the invention to be paid off.

The TRIPS Agreement[12] which is currently considered to be „the foundation on which the international system of intellectual property, in general, and the patent law, in particular, rest […], is the most comprehensive international document ensuring recognition of the minimal level of protection and enforcement of patent rights"[13]. According to *Article 33* of this Agreement, „the term of protection available shall not end before the expiration of a period of twenty years counted from the filing date".

Within the same meaning, the European Patent Convention states, under Art. 63(1) that "the term of the European patent shall be 20 years from the date of filing of the application". Moreover, the most countries in the world established, in application of the provisions of TRIPS Agreement, a patent term of 20 years from the filing date. As far as the Romanian patent law is concerned, it was amended for harmonization purposes, because it previously had provided, for the improvement inventions, a lower limit of 10 years and an upper limit equal to the duration of the patent. The current Patent Law 64/1991, as republished in 2007, provides, under Art. 31(1): "Patent duration shall be 20 years as from the date of filing the application".

[11] Intellectual Property Reading Manual, www.wipo.org.

[12] TRIPS Agreement – Trade-Related Aspects of Intellectual Property is a WIPO-administered international agreement deemed to be the most important multi-national instrument of globaliaztion of intellectual property laws, negotiated in 1994, at the end of Uruguay Round (GATT).

[13] Ştrenc A.C., Ionescu B, Gheorghiu G., op.cit., vol.I, page 86.

The 20 year-term of the patent has in view a maximal period of time in which the patent is valid, subject to payment of the maintenance fees. However, there is a difference between the patent term referring to the patent validity and the period of time during which the patent protection is really and effectively exerted, namely the duration of protection. While the first one, i.e. the patent term, relates to the above-mentioned maximal period of validity, in other words, the patent life, the second one, i.e. the duration of protection, is the period during which the patent owner benefits by his exclusive exploitation right. But the said right is only obtained after the grant of the protection title, namely the patent, the procedure up to grant being many times complicated and long lasting, generally ranging between 2 and 4 years from the filing date. In other words, the effective duration of protection is never equal to the 20 year-long validity of the patent. Nevertheless, the idea of a protection starting on the date of granting the patent was considered to be an unfair treatment for the applicant who, after 18 months from the filing date, makes his invention available to the public by publication; this is why, starting on the publication date, a provisional protection of the invention is established.

The Romanian patent law establishes the provisional protection under Art. 33 which stipulates that*: "Starting from the date of its publication […], the patent application shall provisionally confer on the applicant the protection laid down in Art. 32"*[14]. This provisional protection situation which is also known in the literature as "conditional"protection results, under the Romanian law, from the incomplete character of the action for damages. Thus, Art. 59(3) of the Patent Law 64/1991, as republished in 2007, provides that: *"Infringement of the rights referred to in Art. 32, paragraph (1), by third parties, after the publication of the patent application shall make the infringers liable for damages under civil law, and the entitlement to the payment of damages shall be enforceable after the grant of the patent."* By the amendment brought to this law in 2007, the applicant is given the option that, where, even before the publication of the application, he ascertains or considers that a third party uses the object of his patent application, he could summon such a third party to stop any potentially infringing act. This amendment is the subject of Art. 59(4) of the law, which stipulates that: *"Notwithstanding the provisions of Art. 32, paragraph (1), the acts referred to in Art 32, paragraph (2), performed by third parties before the date of publication of the patent application or before the date of the summons made by the applicant and accompanied by a certified copy of the patent application, shall not be deemed to infringe the rights conferred by the patent."*

Moreover, the duration of 20 years from the filing date is a maximal legal term of the patent which can only be reached subject to payment of the annual maintenance fees. The said duration may be however limited by a series of events that can occur during the patent life, as follows:

-failure to pay the maintenance fees shall lead to the loss of owner's rights;

-the owner's waiving the right conferred by the patent;

-patent revocation in whole within the legal time limit of 6 months from the date of publication of the patent issuance;

-patent revocation in whole, throughout its duration.

Having in view that, despite the 20 year-long patent term, the patent owner does not benefit all throughout this period by the full exercise of the rights conferred thereby, a mechanism was created for the industry of medicaments and plant protection products intended to permit an effective longer owner's protection. This extension of duration was limited to medicaments and plant protection products, because the period of time elapsed between the filing of a patent application for

[14] Art. 32 of the Patent Law 64/1991, as republished, sets out under paragraph (1): *„The patent shall confer on its owner an exclusive right of exploitation throughout its entire duration."* While, under paragraph (2), it stipulates that*: "It is prohibited to perform the following acts without the owner's consent: a) manufacturing, using, offering for sale, selling or importing for the purpose of using, offering for sale or selling, where the subject-matter of the patent is a product; b) using the process and using, offering for sale, selling or importing for those purposes the product directly obtained by the patented process, where the subject-matter of the patent is a process."*

a new medicament or plant protection product and the authorization for placing that product on the market reduces the effective protection conferred by the patent to a period of time which is not sufficient for the investment in research to be recovered. This internationally enacted mechanism is a regulation which recognizes the protection duration either by the registration of the extension, or, in Europe, by a supplementary protection certificate granted by the patent-granting industrial property authority.

Premises for the creation of the supplementary protection certificate

The remarkable technological evolution at the end of the 20th century led to creation and invention of new active substances representing the base of the development of the pharmaceutical industry and the chemical industry for plant protection products. The development of many companies which focused their strategy on the creation of new active substances was possible due to a sustained patent protection policy concerning these substances. Nevertheless the full exploitation of the obtained patents had to overcome a series of obstacles. On the one hand, the huge costs implied, in fundamental research, for the creation and preparation of active substances and, subsequently, for authorizing and marketing the medicinal products or pesticides made therefrom. Unlike many patented products that lose their economic significance by the decrease, in time, of their market attractivity, which leads to a patent life of 8 – 10 years, at the most, the medicaments and plant protection products are generally still on the market in the 20th year of patent life and their market value grows.

On the other hand, the extremely long and complicated administrative procedures related to the grant of the authorization for placing the product on the market, make the real market patent exploitation duration significantly shorter than the legal 20-year term. The owners of the exclusive right conferred by the patent which protects an active substance on which a medicament or plant-protection product is based cannot benefit by their right until the complex authorization procedure for placing the medicament or plant-protection product on the market is completed. Thus, within the Community area, the concern for public health protection led to the enactment, on 26.01.1965 of the Council Directive 65/65/EEC[15] on the approximation of provisions laid down by law, regulation or administrative action relating to proprietary medicinal products. Meanwhile, it was replaced by the Directives 2001/83/EC[16] and 2001/82/EC[17]. Moreover, the Directives 75/318 EEC[18] and 75/319/EEC[19] provide certain details concerning the requirements to be met in developing and authorizing a medicinal product. All these are procedures that can last for years.

In the last century, the private sector produced the most of the medicaments, treatments and vaccines existing on the market. When a pharmaceutical company makes investments in research and development of new medicinal products, the first step is the evaluation of chemical and biological compounds which are potentially useful in the treatment of newly appeared situations. Such an evaluation may comprise about 10000 compounds, a part of which are selected and tested for 10 – 15 years as relates to their effectiveness and safety, before their being launched on the market.[20] So, in 2009, 25 new compounds were launched on the market, while 3050 compounds were being in various development stages, which proves the high number of hindrances and difficulties to be

[20] Innovation.org. *Drug Discovery and Development: Understanding the R&D Process*. Cited in The Pharmaceutical Industry and Global Health: Facts anf Figures, Issue 2011, International Federation of Pharmaceutical Manufacturers &Associations (IFPMA), page 12.

overcome for converting new compounds into safe and effective medicinal products.[21] It is also worth mentioning that, from the data provided by pharmaceutical companies, it results that the process of development of existent products implies huge costs, as the development of a single medicinal product currently costs more than 1.38 billion USD, in comparison with 138 million USD in 1975; it is a 1000% increase which in fact reflects the necessity of safer medicinal products of higher quality, in the sense of reducing the side effects in patients.[22] As a consequence of the higher quality standards used, in particular, in case of medicinal products, with a view to reducing the risks for public health, a significant time lag appears between the date of filing the patent application and the date of placing the product on the market.

Having ascertained that the said time lag caused an alarming decrease in the European pharmaceutical industry research and development activity for new active substances, the European Commission was concerned, starting from the '70s, to achieve a balance between the public health system and the interests of the industry, in order to allow it to keep up with the innovative pharmaceutical products developed in USA or Japan. The statistics made in the Community area after the implementation of the Directive 65/65/EEC showed that the real exclusivity period conferred by a patent for proprietary active substances authorized to be placed on the market had reached no more than 9 - 10 years; the incentive to be given to the medicinal product producers was based on the principle of a reward meant to permit them to recover the investment by extending the patent protection term with a period of time equivalent to the period required for the grant of the market authorization.

At the same time, it was ascertained that the already known active substances can represent an important source of new products, when the research efforts are focused to develop them instead of finding new active substances. But the products based on the said active substances, in particular those created after a long-lasting and expensive research, cannot be subject of a sufficient further development, in Europe, in the absence of a favouring legal regulation intended to provide a sufficiently long protection to encourage research. And, in the pharmaceutical field, research must be encouraged as it has a decisive contribution to the continuous public health improvement. In the filed of plant protection, as well, the research has an important contribution to the permanent improvement of crops and to the manufacture of high quality food products.

In this context, it was internationally agreed that, based on new legal provisions, the duration of a patent granted for an active substance on which a medicinal product or a plant-protection product is based could be extended with a certain period taking into account the administrative procedures needed for placing the product on the market and ensuring an exclusive protection sufficient for the patent owner to recover the investment made in research.

In the USA, the extension of patent duration was made possible by the Act of 24 September 1984, the legal framework for this regulation in respect of medicinal and plant-protection products being represented by the intellectual property law *United States Code, Title 35 Patents, Sections 155, 155A and 156 on Extension of Patent Term, 35USC§155-156 (2000), as well as the Code of Federal Regulations (CFR) Rules of Practice in Patent Cases, Extension of Patent Term: 37CFR§1710-1785(2000)*[23].

[23] WIPO Handbook on Industrial Property Information and Documentation „Survey on the Grant and Publication of Supplementary Protection Certificates (SCPs)" published in 1994 and updated in 2002, www.wipo.int/standards/en.

In Japan, by the 1988 amendment of the patent law, there was created the legal framework for the extension of the term of patents on pharmaceuticals for human and animal use and plant protection products, by 5 years, at the most. These provisions are the subject matter of Sections 67/2, 67 bis and 67 ter of the Japanese Patent Law.

In Europe, at the end of the '80s, France, and then Italy and Germany, created, at the national level, the legal framework for the extension of the term of patents for medicinal products, by up to 5 years. The so-created situation led to a lack of balance at the level of the European Community and the risk of transferring the research centres from certain Member States to the States in which the duration of the exclusive protection gave the owners the possibility to recover the investment made in research, such as USA or Japan. At the same time, the development, at the Community level, of heterogeneous national legislations could result in obstacles to the free circulation of pharmaceutical products within the Community, thereby affecting the functioning of the internal market. Consequently, it was agreed upon a uniform solution at the Community level, to extend the patent duration by means of a Community legal instrument intended to enact the grant, within each Member State, in the same conditions, of a protection title for extending the duration of a patent granted for an active substance in respect of which an authorization for placing the product on the market as a medicinal product was issued within the Community. This way, a Community regulation was issued for the creation of a supplementary protection certificate capable to confer a *sui generis* right which extends *de facto* the patent duration while not affecting the national patent legislations, *per se*[24].

It is worth mentioning that, if in Europe the industrial property title extending the patent duration was named "Supplementary Protection Certificate" (in French - *Certificat complémentaire de protection*, in German - *Ergänzendes Schutzzertifikat*, in Romanian – *Certficat suplimentar de protecţie*), in the United States of America it is called "Certificate Extending Patent Term" and in Japan there is no special name for the extension procedure which is simply known as "Registration of extension of term of patent right".

The Regulation (EEC) 1768/92[25] concerning the creation of a supplementary protection certificate for medicinal products creates the legal framework meant to regulate situations in which a pharmaceutical company owning a patent concerning a medicinal product and having an authorization to place said medicinal product on the market may benefit by a total duration of its exclusive rights of 15 years, at the most, based on the grant of a "supplementary protection certificate". The above-mentioned Regulation entered into force on 2 January 1993 and, starting on 1 July 1994, as a consequence of the establishment of the European Economic Area, it was extended to the said entire area which comprised the European Union plus Austria, Finland, Norway, Iceland and Sweden (published in JO L 198, page 30). After the date of 1 May 1995, the EEA was extended to Liechtenstein, as well.

For the other field of high economic importance, in which the investment made in the identification, creation, research and development of new active substances is huge, i.e. the field of plant protection products, there was also created the Community legal framework which regulates the grant of the supplementary protection certificate, namely the Regulation (*EC*) No 1610/96[26] (hereinafter Regulation for plant protection products).

Both regulations have been amended following the accession of the group of 10 countries: Cyprus, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia and Slovenia, to the European Union, in 2003. The accession, in 2007, of Romania and Bulgaria imposed

[24] Brückner c, von Czettritz P, op.cit., page 17.

[25] Council Regulation (EEC) No 1768/92 of 18 June 1992 concerning the creation of a supplementary protection certificate for medicinal products (OJ L 182, p.1, Special Edition, 13/vol.II, page 130).

[26] Regulation (*EC*) No *1610/96* of the European Parliament and of the Council of 23 July 1996 concerning the creation of a supplementary protection certificate for plant protection products (OJ L 198, 8.8.1996, page 30).

Note: The terms „plant protection products" and „phytosanitary products" have the same meaning and they shall be both used throughout this paper.

the amendment of Art. 19a of the Regulations[27]. The Act of accession of Bulgaria and Romania was published in the Official Journal of the European Union No L 157/11 of 21.06.2005. Annex III to the Protocol concerning the conditions and arrangements for admission of Republic of Bulgaria and Romania to the European Union, the chapter referring to the Company Law contains the section Industrial Property Rights, sub-section Supplementary Protection Certificates.

It is worth mentioning that, before Romania's accession to the European Union, the concern for creating the legal framework for extending the patent duration existed in our country, as a consequence of the legitimate interests of important producers of medicinal products and plant-protection products, patent owners and producers of generic products in these industrial fields.

Law No 581/2004 on the supplementary protection certificate for medicaments and phytosanitary products was published in the Official Gazette of Romania No 1233 of 21 December 2004. The law never produced effects and was expressly abrogated by the Law 107/2007, because from the date of Romania's accession to the European Union, the Community Regulations have become directly applicable and prevailed over any conflicting provisions of the national legislation. At the moment of creation of said act, there was an intense debate concerning the name of the certificate to be granted by the State Office for Inventions and Trademarks, i.e. either supplementary protection certificate or certificate for supplementary protection. An argument in favour of the second option was that the certificate was intended to extend (supplement) for a certain period of time the protection conferred by the patent. At the same time, the certificate was assimilated, as far as the reparation rights are concerned, with another provisional title granted on the territory of Romania, namely the transitional (pipeline) protection certificate. Under the trade agreement concluded with the United States of America in 1992 and ratified by the Law No.52/1992, a transitional (pipeline) protection was established in Romania for patents having as a subject-matter medicinal products for which, in Romania, up to the entry into force of the Patent Law 64/1991, foreign applicants were not allowed to enjoy patent protection. Besides the medicinal products, the substances obtained by chemical or nuclear methods, food products and spices were prohibited as subject-matter of foreign owners' patents. Thus, under the Law No 93/1998 concerning the pipeline protection, the so-called certificate of transitional (pipeline) protection was granted upon request and based on an examination procedure, for the owners of patents granted in the USA, the reference patent being, on the date of filing the certificate application with OSIM, a granted patent in force in its country of origin. We will not analyze further details regarding the protection established by this certificate, although there is a series of similarities with the supplementary protection certificate, however, in our opinion, the main difference between these protection titles consists of the legal system governing them. If the pipeline protection certificate is regulated only by the patent legislation and the scope of protection granted thereby is the same as the protection granted by the reference patent and it expires at the same moment as the reference patent, the supplementary protection certificate operates at the same time under the patent legislation and under the administrative legislation, by the market authorization, and the protection it grants is limited to the product indicated in the said authorization and to a duration which cannot exceed the legal patent term with more than five years. In this context, in our view, the suitable name is „supplementary protection certificate" which is, in fact, the term officially adopted within the European Union.

In 2009, as a consequence of the evolution of exigencies in the pharmaceutical field, on the one hand, and of the changes occurred in the geo-political area of the Community, on the other hand,

[27] The Protocol, in the Annex III of the Accession Treaty, stipulates under number II, „Supplementary Protection Certificates", that Art. 19a of the Regulation for medicinal products shall be amended by adding the following text: „l. any medicinal product protected by a valid basic patent and for which the first authorisation to place it on the market as a medicinal product was obtained after 1 January 2000 may be granted a certificate in Romania. In cases where the period provided for in Article 7(1) has expired, the possibility of applying for a certificate shall be open for a period of six months starting no later than the date of accession.' Under number II (2), Art. 19a is completed by letter (I) comprising a similar provision regarding the phytosanitary products.

the Regulation (EEC) 1768/92 was amended and the codified version thereof was adopted: the Regulation (EC) 469/2009[28] which shall be referred to hereinafter as Regulation for medicinal products.

The legal basis for the grant of the supplementary protection certificates on the territory of the European Union is represented by the two Community regulations: the Regulation (EC) 469/2009 for medicinal products and the Regulation (EC) 1610/96 for plant protection products, as well as the national legislation. The said regulations are, of course, normative acts directly applicable in the Member States, so that essential changes of the national legislation in the field of patents were not required, except for the introduction of a provision relating to the possibility of obtaining such a protection title following the patent for invention, under the conditions set out by the Community regulations concerning the supplementary protection certificate.

Consequently, in Romania, the Patent Law 64/1991, as republished in 2007, was completed by introducing, under Art. 31 referring to the patent duration, a paragraph (3) having the following content*: „For patented medicaments or plant protection products, supplementary protection certificate may be granted under the Council Regulation (EEC) no. 1768/92 of 18 June 1992 concerning the creation of a supplementary protection certificate for medicaments and the Regulation (EC) no. 1610/96 of the European Parliament and of the Council of 23 July 1996 concerning the creation of a supplementary protection certificate for plant protection products."* In order to ensure a unitary procedure for implementing the regulations and also to come to the assistance of the applicants, the Director General of the State Office for Inventions and Trademarks issued the Instruction No 146 of 28.12.2006 concerning the supplementary protection certificate for medicinal and plant protection products, published in the OSIM Official Industrial Property Bulletin (BOPI) No 12 of 29.12.2006. In our opinion, the amendments brought to the Community regulations should entail further amendment of the paragraph within the Romanian law, having in view that, for the field of medicinal products, the certificate applications as well as the Office decisions are currently made under the Regulations, in the codified version of 2009. That is why, *de lege ferenda*, a new drafting of this provision would be required in order to cover future situations in which new amendments of Regulations could occur.

As regards the rights conferred by the European patent, the European Patent Convention, under Art. 63 (2) which concerns the term of the European patent, sets out the patent term extension possibility and offers to the Contracting Parties the possibility of extending the duration of the European patent for products undergoing an authorization procedure, immediately after the expiry of the patent term[29].

Legal characteristics of the supplementary protection certificate

The Explanatory Memorandum of the European Commission of 11 April 1990, COM (90) final, published in the OJ 1990, C114, under the title "Proposal for a Council Regulation (EEC) concerning the creation of a supplementary protection certificate for medicinal products" stated, under paragraph 20, that a Community solution capable of taking into account the interests of all Member States, as regards the issue of the reduced effective duration of the patent within the medical sector of the Community market, is a Community regulation ensuring the legal form of a new *sui generis* right and lying at the interface between two systems, namely that of the authorization for placing the product in the market and the patent system. The 19th paragraph of the said Memorandum

[28] *Regulation* (*EC*) No *469/2009* of the European Parliament and of the Council of 6 May 2009 concerning the supplementary protection certificate for medicinal products (codified version) (OJ L 152/1).

[29] Art. 63 EPC: „Term of the European patent. (1) The term of the European patent shall be 20 years from the date of filing of the application. (2) Nothing in the preceding paragraph shall limit the right of a Contracting State to extend the term of a European patent, or to grant corresponding protection which follows immediately on expiry of the term of the patent […] (b) if the subject-matter of the European patent is a product or a process for manufacturing a product or a use of a product which has to undergo an administrative authorisation procedure required by law before it can be put on the market in that State [...].

shows that the idea of extending the patent duration by amending the national patent legislations could not be adopted because of the necessity to preserve the harmonization between the national legislations and the European legislation, i.e. the European Patent Convention. The situation in which one and the same medicinal product was protected for different periods of time under the national legislation and under the Convention had to be, by all means, avoided. At that moment, in 1990, in the European Patent Convention there were 14 Contracting States, 10 of which were Community Member States. In this context, the extension of patent duration within the framework of the Convention, by amending Art. 63 was impossible as a consequence of the extremely complicated procedure imposed by Art. 172 (a) of the EPC. This is why the final option was to include the possibility of extending the patent term within Art. 63(2), as mentioned above, and the amendment entered into force in 1997, which means six years after the date of the EPC Revision Conference.

In order to define the legal features of the rights arising from the supplementary protection certificate, the provisions of the two Regulations concerning the subject-matter of protection[30] and the effects of the certificate[31] shall be taken into consideration. As we have already shown in this paper, the supplementary protection certificate is deemed to be a **distinct industrial property protection title** which extends the patent duration and confers a *sui generis* right to its owner who is, in fact, the patent owner. The legal nature of this right is a double one, given by the patent right, as a branch of the intellectual property right, and the administrative right relating to the authorization for placing the medicaments or plant protection products on the market. This comes from the protection it confers, which is limited to the protection conferred by the basic patent and to the product for which the authorization was granted. At the same time, the effects of the certificate, i.e. the rights acquired by the entity of law, which is the protection title owner, are the same as the rights conferred by the basic patent and subject to the same obligations. Which means that it has the same legal features as the patent: an absolute *erga omnes* right, a patrimonial right, an alienable right, as well as the special characteristics, such as the time limit and the territorial limit of a national right. The time limit differs from the patent time limit, as it can reach five years, at the most, or exceptionally, five years and six months, in case of the medicaments for paediatric use.

The certificate is however different from the patent in that the protection it confers is limited to the product for which the authorization was issued for placing the product on the market as a medicinal or plant protection product. Taking into account that by the publication of the certificate application or of the granted certificate, the publication of the patent document on which the certificate is based is not ensured, as in the case of the patent, for interpreting the scope of the protection conferred by the certificate it is necessary to start from the scope of protection conferred by the basic patent, given by the content of the claims, which is, in its turn, interpreted by using the description of the invention. Thus, within the limits defined by the patent and the market authorization, the certificate confers the same rights and obligations as the patent on which its grant is based, namely the exclusive right of exploitation and the right to prohibit third parties the unauthorized use of the products protected by the certificate. Furthermore, there are other rights deriving therefrom, such as the right to transfer the same by assignment, licence or succession, the right to renouncement, as well as the defense of rights provided for by the law – security measures ordered by the law court, infringement actions, entitlement to damages. At the same time, the abuse of right may be sanctioned by third parties by actions of revocation or cancellation of the granted

[30] Art. 4 - Subject-matter of protection.

Within the limits of the protection conferred by the basic patent, the protection conferred by a certificate shall extend only to the product covered by the authorizations to place the corresponding medicinal product/plant protection product on the market and for any use of the product as a medicinal product/plant protection product that has been authorized before the expiry of the certificate.

[31] Article 5 - Effects of the certificate .

Subject to Article 4, the certificate shall confer the same rights as conferred by the basic patent and shall be subject to the same limitations and the same obligations.

certificate, with effect *ex tunc*. The same as in the case of the patent, the certificate may be maintained in force subject to payment of the legal fees throughout its entire term[32]

The supplementary protection certificate, the same as the patent, confers a national protection, on the territory of the Member State where an application for the grant of the certificate has been filed with the competent authority that also granted the patent on which the certificate is based. Ensuring uniform conditions, at the level of each Member State, relating to the grant of the certificate, the publication, in order to make it available to third parties, the duration and the cancellation thereof represent the subject of the Community regulations provisions, the uniform interpretation of which is the competence of the Court of Justice of the European Union.

Conclusions

The paper starts from the presentation of the legal characteristics of the right arising from the patent, as a property right having the generally-recognized features thereof as well as a series of characteristics specific to the property over intangible assets, i.e. temporariness, territoriality and ubiquity. The temporariness limits the patent term to 20 years, at the most. The patent term institution is presented in the light of international regulations and national laws, and also of the effects it has over the protection conferred by the patent. One of these effects is the reduced effective duration of the owners' exclusive rights which, in the field of products which undergo a market authorization procedure – medicinal and plant protection products – is even shorter as a consequence of the time elapsed up to the grant of such authorizations. These were the premises for the creation of a new industrial property title, the supplementary protection certificate, which was introduced 20 years ago in the European Community by means of two Council Regulations: Regulation (EEC) 1768/92 concerning the creation of a supplementary protection certificate for medicinal products and Regulation (EC) 1610/96 concerning the creation of a supplementary protection certificate for plant protection products. They both mainly aim at providing a uniform regulation, at the Community level, for the extension of the patent term by five years, at the most. Further on, the legal features of the certificate are presented in comparison with the patent features and the effect thereof upon the owners.

In our view, the paper is useful to the specialists in the field, helping them understand the conditions of creation of a new industrial property title generated by the market economy, and, at the same time, it contributes to the enrichment of the Romanian doctrine in this matter. This paper can be a starting point for other studies concerning the uniform interpretation of Community provisions by the Romanian authorities competent for protecting or settling the supplementary protection certificate cases.

PROTECTION OF DRAWINGS AND PATTERNS IN INTERNATIONAL LAW

OVIDIA JANINA IONESCU*

Abstract

Intellectual property occupies a fundamental place in the legal field, namely it represents the creation, development and evolution of society, with implications in all areas of activity. In recent time, highly advanced technology and the evolution of society in all fields, including in terms of designs, needs expeditious protection, considering also the amazing development recorded in this regard. In order to be protected, designs (and others) should benefit from such protection not only in the country of origin; namely, protection must be ensured internationally, otherwise it would not have the desired effect and the aim sought, meaning that the rightful authors would no longer enjoy all the rights they have over their creation.

This paper aims to specify the applicable international intellectual property laws, namely on protection of designs, the main objective of these legal regulations, and some detailing considered emblematic to be mentioned, our country's accession to these international bodies, as appropriate, or their applicability into the national legal framework. Thus, the goal consists in identifying and detailing the protection that the designs enjoy at international level, respectively the international legislation implementation in the domestic legal framework, and our accession to the international organizations, or amending domestic legislation so as to correlate with the international laws, that is to protect intellectual property through this procedure, including the significance of these international regulations on protection of designs, both nationally and internationally.

Keywords: *protection, designs, models, national and international law, legislation implementation.*

Introduction

The field covered by the theme of this study is represented by intellectual property seen at an international level, in the sense of making a brief presentation of significant legislative evolutions, as well as of its implementation at national level. The importance of this study resides in the fact that such work aims at pointing out the effect of international enactments on domestic legislation predominantly concerning the protection of drawings and patterns. Thus, the envisaged objective is to give due consideration to these regulations, and to question their enforcement at domestic level. Drawings and patterns pertain to the field of intellectual property and do not need any special protection, as they are the products of our intelligence, the proof of development and evolution. Creation in general has these traits, and this category integrates and identifies itself with them. Without creation we would be so much poorer, and evolution, both technological and of any other kind, would be greatly affected. This study understands to respond to the undertaken goals by presenting a detailed account of international regulations and correlate domestic norms in relation therewith. The subject matter is well known, as most studies deal with the topics presented herein, or contain references that are made to such matters, and it is also impossible to talk about an international protection of intellectual property without referencing the facts outlined in this study.

1. Necessity of international legal regulations

Just as Yolanda Eminescu emphasized, quoting Marcel Plaisant, "*creators' rights have an international nature, the spirit of which is a reflection of the collective soul of one nation, and, at the same time, of humanity and of an epoch of civilization*"[1].

* PhD, "Nicolae Titulescu" University, INTELLECTUAL PROPERTY LAW (ovidiaionescu@yahoo.com).

[1] Yolanda Eminescu, *Protecţia desenelor şi modelelor (The Protection of Drawings and Patterns),* Lumina Lex, Publishing House, Bucharest, 1997, page 64, apud Marcel Plaisant, *Traité de droit conventionnel international concernant la propriété industrielle*, Sirey, Paris, 1949, pages 5 and 8.

The protection of industrial creation internationally had started to take place after the first half of the XIX-th century based on certain *Bilateral Conventions*[2] providing for the mutual recognition of rights, but they were not widely encompassing enough, nor did they observe a certain uniform standard. Today, it can be stated that these *Convenions* have managed to partially set forth certain general principles ensuring a minimal equity and equality between the nationals of signatory states. Romania concluded such *Conventions* with Greece, Italy, Great Britain, Yugoslavia, Czechoslovakia, Spain, Hungary, France, Belgium, Switzerland, and so on and so forth.[3]

Likewise, the *Convention for the Protection of Factory Brands and Trademarks,*[4] concluded between Romania and France, which, at Art. 1 provided that: "*Romanian subject in France and French people in Romania shall enjoy the same protection as all other nationals as regards factory brands and trademarks, i.e. the various signs which serve for differentiating products of an industry or trade, such as: name under a special form, trade names (denominations), printed texts, stamps, seals, reliefs, vignettes, numbers, covers, and similar*" or *The Arrangement on Repressing Goods' Fake Indications of Origin*[5]*,* which, at Art. 1, stipulated that "*Any product bearing a fake indication of origin, in which one of the two contracting States or a locality situated in one of them, might be, directly or indirectly, shown as country or place of origin, shall be confiscated when imported into each of the two States*".

Moreover, it is worth mentioning the *Convention for the Protection of Industrial Property and Factory Brands*[6]*,* concluded between Romania and Belgium, which, at Art. 1, provided that: "*Belgian citizens in Romania and Romanian citizens in Belgium shall enjoy, in regards of factory brands and trademarks, the same protection just as nationals*" or the *Trade Convention*[7] concluded with Switzerland, which, at Art. 5, highlighted that: "*with respect to factory brands or trademarks and the other names assimilated to the factory brands or trademarks by the laws of the country where they had to be registered, the industrialists, producers and traders settled in Romania shall enjoy in Switzerland, and the industrialists, producers and traders settled in Switzerland shall enjoy in Romania, the same protection as the nationals or subjects of the most favored nation. The Romanians from Switzerland and the Swiss from Romania will have to fulfill the formalities prescribed by the laws and regulations governing this matter*".

This brief description of the first conventions concluded by Romania, which included also clauses regarding the protection of drawings and trademarks, cannot be concluded without mentioning also the *Trade Convention* concluded with Austro-Hungary on 22 June 1875, which contained a provision according to which citizens of the two states would enjoy, while on the other's territory, the same protection as their nationals "*for everything that was connected with factory brands as well as drawings and patterns of any kind*", and the *Trade Convention Concluded with*

---

[2] Such conventions were concluded by France with England in 1852, 1861 and 1881, with Spain in 1853, and 1880, with Luxembourg in 1856 and 1865, with Italy in 1862, and 1864; Germany concluded conventions with Spain in 1880, with Italy in 1858, with the Netherlands in 1858, with Portugal in 1866 and so on.

[3] For more details, see Florian Porescu, Vasile V. Longhin, Paul I. Demetrescu, *Legea mărcilor de fabrică şi de comerţ, Comentar şi jurisprudenţă (Law on Factory Brands and Trademarks, Comments and Case Law),* Eminescu S.A. – Institute for Graphic Arts and Publishing House , Bucharest, 1937, pages 241-249.

[5] Published in the Official Gazette of 27 February/11 March 1895, apud Florian Porescu, Vasile V. Longhin, Paul I. Demetrescu, *op.cit.,* pages 243-244.

[6] Published in the Official Gazette of 24 May 1881, apud Florian Porescu, Vasile V. Longhin, Paul I. Demetrescu, *op.cit.,* page 241.

[7] Published in the Official Gazette of 19 February/3 March 1893, apud Florian Porescu, Vasile V. Longhin, Paul I. Demetrescu, *op.cit.,* pages 241-241.

Germany in 1877, which was to be applied once the protection of "*patterns, drawings and trademarks*"[8] was adopted in Romania.

Therefore, it was necessary to have, at international level, a protection of industrial creations, protection which is currently done by mutual conventions concluded between these countries, which set forth a few general principles ensuring minimal equity and equality between the nationals of signatory states, as well as by Regulations adopted at international and European level whereby attempting to harmonize the legislation regarding intellectual property, being essential for the economy to institute, both at community, and international level, a system aimed at protecting drawings and patterns that could be more accessible and better adjusted to market necessities.

The drawing or pattern of a product is the element which increases its commercial value and makes it sell better. That is why, in the conditions of the economic globalization and international circulation of goods, it was necessary that a drawing or pattern be protected, both at community and international level. The protection given to a drawing or pattern guarded the holders who registered the respective drawing or pattern, as the case may be, and gave them the exclusive right to file an opposition against any kind of copy or unauthorized imitation of the respective drawing or pattern by any third parties. Consequently, the protection contributed to guaranteeing an equitable income from investments and the sale of individualized goods based on drawings or patterns, acknowledged and protected at international level.

The limitation of the protection of drawings or patterns to the territory of the various states may be an obstacle in the way of the free circulation of goods, reason for which it was necessary to create, at international level, a unified system for obtaining the protection of a drawing or a pattern, to ensure international protection.

The protection of drawings and patterns contributed to the development of commercial activities and to encouraging the export of national products, thus boosting economic development.

2. Common legal regulations regarding the protection of drawings and patterns in conventional law

2.1. The Paris Convention of 1883 on the protection of industrial property

Considering that, as already mentioned above, the clauses of the *Conventions* concluded between states regarding the mutual recognition of rights, were not widely scoped enough, nor did they observe a certain uniform standard, this system became insufficient and other more efficient forms of cooperation started being sought after.

Thus, the first discussions regarding the necessity of certain regulations and international Unions in the field of industrial property took place on the occasion of the universal Exhibition in Wien of 1873, the Trocadero Congress of 1878, and the International Paris Congress of 1880[9].

As mentioned in the Romanian specialized literature[10], "*the development of transports and, especially of railway transports, was at the root of the internationalization of trade and its practices*". As a result of the internationalization of trade, with a view to facilitating the receipt of

protection over industrial property rights outside the country of origin, at 20 March 1883, a number of 11 founding states of the Union[11] concluded the "*Paris Convention for the Protection of Industrial Property*". This first convention in the field of industrial property came into force on 7 July 1884.

The Paris Convention was revised several times, as follows: in Brussels on 14 December 1900; in Washington on 2 June 1911, in the Hague on 6 November 1925; in London on 2 June 1934; in Lisbon on 31 October 1958 and, the last time, in Stockholm on 14 July 1967. Subsequently, the Paris Convention was amended in 1979. At each conference organized for revising the convention, various regulations had been introduced and a Revision Act had been adopted and, save for the ones concluded at the Revising Conferences from Brussels in 1900 and Washington in 1911, which are no longer valid, all the other acts still preserve their enforceability, despite the fact that the greatest majority of countries are now signatories of the Stockholm Act of 1967.

Romania adhered to the Paris Convention for the protection of industrial property, revised in Brussels on 14 December 1900 and Washington on 2 June 1911, by means of Law – Decree No. 2641 of 17 June 1921, ratified by the Law of 27 March 1924. Later on, by means of Decree No. 427 of 19 October 1963, Romania adhered to the revised texts from the Hague, London and Lisbon, and by Decree No. 1177 of 28 December 1968[12] it ratified the form revised at Stockholm on 14 July 1967.

As shown at Art.1 para 2), the object of the legal protection that the Convention ensures is represented by industrial property, comprising inventions, utility patterns, **drawings or patterns, factory brands, trademarks and service marks**, names of origin and indications of origin, trade names and the repression of unfair competition.

Further to reviewing the text of the Paris Convention, as also mentioned in the specialized literature[13], it could be stated that its main provisions may be subdivided into four big categories:

- provisions comprising material law regulations guaranteeing a basic right, known as the *right to national treatment*, in every member country. The principle of national treatment means that every country which has adhered to the Paris Convention must provide, for the citizens of the other member countries, the same protection it provides to its own citizens[14]. The principle of national treatment, formulated instead of the principle of mutuality, as specialized legal literature evinces[15], has been "*a truly revolutionary principle for the epoch when it has been adopted*".

- provisions setting forth a basic right, known as the *Union priority right*. By "*priority right*" it is understood a person (or its successor or successors in rights) which filed a registration application and registered an industrial property right in one of the member countries of the Paris Union, who may request and benefit from protection in all other member states[16]. In general, the previous request the priority of which is claimed, must be a registration application submitted in prior[17].

---

[11] The 11 founding states state of the Union are the following: Belgium, Brazil, Switzerland, France, Guatemala, Italy, the Netherlands, Portugal, Salvador, Serbia and Spain. On 7 July 1884, when the Convention entered into force, the following countries have adhered also: Great Britain, Tunis and Ecuador.

- provisions defining a certain number of common material law regulations, containing either rules regarding rights and obligations of individuals or legal entities, or regulations claiming or allowing member countries to adopt laws according to such regulations[18];

- provisions referring to the administrative framework and which comprise the final clauses of the Paris Convention[19].

The Paris Convention is considered to have been, until the adoption of the Agreements regarding the aspects of intellectual property rights related to trade (the TRIPS Agreement)[20], the most important convention in the field of industrial property[21].

By the Paris Convention, the International Union for the Protection of Industrial Property (the Paris Union) was created, with its seat in Geneva. According to Art. 12 of the Convention, each of the countries in the Paris Union have the obligation to set up a special industrial property service (in Romania, the special industrial property service is the State Office for Inventions and Trademarks - OSIM[22]), as well as a central office for receiving deposits, for relaying to the public, the invention patents, utility patterns, **drawings and patterns,** and **factory brands or trademarks**. This service will also edit a special official periodical publication publishing the names of the holders of the granted patents (with a brief description of the patented inventions), and **the registered trademarks**. In Romania, OSIM edits and publishes the Official Bulletin for Industrial Property (BOPI) in five sections: BOPI – The Invention Patents Section[23]; **BOPI – The Trademarks and Geographical Indications Section**[24]; **BOPI – The Drawings and Patterns Section**[25]; BOPI – New Species of Plants Section[26], and OPI – Applications for European Invention Patents with extended effects, according to the provisions of Law No. 32/1997[27].

[19] See Art. 13-30 of the Paris Convention.

[20] This Agreement is part of Appendix 1C to the Agreement for setting up the World Trade Organization, concluded in Marrakech on 15 April 1994, published in the Official Gazette of Romania, Part I, No. 360 bis of 27 December 1994.

[21] For further details regarding the organizational structure, see Ioan Macovei, *Tratat de drept al proprietăţii intelectuale (Intellectual Property Law Treatise)*, C.H. Beck Publishing House, Bucharest, 2010, pages.13-16.

[22] The State Office for Inventions and Trademarks is a specialized body of the central public administration, a unique authority in Romania ensuring industrial property protection, in compliance with the national legislation in this field, and with the provisions of the international conventions and treaties Romania is a part to, in accordance with the provisions of G.D. No. 573/1998 on the organization and operation of OSIM, as amended, Art. 68 of Law No. 64/1991 on invention patents, as republished, Art. 96 of Law No. 84/1998 on trademarks and geographical indications, as republished, and Art. 48 of Law No. 129/1992 on drawings and patterns, as republished. OSIM's organization, operation and tasks are stipulated in G.D. No. 573/7.09.1998 on the setting up and operation of the State Office for Inventions and Trademarks, amended by GD No.1396/2009.

[23] It has 12 annual issues and comprises the summaries of the patent applications and granted patents, as well as various information on the changes occurred in the legal status of patents, the lists of industrial property advisors attested by OSIM and other useful information. See Gheorghe Bucşă, Tiberiu Popescu, *Dicţionar ilustrat de proprietate intelectuală (Illustrated Dictionary of Intellectual Property),* OSIM Publishing House, Bucharest, pages 48-49.

[24] It has 12 annual issues and includes a table with registered trademarks, the list of registered trademarks, the table comprising withdrawal or limitation, upon request, errata, decisions of the examination commission, oppositions etc. For more details, see Gheorghe Bucşă, Tiberiu Popescu, *op.cit.,* pages 50-51.

[25] It has 12 annual issues, and comprises the registration requests for drawings and patterns submitted to OSIM, the lists of registered certificates, any amendments in terms of legal status etc. For more details, see Gheorghe Bucşă, Tiberiu Popescu, *op.cit.,* pages 49-50. For further research, see also Ştefan Cocoş, *a,b,c-ul protecţiei şi valorificării proprietăţii industriale (The ABC of Protection and Capitalization of Industrial Property)*, Rosetti Publishing House, Bucharest, 2004, pages 210-212).

[26] It has one quarterly issue and contains the applications for patents related to species, proposed names and accepted names, patents for granted species, in force, or decisions offered by licenses for the exploitation of species, and other specialized information such as, for example, Law 255/1998 on the protection of new species of plants, regulation form, technical norms for the examination of species etc. (http://www.osim.ro/publicatii/editura/2001-1.htm).

[27] It comprises the applications for European invention patents with extended effects in Romania, according to the provisions of Law No. 32/1997, European invention patents with effects in Romania, and various information regarding the changes occurred in the legal status of patents (http://www.osim.ro/publicatii/editura/2001-1.htm).

2.2. The Convention for instituting the World Intellectual Property Organization

The Convention for instituting the World Intellectual Property Organization (OMPI) was signed in Stockholm on 14 July 1967, and is the legal instrument whereby regulating international cooperation in the field of intellectual property. The Convention for the setting up of OMPI entered into force on 26 April 1970.

The World Organization for Intellectual Property is one of the 16 specialized agencies from within the system of organizations of the United Nations (ONU), statute obtained as a result of an Agreement[28] concluded between OMPI and ONU, and headquartered in Geneva. OMPI is continuing the activities of the Reunited International Offices for Intellectual Property Protection (BIRPI), which represented the reunited secretariat of the Paris Union, for industrial property, of the Bern Union, for copyrights. Romania ratified the Convention for the institution of OMPI by Decree No. 1175 of 28 December 1968[29], and on 26 April 1970, it became a member of this inter-governmental international body[30].

Art. 2 of the Convention specifies what is understood by intellectual property, the text making express reference also to drawings and patterns, as well as to factory brands, trademarks and service marks. Thus, according to Art. 2 para. VIII, intellectual property "*designates the rights referring to literary, artistic and scientific works; the performances of artists who interpret pieces of art and the ones of executing artists, phonograms and radio broadcasts; inventions in all human activities; scientific discoveries;* ***drawings and patterns****;* ***factory brands, trademarks, and service marks****, as well as trade names and trade denominations, protection against unfair competition and all other rights related to intellectual activities in the fields of industry, science, literature and art*".

According to Art. 3 of the Convention, the World Organization for Intellectual Property has the following main objectives: to promote the protection of intellectual property in the world through the cooperation between states, in collaboration with any other international organizations, specialized agencies and UN bodies, to ensure the administrative cooperation between intellectual property unions. To achieve its objectives, OMPI favors the conclusion of new international treatises, as well as the harmonization of national legislations, provides technical and legal assistance to emerging countries, centralizes and disseminates all information regarding the protection of intellectual property, provides services easing up the international protection of intellectual property, proceeds, if need be, to performing registrations, on such matters, and publishes the information regarding the registrations, facilitating also an ample administrative cooperation between member states. The World Intellectual Property Organization proclaims the universal value of intellectual property, which imprints the world's evolution, contributes to societal progress and plays an important role in long-term economic, social and cultural development[31].

---

[28] The Agreement entered into force on 17 December 1974, when it was unanimously approved by the UN General Meeting by Resolution 3346 (XXIX).

[29] Published in the Official Bulletin No. 1 of 6 January 1969. When submitting the ratification instruments, Romania declared that: "the provisions of Art. 5 and 14 of the Convention for the instituting of OMPI are not in compliance with the principle of treaties universality according to which all states are entitled to become a party to multilateral treaties regulating issues of general interest".

[30] When submitting the signing instrument, Romania declared that: "The provisions of Art. 5 and 14 of the Convention for the institution of OMPI, signed in Stockholm on 14.07.1967, are not in compliance with the principle of treaties universality according to which all states are entitled to become a party to multilateral treaties regulating issues of general interest" (Gheorghe Bucşă, *Protecţia desenelor şi modelelor industriale (The Protection of Industrial Drawings and Patterns)*, Tribuna Economică Publishing House, Bucharest, 2000, page 63).

A Documentary)*, Politică Publishing House, Bucharest, 1980, p. 9 *et. seq*.; Ion Enache, *Apărarea drepturilor de proprietate intelectuală în practica internaţională (Defending Intellectual Property Rights in International Practice)*, The National Institute for Information and Documentation, Bucharest, 1991, page 20 *et seq*..; Mirela Romiţan*, 40 de ani de la semnarea Convenţiei de instituire a Organizaţiei Mondiale a Proprietăţii Intelectuale (40 Years Since the Signing of the Convention Instituting the World Intellectual Property*

2.3. The Agreement on the Setting Up of the World Trade Organization (the TRIPS Agreement)

The TRIPS Agreement is part of Appendix 1 C to the Agreement regarding the setting up of the World Trade Organization, concluded in Marrakech on 15 April 1994, and is destined to regulate the incidence of the intellectual property rights on trade. In the sense of the TRIPS Agreement, the expression "*intellectual property*" designates all categories of intellectual property making the object of sections 1-7 of its IInd part, namely: copyrights and other connected rights; **factory brands or trademarks**; geographical indications; **drawings and patterns;** patents; configuration blueprints (topographies) of integrated circuits; the protection of undisclosed information.

The TRIPS Agreement instituted a set of fundamental principles, such as: ensuring legal protection as minimal norm (Art. 1.1); the principle of national treatment (Art. 3); the principle of the treatment of the most favored nation (Art. 4)[32].

According to Art. 1 of the Agreement, members will be able, without this being an obligation, to enforce, in their national legislations, procedures whereby realizing an efficient protection against any act that might prejudice intellectual property rights.

Section 4 (Drawings and patterns), from Part II of the Agreement focuses on certain regulations regarding the requirements that must be met by these objects of industrial property in order to benefit from protection.

Thus, according to Art. 25, "*Members will provide for the protection of drawings and patterns created independently and which are new or original. The members will be able to determine if the drawings and patterns are not new or original if they do not differ significantly from known drawings and patterns or from combinations of elements of certain known drawings and patterns. The members will be able to rule that such a protection does not extend on to the drawings and patterns dictated essentially by technical or functional grounds (para. 1). Each member must act in such a way that the provisions regarding the guaranteeing of the protection of textiles drawings and patterns, especially concerning any cost, examination or publication, do not compromise unreasonably the possibility to request and be granted such protection. The members will be free to fulfill this obligation as regards industrial drawings and patterns or by means of the legislation on matters of copyright*".

Furthermore, according to art. 26, "*the holder of a protected drawing and pattern has the right to prevent third parties acting without his/her consent from producing, selling or importing items that behave like or contain a drawing and pattern which is, totally or substantially, a copy of such protected drawing and pattern, when the respective acts are done for commercial purposes* (para.1). *The members will be able to provide for limited exceptions regarding the protection of drawings and patterns, provided that they do not prejudice, in an unjustifiable manner, the normal exploitation of the protected drawings and patterns, nor cause any unjustified prejudices to the legitimate interests of the holder of the protected drawing and pattern, paying heed to the legitimate interests of third parties* (para. 2). *The duration of the offered protection shall be of at least 10 years*" (para. 3).

Section 2 (Factory brands or trademarks) from Part II of the Agreement focuses on certain regulations regarding the requirements that must be met by factory brands or trademarks in order to benefit from protection.

Organization), in "Revista română de dreptul proprietăţii intelectuale" ("The Romanian Review for Intellectual Property Rights ") No. 1/2007, pages 7-14; Florea Bujorel, *Dreptul proprietăţii intelectuale (Intellectual Property Law),* Universul Juridic Publishing House, Bucharest, 2011, pages 32-34.

[32] For a more in-depth analysis of this Agreement, see Cristiana I. Stoica, Răzvan Dincă, *Consideraţii teoretice şi practice referitoare la efectele Acordului TRIPS asupra sistemului de drept românesc (Theoretical and Practical Considerations on the Effects of the TRIPS Agreement on the Romanian Legal System)*, in "Revista de drept comercial" ("The Commercial Law Review") No. 7-8/2001, pages 168-200.

Thus, according to Art.15 para1) of the Agreement, "*Any sign, or any combination of signs, capable of differentiating one product or one service of an enterprise from the ones of other enterprises, may represent a factory brand or trademark. Such signs, especially words, including names of persons, letters, digits, figurative elements, and color combinations, as well as any combination of such signs, shall be susceptible to be registered as factory brands or trademarks. In the cases in which certain signs are not, in themselves, likely to distinguish pertinent products or services, the members will be able to subordinate the registrability of the distinctive character acquired by use. The members may request, as a condition for registration, that the signs should be visually perceptible*".

At the same time, according to Art.16 para 1), "*the holder of a registered factory brand or trademark will have the exclusive right to prevent any third parties acting without his/her consent from using, during their commercial operations, identical or similar signs for products or services that are identical or similar to the ones for which the factory brand or trademark is registered, should such use generate a risk of confusion. In case of using an identical sign for identical products or services, the existence of the risk of confusion shall be presumed. The rights described above shall not be detrimental to any previous existing right, and shall not affect the possibility that the members have to subordinate the existence of the rights to usage*".

It is also worth mentioning the provisions of Art.16 para 2) according to which "*Art. 6 bis of the Paris Convention (1967) shall be applied, mutatis mutandis, to the services*[33]*. So as to determine whether a factory brand or trademark is notoriously known, the members shall consider the notoriety of that brand in the segment of the respective public, including the notoriety of the member in question, achieved as a result of promoting the respective brand*". Moreover, in para 3) of the same article, it is provided that "*Art. 6bis of the Paris Convention (1967) shall apply, mutatis mutandis, also to the products or services which are not similar to the ones for which the factory brand or trademark are registered, provided that the usage of the respective brand or trademark for these products or services should indicate the connection between these products or services and the holder of the registered trademark, and if such usage would risk damaging the rights of the holder of the registered trademark*".

Every member state will grant to the nationals of the other member states a treatment which shall not be less favorable than the ones granted to its own nationals in terms of the protection of intellectual property, subject to the exceptions already provided for, as the case may be, in the Paris Convention (by the Stockholm Act of 14 July 1967) and the Bern Convention (by the Paris Act of 14 July 1971).

Based on the provisions of Art.41, of Part III – of the Agreement (Section 1 – General Obligations), "*the members will grant to the holders of the rights access to the civil legal proceedings aimed at ensuring the observance of intellectual property rights covered hereby. The defendants shall have to be informed in due time by means of a sufficiently precise written notice indicating, among others, the fundamentals of the claims. The parties shall be authorized to be represented by an independent legal advisor, while the procedures shall not impose any excessive requirements in terms of obligatory personal appearance. All the parties in such cause shall be appropriately habilitated to justify their claims and present any pertinent elements as evidence. The procedure will include a method of identifying confidential information, except for the case in which such method is contrary to existing constitutional provisions*".

[33] According to Art.6 „Countries of the Union agree to refuse or invalidate the registration, or prohibit, by complementary measures, the usage, without the authorization of the competent bodies, either as factory brands or trademarks, or as elements of such trademarks, of blazonry, flags and other state emblems for the countries of the Union, of the signs and official seals for control and guarantee adopted by them, as well as the imitation of any heraldry signs".

Mention should be made of the provisions of Art. 61 of Section 5, titled "*Criminal Procedures*", According to which "the states will be able to provide for criminal procedures and sanctions that are applicable at least for the deliberate acts of counterfeiting factory brands or trademarks, or of pirating, which breach any copyrights, and which are committed for commercial purposes".

Romania ratified this Agreement by Law No. 133/1994 for the ratification of the Marrakech Agreement on the setting up of the World Trade Organization, of the International Agreement on Beef, and of the International Agreement on Dairy Products, concluded at Marrakech on 15 April 1994[34].

3. Regulations regarding the protection of drawings and patterns in conventional law

3.1. The Bern Convention of 1886 for the protection of literary and artistic work

As shown in the specialized literature, drawings and patterns situate themselves somewhere at the "*crossroads between art and industry*"[35], being known, both in our law, and in the one of other countries, under the name of "*applied art*"[36] or "*ornamental creations*"[37].

Due to their complex nature, *Yolanda Eminescu believed that,* by destination and reproduction manner, they pertain to industrial property rights and, by the nature of the creative effort, to copyrights[38].

As to all the above, we deem that it is worthy to also present a few considerations on the necessity and adoption of the Bern Convention of 1886 for the protection of literary and artistic work which, at Art. 2 para 1) provides that applied art work belongs to the category of "literary and artistic work".

At 9 September 1886, a number of 8 states, in capacity of founding members (Belgium, Switzerland, France, Germany, Italy, Great Britain, Spain and Tunis), adopted the "*Bern Convention for the Protection of Literary and Artistic Work*", the oldest international treaty in the field of copyrights. The Convention entered into force on 5 December 1887, and, on 4 May 1896, it was amended and completed by means of an Addendum and an Interpretative Statement, signed in Paris. The contracting countries are constituted in the "*Union for the Protection of Copyrights on Literary and Artistic Work*".

The Convention made the object of several successive revisions, as follows: the Berlin Act of 13 November 1908, completed at Bern on 30 March 1914; the Rome Act of 2 June 1928; the Brussels Act of 26 June 1948; the Stockholm Act of 14 July 1967; the Paris Act of 14 July 1971, amended on 28 September 1979.

Romania adhered, with some reservations, to the Convention, in the format revised at Berlin by Law No. 152 of 24 March 1926, with effects as of 1 January 1927. Subsequently, in 1995, Romania waived the reservations formulated at the Bern Convention, which mainly had to do with the duration of the rights and the competence in litigations, having as object the construal and enforcement of the Convention. By Law No. 77/1998 for the adherence of Romania to the Bern

[38] Yolanda Eminescu, *Protecţia desenelor şi modelelor industriale. Drept român şi comparat (The Protection of Industrial Drawings and Patterns. Romanian and Comparative Law)*, *op.cit.,* page 7.

Convention for the protection of literary and artistic work of 9 September 1886[39], Romania adhered to the revised form of the Convention by the Paris Act of 1971, and amended in 1979.

The Bern Convention for the protection of literary and artistic work is grounded on two basic principles, *i.e.: the national treatment principle*, or of assimilating foreign nationals of the Union with nationals, and *the principle of unionist treatment*, or *of minimal protection,* that member states are obliged to provide in this field[40].

3.2. The Arrangement from the Hague regarding the international deposit of drawings and patterns

The Arrangement from the Hague was adopted on 6 November 1925 and entered into force on 1 June 1928. According to the provisions of this Arrangement, through the agency of a single international deposit registered with the International Office of OMPI, the entitled persons are allowed to **obtain the protection for one or several drawings and patterns in several states**[41].

The international deposit is deemed to have been drafted at the date when the International Office received the application in accordance with all legal requirements, the charges paid at the same time with the application, and the photos or any other graphic representations of the drawing and pattern were received or, if not received simultaneously, at the date when the last of these formalities was fulfilled. The registration bears the same date.

According to art.5, the international deposit consists of an application, one or several photos or any other graphic representations of the drawing and pattern, as well as the proof of paying the charges provided for in the regulation.

The application must contain the following: the list of contracting states whereby the applicant requests that the international deposit should produce effects; the designation of the object or objects into which the drawing or pattern is intended to be incorporated; if the applicant wishes to claim the priority provided for at Art. 9, the specification of the date, state and deposit number giving rise to the ownership right[42]; any other information provided for by the regulation. The application may also comprise: a brief description of the characteristic features of the drawing and pattern; a statement with the name of the real author of the drawing and pattern; an application for postponing publication as provided for at Art. 6 para 4)[43]. The application may enclose counterparts or models of the object that the drawing or pattern is incorporated into.

According to Art.11, of the Arrangement from the Hague, the duration of the protection agreed by a contracting state for the drawings and patterns making the object of an international deposit cannot be of less than 10 years starting with the date of the international deposit, if the latter was subjected to a renewal, or 5 years as of the date of the international deposit in the absence of a renewal. Nevertheless, if, by virtue of the provisions of the national legislation of a contracting state examining the novelty, the protection starts from a date from before the one of the international

[39] Published in the Official Gazette of Romania No. 156 of 17 April 1998.

[40] For further research regarding the Bern Convention, see Yolanda Eminescu, *Opera de creaţie şi dreptul. O privire comparativă (The Creative Work and the Law. A Comparative View),* Academiei Publishing House, Bucharest, 1987, pages 199-208.

[41] For further research regarding the Arrangement from the Hague, see also Silvia Vincenti, *EU accession to the Hague Agreement and its consequences,* in „Gazzette", No. 56/2008, pages 77-87, Yolanda Eminescu, *Protecţia desenelor şi modelelor industriale. Drept român şi comparat (The Protection of Industrial Drawings and Patterns. Romanian and Comparative Law)*, *op.cit.*,pages 69-75.

[42] According to Art. 9, „If the international deposit of the drawing or pattern is made in a period of 6 months as of the date of the first deposit of the same drawing or pattern in one of the member states of the International Union for the Protection of Industrial Property, and if the priority is claimed for the international deposit, the date of priority is the one of the first deposit".

[43] According to Art. 6 para. 4), at the applicant's request, the publication may still be postponed for the duration of the period he/she requested, but this period cannot exceed 12 months as of the date of the international deposit. Nevertheless, if a priority is claimed, the starting date of such period is the priority date.

deposit, the minimal durations provided for in the previous paragraph are calculated by paying heed to the starting point of the protection in the respective state. The fact that the international deposit is not renewed but once does not affect in the least the minimal duration of the protection thus defined.

The Arrangement was revised in London on 2 June 1934, in the Hague on 28 November 1960, and was completed by the Addendum of Monaco of 1961, the Complementary Stockholm Act of 1967, and the Geneva Protocol of 1975, as amended in 1979 and 1999.

Romania adhered to the *Arrangement from the Hague* on the international deposit of industrial drawings and models of 6 November 1925, revised by means of the Hague Act of 28 November 1960, completed by the Complementary Stockholm Act of 14 July 1967, as amended on 2 October 1979 by Law No. 44 of 28 April 1992 for the adherence of Romania to the Arrangement from the Hague regarding the international deposit of industrial drawings and patterns, of 06.11.1925, as subsequently amended and completed[44].

3.3. The Locarno Arrangement on the international classification of drawings and patterns

The Locarno Arrangement was concluded on 8 October 1968 and entered into force on 27 April 1971. This Arrangement **instituted an international classification of drawings and patterns** the purpose of which is, mainly, to facilitate thematic documentary research aimed at determining the world level stage of the creation of drawings and patterns in a certain field. The international classification of drawings and patterns comprises a list of classes and subclasses, as well as an alphabetical list of products in which the drawings and patterns are incorporated, indicating the classes and subclasses in which they are distributed, as well as some explanatory notes.

The list of classes and subclasses is the one attached to this Arrangement, subject to the amendments and completions that the Experts' Committee, set up in accordance with Art. 3, may bring.

Thus, in compliance with the provisions of Art. 3 of the Locarno Arrangement, "*Every country of the special Union is represented in the Experts' Committee, which is organized as per the procedure regulations adopted with a simple majority by the represented countries. The Experts' Committee adopts the alphabetical list and explanatory notes with the simple majority of votes of the countries in the special Union. The proposal to amend or complete the international classification may be done by the office of every country of the special Union or by the International Office. Any proposal made by an office is communicated by it to the International Office. The proposals from the offices and the International Offices are transmitted by the International Office to the members of the Experts' Committee within maximum two months before the session of the Experts' Committee wherein the respective proposals are to be discussed about. The decisions of the Experts' Committee regarding the adoption of the amendments and completions following to be brought to the international classification shall be taken with the simple majority of the votes of the countries in the special Union. However, if the decisions result in the setting up of a new class or the transfer of products from one class to another, unanimity is mandatory. Every expert is entitled to vote by correspondence. In the case in which a member country did not appoint a representative in a certain session of the Experts' Committee, or if the appointed expert did not express his/her vote during the Session or in a period provided for by the procedural rules of the Experts' Committee, it is deemed that the respective country has accepted the decision made by the Experts' Committee*".

In Romania, the State Office for Inventions and Trademarks classifies the applications according to the 9th edition of the Locarno Classification, which comprises 32 classes[45].

---

[44] Published in the Official Gazette of Romania No. 95 of 15 May 1992, and republished in the Official Gazette of Romania No. 8 of 14 January 1994.

[45] At the web address: http:// oami.europa.eu/ows/rw/resource/documents/RCD/eurolocarno/eurolocarno

Romania adhered to the Locarno Arrangement on the international classification of drawings and patterns by Law No. 3/1998 on the adherence of Romania to the Arrangements instituting an international classification in the field of industrial property[46], despite the fact that it had enforced this classification ever since 1993.

As domestic doctrine also mentions, "*intellectual creation can hardly be constrained by territorial limits, as it naturally has an international vocation. Spiritual products of the human genius defy any barrier set in the way of free circulation, and modern means of information and communication favor such circulation. (...) Spiritual products must be protected outside the borders of the nation of their creator, when they are used in line with their vocation, on the territory of some other states (...)*".[47]

As regards the notion of drawing and pattern, it is necessary to add that, at international level, in this field, two notions are used, which have the same meaning, nevertheless, *i.e.*: in "common law", English-speaking countries, the term of "design" is used, while in French-speaking countries, the notion of "drawing and pattern" is in use, the latter case being also applicable to Romanian law.

As shown in the above, drawings and patterns are known both in our law, and in the law of other countries, under the name of "*applied art*" or "*ornamental creations*". Due to their complexity, in terms of destination and reproduction manner, they pertain to industrial property rights, whereas through the nature of the creative effort, they belong to copyrights .[48]

The historical origin of the right over drawings and patterns explains the ambiguous character of their current status, which, at the same time, pertains to copyrights and intellectual property rights, "*but still, this derivative of the right is today one of the most dynamic of all intellectual properties*."[49]

Drawings are a bi-dimensional creation, and are distinguished and differ from a pattern, which is a tri-dimensional creation.

This derivative of intellectual property is situated at the border between industrial property right and copyright, fact which has also given rise to the reasoning that: "*the aesthetic aspect of the drawings and patterns brings them closer to copyrights, while the utilitarian and technical side brings them closer to invention patents, while the manner in which they can be used sometimes assimilates them to trademarks*"[50] .

The need to harmonize the protection of intellectual property at the level of the European Union fostered the creation of special regulations; respectively they have laid the basis of a communion between European enactments, including as regards their applicability.

Thus, being based on Directive No. 98/71/CE of the European Parliament and Council of 13 October 1998 regarding the legal protection of industrial drawings and patterns, the Council Regulation (CE) No. 6/2002 of 12 December 2001 on Community drawings or patterns was issued, which is obligatory in all its elements, and is applied directly in all member states, thus ensuring a special legal protection for the creations in the field of industrial aesthetics to encourage individuals creators, favor innovation, the development of new products and investments in producing them, respectively "*a unified system for obtaining a Community drawing and pattern, to benefit from a uniform protection, which could produce uniform effects on the whole territory of the Community*".[51]

With a view to enforcing the provisions of Regulation (CE) No. 6/2002, the Commission Regulation (CE) No. 2245/2002 din 21.10.2002 was adopted.

[50] Andre Bertrand, *Marques et brevets dessins et modeles,* Belfond, Paris, 1995, page 20.

[51] Council Regulation (CE) No. 6/2002 of 12 December 2001, Art. 1.

These Regulations contain the necessary provisions for the development of the registration procedure for a Community drawing and pattern, and for the administration of the registered Community drawings and patterns, for the appeal procedure against the decisions of the Office, and for the procedure of cancelling a Community drawing and pattern, respectively a detailed identification of these procedures.

The Directive mentions that the Community drawing or pattern should answer, as much as possible, to the needs of all economic sectors of the Community and that, if the protection of the Community drawings and patterns was limited to the territory of the member states, even if the legislations of these states are similar or not, this would determine a possible segregation of the domestic market for the products which contain a drawing and pattern that makes the object of some internal rights held by various persons. If this happened, free circulation would be obstructed, an undesired fact in the opinion of the member states, and thus the creation of a Community drawing and pattern that was directly applicable in every member state with protection at Union level is absolutely mandatory, this being the only way in which, by presenting a unique application in front of the Office for harmonization within a domestic market, a unique procedure based on a unique legislation – only in this way is it possible to obtain the protection over a drawing and pattern on the territory of the Member States.

In the opinion of the French professor André Marie Lucas[52], "the main priority in the field of the protection of intellectual property for the member states should be represented by the harmonization of the definitions on such matters, at European level,, since, at the present moment, there is a problem in this respect, in the sense that definitions are not the same in all countries, and, therefore, when applying an international scheme, the product envisaged to be protected cannot find the same applicability, considering this situation. Thus, in order to be able to apply some international legislative norms at a domestic level, it is first needed to modify domestic legislative norms and only then can European legislation be enforced".

The edifying example given by the reputed French professor pertained precisely to the field of intellectual property, respectively the definition of copyrights. In Romania the author is believed to be the one who creates or realizes a piece of work, while in France, for instance, through the author of a film, for example, they do not understand to refer to the person who made the film, since, in this case, the person who made the film is the producer. Consequently, as Professor André Marie Lucas stated: "*the definition of copyright must be harmonized across the European Union*".

The protection of drawings and patterns is obtained for products from the most various of economic sectors, some of them with a shorter economic duration, and for which it is advantageous to obtain protection without going through all registration formalities, and for which the duration of such protection is not vital. On the other hand, there are sectors for which the registration is advantageous through the higher degree of legal certainty it offers, such sectors requesting the protection of drawings and patterns for a longer time, in accordance with the predictability of the life duration of the products on the market.

Conclusion

The main directions approached in the present study are: identifying common legal regulations regarding the protection of drawings and patterns in conventional law, identifying regulations regarding the protection of drawings and patterns in conventional law, as well as highlighting the importance of harmonizing national and international regulations in such a way that the same product can be protected in the same manner in any of the countries of the European Union and further away. The contemplated impact to be achieved by this study consists in the acknowledgement of the importance of legal regulations on the protection of drawings and patterns.

[52] Study presented within the „CKS - Challenges of the Knowledge Society", the 6-th edition organized by Nicolae Titulescu University in the period 11-12 May 2012.

For future research in the field of intellectual property, it would be recommended to approach a theme concerned with the contents of the right over drawings and patterns, both at domestic and worldwide level, which implies, however, intensive researches of the proposed theme.

COPYRIGHT PROTECTION FOR CREATIVE INDUSTRIES: COMPARISON AMONG CHINA AND EUROPE

CRISTINA ORTEGA NUERE[*]
SILVIA MARIA GONZÁLEZ[**]

Abstract
The impact and creativity has increase in the last years in Europe. It was focused by an United Nations report on creative economy in 2008 .Cooperation and trade in goods and services has increased. Today, the EU is the biggest destination for China's exports and the second supplier to China. For the EU, China is the second trading partner, after the United States.
Based on current agreements between the two continents, we can mention the following documents that justify our research: The bilateral issues and cooperation, including people-to-people exchanges in 2011[1]; EU-China Youth Policy Dialogue about education, culture and youth policies;[2] The EU-China high level people to people dialogue, celebrated in Chengdu, 2012.[3] EU-China Business Summit, which took place in September 2012, in Brussels.[4] The EU is committed to strengthening its partnership with China, as demonstrated by the fourteenth EU-China summit that took place in Beijing, 2012.[5] Also there are some forums and conferences that are relevant for our research such as, the EU- China high level cultural forum celebrated, in Brussels 2010;[6] Beijing in 2011; the Louvre in 2012,[7] and the China- EU Seminar on cultural and creative industries cooperation.[8]
The rights of intellectual property law are more vulnerable in the cultural and creative sector.For this reason, it is essential that we protect ideas and designs; they are the new creations and they need to be sheltered. In this article, we are going to explain what intellectual property (IP) law is, specifically copyright, and how it began to appears in China in order to understand the concept of copyright
To gather this information, we will discuss the copyright protection for creative industries in China. And we will do a brief comparison about the copyright protection for creative industries in EU, including legal mechanisms in EU that relates to China. The methodology is the investigation and examination of documentation and we will elaborate a diagnose to observe the main differences between the Chinese and European legislation.
In the end, we will summarize the previous material, and draw a conclusion.

Key words: *Creative industries, copyright, China, Europe, EU-China agreements*

Introduction

Few economic sectors have research as much economic potential in China and the EU as the cultural and creative industries. (CCIs) have over the past few years. China is leading Asia in the development of a creative economy. Its cultural sector contributes to 2.45% of Chinese GDP, rising 6.4% higher than the growth of the general economy. European CCIs are worth 2.6% of the EU´s GDP and generate 654 billion € in 2003, much more than the car manufacturing industry. [9] We can say that copyright in the creative markets is "the soul" of the creation to prevent plagiarism. It is the incentive for the creation. And it is for that, there is a local and global trade through the copyright mechanism, the piracy has a huge impact on these industries, and that is why copyright is a necessary tool to protect the profits of these industries. Europe believes that with the directives, regulations, rules, and normative that protects designs and copyright law, the piracy could decrease in a near future and the talent will rise again. [10]The European Union admits it has cost the creative industry over 185 billion Euros in employment alone in 2008, that's why the observatory of counterfeiting and piracy created in Europe has offered a competition called "hands off my design."[11]

This article will explain the impact of copyright law in the creative industries between China and the European Union and the opportunities for trade and exchange among both continents. The importance of this topic is on the agenda of many international organizations. (UNESCO,[12] WTO[13], UNCTAD[14], WIPO[15]). The procedure of the methodology consists in content analysis of the Chinese legislation and the main differences in the Chinese and European legislation concerning copyright in the creative and cultural industries. Also we will support the analysis in the main organizations and treaties that exist in both continents that are important for this topic. For example; The UNCTAD is his 2008 report on the creative economy has mention:

"It has the potential to generate income, jobs and export earnings while at the same time promoting social inclusion, cultural diversity and human development. This is what the emerging creative economy has already begun to do as a leading component of economic growth, employment, trade, innovation and social cohesion in most advanced economies. The creative economy also seems to be a feasible option for developing countries"[16] "

Policies must therefore be designed to support all forms of innovation, not only technological innovation. Specific approaches may also be needed for innovative services with high growth potential, particularly in the cultural and creative industries".[17][18]

[17] European Commission . Europe 2020 Flagship Initiative Innovation Union, Brussels, 6.10.2010, COM (2010) 546 final. 2010.18.

Is the role of copyright important for the development and exchange in the creative and cultural industries (ICC)?

In April 2012, the commission has written a report "policy handbook"[19] in which notes the importance that creative and cultural industries have in the world economy. It says: "Cultural and creative industries are in a strategic position to promote smart, sustainable and inclusive growth in all EU regions and cities, and thus contribute fully to the Europe 2020 Strategy, which is the EU's growth strategy for the coming decade".[20]

The copyright has experienced a process of harmonization worldwide through the Berne Convention, which is now coordinated by WIPO that negotiates with international treaties. For example; the diplomatic conference on the protection of audiovisual performances, in 2011.[21]

China has developed his copyright system since the adhesion of the WIPO in 1980. Currently, China is leading the market. In the last two parts of this paper we will explain the importance of the creative industries in China and Europe and why copyright is so important for both in the commerce. China is as potential future second worldwide in 2017[22], it will be very important for trade and development of creative industries. China has moved to design in china to create in China, and there are many opportunities for business between China and Europe.[2324]

Creating opportunities in the creative industries sector between China and Europe:

Copyright is a part of intellectual property (IP) law. Intellectual property law refers to some of the rights related to ideas and innovations. Most countries agree that some inventions and creative works must be protected in a legal form. This is because the vast majority of workers and owners should be entitled to receive some benefit from the fruits of their labor. If they are guaranteed protection, they maintain incentives to innovate, otherwise creativity is discouraged. For this reason, IP law is divided into two big branches, industrial property and *copyright*.25

Since the adhesion of the P.R China to the World Intellectual Property Organization (WIPO) in 1980 and the entry in the World Trade Organization (WTO) in 2001, the protection of intellectual property rights (IPR) has been an issue of rising importance for new legislation.26Also the Agreement on Trade Related Intellectual Property Rights 1994 (TRIPS) and the Berne Convention on Literary and Artistic Works of 1886 has helped china to increase the cooperation abroad.[2728]

---

[18] We remember the creative industries concept. The world cultural industry refers to those industries that combine the creation, production and marketing of creative content that is tangible and cultural by nature. These contents are usually protected by copyright, and may take the form of a good or service. The ideas and designs need to be sheltered; it is for that the copyright concept is important for this industry. We can mention the UNESCO : Understanding creative Industries report: pp 3. http://portal.unesco.org/culture/es/files/30297/11942616973cultural_stat_EN.pdf/cultural_stat_EN.pdf

Trade in copyright between the P.R China and other countries are increasing rapidly and therefore require protection on both national and international levels. With the international trade in copyright growing at an annual rate of 50% during the period between 1994 and 1999 and continuing to grow, copyright protection requires new legislation to keep up with technical developments, such as through the use of the internet. In spite of the described development, Chinese Copyright Law (hereinafter *CCL*) was amended in October 2001 for the first time. The revision mainly incorporated the necessary changes due to the accession of the PRC to the WTO and the requirements of the Accession Protocol.

In Feb. 2010, *CCL* was revised for the second time and went into effect on Apr.1, 2010. Notably, the amendment to Article 4 contained in the *CCL* (2nd Revision) was adopted primarily in response to recent findings by a WTO panel that China's denial of copyright protection of certain censored works was inconsistent with its TRIPs Agreement obligations.[29] Copyright protection is now extended to all "works," without regard to restrictions on publication and distribution that are imposed by PRC authorities under other laws and regulations (these restrictions are unaffected by the amendments).

In 2006, the council of international Affairs and External Relations in Brussels, (Council 2771), had begun searching solutions of global problems and China played a key role, The EU and China have important commitments and responsibilities whose base is the United Nations.

The Council welcomes the agreement reached in September 2006 to set up negotiations with China as a Partnership and they have signed a cooperation Agreement. This agreement began to cover all aspects of bilateral relations, including the strengthening of the agreements between the two continents, supports dialogue, cooperation and integration in East Asia considering that this agreement could promote stability and prosperity and that will lead to further progress towards resolving territorial disputes in the region. The cooperation with China aimed at strengthening stability in East Asia, including through multilateral mechanisms such as the Regional Forum of the Association of Southeast Asian Nations (ASEAN) and the Asia-Europe Meeting (ASEM), and the role of China as a country host the seventh summit ASEM7. On that date the Council recognizes that trade and economic relations are an increasingly important element between the EU and China. It is very probable that the extraordinary growth of exports, imports and Chinese investment in recent years continue to occur in the immediate future. This represents both a challenge and an opportunity. The challenge for the EU, and for China, is to manage and deepen relationships on a sustainable, predictable, and balanced. The best way to overcome this challenge is the association, through cooperation and common standards and mutual agreements.

Currently, in the creative industries sector China and Europe has signed so many action plans in 2012. For example: EU-China Youth Policy Dialogue in Chengdu, 23 of February of 2012[30]. Furthermore, China and Europe has agreed an EU-China high-level people-to-people dialogue in 2012, in Beijing[31]. EU diplomatic relations with China were established in 1975 and are governed by the 1985.[32] On the other hand, EU-China trade and cooperation agreement and seven other legally binding agreements were reached on those years. China has emerged as the world's third economy,

after the EU and the US, the biggest exporter in the global economy, and an increasingly important political power. EU-China trade has risen dramatically in the last decades. The EU remains China's biggest trading partner while China is now close to becoming the EU's largest trading partner as well.[33]

Also, on December 19, 2012, China-Central and Eastern Europe Cooperation Secretariat held its annual meeting in Diaoyutai State Guesthouse in Beijing. At the meeting, progress that has been made in cooperation between China and Central and Eastern European countries was reviewed and plans made for the Secretariat's work in 2013.[34].

We have to mention as well that Europe and China has signed in 2012 many cultural agreements and forums and seminars in which copyright has a relevant part. For example, the "High level cultural forum" and 3rd edition that took place in Beijing in November to cooperate in culture.[35]

The history and prospect of China's Copyright Law

Since the late 1980's China has taken major steps in the legislation improving its copyright law. The Chinese desire to open their doors to trade in order to encourage foreign direct investment.

There was no copyright norm in Chinese feudal history. Copyright was a purely western concept that was introduced in China in the 20th century under pressure from the western countries. On the other hand, the concept of copyright is contrary to the Chinese and Confucius culture, and is contradictory with the Marxist socialist ideology.36 Chinese law always encourages the society over the interests of individuals.

China has one of the most distinct and deep philosophies, which is essentially contradictory with the notion of copyrights.37. History indicates that China was ahead of Europe when it came to printing techniques that had been invented in the middle of the 11th century. China has an incredible traditional culture, and Confucianism was so basic to feudal Chinese philosophy and social conduct that is almost contradictory to the notion of copyright.

"As a legal concept, copyright seems even less attuned to the Chinese concept of law with its reluctance to rely upon rigid codification and abhorrence of litigation. The traditional Chinese conception of law is so different from the western concept that it has often been described as a rejection of the idea of law ".38

Confucianism always believes in the concepts of equality and individuality, and provides a basic premise for claiming copyright. Confucianism believed that past experiences were indispensable for personal moral growth. Confucius said: "I transmit rather than create, I believe and I love the ancients."[39] He believed that intellectual knowledge, as a whole, was the common heritage of all Chinese. They monopolized authority based on the wisdom of the past, spent time on literature, and tried to express them through art.

In China, the protection of printers, publishers and authors on occasions by means of official prohibitions had remained unchanged for more than eight hundred years, although in the Ming Dynasty this form of protection seems to have been suspended for some time. Neither written law for the protection of copyright nor clauses in statute law have been discovered. 40. By the 17th and 18th centuries, with the European industrial revolution, Europe had begun to develop a concept of copyright. Nevertheless, as early *as 800 years ago China had some definitive notions regarding the idea of copyright or, intellectual property.* The stamp, first appearing between the years 1190 to 1194 would read: this book was published and distributed by the Cheng Family of Meishan, *any reproduction without permission is forbidden.* The notice is strikingly similar to the modern copyright notice --© "All rights reserved". The question might still be raised, then: why has there been no copyright law in China for such a long time? [41] When the west pressured China to open its doors to trade, they had to make special concessions and foreigners were permitted to live in Guangdong and Macao to do business with licensed Chinese intermediaries, known as the Hong. 42 After the Opium War (1839-1842) the social contradictions and conflicts with China became more intense. Prior to the opium war, there was a little foreign investment in China and trade was confined to items, such as opium, tea, raw silk, sold as bulk commodities instead of under brand names. 43

In the second half of the 19th century, the western economic involvement in China expanded. At the same time, the infringements of intellectual property, such as foreign trade names and trademarks began to work. 44 To protect the interest of foreigners, the Qing government commenced a series of negotiations regarding protection of copyright. China did not have universal national laws to deal with the problem of copyright infringement. So, as China began to industrialize, they also began to duplicate the copyrighted works of foreigners. China did not provide any legal protection for copyrights until 1910. In 1928, the KMT government promulgated its first copyright law. In 1949, the People's Republic of China was founded.45 The copyright law changed and the nation had been influenced by the Mao ideology, and the creation of literature and art had to serve the overall social interest. *46*. During the Cultural Revolution, (1967-1977) China made no progress at all in improving its copyright scheme. On the contrary, many aspects of copyright protection regressed considerably. Almost all kinds of what the west would consider creative literature were regarded as bourgeois liberalism and restricted from publication and dissemination.47 From 1979 to 1985, the administration responsible for publication drafted a succession of administrative regulations with respect to copyright protection. The interim provisions declared by the Ministry of Radio and Television in 1982 also emphasized that the rights of authors, performers and audio-radio recorders would be protected in effective ways. The copyright law in 1990 was promulgated and after these regulations they created the protection of computer software. The law is enacted according to the Chinese Constitution with the aim to protect the copyright of the authors and the creative workers, as

inventors or designers in their literary, artistic and/or scientific works related with the copyright, in order to encourage them to continue to innovate and develop a better world. 48

Understanding Chinese copyright. Definition and analysis.

Copyright is defined as the personal right and property right legally enjoyed by authors and creators of literary, artistic and scientific works. This law stipulates that the copyright includes two categories; spiritual right and economic right.49

Art. 6 of the *CCL* provide that copyright arises at the date when creation of the work is complete. Para. 2 and 3, Art 21 provide that the term copyright of a work owned by an employer, or the copyright in a film, television broadcast, photograph, video or sound recording is 50 years from the date of publication. If the author is the owner of the copyright, the term is the life-time of the author plus 50 years after his death, in the case of published work. According to para. 1, Art. 2, foreign works receive the same treatment as works created by Chinese persons and entities. Any work of a foreigner or stateless person published for the first time and within the territory of China shall enjoy copyright in accordance with this Law. (See para. 2-4, Art. 2, *CCL*). Art. 8 of the Implementing Regulations of the Copyright Law of the People's Republic of China (*hereinafter Implementing Regulation*) also provides that where works of foreigners or stateless persons are first published outside the territory of China and then, within thirty days, published in the territory of China, the works shall be deemed to have been simultaneously published in the territory of China., but the moral rights will be perpetual.50.

Copyright Object, Subject and Content

Works are the result of intellectual creation in the literary, artistic, and scientific fields and may be reproduced in a material form in accordance with Art. 2 of *CCL* and the *Implementing Regulation* formulated by the state council in 2002. They have to follow three requirements:

- They should be the expression of ideas and feelings.
- They should be original
- They should be able to be reproduced in a material form.

The subject of the copyright enjoys the rights and bears the obligations of the copyright. It has three categories: includes the natural person, legal entity or other organizations that create the works: the authors. Second category includes the natural person, legal entities or other organizations, besides the author, who enjoy the copyright. The third category includes the natural person, legal entity or other organizations that is entitled to the copyright by trust contract or service the contract.

The object of the copyright refers to literary, artistic, and scientific works protected by copyright law.

---

[48] Copyright Law of the People's Republic of China" (Revised in 2010) UPDATED: June 1, 2010 NO. 20 MAY 20, 2010. Accesed December 12, 2012. http://www.bjreview.com.cn/document/txt/2010-06/01/content_275779.htm

Adopted in the 15th meeting of the Standing Committee of the Seventh National People's Congress on September 7, 1990 and revised in the 24th meeting of the Standing Committee of the Ninth National People's Congress on October 27, 2001 in accordance with the Decision on Revision of the Copyright Law of the People's Republic of China for the first time and in the 13th meeting of the Standing Committee of the 11th National People's Congress of the People's Republic of China on February 26, 2010 in accordance with the Decision on Revision of the Copyright Law of the People's Republic of China for the second time.

[49] "China law guideline in protection of intellectual property rights." China Council For the Promotion of International Trade Law Department (China market press. 2006). 1.

[50] Zhang, Yuwing and Gebhard Inmanuel. Chinese intellectual property law. Comparative cases studies part 2. Department of Treaty and Law. Ministry of commerce PRC advisory service to the legal reform is china. Volume V. (1997). 113.

What is protected?

The legal term work is defined in Art. 2 of the *Implementing Regulation* as an intellectual creation which is in the field of literature, arts or science, displays originality and is capable of reproduction in a certain tangible form

Art. 3 of *CCL* supplemented by Art. 4 of the *Implementing Regulation* identifies particular categories of works as including:51 Literary works; Oral works; Musical, dramatic and choreographic works; Acrobatic works; Works of fine arts and architecture; Photographic and cinematographic works; Graphic works and software works.

Copyright Limitations

The Chinese Copyright Law imposes two limitations on the exercise of copyright by its owner, namely fair use and statutory license Fair Use Consistent with the Copyright Law 2001, 12 kinds of fair uses have been identified(Art.22, CCL). As a civil law country, *CCL* provides detailed circumstances for "fair use" in legislation, and the court may exercise the interpretation rights only according to the specific circumstances set forth in *CCL* and cannot rule "fair use" under other circumstances beyond the scope set by *CCL*.

Statutory License .The statutory license includes that where the copyright owner has not declared that the work concerned is forbidden to be exploited by others, a newspaper or periodical may reprint or print an abstract of the work which was published in another newspaper or periodical (see Para.2, Art.33,CCL), and work published may also be exploited for public performance or for the production of a sound recording, video recording, radio program or television program; but subject to the payment of remuneration (see Art.37,40&43,CCL).

Related Rights China's Copyright Law protects not only works by traditional copyright (author's right), but also subject matters other than works by "related rights". Related rights mean "rights and interests related to copyright". According to Art.26 of *Implementing Regulation*, the so called "rights and interests related to copyright", as mentioned in China's Copyright Law (see Art.1) and these regulations mean the rights enjoyed by publishers in the typographical arrangements of their books or periodicals published, the rights enjoyed by performers in their performances, the rights enjoyed by producers of sound recordings and video recordings in their sound recordings and video recordings and the rights enjoyed by radio and television stations in their broadcast radio or television programs. (Art 34, 36, 38 CCL).

Copyright Infringement and Enforcement

Chinese Copyright Law enumerates acts of infringement in Art. 47 and 48. According to Item (1) to (11), Art. 47 of *CCL*, one who commits any of the following acts of infringement shall bear the civil liability for such remedies as ceasing the infringing act, eliminating the effects of the act, making a public apology, or paying compensation for damages, depending on the circumstances. The copyright administrative departments under the local governments shall be responsible for investigating and handling infringements of copyright, with prejudice of the social and public interests, as enumerated in Article 47 of the Copyright Law. The copyright administrative department under the State Council may investigate and handle copyright infringements that are of nationwide influence (Art. 37, *the Implementing Regulation*).

According to Item (1) to (8), the Art. 48 of CCL says: one who commits any of the following acts of infringement shall bear the civil liability for such remedies as ceasing the infringements, eliminating the effects of the act, making a public apology, or paying compensation for damages, depending on the circumstances; where he damages public interests at the same time, the copyright administration department may order him to cease the act of tort, may confiscate his illegal gains, confiscate and destroy the reproductions of infringement, and impose a fine on him; if the case is

[51] Yuwing ,Zhang; Gebhardt, Inmanuel.Author: Chinese intellectual property law. Comparative cases studies part 2. Department of treaty and law. Ministry of commerce PRC advisory service to the legal reform is china. Volume V. (1997). 104-105

serious, the copyright administration department may also confiscate the materials, instruments, equipment, etc. mainly used to make the reproductions of infringement; where his act has constituted a crime, he shall be investigated for criminal liabilities in accordance with the law.

Copyright enforcement

Protection against copyright infringements and the enforcement of copyrights may still prove to be a difficult task in the PRC. However, the situation changed when China entered the WTO. Copyright can be enforced by administrative or judicial means.

Administrative Action

With respect to the infringement of copyright, with prejudice of the social and public interests, as enumerated in Article 47 of the Copyright Law, the copyright administrative departments may impose a fine not exceeding three times the amount of the illegal business turnover. When it is difficult to calculate the amount of illegal business turnover, it may impose a fine of no more than RMB 100,000 Yuan (Art. 36, *the Implementing Regulation*).

Judicial Enforcement

According to Art 55 of *CCL,* a dispute over copyright may be settled by mediation or be submitted for arbitration to a copyright arbitration institution under a written arbitration agreement concluded between the parties concerned, or under the arbitration clause in the copyright contract. In fact, the copyright infringement disputes shall be settled via mediation. If the mediation fails, it should be submitted to the court. Also, in the copyright contract disputes, it must be sent to the arbitration organization (designated in the clauses of the contract). In the case of no clauses or arbitration agreement, the concerned party goes directly to the court.52. The courts in China are divided into basic courts, Intermediate Courts, High Courts and the Supreme Court. The court where the initial dispute is brought is known as the court of first instance, while the appellate court is known as the second instance court. This appellate system is similar to that which is in place in the United States. In major metropolitan areas, the intermediate court will be the court of first instance for many of the intellectual property cases. Jurisdictions in major metropolitan areas, such as Beijing, Shanghai and Guangzhou handle the majority of intellectual property cases. Because of this specialized capability and the associated protection existing largely only in major metropolitan areas, there should be a heightened awareness among companies in China with regard to where they bring claims in Chinese courts. Venue, as such, becomes a very important issue when litigating intellectual property claims in China

Creative industries in China

What is the first idea that comes to mind when someone asks us about the creative industries? What can we understand about this? Are Cultural industries the same as creative industries? According to UNESCO, culture must be considered to be the distinct spiritual, material, intellectual, and effective identity that characterizes a society or social group and encompasses, in addition to literature and art, lifestyles, the way to live together, value systems, traditions, and beliefs. The term cultural industries concern those industries that merge the creation, the production, and the commercialization of creative contents which are cultural by nature. All of these contents and designs are protected by copyright and they can take the form of a good or a service. (These industries normally include printing, publishing, multimedia, audiovisual, phonographic and cinema, crafts, and design). However, the creative industries are involved with more activities than the cultural industries. This includes architecture and advertising, so, in general, creative industries are those that have an artistic and creative element.

Chinese government has banned an official definition that differentiates core peripheral and culture related industries. (10th five-year plan, 2002). However, this exists with other classifications developed by large cities, such as Beijing and Shanghai.

[52] China law guideline in protection of intellectual property rights. China market press. 2006.6

Inside the cultural industries there are many associations that were created to transmit ideas and create initiatives. Also, they want to unify their rights and have more power in their decisions. Of the categories that we can frame in art are the following: Architecture, customs and traditions, theater, music, literature, visual arts, dance, crafts, audiovisual, multimedia and digital culture.

Chinese and European cultural and creative industries are important sectors (they contribute 2.45% and 3% to the Chinese and EU GDP's, respectively), and account for a growing portion of trade between the two zones. Europe and China are important partners and their cultural exchanges are still to be fully developed. In this table we can check the different contributions to each economy:[5354]

Figure 1. GDP in EU and China

Economic data	EU	China
Turnover	More than € 654 billion in 2003	€ 47.6 billion in 2006
Value added to GDP	2.6% of EU GDP in 2003	2.45% of GDP in 2006
Employment	In 2004, almost 6 million people were employed = 3.1% of total employed population in EU27	In 2006, 11.32 million employed = 1.48% of total employed population
Trade	The export of cultural services from the EU 27 to China has increased, growing from € 31 million in 2004 to € 49 million (+58%)	China has become the third largest exporter (€ 3.7 billion) and the sixth largest importer (€ 2.2 billion) of cultural goods in the world in 2005
Contribution to growth	12.3% higher than growth of the general economy	6.4% higher than growth of the general economy

Source: Creative industries working paper.2012

Over 70% of total exports of cultural products are produced by foreign-funded enterprises. The cultural exports from the U.S., EU, and Hong Kong account for more than 85% of China's export of cultural products, with the share from the Guangdong province accounting for over 70%. Of China's total exports of cultural products, 50% are videogames, 30% are sculpture and visual arts products, while exports of products with real Chinese content account for no more than 15%10**.** [55]

Currently, the added value of China's cultural industry has increased 25.8% and now represents 2.75% of GDP, as counted by the National Bureau of Statistics. The Minister of Culture expects this to represent 5% of the GDP, as this trend continues to rise. A more detailed review of events shows that profits in sectors, such as-film, exceed 1,600 billion. Another business in design, digital animation, architecture and performing arts continues to grow, to the extent that the bank of China has supported the creation of capital funds and successful companies to take public stock market.[56]

Currently, as is being developed jointly by the General Office of CPC Central Committee and the General Office of the State Council, the reform plan of China cultural development for the period between 2011 and 2015, defines the development of cultural industry how to make it a pillar in the global economy. Also, China will intensify the union between effective copyright enforcement

administrative and judicial protection, stop the different kinds of infringement and piracy actions and raise the awareness of the whole society in copyright protection. Lastly, the country will develop other industries relevant to copyrights.

What is the main purpose of the legislation? Releasing the potential of the creative industries in Europe

The European Competitiveness Report, dated in 2010, told: "Innovation and competitiveness in the creative industries" as one of the four factors that determine the competitiveness of the EU in world market".[57] The ICC´s are innovative and they are catalysts for innovation.[58] In conclusion, the EC has defined SCC sector as one of the key sectors of the new European Agenda 2020:

"We must strengthen the potential for growth and innovation in the creative industries, we must take action"[59].

Thousand of designs, pictures, and photographs are copied and when the plagiarism is discovered, their company's designers, and the company itself, lose their prestige and credibility. We need to protect the talent, so the European Union (EU) decided to create a regulation and law that could protect the inventions and the drawings of the designers and artists.

Attempts to harmonize copyright law in Europe can be dated back to the signature of the Berne Convention for the Protection of Literary and Artistic Works of September 9, 1886. All Member States of the European Union are signatories to the Berne Convention, and compliance with its provisions is now mandatory before accession. The first important step taken by the European Economic Community (EEC) to harmonize copyright laws came with the decision to apply the common standard for copyright protection of computer programs, enacted in the directive on computer programs in 1991. A common term of copyright protection, 70 years after the death of the author, was established in 1993 as the duration of the Copyright Directive.

The application of the directives on copyright has been rather more controversial than many other subjects, as shown by the six trials for non-transposition of the Copyright Directive. Traditionally, copyright laws vary considerably among Member States, especially among common law jurisdictions (Cyprus, Ireland, Malta and the UK) and civil law countries. Changes in copyright law have also become linked to the protests against the WTO and globalization in general.

The main treaties concerning copyright and relative rights are as follows:

- Berne Convention for the Protection of Literary and Artistic Works (WIPO)
- Rome Convention for the Protection of Performers, Producers of Phonograms and Broadcasting Organizations
- Agreement on Trade-Related Intellectual Property Rights (WTO)
- WIPO Copyright Treaty (WIPO)
- WIPO Performers and Phonograms Treaty (WIPO)

The European copyright law is based in the following directives:

- COUNCIL DIRECTIVE 93/83/EEC OF 27 SEPTEMBER 1993 on the coordination of certain rules concerning copyright and rights related to copyright in the field of satellite broadcasting and cable retransmission. Transposed into Spanish law by Law 28/1995, which is now part of the IPL.

- DIRECTIVE 96/9/EC OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL OF 11 MARCH 1996 on the legal protection of databases. The term of protection of this right "sui generis" is 15 years.

- DIRECTIVE 2000/31/EC OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL OF JUNE 8, 2000 on certain legal aspects of the services of the information society, in particular electronic commerce in the internal market.

- DIRECTIVE 2001/29/EC OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL OF 22 MAY 2001[60] on the harmonization of certain aspects of copyright and rights related to copyright in the information society. Confers on authors the right to authorize public communication and distribution in all its forms.

- DIRECTIVE 2001/84/EC OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL OF 27 SEPTEMBER 2001 on the right for the benefit of the author of an original artwork. Establishes an inalienable right, the author of original artwork to participate in certain percentages in resales involving art market professionals.

- DIRECTIVE 2004/48/EC OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL OF 29 APRIL 2004. This directive requires member states to take specific procedural measures to ensure the possibility of obtaining evidence (for example; distribution networks of illegal products) and the efficiency of judicial decisions (interim measures), and determine the scope of compensation.

- DIRECTIVE 2006/115/EC OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL OF 12 DECEMBER 2006 on rental right and lending right and certain rights related to copyright in the field of IP. Recognizes rights of performers, phonogram producers and film and broadcasting.

- DIRECTIVE 2006/116/EC OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL OF 12 DECEMBER 2006 concerning the term of protection of copyright and related rights. Amended by Directive 2011/77/EU, the European Parliament and the Council of 27 September 2011, cited below.

- DIRECTIVE 2009/24/EC OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL OF 23 APRIL 2009 on the legal protection of computer programs. Establishes the obligation to protect computer programs as literary works, with a minimum of 70 years harmonized protection.

- 2011/77/EU DIRECTIVE OF 27 SEPTEMBER, THE EUROPEAN PARLIAMENT AND OF THE COUNCIL amending Directive 2006/116/EC of 12 December on the term of protection of copyright and certain related rights. Extend the term of protection of the rights of performers, and sound recordings from 50 to 70 years after the death of the owner or the date of posting.[61]

There are important differences from country to country in the Europe. We do not have enough time to analyze in this paper more deeply to observe the heterogeneity of the legislation between European countries. The main difference among them is the manner in which moral rights and economic rights under copyright are interpreted in relation to each other, with important

[60] "Directive 2001/29/EC of the European Parliament and of the Council of 22 May 2001 on the harmonization of certain aspects of copyright and related rights in the information society **".** Official Journal L 167 , 22/06/2001 P. 0010 – 0019. Accessed January 25, 2013.

consequences for alienability and its limits in the fields of both moral rights and economic rights.[626364]

The European Union believes it has cost the creative industry over 185 billion Euros in employment alone in 2008, that's why the observatory of counterfeiting and piracy created in Europe has offered a competition called "hands off my design."[65]

Main treaties and mechanism related with China copyright legislation

To comply with the topic of this paper, it is not necessary to discuss in detail the EU copyright law, so this paper will focus on the main difference with China and how the system works there in general.

Very few economic sectors have revealed as much economic potential in China and the EU as the cultural and creative industries (CCIs) have over the past few years. China is leading Asia in the development of a creative economy. Its cultural sector records € 50.32 billion of value added, contributes to 2.45% of Chinese GDP, registering growth 6.4% higher than growth of the general economy. European CCIs are worth 2.6% of the EU's GDP and generate a turnover of more than € 654 billion (2003), much more than that generated by the car manufacturing industry (€ 271 billion in 2001) and by that of the ICT manufacturers (€ 541 billion in 2003).

There is no law that can protect an idea which has not yet been expressed. Hence, copyright does not protect ideas. In Europe and Spain, Copyright is a legal concept describing *rights given to creators* for their literary and artistic works, which include books, music, works of fine art, such as paintings and sculpture, as well as technology-based works, such as computer programs and electronic databases. *A work does not need to be published or 'made available to the public' to be protected***.** It is protected from its creation.

Culture also contributes to social cohesion. The development of cultural and creative industries is intrinsically linked with brand strategies. Copyright in Europe provides not only the same economic rights as those in China, but also they include the same moral rights as in China, including:

- ✧ *the right of paternity* (the right to claim authorship of the work); and
- ✧ *the right of integrity* (the right to object to any distortion, mutilation, modification, or other derogatory action in relation to the said work, which would be prejudicial to the author's honour or reputation).[66]

There is no better way to demonstrate the power of the publisher over the intellectual property under his control than to provide examples of how the unscrupulous use of it can deprive creative workers of their fair rewards.

What we can conclude about the economical aspects in the cultural and creative industries in Europe?

Value Added to EU -GDP.

We can observe in the graph that Chinese CCI is one of the most important sectors that add GDP to the country. European CCIs (Cultural and Creative Services) are equal in value to (or simply "are equal to") 2.6% of the EU's GDP, and produce a turnover of € 654 billion (2003), much more than that which is produced by the car manufacturing industry (271 billion66 in 2001**)** and by ICT manufacturers (€ 541 billion in 2003)[67]. Overall, the growth of CCIs in 1999-2003 was 12.3% higher than the growth of the general economy[68]. Almost five million people work in the cultural sector (2005), or 2.4% of the active population in the EU27[69] (6 million if we include people working in cultural tourism[70]).

However, Europe and China ensure their full development in particular through a better use of IP. The economic overview still needs to improve:

- Developing statistics and collaborating more with each other,
- Collecting data, especially cultural and creative SMEs.
- The spilling over effect - for example on tourism or ICT, new devices for cultural, such music or videos.

In some cultural aspects, China and Europe's creative industries suffer the same problems as those in the U.S., domination and oligopolistic behaviours. Also, they suffer piracy.[71] 30% of books

[71] Pricewaterhousecoopers, global Entertainment and media Outlook 2009-2013- Accessed January 27, 2013. http://www.pwc.es/en_ES/es/sectores/entretenimiento-medios/gemo/assets/informe-gemo-09-13.pdf

sales are pirated and 95% of CDs are of pirate origin. In Europe, it is estimated that piracy will cost 1.2 billion jobs and 240 € billion in lost profits by 2015.In Europe, small and medium size companies are 99% of the total enterprise and provide one third of the employment. On the other hand, architects tend to be self employed. They need to take more risk and invest in talent.

In Beijing, Shangai and Shenzen, local authorities that exist under the municipal government comply with laws and regulations that affect banks, tax, and copyright rules. The local government collaborates with the creative industry leadership groups for the big projects.

The national government applies the different rules and laws and the different administrative measurements. The state administration of radio, TV, and film has the role of planning, legislating, and supervising the audiovisual sectors. They also act as agents, because GAPP manages the state owned publishing companies. GAPP also approves publication licenses for periodicals, books, and music. [72] China has to focus more on the international cultural impact via the creation of a platform of cooperation. Also, they have to export more cultural products that are created in China and not just made/manufactured/produced in China. They have to reinforce domestic brands and cultural companies. Chinese industry has another problem; some people do not want to convert cultural industries into businesses and profit making companies.

Globalization and Europe are becoming closer everyday, mixing and generating new expressions and lifestyles. Digital networks become a perfect cultural space. Chinese Statistical Bureau and Culture Bureau with Eurostat should consider a joint development project. [7374]The public sector provides notably to the cultural and creative activities, but its contribution is difficult to grasp. It has an impact via public funds[75], but also through reducing VAT, or by giving fiscal advantages to attract private donations and sponsorship.[76] The overall economic and social weight of the cultural and creative sectors is, however, largely underestimated.

What can do copyright for China and Europe.

Right now, we have an idea of how we can relate the copyright and the Chinese creative industries and why it is so important for these kinds of companies. The copyright is not only important for the license, but it is really significant for those companies that always generate profits using designs and those in which the first product or service made is the original one, and the core of the company. We are going to explain and demonstrate why copyright is so important for the creative industries.

First of all, we can check which kind of companies inside the creative industries contributes more to the GDP. As we can see in the graphic, the press and literature in China contributes 40% to the GDP, afterwards comes the visual and cinema industry with a total of 23%, and in third place, we have radio and television contributing 12%.

