9. Significant progress is registered also in regards to the Common Foreign and Security Policy of the European Union, as an attempt to bolster the international profile of the European Union. First, a framework of values and objectives is firmly established, which corresponds to the role of increasing international responsibility the EU tries to assume at a global level and which ensures increased internal coherence. At the same time a new legal basis is established for the initiation of privileged association relations with countries in the immediate vicinity of the EU, a part of a new specific neighborhood policy. The Union's gain of the legal person status allows the Union to increase its international visibility and efficiency. Two important innovations are relevant to this matter – the newly created function of High Representative for Foreign Affairs and Security Policy of the European Union as well as the newly established European External Action Service, which will help the High Representative to carry out his activity. Both institutions seek to offer unity and coherence to the two fields of foreign policy, the intergovernmental field, specific to the CFSP and the community field, specific to the foreign relations of the EU;

10.The Common Security and Defense Policy is decisively developed through the Lisbon Treaty. On the one hand, the present line of crisis management through the Petersburg missions is continued; on the other hand progresses are made in two directions: cooperation in terms of capacities, through the creation of a European Defense Agency and through the establishment of political self-defense instruments of the Union. To this matter, the Lisbon treaty contains a clause of mutual assistance between the Member States in case of a military attack, a solidarity clause between the Member States in case of a natural disaster or terrorist threat as well as the possibility of establishing a permanent structured cooperation between the states which match a series of criteria and are able and willing to assume responsibilities in relation to these capacities. At the same time, the legal framework of the cooperation is extended through the procedure of "consolidated cooperation", which entails the elimination of the present interdiction, allowing for the creation, as in the cases of the Schengen Area or of the Euro Area the gradual creation of a veritable European Army.

11.The Lisbon treaty also entails significant changes pertaining to the procedure of treaty revision

itself, the European Parliament being several additional competences. An ordinary procedure is established, which consists, as a general rule, of the convening of a Convention, but also simplified procedures, known as "gangways" which allow the amendment of decision-making or rule-enacting procedures without a formal revision of the treaties. The first stipulation represents an important democratization of the reforming process of the Treaties, ensuring the participation to the UE reform of the national legislatures and of the European citizens especially, along the governments of the Member States and the European institutions. The second stipulation consolidates the Union's capacity to cope with new challenges eliminating the need for costly and lengthy reforms. Germany's proposal of modifying the Treaties through the simplified procedure, precisely article 125 of the TFUE, should be seen in this light.

For all these reasons, the Lisbon Treaty can be considered paramount, as it accomplishes most of the substantive European reforms, both in terms of scale and in terms of content. The Treaty is a great step forward towards the construction of political Europe to the extent to which, on the one hand, it develops the model of this unique political system, and, on the other hand, it enhances the Union's power of action in fields that normally lie within the scope of exclusive national sovereignty of the Member States[3].

THE INSTITUTIONAL REFORM. INCREASING THE EU'S EFFECTIVENESS

The new elements, true innovations in certain cases in terms of institutional development, comprised at the same time by the Constitution and by the Lisbon Treaty, represent perhaps the most important institutional architectural reform since the creation of the Communities. It is the answer of the European Union to a double challenge and necessity:

- On the one hand, the continuation of the democratization of the European decision-making procedures, strengthening the participatory character and transparency;
- On the other hand, adapting an institutional system initially devised for six states to the increasing number of members, trying at the same time to guarantee an Effective Union under these circumstances.

The general view is that there is a great deal of continuity. No new institutions were created and their major role in the decision-making procedure of the existing ones was not altered. Nevertheless, there are several changes, their importance and their capacity of affecting the general characteristics of the Union's functioning to be highlighted in the following years. As an example, one can look at the permanent President of the European Council or at the High Representative for Foreign Affairs and Security Policy of the European Union offices. We shall examine these innovations, focusing exclusively on the institutions that have a leading role in the inter-institutional dialogue, i.e. the EP, the European Council and the European Commission.

THE EUROPEAN PARLIAMENT

In regards to the European Parliament, the maximum number of MPs is set at 751, their national allotment being decided by means of a proportionally decreasing sequence. The institutional position of the European Parliament is strengthened, mainly by the provision that the co-decision procedure becomes the general norm, granting the Parliament the effective position of a co-legislator, with full authority in budgetary matters, on equal terms with the Council. The European Parliament is the great winner of the revisions brought about by the Lisbon Treaty, as it was the case in several other institutional reforms. In a way, it is a fully legitimate process that of attributing increasing powers to the EP, given its position of representing the citizens of Union. One can argue that there is a development of the Parliament's prominent role in the institutional functioning of the Union, given its position of representing the civic legitimacy. Hence, art. 14.1 of the TEU states that: "The European Parliament shall, jointly with the Council, exercise legislative and budgetary functions. It shall exercise functions of political control and consultation as laid down in the Treaties. It shall elect the President of the Commission".

This new legislative equal footing between the EP and the council reflects into decisional practice the Union's twofold legitimacy, as an organization of both citizens and states