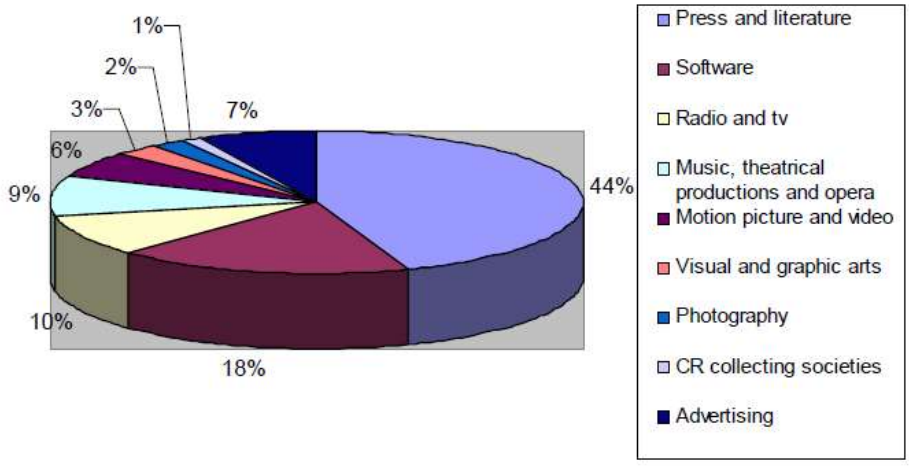
Source: Source: WIPO.Nantong, China, January 13-14, 2011

Figure 3. Contribution to employment by Industry



Source: WIPO.Nantong, China, January 13-14, 2011

By looking at the above charts, we can analyze that 44% of employment belongs to the press and literature sector, while 18% belongs to the visual and graphic arts industry, and in the third place comes radio and TV. We can check to make sure that this coincides with the previous graphic showing the GDP.[77]

Thanks to copyright tool, we can control the exploitation of the product on the market. Without this tool to protect inventions, all findings would be copied when sold on the market. When it comes to musical performances, choreography, and theatre, this is very important, because the first

[77] Gantchev, Dimiter. The role of the copyright in the creative industries. WIPO:China. 2011.21-32

showing, their work would lose its value because other competitors would have no fear of copying it without any scruple. Intellectual property law encourages creators and designers and is an incentive to create. The creator not only designs to commercialize his work, but often times is not even thinking about the profits, but rather thinking that his work will make history, and this must be protected. Therefore, many times it is for the act of pure innovation, rather than thinking solely for profit**.** [787980]

The creative industries are, therefore, not only economically valuable, but also function as a catalyst and provider of intangible value in other ways to the organizational processes, relationships, and dynamic and diverse economic sectors. These industries range from something as simple as designing clothing using local knowledge to something as complex and cutting edge as computer chips in Silicon Valley. In the creative economy, industry and services are increasingly merging. As mentioned by Pernille Askerud, to analyze the Asian situation: Increasingly, the cultural industry and information concerned new sectors of production and distribution (for example, production in Beijing or creative clusters entertainment in Shanghai.)[81]

We have to remember Ramanathan and the politics consideration about the document of the PCC in 2002 that said:" we have to improve the socialist culture and attend the spiritual and cultural needs under the conditions of a market economy."[82]

Nowadays, UNESCO in an article tries to make us understand that for example, Hong Kong,(Special Administrative Region of China), and Singapore, have been rising in analyzing the creative industries sector in an effort to keep their economic dynamism. Both cities have produced detailed studies; for example, a study on Creativity Index, Hong Kong and Economic Contributions of Singapore's Creative Industries, of the role and scale of the creative economy, largely adopting the analytical models developed in the UK and adapting them to take account of their local specificities. Shanghai, the most high-profile of China's more rapidly modernizing cities, is well aware of the potential of the creative industries for economic growth and in 2006 planned to initiate a comprehensive city and district mapping exercise upon which future policy decisions will be based. Furthermore, Shanghai's Creative Industry Centre is currently conducting research in cooperation with the Shanghai Intellectual Property Administration into the creative industries sector as well as a research project on how to make full use of IPRs to promote the growth of creative industries. In order to harness the opportunities offered by the creative industries, governments first need to undertake thorough mapping and statistical research to better understand them.[83]

The Agreement on Aspects of Intellectual Property Rights Related to Trade (TRIPs Agreement) may promote a significant increase in the level of protection and enforcement of intellectual property rights in developing countries. The critical issue for the cultural and creative industries is that of the copyright and related rights, especially the need to increase national law copyright and institutions. The absence of collecting societies in many developing countries is a crucial problem. The issue of protection of traditional knowledge related to cultural expressions and folklore has not yet received much attention. It is expected that loopholes in the IPR regimes will be fixed internationally by the World Intellectual Property Organization (WIPO). The Development

[83] Art. UNESCO.Understanding Creative Industries Cultural statistics for public-policy making.7-8

Agenda of WIPO should review the issues of IPRs to assure the interest of developing countries development issues related to intellectual property rights.[84]

Copyright is a'bundle'of exclusive rights awarded by law to the authors of literary, artistic or musical works for a limited duration of time. Copyright protects the original expression of idea with the "soul"

Copyright law guarantees that the owner has the right to control the use of his work.

Copyright allows receiving remuneration for using the works (see Para.2, Art. 10, *CCL*)

We can define copyright as a set of economic and moral rights given to the authors to control the use of their works. It is a financial mechanism to compensate creators that is also the basic pillar for these kinds of industries and multinationals. We can say that copyright is in the creative markets in which the demand of these markets has specific characteristics, such as unpredictable consumption. There is a local and global trade through the copyright mechanism, they are income dependant and piracy has a huge impact on these industries, and that is why copyright is a necessary tool to protect the profits of these industries.

Besides, there are some problems that a creative industry has when one tries to enter into the market, some examples being low entry barriers, high fixed cost for creation and the low marginal cost of delivery, excess of supply, and the uncertainty of distribution of the products to the final customer. Likewise, the different products are a handicap, because they increase the cost in the production. They cannot generate economies of scale. [85]

Conclusion

As a conclusion, we can say that the culture and the new Communications marketing is so important nowadays, but how can they project the new inventions, the new culture, and creations, without losing Chinese culture, or how can they innovate and develop a country without taking the risk of losing its culture and traditions? Through the legislation and copyright, the folklore is an issue that also needs be protected and is still not really researched.

China is developing its relationship with the rest of the world really fast. China has undergone historic changes. As a new, emerging nation, it will stay unswervingly on the road of peaceful development and unflinchingly implement the opening-up strategy that will lead to mutual benefit and a win-win outcome. Therefore, this path differs widely from the beaten track of the Big Powers throughout history, and this also represents the nation's contributions to the world.

Secondly, China can contribute to the world in differents aspects as: its historical culture, which is one of the unique cultures around the world that has continued unbroken for thousands of years. Also, China has a long standing culture of being very independent and unique, which is the sole culture around the world that has remained uninterrupted for thousands of years. Due to the heavy influence of western culture on the world during the last few centuries, in general, there is a greater overall understanding of western culture throughout the world. Western culture refers to the culture of European origin. The term "Western culture" is used very broadly to refer to a legacy of social norms, ethical values, traditional religious belief and practice.To date, people in the world know very well the enormous contributions made by Western culture to the world, but no culture is perfect, there are always some shortcomings and disadvantages. Therefore, in a sense, the complex problems of the world have a lot to do with the shortcomings of Western culture.

Western culture is based on the civilization of Christendom, in which good and evil, beautiful and ugly things, and the legitimacy and heterodoxy are diametrically opposed to each other and cannot be reconciled.

[85] Giné, Jaume . China, del right to copyright. Economia exterior. Número 53. 2010.4-15.

The world, however, is vivid, colorful and richly-endowed, and it cannot be simply deemed as either black or white. People in China 2000 years ago put forth an outlook of harmony with differences as they came to realize that it was impossible to get rid of diversity, and began to recognize it and proceed to co-exist with it.

The globalization phenomenon allows information to spread extremely rapidly, and sometimes this creates the risk of losing traditions and customs. The function of the copyright is to protect the author's creativity. Naturally, copying something is not always a bad thing; however, from an economical point of view, it is normal that the owner and designer or author of the creation wants to be protected. For this reason, copyright incentivizes the creation and creativity of the work.

Europe is more culturally diverse and as a developed continent already has an artistic and literary culture that is consolidated. Here in Europe, they copy programs and buy copyrights to perform TV shows similar to those in the United States, but people have plenty of cultural products and exposure, so they can simply choose the medium of entertainment, for example," that suits them the best"

In addition to being an essential driver of cultural diversity in Europe, these industries which include notably architecture, archives and libraries, artistic crafts, audiovisual (such as film, television, video games and multimedia), cultural heritage, design, festivals, music, performing arts, publishing, radio and visual arts make up one of Europe's most dynamic economic sectors.[86]

One of these industries is so dynamic and changes so fast that to invest in design is almost too risky for some of the new companies if they want to make profit in a long term. This industry is fashion, and one day it can be up and then follow down. They have to adapt extremely fast to the new market and environment, so the legislation is still developing and improving. Now, the designers do not have to go to the office to protect the design, or the artist does not have to go to the copyright office to pay a fee for the registration. If they can prove that the design or creation or picture is made by them, it is not necessary to register. This is a really good point to save the handwork and save money. Otherwise, there would be problems with fakes and plagiarism everyday in the new globalized market. The small and medium sized companies are fighting to survive everyday and they are constantly encountering difficulties and obstacles that they must overcome. The current economic crisis is also having an adverse effect on these industries, making it even more difficult for them to access the resources that they need to finance their activities and adapt to the new environment.

That is why The European Commission has elaborated the Green Paper (2010) to promote and encourage the entrepreneurial spirit in this industry. Perhaps, the main problem has always been that it has taken so long to prioritize and establish appropriate guidelines for the assistance and encouragement in this sector.

Furthermore, as part of the implementation of the European Agenda for Culture:

- A Group of experts from Member States has been working on the topic since 2008. Its mandate is now focusing on the strategic use of EU support programs, including structural funds (in 2011); export and internationalization support strategies (in 2012-2013); and good practices on financial engineering for SMEs in cultural and creative sector - A Civil Society Platform set up in 2008 produced policy recommendations, in 2010 and is currently working on topics, such as financing and taxation; Regional cohesion; Digital environment; Mobility; and Education and skills.[87].

In general terms we can conclude that both continents are working hard to promote the creative industry because this industry is not only a way to generate wealth, but is a tool to promote peace and tolerance between countries. Culture is a guarantor of peace and a basic component of the international relations. It is for that we need to promote it, to preserve and develop.

THE PRINCIPLES OF TAXES ADMINISTRATION

VIOREL ROŞ*

Abstract
In the management of taxes and contributions are involved three categories of professionals: government officials, economists and lawyers. Somehow or another, everyone involved decide on a significant part of the taxpayers' income and wealth who constitute the state's budget revenues. Therefore, the basic rules of tax administration should be known by everyone, including the taxpayers. And they must be applied uniformly. This requires their knowledge.

Keywords: *taxes, principles, tax administration, equitable, fair.*

Introduction

The need of principles in taxation

Nevertheless, as we know, a principle is the general rule, the basic rule or the general compulsory conduct line rule which nobody cannot avoid, only in and on the basis of an exception expressly provided by the law and that permits it.

Even that we like it or not, the state is interested in everything that people do. The state is a *habentes causam* for all our acts and facts. But we are ourselves interested in and for all that the state where we are living is doing, and taxation is the material expression of this interest.

The state and the taxpayers are in extremely complicated legal, economic, social and political relations. Each other are following, from different positions, their individual and social wellbeing, and between them should be developed a true partnership. This partnership is a modality in which it can be developed a lot of activities in the interest of the both parties, reciprocally favorable, and that is supposed to, except the right and honest intention, fully trust each other, respect, cooperative attitude, conformity between engagements and actions, making compatible the interests for the common wellbeing.

Although taxation is a field in which in Romania (also in other countries) the trust in the both partners (the state and taxpayers), which represent also the subjects of the tax law report, it was and it is extremely low, the lack of trust between them has a long history, which has made deep wounds. At the origin of the taxes most probably there is the plunder. Today taxes are just a more evaluated plunder, because it is, same as its gender, a wealth and/or income dispossession, only now the taxes are made under the law dispositions, not on the sword threat. But even at the shelter of the law, the state is still behaving as a cruel plunderer towards the taxpayer and its interests. It behaves with cruelty or without conscience, and in this way the attitude of the state raises a lot of questions regarding the fact if the state knows its own interests.

The abusive attitude of the state generates normal resistance reactions related to the Revenue Service on behalf of the taxpayers (the normal reaction is, as we know, the tax evasion), so the state is in a permanently and sometimes declared conflict with the taxpayers. The state responds to the denial, the resistance on the excessive taxes, and the escape of the taxable items in the underground, with a more suffocating regulation, with a more discretionary application of the law and with an inadequate treatment applied to the taxpayers, which in fact are the ones that make the state "living". According as the fiscal burden becomes more difficult to bear and the civic sense of the tax is less visible, the statement that the state (the modern states, not the revolute ones!) and the taxpayer are in a partnership, is as in the time of Justinian[1] same utopian (according to the Financial Law – Digests,

* Professor, PhD, "Nicolae Titulescu" University, Bucharest (viorelros@asdpi.ro).

[1] Justinian Digests have a chapter called "the tax law", that comprises rules both for fiscal debtors and for the federal agents to which was recommended *"to behave same as parents with their children, to be wise ruling the*

Justinian was asking to his federal agents to behave with the taxpayers as the parents with their children, even that in fact the taxpayers could only choose between death and the tax paying). The statement justifies Louis Aragon ascertained fact: ***"there are only two ways to govern: the power and the ruse!"***

It is obvious that there is a need for a new kind of relations between the state and the taxpayers! The tension between these two partners must be reduced, if it cannot be annihilated, and this having in mind the fact that the state cannot survive without the taxpayers, and, the taxpayers, social beings, cannot fulfill themselves without the state. The first step for a normal relation between the state and the taxpayers is to recognize that the taxpayers are not only taxes and contributions payers, but partners of the state which have the obligation to pay their taxes and also have rights. This is a normal situation because also the state – the fiscal authority has not only rights, but also obligations. The fiscal partnership cannot be the result of a convention, it has to be the result of the law, and it presumes identifying the rights and the obligations, accepting them, respecting the rights of the partner and accomplishing the obligations. Truly, only in this way it can be done a partnership between the state and the taxpayers. It is what we propose in the following: identifying the rights and the obligations of the parties in the procedure of administering the taxes.

10 years ago, the state seemed disposed to a reposition in its report with the taxpayers, since in the tax laws adopted in 2003, it made a number of rules, taxation and taxes administration principles which, if it were been better formulated, if it were been respected and properly interpreted and applied, they would be capable of conferring the state - taxpayer relationship other dimensions than those with which the State has accustomed us.

Undoubtedly the Romanian legislator was influenced at that time by the solutions and positions expressed by Romanian and foreign academics and by the importance they attach to the principles. Not so much, of course, in order that the Romanian legislator to assume the principles formulated by Adam Smith and Adolph Wagner, although they are simple and clear. And always adding to them (compare in this sense the codes adopted in 2003, with the last ones in effect: you'll see how instable the tax legislation in Romania these years was!), including its principles and formulated them in a way that causes surprise and confusion, because enable tax authorities to abuse the law and to interpret it at their will.

To recognize the need for principles, to state them in the tax laws and to require to be implemented by state agencies and the taxpayers is still an important step. And we regard it as such.

We all have to admit that taxation principles are useful for the subjects of fiscal law relations (substantive and procedural), because if they are known and applied, they *"bring an element of flexibility in applying the law; are to prevail the spirit of the law its letter, it's the common sense and justice on the mere technical by allowing to penetrate beyond the positive law, to the profound aspirations of our legal order"*[2]. But they are necessary because the state finances are governed and managed by different profile institutions (political, administrative, judicial) and with interests that do

---

disputes, to protect the innocent ones, to punish according to the law the ones that were not paying the taxes, to not take bribery". Quote Gh. D. Bistriceanu, Romanian fiscal system, University Publishing House, 2008, p. 12. The Byzantine Empire dispose of a well tax system adjusted by the Cappadocian John, Justinian treasurer, thus it is told that in that period the taxpayers which were not paying their taxes or were making the national treasury empty, or they were dyeing, so sometimes the taxpayers where choosing death as the final fiscal form resistance. As it is known, the excessive rate of the taxes during Justinian period, even that the taxes were used in order to reconstruct the empire, have generated general complaints and culminated in the year 532 with a popular revolt, which was stop with cruelty by the emperor. No wonder that at the death of Justinian the population was very poor, but very happy for Justinian death, and forgot the great achievements of the emperor.

[2] Pierre Pescatore, quoted by R. Bufan and his assistants, p. 63. P. Pescatore was a judge at the European Court of Justice for 18 years and has an important theoretical and practical contribution to the development of Community law.

not always coincide (for example: different interests of the government and the parliament), running with different backgrounds (economists, lawyers, specialists in public administration, etc.). Or, at least in principle, the institutions involved and their officials should agree, they should talk in the same "language" about this phenomenon so complicated and so important to the state and taxpayers.

As for their consistency, quality and efficiency in and for the practical work, we are not the only ones disappointed. The doctrine in other European countries where such principles are developed in law states that ***"the legal principles of taxation are far from being a coherent whole, even if some of them have constitutional value"***[3]. Should not be surprising that a lot of Romanian authors are critical regarding the way in which the principles of taxation are formulated in the tax laws in our country. But all authors agree that the right of taxation, taxation and tax law should be based and meet a few basic principles; although everyone knows even that the principles are formulated, some of them in the Constitution, others in special laws, are not always respected.

These principles are especially useful in a tax system such as in Romania today, characterized by inconsistency and unpredictability due to too many legislative changes which do not meet even the basic rules of adoption of such amendments. Principles should be properly and clearly formulated and adapted to the realities of Romania, because they, their respect and their correct implementation, are essential conditions for the development of the Romanian tax law. That is why it is necessary to dwell on them, not before stating that the legislature and theorists do not have a common view on principles, not even for their enunciation.

Taxes, fees and contributions administration principles under the Fiscal Procedure Code

The legal framework for the administration of taxes and fees imposed by the Fiscal Code is set by the legislation on the tax procedures, namely the Fiscal Procedure Code[4], which deals **within its introductory part with the principles for the management of taxes and fees.**

Examining the tax administration principles formulated in the Romanian Fiscal Procedure Code, however, we find that in reality, not all so named like this by the legislature are principles, that some are unnecessary and others are formulated incorrectly, that they do not only address to the tax administration bodies but also to the taxpayers and by the way in which their content is explained they offer rights to the state agents that can make possible an improper conduct of the state agents and such obligations that do not prevent the abuse.

At the same time, comparing the tax administration principles formulated in the Fiscal Procedure Code, the fundamental principles set out in the **Code of Ethics of the public fiscal administration operating in taxpayer assistance**[5], it appears that apart from the principle of equality, for the authors of the Code of Ethics, none of the principles of tax administration does not seem to be really important, do not seem to have a serious meaning and do not seem to be accepted as principles of the Ministry of Public Finance since all the other fundamental principles set out in the Order approving the Code of Ethics are different from the Fiscal Procedure Code[6].

---

[3] M. Bouvier – Public Finances, p. 588.

[4] The Romanian Fiscal Procedure Code is based on a draft prepared by German specialists after the German Tax Procedure Code. It was adopted in haste, by GEO no. 92/2003, in order to enter into force simultaneously with the Fiscal Code adopted by Law no. 571/2003.

[5] Approved by Order no. 137 of 19 January 2004 for approving the Code of Ethics of the public tax administration operating in taxpayer assistance, published in the Official Gazette no. 66/2004.

[6] The fundamental principles formulated in the Code of Ethics are: i) The principle of equality; ii) The principle of non-discrimination; iii) The principle of access to public information; iv) The principle of free tax assistance to taxpayers; v) Principle of transparency; vi) The principle of adaptation to the requirements of the tax authority to the taxpayers demands; vii) The principle of respect and consideration to the taxpayers; viii) The principle of confidentiality.

1. The principle of uniform application of the law (article 5 Fiscal Procedure Code)

According to article 5 of the Fiscal Procedure Code, **the tax authority** is obliged to apply uniformly the tax legislation in Romania, following a correct assessment of taxes, contributions and other amounts owed to the general consolidated budget. In reality, the principle of uniform application of the law as expressed in the Fiscal Procedure Code merely repeats almost useless, but especially unfair, in our point of view, **the constitutional principle of legality**, which is required to be respected equally by legislature, the tax authority and the judicial authority.

It is useless because it only repeat a general rule of conduct for the state bodies and officials, but also is incorrectly formulated as referring only to the tax, it may be understood that other authorities and the persons with responsibilities in the area of taxation, should not be kept to comply with this principle. Or the obligation to respect and to enforce of the fiscal law is a general one: of all the state organs and officials.

But the principle is not correctly formulated and it appears to formally limit the application field only to **"the correct assessment of taxes, fees and contributions"**, while according to article 1 paragraph 3 of the Fiscal Procedure Code, the management of taxes, fees, contributions and other amounts owed to the general consolidated budget includes *"all the activities carried on by the tax authorities in relation to: a) tax registration; b) declaration, **setting**, **verification and collection** of taxes, fees, contributions and other amounts owed to the general consolidated budget; c) **settling the disputes against the administrative fiscal acts"***. And, in our opinion, we don't believe that the intention of the legislature was to limit the scope of the principle of uniform application of the law, exclusively to the "fiscal body" and to **"the correct establishing"** of the taxes, fees and contributions.

In accordance with article 6 of the Fiscal Code, by the Order no. 877/2005[7] of the Minister of Public Finance was established within the Ministry of Finance, the Fiscal Central Committee, which has the responsibility **for making decisions about the uniform application of the Fiscal Code**, and pursuant to article 4 of the Fiscal Procedure Code, by the Order no. 1995/2007[8] of the same Minister, within the National Agency for Fiscal Administration Commission was established the **Commission for fiscal procedures**, which is responsible for **making decisions on the uniform application of the Fiscal Procedure Code**. Both commissions adopt decisions (each for their field of expertise) which are published in the Official Gazette.

The decisions taken by the **Central Fiscal Commission** represent **documents with interpretative value**, and, according to the order by which the commission was established, they *"are applicable from the date of entry into force of the legislative act considered in resolving each case"* and the Commission's decisions are *"binding and enforceable against the whole staff of the National Agency for Fiscal Administration and its subordinate bodies, from the date of publication"*.

Of course, to the legislature cannot be opposed the Commission's interpretation done by decisions, which is held in the legislative process only by the limits which are set by the Constitution. But these decisions may be opposed to judges and judicial bodies?

Regarding the judges, the answer can be only one: the interpretation of the law made by the fiscal body, if it doesn't comply with the will of the legislature, obviously it cannot hold and cannot be invoked as required. Moreover, the judge as an independent interpreter of the law can find the very existence of the conflict between the law that must apply and the Constitution and he can cause, even ex officio, the constitutionality control of the law (which may, of course, be challenged by the parts) by notification to this end, of the Constitutional Court[9].

---

[7] Replaced by Order no. 1318/2008 of the Minister of Public Finance, which was replaced by Order no. 183/2010, which was replaced by Order no. 1765/2011.

[8] Replaced by Order no. 1765/2011.

[9] See article 146 of the Constitution and the Law no. 47/1992, as amended, and also the comments on them.

But regarding the bodies with judicial activity, their independence is limited by the quality of the tax administration institutions employees, quality which is obliging them to fully implement the decisions of the two commissions. From this point of view, the tax officials and the bodies with jurisdictional activity will not even be able to avail of the provisions of article 13 of the Fiscal Procedure Code ("Interpretation of the law"), which provides that the interpretation of the tax laws should respect the will of the legislature as expressed in the law.

2. Exercising the right of discretion, freedom of management and the abuse of rights

The tax continues to be associated with coercion and oppression because it is undeniably a burden. This kind of the tax reveals the legal definition of it when speaking about it as being a *"compulsory levy, without consideration and grant, in order to meet the general interest needs"*. Sure, a different burden than robbery, taxes, tribute or requisition which preceded it and to which compared are considered a progress, but how big are the differences between taxes and levies that preceded it? The tribute, the toll were rise with the sword in hand. The tax is payable, usually willingly, and in case of refusal, are used more subtle forms of coercion and less violent: execution by seizure or sale of the properties of the tax debtor. Thus, the tax appears as an evolved tribute and some authors are even considered it as a "liberal technique" because *"is the mean to make citizens to contribute to society's needs and the needs of their own leaders, leaving them most of freedom"*[10].

The taxes, no matter how compelling they are, they should be viewed with understanding, because they and only they allow the operation of the organized societies. Therefore, whether we pay them out of conviction or because we cannot evade to their payment (even when we subtract we are risking criminal sanctions), as long as the states' economies are not sufficiently developed, and the monetary resources are not sufficient to that people should be free from the burden of taxes, they will continue to be part of our lives. And as long as they exist, the taxes and trough taxes we will limit the individual freedom, and it will be limited the freedom of the business management.

But how and why this limitation of our freedom through taxes is produced? The answer seems simple: the state raises a part of our incomes and property and wishes that the amount that is taking to be as high as possible. And in order that this amount to be as high as possible, the state restricts us the possibility to decrease the taxable matter, assuming the right to control our acts and deeds which we tend to ease our fiscal burden and to reconsider them, sometimes, according to its interests.

2.1. The ideally taxable economic reality

The state, the fisc and the legislative power, in particular, have their eyes pointed to the economic reality, because this is the matter that can be taxed, it is rooted in that and keeps them alive. In fact, however, between economic and legal reality, between taxable reality and taxed reality are significant differences for many reasons, some of which are attributable to the State, other to the taxpayers. The state and the tax authorities' aim, of course, to tax the reality and not the appearance, but the state should do the same even when the reality is less favorable than the appearance.

The state is interested on the economic reality in many respects: **it determines** by the way in which regulates social relations, **it develops** or, conversely, **makes it backwards** through its policies and measures it adopt and implement, but also **through manner and efficiency with which it manages the revenues**, of which the most important are taxes, fees and contributions.

The legal position of the State in relation to tax law, however, is difficult to classify: a third part towards the private legal relationships in which they engage the taxpayers, the state is interested in these relationships because they generate taxable matter and because the state is the eternal creditor (rarely, the state is the debtor) of its taxpayers, to which most often is linked only by relations of citizenship, without this connection to be absolutely necessary for them to have the tax debtor position. The state became a kind of an associate of each business, of each working individual and to each individual household from which raise a share of profits, income or wealth.

[10] G. Ardant, The history of tax, quoted by M. Bouvier.

But apart from the fact that the state has, directly from the power of the law, the tax credit position, the state also enjoys other privileges: not only has the law on his side (which he himself do it), but also the public force (which he also organizes and maintains), and regarding the legal tax law, governed by rules of public law, the parties are not on equal footing, the taxpayer is the one who, according to the tax law has a disadvantage to the state. The taxpayer has an obligation (fundamental duty) to pay taxes, in return for which, however, the state is not subject to consideration. In principle, to the obligation of the taxpayer to pay the tax does not correspond to a concomitant right. Of course, not this is the case of taxes and contributions, the first ones, due to the service provided by a public institution, and the contributions in order to return, in various forms (pensions, benefits, health care) to the payers.

Interested in the reality that tithed and its claims and having a discretionary power, the state has given itself also a right to control this economic reality, the acts and the facts of the taxpayers, the state has taken a right to appreciate these acts and deeds and a right to decide for itself whether these acts and deeds are in accordance with the regulations that also he has adopted and which really gave us the consent trough the representatives sent to Parliament. A power that authority often faces abuses and in front of which the defenses of the taxpayers are less.

In fact, however, nowhere in the world the states do not tax all that, theoretically, could be taxed but not only what, in fact, should be taxed. The taxable reality and the taxed reality are different things. State seeks to take as much as he can; the taxpayers seek to give as little as they can and each act according to his purpose. Therefore, to the economic reality of taxes always stands with more or less success, the legal reality, but from the latter one is a part, unfortunately, the different treatment of taxpayers and the benefits (not always, rightly) granted to some of the taxpayers by the state itself. The unmeasured greedy character of the state, in its quest for resources, it is opposed the tax resistance in various forms: some legal, some illegal.

Between these extremes there is only the middle way characterized by moderation, proportionality, dialogue, respect for the law and for the rights of others, equality before the law and authority, individual and trade freedom. And the justice is called to curb the excesses of any side of the tax law and to punish them.

2.2. Exercising the right of discretion and proportionality

Because the state is interested in the economic reality, it is recognized to the state, with a principle value, a right of judgment on the acts and deeds of the taxpayers. The principle formulated in article 6 of the Fiscal Procedure Code ("the exercise of the right of discretion") **is not found in any other regulation**, and its explanation in the Romanian Fiscal Procedure Code seems likely to establish **not a normal rule of conduct**, but a provision which can **assign to the tax authority a right and a discretionary appreciation power**.

Indeed, according to article 6 of the Fiscal Procedure Code, "***the tax authority is entitled to determine***, within the limits of its duties and competences, ***the relevance of the fiscal facts and to adopt the solution permitted by law, based on the complete findings on all relevant circumstances enlightening"***.

The agreement between the conduct of public officials and their decisions, on the one hand and the law, on the other hand, it is the duty of any officer, authority or magistracy and not just of the fiscal agent, an obligation rooted in the principle of legality, the latter being a fundamental principle in all legal systems for all branches of law. A principle established also by article 1 paragraphs 3 and 5 and article 16 paragraph 2 of the Romanian Constitution, which requires the observance of the law by all its recipients: citizens and the state, meaning by the state, its institutions and its officials. Therefore, the principle of the pre-eminence of the law should be an integral part also from the administrative and fiscal culture.

In a democratic state, the pre-eminence of the law appears as a response to the need for legitimacy, and it is necessary for the exercise of the public power. Collection of taxes, fees and contributions is vital for any state (because allows its operation), but their good management cannot

be an end in itself, but a means to materialize the rule of law in the sensitive area of taxation, which is part of our lives, both as a society and as individuals.

In the Community law, **the legality and not the exercise of discretion right, is regarded as a principle of good administration**, the idea being formulated in Recommendation CM/Rec(2007)7 of 20.06.2007 of the Committee of Ministers of the Council of Europe, addressed to Member States of the Council Europe on good administration. Article 2 of this recommendation referring to the principle of legality in the administration, which includes also the tax administration, has the following form:

*"(1) The public administration authorities **act to comply with the law**. They **can not take any arbitrary measure, even in the exercise of a discretionary power**.*

(2) It complies with all national and international rules and general principles of law that regulates their organization, operation and activity.

*(3) They **act according to the rules of jurisdiction and procedure required** by the legal dispositions governing their activity.*

*(4) They **exercise their powers for reasons of fact and law which justifies their use and with the purpose** to which **these powers were attributed to them"**.*

It follows that, in accordance with the rules of the national law, but also with those of the Community law, among the conditions of legality of the administrative acts are those that relate to their issue by the competent authority, on the basis and the enforcement of the law, because between the administrative acts and law there is a subordination report. And the Constitutional Court ruled constantly, in line with our Constitution and the case law of the ECtHR and the ECJ that the legality should be the foundation of all legal relations of the rule of law and the rule of law governs the entire activity of the public authorities.

But even if we admit, however, that the exercise of the discretion right of the tax authorities, as stated in the Fiscal Procedure Code, has the value of a principle, then we must also show that **this appreciation right can just only be limited**, because where **the right of citizen is starting, the appreciation right of the administration is ending**.

Even where the legislature uses phrases that give the appearance of discretion power assigned to the tax administration (for example the use in the law of the words "may", "is entitled" etc.), it can't be interpreted as a freedom or a power outside the law, but one of its limits. For the respect of the principle enshrined in article 16 paragraph (2) of the Constitution, the exercise of discretion right cannot be conceived outside the law. In any case, the exercise of discretion right by the tax authority, in violation of the limits of the jurisdiction, or in violation of tax law or the rights and freedoms of citizens, constitute a breach of the principle of legality and is a manifestation of excess power.

There are situations in which the tax authority is required and not just the justification to appreciate, but for the legislature seems to be no difference between the obligation to estimate and the justification to estimate. Thus, article 67 (estimated tax base) of the Tax Procedure Code, paragraph (1) provides that "*If the tax authority **can't assess the tax base, it must estimate it**. In this case we have to consider all the relevant data and documents for the estimation. Estimation is to identify those elements that are closest to the fiscal facts"* and paragraph (2) that *"Where, according to law, the tax authorities **are entitled to assess the tax base**, they will take into account the market price of the transaction or taxable property, as defined by the Fiscal Code"*.

The Fiscal Code provides situations when the fiscal authority (but also the taxpayers, for example article 81 of the Fiscal Code[11]) is required to make the necessary estimations, particularly

[11] Article 81 - Declaration of Estimated Income from the Fiscal Procedure Code have the following content:

(1) The taxpayers and unincorporated associations, which are starting a business activity during the fiscal year, are required to submit to the tax authorities a statement of revenues and estimated expenditures for the fiscal year to be achieved within 15 days date of the event. An exception to the provisions of this paragraph, are the taxpayers who receive income on which the tax is levied by deduction at source.

with regard to determining the taxable matter and its assessment when the taxpayer does not establish personal and sometimes strict criteria and limits and on which the tax may be estimated. Thus, in article 67 paragraph (2) is set as the criterion for assessing the tax base, the market price of the transaction or property. In the case of the tax documents of the economic agents that are lost, destroyed or damaged, article 213 of the Fiscal Code establish a strict rule: first, they are obliged within 30 days of the registration of loss, destruction or damage to reconstruct, based on the accounting records, the duty relating to such transactions. When not reconstituted the tax obligations of the economic operator, *the competent tax authority* ***will establish such amount by estimation, multiplying the number of the lost, destroyed or damaged documents with the media delivery excise invoices entered in the last 6 months of activity before aware of the loss, destruction or deterioration of fiscal documents***.

Things get complicated, however, when and if the tax authority shall recognize the right to assess the qualification of legal operations, interpretation of contract terms, the possibility of invoking the invalidity of legal acts etc. When, for example, his right of discretion is exercised in respect of acts or operations that are deemed to be terminated or carried out in accordance with the law and in good faith, and interpretation has different consequences in terms of tax obligations. The tax authority it could, for example, qualify a joint venture agreement as being, in reality, a lease contract under the word that this is the correct interpretation of the transactions of the parties? Could the same fiscal authority to declare as null a contract clause under the pretext that violates a mandatory provision of law or that the act is done to evade the law? Could be that the tax authorities can do only that a judge can do: to establish the simulation, nullity, to interpret the will of the parties or to conclude that the real will is not matching the declared will act?

To not recognize to the tax authority any right to assess the legality of acts and operations, means, of course, not just to deprive the tax authority from the right and opportunity to repress itself from the obvious acts of tax evasion, but putting it in a position to helpless witness to their multiplying by reproduction of the tax evasion process by other taxpayers. To recognize it a right of unlimited discretion, mean to jeopardize the legal relations and to remove even the presumption of good faith of the parties in legal documents and tax liability arising. To refuse to the tax authorities any right of assessment may have the effect of creating conditions for avoiding the payment of taxes or to conceal taxable matter through legal fireworks may not be the subject to the judicial review. To accept it unconditionally means leaving the taxpayers as secure victims of the authority.

We believe that in the exercise of the discretion right, the fiscal authority is bound by **the principle of proportionality and reasonableness**, in agreement with the use of law cannot be discretionary and the assessments, conclusions and its measures cannot be arbitrary. **The fiscal body must act in fulfilling its responsibilities, reasonable and balanced, and its decisions must ensure a fair proportion between the aim pursued and the means employed to achieve it.** The limits in which the fiscal authority had acted, can't escape to the judicial review.

2.3. Exercising the right of freedom versus the freedom of management

Exercising the right of assessment and the active role of the fiscal authority may not generate directly the examination or the influence of the taxpayers' fiscal activity and management, regardless of their quality (individual or legal entity, national or foreign), the nature of capital (private, state,

---

(2) The taxpayers who obtain income from rental and leasing of personal property must submit a statement of estimated income within 15 days of the conclusion of the contract between the parties. The declaration of the estimated income is handling at the same time with the contract between the parties.

(3) The taxpayers which in the previous year realized loss and those who have earned income for periods of less than the fiscal year, and those who, for objective reasons, expected to achieve revenues that are at least 20% from the previous fiscal year have to file at the same time a declaration of income and the estimated income statement.

(4) The taxpayers that determine the net income based on income norms and those for which the expenditure is determined in the flat rate system and opted for the determination of net income in real system shall submit, with the application of options, the estimated income statement.

mixed, local, foreign) etc., opposing to such a management intervention **the principle of freedom of administration** (management) **or the prohibition of the interference in the business management**.

The freedom of management means the right of the taxpayer who has **to act and to take management decisions that will result in reducing the tax burden, the lowest tax payment**. The principle of freedom of management is a creation of judicial practice, the priority belonging to (apparently) the Belgian and French courts, but which is found in the U.S. Supreme Court. In the doctrine, however, the idea is old and is found in a form quite close in content, long before, in "The Wealth of Nations" by Adam Smith (resumed in recent works) and applied to the U.S. Supreme Court decision mentioned before, which we will return.

The fiscal management has become for all taxpayers, an art, and a science, an industry that speaks more and even aggressive, of the „tax strategies", of „ optimizing the decisions with a fiscal impact", of „de-taxing", of "tax-planning" and even of "the eulogy that must be brought to the fiscal ability". It is recognized today that, as in the common law (civil and commercial), using concepts such as "the good father of a family" or "the prudent and circumspect administrator" in tax matters is a "good fiscal management" or a "good financial management".

The authority is everywhere, abusive and excessive, and in a permanent dispute with disgruntled taxpayers from the burden of increasing fiscal burden imposed on them by the states which continuously are looking for taxable items and for methods to increase its part. Therefore cannot be any coincidence that the science has taken a steady position and there was not only the service of the authority - who gave arguments to justify the law enforcement right, but also for improving the means and methods of taxation, criticizing and demonstrating the excesses and negative consequences - but also in the service to taxpayers, which offered solid arguments not to justify their inutile resistance tax forms, more or less violent, such as riots, antifiscale movements or illegal tax evasion in order to reduce with the means and to the shelter of the law, the tax burden which presses too much on them.

France is a good example in this way, because it is not the only country in the world who at the mid last century gave the world one of the most efficient taxes (value added tax), or the country that has experienced all the forms of tax resistance: the violent riots and evasion, by nation-wide movement (the poujadism and the nicoudism are the latest and most popular)[12], but also the country where a valuable and abundant doctrine justifies the right of taxpayers to reduce, without violating the law, the tax burden. Thus, recent French doctrine states that ***"if paying taxes is an honorable duty, the good father of a family and the good administrator also have a duty to pay the lowest tax possible, to choose the path with less taxes"***[13], and that ***"wanting to pay the highest taxes, may be for some a proof of holiness or heroism, but most will be convinced that it is, rather, a sign of lunacy, and in any case not a model of good father worth following***"[14]. But almost the same Adam Smith was expressing himself, two centuries ago, in England, and his arguments will be taken and developed by the U.S. Supreme Court judges.

The freedom of management does not exclude, but rather requires the inclusion of taxation in the calculation of tax management decisions of any taxpayer. Knowledge of the tax law by the

[12] France experienced after the World War II, two spectacular rebellions against the Revenue Service. First, in the 50s, also known as the "small riot of the bout queries" (like the peasant uprising in previous centuries), led by Pierre Poujade, a small stationery products trader, who created the "Union of Merchants and Craftsmen" and that sent the Parliament elected in 1956 an important number of parliamentarians. His movement, without a program, started in southern France and swept across the country, dressed also violent actions. The second was led by Gerard Nicoud, debuted in 1969 and had as its starting point an upmarket area of France. The adherents have created a Steering and Defense Committee, dressed also violent actions against both the Revenue Service and some politicians. Quote M. Bouvier, Public finances, p. 603.

[13] Patrick Serlooten, Business Fiscal Law, Precis Dalloz, 2006, 5th edition, p. 25.

[14] Maurice Cozian, Specific business tax, Litec, 2007, 31 edition, p. 534.

taxpayers and the tax burden resting upon them is necessary not only so that they can fulfill numerous tax purposes, but also for their decisions to be consistent with the interest to pay the lowest tax as possible, taking into account the tax liabilities they generate, sometimes the law itself giving to the taxpayers, specifically, the right to opt for one or another decision[15]. But even when the law does not expressly say, the decisions with tax consequences on the contributors may be restricted only by the mandatory provisions of law. For everything that is not expressly forbidden by law, is allowed also in the tax matters.

In a proper application of this principle, the fiscal authority cannot substitute itself to auditors or censors and cannot judge the quality or the results of the activity, even weak, of the managers of the company, not for the financial or trade management. The fiscal body cannot give management lessons to the taxpayers, not even when their decisions are wrong, any company - to be established to make profit no loss - having the right to make bad business. Company administrators can do anything in the interest of society and it is in the interest of society, even in the Romanian Fiscal Code, article 3 letter b), but granting to the taxpayers not the right to ***"follow and understand the tax burden they bear***", but the one to ***"determine the impact of their decisions on the financial management of their tax burden"***. Applications of this principle we find, moreover, in the corporate law that allowed only reviewing the legality of decisions of general meetings, and not the control of their opportunity and the case law in this area is consistent in this regard.

The principle of freedom of management requires that:

a) Taxpayers have the right to refuse, pure and simple, to make taxable matters by inactivity, by refusing to work, to obtain income or taxable income, by refusing to invest their savings or interest and bearing deposits in banks. It is noteworthy, however, that this effect (underperformance taxable matter) occurs through excessive taxation, the taxpayers are not interested in creating a taxable matter, because it is seized in (almost) entirely by the state. In this case, however, the bear and other wrong consequences of fiscal policy, because inactivity increases the number of assisted persons, hence the need for state resources, but also increases the pressure on active taxpayers that the state must make to cover the deficit and/or the need for resources, thus creating a vicious circle.

b) Taxpayers have the right to choose the path that generates the lowest tax burden. Thus, taxpayers may choose to make loans - thus increasing their spending - and when they have internal resources, have the right to manage and keep unproductive economies, have the right to acquire the property needed for the activity not at the lowest prices on the market etc. The State which, through authority unreasonable measures because they are contrary to economic realities, seeks to increase the taxable matter of the taxpayers by limiting, for example, the deductible expenses, get the opposite result expected because, on the one hand the profit for that calculated tax is not real, and secondly, because such policies are causing escapist behaviors, the whole matter being subtracted from taxes, or attitudes of abandonment of the activities, or to increase in another way the expenses and to reduce taxable matter.

c) Taxpayers have the right, uncensored by state authorities, to make mistakes, to do business or bad investments, and spend their money to non-profit and to oppose their decisions to the tax administration authorities. Wrong decisions can be censored and punished in all cases, only by those with whom the decision-maker is bound by relations under which he is liable to result, and in relation to the State, represented by the tax authority, the taxpayer has not, in principle, such obligations and cannot be penalized for not producing profit or taxable matter.

In such a case, the taxpayer might find however, if, for example, it was granted to him facilities of payment, or when the taxpayer being in insolvency proceedings has been proposed and

[15] For example, for the technological equipment depreciation, i.e. machines, tools and plants, as well as computers and their peripheral equipment, the taxpayer may elect to straight-line depreciation method, diminishing or accelerated, and in the case of any depreciable asset, the taxpayer may choose the linear or regressive depreciation method. See article 24 letters b) and c) of the Fiscal Code.

approved a reorganization plan that does not realize, the situation is governed by article 177 of the Fiscal Procedure Code.

2.4. Economic reality, freedom of management and the abuse of rights

The reason of the tax law is to provide the legal framework for determining the taxable and tax matter and to ensure the collection of revenue. That is, in a strict interpretation of the fiscal law, any attempt to reduce the payable taxable matter and the due tax can only be a violation of the law, and the act not be seen only as an act in the fraud of the law. In other words, since taxation is based on the economic reality, the tax administration has not only the tempted, but also the obligation to oppose this economic reality to a "legal reality" which reduces the taxable matter.

However, the tax law provides that a taxpayer must pay the highest tax possible, leaving it the right to choose among several possible paths, the one that generates the lowest tax obligation. In addition, **it should be recalled the fact that if the taxpayer does not pay taxes, is not his reason for being, same the state's largest tax collection as possible is not his reason for being**. Furthermore, **collecting the largest possible tax from taxpayers, except that it can be only for a short time, can have only a single and catastrophic result for the state: the disappearance of taxable matter and of the taxpayers**. Therefore, **the endless dispute between the state and the taxpayer, except that should be seen and accepted as a normal thing, is generating positive effects because it is the only way to generate positive effects, to temper the excesses of the parties and to contribute to the recovery of tax laws**.

Taxpayers, therefore have the freedom to manage an individual household or their business according to their interests, have the uncensored right to do business in a good or bad way, have the right to exploit the law and its shortcomings for their own interest and **have the right to do whatever the law does not expressly prohibit**. They have the right to choose among all possible ways, the one that generates the least tax.

However, the freedom of management recognized to the taxpayers cannot be used as to its shelter the rights of others to be disregarded, can't be made in the third parties fraud of interests, or to defraud the law. Exercising in good faith the constitutional rights and liberties is a fundamental duty for every taxpayer.

But how does it is manifested the bad faith, the abuse of rights, the fraud made in the third interests and fraud in the fiscal law? It is the taxpayer the one who tried to reduce the tax burden through legal arrangements provided and permitted by law, a criminal? And who has the right to decide that a taxpayer has reduced legally the tax burden or did it in violation of the law? Who and how can draw the line between the conduct permitted by the law and the punishable one? Can this right be attributed to an organ or an official of the tax authority, or is the exclusive attribute of justice to say right?

The abuse of law, which is the legal antonym of good faith, is a concept lacking a legal definition, an indeterminate concept, identified only casuistic in concrete situations. The lack of legal definition makes more sensitive the fiscal body position, but also of the taxpayer, except that does not have many ways to defend against interpretation by the tax authorities of his acts and the law, is placed, in the fiscal right report, in an inferiority position.

As a general rule, the fraud is an act of deception by the debtor to the creditor, the latter one reduces his heritage or causes or increases his insolvency. Whenever an act is concluded with the intent to deceive a third party, we are in the presence of a fraudulent act. Fraud, which merges with bad faith and abuse of rights, can take many forms (doctrine identified 11 forms of fraud), but likely classified into three broad categories: ***i)*** fraud committed by one side over the other Contracting Party (*de re ad rem* fraud), who has no interest in tax matters; ***ii)*** concerted fraud in order to deceive third parties who are aliens in report to the act (*de persona ad personam* fraud) and ***iii)*** fraud consisting in concealing of an act done by parts in order to evade a legal obligation (fraud)[16].

[16] See D. Gerasimos, Bona fide in the civil legal relations, Academy Publishing House, 1981, p. 91.

In case of the first two forms of fraud, ***the author or the authors act with the intent to harm another person: the co-contractor or the third party creditor***, the latter may be a natural or a legal person. In these cases, the author or the authors have the knowledge that the fraudulently act cause an injury to the co-contractor, or, where applicable, to the third party (creditor).

In the case of **the fraud to the law**, the malicious intent ***aims to circumvent the legal imperative requirements in order to purloin their application, by conscious and voluntary adoption of means which are lawful in their appearance but pointed against the obligations of legally binding rules***. The fraud to the law does not constitute a direct violation of the law, but a roundabout of it, trough the deviation of the legal provisions from their purpose.

The fraud to the law contains two elements: one material and objective, which is the process used, which in itself is not against the law, and the second, intentional, which comprises the essence of this type of fraud, which is the avoidance or evasion of an application of a determined legal text. **The fraud to the law meets and is usually committed in order to deceive the government bodies**, category which the tax authorities are belonging.

But when a legal act is done in order that the parties or just one of them to evade the payment of the tax obligations, **such act will be considered completed the law fraud or in the fraud of the interests of a third party** to the legal act concluded, namely the state, which is the tax creditor?

The obligation to pay the tax, when the event occurred or should occur, it is a legal obligation and the legal document completed in order to avoid the payment of the tax, it is an act done in the fraud of interests of the state, as tax credit, and in the fraud of the law, which establishes the obligation to pay tax on taxable material produced or that should occur. In other words, when the legal act concluded seeks to tax evasion, the fraud of interests of third parties (the State) and law fraud are in fact one and the same.

In the common law, the first **form of fraud (damage counterparty)** is punishable by the court by annulling the sly, at the request of the party who had been injured in his rights[17] and the nullity is relative, so it can be invoked within the general limitation period of three years.

If the fraud is done in order to deceive others, the fraudulent act, act in concert of the parties[18], may be terminated by the Paulian action (set aside). Such action, which seeks to protect the rights of creditors (general lien) against the bad faith of the debtor (not against his negligence) manifested by fraudulent acts will allow the action and will void the fraudulent act to the creditor. When the debtor's assets decreased as a result of **material facts**, which occurred outside his will, the creditor who feels harmed doesn't have access to a Paulian action, because there isn't the fraud concert against his action.

The category of acts that can be challenged by a Paulian action is very high, including both unilateral acts and acts of reciprocal obligations, such as donations, sale, abandoning a duty, overpayments, voluntary assignment, giving a full prescription and even the judgments obtained by the debtor defrauding his creditor etc. But from the principle that **in order to promote the Paulian action should be a reduction of the debtor wealth**, results that **if the debtor refuses to be rich, the Paulian action is inadmissible**, and this conclusion is important and has application in tax matters.

In the common law, the penalty for the acts committed for the fraud of law is the absolute nullity, but this can only be applied by the courts.

What will be the penalty and who will apply it, when the fraud to the law concerns the application of the tax law? If a court should be invested (either a civil or a criminal action), its right to declare the absolute nullity of an act made to defraud the law, at the request of the tax authority,

---

[17] See for more explanations D. Cosma, The general theory of juridical act, Scientifically Publishing House 1969.

[18] In the case of the onerous documents should be a complicity of the co-contractors in order to fraud the interests of third parties. Bona fide purchaser is protected, unless he acquired free of charge. D. Cosma, The general theory of juridical act, Scientifically Publishing House 1969, p. 355.

we believe that it can't be challenged because has an interest and therefore has a right and procedural capacity. In the case of criminal proceedings, the court is obliged to decide, ex officio, the total or partial abolition of documents, meaning also the ones committed to the fraud of law (which, of course, if the criminal actions contains facts of the law fraud in the most serious of them: crime).

Can the tax authority to control, to find the fraud, to judge and to apply the penalty or it stays exclusive the attribute of justice, who's right and power in the fiscal matter nobody contest? But we have seen that the law confers to the fiscal authority a right (exaggeratedly high) of discretion. But appreciation right is not the same as the right to find the possible fraud and to decide and apply the penalty, even if the penalty is one of "do not consider" a transaction, act, etc., because between "to not consider a transaction" and deciding that the transaction is void, through its effects, there is no difference. In fact, the theory of right abuse is the one that justifies the right of the fiscal body to retrain the acts and deeds of the taxpayers according to their economic purpose, and this right of the Revenue Service is a restriction of the enterprise management freedom.

To detect between the fraudulent act and the normal and legal management act, but also between what the law allows or stops, it is not an easy task, not a task that can be given to anyone, because it requires not only profound knowledge (legal and economic), but also experience and good faith. Here it proves the importance of the right of discretion and the limits in which it can be admitted.

Relevant for the power granted, under our Fiscal Code, to the tax authorities and for the exercise of discretion right, are the provisions of article 11 (Special provisions for the implementation of the Tax Code), which provide that:

(1) In determining the amount of a tax or charge for the purposes of this Code, the tax authorities ***may disregard a transaction that does not have an economic purpose or may reclassify the form of a transaction in order to reflect the economic substance of the transaction****.*

(1^1) The tax authorities ***may not consider a transaction*** *done by a taxpayer which was declared inactive by order of the National Fiscal Administration Agency president.*

(1^2) Also, ***are not considered by the tax authorities the transactions made with a taxpayer declared inactive*** *by order of the National Fiscal Administration Agency president. The procedure for declaring inactive the taxpayers will be determined by order. The list of the declared inactive taxpayers is published on the website of the Ministry of Finance - National Fiscal Administration Agency website and will be made public in accordance with the requirements set by order of the National Fiscal Administration Agency president.*

(2) ***As a part of a transaction between related parties, the tax authorities may adjust the amount of income or expense of any of the persons, as necessary, in order to reflect the market price of the goods or services supplied in the transaction****. The market pricing of transactions between related parties it is used one of the most appropriate of the following methods:*

a) price comparison method by which the market price is determined based on prices paid by other people who sell goods or services comparable to independent persons;

b) cost-plus method by which the market price is determined by the cost of the good or service provided by the transaction, plus appropriate profit margin;

c) the resale price method, by which the market price is determined based on the resale price of the good or service sold to an independent person decreased with the expense of the sale, other expenses of the taxpayer and a profit margin;

d) any other method recognized in transfer pricing guidelines issued by the Organization for Economic Cooperation and Development.

2.5. Taxation of the income obtained from illegal activities

The state does not seem interested in morality when it comes to his income, so that is the reason for which the income obtained from illegal activities is taxable. Of course the tax on the revenue from illegal activities is due when the illicit income will not be taken by the state as a result of special confiscation, for example.

Taxation of the income from illicit activities is justified also in the light of the principle of equality before the law and the authorities: if all income done in a professional context is taxed, how could remain untaxed the income from illegal activities. But if we admit that the income from illegal activities is taxable like the income resulted from a professional legal context, then we must admit that the expenses incurred on those revenues (illicit) are deductible.

In our law there is no express provision relative to the taxation of income obtained from illegal activities. It is believed, however, that the taxation of income obtained from illegal activities is possible under article 19 of the Tax Code, which governs the computation of taxable profit, and describes the tax base as represented by ***"the income from any source"*** (....) "***minus the non-taxable income"*** and that the ***"to the determining of the taxable income are taken into computing other similar income and expenses according to the rules of use"***, which means that also for the illegal income, the taxable income is calculated as the difference between income and deductible expenses. Budget laws also contain applications of this rule, where they provide that the illicit income are taxable and even predict the amounts to be collected under this head. For example, Law no. 11/2010, the state budget for 2010, in Annex no. 1 (detail no. 1), estimated state revenues from the taxation of illicit commercial activities in the amount of 129 thousand lei, but also the budgetary laws from the previous years contain similar dispositions.

3. The active role (article 7 Fiscal Procedure Code)

In our system of law, **the principle of the active role of the judge**, without being implicit in the Code of Civil Procedure[19], was and is considered a fundamental principle of the civil process, a principle under which the judge, whose essential function to rule the law in the conflict between the parties and in the matter that he was referred, can not leave the process to the whims of the parties, *"cannot take the sphinx position which helpless assists not to the judicial duel, but to a massacre, and he should be active in the process in order to ensure a procedural balance between the parties and thus the principle of equality"*[20].

According to Professor Ion Deleanu, from the attribute of justice as "public service" drift "formalizing" the civil trial, which implies an active role of the judge, a role that does not mean impartiality or interference in the area of parties' rights and interests[21]. In respect of this principle, the judge must give the exact qualification of the demand that he is judging in relation to its content, to lead the process, to invoke violations of mandatory rules, to give guidance to the parties, to demand explanations to the parties, to order ex officio samples, to mitigate the application of some restrictive legal dispositions, through the application of other legal provisions[22].

Criticized, especially by judges, as was alleged and admitted excessively as a reason for the extraordinary appeal, which could be promoted under article 329 of the former Code of Civil Procedure, till the abolition of this form of appeal[23] only by the General Attorney, the principle of active role proves to be useful and still needed because makes from judges the law keeper and the mediator of particular interest with the public interest, provides transparency and flexibility to the process, help the celerity of the case and the quality of justice and is likely to give the procedure the advantages which results from the parties' public dialogue with the judge. But judges and often the parties are reluctant to this principle. Judges fear of not exhibit, the parties because any active intervention of the parties it may seem that the judge demonstrates partiality.

---

[19] See article 129 Civil Procedural Code, it is considered to be implicit.

[20] See in this sense V.M. Ciobanu, Theoretical and practical treaty of civil procedure, National Publishing House, Volume I, pp. 125-136.

[21] I. Deleanu, Treatise of Civil Procedure, Volume I, second edition, p. 9.

[22] M. Tăbârcă, Civil procedural Right, volume I, p. 66-73.

[23] The Law no. 59/1993, which replaced it with the institution of the appeal on points of law.

The principle of the active role of the authority has been adopted and adapted in the management of fees, taxes and contributions field, in which two categories of obligations are in place: ***i)*** of the tax authority face to the taxpayer and ***ii)*** the tax authority in relation to its basic task: to correctly determine the position of the taxpayer and the tax burden that lies it. In this sense, article 7 of the Fiscal Procedure Code provides that:

i) The fiscal body shall notify the taxpayer of the rights and obligations laid down in the procedure according to the tax law and to guide the taxpayer in the application of tax laws for filing returns and other documents and to correct the statements or documents, whenever necessary. Assistance is done as a result of taxpayers request or at the initiative of the tax authority.

ii) The fiscal body is entitled to examine ex officio, the status quo, to obtain and use all the necessary information and documents for the correct determination of the taxpayer's tax situation, in the analysis made will be identified and taken into account all relevant circumstances of each case. It also provides that the tax authority is required to objectively examine the facts and the right to decide on the nature and volume of examinations, depending on the circumstances of each case and the legal limits.

The principle of the active role of the tax authority is in a conditioning relationship with the exercise of the discretion right, which results from the two texts explaining the law (article 6 and article 7 of the Fiscal Procedure Code). To assess the relevance of facts and adopt a legal solution, based on complete findings revealing all the circumstances, the tax authority must exercise its active role. Conversely, having an active role, fulfilling his obligations under this principle of tax administration, the tax authority may exercise the right of discretion and can adopt the right solution permitted by law, his decision must be based on evidence and their findings and be motivated (Article 66 Fiscal Procedure Code).

4. The official language in the fiscal administration (Article 8 Fiscal Procedure Code)

Article 8 of the Fiscal Procedure Code merely reaffirm the principle enshrined in article 13 of the Constitution, which states that in Romania, the official language is Romanian, and then details it.

According to article 8 of the Fiscal Procedure Code, the official language of the tax administration is Romanian. When to the tax authorities are handle in petitions, justified documents, certificates or other documents in a foreign language, the tax authorities will require that they be accompanied by certified translations into Romanian.

According to article 8 paragraph (3) of the Fiscal Procedure Code, legal dispositions regarding the use of the national minorities languages are applying properly also in the tax administration. Provisions to which the reference is made are those of Law no. 215/2001, of the local public government, which in article 19, provided that in the territorial administrative units where citizens belonging to national minorities have a share of over 20% of the total population, the fiscal authorities will provide to the citizens belonging to national minorities the right to address oral or written in their language and will communicate to them the responses both in Romanian language and mother tongue. The administrative acts are drawn mandatory in the Romanian language.

5. The right to be heard (Article 9 Fiscal Procedure Code)

Introducing with principle value in the tax administration, the duty of obedience to the taxpayer by the tax authority is undoubtedly a step in the procedure regulated by the Fiscal Procedure Code in force since 2004, because prior to that, the taxpayers **were just having the right to sign with "objections" the control acts of the fisc**[24]. However, the opinions expressed in doctrine, in this issue, are to the antipodes: while some authors consider that *"the right to be heard is, rather, an*

[24] See, in this regard, Law no. 105/1997 for solving the objections, appeals and complaints on the amounts found and applied through control or tax documents issued by the agents of the Ministry of Finance.

optional one"[25], others think that listening to the taxpayer is mandatory and constitutes a measure of its protection, a measure likely to strengthen the position of the taxpayer in relation to the fiscal body[26].

The law excludes any possibility of interpreting: obedience of the tax payer by the fiscal authority, before taken the decision is mandatory in order to give the taxpayer the opportunity to express its views on the facts and circumstances relevant to the decision and the establishment of some exceptions to this rule, not only strengthen it, but make it clearer and less likely to challenge or ignore.

Through exception to the obligation of obedience to the taxpayer, the tax authority is not obliged to conduct its hearing when:

a) causes a delay in taking the decision which endangers the real fiscal situation related to the taxpayer obligations that have to be carried on or in order to take other measures prescribed by law;

b) the facts presented will change slightly the amount of the tax claims;

c) the information presented by the taxpayer, which he gave in a declaration or an application, are accepted;

d) is to be taken for enforcement.

It follows that, except some specifically cases provided by law, the listening of the taxpayer is mandatory. Compliance by the tax authorities of this obligation must result from the act itself (the tax authority, accompanied by a declaration of the taxpayer), as, its disobedience in exceptional cases must be substantiated and be mentioned in the document prepared by the tax authority.

The absence of proof regarding hearing of the taxpayer is penalized, unless the limited cases of exception provided by law, the cancellation of the tax administration act, the requirement of obedience is one of the conditions for the validity of the act.

6. Obligation of cooperation (article 10 Fiscal Procedure Code)

In the fiscal procedure, whose purpose is to regulate the tax administration, the tax authorities and the taxpayers alike, have rights and obligations: the rights of the fiscal authorities are obligations of the taxpayer and the rights of the taxpayer are obligations of the tax authority. The tax payer obligation to cooperate with the tax authority is the reverse of the obedience obligation. If the tax authority is required to hear the taxpayer before making a decision, the taxpayer is in turn obliged to cooperate with the tax authorities in order to determine the tax status quo.

For the fulfilling of the cooperation obligation, the taxpayer must present entirely the known facts, as reality and to indicate the evidence means which are known. Also, the taxpayer is obliged to take measures to procure necessary evidence by using all legal and effective opportunities available to him. The taxpayer has the burden the proving acts and deeds which were the basis of his statements and any application to the tax authorities (article 65 paragraph 1 of the Fiscal Procedure Code).

According to article 58 of the Code, the husband / wife and the relatives of the taxpayer to the third degree may refuse to provide information, conducting surveys and submission of documents. The fiscal body shall notify the persons concerned of their right to refuse to provide information.

May refuse to provide information about the data that they acquired in their work: priests, lawyers, notaries, tax advisors, bailiffs, auditors, accountants, doctors and psychotherapists and their assistants and the participants to their work, except for the information regarding the fulfilling of their tax obligations established by law in their task. Except priests, others before shown can provide information, with the consent of the person about whom the information was requested (article 59 paragraphs 1-3 of the Fiscal Procedure Code).

---

[25] Emilian Duca, Commented Fiscal Procedure Code annotated edition, Law Publishing House, 2010.

[26] Bufan Radu and his collaborators, The tax treaty, Lumina Lex Publishing House, 2005.

We note that tax law is inconsistent with the provisions of other laws (for example: the law of lawyers, art. 11, which requires that the lawyer must keep the professional secrecy) and only apparently imposed on subjects the right to choose the conduct to follow. This, because the article 59 paragraph 4) states that "In derogation from the provisions of the above, in order to clarify and establish the actual fiscal situation of taxpayers the special departments of local public administration have the power to require information and documents with fiscal relevance or to identify the taxpayers or the taxable or taxed matter, as appropriate, and **public notaries, lawyers, bailiffs**, police, customs, community public services driving licenses and vehicle registration, community public services for issuing passports, community public services for the evidence of persons and any other entity that has information or documents relating to taxable goods or taxed, as applicable, or the people who have contributors quality, **they are obliged to provide them free of charge**".

As regards the cooperation between authorities, it is governed by articles 60-63 of the Fiscal Procedure Code as follows:

a) The public authorities, public institutions and those of public interest, local and central, and also the government devolved departments will provide information and documents to the tax authorities at their request. To the purposes of this code, the tax authorities can access online the database of those institutions for the information set based on a protocol (article 60).

b) The public authorities, public institutions and those of public interest are obliged to cooperate in achieving the purpose of the tax law. The tax authority requesting collaboration is responsible for the legality of the request and the requested authority is responsible for data (article 61);

c) The cooperation between public authorities, public institutions and those of public interest is achieved within their duties according to law. If the public authority, public institution or the one of public interest refuses the collaboration, the public authority superior to both bodies will decide. If such authority does not exist, the decision will be taken by the higher authority than the one required (article 62).

d) Based on the international conventions, tax authorities will cooperate with tax authorities from other states. In the absence of an agreement, the tax authorities may grant or seek cooperation from other tax authorities of another state on the basis of reciprocity (article 63).

Applications of the taxpayer's obligation to cooperate with tax authorities we find also in other texts. Thus, for example, article 65 (burden of proof in proving facts tax) provides that "the taxpayer has the burden of proving acts and deeds which were at the basis of his statements and to any request to the tax authorities".

7. Tax secrecy (article 11 Fiscal Procedure Code)

Disclosure of information that the fiscal administration officials collect in exercising their duties can prejudice the taxpayers. Therefore, the law (article 11 of the Fiscal Procedure Code) established for civil servants from the tax authorities, including people who do not have this quality, the obligation of secrecy on the information they hold as a result of service duties.

The information on taxes, contributions and other amounts owed to the general consolidated budget may only be submitted to:

a) the public authorities to fulfill the obligations prescribed by law;

b) the tax authorities of other countries, based on mutual terms of agreement;

c) the competent judicial authorities according to law;

d) in other cases provided by law.

The transmission of fiscal information in situations other than those noted above is permitted while ensuring that they do not clear the identity of any person or entity.

The authority receiving tax information is required to keep the secret of the information received.

Failure to keep the secret attracts the responsibility according to the law.

8. Good faith in the fiscal law (article 12 Fiscal Procedure Code)

The Constitution provides four fundamental duties of citizens: ***i)*** loyalty to the country, ***ii)*** defense of the country, ***iii)*** the obligation to contribute through taxes and contributions to the public expenditure and ***iv)*** **the exercise of rights and freedoms in good faith**.

In fact, in accordance with article 57 of the Constitution, *"the Romanian citizens, foreign citizens and stateless persons shall exercise their rights and liberties in good faith, without violating the rights and freedoms of others".* As results of its contents, the constitutional provision codifies two principles: *"bona fides"* and „*neminem laedere*".

Good faith, however, as you know, is not just a legal principle but also a moral principle aimed for the exercise of the rights and freedoms itself, regardless of the manifestation on a legal basis of the rights and freedoms of other law subjects. But as enshrined the constitutional principle relates exclusively to the individuals (Romanian citizens, foreigners and stateless persons) who need to exercise their rights and liberties in good faith, without violating the rights and freedoms of others. It follows that the provisions of article 57 of the Constitution does not apply to public representatives, who may be punished for their wrongful acts and abusive conduct by other jurisdictional mechanisms.

This does not exclude from the rules of conduct of the state agents and public authorities the obligation of reasonableness and good faith in the exercise of their duties, but such obligation does not derive from the Constitution but from the obligation of the state (through its institutions and its officials) to respect and guarantee the exercise of the rights and freedoms of citizens, where the exercise of these rights may be restricted is regulated by article 53 of the Constitution[27].

The legislature felt the need to emphasize for the tax law report parties, that the relationships between them (the taxpayer and the tax authority) must be based on good faith, in order to achieve the requirements of the law. It is, we believe, an affirmation of the idea of the partnership between the state and the taxpayer subsumed to attaining the tax law scope rather than the interests of the taxpayer.

We have seen that legal antonym of good faith is the abuse of law. In respect of the principle of good faith, if the tax authority is not acting on good faith in relation to the taxpayers, it commits an abuse of law. But the possibility of sanctioning such an act, it seems hard to imagine.

[27] Article 53 of the Constitution (Restriction of certain rights or freedoms) provides that:

(1) The exercise of rights or freedoms may only be restricted by law and only if necessary, as appropriate, for: the defense of national security, public order, health or morals, rights and freedoms of citizens; conducting criminal instruction; preventing the consequences of a natural calamity, disaster, or an extremely serious disaster.

(2) Restrictions may be ordered only if necessary in a democratic society. The measure must be proportionate to the situation that caused it, to be applied without discrimination and without prejudice to the existence of the right or freedom.

HARMONIZING PHASE OF THE ROMANIAN LEGISLATION REGARDING PERFORMERS' RELATED RIGHTS

MARIANA SAVU*

Abstract

The Copyright System as established by the Bern Convention for the Protection of Literary and Artistic Works[1], did not provide the necessary protection to those "parties" involved in bringing the work to the public, although it represented a major role in promoting the work. So it was necessary for the legal protection to be regulated in order to allow them to benefit from the entire moral and economic attributes resulted from their work. To remedy the absence of protection due to copyright applicable traditional rules, a new protection system was created: that of related rights[2]. On international level, this led to the adoption in 1961 of the ***Rome Convention for the Protection of Performers, Producers of Phonograms and Broadcasting Organizations****[3], considered in the literature[4] as arising of the Bern Convention, alongside the TRIPS Agreement and the WIPO Treaties in this filed.*

Keywords: *TRIPS Agreement, New Regulations in the field of Related Rights regarding Performers, Implementation of WIPO Performances and Phonograms Treaty, Protection of Performers, Beijing Treaty on Audiovisual Performances.*

Introduction

The Rome Convention is the result of a long-lasting process[5] initiated in 1928 during the Review Conference of the Bern Conference. The success of Rome Convention was not as strong as that of its model, the Bern Convention[6]. The difficulty to adhere to the Bern Convention was the result of the great diversity of national legislation, some still ignoring the establishment of special regulations for related rights, and others only partially acknowledging the related rights' system[7], thus explaining the small number of states that have joined the Rome Convention compared with the number of those that joined the Bern Convention[8].

The Convention covers 3 categories of holders of related rights[9]: performers, phonogram producers and broadcasting organizations.

http://www.wipo.int/treaties/en/ShowResults.jsp?lang=en&treaty_id=15

[9] Art. 1.

Unlike the Bern Convention, the Rome Convention lays down precise definitions of the protected persons[10]. Thus, the performers are defined as follows[11]: actors, singers, musicians, dancers and other persons, who represent, sing, recite, declaim, play or otherwise perform literary or artistic works. The definition of performers is not a restrictive one[12] as that of phonogram producers[13] or of broadcasting organizations[14], being the only one upon which the Contracting States may, by the national legislation, extend the protection provided by the Convention to the artists who do not perform literary r artistic works[15].

In the specialty literature[16] it was considered that the minimum protection offered to the performers by the Convention is relatively modest; thus the rights granted to the performers by the Convention mainly refer to the fact that they can prevent any fixation or recording of their unfixed live performances, so any movie or sound recording could not be performed without the approval of the performer. In practice, this means that a performer can have an exclusive contract with a production company for the recording of his/her performances. Once the recording has been made, the performer may prevent its reproduction: when the original fixation was made without his/her consent, when the reproduction is made for other purposes than those for which the performer already gave his/her consent; if the recording is permitted by national law for certain purposes[17]. Thirdly, the performers may prevent broadcasting or communication to the public of their live performances, if they have not authorized such ways of using their performances. This right is applicable only upon live performances, and not upon those where the performance used for broadcasting or for communication to the public is already broadcasted or made from a fixation[18].

The rights of broadcasting or communication to the public of fixed phonograms offered to the public for commercial purposes are established as rights to an equitable remuneration[19].

The modest protection offered by the Convention to the performers considers, on one hand, the fact that some States do not have to acknowledge them as exclusive rights, and, on the other hand, the States are free to establish or not, by their national legislation, *"the methods by which the performers shall be represented in terms of the exercise of their rights, when a greater number of them share the same performance"*[20]. As appreciated within the specialty literature[21], the Convention itself inflicts its own limits as it reduces protection in audiovisual broadcasting[22].

[22] Art. 19: Without taking into account any other provisions of this convention, the provisions of art. 7 shall cease to be applicable as soon as a performer will be given his/her consent for his/her performance to be included in an image fixation or or in an image and sound fixation.

Actual Content

1. Analysis of the implementation within the Romanian Legislation - *De lege ferenda*.

The related rights system was introduced for the first time in the Romanian legislation[23] by the Law no. 8/1996 regarding copyright and related rights[24], based on the Rome Convention[25].

The Law no.8/1996 (art. 92)[26] translates into a clear manner the coexistence rule[27] of the copyright with the related rights as provided by art. 1 of the Rome Convention: *"The protection provided by this Convention leaves intact and does not affect in any way the protection of copyright upon the literary and artistic works. Consequently, none of the provisions of this Convention shall be construed as affecting this protection"*.

The performers' definition provided by the Rome Convention was taken by Law no. 8/1996 (art. 95) as follows: **actors, singers, musicians, dancers and other persons who present, sing, dance, recite, declaim, play, perform, direct, conduct or execute in any way a literary or artistic work, a show of any kind, including folklore, varieties, circus or puppet shows**.

Performers' definition involves a detailed analysis:

- For instance, the director of a theatre play or of a show (including opera or operetta) is included in the category of performers, unlike a movie or audiovisual work director who, according to art.66 of Law no.8/1996, is considered as author of the same. Including the director of a play or a show seems to have originated in the provisions of the above mentioned art. 9 of Rome Convention, the same being also practiced at the level of other EU countries, for instance France, although art. 9 of the Convention refers in its title to the circus and variety artists.

- Within the specialty literature, performers' definition from Law no. 8/1996 was not construed as a whole, it was seen either declarative[28], or limitative and in accordance with the text of the Rome Convention (art. 3)[29]. In other States, for instance in France[30], the definition seems to be clearer and more restrictive: *"except the additional/auxiliary performers [31](extras) considered as such according to the professional usage, the performer is the person who presents, sings, recites, declaims, plays or performs in any other manner a literary or artistic work, a variety, circus or puppet show"*.

- Including variety and circus artists within the performers' category, although they do not perform or execute a spiritual work[32], is also motivated based on the provisions of art. 9 of the Rome Convention.

- The difference in tone between the notion of "performing artist" and that of „performer"[33] takes into account the fact that the first applies to artists playing individually a song (soloists) and to

[30] Art. L. 212-1 from the Intellectual Property Code.

[31] For instance, the performer who read the scenario within a movie. The auxilliary artist (extras) differs from performer, not only by the complementary, accesory feature to his/her role, but above all because his/her personality does not translate into his/her performance

[32] Ciprian Raul Romiţan, Mariana Liliana Savu, *"Performers' Rights"*, Universul Juridic, Bucharest, 2008, p. 53.

[33] Which difference does not exist in the common (Anglo-Saxon) law, the used terminology being that of "performer".

those performing works (actors), while the second applies to the artists collectively performing musical compositions (conductors, musicians in a group etc). Of course, a performing artist can also be a performer. During the deliberations on the Rome Convention, it was agreed that leaders of instrumental or vocal bands should be included in the performers' category.

- Long debated in the specialty literature is the extras' category[34]. Some authors assert that both theatre and movie extras are not considered as holders of related rights, the boundary between an extra and a real performer being determined by professional usages[35]. On the other hand, other authors state that extras might be included in the category of holders of related rights, provided that their role and position in the general assembly of the show is essential for transmitting the message and for unambiguously causing its transmission[36].

Given the existing examples in other EU countries, such as France, that extras cannot be considered as performers, it is argued, on the one hand, ancillary, complementary to their performance and, on the other hand, on the exhaustive nature of the definition of performers as it is provided by the Law no. 8/1996.

- Another category of artists who raised issues in practice is that of those who "recite". Normally, according to the definition, reciting means saying aloud, from one's memory, a text (poetry or prose). So, recitation involves a text, and not any kind of text, but a poem or a fragment of prose, meaning an intellectual property right. The same is also the solution implemented by Law no. 8/1996, namely: *„(...) recites (...) a literary or artistic work (...)"*. As a consequence, those who present news/weather/various radio or TV shows cannot be included in performers' category. Of course, one can counter-argue by the fact that such a person brings his/her personal contribution to the recitation activity, but what is recited, within the presented cases, does not constitute a work of intellectual creation. However, that activity does not involve further asset exploitation, so those people cannot be granted adequate remuneration.

Given the foregoing, it is necessary to frame and analyze the category of performers from case to case, as well as to develop at the national level some codes of conduct[37] with the professional associations and organizations of performers, which are designed to contribute to the enforcement of the related rights of performers.

Performers' right to an equitable remuneration for broadcasting and communication to the public of their performances and interpretations as provided by the Rome Convention (art. 12) is translated in the Law no. 8/1996[38]. As well as, the exclusive property right to authorize or prohibit the fixation of his/her performance or execution, understanding by fixation: *"incorporating sounds, images or sounds, and images or their digital representation on a support which allows them to be perceived, reproduced or communicated to the public by using a device"*.

Compared with copyrights and with the collective management forms, *de lege ferenda* is necessary to analyze art. 96 and art. 123^1 - 123^2 of the Law no. 8/1996 referring to the property rights of performers and their management forms. Thus, both for the performers and the phonogram producers the right for making available to the public of their phonograms and performances is separately covered by the property rights, but this right is not provided by articles 123^1 - 123^2 , which refer to the collective management forms, either mandatory or optional, covering only the public communication right. In this respect, detrimentally to the performers, it was concluded that such a right is not mentioned under any of the forms of management and thus it should be managed based on a special mandate. Such an opinion is inacceptable in relation to the provisions of art. 96.

[37] Art. 139 paragraph (19) of Law no. 8/1996, with subsequent amendments and supplements.

[38] Art. 98 paragraph (1) items g)-g)[1].

Consequently, *de lege ferenda* is necessary to distinctively regulate the right of making available to the public, i.e. to amend art. 15 of Law no. 8/1996, as well as to include this right within the category of the optionally managed rights, i.e. to amend art. 123^2 of Law no. 8/1996.

However, *de lege ferenda* is necessary to correlate art. 123^1 paragraph (1) item f) regarding the right to an equitable remuneration which is acknowledged for the performers and phonogram producers for the communication to the public and broadcasting of commercial phonograms or of their reproductions, with art. 123^2 paragraph (1) item f) regarding the right to an equitable remuneration which is acknowledged for the performers and phonogram producers for the public communication and broadcasting of phonograms published or reproduced for commercial purposes. In fact it creates a false distinction between commercial phonograms and the phonograms published for commercial purposes, when, in fact, such a distinction does not exist, because all phonograms are published for commercial purposes[39]. This is the meaning of the definition of phonograms, according to art. 3 item b) of the Rome Convention and with art. 103 of Law no. 8/1996[40], and in compliance with the provisions of WIPO Performances and Phonograms Treaty (art. 2(e), 8, 9, 12, and 13), in the sense that they consider that only fixed copies of the phonograms may be put into circulation as tangible objects. *De lege ferenda*, in order to eliminate any prejudice brought to the performers as a result of their use, appears more than necessary to define the phonograms published for commercial purposes. Such a legislative proposal may be regulated as follows: At the art. 106^5, insert after paragraph (4), a new paragraph (5) with the following content: *„For the purposes of this Law, it shall be deemed that a phonogram is published for commercial purposes when its copies are offered to the public in a sufficient quantity."*

The analysis of the implementation of Rome Convention into the Law no. 8/1996 leads us also to the art. 8 of the Convention, which considers the methods that States can adopt, by which the performers will be represented in terms of the exercise of their rights, when a greater number of them share the same performance. Correlatively, Law no. 8/1996[41] establishes that the interpretation or performance of a work is collective, if the individual performances form a whole, without the possibility, given the nature of the performance, to assign a distinct right to any of the participating performers upon the overall interpretation or performance. In order to exercise their exclusive rights regarding the authorization provided at art. 98 of Law no. 8/1996, the performers participating collectively in the same performance, such as members of a musical band, a choir, an orchestra, a ballet or a theatre troupe have to empower in writing a representative among them, with the consent of their majority, except the director, conductor or soloists.

Limiting the voting right of performers who participated in a joint performance or execution to a single vote by an assigned representative (art. 129 paragraph 2, 2nd Thesis), seems to have originated in the above Rome Convention, but it cannot be justified by the notion of exercising the rights because it takes into account the exercise of the property rights, meaning those to authorize and prohibit, or of the right to an equitable remuneration. As long as this rule is constituted by a holder of rights who granted a mandate to the collective management organization, i.e. one vote within the General Assembly,[42], then the legal provision by which performers who participated in a joint performance or execution have a single vote by their assigned representative seems to be a limitation of their right to vote. *De lege ferenda*, this provision might be removed from the Law no. 8/1996 or provided in the statutes of the collective management organizations in this field, also taking into

[39] Art. 106^5 paragraph (1) referres to the phonograms published for commercial purposes.

[40] It is considered a sound or phonogram recording, the fixation of sounds from a performance or of otger sounds or of digital representation of these sounds, other than in the form of a fixation incorporated in a cinematographic work or in any other audiovisual work.

[41] Art. 99.

[42] Art. 129 paragraph (2).

consideration the draft Directive regarding collective management[43] according to which any restriction regarding members' rights to attend to and vote within the General Assembly must be acceptable and pro rata and should be based on the following criteria: duration of membership and remunerations paid or payable to a member in relation to a certain financial period of time. These criteria shall be provided in the Statutes of the collective management organizations and shall be made available to the public.

The provisions of Law no.8/1996 regarding performances of an artist based on an individual employment contract are in accordance with the international regulations, and the property rights transferred to the employer should be expressly provided for in this employment contract. This provision is also in compliance with those regarding the agreement on transfer of economic rights[44], which must include, among others, the transferred rights in detail.

Analyzing the implementation of the provisions regarding performers within the Romanian legislation leads us to one of the gaps in the Law no. 8/1996. Thus, the Law does not refer to the transfer of exercise of performers' property rights subsequently to their death. The art.97 of Law no. 8/1996 refers only to performer's moral rights, which exercise, according to the civil law, is transferred by inheritance after the performer's death, on an unlimited period of time. If there are no heirs, the exercise of such rights shall go to the collective management organization that manages the rights of the performer or, where appropriate, to the organization having the largest number of members from that field. These provisions are compliant and correlated to the ones regarding authors (in art. 25) only regarding the moral rights; there is no such provision for the property rights. *De lege ferenda*, is necessary to supplement art. 97 paragraph (2) of Law no. 8/1996 with specifications regarding the property rights, as follows: *"After the death of performer, his/her exercise rights under the art. 96 and art. 98 are transmitted by inheritance, as per the civil law, on an unlimited period of time. If there are no heirs, the exercise of such rights shall go to the collective management organization that manages the rights of the performer or, where appropriate, to the organization having the largest number of members from that field"*.

As stated in the specialty literature[45], in absence of heirs, the collective management organization is granted only the exercise of the rights, meaning the right to authorize or prohibit performances' use, in accordance with the property rights as provided by art. 98. This means that the said collective management organization shall authorize such use under art. 98, shall collect appropriate remunerations and shall distribute such remunerations to the members of the collective management organization, according to the provisions of the Statute, and withholding the appropriate administrative fee. Practically, any other activities, in contradiction with said activities of a collective management organization are in conflict with provisions of the art.134 align. (2) lit. f) *("the amounts resulting from unclaimed and undistributed remunerations deposited in bank deposits or from* ***other operations within the limits of its object of activity****, as well as those obtained by way of loss or damage as a result of or related to copyright or related rights infringements,* ***are entitled to and distributed to right holders and may not be considered as revenues of the collective management organization****"*) and paragraph (3) of Law no. 8/1996 (*"****The remunerations collected by the collective management organizations are not and should not be treated as their revenues****"*).

---

[43] On July 11th, 2012, the European Commission adopted the draft Directive on the collective management of copyright and related rights and on the multi-territorial licensing of the rights upon musical works concerning their online use on the internal market.

[44] Art. 41.

[45] *Viorel Roş, Dragoş Bogdan, Octavia Spineanu-Matei*, op. cit., p. 299.

Another important element determined in practice by the accession of Romania to the Rome Convention was the possibility of the collective management organizations[46] to represent, based on reciprocity agreements, the rights of artists from abroad.

2. TRIPS Agreement – Trade Related Aspects on Intellectual Property Rights

2.1. History

After the Rome Convention, two significant developments were registered in the related rights field: the first one considers the appearance in 1994 of the TRIPS Agreement, and the second one by adopting in 1996 the WIPO Performances and Phonograms Treaty.

The TRIPS Agreement[47] is part of the Agreement establishing the World Trade Organization (WTO), signed on April 15th, 1994 in Marrakesh, which Agreement is administered by WTO. It terms of intellectual property, the Annex IC is relevant to this Agreement which provides minimum standards for various regulations in the field of intellectual property, regulations that have to be applied in the WTO Member States. At the same time, TRIPS represents one of the most important multilateral instruments concerning the globalization of the rules in the field of intellectual property, and as far as the copyright and related rights are concerned, this agreement includes many provisions that are to be found in the Bern Convention[48].

Adopting the TRIPS Agreement represented an important step for the protection of neighboring/related rights[49], being considered in the specialty literature[50] as a large-scale text as its applies to both copyright and related rights and to other intellectual property rights (trademarks, designs and models, patents and so on). The agreement involves many features compared to traditional conventions[51]: the first derives from its purely economic logics of free competition, similar to that of Community law, the importance of the commercial interest of states; the second derives from the "modernist ambition" of the Agreement to cover various gaps criticized in the classical conventions for their lack of realism and their failure to adapt to new technologies; the third derives from the strictly "journalistic" feature of the Agreement, implementing a more efficient regulatory system than the one in the conventional agreements.

The Agreement has not been adopted in order to replace the Rome Convention; this is stipulated in art. 2.2 which shows that TRIPS does not affect any of the obligations of contracting states under the Rome Convention. The TRIPS Agreement regulates the national treatment, but does not require WTO member states to join or to implement the Rome Convention, instead establishes a set of minimum protection standards[52] that member states must implement and which are similar to those provided by the Rome Convention; in this respect in the specialty literature[53] it was stated that in this manner the Agreement came closer to the substance of the Rome Convention. Thus, art. 14 regulates the rights of performers, phonogram producers and broadcasting organizations, but with some important changes:

---

[46] CREDIDAM, within AEPO-ARTIS, signed bilateral agreements for reciprocal representation with partner collective management organizations.

[47] The Agreement entered into force on January 1st, 1995 providing, for mandatory application, flexible periods by signatory countries, ranging from a year as a general term and up to five years for developing and transitory countries (valid period even for Romania) and to ten years for less developed countries. Except articles 3, 4 and 5 of TRIPS agreement which had to be applied also by Romania under the general term of entry into force with mandatory applying term of 1 year (i.e. from January 1st, 1996), the remaining TRIPS articles became mandatory for Romania as of January 1st, 2000. This Agreement was ratified by Romania through the Law no. 133/1994 for the ratification of Marrakech Agreement regarding the establishment of World Trade Organization.

[48] http://www.orda.ro/default.aspx?pagina=208

[49] Starting with this date they were also called as „related rights" (into English).

[50] *André Lucas, Henri-Jacques Lucas*, op. cit., p. 1008.

[51] *André Lucas, Henri-Jacques Lucas*, op. cit., p. 1009.

[52] Art. 14.

[53] *André Lucas, Henri-Jacques Lucas*, op. cit., p. 1026.

- the producers of phonograms are guaranteed the right to rent their phonograms, which means that they can authorize or prohibit the rental for commercial purposes to the public of the original or copied phonograms.

- the term of protection granted to performers and phonogram producers was modified, thus it could not expire before the expiration of the 50 years period from the end of the year when the performance took place, i.e. when the fixation was made.

The Agreement contains important provisions regarding enforcement measures and disputes settlement.

As far as performers are concerned, according to art. 14.1, they are able to prevent unauthorized fixation of their performance in a sound recording, for instance on a CD. Fixation right under the Agreement applies only to audio fixations, not to audiovisual ones. This means that artists should be able to prevent the unauthorized recording of their concerts, but actors do not have the same opportunity to prevent the unauthorized filming of their performances. At the same time, artists are able to prevent the reproduction of such fixations of their performances, as well as the broadcasting and communication to the public of their live performances.

Art. 14.6 refers to exceptions and limitations to the rights of performers, which are in accordance with the Rome Convention, such as, for instance, the private copy.

Given the above, the standards imposed by the Rome Convention were improved by the TRIPS Agreement as far as the performers are concerned.

General obligations imposed on States by the TRIPS Agreement regarding the enforcement measures are: administrative and civil measures, ways of appeal, provisional measures, measures provided to the states' borders and criminal proceedings.

2.2. Analysis of the implementation within the Romanian Legislation - *De lege ferenda*.

The TRIPS Agreement was implemented by the Law no. 8/1996 regarding performers, the legislation being harmonized at this level: duration of protection, rights, limitations, exceptions and sanctioning measures. Regarding the latter aspect, it is necessary to **analyze legal liability for infringement of the rights of performers**[54]. This subject matter is incorporated by the Chapter III, Section II, art. 138^7-145 of the Law no. 8/1996, with subsequent amendments and supplements.

Infringement of performers' rights incurs civil liability, either administrative or criminal, as appropriate[55], and artists may request to the Court to order, as applicable: the acknowledgment of their rights, determining the violation of the said rights and the compensation for caused damages. In **determining damages**[56], the Court has to take into consideration the criteria provided by art. 139 paragraph (2) of the Law no. 8/1996; however, to avoid any wrong construe of this article, *de lege ferenda*, it should consider the following wording:

"In determining compensations, the Court takes into consideration:

a) criteria such as negative economic consequences, especially the lost profits, unjust profits made by the offender and, when appropriate, other elements beside the economic factors, such as moral damages incurred by the right holder;

b) if the criteria set out at item a) above can not be applied, there will be granted damages representing three times the amounts which would have been legally payable for the type of use subject to the illegal act."

For full coverage of the property or moral damage and in order to eliminate the exposure to danger, the performers may ask the Court to order the implementation of any of the **remedies** provided by art. 139 paragraph (14) of Law no. 8/1996: submission of returns achieved by the

[54] *Ciprian Raul Romiţan, Mariana Liliana Savu*, op. cit., p. 111-122.
[55] Art. 138^7 paragraph (1).
[56] Defending the rights by the means of civil law.

unlawful act, destroying the equipment and tool owned by the perpetrator, shutdown/removal from the market/commercial circuit and spreading the information about the decision of the Court.

Precautionary measures may be ordered by the Court pursuant to art. 139 paragraph (3) and the following of the Law no. 8/1996 and they are divided into 5 categories: for preventing an imminent damage (provision of security, payment of fines), providing for damage repair (measures taken upon movable and immovable assets, blocking bank accounts and so on), seizure or surrendering to competent authorities the goods suspected of infringement of a right in order to prevent their introduction on the commercial market, measures to ensure evidence or findings of a state of facts[57], seizure of objects and documents that constitute evidence of the infringement of rights[58].

The administrative liability is provided at art. 139^2 – 139^4 of Law no. 8/1996, with subsequent amendments and supplements. For the performers, the administrative offenses provided at art. 139^2 are applicable, namely:

d) if users fail to comply with the provisions of art. 130 item h);

e) in case of fixation of their artistic performances or of broadcasted radio or TV shows without the consent of the holder of rights acknowledged by this law.

The administrative punishments provided at art. 139^2 are also applicable to legal persons. If the offender, a legal person, performs activities which involve, according to its object of activity, the communication to the public of works or products bearing copyrights and related rights, the penalties limits are twice increased. Administrative offences and sanctions are found and applied by officers or police agents within the Minister of Administration and Internal Affairs with relevant expertise in this field. The offender can pay, within 48 hours of receipt of the minutes of finding the offence, half of the minimum fine provided.

The art. 139^4 paragraph (1) of the Law no. 8/1996, is problematic in practice: Constitute an offence, if not a crime, and they are punishable by a fine of RON 10.000 up to RON 50.000 and seizing pirated-goods or access control pirated devices, the facts/acts carried out by natural or legal persons authorize to allow access inside the premises, to the equipments, to the transportation means, to private goods or services, in order for another person to commit an offence or violation provided by this law – in the sense that the listed facts are minor, if not criminal, or there can be no facts that would constitute, at the same time, offenses and crimes, because the degree of social danger of an act is determined only by the legislator, when regulating certain acts as crimes and others as offences[59]. In this regard, it is necessary for *de lege ferenda*, to appropriately amend art. 139^4 paragraph (1) of Law no. 8/1996.

Defending performers' rights by means of criminal law[60] includes analyzing the offences' content regarding the related rights of performers and the defense procedural means. As a general rule for such offences to exist, is that **acts are performed without the authorization or consent of performers**[61]. The active subject might be any natural or legal person who fulfills the requirements provided by law for criminal responsibility and the passive subject is the representative of the performer.

This subject matter is incorporated by art. 139^6, art. 139^8, art. 140 and art. 143 of Law no. 8/1996, with subsequent amendments and supplements. Thus constituting crimes **the facts carried out without the consent of the holders of related rights: making available to the public**, including via Internet or by other computer networks, of products bearing related rights[62], so that the

[57] Art. 139 paragraph (6).
[58] Art. 139 paragraph (10).
[59] Bucharest Court of Justcie, Decision no. 1866/1998.
[60] *Ciprian Raul Romiţan, Mariana Liliana Savu*, op. cit., p. 119-122.
[61] *Ciprian Raul Romiţan, Mariana Liliana Savu*, op. cit., p. 119.
[62] Art. 140 paragraph (2): We understand by products bearing related rights any artistic fixed performances, phonograms, videograms and shows or services of programs owned by broadcasters and TV organizations

public can access them freely at any place or at any time elected individually; **reproduction** of products bearing related rights; **distribution, rental or import** on the internal market o products bearing related rights, other than the pirated-goods[63]; **public communication** of products bearing related rights; **broadcasting** products bearing related rights; **cable retransmission** of products bearing related rights; **fixation for commercial purpose** of artistic performances or of broadcasted radio or TV programs.

Given the issues raised in regulatory practices as crimes of some facts provided by art. 140 of Law no. 8/1996, with subsequent amendments and supplements, *de lege ferenda*, it should be necessary the regulation as offences (art. 139^2) of the following facts: the public communication of phonograms and performances without paying the equitable remunerations due to producers of phonograms and performers, as well as the possession of pirated goods at the premises of legal entities, to be used for unauthorized public communication.

3. Implementation of WIPO Performances and Phonograms Treaty[64]

3.1. History

An important aspect not covered under the TRIPS Agreement was the need to update the substance of related rights regarding the online use based on digital technology and Internet. This was regulated by WIPO Performances and Phonograms Treaty, signed on December 20th, 1996[65]. The number of states (90) that have ratified the Treaty is compared with that of the countries that have ratified the Rome Convention (91)[66]. The principle of national treatment provided by the Rome Convention is also overtaken by WPPT (art. 4) and as we can see from its title, it takes into account only performances and phonograms, not the radio and television organizations.

WPPT includes **updated definitions** (art. 2) of those provided by the Rome Convention:

- **performers**[67]: actors, singers, musicians, dancers or other persons who present, sing, tell, declaim, play, perform or execute in any way a literary or artistic work, or folkloric expressions.
- **publishing a fixed performance or a phonogram**[68] - making available to the public copies of fixed performances or copies of a phonogram with right holder's consent and provided that the copies are made available to the public in a sufficient quantity;
- **broadcasting**[69] - wireless transmission of sounds or images, or of sound or their representation, for the public to receive them; this term also covers such a transmission via satellite; transmission of encoded signals is treated as broadcasting if the decoding means are provided to the public by the broadcasting organization and based on its consent;
- **communication to the public of a performance or phonogram**[70] - transmission to the public by any means, otherwise than by broadcasting, of sounds coming from a performance or of sound or representation of sounds fixed on a phonogram. For the purposes of art. 15, the expression 'communication to the public' includes to make audible to the public either the sounds or the representation of sounds fixed in a phonogram.

Considering the above, the influence of new technologies upon the definition of broadcasting and communication to the public, is obvious.

---

[63] Art. 139^6 paragraph (8): We understand by pirated goods: all copies, no matter the support they are on, including covers, recorded without the consent of the holder of rights or of the person legally authorized by him/her, and which are directly or indirectly, totally or partially copied from a products bearing copyrights or related rights, or from their packaging or covers.

[64] Hereinafter referred to with the English abbreviation WPPT.

[65] Ratified by Romania by the Law no. 206/2000.

[66] See Annex no. 2 – p. 47.

[67] Art. 2 item a).

[68] Art. 2 item e).

[69] Art. 2 item f).

[70] Art. 2 item g).

It is interesting the specification of folklore expressions in the definition of performers, as they are from the adoption moment of WPPT, explicitly introduced in the definition, being a signal indicating that related rights play an important role in the protection of unrecorded cultural expressions. Performers play a vital role in communicating these expressions to the public, thus protecting their performances and any records made in this occasion indirectly protect folklore.

The rights granted to performers are the **moral ones** (**the right to paternity** – of pretending to be mentioned as such, unless the use of the performance requires the omission of this specification; **the right to integrity** – of being against any distortion, mutilation or other modification of its performances that would damage his/her reputation) and, additionally, **WPPT updates the property rights upon performances**:

- **unfixed ones**: the performer has the exclusive right to authorize fixation of his/her performance, and consequently, the exclusive right shall also be applied upon the right of broadcasting and communication to the public, unless the said performance is a broadcasted performance.

- **fixed ones**:

- **the reproduction right**[71] - the performers enjoy the exclusive right to authorize the direct or indirect reproduction of their performances fixed on phonograms, regardless the way or form of reproduction.

- **the distribution right**[72] – the performers enjoy the exclusive right to authorize the making available to the public of the original or copies of their performances fixed on phonograms, either by sale or by any other transfer of property. None of the WPPT provisions bring prejudice to the possibilities that the contracting parties have for determining any conditions under which the exhaustion of the distribution right applies after the first sale or after another transfer of property operation of the original or of a copy of the performance or of the fixed performance, carried out with the consent of the performer.

- **the rental right**[73] – the performers enjoy the exclusive right to authorize the commercial rental to the public of the original and copies of their performances fixed on phonograms, even if they were previously distributed by the performers themselves or with their consent.

- **the right of making available to the public**[74] – the performers enjoy the exclusive right to authorize the making available to the public, by wire or wireless means, of their performances fixed on phonograms, in such a manner that anyone could access them at a place and at a time elected individually. This provision covers on-demand services, for instance consumers can select from their personal computer at home a performance, anytime they choose.

- **the right to an equitable remuneration for broadcasting and communication to the public**.

The protection term provided under WPPT[75] is of 50 years, calculated from the end of the year during which the performance was fixed on a phonogram.

The limitations and exceptions[76] provided for the protection of performers must be of the same nature with the ones provided in respect of copyright protection upon the literary and artistic works, of course with the observance of the 3 steps: in certain special cases, when they do not affect to the normal use of the performance and no unjustified harm is caused to the performer's legitimate interests.

[71] Art. 7.
[72] Art. 8.
[73] Art. 9.
[74] Art. 10.
[75] Art. 15.
[76] Art. 16.

WPPT requires[77] to Member States to provide an adequate legal protection and effective legal punishments against neutralization of the efficient technical measures used by the performers within the exercise of their rights and which, as far as their performances are concerned, restrict their achievement of acts that are not authorized by performers or allowed by law.

At the same time, WPPT provides[78] obligations regarding information on rights management[79]. Thus, the States must provide adequate and effective legal punishments against any person who carries out one of the following acts aware or, as far as the civil punishment are concerned, having reasonable grounds to believe that such an act shall involve, enable, facilitate or conceal the impairment of a right under the WPPT:

- Suppresses or changes, without authorization, any information regarding rights management that is presented in electronic form;

- Distributes, imports for the purpose of distribution, broadcasting, communication to the public or makes available to the same, without being authorized, performances, copies of fixed performances or copies of phonograms, aware of the fact that the information referring to right management, inan electronic form, was suppressed or changed without authorization.

3.2. Analysis of the implementation within the Romanian Legislation - *De lege ferenda*.

Harmonization of the provisions of Law no. 8/1996 with the WPPT was performed under the Law no. 285/2004[80] amending and supplementing the Law no. 8/1996.

Also reiterated by the provisions of WPPT and of Law no. 285/2004 amending and supplementing the Law no. 8/1996, **single equitable remuneration due to performers** is an intellectual property right[81], and it is due for the direct or indirect use of phonograms published for commercial purpose or of their reproductions by broadcasting or by any method of communication to the public[82].

Harmonization with the WPPT regarding the technical protection measures was conducted according to **Chapter III „Protection measures, procedures and punishments", Section I "Technical protection measures and information regarding rights management", art. 138[5]-138[6] of Law no. 8/1996**. Thus, the performer may establish technical measures of protection of the rights acknowledged by law. By technical measures[83] we understand the use of any technology, any device or component which, by its normal operation, is designed to prevent or to restrict acts that are not authorized by the right holders. Technical measures are considered as effective when the use of any work or of any other object of protection is controlled by the right holders by applying an access code or a protection procedure, such as encryption, coding, scrambling or any transformation of the work or of another object of protection, or by a copying control mechanism, whether the measures meet the objective of protection. The right holders who have established technical measures of protection are required to make available to the beneficiaries of the exceptions provided by the law the necessary means for legal access to that work or to any other object of protection. The foregoing shall

[77] Art. 18.

[78] Art. 19.

[79] Art. 19 paragraph (2): By expressing the information regarding the rights management we understand the information which allow us to identify the performer, the performance, the phonogram producer, the holder of any right upon the performance or upon the phonogram or information regarding the conditions or methods of use of the performance or phonogram, as well as any number or code representing such information or information about the terms and conditions of use or interpretation of execution or phonogram, and any numbers or code that represent such information, when any of these items of information is associated to the copy of a fixed performance or to the copy of a phonogram, or it appears in connection with the communication to the public or making available to the public of a fixed performance or a phonogram.

[80] Published in the Official Gazette no. 587 on June 30th, 2004.

[81] *Ciprian Raul Romiţan, Mariana Liliana Savu*, op. cit., p. 124.

[82] Art. 106[5] of Law no. 8/1996.

[83] Art. 138[5] paragraph (2).

not apply to protected works which are made available to the public according to the contractual provisions agreed between the parties, so that everyone in the public can have access to them in any place and at any time chosen individually.

At the same time, the holders of rights, including performers, may provide in an electronic format associated to a work or to any other object of protection, or within the context of their public communication, information regarding the rights management[84]. In this respect, by information regarding the rights management we understand any information provided by the right holders which allows the identification of a work or of any other object of protection, belonging to the author or to another right holder, as well as the conditions and methods of use of that work or of any object of protection, as well as any other number or code representing such information[85].

In relation to the draft Directive regarding the collective management of copyright and related rights and multi-territorial licensing of rights in musical works in terms of online use on the internal market, which as indicated by its title refers only to musical works, the development of digital rights management systems, governed by the WPPT, becomes increasingly necessary in order to serve authorization rights, to secure payments, tracking behavior and enforcement of rights[86].

The Development of new digital technologies and the Internet, which now has become the most important factor in the spread and use of works and products bearing related rights, determines the need of a mutual effort from all the right holders as well as from all the involved factors such as: collective management organizations, governmental bodies, users, consumers. In this way, performers' rights shall be defended and managed in an effective manner, without any prejudice to them. One first step taken by CREDIDAM[87] in this field consists of developing the Methodology for fixing the remuneration due to the holders of related rights for the public communication of commercial phonograms via online or mobile services. This Methodology covers the use by communication to the public, without the possibility of free downloading, without (3 categories depending on the number of phonograms: 1-20 phonograms – RON 5, 21-200 phonograms – RON 7, 21-1.000 phonograms – RON 10, over 1.000 phonograms – RON 20) generating or not revenues[88] for the users; users being considered any natural or legal person who communicates to the public commercial phonograms via online or mobile services and who are responsible for the contents of the web page. In this manner it distinguishes between services offered to the public hearing.

4. Implementation of European Directives in the field of Copyright and Related Rights.

Eight Directives were adopted at European level in the field of copyright and related rights:

a) The Directive 91/250/CEE of the Council of May 14th, 1991 on the legal protection of computer software, published in the Official Journal of the European Communities no. L 122 dated May 17th, 1991;

b) The Directive 92/100/CEE of the Council of November 19th, 1992 on the rental and lending right and certain copyright related rights in the field of intellectual property, published in the Official Journal of European Communities no. L 346 dated November 24th, 1992, amended by the Directive 2006/115/CE of the European Parliament and of the Council dated December 12th, 2006;

c) The Directive 93/83/CEE of the Council of September 27th, 1993 on the harmonization of certain provisions regarding copyright and related rights applicable to satellite broadcasting and cable

[84] Art. 138[6] paragraph (1).
[85] Art. 138[6] paragraph (2).
[86] European Commission Communication of April 19th, 2004.
[87] Together with the collective management organization UPFR (The Union of Phonogram Producers in Romania).
[88] See Annex no. 3 – p. 48.

retransmission, published in the Official Journal of the European Communities no. L 248 dated October 6th, 1993;

d) The Directive 93/98/CEE of the Council of October 29th, 1993 on the harmonization of the protection duration of copyright and certain related rights, published in the Official Journal of the European Communities no. L 290 dated November 24th, 1993;

e) The Directive 96/9/CE of the European Parliament and of the Council of March 11th, 1996 on the legal protection of databases, published in the Official Journal of the European Communities no. L 077 dated March 27th, 1996;

f) The Directive 2001/29/CE of the European Parliament and of the Council of May 22nd, 2001 on the harmonization of certain aspects of copyright and related rights in the information society, published in the Official Journal of the European Communities no. L 006 dated January 10th, 2002;

g) The Directive 2001/84/CE of the European Parliament and of the Council of September 27th, 2001 on the resale right for the benefit of the author of an original work of art, published in the Official Journal of the European Communities no. L 272 dated October 13th , 2001;

h) The Directive 2004/48/CE of the European Parliament and of the Council of April 29th, 2004 on the enforcement of the intellectual property rights, published in the Official Journal of the European Communities no. L 157 dated April 30th, 2004.

The last legislative acts, including the drafts, adopted by the European Commission in the field of copyright and related rights are:

- The Directive 2011/77/UE of the European Parliament and of the Council regarding the amendment of Directive 2006/116/CE on the term of protection of copyright and certain related rights[89].

- The Directive 2012/.../UE of the European Parliament and of the Council on certain permitted uses of orphan works[90].

- The draft Directive on collective management of copyright and related rights and multi-territorial licensing of rights in musical works in terms of online use on the internal market[91].

Of the relatively large number of adopted Directives, it results a particularly high interest at the EU level in order to regulate in the best conditions of copyrights and related rights.

4.1. Analysis of the European Directives regarding Performers.

The Directive 93/83/CEE of the Council of September 27th, 1993 on the harmonization of certain provisions regarding copyright and related rights applicable to satellite broadcasting and cable retransmission regulates the mandatory collective management for the cable retransmission right, including for the performers, i.e. only by the means of collective management organizations[92]. If there are several collective management organizations, which manage rights in this category, the right holder may assign by himself/herself the organization empowered to manage his/her rights, and the right holder may claim his/her rights over a period of time which shall not be less than 3 years.

The Directive 93/98/CEE of the Council of October 29th, 1993 on the harmonization of the protection duration of copyright and certain related rights provides at art. 3 a protection term

---

[90] http://register.consilium.europa.eu/pdf/en/12/pe00/pe00036.en12.pdf - adopted on October 4th, 2012, it has not been published yet in the Official Journal of the EU.

[91] Adopted on July 11th, 2012 by the European Commission:
http://ec.europa.eu/internal_market/copyright/docs/management/com-2012-3722_en.pdf.
Currently, as procedural phase, the draft was submitted to the European Parliament in order to express its position and oppinion.

[92] Art. 9.

of 50 years for performers beginning with the performance date, calculated from January 1st of the year following the generating performance[93].

The Directive 2001/29/CE of the European Parliament and of the Council of May 22nd, 2001 on the harmonization of certain aspects of copyright and related rights in the information society, regulates for the performers:

- the reproduction right[94] – the exclusive right to directly or indirectly, temporarily or permanently authorize or prohibit by any means and in any form, in whole or in part.

- the right of making available to the public[95] by wire or wireless means, in such a manner that the public could access them at any place and any time they choose. This right is not exhaustible by any action of communication to the public or making available to the public[96].

- exceptions and limitations – the most important and effective regarding the payment of remuneration is: the private copy (art. 5).

- obligations as to technological measures (art. 6).

- obligations concerning rights-management information (art. 7).

The Directive 2004/48/CE of the European Parliament and of the Council of April 29th, 2004 on the enforcement of the intellectual property rights[97] regulates regarding performers:

- performers' entitlement to apply for the application of the measures, procedures and remedies (art. 4).

- the presumption of holder of related rights for performers (art. 5).

- the measures for preserving evidence (art. 7).

- the provisional measures (art. 9), corrective measures (art. 10), injunctions (art. 11), alternative measures (art. 12), damages and legal costs (art. 13-15).

The Directive 92/100/CEE of the Council of November 19th, 1992 on the rental and lending right and certain copyright related rights in the field of intellectual property, published in the Official Journal of European Communities no. L 346 dated November 24th, 1992, amended by the Directive 2006/115/CE of the European Parliament and of the Council dated December 12th, 2006 regulates for performers:

- the entitlement as holder of rental rights (art. 3).

- the unwaveble right of performers to an equitable remuneration (art. 5)

- the exclusive right to authorize or prohibit fixation of their performances (art. 7).

- the exclusive right to authorize or prohibit the broadcasting and communication to the public of their performances (art. 8 paragraph 1), as well as the right to an equitable remuneration when a phonogram published for commercial purpose or its reproduction is used for the purpose of broadcasting or for any communication to the public (art. 8 paragraph 2).

- the distribution right (art. 9).

- the limitations and exception (art. 10).

4.2. Analysis of the implementation within the Romanian Legislation - *De lege ferenda*.

Harmonization of the provisions of Law no. 8/1996 with the European Directives in the field of copyright and related rights was carried out under the Law no. 285/2004 for the amendment and supplementation of Law no. 8/1996 and of OUG no. 123/2005 approved by the Law no. 329/2006 on

[93] Art. 8.
[94] Art. 2.
[95] Art. 3.
[96] Art. 3 alin. (3).
[97] The harmonized provisions, in conformity with the Directive 2004/48/CE of the European Parliament and of the Council of April 29th, 2004, on the enforcement of the intellectual property rights, shortly named Enforcement Directive, was analyzed at an earlier point.

the approval of Government's Emergency Order no. 123/2005 for the amendment and supplementation of Law no. 8/1996 on copyright and related rights[98].

Concerning **the Directive 93/83/CEE of the Council of September 27th, 1993 on the harmonization of certain provisions regarding copyright and related rights applicable to satellite broadcasting and cable retransmission**, it was harmonized at the level of Law no. 8/1996, including as far as the mandatory collective management of the cable retransmission is concerned for artists' performances. Thus, according to art. 123^1 paragraph (1) item g) in the Law no. 8/1996: the collective management is mandatory for exercising the cable retransmission right, which means that collective management organizations also represent those right holders who did not grant an empowerment[99]. At the same time, under the Directive, the holders of copyrights or of related rights, including the performers, may exercise their rights for authorizing or prohibiting the cable retransmission only through a collective management organization[100].

The remuneration amount regarding copyright and related rights is determined by a methodology negotiated between the collective management organizations for copyright and related rights and the cable distribution associative structures. Also, by the transposition of the Directive provisions, in case of cable retransmission is provided optional mediation procedure performed by one or more mediators selected by the parties so that their independence and impartiality can not be questioned. The Mediators task is to assist negotiations and notify proposals to the parties.[101] It is the only property right, the only case in the Law no. 8/1996, for which such a procedure of optional mediation is provided. The mediation does not preclude arbitration procedure provided by Law no. 8/1996, mandatory under art. 131^2 paragraphs (3)-(9).

From the calculation of remuneration payable for cable retransmission, according to art. 121 paragraph (2) of the Law no. 8/1996, are excluded the mandatory cable retransmission programs, according to the law (must carry). *De lege ferenda*, the previously mentioned paragraph must be deleted in order to avoid prejudicing the right holders.

According to the **Directive 93/98/CEE of the Council of October 29th, 1993 on the harmonization of the protection duration of copyright and certain related rights**, **the** art. 102 of Law no. 8/1996 provides that the duration of the property rights of performers is of 50 years after the date of the performance. However, if the fixation of the performance is lawfully published or lawfully communicated to the public within this period, the duration of rights shall be of 50 years from the date of the first such publication or the first such communication to the public, whichever is the earlier. Duration shall be calculated beginning with January 1st of the year following the performance which generated the right.

The Directive 2001/29/CE of the European Parliament and of the Council of May 22nd, 2001 on the harmonization of certain aspects of copyright and related rights in the information society, transposed into the Law no. 8/1996, represents one of the most important legal acts adopted at the UE level and regarding technology development, implementation of a harmonized framework on all new forms of exploitation of copyright and related rights. Recital 9 of the Directive restates the need for a higher degree of protection of copyright and related rights, since such rights are crucial for the intellectual creativity. Protection of these rights provides maintenance and development of creativity in the interests of authors, performers, producers, consumers, culture, industry and the general public. At the same time, recital 10 of the Directive specifies appropriate reward for authors and performers in order for them to continue their artistic and creative work.

For the purposes of the European Directives in this field, including the Directive on the harmonization of certain aspects of copyright and related rights in the information society, in

[98] Published in the Official Gazette no. 657 on July 31st, 2006.
[99] Art. 123^1 paragraph (2).
[100] Art. 121 paragraph (1).
[101] Art. 121 paragraph (3)-(4).

accordance with **art. 98** of Law no. 8/1996, **the performers have the following exclusive property rights to authorize or prohibit**:

- the fixation of their performances;
- the reproduction of fixed performances. By reproduction[102], we understand achieving all or part of one or more copies of a work, directly or indirectly, temporarily or permanently, by any means and in any form, including realization of any sound or audiovisual recordings of a work such as and its temporary or permanent storage by electronic means.
- the distribution of fixed performances. By distribution[103], we understand the sale or any other type of transmission, either binding or for free, of the original or copies of a work, as well as their public availability. According to the provisions of the Directive, the distribution right is exhausted with the first sale or with the first transfer of ownership upon the original or copies of a work, on the internal market, by the right holder or with his/her consent.
- the rental of fixed performance;
- the lending of fixed performance;
- the import for the internal market sale of fixed performances;
- the broadcasting and public communication of his/her performance, except when the performance has already been fixed or broadcasted, in which case performers are entitled only to an equitable remuneration;
- the making available to the public of fixed performances, so that they can be accessed in any place and at a time individually chosen by the public;
- the cable retransmission of fixed performances.

As far as the **private copy** is concerned, this has turned many changes in the Law no. 8/1996, and currently it represents[104] the reproduction of a work without the consent of the author, for personal use or for the use of a normal circle of a family, provided that the work would have been previously disclosed to the public, and the reproduction is not contrary to the normal use of the work and does not prejudice the author or the holder of the rights of use. In the case of private copy, for the support on which sound or audiovisual recordings can be performed or on which reproductions can be performed for the works graphically expressed, as well as for the devices designed for making copies, a compensation shall be paid, which is to be distributed to the right holders category as follows:

- in the case of supports and devices for recording sound copies, through analogue processes, 40% of the remuneration turns, in negotiable parts, to the authors and to the publishers of recorded works, **30% turns to performers**, and the remaining 30% turns to the producers of sound recordings;
- in the case of supports and devices for recording audiovisual copies, through analogue processes, the remuneration is equally divided between the following categories: authors, **performers** and producers;
- in the case of copies registered by digital processes, on any type of support, the remuneration shall be equally divided between the beneficiaries corresponding to each of the categories previously provided, and, within each category, as agreed.

The dynamics of private copy and of adequate remuneration is still subject to mediation at the European Commission level[105], making the future of private copy rather uncertain. Our opinion is

[102] Art. 14 of Law no. 8/1996.
[103] Art. 14^1 of Law no. 8/1996.
[104] Art. 34 din Legea nr. 8/1996.
[105] http://ec.europa.eu/commission_2010-2014/barnier/headlines/speeches/2012/04/20120402_en.htm
António Vitorino, former Portugal Defense Minister and former European Commissioner for Justice and Internal Affairs was appointed as mediator. On October 3rd, 2012, took place a new series of consultations attended to by several associations of the collective management organizations in Europe, including AEPO-ARTIS. The consultations focused on topics such as: the category of payers, professional uses, transparency, methodologies regarding determination of prices and alternative methods to the remuneration for private copy. The probable term when the mediator will submit his recommendations to Commissioner Barnnier is November/December 2012.

that for fulfilling the aforementioned objectives of the Directive regarding the harmonization of certain aspects of copyright and related rights in the information society it is necessary to maintain the notion of private copy and its corresponding remuneration, thus achieving a fair compensation of right holders for the use of their works and products bearing related rights, which cannot be monitored. Since in this matter, as stated in the specialty literature[106], the Romanian legislator established a legal license, this should be maintained in order to ensure a high level of protection of copyright and related rights.

In relation to the persons who must pay compensatory remuneration for private copy, i.e. in accordance with art. 107 paragraph (2) of Law no. 8/1996, manufacturers and/or importers of media and devices, *de lege ferenda*, it is necessary the supplementation of the legal provisions also with the intra-communitarian operators, as follows: *"The compensatory remuneration for private copy is payable for the media and devices referred to in art. 34 paragraph (2), whether the method used is analogical or digital, both by the manufacturers and importers in Romania and by the operators which introduce on the Romanian market and distribute such media and devices within the intra-communitarian area"*. At the same time, through the correlation with the provisions of the Law no. 8/1996 which provides for the renegotiation of the methodologies every three years, *de lege ferenda*, the enlisting regarding the media and devices subject to compensatory remuneration for private copy and the amount of such remuneration should also be renegotiated every 3 years, and not every 2 years, as currently provided.

In relation to the notion of communication to the public as regulated by the Directive (art. 3) and harmonized at the level of the Law no. 8/1996, the following remarks should be taken into account[107]:

- the notion covers all the communications to the public when not present at the place where the communication originates;

- the Law no. 8/1996 (art. 15) does not specially lists the representation in the methods of use by communication to the public, but representation is included in the definition of the communication to the public, so, also for those communications where the public is present at the place where communication originates.

- there are two methods of communication to the public, meaning: either the public is present at the place where the communication originates or the public is not present where the communication originates, and in the latter case we have here the right of making available to the public, so the public is potentially appreciated "in abstracto", not "in concreto".

- as the notion of "public" is not defined, then it has to be understood in a very broad sense, as opposed to that of the „normal circle of a family", applicable for the private copy, the latter being regarded[108] as outdated, obsolete, difficult to operate with and apply in the age of information.

Considering the above mentioned, the continuous harmonization at the Community level appears as a necessity, including in Romania, in order to meet such technological challenges and to ensure the best defense in terms of intellectual property rights.

5. New Regulations in the field of Related Rights regarding Performers.

5.1. Directive 2011/77/UE of the European Parliament and of the Council for the Amendment of the Directive 2006/116/CE on the Term of protection of Copyright and Related Rights.

5.1.1. Analysis.

On October 11th, 2011, there has been published in the Official Journal of the European Union[109]: the Directive 2011/77/UE of the European Parliament and of the Council of September

[106] *Viorel Roş, Dragoş Bogdan, Octavia Spineanu-Matei*, op. cit., p. 476.
[107] *Viorel Roş, Dragoş Bogdan, Octavia Spineanu-Matei*, op. cit., p. 263-268.
[108] *Viorel Roş, Dragoş Bogdan, Octavia Spineanu-Matei*, op. cit., p. 308.
[109] Nr. L 265/5.

27th, 2011 for the amendment of Directive 2006/116/CE, on the duration of protection of the copyright and related rights, the so called "Time Directive"[110]. The new Directive, which extends the protection duration of property rights for performers, is in this respect a real victory for the performers and it is another important step to the acknowledgment of their rights[111]. The Directive was adopted by a majority of Member States; Belgium, the Czech Republic, the Netherlands, Luxembourg, **Romania**, Slovakia, Slovenia and Sweden **voted against it**, and Austria and Estonia abstained from voting.

The purpose of the Directive was to bring at the same level the protection duration for the property rights of performers with those of authors[112]. Thus, the Directive extends the term of protection for sound recordings (performances fixed on phonograms) in the European Union **from 50 to 70 years** beginning from the date on which the registration was for the first time published or communicated to the public. Consequently, the term of protection for the performers whose performances are included on a sound recording is also extended from 50 to 70 years. Extension of the term of protection will allow performers to gain remunerations for a longer period of time and, anyhow, for their lifetime[113].

At the same time, extending the term would also bring benefit to the producers who will generate additional revenue by the selling disks both online and in stores[114].

The Recital 4 of the Directive also specifies another aspect of how important is to extend the term of protection, and also the socially acknowledged importance of the creative contribution of performers which must be reflected in a level of protection that acknowledges their creative and artistic contribution.

The Directive guarantees that the performers who receive a nonrecurring remuneration also enjoy the extension of the term of protection. This means that non-featured performers, who do not enjoy remunerations for the exploitation of their recordings, are granted a firm right to benefit an **annual additional remuneration** from the producer of the recording (after the 50 year period of time of the term of protection). The right to benefit an annual additional remuneration may not be waived by the performer[115].

The producer of the recording (before deducing the costs) has to give 20% of the incomes from the reproduction, distribution and making available to the public of the sound recording, percentage that will be managed by the collective management organizations[116] and distributed (at least) once per year[117]. The member States guarantee that the phonogram producers should provide, upon request, to the performers who are entitled to receive the annual additional remuneration any information required for the payment of such remuneration[118].

When calculating the overall amount intended for the payments one should not take into account the revenues gained by the producer from renting the recordings, the revenues resulted from broadcasting and communication to the public or from compensatory remuneration for private copy

---

[110] The draft for the amendment of the Directive 2006/116/CE was signed by the European Parliament and by the European Union Council on September 27th, 2011.

[111] http://www.credidam.ro/cgi-bin/cdd_site/cdd.cgi?act=det_event&evid=23

[112] http://ec.europa.eu/internal_market/copyright/term-protection/index_en.htm

[113] This clarification is particularly important because, as stated in Recital 5 of the Directive, performers generally start their careers young and the 50 year term applied upon the fixation of their performance often does not protect their performances throughout their entire lifetime. As a result of this fact, some performers face a lack of incomes toward the end of their lives.

[114] http://ec.europa.eu/internal_market/copyright/term-protection/index_en.htm

[115] Art. 3 paragraph (2b).

[116] This obligation has to be guaranteed by the Member States - Art. 3 paragraph (2d).

[117] Art. 3 paragraph (2c).

[118] Art. 3 paragraph (2c), 2nd Thesis.

(based on the fact that in most EU countries and on the European legislative acts, such uses are subject to the remuneration already distributed between performers and producers).

The Directive introduces the provision „use it or lose it"[119] applicable if the producers of recordings fail to provide for sale on the market sufficient quantities of copies of a sound recording or they do not make them available by wire or wireless technical means (for 50 years after the first publication), then **the performers have the firm right to terminate the contract concluded with that recordings producer**. This right may be exercised if the **producer**, although it has been notified by the performer about his/her intentions to terminate the contract, **fails to fulfill for a year any of the exploitation acts**. If there are many performers in a recording, they can terminate their contracts in accordance with the applicable national legislation.

The Directive also includes a "clean slate" provision[120] for contracts whereby performers transfer their own right based on royalties for the exploitation right. According to this provision, **a percentage of the royalty or remuneration shall be paid to the performers, any unrecovered advances being recovered during the extended period.** Moreover, the Member States should be able to provide that certain clauses of the contracts that establish recurrent payments **can be renegotiated**. The Member States should have procedures at hand **in case those renegotiations fail.**

The Member States must implement the Directive (legislative acts and lawful acts) until November 1st, 2013 and must communicate immediately to the European Commission the texts of these provisions[121]. At the same time, the Member States must communicate to the European Commission the texts of the main provisions of the national law, which they adopt in the field covered by the Directive[122].

By November 1st, 2016, the Commission has to present before the European Parliament, the Council and the European Economic and Social Committee a report regarding the implementation of the Directive, taking into account the development of the digital market, accompanied where appropriate by a proposal for the additional amendment of the Directive 2006/116/CE[123].

By a statement[124] of AEPO-ARTIS[125] they show that this umbrella organization of the collective management organizations for European performers shall develop recommendations regarding the implementation of the provisions of the Directive, taking into consideration that the method by which the national legislation of each Member State will be essential for the effective implementation of the Directive.

The European Commission shows[126] that only in the UK almost 7.000 performers would suffer damages in the next 10 years, if the Directive had not been adopted, because most of these performers are not well known stars, who have earned millions of Euro along their careers. On the contrary, there are thousands of session musicians[127] who contributed to the production of sound

[119] **"Use it or lose it" -** Art. 3 paragraph (2a).
[120] "**Clean slate".**

[127] Musicians employed for a single sound recording and paid only once, in full, at the time of audio recording.

recordings during the 50's or 60's. The Impact Assessment[128] carried out by the European Commission previously to the adoption of this Directive, shows that extending the term of protection will offer the artists additional annual revenues ranging from de Euro 15 to 2.000.

5.1.2. De lege ferenda

Given the implementation deadline of the Directive by the Member in the States, namely until November 1st, 2013, the Directive should be expeditiously translated Romanian legislation. Within the current context when in Romania are organized consultations regarding the amendment and supplementation of the Law no. 8/1996[129], the translation of Directive appears to be more as necessary and appropriate. ***De lege ferenda*, translating the Directive into the Romanian legislation must consider first:**

- the extension of protection duration of performers rights from 50 to 70 years;

- a distinctive regulation of the contract to be concluded between producers and performers for artistic performances fixed in phonograms.

At the same time, ***de lege ferenda*, the following amendments and supplements of Law no. 8/1996 are required:**

- Art. 102 paragraph (1) shall be amended with the following content:

"The Duration of property rights of performers is of 70 years from the date of performance."

- At Title II *Rights Related to Copyright and sui-generis rights*, after Chapter III[1] *Rights of Producers of Audiovisual Recording*, insert a new Chapter, Chapter III[2] *Common Provisions for Performers and Producers of Sound and Audiovisual Recordings – the Transfer Contract concluded between phonogram producers and performers OR at Chapter IV Common Provisions for Authors, Performers and Producers of Sound and Audiovisual Recordings,* after article 112[1], insert a new article (or more articles), article 112[2] and the subsequent, with the following content:

"(1) If, 50 years after the phonogram was lawfully published or, failing such publication, 50 years after it was lawfully communicated to the public, the phonogram producer does not offer copies of the phonogram for sale in sufficient quantity or does not make it available to the public, by wire or wireless means, in such a way that members of the public may access it from a place and at a time individually chosen by them, the performer may terminate the contract by which the performer has transferred or assigned his rights in the fixation of his performance to a phonogram producer (hereinafter referred to as «contract on transfer or assignment»).

(2) The right to terminate the contract on transfer or assignment may be exercised if the producer, within a year from the notification by the performer of his intention to terminate the contract on transfer or assignment pursuant to the previous sentence, fails to carry out both of the acts of exploitation referred to in that sentence. This right to terminate may not be waived by the performer.

(3) Where a phonogram contains the fixation of the performances of a plurality of performers, they may terminate their contracts on transfer or assignment in accordance with applicable national law. If the contract on transfer or assignment is terminated pursuant to this paragraph, the rights of the phonogram producer in the phonogram shall expire.

---

[128] http://ec.europa.eu/internal_market/copyright/docs/term/ia_term_en.pdf

[129] As a result of the legislative proposal for the amendment and supplementation of Law no. 8/1996 on copyright and related rights, registered to the Senate of Romania under no. L212/23.04.2012, consultations were organized between the collective management organizations, including CREDIDAM , UCMR-ADA, PERGAM, DACIN-SARA or VISARTA, considering mutual proposals for the amendment and supplementation of Law no. 8/1996. At the same time, the Romanian Office for Copyright (ORDA) requested to the collective management organizations to transmit their proposals concerning the amendment and supplementation of the Law no. 8/1996.

(4) Where a contract on transfer or assignment gives the performer a right to claim a non-recurring remuneration, the performer shall have the right to obtain an annual additional remuneration from the phonogram producer for each full year immediately following the 50th year after the phonogram was lawfully published or, failing such publication, the 50th year after it was lawfully communicated to the public. The right to obtain such annual supplementary remuneration may not be waived by the performer.

(5) The overall amount to be set aside by a phonogram producer for payment of the annual additional remuneration referred to in paragraph (4) shall correspond to 20 % of the revenue which the phonogram producer has derived, during the year preceding that for which the said remuneration is paid, from the reproduction, distribution and making available of the phonogram in question, following the 50th year after it was lawfully published or, failing such publication, the 50th year after it was lawfully communicated to the public.

(6) The phonogram producers must provide, upon request, to the performers who are entitled to receive an annual additional remuneration specified at paragraph (4) any necessary information for ensuring the payment of such remuneration.

(7) The right to obtain an annual additional remuneration, as specified ar paragraph (4), is managed by the collective management organizations.

(8) If a performer has the right to a recurrent remuneration, neither the advance payments, nor the discounts defined in the contract will not be deductible from the payments toward the performer following the 50th year after it was lawfully published or, failing such publication, the 50th year after it was lawfully communicated to the public.

(9) Unless expressly otherwise agreed, a contract on transfer or assignment concluded before November 1st, 2013 shall be deemed to continue to produce effects even following the date when the rights of the performer would have ceased to be protected.

(10) The contracts on transfer or assignment by which a performer is entitled to recurrent payments and which are concluded before November 1st, 2013 can be amended following the 50th year after it was lawfully published or, failing such publication, the 50th year after it was lawfully communicated to the public."

The effects of extending the protection duration of performers rights, in terms of their remuneration, can not be currently quantified, but they will certainly contribute to the strengthening of the „related rights institution"[130], in general, and to "mitigate piracy, in order to ensure the communication of the works to the public, as well as the means of existence of those who put their talents to serve the consumers of their works, for those who made an occupation from communicating the works in order to be able to recover investments"[131], in particular.

5.2. The Beijing Treaty on audiovisual performances[132]

5.2.1. Analysis

On June 24th, 2012, the Diplomatic Conference of the World Intellectual Property Organization (WIPO)[133] adopted the Beijing Treaty on Audiovisual Performances. David Kappos, head of USPTO[134], said about the Treaty that it is a win both for the creative industry in the audiovisual field and for the labor market, allowing the forces of the two areas to work even more

[130] Viorel Roş, Univ. Prof. Dr. - Preamble, *"Performers Rights"*, Ciprian Raul Romiţan, Mariana Liliana Savu, Universul Juridic, Bucharest, 2008, p. 7.

closely in fighting global piracy. The head of the U.S. Copyright Office, Maria Pallente, said that the Treaty represents an important step forward for the protection of performances worldwide.

Both the International Federation of Actors (FIA) and the International Federation of Film Producers Associations have also supported the Treaty, with the desire to develop and maintain the protection of the rights of performers in their audiovisual performances in a manner as effective and uniform as possible and to facilitate the enforcement of private contracts and collective agreements around the world[135].

For WIPO adopting this Treaty basically meant the revival of the organizations' activities in the field of copyright and related rights, because, except for amendments to existing treaties, since 1996 there was not adopted any other treaty in the field[136]. WIPO Officials stated[137] about this Treaty that, for the first time during the evolution of related rights, the Treaty will provide to performers the necessary protection in the digital environment. The Treaty will also help to protect performers' rights against the unauthorized use of their performances in the audiovisual environment. The impact of the Treaty will strengthen the property rights of actors and of other performers and can provide them additional revenues resulted from their work. At the same time, the Treaty will provide the international legal frame for the audiovisual industry.

Of WIPO 184 members, 48 of them signed the Treaty and 122 signed the "Final Act" of the Treaty, essentially stating the participation of the Member States of WIPO in the negotiations and recognition of the outcome, i.e. adoption of the Treaty. Romania, although attended the Diplomatic Conference in Beijing, has signed neither the Treaty nor its Final Act.

The Conference was attended by 156 members, plus 6 Intergovernmental organizations and 45 non-governmental organizations, accounting the highest turnout ever for a WIPO Diplomatic Conference.

The European Commission stated that the Treaty sets rules that will ensure an accurate protection and remuneration of actors and will allow their performances to be made available to the public either by distribution or through physical supports such as DVDs or via Internet[138]. The Commissioner Michel Barnier said that the Treaty is very important and that actors are the ambassadors of cultural expressions and exchange. They have to be able to earn their living from their artistic contributions, because without the means to express themselves, no cultural expression would be possible.

Treaty negotiations began in 1996, when the so called WIPO Treaties ragardign the Internet were adopted[139]: WCT (WIPO Copyright Treaty[140]) and WPPT (WIPO Performances and Phonograms Treaty[141]). These Treaties' targets were the singers, musicians and other performers, but not actors. In 2000 was organized a Diplomatic Conference on the adoption of the Treaty in the audiovisual field, but it failed because of art. 12 of the draft Treaty, regarding the transfer of rights. The U.S., sustained by India, insisted on the provisions regarding the transfer of rights, meaning that major film producers felt that they need to ensure their ability to distribute movies at global level. EU was against this provision of the Treaty. Thus, this issue became for more than 10 years one of the most important on the agenda of WIPO Committee regarding Copyright and Related Rights[142].

The Beijing Treaty regarding the audiovisual performances includes a number of 30 articles. Any Member State of WIPO may become a part of this Treaty. Intergovernmental organizations may

become parties if this Treaty if they declare that they have responsibilities in the field of action of the Treaty and if their national legislation covers the provisions of the Treaty. The European Union can also be party of this Treaty.

The Treaty is open for signature by eligible parties within 1 year after its adoption, performed within 3 month period of time after 3 eligible parties have deposited instruments of ratification or accession to the Treaty. According to WIPO information, the Treaty has not entered yet into force.[143]

The Beijing Treaty on audiovisual performances was adopted taking into account, inter alia, the following desires of the contracting parties:

- to develop and maintain the protection of the rights of performers in their audiovisual performances in a manner as effective and uniform as possible;

- the need to include some new international rules for the purpose of providing proper solutions to the questions resulting from the economic, social, cultural and technological development;

- the impact of the development and convergence of information, as well as of communication technologies upon the production and use of audiovisual performances;

- the need to maintain a balance between the rights of performers on their audiovisual performances and the public interest, especially in terms of education, research and access to information;

- the WIPO Performances and Phonograms Treaty (WPPT) does not extend the protection provided to performers upon their audiovisual fixed performances.

Regarding the relation between the Treaty and other conventions and treaties in this field, none of the provisions of this Treaty shall derogate from existing obligations of the Contracting Parties as established under the WIPO Performances and Phonograms Treaty (WPPT) or under the International Conference for the Protection of Performers, Phonogram Producers and Broadcasting Organizations. The protection established by this Treaty has no effect upon the protection provided for literary and artistic works, and as a consequence none of the provisions of the Treaty shall be construed as prejudicing such a protection.

Art. 1 paragraph (3) of the Treaty sets very clearly the fact that This Treaty shall not have any connection with treaties other than the WIPO Performances and Phonograms Treaty (WPPT), nor shall it prejudice any rights and obligations under any other treaties.

The Treaty also presents 4 definitions necessary for its adoption:

- performers[144] – actors, singers, musicians, dancers, and other persons who act,[145], sing, deliver, declaim, play in, interpret, or otherwise perform literary or artistic works or expressions of folklore.

This definition also includes performers who perform a literary or artistic work which is created or fixed for the first time during a performance.

- audiovisual fixation[146] - means the embodiment of moving images, whether or not accompanied by sounds or by the representations thereof, from which they can be perceived, reproduced or communicated through a device.

- broadcasting[147] - means the transmission by wireless means for public reception of sounds or of images or of images and sounds or of the representations thereof; such transmission by satellite is also broadcasting; transmission of encrypted signals is broadcasting where the means for decrypting are provided to the public by the broadcasting organization or with its consent.

[144] Art. 2 lit. (a).
[145] Termenul utilizat în Tratat este de „act" – care se referă la a juca (teatru).
[146] Art. 2 lit. (b).
[147] Art. 2 lit. (c).

- communication to the public[148] - means the transmission to the public by any medium, otherwise than by broadcasting, of an unfixed performance, or of a performance fixed in an audiovisual fixation.

The beneficiaries of the protection provided by this Treaty[149] are the performers who are nationals of the Contracting Parties and of other contracting parties, as well as performers who are not nationals of a Contracting Party, but who have their habitual residence in one of them. Each Contracting Party shall accord to nationals of other Contracting Parties the treatment it accords to its own nationals with regard to the exclusive rights specifically granted in this Treaty and the right to equitable remuneration provided by this Treaty. This requirement does not apply to a Contracting Party to the extent that another Contracting Party applies the exclusive right or the right to an equitable remuneration or to authorize broadcasting and communication to the public of performances fixed on audiovisual fixations only on certain uses or will restrict the application in another form. A Contracting Party shall be entitled to limit the extent and term of the protection accorded to nationals of another Contracting Party, with respect to the exclusive rights or the right to an equitable remuneration or to authorize broadcasting and communication to the public of fixed performances, to those rights that its own nationals enjoy in that other Contracting Party.

The Treaty also indicates[150] the moral rights enjoyed by a performer for his/her live or fixed performance:

1) to claim to be identified as the performer of his performances, except where omission is dictated by the manner of the use of the performance;

2) to object to any distortion, mutilation or other modification of his performances that would be prejudicial to his reputation, taking due account of the nature of audiovisual fixations. Concerning this right, the Treaty also makes certain clarifications: considering the nature of audiovisual fixations and their production and distribution, modifications of a performance that are made in the normal course of exploitation of the performance, such as editing, compression, dubbing, or formatting, in existing or new media or formats, and that are made in the course of a use authorized by the performer, would not in themselves amount to modifications provided for this right. Consequently, this right has to be construed only for the changes that are objectively prejudicial to the performer's reputation in a substantial way. The mere use of new technologies is not equivalent to the changes provided in this regard.

The legal management of the moral rights under the Treaty is part of the standard legal management for this type of rights: they cannot be alienated, i.e. even after the transfer of property rights, they remain in the possession of the performer; after the performer's death they will be maintained at least until the expiry of the property rights and shall be exercised by persons or institutions authorized by the legislation of the Contracting States.

The moral rights of performers as regulated by Law no. 8/1996 (art. 96), according to the French system, including the right to claim the acknowledgment of authorship on his/her own performance, the right to claim his/her name or pseudonym to be indicated or communicated in every show and every use of his/her performance and the right to demand respect for the quality of his/her performance and to oppose to any distortion, falsification or other significant change in the performance or any breach of his rights, which would seriously damage his honor or reputation. As shown in the specialty literature[151], the right of disclosure and withdrawal, regulated for the authors, cannot be withheld for performers, because in case of disclosure right, the performance of the artist is equivalent to the disclosure of his/her work, and in case of withdrawal right, a performance act once

[148] Art. 2 lit. (d).
[149] Art. 3.
[150] Art. 5.
[151] *Viorel Roş, Dragoş Bogdan, Octavia Spineanu-Matei*, op. cit., p. 467.

carried out it cannot be withdrawn. In other words, the right of disclosure and of withdrawal is not of the nature of the creation – performance – made by the performer.

The Romanian Jurisprudence[152] reveals many cases where the Court found the violation of the moral rights of performers, especially of the right to demand respect for the quality of his/her performance and to oppose to any distortion, falsification or other significant change in the performance or any breach of his rights, which would seriously damage his honor or reputation and the Court ordered compensations for the breach of moral rights of performers.

Regarding property rights, art. 6 of the Treaty refers to the exclusive economic rights of performers in their unfixed performances, such as: the right of broadcasting, the right of communication to the public, except when the performance is already broadcasted, and the fixation right.

On fixed performances the performer shall have the following property rights:

a) Right of reproduction[153] (direct or indirect, in any form or manner). This right and its exceptions shall be totally applied in the digital environment and especially for the use of digital performances. Thus, the storage of a protected performance in a digital form in an electronic environment constitutes an act of reproduction as defined by the Treaty.

b) Right of distribution[154] (through sale or other transfer of ownership). The Contracting Parties are free to determine when this right becomes worn, respectively after the first sale or another transfer of the right on the original or a copy of the performance fixed with performer's consent. This right refers exclusively to the fixed copies which may be put into circulation as tangible objects.

c) Right of rental[155] (for commercial purpose, immediately after the distribution of audiovisual fixations by or subsequently to performer's authorization). The Contracting Parties are exempt from this obligation unless the commercial rental has led to widespread copying of such fixations materially impairing the exclusive right of reproduction of the performer. This right, just like the distribution right, refers exclusively to the fixed copies which may be put into circulation as tangible objects.

d) Right of making available to the public[156] (through wire or wireless means in such a way that the public may access it from a place and at a time individually chosen by it).

e) Right of broadcasting and communication to the public[157]. Regarding these rights, the Contracting Parties may notify the Director General of WIPO, if they will establish a right of equitable remuneration for the direct or indirect use of the fixed audiovisual performances for broadcasting or communication to the public. The Contracting Parties may also declare that they will set conditions on the national legislation for the exercise of the right to an equitable remuneration. Any Contracting Party may declare that it will apply these provisions only regarding certain uses of the fixed audiovisual performances or that it will limit their applying in another manner or that it will not apply these provisions at all.

The Treaty also includes provisions regarding the transfer of rights[158]. Thus, the Contracting Parties may provide in the national legislation that as long as the performer consented to the fixation

---

[152] The most well known such cases are: Oana Pellea vs. Gigi Becali – during the president's election campaign in 2004, when he used images with Amza Pellea (a great Romanian actor), broadcasting without consent a video at the local televisions containing images from the Romanian history movie „Mihai Viteazul" („Michael the Brave"), video which damaged the public image of the actor Amza Pellea. The daughter of Toma Caragiu (great Romanian actor) vs. Golden Pages – TV commercials in which there were used images from the movie "Operaţiunea Monstrul" („The Monster Operation") with Toma Caragiu, damaging the public image of Toma Caragiu.

[153] Art. 7.

[154] Art. 8.

[155] Art. 9.

[156] Art. 10.

[157] Art. 11.

[158] Art. 12.

of his/her performance, the right of reproduction, broadcasting and communication to the public will be owned or exercised by or transferred to the producer of the audiovisual fixation, subject to any contract to the contrary between the performer and the producer of the audiovisual fixation as determined by the national law. Thus, the national legislation may regulate the written form of the contract between the producer and the performer and that it should be signed by the two contracting parties or by their duly authorized representatives. Independent of the transfer of exclusive rights described above, national laws may provide the performer with the right to receive royalties or equitable remuneration for any use of the performance, including for the right of making available to the public, of broadcasting and communication to the public.

Contracting Parties may, in their national legislation, provide for the same kinds of limitations or exceptions[159] as they provide for in connection with the protection of copyright in literary and artistic works. Of course, limitations and exceptions must be provided for special cases, not to breach the normal use of the performance and not to unreasonably prejudice the legitimate interests of the performer[160].

The term of protection[161] granted to performers under this Treaty shall last, at least, until the end of a period of 50 years computed from the end of the year in which the performance was fixed.

The Treaty also sets obligations regarding technological measures[162] and information regarding the rights management[163]. Thus, the Contracting Parties must provide the legal protection and effective measures against the circumvention actions of the technological measures used by the performers in connection with exercising their rights and which represent restrictive acts regarding their performances and which are not authorized by the performer or permitted by law. These provisions must be construed by correlation to those regarding limitations and exceptions, in the sense in which the contracting parties may adopt effective and necessary measures in order to ensure that the beneficiaries can enjoy the limitations and exceptions provided by the national legislations; where technological measures were applied to a audiovisual performance and the beneficiary has legal access to that performance under circumstances in which the holders of right did not take effective measures of protection in relation to that performance in order to authorize the beneficiary to enjoy the limitations and exceptions provided by the national law. Without prejudice to the legal protection of an audiovisual work in which the performance is fixed, the obligations regarding the technological measures are not applicable to the unprotected performances or to those which are not protected anymore according to national laws.

By information regarding the rights management we understand information identifying the performer, his performance or the holder of any right on the performance, or information regarding the terms and conditions of use of performance and any numbers or codes representing such information, when any of these information elements is attached to a fixed audiovisual performance[164].

Contracting Parties shall provide adequate and effective legal remedies against any person knowingly performing any of the following acts knowing, or with respect to civil remedies having reasonable grounds to know that it will induce, enable, facilitate, or conceal an infringement of any right covered by this Treaty:

a) to remove or alter any electronic rights management information without authorization;

b) to distribute, import for distribution, broadcast, communicate or make available to the public, without authorization, performances or copies of performances fixed in audiovisual fixations

[159] Art. 13.
[160] Art. 10 of the WIPO Copyright Treaty is applied mutantis mutandis to the art. 13 in the Treaty.
[161] Art. 14.
[162] Art. 15.
[163] Art. 16.
[164] Art. 12 of the WIPO Copyright Treaty is applied mutantis mutandis to the art. 16 of the Treaty.

knowing that electronic rights management information has been removed or altered without authorization.

The protection provided by this Treaty must be applied to the fixed performances existing at the moment of entering into force of the Treaty and to all the performances that will appear after the Treaty entering into force, for each of the Contracting Parties. The Contracting Parties may notify WIPO that they will not apply the provisions of the Treaty regarding the right of reproduction, broadcasting and communication to the public (one, many or all) of the audiovisual performances existing at the moment of entering into force of the Treaty. If one of the Contracting Parties will apply such a notification, then other Contracting Parties may limit the application of the provisions of the Treaty regarding the right of reproduction, broadcasting and communication to the public of the performances carried out after the entering into force of the Treaty, for that Contracting Party.

The Contracting Parties may in their legislation establish transitional provisions under which any person who, prior to the entry into force of this Treaty, engaged in unlawful acts with respect to a performance, may undertake with respect to the same performance acts within the scope of complying with the moral rights and the rights of reproduction, broadcasting and communication to the public after the entry into force of this Treaty for the respective Contracting Parties.

The Contracting Parties undertake to adopt, in accordance with their national legal systems, the measures necessary to ensure the application of this Treaty and shall ensure that the sanctioning procedures are allowed under their national legislation so as to ensure effective action against any act of infringement of rights covered by this Treaty.

The Treaty also contains administrative provisions regarding the establishment of a General Assembly of the Contracting Parties[165] that shall deal with matters concerning the maintenance and development of this Treaty and the application and operation of this Treaty; it shall also decide the convocation of any diplomatic conference for the revision and supplementation of this Treaty.

5.2.2. De lege ferenda

Adopting the Treaty in the Romanian legislation, *de lege ferenda*, has to take into account:

- to insert the folklore expressions in the definition of performers: actors, singers, musicians, dancers and other persons, who represent, sing, recite, declaim, play, perform, direct, conduct or perform in any other manner literary or artistic works or folklore expressions, any kind of show, including folklore, varieties, circus or puppet shows.

- to define audiovisual fixations, according to art. 2 item b) of the Treaty, as follow: the embodiment of moving images, whether or not accompanied by sounds or by the representations thereof, from which they can be perceived, reproduced or communicated through a device, for instance by supplementing art. 98 and introducing a new paragraph, the paragraph (2^1).

- to distinctively regulate the right of reproduction, distribution, rental, broadcasting, communication to the public and making available to the public of audiovisual performances. As mentioned above to the previous chapter, a distinctive regulation of the right of making available to the public appears more than necessary, in the conditions under which the Beijing Treaty itself distinctively regulates such right (art. 10) from the right of communication to the public (art. 11).

- to apply national treatment, meaning to those performers who are nationals of the Contracting States.

- to correlate the moral rights of performers also for their audiovisual performances.

- the provisions of the Treaty regarding the transfer of rights involves a **corresponding change in art. 101 of the Law no. 8/1996** by including the right of broadcasting, communication to the public and making available to the public: Unless provided otherwise, the performer who participated in an audiovisual work, an audiovisual recording or a sound recording, is presumed that he/she will give to its producer, in exchange for an equitable remuneration, the exclusive right to use

[165] Every contracting party, a State, will have one vote in the Assebly and will vote only per se.

his/her fixed performance by reproduction, distribution, import, rent, lending, broadcasting, communication to the public and making available to the public.

- to correlate the limitations and exceptions for audiovisual performances, complying with the rule of the 3 steps: to be expressly provided by law, not to contravene to the normal use of the performance and not to prejudice the interests of the performer.

- the protection duration of 70 years of the performers' rights for audiovisual performances, in accordance with the "Time Directive" and with the Beijing Treaty which provides that the terms of protection shall be of at least 50 years computed from the end of the year in which the performance was fixed.

- to correlate the provisions regarding the technological measures and those regarding DRM with those regarding the audiovisual performances.

At a formal level, implementing the Treaty in the Romanian legislation does not seem to raise too many issues, as the Copyright and related rights law already includes such provisions. There can be analyzed, by correlation with the "Time Directive", the implementation of a special Chapter in the Law no. 8/1996 dedicated to the contract regarding the cinema works and other audiovisual works with special provisions on the audiovisual performances or a distinctive regulation within the provisions referring the performers.

In practice, it persists the problem[166] of performers who participated in the making of the Romanian movies created before 1996 that are currently reproduced on DVDs. In such circumstances, even if rights were transferred to the producer or achieved by an employment contract, at that time the main use being by public communication through public projection in a cinema, and by no means, through uses determined by technical development such as the reproduction on DVDs. In order to regulate this situation, the right to reproduce audiovisual performances should be included at least in the category of the collectively managed rights on a voluntary basis or draft agreements on a minimum period of 5 years, providing due remunerations, should be elaborated with the producers, based on the model of the French system.

Conclusions

The Analysis carried out in this Report reveals a high degree of harmonization of the Romanian law with the international treaties and conventions and with the EU Directives in this field. From this point of view, the Law no. 8/1996 regarding copyright and related rights is a good example for the legislation of other states and one of the most comprehensive within the EU[167]. Certainly, as for any legal frame, the Law no. 8/1996 involves some supplements and amendments regarding performers which were detailed in the previous paragraphs. The analysis on the harmonization phase revealed, on one hand, amendments and supplements to the Law no. 8/1996 related to its drawing up and correlation and, on the other hand, amendments and supplements related to the substance and nature of performers' related rights.

---

[166] In 2008, the daughter of Toma Caragiu brought to justice TVR Media because the latter reproduced and marketed the Collection "Momente de aur - maeştrii comediei: Toma Caragiu" („Golden Moments – Masters of Comedy: Toma Caragiu") without paying the appropriate remuneration to the heir in accordance with the revenues earned by TVR Media. The Court had admitted the petition of the heir and decided for her to receive a proper compensation. The same happened to Ştefan Bănică junior for "Momente de aur - maeştrii comediei: Ştefan Bănică senior" („Golden Moments – Masters of Comedy: Ştefan Bănică senior"). Doina Petre, the actress playing Veronica in the movie with the same title, received compensation from CNC and Campion Film SRL, for nonpayment of related rights. In June 2008, Doina Petre (Lulu Mihăescu) brought to justice the Natioal Center for Cinematography (CNC) and SC Campion Film SRL, claiming to be paid approximately RON 70.000 as "compensation for nonpayment of related rights during the period 2003 to 2008", as a result of marketing the DVD including the movies "Veronica", "Veronica se întoarce" („Veronica is back"), "Saltimbancii" („The Tumblers") and "Mama".

[167] *Ciprian Raul Romiţan, Mariana Liliana Savu*, op. cit., p. 140.

However, the continuous process of harmonization is determined both by the dynamics of new technologies and use of products bearing related rights, as well as by the legislative evolution; an example in this sense is, on one hand, at the Community level, by the adoption of **Directive 2011/77/UE of the European Parliament and of the Council on the amendment of the Directive 2006/116/CE regarding the term of protection of copyright and of certain related rights**, and, on the other hand, at international level, by the adoption of the **Beijing Treaty on Audiovisual Performances**. At the same time, **the draft Directive on Collective Management** is of real interest for the collective management dynamics, including that of performers.

Multiple efforts are needed for harmonizing the Law no. 8/1996 with the two legal acts previously mentioned, both on the part of the authorities in this field, as well as on the part of the collective management organizations, but the real **challenge will be to find the best solutions for their implementation**.

Thus, in case of Directive 2011/77/UE of the European Parliament and of the Council regarding the amendment of Directive 2006/116/CE on the term of protection of copyright and related rights and of certain related rights there should be established, inter alia, as follows:

- For the annual additional remuneration:
  - o Who is the producer responsible for making the payment?
  - o Whom are the performers who enjoy remuneration?
  - o Centralization of the information regarding the 20%.
- For the „use it or lose it" provision:
  - o There has to be a written proof of notification (i.e. the registration of notification)
  - o The need to make available the physical copies, as well as the need to make them available online to the public has to reveal the market reality.

The Beijing Treaty on Audiovisual Performances should not be construed as a model, but as a set of minimum standards of protection regarding the national treatment provided by every Member State. At the same time, compared to the situation of the states that have implemented the WPPT, one should be relatively optimistic toward the number of states that will adopt this Treaty. From this point of view, to better protect the rights of performers, WIPO has to encourage the states to adopt the WPPT and the Beijing Treaty on audiovisual performances. At the international level, WIPO strategy in this field should be changed and improved in order to limit the loss for performers.

A particular attention should be paid to the draft Directive regarding collective management, as it does not take into account the specificities of the activity of the collective management organizations for performers, because in the digital environment the collective management organizations for performers represent the most important link between right holders and users. Collective management organizations do more than just collect and distribute remunerations, so they play a vital role in protecting performers' rights.

The analysis of harmonization phase also reveals a legislative issue at the level of the *acquis communautaire*, i.e. the protection provided to performers is weaker compared to that provided to authors. Consequently, the performers have a weaker position in the negotiations with producers or users.

All these aspects should be taken into account also in Romania in order to achieve the best possible protection of performers' rights.

Annex no. 1

Statistics on the Total Number of States that acceded to the Rome Convention[168]

Year	The number of states that acceded
1970	10
1980	22
1990	34
2000	67

COLLECTIVE MANAGEMENT OF THE RELATED RIGHTS OF PHONOGRAM PRODUCERS

ANDREEA IULIA STRATULA*

Abstract
The collective management activity of intellectual property rights has grown lately globally, it is very challenging for all market players. Also, the legal framework must be carefully analyzed and interpreted because in the middle, there are many rights holders as regards their property rights.
Because until now there is no European Directive to apply uniform to all collective management organizations, the activity is governed more by principles which are found in different Directives.

***Keywords**: phonogram, collective management, equitable remuneration, exclusive right, producer*

Introduction

I will analyse the collective management activity for neighbouring rights of music producers, I will consider the need of such activity and the impossibility of the administration of such rights individually. Our legislation is not very clear so it is necessary to interpret the community and international provisions.

Legal frame:

I. Community decisions: Directive 92/100/CEE, Directive 2001/29/CE and Directive 93/83/CEE

II. Decisions provided in the international treaties and conventions which Romania affiliated to: Convention from Rome and OMPI Treaty

The right of phonogram producers to the equitable remuneration by broadcasting and public performance of their phonograms

The right of phonogram producers to the compensation remuneration for the private copy of works reproduced upon the sound recordings

The exclusive patrimony right of phonogram producers to the cable retransmission of their own sound recordings

The exclusive patrimony right of phonogram producers to prohibit or authorize the reproduction of their own sound recordings exclusively for the purpose of public performance

I. Community decisions

Directive 92/100/CEE of the Council from 19.11.1992 regarding the rental and loan right and certain related rights to the copyright in the field of intellectual property provides in its preamble the considerations *(19) because it is necessary to introduce a regime that ensures an equitable remuneration, to which it cannot be renounced, for the authors and interpreters or performers, who must have the possibility to entrust the management of this right to a collecting organization that represents them, (21) because this equitable remuneration must take into account the importance of the relevant authors' and interpreters' or performers' contribution to the phonogram or movie but also (25) because the member states may foresee, for the rightholders of related rights, more protective decisions than those provided at Art. 8 of the current directive,* under these conditions, the Directive provides at *Art. 4 that the right to an equitable remuneration cannot make the object of a renouncement.*

* Attorney at Law, Bucharest Bar Association, copyright specialization (Andreea.Stratula@upfr.ro).

Also, the directive provides at par. (3) of the same Art., that the management of the right to obtain an equitable remuneration may be entrusted to certain collecting organizations, representing authors or interpreters or performers and at par. (4) that the member states may regulation if and in what extent the management by the collecting organizations of the right ***to obtain an equitable remuneration may be imposed****, as well as from whom this remuneration may be required or requested.*

With respect to the broadcasting of phonograms from the radio and television organizations, but also with respect to their public performance, the Directive provides at *Art. 8 Broadcasting or television and public performance par. (1) that the member states provide for the interpreters or performers the exclusive right to authorize or prohibit the broadcasting or television by radioelectric waves and public performance of their performances,* ***except for the case whereby the performance is itself broadcasted/ television or performed starting from an attachment*** *and at par. (2) of the same art. that the member states provide a right to ensure that a sole equitable remuneration is paid by the user, when a* ***phonogram published for trading purposes, or a reproduction of this phonogram****, is used for the purpose of a broadcasting/ television through the radioelectric waves or for any public performance and that this remuneration is divided among the interpreters or the relevant performers and phonogram producers. In default of an agreement between the interpreters or the performers and phonogram producers, the member states may establish the conditions of the remuneration distribution among them.*

Directive 2001/29/CE of the European Parliament and of the Council from 22.05.2001 regarding the attenuation of certain issues of the copyrights and related rights in the informational society.

Taking into account the following considerations of the Directive:

(23) the current directive must attenuate in a wider extent the copyright over the public performance acts. This right must be understood in a wide respect, as covering any communication to the public that is not present in the provenience place of communication. This right includes any transmission or transmission, of any kind, of a work to the public, by cable or without cable, ***including the broadcasting****. This right should not include any other act.*

(26) with respect to the distribution by the broadcasting and television organizations, with the services on request, of their radio and television programs, ***including the music of the trading phonograms*** *as integral part of them, it has to be encouraged the conclusion of collective license contracts to facilitate the recovery of involved rights.*

(30) the rights provided in the current directive may be transferred or may make the object of certain license contracts, without affecting the relevant internal legislation regarding the copyright or the related rights.

(61) the Directives 92/100/CEE and 93/98/CEE should be amended to conform to the provisions of OMPI Treaty regarding the interpretations or performances and phonograms.

The Directive provides at *Art. 3 The right of public performance of works and the right to make available for the public of other protected objects*

Par. (1) The member states provide the exclusive copyright to authorize or prohibit any public performance of their works, by cable or without cable, including to make available for the public their works, so that anyone to be able to access them from any place and any time.

Par. (2) The member states provide the exclusive right to authorize or prohibit the making available for the public, by cable or without cable, so that anyone to be able to access them from any place and any time:

a) For the interpreters or performers, of the attachments of their interpretations or performances;

b) For the phonogram producers, of their phonograms;

c) For the producers of the first attachments of movies, of the original and copies of their movies;

d) For the broadcasting or television organizations, of the attachments of programs distributed by them, independently if the distributions are wired or wireless, including by cable or by satellite.

And at Art. 5 par. (2) letter b) of the same Directive no. 2001/29/CE it is provided that "*the states may provide exceptions and limitations from the reproduction right provided at Art. 2 [...] for reproductions on any support, issued by a natural person for its personal use and for the purposes that are not directly or indirectly trading, with the condition that the rightholders receive equitable compensations."*

The latter article must be interpreted in considering the item 38 of the Preamble of Directive (item 38) whereby it is shown the fact that "*The member states should be allowed to provide an exception or limitation from the reproduction right for certain reproduction types of audio, video and audio-video materials for its personal use, accompanied by an equitable compensation. Such an exception may involve the introduction or maintenance of remuneration systems in order to compensate the prejudice caused to the rightholders.*"

Directive no. 93/83/CEE of the Council from 27.09.1993 regarding the coordination of certain decisions regarding the copyright and the related rights applicable to the distribution of programs by satellite and cable retransmission

Taking into account the considerations of the Directive:

(24) because the harmonization of the legislation foreseen in the current directive involve the harmonization of decisions that warrant a high level of protection for the authors, interpreters or performers, the phonogram producers and the broadcasting and television organizations; because this harmonization should allow the broadcasting and television organizations to profit from the differences between the protection levels by moving the activities in the detriment of audiovisual productions;

(28) because, in order to avoid that the interventions of third rightholders over certain elements of programs to prohibit the good development of contractual agreements, it is required to be foreseen, by the obligation of requiring from a collecting organization, an exclusive collective performance of the authorization right, in the extent that the features of cable retransmission require it; because the authorization right as that rests intact and only its performance is regulated in a certain extent, which involves the fact that the transfer of right to authorize a cable retransmission rests possible; because the current directive is not reflected on the exercise of moral rights;

The Directive provides at Art. 9 *(1) that the Member states to ensure that the right of copyright holders and of the related rights to grant or refuse the authorization of a cable operator for the cable retransmission of a show cannot be performed but by a collecting organization.*

(2) Unless the holder did not entrust the management of his rights to a collecting organization, the collecting organization that manages the rights of the same category may be considered empowered with the management of his rights. If there are several collecting organizations that manage the rights of this category, the holder may appoint himself the collecting organization that will be considered empowered to manage his rights.

II. Decisions provided in international documents which Romania affiliated to

According to Art. 15 par. 1 of the Worldwide Organization Treaty of Intellectual Property regarding the interpretations, performances and phonograms, ratified by Romania by Law no. 206/2000

The interpreters or the performers and the phonogram producers have the right to an equitable and sole remuneration if the phonograms published for trading purposes are directly or

indirectly used for broadcasting or for any kind of communication to the public", and according to par. 4 of the same article " the phonograms made available for the public by wire or wireless means, so that anyone is able to access them at the place and time individually chosen, are considered as phonograms published for trading purposes.

According to the International Convention at Rome for the protection of interpreters or performers, of the phonogram producers and of the broadcasting organizations, ratified by Romania by the Law no. 76/1998

Art. 3 *In respect of the current convention, it is understood by:*

b) phonogram - any exclusively sound attachment of the sounds resulting by a performance or other sounds;

d) publication - making available for the public, in a sufficient quantity, of certain copies of a phonogram;

Art. 12 *When a phonogram published for a trading purpose or a reproduction of this phonogram is directly used for the broadcasting or for any kind of communication to the public, the one that uses it will pay the interpreters or performers or the phonogram producers or both of them an equitable and sole remuneration.*

III. In the light of these community and international decisions, according to internal legislation, the producer of sound recordings may individually exercise his rights over the phonograms or by a collecting organization, based on a mandate.

The rights of the producers of phonograms that may be managed by a collecting organization are:

- The right to equitable remuneration for the broadcasting of their own phonograms
- The right to equitable remuneration for the public performance of their own phonograms
- The right to compensation remuneration for the private copy for the works reproduced upon the sound recordings
- The exclusive patrimony right of cable retransmission of their own phonograms
- The reproduction right of their own phonograms for the purpose of public performance or broadcasting

The first four categories of rights are jointly mandatorily managed, by a collecting organization, given the fact that these are not susceptible to be individually managed, while the last category falls within the collective management by a collecting organization, based on especially granted mandates awarded by the rightholders.

In the internal legislation, three types of managements are provided in the Title III of Law no. 8/1996 amended and completed, as follows:

i. The mandatory collective management, whereby the first four categories of rights are managed, as we showed above – Art. 123^1. This type of management is characterized by the fact that the collecting organization represents all the holders of a creation field, including those that did not grant him a mandate.[1]

ii. Optional collective management, whereby other categories of rights belonging to other holders are managed, like the mechanical reproduction right of music works, belonging to the authors or the broadcasting right of works and artistic performances in the audiovisual field – Art. 123^2. This type of management is characterized by the fact that the collecting organization represents all the holders of a creation field, including those that granted him a mandate, meaning its own members.

[1] *Viorel Ros, Dragos Bogdan, Octavia Spineanu Matei, Dreptul de autor si drepturile conexe, Tratat, p. 492 Formele gestiunii colective*

iii. The collective management based on a special mandate, whereby the last category of rights, above mentioned, belonging to the phonogram producers is managed - the reproduction right of phonograms for the purpose of public performance or broadcasting - Art. 123^3. This type of management is characterized by the fact that the collecting organization represents only the holders of a creation field that granted him a special mandate and only for the object of mandate.

The three types of managements provided in our legislation don't represent all the categories of collective management of the intellectual property rights, the most often met in the legislations of other states being the collective management on an extended repertoire. This type of management is situated between the mandatory and the optional collective management, the collecting organization representing all the rightholders of a certain field, except for those that opted to manage their own rights directly in the relations with the users of their works and that exploit them as that.

During the last period, the collective management activity in the sound recording field has been magnified, on the one hand, due to the importance of this segment in the detriment of the sale activity of musical products, the industry being more and more based on these incomes from secondary use and, on the other hand, due to the development of collecting organizations that activate in the musical field. The proof in this respect is also that the number of collecting organizations in this field - currently 7 compared to 3 such organizations that were operating only 5-6 years ago.

Not the same is the situation of collective management in other creation fields, too, referring here especially to the audiovisual field, especially to the movies, where the rightholders have good exploitation receipts of the rights, individually, so that, in the broadcasting field, at least, the need of such a collective management is not justified. Further, in the audiovisual field, the collective management is only mandatory in the case of cable retransmission rights of audiovisual works (movies) and in the case of private copy of the works reproduced upon audiovisual recordings.

IV. The right to equitable remuneration recognized to the phonogram producers for the broadcasting and public performance of their recordings by broadcasting and television bodies is mandatorily collective managed [2]

This issue results by the corroboration of several law texts, as follows: Art. 105 par. 1 letter f) of Law no. 8/1996 amended and completed, recognizes the exclusive patrimony right of the phonogram producers to authorize or prohibit the broadcasting and public performance of its sound recordings, except for those published for trading purpose, *case that it only has the right to equitable remuneration.* In accordance with this Article, Art. 106^5 par. (1) of Law no. 8/1996 provides that for the broadcasting or by any public performance way, the interpreters or performers and phonogram producers have the right to a sole equitable remuneration, being in fact taken over the provisions of Art. 12 of the Convention at Rome and of Art. 15 par. 1 of the OMPI Treaty above mentioned. This equitable remuneration is established according to Art. 106^5 par. (2) and (3) of Law no. 8/1996, meaning by a methodology negotiated by the involved parties (rightholders, by the collecting organizations and users, by the professional associations) or established according to the special procedure provided by law - by institutionalized arbitrage near the Romanian Office for the Copyrights, and after the establishment of tariffs included in the methodology, the collection is issued by the collecting organizations.

The essence of equitable remuneration, as well as the circumstance that, both according to the national and community law, and international treaties, this remuneration is collected by the

[2] *Mihaly Ficsor, Gestiunea colectiva a drepturilor de autor si conexe, 2010, Universul Juridic, p.85, 212. From the practical point of view, the remuneration right or the exclussive right of interpreters of performers and of the phonogram producers regarding the broadcasting and communication to the public of their performances registered on phonograms or of their phonograms, is similar to that of the issuance rights of composers and of the script writers that have been examined above. It results that this right of interpreters or performers and of the phonogram producers cannot be issued but by an appropriate collective management system.*

collecting organizations, has as base the protection of related rights of phonogram producers by ensuring an equitable remuneration and by ensuring the right to refer to the collecting organizations for the recovery of this remuneration (Art. 129¹ of Law no. 8/1996), but also by ensuring the use of phonograms within the radio and television programs as culturing and information free access, under the conditions that it is proven (but it is also presumed from the community law and the treaties which Romania takes part to) that the individual management of the related rights is impossible (both for the rightholders who cannot check the use degree of their own works and for the radio and TV organizations that cannot conclude direct license contracts with all the holders), ensuring this way a correct balance between the rights and interests of related rightholders, as well as between them and the rights and interests of users (radio and television organizations).

V. The right to the compensation remuneration to the phonogram producers for the private copy of works reproduced upon the sound recordings is mandatorily managed collectively[3]

This right results as mandatorily collectively managed by a collecting organization results by the provisions of Art. 107^{1} of Law no. 8/1996 amended and completed, and at Art. 107 it is widely described the way that this right will be collected, by the establishment of a *"List"* of machines and supports established by the issuance of copies. The internal provisions don't represent but the transcript of the provisions of Art. 5 par. (2) letter b) of the Directive no. 2001/29/CE above mentioned.

However, the right to the compensation remuneration for private copy is mandatorily collectively managed, for all the rightholders both for the works reproduced upon sound recordings and for the works reproduced upon the audiovisual recordings, by a sole collective organization. It is also the single management case where the organization is not liable to the issuance of a license as non-exclusive authorization, this case the payment of right not being made to the collective organization by the one who makes the copy (even if it is included in the price or support that allows the copy) but by the importer or producer of such machines and supports, so that it is not imposed, not justified the licensing or authorization procedure.

VI. The exclusive patrimony right of phonogram producer to authorize or prohibit the cable retransmission of their own sound recordings

The mandatory collective administration of this right is provided as that in our legislation for all the rightholders at Art. 121 par. (1) of Law no. 8/1996, decisions that transcript the text of Directive 93/83 provided at Art. 9 par. (1), above mentioned.

The decisions according to which the cable distributors were exempted from the payment of copyrights and related rights for the mandatorily cable retransmitted programs (*must carry*) have been abrogated, given the admission of the non-constitutionality exception of par. (2) of Art. 122 by the Decision of Constitutional Court no. 570/2010.

Also, by the Decision of the Appellate Court Bucharest no. 263A/2010 published in the OG by the ORDA decision no. 327/2010 it was established that the rights for cable retransmission will be collected by a collecting organization for each creation field and not by a sole collective organization, for all the copyright and related holders.

On the other hand, the provision of an exclusive patrimony right to authorize or prohibit the cable retransmission of certain works protected under the conditions whereby, for the broadcasting by televisions of the same works, it is provided a right to equitable remuneration, it seems to me entirely inappropriate for the practical conditions and impossibly to apply, as long as the cable operator does not intervene in the content of a television body, taking over as that in its entirety. If a

[3] *Mihaly Ficsor, Gestiunea colectiva a drepturilor de autor si conexe, 2010, Universul Juridic, p.95, 246. The national legislation that introduced tributes for the private copy provide that these cannot be pretended but by the collective organizations.*

holder may prohibit the cable retransmission of his work and may not prohibit the transmission by television of that work (112^1 of Law no. 8/1996), the right to prohibit the cable retransmission rests without an object.

VII. The exclusive patrimony right of phonogram producers to authorize or prohibit the exclusive reproduction for the purpose of public performance of his own phonograms

This collective management form falls within the collective management based on a special mandate, provided at Art. 123^3 of Law no. 8/1996 amended and completed, given the exclusive character of the reproduction right provided in the case of phonogram producers at Art. 105 par. 1 letter a) of Law no. 8/1996 and, certainly, his express non-falling within the other collective management forms.

THE MACROECONOMIC EVOLUTIONS IN THE ROMANIA DEVELOPMENT REGIONS IN THE CURRENT ECONOMIC - FINANCIAL CRISIS

MARIANA BĂLAN[*]
EMILIA VASILE[**]

Abstract
Disparities between the regions of Romania as within them were both in the run-up to accession of Romania to the European Union as well as after 1 January 2007. This phenomenon has gained momentum due to the impact of economic restructuring, especially in the areas of monoindustriale, whose population has been affected by unemployment as a result of the closure of unprofitable State enterprises.
The impact of the financial and economic crisis on economic growth at the level of the eight development regions of Romania did not produce modifications in their rankings after the index of regional disparity, even though for some, its value increased compared to 2006 or 2008.
The paper presents a comparative analysis of the evolution of macroeconomic indicators in the development regions of Romania in the period 2006-2011.

Keywords*: development regions, territorial-administrative structures, regional disparities, aging, education level*

Introduction

In the last decade there have been major changes in the world economic system, due mainly to the economic development of the Central and Eastern European countries, but also the commitment of the paths of economic development of countries with large populations (China and India approx. 1/3 of the world's population). In this context, balance the markets of energy resources, raw materials, capital, labour and the global ecological balance have been and will be affected

Highs in several developed countries, fluctuations in oil and gas prices, inflation, crisis in the agro-food sector, the crisis in the financial markets, reducing the pace of economic development in some countries are aspects of regulating phenomena/regulating an economy " increasingly global".

The global impact of the financial crisis on the real economy was felt strongly, and the economy as a whole, has been affected by a substantial growth slowdown that has affected the population, companies and jobs. Under these conditions, the growth of world GDP went down from 5.3 percent in 2010 from 3% in 2011.

The global financial crisis has generated a global crisis and places of work. Among the macroeconomic indicators, unemployment is reflected directly in the daily life of citizens than GDP, budget deficit, inflation, exchange rates or interest rates. The global economic crisis has led to a "dramatic increase" in the number of those who have lost their jobs, and those with low wages.

The domino effect was felt in the European financial system, as well as in American also. At national and international level were developed numerous bailouts, which have included a wide range of measures, from grants and equity participation up to the nationalisation of financial institutions in crisis, giving public guarantees of bank deposits insurance, etc.

In a difficult international conjuncture, Romania continued in 2011 aimed at stabilising the macroeconomic policies. 2011 has seen a slight recovery on the labor market conditions amid the resumption of economic growth and of the entry into force of the new labour code in May. Thus, the

[*] "Athenaeum" Univesity - Professor, PhD; Senior researcher – Institute for Economic Forecasting-NIER, Romanian Academy, Bucharest (mariana_prognoza@yahoo.com).
[**] Professor, PhD, Rector of "Athenaeum" University – Bucharest (rector@univath.ro).

number of persons employed in the economy has reversed the downward trend observed in the period 2009-2010, but the pace of growth during the year was modest. ILO unemployment trends in each of the developing regions of Romania reflects the persistence of difficulties encountered by certain categories of persons (e.g., young inexperienced workers without qualifications) in finding a job, amid a moderate pace of economic growth and structural failures and rigidities of the labour market (still a significant share of employment in agriculture of subsistence,low emphasis placed in the system of education on the development of practical skills, the persistence of global imbalances between supply and demand of manpower at the regional level, etc.).

The basic aim of the regional development policies is to reduce territorial disparities, achieving a balance between the levels of economic and social development of the various regions. A goal of regional policy, specific to this period, shall be to facilitate structural adjustment and sectoral restructuring processes support and economic revival, reconstruction and boosting the competitive ability of the regions to support the processes of European integration. Most countries, including the developed ones, faced with regional disparities and, in consequence, apply strategies and regional development policies. For its part, Romania is the sum of the inner regions, so the overall growth of Romania depends on the evolution of these regions.

The eight development regions of Romania presents certain particularities in terms of their economic structure, what makes certain sectors to play a decisive role in their future development. The economy of the regions in the South of the country (South-East, South, South-West Oltenia) is influenced by the evolution of the agricultural sector, it owns in these areas a significant proportion of over 15%, which makes in the years with harsh conditions for agriculture gross domestic product growth to be influenced negatively. There are also regions with significant tourist potential (the Bucovina region in North-Eastern region, coastal and Danube Delta in the South East region, etc.), economic developments of these being influenced and level of use of this potential. Another peculiarity is the areas where mining play an important role (Jiu Valley basin of South-West Oltenia) and whose economy has been affected as a result of the restructuring process of goal to mining sector.

The impact of the financial and economic crisis on economic growth at the level of the eight development regions of Romania did not produce modifications in their rankings after the index of regional disparity, even if for some, its value has increased ahead of 2006.

Brief overview of the evolution of macroeconomic indicators in the major regions of Romania

Administrative-territorial structure of Romania consists of 320 towns (of which 103 municipalities) and 2861 common and 12957 villages[1].

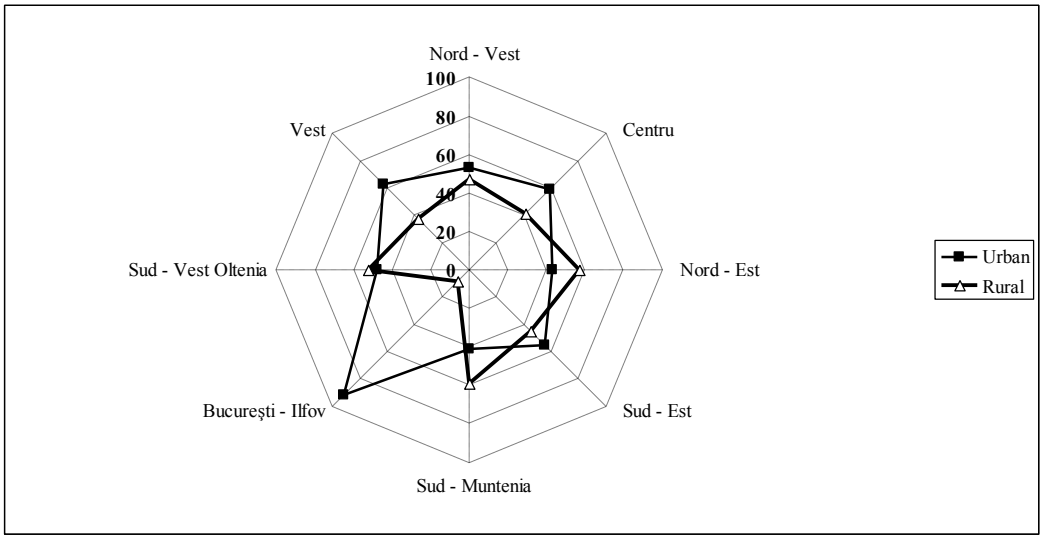
In 1998 it was approved the law No. 153 concerning regional development, legislation setting out the framework, objectives and institutional competencies and specific policy instruments for regional development in Romania. In order to achieve the objectives of regional development policy, law No. 151\1998 has enabled the establishment of the eight development regions corresponding to NUTS II-statistical level, through voluntary association of counties.

In terms of population density, there are differences between regions. Without taking into account the Bucharest-Ilfov Region which has 1.237, 7 inhabitants\/km2-as a result of this urban agglomeration of the capital-the largest population density is recorded in the North-East Region (100,3 inhabitants\/km2), and the lowest population density is in the region of Western Romania (59.6 inhabitants\/km2)-the region with the greatest population decrease and mountainous part on a large part of the surface.

[1] Romanian Statistical Yearbook 2012 Table 1.8

Degree of urbanisation of regions is also somewhat different. With the exception of the Bucharest-Ilfov Region, the most urbanized regions are the Western Regions (62.7% of urban population), Center (59.2%), Southeast (55%), and Northwest 53,1% urban population with (see Figure 1).

Figure 1 Population, in territorial, on average, to July 1



Source: Romanian Statistical Yearbook 2012, Table 2.32, National Institute of Statistics

Instead, in the Northeast Region and in the entire southern part of Romania: Muntenia and Southern Regions Southwest still prevails rural population, which are large areas of lowland areas where companies are farming activities (Figure 1).

After decades the number of inhabitants of cities has registered a significant increase in the period 1990-2010, the urban population has seen a trend of continuing growth in all developing regions.

The main cause of the decreasing of the urban population was both migration to rural areas, as well as outside the country. This was caused by the economic downturn as a result of which some of the inhabitants have left the towns of which remained without jobs. In parallel to the decrease of the urban population have contributed and other demographic phenomena (e.g., negative natural increase) but their magnitude was much lower. As a result of these developments, the ring network structure has changed: increased the number of small cities and towns issue has decreased. A relatively balanced distribution in the territory of the towns remained a distinctive feature for the network of villages.

Statistics show that Romania has entered the transition process with a relatively low level of regional disparities, compared with other Member States or candidate countries. They have rapidly increased especially between Bucharest and the rest of the country.

The disparities between regions and within them have gained momentum because of the impact of economic restructuring, particularly in monoindustriale areas whose population has been affected by unemployment as a result of closing unprofitable State enterprises but also because of the economic and financial crisis. Among these may be mentioned the regions border with Moldova and Ukraine and the less developed regions along the Danube.

Based on data provided by the National Institute of Statistics of regional disparity index was calculated for the period 2005-2010 (Table 1) using the relationship $\frac{PIB_{reg}/loc.}{PIB_{na}/loc.} \cdot 100$

Table 1 *Regional Disparity Index*

	2005	**2006**	**2007**	**2008**	**2009**	**2010**
Regiunea						
North-West	0.938	0.936	0.964	0.900	0.912	0.893
Center	0.980	0.997	1.014	0.949	0.969	0.959
North-East	0.667	0.645	0.639	0.618	0.628	0.614
South-East	0.864	0.850	0.810	0.798	0.803	0.822
South-Muntenia	0.828	0.838	0.816	0.821	0.853	0.830
Bucharest-Ilfov	2.213	2.193	2.228	2.493	2.360	2.379
South-West Oltenia	0.776	0.781	0.782	0.745	0.761	0.767
West	1.127	1.163	1.157	1.094	1.097	1.131

Source: Romanian Statistical Yearbook 2007-2012, authors' calculations

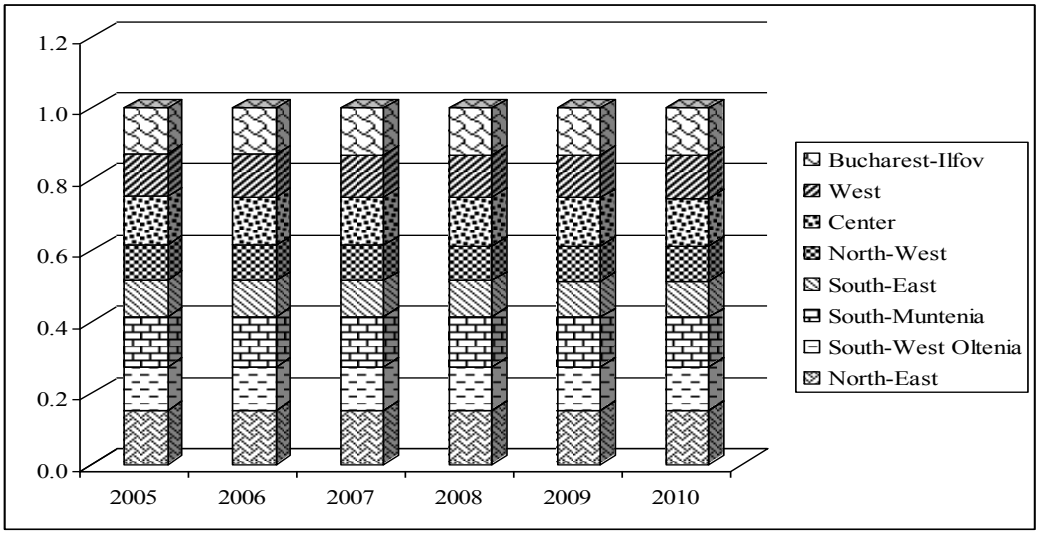
Analysis of the data in Table 1 reveal declines recorded by the North-Eastern regions (from 2005 to 0,667 0,614 in 2010) and Center (in 2005 the 0,980 0.959 in 2010) and the leap of Bucureşti-Ilfov (from 2,213 in 2005 to 2,379 in 2010).

The impact of the financial and economic crisis on economic growth at the level of the eight development regions of Romania in 2010 has not produced significant changes in their rankings after the regional disparity index even if all its value has dropped significantly from 2005.

Estimates of *labor force* at the regional level, during the period 2005-2010 have taken into consideration the disparities still exist but with a downtrend due to economic differentials within the regions.

For the *employed population* at the level of all eight development regions have experienced a slight increase. In terms of regional differences are slight decrease in each region. The maximum values are registered in the North-East (which holds approximately 15% of total employment), and the minimum values in the Northwest region (around 8.5% of total national employment) (Figure 2). Bridging the gap was due to the fact that the level of employment has increased in all regions of the country.

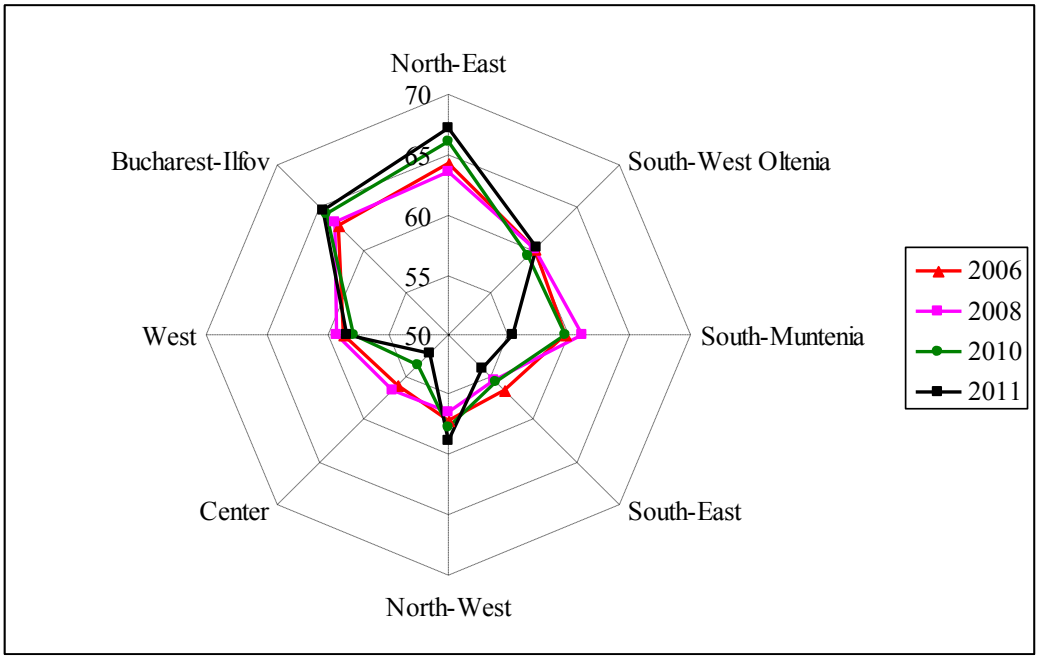
Figure 2 Disparity index of employment to the national average



Source: Romanian Statistical Yearbook 2007-2012, authors' calculations

It also has improved *employment* in less developed regions where the rate of employment is sharper than in the other (Figure 3). Thus, in 2010 compared to 2006, in the North-East it grew by 3 percentage points while in the South-Muntenia region decreased by 4.3 percentage points. Year 2006 only in South West regions, Northwest Bucueşti-Ilfov and put the growth of the employment rate.

Figure 3 Evolution of the employment rate on major development regions of Romania during 2006-2011



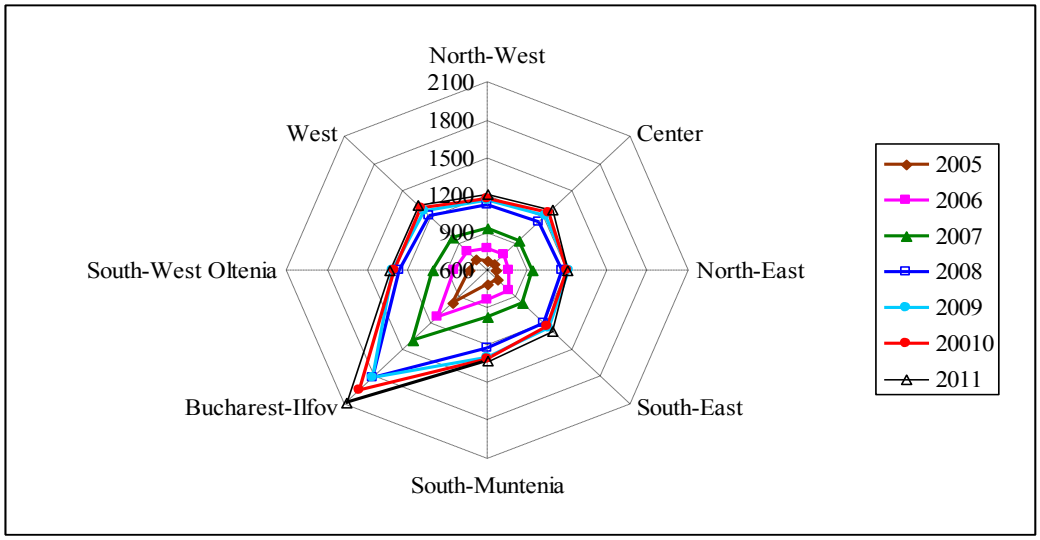
Source: authors' calculations based on data from Statistical Yearbook of Romania 2007-2012

In 2011 the North East Region with 14.3% to help fill the country with total while the highest rate of employment in agriculture, forestry and fisheries of 20.3%. At the opposite pole lies West region as contributing to the total occupation of the country with only 9.7%.

In terms of *net monthly average nominal wage* discrepancies of regions began to diminish during the reporting period, however, the ranking of the regions from the point of view of the major changes that have been known. So if in 2005 the level of earning net monthly average nominal in the Center represent the level of 67.67 earning net monthly average nominal in Bucharest-Ilfov Region in 2011 the lowest nominal average monthly net salary was registered in the northeast (57.47% level is only earning net monthly average nominal in Bucharest-Ilfov Region).

2005-2011 has registered an increase of earning net monthly average nominal at NACE in the section for each region (Figure 4) territorial disparities of income, however, are complemented by maintenance discrepancies in terms of unemployment, even though this phenomenon has seen a reduction in recent years.

Figure 4 *Evolution of net monthly earnings at NACE section*



Source: authors' calculations based on data from Statistical Yearbook of Romania 2007-2012

During the period 1992-2011 the Romanian population decreased 6.3%. *The decrease in Romania demography* is due to demographic powerful fertility decrease, increased death rate and emagration (especially during the period 1991-1992).

South-Muntenia region and Nord-Est have the largest share of the population aged 65 years and over in the total population (16.97% 16.63% respectively with effect from 1 July 2011). Most of the young population is registered by the Northeast Region, where, on July 1st 2011 saw 19.95% population aged 0-14 years, negative record is owned by the West region with a share of the young population of 8.83%. If the country register a surplus of young population towards the old there are regions where this proportion is reversed: Bucharest-Ilfov South-Muntenia, Southwest, Southeast and West.

However the demographic dependency rate recorded the highest values in the North-East Region because of the high level of the "pressure" of young people aged 0-14 years of age over adults – over 20.65% while highest pressure exerted by the elders to record in the Southwestern regions of Oltenia and Muntenia South that 14 elderly per 100 adults, respectively, 7.8 14 elderly per

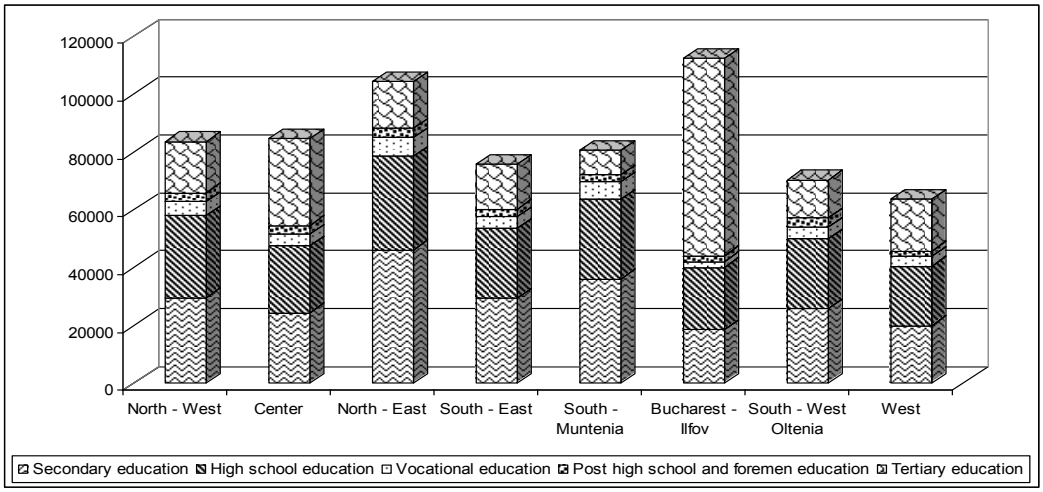
100 adults. Bucharest-Ilfov region although noticed for the number and share of the aged from the viewpoint of demographic dependence present a good situation because the proportion of adults was the highest in the whole country. The capital has always been a pole of attraction power in internal migration due to the degree of social and economic development of the area.

At the regional level, in 2011, the *life average* is 75,55 years in Bucharest-Ilfov Region and 73,31 in the West region, a strong difference is given by the residence area and gender. Spread the greatest gender difference was almost 8 years for women in South-Muntenia Region, while the on average the strogest differentiation was registered in Bucharest-Ilfov Region (2.58 years in favor of urban population). Note the difference in extremely small (0.68) between life average in the West region, which shows the living conditions almost similar on the two types of habitat.

The regional profile, *education level*, with the largest increase in terms of the school population included is higher education, particularly since the 2000s, after the appearance of private education and dissemination of public and private education through open universities or their subsidiaries in the cities.

Regarding the distribution of the population enrolled in tertiary education in development regions, in the academic year 2010/2011, in Bucharest-Ilfov Region was 30.91% of all enrolled students. The share of students in the North-Western Regions, North-East, Center and West is about 11.34% and 14.6% (Figure 5). These regions constitute immigration centres for other regions, in terms of higher education. In Bucharest, the share of the population the higher education tuition is much higher than in the case of other types of schools, the majority of the school population registered in this type of education coming from southern and Eastern regions, regions with lower weights of school population registered in higher education.

Figure 5 Number of graduates in territorial and levels of education, school/academic year 2010/2011



Source: authors' calculations based on data from Statistical Yearbook of Romania 2007-2012

Working abroad is an important source of income for a significant part of the population. Currently, one out of ten households receive income from international migration. Households with migrants have a larger number of long term assets compared to households which have the same socio-economic profile, but without experience of migration.

Nationwide, about 10% of the volume of each type of investment over the past five years is realized with the help of international migration. In terms of the type of expenditure – the most

important are the investments in housing (expansion/modernization and construction or purchase), followed by the purchase of household appliances, cars and other goods. Productive activities financed with money from migration are different depending on the environment in the rural residential – money is invested mainly in agriculture, while the type in urban environment money is invested in other types of businesses.

The intensity of the phenomenon were stressed especially after 2002, together with the liberalisation of movement in the Schengen area for Romanians. Currently, the phenomenon of temporary migration for working abroad is approximately three times higher than in 2002.

Moldova, Muntenia and Oltenia are historical regions in which temporary labour migration shall prevail over the temporary departure of tourism-sightseeing, more common in Western Transylvania, Dobrudja and Bucharest.

Currently, Italy and Spain are the main destinations of Romanians who work abroad.

Migration flows have a more balanced territorial distribution compared with those of immigration, the main sources of emigration during the year 2011 as the Bucharest-Ilfov region, West, and North-East. Sizes of more modest emigration were recorded during this period in South-Muntenia region and the South-West Oltenia.

If it is natural that areas with a higher unemployment rate than the average to hold greater potential of migration among the workforce, it is found that the Bucharest-Ilfov region, characterized by low numbers of unemployed, is also a major source of emigration, but its features are different from other areas of the country.

In the case of the Bucharest-Ilfov region, a high share in the number of migrants hold that people with a higher professional qualification, who decide to leave the country motivated by increased chances of affirmation and of obtaining very high incomes compared to those in Romania, as well as young people attracted by the prospects of specialization or continuing their studies in better conditions.

There are a number of arguments for further decreasing the final migration in the future, the reduction of temporary migration for work and return a portion of the Romans leave to work abroad:

- Economic recession that continues in Europe, economic growth forecasts are increasingly more pessimistic in countries where most of romanian migrants are concentrate. Construction, which have so far attracted many romanian migrant workers are among the first areas affected by the reduction of economic activity, with negative consequences on the employment of immigrants is already felt. Italy and Spain, two of the key destinations for humane and Romans, are no longer attractive in the present
- The scarcity of labor in the country, especially in the construction and continued growth of salaries, linked to a large extent with this deficit. The emigration of important parts of the work force has created a shortage of labour in many sectors of activity in Romania (construction, textile and footwear, food industry, trade, health, etc.)

Thus, the negative impact it has on the size and quality of the labour force employed in Romania is manifested in several directions: the departure abroad of a significant part of the highly qualified workforce (brain-drain), the brain-brain-win-loss is disadvantageous to Romania under the qualitative aspect, in view of the fact that the skill level of people coming in Romania is lower than those leaving the country ,the processes of brain circulation and brain regain, ageing of the workforce in some sectors (e.g. R & D), which is partly influenced by migration, etc.

At the regional level, there are major disparities in terms of the number of redundant. These variations are due to several factors, among which:

i) The structure of the local economy-economic sectors have been affected in different ways by the crisis-which it is observed and at the level of local/regional economies;

ii) Influence of workers with floating domciliu: big cities such as Iaşi, Cluj, Timisoara and Bucharest drew manpower from the adjacent counties, they are among the first fired at the beginning of the crisis.

However, regionally there were discrepances before the crisis, they have just had a tendency in recent quarters emphasis.

Given the low values of the unemployment rate at the national level, it can be affirmed that the layoffs that occurred in the year 2012 did not produce imbalances in the evolution of unemployment, and the counties that have been confronted with this phenomenon have found solutions for economic recovery reflected and in alleviating problems in terms of employment.

At territorial level, according to data provided by the national employment Agency employment, the number of unemployed grew in 36 counties, the largest increases in residential districts: Alba (with 2.301 persons), Hunedoara (with 1.124), Harghita (with 958), Valcea (with 943), Arges (with 907), Galaţi (with 901) and Vaslui (with 876).

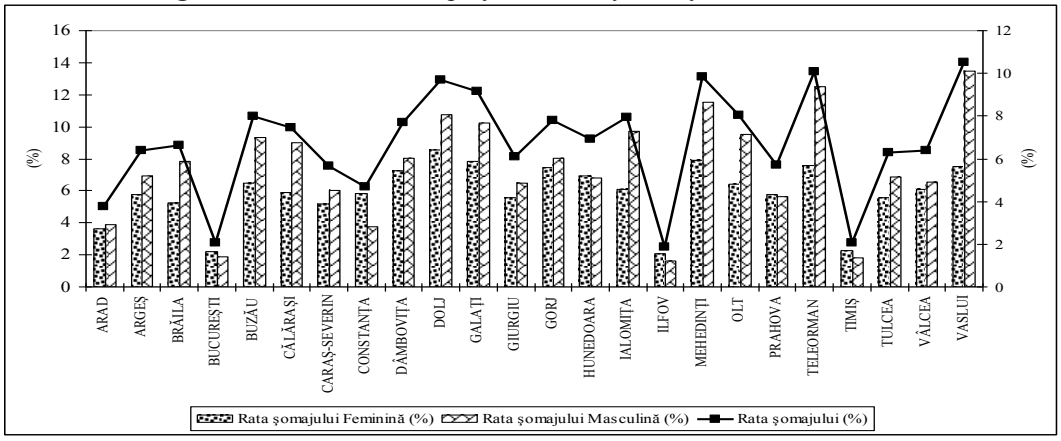
The number of unemployed fell in 5 counties, namely: Buzau (with 313), Maramureş (with 292), Suceava (with 245), Iaşi (with 168 persons) and Ontario (with 38 persons). In Bucharest the number of unemployed fell by 125 people.

The counties with the highest unemployed rate from the total number of unemployed are: Dolj (77,25%), Teleorman (76,86%), Galaţi (73,14%), Satu Mare (73,04%), Iaşi (72,68%), Buzău (70,56%) and Brăila (70,37%).

The unemployment rate fell in the counties: Buzau (with 0,16 pp), Maramureş (with 0,14 pp), Suceava (with 0, 11pp), Iaşi (with 0, 06pp) and Ilfov (with 0, 02pp). In Bucharest the unemployment rate fell by 0, 02pp. The largest increases in unemployment rate were registered in the counties like Alba with 1. 34pp, Ialomiţa 0.74 pp, Harghita with 0.67pp, Hunedoara with 0.68 pp, Vâlcea with 0,57 0pp,Valcea witho. 54pp and Sălaj with 0.50 pp.

The highest levels of unemployment have been achieved in counties: Vaslui (10,48%), Teleorman (10.04%), Mehedinţi (9,80) Dolj (9,69%), followed by counties: Galaţi (9,14 m), Alba (8.71%), Olt (8,01%) and Buzau (7,98%) (Figure 6).

Figure 6 Evolution of unemployment rate by county in December 2012



Source: National Agency for Labour Force Employment

The regions with the highest rates of unemployment were Southwest, South, Southeast and Central rural regions where activities are prevailing. These are regions with pronounced disparities even within them, where, predominantly agricultural counties coexists with the most developed ones Table no.2).

Table 2 Total number of unemployed and the unemployment rate by counties and regions in December 2012

Regiunea/ judeţul	Total şomeri		Indemnizaţie şomaj: 75%		Indemnizaţie şomaj 50%		Someri Neindemnizaţi		Rata şomaj **
	Total	Femei	Total	Femei	Total	Femei	Total	Femei	
Sud-Est	69572	29684	19190	9110	5151	2622	45231	17952	6.62
Sud - Muntenia	87880	36611	23818	9618	8137	3892	55925	23101	7.12

** calculated on the civil active population 01.01.2012, communicated by INS
Source: National Agency for Labour Force Employment

Bucharest regions, West and Northwest, have reached the lowest levels of unemployment, these areas being advantaged by their lower dependence on the primary sector (Bucharest-Ilfov region), and the proximity of Western markets (areas West and Northwest), as well as high capacity they have in attracting foreign direct investment.

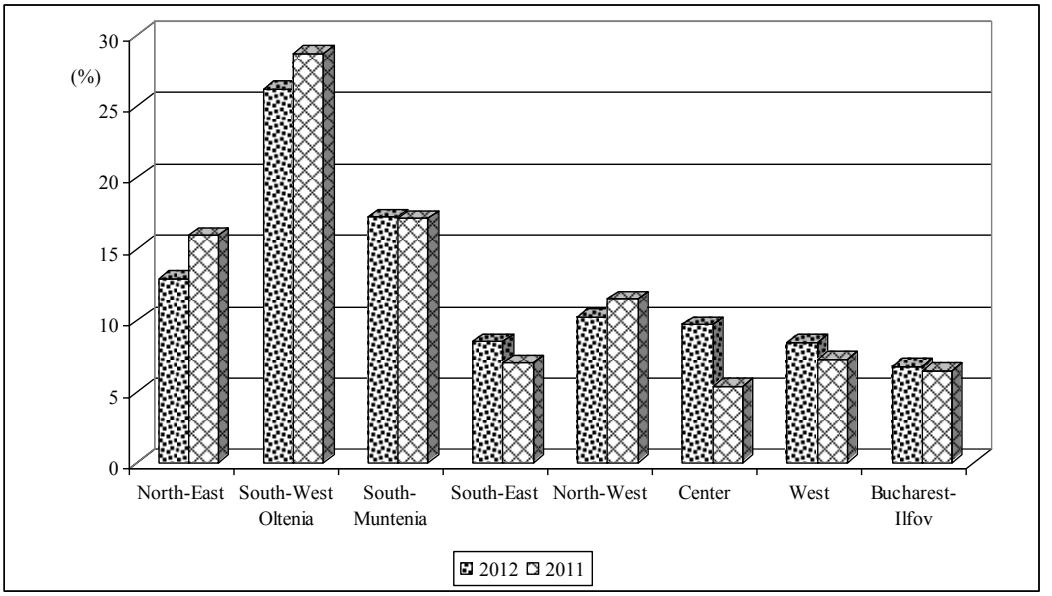
The counties with the largest proportion of the unemployed who receive unemployment allowance in accordance with the Law No. 76\/2002 with secondary education were recorded in the County of Prahova (47.677), with secondary-school studies or post secondary and higher education in Bucharest (3030 persons ,respectively 2392 persons).

At territorial aspect, in 2012, with the highest values both in terms of *the rate and the average annual number of job vacancies* were registered in Bucharest-Ilfov region and northeast (0,73% for each one, and the average annual number of job vacancies was 6.7 thousand vacancies, i.e. 3.6 thousand vacancies). Characteristic of the Bucharest-Ilfov Region is the fact that the annual average number of job vacancies has represented 27% of the number of job vacancies across the country. At the opposite pole, both in terms of the rate and the average annual number of job vacancies at the lowest levels it has known the region South-West Oltenia (0.36%, respectively 1.2 thousand vacancies), followed by the Southeast (0,42% respectively 1.9 thousand vacancies).

The phenomenon of labour migration calls for the development of at least three relevant themes: management of legal migration, fight against illegal migration and the integration of legal migrants into receiving societies.

In order to achieve the general objective " Facilitate the free movement and increase the awareness of workers in EU Member States or the signatories to the agreement on the EEA, as well as in countries with which Romania has concluded bilateral agreements in the field of employment\", the EURES advisers led by EURES and International Relations have offered Mediation in 2011 and 2012, counselling and information services mediationa number of these 16.496, 17.318 persons looking for a job in the European countries (see Figure 7).

Figure 7 Percentage distributions of persons seeking employment in countries of the EU / EEA, mediated by EURES advisers in 2011 and 2012



Source: *Employment, Mobility, Unemployment and Unemployed Social Protection*, Ministry of Labour, Family and Social Protection

Thus, in 2011, the number of workers, for countries with average workers with which bilateral agreements were signed between governmental institutions (Germany, France and Switzerland) was 72.875, while, in the same period of 2007, the number of workers was 37.639, which represents an increase of 35.286 people.

In terms of the area of origin of international workers, both in the year 2011, most applicants have a contract to work abroad originated in geographical area (22.913), which represents 31.4% of the total number of people internationally**.**

Conclusions

Comparative analysis of the evolution of macroeconomic indicators at the level of the eight development regions of Romania have revealed a number of disparities and desprinerea, from which conclusions may be drawn:

- unbalanced development between the West and East of the country;
- economic development followed a West-East direction, the proximity of Western markets acting as a growth promoter;
- chronic underdevelopment is concentrated in the Northeastern Region on the border with Moldova and in the southern regions along the Danube;
- industrial restructurea monoindustriale cities had a strong negative impact on the labour market at regional level;
- migration was more accentuated in 2011 in the Centre;
- restructuring of industry, internal and external migration are factors that have led to the decline of small towns and medium-sized enterprises;
- increasing the proportion of the importance of Bucharest in Bucharest-Ilfov Region compared to the general situation of the development of the other regions.

The process of reducing discrepancies between developed areas and those lagging behind is one of duration and is carried out with small steps. Even if growth rates are higher than in areas with a low level of development, yet not stagnating economies developed regions but are also on an uptrend it is reflected in reduced intensity gaps. For this reason, reducing territorial disparities should be a core component of the National Strategy of regional development, and development Planners to the regions.

SUSTAINABLE INNOVATION - NEW ECONOMIC CONCEPT REQUIRED BY SUSTAINABLE DEVELOPMENT

VIOREL CORNESCU[*]
CECILIA-ROXANA ADAM[**]

Abstract
Following the concept of sustainable development and standard economics, we find innovation presented as one of the most important factors of world economic growth. Although most authors focus their research on sustainable development, this paper will instead focus on sustainable innovation. The paper converges on studying innovation from the perspective of sustainable development and sustains several theoretical results in order to show the importance of adopting innovation process which respects sustainable goals. The paper it is also focused on analyzing the importance of creating sustainable innovative products or services within the constraints of economic, environment and social issues. The paper concludes by enhancing the understanding of the sustainable innovation power in economic environment development, correlated with social and natural environment.

Keywords: *Sustainable innovation, development, sustainability, innovation process, innovative products*

Introduction

In the late 1960s, the National Environmental Policy Act (NEPA), American environmental movement became the progenitor of the contemporary global sustainability movement:

"*…to create and maintain conditions under which man and nature can exist in productive harmony, and fulfill the social, economic, and other requirements of present and future generations of Americans*."[1]

Sustainable development is a concept based on intergenerational equity - that is, the current generation must not compromise the ability of future generations to meet their 'material needs' and to enjoy a healthy environment.[2]

For instance, a desideratum of the sustainable is to create a balance between the apparently opposite objectives of economic growth and environmental protection, with the issues of social equity. Sometimes the solution results of the balancing objective have been disappointing, designed in policy ineffective.

Sustainable development is a normative concept which is incorporating economic, ecological and social objectives. In economic development we have to take into consideration that the *importance of innovation for development is increasing with time*.[3] It is important to understand the importance of innovative process or goods and services in a sustainable development.

The purpose of this work is to identify and analyze from a theoretical perspective the innovations in a sustainable environment by defining the concept of *sustainable innovation*. Based on literature review the current study intends to make understandable the role it plays this topic in economic and natural environment.

If sustainable development is *the pursuit of growth subject to environmental constraints*[4] then innovative process can't take place without respecting constraints, furthermore an innovative product or service can't be achieved without respecting the constraints of economic, environment and social issues.

From this perspective, sustainable innovation it is and it will be an important factor which may be consider as a primary need for achieving sustainable development on a long term. Therefore, the paper discusses the interdependence between innovation, environment, social and economic stability, when constraints are implied.

Sustainable Innovation: a linkage between innovation and sustainability concept

Taking into consideration the economic literature and analyzing our society, we note that innovation plays an important role in economy and consumer life. *During the 20th century, innovations have produced revolutionary effects on the locus of capital, labor and productivity – we need only look at the changes produced by the airplane or the computer to convince ourselves of this.*[5]

Innovation is a search process characterized by less regularity in its outcome. Production and innovation are interdependent.[6] Innovation is the key of economic growth and producers are investing in innovative products to increase profits. In our days innovation is an accelerating process, and today's innovative products may become the "old products" of tomorrow.

Along with profit like a primary target, an innovative producer is important to have sustainable goals. In an innovation process is important to have linked targets for issues such as pollution, carbon emissions, social and economic problems. According to John Hagel III, we are in the midst of a vast global flow of ideas, innovations, and opportunities for profit through collaboration.[7] It is important to work "together and to pull out of ourselves more of our true potential, both individually and collectively" like he said, but in addition it is important to work for our present and future welfare without compromising the welfare of the future generations.

Producing innovative products/services in a sustainable development requires a sustainable innovation. Based on scheme of sustainable development: at the confluence of three constituent parts[8], we have identified sustainable innovation like in the next figure:

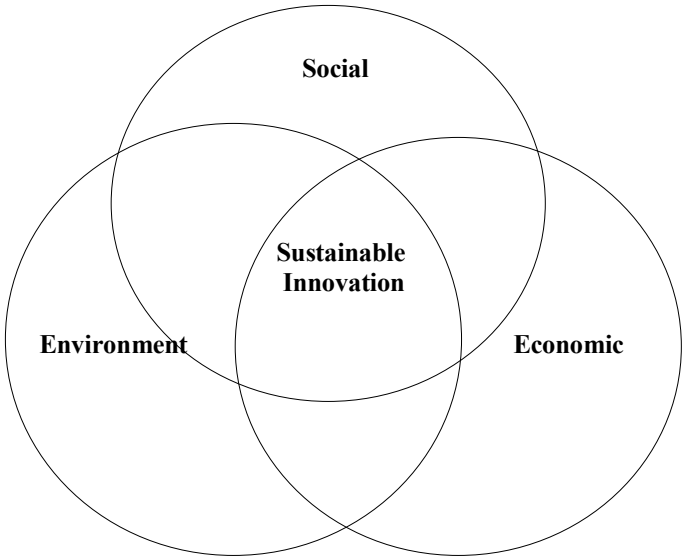

Figure 01: Sustainable Innovation - based on UCN 2006 Source

When we are referring to producer, we speak about individual or organization concerned with the production of goods and services; after all we are dealing with human beings that are taking part in the economic process. In economic process, consumer is not the only human being, behind organization there are and there always be, people. If we imagine the market like a theater play, we can see that all the participants on the market are actors with different role, but in the end there are all human beings. In real life, even if we are producer or consumer, we all face, at global level, with climate changes, deforestation, biodiversity loss and water shortages. These types of changes affect everybody, even if we refer to producer or consumer, consequently we should pay more attention to the concept of sustainable development.

Manufacturing of innovative products is at a stage that needs resources, and it is important to think of them and act in a sustainable manner. To face off the limited supply of natural resources and the impact of growth on the environment, the producer needs to set aspirational goals on a long-run economic growth and to pay more attention to a sustainable production.

Within the area of environmental management, according to United Nations Environment Programme, the Cleaner Production network has stressed the need for the promotion of cleaner production processes and preventive environmental strategies[9].

Innovation and sustainability, in the economic environment, have to be interconnected and in order to ensure long-term success and as well as a healthy economy that takes into account both environmental performance and social responsibility.

According to the OECD[10], new sources of growth and competitiveness need to be identified, including innovation, green growth, knowledge-based assets, and skills *("go structural and go green")* to put our economies back on a strong, inclusive growth path.[11]

In our days, with new and competitively differentiated products, companies can no longer avoid innovation process; innovations can provide or ensure an important place on the market.

Harmony between the three pillars of sustainable development in innovation process is the best choice in terms of innovation. We can call it "sustainable innovation", which is distinguished from an ordinary innovation by bounding it to the constraints of society, environment and economy. Sustainable innovation is about using innovation to reduce energy consumption, social issues, improve environmental performance and it is a determinant key of economic performance and to our ability to keep innovating. Innovation should be created by taking into consideration the efforts to achieve the goals of sustainable development.

Sustainable innovation is the pulse of economic growth. In sustainable innovation we are studying innovations from more perspectives: technological, economic, environment and societal perspective, to facilitate sustainable societies by producing and consuming in a sustainable way. Therefore, sustainable innovation involves multiple actors such as government, business, educational institutions, groups within society and consumers to use technological goods or service to solve societal issues and to strengthen welfare in the world.

A sustainable innovative system is composed of a series of production practices that are incorporated and interconnected with each another. John Ikerd argues that sustainability is determined by the system as a whole[12]. Such as, to develop an innovative good or service in a sustainable environment involves the working together of more than two factors to produce a better effect than the amount of their individual effects.

Most times, when companies want to innovate or adopt innovations, they overstate the immediate benefits or economic profit in the long-run and they are underestimated the adverse effects, either because they do not know the exact effects of using the innovation in the long term or due to the high costs that would be involve by such an analysis. However without a proper planning, apparently bearing only positive effects, it is possible to observe in time higher negative results, with side effects that could have been avoided by a proper appreciation of these innovations.

In most definitions of sustainability we find long-term benefits to the environment and the economic profitability over a long period of time. The development of new products is the main factor that underlies the requirement suggested by the definition of sustainability and the most important forms it might take it are: innovative process and innovative goods and services.

Sustainable innovative process

An innovative process is the adoption of a new process or a new machine, by the organization, to facilitate the production of goods and services, to obtain the best results from fewer resources in an efficient way and to make the organisation to function in the best way. The innovative process became sustainable when the organisation achieves this improvement by the integration of economic, environmental and social concerns[13].

Innovative processes are complex and often require a large number of different participants, where human engagement is essential. An entrepreneur that organises the implementation of the innovation is like a visionary with a new idea which identifies important needs for organization.

Advancing technological knowledge has been identified as the single most important contributing factor to long-term productivity and economic growth.[14] As has been noted, sustainable innovation processes is different from conventional innovation, it mainly differs in purpose and

direction[15]. For instance, organisations need to invest in a sustainable innovation processes by providing their employees with the right innovation tools or software system, by adopting only those innovations which respect the constraints to achieving sustainable development.

The innovations, which are adopted by the organization, have to enable employees to complete their tasks more efficiently and effectively in the production of goods or services or to improve existing products and processes. These adoptions lead the organisation to higher profits and to sustainable development. However, in some cases, the adaptation of a sustainable innovation processes over the short run suggests lower profit with the expectation that benefits will be achieved over a longer period of time.

Focusing on long-terms objectives by adopting a sustainable innovation processes can improve environmental quality over time, resolve social issues and to enjoy more economic benefits in time. However, the benefits from adopting sustainable innovation in the production process, must be estimated not only in terms of absolute improvement in natural environmental quality, but also in relative terms, relative to what would have occurred if the innovative process have been continued without not implementing a sustainable innovational processes. Furthermore, the consequences on profitability of such sustainable innovation processes must be estimate not only over a time horizon, but also be evaluated relative to the profitability of a conventional innovation processes over the same time horizon[16].

Sustainable innovative goods and services (Sustainable innovations)

The concept of sustainability may be defined like a "development that meets the needs of the present without compromising the ability of future generations to meet their own needs." (Brundtland Commission, 1987)[17]

If we link such definition to sustainable innovations, then sustainable innovative goods and services are also based on intergenerational equity. The current innovations (expressed in innovated products or services) of the actual generation, must not compromise the ability of innovating of the future generations, the resource that they need for innovating products (or services) and have to maintain or improve a healthy environment.

In the '80s, Freeman and Perez propose a new way to classify technological innovation: incremental innovation, radical innovation, new technology systems and new technological models. This classification will serve as foundation for a more complex classifications made by Henderson and Clark[18] (1990) who classify innovations using two dimensions: basic concepts - that capture of the impact of innovation on product components and connections between fundamental concepts and components of a product.

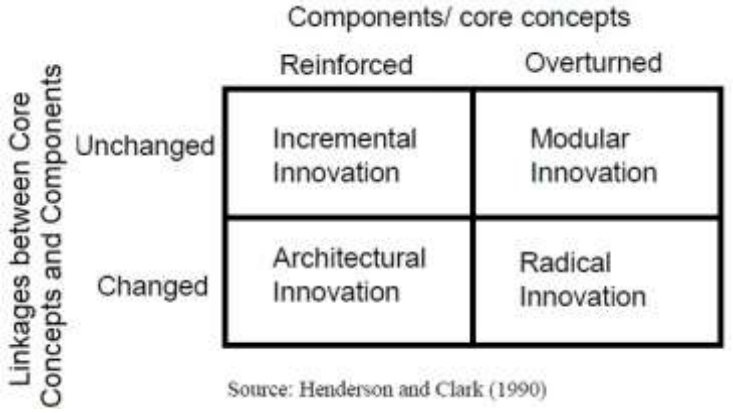
* World Commission on Environment and Development (Brundtland Commission) published its report in 1987 and presented a new concept - sustainable development. The concept helped to shape the international agenda and the international community's attitude towards economic, social and environmental development.

[18] Henderson R.M. & K.B. Clark, Architectural Innovation: The Reconfiguration of Existing Product Technologies and the Failure of Established Firms, Administrative Science Quarterly, 1990.

Figure 02: Classifications of innovation



As we can see, the degree of the innovation process can begin at a minor level, minimal or incremental improvements, to radical changes modifying our way of thinking about a product or service and how to use it.[19]

Analyzing the classifications made by Henderson and Clark, we define:

Incremental innovation is the simple improvement of the ensemble. Studies about incremental development processes have shown that the efficiency gained over time is more important than occasionally appeared with radical changes.

Modular innovation requires only the change of the fundamental concept. Making changes on the basis of the product but the use remains the same.

Architectural innovation involves only changing the links between product components. Merge several components with different benefits in order to make an improvement, a novelty product, but individually these components remain at the same degree of novelty.

Radical innovation involves the creation of both, new fundamental concepts and some new links. It refers to the creation of unprecedented products.

The major products and services on the market are innovative products or services that consumers adopt in daily life. Correlating with the sustainability constraints, by respect them, it becomes sustainable innovative products and services.

According to Watson (2008)[20] the governments should set general frameworks to encourage more sustainable innovation. He maintains that the government plays an important role in the support of eco-innovation. It is difficult to measure either the outputs (e.g. in terms of economic returns) or outcomes (in terms of successful innovations) of technology support programmes[21] and sustainable innovation support programmes. However, government technology policies have to do more than fund basic research and development, and internalize the social costs of carbon emissions[22]. Governments can promote innovative products or services by introducing strong policies, creating

Subcommittee on Energy and Environment, Committee on Science and Technology.

types of constraints that involve environment, economic and social issues to lead to sustainable innovative products on the market.

To solve market problems complying with social and environment norms, the organisations can use sustainable innovative products. The four kinds of innovation come together in large proportion on the market. Even if we refer to radical innovations or to the others type of product/ services innovation, we know that the economy is characterized by a multitude of new products launched on the market, of which almost 90% of them do not survive[23].

To avoid the failure of the innovative products on the market, investing in creating sustainable innovative products represents, first of all, the manufactures interest by increasing their competitiveness on the market. If we just imagine increasing the number of the producers which are investing more and more in an sustainable innovative process or to create sustainable innovative products, in a long time we will be able to achieve a sustainable development at a global level. A sustainable innovation doesn't represents just a benefit for new generations, hence it represent a benefit for the actual economic environment and for the producers profits by decreasing the number of the products that doesn't survive on the market and dreducing the inefficient use of resources.

A way that All Civil Society Organizations contribute to sustainable consumption and production is to support business in producing and marketing more sustainable products. Consumers can also become agents of change by demanding better quality and more sustainable products and services. [24]

Conclusions

Sustainable innovations should be regarded as a binder between sustainable development, manufacture and consumer. It merges the consumers satisfaction with the aim of manufacturers by meeting the requirements of sustainable development.

The innovative process, chosen by the producer, must be sustainable to generate a long term development on the market without affecting the welfare of the future generations. As has been noted, this type of innovation is the optimal choice for producer, consumer, on the market and for a healthy economy by using the right amount of resources in developing innovative products.

In conclusion, by adopting sustainable innovation process or creating sustainable products and services, the manufacture will avoid high losses, the limited resources will be efficiently used, increasing the benefits of consumer without affecting the innovative "power" of a future generation or their needs.

The relationship between innovation and sustainable development has received relatively little attention because the definitions of the concept of sustainable innovation largely unexamined. The presented work will possibly shed some light on the concept of sustainable innovation and in the future, the authors intend to evaluate the attitudes of producers regarding the problem of innovating in a sustainable environment.

EVOLUTION OF THE PHENOMENON INTEGRATION IN LATIN AMERICA (SOUTH AMERICA)

EMILIAN M. DOBRESCU[*]
EDITH-MIHAELA DOBRE[**]

Abstract
With the end of the Cold War, the creation of a South American economic space has become an important priority of regional powers (Brazil, Argentina, Chile), and the great powers after the war, the U.S. and the European Union (the current name).
This integration process has had particular features derived from characteristics of Latin American countries. Multitude of organizations integrative role once again demonstrates the specificity of this process in Latin America to other areas of the world: Africa, Asia, Europe, etc. Contradictory developments phenomenon / Latin American integration process gives substance its characteristic and I will make, probably deeply and future.
The purpose of the work and objectives are: know the main features of the phenomenon in Latin American integrationist
Objectives: following our vision of a historical phenomenon; brief characterization of the most important Latin American organizations, establishing current and future consequences of integrationist phenomenon in this part of the world.

Keywords: *The integration of Latin American countries (South America), The South American integration process, Free Trade Area of the Americas, UNASUR, MERCOSUR*

Introduction

Area covered by the subject of this study is economy specific phenomenon Latin American integrationist. The purpose of the work are know the main features of the phenomenon in Latin American integrationist and the objectives : following our vision of a historical phenomenon; brief characterization of the most important Latin American organizations, establishing current and future consequences of integrationist phenomenon in this part of the world.

The way we respond to the objectives set is way is the description, analytical and synthetic.

Selective bibliography of works consulted our study demonstrates that covers a temporal of 1988 to 2003, which allowed us to produce both the purpose and scope of the work, and especially the development of our approach including the conclusions.

We appreciate that South American integration process is centuries old. It is not the purpose of this study to examine the history of this process. European cities, especially Spain and Portugal, very ambitious way to find new water to colonies in Asia, have discovered the American continent with its two variants - North and South - included in Central and South Americas then, other new colonies and "civilization" (not always the case) the current state today, making Latin America.

In the second part of the last century, after the Second World War were founded integrated socio-economic and cultural Latino American countries and those in South America. International Negotiation under the auspices of GATT (General Agreement on Trade and Tariffs) such as the 1960 Kennedy Round, Tokyo Round in 1970 and then negotiation of the Uruguay Round, concluded in April 1993, are clear examples of the elimination of customs barriers and trade in circulation goods. We appreciate that these negotiations marked were the beginning of the current Latin American

[*] Professor, PhD, Romanian Academy; Scientific Secretary of the Department of Economics, Law and Sociology of the Romanian Academy, Bucharest (dobrescu@acad.ro).
[**] Assistant Lecturer, PhD, "Nicolae Titulescu" University of Bucharest; Associate Researcher of the National Economic Research Institute of the Romanian Academy (edithdobre@gmail.com).

integrationist phenomenon that has changed a lot and will continue to change as more countries and peoples of this continent. Emphasizing nationalism in some South American countries, and in some areas, exacerbating ethnic tensions have accompanied strengthening economic pluralism, social and political, integrationist specific phenomenon.

Dominated economically, militarily and politically by one or a few nations, outside of South America, Latin American states were subject to the power Political own leadership and economic influence are divided entirely. Brazil and Mexico South American continent - on the North American are the only U.S. states, federal principles themselves organized, managed the U.S. model, which were imposed in the rush of many post-war changes. Latin American governments, which for many years have tried to isolate economies today are trying to adopt reforms tailored to the principles of western capitalism. To have succes, these national economies increasingly tend more to integrate into the regional economy (Latin America and then the Americas) and only finally in the global economy. Political and economic alignment among Western industrialized nations, will force them to adapt so.

Trade in goods between nations is well defined differences between these nations - in terms of natural resources, labor skills, consumer tastes. Producing nations in preference those goods and services that are competitive in the whole world nations. International trade is still valid theory of comparative advantage of David Ricardo, developed in the early nineteenth century the principle of national differences in technology. Today, the theory of comparative advantage continues to argue that free trade between nations will maximize global welfare. But nations - and here are poor and South American states - have not yet solved the other principles of movement: the human resources, capital, currency, information and knowledge. Here the South American (Latin American) have the confederation U.S. model, closer geographically, who exercise such a powerful influence on all levels in the area. But the model and the European Union - now an economic entity in search of their identity social, political and cultural, but containing the main cities of South American colonies, Spain and Portugal. And this is a historical advantage seems to exceed that geopgrafic. And if we consider the main share of the population in the U.S. - Latin American and Afro-Asians, have a smashing argument, yet sufficiently well understood deoamenii ordinary and policymakers of countries in the region ...Evolution of Latin American integrationist phenomenon of the last half century may well be understood and followed encapsulating the member organizations and integrating Latin American vocation.

Integrative-oriented groups in Latin America (in alphabetical order)

ALADI

First Treaty of Montevideo in 1960 (there was one in 20 years) birth enshrined Latin American Integration Association (ALADI), an intergovernmental body composed of 12 countries (in alphabetical order) - Argentina, Bolivia, Brazil , Columbia, Chile, Cuba (since 6 November 1981), Ecuador, Mexico, Paraguay, Peru, Uruguay and Venezuela - but also from other countries and bodies as an observer, observer countries ALADI are (in alphabetical order): China, Costa Rica, Switzerland, Guatemala, Honduras, Italy, Nicaragua, Panama, Portugal, Dominican Republic, Romania, Russia, Salvador and Spain. Among organizations that are ALDI observer: Economic Commission of Latin America (ECLAC), the Organization of American States (OAS) Inter-American Development Bank (IDB), United Nations Development Programme (UNDP), Economic System Latin American (SELA), the Andean Development Corporation (DAC), Interamerican Institute for Cooperation in Agriculture (IICA) and the European Union (EU). Latin American population of ALADI composition is 88 percent of the territory of Latin America and the Caribbean, and 94 percent of the GDP of Latin America and the Caribbean[1].

[1] according to figures provided in 1997 by BID on SELA, Guía from Integración: Asociación Latino Americana of Integración, 1999, http://www.lanic.utexas.edu/project/sela/libro/aladi.htm.

Given the countries and organizations that observer ALADI is the largest integrated group oriented in the Americas, its headquarters are in Montevideo (capital of Uruguay). Its main function is to promote convergence and articulation of various existing integration projects to make the multilateral system functional integration between Member States.

ALENA

Regional Assembly created on 1 January 1994, is a free trade area that operates between the U.S., Canada and Mexico. The main objective was ALENA set of free movement of goods, services, capital, at the express request of the U.S., over a period of about 15 years, without having to involve a common trade policy or economic or legislative harmonization. This understanding obstacles suppress investment and open a market for each state services, banking, insurance, telecommunications, transport, business competition with other foreign partners. Taken together, the three states comprise a market of 386 million consumers and have one enormous economic potential. However, there are fairly large differences between the three countries in terms of economic development: thus, GNP / capita in the U.S. and Canada exceeds $ 25,000, up from $ 4,000 in Mexico.

Achieving this agreement led to an explosion of trade, but there is danger of economic interference can be particularly damaging in terms of Mexico, and the financial and economic crisis in this country may have a negative impact on the U.S. dollar.

CARICOM

It was practically oriented integrative first organization organized between Latin America, in 1973 by Caribbean Free Trade Association (founded in 1965), which comprises 11 small island states and three continental countries of Latin America, who tried to harmonize macroeconomic policies, aviation and hopes to put together a common market.

MERCOSUR

Represents the common market "southern cone" of South America and includes the most important member in our view, located on the continent (in alphabetical order): Argentina, Brazil, Paraguay and Uruguay. Countries possess about 200 million people, or 44% of the population of Latin America and 59% of the territory.

In 1991, the four countries of the customs union between Argentina, Brazil, Paraguay and Uruguay accounted for 76% of the GDP of South America, 67% of its industrial production and 62% of the population. MERCOSUR trade bloc representing the third in the world after the EU and NAFTA, which group the United States, Canada and Mexico. After declaring the customs union, inflation has disappeared regional trade has multiplied three times, making MERCOSUR third world market. Foreign investors "injected" in a $ 50 billion U.S. in anticipation of such FTAA (Free Trade Agreement American), then ZLEA (Free Trade Area of the Americas) described later in the paper, which was to be operational in 2005.

On 26 March 1991 the four countries mentioned above have signed in Asunción (Paraguay), the Treaty on the establishment until December 31, 1994, the Common Market of Southern Cone (Spanish: Cono Sur del Mercado common (MERCOSUR) in Portuguese Mercado Cone comum do Sul (MERCOSUL)). On 14 December 1994, Ouro Preto (Brésil), the project was finally initialed the protocol signed by the presidents of the four MERCOSUR countries grant / MERCOSUL international legal personality. MERCOSUR is not only a common market project is part of the new vision of integrating competitive global economy, but is also the result of development in Latin America in various forms of integrative phenomenon after 80s of last century.

On June 25, 1996 have been associated to MERCOSUR, Bolivia and Chile, and Bolivia asked a customs procedure - by reducing customs duties on its exports to MERCOSUR countries. Chile

needs MERCOSUR countries for its exports, foreign investment and Argentine gas. Also, Peru has begun discussions Association in March 1996 and signed in this free trade agreement.

MCCA

Central American Common Market is one of the oldest organizations with integrating Latin America, arising from the signing of the Charter of San Salvador in 1951. Aims to economic, social and cultural between five Central American countries, which together want better access within the organization structure ALENA.Since MCCA has developed over time (see the paper), ALADI, ANDEAN PACT, CARICOM, SELA, UNASUR, ZLEA and ALENA.

ANDEAN PACT

Founded in 1969, includes five countries - Bolivia, Colombia, Ecuador, Peru and Venezuela - located along the Andean Cordillera. Initially State, Chile withdrew from the organization in 1976. At the eighth meeting in Trujillo (Peru), on 10 March 1996, decided to reorganize institutions: political representation has been created, a permanent general secretariat and other intermediary bodies were structured organization. There is some disagreement among members of the organization: Peru wants a free trade area, and the other four countries want a customs union. Marked by these misunderstandings, Colombia and Venezuela formed with Mexico, "Group of 3".

SELALatin American Economic System - Economic-oriented organization that includes most of the South American continent countries, called in Spanish "Latino-Americano economic system" (also abbreviated SELA). This organization was created within the Inter - American Economic and Social Council (ECOSOC-IA) Economic Organization of the Americas (AEO), following an initiative of Mexico and Venezuela.

Inspired by Success won the Organization of Petroleum Exporting Countries (OPEC briefly in English and OPEP, in French) in 1973, these two countries have proposed other Latin American countries to create a body whose mandate to foster cooperation between countries States to promote regional development more autonomous and establish common positions with major countries of the region in international economic forums, especially in terms of commodity prices.

On October 17, 1975, in Panama, SELA was established through the signing by 25 Latin American countries attended the Convention in Panama. Then, create ALADI and ALENA (described above), not only increased the number of organizations with integrating the region and to promote the emergence of multinationals firms Latin American and especially American phenomenon leading to increased trade and relations between countries of the region and the world. SELA was thus a catalyst favored the opening of Latin American countries to the rest of the world.

UNION SOUTH AMERICAN NATIONS

(In spanish: Unión de Naciones Suramericanas in Portuguese: União das Sul-Americanas Nações, abbreviated: UNASUR, or UNASUL), known until April 2007, like South American Community of Nations.

UNASUR is a regional political and economic organization, founded by 12 countries in South America. It was established on 8 December 2004 in the Peruvian city of Cuzco during the Assembly of III of South American heads of state. The declaration of incorporation have established the following objectives: 1. concentration, coordination and diplomatic policy in the region, 2. convergence between Mercosur, the Andean Community and Chile into a single free trade area. Objectives: a) energy integration and communication întreţările South America, driven by Initiative for the Integration of South American Regional Infrastructure b) harmonization of rural and agri-food policies dezvolare c) technology transfer and horizontal cooperation in scientific, educational cultural and d) increasing the interaction between commercial media and civil society, e) promoting gradual measures, actions and areas of action based on existing institutions.

Meeting of Foreign Ministers of the member countries formulate concrete proposals for action and executive decisions. Meetings of Heads of State are higher courts in political leadership. Their first meeting took place on 29-30 September 2005 in Brazil, and the second meeting - in Bolivia in 2006. Host a meeting of Heads of State holding the Presidency and gives temporary headquarters for a year of organization.

Founding members are member countries of the Andean Community (Bolivia, Colombia, Ecuador, Peru, Venezuela), Mercosur (Argentina, Brazil, Paraguay, Uruguay and Venezuela again). Subsequently, affiliated Chile, Guyana and Suriname. The status of observer countries: Mexico and Panama.

UNASUL started plans of integration of Latin American countries through the construction of a highway linking Brazil to Peru, through Bolivia. So Brazil won out on the Pacific Ocean and Peru - the Atlantic Ocean. Construction took place from 2005-2009, being financed by Brazil - Peru 60% and 40%. He built a pipeline to transport gas joint Natira called Energy Inelulul South American pipeline that Argentina, Brazil, Chile, Peru and Uruguay Peruvian receive natural gas. Binational pipeline is another project aimed at energy integration between Colombia and Venezuela. Construction took place between 2006-2008. Project beneficiary was Venezuelan state oil company PDVSA, and the project cost was 300 million dollars.

FREE TRADE AREA OF THE AMERICAS (FTAA)

An abbreviation of the name of the organization is hard to find, it means Free-Trade Area of the Americas (FTAA) in English, Area Libre Comercio de las Americas (FTAA) in Spanish or areas Libre Echange des Ameriques (ZLEA) in French. Negotiations for the construction of a single market - Free Trade Area of the Americas brought to Miami (USA) in 1994, 34 countries (of which 24 are considered small economy) in the Americas except Cuba. The organization was confirmed in Santiago de Chile in 1998, and "construction" they had to be completed in 2005.

Washington has estimated that the establishment of Free Trade Area of the Americas (ZLEA) opens a new era of cooperation, bringing for the first time the Americas in a common project. Only a small part of Latin American leaders shared and still share this view[2]. ZLEA is called Free-Trade Area of the Americas (FTAA) in English or Area Libre Comercio de las Americas (FTAA) in Spanish.

The strategic objective of the U.S. was to form the largest market in the world, but especially to ensure economic hegemony and hence political, the entire American continent. Washington estimated that ZLEA will open a new era of close cooperation for the first time, the two halves of the Western Hemisphere of the planet around this joint.

The six countries (Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua and Panama) in Central America, which represents a market of 35 million inhabitants in 2007 negotiating an Association Agreement with the EU. It is known that since 2008, the EU recorded a trade surplus with the region of 8 billion euro[3]. Negotiations on a regional association agreement between Latin American countries, including issues such as political dialogue, cooperation and trade, were suspended in June 2008. Then, in January 2009, the Council authorized the Commission to negotiate a trade agreement with the Andean Community countries, trade ministers from the EU and Central America reached an agreement trade association for years, beyond what It means that markets are will open 100 percent in either direction. Conclusion of negotiations on trade part of the Association Agreement will lead to trade ambitious, comprehensive and balanced between the two parties. The

agreement allows also benefits from export markets such as agriculture, automotive, electronics and alcohol and settlement in the EU restrictions on meat and bananas from Central America.

On 16 March 2012, Member States of the European Union reached a political agreement on a draft decision approving the signing and provisional application of an FTA between the EU on one hand, Peru and Colombia, on the other hand[4]. Agreement, initiated in March 2011, provides for the elimination of high tariffs, technical barriers to trade fighting liberalization of services markets, protection of EU geographical indications and opening of public procurement markets. Understanding includes commitments to strengthen labor standards and the environment, and effective and rapid procedures to resolve disputes and ensure a level playing field for EU action with other competitors in the region, such as the U.S. Based on the principle of regional integration, it shall remain open for signature in the future by Ecuador and Bolivia, the other two members of the Andean Community.

Conclusions

In recent years we are witnessing a forced integration of Latin American countries. The deepening economic integration between nations of the South American continent in many cases led to the erosion of differences between national economies and to "undermine" the autonomy of national governments, the trend does not show signs of stopping. Profound changes in the fields of technology, society and culture of South American Nations brought closer together by reducing real economic distance between them. International economic and political interdependence has significantly improved the living standards of many nations and promises considerable further benefits, says Ralph C. Bryant.

But economic integration imposes many challenges national governments. All these objects present complex economic dimensions, and governments need to understand very well the economic costs and benefits involved. Undoubtedly, the challenges are profound social, political, cultural and spiritual. Strong competition between national political sovereignty and increased cross-border economic integration unmoderated may cause major problems if national policies and international cooperation in this area are poorly coordinated.

Latin American country governments and their presidents seem to have understood that their country's economic integararea is the only solution in the vast concert of globalization.

AGENCY THEORY AND OPTIMAL CAPITAL STRUCTURE

MARIA ZENOVIA GRIGORE[*]
VIORICA MIRELA ŞTEFAN-DUICU[**]

Abstract
In the corporate finance, the agency theory tries to explain the behavior of various agents that intervene in the company's funding (managers, shareholders and debt holders) and to analyze the impact of these behaviors on the financial structure.
Accordingly to the agency theory, the optimal financial structure of the capital results from a compromise between various funding options (equity, debts and hybrid securities) that allow the reconciliation of conflicts of interests between the capital suppliers (shareholders and creditors) and managers.
The indebtedness allows shareholders and managers to adhere to same objectives, but causes other conflicts (between managers and shareholders, on the one hand, and creditors, on the other side). The optimal level of indebtedness is the one that allows the minimization of overall agency costs.

Keywords: *agency theory, agency relationship, agency costs, optimal capital structure, equity, debts*

Introduction

The normative agency theory, named also the Principal-Agent Model, has as objective to issue optimal agreements between partners and to explain their behavior as soon as an agency relationship begins. An agency relationship is an agreement in which one or more persons, called principal(s), engages another person, called agent, to perform some service on their behalf which involves delegating some decision-making authority to the agent. The agency theory assumes that the interests of principal and agent diverge.

In a company there are many agency relationships: between shareholders (principal) and managers (agent); between a creditor (principal) and shareholders and managers (agents); between an employer (principal) and employee (agent), etc. The firm can be perceived as an assembly of principal – agent relationships, more or less ranked, in which the agents can also exercise the principal function in other relationships. Every stakeholder or group of stakeholders will attempt to act in order to satisfy its own interests:

- For the principal, the issue is to determine appropriate incentives for the agent and optimal control procedures designed to limit opportunistic action by the agent;
- For the agent, the issue is to relate the effort with the information[1] depending on which the primary judgment from the principal will be made; a great effort that cannot be reported to the principal will be useless but, on the opposite, a small effort will not be well seen.

A company's behavior is comparable to the market's one, meaning that is the result of a complex balancing process.[2]

[1] by "information" is needed to understand all the elements that allow an organization to evaluate its members activity (presence, activity reports, financial and accounting statements; management control indicators, reputation etc.).

[2] M. Jensen, W. Meckling, "Theory of the firm: managerial behavior, Agency costs and ownership structure", Journal of Financial Economies, 3-4, 1976, p. 305-360.

In finance, the sources of conflict can be many and relate to the relatively classic financial problems: dividends payment policies, investment decision, determining the optimal capital structure etc.

The structure of the capital can affect two types of conflict of interests:

- Conflict of interests between managers and shareholders;
- Conflict of interests between shareholders and managers, on one side, and creditor, on the other side.

The reconciliation of these conflicts will determine the optimal capital structure that will allow the maximization of company's global value.

1. Equity - debts conflicts and optimal capital structure

An agency problem arises when managers own only a fraction of the shares of the firm. This partial ownership may cause managers to work less vigorously then otherwise and / or to consume more perquisites (luxurious offices, company cars, expensive hotels) because the majority owners bear most of the cost.

The managers can be motivated to act in the interests of the shareholders through contracts that repay the managers by the value of the company's shares. In addition, their decisions can be determined by the desire to keep their professional reputation. However none of these mechanisms is perfect.

The agency theory proposes the indebtedness as way to solve potential conflicts between managers and shareholders. The indebtedness has advantages, as has costs.

The advantages of indebtedness emerge on two levels:

- Indebtedness, through regular payments of capital rates and interest that result from it, becomes a mean of control for managers investment policies;
- Indebtedness allows the shareholders to discipline the managers and hold more information regarding the company's management.

There are three types of costs of indebtedness:

- Shareholders can give up investment projects that have positive net present value, if the difference between these and the present value of the amounts needed to be reimbursed is negative;
- The indebtedness can incite the shareholders to select risky investment projects;
- The costs of shareholders' investigations over the nature of the debts employed by the managers.

In order to maximize the value of the company, through resolving the conflicts of interests, is necessary to be taken into consideration the advantages and costs of indebtedness and own funds recourse.

The first researches in this manner were developed by M. Jensen and W. Meckling in 1976. They highlighted an optimal financial structure resulted from two divergences[2]:

- In the presence of income tax, the managers tend to indebt, because the financial expenses are deductible;
- The indebtedness attracts agency costs of three types: control and justification costs; high risk investments remuneration costs, demanded by the creditors; bankruptcy costs.

Companies thus have interest to indebt until the point on the increase of its value owed to the financed investments will be equal to the marginal costs generated by the indebtedness.

Therefore, the optimal level of indebtedness is the one that allows the minimization of overall agency costs, meaning the costs related to indebtedness and to appeal to external own funds.

[2] S. Rifki, A. Sadq "La structure financière de la firme a-t-elle une influence sur sa valeur?", Problèmes économiques, nr. 2728/2001, p. 28.

The indebtedness allows shareholders and managers to adhere to same objectives.

For managers, the indebtedness has the power to incite to performance. More the company is indebted, more its bankruptcy risk is higher. For managers the bankruptcy means generally losing their jobs, the remunerations and other advantages. This is considered to be a sufficient thread to incite to efficient management that will bring maximum cash-flow in order to reimburse the debt, and to lead to the choice of investments projects with positive net present value. In the absence of indebtedness, the bankruptcy risk is limited but the market will assume that the managers do not aim maximum performance. The value of the company will decrease and, if there exists a managers' co-interest system (remuneration related to the value of company shares), they will lose.

For the shareholders, the indebtedness has a leverage effect over the financial return. In addition to the new shares issue funding, applying to a loan has the advantage that it does not lead to the dilution of the share capital.

Indebtedness generates new conflicts (between shareholders and managers, on one side, and creditors on the other side) and costs: bankruptcy and reorganization costs, costs for surveillance over the managers by the creditors, justification cost for managers to justify in front of creditors.

Allying, shareholders and managers can divert in their advantage part from the company's assets to the detriment of the creditors. For example, they can lead a policy of risky investments or can decide to take a loan from which a part can be redistributed as dividends.

In the situation of a company with high debts reported to the equity, the owners could be tempted by risky investments. Shareholders will practically benefit from all the advantages if the investments turn out to be profitable. The creditors know this situation and can include in the loan agreement articles that can restrain the managers' abilities to conduct risky investment on the duration of the loan agreement.

In order to find solutions for the emerging conflicts between the shareholders and managers on one side and the creditors on the other side, new means to restrain the shareholders and managers to acquire the company's assets must be provided. Therefore there is needed to limit or avoid the decisions that raise the risk of company's assets or lead to sub-investment and tend to reduce the value of existing debts, even though this aspect prevents a decrease of the company's value.

Beside various juridical subtleties that can be inserted in the loan agreements, in practice we also find other solutions[3]:

- Real or insurance guarantees clauses that suppress the temptation of giving up project with positive net present value, but reduce the variation of future cash-flows in order to avoid a transfer of wealth to borrowers.

- Certain loan agreements provide clauses that restrain the liberty of the company's managers to indebt more. This clauses, in generally set a maximum level of certain rates (debts/equity, financial expenses/turnover, debts/gross accumulation margin, chargeability/cash, etc). When these values are exceeded, the loan can immediately become chargeable.

- Paying dividends to shareholders decreases the net assets of the company and so the guarantees for the creditors. Because of this, some clauses have as subject the limitation of dividend payment on the duration of receivables. Also, the reserves distribution or reimbursements of own shares by the company are limited or forbidden.

- Harmonizing of assets and liabilities maturity aims the prohibition of de-investment behavior which, resulting from shareholders refuses to act in the creditors' interests, would have as result the decrease of company's global value.

[3] G. Hirigoyen, J-P. Jobard "Financement de l'entreprise: évolution récente et perspectives nouvelles", Encyclopédie de gestion, Economica, Paris, 1989, p. 1226 – 1228.

- Resorting to indebtedness on short term, constantly renewable, can be assimilated to a long term disguised liability, designed for example to finance the global treasury shortage. But the investment decision becomes later to the short term liability maturity. The creditors have therefore the possibility to sanction at any time the management of shareholders and managers. In consequence, short term indebtedness incites them to seek out more rentable investment projects.

- Convertible to shares bonds or bonds with subscription receipts issuance is another solution to solving the conflicts between shareholders and managers on one side and creditor on the other side. The convertibility clause or the use of the subscription receipt into shares option can determine the current shareholders to change the structure and the portfolio of assets risks in order to increasing the long term profit because this could go to the bond owners, who are potentially shareholders. These clauses can incite to choosing projects that contribute more to the increase of company's value rather that their own interest.

- Resorting to lease can be interpreted as an alternative to giving real guarantees, aiming to the limitation of risks for substitution of assets and sub-investments. However, lease agreement implies specific agency costs. Therefore, the potential costs because the bad maintenance general tendency of leasers can be reduced by a high value guarantee deposit or a flat rate maintenance agreement. Also, the purchase option at the end of the contract can be considered to be an agency cost reduction option.

2. Agency costs depending on funding sources

Determining the optimal financial structure doesn't imply only the settlement of debts and own funds but also determining the part of equity owned by managers and the one owned by other shareholders. Therefore there are three variables:

- S_i = internal own funds (owned by managers);
- S_e = external own funds (owned by other shareholders);
- D = debts

The total amount of own funds is $S= S_i+ S_e$ and the total value of the company is V= S+D.

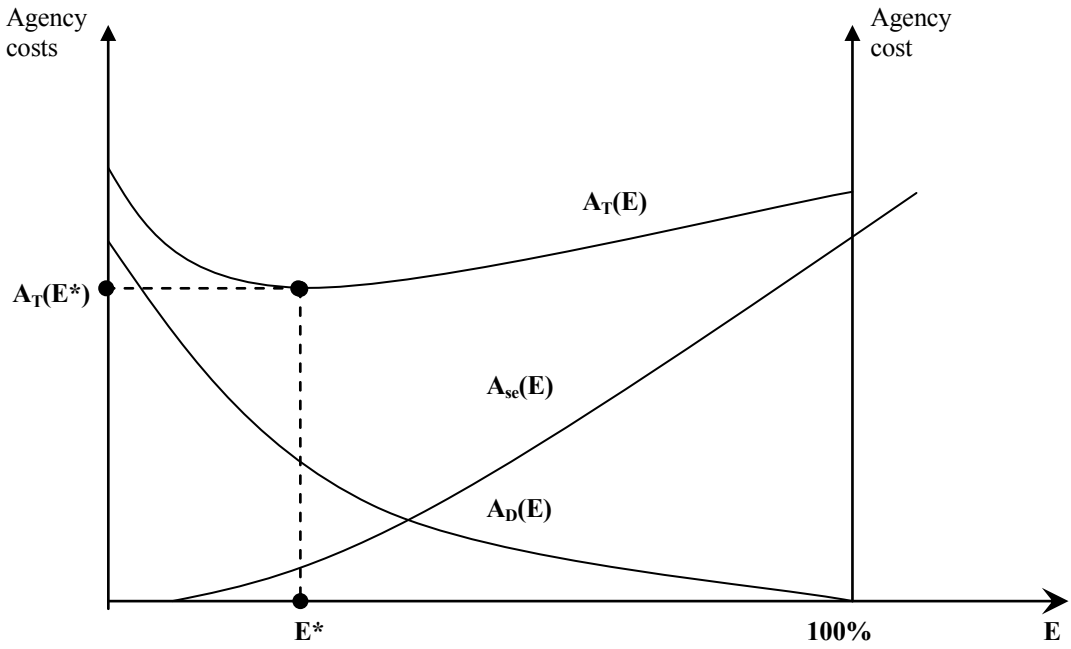
We will determine the optimal rate of external own funds reported to debts $\left(\frac{S_e}{D}\right)$, assuming that the size of the company and the amount of needed external funding (S_e +D) are constant.

Knowing that an amount of external funding is needed to be settled, the issue is to determine the optimal part (E*) of external own funds in the total external funding:

$$E^* = \frac{S_e}{S_e + D}$$

In the rational expectancy markets, the prices set to certain assets such as bonds (for debts) or shares (for own funds) issued by the company reflects correct estimations of control costs and wealth transfer costs determined by the agency relationship. Furthermore, in case of conflict of interests, the one that will pay for these agency costs is the managing shareholder. On his side of view, for a given level of internal own funds, the optimum amount of external own funds in the total external funding must correspond to an E* level for which the total agency costs, noted A_T (E*) are minimal. This situation is illustrated at figure no.1.

Fig. no. 1. Agency costs depending on funding sources



The agency costs graphically represented are:

- $A_{Se}(E)$ = agency cost depending on E, associated to own external funds;
- $A_D(E)$ = agency cost also depending on E, associated to debts. To be remarked that when maximum (100%) is reached for every of the two external funding sources, $A_D(E)$ is lower than $A_{Se}(E)$;
- $A_T(E)$ = total agency costs, equal to $A_{Se}(E) + A_D(E)$.

We will attempt to interpret these functions, on managerial behavior related to agency cost, presented in the previous section.

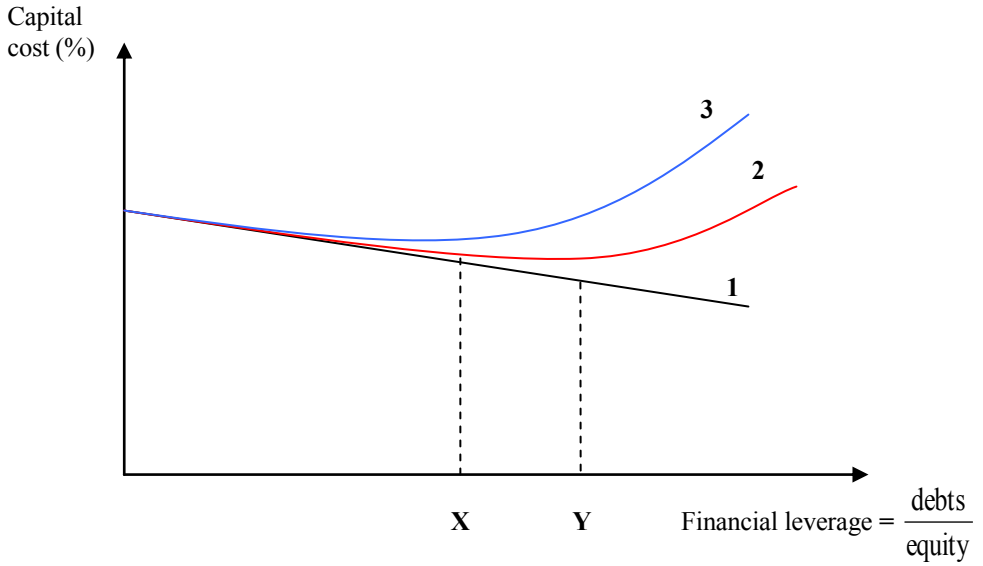
Thereby, for $A_{Se}(E)$, when E = 0 (meaning there are no external own funds), the manager isn't motivated to exploit external own funds. Besides, in this extreme case, any change in the value of the external own funds is equivalent to the change of value in the own funds owned by the manager; therefore the agency costs are null. Hence, any increase of E implies a manager's increase of motivation and for E=100%, the agency costs will be maximal.

For $A_D(E)$, representing the agency cost resulted from the indebtedness, it must be noted that this cost exist only because the manager is tempted to transfer a part of the profit from the benefit of the creditors to itself, given that this transfer increases the own fund value.

Starting from this, in order to explain the $A_D(E)$ function behavior we will apply the reverse reasoning used in the $A_{Se}(E)$ function analysis.

This allows the representation of a curve for total agency cost whose minimum indicate an optimal financial structure of the capital. If we take into consideration the fiscal effects of indebtedness (reducing the income tax amount owed to the deductibility of interest in the determination of taxable income), we got a new global representation of indebtedness limit (figure no.2).

Fig. no. 2. Capital cost



1 = capital cost considering fiscal effects;
2 = capital cost considering fiscal effects and bankruptcy costs;
3 = capital cost considering fiscal effects, bankruptcy costs and agency costs.

This graph allows understanding why the companies do not indebt to the maximum despite the fiscal advantages of indebtedness. If we take into consideration the fact that bankruptcy costs are as high as the financial leverage (rate of indebt) is higher, the optimal financial structure will be at Y level. If we also take into consideration the agency costs, which increase as the level of indebtedness increases, the weighted average cost of capital will increase and the optimal financial structure will be at a lower level (X).

Conclusions

In the financial domain the agency theory re-analyses the issue of optimal financial structure and stands as ground for new financial products development.

The agency theory starts with the hypothesis that stakeholders (managers, shareholders, creditors, employees, customers, suppliers, state etc.) have specific objectives and interests that are not necessarily spontaneous reconcilable; in consequence there are conflicts between them, especially in the large companies, based on the separation between ownership and management.

Accordingly to the agency theory, the optimal financial structure of the capital results from a compromise between various funding options (own funds or loans) that allow the reconciliation of conflicts of interests between the capital suppliers (shareholders and creditors) and managers.

The structure of the capital can affect the value of the company, by acting on the ways of managerial motivation and inciting the shareholders and creditors to supervise the managers and limit their abuses.

The agency relationships are mostly based on the theory of options. The junction between the two theories is proven useful for understanding the investment and funding behavior and for explaining the existence and role of some specific financial products such as bond convertible to shares or bonds with share subscription receipts, etc.

The agency theory has some limitations. It often gives partial models for identifying potential sources of conflicts and for finding appropriate solutions (sometimes idealistic). It is to be remarked that in order to formalize approached issues, some complex conditions have to be fulfilled. These conditions can refer, for example, to the sequences of events and decisions that are needed to be respected, in the simplified frame of single period, in order to highlight the sub-optimal investments issue.

The main limitation of the agency theory remains the insufficient studying or empirical verification of theoretical concepts. This methodological and scientific gap is firstly explained by the difficulty to measure the agency costs.

INNOVATION, VECTOR OF THE KNOWLEDGE-BASED SOCIETY

VLADIMIR-CODRIN IONESCU[*]
VIOREL CORNESCU[**]

Abstract
The innovative potential of a nation is determined by its members' creative capacity, as well as by the design and implementation of strategies and policies that are meant to support the devise, experimentation and application of new ideas, respectively the transformation thereof both into tangible goods (products and services) and intangible ones (knowledge). The present paper approaches innovation as a vector of the new knowledge-based society, which consists of the main actions undertaken by the EU within the context of the "European Year of Creativity and Innovation", as well as of the actions promoted through the Initiative known as "A Union of Innovation", comprised by the Europe Strategy 2020. The final part of the paper illustrates the essential role of universities in developing knowledge-based and innovation-based society.

Keywords*: innovation, knowledge-based society, intelligent growth, community actions, university*

1. Introduction

Knowledge-based society implies putting to good account knowledge – which is a key component of national intellectual capital – at a higher level. In such a society, knowledge – the result of all knowledge processes – is the main competitive advantage at national, organizational and individual level. The increasing complexity of activities, the information-based society, as well as the accelerated rhythm with which technical and technological innovations are created require new competences, which result subsequent to the aggregation of the new knowledge that society members acquire through a continuous learning process. Consequently, in the knowledge-based society and economy, human resources are permanently included in the learning processes both at institutional level (in schools, high schools, colleges, universities, academies etc.) and at an organizational one (in private, non-profit and public organizations).

From this point of view, the European Union launched a long-term strategy which aims to promote a knowledge-based society that requires life-long learning in order to ensure the European citizens' sustainable prosperity and welfare.

Innovation plays a fundamental role in enhancing organizational competitiveness and, implicitly, the economic, social and cultural development of a nation. Within the context of the new society and, respectively, of a potentially new economy, the importance and significance of scientific and technological knowledge for economic activities has radically modified; the opinions according to which it is necessary for the innovation concept to be redefined theoretically are more and more insisting and convincing; according to these theories, the very concept of innovation must be included in a systemic model that is more complex than the traditional one, and that is also appropriate for contemporary realities; from a practical point of view, such a model would bring modifications in the innovation policy according to the new requirements [2].

The American Professor Peter F. Drucker considered that "knowledge-based society will inevitably become more competitive than any existing human society, simply because the more accessible information, the less excuses for lack of performance. There will be no "poor" countries, merely ignorant countries. The same principle will be applied to companies, industries and organizations of any kind. In fact this principle will be applied to human beings, too".

[*] Associate Professor, PhD, Faculty of Business and Administration, University of Bucharest (vladico12@yahoo.com).
[**] Professor, PhD, "Nicolae Titulescu" University of Bucharest (viorelcornescu@univnt.ro).

Knowledge-based society relies on innovation, the on-going training of its members, as well as on a large number of researchers, university teaching staff, and engineers, all of whom are part of a university and research centre network, as well as of innovating companies that provide high technological products and services which use information and put it to good account [8].

Knowledge-based society ensures – through its technological and functional vectors – human development while creating and maintaining balance between the economic, social and ecological dimensions. These vectors represent instruments that transform information into knowledge; thus, they transform informational society into a knowledge-based society. Knowledge-based society requires a converging action of these technological and functional vectors [1].

Innovation is a defining coordinate of the knowledge-based society. The innovative potential of a nation is determined by its members' capacity, as well as by the design and implementation of strategies and policies that support the creation, experimentation and application of new ideas, respectively the transformation thereof into tangible goods (products and services) and intangible ones (knowledge).

In a knowledge-based society, creative-innovative processes, respectively production of ideas and the transformation thereof into competitive products and services, are fundamental, whereas intangible resources become more important than the tangible ones.

2. Community-run actions within the innovation sphere

The EU developed states have adopted strategies and policies that stimulate innovation and that ensure transition from the new economic, social and institutional structures that are specific to knowledge-based society.

Since 2009 an eloquent proof of the concerns manifested by the EU in the sphere of innovation has been represented by the European Commission, which initiated the campaign: „Imagine. Create. Innovate". This Campaign mainly aimed at promoting creativity and innovation in different sectors of human activity, as well as at drawing attention at the importance of creativity and innovation for personal, social and economic development. A key-factor for the future economic growth is the full development of the EU citizens' innovation and creativity potential, which relies on European culture and scientific excellences [4].

Today's world relies on fast innovation. Creative thinking is the key of success in a global economy, a fact which was admitted by the EU a long time ago. Creativity can be considered the supreme innovation source that transforms creative ideas into products and services. Creativity and innovation cannot create sustainable economies outside the observance of cultural diversity, which is a source of creativity and innovation itself [7]. Innovation is an integrating part both of the European Commission as regards climate change, and also of the plan for re-boosting EU economy.

Danuta Hübner, former commissioner for regional policy, stated that "due to an ever increasing competition and to the serious global challenges, innovative practices and creative solutions represent an opportunity towards ensuring economic growth and welfare within our regions and countries. Abilities, ideas, and processes – all combine in order to help us gain a competitive advantage. Europe must not react to the present crisis while reducing investments in abilities and innovation. We must be trustful and rely on the quality of our ideas, as well as on our adaptation capacity."

The projects performed by the European Commission within the campaign run in 2009 basically aimed at [6]:

- Cooperation between member states in domains such as education, culture, enterprises and workforce occupation;
- Creation of closer links between art, business, schools and universities;
- Encouraging young people to be entrepreneurs;
- Developing innovative abilities within public and private organizations.

Results of the Campaign run by the European Commission in 2009 were summarized in "The Manifest for Creativity and Innovation in Europe", which comprises seven major directions of activity and represents a support community strategy for creativity and innovation for the period of 2010-2020.

Consequently, the European Union supports through active policies creative-innovative processes, a fact illustrated by the Programme of the Cohesion Policy for 2007-2013, in which creativity and innovation are appreciated as sources of sustainable development. Thus, over 86 billion of Euro, representing 25% of the total structural funds, have been allotted to the Agenda for Innovation, which includes research and innovation, ICT (Information and Communication Technologies) exploitation, measures for enhancing the entrepreneurial spirit, as well as innovation at the workplace.

3. A Union of Innovation

In 2010, the European Commission adopted the Europe 2020 Strategy, which is structured on three major coordinates [5]:

- Intelligent growth – the development of a knowledge and innovation-based economy;
- Sustainable growth – promotion of a more efficient economy ensured through an ecological and highly competitive resource usage;
- Favourable increase of inclusion – promoting an economy which has a higher rate of workforce occupation and can ensure economic, social and territorial cohesion.

These three important axes of development support each other and offer an overview of social market economy during the 21st century Europe.

Intelligent growth implies consolidation of knowledge and innovation, which are essential vectors for the knowledge-based society and economy. In order to achieve this goal, one must:

- Enhance the quality of learning systems;
- Enhance research performances;
- Promote innovation and knowledge transfer within the community by using informational and communication technologies;
- Cultivate the entrepreneurial spirit, which is market and consumers' needs-oriented.

One of the seven initiatives comprised in the Europe 2020 Strategy is the Initiative "A Union of Innovation". The objective of this initiative is the orientation of politics within the research-development and innovation sphere towards the challenges of a contemporary knowledge-based society: climate changes, energy and the efficient use of resources, health and demographic modifications. Each piece of the immense innovation chain should be reinforced as regards fundamental demand and commercialization. The European Commission will act in the following three directions:

- Accomplishing a European Space for Research, devising a strategic research agenda in compliance with a set of priorities, of which we mention: energy security, transports, climate changes, the efficient use of resources, health and aging, as well as ecological methods of production and land management;
- Improvement of the innovation-frame conditions for the business environment, creation of the Single European Patent, of a sole Court of law specialised in matters of patents, modernization of the design frame of copyright and trademarks, improvement of SMEs access in order to ensure intellectual property protection, enhanced creation of inter-operational standards, improvement of capital access and full use of secondary demand policies, e.g. through public acquisitions and intelligent regulations;
- Conclusion of European partnerships in the area of innovation between the European Union and member states in order to accelerate the development and usage of technologies that are necessary for answering potential challenges;

• Consolidation and further development of the community instruments that support innovation (e.g. structural funds, rural development funds, Research - Development Frame - Programme, Frame – Programme for Competitiveness and Innovation, SET Plan) and a closer collaboration with the European Bank for Investments through the simplification of administrative procedures in order to facilitate access to finances, particularly for SMEs;

• Promotion of partnership in matters of knowledge and consolidation of links between education, enterprises, research and innovation, including through the European Institute of Innovation and Technology (EIT), as well as the promotion of the entrepreneurial spirit by supporting young innovative enterprises.

4. University, a pillar of the knowledge & innovation-based society

Development of knowledge and innovation-based society fundamentally depends on universities, that is on the quality of processes and activities which are performed within them. Human resources are trained by universities and are going to be hired in private organizations, institutions and public authorities, NGOs, research centres, international organizations etc.

The activity performed within universities comprises:

• Acquisition of competences;

• Scientific research;

• Contribution to the development of the knowledge and innovation-based society.

Universities play an essential role in the new knowledge-based society:

➢ Scientific research processes produce, develop, store and disseminate knowledge;

➢ Didactical processes basically ensure knowledge transfer towards students, master's degree and PhD students;

➢ Knowledge that was assimilated and competences that were acquired during the three university study cycles (Bachelor's degree, Master's degree and PhD degree) will help potential students integrate into the labour market.

University, as a knowledge-based organization must produce three categories of intangible values:

• Concepts (ideas and technologies that result subsequent to the performed processes and activities);

• Competences (that help potential graduates adapt to the requirements on the labour market);

• Connections (creating partnerships with a view to extending the sphere of influence, and putting to good account opportunities).

The conclusion of partnerships between universities and research institutions, as well as private and public organizations, and NGOs, is essential for the knowledge and innovation-based society. If universities, innovative organizations and research institutions conclude partnerships, they have the chance to win grants and projects competitions, and also to obtain finance from national and international bodies.

Similarly, these partnerships facilitate the accomplishment of interdisciplinary studies and research projects through the participation of universities, institutes, technical, economic, and healthcare research centres. The involvement of private organization in these projects confers these studies and research projects an applicative dimension.

Dissemination of scientific research activities, which is in fact ensured through grants and projects, is accomplished through the organization of conferences, symposiums and workshops, through the publication of scientific studies and articles in journals with an outstanding indexation etc.

Another important aspect is, in our opinion, the development of the entrepreneurial spirit within the university and post-university system by creating competences that rely on the entrepreneurial, innovative spirit, respectively on the individual's capacity to identify and put to good

account potential business opportunities. The enhancement of the entrepreneurial spirit within the university curricula is a sine qua non condition at present especially because, on average, over two thirds of the active population performs its activity in SMEs.

In knowledge and innovation-based society it is important for university management to create and apply adequate development policies and strategies in order to improve performed activities and processes. We consider that the main goal of universities, as pillars of the new knowledge and innovation-based society, is to offer students, including master's degree and PhD students, who are potential actors on the labour market, relevant information and knowledge which, if understood and acquired, would later on become competences. In this context, we would like to include a comment. Academician Solomon Marcus underlined, in several conferences, the fact that knowledge is often received / memorised and repeated without being understood and, thus, knowledge is not transformed into competences for graduates. In our opinion, didactical academic activities should be reconsidered in order to ensure the acquisition of knowledge through modern and interactive methods, which rely on case studies, simulations, role plays, projects etc.

5. Conclusions

Knowledge-based society is based on innovation and the on-going training of its members, and it relies on a large number of researchers, academic teaching staff, engineers, all of whom are reunited in a network made up of universities, research centres and innovating firms that offer high technology products and services and that use information and put it to good account.

The EU supports through active policies creative and innovative processes, a fact which is illustrated by the Cohesion Policy Programme adopted for 2007-2013, in which creativity and innovation are seen as sources of sustainable development. Thus, a sum of over 86 billion Euros, representing 25% of the total structural funds, was allotted to the Agenda for Innovation, which comprises research and innovation, ICT (Information and Communication Technologies) exploitation, measures for the entrepreneurial spirit, as well as innovation at the workplace.

Intelligent growth, a coordinate of Europe Strategy 2020, implies the consolidation of knowledge and innovation, as essential vectors of the knowledge-based society and economy. In order to achieve this objective, the European Commission performs its activity in the following areas: improving the quality of the learning systems; increasing performance in research activity; promoting innovation and transfer of knowledge within the community space, by using informational and communication technologies; cultivating the entrepreneurial spirit, which is market and users' needs-oriented.

The development of the knowledge and innovation-based society basically depends on universities, respectively the quality of processes and activities performed by them. Universities train human resources that are going to work in private organizations, institutions and public authorities, non-profit organizations, research centres, international organizations etc. The university, as a pillar of the knowledge and innovation-based society, must produce three categories of intangible values: concepts (ideas and technologies resulted subsequent to the performed activities); competences (that will help prospective graduates adapt to the requirements imposed by the labour market) and connections (creation of partnerships with a view to extending the sphere of influence and putting to good account new opportunities).

NEW TRENDS IN ECONOMIC FORECASTING

NICOLAE MARIUS JULA[*]
NICOLETA JULA[**]

Abstract
Economic forecasting is a dynamic domain. New methods are developed and tested and the methodology needs to be updated according to economic reality. Classical approach in methodology must be completed with latest trends in econometric analysis and the forecasting methods have to benefit from the increasing computational power of the modern software. One of the main causes of false prediction is using altered data. In this paper, we will present the new concepts for data testing, adjusted for the Romanian economy, based on Benford's law.

Keywords: *Economic forecasting, econometric analysis, data testing, econometric software, Benford's law*

1.Introduction

For creating reliable econometric model, one must rely on existing data. There are many situations when the models and the obtained results are not useful because of the initial data. The altered data sets may create false signals and the conclusions based on these signals are not in accordance with the economic reality.

For example, we have analyzed in the papers signals of political inferences in economy in order to manipulate the voters for increasing the chances of reelections. These models were based also on data provided by authorities, data related to final results in parliamentary or presidential elections. Now, we are testing the data form parliamentary elections in Romania from December, the 9th, 2012.

There are numerous useful methods that can be conducted in data analysis in order to check data correctness and authenticity. One of contemporary and efficient method is application of so-called Benford's Law.

Why using Bendfor's Law? In 1972, Hal Varian suggested that the law could be used to detect possible fraud in lists of socio-economic data submitted in support of public planning decisions. Based on the plausible assumption that people who make up figures tend to distribute their digits fairly uniformly, a simple comparison of first-digit frequency distribution from the data with the expected distribution according to Benford's law ought to show up any anomalous results. Benford's law is used extensively in United States in legal status issues, election data, macroeconomic reported data and other scientific fraud detection algorithms.

2.Benford's Law – from random numbers to political fraud

2.1. Benford's law

Benford's law has its origins in the study of American astronomer Simon Newcomb, who observed that in logarithm tables (used at that time to perform calculations) the earlier pages (which contained numbers that started with 1) were much more worn than the other pages. Newcomb's published result is the first known instance of this observation and includes a distribution on the

[*] Lecturer, PhD, Faculty of Economic Sciences, "Nicolae Titulescu" University of Bucharest (mariusjula@univnt.ro).
[**] Professor, PhD, Faculty of Economic Sciences, "Nicolae Titulescu" University of Bucharest (nicoletajula@yahoo.com).

second digit, as well. Newcomb proposed a law that the probability of a single number N being the first digit of a number was equal to log(N + 1) − log(N).

The phenomenon was again noted in 1938 by the physicist Frank Benford[1], who tested it on data from 20 different domains and was credited for it. His data set included the surface areas of 335 rivers, the sizes of 3259 US populations, 104 physical constants, 1800 molecular weights, 5000 entries from a mathematical handbook, 308 numbers contained in an issue of Readers' Digest, the street addresses of the first 342 persons listed in American Men of Science and 418 death rates. The total number of observations used in the paper was 20,229.

The law stipulates that the distribution frequency of digits in data sources. A set of numbers would satisfy Benford's law if the leading digit d {1..9} occurs with probability:

$$P(d) = \log_{10}(d+1) - \log_{10}(d) = \log_{10}(1+\frac{1}{d})$$

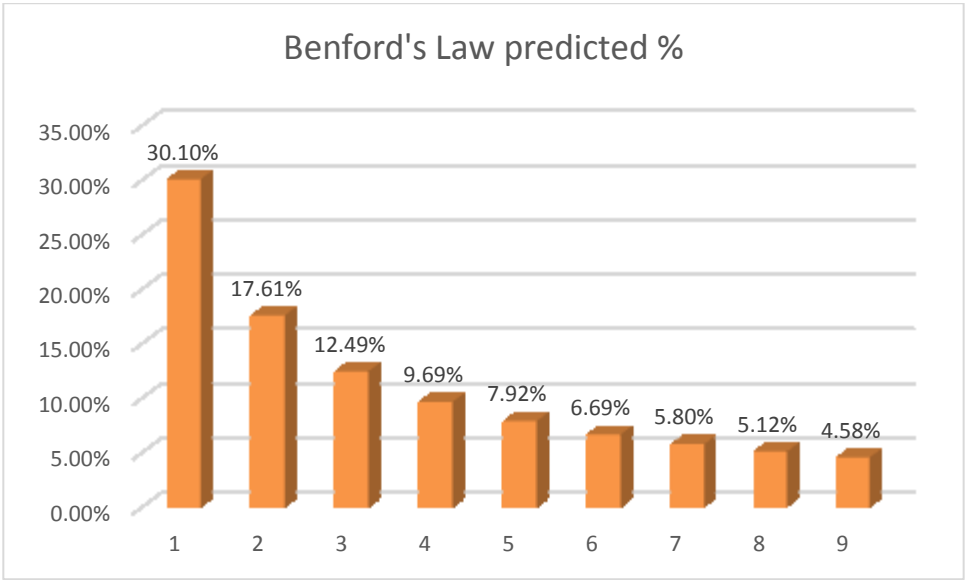

Figure 1 – Benford's distribution

The law is also valid for other bases besides decimal. Also, this law was extended to digits beyond the first. The general formula for probability that d {0..9} appears as the *n*-th (n>1) digit is:

$$\sum_{k=10^{n-2}}^{10^{n-1}-1} \log_{10}(1+\frac{1}{10k+d})$$

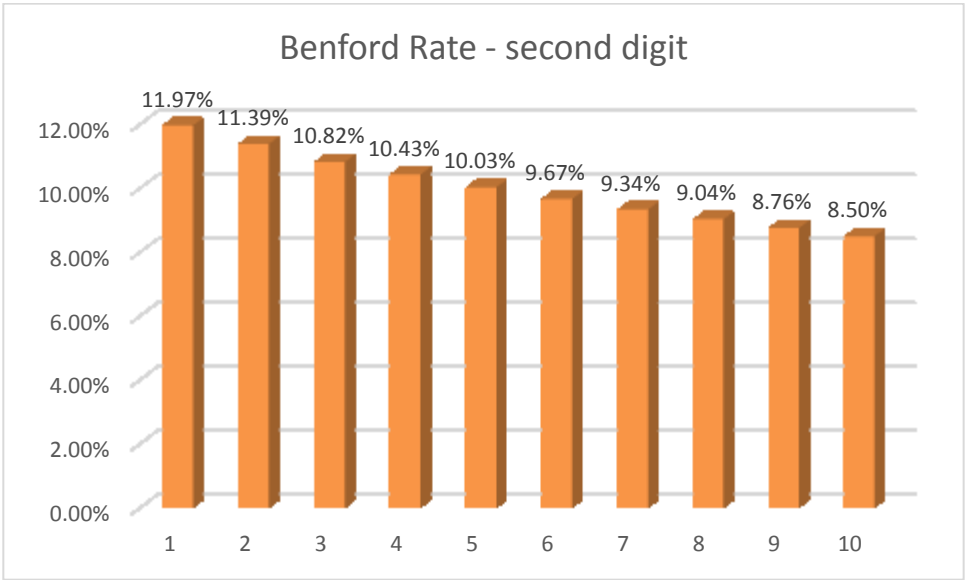

Figure 2 – Benford's law – second digit distribution

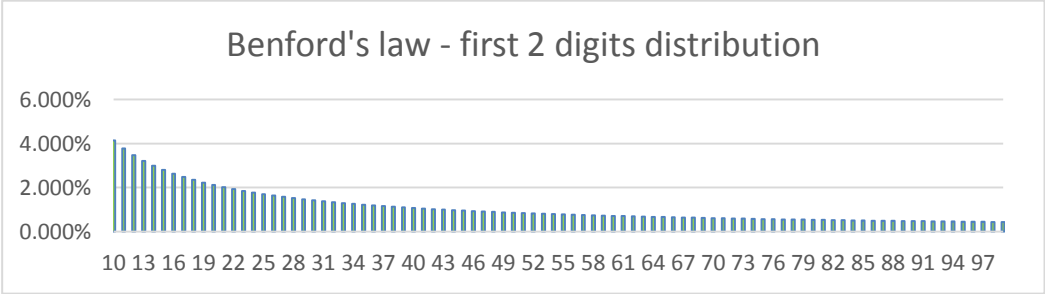

Figure 3 – Benford's law – first 2 digits distribution

2.2. Electoral data analysis

As Peter Klimeka et all[2] stated, free and fair elections are the cornerstone of every democratic society. A central characteristic of elections being free and fair is that each citizen's vote counts equal. However, Joseph Stalin believed that "it's not the people who vote that count; it's the people who count the votes." How can it be distinguished whether an election outcome represents the will of the people or the will of the counters?"

One can see elections as large-scale social experiments. A country is segmented into a usually large number of electoral units. This is also the case for Romania. Here we have electoral circumscriptions for each county, districts in Bucharest and electorate from abroad. The above-mentioned authors affirmed that "each unit may represent a standardized experiment, where each citizen articulates his/her political preference through a ballot. Although elections are one of the central pillars of a fully functioning democratic process, relatively little is known about how election fraud impacts and corrupts the results of these standardized experiments."

[2] Peter Klimeka, Yuri Yegorovb, Rudolf Hanela, Stefan Thurner (2012), Statistical detection of systematic election irregularities, Proceedings of the National Academy of Sciences of the United States of America, no. 41, vol 109, 16469–16473.

The specific literature acknowledge that there is an overabundance of ways of tampering with election outcomes (for instance, the redrawing of district boundaries known as gerrymandering or the barring of certain demographics from their right to vote, blocking access to voting locations). Some practices of manipulating voting results leave traces, which may be detected by statistical methods. Recently, Benford's law experienced a new start as a potential election fraud detection tool. In its original and naive formulation, Benford's law is the observation that, for many real world processes, the logarithm of the first significant digit is uniformly distributed. Deviations from this law may indicate that there are chances of data to be incorrect. For instance, suppose a significant number of reported vote counts in districts is completely made up and invented by someone preferring to pick numbers, which are multiples of 10. The digit 0 would then occur much more often as the last digit in the vote counts compared with uncorrupted numbers. Voting results from Russia[3], Germany[4], Argentina[5], and Nigeria[6] have been tested for the presence of election fraud using variations of this idea of digit-based analysis. There are also analysts who stipulate that the validity of Benford's law as a fraud detection method is subject to controversy. Peter Klimeka suggests that "the problem is that one needs to firmly establish a baseline of the expected distribution of digit occurrences for fair elections. Only then it can be asserted if actual numbers are over- or underrepresented and thus, suspicious. What is missing in this context is a theory that links specific fraud mechanisms to statistical anomalies[7]."

Walter Mebane[8] supports the idea of using Benford's law: "why should Benford's Law apply to vote count data?" He offers two mechanisms for why second digits of vote counts should follow a "Benford's Law-like distribution" which he refers to as the 2BL distribution. As stated above, Benford's Law does not apply to "simple random" data. Therefore, in order for Benford's Law to apply to vote count data vote count data cannot be generated simply randomly. Instead, due to the complexity inherent in the voting process, simple randomness should not be observed in voting outcomes. Thus, vote choice is not simply a "stochastic choice", but rather consists of a set of complex processes. Such processes are as follows. An individual voter first decides whether or not to vote and, secondly, who to vote for (or also which way to vote on a particular referendum). Finally, a voter must actually cast his or her ballot which can be done in a variety of ways: "election day voting in person, early voting, provisional ballots or mail-in ballots; on paper, with machine assistance or using some combination". In addition, there is always the potential for mistakes:

When all is said and done, most voters will look at each option on the ballot and have firm intentions either to select that option or not to select that option. Then for whatever reason—momentary confusion, bad eyesight, defective voting technology—a small proportion of those intended votes will not be cast or recorded correctly. A small proportion will be "mistakes" (Mebane).

The combination of the potential for mistakes and the set of complex processes produce vote counts that should "or will often" follow the 2BL distribution as laid out in Table 1. According to

8 Mebane, Walter R., Jr. 2006b. "Election Forensics: The Second-digit Benford's Law Test and Recent American Presidential Elections." Earlier version presented at the Election Fraud Conference, Salt Lake City, Utah, September 29-30, 2006.

Mebane, "the kind of complexity that can produce counts with digits that follow Benford's Law refers to processes that are statistical mixtures (e.g., Janvresse and de la Rue 2004), which means that random portions of the data come from different statistical distributions" (Mebane).

Mebane uses simulations to show that when manipulations occur to 2BL distributed vote counts, this "will produce a significantly large value" of the test statistics. He shows that the test statistic is sensitive to departures from the 2BL distribution under a variety of scenarios: (1) when electoral manipulation occurs in a precinct for an already strong candidate; (2) when vote counts are manipulated in a close election (tie is expected according to the vote-generating process); and (3) when votes are manipulated in a precinct for a weak candidate. In addition, he shows that even small manipulations will produce significance (i.e. test statistic is sensitive to small manipulations). In other words, a massive amount of fraud does not have to occur for this test to detect fraud. However, "if the amount of manipulation is sufficiently small, the 2BL test will not signal that manipulation has occurred"

We have analyzed the data from parliamentary elections from 9th December, 2012. The selected data was from the official results published by Central Electoral Bureau (Biroul Electoral Central – BEC) – Final results – Per candidate statistics[9].

First analysis was made using the whole set of data, counting 8120 records. The data was recorded per electoral circumscriptions (41 counties, Bucharest with 6 districts and voters from abroad). We were looking into the column of "Obtained votes per candidate" and we are searching for differences from the Benford's law.

The tests included 3 phases:

- First digit distribution
- Second digit distribution
- First 2 digits distribution

For all these distributions, we were using also the chi-square test, which is used to determine whether there is a significant difference between the expected frequencies and the observed frequencies in one or more categories. Here, we were testing if the observed distribution differs significantly from the Benford's law predicted distribution.

2.2.1. First digit distribution

Digit	Sample Frequency	Benford Rate	Sample Data Rate	Difference
1	2642	30.103%	32.585%	0.02482102
2	1498	17.609%	18.476%	0.00866454
3	1083	12.494%	13.357%	0.00863304
4	725	9.691%	8.942%	-0.00749215
5	583	7.918%	7.190%	-0.00727695
6	459	6.695%	5.661%	-0.01033603
7	420	5.799%	5.180%	-0.00619126
8	360	5.115%	4.440%	-0.00675193
9	338	4.576%	4.169%	-0.00407027

Table 1 – First digit test

[9] http://www.becparlamentare2012.ro/A-DOCUMENTE/Statistici/RezultateCandidati2012.xls

ChiTest: 99.99999999903%

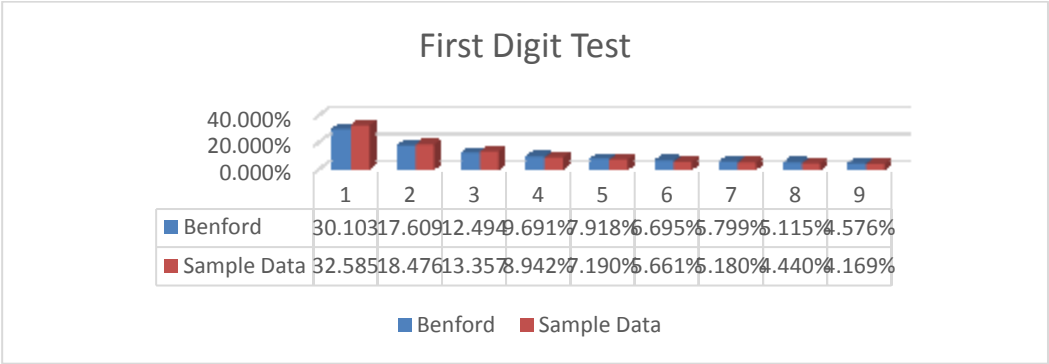

Figure 4 – First digit distribution

Conclusions: We observed a slight difference from the Benford's distribution, mainly the first 3 digits' frequency being above expected value and the others below. The Chi Square test indicates that the 2 distributions are almost identical, meaning that the test is not able to suggest a fraud in the data.

2.2.2. Second digit distribution

Digit	Sample Frequency	Benford Rate	Sample Data Rate	Difference
0	825	11.97%	11.84%	-0.0012986
1	846	11.39%	12.14%	0.0075047
2	782	10.82%	11.22%	0.0039912
3	728	10.43%	10.45%	0.0001326
4	702	10.03%	10.07%	0.0004218
5	686	9.67%	9.84%	0.0017559
6	625	9.34%	8.97%	-0.0036871
7	640	9.04%	9.18%	0.0014853
8	578	8.76%	8.29%	-0.0046313
9	557	8.50%	7.99%	-0.0050746

Table 2 – Second digit test

ChiTest: 100.00%

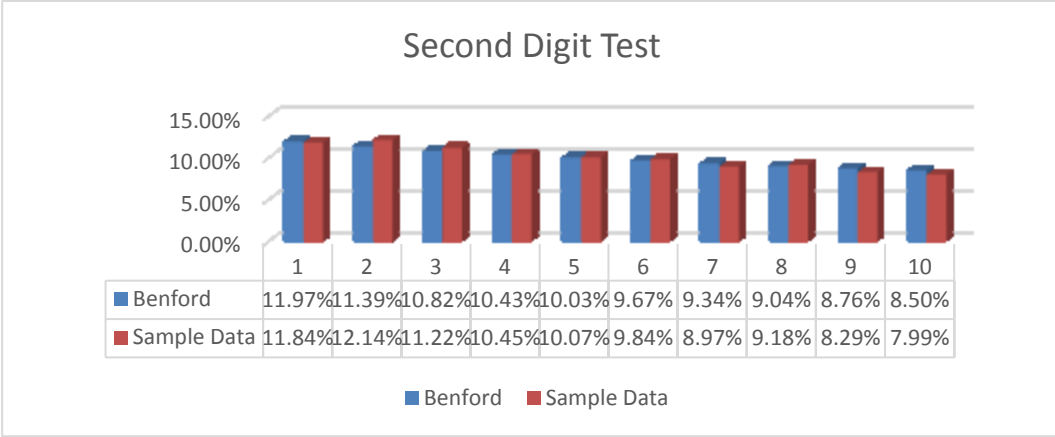

Figure 5 – Second digit distribution

Conclusions: The second digits 2 and 3 are above expected frequencies. The differences are insignificant according to Chi Square test.

2.2.3. First two digits distribution

Digits	Benford Rate	Sample Rate	Sample Frequency
10	4.139%	4.721%	329
11	3.779%	4.405%	307
12	3.476%	4.219%	294
13	3.218%	4.204%	293
14	2.996%	4.061%	283
15	2.803%	3.702%	258
16	2.633%	3.343%	233
17	2.482%	3.272%	228
18	2.348%	2.769%	193
19	2.228%	2.784%	194
20	2.119%	2.497%	174
…	…	…	…
96	0.450%	0.187%	13
97	0.445%	0.230%	16
98	0.441%	0.301%	21
99	0.436%	0.158%	11

Table 3 – First two digits test

ChiTest: 100.00%

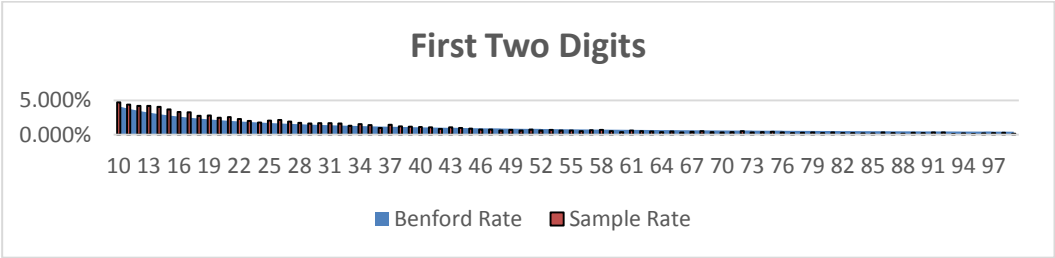

Figure 6 – First two digits distribution

Conclusions: The values starting with 1, 2 and 3 seem to have a slight value above expected distribution. All other starting digit pairs are under expected frequencies. This can suggest a possible data alteration (example: for a candidate with 24xx vote to 23xx or 25xx). The hypothesis is unstained by the Chi Square test.

3.Conclusions

Using Benford's law to discover data manipulation in the final results of the parliamentary elections from December, 2012, we can conclude that the data are validated. No important signs of abnormal distribution were detected.

As a further analysis, we recommend the analysis of the data using more fraud detection methods. This method is not exhaustive, as some economist suggest. This is not a perfect validation tool, is more like a test. If the data is in a category which supposed to obey Benford's law (like election data) and it fails, there is a signal of possible fraud. If the test is passed, doesn't mean the data is automatically validated, but more tests are always recommended to increase the confidence level.

MARKET CONCENTRATION IN TURKISH JOURNALISM SECTOR

ADEM KALÇA[*]
YILMAZ ONUR ARI[**]

Abstract
Concentration is a situation in which market structure of a sector is controlled by a few firms. At the present time, many analyzing methods such as Herfindahl-Hirschman and N-Firm Concentration Indexes are used to determine market structure.According to market concentration indexes, higher concentration level means more monopolistic market structure, lower concentration level means more full competitive market structure.
In this study concentration levels of media groups in Turkish journalism sector within the scope of traditional journalism and internet journalism was analyzed via N-Firm Concentration and H-H Indexes. As a result of the study, it's seen that first four biggest media groups have monopolistic competition in internet journalism sector,and oligopol structure in traditional journalism sector. According to H-H index analyze, there is monopolistic competition in the sector.

Keywords: *maket concentration, Turkish journalism, internet journalism, Turkish media groups, concentration indexes*

1. Introductıon

In Turkey the basic function of journalism is to give information. Today there are many media groups which fulfill the function of giving information (Tokgöz 1981, 5). Primary objective of these media groups or firms is to get profit from this job. Highlighting the society is only an instrument, not a purpose; exactly like a baker's purpose is to return profit instead of providing people good and healthy food. Economically, a newsperson is like a firm who works for profit maximization and it's success level can be determined with it's profit level (Demir 1996, 79-84). Thus, the more journalism sector gets monopolistic, the more a newsmaker or a media group gets stronger, takes more ads and increases it's revenue.

Market concentration indexes provides beneficial and practical indicators to measure market power. Also these indexes become more beneficial when determining a firm's market power if they are used with other datas. Market concentration indexes are measured easily and give clues about how competitive a market is. If the number of firms in a sector increase, concentration diminishes and it augments the competition level. Firms' power of influencing the market variables decrease in direct proportion to competitiveness of the market structure. For this reason, it's important to know market concentration rates to determine how competitive a market is (Durukan et al. 2009, 76-77).

In the first part of this study the concept of concentration and concentration in media sector was discussed, followingly market structure of Turkish journalism sector was analyzed using N-Firm concentration and Herfindahl-Hirschman Index methods.

2. Conceptual framework of concentratıon

As its common definiton, concentration is the situation that production and pricing behaviours are controlled by a few firms. In a broad sense, concentration is the market structure-analyzing method used for measuring unfair competition among the firms in a sector or industry (Schmalensee 1988, 648). According to Varona et al. (2002, 8), concentration is the operation which makes the controls of two or more independent enterprise monopolise consistently. The situation which market behaviours are controlled by only one firm is called monopoly, the situation which market

[*] Professor, PhD, Black Sea Technical University, Trabzon (akalca@ktu.edu.tr).
[**] Research Assistant, Bayburt University (yoari@bayburt.edu.tr).

behaviours are controlled by two or more firms is defined as oligopoly (Güneş et al. 1997, 34). Taking over a firm by another firm involves the most important part of concentration. Also this concept includes changes in the structure and characteristics of control (Cook and Kerse 2000, 24). Market concentration differs according to market types and competition forms. In a monopolistic structure concentration is very high and competition is very low in a market, but vice versa in a full competitive market structure (Baş 2004, 111).

In media sector, concentration is generally divided into 3 groups as horizental, vertical and cross concentration (IRIS Special 2011, 2):

Horizental concentration happens when firms in the same sector merge. Generally these mergings are seen among radio and tv broadcasters, book, newspaper and magazine publishers and filmmakers in international communication. Rupert Murdoch's Sun, Times, News of the World ve Sunday Times and Doğan Media Group's ownership of five newspapers in Turkish journalism sector are the examples of horizental concentration (Özokçu 2011, 17). The reason why horizental concentration has been increasing in recent years is the possibility to operate all channels with same staff and remove marginal costs.Horizental mergings reduce the number of rival firms and remove the competition (Özdurdu 2011, 48).

Vertical concentration is defined as a firm dominates in every stage (from production to consumption) by ownership in an industry. For example, American film industry has a voice in filmmaking, distribution, studios and movie theatres, briefly in all phases (Sayılgan 2009, 82).

As a result of vertical concentration, market structure doesn't change directly because number of firms don't change at the sub-section and upper part of production chain. On the other hand, vertical concentration has negative effects for competition. **Foreclosure effect** is the leading effect. For example, if assignee firm is a customer of acquired firm, other firms no longer will sell goods to assignee firm. In addition to that, vertical concentration has many negative effects on competition such as making new entries to a market difficult and providing suitable environment for mergers (Waldman and Jensen 1998, 506).Especially if a one of the parties have power in its own market, new firm, which was formed as a result of vertical concentration, may push it's rival firms out of the market (Bishop and Walker 2002, 288).

Cross concentration emerges when big firms, which strenghten their controls over a significant means by the help of merger and acquisition, canalize different sectors and broaden their control area (Adaklı 2006, 37).In other words, ownership and integration of capital are the point in question among media components like television broadcasters, press and internet service providers, for example investments and ownerships are the point in question in sectors like automotive and finance (Avşar 2004, 90).

Cross concentration can be defined as the situation that a firm mergers in an industry which is more different than its own industry; but although the firm has the biggest share of resources and operations in its own industry, in other industries it is only a supplier or a user of products. As a result the firm doesn't make horizental or vertical merging. If cross concentration happens after a decline at operation costs, this situation may increase market efficiency (Demirgil 2008, 34).

Cross concentration developed in media sector especially by 2000s in Turkey. Thanks to cross concentration, media sector preserves its oligopol structure and eliminates the chance for new entries to the media sector (Özokçu 2011, 19-20).

3. Literature research

In the literature it's seen in the studies about market concentration that generally this subject was analyzed in many sectors, and concentration levels were analyzed according to production, income and cost and finally measured by N-Firm Concentration Rate and Herfindahl-Hirschman Index methods.

In the studies, it's stated that concentration is one of the most frequent situation in developed and developing countries's markets and this situation is a major obstacle for competition (Baş 2004,

110).Recently food security and quality control regularizations made mergers and acquisitions increase in the food sector in Turkey. Therefore number of giant companies in food sector increased and concentration rates of both food and retail sector augmented (Koç et al. 2008, 105-106).

In a study about cement sector in Turkey, N-Firm concentration analyze and Herfindahl-Hirschman analyze were applied. According to first analyze, market structure is a weak oligopolistic but it is more competitive, according to second analyze (Polat 2007, 97-116).But firms were assessed separately in this analyze..If they were analyzed as holding companies, concentration level could be higher.

Durukan and Hamurcu (2009, 84) made a study of market concentration in mobile communication and compared market structure in Turkey with Central Asian Turkish Republics' (Kazakhstan, Turkmenistan, Kyrgyzstan, Uzbekistan, Tajikistan) market structures.As a result of the analyze with the help of H-H index method, a non-competitive, over concentrated oligopolistic structure in Turkey, Kazakhstan, Kyrgyzstan and Turkmenistan; a mid-concentrated oligopolistic market structure was found out. Therefore some measures should be taken for easiness of new market entries in all six countries.

There are studies which argues its possible to get different results when concentration levels are analyzed according to production, income and cost. In a study on American advertising and marketing sectors, it's stated that these two sectors have the lowest share in total industry income but they have the biggest CR-4 concentration share in 2002 (Silk and King III 2008, 30).

Abdel-Raouf (2010, 398) stated in his study that international trade plays a crucial role in reducing CR-4 concentration rate to reflect the market structure better. As a matter of fact adjusting the published concentration ratio for international trade reduces the percentage of concentrated manufacturing industries (with $CR_4 > 60\%$) from 23 % to 11 % in 2002 and from 20 % to 11% in 1997 in USA.

In a study about media sector (Özdurdu 2011, 55-62) concentration analyzes were made according to Tv ratings, daily circulation and television advertising expenditures in Turkey. In the study both N-Firm concentration and Herfindahl-Hirschman methods were applied. As a result an oligopolistic market structure was confirmed in this sector. Also it was emphasized that advertising expenditures have been decreasing in journalism sector, but internet and television advertising expenditures have been increasing recently.

Bates (1993, 3-21) measured concentration levels of American local television market via H-H Index. As a result concentration is decreasing constantly in local television market because of the fact that broadcasting markets have been augmenting and artificial obstacles to the markets have been removed recently.

4. Application

On a standard measurement in order to determine the concentration level hasn't been agreed yet. Nevertheless, there is a wide range of selection among different concentration measurements. N-Firm Concentration Index, Herfindahl-Hirschman Index, Entrophy Index, Hall-Tideman Index, Linda Index and Gini Index are the most commonly used methods. But in empirical studies, the most widespread methods are N-Firm Concentration Index and Herfindahl-Hirschman Index (Yıldırım et al. 2009, 40-45).

Concentration level in Turkish Journalism Sector was determined via N-Firm Concentration Method Index and H-H Index.

N-Firm Concentration Rate (CR_N) shows aggregate market share of the biggest N number of firms in an industry.CR_4 states total shares of the biggest four firms and CR_8 states total shares of the biggest eight firms (Yolaç 2010, 1089).

By the help of formula (1), concentration rate index based on newspaper sales in Turkey was measured. In the study, concentration rates of first four and first eight firms in media sector were measured by the help of daily newspaper sales at Table 1 and shares of media groups at Table 2.

$CR_N = \frac{1}{x}\sum_{i=1}^{m} Xi$ (1)

N-Firm Concentration Rate (CR_N);

CR_N: Concentration rate for ''N''number of firms

X_i: Value of ''x'' for firm ''i'', when firms are ranged one under the other according to ''x''.

X: Total value of ''x'' for all firms in a market

In practice, according to CR_N concentration rate; it's accepted that there is low concentration if concentration level is between 0 and 30 (perfect competition), medium if it's between 31 and 50 (monopolistic competition), high if it's between 51 and 70 (oligopolistic structure) and very high if it's between 71 and 100 (Polat 2007, 100).

Similiarly, Herfindahl- Hirschman Index was measured based on newspaper sales in Turkey using Formula (2).

Herfindahl Hirschman Index is measured as the sum of squares of the market shares of firms.

$$H = \sum_{i=1}^{n} P_i^2 \quad (2)$$

P_i^2 ; sum of squares of firms' market shares

This index is accepted as a good measure because it not only includes all distribution but also is critical between the changes of firm sizes and number of firms in a market. H-H Index has been one of the most popular method of determining market structure since 1980s. In practice, H-H Index shows that there is perfect competition if it's smaller than 1000 (H-H < 1000), monopolistic competition if it's between 1000 and 1800 (H-H; 1000-1800) and finally there is oligopolistic market structure if it's higher than 1800 (H-H > 1800) (Parkin 2003, 203).

Average daily sales of newspapers between 26th of November 2012-2nd of December 2012 were shown[1] below at Table-1.

Table-1: Daily amount of newspapers sold

NEWSPAPER	**SALE**	**NEWSPAPER**	**SALE**

AMK	72.823	H. DAILY NEWS	5.191
AYDINLIK	59.705	HURSES	2.118
TOTAL 4.873.989			

Aggregate sales of newspapers according to media groups and shares in this sector were shown at Table-2.

Table-2: Sector Shares of Newspapers of Media Groups

Media Groups and Newspapers	**Newspapers Sold**	**Sector share (%)**
Doğan (Hürriyet, Posta, Fanatik, Yeni Radikal, H.Daily News)	1.096.003	22,4
Feza (Zaman)	1.056.116	21,6
Çalık (Sabah, Takvim, Yeni Asır, P.Fotomaç)	688.362	14,1
Sözcü (Sözcü, AMK)	353.918	7,2
Demirören (Vatan, Milliyet)	290.639	5,9
Ciner (Habertürk)	210.988	4,3
Çukurova (Akşam, Güneş)	190.483	3,9
Star-Sancak (Star)	135.557	2,7
İhlas (Türkiye)	126.416	2,5
İpek (Bugün)	108.514	2,2
Albayrak (Yeni Şafak)	100.775	2,0

When H-H Index was analyzed according to sector shares of media groups' newspaper sales using Table 1 and Table 2;

$$H\text{-}H = \sum_{i=1}^{11} X_i^2 = 22{,}4^2 + 21{,}6^2 + 14{,}1^2 + 7{,}2^2 + 5{,}9^2 + 4{,}3^2 + 3{,}9^2 + 2{,}7^2 + 2{,}5^2 + 2{,}2^2 + 2{,}0^2$$

H-H= 501,76 + 466,56 + 213, 16 + 51,84 + 34,81 + 18,49 + 15,21 + 7,29 + 6,25 + 4,84 + 4,00

H-H= 1324, 21

According to average daily sales, H-H Index value is between 1000-1800. Thus it can be said that market structure for this sector is monopolistic competition.

When concentration was analyzed in Turkish journalism sector based on media groups' newspaper sales by the help of N-Firm Concentration Index;

When first four media groups namely Doğan, Feza, Çalık and Sözcü were analyzed in terms of their newspapers' selling rates, it's seen that concentration rate of the biggest four firms in the market (CR_4) is 65,3 %. According to CR_4 analysis, if total concentration rate of the biggest four firms is between 51-70 % ,it's accepted that market structure is oligopolistic. All in all, there is oligopolistic structure in Turkish journalism sector.

When first eight media groups namely Doğan, Feza, Çalık, Sözcü, Demirören, Ciner, Çukurova and Sancak were analyzed, it's seen that concentration rate of the biggest eight firms in the market (CR_8) is % 82.1. According to CR_8 analysis, it can be concluded that there is a very high concentration level in Turkish journalism sector.

COMSCORE measurement of news category sites on internet[2] shows the number of visitors to websites in Turkish Internet Journalism sector. At Table-3, number of visitors to internet sites in news category in March 2012 were shown.

Number of visitors of media groups' websites in Internet journalism sector, which has an increasing importance recently, were shown at the table below.

Table 4: Shares of Media Groups' Websites in News Category

Groups	Number of Visitors (x1000)	Sector Share (%)
Doğan	15566	14,2
Demirören	14785	13,4
Çalık	6384	5,8
Ciner	4605	4,2
Albayrak	2913	2,6
Doğuş	2369	2,1
Feza	2125	1,9
Sancak	1039	0,9
İpek	934	0,8
İhlas	760	0,6

According to Table-4, market shares of media groups' websites in news category, total concentration rate of first four media groups (Doğan, Demirören, Çalık and Ciner) is 37,6 %.Thus, there is a monopolistic competitive structure in Internet journalism sector and it's close to perfect competition.

When sector shares of media groups' websites which were shown in Table-4, were analyzed using H-H index;

H-H= $\sum_{i=1}^{10} X_i^2 = 14{,}2^2 + 13{,}4^2 + 5{,}8^2 + 4{,}2^2 + 2{,}6^2 + 2{,}1^2 + 1{,}9^2 + 0{,}9^2 + 0{,}8^2 + 0{,}6^2$

H-H= 201,64 + 179, 56 + 33,64 + 17,64 + 6,76 + 4,41 + 3,61 + 0,81 + 0,64 + 0,36

H-H= 449,07

H-H Index value of Internet web sites in news category in March 2012 is at perfect competition level. It's main reason is that only websites of media groups were included in H-H measurement, and independent internet websites weren't considered in that index.

Conclusions

Newspapers, which are the oldest mass communication tools, have been still keeping their importance. Main purpose of newspapers is to produce news. Accordingly, news carries value economically and media groups, which are the owners of newspapers, try to dominate the market in order to maximize their profits.

Using CR_4, CR_8 and Herfindahl-Hirschman Index, market shares of media groups' newspapers were analyzed by the help of newspapers sold in traditional journalism sector in Turkey. Similiarly, market concentration of news websites of media groups was measured by the help of number of visitors to those websites in Internet journalism sector.

According to daily newspaper sales, total concentration rate of four biggest media groups in the market is between 50-70 %, so this sector's market structure seems to be oligopolistic. In internet journalism sector, total concentration rate of first four media groups is 37,6 %. In other words a

monopolistic competition is dominant in this sector. The reason why internet journalism sector is more competitive than traditional journalism sector is that internet journalism sector is a newly developing sector in Turkey and also many websites on news category, which acts independently from media groups, have lots of visitors and show impressive performance in cyber world.

According to the results for H-H Index, H-H value occured between 1000 and 1800 for daily average newspaper sales. Therefore there is a medium-concentrated, monopolistic competitive structure in that sector.

FACTORS AND ASPECTS OF THE RELOCATION STRATEGIES OF COMPANIES

SERGHEI MĂRGULESCU[*]
ELENA MĂRGULESCU[**]

Abstract
In the last two decades there have been significant changes in the factors that determine the geographic location or relocation of R & D, production and marketing of all transnational companies. Supply chains have expanded to new areas of the globe and big traditional providers have also expanded their global presence by an increasing trend of co-localization with their main customers. Contract manufacturers have multiplied and strengthened, expanding their geographical distribution. A more obvious trend was that of the geographic dispersion of other global value chain functions such as business services and logistics support functions. Relocation to countries with cheap labor is not always a successful strategy. Therefore the decision to relocate in international geographical area, regardless of the structure formula, offshoring or outsourcing, must be based on a more diverse set of factors.

Keywords: *relocation, TNC, clustering, offshoring, outsourcing*

Introduction

In the last two decades there have been significant changes in the factors that determine the geographic location or relocation of R & D, production and marketing of all transnational companies. Production was internationally dispersed long ago, but the trend of integration on a so large geographic scale is relatively recent. Supply chains have expanded to new areas of the globe and have virtually integrated regional production areas that were previously separate structures.

Contract manufacturers have multiplied and strengthened, also expanding their geographical distribution.

Great traditional suppliers have also expanded their global presence by an increasing trend of co-location with their main customers. In connection with this, the so-called "postponement" trend appeared, meaning that components are manufactured or assembled as close as possible to the final sale locations to reduce transportation costs, which for some products are still high.

A more obvious trend was that of the geographic dispersion of other global value chain functions such as business services and logistics support functions.

Even innovation, which is supposed to be rooted in their own countries for strategic and skilled professionals reasons, is increasingly performed in overseas locations. Cutting-edge research is still mainly carried out in developed countries, but we can see that emerging countries allocate increasing and impressive amounts on research and development spending.

Factors of the relocation decision

To summarize, we can mention the following categories of factors acting simultaneously on relocation decisions of transnational companies:

a) **Differences in costs**. They remain an essential factor in choosing location, especially in respect of the production function, but to a greater extent also in what involves other activities such as research and development, accounting services, IT or marketing. In selecting the location, the

[*] Professor, PhD, Dean of the Faculty of Economic Sciences, "Nicolae Titulescu" University of Bucharest (margulescu@univnt.ro).
[**] Lecturer, PhD, Faculty of Economic Sciences, "Nicolae Titulescu" University of Bucharest (elena.margulescu@univnt.ro).

production costs are evaluated in the broader context of the efficiency and productivity of the location in question. This aspect is often neglected in discussions of comparative costs, but is essential for the transnational companies strategy of achieving a "systemic" efficiency throughout their entire productive system. Therefore, a location is analyzed according to how efficient performs a particular function in coordination with functions located elsewhere, and not in isolation.

b) **Search for valuable "assets"** such as the workforce qualification or the availability of talented people. The development of informatics and telecommunications has increased the ability of transnational companies to coordinate increasingly complex functions located at increasing distances. This stimulates them to outsource these functions in close relation with the mobilization of a broader range of skills and knowledge.

c) **Clustering**, which has turned into a global process of recognition by transnational companies of the benefits of co-location with suppliers, competitors, service providers, research and development centers. Although distances matter less in closing transactions, it is found that closeness and access to knowledge remains an important factor of competitiveness, and as such relocation to industrial parks or other areas of concentration of R & D activities will further remain a strategy of transnational companies.

d) **The growth potential of markets** is also an important factor. It is obvious when looking at the location of many activities in China, India and other emerging countries with large populations that, with the increasing standard of living, will also become important outlet markets.
e) **Other factors**, such as:

-Existence of a relatively developed infrastructure which creates an increased efficiency from start,
-Quality and cost of public utilities,
-Availability of building land,
-Institutional incentives offered by central and local authorities,
-Laws in the field of financial and economic activities and labor
-Aspects related to the quality of life.

In the field of services, offshoring reflects, in essence, the resulting revolution from the services' commercialization. Traditionally, most services were until recently non-marketable, in the sense that this required the buyers and sellers presence in the same place and at the same time. Unlike goods, they could not be traded between parties placed in different countries (medical services, fitness services, etc..). Other services do not require physical proximity of the parties, but instead they have to be delivered face-to-face due to technical or traditional constraints (sharing, storage, processing and transmission of information). These services were non-marketable because:

- certain types of information could not be stored
- others could be stored, but could not be transmitted quickly and economically across borders for processing,
- others were traditionally processed inside the company (accounting, data storage, design),
- others, traditionally presumed face-to-face presence (medical, financial, legal consultantions).

With the development and application of the new information and communication technologies (ICT), such barriers were more frequently demolished.

ICT enables the digitization, encoding and standardization of knowledge and, consequently, the production of a wide range of services which can be fragmented or modularized, the resulting components being relocatalbe, in order to obtain cost or quality advantages, economies of scale or another advantages. Thus, the arbitrage strategies of various factors on national and international level have become feasible in the sphere of services.

Requirements for these services to be relocatable are:

- to involve no face to face interaction

- to have a high information content
- the working process must be compatible with the distance transmission and the Internet
- to involve large wage differences
- installation barriers to be insignificant
- social protection requirements to be modest.

Factors that prevent compliance with these requirements and consequently prevent the offshoring of services are:

- technological limitations (such services can not be digitized or separated from other activities)
- need face to face interaction (marketing, delivery, etc.),
- the need to be closw to customers (fashion, creativity, innovation, medicine, privacy, etc.)
- occupational requirements, labor market restrictions, lack the necessary qualifications or knowledge of foreign languages,
- law and intellectual property rights protection
- risk aversion.

As time passes, more and more of these barriers are overcome, or seem to be overcome, both in terms of technological developments and government policies.

In many respects between the factors that determine the modularity and the globalization of production of goods and services there are many similarities, but some differences persist, such as:

- the offshoring of services is structurally simpler and faster in terms of resources, endowments and equipment necessary, than the offshoring of production,
-the offshoring of services mainly affects white-collar workers, not the blue-collar workers from the manufacturing sector,
- the offshoring of services potentially addresses to a larger number of companies in all areas,
- the offshoring of services require less investments and links with local suppliers.

Large transnational companies play the most important role in the phenomenon of services offshoring, both through captive offshoring, and through subcontracting to local suppliers. The captive offshoring can be implemented both for their own activities and / or to serve third parties. Offshoring is not limited however to transnational companies, but is implemented also by smaller companies.

The main **factors** that have influenced the decision of services offshoring are the following:

1**. The need to control those activities,** especially when involving intellectual property rights or sensitive information. As in other economic activities, the more strategic those services and closer to the core competencies of the companies are, the less willing are the companies to outsource them. In this situation there are, for example, the financial services or the research and development activities, preponderantly transferred to their own subsidiaries (transnational companies such as Oracle, Texas Instruments, General Electric, Cisco, Hewlett-Packard, IBM and Microsoft have established research and development centers in India).

2. **The internal interaction degree** involved in the respective activity. When the services can be split, but involve a closer connection with the other business activities (services, manufacturing, research and development) to ensure a greater efficiency, they will not be outsourced. By contrast, the back-office and front-office operations that can be easily standardized and separated from the other activities are more easily subject to outsourcing. The same thing happens when the software developments are outsoursed: the standard or routine activities are contracted with Indian corporations, for example, and the most sophisticated are kept in business.

3**. The existing of the service providers in the emerging countries.** The activity of such providers in the emerging countries is a relatively a recent phenomenon and has become an alternative to the strategies of the western companies, for about a decade. For example, when transnational companies began to transfer their back-office functions to India, they couldn't find there local companies to undertake the outsourcing. Therefore, in 1998, American Express had to set

up their own subsidiaries. Only after 2000, other airline companies that wanted to outsource similar services have found local Indian companies able to take over. For example, Delta Air Lines has outsourced some of the services booked by the call-center company Spectramind, a subsidiary of Wipro company. Also, Swiss International Airlines, Austrian Airlines and Sabena have outsourced the accounting services for the revenues resultinf from the cargo and people transport, ticket booking, flight schedules and administration support to air navigation to the company AFS, a subsidiary of Tata Consultancy Services, the largest Indian software company. There is also a range of services, which was developed more rapidly in the emerging countries, as the software services, for which local suppliers competitors can easily be found, while other services have evolved later, so that competition is lower (for example the financial analysis services). Availability of local suppliers in emerging countries is correlated with other factors such as intellectual property protection, cultural and linguistic differences, the information availability on local business.

4**. The volume of the activities that can be outsourced**. From the analysis of the corporate decisions can be seen that there is a greater temptation to keep in the company those activities with a bigger workload or added value, in order to benefit from the efficiency surplus resulting from the operations of the large yield series. Offshoring's version to subsidiaries is the most frequently used. At smaller sizes of activities, the offshoring to third parties enter into discussion with more power.

5. **The costs reducing** is one of the main motivations of offshoring, as confirmed by numerous studies. Cost reduction can be achieved either by searching for locations with lower costs, or by consolidating operations and reduce the costs with infrastructure, personnel training and management. Any international bank that has, for example, 50-60 data centers, each with infrastructure, specialists and maintenance costs, can strengthen them in 5-10 centers. This means costs reductions and allows the creation of centers of excellence, and if combined with lower labor costs, the savings can be considerable. It is estimated that the U.S. banking industry saved by offshoring to India about U.S. $ 8 billion in 1999-2002. In Europe, about 80% of the largest transnational companies with offshoring experience reported savings ranging between 20-39% and another 10% of them showed even greater savings. In call-centers, labor costs in developed countries represent 50-70% of total costs. In India, the salaries were at the beginning of this decade 80-90% lower than in England. However the savings derived from wages are diminished because of higher costs of infrastructure, personnel qualification and travel. Overall the savings are situated in the margin of 30-40% compared to the costs in England and something more compared to that ones from the U.S.A.

6**. A better quality of the services** is another important factor in the decision of services relocation. Many transnational companies have been surprised to find this, the factors in this respect being of two categories:

- when the "back-office" services of the services customer become “front-office” services of the services provider, the latter gives a higher attention to the quality of the services
- mostly, the low-cost locations use a more educated staff than the one used in developed countries. If in India they are university graduates in industrialized countries are school or college graduates.

Aspects of the relocation strategy

1. **Relocation to countries with cheap labor is not always a successful strategy.** Absolute labor costs are important in labor-intensive industries, but in the overall equation there are other factors that are even more important than we are tempted to believe at first, such as:

-Political risk,
-Risk related to intellectual property rights,
-Cost of raw materials,
-Energy and equipment,

-Transportation costs,
-Interest rates,
-Taxes
-Trade policies of states.

Maybe some items have to be adjusted in the meantime, but a study conducted in 2004 by McKinsey company, based on the experience of a number of companies in California, quantified that, when companies operate efficiently in the home country, the comparison with carrying out the same business in countries with cheaper labor, taking into consideration the above mentioned factors, leads to the following final price advantages in favor of these countries: in high technology field 0.6%, in the processing of plastics 6% and in the clothing industry 13%. These gains seem minor compared with those obtained by a faster satisfying of customers and a prompter respond to fashion trends and consumer preferences.

Also what matters ultimately is not absolute labor cost (dollars / hour), but the unit cost of labor, or labor incorporated into the product. This unit cost is often higher in countries in transition as a result of:

- Lower qualification of the labor force,
- Periods of training required to use certain technologies,
- Losses due to the need of more frequent repair of equipment and machinery,
- Loss of material,
- Increased labor migration,
- Stress caused by living conditions, transportation, and so on.

2. Relocation strategies generated by the cost benefits or by the benefits of processes **modularisation and** their outsourcing, show noticeable conceptual differences and approach. The best example results from the comparrison between the American and Japanese strategies, especially in the electronics industry.

In this respect, it is of interest the opinion of the president of the Japanese company Kenwood regarding the manufacturing outsourcing strategies, expressed in an interview: "I know that American companies are convinced that production without manufacturing plus EMS (electronics manufacturing services) is the best approach. But I have serious doubts in this respect ... especially on markets that are in rapid change. Managers of companies without manufacturing do not know anything about production anymore. If technologies or markets change, they simply can not adapt. Newly established companies require contract manufacturers, is the best approach for them because investments are minimal and development quick. But this is not for me. This is the U.S. power: new technology combined with production without manufacturing and EMS. In such a system, a flexible value chain is an advantage. In the long term, however, where the manufacturing process changes due to changing technologies and markets, you need manufacturing in-house. That's why companies in Japan have a longer life. It is another form of competition. We must specifically adapt to meet the challenges."

Japanese electronics companies have also pursued strategies that use the advantages of assemblying in China, but within a division of labor that keeps important percentages of production in the country, along with the phases of product defining, research and development, design and distribution. This trend is also manifested in industries with high potential of the value chain fragmentation. Japanese strategies focus on the complementarities between home integration and abroad networks.

Such an approach, even U.S. researchers say, is simply not possible to be put into practice in the U.S. anymore, in a wide range of fields.

Most likely to remain contracted in the country are activities with a strong nonmodular character. Also, due to American penchant for strategies built on modularity and contracting the modules (functions) of that business, modularity covers a wider range in U.S. than in Japan.

The two distinct forms of competition are based also on different thinking. A good example can be the following:

- Kenwood prefered organizing the production of mini-disk players within its factory in Japan, as a means of accelerating the renewal of the product range and their supply to consumers.
- Apple has registered remarkable achievements through another strategy, quickly designing new generations of iPods that are assembled outside the United States from components whose production was also outsourced. Apple has promoted the same strategy in the production of iPads, massivelly outsourcing it into China.

But what is more interesting is the fact that if an American manager in the electronics industry would like to apply the Japanese strategy to increase its market share of products with short production cycle, it would be hard for him to find within U.S. the ingredients for such a strategy. The widespread transfer of manufacturing functions and of other product design and technology functions to contract manufacturers in the U.S. and abroad have practically broken the production system in a way that seems irreversible.

Zara Company is maybe a "king" of speed on the route of concept-manufacturing-retail, but the U.S. has not left any company that could be like this. On a smaller scale there is still that possibility, and American Apparel and Knapps prove it. But electronics, automotive and auto parts, textiles and clothing, such companies are not the mainstream anymore.

3. There are a number of cases that make the manufacturing outsourcing counterproductive, and as such the relocation strategies are not operational. Such cases can be considered the following:

- High-tech areas where the new knowledge content has yet not been standardized
- Areas which require a continuous relationship between engineers, designers and workers on both manufacturing and product design or technology
- Situations in which major brand companies are reluctant to do outsourcing for fear of insufficient protection of intellectual property rights,
- Situations where the effect of "clustering" makes the leaving of the area counterproductive since in other locations proper factors are not to be found (qualified workforce, talents, research centers) or synergistic effects do not exist (large number of suppliers, manufacturing traditions, the type of relationships between firms, and so on).

Conclusions

The phenomena of the globalization of production have to be seen as a sum of **strategies of companies regarding the reorganization and relocation of their activities.**

The arbitrage of functions of the global value chain of a product is relatively new in corporate management, in the context of the “functional” specialization, and the analysis of the relocation strategies of companies on the basis of the “functions” arbitrage completes the entirely new list of opportunities that globally integrated companies have latelly at their disposal .

New opportunities arise also from the **reorganization and relocation of companies in the context of business services offshoring.** That is why companies have to analyze the premises for the services offshoring and the factors in the decision of outsourcing and offshoring of services. There are sufficient motives to assert that the modularization of services is vaster than the one in the sphere of production. At the same time, the new technologies often simplify the “production” of those services, facilitating even more their geographic relocation. However statistical data of the past decade show **differences in strategy among American companies, more likely to establish foreign affiliates, and European, more likely to contract service providers in other companies.**

One conclusion is that the **strategies of companies regarding the relocation of their activities**, driven by the cost advantages or by the benefits of processes modularization and

outsourcing, are hard to be standardized as far as companies and managers bear certain national incriptions. It is the case of American and Japanese company strategies.

Another conclusion is that **the relocation strategies are not operational anytime. There are cases that make the manufacturing outsourcing counterproductive and the business can be carried out more effectivelly and safe with most of the functions kept inside the company.**

INNOVATION – CREATIVE MANIFESTATION WITH ECONOMIC IMPLICATIONS

VALENTINA MUNTEANU[*]

Abstract

The present paper aims at a correct perception of innovation, regarded as a present phenomenon, for which it is necessary to resorts to a series of notions and definitions, as well as to multiple perspectives. Thus, the definition of this phenomenon - in all that it captures in it - suggests dynamism and ease of communication.

The complexity of the phenomenon of innovation is the creative capacity, around which there revolve all other matters concerning innovation.

The present paper also illustrates the relationship between technology and economy, meaning that technical progress makes the economic system that created it. This, in turn, provides a more consistent support for changing technology. Economic factors play a major role in the development of technology, because they are interested in reducing costs, increasing productivity, sales volume, as well as goals that can be achieved through innovation.

Successful entrepreneurs in an increasingly more competitive environment try to assert through value creation rewardingly new and different outputs, a fact which represents a change from what was known at the beginning of the business.

In general, innovation and to the same extent technical and technological innovation has always accompanied the development of human society. Innovation has manifesting itself throughout history with different levels of intensity. Technical-scientific revolution, present in all spheres of human activity through the accelerated mutations that produce them, fundamentally influence the way in which orientation and innovation evolve.

Keywords: *innovation, creative capacity, concerning innovations, value creation, economic factor.*

Introduction

Since the advent marked by the birth of a new idea until its merging with daily natural phenomena and becoming a common product for consumers at the organizational level there is an on-going metamorphosis, marked by an extremely complex process, called innovation.

Passing through a filter system, only a few ideas come to detain the attention of managers that may find those ideas worth being investigated. And fewer of these are to be implemented projects in the production system – often just a single one. In this instance, after substantial marketing costs, product/service reaches the market, supported by advertising, but also through a set of specific features (as defined in the phase of conception).

In the end, the consumer shall - depending on the degree of satisfaction of one's requirements - decide to buy it or not; the consumer is the one that decides the success of this very creative effort, which is both organizational, financial and also the result of media enterprise. The consumer compares all characteristics of the product – i.e. the perceptible and imperceptible ones – with those of similar products offered by competitors.

Definition of the concept

For a correct perception of this actual phenomenon that is believed to appeal to the notions and definitions that have tried to describe and to explain it, we have to consider a series of different points of view. Thus, the definition of phenomenon captures the fact that through it you suggest dynamism and ease of communication.

[*] Lecturer, PhD, "Andrei Saguna" University of Constanta (valentinamunteanu@yahoo.co.uk).

- Phenomenon: the outer manifestation of the essence of a thing, process, which is accessible and directly perceivable; what surprises by rarity and/or novelty.

The complexity of the phenomenon of innovation is the creative capacity, around which there revolve all other matters concerning innovation.

- Creativity: ability to identify new connections between seemingly unrelated items between them. A whole complex of ideas, ways of thinking, activities, processes (Tools, techniques, and approaches), results (solutions to problems, production systems, products).

From the historical point of view, the first item in terms of institutionalized innovation was the invention through the patent of invention. The definition suggests that a creation is permanently tied to the intellect, science or engineering and must involve the novelty, intention and purpose.

- Invention means an intellectual creation, scientific or technical, embodied in a product or process, in all fields of technology, provided that they are new, involve inventive step and are susceptible of industrial applicability.
- Invent yourself: is the science of making inventions.
- Innovation.

In terms of data definitions of the notion of innovation, one can notice a relatively large variety. According to our opinion, this diversity is a result of the manifestation of the phenomenon of innovation, which, over time, was revealed by researchers through new perspectives. One should remark the convergence of these definitions to the explanation of the application of the new innovation in response to the requests and demands of the market.

Starting from the definition of the concepts of this phenomenon, i.e. creativity, as well as invention, we appreciate that the most comprehensive definitions and objectives, in terms of coverage of innovation, appear to be the following:

- Innovation: the action to make a change, to enter a new domain, in a system that is upgraded, etc. The notion of innovation has become interesting to economists like Schumpeter, in whose work innovation is presented as an accomplishment which consists in applying ideas or inventions, products, technologies or systems in the economic activity. Thus, innovation can be considered to produce something else or to make something occur otherwise or in a way that may be a tool for entrepreneurs who might exploit change as an opportunity for the various different services or business.
- Industrial innovation: innovation in the industry that does get added value and competitive advantage for businesses, the main generator of new products/services.
- Open innovation: innovation based on the partnership between industry, universities and technology centres and research.

The concepts and definitions above may be supplemented with other forms of literature or through actual practice.

The definition most used at present is the one that presents innovation as a global technological process and a commercially creative act, one whereby new ideas or a new concept is transferred to the final stage of a new product, process or service accepted by the market.

Innovation – as a product: a new feature or improvement or expansion of the functionality of a product, process or service, in any of the domains and which could (or can be) responsible applications or market that could (or can be) generate a new market demand.

Innovation – as a process: the activity that allows the emergence of innovation-like product that is based on individual behaviour, as well as on social or corporate, creative and dynamic behaviour; innovation – the process includes research-development.

In these definitions, is the approach to innovation and its potential value, which in turn requires criteria of analysis, very difficult to establish? Criticism of these definitions, from the perspective of the author, mainly relates to the terms of individual, social or corporate, creative and dynamic behaviour in the definition of innovation – seen as a process, which must be extended to the

level of the product. The argument is that the two types of innovation do not differ in the assumptions or conditions, but only as to their based-on-reason application, which operationally and, possibly, from the point of view of the nature of the result, in the case of the second category of innovation, are more difficult to quantify.

- Innovation implies its own laws, such as:

➢ paradigms: innovation based on Science, this is the 'road' from idea, when the technology is in its infancy, up to standardizing the way of production, which requires a specific "technological trajectory";

➢ to innovate opportunities coming both from within the system (incongruity, need, changes in industry structure or market), and outside the system (of demographic changes and changes in education, openness, and understanding, the accumulation of new knowledge, etc.).

- Innovation stimulating role for the emergence of institutional forms, design offices, laboratories, centres of research and development (RD), public or private, in which human resources are trained; research is important both numerically and also as regards training, which organized on the topics of innovation. In addition, it outlines the trend of corporate networks for the exchange of information in the field of innovation.
- Innovation presents a high degree of dependency on the learning process of the acquiring of knowledge, whereas, during the process of innovation there is a dependency of the subsequent past-innovation processes (technological trajectory or natural trajectory).

Analysing the previous definitions, literature filters ideas and practical experiences generate long results in advising firms. Authors have outlined their own definition that summarizes the undertakings and the innovative effort. Thus, innovation is a continuous process of identifying and implementing new solutions (products, technologies, new production methods, new sources of supply, developing new markets, management systems, learning, etc.) in order to satisfy customers.

Socio-economic implications of the phenomenon of innovation

Innovation activity at all levels of aggregation overlaps the history of human society. This anthropology of human creativity is very well mirrored in literature, but the relevant points which are specific to the concept of innovation are very difficult to surprise especially with a profound clarity. As regards the evolution of the concept of innovation, once can find a few steps that have encumbered the phenomenon of innovation over time.

Innovation has been extended gradually, from the individual action of men of exceptional, collective actions, organized within the framework of institutions, research centres, enterprises, economic innovation by putting their thumbprint in all sectors of the economy, especially on the industry. Seen as evolving over time, innovation moves from the individual in the community, with significant social values, and will define itself as a change in the yield possibilities.

The most common sense and general innovation is attributed to the introduction of new products and technologies that affect the market. Schumpeter has addressed for the first time the mechanisms and factors of the innovative process, arguing that the spirit of enterprise and the possibility to obtain a temporary monopoly profit may stimulate the release of new products on the market and reducing the cost of production. Schumpeter called it creative destruction whereby the previous market structure is destroyed to make way for a successful invention[1].

Interference between technological development and economic development have resulted in the gradual shaping of the idea concerning the existence of a synchronization between the two phenomena, in the sense that major technological innovation intensifies during periods of strong economic growth[2].

[1] J. Schumpeter, 1934.
[2] J. Schumpeter, 1934.

The relationship between technology and economy is interdependence, meaning that technical progress makes the economic system that created it. This, in turn, provides a more consistent support for changing technology. Economic factors play a major role in the development of technology, because they are interested in reducing costs, increasing productivity, sales volume, goals that can be achieved through innovation.

Under the economic factors, in particular, the technological development (as the sum of innovation in a given period) tends to occur in waves, meaning that technological changes made in an industrial sector following the response triggers in other related sectors.

The concept of innovation, reflected in neoclassical growth theory leads to the observation that the ability to change the configuration of production becomes an essential factor of profit maximisation. In this case, technology is understood as summing the knowledge that firms can access on a fast and inexpensive way. K. Arrow identifies technology with knowledge; technology in its broadest sense is the know-how and the innovative process is interpreted as the process of production of knowledge. In this instance, it is considered that the process of innovation is, in particular, a process of discovery of new knowledge, transformed into new products under a given set of conventional stage.

In the modern theory of innovation, the technological infrastructure is different from one firm to another, depending on the organizational footprint of the firm, its features, and how the technological processes can be integrated with the knowledge, skills, use of equipment, training, management system, etc.[3]

According to endogenous growth theory, developed in the second half of the 80s[4], instead of total factor productivity, new inputs, as well as the knowledge of design and development, product quality, and quality of human capital are more realistic. The supporters of this theory believe that they may have an important contribution to the Elimination of jams induced by decreasing yields of production factors, to assure a continuous economic growth.

After 1994, the relationship between innovation and social issues has been highlighted by the study of the influence of technological innovation on the standard of living.

In the same context, in 1992, Lundwall, formulated for the first time in history, the phrase "national innovation system"; he stated that it is a principal instrument of government intervention in favour of technological innovation. Prerequisites for the success of the national system of innovation are considered economic liberalization, reforms of copyright, and multiculturalism[5].

In the recent statements of the theory of economic growth there has been a significant mutation in the treatment of the sources of growth, i.e. an acceptance of technical progress, which is regarded as a determining factor, has become widespread. The role of innovative activity in the process of growth has been reconsidered, air-dried to a finding that the abundance of goods which characterize the current era is the result of a sequence of following the confessions of design and methods development design, dissemination of information, dissemination of results, etc., both in terms of products and technological processes. Thus, the emergence of science is motivated by economic reasons, but also extra-economic resorts (social, environmental, etc.).

Successful entrepreneurs in an increasingly more competitive environment try to assert through value creation a rewardingly new and different production; thus, a change of what was known at the beginning of the business occurred. Innovation, in the opinion of a businessman, consists of an organized search and purposeful change; it also implies the systematic analysis of the opportunities that these changes could provide through the economic or social innovation analysis of the concept of innovation, which has lead to highlighting two approaches that have undergone multiple transformations.

---

[3] Peter F. Drucker, 1993.
[4] Peter F. Drucker, 1993.
[5] Lundwall B, 1992.

The first refers to the newness of the technology, which is considered a major source of essential changes.

The second approach, the latest, the innovation as a result of quality management, whereas the Manager is considered an essential vector of innovation within an enterprise, being responsible for its outcome. In this sense, different managerial tools have been developed with a view to creating efficient management for managers of all kinds within an organization.

Thus, when referring to innovation, the effects are: thinking in terms of efficiency or quality all activity or business, which sends it to the notion of quality assurance as a key part of the total quality management (TQM-Total Quality Management), as well as other similar systems that are developed (e.g. engineering). Currently, new approaches to quality in the enterprise have been expanded from the product up to the level of the organizational system of the firm, being developed as well, and for all phases of the life cycle of a product/service (from conception and design to after-sale services offered to customers)[6]. As a result, it has become natural for these systems to be applied, as well as for the innovative processes within organizations.

The Conference in Brussels in 2004, the cooperation in the fields of research and development (RD), on the one hand, and the transfer of knowledge, on the other hand, both stressed that they expect improvements in all aspects of innovation, because innovation depends on many factors, including the ability to create new relevant knowledge and to implement it through industry, as well as the value of human resources, and the ability to learn and innovate.

Collaboration with research organizations and firms from outside via a network and intake of this way of structuring the business innovation of enterprises is a feature of the phenomenon of innovation.

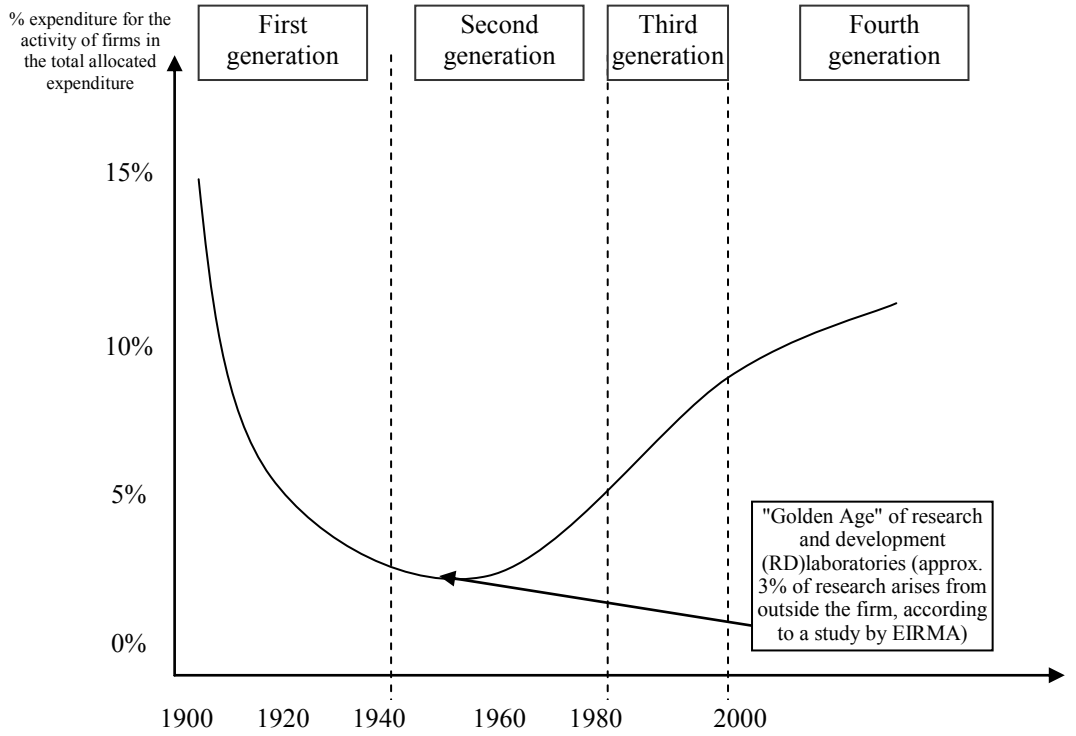
The innovation activity, link-time, research-development implied both the preservation of independent and specialized laboratories, as well as the internal organization of firms. In Figure 1 it is shown the work of research and development throughout the four phases (or generations) in the evolution of research-development-innovation, that is, the ratio of research and development organized outside the enterprise and company (first generation), research and development conducted within the enterprise (second generation), outsourcing research and development activity (third generation) and, finally, the globalization of research and development activity (the fourth, current generation).

As one can see, by the year 2000 (with the onset of the fourth generation), concurrently with the amplification of the phenomenon of globalization, businesses are looking to combine optimally the research and development work with the purchased from outside. The company, in this case, focuses attention on the evaluation, selection and exploitation of research results, as well as the development of purchased activities.

Thus, the fourth generation is characterised by the existence of cooperation between enterprises and research and development centres, and other businesses that carry out research and development, as well as in other newly created entities in the last period (centres of excellence, business incubators, technology transfer centres) etc. This new form of organisation of activity of enterprise is the concept of open innovation, as an important component of it.

[6] Utterback I., 1994.

Figure 1 Transforming evolutionary patterns of industrial research and development



Source: Druker, F. Peter – 1993.

Of the most fruitful collaboration, one should mention cooperation between businesses and universities, which has led to beneficial effects of stimulating innovation (research activities with predetermined goal, education for innovation, long-term research programmes and academic networks to promote the diffusion of knowledge and technology transfer, etc.), as well as the positive effects of social-economic nature (education for entrepreneurs increasing mobility of university-industry-market, business management courses for young scientists, etc.).

Currently, aspects such as the permanent relationship with the market (consumers) or construction of innovation culture have become equally important with the research and development component of the innovation.

Conclusions

Thus, it can be said that the phenomenon of industrial innovation, considering all its characteristics and determinants, as well as its restrictive dimension, is a difficult endeavour. Firstly, because of the immense literature and documentation developed on this topic so far (actually, this topic has an exciting, fascinating character and it illustrates the most outstanding attribute of the human spirit – creativity – that lies at the origin of one of the most explosive phenomena of the contemporary world-innovation), and secondly, due to the complexity of the phenomenon of innovation. In general, understanding innovation – to the same extent as the technical and technological – which has always accompanied the development of human society, implies that we also understand its manifestation throughout history with different levels of

intensity. Technical-scientific revolution, by affirming in all spheres of human activity, through the accelerated mutations that produce them, fundamentally influences the way in which orientation and innovation evolve.

THE INFLUENCE OF THE ECONOMIC CRISIS ON ROMANIA

VALENTINA MUNTEANU*

Abstract
Macroeconomic developments in Romania have submitted inadequate development amid the financial and economic crisis deepened. The objective of this research is highlighting the impact of the economic crisis, deepening its effects at the national level.
In Romania, the negative effects of the crisis begin to be more evident: lack of demand on the market, which the collapse of production and reduction of the amount of reports of police work. The economic crisis creates uncertainty. The uncertainty in the economy is, in fact, income insecurity – both for the company and for the employees. The unemployment rate is in a continuous growth and the population is increasingly affected.
Crises do not constitute exceptional circumstances, because they tend to repeat it; at the same time, it must be stressed that these changes its form, that require a periodic review of their claims, as understanding more and more refined methodologies and a smooth integration of empirical research in theoretical solid construction. If all economic mechanisms would work perfectly balanced real economy should not deal with situations of crisis.

Keywords: *crisis, economic, financial, unemployment, wages.*

Introduction

The effects of the financial crisis have spread and the Romanian economy. In terms of direct impact, the banking system has been relatively unscathed. He has not been exposed to toxic assets, prudential measures taken by the National Bank of Romania along the time. But the consequence of the global financial crisis had spread to the economy of Romania on multiple channels.

On the commercial channel, has been slowed and even reduced production, the latter being correlated with the evolution of the world economy.

The financial channel, has been limited access to external financing, such was the volume of lending, generating small difficulties in private foreign debt service. This phenomenon was demonstrated through: stop lending, increasing the "spread" CDS, the "trend" after agreement with the European Union and the International Monetary Fund, the "spread" between interest-NBR and ROBOR, moving the focus from market share to customer risk assessment[1].

The exchange rate channel, the depreciation of the national currency, reduced external financing reflected. Relative stability followed increased volatility.

In respect of the trust, there has been a withdrawal of investors from European countries, the effect of this phenomenon by highlighting them in the expression of the monetary-currency market has some moments of speculative attacks and panic.

On the effects of balance sheet and asset deterioration took place on net asset of companies and of the population, due to the high share of foreign currency loans (related to the depreciation of the ROL) and lowering prices for real estate assets and securities. This has contributed to the deepening of the crisis through the negative effects it has had on the expectations and the augmentation of caution from consumers and businesses.

National Bank of Romania has made estimates of the evolution: the confidence – very active, active trade channel – the channel of exchange rates – attenuated, alleviated the financial channel – (EU, IMF, EBRD, WB)[2].

The evolution of the crisis in Romania

Macroeconomic developments in Romania have submitted inadequate development amid the financial and economic crisis deepened.

The economic growth in Romania in the period 2005-2009 was generated by exports, as it would have been effective from the economic point of view, but also from domestic demand (consumption), investments in the most productive and Government consumption. This will be inadequate growth[3], macroeconomic imbalances created.

Reduction of exports led to a contraction of domestic demand and lower production.

Decline in production resulted in lower turnover in trade and services. This, in turn, has led to rising unemployment through limited size of enterprises.

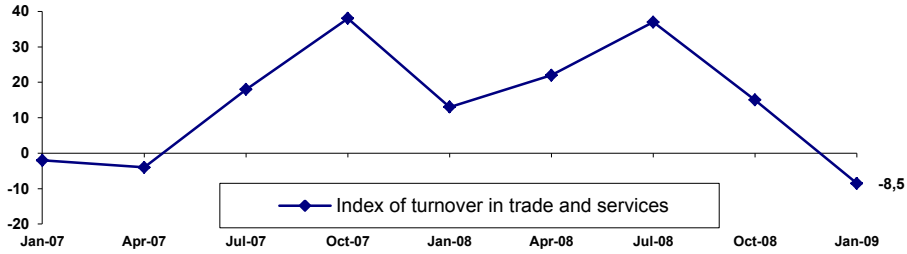

Fig.1 Index of turnover in trade and services

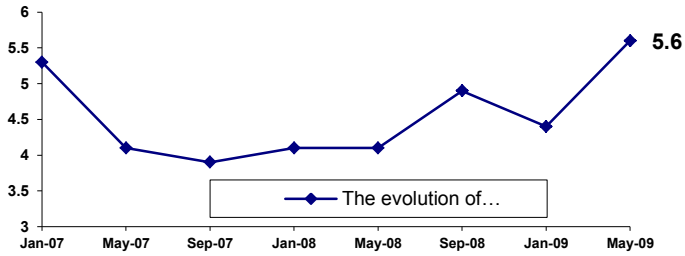

Fig. 2 The evolution of unemployement

In 2008, we achieved a growth of 7.9% to 6.3% inflation, a fiscal deficit of 4.8 percent of GDP (gross domestic product) and a current account deficit of 13.5 percent of GDP compared with 2004 when it achieved a growth of 8.5% to 9.3% inflation, a fiscal deficit of 1.5 percent of GDP and a current account deficit of 8.4 percent of GDP[4].

[3] Ibidem, p.83.
[4] Ibidem, p.84.

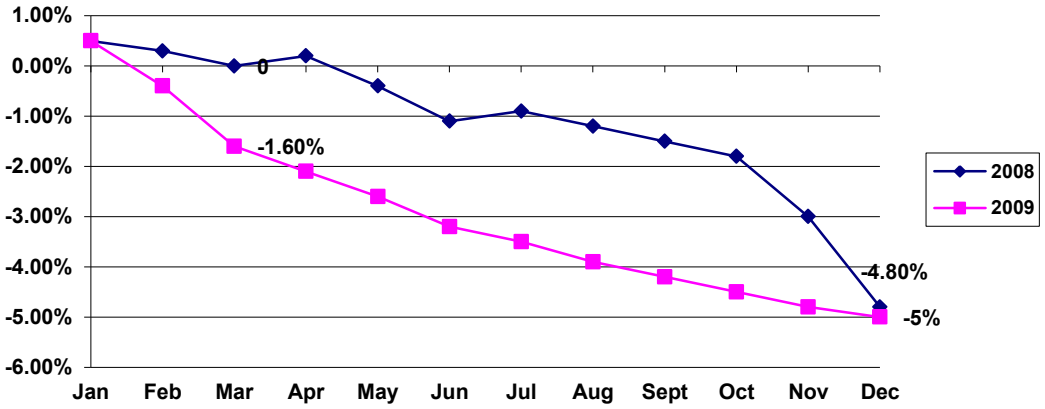

Fig. 3 Budget Deficit (% GDP)

Domestic savings are low, and economic growth and satisfy the domestic consumption and of higher investment was foreign capital. The total foreign debt has increased from 21.5 billion euros in 2004 to 74 billion euros in 2008. Unguaranteed public debt has risen to 11.4 billion euros in 2004, 63,3 billion euros in 2008[5].

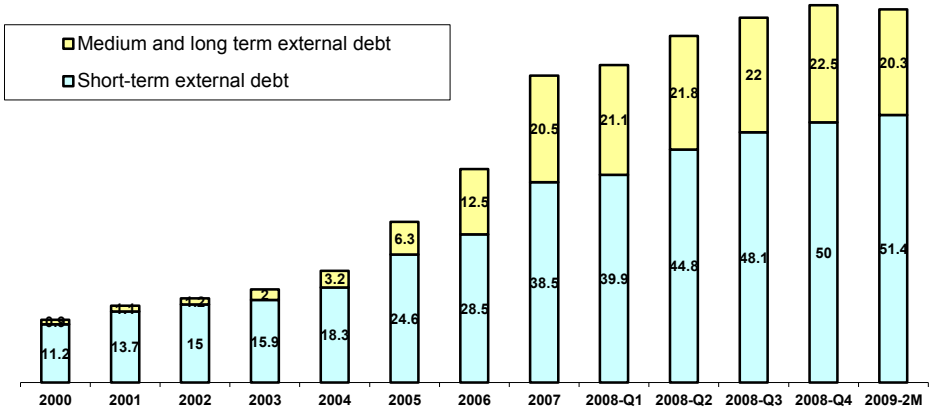

Fig. 4 Evolution of external debt

The Romanian banking system is owned in the proportion of 90% of banks with foreign capital. They have experienced financial losses due to the purchase of toxic products on the u.s. market and on the English, such as financial derivatives that are based on real estate and financial assets whose prices have collapsed.

By default, the low capacity of the parent banks with branches in Romania to grant further generous lines of credit with low cost to be reîmprumutate, with the American Bank Lehman

[5] Ibidem, p.87.

Brothers ' bankruptcy. Foreign debt in the short term, under one year, increased by 7,5 times. This creates a high degree of vulnerability in the external deficit financing[6].

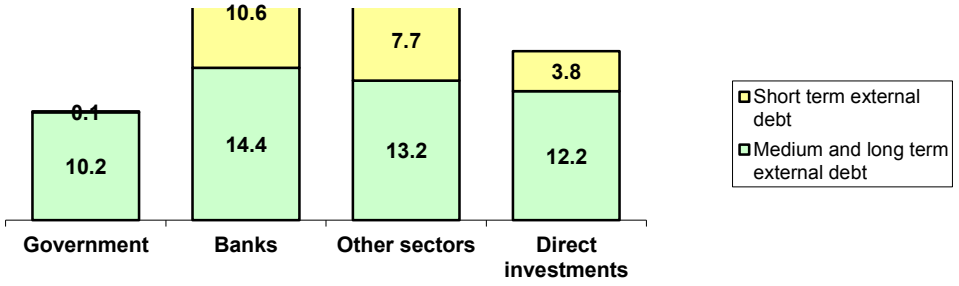

Fig.5 The structure of external debt-billions of euros

Romanian's exports are based on products, petro-chemical, metallurgical and construction of advanced equipment, including cars. The collapse of loans to banks decreased demand for such products. At the same time, domestic demand has fallen amid a sharp contraction in lending and thus GDP growth has been reduced by 3%.

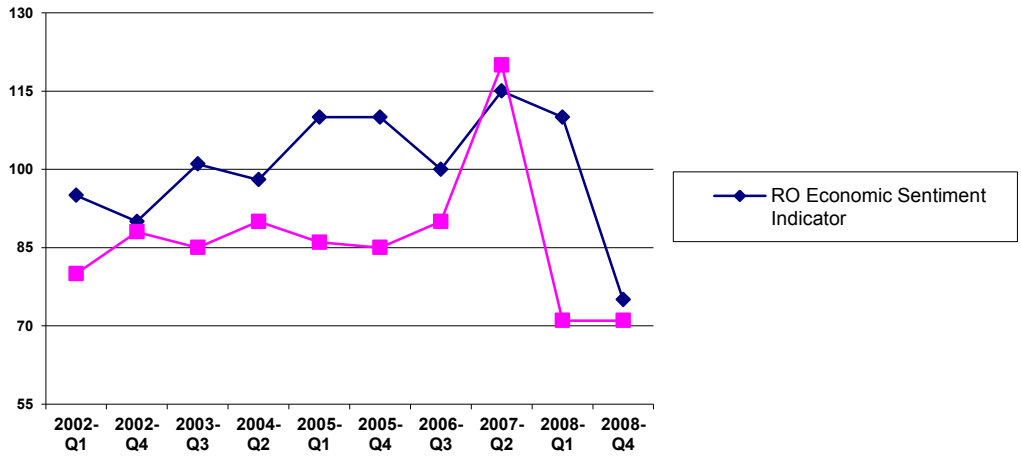

Fig. 6

Due to the uncertainty and cost of finance, foreign investment fell by around 10 billion euros in 2009.

The national currency, the ROL, was depreciated by 10.4% in 2008 and by 6.4 percent in 2009[7]. The inflation rate in 2010 was 7,96% to a level almost double that recorded in 2009. Increase in the value added tax (VAT) and the rise registered last year have caused this growth. Prices have climbed by 0.5 percent in December, further increases being registered in all foods.

The data appears in a report by the National Institute of statistics (NIS). National Bank of Romania (NBR) missed, so, for the fourth consecutive year inflation target set at 3.5% +/- one

[6] Ibidem, p.72 .
[7] Ibidem, p.72.

percentage point. The annual rate was 4.74% in 2009, when the range was being targeted all of 2.5-4.5 percent[8].

Average annual inflation in 2011 arrived at minimum-3,14% record, show the data of the National Institute of statistics (NIS).The graphs show that the official rate of inflation has not had a level in post-Decembrist so low, the last record of this kind being achieved only in March of 2007, when the media came down slightly under 3.7 percent.

CNP estimates an inflation of 3.5 percent by the end of 2013, as well as in the autumn forecast, while the annual average will be 4.3%.

No forecast for 2014 was not altered, so that it expects inflation of 3.0% at the end of next year.In 2015 and 2016, it will drop slightly, from 2.5% 2.3%, respectively.

In February 2009, the CDS have reached the peak of 777 bp, while the average for the year 2008 was of 260 bp[9].

The impact of the financial crisis and the confidence was felt in the real economy, which hit sectors of the economy, among the first reacting strongly to changes of cyclic: automotive and aviation industry, computer science etc. These are typically the industries where the negative effects of the change shall be reflected in the attitude of the people, i.e. the tendency to spend less and save more[10].

The consequences of the financial crisis in Romania

In spite of the interventions of the farms, the feeling of disbelief of investors has persisted, what he has done as many segments of the financial market in general and of the scuritizare and long-term financing in particular, remain vulnerable[11].

Increasing risk premiums and higher financing has affected directly and indirectly by a multitude of economic actors and had consequences in the real economies, which have been given clear signs of slowing economic growth or even recession.

Corrections to the value of assets had a wide and unpredictable. Although adjustments were concentrated in the residential mortgage market and the financial market segment it serves, their complex ties with parts of the financial sector and real have prompted tensions at the price level of other categories of financial assets, such as obligations issued by corporations or municipalities[12].

At the time of a shock in financial markets tend to overshooting. Afterwards, analyzes and digested the information and the prices of financial assets is adjusted according to the perceived risk. In the financial markets, asset values and corrections now, what is the evidence that the risks were not fully understood and the markets still face uncertainties[13].

Remain open and fair evaluation of the issue of financial instruments, the kind that have been based on the borrowers ' loans neperformanţi. As such, you may be able to assist you further to new revelations of losses from the financial institutions.

The areas affected by the crisis

Nationally, more than 150,000 employees have experienced a drastic decline in income due to the increasing demand of the market, reducing the activity of the place of work, or remained unemployed because of massive dismissals.The most affected are the trades that produce come in direct relation to the volume of sales (in commissions, for example, brokers.

[8] Ibidem, p.75.
[9] Ibidem, p.76.
[10] Ibidem, p.80.
[11] Puiu, 2010, p.15.
[12] Ibidem, p.83.
[13] Bal, 2009, nr.31.

As far as the sellers and brokers, the situation is somewhat better. They manage to get in the best case, revenue by 35% lower than those realized so far[14].

Due to the temporary closure of factories, workers in the iron and steel industry, receive wages by a quarter. They are in number of over 30,000 people.

In fifth place in the ranking of categories of employees poorer due to the crisis, there are those in the subassemblies.

Sixth place is budgeting, whose salaries were low by 25% and they have been changed to wage grids.

All of these are added to those who have lost their jobs, those who have not received meal vouchers and subsidy, there is no question of any of the 13th salary or holidays.

Banking sector

Despite the international financial crisis and reduce lending globally, the Romanian banking system can be described as solid, with levels of capitalisation, liquidity and solvency in accordance with the prudential requirements.

Following the requests made by NBR, the shareholders of the Bank have proceeded at an increase of share capital/endowment at the end of 2010 its level being higher in 2009 with 17.8% in nominal terms (+ 9,1% in real terms). In terms of foreign banks ' exposures are present in Romania, they rose from 81,1 billion in 2009 and EUR 84,7 billion during the year 2010.

In this context, the aggregate level of solvency shall be pointer to 31 December 2010 to 15%, its value in excess of 11% in the case of credit institutions. Furthermore, during the years 2009 and 2010 there were banks with a solvency ratio below 10 percent. The liquidity indicator system has been placed over the minimum regulated[15].

Rate of unemployement

Even if he will come back from Romania's recession, unemployment will head to 10%, and any wage hikes could be affected by inflation. The International Monetary Fund (IMF) has said the year 2010 that Romania could get out of the recession in 2011, i.e. a decrease of 8.5% to an increase of 0.5%. At the end of 2008, in Romania there were just over 400,000 people unemployed. After half a year, their number grew to nearly 550,000, the unemployment rate climbing from 4.4 percent in December and 6.3 percent in July. Also, at the conclusion of the 2009 unemployment rate has climbed to nearly 8% [16].

In 2010 unemployment rate was 6.8%, reduced by 0.9 percent from the previous year, the number of unemployed totaling 629.960 people, according to the NEA (National Employment Agency). Of these, 329.640 are unemployed make. The unemployment rate in Romania was less than the average of the European Union (EU) where it had fallen by over 9%[17].

According to data provided by the NEA, the unemployment rate in February 2012 fell to 6,58%, 1.75 percentage points below the level of February of 2010. Total number of registered unemployed was 600.308 people.

In April 2012, according to the international definition (BIM), seasonally adjusted, the unemployment rate in Romania was 7.1 percent, down 0.1 point in December 2012, and unemployment rate in seasonally adjusted was 6.5 percent, it said in a press release (NIS)[18]. Number of unemployed (persons shall be taken into account between 15 and 74 years) estimated for the last month of last year, is 661.000, towards 751.000, in December 2011.

[14] Ibidem, p.193.
[15] NBR, 2010, p.30-33.
[16] Ibidem.
[17] Ibidem, p.139.
[18] Ibidem, p.140.

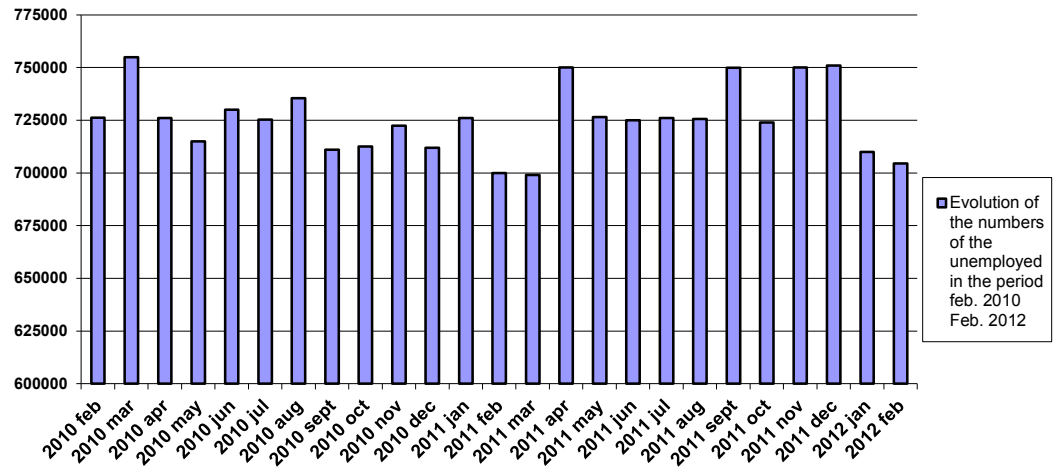

Fig. 7 Evolution of the numbers of the unemployed in the period Feb. 2010 Feb. 2012

In June of 2009, the average net salary per economy amounted to $ 1.379, up 8.3% compared to the same period in 2008. The average salary in real net, reduced inflation, increased by only 2.3% in the same period. From June 2007 to June 2008, the average net salary on economy rose by 24.4 percent, the real appreciating it with 14.5 percent. The highest average net salaries was retrieved in aviation, 3.282 ROL, and the lowest in hotels and restaurants, 769 ROL.

The average gross nominal earning was total at the beginning of 2010, with 1.1 percent higher compared with November 2009[19].

"Earning real Index" for February 2011, calculated as the ratio between the net nominal salary and consumer prices compared with the same month of 2010 has been set at 93.1% (6.9%)-reads in a press release (NIS).

At the same time, the average nominal wage net was in February of 1.414 ROL, 0.7% (10 ROL) lower than in January. The highest values of the nominal average wage net have been in the industry for tobacco products (3.790 ROL), and the lowest in hotels and restaurants (855 ROL)[20].

National Forecast Commission (NFC) claim that real wage grew by 0.8% in 2012 compared with 2011, according to the draft of the medium-term forecast for 2011-2015. For 2013, the NFC intends to increase real wages by 1,4%, 2014 with 1.6% and 1.8% for 2015.

The areas unaffected by the crisis

Although the economic crisis has swept most of the areas of activity, there are still a few areas that have not yet been affected: IT and communications, Retail and pharmaceutical. Due to the nature of these industries, employment will be made in the next period to meet demand of qualified personnel.

Despite the existence of these areas that are protected from the dangers of the economic crisis, the problem usually arises at the level of each company individually, depending on the liquidity of available and its capacity to make a long-term activity. It provides for an increase in salary in the next period, ranging between 3 and 5% thing declared and the Romanian Government.

[19] Gandul info.
[20] financiarul.com.

Maximizing profits is one of the main goals of all companies. Both companies in the public sector and the private sector have realised that this can be achieved by reducing the dramatic wage and looking for ways to reduce costs and depreciation risk for subsequent periods[21].

Conclusions

The direct effects of the economic crisis on Romania were increasing the risk premium and the cost of financing, high interest rates on CDS and the interbank market, depreciation and high volatility of the national currency ROL, reduction of imports and exports, the outflow of foreign capital, the decrease in industrial production due to dependence on international demand (70% of the exports of Romania being in the Euro area).

Indirect effects of the economic crisis on Romania were: increasing the uncertainty and cost of funding led to the cessation of crediting, increase of unemployment, reduction of the population, the decline in consumption; reduction of domestic and foreign demand coupled with the rising cost of funding have repositioned investment plans resulting in the postponement or reduction of investments in the economy, risks relating to financial activity by increasing bad loans, dwindling profits and a lack of financing companies, as well as exposure to currency risk; decrease in budgetary receipts resulting in a high budget deficit[22].

THE INFLUENCE OF CORPORATE REPUTATION AND MARKET COMPETITION ON COMPANY'S GROSS PROFIT

MIHAELA CORNELIA SANDU*

Abstract

To have a profitable business you have to make a big effort. There are two important things that can influence the profitability of a company: the rivalry among stakeholders or market competition and an important intangible asset, corporate reputation. In this paper I will develop a study about how reputation and competition influence the market position of an important cosmetics business from Romania.

Keywords: *corporate reputation, competition, gross profit, trend, time series.*

Introduction

Corporate reputation refers to the perception of a person on certain intentions or rules. It can explain the implication of stakeholders in repeatedly actions in conditions of uncertainty. Competition is the confrontation from different economical agents which wants to reach their interests. Competition has a significant growth at macroeconomic and microeconomic level, determines the development of the market and plays an important role in economical and social life as well. Reputation is an important element which determines the competitive position of a company. A good reputation determines the competitive advantage of a company.

In this paper I will speak about the influence of reputation and market competition on gross profit of a company and I will do a case study on Avon Company. At the beginning I will make a short review on corporate reputation and reputation. After this I will put in discussion a way to quantify corporate reputation. In the third part I will speak about Avon's history and her reputation. In the end I will make a study on Avon's gross profit.

A short review on corporate reputation and competition

Corporate reputation is an intangible asset defined as the firm value that exceeds the physical asset. A Latin Maximum says that a good reputation worth more than money. Reputation mirror expresses firm performance over the last customer confidence and business partners and also its promise for the future in an uncertain environment which is in continuously changing. This determines the stakeholder's credibility and determines their decision to continue or not working with the company in question. Reputation can be defined as a distribution of opinions about an entity[1] or as an interaction among and between business partners over which the company has no direct role or not investing[2]. Also, reputation is the result of past actions[3], the result of repeated actions and of the experience gained[4], and that element that will determine achievement expectations by comparing the company with competitors[5].

---

* Assistant Lecturer, Faculty of Business and Administration, University of Bucharest; PhD candidate at the Faculty of Economic Sciences, "Lucian Blaga" University of Sibiu, Romania (mihaela9sandu@yahoo.com).

[1] Bromley, D.B., "Psychological aspects of corporate identity, image and reputation", Corporate Reputation Review, vol 3, no 2, 2000.

[2] Mahon, J.F., "Corporate reputation: a research agenda using strategy and stakeholder literature", Business and Society, vol 41, no4, 2002.

[3] Herbig, P., Milewicz, J., The relationship of reputation and credibility to brand success, Journal of Consumer Marketing, vol 10, no 1.

[4] Flatt, S.J. and Kowalczyk, S.J., Do corporate reputations partly reflect external perceptions of organizational culture, Corporate Reputation Review, vol 3, no 4.

[5] Roberts, P.W. and Dowling, G.R., Corporate reputation and sustained superior financial performance, Strategically Management Journal, vol 23, no 1.

Reputation is seen as "an overall assessment of their impact on society stakeholders-time"[6] or on firm valuation by business partners. "Reputation is how people feel about the organization, taking into account the experience and networking with various information available from different people but also through the media"[7, 8]. Bromley[9] believes that reputation is a social impression, a consensus about what is considered a firm will behave in a given situation. Fombrun[10] says that reputation is based on a set of beliefs of a community about the company's ability and about her desire to meet the interests of different partners.

The public constructs his relation with a certain company based on perceptions results on his direct experiences with companies products, investments, clients services, employment; based on what the company says about herself by advertising, public relations, marketing and social responsibility; based on what other people like media, experts, leaders, family/ friends says about the company. This experience has different impact about respondent perception according the company.

Whether we are talking about economic or social life, competition plays an important role as an element providing a foothold situation of the individuals. Also, it ensures the functioning and development of different markets. We can say that the presence of competition is a positive factor if we see a significant increased performance at macroeconomic and microeconomic level.

In economics, firms that operate in the same market compete for both customers and suppliers seeking supremacy. We deal with direct business competition - they produce identical or similar goods that meet customer needs in the same way and in this case corporate reputation plays an important role in consumer choice; and indirect business competition - firms produce different goods but which satisfy similar customer's needs (for example road and rail or air)[11].

To gain competitive advantage, companies acting on the same market making significant efforts to build and maintain a reputation.

A way to quantify reputation

As we said before, reputation is the perception of a person according to a company. Reputation Institute survey (2012)[12] measure the way that respondents interact with the company and determine the way that different experiences determine the level of trust, admiration, respect and good feeling. Based on dates furnished by Forbes Global 200 list about companies revenue, big companies from USA are choose to participate at this study. All of these companies are activating in commercial field and are well known for the public. None of these companies was held by another one in the past. In January and February 2012, 10 198 clients answered about their perceptions about 5 different companies. Every company has at least 100 characteristics assigned by the respondents. The sample was a representative one and respected the criteria about age and gender. The USA respondents were 20.8% from West, 16.3% from Northwest, 24.4% from Midwest and 38.5% from South. The level of education is the following: 3.3% low, 21.2% medium and 75.5% high. The chart from figure 1 shows us the age dispersal of the group:

[6] Gotsi, M and Wilson, A.M, "Corporate reputation: seeking a definition", Corporate Communication: An International Journal, vol 6, no 1, 2001.

[7] Wartick, S.L., Measuring corporate reputation, Business and Society, vol 41, no 4, 2002.

[8] Fombrun, C., Gardberg, N.A., Barnett, M.L., Opportunity Platforms and Safety Nets: Corporate Citizenship and Reputational risk, Business and Society Review, vol 105, no 1, 2000.

[9] Bromley, D.B., "Psychological aspects of corporate identity, image and reputation", Corporate Reputation Review, vol 3, no 2, 2000.

[10] Fombrun, C, "Reputation: Realizing value from the corporate image", Boston: Harvard Business School Press, 1996.

[11] http://www.comunicatedepresa.ro/concurenta/definitie/.

[12] Forbes 2012, Reputation Institute U.S. RepTrak™ Pulse Study, Top-Line Findings Report Spring 2012.

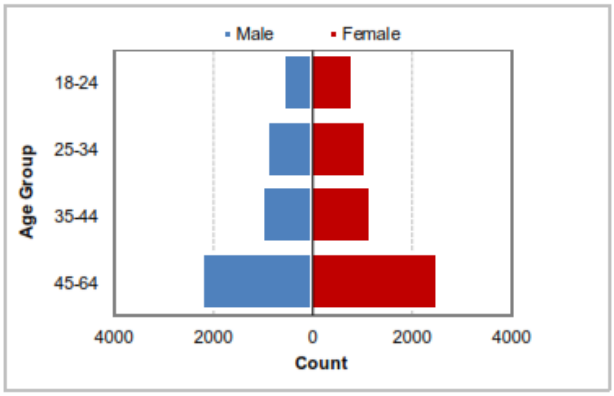

Figure 1. The age dispersal of the respondents[13]

For every company that participates to the study, based on respondents trust, admiration, steam and good feeling we determine the dependent variable – the Reputation Trak-Pulse. In the study, 150 companies were analyzed according to this score. To have a strong reputation, companies have to reach all of next seven dimensions: performance, products/ services, innovation, leadership, citizen, governance and working place. In 2012 the most important dimensions summed 47.3% from reputation components as it follows 17.5% for products/ services, 15.6% for governance and 14.2% for citizen. So, if consumers perceive a company as being very good in these dimensions, than the reputation is very strong. Contrary, perception and support will suffer.

A short review of Avon's history and company's reputation

According to 24/7 Wall St.[14], Insightful Analysis and Commentary for U.S. & Global Equity Investors, Avon is one of the ten brands in USA that will disappear in 2013. This conclusion is based on some major criteria like: a rapid fall-off in sales and steep losses; disclosures by the parent of the brand that it might go out of business; rapidly rising costs that are extremely unlikely to be recouped through higher prices; companies that are sold; companies that go into bankruptcy; companies that have lost the great majority of their customers; operations with rapidly withering market share.

On Avon's official site[15] it says "As the world's largest direct seller, Avon markets leading beauty, fashion and home products to women in more than 100 countries through more than 6 million active independent Avon Sales Representatives". The company[16] was founded in 1996 by book sales David H. McConnell which observed that women are more interested in his free samples of perfume than his books. More, he wanted to offer women an opportunity to earn their own money. At the beginning, the business was door-to-door selling. In 1970 when a big part of people have jobs and nobody was home all day long to answer the door, a brochure that included samples was left on a doorknob. Later, in 1986 were opened some workplace selling where the customers could access more easily the products. Until 1990 the only possibility to earn money within company was by selling the product to the customers. That thing changed with the launch of Avon's Sales Leadership Program. Representatives could earn money, not just by selling, but also recruiting and training other people. In our days when the technology had evolved so much, Avon developed the e-commerce. In 1996 Avon was the world's first beauty company to launch an e-commerce site.

[13] Forbes 2012, Reputation Institute U.S. RepTrak™ Pulse Study, Top-Line Findings Report Spring 2012.
[14] http://247wallst.com/2012/06/21/247-wall-st-10-brands-that-will-disappear-in-2013/2/.
[15] http://www.avoncompany.com/aboutavon/avonmarkets.html.
[16] http://investor.avoncompany.com/phoenix.zhtml?c=90402&p=irol-IRHome.

Avon started her activity in Romania[17] in September 1997. Company offered these years the possibility to buy products at an accessible price, delivered directly at home. In a very short period, Avon created a strong image in Romania. In 2002 the company was the leader on Romanian cosmetic market and it maintained the position until now.

Principal competitors[18] of Avon Company on Romanian market are Oriflame Cosmetics, Amway Romania and Zepter. In 2009, the year of economic crises when real estate market and auto market recorded important decreases in sales and profit, the advantage of Avon was on line market. To have a good on line reputation you have to focus on social engagement and outreach, to develop a social media policy, to coordinate social media management with other marketing efforts and to be prepared for crisis communication. It seems that Avon was very careful at all of these tips and in 2009, the year of economical crisis her sales have increased.

The study about Avon's gross profit

We will study Avon's gross profit[19] (table 1) registered between 2003 and 2011. Based on this data we will predict pre profit registered in 2012 and we will compare the results with the real one.

Year	Quarter	Gross Profit	Year	Quarter	Gross Profit	Year	Quarter	Gross Profit
2003	1	902,1	2006	13	1223,5	2009	25	1341,4
	2	1028,5		14	1303		26	1507

Table 1. Avon's Company Gross Profit

The graphic representation of observed values (blue points) and trend values (red points) shows us a linear growing tendency. We will work in multiplicative model hypothesis for a time series analysis: $y_t = T_t * S_t * \varepsilon_t$, where T_t is the trend, S_t is seasonality and ε_t is the noise.

[17] http://www.avon-reprezentant.ro/avon-reprezentant-istoria-avon.html.

[18] http://ycharts.com/.

[19] http://investor.avoncompany.com/phoenix.zhtml?c=90402&p=irol-IRHome.

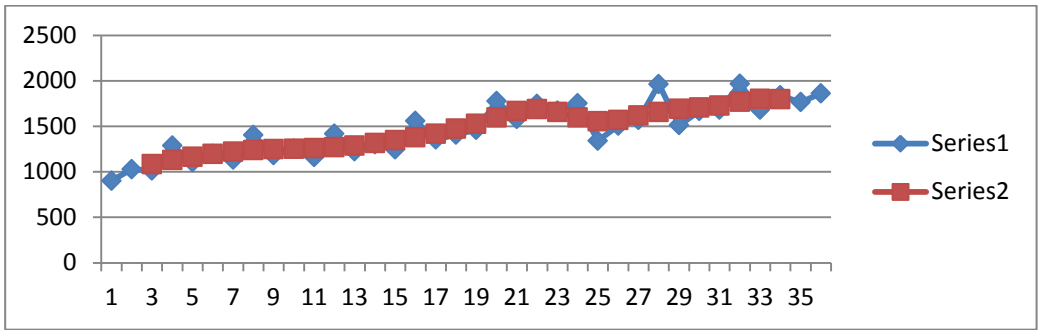

Figure 2. The graphic representation of the quarterly gross profit and of the trend

We will analyse quarter's values using time series analysis. Using specific calculations we determined the following seasonality factors: 0.93% for the first quarter, 0.99% for the second quarter, 0.95% for the third quarter and 1.13% for the fourth quarter. So, we can say that in the first quarter the gross profit is with 7% under the quarter media, in the second quarter the gross profit is with 1% under the quarter media, in the third quarter the gross profit is with 5% under the quarter media and in the fourth quarter the gross profit is with 13% over quarter media. This can be explained by buyer's appetite for shopping during holiday season and also by the offers made by the company.

Using least square method we intend to determine trend equation,

$$T_t = \widehat{\beta_0} + \widehat{\beta_1} \cdot t$$

So, with the help of a statistical soft called SPSS[20] we determine the following trend equation: $T_t = 1022{,}83 + 23{,}54 \cdot t$.

Using SPSS we determine that the coefficient of determination is 0,772 which means that 77,2% from the variation of the gross profit is influenced by the time (quarter of the year), the rest of 22,8% being influenced by others factors.

We want to test the significance of the relation between values. For this we will use the Fisher test. The critical value determined with the use of SPSS, which is calculated as the ratio between two sums of squares, F_c is equal with 114,936. If we want to test the significance for a 99% confidence, for a level of significance $\alpha = 0{,}01$, from Fisher table for 1 degree of freedom at numerator and 34 degrees of freedom at denominator we have F_α equals with 7,44. Comparing those two values, we see that F_c is bigger than F_α which means there is an significant relation between time and gross profit.

Based on this equation we can predict the trend value in every quarter of 2012 that means in quarter noted by 37, 38, 39 and 40. The predicted values are: $T_{37} = 1893{,}81$ millions dollars for the first quarter from 2012; $T_{38} = 1917{,}35$ millions dollars for the second quarter from 2012; $T_{39} = 1940{,}89$ millions dollars for the third quarter from 2012 and $T_{40} = 1964{,}43$ millions dollars in the fourth quarter of 2012.

Adjusting the forecast with seasonality factors we obtain the predicted values of gross profit from the fourth quarter from 2012: $y_{37} = 1761, 2433$ million dollars for the first quarter from 2012; $y_{38} = 1898, 1765$ million dollars for the second quarter from 2012; $y_{39} = 1843{,}8455$ millions dollars for the third quarter from 2012 and $y_{40} = 2219, 8059$ million dollars in the fourth quarter of 2012.

If we look at real data from Avon's official site we can see that the gross profits from the four quarters in 2012 were: 1566 million dollars in the first quarter, 1627 million dollars in the second quarter, 1560 million dollars in the third quarter and 1795 million dollars in the fourth quarter. It is

[20] http://www-01.ibm.com/software/ro/analytics/spss/products/statistics/.

truth that Avon's general manager Andreea Jung was changed with Sherilyn S. McCoy and this could cause a decreasing of the profit. Another important element is high competitiveness on beauty products market. The profit of the main competitors of Avon like Revlon, Inter Perfumes and Colgate-Palmolive Company grew from 888,8 million dollars, 386,77 millions dollars and respectively 959 million dollars in 2011 to 919,6 million dollars, 414,47 millions dollars and respectively 993,2 millions dollars in 2012. The estimation of gross profit made using time series is closer to the real one.

Conclusions

According to Reputation Institute survey (2012) Avon Company has the rank 32 in reputation ranking. In 2012 Reputation Trak was 73,13% lower with 0.53 than 2011 when Avon had the rank 37; the rank from 2010 was 50. Based on these data, we can see that even the Reputation Trak is lower in 2012, the company is better placed in reputation ranking. Even we can observe an improvement of reputation 24/7 Wall St. says that Avon Company is one of the brands that will disappear in 2013. Colgate Palmolive Company, one of Avon's competitors had rank 14 in Reputation Institute survey and her Reputational Trak grew from 74,40% in 2011 to 76,14% in 2012. The other two competitors, Revlon and Inter Perfumes are not in the ranking of Reputation Institute. In this case, according to Avon's trend of gross profit and to Reputation Institute ranking we can say that Avon is a strong company that will survive all problems.

In our days Avon is on socialization site like Facebook, Linked in or Tweeter. Also, Avon has an electronic catalogue so you can see and command products online. This development of electronic commerce determined important sales for many companies. Also, the development of on line communication determined important problems for corporate reputation. Not only good news like company offers and promotions but also bad ones are on the internet. In conclusion, company have to be always in alert to stop or to correct every problem that appears.

For on line market, reputation is an important element because you buy something that is intangible. Past experience with the company or with that product, but also the others consumers experience and beliefs is very important in decision to buy and remain loyal.

ATTITUDES AND PERCEPTION IN CONSUMER'S INSURANCE DECISION

MIHAELA ANDREEA STROE[*]
MIHAELA ILIESCU[**]

Abstract

Consumers attitudes are both an obstacle and an advantage in the decision proccess. Choosing to discount or ignore consumers' attitudes of a particular product or service, while developing a marketing strategy,guarantees limited success of a campaign.Differences in attitudes dependes also by the gender of decidents. the different features between men and women in the perception of risk and decisional process of making an insurance. Women are more risk averse than men. Over an initial range, women require no further compensation for the introduction of ambiguity but men do. Differences appear also in which concerns risk taking, overconfidence and information processing. Perhaps the attitude s formed as the result of a positive or negative personal experience and by other psychological factors outside the common market manipulation.

Keywords: *risk aversion, insurance, decisional process, information processing, perception*

1. Introduction

This study aims to assess the degree in which formed attitudes and consumer perception influences the insurance decision and if women display a common trait of less risk-seeking behaviour than men in insurance decision-making.It is common known that the influence of society, of culture, of family and friends are not the only factors that drives a consumer in making a market decision.The subliminal factors like psychological ones and cognitive dissonance play a main role in what consumer perceive and decide in the insurance world.

Insurances are intangible products that have some special features apart from the material good. Insurances represent a service that cannot be touched, price standardization is not possible,there is no ownership transfer and production and consumption are inseparable.The consumer is a part of the production process so the delivery system must go to the market or the consumer must come to the delivery system.Because the insurance is linked also to the value of risk is very important to analyze if consumer of insurance is risk averse or not. The risk is evaluated before insuring to charge the amount of share of an insured, consideration or premium. There are several methods of evaluation of risks. If there is expectation of more loss, higher premium may be charged. So, the probability of loss is calculated at the time of insurance.

The insurance serves indirectly to increase the productivity of the community by eliminating worry and increasing initiative. The uncertainty is changed into certainty by insuring property and life because the insurer promises to pay a definite sum at damage or death.

From a family and business point of view all lives possess an economic value which may at any time be snuffed out by death, and it is as reasonable to ensure against the loss of this value as it is to protect oneself against the loss of property. In the absence of insurance, the property owners could at best practice only some form of self-insurance, which may not give him absolute certainty.

Having into consideration this aspects we can say that, the ultimate level beside the real utility of the insurance product in the decision process, is played by the perception of the insurance product.

[**] Lecturer, PhD, Faculty of Economic Sciences, "Nicolae Titulescu" University of Bucharest (mihaelailiescu@univnt.ro).

Consumers can evaluate a product along several levels. Its basic characteristics are inherent to the generic version of the product and are defined as the fundamental advantages it can offer to a customer. Generic products can be made distinct by adding value through extra features, such as quality or performance enhancements. The final level of consumer perception involves augmented properties, which offer less tangible benefits, such as customer assistance, maintenance services, training, or appealing payment options. In terms of competition with other products and companies, consumers greatly value these added benefits when making a purchasing decision, making it important for manufacturers to understand the notion of a "total package" when marketing to their customers.For example when acquiring an insurance, the consumer do not acquire only the risk protection represented by the sum of money payed in case of a disaster but also the feeling of security and the psychological confort that can be offered by this exchange through the insurance policy.

Nevertheless, is obvious that some people are more risk averse and value more the insurance protection, others like to take risk and the insurance will not appear so appealing.

Also, gender differences relating to risk behavior, the perception of insurances, the information acquisition and reporting, information and moral hazard in financial decision-making is examined in Section 2, together with the importance of differing contextual instances in explaining such differences in building the stereotypes. If some behavioral factors as gut feeling and emotion effect desion making and how the persons react to those is the subject of our debate.

The insurance purchasing and marketing activities do not always produce results that are in the best interest of indivuals at risk.we will discuss such behavior with the intent of showing the difference for the insurance interest decision making and the factors that influence both men and women.

2. Knowledge stage

An attitude in marketing terms is defined as a general evaluation of a product or service formed over time (Solomon, 2008). An attitude satisfies a personal motive and at the same time, affects the shopping and buying habits of consumers. Dr. Lars Perner (2010) defines consumer attitude simply as a composite of a consumer's beliefs, feelings, and behavioral intentions toward some object within the context of marketing. A consumer can hold negative or positive beliefs or feelings toward a product or service. A behavioral intention is defined by the consumer's belief or feeling with respect to the product or service.

Perhaps the attitude formed as the result of a positive or negative personal experience. Maybe outside influences of other individuals persuaded the consumer's opinion of a product or service. Attitudes are relatively enduring (Oskamp & Schultz, 2005, p. 8). Attitudes are a learned predisposition to proceed in favor of or opposed to a given object. In the context of marketing, an attitude is the filter to which every product and service is scrutinized.

The functional theory of attitudes,developed by Daniel Katz,offers an explanation as to the functional motives of attitudes to consumers (Solomon, 2008). Katz theorizes four possible functions of attitudes. Each function attempts to explain the source and purpose a particular attitude might have to the consumer. Understanding the purpose of a consumer's attitude is an imperative step toward changing an attitude. Unlike Katz's explanation of attitude—as it relates to social psychology, specifically the ideological or subjective side of man—consumer attitudes exist to satisfy a function (Katz, 1937).

The utilitarian function is one of the most recognized of Katz's four defined functions. The utilitarian function is based on the ethical theory of utilitarianism, whereas an individual will make decisions based entirely on the producing the greatest amount of happiness as a whole (Sidgwick, 1907). A consumer's attitude is clearly based on a utility function when the decision revolves around the amount of pain or pleasure in brings.

In insurances case, we can assume that the consumer is thinking at and balance the chances that exists that a risk occur in his/her field of activity and the consequences it brings.

If the amount of pain and financial loses is bigger that the pain felt of loosing the premium amount of money that it is payed for the insurance policy, this is to say that the consumer accepts the insurance and has a positive attitude in which concerns the insurance.

Changing a consumer's attitude towards a product, service or brand it can be a challenge. Three attitude change strategies include: changing affect, changing behavior, and changing beliefs (Perner, 2010). Classical conditioning is a technique used to change affect. In this situation, a marketer will sometimes pair or associate their product with a liked stimulus. The positive association creates an opportunity to change affect without necessarily altering the consumer's beliefs. Altering the price or positioning of a product typically accomplishes changing behavior. In insurance, the deductibles and the marketing strategies in the domain have conditioned clients to be more opened to contract a policy of insurance that is less costly or is comprehensive and include more rosk in a single insurance and this lowers the price making the consumer more inclined to subscribe to such contract.

In this section, it can be discussed the problem of ambiguity which is close related with the risk and about risk aversion that manifest different in the case of women and men.

Studied have shown that women are more risk averse than men. Over an initial range, men reduce their

valuation of ambiguous urns more than women. After that, men and women equally value marginal changes in ambiguity.Since psychological measures are related to risk but not to ambiguity, risk aversion and ambiguity aversion are distinct traits since they depend on different variables. Schubert et al. (1999) find that women are more ambiguity averse than men in an investment context but not in an insurance context. Powell and Ansic (1997) report that women are more risk averse and ambiguity averse. Dohmen et al. (2008) find that lower cognitive ability and less openness to new experiences predict greater risk aversion.

In a review of the specific literature on gender differences in business decision-making, Johnson and Powell (1994) argue that the research findings before 1980 were instrumental in establishing a dominant view that substantial gender trait differences exist in the nature and outcomes of management de-cisions involving risk. These studies suggest that women are more cautious, less confident, less aggressive, easier to persuade, and have inferior leadership and problem solving abilities when making decisions under risk compared to men, reinforcing stereotypical views that women are less able managers. Johnson and Powell (1994) re-examine the early business decision-making literature and conclude that the evidence on gender differences is no longer clear cut.

Studies of insurance decision-making have also identified a lower degree of confidence amongst women in their ability to make decisions and in the out-come of these decisions (Estes and Hosseini, 1988; Stinerock et al., 1991; Zinkhan and Karande, 1991; Masters, 1989).

Women had a lower risk preference and a higher degree of anxiety in financial decisions

than men, plus a stronger desire to use financial advisers.

In which concerns moral hazard the difference between genders is not important,maybe because of the psychological factors like narcissism that make the person behave more irresponsibly.Suppose an insured individual behaves in a manner, which increase the probability of a loss from what it was before insurance was purchased. Furthermore suppose that the insurer cannot determine that the policyholder has changed his behavior in this way. When there is this type of asymmetric information between buyer and seller, then one has the condition known as moral hazard. There are good reasons for the presence of moral hazard. The insured individual has less incentive to take the same amount of care as when she was uninsured, knowing that if there is an accident or disaster, she has protection. Furthermore if a person has suffered an insured loss he may try and be able to collect more than the actual loss. The insurer may not be able to detect these types of behavior. It is costly and often extremely difficult to monitor and control a person's actions and determine whether she is behaving differently after purchasing insurance. Similarly it may not be

possible to determine if a person will decide to collect more on a policy than he or she deserves by making false claims without extensive auditing, which is also a costly proposition.

The risk aversion is related with risk perception and other psychological triggers that exists in the decisional process of the consumer.

Perception is another lead factor in the consumer insurance decision. A *perceptual set*, also called *perceptual expectancy* or just *set* is a predisposition to perceive things in a certain way. It is an example of how perception can be shaped by "top-down" processes such as drives and expectations. Perceptual sets occur in all the different senses. In insurance, perception is determined by culture, social development, education and informational background.That is why in poor country the perception of insurance is different by the one people have in devolped countries.

For example in Ghandia, majority of policyholders think that insurance companies are good at collecting premiums and once one get into trouble they bring you a lot of issues in order to avoid paying claims. 'insurance companies just collect your money.The perception is if one has an accident the company want to get a police report or inform that one's policy does not cover this amount.

In the developed countries, people have a financial education and they are opened to having more than one insurance policy.

But what happens about the young perception in insurance ? The perception and the attitudes of young people about the necessity of insurances it will be shown in the next survey.

3. Study case

Questionnaire about the perception of students about insurances.

The sample 100 students of the Foreign Languages Faculty, Italy.We can consider this sample as a pilot sample taken with the purpose of projecting a survey with much more variable which should insure a better reprezentativity of the sample and minimize the errors of the survey. The contact method and the collection of data was the direct questionnying of students applying a formular and also completying data on a internet platform

The first part of the questionnaire had the purpose to follow the registration of the classifying characteristics of the insurance agent or the consumer which had, has or will have an insurance and obtaining a representative sample. The sample structure after the classifying were:

1.At the question *"What is your age ? "* , the distribution of the answers was : **Table 2.**

The structure of students after age

Age	Structure (%)
>20 years	41,3
< 20 years	58.7

The majority of the students had above 20 years, some of them between 25-30 years old refering to the ones that completed the questionnaire on the online platform, the rest of the students had 20 or less (around 40 %). That is why at this segment of population the more important thing is to empahse the perception about insurances and the proclivity to make or not in the future a sort of insurance because at this age students don't have sufficient income in order to already subscribe to an insurance company.The main purpose of the questionnaire is to see the perception and the availability of the students regarding insurance market..

1. At the question *" You are male/female? "*,the distribution of answers was:

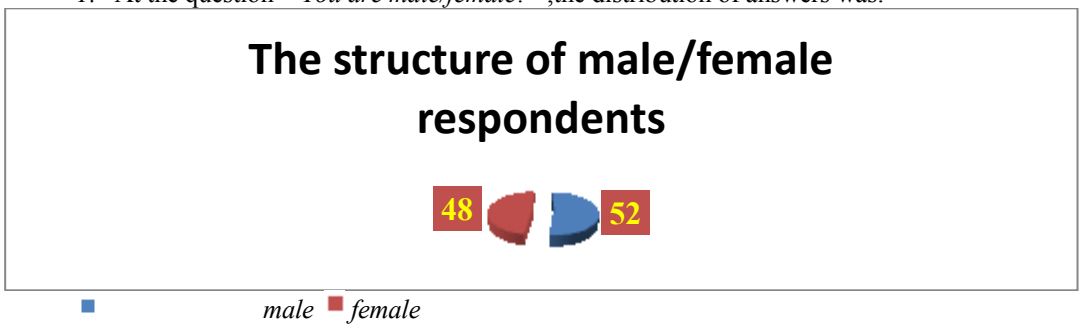

Figure 1 –The structure of male/female respondents

It can be seen that 52 % of the respondents were male that and the rest, 48% female.In fact, the type of the insurance held,as we will see in the second part of the survey, it is the insurance for social responsability car and the gender can create some differences in which concerns the consumer preferences and risk perception.

2. At the question «Are you risk averse ? », the distribution of answers was :

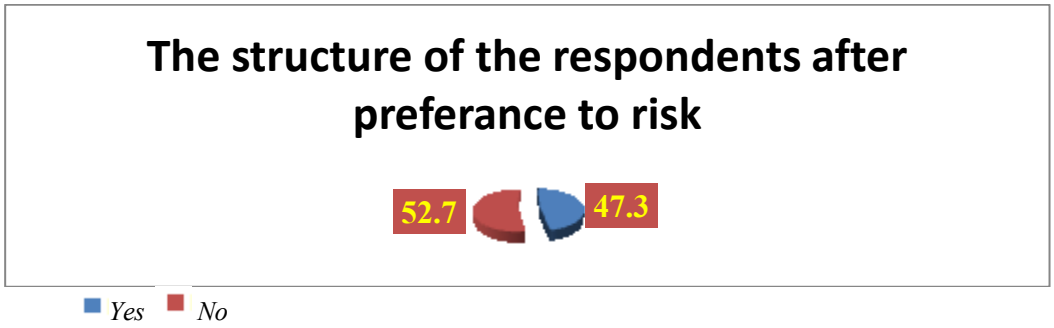

Figure 2 –The structure of the respondents after preferance to risk

It can be observed that 52.7% are risk averse, which is in according to Standard Economic Model (www.wikipedia.org/wiki/Economic_model) and 47,3% prefer risky situation.The reason that are behind this option should be analyzed in order to sustain the Prospect Theory(Prospect Theory: An Analysis of Decision under Risk, Daniel Kahneman and Amos Tversky, Econometrica, 1979) and prove that psichological factors and enviroment referential points can influence one person perception in which concerns risky situation.

3.At the question « Do you have an insurance policy ? If yes what kind of ? », the distribution of answers was :

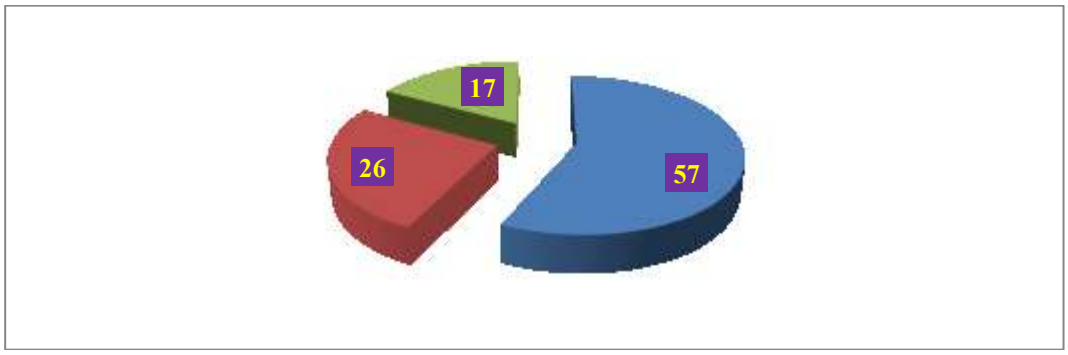

Figure 3 –Structure of the respondents after the insurance type held or future purchase

In the total of the responses, 57% of the students said that they did not have an insurance and of the ones they had an insurance they preferred RCA 26 %,insurance for car civil responsability because at this age the only good they have is the automobile and 17% had CASCO insurance or other types.It can be menstioned that in this procentage of 17%,are included the respondents that completed the online form and the age average was between 27-30 years. In this case the other types of insurance that they had, were included life insurance, family insurance,work insurance and accident or disaster insurance.

4. Referring to the question « Which is the current state of your insurance ? », the distribution of answers was :

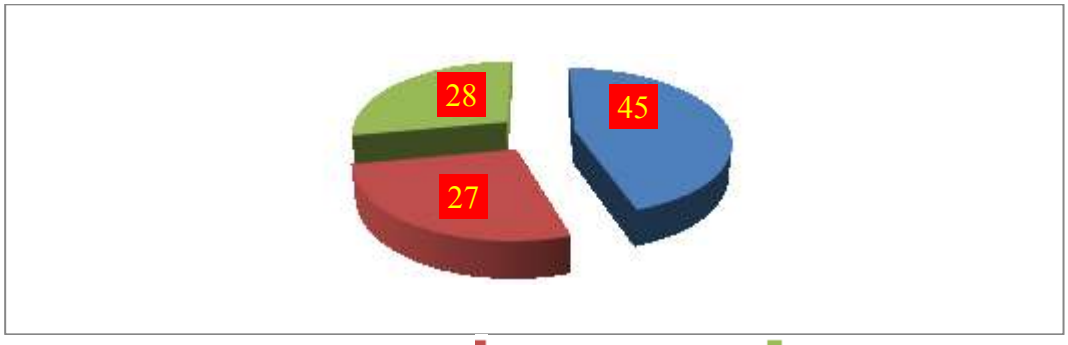

Figure 4 –The structure of the respondents in function of the current state of the policy

In figure 4 it can be seen that 45% of the ones that had insurance have a contract that is still running, 27% declare that the contract finished and 28% didn't answered motivating that for lack of money they did not subscribe to a contract.

4. At the question « Which are the main reasons for which you would buy an insurance ? », the distribution of answers was :

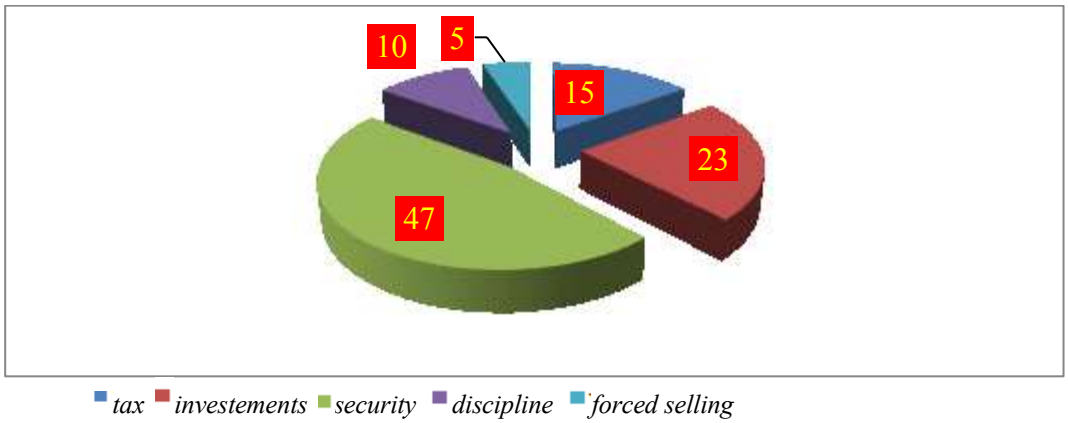

Figure 5 –The structure of answers after the main for buying an insurance

In figure 5 it can be observed that 47% of the respondents appreciate that they will buy an insurance for reasons of security, safety and trustv (emotional factors) 23% as investment in their future stability 15% for taxes, 10% for discipline,and 5% declare by forced selling because of contracting a bank credit.

5. At the question «What criterya you use for choosing the insurance company ?», the distribution of answers was:

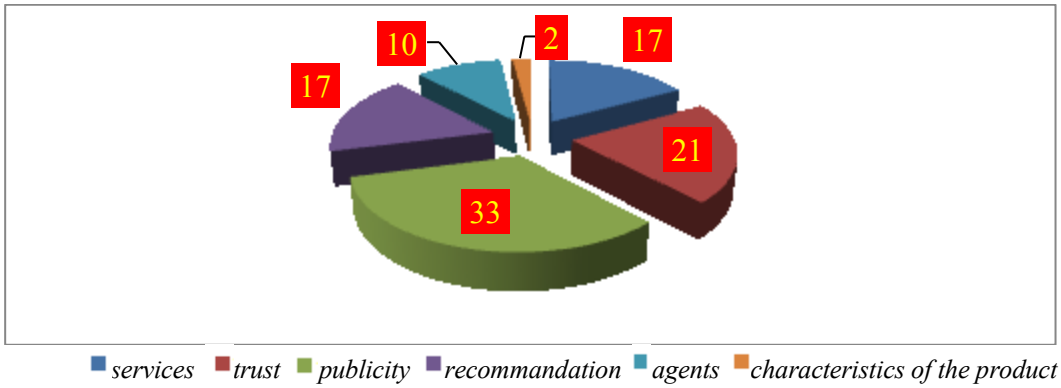

Figure 6 –The structure of the respondents after the criterya used in choosing an insurance company

In the figure 6, it can be observed that 17% of answers show that the society is choosen having into consideration the services offered and the historic of the security and trust of that society on the market, 33% by publicity, 21% due to trust and recommandations, 10% due to the selling agents, 17% due to the characteristics of the product, 2% other motifs.

7. At the question « If you have not an insurance, would you buy one ? Why ?. »

The majority answered that they would not buy an insurance (53%), because they do not need an insurance or they do not have money to subscribe to an insurance policy.This is easy to see

that the students does not perceive the importance of an insurance, they are not risk averse due to the lack of information or due to the age when they minimize the risk they are expose to.If they do not have the money to make an insurance is due to the fact that they do not have a fix income or the schoolarship or parents' allowance is very little and the structure of their income addresses to the fundamental needs like food, clothes, buying books for education, etc.

8. At the question « How do you prefer to buy an insurance ? », the distribution of answers was :

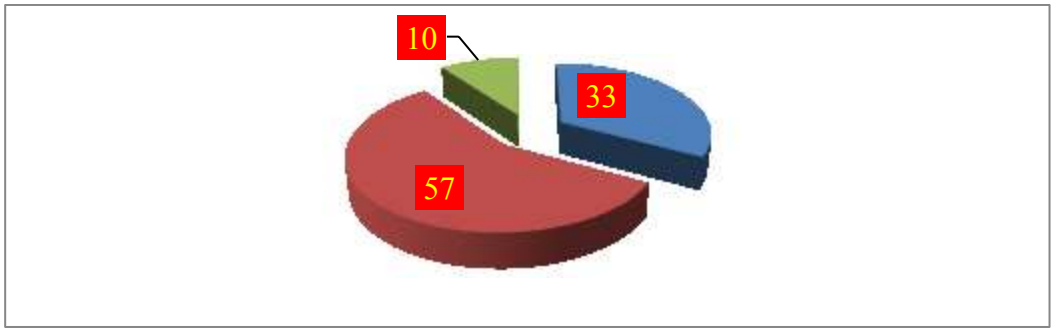

Figure 7 –The structure of respondents according to the channel of buying an insurance

The distribution of answers was : 57% declare that prefer to buy the insurance direct from the insurance society, 33 % prefer the selling agents and 10% prefer online buying.

9. At the question « Do you feel more protected having an insurance ? », the distribution of answers was:

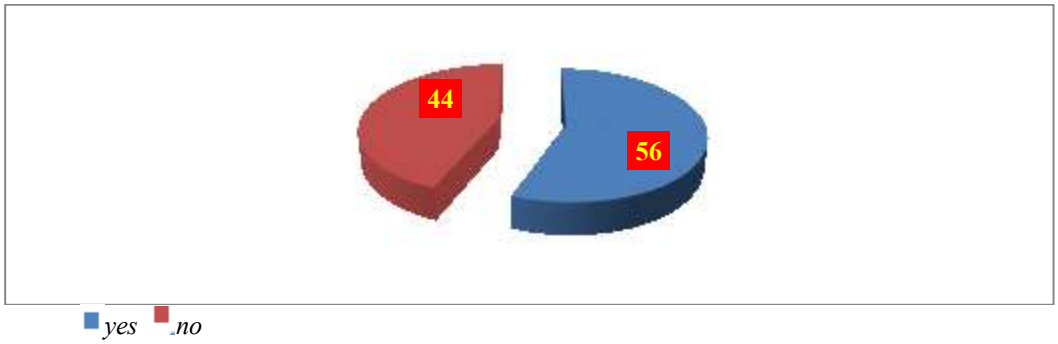

Figure 8 –The structure of respondents after the protection level perceived

In figure 8 we can see that 56% of students feel more protected having an insurance and 44% consider that this is not increasing their level of safety.This is due to the fact that in that 44% percentage the student do not have an insurance or do not have the financial education to understand why would be better to have an insurance.Due to the lack of experience, lack of money, lack of information and having in consideration that at this age they do not have many goods in their possesion, young people do not feel the need to be protected or to protect the welfare of their family.As the Maslow needs pyramide show, the need for security and safety is a superior need, it is

on the third level of the pyramide and this shows that people have primarly to fulfill their basic needs and accomplish a certain level of personal development in order to concentrate upon this sorts of need like security, protection.

Conclusions

The majority of students had no insurance or had an automobile insurance because of lack of money.It was observed that the male were more proned to subscribe to an compulsory car insurance or to a casco because they had automobiles.Other types of insurance,were registered to the ones that completed the questionnaire online and had between 25-33 years old, the principale insurances were house policies and life policies.In the crisis context, price has certainly become more important. It can be assumed that modern retail, which offers good prices, will be the consumers' first choice.Students perception about insurances in Italy revealed the fact that young people appreciate and find useful an insurance policy but due to the lack of money they do not have insurance policies. This is to say that majority of students would buy an insurance due to the trust and security feeling that an insurance held creates. Another reasons for making an insurance is to protect their family and future goods or if they will have the money for it. The principale insurance detain by students are the automobile insurances because this is the only welfare they have. It is to be noticed that financial reasons blend with emotional ones in order to sustain the idea that human beings are not so rational in their decision process and the affective component could play an important role in making an acquisition.

CHARACTERISTICS OF INVESTMENT PORTFOLIOS PASSIVE MANAGEMENT STRATEGY ON THE CAPITAL MARKET

MIHAELA SUDACEVSCHI*

Abstract

The strategies of investment portfolios management on the capital market involves a range of transactions with different financial securities, aimed at optimizing the results. On a developed and efficient capital market, with a high liquidity level, portfolio management primarly depends on investor's targeted level of return and the risk profile of the investor. Passive strategy of investment portfolios management is applied especially by risk aversion investors, who are taking into account all existing risks in the capital market and seeking to preserve the value of investments, rather than increasing its value. This strategy presume that the investor has no information about the prices and the return of securities that would make him to give to his investment portfolio a different structure from the structure of capital market portfolio. Therefore, he will seek a return level equal to the return on the market portfolio, minimizing the portfolio risk up to eliminating the specific risk.

Keywords: *investment portfolios, portfolio management, Random – walk theory, risk aversion, treasury bill.*

Introduction

One of the first proponents of passive portfolio management strategy was Eugene Fama (1), the author of the Efficient Market Hypothesis and Random Walk Theory. According to the Efficient Market Hypothesis is a useless searching undervalued securities or forecasting financial market movements, since the new information is already in the securities price, making impossible overcome the market performance. Also, the Random Walk Theory argues the lack of utility of shares historical price in forecasting of stock prices. That is happen because the information which runs on market is already incorporated in the price of securities.

Thus, using the two theories, E. Fama argues that there is no reason to determinate an investor to invest his capital in certain securities, as long as the market does not provide any signal that would justify such a decision.

Another convinced passive manager is Rex Sinquefield, President of *Dimensional Fund Advisors*[1]. He explained that the option for passive strategy portfolio management is based on understanding the function of the market mechanism. Virtually, no one has a too high volume of information that would allow the adoption of a specific investment decision under conditions of certainty. In fact, no matter how smart or how well informed are, the investors have a fraction of the information that are available to all market at any point in time. Markets are completely interdependent. Cannot be credible there is a person who has more information, in a systematic way, than a dispersed market of 6 billion people. However, Rex Sinquefield does not preclude someone chance to obtain a performance better than the market performance, but this case cannot be predicted with accuracy and, therefore, portfolio management active strategy is considered a waste of time. He believes that is more appropriate and efficient an investment in a market index than a portfolio management by an active strategy with a series of costs involved by selection of best securities. "Price is always correct, even if there are variations, which are determined by information that

[1] Dimensional Fund Advisors, abbreviated as DFA or Dimensional, is an investment firm headquartered in Austin, Texas. The company benchmarks the performance of its large-cap equity portfolio against the S&P 500 Index, Consumer Price Index, MSCI EAFE Index and the Dow Jones Wilshire 5000 Index. (Accordingly Wikipedia, the Free Encyclopedia).

continuously appear on the market" is Rex Sinquefield's argument for a portfolio management passive strategy.

Finally, Merton Miller, Nobel Prize laureate (1990), also explains why passive management exceed that active one: "I favor passive investing for most investors, because markets are amazingly successful devices for incorporating information into stock prices. I believe, along with Friedrich Hayek [also a Nobel laureate, and a contemporary of John Maynard Keynes] and others, that information is not some big thing that's locked in a safe somewhere. It exists in bits and pieces scattered all over the world."[2] (interview for „Investment Gurus").

The portfolio selection and diversification

Investing in shares is a complex process. Even if the investment is short term (speculation) or a long term investment, a financial planning should be done and set the strategy to be followed. A rational management of investment capital involves keeping a liquid part of it. For a better risk management, financial assets should be placed as diversified (bank deposits, units, bonds, pension plans, life insurance or shares). The amount allocated for investment in shares should be in accordance with investor profile and its tolerance to risk (investor with risk appetite / individual risk aversion). Even if can be made equity investments with substantial reduction in risk, it is recommended that the amount of money that is aimed to be invested in shares be not planned for other investments.

Investment strategy

When forming a share portfolio, each investor sets a target of his return for the entire portfolio or sets a return target on each share of the portfolio. Thus, portfolio formation criterion is probability – risk / mean – variance. The mean – variance optimization used in standard asset allocation models is extremely sensitive to the expected return assumptions the investor must provide. Investor's return target is usually established long term of 1 year and therefore, the overall return on investment in shares may be compared to bank deposits interest rate for 1 year or term interest rate on government securities (money investments in zero risk conditions or risk free assets). It is also recommended that before making investment in shares, each investor establish the return objective and risk limit that he is prepared to assume.

The securities efficient portfolio selection, traded on the financial market requires three basic conditions:

1.Investors rational behavior, who target a level of the risk assumed in direct ratio to expected return of investments portfolio.

2.There is a positive correlation between the returns of portfolio's securities.

3.The price changes of securities are purely random. This means that changes in the price result only from the release of new information, which is completely unpredictable.

As financial instruments became more diverse and venture decision turns into a real risk, portfolio management becomes more and more difficult. Theoretically, there are only two portfolio management models: passive investment strategy and active investment strategy, both taking into account market performance. Nevertheless, it is obvious that today efficient management of portfolio is based on models created by complex informatics programs with massive quantity of information. Bringing together these elements can give, most of the time, surprisingly valuable solutions,

Portfolio's financial management aims to provide a superior return of financial investment than any other financial solutions. Thus, investments portfolio valuation and efficient management of portfolio will be made and will be anticipated by mean – variance criterion. It will be observed securities efficient combination that will lead to earn portfolios on the efficiency frontier.

[2] *Investment Gurus* by Peter J. Tanous, New York Institute of Finance, 1997.

The placement of available financial resources of individuals or companies can be done both on the money market and capital market, the option for the portfolio assets being justified by the risk – expected return ratio. Usually, the investment on the stock market is preferred as it provides an additional return from the investment on the money market. But investment on the capital market is more difficult than the other one and requires a detailed financial analysis of investment under certain conditions of income and costs, profitability and risk, respectively.

As a result of investments on the capital market, the investor expects to earn income, being ready to assume a certain level of transaction costs involved. Therefore, for investments in equities, investors expect to earn from dividends and capital gains as a result of the positive evolution of the shares price, which are investment subjects. In case of bond investments, the expected gain for the investor is permanent, for the entire bond life cycle and it consist in a bond coupon. The bond interest coupon means the annual interest amount, calculated as a percentage of the bond face value. In case of a discount bond issue, the earning per bond is generated by the difference between tha sale price of the financial tile and the face value repaid at maturity. If the investor chooses fund units for his investment, the income will consist in increasing in value of the net assets of the fund. The net asset value per unit of fund (NAVU) is the current market value of fund holdings, expressed as unitary value[3]. The NAVU is daily determined and it is calculated as:

$$NAVU = \frac{TotalAssets - TotalLiabilities}{TotalFundUnits}$$

A higher net asset value per unit of fund indicates a higher investment.

The basic rule of stock exchange is „buy cheap and sell high". This is the goal of all investors in the stock exchange, even if they are short-term investors (the stock exchange speculators), medium-term or long-term investors in the stock exchange (institutional investors).

One of the main concerns of the portfolio manager is the fact that the portfolio internal rate of return must be, in any case, higher than the other forms of investment return. Under this approach, it is aimed a certain return – risk ratio, as a goal of investment performance. Since the portfolio is a combination of securities, it has the same performance characteristics of the securities, the randomness of the profitability, the systematic and the specific component of risk.

Modern portfolio theory goes around of two fundamental concepts, which are: the efficient portfolio and optimizing portfolio structure. Financial fund managers will always try to find the efficient combinations of securities or, in other words, portfolios located on the efficiency frontier, which could satisfy investment's utility function for investors, or their attitude to risk. Optimal and efficient portfolios on the financial market are the result of various factors, such as: the rational behavior of investors, the positive correlation between securities return, or the random – walk of the return and the market price of the securities.

The optimal – risk portfolio can be found on the "Efficient frontier". That is the efficient portfolio, which offers the highest return for a given level of risk or the minimal level of risk for a certain return rate. In other words, it is possible for different portfolios to have varying levels of risk and return. Each investor must decide how much risk he can handle and then diversify his portfolio according to this decision. The optimal – risk portfolio has a minimal variance of return on investment and satisfy utility function for an investor with risk aversion. According to Modern Portfolio Theory, this portfolio is situated at the junction of "Efficient frontier" and highest utility curve. As a consequence, an optimal portfolio is the one that increases profitability and reduces risk level.

[3] A consumer's guide to MiFID (Markets in Financial Instruments Directive) – Investing in Financial products / The Committee of European Securities Regulations, Paris, France, March, 2008.

In the portfolio management, the main feature is to reduce and even eliminate the specific risk using the portfolio diversification and taking into account that the return – risk criteria is the evaluation and efficient management framework of a securities portfolio.

For stock market investments, it is necessary to predict market trends, because knowing its characteristics may lead of an efficient portfolio.

The set of portfolios that have the highest level of return for each level of risk or the lowest risk for each level of return forms the "Efficient Frontier".

To optimize the relation return – risk, must met a few aspects: making an investment with a minimum return, placing just a specified percentage of available fund in financial assets and maintaining a liquid part of available funds.

By the efficient portfolio selection, Harry Markowitz introduced the risk quantification theory, using the concept of average expected return and its variance, As a result, the optimal portfolio will be chosen as the maximum return portfolio with minimum risk conditions, achieved by applying the mean – variance criterion.

Based on this model, William Sharpe developed Capital Assets Pricing Model.

In finance, the **capital asset pricing model (CAPM)** is used to determine a theoretically appropriate required rate of return of an asset, if that asset is to be added to an already well-diversified portfolio, given that asset's non-diversifiable risk. The model takes into account the asset's sensitivity to non-diversifiable risk (also known as systematic risk or market risk), often represented by the quantity beta (β) in the financial industry, as well as the expected return of the market and the expected return of a theoretical risk-free asset. Since beta reflects asset-specific sensitivity to non-diversifiable, i.e. market risk, the market as a whole, by definition, has a beta of one. Stock market indices are frequently used as local proxies for the market—and in that case (by definition) have a beta of one. An investor in a large, diversified portfolio (such as a mutual fund), therefore, expects performance in line with the market.[4]

$$R_i = f(R_M),$$

Investment portfolio strategies

The decision of how to manage the portfolio (active or passive strategy) depends on whether the manager has access to superior analysts. A portfolio manager with superior analysts or an investor who believes that he has the time and expertise to be a superior investor can manage a portfolio actively by looking for undervalued or overvalued securities and trading accordingly. In contrast, without access to superior investor, the manager should manage passively and assume that all securities are properly priced based on their levels of risk.

A portfolio manager with access to superior analysts who have unique and analytical ability should fellow their recommendations. The superior analysts should make investment recommendations for a certain proportion of the portfolio, and the portfolio manager should ensure that the risk preferences of the client are maintained[5].

Passive investment portfolio strategy (or indexing strategy) starts from the premise that the investor has no information that would make him giving of his portfolio a different structure of the market portfolio, in which case, the portfolio risk is only the systematic risk. Passive investment management involves minimal trading, based on the belief that is impossible to beat averages on a risk – adjusted basis consistently.

[4] en.wikipedia.org – Capital Assets Pricing Model

[5] Reilly, Frank, Brown, C, Keith - Investments Analysis and Portfolio Management (10th Edition), South – Western Cengage Learning, Mason, Ohio, USA, 2012.

The equations underlying this theory are:

$$E(\overline{R}_{pf}) = E(\overline{R}_M) \text{ and } \sigma_{pf} = \sigma_M$$

Where: $E(\overline{R}_{pf})$ is the expected return for the portfolio, which depends on the expected return of all the assets returns in the portfolio

σ_M is the Variance of the portfolio's return, which depends on the variance of all the assets in the portfolio and the covariance of returns between al pairs of assets in the portfolio

$E(\overline{R}_M)$ is the market return, expressed by the official market index

σ_M variance of the market return

Indexing is a sensible strategy because the security market appears to be remarkably efficient in adjusting the new information. When information arises about individual stocks ar about the market as a whole, that information is generally reflected in market prices without delay. But passive management would sill be a winning strategy even if markets werw inefficient. This is so because winning performance must be a zero – sum. Clearly all stocks have to be held by some of certain investors achieve above – average returns, then it must be the case the other investors are achieving below – average performance. It is clear that all investors cannot be above average.[6]

If the market where portfolio securities are quoted is an efficient market, the only criterion considered for buying them is their relative capitalization. But it is not possible to know if the share's decreasing price is the effect of constitutive factors of securities. Investment passive strategy is considered the most appropriate method for managing a portfolio, in the stock exchange efficiency conditions. The result of choosing this strategy is the elimination of portfolio's specific risk.

Another great advantage of buy and hold strategy is also, the low cost, because broker's commission fees, spreads and other dealing costs become occasional rather than frequent. Passive strategy or buy- and-hold investment strategy means that rather than trading regularly securities are purchased and held for a long time (many years).

Another portfolio management strategy, opposite of the one, previously presented, is the active portfolio management. In an active portfolio strategy, a manager uses financial and economic indicators along with various other tools to forecast the market and achieve higher gains than a buy-and-hold (passive) portfolio.

Active portfolio management strategy is based on the selection of securities included in the portfolio. Manager will select securities according to their own performance and not according to their affiliation to an index or sector. Active management objective is to achieve higher performance as the benchmark (the stock market's official index).Accordingly, the return rate obtained by the investment's active management, which involves investing in securities with high return rate and risk is random, being the result of a normal distribution around the average return. (Gaussian function). Managers who adopt this strategy relies on a certain degree of market's inefficiency. They noticed that it could be achieved a higher return rate for very short term, as long as financial asset's price is not steady. Portfolio active management can be applied both on the individual securities, in which case we are talking about "stock selection" (picking) and on various financial assets (from the stock exchange market and from the banking sector), in which case active management is called "active asset allocation". The third form of active management is "market timing", the strategy which is based on expectations of market's return development.

Portfolio managed by an active strategy has fewer titles than the one which is managed by the passive strategy, because requires individual analysis of each title of the portfolio. The active strategy also involves higher costs than the passive one.

---

[6] Burton G. Malkiel – "Passive Investment Strategies and Efficient Markets" - European Financial Management, Vol. 9. No. 1, 2003, Blackwell Publishing Ltd., 2003.

Conclusions

Passive and active investment strategies properly impose to check if the results meet the objectives. Thus, investment passive manager has to check if portfolio return rate is at the same level as stock index performance. Instead, the manager who prefers to apply an active strategy of the investments and who has to manage the informational efficiency of the market, too, should check if the excess return level achieved is big enough to offset the risk supplement level.

Very few active portfolio strategy managers actually beat the market. That is why famous investors often recommend a simple index strategy, which allows everybody to profit from the overall growth of economy.

The aim of this paper was to prove that investors are likely to achieve far higher returns by employing a passive portfolio strategy, than they are likely to achieve from active portfolio management. Certainly, every goal set in a trading or management strategy has its advantages and disadvantages, which determines an investor to make some compromises.

POTENTIAL DIRECTIONS FOR ENTREPRENEURIAL DEVELOPMENT THROUGH EDUCATION

CĂTĂLINA BONCIU*

Motto: **"Education, innovation and entrepreneurship are keywords today"**
(Silviu Hotaran, director of Microsoft Romania, 2012)[1]

Abstract
The European Union lives, for the past three years, a beginning of change. It was initially stated that it is a shift in the existential paradigm. Along with the financial crisis the United States exported in the whole world, primarily in Europe, a social, economic, spiritual, moral crisis is manifested... all these requiring a totally different approach to work, value, money, investment but not to man – as a social individual, with work, saving and consumption behaviors, with attitudes towards his own needs, as well as the possibilities to meet them... The sequence of crises was completed by a system crisis. In my opinion, it is totally true. A system tired, drained and depleted – according to my thinking - absolutely intentional. Of course, each system has its own life cycle, which implies that also the existing macroeconomic system shall reach in a point of inflection, only natural would have been to not cause its decline and death, but to prolong its existence as much as possible, by fundamental and structural modifications to support an innovative idea, of higher quality, viable for a medium period of time.

Keywords: *education, entrepreneurship, social/current entrepreneurial opportunities*

Introduction

Who can really know what it was planned for the economic and social future of the European Community? A hasty response could be given by developing and implementing the Europe 2020 Strategy. Sufficiently publicized, commented and interpreted, with pro and con approaches, the document provides targets on social inclusion (as a novelty, it is specified the extension of the green jobs), combating poverty and lack of education, rethinking the traditional forms of energy which can be replaced with alternative ones... A deeper approach should offer solutions to questions like "How could we achieve objective ...x?" And this is how the entrepreneurial solutions appear. In this presentation we shall develop a few valuable ideas that inspired entrepreneurs and professional investors may capitalize on today's market. We are going through a difficult period, even hostile for the small and medium business environment, but contrary to the general opinion, one can find enough entrepreneurial opportunities. To the question if entrepreneurship should be learnt, the answer is definitely yes. In this paper we shall illustrate this fact both theoretically, through studies in the traditional educational system or in the public/private organizations of continuous formation, and practically, by actual profession – either individually, in low level attempts or in groups, often facilitated through different projects.

Ever since mankind realized that a form of organization increases its chances of having a comfortable existence, it also understood that the role of learning is in continuous growth. Each may learn from the life experiences of their ancestors, from the close observation of others or of nature.

Nowadays there are many forms of training, for any level of education and formation. Also, there is a wide range of possibilities for each individual, provided that he is willing to learn. Of

* Professor, Ph.D., Faculty of Administration and Business, University of Bucharest (e-mail: catalina.bonciu@yahoo.com).

[1] http://www.euractiv.ro/uniunea-europeana/articles|displayArticle/articleID_13320/Educatia-inovatia-si-antreprenoriatul-cuvinte-cheie-in-lumea-de-azi.html.

course, the chances are not the same for everyone, the equal access to opportunities is not to be found in reality. What we can do, as trainers, is to provide them with as many information as possible, to instill them the courage to undertake, to encourage them in their actions and to consolidate in them the principles, norms and rules of entrepreneurial conduct. Of course, all in the spirit of respect for the ecosystem, the natural laws of the riches that the earth provides us so generously.

The education system introduces the pupils and students in the mysteries of entrepreneurship. It develops not only through education, exchange of experience with other universities with similar activities, but also by practice, or visits to successful companies entered in market niches. In recent decades, entrepreneurship has developed in its social form. The social entrepreneurship (HBS Social Enterprise Initiative) appeared and expanded from an idea, designed to meet a social need, which has been translated into reality and attracted followers, not only support funds, and transformed over time into a prosperous business.

Social entrepreneurship

Fundamentally different from the object of activity of NGOs, which support certain categories of disadvantaged people, social entrepreneurship stands aside from the charitable, voluntary and profitless actions conducted for the needy. The social entrepreneurs are ”problem-solvers” and do this for money. Namely, away from the altruist idealism directed towards others, the social entrepreneurs make business plans based on ideas that generate innovation, in order to prepare the society for change, to open the way for new entrepreneurial actions with profound social impact. Social entrepreneurs work to find means, tools, and ways of economic development that would lead to increases in profit. Of course, there are entrepreneurial courses in many universities of the world, people are competing for scholarships in different pilot organizations in the entrepreneurial environment, or there are research grants to address some pressing issues in society.

Social entrepreneurship, up to the present crisis, had only followers lacking of courage, who critically observed those who really have proven their entrepreneurship in real life. Nowadays, as funding has become more expensive and discretionary granted, entrepreneurship lost popularity. People think more before testing a new idea, which is a great loss for the practical dimension of the concept. In vain we have some well-prepared enthusiasts, with one or several potentially successful ideas, if they do not have the courage to borrow money from the banks to make them viable. It is really a pity because the present society offers many opportunities. Now the conditions to develop a successful social entrepreneurship are really met:[2]

1. *Entrepreneurship plus innate qualities* – the ability to identify and capitalize commercial opportunities in the economic and social environment we live in; the ability to think freely, to be a visionary, on the long term, unhindered by the restricting actions of ordinary people; determination, strong motivation to create and innovate; ability to take risks for the sake of goals.

2. *Behavior characteristics of a change agent, with "generator and destructive role in the same time"*- the ability to identify opportunities, creativity and determination. The idea of entrepreneurship success and serial entrepreneur is based on the perseverance of the entrepreneur to obtain and increase success, hence the profit, to "trigger a chain reaction", encouraging other entrepreneurs to restart the same process and, eventually, to promote the new, multiplying it up to the so called "point of creative destruction", when the innovative exhausts its innovative capacity, the products, services and the business itself ending its ability to generate profits (Joseph Schumpeter).

3. *Social mission* – the creation of value to determine social change, by speculating an opportunity, makes the entrepreneur a social missionary. Identifying the social problem entails the perception of the adequate opportunity for the respective community need. The prospect of financial gain is not as important as the community benefit, the impact with profound changes in attitude,

[2] http://master-supervizare.blogspot.ro/2009/11/antreprenoriat-social-nasterea-unei.html.

behavior, system of needs and possibility to satisfy them. The business turned into a social missions offers a special status to that particular business.

Current entrepreneurial opportunities

1.In the midst of uncertainty caused by the prolonged crisis, successful business ideas are those related to existence, working and living style of people. There will always be new directions for those in the food industry. The obvious trends of extension in current comsumption of genetically modified organisms are not examples to follow. But, shift towards organic farming, capitalize each plot of land with agriculture potential, expand agricultural land and irrigations are the imperative of the moment.

*2.*Permanent restrictions shall turn the future entrepreneurship towards unconventional energy systems. The depletion of fossil fuel reserves, estimated – at the present consumption – to maximum 25 years, as well as the continuous increase in prices for energy obtained in the traditional ways, require research and testing of primary energy resources, renewable and inexhaustible, but dependent on the sunlight, internal temperature of the earth, gravitation interactions of Sun and Moon with the globe's waters[3]. *Solar energy*, annually captured on Earth in quantity of 720x106TWh (dependent on the alternation day/night, on the latitude and longitude of captation, on the seasons and cloud interference) already offers many opportunities for captation and conversion. *Thermic solar energy* is already brought to experimental centers (with low capacity of 15%) through extractions by means of thermodynamic machines (with capacity of 2%, where differences between the surface and depth waters are of 25-30°C). These solutions are not cost-effective, but there is a field where research can be further done. *Photovoltaic solar energy* may be used to produce electricity using silicon cells. Photovoltaic panels are used to convert 10 – 15% of solar energy into electricity. These panels cover increasingly larger areas in Romania, even though its position does not allow capturing sunrays of strong intensity. *Wind energy* has a significant potential, because, at least in theory, the world availability of 60.000 TWh per year may cover the global demand of 40.000 TWh (including losses). *Kinetic and potential water energy* provides the cheapest energy. In terms of power installed, at world level, the hydroelectric power may be considered the first renewable source of electricity. Technically exploitable are 14.000 TWh of the theoretical potential of 36.000 TWh. *Tide energy* is not an opportunity, as projects already started in Canada, France and Britain transform the local ecosystem. *Waves energy* is an important source of energy, unfortunately cheap on the shores and expensive on territories far from them, because of the large areas occupied by the caption facilities. *Geothermal energy* can be transformed into electricity by pumping hot or warm water from the inside of the crust towards the surface. *Biomass*, supplier of biofuels (solid, liquid, gaseous), becomes renewable energy source on two conditions: expansion of forest areas and their rational exploitation. Here there can be identified many opportunities for entrepreneurship.

There are already more or less prosperous businesses[4]: electricity in the paving (through parquet, tiles, carpets); facilities to melt ice and snow outdoors, protection of roofs, gutters and downspouts, pipes, gates and exterior doors; foundations of freezer rooms and skating rinks; relays and mobile phone antennas; not to mention greenhouses in agriculture, livestock farms, public spaces destined to entertainment and recreations (malls, stadiums…)

3.More expensive are and will remain the futuristic initiatives. They have always supported bold ideas those beautiful dreamers who have brought the future in the hands of their fellows. Now it is the time of nanotechnology. Are not sufficiently promoted those researches on technologies and techniques of medical rehabilitation – for example, the efforts of Prof. Samuel Stupp team, with significant results in reversing and preventing the paralysis through regeneration of the spinal cord, the conservation of Parkinson and Alzheimer diseases, the universal repair of all fractures and

[3] http://www.armonianaturii.ro/Sursele-de-energie-neconventionala.html*articleID_1193-articol.
[4] http://energie-neconventionala.blogspot.ro/.

production of new cartilages[5]. And these are not the only achievements. As seems obvious, nanotechnology is most present in computers[6], varnish industry, colours and paints[7], constructions – automatic systems, automatic cranes, laser excavators, industrial robots[8]…

Unanswerably, entrepreneurship can be taught. The present offers wide entrepreneurial opportunities, in terms of types of business, scope, viability over time. Questionable is the capacity of financing the idea. As also the favorably legislative frame.

For several decades people are taught, through the educational system or via non formal and informal training, that in the battle with nature, the latter always wins until the end. Man must understand nature, identify the resources that it provides, the conditions under which it accepts his intervention, and most importantly respect it because if we were to state for the man to "cherish" or "love it" we might just overcome the economical-educational framework. Who teaches man how to find business opportunities without jeopardizing his present and future relationship with nature? The educational system did not always accomplish everything. At least lately, the involvement of various actors from the market has been more than welcome – they are training companies, economic agents, various projects which reunite non-governmental organizations, administrative structures with private partners, they are multinational companies with creative projects, they are organizations powerful research and development departments and pilot products in areas where ordinary human mind cannot imagine reaching.

The very premise is wrong, man cannot fight nature, man must not fight, especially nature. In a more formal way and quite commonly used, the rational man, "Homo tehnicus" or "Homo oeconomicus", as a product of nature, makes decisions based on ethics, environmental responsibility, respecting the rules of human coexistence with nature [Odum, 1971]: not to dissipate potential energy; to know exactly which elements our own survival system depend on; to act in such a manner so that all may benefit as efficient as possible from the energy circuits of the system; to outline in his own work systems those parts that place him on the good side of events; to value other life in the surroundings as one of his own, for only so can he survive; to judge any value through the energy spent to produce it and the energy that he is able to accumulate, and not to convert the energy current into insufficient money means whenever possible; not to use large amounts of energy because mistakes, destruction, noise and excessive surveillance lead to the increase in waste; not to take anything from man or nature without providing an equal value service in return; to enrich informational heritage, because using this unique and complex action, the system will justify new through what is immortal in it; to believe in the benefits of stability over growth, of organizing over competing, of diversification over uniformity, of the system over parties and of the process of overall survival of mankind over personal peace. But who to tell man how to act in order to meet the above standards? Examples to be presented in the paper come to reinforce the need for education in an entrepreneurial manner, innovative, responsible, economically and environmentally responsible, supporting the ecosystem.

Predictions about the future of mankind have always been more or less alarming. It seems that the present ones are based on the restrictive access to resources of an increasing number of consumers. Are we sufficiently educated to meet the needs of the planet that gives us existential support? Of course not. Do we really strive to teach our offspring how they can healthily live and work, economically and environmentally? Absolutely not. Do we manage to sufficiently develop everything that is provided to us by the environment? Certainly not.

It is difficult to understand how we should organize and administer our existence. The consumer society has destroyed almost all human common sense. The needs do not longer meet the

[8] http://www.proiectulvenus.ro/tehnologia/constructiile.html.

level of existential comfort. There is an obvious and excessive polarization of the population – on the one hand an alarming majority survives at the minimum level of subsistence, and on the other hand, there is a small group, part of a "selective club, perpetuated in the family", the owner of wealth and numerous resources. What can we do? How could we overcome the current deadlock, in its double manifestation (economic and environmental)? Who is entitled to coordinate such actions? In any case, someone who is capable, someone literate and with vision, someone who is educated in the sense of respect, responsibility and duty towards fellow predecessors, contemporaries and successors. This means we need learning, experience, theoretical and practical knowledge, support and proper measures taken at high level, but also actions taken by smaller entrepreneurs.

From where we can start the entrepreneurial learning in resource exploitation

Entrepreneurship remains a process of identification, pursuit and capitalization of a business opportunity. The entrepreneur tries to make a business plan, which he must observe as closely as possible, in a structured manner, in order to achieve success on the market, i.e. to collect a satisfactory profit from the opportunity he discovered. A very important aspect is the time horizon, at least three-five years to develop the respective business, during which it is desirable that it becomes self-sustainable. If the entrepreneur succedes in repeating the process at least two times, with the same good results, watching different opportunities, he is a serial entrepreneur[9]. As everything is learnt, except native abilities, it is obvious the need to introduce as learning subjects (at any level) the entrepreneurial experiences, the good practices and the success in business, especially for low level businesses. The entrepreneurship and the business administration is learnt from the books, in a formal organized frame or from practice. But entrepreneurship is strongly related to the personal qualities and skills of a certain person, as well as to the managerial skills. An entrepreneur can develop by accumulating quantitative and qualitiative knowledge at theoretical level, he keeps himself permanently active, individually or within organizations, he operates in a extremely dynamic competitive environment, which is way too turbulent in recent years[10]. Regarding exploitation opportunities,there are many factors that influence the price and output trend in the mining industry, the most important being: fluctuations in profit rates, fluctuations in the cost of extraction, the introduction of taxes by the government. Some of these, such as taxation and the profit level, may by treated as variables of the pricing policy by the government in order to influence the extraction of non-renewable mineral resources.

A. Changes in the profit rate

Profit fluctuations may strongly influence production - price trends in the mining industry. For the beginning we shall assume that the profit market rate will increase. This means that the income rate obtained from a project of alternative investment, say term cash deposits, increases. If the owners do not undertake any amendments to the original plan, the stock reserves shall lead to suboptimal income rates in time. A way to avoid such losses is to transfer production into the present. Namely, the owners shall extract and sell more in the present, which will lead to lower market prices. Therefore, the less it is extracted, the higher shall be the net price of remaining reserves. This means that reserves would be exhausted in less time that the time needed to increase profits.

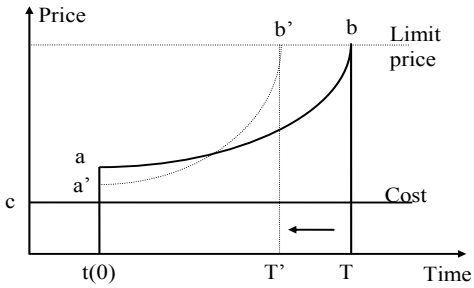

Fig.1. The effect of profit rate increase on the production – price trend and on the depletion time

Figure 1 illustrates this situation. The "ab" curve is the production – price trend before the increase in profit rate. Immediately after increase, the owners should make an adjustment by growing the production level, the price level shall drop to t(0) from a'. For the remaining time it shall be extracted less so as the appropriate rent of the remaining reserves to grow to a higher level. This shall shorten the depletion time from T la T'. The new price – production trend "a'b'" shall be more abrupt than the previous "ab".

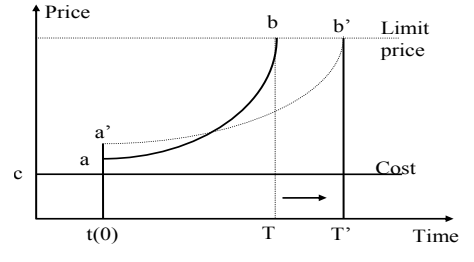

Fig.2. The effect of profit rate decrease on the production – price trend and on the depletion time

If the profit rate decreases, the reverse phenomenon shall take place. The initial price shall increase as the owners move the production into the future by reducing the current extraction. This is because lower profit rates make stocks more attractive than current production. This is also obvious because a lower profit rate would indicate a lower growth trend than in the previous case. This means that the depletion time increases, as shown in Figure 2.

For the start, let us think how the extraction cost increased. This can happen for various reasons, such as the lack of skilled labor, growth of salaries in the industry or the decline in base resources, because the owners start the extraction from ores with difficult access. A growth in costs shall reduce the current extraction level, thus shall increase the starting price, but reduce the subsequent prices. In exchange, this phenomenon shall reduce the amount required in the near future and increase the one in the future. The net effect shall be the increase of depletion time. The situation is described in Fig. 3. As the extraction cost increases, the rent shall be reduced. In response, the owner shall reduce the current production, which shall increase the initial price from t(0) to t(0)a', and the new price – production trend shall be "a'b". On the other hand, a decrease in the cost of extraction shall have the contrary effect, by increasing the initial rent. If no adjustment is made, the renunciation price shall be reached earlier than desired, and the owners shall remain with unsold stocks. To avoid such a situation the owners shall reduce the starting price. In this case, when the extraction cost decreases, the immediate level of production increases, which in turn shall reduce the initial price and the time of depletion (Fig.4.).

B. Taxation system

The taxation system may have powerful effects not only on entrepreneurial opportunities, but also on the policies used in the mining industry. In this respect we can mention several taxes. ***B.1. Excise.*** A tax on the value of production in the mining industry shall determine the increase in costs, with an effect similar to that described in Fig. 4. ***B.2. Ad-valorem tax.*** Set to the price of each production unit, usually as a percentage of the value of the extracted production. Its effects are the reduction of the depletion rate of reserves and an increase in their depletion time. ***B.3. Property tax.*** This type of tax shall shorten the time of depletion.

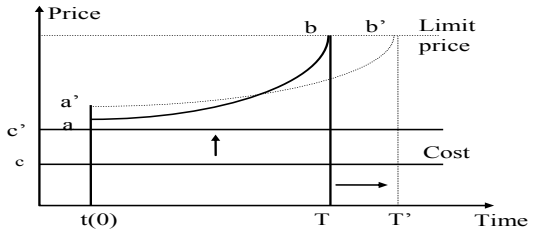

Fig.3. The effect of extraction cost increase on the price – production trend and on the depletion time

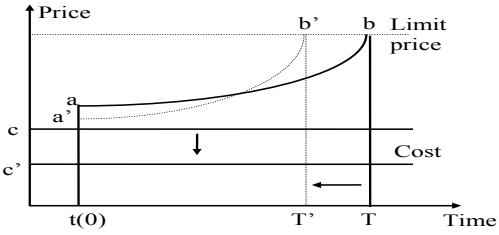

Fig.4. The effect of extraction cost decrease on the price – production trend and on the depletion time

Conclusions

The above example is just one among the many other opportunities which a potential entrepreneur may take, the majority of these being learnt. Of course the role of learning, individual or organized, is essential, not only because it facilitates the business organization and learning, but because it also offers ideas. The ideas of resource exploitation remain among the most profitable. Or, they continue to incite people with entrepreneurial spirit, precisely because mankind, until now, did not find or did not want to find, at large scale, alternative solutions to replace natural resources.

NATURAL RESOURCES AVAILABILITY IN A SUSTAINABLE ECONOMY

CĂTĂLINA BONCIU[*]
CRISTIAN SIMA[**]
GEORGE MARINESCU[***]

Abstract
In the theoretical and practical approach of the economic life, appears more often the idea of sustainable economic development, of reconciliation between man and nature in attracting and using its resources without interfering in its natural movement and evolution.
In this paper we are trying to bring to light the relation between the economic development and the mineral resources, in terms of achieving sustainable development. The place and role of natural factors in the market economy is revealed by bringing to the forefront a number of arguments that demonstrate their vital position in the sustainable growth and development.

Keywords: *mineral resources, natural environment, economic growth, environmental protection, eco-development*

Introduction

When the relations "natural resources – raw materials" and "energy – final products" are considered, we must also take into account the possibility of replacing certain raw materials, because some natural resources become deficient or depleting at some point. Technically speaking, raw materials are interchangeable but, from the economic point of view, the substitution is limited at the level of unitary production costs. Thus, as long as these expenses are under the marginal cost of extraction, preparation and processing of a particular material, its substitution with a new raw material is considered profitable. For these reasons, we consider that in approaching the economic management system of natural resources we have to take into account some peculiarities determined by: the type of resource, the type of ownership on the soil and subsoil, the pricing methods, as well as of the relation between the development of industries consumers of natural resources and the environmental protection policies.

In terms of the degree of depletion of deposits, natural resources can be divided into three categories: renewable, permanent and nonrenewable. Therefore, vegetables, livestock and the biomass resources (generally, riches of the soil) are included in the renewable natural resources category, as they continuously reproduce, so a balance between production and consumption is established. Man can intervene in the processes of production and consumption of renewable resources in order to change their status. In the permanent resources category (solar energy, rain and running waters) are included those whose conversion cycle is the same, man not being able to fundamentally change it. In the specialized literature, permanent resources are mostly included in the renewable category.

Nonrenewable resources are, generally, the minerals, whose formation lasted millions of years. Therefore, geological reserves of natural resources appear as finite, and their exploitation and consumption lead to the depletion of deposits.

This delimitation of natural resources brings a distinct policy of economic management and financing of the exploitation activities by type of resource. For example, in the case of mineral resources, which are exhaustible, it is implemented an efficiency directed exploitation and usage policy. In fact, exploitation of mineral deposits must be made within certain economic and technical limits, so as to ensure the necessary mineral resources for future generations. In the same time, there are certain renewable resources whose regeneration stretches over 2-3 generations, such as the forest resources. Replanting forests and growing trees up to the economic limit of exploitation lasts between 50 and 100 years, which also requires a rational economic management policy on these resources.

Implementing a system of economic management also depends on the type of ownership on the soil and subsoil richness. In Romania, both mineral deposits (subsoil richness) as well as most of the forests are State's property, which imply appropriate organizational systems and international circuits for the management of these resources in the market economy conditions.

A special element in the economic management system of natural resources is the costs-prices relation, as well as the pricing methods for the products in mining, oil, gas, forest resources etc. In mining, as in forestry, there are major differences between the costs of production of the respective companies, because of the exploited deposits or the existing species of trees, as well as because of the conditions for obtaining the respective raw materials or energy resources. Depending on the market prices of raw materials or energy resources, companies may register profits or losses in relation to the costs incurred. In case of profit, companies may use a part of it for development, using, in this respect, a series of short, medium and long term strategies. In case of loss, according to their volume and the social utility of the respective natural resources, they may decide to close the company or to receive subsidies from the state up to a certain economic limit. The state intervention in the field of mineral resources exploitation is mandatory. The state, through its policies, may control both the mineral resources exploitation and the pollution arising from the exploitation activities.

The analysis of natural resources availability

By closely analyzing the results of specialized research we can assess that the earth curst encompasses, in absolute terms, practically inexhaustible resources of all metals and minerals necessary to human beings, although many of them are distributed evenly in the crust and are to be found in low concentrations. The necessary costs for mining the inferior deposits are surpassing their economic and social value and, therefore, under the current technology, these are not considered exploitable.

Anticipating future conditions is clearly arbitrary and subjective and therefore, the mineral richness of a certain region may vary widely from one evaluator to another. Therefore, it can be said that the mineral richness of an area or region cannot be expressed in absolute terms, but only in connection with a certain economic and technological situation, but it may be that in these circumstances there is plenty of room for error.

A country's mineral reserves include both the reserves known and declared by the companies and the estimates based on the best information available. The information obtained is related to the ore regions that, if not already exploited, at least have been prospected.

The concept of reserves is dynamic in essence. Therefore, the terms used to define mineral reserves, namely the quantity, type, concentration etc., must be regarded as variables that can change in time, together with technology and economic conditions.

There are few materials found in nature in a form man can use as such. In order to become materials, in most cases, natural resources have to undergo a certain physical or chemical processing, which requires an increase in prices.

This price rise shall be particularly due to the additional energy necessary for extraction and treatment of poor ores, as well as to the efforts to maintain satisfying ecological and geographic levels (envinronmental changes). These rises shall be partially balanced by a decrease in exploration expenditures, the practice of economies of scale, the technological improvement and the development of procedures for the recovery of all elements of real value from a certain resource. An important problem is the market imbalance which may come from the complex recovery of useful substances (POSTOLACHE T.,1987).

As national economies develop, their profile and structure does not longer depend exclusively on the endowment with natural production factors. The economy structure remains closely linked to its own energy basis and raw materials only as far as the national economy is at a relatively low level of development. The influence of technical progress on the economic structure, in particular on the industry, had led to weakening its ties with the energy basis and raw materials because:

a) the creation of new industries and diversification of production which encourages an increasing demand for high skilled labor and research had resulted in the reduction of natural resources consumption per unit of national income;

b) the development of foreign trade relations has triggered the payment in different currencies for the import of natural resources and the expansion of international cooperation through direct investments in production, as well as in energy and raw material research;

c) some raw materials and energy resources have been replaced by new ones (synthetic and artificial) or alternative resources have been used.

In the economic literature it was said that natural resources depletion is caused by the economic and demographic development. But the technical, economic and social progress leads to a wider nomenclature with new natural and artificial resources which may substitute the weak and exhausted ones. In fact, the technical progress simultaneously acts on the economic structure and on the specific consumption of resources, especially on those which are poor and expensive, making it possible to obtain increasing amounts of goods and services by improving the product performance and reducing the consumption per product unit or performance (W. Malenbaum, 1975).

In theory, the evaluation of natural assets is based on the development of an integrated model, essentially focused on extending the capital theory, and a social welfare theory in dynamic and uncertain conditions. From this perspective, *natural assets are known as capital goods, not produced by the economic system, but directly and indirectly influenced by the production and consumption conditions of economic goods within this system* (Amigues J.P., 1997). We are, therefore, talking about an explicit temporal approach and the introduction of uncertainty in the system, which gives it a double nature. On the one hand, uncertainty comes from not knowing if the potential ecosystems could maintain a certain amount of services to society, as well as their impact on the human activities. On the other hand, uncertainty depends on the dynamics of economy and society, the role of technological progress, the demographic evolution, the dynamics of production and consumption patterns, as well as on the special distribution of agricultural, industrial and population assets.

In purely economic language, the uncertainty is caused, primarily, by the "efficiency" and "dynamic" of accumulation and dispersion of natural assets, which revives the problem of "sustainability" of the economic development trajectories in interaction with the environment dynamics. Secondly, uncertainty also ponders on the criteria which have to be adapted in order to make sure the optimal decisions are taken when talking about the evolution of the relation economy-environment, which have to take into account the future generations.

In terms of applicability, the evaluation of natural assets encounters difficulties because of the studies regarding the physical impacts, certifications or social and political analysis, as well as the social perceptions and implications on the environment when talking about the behavior (actual or

simulated) of the economic agents. The physical impact tends to be confused with individual welfare, in general, measured in biological or physical constants in relation to the environment quality characteristics and with welfare in economic terms, which reflects the characteristics, life options and social situations of individuals, as well as the technical and economic rationales of industrial or agricultural production. As a matter of fact, it is again discussed the performance of surveys to guide the public choice in terms of environment. If the need for a scientific expertise is unquestionable, a minimum democratic requirement must take into account the public option with regard to the financial efforts to be made in order to improve environmental quality. Otherwise, countries will only measure social perception without acknowledging neither the actual behavior of individuals nor their attitude when making a choice, in sacrificing money or improving environmental quality.

Productive assets (mineral resources, forestry, arable land) are evaluated by rules similar to those of productive physical capitals, which allow the conversion of the service flow value generated by the value of available inventories. These flows may be spread over finite periods (the case of a mine, or all exhaustible resources) or infinite periods (for example, a forest continuously replanted, a cultivated and maintained soil etc.). When adopting general rules of evaluation the specific characteristics of each type of natural asset are taken into account. But, sometimes, these rules are not applicable if not verified the following hypothesis: the existence of a balanced capital market rationally anticipated by the economic agents. However, the evaluation of these assets is a very delicate operation, depending on the period of time considered, therefore also on the uncertainties affecting their use and value (for example, the long-term evolution of demand for raw materials, the exploration and discovery of new reserves, the evolution of production technologies and use) (Răducanu V., 2000).

The evaluation of the subsoil mineral assets was subject to many theoretical arguments for extending or restricting the introduction of mineral resources in the national wealth. Taking into account that the availability of mineral resources is dynamic (on the one hand, following the extension of geological research activities and the influence of technical progress on the level of demand for raw materials and energy and, on the other hand, due to the size of the exploitable reserves due to consumption) the problem regarding their introduction in the national wealth became more complicated. In general, economists interested in this area, converge towards two interpretations:

The first group considers it is necessary to make a distinction between the quantifiable elements, well known, of the national wealth and those that cannot be evaluated in a satisfying manner. This idea was promoted by A. Vincent and R. Neline (1965), who believed that national wealth is a theoretical concept and as such, it is necessary to distinguish between its quantifiable elements (such as the industrial exploitable reserves) and those that cannot be rigorously quantified (such as potential reserves).

The second group, supported by N. N. Constantinescu (1976), gives to the term national wealth both a theoretical and a practical meaning. Thus, are included in the national wealth, in addition to the exploitable reserves (which can be determined with certainty), also those reserves which have a low level of useful elements but which can be drawn in the economic circuit in the future. Therefore, it is considered that in the national wealth should be included both the exploitable reserves of mineral resources (known and rigorously determined) and the potential reserves which cannot be drawn into use and efficiently exploited with the existing technologies. The authors also emphasize the necessity of a periodical evaluation of national mineral resource potential because there are indissoluble links between the evolution of the production process and the volume of goods offered by nature.

The problem of introducing the mineral resources in the national wealth was subject to many studies in our country. Most authors have considered that the evaluation of mineral heritage has a practical importance for the measurement of the potential exploitable subsoil, in order to avoid waste in production and consumption, for their efficient exploitation etc. In order to introduce the mineral resources in the national wealth it was required to group the mineral resources, according to the possibility to attract them in the economic cycle, in three categories (Răducanu V., 2000):

1. useful mineral substances found in deposits;
2. useful mineral substances recoverable from deposits;
3. useful mineral substances capitalized as raw materials.

Such a classification of raw materials is particularly useful as it can highlight the share of national exploitable potential from the total mineral asset of the subsoil. In fact, knowing and evaluating the mineral potential offers the possibility to quantify the share of internal production to cover the necessary of energy and mineral resources.

Developing a methodology and a unitary statistical system of classification and quantitative and qualitative assessment of the mineral resources potential represented a complex issue that has been examined repeatedly by the UN Economic and Social Council. In developing this methodology, the recommendations made by F. Blondell and S. C. Lascky were taken into account (they were valued and supported even since 1956 by the International Committee of the Society of Economic Geologists). These recommendations underline the need to distinguish between the term "reserves" and the term "resources"[1], as well as the classifications made by other specialized bodies. Therefore, in terms of opportunities for exploitation, the European Commission classifies the resources in: exploitable, marginal, submarginal and latent (qualitative aspects). From the point of view of the degree of knowledge (quantitative aspects) there are: not estimated (unknown), presupposed, identified and measured. This classification takes into account that, when evaluating and defining reserves and resources, two factors have to be considered: the degree of geological safety regarding the industry's existence and extent (discovered and potential reserves) and the possibilities to recover the useful substances with the economic and technological conditions existing at a certain moment. These two factors are directly influenced by the technological level existent at a certain moment in the mining industry.

Mc. Kelvey made another distinction between reserves and resources, applied to fossil fuels (Mc. Kelvey V.F., 1978). Thus, the reserves are economically identified deposits and resources include other than reserves also the sub-economic or undiscovered deposits. According to Mc. Kelvey, a high degree of geological certainty leads to the identification of new geological reserves and a known economic feasibility degree leads to the growth of industrial exploitable reserves.

It should be noted that in the picture made by Mc. Kelvey resources are listed in columns according to the degree of knowledge, and in rows according to costs. Even though this classification differs according to the geological and mining peculiarities of minerals, we could make a simplified diagram in order to notice the distinction between the different types of resources (Fig. 1), whose evolution is determined by:

[1] The term "reserves" is limited to the mineral substances estimated and considered exploitable from the teorethical and economic point of view and the term "resources" are the "reserves" plus all the substances that may become exploitable (See: F. Blondell, S. C. Lasky, Mineral reserves and Mineral Resources, Economic Geology 51 (7), 1956; D. Gabor, V. Colombo, A. King, R. Galli. "Sa iesim din epoca risipei, Ed. Politica, 1983).

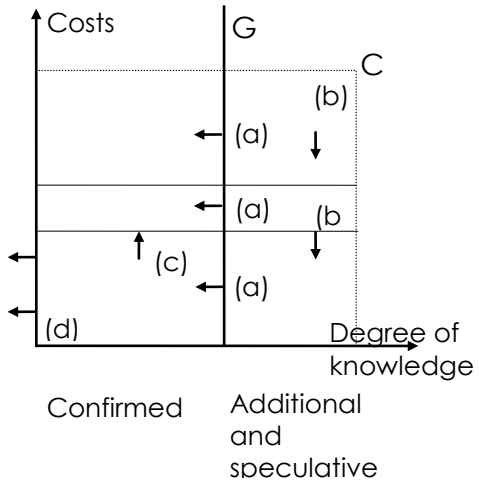

Fig.1: The simplified diagram for the classification of mineral resources according to Mc. Kelvey.

- the growth in volume of confirmed resources following activities of attraction in the economic circuit (arrow "a") of certain deposits;

- shift of some resources from the "high cost" category to "low cost" category following the introduction of new methods of extraction (arrow "b");

- the shift of some deposits from the "reserve" category in the "resources" category due to lower efficiency and higher costs of extraction (arrow "c");

- increase in resource consumption (arrow "d").

It should be noted that the dynamics marked by arrows a, b and c modify only the distribution of resources among the different categories, their total volume remains constant, while those marked by arrow d reduce their volume.

Theoretically, the horizontal lines according to cost may be succeeded infinitely. Practically, these stop at a certain level (line of points c) from where exploitation, even in a distant future, is not profitable. Therefore, the vertical line "G", which marks the evolution according to the degree of knowledge, may have the "O" value, but practically, the process of mineral resources evaluation does not reach this point.

The distinction between "reserves" and "resources" according to the level of production depend also on the mineral resources market, which determines the limit fixing the boundary between these two concepts. As rich deposits deplete, this limit will rise due to increasing level of marginal costs influencing the resources trading prices. Such a movement of the cost limit is stopped by the appearance of certain factors that reduce marginal costs (especially those related to technical progress) (Răducanu V., Bulearca M, and others, 1997).

This methodology was implemented also by the US Bureau of Mines which sorted the mineral resources both in terms of knowledge development (identified and undiscovered) and that of development of profitability level (economic and sub-economic).

Regarding the classification of geological reserves into deposit groups and categories, the specialized literature considers that certain criteria of classification have to be taken into account, among the most important are: knowledge of reserves from the quantitative, qualitative and deposits conditions point of view; the technical and economic exploitation possibilities of the respective deposits; the medium or minimum content of useful substances in the extractible mining gross mass; the existence of natural energy in the case of hydrocarbon deposits etc.

The adoption of these principles led to the development in various countries, including Romania, of similar classifications, which facilitated data comparisons. However, in terms of terminology and parameters used in setting up the categories or classes of reserves these classifications still differ.

Taking into account all recommendations and classifications used, since with the sixth session of the Committee on Natural Resources, held in Ankara in 1979 under the aegis of ECOSOC, was adopted an international classification of mineral resources which attempted to unify all methods of quantitative evaluation of potential mineral resources (in compliance with the essential condition that these principles are compatible with those of the national classifications).

Recently, it has been tried to develop a new methodology to allow the equalization in exploitable reserves of those resources belonging to different categories and groups in order to obtain a full picture of the entire national heritage. Such an activity is extremely important because the evaluation of mineral resources in natural-conventional units (equivalent) allows a better understanding of the potential of different mineral substances by using an equivalent unit (for example: tcc, Kcal or joule for energy).

Problems concerning the environment and the mineral resources

In the context of economic growth, sustainable development, economic and environmental progress, natural resources and environmental protection are having a strong impact on redefining and determining their real content. In the economic literature there are new terms like: ecotechnics, eco-development, ecological progress, ecological growth etc., which express the evolution of economic phenomena and processes due to the human impact on the environment and the restrictions in the natural resources field (FROGER G.1997).

Intense exploitations of natural resources of raw materials and energy have maintained an unsustainable economic growth, leading to an increasing economic gap between the developed and the developing economies. The human impact on nature increased, nature being the main source of natural resources (mineral and organic) and in the same time the main industrial and household waste receptor. The limited absorption capacity of these residues and the low capacity of the natural factors to self-healing were shaken for long periods of time.

In the relations between man and nature the social-economic system proved to be very important. Thus, the desire for profit and the tendency to avoid external costs by not considering the total effect of the economic activity gave the impression of movement in an infinite space, with "free and unlimited" natural assets. The market mechanisms had proved to be unable to prevent this exploitation and degradation of natural environment, causing serious ecological imbalances. This type of economic growth, especially in the developed countries does no longer meet the current conditions, a new vision on the growth model is required, which must take into account a series of restrictions regarding the natural resources and the environmental quality.

Today, the problems on natural environment and natural resources have become increasingly complex. It is therefore necessary: (a) a thorough knowledge of the natural environment and the interactions between the social-economic system and the natural systems; (b) a rational and economical use of natural resources, avoiding waste and disorder in their management; (c) preventing and combating serious environmental degradation caused both my man and nature; (d) harmonize the immediate interests with the long term and permanent interests of the human society in the use of natural environmental factors: air, water, soil, subsoil, flora, fauna, nature reserves, monuments of nature, landscapes. By discussing these issues we can discover a series of consequences regarding the efficiency criteria of modern economic growth and sustainable development.

Modern concepts, that support sustainable development, start reconsidering the human role not only in the economic system of market economy, but also in the social, spiritual, moral space. It can be noted the international and national institutions concern for maintaining a natural environment capable of efficiently capitalize the human physical and intellectual capacity. For Romania, which goes through profound changes towards a market economy, a problem of vital importance is the protection of natural environment. It is also important to learn and promote new conceptions on the relation man-nature, meaning that man is part of nature and cannot live but in harmony with it, for his own good and for the whole community.

The rational and economical use of natural resources leads to obtaining from the same amount of raw material and energy a larger amount of utilities or added value due to the amplification of work in their processing. The process of rationalizing and saving resources is complex and requires knowledge of all factors influencing it. This leads to less pressure on the natural environment, the

rational conservation and use of nature. In this respect, it is necessary to reduce the energy intensity of certain products, to attract and seize all relevant components of deposits, to set aside the way too selective character of processing technologies (by creating integrative technologies), to recover and recycle materials after they are no longer used, to recycle waste and industrial waste.

The problem of economic growth under the environmental protection conditions has at least two aspects. First is the incompatibility of economic growth with natural environment disorder and second the efficiency criteria of economic growth in contemporary conditions.

1. The increase of national income and gross domestic product per capita implies attracting in the economic circuit both the natural resources of raw materials and energy and their superior capitalization. Their selective use requires more energy and causes waste of raw materials. Basically, the relation between the mass of natural resource extracted and the finite product decreases in direct proportion with the increase in processing steps. Contrary to this trend, recovery and recycling reduces this waste, but differently from one economy to another, depending on the existing industrial structure, their degree of technicality and economy.

The economic growth was realized so far as a "polluting" growth based on the idea of obtaining maximum profit and ignoring the external costs of development. Some economists consider that the economic growth cannot avoid pollution, their removal meaning an arrest in the economic growth, solution mirrored in "Limits of Growth" with the famous theory "zero growth." Economic growth and sustainable development should not be opposed to environment, but adapted to the laws of nature, of natural ecosystems. Therefore, ensuring an ecological balance requires particular attention from society, effective actions to protect the environment, to prevent and combat environmental degradations, of rationally using natural resources.

2. The economic growth in the modern market economy is efficient when the optimum economic-social-ecological relation is fulfilled. This includes: maximizing the efficient use of key resources for the society; allocating these resources based on the market mechanisms; maximizing material and spiritual welfare by making consumption more diversified and efficient; maintaining ecological balance. These criteria of the optimum economic-social-ecologic must be completed by new criteria which come from the necessity for economic growth in the context of environmental protection. Such criteria may be: a) minimizing the natural resources incorporated into products or per unit of national product and national income; b) appropriate conservation of natural resources; c) full capitalization of material substance and energy by designing and introducing technologies in steps; d) production and products energy intensity criterion (energy intensity – essential condition of economic efficiency); e) recycling and recovering after consumption; f) the biodegradation and integration in the natural circuits of goods entered in the natural environment; g) minimizing costs imposed by using non-polluting technologies; h) rational consumption of goods and services per inhabitant; i) environmental responsibility in all productive and non-productive areas.

a) *The criterion of minimizing the amount of natural resources per product* favors growth by maintaining the average annual growth rate, in terms of restructuring, modernization and improvement of technology by stimulating activities which bring about technical progress. The difficulties in accessing the raw materials and energy make this criterion a very important one. Along with this criterion we can find the qualitative and quantitative restrictions, the economic efficiency of attracting and using natural resources. Generally, attracting resources occurs in the decreasing order of their effectiveness and therefore the same amount of utilities is obtained by using a bigger volume of production factors.

b) *The criterion of appropriate conservation of natural resources* starts from the fact that social production takes place in a finite environment with renewable and non-renewable resources, which must satisfy not only the immediate requirements of the present generation, but also the needs of future generations. From this point of view, it is necessary to reduce material consumption and reallocation of natural resources used for military purposes by orientating them towards peaceful activities. Maintaining economic growth, without worsening working conditions, involves

rebalancing the relation between the amount extracted from nature and the amount included in the goods produced at various stages of processing.

c) *The criterion on the full capitalization of material substance and energy* starts from the principle of conservation of matter and energy. Based on this criterion it is made the transition from linear production processes to active loop system production processes.

d) *The criterion on the energy efficiency national production* expressed by the indicator "energy consumption/social product or national income" which measures how many energy units are used to obtain a unit of national product or national income. For physical products it is necessary to specify the energy efficiency by degrees of intensity. In the economic literature in our country, it was expressed the need to determine the cumulative energy consumption in value and physical units (t.c.c.).

e) *The criterion of post consumption recycling and recovering* aims to anticipate the recovery of useful material from the physical body of material goods after their removal from production, both as inputs and consumer goods. This involves maintaining the quality of economic goods with low and very low value – likely to be attracted in a given time horizon – and after expressing the duration of use to be considered as "stocks of raw materials in the recycling process."

f) In order to maintain the quality of the natural environment, by avoiding the risk of pollution, *the biodegradation criterion* takes into account the decomposition of materials without any harmful effects to nature. "Biodegradation is the decomposition process of certain elements, objects or organic bodies in nature under the action of living organisms and especially of "microorganisms." By the action of biodegradation the decomposing microorganisms help reintegrate into nature all organic compounds. Therefore, the capitalization in steps of natural resources, ensuring the return and reintegration of waste in nature, justifies the promotion of eco-technics and economic eco-growth.

g) *The criterion of minimizing the anti-pollution costs* is verified by the curve of total savings resulting from the anti-pollution activity. This curve has a rapid growth up to a certain point where growth is slowed (Fig.2.).

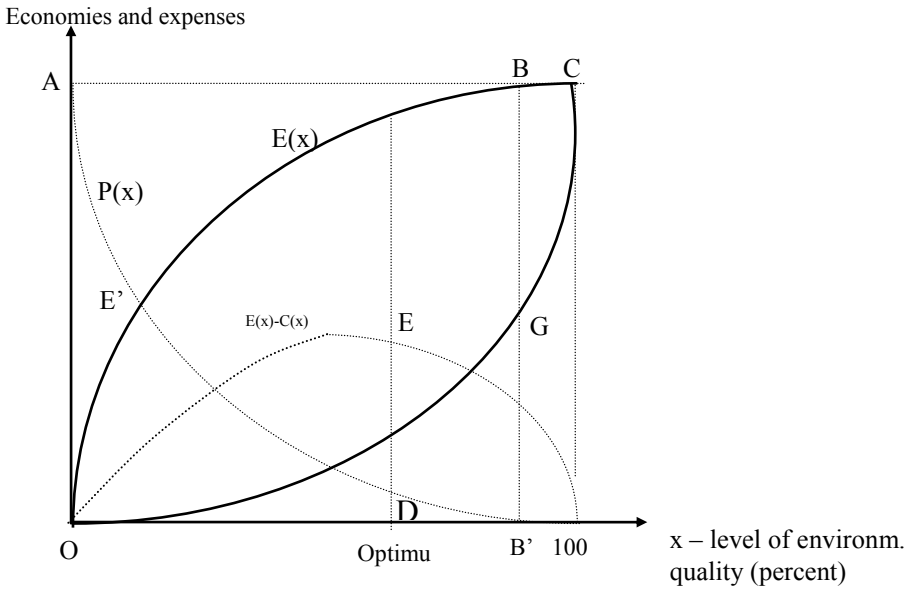

Fig. 2. The evolution of costs for anti-pollution actions C(x), the total savings resulting from the anti-pollution activity E(x) and the damage produced by pollution P(x) according to the level of environment quality (x)

The inside region bounded by curves C(x) and E(x) represents an area of environmental quality where saving are greater than anti-pollution costs. In practice, removing pollutants and waste should be made up to the point B, because this marks the disappearance of economic and social damage caused by pollution. The optimal level, minimal level, where these expenses have maximum effects is achieved on top of the graph representing the differences between E(x)-C(x). In other words, in point D on the Ox axis it is achieved the optimal level of environmental quality; in point E the minimum level, optimal level, of anti-pollution costs; and in point F the maximum level of savings and benefits as a result of the implementation of anti-pollution measures.

The problem of optimizing the anti-pollution costs arises especially since they appear as production costs, included in the company's costs.

Starting from the fact that these expenses are necessary, the company must determine their optimal level compared with the saving and benefits achieved by each pollutant unit.

From the figure result the main functions that define the actions taken in combating environmental damage and the effects obtained. Here is their meaning:

C(x) - expenses for anti-pollution actions, depending on parameter X, which represents the level of environmental quality;

E(x) - total savings resulting from the anti-pollution actions, according to the same parameter x;

P(x)- economic and social damages caused by pollution, according to the same parameter x.

In determining the optimal level we have to start from the increasing values of x, which express a growing level of environmental quality. The anti-pollution expenses curve increases slowly at the beginning. These expenses shall influence the gross income (benefit) and hence the national income and price level. On the other hand their optimal determination is necessary because without any of these expenses the absolute growth of the national product and income cannot take place, because of the worsening environmental conditions.

h) *The criterion of material and social wealth*, under the modern economic growth conditions, means increasing the national income per capital and the amount of goods and services to satisfy their needs. However, under the environmental protection conditions, the need to preserve and improve environmental factors has to start with determining the consumption needs, their harmonization with the biological requirements of each individual. Material wealth is achieved in relation to the natural and human resources level and efficiency. When talking about rational consumption of goods and services per capita, economic growth efficiency may be achieved by switching from mono-energetic production to multi-energetic production, from the "dirty" (but still useful) fossil resources, to the clean ones. How do we exploit or preserve the resources available today, how energetic we develop our new technologies, how carefully we reduce their capacity to damage the environment, all these represent opportunities we leave to future generations. To make sure that the current aspirations will be met in the future, we have to limit the range of actions allowed today. Giving up on the tendency to shorten a product's life and to acquire personal goods, over the real needs, are basic requirements for the conservation of natural resources. Economic growth, under the conditions of environmental protection, is marked by the society's efforts to avoid the degradation of nature. Together with the economic growth there is a tendency of increasing external costs to be born, primarily, by those who caused the environment degradation. It is clear that money have to be spent in order to maintain the environment unaltered.

i) The social and economic implications of the exploitation of nature are not sufficiently understood by all participants in the economic life. One or another criteria mentioned above is being generalized, or any change is judged by the immediate pecuniary effects. "Taking into account this insufficient knowledge, anyone taking any action which represents an investment in nature, no matter how minor it would seem at first sight, is bound to make a scientific analysis of all implications that might result from it."

Conclusions

Any decision should be based on ethics, environmental responsibility, which involves compliance with the rules of human coexistence with nature. These rules were formulated by Odum in 1971 and state that man is part of nature and any economic activity bears the seal of this relationship sine-qua-non. "Homo tehnicus" or "Homo economicus" should respect and implement the following rules, a true human-nature Decalogue:

- do not waste potential energy;
- know the exact elements on which our own system's survival depends;
- act so that everyone benefits as efficiently as possible from the energetic circuits of the system;
- highlight in your own work systems those parts to place you on the goods side of events;
- value the other forms of life in the environment, as it were your own life, because that is the only way to survive;
- judge any value by the energy needed to obtain and by the energy capable of accumulate, and the flow of energy do not turn it, any time it is possible, into money;
- do not use large amounts of energy because mistake, destruction, noise and excessive surveillance lead to waste;
- do not take anything from man and nature without offering them back a service of equal value;
- enrich your legacy of information, because by this unique and complex action the system shall justify what is immortal in it;
- have trust in the advantages of stability over growth, of organization over competition, of diversification over uniformity, or system over parts and of general survival process of humankind over personal peace.

We believe that in terms of a sustainable development the criteria of measuring the efficiency of economic growth could be more, but in this paper we referred only to the most important ones.

It should be noted that these criteria converge towards a common goal: the satisfaction of human welfare. This gives a human meaning to growth which cannot take place, whatever the system, without a rational use of natural and human resources, without maintaining a natural environment proper for life on earth.

We consider necessary to mention that, under the economic development conditions, the natural environment becomes environment prepared for the economic activities of protection, defense, preservation and improvement. Environment appears both as premise for development and the materialized effect of our efforts to attract it and transform it in a man-made environment. From this point of view, we consider complete and full of meaning the definition given by academician N. N. Constantinescu to the environment "the environment itself is defined by understanding man as part of nature and purpose for the general development; he represents all natural factors and those created at a certain time and in a certain place, influencing the ecological balance, determining the life and work conditions of man and the social development prospects." From here results a new concept regarding the position of man towards nature, towards its wealth. The demiurgic, almighty, victorious in the "fight" with nature position is excluded. Environment is an economic factor of utmost importance, traditionally considered production factor, along with capital and labor. It is also interesting the definition of environment given by prof. Gonzague Pillet, from the University of Freibourg, Switzerland, who considers that "the environment or environmental resource is any function assigned or obtained from an ecosystem or produced by it." We note, in particular, the point of view according to which the environment becomes economic resource of the ecosystem as it attains certain functions in the benefit of man. But the environment cannot be limited only to the function of provider of resources and recreational services; it provides, first of all, the greatest service to humanity: the maintenance of life on earth, basis for life and economic activities.

NON-QUALITY COSTS AND THEIR CONSEQUENCES IN THE ORGANIZATION

ANDREI DIAMANDESCU*

Abstract
The purpose of this paper is to evaluate and analyze non-quality costs. This approach can be best based on the definition and understanding of the quality costs and then passing to the study of the effects of failures on the quality and the costs of these failures. Finally the paper will suggest several ways to improve the control costs of non-quality.

Keywords: *quality system, quality costs, non-quality, evaluation of non-quality, total quality management.*

Introduction

The problem of quality costs can be treated in terms of highlighting the costs, the time evolution of the concept and their classification (types of quality costs). Quality costs contribute to a high proportion of the total costs of an organization. Their importance is as important as they can not be fully reflected in the accounting documents, many of them can not be measured in practice. Thus, some costs can be calculated, such as for example the costs involved during the warranty period, others, due to wastage or subsequent processing can be found in the documents, others can not be practically measured.

If it were be possible making comparisons between quality costs, they can be regarded as a qualitative benchmark of an organization. However, to perform such analyzes should be considered different cost categories and among these must be the most carefully studied non-quality costs. About these costs it is said that they are most important in the organizations.

About the costs of quality there are opinions that the correct wording would be "cost of poor quality" or "non-quality costs." Although the arguments using the phrase, non-quality costs "were quite strong, yet most authors use the term" quality costs ", considered to be more comprehensive and fairer because, logically, quality costs include non-quality costs.

Quality costs are in fact a generic formulation of an activity for all costs involved in getting a quality product or service, they can be defined as "costs of insurance and quality assurance as well as losses incurred if the quality is not reached ". This definition completes an earlier definition given all of J.M. Juran, but the definition which better capture the idea of non-quality costs, "costs will disappear if there will be no defects"[1]

Quality costs include three categories of costs that voluntary cost to achieve a desired level of quality, cost involuntary failures in reaching this level (these cost categories were called "quality costs" - costs of compliance and the "cost of non-quality" - costs of non-compliance), plus the cost of the lost opportunity.

This classification was made to distinguish clearly between "useful cost, good, necessary" that will produce the desired quality and "bad costs, unnecessary", which are cost penalty for failures to achieve the desired quality.

Methodology for assessing non-quality

Evaluation of non-quality is first considering the cost of the investment in quality systems. These investments are designed to bring the organization to a level of quality according to the

* Assistant Lecturer, Faculty of Economic Studies, "Nicolae Titulescu" University of Bucharest; PhD Candidate at The Bucharest University of Economic Studies (email: dandrei@univnt.ro).

[1] Joseph M. Juran – *Quality Control Handbook*, McGraw-Hill, New York, 6th Edition, 2010.

requirements. The second issue concerns the costs incurred by the organization for quality failures. These costs are most important to the organization and should be as carefully controlled and managed.

Working on quality management organizations generates some costs that are not included in the traditional accounting systems. However the biggest challenge in testing, evaluating and reducing quality costs represent precisely these hidden costs. The cost of non-quality can be calculated as the difference between the costs actually incurred by the organization in the current and costs reduced if there was no error and no defect during the design, manufacture, marketing and use of products.

Information necessary to compute non-quality costs are sometimes difficult to obtain. The data source for the analysis of these costs may be technical and commercial product documentation, and accounting organization since it records the data. Another source of data could be estimates based on surveys and organizations interested in knowing the costs of non-quality.

Total Quality Costing

Traditionally, so-called quality costs have been divided into the following four main groups[2]:

1. Preventive costs;
2. Inspection / appraisal costs;
3. Internal failure costs;
4. External failure costs.

In the quality literature, it is often claimed that total quality costs are very considerable, typically between 10–40% of turnover. This is why these costs are also called 'the hidden factory' or 'the gold in the mine'. We believe these figures can be much higher, especially if invisible costs are taken into account.

Invisible costs are everywhere. This can easily be seen by looking at developments in quality cost theory from before 'the TQM age' to the present.

Before TQM. Quality costs consisted of the costs of the quality department (including the inspection department), costs of scrapping, repairs and rework and cost of complaints. The companies were aware of the above division of quality costs and understood that prevention was better than inspection and that an increase in preventive costs was the means of reducing total quality costs. Most companies, however, did not deal either systematically or totally (i.e. in all the processes in the firm) with these costs.

The TQM age. Total quality costs are defined as the difference between the firm's costs of development, production, marketing and supply of products and services and what the (reduced) costs would be in the absence of defects or inefficiencies in these activities. Put another way, total costs can be found by comparing the firm with 'the perfect firm' or 'the perfect processes'. In this sense, there is a close connection between the concept of quality cost and benchmarking.

There is also a close connection between quality control points and quality costs. A quality control point is defined as a result (output) of a process which management has decided to control and therefore measure. The result of any process is thus a potential quality control point. Since all firms consist of a large number of processes, there will be a similarly large number of potential control points. Each of the firm's processes can be compared with the perfect process and all the potential control points can therefore be compared with the result of 'the perfect process'. If the difference between the result of the perfect process and the firm's present process result is valued in money, we get the process's contribution to the total quality costs. We can also call this the process's Opportunity For Improvement measured in money. This process can best be determined either at the time of the annual quality audit or during the year when the quality improvement teams choose new quality problems to solve.

[2] Dahlgaard J.J., Kristensen K., Kanji G.K – Fundamentals of Total Quality Management – Process analysis and improvement; Taylor & Francis Group, e-Library 2007.

Approach of non-quality

We can not talk about quality without managing non-quality, if we get the additional costs, which reduce the competitiveness of products.

Concept of quality means the assessment of the cost of non-quality improve previously attempted definition of quality is "the totality of characteristics of an entity that bear on its ability to satisfy stated and implied needs" (ISO 8402). Quality is "the totality of characteristics of an entity that bear on its ability to satisfy stated and implied needs" (ISO 8402).

The best definition in the opinion of many specialists can only come from those who are considered as the pioneers of quality management. Thus, for K. Ishikawa "Quality can only be defined in terms of one who does it."

For the worker quality means "to be proud of his work".

For enterprise manager quality means the realization of the required production.

For the engineering director quality is the compliance with the specifications

For the marketing manager quality is the best fit of the product to public expectations.

However, obtaining this quality implies a cost that denominates the cost of obtaining quality"

Evaluation of the non-quality methodology

We can distinguish two aspects:

• The first aspect is related to the investments we made to achieve the level of quality that meets the requirements. This is the price to pay to ensure an acceptable level of quality.

• The second aspect is the cost of doing things wrong, or not doing them well since the first time. The cost incurred is twice the price it would be enough to invest to make a conform quality product.

Financial implications

The production activity generates energy losses, human and physical resources that do not appear in conventional systems where only conventional accounting costs of material, labor and workshop are taken into account. Research quality should reduce these hidden costs.

The cost of non-quality can be defined as the difference between the current cost and reduced cost if there were no errors and defects in the design, production, marketing and use.

It is possible to calculate the cost of non-quality in % of turnover of a company or a nation's GDP.

The information needed to calculate the costs of non-quality are sometimes difficult to obtain (often confidential). They can be obtained from the accounting documents (analytical and general), technical documents, administrative or commercial. It is always possible to make an estimate from surveys of persons concerned.

Elements of costs of non-quality that involves in the evaluation

Most experts say that non-quality costs can be measured from:

- Excess of financial expenses
- Delays billing
- Loss of prestige
- Delayed start or premature introduction of new products
- Absence, insufficient or inadequate presence of the product in retail outlets
- Repeated requests for changes in design
- Purchase price wrongly established or calculate
- Out of stock or excessive stock
- Stop production

- Investments not utilized at their entire capacity
- Over-consumption of raw materials and supplies
- Failures of production tools
- No recovery or inadequate utilization of by-products.

After the evaluation, the following ratios are calculated and integrated dashboard management company. They constitute the reference indicators to monitor progress in the improvement process:

$$I_1 = \frac{NQC}{T} \times 100$$

$$I_2 = \frac{NQC}{AV} \times 100$$

$$I_3 = \frac{NQC}{NE} \times 100$$

NQC = Non quality costs
T = Turnover
AV = Added value
NE = number of employees

Analysis of the different costs of non-quality

The calculation of the cost of non-quality is an accounting method that locates in the business all unnecessary expenses caused by the failure of products and services. The cost of quality has the same elements with the addition, the cost of failure prevention.

The result of the calculation of the cost of non-quality allows the company management to prioritize the improvement of the quality programs.

It is important to observe that the data at the origin of this information are not always reliable, and these expenses are only part of the shortfall.

For example the fact of losing dissatisfied customers services business is generally much more serious than replacing defective products.

The design means manufacturing and distribution is not perfect and it causes defects in the product that will result in losses automatically.

These losses can be quantified directly:

1. Internal anomalies: scrap, rework, repairs - repairs, decommissioning of finished product or ongoing losses unemployable purchases other internal costs, pollution, accidents, absenteeism, etc.

2. External anomalies: Customer complaints, cost of warranty, other external costs, late fees, interest charges for missed deadlines, loss of customers, reimbursement for damage caused to others, insurance premium to cover the liability products etc..

We must add to this the indirect losses in credibility as the loss of brand image (and often most difficult to quantify)

Detection

- Salary and expenses related to audits
- Cost control outsourced
- Supplies and products for various tests used to evaluate the product
- Costs calibration

Prevention

- Establishment of quality documents (manual quality assurance, quality plan, control plan, procedures)
- Evaluation of suppliers
- Awareness, motivation and training to quality and quality management.
- Conducting quality audits.

Methodology to reduce the cost of non-quality

- Understanding the situation, identifying all the costs of non-quality (state of places)
- Set realistic and achievable goals of decreasing costs.
- Prioritize problems with the cost Pareto chart:
- Ranking the costs.
- Identifying the priorities
- Determine the true causes the diagram cause - effect (Ishikawa) that classifies a structured way the views of various experts
- Define corrective actions, monitor their implementation and measure the effectiveness with dashboards
- Conclude preventive actions
- An inappropriate choice of suppliers may result in the following consequences:
- Reinforced entrance inspection
- Returns to suppliers
- Delays
- Incidents manufacturing.

Action process for the treatment of non-quality

Cost improvement

Lowering costs is given by:

- Improving process operations
- The removal of non-rewarding operations
- The improved results following improvements oriented process.

To improve the results, it must be directed to the process and not move towards results. The process must be understood in its broadest sense and includes the development. The largest gains are achieved in the design and industrialization.

Reduction of losses

In an attempt to reduce losses, investments are needed.

Investment in hardware detection

It is investing in equipment, methods and techniques of control:

- Receiving inspection
- Controlling the products
- Verification of the measuring instruments
- Controlling the lines
- Inventory control
- Monitoring time
- Control orders and invoices

But this investment is limited. This is strictly a consequence andit does not address the causes of evil.

Investment in prevention equipment

We can talk about the reason to investing in equipment, methods and techniques of prevention.

- Check specifications (contract)
- Review design and production
- Improvement plans and records of planning and control
- Creating quality indicators
- Training of staff
- Implementation of a quality approach from model

An investment in prevention is made only if the losses will be reduced. The optimization is made knowing that there is a correlation between losses and investment.

Conclusion

Non-quality costs money. The cost of non-quality proves to be an indicator that can help the company management to understand the problem of quality, highlight opportunities for improvement and to measure the progress of the improvement actions.

It thus makes it possible to summarize the overall situation of the quality in the company and speak in common terms, which allows us to measure progress and set priorities in corrective actions.

It is therefore necessary to manage quality by implementing a gradual process of continuous improvement that will bring the industrial enterprise of a state of "detection - defection" to a state of "prevention - action."

The most productive investment would ultimately be for many businesses prevention. This will be a key element of quality management.

AN OFF-LINE DUAL MAXIMUM RESOURCE BIN PACKING MODEL FOR SOLVING THE MAINTENANCE PROBLEM IN THE AVIATION INDUSTRY

GEORGE CRISTIAN GRUIA[*]
MICHAL KAVAN[**]

Abstract
In the aviation industry, propeller motor engines have a lifecycle of several thousand hours of flight and the maintenance is an important part of their lifecycle. The present article considers a multi-resource, priority-based case scheduling problem, which is applied in a Romanian manufacturing company, that repairs and maintains helicopter and airplane engines at a certain quality level imposed by the aviation standards. Given a reduced budget constraint, the management's goal is to maximize the utilization of their resources (financial, material, space, workers), by maintaining a prior known priority rule. An Off-Line Dual Maximum Resource Bin Packing model, based on a Mixed Integer Programing model is thus presented. The obtained results show an increase with approx. 25% of the Just in Time shipping of the engines to the customers and approx. 12,5% increase in the utilization of the working area.

Keywords: *bin packing, maximization, resources, scheduling*

1. Introduction

Scheduling in the field of Maintenance is any variety of scheduled maintenance to an object or item of equipment. Specifically, Planned Maintenance is a scheduled service visit carried out by a competent and suitable agent, to ensure that an item of equipment is operating correctly and to therefore avoid any unscheduled breakdown and downtime.[1]

Aircraft maintenance checks are periodic inspections that have to be done on all commercial/civil aircraft after a certain amount of time or usage, according to Federal Aviation Administration (FAA) in the United States,[2] Transport Canada, for Canadian carriers, or the European Aviation Safety Agency (EASA) for EU carriers. Taking into account that an airplane (or helicopter) engine must be checked and repaired in such a way that the quality of the repair should be nearly perfect and the operational scheduling involved in this field, we've decided to investigate a scheduling problem within a maintenance facility, where the engines must be priority-based scheduled function of the availability of multiple resources.

The present article aims to present a way for solving the problem of maximizing the utilization of the available resources for the maintenance and repairing operations of the propeller motor engine (for helicopters and small commercial and recreational airplanes) based on a priority rule when entering the company. In order to solve it, a Mixed Integer Programing model is created, but due to the complexity of the problem we try to solve it by an analogy to the Off-line Dual Maximum Resource Bin Packing problem where three novel approaches are used. Then, the model is tested in a Romanian company and results are presented accordingly.

The Bin Packing Problem has been extensively studied in combinatorial optimization. We can state it as follows:

---

[*] Graduate Teaching Assistant, Ph.D. Candidate, Czech Technical University in Prague, (georgecristian.gruia@fs.cvut.cz).
[**] Associate Professor, Ph.D., Czech Technical University in Prague, (michal.kavan@fs.cvut.cz).
[1] Wood, Brian, *Building care*. Wiley-Blackwell, 2003.
[2] AFS-600. "Chapter 8. Inspection Fundamentals". In *Aviation Maintenance Technician Handbook,* ed. Federal Aviation Administration. 2008, 129.

-for a given set of n items with a weight w_1, w_2, … , w_n and an unlimited number of identical bins of maximum capacity c, find a way of packing all the items into the minimum number of bins so that no item is left aside and the capacity of the bin c is not exceeded.

This problem has several applications in different areas like production scheduling, manufacturing, hospitals, logistics, but however is a NP-hard problem[3] as Karp[4] showed.

In our case, the above stated problem was modelled as a Dual Bin Packing Problem (DBPP). If classical bin packing problem is about minimizing the total number of bins required to assign a given set of items, the dual one is about maximizing the number of items that can be packed in the available bins, i.e. maximizing the resources utilization for our maintenance operations.

The DBPP has been referred to in the scientific literature[5], as a problem of maximization the number of items packed in a fixed number of bins[6], but also as a problem of unlimited number of bins[7], where we should pack items in as many bins as possible so that the total weight of each bin is at least equal to its capacity. Assmann[8] studied this problem from a discrete point of view. We will however consider the first type of the DBPP in our study case.

There are a lot of applications of the DBPP but until this article was written, the authors didn't find an application in the manufacturing aviation industry where products are scheduled according to their priorities and the workers' performance on their jobs, which in the worst case scenario may increase their time working on a specific assigned product, thus the schedule would be affected.

2. Problem definition

The Romanian company involved in our research, further "the Company", was as many other manufacturing and maintenance companies, hit by the financial crisis. Due to this unfortunate situation, the management had to let go some of the employees and the working floor was redesigned in order to better comply with customers' requirements and due-dates. A problem with the process line occurred when the delayed orders hit a record number of 300 per week (because workers were laid off and human resources together with the financial resources had to be drastically reduced). Also due to the Company's working profile, the maintenance has to be done according to the airspace regulations and ISO 9000 Quality Standards, so a middle way had to be found when scheduling the incoming orders for different types of engines with different problems.

The Company's facilities are equipped with a tear-down area, a dismantling dedicated area and several types of equipment for measurement and NDT capabilities. Engines repairs and overhauls are performed using state-of-the art technology. All phases of the repairs are applied according to the requirements: dismantling, stripping and cleaning, visual inspection of components, measurement and/or non-destructive inspection tests. After the preliminary analysis, technical reports are filled in and the replacement of non-reparable parts is made accordingly. The engine is then reassembled and tested in another testing facility for ensuring the required performance as part of the quality assurance process. The Company's testing facilities cover a wide range of tests: test rigs for fuel/oil/hydraulic accessories of the engine, balancing and over-speed equipment, test beds for

[8] S.F. Assmann, "Problems in discrete applied mathematics" (PhD diss., Mathematics Department, Massachusetts Institute of Technology, 1983).

turbojets and turbo shafts. Similar procedures are applied on specific equipment for Dynamic Components for helicopters.

Assembling of components, subassemblies and final assembling are performed in a dedicated shop area, divided in several working areas (WA), using complex assembling precision specific equipment, where specific personnel works in teams, each team being run by a Team Leader (TL) and each team having assigned one engine at a time. There is also available and used equipment for balancing (shafts, rotors, rotating assemblies) and over-speed tests.

Due to the large number of airplanes and helicopter engines which have been waiting for the maintenance operation to be performed on and also due to a new lucrative contract for the next 5 years with important clients, the management decided to redesign the production and overhaul shop space in parallel with an optimization of the available resources, according to a priority-based rule.

For the production 2,000 sqm were dedicated and for overhaul 4,000 sqm shop space. The assembly shop of the new facility allows for other engines from the same family-types and sizes similar to the engines in current maintenance to be repaired. But in order to do so, the current orders had to be scheduled for maintenance and the delayed orders had to be reduced to zero.

The old and new orders had to be scheduled according to: the priority of each case (late orders had the highest priority, because of every additional day of the one week, i.e.5 working days, guaranteed maintenance time, the Company had to pay 0.01% penalties; and also new orders had high priority, i.e., the customers had the opportunity of paying an extra fee for getting their engines fixed faster than usual), the resource availability (available shop space, equipment, each TL was responsible for his/her engine and each TL had a certain affinity and thus was specialized in a certain engine type) and working time of each team. Due to the constraint imposed by the limited resources compared to the high number of engines which had to be repaired in the same time, a working schedule was implemented for the 8 hours, 5 days a week, working time. Sequencing the maintenance operations on engines and placing them at the right time slots, according to the available resources plays an important role in maximizing their utilization.

In this schedule case it was considered the case of maximizing the resource utilization – for the fixed costs to be as lower as possible, when assigned to final products. In other words, the fixed costs with the resources and the new production and overhaul shop space, are known in advance and taking in consideration that the working overtime would make the management to pay workers their overtime, the goal is to maximize the number of engines that are repaired using fixed working hours through a given set of available resources.

Some of the engines which arrived for their annual maintenance procedure had complaints from their owners and had to be subjected to additional tests before the typical maintenance procedure, and so required a delayed start of the maintenance, i.e. delayed start.

The engines when entering the Company's facility are registered in the internal informational system (database) from where are scheduled on a first-come, first-served basis.

The Service department, based on this FCFS policy but also according to the priority of each engine in combination with some engines which had to be subjected to different tests (had a delayed start) had to choose the optimal solution of the sequence of the engines which entered the shop floor. Accordingly, a tool was needed in order to comply with these constraints but also to maximize the resources utilization, as part of the top management's priority.

Our problem is a complex one because it takes in consideration a long term period of time, where the resources can have distinct availabilities, function of different parameters like: delayed materials needed for the repairs, different tools and/ or machines are not in handy for one team because are used by another team, one team cannot work on more than one engine at a time and so the assigned floor space is occupied until the engine is ready to go.

Another constraint is added to the actual problem, i.e., new people are needed to be specialized for the new orders (also because of the lay-offs, it was cheaper to employ and train new workers than to increase the salary of the old ones, which accordingly were laid off) and so they

should be able to be trained on the spot within different maintenance operations and the maintenance could have been prolonged.

The article is further organized as follows. A MIP model is presented in the 3rd part, while in the 4th part a simplified example of the DBPP is solved using three heuristic approaches for finding the best possible solution: First Fit Decreasing-based (FFD), First Fit Increasing (FFI) and a new First Fit Best Randomized (FFBR) approach. In the last part of the article conclusions are drawn based on the obtained results and we show that the FFBR is the best possible solution for our example, taking in consideration that DBPP is NP-hard.

3. A Mixed Integer Programing (MIP) model

We've started from our goal of maximizing the utilization of available resources (people, space, fixed working hours) according to the cases' priority and availability. In order to do so we should maximize the number of repaired engines in a given working time-slot according to the resources' availability. Due to the priority constraint, we should maximize the sum of priorities of the scheduled engines as an objective. In this way, weights are given to each engine when entering the facility in order for a priority scale to be made, and use these weights for the model to solve first the highest priority cases and then the lower priority cases.

In order to maximize the utilization of the working area and the shipment of the repaired engines, two coefficients are introduced:

$$k_1 = \frac{total\ time\ the\ WAs\ are\ occupied}{total\ available\ time\ across\ all\ WAs} \text{ and } k_2 = \frac{scheduled\ engines}{total\ number\ of\ engines\ to\ be\ scheduled}$$

and will be used is assessing the improvement of the maintenance process after implementation of the three approaches for our DBPP.

Before trying to state the MIP model, several initial conditions should be stated:

- A team can only work on one engine at a time in only one designated shop area.
- A team can repair an engine only if all the members, including the TL is present at work in that day, at that time interval (time-slot).
- Each team is specialized in one engine and when prioritizing this aspect is considered, but every team can also switch the type of engine which will repair in case of increased number of a certain engine type.
- Engines, when entering the facility are prioritized according to the customers' requirements and they are sent to testing facility or to the deposit (where will wait to be processed at a later time) or directly to the WA. Accordingly, we can give 3 levels of priority to these engines: 1 star to the engines which are not an urgency and can still wait a little time in the deposit, 2 stars for those which should be tested and 3 stars to those, which customers need as soon as possible and for which they paid an extra fee to "be first in the row".
- Each TL has assigned the type on engine at which his/her team is the best and we can predict that the duration of each repair is known in advance.
- In order for the time to be better managed, the working day (8 hours) is divided in 30 minutes time slots obtaining a 16 time-slots for one working day. We have chosen 30 minutes, because this is the average time for checking the parameters of an engine (visual and computer aided process) by performing a basic diagnostic analysis.
- The Company works on a 1 shift, 8 hours a day, 5 day per week, working program.
- An engine can be automatically scheduled for maintenance by the Service department, but also by each of the Team Leaders according to their time availability. As part of the management's motivation scheme, a Team Leader and his/her team can enter the internal competition of "the Best Team" Award, with extra financial benefits, according to the highest number of engines repaired

according to their priority. But also the number of engines assigned by the TLs cannot surpass the number of the assigned engines by the Service department.

For a clearer description of the problem, we give a mathematical formulation for the problem. We first give notation used in the formulation (and throughout the paper).

The parameters, indices and variables of the proposed model can be seen from table 1 below:

Variable	Equals to:
$x_{ewatltsd}$	1, if the engine e is scheduled for maintenance in the WA with a team, run by team leader TL, at time-slot ts on day of the week d, 0, otherwise
y_{ewad}	1, if the engine e is assigned to the WA on day of the week d, 0, otherwise
z_{etl}	1, if the engine e is scheduled for maintenance by their TL, 0, if it is not scheduled at all
w_{eS}	1, if the engine e is scheduled for maintenance by the Service department, 0, if it is not scheduled at all

Table 1 – Variables of the MIP model

A start time (St) and an end time (Et) can also be considered for the maintenance process of a given engine.

Indices and parameters:

EIndex for engines requiring maintenance e = 1, 2, … , E

WAIndex for working areas: wa = 1, 2, … , WA

TLIndex for team leaders: tl = 1, 2, … , TL

TIndex for teams: t=1, 2, …, T

DIndex for days, used for scheduling the maintenance operations: d = 1, 2, …, D

TSIndex for time-slots during a working day: ts = 1, 2, … , TS. In our case TS=16, for one shift working day, but we consider a general approach.

IIndex for repairing operation: i = 1, 2, … , I

JIndex for engine type which will be repaired: j = 1, 2, … , J

SSet of all engines which must be repaired / pass maintenance operation

S^TSet of engines which require additional tests

S_iSet of engines requiring the repairing operation i

S_jSet of engines of type j

S_{tlj}Set of TLs specialized in repairing the engine type j

P_{ed}Priority of engine e in the day d: $P_{ed} \in \{1, 2, \dots, k\}$ $stars$ as a priority scale

T_eTotal time for maintenance / repair for engine e, required by the best TL and his / her team (we assume that T_e = 1 time slot = 30min)

T_{tl}Time needed by the TL for fixing an engine according to his/ her abilities (skills)

T_TTime for the transportation of the materials, people, engine to and from the WA, before and after the maintenance

A_{tltsd} 1, for the availability of the TL (with his / her team) at time slot ts on day d; 0, otherwise.

E_{tsd}Total equipment (tools, machines, parts, consumables) available for time slot ts on day d

N_{ee}Number of equipment e required for fixing an engine e

Although each TL has his / her own team, on some engines which are in better conditions than others, there is no need for all of the team members to participate in the repairing process, thus we consider that the number of team members is variable and we introduce:

M_{tsd}Total number of team members available at time slot ts on day d

N_{me}Number of team members required for fixing an engine e

Our goal is to maximize the number of engines scheduled in all the WAs during all given working days. This can be noted as follows:

$\sum y_{ewad} P_{ed} = maximum$ subject to:

$\sum_{watld} x_{ewatltsd} \leq 1, \forall\, e, ts(1)$

This states that an engine can be assigned at any time slot to at most one TL and WA on a certain day.

$\sum_{etl} x_{ewatltsd} \leq 1, \forall\, wa, ts, d(2)$

That is, at most one maintenance operation can be performed in a WA in a given day and time slot.

$\sum_{ewa} x_{ewatltsd} \leq 1, \forall\, tl, ts, d(3)$

Any TL can work on at most one engine at a given time slot and day.

$\sum_{wad} y_{ewad} \leq 1, \forall\, e(4)$

An engine will be scheduled to at most one WA across all days.

$\sum_{tlts} x_{ewatltsd} \leq TS\ y_{ewad} \forall\, e, wa, d(5)$

A TL works on an engine in a given WA at a time slot on a day no more than the assigned TS for engine e to be repaired in the WA on day d.

$\sum_{wad} y_{ewad} = \sum_{tl}(z_{etl} + w_{eS})\ \forall\, e(6)$

The scheduled engine will be assigned with its TL to a specific WA on a day d.

$\sum_{watsd} x_{ewatltsd} = (T_e + T_{tl})(z_{etl} + w_{eS}) + T_T\ \forall\ e, tl(7)$

The total time slots an engine is worked on, equals to the sum of total time for maintenance required by the best TL and the time of the actual TL according to his/ her skills, where the T_e is considered a reserve time slot for additional complications which may appear during the repair.

$\sum_{wa} x_{ewatltsd} \leq A_{tltsd} z_{etl} + A_{tltsd} w_{eS} \forall\, e, ts, d, tl(8)$

The scheduled engines by their TL and the Service department should be repaired only by the Team Leaders who are available.

$S_t \leq ts \sum_{watld} x_{ewatltsd} + TS\ (1 - \sum_{watld} x_{ewatltsd}) \forall\, e, ts(9)$

The start of the maintenance operation should not exceed the time slot allowed for the start of its repair.

$E_t \geq (ts + 1) \sum_{watld} x_{ewatltsd}\ \forall\, e, ts(10)$

The maintenance of an engine with eventual repair should not exceed the maximum time slot allowed by the timetable and should be longer than the calculated start of the operation, with at least one time slot.

$\sum_{watltsd} x_{ewatltsd} = E_t - S_t \forall\, e(11)$

The time slot allowed for the engine e should be equal to the difference from the end and the start of the maintenance and repair.

$\sum_{ewatl} N_{me} x_{ewatltsd} \leq M_{tsd} \forall\, ts, d(12)$

A certain number of team members are necessary to be present at the time slot ts in the day d, for the maintenance of the engine e.

$\sum_{ewatl} N_{ee} x_{ewatltsd} \leq E_{tsd} \forall\, ts, d(13)$

A certain number of equipment should be available for the maintenance of the engine e to be performed in the allowed time slot ts on the day d.

Due to the conditions of the bin packing problem, we must state that the variables can have only two values according to their specific conditions, i.e., 0 and 1.

We cannot solve the problem due to the NP-hard situation, but we can solve a simplified example where we show our three approaches.

We consider a number of 8 engines with different priorities (as given by the customers), but note that the same engines have priorities given by the available time and resources' constraints within the company.

Our methodology for solving this problem can be stated as follows:

1.Assign priorities to the set of engines according to the outside constraints (from the customers who paid an extra fee).

2.Assign priorities according to the estimated repair time, the availability of the TLs and their teams in the certain days and time-slots (inside constraints).

3.Search the local optimum for both of the cases.

4.Compare and combine the local optimums in order to satisfy the constraint of maximizing the resources' utilization, i.e., to find a global optimum.

5.Send the engine e to maintenance to the assigned WA with the available TL in the day d on the time slot ts.

6.Repeat the 1st to 5th step until all the engines are repaired and shipped to the end users.

The constraints for the 8 engines' example for the day d are as follows:

Engine no.	1	2	3	4	5	6	7	8
Customers' priority	3	1	3	2	2	2	3	1
Expected maintenance time in time slots	1	1	1	3	3	3	2	2
Available Team Leaders specialized in these engines*	YES =TL1	YES =TL2	YES =TL3	NO =TL1	NO =TL2	NO =TL3	YES =TL4	NO =TL4
Special equipment available for each specific engine	NO	YES	NO	YES	NO	YES	NO	YES
Available WA in ts	YES	YES	YES	YES	NO	NO	NO	NO
Company's priority**	2	3	2	2	1	1	1	1

Table 2 – An example for 8 engines with their constraints

*) If the TLs specialized in engines 4, 5, 6, 8 are not available; other TLs available will repair these engines.

**) Take in consideration that the company's priority is solved in a very simplistic way, which doesn't correspond to the reality! However in practice we cannot find the priority according to the company's resources and time constraint so easily!

If we try to solve this MIP model we won't be able to get feasible solutions due to the complexity of the model. Also we can make an analogy with the dual bin packing problem. We are able to solve it only for a restricted number of engines which are to be scheduled for maintenance, because this relates to a NP-hard problem.

4.A new approach for solving the DBPP

The DBPP can be solved with different algorithms, but due to the fact that we must choose a way of prioritizing the incoming engines, we've decided to use the First Fit Decreasing, First Fit Increasing and a new First Fit Best Randomized approach. Our solution tries to find a way for repairing the incoming engines and according to our constraints x, y, z, w, which can take only 2 values {0,1}, our DBP problem transforms into an Off-Line Dual Maximum Resource Bin Packing (ODMRBP).

In this off-line variant, we have a limited number of unit sized bins, the working areas, and a sequence of items with sizes in [0; 1], and the goal is to maximize the number of bins used to pack all the items subject to our constraints. A set of items fits in a bin if the sum of the sizes of the items is at most one, where number one can be associated with a fixed engine. In the off-line variant, there must be an ordering of the bins such that no item in a later bin fits in an earlier bin.

Thus we must first sort the items, and in our case this is done with the help of the "stars" scale, where for the engine with the highest priority the engine receives 3 stars and the one with lowest 1 star. Then the first engine e_1 should be sent to the first WA where "fits best" and the maintenance will start according to the available resources and time slot.

We consider and further solve the problem for 4 Team Leaders and 8 engines which must be scheduled on 2 Working Areas in 8 time slots from Monday, i.e, 4 hours.

Team Leader	Availability
TL 1	1-8
TL 2	3-7
TL 3	1-8
TL 4	4-8

Table 3 - Team Leaders availability on Monday

We use the following approaches:

• *First-Fit-Increasing* (*FFI*) allocates engines to WA (bins) in non-decreasing order with respect to their "sizes" (priority and resource availability).

In this case, we must first sort the engines according to the increasing priority as can be seen from Tab.4. With the time availability of the Team Leaders and their teams we find the best way for utilizing the available resources for scheduling the engines on Monday morning.

Engine no.	2	8	4	5	6	1	3	7
Customers' priority	1	1	2	2	2	3	3	3
Expected maintenance time in time slots	1	2	3	3	3	1	1	2

Table 4 – Engines sorted according to increasing priority

The results can be seen from the table below, where "?" signifies an empty time slot, an extra cost the company had to pay if this approach was chosen:

30 minutes time slots	TLs working on e_x engine in WA1	TLs working on e_x engine in WA2
1st	?	?
2nd	?	?
3rd	TL2 on e_2	TL2 on e_5
4th	TL4 on e_8	TL2 on e_5
5th	TL4 on e_8	TL2 on e_5
6th	TL1 on e_4	TL3 on e_6
7th	TL1 on e_4	TL3 on e_6
8th	TL1 on e_4	TL3 on e_6

Table 5 – Results for the FFI approach

• *First-Fit-Decreasing* (*FFD)* allocates engines to WA (bins) in non-increasing order with respect to their "sizes" (priority and resource availability).

For this approach the engines are sorted in a decreasing priority manner, according to Tab.6 and results are in Tab.7.

Engine no.	1	3	7	4	5	6	8	2
Customers' priority	3	3	3	2	2	2	1	1
Expected maintenance time in time slots	1	1	2	3	3	3	2	1

Table 6 – Engines sorted according to decreasing priority

30 minutes time slots	TLs working on e_x engine in WA1	TLs working on e_x engine in WA2
1st	TL1 on e_1	?
2nd	TL3 on e_3	?
3rd	?	TL2 on e_5
4th	TL4 on e_7	TL2 on e_5
5th	TL4 on e_7	TL2 on e_5
6th	TL1 on e_4	TL3 on e_6
7th	TL1 on e_4	TL3 on e_6
8th	TL1 on e_4	TL3 on e_6

Table 7 – Results for the FFD approach

• *First-Fit-Best-Randomized (FFBR)* allocates engines to WA (bins) in a purely randomized, corresponding to the optimistic scenario, where each TL wants to work on a specified engine and they make their schedule accordingly.

We will sort the engines first according to the willingness of the TLs and second according to the customers' priority as can be seen from Table 8. The results one can see from the Table 9 below:

Engine no.	1	3	2	4	5	6	7	8
Customers' priority	3	3	1	2	2	2	3	1
Expected maintenance time in time slots	1	1	1	3	3	3	2	2

Table 8 – Engines sorted according to the optimistic scenario

30 minutes time slots	TLs working on e_x engine in WA1	TLs working on e_x engine in WA2
1st	TL1 on e_1	?
2nd	TL3 on e_3	?
3rd	TL2 on e_2	TL2 on e_5
4th	TL1 on e_4	TL2 on e_5
5th	TL1 on e_4	TL2 on e_5
6th	TL1 on e_4	TL3 on e_6
7th	TL4 on e_8	TL3 on e_6
8th	TL4 on e_8	TL3 on e_6

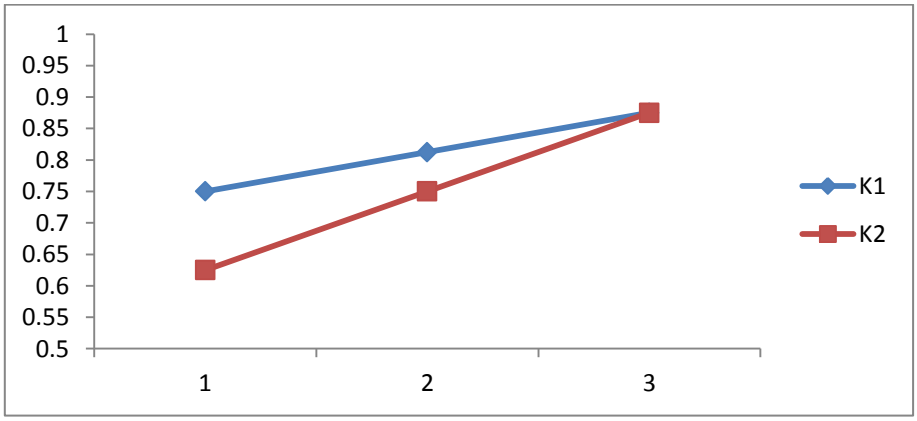
Table 9 – Results for the FFBR approach

Another way of measuring the success rate of our approaches for solving the ODMRBP problem was by computing the two coefficients presented at the beginning of the paper. Also due to the solutions presented above the best values of these 2 coefficients are for the FFBR approach,

where workers together with their TLs and Service department schedule their own tasks and try to optimize every day the WA and time slots' utilization.

The obtained results show an increase with approx. 25% of the Just in Time shipping of the engines to the customers and a decrease of the penalties the company had to pay for sending engines with delays and an approximate 12,5% increase in the utilization of the working area, which also increase the resources' utilization and minimizes the fixed costs of the working area when assigned to the total costs of the engines' repair.

The coefficients can be seen from the Graph below:



Graph 1 – Values of the coefficients K_1 and K_2 for FFI, FFD and FFBR approach

5.Conclusions

In this paper we have offered a possible solution to a multi-resource, priority-based case scheduling problem, which the authors have encountered in a Romanian manufacturing company, where helicopter and airplane engines were repaired. A Mixed Integer Programing model was developed, but due to the complexity of the problem, which is NP-hard, a solution was described only on a small batch of engines which had to be scheduled on the Monday morning. An analogy with the Dual Bin Packing problem was noticed, more exactly with the Off-Line Dual Maximum Resource Bin Packing problem and three new approaches were used in order to find the best possible solution. As one can observe the best results are when we use the new FFBR approach, as a number of 7 out of 8 engines are scheduled according to the priority imposed by the customers, the working space availability and Team Leaders' working hours. For the previous approaches a number of 5 out of 8 engines are scheduled for FFI and 6 out of 8 for FFD. Even if 7 out of 8 still misses one engine to be scheduled, the authors consider that FFBR approach can be successfully used for finding the optimum solution (with all the engines scheduled), because on a longer time interval, the complexity of the problem increases, but with the help of computational software a good solution can be found.

Due to the intellectual property rights the data presented in this paper were altered and the company's name cannot be stated, but the authors tried to present the ratios, coefficients and results as close to reality as possible.

Future studies are aimed at improving the upper presented approaches, with the goal of developing new software for solving this exact type of problem, where other constraints can be added or removed according to the specific profile of the company where the optimization of the resources is needed on a priority-based rule.

SERVICES EXPORT PROMOTION, A PRIORITY WITHIN THE GLOBAL WORLD ECONOMY

OCTAVIAN-LIVIU OLARU*

Abstract
The basic challenge in exporting a service is to convince a foreigner to try a service that does not exist yet. The foreigners have to believe that the service will be of good quality and will meet their needs. Usually the foreigner forms that belief based on recommendations, referrals, or somehow seeing the service provider in action. There are also several roles that trade promotion activities can play in building that belief or credibility. A national TPO needs to find or reinforce some special quality that its country has so that when potential customers hear about a service supplier from this country, their first response is, "Oh yes, I've heard good things about services from your country."

Keywords: *foreign trade promotion, services, TPO, efficency, export*

1. Introduction

The importance of international trade is widely recognized not only by the business sector, but also by governments. Governments all over the world have reviewed and streamlined their trade policies during the last decade. Economic reform programmes have improved the overall policy framework and created a more favorable environment in many countries.

In spite of this considerable resource endowment of trade promotion programmes, these programmes need to be selective in terms of products, functions and/or markets. An equal distribution of trade promotion resources over all products, functions and markets would obviously not make sense, as resources would be spread to thinly to reach anywhere a critical mass.

In spite of this considerable resource endowment of trade promotion programmes, these programmes need to be selective in terms of products, functions and/or markets. An equal distribution of trade promotion resources over all products, functions and markets would obviously not make sense, as resources would be spread to thinly to reach anywhere a critical mass.

In the context of globalization and increased competitiveness in the world market in general, and in Central and Eastern European countries, in particular, structural adjustment programmes and trade policy reforms are preconditions for economic growth and healthy trade performance. However, macroeconomic initiatives need to be complemented and supported at the microeconomic and operational level, in order to ensure a dynamic, outward-oriented and competitive business sector. Firstly, there is a need to improve the export supply response through institutional strengthening and enterprise-oriented assistance in areas such as product development and adaptation, trade finance, export quality management, export packaging, and better management of imported inputs. Secondly, efforts towards market expansion and diversification must be intensified, for example through the strengthening of business information networks.

Trade Promotion Organizations (TPOs) have a broad mandate to provide or coordinate trade support services in these areas.

A Trade Promotion Organization (TPO) is defined by the International Trade Centre UNCTAD/WTO from Geneva like a private or public institution with the main task to facilitate entry into foreign markets for a collective group of exporters and manufacturers of the home country.

* Professor, Ph.D., Faculty of Economic Sciences, "Nicolae Titulescu" University, Bucharest (e-mail: livolaru@yahoo.com).

Governmental TPOs are those bodies set up by government as part of its infra-structure in order to facilitate foreign trade in general, but exports more in particular.

2. Recent Trends of the International Trade with Commercial Services

The total dollar value of world merchandise exports (nominal terms) jumped 19 per cent to US$ 18.2 trillion in 2011. This increase was nearly as large as the 22 per cent rise in 2010 and was driven in large part by higher primary commodity prices.

Commercial services exports also grew 11 per cent in 2011 to US$ 4.1 trillion. The share of commercial services in total goods plus commercial services trade (on a balance of payments basis) was 18.6 per cent, the smallest such share since 1990.

Transport services recorded the slowest growth of any sub-category of services (8 per cent), followed by other commercial services (11 per cent) and travel (12 per cent). The slow growth of transport services is perhaps not surprising considering the close relationship between this category of services and trade in goods, which stagnated in the second half of 2011. An oversupply of new container ships may have also depressed revenues in the shipping sector.

The top five exporters of commercial services in 2011 were the United States (US$ 578 billion, or 14 per cent of the world total), the United Kingdom (US$ 274 billion, 7 per cent), Germany (US$ 253 billion, 6 per cent), China (US$ 182 billion, 4 per cent) and France (US$ 161 billion, 4 per cent). The United Kingdom replaced Germany as the world's second-largest exporter of services compared with last year's tables, but this was mainly due to a large upward revision in official statistics on UK exports of other business services and financial services, which together make up roughly half of all UK commercial services exports.

The top five importers of commercial services were the United States (US$ 391 billion, or 10 per cent of the world total), Germany (US$ 284 billion, 7 per cent), China (US$ 236 billion, 6.1 per cent), the United Kingdom (US$ 171 billion, 4 per cent) and Japan (US$ 165 billion, 4.3 per cent). There were no changes in the ranking of the top importers.

3. Service Innovation Management

Innovation in any industry requires a conscious allocation of resources and careful management of the concept development and implementation process. The firm is at risk if the innovation fails; however, there is also the potential for major market rewards if the firm is able to sustain intentional, repeatable change. Services firms face some additional challenges related to innovation that are not shared by goods-producing companies:

- Need the most skilled staff in direct contact with customers, but promotion means moving away from direct contact.
- Need staff to be highly motivated, but staff have flat career paths.
- Need staff to take initiative in solving customers' problems, but staff need to conform to standard service procedures.
- Need staff to use information technology, but there is no time available for training.
- Need staff to "recover" well with customers, but often they do not have the authority to act.
- Need customers to cooperate, but customers do not know or accept their role in co-production.
- Need customers to recommend the service, but customers' perceptions are shaped after they receive the service.

To manage these additional challenges, managers of services firms need to be able to address the issues discussed below: reducing the risk, managing the customer interface, "training" customers, managing staff performance, engaging front-line staff, linking innovation options to the type of service, and using information technology.

Reducing the risk. One of the main barriers to innovation adoption is the customers' fear of the risk involved. For services firms, risk is already a factor in that customers never know ahead of time how well the service will be provided. While customers may find a service innovation intriguing, they may also be concerned that the service firm is less likely to be able to control quality in providing a service with which they are less experienced.

The issue of risk is particularly critical in regard to business services (i.e. those provided to businesses rather than to households) as the consequences of service failure are often more serious. Business services typically comprise half of all the output of the services sector, or as much as 40% of overall economic activity, and are the most likely candidates for export.

Managing the customer interface. Manufacturers produce their goods away from the customer and so can separate the operational and marketing functions. This is not the case for services firms. In most cases, customers have too levels of direct interaction with the service production process, whether virtually or in person (so called line of interaction and line of visibility) and one level of indirect interaction (so called "line of internal interaction").

While the technical aspects of the service may be provided by professional staff, the customer's experience of the service process is shaped in large part by the front-line contact staff, which performs both as administrative and marketing staff. The "line of interaction" represents the potential moments of truth when the customer is in direct contact with the company's employees, and so he is gaining a positive or negative impression of the company service capabilities.

The "line of visibility" indicates the point at which the customer is aware of being in direct contact with the firm. Poor service at this interaction point often reflects a staff attitude that views customer contact as disruptive. Alternatively, poor service may result from not having analyzed all aspects of the service delivery process from the customer's perspective.

The "line of internal interaction" refers to interactions between those responsible for services to customers and those who provide the support functions within the firm (e.g. accounting, computer network administration) which affect how well the service can be delivered to the customer. This is the place within a service firm where organizational innovations are most promising but most often overlooked. The ease with which this interaction is handled is often referred to as "internal service quality".

Training customers. Often customers must themselves play a role as "co-producers" or "unpaid staff" for the service to be delivered. This requires them to learn their role and execute it properly. In this respect it has to be mentioned the conclusion of the United States Technical Assistance Research Program (TARP) that 30% of customer dissatisfaction results unwittingly from their own inadequate performance.

When considering service delivery innovations, firms often overlook the customer's role, which overlaps significantly with that of staff at all three stages of the service (service design, service delivery, service evaluation). At the service design stage, an increasing number of services firms solicit customer input on what would make a new service or service delivery process most attractive to them. Once the service is being delivered, both customer and staff roles may vary. If the design is for self-service, then customers will be taking the lead "production" role.

Alternatively, staff may provide the service to customers without requiring customer participation, or both customers and staff may collaborate in creating the service experience. Once the service experience has been completed, staff will want to review and evaluate it, but customers play the dominant role.

When services firms introduce an innovation, the customer's role may need to change. This raises issues about whether or not customers want to take on the effort of learning a new role. Services firms also need to think through how they will communicate those changed role expectations and what additional benefits customers could expect to receive if they are willing to adopt a new role.

Managing staff performance. When customers assess service quality, what they are typically assessing is staff performance (i.e. how the service was delivered) rather than the service offering *per se*. This means that successful innovation needs to focus on execution in the interaction in the web of relationships. One of the challenges for managers is that, while customer satisfaction increases with consistent task execution, staff motivation may decrease if they feel that their work has become routine. Generally staff is motivated by increased task complexity and increased discretion in task execution.

Because research for innovation begins with assessing customer needs, it is usually counterproductive for services firms to segregate research and development into a separate department. In fact, the most knowledgeable staff is often those who interact directly with customers.

Traditionally, "research" has been viewed as a technical skill that is not part of front-line responsibilities. Services firms which overlook the potential for input from front-line staff are severely limiting their chances of success.

Linking innovations options to the type of service. While in general service operations differ from goods production in the tangibility of their output, they also differ amongst themselves in critical ways. One of the dimensions most relevant to innovation is the perceived degree of risk. Experience shows that customers will expend much more energy seeking out specific services firms if the potential for nonperformance is high and the consequences are highly negative. Customers select some services primarily on the basis of convenience of location and are unlikely to travel to a distant location no matter how innovative the service offerings are. More risky services purchases (e.g. medical care, security services) usually result in customers researching options carefully and selecting a service provider largely because of its ability to deliver rather than for reasons of convenience.

Using information technology to innovate. Both domestic and export service operations have been revolutionized by the links between information technology and telecommunications. The Internet is being utilized for marketing, partner search, service delivery, inter-staff coordination, and interactive customer research, among other uses. The successful launch several years ago of amazon.com, the first bookstore to exist only in cyberspace, is one example. Medical specialists provide real-time consultations to remote communities that they may never visit in person. Customer service telephone numbers may be answered from anywhere in the world.

4. Main Approaches in Trade Promotion of Services Exports

At micro - economic level, the main approach for a services exporter is represented by his ability in promoting his new product on the international market. In this respect, the basic challenge in exporting a service is to convince a foreigner to try a service that does not exist yet. The foreigner has to believe that the service will be of good quality and will meet their needs. Usually the foreigner forms that belief based on recommendations, referrals, or somehow seeing the service provider in action. There are also several roles that trade promotion activities can play in building that belief or credibility.

At macro – economic level, the main task in promoting the national business oportunities in the field of services on the international market is in charge of the national TPO, which, in cooperation with the non – governmental organizations and the economic operators has to create a general favorable image of a certain branch on a well defined segment of the world market. In this respect, the national TPO needs to find or reinforce some special quality that the national providers of a specific service have, so that when potential customers hear about a service supplier from this country, their first response is, "Oh yes, I've heard good things about services from your country". An example in this respect is the following: when people think of computer software and IT services, they think of India which now has 12% of the global market. Any Indian IT firm benefits from that reputation, which was built up over a period of ten years.

Here are some questions to ask yourself to help a national TPO to identify the competitive advantage of the national providers of service:

- *Does the country have a geographic advantage?* For example, Panama is already known for being a transportation and distribution hub due to the Panama Canal and its strategic position between Central and South America. Based on its infrastructure and links to four submarine fibre optic cable systems, Panama can now market itself as the regional hub for e-services.
- *Does the country have a language or cultural advantage?* For example, Peru has large Japanese and Chinese immigrant communities.
- *Does the country have a human resources advantage?* For example, Jordan has a number of well- trained professionals who were trained in the U.K., U.S., or France and have extensive work experience in the Arab Gulf countries.
- *Does the country have a reputation for being particularly business friendly or familiar with other ways of doing business?* For example, Barbados has a reputation as a politically stable, open economy with over 8,000 offshore businesses.
- *Does the country have a reputation in a particular sector that can be leveraged as a country image?* For example, Jamaica has a global reputation of reggae music, which is being leveraged as a lead sector.
- *Can the country provide the foreign customer access to a range of other markets?* For example, a CARICOM country like Trinidad & Tobago can position itself as the gateway to the Caribbean (and South America through links with Venezuela) for services like market research.

5. Selecting Priority Sectors and Target Export Markets

Usually, a country is offering over 60 categories of services being exported. For successful trade promotion, the national TPO will need to pick priority sectors for the focus of its promoting resources – i.e., sectors where the local companies have:

- Some competitive edge to exploit.
- Sufficient domestic capacity to support rapid export growth.
- Some potential for synergies among services.
- A service industry association to work with government on trade promotion strategies.

In general, services are exported to a wider range of markets, at least 30 different export markets, than are goods. For effective use of resources, the national TPO will need to select geographic markets that hold the greatest growth potential. For this reason, the national TPO has to take into account the following:

- The number of firms already exporting to, or interested in, that market.
- Economic growth patterns in that market.
- Attitudes in that market towards importing services.
- Historical links with that market, including investment and tourism.
- Ease of access for exporters (direct flights, visa requirements).
- Ability to pay, including exchange restrictions, inflation rate, currency stability.

6. Services Trade Promotion Activities

While goods promotion typically focuses on the tangible product (making use of virtual trade shows and online catalogues), services promotion needs to focus on the solutions that can be provided by the service companies. Customers are particularly interested in onestop solutions. For example, a consortium that includes architecture and design, engineering, construction, and project financing is more competitive than any of those services on their own.

While there is a wide range of services being exported, from a trade promotion perspective there are five general categories of services that benefit from slightly different promotional approaches:

• *Infrastructure services*. These include architecture, engineering, construction, transportation, distribution, and financial services.

• *IT-related services*. These include computer consultancy, software development, data processing, database management, and call centres.

• *Business services* (non-IT-specific). These include a wide range of business support activities such as research & development, equipment leasing or maintenance, market research, management consulting, translation, investigation & security, etc.

• *Professional services*. These include the licensed professions (other than architecture and engineering) like accounting, legal services, medical & dental services, nurses and veterinarians.

• *Quality of life services*. These include education & training, health-related services, entertainment services, cultural services, recreational services, and sporting services.

There are eight general types of activities that have proven useful in promoting the above mentioned five categories of services.

• *Participation in global or regional trade events*. For some services, there are annual or biannual trade events that provide excellent profile building and networking opportunities. Examples include CeBIT, Medtrade, and WTA. In some instances, it is possible to find that a regional trade event that is held in an export market of priority is even more useful. To maximise effectiveness, it is useful to have some kind of export country presence – a booth with information about service capabilities, a sponsored reception for participants from targeted export markets, speakers on the program, etc.

• *Sector-specific trade missions.* These trade missions would be comprised of service firms that are already exporting or wishing to export. To maximise effectiveness, the TPO which is in charge with the mission has to think to have some kind of theme to the mission and organise opportunities for mission participants to meet not only with potential customers but also with potential partners. A component of the mission would be educational presentations by mission participants. An example of this type of mission is the health services missions Malaysia has led to Cambodia and Brunei in order to convince local health practitioners to refer patients to Malaysian hospitals for specialised care.

• *Cross-sector trade missions.* These trade missions would be comprised of service firms from several industries willing to work together to provide "bundled' services.

• *Partnering events.* The purpose of such an event is to encourage collaboration between organisations, either across national boundaries or across sectoral boundaries. Such events can be held for service firms and/or for service industry associations.

• *Media tours.* The purpose of this type of event is to promote the profile of service firms' capabilities in the media of developed markets where media coverage confers credibility. The structure would be to identify a small group of service firms with unusual capabilities and successes, and then to hire a public relations firm in the target market to arrange a series of media interviews with those firms.

• *Incoming missions.* Incoming missions from target export markets provide a low-cost opportunity to acquaint potential foreign customers with the capabilities of service suppliers. The structure would be to have an business event at which service suppliers could provide useful information, followed by a networking reception.

• *Networking with investors*. Sometimes foreign investors import services (especially professional and business support services) because they are unaware of local capabilities. Providing a structured opportunity to highlight national expertise gives the local firms the chance to engage in exporting.

• *Missions to international finance institutions*. These missions would be comprised of service firms that provide the types of services currently being funded by international financial institutions such as the World Bank, the regional development banks, or bilateral aid agencies. The

purpose would be to apprise the officers of the capabilities of country's service firms both to deliver IFI-funded projects in their country and also to deliver quality services in other donor-funded markets.

7. Conclusions

Export readiness is the capability to succeed in export markets. Innovation links to export readiness in several ways. First, in order to resource a company export initiative effectively, it may need to introduce internal organizational innovations to handle different customer demands. Second, the manager will find that his company will profit the most in an export market if it is offering a service or service delivery process that is new to that target market. Third, in order to adapt to the cultural norms of the target market, it is very likely that the company will need to change features of its service or the manner in which its service is delivered (again an innovative activity).

Exporting can strengthen overall competitiveness if the company is able to select target markets where the services it can offer are a good match with local needs and cultural values. Foreign customers can offset low demand in a home market and may provide hard currency earnings. However, because of cultural variables, it is all too easy to misread customer needs, motivations and priorities. The same is true with local partners and staff.

To improve a service company's chances of export success through innovation, there are several strategies to put into practice:

- It has to target ethnic subgroups with cultures similar to the services provider.
- It has to target expatriates from the services provider's home country who are living in the target market.
- It's very useful to find a local partner and let them lead on issues of services design and delivery that are culturally specific.
- It's considered to be efficient to hire local staff for the lead front-office, high-contact positions.

Entry into new export markets can be speeded up through strategic alliances with local service providers. A local partner can vouch for the service exporter capabilities and can provide it with ready-made networks. Strategic allies can also help exporter to succeed in third markets due to their reputation and profile.

ROLE OF DIVERSITY IN TEACHING MARKETING

MAGDALENA PLATIS[*]
ELEONORA GABRIELA BABAN[**]

Abstract
In a contemporary context, education is regarded as an innovative concept that has a powerful impact on educating the young generation. Selectively passing over knowledge in an adequate framework allows an optimum development of educational actions that have a specific goal. The role of education in the society's development and in the development of each individual increases significantly as the impact of technological progress on the educational process requires an organization of the educative activity in accordance with these significant changes in society. From the past and up to now, the education system has undergone important stages in the transformation and improvement of the educational activity. The modernization of the education system aims to achieve an optimal balance between the contemporary society's demands and the quality of the educational activity. The objectives of this study are the following: highlighting the context of higher education in Romania, presenting the importance of teaching marketing in an applied way, the analysis of the effectiveness of implementing modern teaching techniques, the analysis of the impact of diversity in teaching marketing discipline, highlighting the role of the teacher in teaching and learning activities. Teaching strategies and interactive teaching methods are direct ways of action that stimulate the activity of teaching-learning. By using modern strategies and means of education, the teacher makes task achievement more efficient, thus facilitating the transmission of knowledge taught.

Keywords: *innovation, interactive teaching strategies, diversity, marketing, higher education*

1. Introduction

Education contributes to the development of each individual having a purpose oriented towards training and educating individuals to adequately adapt to the demands of the labor process but also to everyday reality. For a proper functioning of the education system a connection of all education and training activities to a social, economic, political, geographic, demographic and cultural level is required in each country. In a knowledge-based society, the continuous improvement of the education process represents a priority axis in the current European context.

This study aims to emphasize the importance of practicing a modern teaching style practiced by teachers by using various techniques and modern methods of teaching. The objectives of this study are: emphasizing the main changes that occurred in time in the Romanian system of higher education, the analysis of the implementation of modern teaching techniques in the educational-training process, the analysis of the role that the diversity of techniques and modern teaching methods contribute to teaching marketing in an applied way, highlighting the role that the teacher has in using interactive and modern methods of teaching in the educational-training process.

This study presents the main modern teaching methods and techniques used by teachers in teaching marketing in an applied way. These are the following: 1. case study; 2. writing essays; 3. personal reflection; 4.Brainstorming method; 5. Jigsaw puzzle. A brief description of these elements is made, emphasizing the role that diversity plays in teaching marketing and the positive effects generated by applying modern techniques on students who in this way succeeded in developing their creativity, practical skills and competitive spirit.

A review of literature is made in order to highlight the importance of using modern, effective and interactive teaching techniques by teachers in the educational-training process.

In Romania, the implementation of effective learning strategies and setting up a radical reform in education could be the key of an efficient education process. In knowledge society the teacher's role is to encourage and stimulate students' creativity, to develop their skills by using modern teaching strategies. A good teacher, in order to obtain the results expected and in order to maintain an interactive teaching environment, needs to harmoniously combine all forms of learning, i.e. formal, non-formal and informal learning. Traditional pedagogy was dominated by formal learning; while modern pedagogy harmoniously entwined formal, non-formal and informal learning (learning is also accomplished outside universities through the students' participation in specialized trainings held in companies which operate in fields that are in accordance with the students' specialization). Nowadays, students participate in interactive classes, gliding from the process of memorizing to that of developing critical thinking and personal expression. By using interactive teaching strategies, an effective teacher prepares his/her students for the dynamic challenges in society.

2. The context of higher education

From the past and up to present the higher education system has continued to grow and attract more and more students. After 1989, there was a steady effort regarding the development of higher education in Romania, the following steps being taken: "the development of the institutional network and the number of students; the appearance of private higher education, the efforts to achieve decentralization (…)"[1].

In the '90s, aside from full-time higher education institutions that held courses for 4, 5, 6 years there were also colleges (short-term higher education institutions), and also distance learning[2].

In its attempt to reach the standards of Western Europe, Romania went through important stages in the development of Romanian higher education. Therefore, on June19th, 1999, 29 countries (both from Europe and outside it), including Romania, attended the meeting in Bologna, that ended with the signature of the "Bologna Declaration". The general objectives set out in the "Declaration of Bologna" are the following: "the accreditation of diplomas (...), adopting a system for organizing studies based on two cycles; implementing a credit system (ECTS), promoting the mobility of students and that of academic administrative personnel; promoting the European cooperation in terms of quality development, promoting the European dimension of higher education, especially in terms of curricula development, cooperation between institutions, mobility programs"[3].

In the present context, Romanian higher education system follows these objectives that contribute to the achievement of the expected performance. In Romania, higher education is organized on three levels, namely: Bachelor's degree programme, Master's degree programme and doctoral programme, the European Credit Transfer and Accumulation System (ECTS) being mandatory, and "starting with the academic year 2005-2006, universities issue to each graduate, free of charge, the Diploma Supplement, both in Romanian and in a foreign language, whose content is in accordance with European standards"[4]. Also, the implementation of National law no. 1/2011 has resulted in significant changes in the Romanian higher education system. Universities participated in an evaluation process that had the fundamental purpose of improving the educative process and identifying the position held by each university in the system of higher education.

[1] Pachef, R.C. (2008), Evaluarea în învăţământul superior, Editura Didactică şi Pedagogică, R.A., Bucureşti, pp. 78.

[2] Ibidem, pp.79.

[3] Ibidem, pp. 73-74.

[4] Ibidem, pp.80-81.

Universities are classified into three categories: "universities focused on education, universities of training and scientific research and universities of education and artistic creation, and universities of advanced research and education"[5].

According to the National law of education no. 1/2011, 2011 universities must provide students with necessary practice sites, both within and outside universities. Also, higher education institutions accredited according to legislation can organize the graduation exams for bachelor, master, and doctoral programmes.

Regarding this process of transformation and change that took place in the Romanian higher education system, by the implementation and adoption of new measures it can be mentioned that "education in Romania is going through a process of reform. All components of education are subjected to some transformation actions: institutional organization, relational aspects, the contents put forth, the assessing and credit system and styles, and teacher training"[6]. It can also be mentioned that currently, ensuring the quality of the educational process as well as the implementation of measures that takes into account the smooth development of the entire educational process are key elements that contribute to the development of national higher education system. Student-focused education by his/her direct involvement in the education process, and the use of modern interactive teaching strategies are also important elements in this innovative process in terms of quality assurance in higher education. To back up these statements, we may conclude that "quality assurance in education is a very complex process that targets the institutional - administrative side and the educational process itself"[7].

3. The importance of teaching marketing in an applied way

Learning is a complex process that contributes to the formation and development of young generations, who constantly need to adapt to changes in society. The learning process is led by teachers whose role is to plan, conduct and coordinate educational activities and effectively communicate essential information in order to achieve the learning process.

After graduating, future specialists are faced with the reality of everyday life. It is therefore very important that during the years of study, teachers combine the theoretical aspect with the practical one when teaching. Hence, students are motivated, the main purpose being that of stimulating and gaining their attention.

In Romania, there are many universities specialized in economics where marketing is being taught. The practical approach of this subject is essential because "marketing is not an exact subject, like analytical geometry (...) marketing should not be applied according to a fixed scheme in various countries that have different economies, cultures and policies"[8]. The role of the teacher is therefore essential in conducting educational activities consisting in the fact that students acquire basic concepts that operate within this subject.

"Marketing as a topic appeared in the United States in the first part of the 20th century in the teaching of courses having to do with distribution, particularly wholesaling and retailing"[9]. According to Kotler (2006) "marketing is based on several key disciplines such as economics, psychology, sociology, organizational theory, mathematics and decision science"[10]. Marketing will evolve as new changes are recorded in these fields, changes caused by the scientific progress.

Nowadays, the advent of new technologies has a strong impact on companies that need to conduct effective marketing activities to achieve their goal, namely making a profit. It is very important to note that "the classic marketing model needs to be future-fitted. Marketing must be deconstructed, redefined and stretched"[11]. In this context, the teaching strategy must be focused on interactive, innovative and practical methods which reflect the dynamic nature of this practical science called marketing. Currently, marketing based on client relationship allows companies to build customer loyalty and to attract new customers.

In this way the important role of market research is highlighted when one wishes to identify customer needs. Marketing researchers often use effective marketing tools in their attempt to respond effectively to the most sophisticated desires of consumers. From a theoretical perspective, presenting the marketing research type is essential in starting the practical part, which, for students represents the grounds for carrying through teaching projects. Teamwork (creating working groups of four to five students) facilitates the development of the sense of competition and allows each team member to get involved in carrying out tasks when the project is initiated. In literature review it is noted that "teamwork is important for the self-detection of capabilities and limitations" and "interactive group strategies develop the ability to work together, to show tolerance towards the participants' point of view and mutual respect"[12]. In other words, teamwork is challenging and it generates creative ideas while generating at the same time tangible results that lead to achieving the desired performance.

Tudorică (2007) believes that "learning is determined by a complex interaction between the existing knowledge of subjects, the social context and the problem that needs to be solved"[13]. Thus, by outlining common working tasks, students are given the opportunity to express their own ideas and to test teamwork skills. In this situation the teacher's role is to promote students' creativity, to address open questions and to encourage them in expressing constructive ideas. An efficient teacher encourages teamwork by using an interactive learning style. Also, teaching marketing in an applied way targets educational activities aimed at acquiring knowledge and practical skills. Active participation and an environment favourable for debates allow the encouragement of the sense of initiative among students who analyze and provide solutions for solving the tasks undertaken.

It is important to note that teaching communication performed between the teacher and his/her students plays an important role in the educational process. The teacher's flexible communication and teaching style gives students the freedom to express their ideas. The positive attitude, accuracy and pedagogical tact are the main factors that contribute to the smooth course of the educational process.

4. Role of diversity in teaching marketing

In literature review, it is mentioned that success in the educational process largely depends on the following characteristics of the teacher: "attitudes towards self, students, peers, and what they teach; knowledge on subject and education theory; skills on planning, organization, and management; on communication, and on motivation"[14].

In teaching marketing, in order to capture the attention of students teachers use various teaching techniques and methods. We can mention therefore: 1. case study; 2. writing essays; 3. personal reflection; 4. Brainstorming method; 5. Jigsaw puzzle.

[14] Bacellar, F.C.T., Ikeda, A.A. (2006), "Marketing professors: paths and perspectives", European Business Review, Vol.18, No.3, pp.237.

1. A traditional example used in teaching marketing is the case study. Preparing a case study requires a sustained effort from the teacher's part. He/she needs to formulate questions that encourage free debate among students and the expression of personal opinions.

2. Writing essays is another method of interactive teaching that invites students to personal reflection. On specific topics previously outlined, students are encouraged by the teacher to express their opinion. This method enjoys great success among students because it stimulates creativity and freedom of expression. They combine elements of theory assimilated over years of study while offering practical examples from everyday life.

3. Brainstorming is another teaching method focused on producing ideas that stimulate creativity. It is very important to accept all ideas during the debate, ideas that are to be evaluated at the end of the discussion by all team members; then those ideas that can provide accurate answers for the debated issue are selected.

4. Jigsaw puzzle is an example of interactive group learning method that develops creative thinking and cooperation among students.

Involving students in various educational activities produces positive effects by developing their practical skills, creativity and sense of initiative.

Formulating open questions is another means by which the students' ability to learn is developed. Creating a climate adequate for free expression of students depends, as mentioned above, on the teacher's pedagogical tact. The variety of teaching methods develops students' curiosity who will be able to develop hypotheses, formulate questions and build personal values. Teachers who apply effective and interactive teaching strategies, providing students with diversity and a theoretical and practical component can achieve the desired performance, thus contributing to the development and training of young generation able to face the challenges of the labor process.

The teaching activity gains efficiency during academic seminars because "the debates conducted during seminars give the students the possibility to clarify, improve, fathom, corroborate and perfect their own skills"[15] .

Figure no. 1: Teacher-student relationship and the efficiency of applying modern teaching techniques

YES	NO
- interactive teaching (using examples and involving students in the teaching process)	- lack of interaction with students (using dictation)
- formulating open questions	- avoiding communication
- flexible style of teaching	-authoritarian teaching style
- emphasis on learning	-emphasis on teaching
- ensuring feedback	-lack of cooperation

Source: Authors

It is important to note that each individual is unique and has his/her own experiences and personality traits and the success of the teaching process depends largely on these elements. Therefore, each teacher must adapt to the needs and expectations of the group of students involved in educational activity, motivating them to actively participate and to obtain success through perseverance and tenacity. An effective teacher must react spontaneously, practice a modern and flexible teaching style, be creative and respond clearly to students' wishes who want to participate interactively during the course of teaching.

[15] Marinescu, M. (2009), Tendinţe şi orientări în didactica modernă, Editura Didactică şi Pedagogică R.A., Bucureşti, pp. 161.

Oprea (2009) highlights the following principles of interactive teaching strategies, namely: "students build their own meanings and interpretations of training; training purposes are discussed, negotiated, not imposed; methodological alternatives for teaching, learning and assessment are promoted; (…) the evaluation will be less criterial and more reflective, integrating complementary methods of evaluation; learning by detection and problem solving are promoted"[16] .

In the current European context, when new measures that have an overwhelming impact on the entire educational process are adopted, training teachers in accordance with European requirements and trends is a key point in improving the qualitative aspect of education.

The progress of new technologies significantly influences the structure of the teaching process. Thus, implementation of New Information and Communication Technologies in the education system contributes to the development of interactive teaching techniques and methods, and to the increase of quality in higher education, and it also constitutes a challenge for all those involved in this dynamic and complex process. Teachers are forced to adapt their teaching strategies according to the new technological requirements. Thus, the implementation of the eLearning structure in higher education contributes to an interactive approach of the educational process focused on students.

According to Singh, O'Donoghue and Worton (2005) "eLearning is constructed in a variety of contexts, such as distance learning, online learning and networked learning"[17]. In order to keep up with changes in the knowledge-based society, universities must use modern information systems in the teaching process. ELearning platforms imply this process. Marinescu (2009) consider that an efficient eLearning structure must be interactive and must involve students directly, who should provide immediate feedback .Also, in order to gain the attention of students, teaching strategies used by teachers must be carefully chosen and efficiently implemented. It is important to note that assessment in the context of eLearning is a complex process that pursues the following main goals: "connection to a specific learning content considered to be important; internalization of a way to assume learning, capitalizing and materializing new acquisitions by the beneficiary"[18].

In Romania an eLearning platform (Advanced e-Learning) has developed. The purpose of this platform is to stimulate competition, but also teamwork. This allows monitoring of the educational process and offers teachers modern methods of teaching and learning[19]. For students, the eLearning structure allows direct access to the contents taught, a significant advantage being the flexibility and interactive nature of the modern educational process.

In a contemporary context when the technical and technological progress leaves their mark on the structure of the education system, training of efficient teachers represents a premise in the development and improvement of the education process. In Romania, two stages aimed at the training process of teachers are known, namely: "initial training - during studies in universities; and constant training - which means improvement during practice"[20].

A good teacher must be a promoter of new, of change and must have a reflective attitude focused on students' needs. The quality of the education provided to young generations of students depends on how teachers implement the new contents, and on their pedagogical tact. Highly trained teachers focus on interactive teaching strategies of cooperation. They are open to cooperation, promote interactivity and motivate their students to actively participate in discussions during lectures and seminars. Therefore, besides the fact that students develop social skills, they acquire autonomy in

expressing personal ideas. In this way, the teaching process is no longer regarded by students as a monotonous process that promotes the classic model of teaching, when the teacher dictates the content and they have to take notes. Practicing interactive teaching strategies, teachers turn teaching into an activity that develops students' curiosity by actively involving them in this process that targets the improvement of the quality of the educational process.

Also, learning strategies have an important role in the teaching activity. Specifically, the teacher needs to take initiative and suggest topics for debate in order to encourage students to implement their own learning strategies. Sălăvăstru (2009) believes that "strategies are extremely important in the student's learning activity. When proposing a learning situation, the teacher might find out that his/her students conduct a multitude of behaviours regarding how they select, acquire, organize and integrate new knowledge. These behaviours are designated by the term learning strategies"[21].

The learning strategy represents the actions that an individual performs in order to achieve learning objectives. Students use different learning strategies that contribute to the formation and development of individual study capacities, facilitating a proper filtering of information provided by the teacher.

In literature review the following typology of learning strategies is presented: a). primary strategies that aim at "memorizing, updating and using information"; (…) as well as "identifying key concepts, establishing links between knowledge, creating conceptual networks"; b). support strategies that aim at "planning study time, control of attention focus, self-motivation, control of negative emotions, ensuring a mood proper for study, and so on"[22]. Learning strategies are considered to be self-fitting strategies that aim at planning, monitoring and adjusting learning activities. According to this strategy students plan their information on a specific topic of study, being disciplined and responsible in their learning activity[23]. A good teacher must teach students to learn. Therefore, when teaching learning strategies, he/she must provide clear information and must point out the efficiency of the use of the learning strategy selected. Students should be aware that applying effective learning strategies will help them enhance knowledge. Thus, they will progress more easily; they will set short-term and long-term goals and will also be able to develop hypotheses.

An efficient method that teaches students how to organize their learning activity is SQ3R method (Survey - Question - Read - Recite - Review). SQ3R method is a modern method of learning that has a great success abroad, being present in all university textbooks. According to this method, students go through five major steps, namely[24]:

1. The first step - Survey - refers to a primary filtering of information. Students analyze the course structure on chapters and subchapters; they select key concepts and analyze the schemes in the paper.

2. The second step - Question – refers to formulating key questions about the content that needs to be acquired, allowing them to structure the information into chapters.

3. The third step - Read - refers to reading notes and establishing connections between systematic knowledge and the main concepts.

4. The fourth step – Re-read - aims at reproducing the content covered and scoring the responses formulated in the second stage.

5. The fifth step – Review – is the last step and aims at a reproduction of memorized content, a presentation of the schemes and making connections between memorized concepts and knowledge.

[21] Sălăvăstru, D. (2009), *Psihologia învăţării. Teorii şi aplicaţii educaţionale*, Editura Polirom, Iaşi, pp.167.
[22] Ibidem, pp.169.
[23] Ibidem, pp.174.
[24] Ibidem,, pp.180-181.

Going through all these steps, students manage to establish connections between knowledge acquired and interact better with the content that needs to be learned for that exam preparation. Although it is a method that requires more attention and effort from students, this method proves its effectiveness through a better systematization of study time. Passing the exam for which preparation was made represents a favourable result generated by the effective planning and organization of the time needed to prepare individually, by using the learning method mentioned above.

Students must be self-taught, they must effectively organize study time, and they must control learning activities and set realistic goals. During this process aimed at learning, the teacher's role is that of "mediator of student's knowledge. He/she gets involved in the acquisition and organization of such knowledge according to the properties of the cognitive system, determining the student to be aware of his/her own cognitive resources, examine learning strategies and use the most effective ones"[25].

5. Conclusions

The teacher's role in the educational activity is of utmost importance. Effective teachers are those teachers who manage, through tenacity and perseverance to mobilize students to achieve their goals. Their creativity, perseverance and firmness in decision making develop through their engagement in activities aimed at achieving tasks. The effective communication of teaching objectives as well as effectively ensuring knowledge transfer and feedback are key elements in effectively achieving teaching tasks. Teacher-student interaction should be based on a mutual exchange of ideas, thus encouraging dialogue between the two parties. Diversification of teaching strategies contributes to professional success, the teacher therefore managing to stimulate his/her students' attention. The teacher outlines task for his/her students, he/she being the one who organizes the teaching activity.

The education system contributes through its dynamic and innovative nature to the education of young generation in accordance with the requirements of the knowledge-based society.

Education is an external factor, which acts both directly and indirectly, on human personality. Developing skills specific to a certain field of activity is a prerequisite for education and training of young generations to meet labour market requirements which is in fact, the purpose of the educational activity. In knowledge-based society, the educational objective is to promote innovation and competitiveness which contribute to setting up a proper learning space for the entire life. The role of the education activity is to support the use of interactive teaching strategies based on modern techniques used by teachers to effectively deliver contents specific to the courses taught.

Modern teaching and learning strategies based on interactive learning methods (critical thinking, implementation of theoretical concepts, formulating questions, creating projects and case studies, learning by detection and so on.,) contribute directly to strengthening learning skills, and to the development of creativity and sense of initiative. Promoting efficiency and creativity in the learning process allows students to develop their personality in a harmonious way. They will gain key skills and they will easily adapt to labour market requirements.

The education system contributes through its dynamic and innovative nature to educating the young generation in accordance with the requirements of knowledge-based society.

Nowadays young people are forced to adapt to all changes in the education process and they successfully manage this, being aware that in the future new technologies will have a significant impact on all activities because "the ability to master modern technologies intellectually, socially and politically is one of the major challenges of this century"[26].

REFLECTIONS ON THE SALE OF CONSUMER GOODS AND ASSOCIATED GUARANTEES

COSTEL STANCIU[*]
SORIN-GEORGE TOMA[**]

Abstract
In the European Union all members states have already transposed Directive 1999/44/EC of the European Parliament and of the Council of 25 May 1999 on certain aspects of the sale of consumer goods and associated guarantees into national law. In Romania, the state, through its legislative institutions, the Parliament and the Government, and through those who take care of market surveillance, in our case the National Authority for Consumer Protection, should ensure the consumers a high level of protection. The aims of our paper are to render in brief the legislative framework related to the consumer protection and to clarify a number of issues regarding: the distinction between products that benefit a 2 years legal warranty and those for which the legal warranty is limited to the average duration of use (household products); the legal warranty for second-hand products; the importance for the consumer of the presumption of the product's noncompliance; the situations that involve repair, replacement, appropriate price reduction, contract resolution; the deadline for the product to be repaired; the issue of replacement parts when product repair is in warranty or post-warranty; hidden vices. The methodological approach was based on the literature review. Our paper contributes to a better understanding of the sale of consumer goods and associated guarantees and provides a platform on which to build further studies on the same subject.

Keywords: *commercial guarantee, legal warranty, goods, consumer, lack of conformity*

Introduction

As we are living in a consumer society, many different businesses and service providers offer guarantees. That is why many products we purchase may come with a manufacturer's guarantee. A guarantee is generally provided by manufacturers whereas the warranty is given by most of the retailers or distributors.

In the European Union all members states have already transposed Directive 1999/44/EC of the European Parliament and of the Council of 25 May 1999 on certain aspects of the sale of consumer goods and associated guarantees into national law. Consumers have certain rights vis-a-vis the manufacturers and the sellers in the case of non-conformity of the goods.

In Romania, the state, through its legislative institutions, the Parliament and the Government, and through those who take care of market surveillance, in our case the National Authority for Consumer Protection, should ensure the consumers a high level of protection.

Our study focuses on the consumer protection domain. The aims of our paper are to render in brief the legislative framework related to the consumer protection and to clarify a number of issues regarding: the distinction between products that benefit a 2 years legal warranty and those for which the legal warranty is limited to the average duration of use (household products); the legal warranty for second-hand products; the importance for the consumer of the presumption of the product's noncompliance; the situations that involve repair, replacement, appropriate price reduction, contract resolution; the deadline for the product to be repaired; the issue of replacement parts when product repair is in warranty or post-warranty; hidden vices. The methodological approach was based on the literature review.

[*] Associate Professor, Ph.D., "Nicolae Titulescu" University, Bucharest (e-mail: costelstanciu@yahoo.com).
[**] Professor, Ph.D., Faculty of Administration and Business, University of Bucharest.

The paper is organized as follows. The second chapter of the paper deals with the conceptual framework of the main aspects regarding the sale of consumer goods and associated guarantees, emphasizing some of the main issues derived from the European legislation. This is followed by conclusions.

Aspects of the sale of consumer goods and associated guarantees

In the old Member States of the European Union (all ten of them), the notion of guarantee is understood as the commercial guarantee offered voluntarily by the business operators - manufacturer, importer or seller - to the consumer.

Such thing was motivated by the existence of competition on the market, fact which led the business operators to take a series of measures including this guarantee which is offered voluntarily, the ultimate purpose being to provide consumers with the best possible product markets.

As time passed by, consumers within these states were discontent because of the products purchased and the fact that these commercial guarantees were either functioning with deficiencies or simply did not exist for certain groups of products or certain manufacturers, importers, distributors.

In this situation, the European legislator had to draft a directive to impose certain conditions regarding the sale of consumer goods and associated guarantees. Thus, the Directive 1999/44/EC of the European Parliament and of the Council of 25 May 1999 on certain aspects of the sale of consumer goods and associated guarantees was enacted.

Basically, this Directive stipulates that the guarantees, in the sense of certain voluntary commercial operations, become mandatory for the one who declared them so that consumers can have a legal basis in case of failure to fulfil obligations provided under them.

Another important concept stipulated in the Directive is the one regarding the consumers' right to beneficiate without additional costs of the restoring, replacement or the reimbursement of the product value should these non-conformities occur within 2 (two) years from date of purchase.

In Romania, the situation is slightly different meaning that, until the entry into force of Law no. 449/2003 on sales of consumer goods and the associated guarantees transposing the provisions of the Directive mentioned above, the Romanian consumer had used only to the existence of the mandatory guarantees required by the law, guarantees which differed according to the nature of the product, namely periods up to two years for durable products depending on the classification within certain groups (see Government Decision no. 394/1995 currently repealed), respectively 30 days for the immediate use products (e.g., the Government Decision no. 665/1995 - currently repealed).

It is true that, in certain situations, depending on market development, as well as the increase of competition on certain segments, some business operators offered commercial guarantees - in the European sense of the term – which were higher than the minimum required by law.

Given the data presented above, it results that we currently need a change in the way of approaching this issue, including the consumers' mentality, but also the business operators' mentality, with the purpose of addressing this issues in the European sense. This will cause the Romanian consumers some difficulties in understanding as it will be complicated to distinguish between guarantee – a voluntary commitment undertaken by the business operator but legally binding on the offeror under the conditions laid down in the guarantee statement and the associated advertising, the seller's liability if lack of conformity occurs within a period of two years from the date of delivery of the product or hidden vice for whose repairing it is necessary to resort to the procedures set forth in the Government Ordinance no. 21/1992 supplemented, where appropriate, with provisions of the Civil Code.

One should also bear in mind that in the event that any lack of conformity is occurring within six months from the date of delivery of the product is considered to have existed at the time of delivery, hence for this case the consumer is not required to demonstrate, with evidence that the product is without conformity. However, in the period from six months to two years, the seller is has

the same rights as the consumer and within the presumption of lack of conformity the obligation to prove that the product was without conformity belongs to the consumer.

From a legal perspective, this normative act covers all types of consumer products, with few exceptions – goods that are sold after being confiscated or seized under a court enforcement procedure or based on any other document that is issued by court authorities, as well as the water and gas which are not packed in limited amounts or in a fixed amount and electric power. However, there will be cases of products for which there are specific laws, for instance food products for which the concepts of validity and date of minimum durability are applied.

We are also mentioning the fact that Law no. 449/2003 is a general law regulating the issue of guarantees, but certain normative acts may set forth specific regulations as follows:

- The durable products must mandatorily have certificates of guarantee, thus they will have a guarantee that is legally binding (Government Ordinance no. 21/1992 – Article 20);
- The refillable lighters must mandatorily have a written guarantee from the manufacturer for at least 2 (two) years for each lighter (Article 1, letter a – Order no. 10/2007) on trading on the market of child-resistant lighters, as well as the interdiction to trade fantasy lighters (the joint order of the National Authority for Consumer Protection and the National Agency for Fiscal Administration.

In terms of scope, it refers to products, including those made upon order and the said products must be compliant with the specifications included in the contract of sale as stipulated under Chapter II of Law no. 449/2003.

Law no. 296/2004, regarding the Consumer's Code gives the definition of contracts on point 14 of the Annex, namely the contracts between traders and consumers which include warranty certificates, order details, invoices, bordereau or delivery certificates, bills, tickets which contain stipulations or references to general present conditions. Given the provisions of Government Emergency Ordinance no. 28/1999 on the obligation of economic agents to use electronic cash registers, namely the provisions of Article 1 paragraph 2: "The economic agents described under paragraph (1), hereinafter referred to as users, are required to issue fiscal tax receipts using electronic devices and hand them to the clients. Upon clients request, users will issue a fiscal invoice" – therefore it results that a consumer may request at any time, a fiscal invoice together with the electronic tax receipt.

Therefore, we can conclude that, under the Law no. 449/2003, the tax receipt is enough to be considered contract.

Moreover, Article 5 of Law no. 449/2003 clearly stipulates the conditions in which the products are considered to be compliant with the contract of sale, for instance the case where the products comply with the description given by the seller and possess the qualities of the goods which the seller has held out to the consumer as a sample or model or the situation where the products are fit for the purposes for which goods of the same type are normally used.

Law no. 449/2003 on sales of consumer goods and the associated guarantees came into force on January 1, 2007 and the Law transposes into Romanian legislation the Directive 1999/44/EC of the European Parliament and of the Council on certain aspects of the sale of consumer goods and associated guarantees repealing Article 14, paragraph 1 and Article 20 paragraph 2 of Government Ordinance no. 21/1992 and Government Decision no. 665/1995 on the replacing, repair and reimbursement of the equivalent value for products with quality deficiencies.

1.Scope

Law no. 449/2003 shall apply to all the contracts of sale of goods concluded between economic agents, physical or legal entities, and consumers, physical or legal entities.

The product, as defined by law, represents any movable tangible item whose final intended purpose is to be consumed or used individually or collectively, including those that are purchased under a contract of sale of goods that will be produced or processed.

The following categories of movable goods do not fall under the present Law:

- Movable incorporeal goods: shares, bonds, etc.
- Movable goods sold:

- After being confiscated;
- After being seized under a court enforcement procedure;
- Based on any other document that is issued by court authorities.

- the water and gas which are not packed in limited amount or in a fixed amount (bottles, gas bottles, other recipients);
- electric power;
- second-hand movable goods that are sold through public auction in a procedure that consumers can attend personally. The exclusion is justified by the fact that the consumer's presence at public auction allows the consumer the opportunity to choose knowingly. This is not valid should the consumer not be able to attend the auction personally, therefore, goods purchased in this situation will fall under this law.

The consumer is defined as any natural person or group of natural persons who get together in associations that purchase, acquire or consume products for purposes that do not fall within the sphere of is commercial or professional activity.

Two clarifications need to be made here. First of all, the law uses the generic formula of "group of natural persons formed in associations". In this case, we are referring to the legal entities constituted under the Government Ordinance no. 26/2000 on associations and foundations, meaning associations, federations and foundations.

Secondly, the provision regarding the "commercial and professional activity" applies only to the natural persons, as associations in a generic sense are non-profit legal entities that cannot carry on such activities.

The category of natural persons who purchase, acquire, use or consume products within their professional activity may include the following:

- persons with liberal professions such as doctors, lawyers, etc.
- persons who acquire by themselves the necessary means in carrying out their professional activity within companies where they are hired.

The seller is defined as any natural or legal person authorized - companies, cooperative societies, natural persons engaged in independent economic activities and authorized family associations – that as part of its activity sells products under a contract with the consumer.

The producer may be the following:

- an economic operator that produces a finished product or a component of a product
- an economic operator that produces raw material;
- an economic operator that applies its name, trade mark or another distinctive sign on a product;
- an economic operator that reconditions a product;
- an economic operator or distributor that modifies and changes through its activity the characteristics of a product;
- the representative who is registered in Romania of an economic operator who is not headquartered in Romania, or, if there is no such representative, the importer of that product;
- an economic operator that imports products in order to perform a sale, rent or
- leasing operation at a later time or any other form of distribution which is specific to running a business;
- the distributor of the imported product, in the event that the importer is unknown, even if the producer's name is specified;

- the distributor of the product, in the event that the importer cannot be identified, if the distributor fails to notify the injured person about the importer's identity, within 30 days from the request thereof.

2. The legal guarantee – obligation of conformity with the contract

The Law establishes an obligation for the seller to deliver goods which are in conformity with the contract of sale and to be held liable for any lack of conformity existent at the time of the delivery.

Conformity

Products should be considered as being in conformity with the contract provided:

a) they are suitable to the description made by the seller and has the same qualities as the products presented them by the seller as a sample or model;

b) the products satisfy any specified purpose requested by the consumer, purpose made known and accepted by the seller at the conclusion of the sale;

c) products are suitable for the purposes for which they are normally used products of the same type;

d) they present the quality and normal performance parameters, which the consumer can reasonably expect, given the nature of the product and public statements regarding the specific characteristics thereof, made by the seller, by producer or his representative, particularly by advertising or by the product label registration.

The seller will be liable also for the lack of conformity resulting from the situation in which the product purchased by the consumer is incorrectly installed by the seller, while the installation is stipulated in the contract as an obligation of the seller. The same thing applies for the situation in which the product intended to be installed by the consumer that was incorrectly installed due to deficiencies in the operating instructions.

Seller's Liability

The seller is liable to the consumer for any lack of conformity which exists at the time the goods were delivered and the consumer has the right to require the seller to bring the product into compliance without additional costs and he can choose he wants the product to be brought into conformity, either by replacement or repair, or by price reduction or rescission of the contract.

The seller will bear all the necessary costs incurred to bring the products into conformity, including the postage expenditures, labour, materials, transportation or technicians' trip to the consumer's residence.

A. The consumer has the right to choose how he wants the product to be brought into conformity, by repair and replacement of the product with no additional costs, provided that the means chosen are not disproportionate or impossible:

a) A redressive measure is considered disproportionate if it imposes unreasonable costs on the seller in comparison with the other redressive measure, taking into account the value of the product, with the lack of conformity, the importance of the lack of conformity and any possible inconvenience caused to the consumer.

b) The replacement is considered impossible if the seller does not have an identical product for replacement, which means that the product is no longer manufactured nor available on the market.

The redressive measure, repair or replacement of products must be brought out in a reasonable period agreed between the consumer and the seller, and without any significant inconvenience for the consumer, taking into account the nature of the product and the purpose for which it was purchased.

B. The consumer is entitled to the proper price reduction or rescission of the contract in any of the following cases:

a) the consumer has not received neither repairing or replacing the product;

b) the seller has not take the remedy measure within a reasonable time;

c) the remedy measure is causing significant inconvenience for the consumer.

Should the lack of conformity be minor, the consumer cannot request the rescission of the contract.

Duration of legal guarantee of conformity

The seller's liability in terms of guarantee of conformity is engaged if the lack of conformity occurs within 2 (two) years calculated from the date of product delivery. For used products, the consumer may agree with the seller to reduce the term of two years, but not less than one year after product delivery.

For the consumer's benefit, the law stipulates a rebuttable presumption, meaning that any lack of conformity occurring within 6 months from the date of delivery of the product is considered to have existed at the time of delivery, except for the cases when the presumption cannot be invoked as it is incompatible with the nature of the product or the lack of conformity.

The presumption of the lack of conformity means that if such lack of conformity occurs within the first six months from the delivery of the product, all the consumer has to do is to prove that the product was lack of conformity at handing. In this case, the seller can defend himself if he can prove that the defect did not exist or it was impossible to exist at the date of the delivery.

However, should the lack of conformity occur outside the period of six months, the consumer is the one who will have to prove, together with the real lack of conformity, its existence at the time of delivery of goods.

The consumer must inform the seller of the occurrence of the lack of conformity within 2 months from the date when the consumer has notice it. If the consumer does not notify the seller within this period, he will not be able to request the remedy of lack of conformity, nor the seller's liability.

A final observation must be made regarding the periods of two years and six months. As we have seen, the law does not refer to the date of noticing the lack of conformity, but to the moment of its occurrence. Therefore, if the lack of conformity occurs within the mentioned time limits, but is claimed after these periods, but within the two months period, the liability of the seller will be engaged. However, in practice, the consumer will have to prove that the lack of conformity has occurred within the two years period, or, if applicable, the six months period.

Removal of the seller's responsibility

A. If the public statements are made by the manufacturer of his representative, the seller will not be held responsible should he prove that he did not know them and could not have, in reasonably, know them.

For this situation, the law does not indicate who is responsible for the lack of conformity of the product. Therefore, the consumer will be able to recover the loss through the tort liability of the manufacturer under Articles 998-999 of the Civil Code.

B. Also, the seller will not be held responsible for the public statements, regardless their origin, the manufacturer or his representative, should he prove that:

- The public statements made by the manufacturer or his representative were corrected at the time of conclusion of the contract of sale.
- The decision to buy the product could not be influenced by the public statements in question.

C. Also, the seller will not be held responsible for the situations in which at the time of concluding the contract, the consumer knew or could not, in reasonably, be unaware of the lack of conformity or such lack has its origin in the materials supplied by the consumer.

Limitation or exclusion of liability of seller

The contractual agreements or provisions that stipulate the limitation or exclusion of the seller's obligation for conformity are null of right.

3. Guarantee for hidden vices

Under Article 25 of Law no. 449/2003, the rights of consumers, as described hereunder, shall be exercised without harming any other rights that consumers may invoke as per the other legal provisions that govern the contractual or non-contractual accountability.

Given these provisions, the consumer has the right to choose the legal grounds in terms of engaging the seller's liability from the obligation of conformity with the contract provided by Law no. 449/2003 and the obligation of guarantee for hidden vices regulated under Articles 1352-1360 of the Civil Code.

In order for the seller to be held responsible under the guarantee for hidden vices, three cumulative conditions must be met:

a) *the vice is hidden*. The seller is not responsible for apparent vices of which the consumer was able to convince by himself. Apparent vices are those which can be known by the consumer through the usual means of verification, an attentive checking of the goods. If the vice was communicated by the seller to the consumer, then the vice is not considered hidden.

b) *the vice have existed at the time of conclusion of the contract.*

c) *the vice is serious,* which means the product is improper for the usage to which is intended by nature or according to agreement or the use value of the product is reduced so much that in consumer's knowledge of the facts, the consumer would not have bought or have paid a lower price.

The consumer is the one who must prove the cumulative existence of the three elements. Also, the consumer may require either the rescission of the sale, or the price reduction, provided all the conditions are satisfied.

The statute of limitation of actions for rescission of the sale and price reduction is six months from the date of finding the vice, and if it turns out that vices were cunningly hidden by the seller, the term is three years. In both cases, the vice must be discovered within one year from the date of delivery of goods.

4.Commercial Guarantee

Under Law no. 449/2003, consumers may benefit from a commercial guarantee offered by the seller. Such guarantee is legally binding for the offeror, under the conditions set forth in the statements concerning the guarantee and or in the associated advertising.

The commercial guarantees should include mentions of the consumer rights which are provided by law and attesting clearly that these rights are not affected by the granted guarantee. Also, the commercial guarantee must contain the mandatory clauses concerning the identification elements of the product, the warranty term, ways to ensure the guarantee - maintenance, repair and replacement, including the name and address of the seller and the name and address of the specialized service.

The commercial guarantee must be written in simple and understandable terms. If the consumer requests so, the guarantee must be given in writing or on any durable medium support which is available and accessible for the consumer.

Should the conditions described above are not complied with, the guarantee remains valid and in this case the consumer can use the statements made by the seller or manufacturer and may require from the seller the compliance of the obligations laid down in these statements.

Conclusions

The idea that consumers have to have rights has been evident at least since the 20th century. In order to ensure consumers a high level of protection, the European Union has understood the need to create a legislative framework. Establishing minimum quality standards and equal rules for consumer sales and guarantees for the common European market have become an important issue starting with the mid 1970s. As Romania has been a member of the European Union since 2007, the national legislation in force has to comply with the Community's minimum requirements on consumer protection.

Our paper contributes to a better understanding of the sale of consumer goods and associated guarantees and provides a platform on which to build further studies on the same subject.

THE SPECIFIC CHARACTERISTICS OF PROMOTIONAL JOURNALISM – A COMPARATIVE ANALYSIS WITH OTHER RELATED CONCEPTS

CRINA ANIŞOARA TRIFAN (LICA)*

Abstract

Purpose statement – This paper's purpose is to contribute to the development of a specific know-how through the establishment of a theoretical framework of reference. This can facilitate the research steps which follow the identification; analysis; and interpretation of a new marketing instrument – promotional journalism. The objectives, of this study, relate not only to the establishment of theoretical but, also, to the practical characteristics, of promotional journalism. These are based on a comparative analysis with other related concepts and, also, on a qualitative analysis of the contents of the specific materials.

Design – The research problem imposes a methodological interdisciplinary approach; this enables the identification; systematization; analysis; and theoretical interpretation of the fundamental concepts, theories and ideas, from the specialized literature, to be orientated towards studies and articles from separate fields.

From the perspective of the research objectives and this interdisciplinary study of specilized literature, there was added a qualitative analysis of the content of the materials specific to promotional journalism found between 2002 and 2006, in the fashion magazine, Elle Romania.

Overview - The specialized literature presented key-concepts; different terminologies; and meanings apparently for the same studied "reality". This made the achievement of the process of conceptual delimitations even more difficult to the extent that promotional journalism was situated at the intersection of various sciences and the acknowledgment, of its related terms, were either similar or stated vaguely.

Originality – This paper's originality stems from the interdisciplinary perspective to the approach to the problematical aspect and the analysis and interpretitive complexity of the research results. These might prove useful both to the accomplishment of the studies in the field and for the practitioners and beneficiaries of this new marketing instrument.

***Keywords**: promotional journalism, advertorial, advertisments, hybrid messages, advertising*

Introduction

There is a concern to define and analyse promotional journalism – a practice still unknown and unassumed by a particular area - especially since there are countries (Slovenia; Russia; The United Kingdom) where this practice is forbidden. It is specific to marketing research even if it could present, in equal measure, a specialist interest in other lines of work (public relations; journalism communication science; psychology; and sociology).

Therefore, scientific research, as assumed by this thesis proposes a multidisciplinary approach which links the aforementioned fields. However, although used as a new instrument in achieving marketing goals,it remains a tributary to the interests of the actors (public relations and marketing professionals; journalists; representatives of public organizations, and promoted individuals) involved directly in achieving them..

The choice, of such an approach, is justified in relation to the goals; objectives; and research issues, and given that, theoretically, the complexity, of studying this concept, remains groundless.

This study's purpose is to contribute, through theoretical and empirical approaches, a specific research strategy established to develop a specific expertise in facilitating the identification; description; and analysis of promotional journalism.

* Ph.D. Candidate, Doctoral School of Economics and Business Administration, Faculty of Economics and Business Administration, "Alexandru Ioan Cuza" University, Iasi, Romania (e-mail: trifancrina@yahoo.com).

In this thesis, the research objective is to identify the theoretical and practical aspect of promotional journalism. Compared to other related concepts (e.g. advertorials; masked advertising; hybrid message), this is based on both a theoretical analysis and a qualitative analysis, of specific content from 2002 to 2006, in the fashion magazine, *Elle Romania*.

This thesis' originality lies in its interdisciplinary approach towards the problem and the complexity of the analysis and interpretation of research results. These may prove useful both for the studies in the field and practitioners and beneficiaries of this new marketing tool.

Research

Context of research

After studying the specialist literature, there was identified a small number of studies which related strictly to the issue. However, in considering the strong interdisciplinary concept and the multiple implications of specific practice, it is considered necessary to widen the research on the topic in order to link the following: marketing; public relations; mass-media; linguistics; semiotics; and communication science.

Also, the analysed studies presented and proposed key concepts; terminologies; and different meanings, apparently for the same studied "reality". This makes it difficult to achieve conceptual boundaries, especially since promotional journalism lies at the intersection of several sciences and the acceptance, of related terms, are either similar or formulated vaguely.

Therefore, the analysed studies revealed two directions of interest for the assumed research issues. These were: (i) attempting to build a conceptual reference framework for promotional journalism (using various meanings for the name), with reference to related concepts and establishing conceptual boundaries in relation to them; and (ii) proposing theoretical models in identifying and analysing materials specific to promotional journalism.

The people, who conducted these studies, were, in most cases, marketing and public relations specialists. They reflected their own interests in the research which were: (i) the recognition of hybrid messages as commercial texts and (ii) the identification and assessment of the effects, of hybrid messages, on readers.

In relation to the research issues, the most relevant studies, in the field, were those carried out by: (i) Tina Tomazic and Jelena Jurisic[1]; (ii) Karmen Erjavec[2]; and (iii) Karmen Erjavec and Melita Poler Kovacic[3].

In the context of the slovenian press, the purpose, of the cited research, is to define and analyse the debut of masked advertising; hybridid messages; and promotional journalism (depending on the terminology used by each study). In addition, it is to demonstrate the existence of this practice; to identify its forms of manifestation; the actors involved; and the means of production through presenting their theoretical influence on the interpretation of text.

The findings K. Erjavec[4]'s study and those, made by researchers (Stular[5]; Tomazic şi Jurisic[6]), highlighted partially the apparition and manifestation of these new journalistic practices. These were considered to be an instrument, used by organizations; institutions; and public individuals in reaching marketing and public relations objectives. However, it was, also, had an

important role as an illegal and unethical practice, in using specific promotional texts to influence readers of these exposed publications.

Research Methodology

Therefore, in order to reach the assumed research's objective in creating a theoretical framework to allow the identification; analysis; and interpretation of promotional journalism, there was need for a theoretical analysis for comparison with related concepts or to make reference to the same studied reality (e.g. advertorials; masked advertising; hybrid messages).

Also, in order to identify the theoretical characteristics of promotional journalism there was a qualitative analysis of the fashion magazine, *Elle Romania*'s specific content between 2002 and 2006.

Boundaries and Conceptual Clarifications – Promotional Journalism and Related Concepts

In creating the promotional journalism's conceptual framework and taking into account, also, the comparative analyses of the studies, the following concepts were considered to be relevant on a theoretical level. These are: (i) advertorial; (ii) advertisments; (iii) hidden advertising; (iv) communication journalism; (v) hybrid unlabled message; (vi) advertising; and (vii) stories.

Consequently, this subsection presents the above assessments in order of listing and their theoretical and practical characteristics in relation to particular material as related to promotional journalism.

Advertorial

The most common confusion, which allows these practices to be tolerated, is between an advertorial and materials specific to promotional journalism caused by existent similitudes between the two concepts.

In order to clarifiy the existing diferences amongst these and to highlight each concept's specific characteristics, the following clarifications are made:

- advertorials are defined in speciality literature as "forms of paid commercial messages which simulate the editorial content of a publication in structural terms, design, visual content verbal and/or the context in which it appears", whilst promotional journalism's specific materials (by inserting advertorial/promotional messages) do not simulate but represent editorial content;
- the objectives, used in the case of advertorials, are different depending on the chosen media channel and its type. Each channel influences directly a distinct category of the specific audience[7], whilst promotional journalism's objectives, aimed at specific objectives of marketing and public relations. are not only different in the context of the chosen media channel but, also, take into consideration other factors (e.g. target audience; message; context; subject);
- from a legal point of view, any content, paid or ordered, to be labeled as such – by a specific mention (e.g. advertorial; promo; infommercial) so that it cannot be recognized easily by the mass-media audience[8]. Consequently, by comparison with the advertorial – for which there are regulations regarding the obligations of its publication labeling requirement – materials specific to promotional journalism are not regulated from a legal point of view and, not being advertorials, are not subjected to the labelling rules.

Therefore, in relation to advertorials (according to the qualitative research based upon the fashion magazine *Elle Romania* from 2002 to 2006), materials, specific to promotional journalism, present the following characteristics:

[7] Clyde Brown and Herbert Waltzer, "Organized interest advertorials: Responding to the 9/11 terrorist attack and other national traumas", *The Harvard International Journal of Press/Politics*, 9 (2004): 25.

[8] Tina Tomazic and Jelena Jurisic, *art. cit*., (f.a.): 67-82.

- it represents editorial content (non-simulated) in which advertising or promotional messages are inserted;

- in most cases, they bear the signature of a journalist who is either the author or has manipulated the advertisement or promotion received from the representatives of the organizations; institutions; or public individuals and, without departing from the desired interest expressed by those that paid or created them, has used them to create materials specific to promotional journalism;

- sponsors or beneficiaries are not presented explicitly; however, sometimes, they can be identified by the nature of the article (e.g. by reference to a single industry or activity sector; brand; product or person);

- they are labeled by specific brands (referring to labels imposed by law on the publication: advertorial; promo; info-commercial etc.);

- they are assigned different sections of the publications depending on the subject or journalistic genre used in writing (if applicable); apparently, this justifies the title of editorial content;

- they contain the promotion's distinguishing marks (e.g. textual devices: title; the load; the subject; sources; vocabulary; and so on) which can be found in the article's content;

- they give the message credibility; objectivity; and impartiality by transferring to an, apparently uninvolved, third party (e.g. media channel; journalist - as an author to the article cited sources), , with expertise (specialist in the field to which the article refers); known as such (by the target audience or other specialists, even by means of the function attributed by the publication); or individuals who are famous (e.g. stars; public individuals; brand ambassadors; and brand representatives etc.).

Advertisements

Advertisements represent a form of promotion in terms of language and style used. Promotional journalism (especially news of this type) adopts this style and integrates specific elements in order to stimulate the audience's drive to consume, use or benefit certain products or services.

In speciality literature[9], through the argumentation structure used to influence consumers buying decisions, they represent a related concept to the one of promotional journalism.

Although, in the case of promotional journalism, this structure is more complex and less noticable, any advertising approach should be regarded as an argument directed to a precise target, with the purpose of making it act in a certain way.

In this regard, the following characteristics were considered commonplace to promotional journalism materials: (i) the argumentative structure used generic models of argumentation; (ii) rhetorical language; (iii) the dialogic implicit character; (iv) inter-textuality; (v) complex subtlety of gender; and (vi) the arguments offered to the potential client.

However, in order to avoid confusion in understanding the terms, researchers Tomazic and Jurisic[10] clarified the significant terms attributed to the concept of advertisement and which, most of the time is inserted in materials specific to promotional journalism. These were:

- positive remarks and praise (in the case of promotional journalism, this results in an exclusively positive review) regarding a certain product; service; or company;

- an article joined to an advertisement or a themed commercial (or, in some cases, specific to promotional journalism and associated to the person being interviewed; in case, he/she is a representative of a brand or organization);

- messages which promote a certain product; service; or company, published under the form of a journalistic article, without mentioning their advertising or promotion;

- mentioning, through celebrities, certain products; services; and brands and linked to them;

[10] Tina Tomazic and Jelena Jurisic, art. cit., (f.a.): 67-82.

- under the title of recommendation, announcements (editorials) or journalistic texts (usually), accompanied by photos, with the purpose of boosting sales (in the case of promotional journalism, this practice can take the shape of product placement).

Hidden advertisements and hidden publicity

Regarding the particularities which define and contribute towards identifying "hidden" advertisements, these are assessed as follows[11]:

- inserting, in the journalistic one, a part of advertising (or promoting) text with the purpose of either creating or maintaining a real or legal person's interest or determining the sale of a product or service;
- focusing the reader's attention on a specific brand or producer and on its important qualities so as to create and maintain interest in the offered products or services;
- the text is not based on news value (artificial character of the story);
- positive and emotional arguments in favour of the product; service; organisation; or promoted person; and enthusiastic, artificial and exagerated means of expression in order to present it in a favourable light;
- the advertisement is a definite sale suggestion („instructions of sale" are presented; brand language);
- the placement of a product in order to sell it; making it have a different character in comparison to similar products:
- particular mentions relating to the sale or purchase of a product or service quickly (its presentation and specific characteristics or attributes); texts contain usually information regarding time[12]; meaning a specified window of a promotional offer's availability; and the duration of an event etc.

In relation to the particular elements of hidden advertising presented above, promotional journalism endorses them theoretically in their entirety and partially, in terms of specific practice. This states that the term "ad" could be considered to be a kind of promotional journalism. However, it does not cover fully its complexity and variety of specific genres.

The typology, proposed in specialized literature for hidden advertisements and showing the features mentioned below, can be considered to be an example of promotional journalism's specific practices (as shown in research conducted on publications *Elle Romania* during the period from 2002 to 2006):

- items paid by an organization, which presents products and services, in order to improve their reputation;
- an article on a specific topic to attract attention to the advertised products referred to therein;
- text, written in journalistic style by a PR specialist, which appears unchanged in the media;
- an article containing only information favourable to a company because, otherwise, it would abandon purchasing print space in the publication (obligation or blackmail).

Also, according to the literature[13], to better underline the hidden advertisements and, therefore, to facilitate the identification of materials specific to promotional journalism, it is considered to be useful to present the following specific elements which cancel their specific character:

- in a text, criticism of a product; service; or company in a text which triggers a critical point of view with the reader thereof (e.g. those tasks which are offered usually to experts or any other independent sources, based on assumption that they do not get any benefit from praising a product);
- presentation, in an article, of a particular product or service without mentioning explicitly its commercial characteristics (e.g. price; location of sale) to people who could benefit from its use;

[11] *Ibidem*.
[12] *Ibidem*.
[13] Tina Tomazic and Jelena Jurisic, *art. cit*., (f.a.): 67-82.

- informative advertisements which, although they form a journalistic text, are not signed by a journalist and, in fact, are advertisements of products or services; this is a fact confirmed by marking them explicitly (e.g. "promotional message" or "commercial")[14].

Communication Journalism

Researcher, Jean Charron[15], distinguished the following main characteristics of communication journalism:

- the involvement of journalistic bias and use of connotative language and tropes abound along with the axiological adjectives and phrases specific to the expressive function of communication;
- monitoring contact and communion with the audience and the special features of the communication's factual function;
- the manifestation of a report "inter-subjectivity" between journalist and audience; this is visible through mutual design of the two parties (e.g. "I" - "we" and "you" - "I");
- practicing "proximity" journalism by being playful, imaginative, using puns, reflections and impressionistic judgments.

These features of communication journalism (a misnomer for the very meaning of the concept of journalism) can be considered to be common and specific materials to promotional journalism.

Critics of communication journalism, through assessments made against it[16], complete all the specific characteristics and highlight further highlighting its particular characteristics as follows:

- very careful in ensuring "comfortable reception by the public";
- aesthetic journalism, giving an appealing shape to messages in a competitive environment;
- a representation of society as a "mosaic of target audiences and lifestyles";
- a type of journalism which reduces the individual to a consumer.

In relation to these critical acclaims, the second characteristic is most relevant to promotional journalism, in terms of form and strategies practiced and the approach to the target audience. The latter may be the expression of specific features but in a more complex manner as imposed by the studied reality itself.

Hybrid Unlabeled Messages

Hybrid unlabeled messages can be considered to be the first theoretical attempt to identify and define specific elements of promotional journalism. These exceed the already well-established concepts, like hidden advertising and advertorials, with which promotional journalism is confused.

The main feature, of this type of message, is the specific structure of a mixed type, combining editorial content with publicity.

However, the element, which it has in common with promotional journalism, is being published in the publication's editorial. Thes include regular journalistic elements without sponsors or beneficiaries who paid for the development and/or the publication to be identified easily[17].

Also, the messages' actual content and their similarities with promotional journalism's specific materials occurs especially in the title; semantics; and vocabulary.

As for the title: (i) it is considered to be a "typical characteristic of hybrid genres or promotion"; (ii) contains positive elements about the company; its products; or services; (iii) "directs the reader in a predetermined direction"[18]; and the meaning is positive.

Semantic and lexical peculiarities are related to the following aspects: (i) are promotion specific, using words and positive adjectives; (ii) use positive publicity which is achieved through the

[14] Karmen Erjavec and Melita Poler Kovacic, *art.cit.* (2010): 92–105.
[15] Ioan Drăgan, *Comunicarea – paradigme şi teorii*, volumul 2, (Bucureşti: Rao, 2009), 649.
[16] *Ibidem*.
[17] Karmen Erjavec and Melita Poler Kovacic: *Art. cit.*, (2010): 91–109.
[18] *Idem*: 95

basic function and effect of promotion[19]; (iii) ensure, in ubiquitous lexical devices, consistency in promoting a favourable image of the organization; products; services; and (iv) is a direct form of lexical cohesion.

According to researcher, Karmen Erjavec[20], these two concepts include, also, the following common features: (i) partial semantics (e.g. reference to a single organization; product; or service); (ii) introducing the topic only through positive characteristics (for the purpose of building a favourable image); and (iii) the predominant use of positive words and literature (invoking expertise).

Advertisement

Some of the main features, of advertising, which may interest this research are[21]: (i) it is more reliable compared to advertising; (ii) it provides diagnostics; (iii) the use of custom communication with potential customers; and (iv) it causes them to evaluate information, even if it presents the same content from advertising.

However, in the case of promotional journalism, although, in terms of reporting to the target audience, these characteristics are given particular importance in achieving specific marketing or public relations targets, , their character remains an apparent one.

Therefore, from analyzing, between 2002 and 2006, the content of specific materials, with a promotional purpose, identified to promotional journalism, in the fashion publication *Elle Romania*, we found that the expression, of these practices, contained commonly the following features: (i) ensuring the source's credibility; (ii) acknowledgement of the lack of citation and the use of a single citation source; (iii) in relation to the subject material, diagnostics based on the signatory's false, apparent or relative expertise (in most cases, based on the position they occupied in the publication's organizational structure of the publication); (iii) custom address manner to the target audience; (iv) assessing conceptual content of information within specific material (most often by its signatories or by citing a single source and/or secondary sources which confirm or reinforce the idea enunciated by source).

In relation to the specific items listed above, promotional journalism has the following features:

(i) With regard to the first element, promotional journalism uses the target source's reliability; objectivity; and reputation to reduce public resistance to the message and to increase its effectiveness according to specific marketing objectives. In this sense, internal experts (e.g. employees or employees of publication heading the signed materials in which the article was published and the quality of "specialists") or external (e.g. representatives of brands; organizations etc.) are used to confirm or reinforce the signatory's findings in relation to the subject of the article.

(ii) The second distinctive feature, shown above, limits the publications' expression of explicit advertising editorial content to terms related to commercial characteristics (e.g. selling price; and location) and potential beneficiaries. However, in the case of promotional journalism, strategies and practices are more "subtle" in the sense that we can talk about product placement (the title of recommendations; examples; proposals) without textual presence of commercial terms. Nevertheless, the choice, for those products and the presentational characteristics and product attributes, accompanied by images of the packaging, are placed in a favourable editorial context (e.g. item advice; recommendations; trends; experiences or personal choices). These are forms of implied promotion and, sometimes, have potentially greater efficacy when compared to explicit trade entries.

(iii) In the case of informative advertisements, the third distinctive element, direct comparison in terms of promoting journalism can be achieved by one of its specific genre - "news promotion". Clearly, from the content analysis conducted for the publications *Elle Romania*, in the period from

[19] Karmen Erjavec and Melita Poler Kovacic:*Art. cit.*, (2010): 92-105.

[20] Karmen Erjavec, *art. cit.* (2004): 553–578.

[21] Martin Eisend and Franziska Kuster, "The effectiveness of publicity versus advertising: a meta-analytic investigation of its moderators", *Journal of the Academy of Marketing Science* (2010)

2002 to 2006 it had the following characteristics: (a) be signed by a journalist (not: one signature for that news item, usually there were more categories, of this kind, and each bore the signature of a magazine journalist); (b) labeled visible (false) "news"; (c) were assigned to specific sections of readers' fields of interest (e.g. fashion; beauty; health); (d) formal assignment to a specific section (given only by title) because these were included in the promotional text and/or advertising which did not target the specific section to which they were assigned; (e) their character was permanent and was published regularly in the observed sections which were framed and sequenced with the rest of the materials) and had, also, a fixed structure in the publication's economy.

Stories

Reports, of studies[22], exemplify explicitly promotional journalism practices by describing the ratio of real estate transactions.

A report, of a transaction, can be considered to be a development of an advertorial which, initially, loses its appeal and can be considered to be a type of advertising (e.g. advertisement).

Such an account is a kind of promotion; an advertisement, posing as news, such as embedded inter-textuality.

However, although it appears to be a story, it presents subtle elements to promote the characteristics of a "hybrid genre"[23].

Both specific news items and the specific advertisements are present, in this kind of genre, and the communicative functions, of information and belief, are equal.

Reporting, on real estate transactions, are considered to be "boundary objects", located between promotion and information. This is necessary in order that this genre can be placed in the broader context of the analysis.

Specific characteristics of promotional journalism

Also, following the research, conducted between 2002 and 2006 on the fashion publication *Elle Romania* and after a through analysis of related concepts, the following were considered to be specific characteristics of promotional journalism and complementary to those presented above:

- completion and publication, of materials specific to promotional journalism, are linked strictly to reaching marketing or public relations objectives;
- strategies and techniques, used in creating and publishing, are similar to those used in advertising and public relations;
- the selection, of subjects, is based on commercial reasons – boosting sales or promoting a product; service; organization; or person;
- the approach's perspective is one sided (e.g. one point of view; only one cited source);
- evaluation and reporting on the subject is strictly positive;
- the cited source is a representative of the company; a satisfied customer, or an expert in the field. This confirms or reinforces the favourable idea regarding the subject of the article;
- where no source is cited, the article's author shares his experience or opinion – strictly positive - regarding the subject of the article;
- the used vocabulary used contains only positive figures of speech (adjectives, superlatives). These underline the nature of the genre and the objectives (e.g. building and/or maintaining a favourable image; promoting atributes; and advantages of using the certain product/service);
- these ensure the transfer of particular journalistic genres specific attributes (e.g. objectivity; impartiality neutrality) and reduce resistance to messages which contain or use the specific shape structure and typology.

[23] *Ibidem*.

Conclusions

The purpose, of this study, was to contribute by creating a conceptual reference framework, in order to develop a specific know-how which would facilitate the efforts in identifying; analyising; and interpreting promotional journalism. It was difficult to both define and particularise a concept theoretically and practically amid vague boundaries concerning related cobepts which existed in speciality literature.

In this context. the objectives, of this research, focused on establishing the theoretical and practical characteristics of promotional journalism. This was based upon a comparative analysis to related concepts, and a qualitative analysis of specific content found in the fashion publication, *Elle Romania*, between 2002 and 2006.

The study's results led both to establishing and clarifying important conbceptual boundaries between promotional journalism and other popular concepts in literature. These either related to it or to represent the same studied reality, and to identify specific theoretical and practical based characteristics upon comparative analysis and analysis of the content of fashion publication, *Elle Romania*, between 2002 and 2006.

Therefore, this thesis' originality was in addressing interdisciplinary issues and adopting a research strategy to achieve its objectives - from two points of view - both theoretical and practical. These would help to enrich not only the conceptual framework, of reference, but, also, to provide a better understanding of the studied reality.

In terms of research results, establishing theoretical and practical characteristics, specific to promotional journalism, can be useful to both theoreticians and researchers in the field. This is not only in defining and analysing it but, also, in assisting practitioners and beneficiaries, of this new marketing instrument, in understanding and improving the process of creation and implementation.

Research Limitations

Regarding the limitations of the research, they were assessed as being: (i) the selection of articles and studies reviewed; (ii) analyzing; interpreting; and assessing the fundamental ideas identified in the literature in relation to the issues studied; (iii) lack of unanimity in the conceptual framework's references which were considered in order to achieve comparative analysis; (iv) the limited number of existing studies on the subject of research; (v) the selection and representativeness of the sample and units of analysis; (vi) the construction of research instruments used for content analysis and the lack of validation thereof; (vii) the absence of the quantitative content analysis component; (viii) inability of generalization of research results; and (ix) the subjectivity, of the researchers, in relation to their assessments.

Future Research

In reaching this study's goal and objectives, the following research efforts can be considered to be useful and, in particular, the use of triangulation as a strategy. These are: (i) in the editorial offices, of the analysed publications, scientific observation regarding particular practices in creating and publishing specific materials to promotional journalism; (ii) conducting in-depth interviews with the actors involved in all the steps of this practice; and (iii) creating an adequate toolkit to achieve a content analysis which will respect its predominantly quantitative character and will ensure, also, objectivity and validity of the research results.

CHARACTERISTICS OF THE CONSUMER PREFERENCES RESEARCH PROCESS

MIRELA-CRISTINA VOICU*

Abstract

*Information is one of the most important resources that a company must possess. Some **information is** hidden deep in the black box - the mind of the consumer, as in the case of **information** about consumer preferences. Although it seems a concept difficult to **grasp**, it was shown that consumer preferences can be effectively measured and their research may provide a deeper understanding of the choices that consumers make when deciding to select an offer against another and when deciding to continue in time the relationship with one supplier. The following paper reveals some important aspects regarding the use of **information** regarding consumer preferences, the fundamentals behind consumer preferences research and the milestones in **the** consumer preferences research process.*

Keywords: *marketing research, consumer behavior, consumer preferences, dimensions of consumer behavior*

Introduction

Studying the consumer's behaviour is not an easy task at all, and even less simple is observing only one aspect of this behaviour, like in the present case, the consumers' preference for a certain product, label or organisation. Along the research consumers may express their needs and desires and still may act in a totally opposite way; at times, it's possible that they aren't even aware of the true motivations behind their buying behavior, or they could react to factors determining last minute changes to their buying decision. Although the consumer decisions are relatively easy to notice and quantify, the psycho-physiological processes behind them are very difficult to take into account[1].

Research related to consumer behavior looks upon its different dimensions and their relationship. The final aim of these investigations is to foresee and channel the future reactions of the demand agents, for a precise correlation between demand and supply. In this respect, all dimensions that lead to the manifestation of a certain behaviour must be studied and understood. Each of the dimensions of the consumers' behaviour we want to focus on within a marketing research imprints on it with certain specificity, a special way of approach. Therefore, the features of the consumers' preferences mark the conducted studies with certain specific features in this sense, which we must take into consideration when elaborating and conducting these studies, in view of observing the essence of this dimension of the consumers' behaviour.

1.The necessity of knowing the consumers' preferences

The preferences of the consumers are a positive motivation, expressed by the affective compatibility towards a product, service or trading form. We're not dealing with an internal bodily function, but a quality of objects that aims to fulfill our needs, quality acquired within the connection between man and the merchandise able to fulfill these needs.

Preferences can be triggered by: the features related to the material substance of the goods (shape, size, print, taste, colour, consistency, package, etc.); elements referring to label, name, use instructions that accompany the product; the statute granted to the person owning and using that particular product[2]. Theoreticians, at some point, had the tendency to limit the preference to the concept of choice; however choice and preference are two radically different entities: the first one is

* Lecturer, PhD, "Nicolae Titulescu" University of Bucharest (voicu.cristina.m@gmail.com).

an action and the other one, a state of mind[3]. Preferences are the result of a long-term relationship between the brand and the consumer, as the latter learns to associate the brand with a symbol and perceive it as having high quality. Following these deep connections created over the course of time, a strong emotion is developed which lies on the basis of preferences, remaining present even in the absence of the friendly symbol or of any other component feature.

Although a hardly comprehensible concept, it has been demonstrated that the consumers' preference can be measured effectively, and that their study can provide a more thorough understanding on the choices consumers make, when they decide to select a particular offerer as against the other, or even when they decide to continue the relationship with the offerer in time. Additionally, conducted studies have established various concepts related to the preference, such as the concept of the formed preference which underlines the idea that the consumers' preferences are not better defined, but rather formed along the process of choosing, a constructive point of view which suggests that different tasks and contexts highlight different aspects of the options, the consumer concentrating on different considerations leading to inconsistent decisions[4].

Knowledge of consumer preferences is especially important with respect to the various activities carried out at the organizational level, necessary for its survival. For instance, if an entrepreneur must determine what features must have the product he wants to create, he will interview more potential buyers, asking them to mention the level of preference for each separate feature. The consumer preferences and behavior represent the basis of the pretesting models for the new products (ASSESSOR, COMP, DEMON, NEWS, SPRINTER), which implies determining the functional relationships between the buyer's opinion concerning a product, testing it and the purchase behavior. The level of preferences is one of the variables that need to be taken into account when identifying the strong and weak points of the competitors. By measuring the consumer preferences before and after carrying out an advertising campaign, the transmitter may evaluate its success or failure[5]. The preferences towards certain products or brands may constitute the theme of a survey supplying information concerning the relative non-consumers, since attracting these represents an important means of increasing the sales volume up to the maximum limits of market potential. The companies constantly increasing the level of reminding and of preference shall attain an inevitable increase in market share and profitability. The size of profits is less important than managing to consolidate consumer preferences towards its products[6].

More frequent are the situations that emphasize the necessity of knowing this dimension of the consumers' behaviour.

After determining consumer preferences towards a brand, the producer may take the following measures, with a view to increase preferences for that brand:

- change the product;
- change beliefs concerning the brand;
- change beliefs concerning the competing brands;
- change the importance of features;
- attract attention towards neglected features;
- change the consumers' ideals.

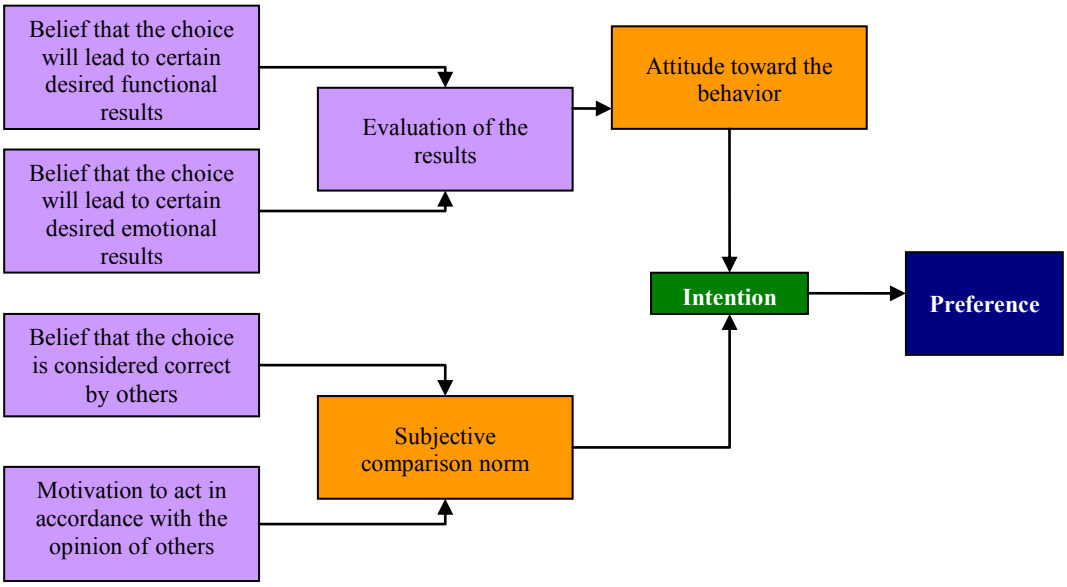
In addition, in order to attract consumers' preferences towards their own brands, producers and retailers may chose the option of "renting" those brands having won the preferences of consumers (names or symbols previously created by other producers, names of celebrities, names of movie characters etc.).

2.Fundamentals of studying the consumers' preferences

The theory of rational choice comprises attitude components which, in the end, represent the basis of forming a preference. This theory gives us a model contributing to a better understanding of the way consumers' preferences are formed and providing us, in an appropriate way, with the necessary means of researching and foreseeing the evolution of the consumers' preferences.

After analysing the way consumers' preferences are formed from the point of view of the theory of rational choice, depicted in figure 1, we can state that, in order to understand the consumers' preferences, it is necessary to determine their demands and desires regarding the performance (functionality) involved in the purchase, the expected emotional results, as well as the subjective standards consumers use to identify the tendency for a product or a service as against the others.

Figure 1. *Structural model of how consumer preferences are formed*



Source: *Developing Customer Insight: The Determination of Customer Preference*, International Communication Research, www.icrsurvey.com/docs/Customer%20Preference%20Formation_1205.doc

A first hypothesis of the presented model is that individuals perform thought purchases. In some cases, the act of thinking can be minimal when purchasing a product or a service has already become a habit. In other cases, the act of thinking can be extended over a longer period of time, whereas each element is carefully processed before performing the purchase.

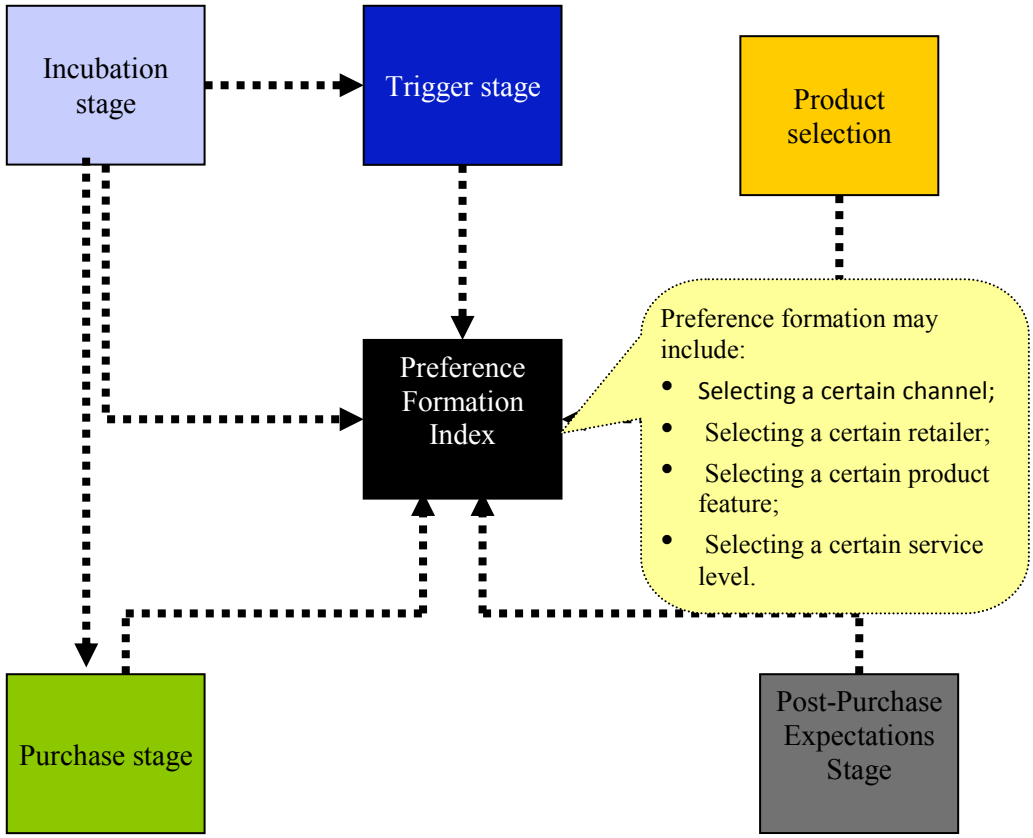
We can observe that the presented model is used by the consumer, more or less, whenever he buys and the components that influence a preferred decision are, at the same time, components that interfere in the process of evaluating the performance of the product/service bought, as well as of the

organization responsible for it. Hence, to the extent that the components of the preference change, the components that influence the satisfaction change, too, accordingly.

The theory of rational choice takes into consideration the consequences of performed actions. We prefer a product, a person or a service because we have already decided that the object suits best to our needs or demands on the performance, altogether with the emotional demands judged by our standards of comparison. Each step in the purchasing process contains emotional and performance components preferred by the consumers.

If we extend the steps of the purchasing process over the model of the theory of rational choice (depicted in figure 1), we will be able to interpret the evaluation experience by means of the purchase (see figure 2).

Figure 2. *Evaluating the purchasing experience – using the model of rational choice within different stages of the purchasing process*



Source: *Developing Customer Insight: The Determination of Customer Preference*, International Communication Research, www.icrsurvey.com/docs/Customer%20Preference%20Formation_1205.doc

Note: The indicator of preference formation represents a standardized score that varies between 1 and 100

In reality, the decision of buying is taken by making certain well-thought compromises (compensations) between the levels of fulfilling the consumers' preferences as against the significant attributes, considered by the consumers as decisive when purchasing a product (the most frequent example is accepting some intermediary levels of performance in exchange for a price suitable to the consumer's purchasing power)[7].

3.Methods used in the study of the consumers' preferences

Since the preference appears only in the context of a strong motivation, the research of preferences covers a more limited but, at the same time, a much deeper area than the study of motivations that subsumes the evaluation of the preference intensity, using also the same instruments as in the case of the evaluation of reasons.

The study of consumers' preferences can resort to *the observation method* (as when analysing the purchasing reasons), being the cheapest way of collecting behavioural information and, at the same time, the most accurate one that assures an authentic motivational image. *The selective enquiry* based on a written questionnaire is also used in studying consumer preferences even though it determines solely the declared behavior of consumers and not the actual one, as in the case of observation.

Measuring consumer preferences for alternative product concepts may be performed by using technique that is more and more widely known, namely the *conjugate analysis*. This is a method of finding out the value in use consumers attach to various features of an object. The respondents are presented with several hypothetical offers obtained by combining certain features, and they must rank these offers according to their preferences.

Testing consumer preferences is based on a variety of techniques such as: simple rank ordering, paired comparisons, appraisal scales, each having specific advantages and disadvantages. *The method of unitary appraisal* supplies much more information than the method of simple ranking and that of paired comparisons. The subject is required to order on a scale his/her preferences for each product. By using this method, we can find out not only the order of preferences, but also the qualitative levels of preferences for each product and the distance between the products. At the same time, this method is easy to use, especially when we must evaluate several products[8].

Investigating preferences may be approached in different combinations with investigations on other dimensions of consumer behavior. For this purpose, one can make use of special investigation techniques, such as contextual methods or psychodrama[9].

The research on the consumers' preferences has lead to a more thorough understanding of several important problems arisen in the research on the consumer satisfaction, especially one related to the fact that the consumer satisfaction in superior conditions at present does not assure the manifestation of the consumer preference in the future.

4. Key stages in organizing a research on the consumers' preferences

Organizing a selective marketing research is an especially complex process. In order to maximize the contribution of the marketing research to the decision-making process, this activity must be organized with most care.

---

[8] Voicu, M.C., 2007, *Aspects Related to Researching Consumer Preferences*, Theoretical and Applied Economics, Nr. 9/2007 (514), ISSN 1841-8678 (print edition)/ISSN 1844-0029 (online edition), http://store.ectap.ro/articole/250.pdf.

[9] Florescu, C., Balaure, V., Boboc, Şt., Cătoiu, I., Olteanu, V., Pop, N. Al., 1992, *Marketing*, Marketer Publishing House, Bucharest, pag.164.

Carrying-out the marketing research involves going through certain successive phases, within a complex process, starting with determining the research aim and objectives and finishing with presenting conclusions and recommendations.

➥ *Identifying the issue and defining the research purpose*

Identifying the issues and defining the research purpose is one of the most important phases of the research process, having decisive influences over the subsequent phases. Even if perfect decisions are taken during the other phases, the research is compromised if the issue to be investigated and the research purpose were not clearly defined, and this can only be attained through a close collaboration between the person conducting the research and its beneficiary[10].

In order to exemplify such a research, we will assume that the purpose is: „Research on the preferences of tourism services consumers for the Sinaia mountain resort".

➥ *Defining the research objectives*

In the process of organizing the marketing research, formulating objectives involves determining on an operational level which information is necessary for grounding the optimal decision alternatives for each dimension of the issue investigated. Each objective must be relevant for the research purpose.

Establishing clearly the research objectives is useful in fundamenting the priorities concerning the necessary information and serves as a standard in evaluating the final results.

The objectives corresponding to the research purpose may be formulated as follows:

- Identifying the frequency of visits at the mountain resorts;
- Determining the importance of the mountain resorts' main features;
- Determining the main categories of tourists visiting the Sinaia resort, by age, sex, occupation and income;
- Identifying the main mountain resorts competing with the Sinaia resort;
- Establishing the main categories of visitors who prefer Sinaia, by age, sex, occupation and income;
- Determining the frequency of visits at Sinaia made by tourists who prefer this resort;
- Identifying the minimal length of the stay by visitors who prefer Sinaia;
- Determining the year period when visitors prefer travelling to Sinaia;
- Identifying the minimal number of people accompanying visitors who prefer travelling to Sinaia;
- Determining the main features preferred by visitors coming to Sinaia;
- Identifying the appreciation degree of the main features of the resort by tourists that prefer Sinaia;
- Determining the main reasons of tourists who prefer visiting Sinaia;
- Identifying the way tourists preferring Sinaia appreciate this resort's main features of the tourism services.

➥ *Defining the research hypotheses*

Once the research objectives are set, it is necessary to decide on the hypotheses to be tested within the research. Based on a logical analysis of all possible hypotheses related to the issue under research, those hypotheses that can be tested by the research conducted are selected.

Stating a valid hypothesis may have as a starting point the theory of a discipline, the experience acquired by certain specialists, the results of previous researches or the results of an exploratory research conducted in advance.

For our example, the corresponding hypotheses may include:

- The majority of people are frequently travelling to mountain resorts;

[10] Balaure, V., Adăscăliței, V., Bălan, C., Boboc, Șt., Cătoiu, I., Olteanu, V., Pop, N. Al., Teodorescu, N., 2003, *Marketing,* Uranus Publishing House, Bucharest, pag. 133.

➢ According to tourists, the most attractive features of the mountain resorts are the natural location and the diverse landscapes, as well as the concentration of tourist attractions;

➢ Sinaia is on top of the most visited mountain resorts;

➢ Most of the tourists visiting Sinaia are male persons with an income of 2000 Lei;

➢ Sinaia is a mountain resort preferred most specially by male persons with ages between 20 and 35 years, working as employees with higher education and with an income of 2000 Lei;

➢ At least 50% of the tourists, who prefer Sinaia, travel to this resort at least three times a year;

➢ The tourists are unsatisfied with the services provided at Sinaia mountain resort;

➢ All year long, the winter season is preferred for the package tours offered by Sinaia mountain resort.

➥ *The research sample*

It is essential in carrying out a marketing research to determine the elements concerning the research sample. Sampling relates to establishing the sample size and structure, so that one basic condition is fulfilled, for the sample to be representative with respect to the population researched[11]. In this regard, a sample base (general group, selection group and observation unit) and the dimension of the research, which will produce the best results with minimal costs (does not necessarily ensure the representativity of the information), will be established.

The sample size, apart from its theoretic foundations, must answer to the concrete objectives associated to the study under scrutiny. In practice, while it is possible to determine a sample size ensuring representativeness of all information to be gathered, is very seldom used, due to the costs involved. A compromise is usually accepted between objectives and costs, by choosing that sample size producing the best results.

➥ *The research questionnaire*

The questionnaire is the instrument most frequently used in obtaining primary data and consists in a set of questions the respondents must reply to. The flexibility of such instrument lies in the fact that a question may be asked in countless different ways.

The questionnaire is one of the most important elements the success of a selective research depends upon. Concerning the methodology of elaborating the questionnaire, it is believed it is more of answer art than a science.

Specialists agree that, in order for the questionnaire to be an efficient tool, it must fulfill the following functions:

- to ensure the cooperation and involvement of the respondents;
- to communicate correctly to the respondents what is expected from them;
- to aid the respondents in formulating answers to questions;
- to avoid possible distortions of replies;
- to facilitate the interview operator to carry out his/her task;
- to generate the base necessary for processing the data gathered.

Upon elaborating the questionnaire, aspects such as the following needs to be addressed[12]:

⇨ identifying the characteristics comprised in the survey objectives and program, and their logical ordering. Mentioning the desired information and the research objectives envisage that every objective, hypothesis and variable must reflect in the structure of the questionnaire. Also, another preliminary moment of great importance is when the method of collecting information is established, a phase with great impact on the other stages during the projection of the questionnaires. The

[11] Anghelache, C., 2008, *Treaty of theoretical and economic statistics*, Economica Publishing House, Bucharest.

[12] Voicu, M. C., 2008, *The questionnaire – a tool in the survey research*, The Romanian Magazine of Statistics, Supplement May 2008, pp.112-125, ISSN 1018-046x, B+ category, CNCSIS monitored ISI Thomson Philadelphia (SUA).

questionnaires' content and the way questions are formulated, their type and sequel, the questionnaires' length and other physical features are subject to this phase.

⇨ formulating the questions the respondent is to be asked. With this respect, one must take into account:

- the type of questions that are to be used (closed, open or mixed questions; factual or opinion questions etc.);
- the quality of questions (to be specific, simple, to avoid ambiguity, vague and tendentious wording, to avoid presumptions or hypotheses etc.);
- the order of questions (the questionnaire must be elaborated using the "funnel" principle, starting with general questions and continuing with more and more specific questions, or using the "inverted funnel" approach);

⇨ choosing the proper sizing, page layout and general aspect of the questionnaire;

⇨ coding and elaborating the code list;

⇨ questionnaire pretesting.

After applying the questionnaire and processing the data collected, we proceed to analyzing and interpreting the data in order to reach the research conclusions. The research conclusions aim at answering to the objectives and hypotheses set out in the preliminary phase of the research, and shall constitute an important source of data for the decision-maker.

Conclusions

Current debate on consumer preferences research is reduced to a few key points:

- Determining the preferences of the consumers is part of the category of strategic information. This type of information allows organizations to take a decision that would lead to the fructification of preferences, which will ensure its success on the market it activates on.
- The features of the consumers' preferences and, in general, of the consumers' behaviour impose that the marketing research appropriately adapt in order to observe an aspect of the consumers' behaviour, which is more of qualitative nature, and, as a result, hard to discover by means of a quantitative method.
- Along the marketing research it is necessary to take into consideration several key stages, which, if carried through, will influence the obtaining of certain higher qualitative information. Of great influence on the quality of the data obtained by the means of the marketing research are the stages that formulate the problem and the research objectives, as well as the stage when the questionnaire is elaborated – at some point important steps in evidencing the preferences of the consumers.

SUSTAINABILITY AS A PART OF BALANCED SCORECARD

LUCIE SARA ZAVODNA*

Abstract
Sustainability is a trend, which is more seriously discussed on the international and national level. But also companies in the local level are pushed to have strategies and visions, which enable better future for society, our planet and local economy. Sustainability is one of the conditions – it allows companies to implicate social, economic and environmental pillars to the company´s strategy and management. The question, which remains today is, how to measure social, economic and environmental impact on society? And more – how to enable future generations to have the same conditions as we have today? The paper provides format for a possible bridge between current strategic Balanced Scorecard system and future trend of sustainability. One of the special tools, which can be used for measuring sustainability, is Balanced Scorecard (by Kaplan and Norton in 1990s) with the complement of sustainable metrics. The paper introduces three possible methods, which can be used by implementing sustainability into the Balanced Scorecard. One of these methods is described in detail. There is a focus on the sustainable indicators included as the fifth area in Balanced Scorecard model.

Keywords: *sustainability, management, trends, balanced scorecard, measurement.*

1. Introduction

The Balanced Scorecard methodology demonstrated in this paper provides format for a possible bridge between current strategic Balanced Scorecard system and future trend of sustainability.

The sustainability concept is relatively new and in many organizations still do not know, how to implement or measure its outputs. Sustainability is key factor for success in the future market. Climate change is emerging as a key factor, which expects to transform the way we manage resources. Impacts of climate change on resources affect all regions of the world, but will manifest themselves in different ways. The uncertainty regarding the severity, timing, and frequency of events and their impacts, is the main challenge. Having robust and adaptive resource management plans will help prepare company for the uncertainty and risks that lie ahead. (Changing Currents, 2010)

Responding to societal concerns is very important to businesses, not only from a public relations (marketing) perspective but also as a means to address customer and shareholder expectations. Financial markets are also starting to examine the way in which companies address environmental / sustainability issues, adding to this public pressure to sustainably manage natural resources. Many people are not aware of the impact that such industrial pollution can have on the earth. By helping to make it known, companies can be one of the voices that will draw attention to the issue thus helping to inspire change.

Every business is usually made with the main goal in the form of profit. The management is traditionally focused on profitability, market share or some from the new measuring indicators such as EVA, CFROI, RONA, CVA, etc. Many view the sustainability report as only a companion to financial reporting. It is unavoidable perspective, when company trades abroad.

Forty or fifty years ago, it was a struggle to call general public interest concerning the state of the environment even in developed countries. Nowadays such concepts as becoming ‘carbon neutral,’ ‘green consumerism’ and ‘eco-efficiency’ appear to have been embraced in the developed world. (Elijido-Ten, 2011)

* Ing., Ph.D.,Department of Applied Economics, Philosophical Faculty, Palacky University in Olomouc, Czech Republic (e-mail: lucie.zavodna@upol.cz).

This paper focus on the way, how to implement sustainability measuring into the Balanced Scorecard and what exactly does it mean for organizations.

The paper establishes older findings by many scientists with the new view of concrete indicators, which could be implemented in the Balanced Scorecard.

Aim of the article and research questions: The aim of this paper is to introduce and implement sustainable indicators into the system of Balanced Scorecard. The main research questions are: How to measure sustainability? What are the main sustainability indicators? How to implement these indicators into the Balanced Scorecard?

Methods used in research: Examine and analyze characteristics of the sustainability and its metrics. The expected result of the research is a new model of Balanced Scorecard with the sustainability elements.

2. Original Balanced Scorecard

Robert Kaplan and David Norton managed in early 1990s to combine financial and nonfinancial issues into a comprehensive performance management system called Balanced Scorecard (BSC). In 2012 it was 25 years since the publication of 'Relevance Lost', in which Professors Johnson and Kaplan alleged that management accounting information needs had become subservient to financial reporting requirements. The goal in 1992 was to incorporate multiple perspectives into organizations that primarily manage financial issues, balance sheets and income statements. These traditional financial reports only indirectly measure the effectiveness of corporate strategy and can be misleading about whether a specific strategy has been implemented successfully.

Financial measurement systems are years ahead of nonfinancial measures. This is naturally because of governmental regulatory and obligatory reporting. Accounting experts have improved these measurements through decades in cooperation with government agencies.

The BSC model was originally created to measure four quadrants: financial, customer, internal and learning perspective.

- Financial quadrant – primarily measures revenue growth, investment return, and cost reduction
- Customer quadrant – focusing mostly on market share and customer loyalty, satisfaction, profitability, and acquisition
- Internal Business Process quadrant – identifying more effective processes for the organization to most efficiently meet its objectives
- Learning & Growth quadrant – consists of employee skills and training, IT functionality, and administration of routine processes

The basic premise of the Balanced Scorecard is that financial results alone cannot capture value creating activities. The only financial measures are lagging indicators and are not effective in identifying the drivers or activities that affect financial results.

According to Bain&Company in 2004 about 57% of global companies were working with the Balanced Scorecard model. It is used extensively in business and industry, government, and non for profit organizations to align business activities to organizational strategy.

The Balanced Scorecard is a customer-based planning and process system, which main aim is focusing and driving the change process. Sustainability is also focused on customer needs. That means company needs to implement sustainability into the company´s goals. Is there any space in BSC for it?

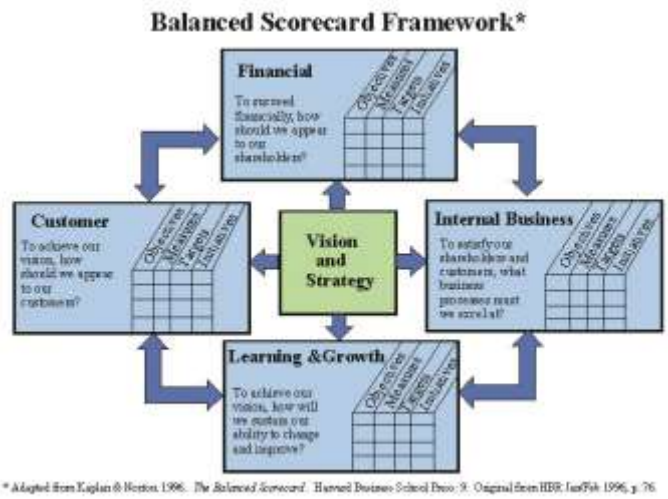

Figure 1: Balanced Scorecard Framework adapted from Kaplan & Norton (1996).

3. Sustainability Perspective Discussion

As the sustainability or environmental/green strategy is a nowadays theme of the organization's strategy, it can span the existing balanced scorecard perspectives. The sustainability concept originally refers to how organizations handle non-financial factors related to environmental, social and economic issues. This concept potentially impacts the organizations future.

Sustainability includes broader issues in area of ecology, sociology and environment as well as well-being of people and standard of life. In other words it is sustainability seen as "green" practices and can be found throughout the operations of all types of business.

The sustainability concept is also synonymous with citizenship reporting, social reporting, triple-bottom-line reporting, and other terms that encompass the economic, environmental, and social aspects of an organization's performance and planning. Public and private agencies can consider sustainability reporting at three levels: organization (internal), policy outcomes (external), and contextual or spatial outcomes (regional). (The Centre for Public Agency Sustainability Reporting, 2007)

Organization with the sustainable (also seen as green) strategy have three possibilities, how to implement sustainable strategy in BSC. (Elijido-Ten, 2011) **First**, environmental and social aspects can be integrated in the existing four standard perspectives. Environmental/social aspects become then an integral part of the Scorecard and are automatically integrated in its cause-effect links and hierarchically orientated towards the financial perspective. For example an added dimension within the financial category can be the integration of sustainability measures, such as energy costs, recycling revenues, disposal costs, and environmental dollars. Each organization can choose what specifically applies to its business environment and ignore any of the metrics that do not apply.

Secondly (and this is more likely) there can be created an additional perspective to take environmental and social aspects into account. Figge et al. (2001) propose the introduction of an additional, so called non-market perspective in order to integrate strategically relevant environmental and social aspects. Kaplan and Norton also point out that the firm-specific formulation of a BSC may involve a renaming or adding of perspective (Kaplan, Norton, 1996). Adding an additional perspective to the BSC may be the simplest approach for companies that want to emphasize sustainability as a key corporate value. The paper develops this idea later on.

Third possibility, a specific environmental or social scorecard can be formulated. Derived environmental or social scorecard cannot be developed parallel to the conventional scorecard. This scorecard is not an independent alternative for integration, but only an extension the two variants discussed above. (Figge et al., 2002) The reason, why companies establish a separate Balanced scorecard for sustainability, is that CSR strategy or/and sustainable development are seen as core strategy in creating competitive advantage.

Sustainable perspective implemented in BSC model should ensure that *the strategy of company is in link with environmental, social and economic needs of the next generations*. The integration procedure of the sustainability perspective metrics offers a possibility for organizations to translate sustainability visions and strategies into action plans.

The process of creation new perspective into BSC must lead to an integration of environmental and social management into strategy. The sustainable aspects must be integrated according to their strategic relevance. (Figge et al., 2002) By integrating sustainability measures into business practices and by clearly linking an organization's competitive strategy to its green outcomes, the BSC clarifies the relationship between sustainability outcomes and profitability/shareholder interests. (Butler, Henderson, Raiborn, 2011)

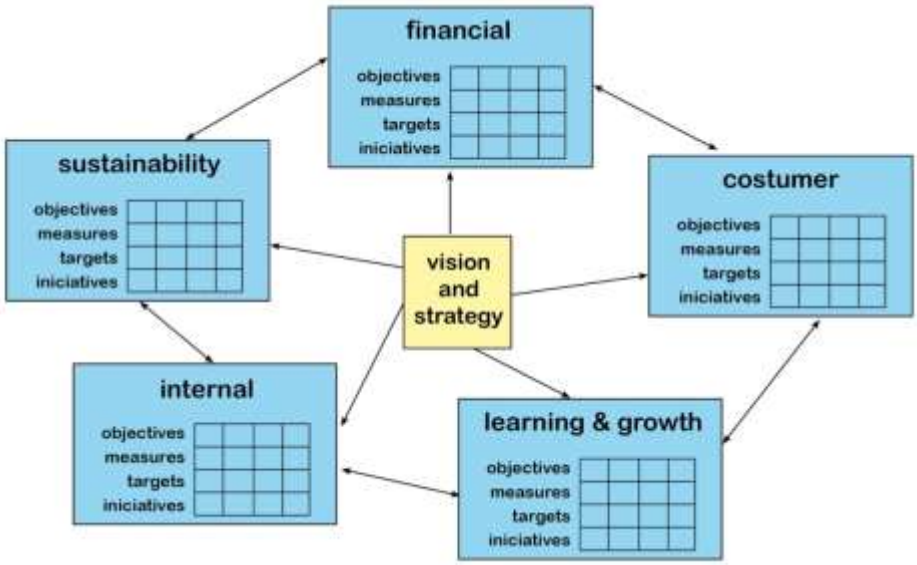

Figure 2: Balanced Scorecard with the Fifth Category - Sustainable Perspective - adapted BSC model.

"*What gets measured gets managed*" is an old accounting saying that remains true today. The sustainability perspective enclosed in BSC also needs its measurement.

4. Indicators of Sustainability

Before we can measure anything, we have to define the term sustainability and its characteristics. The definition of sustainability depends on who is defining – government, NGO, scientists. Still, common topics run through most definitions of sustainability. They usually deal with the economy or/and nature. They are about the rate of change, and about equity between generations. Many see sustainability as a continually process of development. As the sustainability is a new trend, many come with own definitions.

The concept of sustainable development was described in a 1981 White House Council in Environmental Quality Report (EPA, 2011): "The key concept here is sustainable development. If economic development is to be successful over the long term, it must proceed in a way that protects the natural resource base of developing countries." The business dictionary (2011) defines the sustainability as an "ability to corroborate or substantiate a statement" and "ability to maintain or support an activity or process over the long term". According Brundtland Commission and the report "Our Common Future" sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs. Donella H. Meadows (2004) sees "a sustainable society as the one that is far-seeing enough, flexible enough, and wise enough not to undermine either its physical or its social systems of support." Searching through different definitions there can be found key elements, which are common for most of the authors. These are: Consideration of future, Protection of resources, Economic prosperity and Connection between environmental, social and economic areas. These areas should be considered by creating sustainable indicators for the companies.

Management of the organization should develop certain metrics for achieving sustainability goals. BSC measures can reflect each individual company´s strategies and operations, so those measures identified will vary widely among companies. According Butler et al. (2011) measures, targets, and goals chosen for every perspective should be:

1. Controllable by all stakeholders,
2. Quantifiable,
3. Include all component elements when a multidimensional measure is used.

Multidimensional measure means for example, that the term greenhouse gasses (output to global warming) may be used for a variety of gasses (carbon dioxide, methane, chlorofluorocarbons, etc.).

At the figure 3 there is a model of incorporating sustainability into companies and other organizations. It is all based on the principles of sustainable development, which are giving the basic platform.

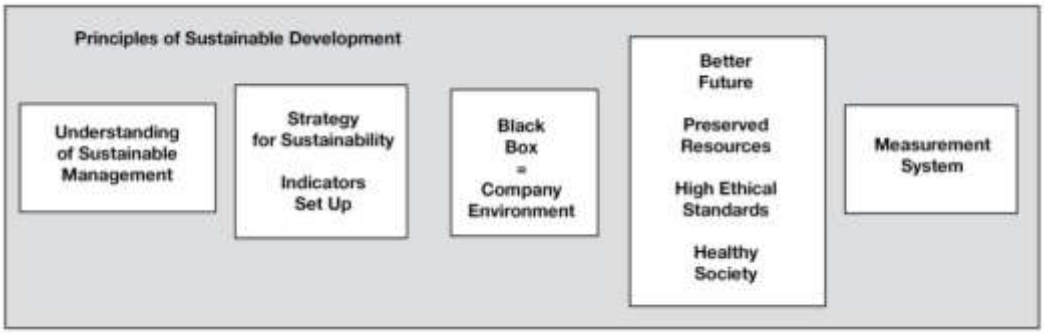

Figure 3: Model of processing sustainability in companies.

As it can be clearly seen, the main challenge is set up of measuring indicators. Indicators are statistics and are used to measure current conditions as well as to forecast. They can be used extensively in analysis to predict changes. There has been specified no rule for the right number of measures to include in a Balanced scorecard. Including too many tends to distract from pursuing a focused strategy. Generally complete balanced scorecard contains three to six measures in each perspective. (Epstein, Wisner, 2001) By creating indicators companies should be specific. Words like efficiency, low cost, and productivity has no real meaning.

The measurement system should make the relationships among the objectives and measures explicit, so the company can manage and validate them. To be comprehensive, the Balanced scorecard must include measures that interact on the basis of an established cause-and-effect relationship.

Each company defines sustainability differently. The performance indicators chosen will be based on strategy and goals of the particular company or organization. The weight given to the various dimensions of the Balanced scorecard will also depend on the goals and culture of each company. (Epstein, Wisner, 2001)

Below this paragraph there is list of indicators, which could be used in companies for measuring sustainable behavior. These are created by deduction from the national/local indicators and some of them represent ideas from brainstorming in every sustainable area.

Sustainable Perspective in BSC	
Goal	**Indicators**
Lowering **energy** consumption	Percentage of Energy Consumption from Renewable Resources Average Consumption of Solar/Water Energy Average Consumption of Energy (year and square meter) Average Consumption of Vehicle Fuel
Lowering **water** consumption	Average Consumption of Drinkable Water Average Consumption of Hot Water Management of Waste Water
Waste reduction	Number of Waste Containers Percentage of Recycled Waste Percentage of Assorted Waste: paper, plastic, glass, bio-waste Average Disposal Costs
Environment preservation	Investments for the Savings of Nature/Environment Percentage of Costs Going Back to the Environmental Protection Percentage of Office Supplies Recycled Percentage of Inclusion in Green Funds
Equality in **society**	Percentage of Local Employees Percentage of Woman in Management Percentage of Material from Local Resources Percentage of Certified Suppliers Number of Safety Improvement Projects
Lowering **noise** and **emissions**	Air Emission Greenhouse Gas Emission Average Work Week Hours Average Overtime Work Hours

Table no.1: Sustainable perspective and sustainability metrics suitable for BSC.

There is also a question of how often should those indicators be measured. The usual recommended measurement is ones a year, but this depends on every company. The limits of measurements lie in special employee or somebody, who is able to measure and control these outputs.

The system of measurement can also pose a problem. If the management focuses only on the results, employees may be preoccupied by hitting the right numbers and not doing the right things.

Executives can easily judge the performance only on monthly or quarterly numbers. It can be challenge too to define nonfinancial measures. There may be only few (especially bigger) companies that have experience in using nonfinancial numbers to measure their outcomes. Adding more performance indicators to overworked workforce may make confusion and apathy. Workers spend more time by collecting data and monitoring activities then actually doing their job.

5. Conclusions

As the Balanced scorecard was being adopted by corporations all over the world to implement corporate strategy, it could be used by companies to implement sustainability strategy to link corporate sustainability objectives with actions and performance outcomes. The output of improved sustainability performance can include for example increased employee satisfaction, lower operational and administrative cost, improved productivity, improved image and reputation, increased market opportunities, better stakeholder relationships etc. In line with the voluntary disclosure theory, it appeals that organizations adopting BSC together with collecting sustainability data have more incentive to provide public disclosure to show their divergence.

The paper summarizes previous findings and introduces three possibilities of implementation sustainability area into BSC. It is up every company, which indicators will be used for measuring sustainability. The paper suggests several indicators, which could be incorporated in each sustainable area.

The main impact for companies is in notification about the importance of such measurement and orientation. It explains in detail, how process of sustainability works and what is needed to do in order to start such direction. This concept is needed not only for organization itself, but also for future generations and society.

The future research work can focus on case studies in practice. It would be useful to summarize real problems, which could emerge during implementation period of sustainability in BSC. There would be also important comparison between all three methods of sustainability incorporation in BSC model. In the end the research of costumers and their satisfaction with green strategy of organizations would also help to improve overall situation in the market and can push more companies in implementation sustainability indicators.

ANALYZING FAT-TAILED DISTRIBUTIONS IN EMERGING CAPITAL MARKETS

FELICIA RAMONA BIRĂU[*]

Abstract
The aim of this article focuses on analyzing the implications of fat-tailed distributions in emerging capital markets. An essential aspect that was highlighted by most empirical research, especially in terms of emerging capital markets, emphasizes the fact that extreme financial events can not be accurately predicted by the normal distribution. Fat-tailed distributions establish a very effective econometric tool in the analysis of rare events which are characterized by extreme values that occur with a relatively high frequency .The importance of exploring this particular issue derives from the fact that it is fundamental for optimal portfolio selection, derivatives valuation, financial hedging and risk management strategies. The implications of fat-tailed distributions for investment process are significant especially in the turbulent context of the global financial crisis.

Keywords*: Non-normal distribution, estimation, statistical inference, asymmetric volatility, fat-tailed distributions, stable-Paretian distributions*

Introduction

The issues discussed in this article concern a theme of great interest in the financial area with profound implications for emerging capital markets modeling and forecasting. Emerging capital market behavior is characterized by a range of specific features, such as: volatility clustering, non-stationarity, extreme fluctuations, financial risks, deviations from normal distribution, leverage effect, time variation. This particular category of capital markets is a highly fertile research habitat where empirical analysis contradicts in certain circumstances the generally accepted theoretical substrate. Thus, this article can be perceived as a conceptual debate between different theoretical paradigms whose accuracy depend beyond any argument on the overall context in which they apply.

The normal distribution assumption has increasingly occupied a central place in computational finance. Thereby, the general idea was that capital market logarithmic returns follow a normal distribution. Despite the fact that this assumption was empirically contradicted based on various studies, the debate is far from being completed. Obviously, due to several reasons, normal distribution is preferred at the expense of more accurate, but complicated assumptions. Likewise, the central limit theorem and independence assumption play a rather significant role in financial time series analysis. Thus, from a certain point of view, an uncomplicated statistical methodology based on rigorous mathematical properties is perceived as a significant advantage in modeling continuous random variables. However, the theory is sometimes contradicted by practice, especially in the context of turbulent events such as the current global financial crisis. Strictly to topic, stock returns exhibit extreme variations due to dramatic events whose magnitude affects a wide range of investors. Moreover, the quintessence of this article constitute a rigorous analysis regarding the implications of fat-tailed distributions in circumstances of extreme financial phenomena, such as emerging capital market crashes. Consequently, econometric analysis and its degree of accuracy have a major significance for optimal portfolio selection and risk management strategies.

[*] Ph.D. Candidate, Faculty of Economics and Business Administration, University of Craiova, Craiova (e-mail: birauramona@yahoo.com).

Theoretical radiography of the concept

The particular issue regarding the unequivocally framing in a certain pattern of stock returns distribution remains an unsolved dilemma. However, this controversy revolves around time units. Stylized facts based on empirical evidence encourage the idea that high frequency financial time series, such as weekly, daily or intraday return data, exhibit non-normal distributions. On the other hand, to an imaginative limit it can be assumed that financial returns follow a normal distribution. Thus, for a longer time horizon, such as monthly, quarterly, half-yearly, annual or even higher, return time series are apparently perceived to be normally distributed.

Relevant information are provided by the main statistical properties, specifically Skewness and Kurtosis. In statistical terms, skewness is a measure of asymmetry of the distribution of a data series around its means. The skewness of a symmetric distribution is zero. In conclusion, in the case of normal distribution, the skewness is null. Positive skewness suggests that the distribution has a long right tail, while negative skewness implies that the distribution has a long left tail. Kurtosis measures the peakedness or flatness of the distribution of a return financial time series. The kurtosis of a normal distribution is 3, any other value generating sharp meanings in the fragile context of emerging capital markets behavior. Thus, if the kurtosis exceeds 3, the distribution is peaked (Leptokurtic) relative to the normal. On the contrary, if the kurtosis is less than 3, the distribution is flat (Platykurtic) relative to normal.

In this regard, the following figure is highly suggestive :

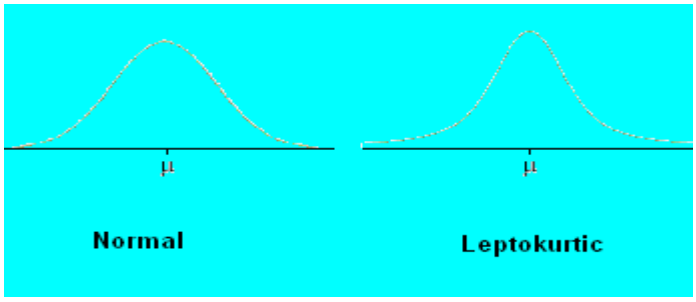

Fig. nr.1 Probability density functions for a normal and a leptokurtic distribution

Empirical studies have revealed that short term horizon stock returns are characterized by a pronounced cluster near the mean and in the tails. Likewise, fat tails involve a higher density ie a sharp attenuation of the density function in the tails. This framework is much different than a normal distribution would reflect, so this particular behavior is classified as leptokurtic distribution. In other words, this typology implies that the distribution is more peaked in the center and fat-tailed. Another interesting aspect which contradicts the classical financial theory suggests that very long term annualized returns tend to follow rather a platykurtic distribution. Making an analogy, it appears that fat–tailed distribution of returns involve the occurrence of extreme events in both directions, i.e substantial gains and major losses. In financial terms are distinguished the following categories : booms, bubbles, recessions, crisis, crashes.

In the literature this issue has been discussed with great interest in recent decades and it was emphasized by certain representative researchers (but not limited to), such as Mitchell (1915) Lévy (1925), Mandelbrot (1963), Fama (1965), Fama and Roll (1971), Rosenberg (1972), (Clark 1973), (Blattberg and Gonedes 1974), Hols et al. (1991), Tucker (1992), Mandelbrot (1997), Mandelbrot (2001), Rachev, Menn and Fabozzi (2005), Camilleri (2006), Kirchler and Huber (2007) or Mello (2008).

The analysis of emerging capital markets is based on continuously compounded return or log return, instead of using the absolute closing price variation, respectively $\Delta P = P_{t+1} - P_t$ or even on the simple net return (discrete return), which is calculated as $R_t = \frac{P_t}{P_{t-1}} - 1$.

Continuously compounded return which is calculated using the log-difference of the closing price, is calculated as follows : $r_t = \ln\left(\frac{p_t}{p_{t-1}}\right) = \ln p_t - \ln p_{t-1}$ where p is the closing price (level) of the financial asset. Mandelbrot provides a very suggestive explanation regarding the opportunity of using continuously compounded returns in financial modeling : "The only reason for assuming continuity is that many sciences tend, knowingly or not, to copy the procedures that prove successful in Newtonian physics . . . But prices are different: mechanics involves nothing comparable." On the other hand, financial time series, such as daily stock market returns are characterized by high-frequency and excessive volatility, feature known in the literature as "volatility clustering".

The main interest in understanding stock price fluctuations derived from significant economic implications. Consequently, econometric tools and financial theoretical approach must rigorously selected.

Mitchell has empirically demonstrated that commodity prices exhibit fat-tailed distributions. In his paper "The Making and Using of Index Numbers" published in 1915, he reached an unexplored financial area and opened a new horizon for empirical research. Particular concepts discussed were in the spirit of an alternative theoretical approach, namely : time-varying volatility, interrelations (co-movements), high-peaked or fat-tailed distributions in financial asset prices.

Likewise, Mills suggested in his research papers that the normal distribution assumption is inconclusive for both natural or logarithmic distributions, but noting, however, some exceptions in particular circumstances. Significantly, it is concluded that the standard deviation derived from both natural and logarithmic numbers is being applied as a measure of dispersion. According to Mills (1927) : "a distribution may depart widely from the Gaussian type because the influence of one or two extreme price changes".

Above all, Mandelbrot (1963) is also remembered for his substantial contribution to the study of fat-tailed distributions. His initial research has relied on stable-Paretian distributions (the variance of a stable-Paretian random variable is infinite) in order to provide a justification for the fat tails empirically highlighted by other researchers. In other words, Mandelbrot based on Lévy's acceptance, suggested that tails of all non-Gaussian stable laws follow an asymptotic form of the law of Pareto, respectively : if it is considered that $C'=\sigma'^{\alpha}$ and $C''=\sigma''^{\alpha}$ represent two constants interconnected through $\beta = (C' - C'')/(C' + C'')$ implicitly, when $u \to \infty$, $u^{\alpha}Prob(U>u) \to C' = \sigma'^{\alpha}$ and $u^{\alpha}Prob(U<-u) \to C'' = \sigma''^{\alpha}$. An essential role is played also by Cauchy law, i.e $u \to \infty$, then $uProb(U>u) = uProb(U<-u) \to 1/\tau$. Consequently, these two tails are Paretial if $|\beta| \neq 1$, where σ' and σ'' are the equivalent of the standard deviation of a normally distributed random variable. These particular numbers are known as the "standard positive deviation" and the "standard negative deviation." An exception is the rare case where $\beta=1$ therefore $C''=0$ (negative tail) and vice versa $\beta=-1$ therefore $C'=0$ (positive tail). Interestingly, the normal distribution was perceived just as a special case or as one of a family of stable distribution.

Mandelbrot 's approach is quite inconsistent with the central limit theorem which states that sums of random variables will converge to a normal random variable (the random variables are independent and have finite standard deviations). It is important to highlight that the central limit

theorem is based on the assumption that normal distribution is the only suitable alternative distribution which is characterized by a defined standard deviation.

Regarding the concept of stable distribution's probability density function, the most relevant approaches are the following :

a) normal distribution or Gaussian : α= 2 and β is insignifiant

b) Cauchy distribution: α= 1 and β=0

c) Lévy distribution: α= 0,5 and β=1 (δ=0 and γ=1)

d) Landau distribution α= 1 and β=1

e) Holtsmark distribution α= 3/2 and β=0

In his paper "From Mandelbrot to Chaos in Economic Theory", Mirowski performs an insight regarding the log of the characteristic function for the stable distribution based on Lévy's contribution :

$$\log f(t) = \log \int_{-\infty}^{\infty} e^{iut} dP(\bar{u} < u) = i\delta t - \gamma |t|^{\alpha} \left[1 - i\beta \operatorname{sgn}(t)\omega(t,\alpha)\right]$$

where $\forall \gamma \in \Re$, $\gamma > 0$, $|\beta| \le 1$

$$\omega(t,\alpha) = \begin{cases} \tan(\alpha\pi/2) & if \quad \alpha \neq 1 \\ -(2/\pi)\log|t| & if \quad \alpha = 1 \end{cases} \quad \alpha \in [0,2]$$

$$\operatorname{sgn}(t) = \begin{cases} 1, & if \quad t > 0 \\ 0, & if \quad t = 0 \\ -1, & if \quad t < 0 \end{cases}$$

The characteristic function is based on certain real parameters, namely α, β, δ and γ. The parameter α is the Lévy index or the index of stability or characteristic exponent (on condition that $\alpha \in [0,2]$) and β is the skewness parameter (on condition that $\beta \in [-1,1]$). On the other hand γ is the scale parameter (on condition that γ>0) and $\forall \delta \in \Re$ is a location parameter.

According to Fama (1965) : There is some evidence that large changes tend to be followed by large price changes of either sign, but the dependence from this source does not seem to be too important. There is no evidence, however, that there is any dependence in the stock-price series that would be regarded as important for investment purposes. That is, the past history of the series cannot be used to increase the investor's expected profits. Regarding the fact that empirical evidence suggests the presence of an excessive number of observations near the mean and in the tails, Fama is particularly interested on some models, such as stable-Paretian distributions (mainly), mixture of normals and nonstationarity.

Certain significant conclusions were suggested by Rosenberg (1972) : "The apparent kurtosis of the empirical frequency distribution is the result of mixing distributions with predictably differing variances. . . . The results of the experiment have widespread implications for financial management and the theory of security markets. Some of these are the following:

a) the requirements for forecasts of price variance;

b) the opening of the study of the determinants of price variance as a field of economic analysis;

c) the need to respond to fluctuations in variance in portfolio management;

d) the role of fluctuations in variance, through their effect on the riskiness of investment and hence, on the appropriate risk premium, as an influence on the price level".

The implications of fat-tailed distribution for investment process

Emerging capital market behavior is characterized by certain features such as : volatility clustering, non-stationarity of price levels, leverage effect, heteroskedastic log returns, deviations from normal distribution, time variation, unpredictability, fat-tailed distributions, time-reversal asymmetry, leverage effect, chaos. In addition, the global financial crisis has emphasized these particular features. Implicitly, certain concepts such as integration, cointegration, co-movements of stock returns, interdependence of financial structures, spillover effects, market liberalization, extreme financial events have a quite sharp connotation.

Fat-tailed distributions is considered an issue of great interest in financial economics with profound implications risk management, financial assets portfolio selection, derivatives valuation and financial hedging. The implications of fat-tailed distribution for investment process are quite significant especially in the context of the global financial crisis. An emerging capital market is a fragile structure, but quite attractive for financial investors. The financial assets price behavior in emerging capital market is quite different from the classical perception of investors optimization behavior. Nevertheless, despite the fact that normal distribution represented a cornerstone in financial theory, which is used to implement fundamental financial models, such as Markowitz's modern portfolio theory, Capital Asset Pricing Model or Black-Scholes option pricing model, empirical evidence revealed the inaccuracy of this assumption.

The interest of financial investors in hedging tail risk was significantly growing, especially in the context of the global financial crisis. In addition, innovative financial tools have been developed in order to hedge tail risk and to prevent massive losses caused by extreme events. The "black swan" metaphor has acquired sharp connotations after U.S subprime crisis in mid-2007, but the consequences of ignoring them are quite dramatic. Technically speaking, tail risk is perceived as representing a higher-than-expected risk category that characterizes a financial investment that oscillates wider than three standard deviations from the mean.

In other words, a portfolio of derivatives can be liable to this risk typology if it suffer any major decrease or downward trend. Moreover, in the investment process should be taken into account that financial derivatives are designed as complex financial instruments whose main purpose is to manage the risk associated with the underlying asset (stocks, bonds, commodities, currencies, interest rates and stock market indexes). The global financial crisis that erupted in mid-2007 has generated significant losses and consequently has raised questions about the accuracy of financial econometric models based on normal distribution assumption. Nevertheless, empirical evidence on the behavior of financial asset return distributions highlighted that fat-tailed distribution is a more appropriate alternative for risk management.

Conclusions

Emerging capital market are highly volatile and difficult to forecast. The behavior of financial investors is significantly influenced by the instability of trading mechanisms in emerging capital markets. Although, developing markets represent an increasingly attractive financial environment, they are exposed to diversified risks and structural deficiencies. Consequently, financial econometric analysis and its degree of accuracy have a major significance for optimal portfolio selection and risk management strategies. Thereby, certain aspects should be considered when measuring the importance of the fat-tailed distributions concept to ensure that the consequences are significant, respectively risk management, financial assets portfolio selection, derivatives valuation and financial hedging. In other words, an inappropriate model of the underlying asset involves a mispricing and

unsatisfactory hedging. On the other hand, the current global financial crisis revealed the stringent necessity of modeling and managing extreme risk in order to estimate rare events.

CONVERGENCE BETWEEN FINANCIAL AND MANAGEMENT ACCOUNTING AND THEIR IMPACT ON THE ORGANIZATION'S COMMUNICATION PROCESS

ANDREEA PAULA DUMITRU*

Abstract
It is well known the role of accounting entity in the „measurement, evaluation, knowledge management and control of assets, liabilities, equity and the results obtained" during a period of management.
The accounting regulations distinguish between financial accounting and management accounting.
Detection convergence of financial accounting and management accounting stirs debate on a larger scale when it comes to integrating information from both types of accounts and their efficient use decision context.
This study aims to emphasize the necessity of using integrated information provided by the accounting and financial management so that users of such information, managers can take contact with natural depth of potential investments, provided with the possibility of making an informed decision.

***Keywords**: accounting information, financial accounting, management accounting, convergence*

Introduction

Slow evolution of the accounting system in Romania until 2003 that does not appear in legal terms no document specifying clearly how organized and how to drive management accounting made that the information provided by it to be close insignificant.

Minister of Public Finance Order no.1826/2003 for the approval of details concerning the organization and management accounting management brings clarification on how management accounting organization and specifies three possibilities, economic entities free to choose any of this. These three possibilities are: leadership management using specific accounts or accounts in financial accounting by developing a compiling technical and operative record of its own.

None of these options is detailed so that economic entities can consider it as an autonomous organization, bookkeeping emerged financially, imposed, implying that it is not mandatory preparation of such evidence, more not provide for sanctions failure to produce them.

However domestic market opening to Western capital, plenty of medium and large foreign companies in the Romanian economic cycle, need information homogenization in the European Union and beyond, make research into the convergence of the two accounting, measuring the impact of information provided by the mechanism to be one of major interest.

Researcher interest in practice is essential because as a provider of accounting information processed must ensure client the best solution to the needs of decision-making, to answer specific questions about bookkeeping sector organization-operational and financial.

These are some reasons why we aim, through this study, to emphasize the most important aspects of the points of convergence between the two types of accounting and communication process in organizations.

Theoretical framework

This study tries to find an answer to the following questions:
***A)** Can financial accounting coexist with managerial accounting within an integrated System and which is the role of this convergence in defining the managerial decision?*

*Lecturer, Ph.D., Faculty of Economic Sciences, "Nicolae Titulescu" University, Bucharest (e-mail: queenye04@yahoo.com).

B) *What is the degree of understanding and implementation of this mechanism at this moment within the Romanian economic entities?*

Organization, information and quality

Finding convergences between external accounting and internal accounting generates more and more ample debates when raising the issue of integrating the information provided by the two types of accounting and of using it efficiently within a decisional context.

This study intends to emphasize the need to use the integrated information provided by the management and financial accounting so that the users of such information, the managers, should be able to get in touch with the natural deepness of potential investments, while having the possibility of making decisions with full knowledge of the case.

The accounting information, under its evolved form, transforms the cognitive element while systematically processing the reports of a productive process and putting them into a numerical, significant message of results.

From ancient times to present, the main manifestation of accounting has been the activity of professionals well-known for their competency to produce, explore and authenticate quantified economic data, submitted according to normalized conventions.

The accounting professional, while observing professional norms, for the improvement of accounting information, covers a cyclic and determining way in order to obtain, filter, measure and expose such information. Therefore, the accounting information becomes the processing object both of financial accounting and of management accounting, the determining references being as follows:

- Rules, drawings, reports required by the decisional framework, used for the elaboration of the best decisions;
- Improving, monitoring informatics means, while providing control filters and the coherence of the information delivered by the different operational systems;
- The need to extract synthesis reports required by internal and external users,

monitoring the course of the operational life in order to validate post-factum the current flows of information;

The quality of the accounting information, determined by its pertinence, accuracy and reliability, provided to users, results from the accounting documents integrated in the production process of such information. The more it fulfils certain pre-established features, the more the accounting information becomes more credible.

The accounting function of any entity makes sure that the accounting information complies with generally accepted norms in strict accordance with professional deontology.

The accounting information has the quality of exact image defined through a correct implementation of the accounting conventions of the economic reality.

The proximity of accounting systems, marked by the market internationalization and globalization, by the activity of economic entities, through the increase of direct international investment, shall determine more and more the standardization of accounting information.

The need for this proximity derived from the need of international investors, who wish to compare, in a natural, normal, correct manner according to equivalent criteria, the opportunity area for capital placement.

Either at national or international level, the accounting rules do not result mainly from an academic scientific elaboration. We can only approve what a university practitioner has written: *"The elaboration of accounting rules is a complex political-strategic process where each of us defends its own interests"*[1].

[1] Broussard D. – *The second communication research seminar French Accounting Association*, Grenoble, January, 1981.

All the performances proposed by specialists may make it difficult for the accountants and managers who aim the advantage to the competition. There is a tendency to use consultants who have a "product" to sell, a product which reflects their understanding of the advantages and difficulties of the methods provided.

In such circumstances, chief accountants are made to take over the task of strategic positioning as well, not only the activity of transactions' accounting.

The significant, continuous improvement of the company's strategic positioning accounting also considers an exploitation process of its actual limits and its creation means for an extended research program for the relevant universities, the accent being put on quality and not on quantity elements.

For the client, the value represents an important element in the management of quality. From this perspective, the notion of quality may be approached, including the means used for monitoring it.

The management control determines the structuring and synthesizing of accounting information and economic rationalism, thus the capitalization of the accounting information at high quotas recognizes its inexhaustible nature.

We can say that an upper form of collecting and structuring the information, consistently processed and analyzed, generates the definition of economic intelligence.

For this purpose, it is necessary to use specialized programs and control systems which enable the achievement of significant indicators.

It is not the amount of information which determines its value, but the facts of having it before competitors do.

We consider that all these challenges constitute solid grounds for any researcher interested in the accounting field, who uses particularly the gross information from practical activity, to search for the convergence points of its various manifestation forms, while looking for the theoretical and practical answer.

Two levels of accounting: financial accounting & management accounting

There are many things that distinguish management accounting and financial accounting it from different goals that they have. We present in the following table, the most significant differences between these "two sisters" of the information system.

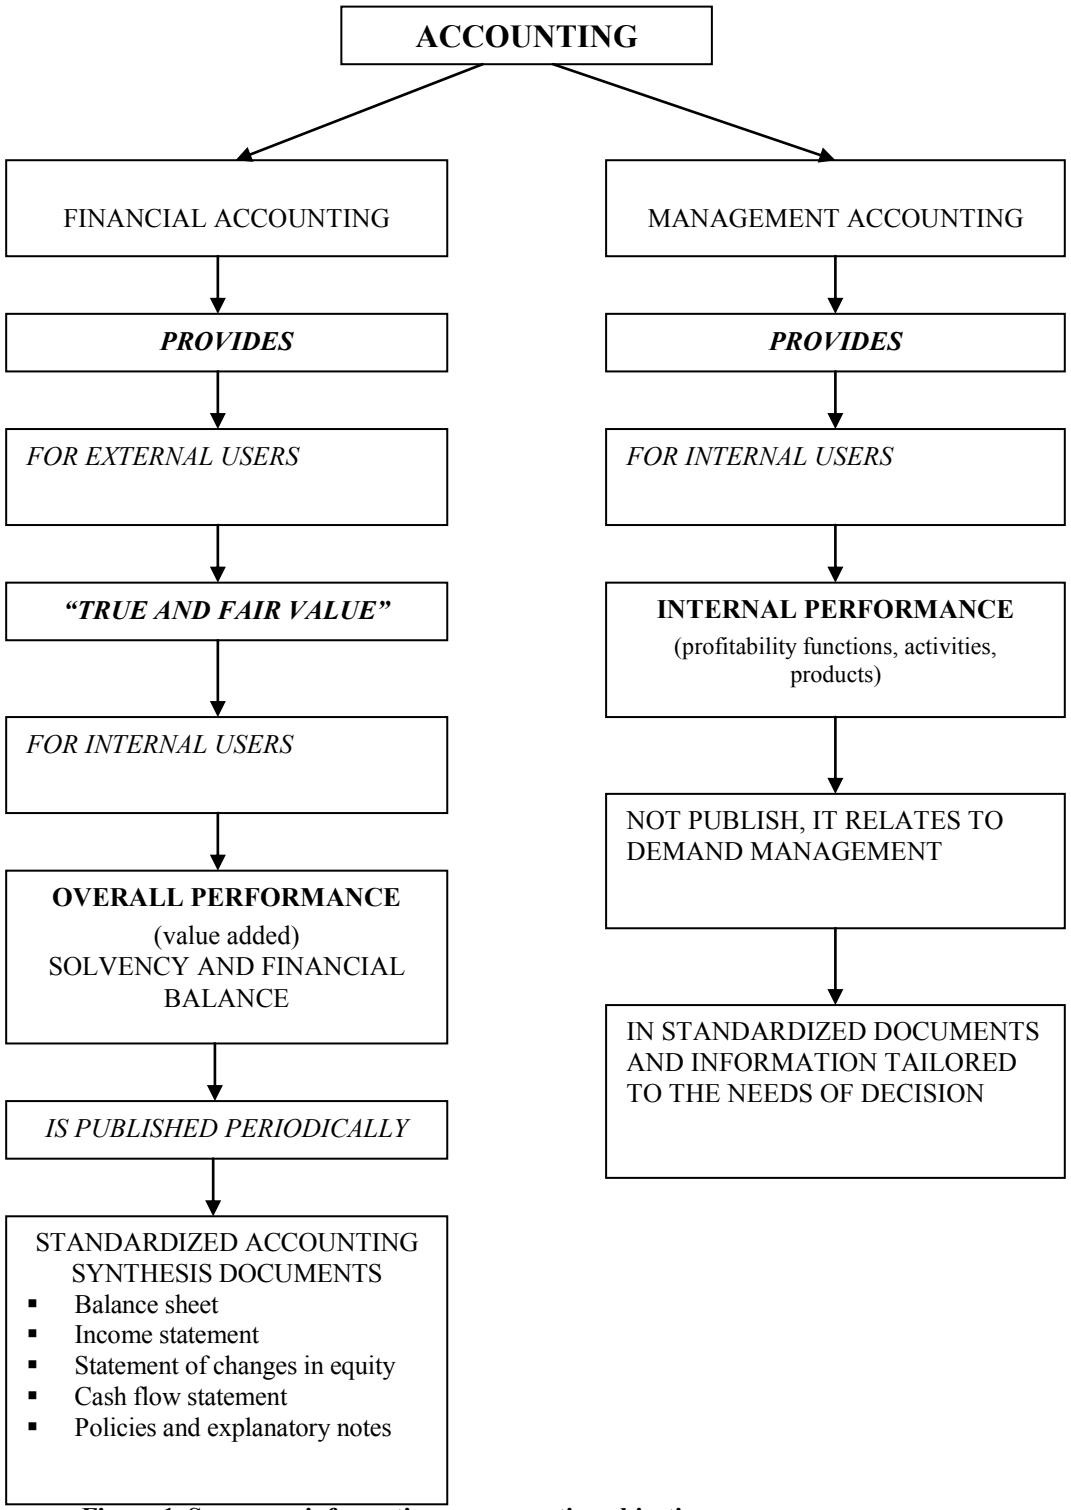

Figure 1. Summary information on accounting objectives

Financial accounting is to record the transactions of an organization with her environment to determine the regular and systematic economic and financial situation and results of operations performed.

Produces most of the *management accounting* information for decision-making processes of financial accounting can be extracted, in addition, data for the current management of relations with customers or suppliers, to base investment decisions and financing activities, to correct the effects of inflation on management decisions. Financial accounting information products within the scope of economic and financial analysis, will help to support decision management[2].

Management accounting and financial accounting serve different purposes. Management accountings quantify and report financial and non-financial information that helps managers make decisions that will enable an organization's goals. Managers use management accounting information to choose, communicate and implement strategy. They anticipate that information and to coordinate decisions on product design, production and marketing. Management accounting is based on internal reporting.

Financial accounting reporting is based on the outside. It quantifies and records economic transactions and provides financial statements prepared under GAAP. Managers are responsible for financial statements issued for the attention of investors, governments and other interested parties outside the entity. Often enterprise management remuneration is directly conditioned by the information contained in these financial statements.

Another difference is the fact that management accounting focus often on the future through budgeting activity and influence, on this occasion, the behaviour of managers and employees.

Type reports balance sheet, income statement, cash flow statement are used by management accounting. It covers an area much larger but it developed into a more advanced topics such as developing and implementing strategies and policies, preparing budgets, studies and forecasts predetermined purpose, providing financial and non-financial information[3].

Solution for improving accounts communication in organization's

Like any component of the economic system, and accounting had to undergo changes and adjustments to the new trend of globalization, harmonization and integration, trying to adapt to changes in both regional and adaptation resulting from Romania's EU integration, as well as changes internationally.

In the context of the phenomenon of international accounting harmonization, financial and accounting information quality has improved considerably in recent years. The abundance of information allows organizations to increase their competitiveness parameters in terms of information relative to competitors in the domestic and international market, representing only inexhaustible resource information, a true power factor, directly influencing a good degree of prosperity of nations.

The need for a national information system, which creates prerequisites for a correct diagnosis of the organization, to support decision makers in choosing the optimal variants of solutions to various problems of management, detect anomalies and dangers surrounding the organization, has resulted in its management accounting system.

Type and methods of the latter are selected according the organization's activities and its financial news in the absorption of management techniques, methods of determining costs, etc.

---

[2] Boghean F. – *Cost Management,* online course for distance learning, Stefan cel Mare University of Suceava, 2008, p. 6.

[3] Seal W., Garrison R.H., Noreen E.W., - *Management accounting*, Mc Graw Hill Education, London, 2006, p.126.

Management accounting serves no communication with outsiders, therefore, is not normalized as a "business modelling tool" to reach their managers in the complex processes of "piloting" of organizations.

Mechanism and methodology of reports, internal communication and the exchange of information between these two circuits are very important for organizing and conducting the accounting of any organization.

Efficient financial management and accounting concerns, required in the current context, double accounting system with an effective reporting, accounting structures to provide for flexibility, collaboration and coordination with other departments in the organization's overall objectives.

The strategy presenting the results of accounts subject to attention, being a central part of the communication of an organization's accounts.

In general, at the organizational level there are two types of communication: information and offer voluntary legal accounting information.

In the first case, of information transmitted regulated by law and accounting standards, the presentation is not always "friendly" and is more difficult to interpret by non-specialists.

The second type is fully available to the management of an organization and illustrates, on a voluntary basis, any forecast or other types of sizes, usually when they occur, or might occur significant changes, extensions or restrictions the activities of an organization.

To improve accounting and financial disclosure, transparency and creating a healthy business environment and credible efforts are being made globally. Thus, since 2002, the European Union seeks to align European accounting standards to International Financial Reporting Standards (IFRS) and also use a single language in the conduct of business by finding a point of convergence between European and U.S. accounts.

Internationally, the normalization accounting is the process of harmonizing the

presentation of summary documents, accounting methods and terminology and involves the development of rules or regulations applicable in whole or in part, to a group of countries, a set of entities or as a group of specialists from the accounting profession[4].

At the same level through harmonization/convergence of international accounting rules by national standards, differing from one country to another, sometimes divergent, are refined to be made comparable.

In this context, the general accounting and auditing continuously improving its quality of accounting information through the application of accounting regulations in accordance with E.U Directives (Directive to IV and VII).

The need for compliance is required by: globalization of national economies, Romania's access to international capital markets, transparency and simplification of financial reporting.

To achieve these objectives in recent years have been a number of changes legislation which included :

- accounting amend Law 82/1991;
- accounting regulations in accordance with Directive IV and VII to the European Union;
- adoption of International Financial Reporting Standards (IFRS) and International Accounting Standards (IAS), by Order of the Minister of Finance.

Harmonization/convergence of accounting by the Fourth Directive establishes the principle of true and fair view as the main element of the group accounting principles, considering that the other principles are derived and its subordinates. Fourth Directive of the European Economic Communities explains the need to adopt uniform accounting policies for the Member States in the following situations:

[4] Hennie Van Greuning, Darrel Scott, Simonet Terblanche, - *International Financial Reporting Standards. A Practical Guide,* the sixth edition, IRECSON Publishing, Bucharest, 2010, p.33.

Member States companies work often extends beyond the national territory, providing them as collateral for third party only capital;

- competition between companies may be unfair due to legal conditions conducive to certain activities in some countries;

- present a "true and fair view" of business.

VII of the Directive of the European Union presents itself as a continuation of European accounting harmonization process, a process started by the Fourth Directive, with the following objectives:

- to ensure comparability of information provided by the consolidated accounts for external users, especially investors and third parties;

- creation of uniform conditions for the operation of a common capital market, by eliminating national differences on how to draw of these consolidated accounts;

- developing a "true and fair view" in terms of assets, financial condition and results of the group companies.

In a market economy, the harmonization/convergence and normalization accounting rules that organize the functioning of accounting information, financial and communication in order to optimize the utility, provides:

− comparing the information in time and space;

− control and centralization of information;

− rigorous substantiation of the decisions of users of information;

− increasing trust between social partners using a standardized and understandable language[5].

The existence of a market requires the existence of a product. The accounting information is exchanged at the market of product accounting. This product exists only by the rules and regulations that define it.

In this context, national destinies are influenced by global forces of global competition, so that operating decisions, financial and investment have significant international implications. How many of these decisions are based on accounting information, knowledge of regional an international rules is crucial.

Conclusions

The researches made in the field of managerial accounting in order to obtain

information, new knowledge and results are useful for practice and practitioners. Moreover, the purpose of researches in the field of both financial and managerial accounting is to describe, explain and disseminate the techniques and practices used for the clarification and improvement of the generally employed existing organizational practices, opening thus the gates of practice oriented researches.

The need to obtain real-time clear and concise information regarding the evolution of an economic entity, useful to deciding factors, has lead us to the attempt to identify, study and develop the convergence points between the two types of accounting and the way we can solve the issue of introducing them into an operable, efficient and especially less expensive circuit.

Thus, through research topic chosen, we tried to find a possible answer to the following questions:

A) *Can financial accounting coexist with managerial accounting within an integrated system and which is the role of this convergence in defining the managerial decision?*

The beneficiaries of the research results obtained this way are:

(1) *Managers* – the answer to this question is concretized in making clarifications and improvements to the existing practices. In this approach, pertinent solutions and results are obtained for the settlement of quality issues of the decisions made;

---

[5] Feleaga, N., L. Feleaga, *Financial Accounting – a European approach and international,* second edition, vol.I, Economic Publishing, Bucharest, 2007, p. 207.

(2) *Accounting professionals* – who, being willing to provide concrete and complete solutions to their clients, will use the results of this approach; we would also like to mention their interest and the need for continuous improvement;

(3) *Education* – using the results of researches to better understand modern methods, phenomena and theories which meet the needs of an efficient management.

B) *What is the degree of understanding and implementation of this mechanism at this moment within the Romanian economic entities?*

The answer to this question is meant to highlight the need that decision factors and accounting professionals should consider the scientific and integrated organization of the accounting of the entities which they manage so that the efficiency of the decisions to be adopted is maximum.

This perspective has allowed us to make a few suggestions:

− The introduction and use of an integrated accounting module at the level of

SME s so that this is the main platform in the management and legal activity of entities. We also purpose the use of a specific common balance sheet document, called integrated balance sheet;

- The second phase of this process is the establishment, from the perspective of the price-expense-cost correlation, of the correct organization of the management accounting adapted to the main scope of activity of the economic entity;

In terms of improvement of the quality of managerial decisions, the process aims the introduction of a controlling compartment in the flowchart of the economic entity which should be the "interface" between the execution and decision compartments, a compartment which should take over the information processing tasks from the financial and management accounting and transpose them into projects and solutions at the management requests.

EFFECTS OF MERGERS AND ACQUISITIONS ON FINANCIAL PERFORMANCE OF THE TARGET COMPANY

ADRIANA DUŢESCU[*]
ANDREEA GABRIELA PONORÎCĂ[**]
GEORGIANA OANA STĂNILĂ[***]

Abstract
Many studies revealed the fact that mergers and acquisitions are a risky business. Disregarding the M&A advisers' fees, evaluations show that most of the companies completing M&A transactions disappoint to deliver on promised financial performance. But, as many would say, it is an investment and the highest risks produce the highest results - whether they're good or bad.
Within this paper, we were intending to analyse the rate of success of relevant M&A transactions that took place in 2007 in Romania, by comparing the financial statements of the target companies before and after the acquisition, in the current economic context.
The main objective of this study is to generally determine the successfulness of the M&A transactions, starting from assessing changes induced by the M&A transaction to the target company, with the help of three important financial ratios: profit margin, ROE and receivable collection period.
Even though the study may present some bias, we have tried to be as objective as possible and not influence its outcome: that 80% of 10 most important private Mergers and Acquisitions taking place in Romania in 2007 and that meet several conditions:
o The target is part of the consumer goods and services market (mainly trade and tourism) and is an important player in its industry
o The target is a Romanian private company, and its shares are not listed on the stock exchange
o The acquirer is majority shareholder after the transaction
The target company remained as a sole entity and was not integrated into the mother company after the transaction were not successful.

Keywords*: mergers & acquisitions, financal performance, financial ratios, listed companies*

Introduction

Latest studies revealed the fact that mergers and acquisitions are a risky business. Disregarding the M&A advisers' fees, evaluations show that most of the companies completing M&A transactions disappoint to deliver on promised financial performance. But, as many would say, it is an investment and the highest risks produce the highest results.

In the early 2000, the Romanian accounting entered in a new stage of reform, built in connection to the international realities. In 2004, in Romania, the authorities have initiated a national strategy to improve the financial reporting, considered to be a true catalyst for developing a sustainable economy. The present demonstrates that the national strategy for improving the financial reporting of the private economic entities, mostly based on the elaboration of the individual annual financial statements of the public entities according to the IFRS referential, has encountered some difficulties in the complex process of implementation. (A.Popa, R. Laptes – AMIS 2011)

Generally, the main reason behind people's decision to invest is that they think they know something that is not known by others. Warren Buffet declared: "… ignore the economy and buy a business that you understand" (Corrado et al, 2005, p.1). There are many aspects underlying an M&A transaction, the success or failure of their result relying on the appropriate adaptation to the business.

This paper analyses the rate of success of relevant M&A transactions that took place in 2007 in Romania, by comparing the financial statements of the target companies before and after the acquisition, in the current economic context.

The main objective of this study is to generally determine the successfulness of the M&A transactions, starting from assessing changes induced by the M&A transaction to the target company, with the help of three important financial ratios: profit margin, ROE and receivable collection period.

For reaching the proposed objectives, the paper will follow the main literature and theory on M&A transactions in general, followed by a more specific analysis on the Romanian M&A market.

Romanian M&A market

Romania is one of the largest markets in Central and Eastern Europe (with over 21 million inhabitants) and has an attractive location located at crossroads between EU, the Balkans and CIS countries. This position facilitates Romania being traversed by three key pan-European transportation corridors: corridor no. IV – linking Western and Eastern Europe, corridor no. IX – connecting Northern and Southern Europe and corridor no. VII – Danube River, facilitating inland water transportation connecting the Romanian Port of Constanta to Northern Europe. These, together with Romania's accession to EU since January 1st, 2007 – providing legislation in accordance with the EU legal framework – are important factors that make Romania attractive for possible investments and M&A transactions.

Starting with the 90s, the Romanian Government, following the trend set by other Central and Eastern Europe countries, decided to renounce at its domination in the economic sector in favour of private shareholders. However, the privatisations and transition periods did not happen at the same time for all countries. The comparative studies made on the restructuring effects of privatization in Continental Europe ascertain that, in the first stage of transition, Romania was one of the slowest countries of this region, mainly due to the irregular rhythm of privatization.

Regardless of the sluggish evolution, the market for corporate control boosted in Romania as nowhere else in Central and Eastern Europe, due to the various methods of privatization proposed by the Romanian government in the following stages of the transition. This allowed investors to initiate their strategies of acquisitions directly on the market. In the years following the mass privatization program, more than one tenth of the five thousand privatized companies listed on the new established stock market were targets of takeovers bids. Between 1998 and 2002, 993 takeover bids were approved by the National Security Commission (henceforth CNVM); 44 on the Bucharest Stock Exchange (henceforth BSE); and 949 on the OTC Market (RASDAQ).

The values of the Romanian M&A market highly differ from one source to another. Every company has a different measurement method when analysing the M&A market.

The Ziarul Financiar newspaper publishes a yearbook called "Top Transactions", in which its presents the M&A market value and most important taking place in the current year.

According to this newspaper, the M&A market is estimated at EUR 6.15 mld over 2000-2005, of which EUR 1.32 mld on privatisations and EUR 4.83 mld private transactions. Most important privatisations were: sale of Sidex to Mittal, Petrom to OMV, Electrica, Agricola Bank to Raffeiesen, Distrigaz Nord and Sud. Among the most important private transactions are: the sale of Connex to Vodafone (Great Britain), Astral to UPC (USA), Ion Tiriac Bank to HVB (Germany), Siveco to Intel (USA) ot Omniasig to Wiener Staedtische (Austria).

The value of transactions increased spectacularly in 2006 to EUR 4 mld, most of them made by foreign investors. The most important transaction is represented by the privatisation of

ElectricaMunteniaSud to Enel, estimated at EUR 820 mil. Other transactions include the 7.2% sale of BCR to Erste for EUR 410 mil and Cuprom's acquisition of RTB Bor.

2007' transactions

The number and value of transactions on the M&A Romanian market boosted again in 2007, due to Romanian's accession to the UE. The market increased with 63% y-o-y and with 6% compared to the whole period 2000-2005 to EUR 6.5 mld. Most of the transactions were registered in the real estate market (34 transactions), followed by FMCG market (24 transactions), energy and industry (18 transactions), IT&C (18), financial services (12) and pharma market (7).

Most relevant transactions from 2007 are: Rompetrol acquisition by KazMunaiGaz (EUR 1.8 mld), Petromservice acquisition by Petrom (EUR 329 mil.), Immoeast acquisition of Euromall Pitesti and Euromall Galati (EUR 173 mil.), Advent takeover of Labormed (EUR 123 mil) and America House sale to Ixis (EUR 120 mil).

According to Thomson Reuters, there have been 91 completed transactions in 2007:

- 13 in consumer products and services market
- 12 in consumer staples market (food and beverages, textiles and apparel, agriculture & livestock)
- 12 in energy and power market
- 10 in high technology market
- 9 in industrials market
- 9 in real estate
- 6 in materials market (metals and mining, construction materials, chemicals, Containers & Packaging)
- 6 in media and entertainment
- 5 in retail
- 4 in financials market
- 3 in healthcare market
- 2 in telecommunications

M&A in Romania during crisis

2008 M&A Romanian market sets a new record, its value being approximated at EUR 10 mld. The value, however, is increased by the partnerships valued at EUR 6 mld initiated by the state with the energetic giants for the completion of Braila, Galati and Borzesti thermals, and reactors 3 and 4 form Cernavoda (nuclear power plant). Excluding these projects, the M&A market volumes decreased with approximately 40% in 2008 compared with 2007 especially in the second part of the year, based on the real estate activity reduction and on the crisis emergence. Thus, the real estate market eased its domination, and the value of big transactions decreased from approximately EUR 3 mld in 2007 to EUR 1 mld in 2008. (Potcovel A., 2012)

"Top Transactions 2010" states that, even though the market decreased with 70-80% in 2009 as value compared to previous years, the number of transactions decreased only with 20%. This leads to the conclusion that investors did not completely disappear during crisis period, but limited themselves to small transactions. Most prolific sector was energy, proof that in the following years, Romania will be a strategic target for large players from electricity, petrol and gas. The biggest transaction in IT&C was Zapp takeover by Cosmote, and in retail, Lidl's acquisition of Plus network. In the insurance market, one of the most important moves was the entrance of Axa on the Romanian market, through the acquisition of Omniasig Life. Another sector with many transactions that was not affected by crisis was pharma and health. 2009 M&A market is estimated by the "DealWatch Emerging Europe M&A Report 2010" at approximately EUR 2 mld, 32% higher than the following year 2010, when the market is estimated at EUR 1.6 mld.

Main players

The Romanian M&A market players are divided into 2 categories:

- Independent M&A companies, founded by entrepreneurs: Capital Partners, BAC Investment, Altria Capital, Capital Mind, Osprey Partners, The Counsel
- Division of commercial banks and Big 4 companies, such as: Raiffeisen Investment, EFG Finance, BCR, BRD, Ernst and Young, Delloite, KPMG and Price Water House Coopers.

In addition, there are the most important banks such Goldman Sachs and Morgan Stanley that carry on activities in Romania through their European offices. Below, we will make a short presentation for each of the independent M&A boutiques:

Capital Partners SRL o Romania's leading independent investment banking adviser o Founded, owned and managed by four Romanian ex-bankers: DoruLionachescu, Andrei Diaconescu, Victor Capitanu and VladBusila. o Since inception, advised on transactions amounting to more than EUR 1.5 billion successfully closed across its main business lines: M&A, Corporate Finance and Real Estate such as: the sale of Mindbank to ATEbank of Greece, the sale of BT Asigurari to Groupama of France, the sale of Ejobs to Tiger Fund of US, the sale of Eurisko to world leader CB Richard Ellis, the acquisition of Romenergo by Nauru Holdings - one of the largest transactions in private energy in Romania- , or the sale of a minority stake in Internetcorp to 3TS Capital Partners. o Member of the world's largest M&A alliance, M&A International Inc (www.mergers.net)
BAC Investment o Established in 2004 – 2005 by co-managing partners at that time, MateiPaun and Tudor Boloni, and legally registered in Romania as Balkan Advisory Company S.R.L o Since 2005, BAC Romania has been involved in a large number of transactions, among the most important being the sale of Romstal Leasing and INK Broker to KBC Private Equity in 2006, for EUR 70 million
Altria Capital o Established in October 2004 by managing partner, Marian Tescaru o Provides a wide range of financial and strategic advisory services focused on M&A, corporate finance and restructuring, as well as capital raising activities o Most important transactions include: sale of Diamedix SRL to GED, minority stake sale of Centrul Medical Unirea to 3i
Capital Mind o Has offices in Bucharest and Milan, covering Romania, Bulgaria, Moldova and Italy, in the fields of Corporate Finance, Equity Capital Markets, Renewable Energy, and Real Estate o Managed by RanieroProietti
Osprey Partners o Offers the entire range of M&A services: sale and acquisition of a company, raise finance for a company, company valuation, business plans & strategy, business intelligence o Main transactions concluded: sale of Pegasus Courier SRL, sale of Artima
The Counsel o Young company founded and managed in 2009 by Guy S. Verduystert and SergiuLisnic o Provides advice on mergers and acquisitions, divestitures, corporate restructuring and finance raising

2007' Romanian Transactions Analysis

The objective of this chapter is to ascertain how many of the Mergers and Acquisitions have a positive impact on the financial performance of the target company, representing a good decision for the Acquirer's management and what their rate of success is.

For this study, we have taken into consideration the most important private Mergers and Acquisitions that took place in Romania in 2007 and analyzed the financial information of the target company prior to the transaction (years 2005 and 2006) with the financial information after the transaction (years 2007, 2008 and 2009).

The mergers and acquisitions considered for the evaluation had to conform to the following conditions:

- The target is part of the consumer goods and services market (mainly trade and tourism) and is an important player in its industry
- The target is a Romanian private company, and its shares are not listed on the stock exchange
- The acquirer is majority shareholder after the transaction
- The target company remained as a sole entity and was not integrated into the mother company after the transaction

Taking into account the financial information available on the Ministry of Finance Website, we have computed 3 ratios for each of the target companies for the period 2005 – 2009. The ratios chosen for analysis were Net Profit Margin, after tax ROE (return on equity), Accounts Receivable Collection Period.

M&A financial analysis algorithm (Source: Own compilation)

Ratio	Condition	% in Financial Ratios Evolution
Profit before tax margin, of which	*Profit before tax margin is >= than 2005 or 2006*	**40%**
2007		*13%*
2008		*13%*
2009		*13%*
ROE, of which	*ROE is >=than 2005 or 2006*	**30%**
2007		*10%*
2008		*10%*
2009		*10%*
Receivable Collection Period, of which	*Receivable Collection Period<=than 2005 or 2006*	**30%**
2007		*10%*
2008		*10%*
2009		*10%*
Total		***100%***

Below one can find a short presentation of each of the M& A transactions from 2007 that comply with the criteria.

Transactions summary

Date Effective	Target Name	Target Business Description	Acquirer Name	% of Shares Acquired	Value of Transaction (EUR mil)
12/31/2007	ProiectBucuresti SA	Provides architectural design services. The company was evaluated at EUR 50 mn in 2008 and is one of the most important players of the arhitecture and design services market.	Bantisco Holdings SRL	84.0	30.00
12/14/2007	Happy Tour	Provides travel services and is the leading player in Romania	GED Iberian Private Equity SAU	100.0	10.00
11/1/2007	SC RomsysSrl	Major player on the computer and software consulting services market.	New Frontier Holding GmbH	100.0	-
1/29/2008	Artima Retail Investment Co SA	Own and operate retail stores	Carrefour Hypermart Chain	100.0	57.95
10/15/2007	PharmaFarm SA	Wholesales pharmaceuticals	Armedica Trading	95.8	-
10/5/2007	SC Depomures SA Tg Mures	Provides natural gas distribution services	Gaz de France	59.0	-
10/1/2007	Domo Retail SA	Provides retail services of electronic products	Lynx Property BV	75.0	65.00
5/18/2007	SC Digital Cable Systems	Provides digital cable systems services.	AIG New Europe Fund	-	44.42
5/17/2007	La FantanaSrl	Wholesale spring water through water-cooler systems	Innova/4 LP	100.0	35.00
12/21/2007	Elmiplant	Manufactures cosmetics.	SarantisRomania	100.0	6.83

Source: Thomson One, www.thomsonone.com

If the total is higher than 50%, we consider the M& A transaction as a successful one.

After analysing the target company from its financial statement evolution, we have also included in the study the market evolution of the target company, in order to asses whether the drop in profit before tax margin, mainly in 2009, was really affected by the acquisition or by external factors (eg. the financial crisis).

After finding the National Economy Activities Classification category of each target company from the Ministry of Finance, we have extracted from the "www.doingbusiness.ro" Website the turnover and profit before tax evolution for each of the National Economy Activities Classification industries corresponding to the target company National Economy Activities Classification. Next, I have computed an industry profit before tax margin evolution for the years 2005-2009, and compared that ratio with the target company ratio.

Below one can find a short presentation of each of the M& A transactions from 2007 that comply with the criteria.

Transactions summary

Date Effective	Target Name	Target Business Description	Acquirer Name	% of Shares Acquired	Value of Transaction (EUR mil)
12/31/2007	ProiectBucuresti SA	Provides architectural design services. The company was evaluated at EUR 50 mn in 2008 and is one of the most important players of the arhitecture and design services market.	Bantisco Holdings SRL	84.0	30.00

Conclusions

After setting the criteria for choosing the transactions analyzed, we have chosen 10 most transactions from the 2007 M&A Romanian market, which in our opinion doses not influence the result. The number of transactions is large enough to help us to formulate an opinion and also small enough to evaluate each of them in details.

Following the above analysis, the rate of transaction success balance weights more in the unsuccessful part, 8 transactions out of 10 were not profitable.

The two transactions that were successful are:

i. ProiectBucuresti SA, the first target company analyzed obtained a 47% score from the historical financial statement point of view. But, in the context of its "Architectural and engineering activities; technical testing and analysis" industry, ProiectBucuresti SA did in fact had a positive evolution since it was acquired by Bantisco Holdings SRL and performed better than the market.

ii. Depomures SA can be set as an example for an M&A transaction: all its financials indicators improved after the acquisition (the score obtained was 100%) and had an excellent evolution also when compared to the industry results, having equal profit before tax margin in 2007 and higher margins in the following years.

The eight transactions that were not profitable for the acquirers were:

i. Happy Tour SRL scored 47% in the historical financial performance analysis, and also under-perfumed the "Travel agency, tour operator and other reservation service and related activities" industry in 2009

ii. Romsys SRL acquisition by New Frontier Holding GmbH is another unsuccessful transaction for several reasons: even though it over performed its industry in all analyzed years, historically the financial indicators evaluated deteriorated in 2008 and 2009 compared to 2005 and 2006, while industry margin remained constant.

iii. Artima Retail Investment Company SRL acquisition by Carrefour Hypermart Chain represents an unprofitable had because of the poor evolution of the target company in the years after the takeover historically but also when also when compared to the industry results

iv. Pharmafarm SA (acquired by Armedica Trading) had a poor evolution historically and also when compared to the industry results, being lower than the market and the previous years in all three analysed years, 2007, 2008 and 2009

v. Domo Retail SA scored 53% in the historical financial performance analysis, butin 2008 and 2009 it performed worse than the market

vi. Digital Cable Systems SA is a company that was performing very poorly before its acquisition by AIG New Europe Fund. The acquirer managed to improve its key financial indicators only in 2007, but it still performed worse than the market in 2007, 2008 and 2009 and having negative profitability in the last two years, from an historical perspective.

vii. La Fântâna SRL had a poor financial evolution historically but also when compared to the industry results, having a profit margin lower than the market and the previous years in all three analysed years, 2007, 2008 and 2009

viii. ElmiProdfarm SRL scored 47% and is another unsuccessful transaction for several reasons: even though it over performed its industry in all analyzed years, historically the financial indicators

evaluated deteriorated in 2008 and 2009 compared to 2005 and 2006, while industry margin remained constant.

In conclusion, even though the study may present some bias, we were as objective as possible and not influence its outcome: that 80% of 10 most important private Mergers and Acquisitions taking place in Romania in 2007 and that meet several conditions:

o The target is part of the consumer goods and services market (mainly trade and tourism) and is an important player in its industry

o The target is a Romanian private company, and its shares are not listed on the stock exchange

o The acquirer is majority shareholder after the transaction

o The target company remained as a sole entity and was not integrated into the mother company after the transaction were not successful.

STUDY ABOUT THE RELATIONSHIP BETWEEN ACCOUNTING AND TAXATION. PROPOSALS FOR DISCONNECTION

MARIANA GURĂU[*]
MARIA ZENOVIA GRIGORE[**]

Abstract
The observation that many practitioners, by virtue of strong dependence between accounting and taxation encountered in our country after years of "90, find with difficulty the way to detachment of accounting and taxation by making cautious steps, lack of courage, was the impulse for choosing this research topic. Therefore, we consider that research in accounting and taxation field must represent the combination of information obtained as a result of theoretical research with information from economic reality.
By its content, this study, perform extensive research on the intersection of accounting information with tax elements, combination oriented to disconnection between the two areas.

Keywords*: integrated reports, neutral reports, relations between accounting and taxation, convergence, divergence*

Introduction

The relationship between accounting and taxation was characterized over the time by words and phrases such as *dichotomy, subordination, convergence, divergence*, and more also, who takes imagination to see the eternal status of conflict between the two. Professor Ristea[1] believes that "we have accepted a new formulation of the relationship between accounting and taxation, the dichotomy "**connection and disconnection**". **Connection**, because by the same system, the accounting is done two purposes, accounting and taxation. **Disconnect**, considering the differences between rules and principles of accounting and tax. "

In a regulated accounting, accounting information is built on the principles, rules and regulations intended to serve their objective. Instead, tax information, subordinated to tax interest, serves as a basis for taxation, an according to the principles, rules and standards defined by tax law. The relationship between accounting and taxation is influenced by the objectives and principles of both areas aimed at helping to fulfilling them.

We propose, through this study, several measures to help disconnecting between accounting and taxation.

Relationship between accounting and taxation

Accounting is an instrument for understanding and managing of the financial position and the result obtained by an economic entity. It must provide accurate information to investors' capital, for state institutions (including tax), suppliers, and employees.

Excessive taxation and tax regulations instability leading to the choice of accounting methods that, ultimately, does not reflect a true and fair view of the financial position, but one adapted to the tax and conjectural.

[1] Ristea Mihai, *Bază şi alternativ în contabilitatea întreprinderii*, Tribuna Economică Publishing, Bucharest, 2003.

The relationship between accounting and taxation is influenced by the reports between the two. Given this situation, the question what arises is demarcation and hierarchy of reports between accounting and taxation.

These reports can be grouped into two categories: *integrated reports* and *neutral reports*.

Integrated reports (employees) are connection reports, being determined by the intersection between tax and accountant interest. In case of these reports reveal differences between accounting and tax principles that must be harmonized. Employed reports are considering reconciliation of relations between accounting and taxation.

In the area of these reports are part mainly three problems:

- Depreciation of non current assets;
- Evaluating, and
- Taxation of profits.

In the area of integrated reports between accounting and taxation, falling rules on deductibility of expenses in determining taxable profit of the company. To this direction must be applied the principle of connection between expenses and income, which requires recognition in the financial statements for only those expenses which are incurred in carrying on the company's current activity. Other costs that it generates should not be recognized in the financial statements.

This point of view is more purely accounting. But, given the fiscal aspect of the problem, the company must record all documents that are prepared on its behalf, which means that some of them contain costs that are not recognized. These expenses must be accounted for, but when calculating income tax should be eliminated, thus obtaining a higher taxable income and consequently of the income tax payable to the budget.

Another consequence of application of the principle of linking expenses at the revenue is that: an expense is deductible for tax purposes only if they are generated by revenue. For example, if a company records expenses in the period when not engaged, expenses are considered nondeductible from a fiscal standpoint.

Neutral reports between accounting and taxation do not directly affect the profitability of the company. They occur when the dividend tax, income tax, social security contributions, VAT (when it has a pro-rate deductibility of 100%). The information provided by accounting is used from taxation in the calculation and settlement of taxes and contributions.

Neutral reports between accounting and taxation have in mind that accounting information is used for taxation like a support and purpose for determination and settlement support for taxes and contributions. These reports do not require conciliation of differences between accounting and taxation; do not generate usually problems on the harmonization of the two interests.

These reports can be exciting for the company's fiscal management, accounting default, only to the extent mobilize the imposed subject to a behavior recorded in fiscal effectiveness.

Relations resulting from the reports between accounting and taxation

The relationship between accounting and taxation must be analyzed beginning from the evidence that objective of accounting is different from the taxation one. In addition, two other factors are involved in this equation: entity, through associates or shareholders, and professional accountant, each of them with its own objective. Thus, four factors of interest are found four different objectives:

This objective sustains structures described and recognized in the financial statements.

According to financial reporting conceptual framework, the objective of general purpose financial statements is to provide financial information about the reporting entity that is useful to existing and potential investors, lenders and other creditors in the decisions they take on providing resources to the entity.

Information about the financial position aims:

- economic resources controlled by the entity and that are useful for anticipating the entity's ability to generate future economic benefits;

- structure of funding sources, it is necessary to anticipate future needs credit and the possibility of obtaining such loans;

- the distribution of profits and future cash flows, liquidity, solvency of the entity and the ability to adapt to changes in the economic environment in which it operates.

The objective of taxation consists in calculating, charging, placing, tracking payment of taxes and contributions due from economic units, state.

These objectives are achieved by promoting financial policy economic and social. Taxes are a form of sampling a part of the income or property of individuals or legal entities to the state to cover its expenses. This sampling is necessarily non-refundable basis and without consideration of the state. It is necessary that fiscal rules to be known and respected as from payer and the tax authorities.

The objective of the economic entity, of the owner is to make a profit. Ownership unbundling and power within the entity favored the development and other objectives, but whose implementation remains subject to obtaining a satisfactory profit. These goals relate to increasing or maximizing sales and the quality of service rendered or goods.

Making a profit remains, therefore, the first purpose of the entity, but not only.

Accountant objective is to achieve the first three objectives respecting accounting and tax rules so that:

- To present a true and fair view of the financial position, financial performance of the entity and changes in financial position and financial performance (the objective of accounting);

- Ensure the correctness of the calculation and recording taxes owed by the economic entity (which consists of fiscal objective);

- To build the desired result as beneficial owners using tax incentives and accounting and tax treatments, when the choice (within the limits of the objectives of the two fields of accounting and taxation).

When accounting principles are in conflict with the taxation, arise the problem about the reconciliation between accounting, which represents the interests of society, and taxation, representing the interests of the State.

Relation accounting-taxation is a subject that can be analyzed in the context of optimizing fiscal management company.

Tax administration is considering tax parameter, respectively the entity's tax obligations. Effective realization of the fiscal management objectives is by fiscal policy entity as concrete manner using specific tools and techniques.

Searching and performing of fiscal security must ensure relationships between entity and taxation regarding substance and form and payment postponement imposed by tax law. Achieving this objective involves the carrying out of appropriate allocation of financial resources to avoid delay penalties, fines and tax penalties.

Searching and performing fiscal efficiency refers to the fact that the entity needs to optimize its economic and financial relations with taxation. Entity behavior in this direction is possible in the system of taxes and contributions provide ways of instigating entity taxable amount on line growth or profit use in certain destinations. For example reinvestment of profits involves tax reduction.

In a research study on normative type concerning change that occurred in the accounting regulations in Romania[2] in the last ten years, the authors concluded that "at present, in Romania, accounting and taxation is disconnected, only barrier left to overcome in custom accounting practitioner to think in terms of economic transactions tax ".

[2] M. Ristea, I. Jianu, I. Jianu*, Experienţa României în aplicarea Stadardelor Internaţionale de Raportare Financiară şi a Standardelor Internaţionale de Contabilitate pentru sectorul public,* Transilvanian Journal of Administrative Sciences, 1 (25)/2010, p. 188.

Although formally accepted, disconnecting between accounting and taxation, in the implementation process continues to face many difficulties. It can see great progress, sometimes unexpected, followed by recovery and reinterpretations, as noted G. Popescu[3].

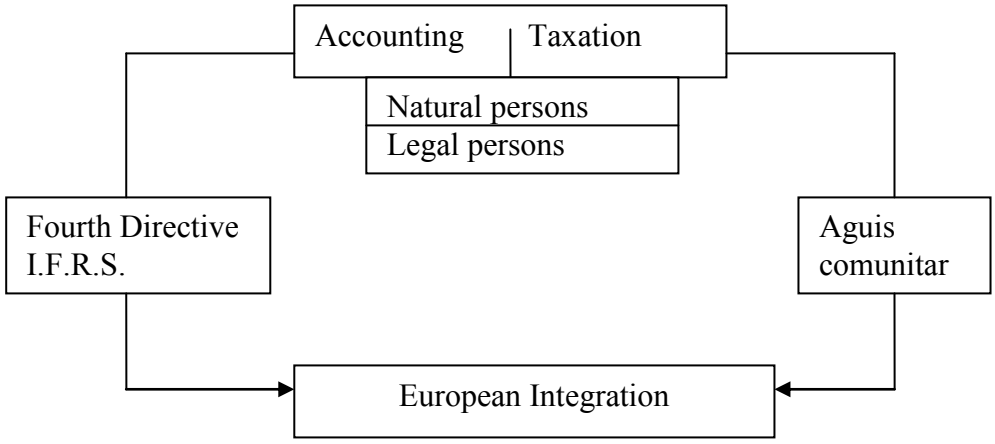
But there remains an artificial dependency between taxation and accounting, maintained by the practice. And we refer to situations in which, although there are accounting rules, it choose the taxation rule to the detriment of accounting one, for several reasons: convenience, saving time and administrative costs. An example of this is the depreciation: accounting rules may differ significantly from fiscal rules, which has the effect of keeping the two records amortization: accounting (in the accounting records) and tax records (in a special register for this purpose).

In practice it is usual to use the same method of depreciation for accounting purposes and tax purposes to avoid complications regarding double records depreciation. Most often, however, the accounting rule is deliberately circumvented in favor of the tax. Is the valuation of the inventory reflected on the balance sheet, assessing the taxation is not recognized. There are few accountants specialists who respect the accounting rule in this regard.

In general, in case of separate tax rules, different from accounting rules, must be applied two sets of rules, which may increase the bureaucratic burden on businesses. It can lead most of the time, to the failure to comply with accounting principles.

Taxation has also passed through many changes in the last twenty years. Some of the changes were dictated by state fiscal policy, by the political interests of various parties in power, and some of integrating, in 2007 the European Union. All changes related to harmonized taxation had a direct impact on each category of taxpayers, individuals and businesses, and from an accounting viewpoint changes confirms that all plans must be made for the image correlation both fiscal and accounting statements financial statements to reflect reality and to be comparable at both micro and macro level.

Briefly we can imagine the relationship between actors participate in the economic and tax in close interdependence, each generating a stimulus on the other, as shown below:



We can conclude that an important step has been made regarding the separation by the tax accounting rules on a regular, but not enough specialists as long as your account remains still victims of economic transactions habit of thinking in terms of taxation. It is imperative to achieve this separation in practice, involving the need for thorough preparation for mastery of accountants to detail the laws and accounting rules, so as to understand and to learn and to master those taxes.

[3] Gheorghe Popescu, Adriana Popescu, Cristina Raluca Popescu - *Imaginea fidelă versus fiscalitate în contabilitatea românească a anului 2006*- Gestiunea Publishing, Bucharest, 2006.

But there are many problems that an accountant is forced to face and largely state they are caused by excessive bureaucracy, the greater the number of laws that come into amending the Tax Code and accountants who make trouble.

In our opinion, although difficult path from addiction to disconnect taxation accounting has been completed, there is still a hard and difficult road from theory to practice. Theorists believe that it is the duty of helping practitioners, through their work, understand and follow this path.

Our proposals which aim to disconnecting between taxation and accounting refer to the following:

1. Assurance of a stability regarding legal provisions at least at the level of a financial period, although we consider that normative acts should have effect over a greater period. Our proposal stops at the financial period in the conditions in which the legislative modifications take place in Romania with great frequency and in any period of the year. Otherwise the fiscal stability represents an essential condition for the predictability of the fiscal and business system from our country.

2. Publication of legislation and modifications brought to this in an adequate period of time before the date of coming into force, so that the entities affected by the new legislation can take the required organizational measures.

3. Publication of application norms, not only at the adoption of a normative act but also at its modifications, at the same time with the regulation act. At present, in most cases there are provisions regarding the publication of norms in terms of thirty days. Since they are not published at the same time with the regulation referred to, a dysfunctionality occurs, many of the normative acts giving rise to misinterpretations for lack of application norms. Besides this, the foreseen term is not observed very often.

4. Use in the normative acts of a common terminology which does not create confusions. In this sense, the Fiscal Code uses at present the term of „provisions" meaning the adjustments for the debts depreciation.

5. A better analysis of the legislation, so that provisions contradictory to those from accounting regulation and fiscal legislation be eliminated, as it is the legislation regarding the fixed assets (corporal fixed assets in accounting regulations) or at the acquisition of non-corporal fixed assets which is considered from the VAT point of view, respectively of the Fiscal Code, as an acquisition of delivery of services, even if from an accounting point of view we have a acquisition of non-corporal fixed assets.

6. Republication of legislation in the accounting and fiscal field after the successive modifications which take place as to enable its adequate comprehension.

7. Simplification or taxes reduction (of the number of taxes) as well as of the fiscal statements which would lead to the diminution of time and resources used in this sense with a result, as it followed from the empirical study made, and upon the true and fair view presented in the financial statements.

8. For the situations in which the accounting regulations foresee more accounting treatments, leaving to economic entities the choice of one of them, we consider that it should exist some conditionings and norms in this sense which would minimize the impulse to creativity. The Romanian economic environment is not prepared to use the options with the purpose to present a true and fair view.

9. From the empirical study, we draw the conclusion that in most cases, where the taxation doesn't recognize an accounting treatment, this doesn't apply in practice. It is the case of balance sheet evaluation where adjustments of depreciation are not registered in most cases because they are not allowed by taxation. We propose in this sense the setting up of an obligation, so that the information from the accounting reports be complete and also comparable with those of the entities which observe the principle of prudence and recognize the depreciations in the financial period in which they appear.

10. We consider that the only solution to prevent the financial statements from fiscal pollution is to separate the accounting 'work' from the fiscal one, so that these two be performed by different persons. Although it requires an additional consumption of financial resources, this measure will guarantee the presentation of an image not altered by fiscal provisions by means of financial statements.

11. We consider that raising more awareness of all who contribute to the drawing up of financial statements, starting from recognition and evaluation and finishing with their elaboration, will have an impact upon the observance of accounting reports' objective. We propose in this sense the delegation of responsibilities when drawing up the financial statements starting from the regular level, the lowest on the managerial chain.

12. For a good informing of the factors implied, not only of institutions but also of those who prepare and assume the responsibility for the information comprised in financial statements, it is necessary the setting up of **a strategy of communication** which should have in view at least the following aspects:

- communication between the institutions of the State and professional organisms on one side and the business environment on the other side;
- communication between the economic academic environment and professional organisms in view of correlation of studies programs with the demands imposed by professional organisms, demands which result as a rule from European Directives or from standards regarding education.

13. Last but not least, we believe that it is necessary the periodical evaluation of professional accountants and even of auditors and of the way in which they respond to the demands imposed by the norms and standards issued by the specialty organizations to which they belong.

Conclusions

As a **general conclusion** of the present work, we can consider, without reserves that **significant progress was made** i**n Romania regarding accounting and taxation as well as regarding the disconnection of taxation from accounting**. This process of perfection of the accounting and fiscal system needs a special attention in the future because on an international and European plan, the mentioned fields are very dynamic, fact which also influence the national environment in the conditions in which business doesn't know boundaries and its effects, favourable or not, spread very quickly.

The conclusions, the results of the research and the examples expressed in this work can be a source of information which can be taken into consideration by the management of entities in order to establish, apply or change their own accounting policies in the context in which we all should be aware that accounting regulations corresponding to European directives encourage the disconnection of accounting from taxation.

FACTORING- CREDIT OPPORTUNITIES IN ROMANIA

ADELA IONESCU*

Abstract

Capital is the main factor of production, business development becomes virtually impossible without taking into account the financial market and the resources it provides to businesses. Any business, regardless of its degree of development, is involving direct contact with financial markets, namely the institutions that mediate mobilization of capital and the services they provide. Understanding the functioning of the financial system, the specific financial mechanisms through which savings are allocated to support capital investments and the costs and risks involved is essential for the development of a solid base for business.

In this context, factoring operations can support economic agents, allowing a transfer of commercial receivables from their holder to a factor who commits to their recovery and guarantee such operations even if temporary or permanent insolvency of the debtor . Thus, factoring is a complex technique in at least two aspects, of the debt and the transfer of credit. . Factoring is a means of financing business, especially export-import transactions, less known in Romania. Maybe because of poor business environment popularize the term is as little known as it was a few years ago the leasing.

Present in Romanian legislation since 2002, factoring appears as a contract between one party (called adherent), providing goods or service and a banking company or a financial institution specialized (called factor), which the last one shall finance debts pursuing and preservation against credit risks and adherent gives factor by way of sale, debts arising from the sale of goods or services to third parties.

The article is divided into three parts. In the first part we defined the concept of factoring and international factoring, then I presented the advantages and development of factoring in Romania, and the last part conclusions.

***Keywords**: International Factors Group, factoring, product of financing, sale invoices, double sales, factoring contract , factor, financing technique, credit and payment instruments, costs, regulatory framework*

Introduction

Factoring overview

Factoring is a financial - trading activity which consists mainly of firm acquisition by a person named factor, from the producers of goods and services, the claims that they have on their customers. Factoring operation is essentially a transfer of trade receivables to a factor holder to commit to their recovery and guarantee such operations even if temporary or permanent insolvency of the debtor, retaining for this a commission. Results therefore that factoring is a complex technique consisting of at least two aspects: the credit and the transfer of debt, which is causing its financial and legal nature.

Factoring is a commercial credit agreement involving a specialized company (banking company or a specialized financial institution) in the collection of bills called ***Factor*** and a company providing products or services referred adherent **.** The adherent aims to charge invoices before their expiration term as the *Factor* seeks a benefit, usually a percentage of the invoices adherent he settled in advance. In factoring business is involved as well the customer/client of the which is notified that it will pay the bill at maturity to the *Factor*. By entering into a factoring agreement is not envisaged an isolated operation but is usually sought an exclusivity on a certain customer segment, region or country. The adherent is in a major advantage because it does not have to collect bills from a variety of customers but they receive the amount directly from the factoring company. The *Factor* accept invoices on its own risk and if the debtor does not pay cannot demand the payment from except that the adherent does not provide to its customer the services or goods covered by the adherent invoice).

*Associate Professor, Ph.D., Faculty of Economic Sciences, "Nicolae Titulescu" University, Bucharest (e-mail: adelaim@yahoo.fr).

To assume the risk of non-payment of an invoice, the *Factor* must first agree that invoice, in other words it will only work with agreed clients and those that provide security. If it does not accept the invoice the *Factor* can cash it under a contract of mandate without taking the risk of default. The is adherent required to notify its customers that it yielded its claims to the *Factor*, so it must pay to the latter.

Factoring is a way of financing business - especially export-import transactions - less known in Romania. Maybe because of the poor promotion of the term in the business environment it is as little known as it was a few years ago at the "Lease". Meantime if we became familiar with leases, market trend will lead logically to modernization in trade financing. This involves as well adopting factoring as a means of funding, to the detriment of classic credit.

In a more common language factoring operation consists in selling by a bank or a specialized company receivables generated from commercial invoices. In the transaction, the bank (or factoring company) offers immediate financing. Thus upon presentation of the client's invoices for products or services purchased it's paid immediately a percentage of 85% of their value. After recovery of the invoices, the *Factor* will pay the difference of 15% from which retains the value of commission and interest. Specifically, factoring is the financing mechanism which quickly obtains cash by selling bills whose maturity is short (usually comprised between 180 and 360 days). Since *the Factor* is one that assumes the risk of default of the debtor, must take into account the seriousness of the foreign partners. In this regard, the bank (or factoring company) will require financial statements and reports concerning the importers loans so it can check the situation. The *Factor* take also into account the quality of the undertaken debt.

Factoring applies particularly in export-import operations where the need for fast cash and short time to recovery invested funds are in balance, hence the success of this financing mechanism.

Factoring benefits are primarily related to the ability to obtain financing in a very short time. Thus, banks and factoring companies provide financing on the day of producing the bills, of course after signing factoring agreement. Among the advantages we may indicate an improvement in the cash-flows due to much shorter time needed to obtain liquidity than for a loan. Moreover, unlike credit funds raised should not follow a particular destination as they can be invested according to the immediate needs of the client.

For traders who apply to factoring, facilities are complemented by the fact that the number of documents to be submitted to the bank or factoring company is much lower than for a credit application. After analyzing the documentation the *factor* may refuse services only in case of shareholder partnership between adherent and debtor or if sales payments are conditioned, for advance or at delivery payment. Using factoring the companies engaged in commercial transactions also benefit that can focus on business development through the expansion of production and sales, while factor deals with tracking cashing and recording invoices conducted by factoring.

First worldwide important market that factoring has appeared was the United States', where until the 60s, most specialized firms were family companies. Since 1980, banks have seized the opportunity to promote such services and have launched a massive acquisition of factoring companies. The key to success is not the size of the market so the U.S. is inadequate reporting to into the context. It also does not matter much any knowledge of the concept of factoring. What matters is the proper organization of specialized companies and the awareness that factoring industry has its own culture. For example, the exchange of knowledge between members of factoring networks, such as "Factors Chain International", contributed to the growth of professionalism. Consequently, national companies in the sector have become able to operate internationally.

International factoring

The first form of factoring has been funded in the U.S. in 1808, after which, under its own regulations the activities promoted by a number of U.S. states, factoring quickly spread throughout the United States. In 1923, in the U.S. was adopted the world's first law of factoring.

In Europe, the first factoring company appeared in England in 1960. At present in all European countries there are factoring companies, most of which belong to international groups such as the U.S. International Factors, Walter Heller & Co., International Factors France etc. Also, it was enacted detailed legislation in this area, in each of the Western European countries.

If we look at international factoring several important factors are to be noticed and considered such as:

- the Factor is a bank, usually a wide known one, fact which on the one hand brings credibility and on the other hand allows it, through Factor correspondents in the importer's country, to acknowledge the latter financial situation so making able the best decision to take concerning the takeover of the claim or not;
- the activities tracking debt collection and credit control are taken from adherent and are made with a higher efficiency due to Factor capabilities:
- payment of invoice amount is guaranteed to the adherent;
- the Factor charge a fee of between 0.5% and 2% of the total debt (depending on volume of activities performed, the existing risks and bills).
- the interest charged by the Factor for its financing is usually higher more than 3% than the market rate.

Finally should be mentioned that factoring apply to transactions with short term credit payment (generally up to 180 days), which usually refers to goods with a low degree of processing, consumer goods and industrial products series, whose sales are repeatable so that collection facilities can be provided on an ongoing basis.

International Factoring (bills negotiation) is first and foremost a financial banking transaction with commercial support, which, based on a contractual agreement, the Factor, a specialized banking institution undertakes to ensure recovery of claims that Adherent (the exporter) has at its customers (the importers) and perform other services for the Adherent.

The Factor take over the bills representing receivable from Adherent and agree to pay them to it, either after full payment of their fee or, most often, paying some bills (between 70% and 80% of their value) immediately and rest when invoices are received in full. The Factor charges a fee for its services that covers all expenses and is earning him a profit.

The Factor take over as well all collection activity tracking the invoices and credit control including accounting operations, as well as sending statements and letters. This allows the Adherent to employ its staff for other activities, leading also to a relaxation of pressure on cash-flow and increased competitiveness of the Adherent.

In international factoring operations may come up to four parts: Adherent (the exporter), Export-Factor (a bank in the exporter's country), Import-Factor (a bank in the importer's country) and Foreign Customers (the importers).

Schematically, the mechanism of a comprehensive international factoring transaction is as follows:

- factoring transaction begins when Adherent submit the Factor its claims on third party importers as invoices with different maturities, from exports performed by the Adherent;
- comes up factor subrogation to the Adherent rights in claims mobilization ;
- payment of bills nominal fee less the Factor fee, either immediately - before the maturity of debt (old line factoring), which requires payment before maturity and thus adding to the cost of factoring an appropriate interest rate, or at maturity (maturity factoring).

In case of payment on maturity, the Export- Factor hands over the claims to the Import - Factor that recovers their value from importers making settlements with Export-Factor, which then pays the exporter.

Export- Factor can pay the Adherent at delivery a certain amount of bills and afterwards the difference will be adjusted after recovery of loans. At debt maturity the Import-Factor receives from the third party borrowers their value by showing the payment and settlement documents with the

Export-Factor. In the case of immediate payment factoring, The Export- Factor, as noted above, advances funds to the Adherent paying the bills at face value from which deducts the interest and fee. Export-Factor can grant also loans to the Adherent for development of export production. By factoring operations, the Adherent transfers on Factor the insolvency risk of its customers, the risk of collection (payment cancellation) and currency risk (devaluation of the currency in contract). In addition to taking these risks, the Factor ensures to Adherent, as mentioned above, other services too, such as sales accounting, tracking receivables from foreign customers, developing short term studies on foreign markets as well as on the Adherent customers, specialized banking services as granting and guaranteeing loans or as economic efficiency analysis for Adherent export activity. By resorting to factoring Adherent may increase its export products competitiveness.

Factoring activity in Romania

In Romania factoring has substantially grown recently. With all substantial advantages offered by factoring, Romanian companies have resorted to a greater extent to this category of product until 2001. Only then transactions exceeded 100 million Euros. Meanwhile, in Poland transaction volume measures 3 billion Euros and the Czech Republic, Hungary and the Baltic countries recorded higher volumes. The reasons for this discrepancy account both to macroeconomic conditions and the banking offer system. Lack of bank offer was a brake on expand factoring, but the current trend is on a high increase. The rapid growth of banks' revenues from factoring operations (approximately ten times in the last six years) indicate an increase in trade exchanges and need for cash of the economic agents, faced with increased tougher competition. Now the domestic bank factoring services market is divided between BRD(27%), BCR(23%), Raiffeisen(19%), UniCredit(19%) and ABN Amro(12%).

In the current economic situation it can be said that the development of factoring in Romania has some limitations caused mainly by the following facts:

- Technical issues related to nature and natural limits of factoring
- Economic situation
- Financial regulations
- The level of understanding and knowledge of the involved factors
- The need to making up specific legislation

Evolution of factoring market in Romania during the period of 2009 – 2011

In Romania factoring market is controlled in proportion of about 75% of companies in the banks. The main players are BCR, BRD, Raiffeisen and Unicredit Tiriac, which work on the factoring market through 'inhouse' departments while lending institutions such as ING and BT are on the market through specialized divisions, namely the Commercial Finance and Factoring Company. *Next Capital Factoring* Company, with totaling 5 million grants last year, is one of the leading independent players in the market. Recently, the British private equity fund North Bridge took over 29% of its share capital, the value of transaction amounting to 4 million. Most customers of the *Next Capital* are SMEs and entrepreneurship.

Factoring market in Romania increased in 2011 by 10-15% compared to 2010, when it fell by 27.8%, to € 1.3 billion, compared to 2009, in the context of marked reduction in the number of borrowers accepted by specialised companies. One of the most important players on the Romanian market is *Capital Factoring* company which finances up to 80% of the assigned customer invoices within 24 hours from the date of signing the contract, even if SMEs do not meet the necessary conditions to get a traditional bank loan. Financing that meet the necessary conditions are guaranteed by the National Credit Guarantee Fund for SMEs.

Factoring market in 2010 was 1.3 billion Euros, a contraction of 28% over the previous year when factoring market reached a total of 1.8 billion euro, an increase of 63% over 2008. Factoring market in Romania has continued to develop and in 2012, according to representatives of companies in the domain. Moreover, since 2011 new specialized companies emerged, which shows the interest

in the business. According to experts Romania is interesting to investors because of the market size, even if in this period is little hope for growth.

According to the data, Romania ranks last in the region in terms of factoring volume transactions related to gross domestic product (GDP), at a level of 0.52% compared to 0.67% of GDP in Bulgaria. The low penetration of factoring in the GDP shows that this sector has a significant potential for growth. Factoring which is a financing product implies the assignment of payment of bills on time in order to get quick cash, but funding does not include collaterals (deposit, mortgage), being strictly based on customer invoices.

For the development of factoring industry in our country I think there is a need to diversify the range of services offered by factoring companies, such as:

- the bookkeeping of sales, inventory, cash management, representatives a.s.o for the adherent;
- providing adherent information on the economic-financial situation of buyers;
- informing with statistical data on key customers, products and market sales volumes etc.

Thus adherent will find at the factoring company a source of commercial informations, a source of credit and services of banking, insurance, accounting, statistics etc.. The only concern to the adherent will be to make and sell quality and competitive goods.

Nevertheless a question arises: ***has factoring a future in Romania?***

There are many factors to be considered in order to give a positive answer to this question. But what we can say with certainty is that the success of this funding technique depends on its acceptance by customers, consisting primarily of small and medium enterprises, as well as on the behavior of the *Factors* in satisfying users requirements. Has factoring been able to meet only temporary needs due to fortuitous circumstances or needs arising from the development of the Romanian economy, only time will give us an answer.

Conclusions

At the end it can be concluded that for Romania is necessary that factoring become the subject to a legal status similar to that met in the U.S. and known as the Factor Acts, harmonized as much as possible with European Union legislation.

It must however be taken into account that the evolution of the legal nature of factoring leads to a vicious circle: to develop factoring needs a status that can not be attained but only when it is highly developed, so it is that factoring will have to be developed on the move.

It is also necessary that financial institutions which monitor factoring give to it every chance up agianst other financing techniques. We bear in mind primarly the National Bank and the commercial banks which must expand use of credit and payment instruments.Exporters that will need to mobilize their client accounts and which will not have sufficient financial coverage to obtain credit by mobilizing trade receivables will have to resort to factoring.

In terms of economic and financial obstacles, first will have to be reduced factoring costs by lowering *Factor* costs. Romanian *Factors* which appeared since a real short period may consider to improve their work efficiency. Increasing the number (and quality) of bills covered by B/E will bring to bear in that direction - that as posibilities to internal cost reduction. On the outside it is envisaged endowing with high performance equipment for data processing and communication, as well as competition and specialization of factors in different fields.

Another obstacle related to factoring costs can be deemed the relative ignorance of the prospective users to the offered services.

Candidates to factoring may only consider the importance of financial advantages of this technique, not knowing or minimizing the importance of some other advantages. Or, factoring is not reduced only to the immediate and final settlement of bills. If a company interested in this technique takes into account only financial benefits, risks to give up its use due to its high apparent costs. It

should be a shift from apparent cost to actual cost, ie know all services obtained for this cost. It depends on the promotional activity carried out by *Factors* and is a matter of educating customers on sale domain.

Factoring activity requires a single regulatory framework, given that it has potential to grow more than seven times the amount of 1.6 to 1.8 billion, reached already last year. Currently, factoring market is dominated by banks, which run internally such operations but independent players begin to force their way in as well.

COORDINATES OF A RISK MANAGEMENT PROJECT

ALEXANDRU OLTEANU[*]
MĂDĂLINA ANTOANETA RĂDOI[**]

Abstract
High risk – high benefit: a well-known correlation both in the economic field and in the day-to-day life. Another correlation, on which this article is based: large project – numerous participants – increased risks and other malfunctions.
The risk management concept is challenged by those projects and is forced to find the most adequate "customized" ways for each project at its turn.
In this respect, the assessment of management has followed the trend of the last three decades, marked by moving of management profit analysis by risk intermediation, respectively the transition from managing profit to risk-return relationship management. Such trend assumes the obligation of participants to identify objectives and expected benefits of the project on the basis of the strategies laid-down, the elements of risk management policies, in conjunction with the indication of the most negative scenarios which they may provide.
This activity must take into consideration the process of obtaining and combining human, financial, physical and information resources in order to accomplish the primary goal of the proposed and wanted project by a certain segment of population.
Project participants are directed to evaluate their own activities in terms of revenues and risks from the business access, opportunity, operating mode, as well as the limitations and boundaries on certain sides of activity. The paper focuses on the analysis and evaluation of incomes and risks, on simulations to streamline the activities and the determination of the optimal model of project choice.
Also, the paper treats the risks that can be taken over by the sponsors, especially those related to implied guaranties, even implied guaranties.

***Keywords**:* project risk, output supplier and purchaser, swap currency, swap on interest rate, operation risk.

Introduction

The investment projects support the economic development of a country by creating and developing production capacities, achieving the infrastructure and socio-cultural objectives.

The present paper intends to identify the project participants with all their duties, and especially the risks which are relevant for the project, the stultification of their consequences, as well as risk management by the parties entitled to manage them.

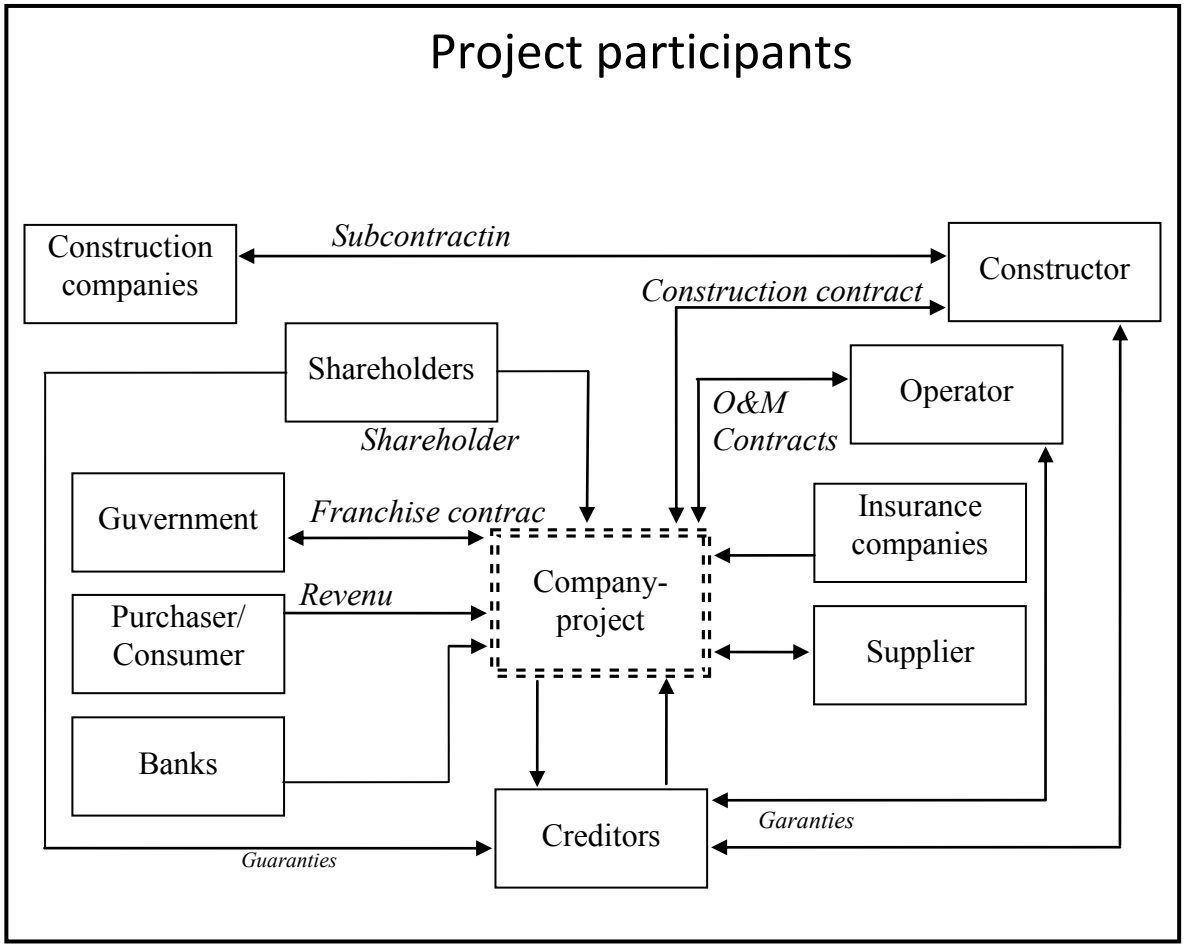
Minimizing those risks must be operated starting from the negotiation stage of the project participants and reflection of those agreed with the contract arrangements.

Discussion

Large project means infrastructure objectives or other high scale constructions to create or develop production capacities or socio-cultural objectives and implying also numerous participants. Summing up, they are those included in figure 1.

[*] Professor, PhD, Faculty of Economic Sciences, "Nicolae Titulescu" University of Bucharest (e-mail: aolteanu@univnt.ro).
[**] Associate Professor, Ph.D., Faculty of Economic Sciences, "Nicolae Titulescu" University, Bucharest (e-mail: madaradoi@gmail.com).

Figure 1. Project participants



In the first place, in order to reduce the risk of the project promoters (most of the cases, shareholders, named in this case sponsors), those are separately constituted, under the shape of a company-project getting out of the company finance sphere and joining the project finance field (Project Finance).

Another step is the identification of the risks which are relevant for the project, their reduction (for instance by selecting checked suppliers, with a good reputation) and managing risks towards other parties which are entitled to manage them (simplified, the construction risk is transmitted to the constructor, the management risk to the manager and so on). At this level, still, each part involved is covered and /or ensured against the risks which come with the territory (1).

Risk management differs from a transaction to another.

1.**However, in most cases, the parties participating at risk management are:** the production purchaser, the supplier, the constructor, the government, the operator, and, of course, the sponsors.

♦The *output* purchaser is motivated to assume certain risks when the project is important for his own business.

The relationship with the output supplier and purchaser is approached mainly through the indirect guaranties, as long term contracts, which can assure the availability of the needed materials, on one hand, and the project revenues on the other hand. The most known and applicable contract arrangements of the kind are: *take-if-offered*, *take-or-pay*, *hell-or-high-water*[1], *put-or-pay*, and *pass-through*.

The *take-if-offered* contract urges the purchaser of the project output to accept the delivery and to pay for the offered products and services. The contract doesn't demand the purchaser to pay in the case when the project doesn't succeed in delivering or supplying the promised services. Thus, the contract protects the creditors only if the project is operational. In general, the creditors demand further arrangements to cover for force majeure, which make the project inoperable for a certain time.

The *take-or-pay* contract urges the purchaser to pay for the goods and services even if he doesn't accept the delivery. It can be set that the parties from the contract should cover all the fixed expenses of the project (the fixed operational and maintenance expenses, the debt services, the net benefit of the shareholders) or only a part from the project capacity. In the latter case, the project sponsors have to sell the remaining part from the market transparently or to look for long term buying arrangements with third parties.

The *hell-or-high-water* contract is similar to the *take-or-pay* contract, with the bounding to pay to the purchaser further, no matter if a product is delivered or not or the services are offered or not.

The *put-or-pay* contract provides that the supplier should deliver a certain quantity of materials to achieve the project or to pay a certain amount which can allow the provision to be made by third parties in case he doesn't succeed in fulfilling his duty. The *pass-through* arrangements come to complete the purchasing ones or supplying with the purpose of protecting the investors from unwanted amendments of the goods price. For instance, a link between the power selling price and the fuel buying price for central heating can be set. Thus, if the price of the fuel increases, it increases therefore also the selling price of the power from the buying contract. Yet, if the efficiency of the fuel use decreases, namely if a unit of produced power needs a higher consumption of fuel than it has been anticipated (then the consumption on production unit increases), then the *pass-through* arrangements don't apply and, therefore, the net operational revenue won't diminish.

♦The supplier can take some risks from his desire to sell his own products.

♦The constructor most times takes risks appropriate to the construction time. On the construction market there is a strong competition, and a large project may be a profitable source of income and, in the same time, an opportunity to increase the reputation of the construction company.

In order to guaranty the constructor's responsibilities stand-by credit letters are used, bid bounds guaranties, performance bonds guaranties, advance payment bonds guaranties and so on.

♦The government is interested in promoting certain projects according to the economic, political and social context.

The involvement of the government doesn't pay a real part in certain assumptions (although, in some cases the strategic importance of a project for the national economy of a state justifies this approach), but guaranties against the political risk action (transfer, expropriation, etc.) the government co-interest in a particular project is a cautious and wise attitude, due to the fact that not few were the case in which certain projects profitability was affected by the hostile the government decisions, with social, political, environment motivations etc., more or less well-founded.

[1] The phrase (come) hell-or-high-water means in English "any difficulties which may arise".

The government support offered to a project can be expressed in implicit guaranties, but also through formal support guaranties. The latter contains insurances on behalf of the government to minimize the political risk.

♦The operator is, also, motivated to take over some risks in exchange for a convenient operation and maintenance contract.

♦The sponsors (the shareholders) assume some risks at their turn and can be demanded to contribute with some in-house further capital in case any adverse event takes place. The sponsors also have to offer some guaranties or they have to obtain them from third parties (2).

These take over the risks they don't succeed in allotting or consider they cannot manage effectively. Along the limited guaranties (as amount, time or coverage), there is also an interesting tool through the consequence it has, without having a strong background: the implicit guaranties. These are so-called guaranties, due to the fact that they don't have a legal influence over the guaranty. Still, they offer certainty to the creditors who get from the sponsors insurances that all the efforts will be made for the project to succeed. The implicit guaranties take the form of declarations, intents, best-efforts commitments. The most common implicit guaranty is the comfort letter which consists of a sponsor intent declaration to supervise the management and the development of the project. In case the financial terms deteriorate, the guarantor sponsors will take all the needed measures to prevent the project from becoming unable to fulfill its duties.

2. **Risk management organization and its objectives**

Risk management in an organization or institution is, first and foremost, the responsibility of the executive board. The main objectives of a good system of risk management concerns:

- establish a common accepted definition of "risk" and the types of risks;
- evaluation of financial sources necessary for the institution, of existing and potential internal and external risks;
- establish of clear responsibilities in the field of risk management and reporting system;
- ensuring a transparent, comprehensive system of information management, a system of monitoring and reporting of actual exposures, losses and gains;
- development of a system for measuring financial performance to take into consideration the expected loss (the cost of activity), unexpected loss (risk measurement), capital allocation for each risk, where is possible, and income adjusted for each risk (return of capital adjusted with the risks);
- define and use principles of diversification of risk and financial management of the portfolio;
- establish the price of the products, services and investments taking into account the above items;
- identify inclination/tolerance in assuming risks and establish limits of exposure;
- installing in all of the areas by organizations of plans for recovery in the event of natural disasters and/or of plans for the continuity of activity, as well as updating and testing on a regular basis to these plans;
- permanent analysis of achievements and failures of the risk management system and adjustments in accordance of instruments of control;
- providing a professional level and specialized of the employees in order to neutralize and control various categories of risks.

One of the most important risks, which must be managed by the participating organizations at an investment, is market risk. Losses arising from this risk can be significantly and can generate the bankruptcy of the organizations if the changes on markets are dramatic. After 1990's the global exposure to this risk has increased noticeably, therefore poor management of this risk has become a

leading cause of organizations' losses. Market risk represents the probability that a variation of the conditions of its markets adversely affect profit organizations. If we refer to changes in the conditions of financial markets, they can affect organizations through three interrelated transmission channels, which are separately managed: the variation of tendency of evolution and of the level of interest rates; the exchange rate variation and hence the value of the national currency of foreign assets and liabilities (building materials, investment goods); financial assets rate variation which may affect market value of the portfolio of securities (commercial) and value of financial securities issued by organizations (stocks, bonds). The volatility in price of assets (commercial or financial) is determined by the factors that determine supply and demand. If these factors change significantly, asset courses will display important variations adapted to restore market balance. This volatility has following dimensions: frequency, amplitude and speed. Since volatility in price of assets reflects efficient functioning of markets, it should not be worrisome for management of organizations. However, volatility in price of assets may significantly expose both participants of the market transactions and non-participants at risks. The change is the main source of volatility and vulnerability of markets. The process of changing commercial and financial structures change relative capacity of various institutions and markets to efficiently process the information on which depends the regular functioning of markets. The market risk concerns the possibility to affect market value in a positive or negative way and/or the profit of an organization as a result of unexpected price fluctuations. Exposure to this risk may be different from one organization to another. Assets volatility (commercial or financial) implies market risk if this volatility was not anticipated.

The volatility transmission from one national market to another involves several models that report the transmission mechanisms. The overall conclusion indicates there is a strong degree of connection of different markets and stock volatility transmission. Don Jones is the index most open to international influences, while FTSE is at least open at such influences. Market risk management can be achieved: ensuring commercial and financial assets; using derivatives (hedging instruments). Derivatives may reduce risks, but can't eliminate the need for proper capitalization of the organizations. There is no complete protection, some risks inevitably remain undiversified.

Once all the risks which affect a project are allotted to the project participants, these will reduce them further by *hedging* and insurance operations.

This final stage is, also, demanded by creditors for all these risks which remained the responsibility of the project-company. In theory, the creditors don't take risks, such as currency risk, interest risk, market and force majeure risk (including political risks) (3).

The currency risk reduces by using certain derivative tools, such as swap, futures, forward and options. Below there is an example of currency swap.

The exchange of the loan in local currency (LC) into a USD one reduces the currency risk due to the fact that the USD revenues can be paid within the swap contract, and the local currency which is received can be used to pay the debt (see fig. 2).

Fig. 2: Currency swap

Total cost: Pays 8% in LC within the loan contract

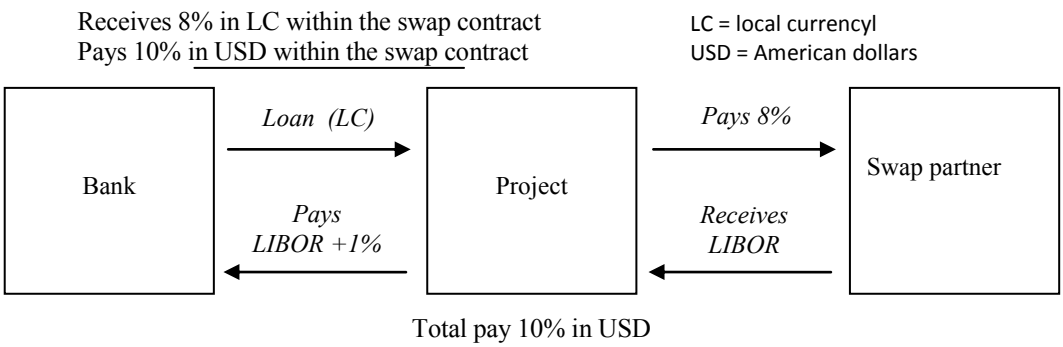


Figure 3: Swap on interest rate

The interest rate risk reduces by derivative swap futures, options and FRA's (forward rate agreement) tools. Figure 3 shows how a fixed interest rate can be converted into a variable rate, through a swap contract. The project loans founds from a bank at LIBOR + 1% variable interest rate. Within the swap contract it pays 8% and receives LIBOR. In reality, the interest rate it pays is invariable, equal to 9% (8%+ 1%).
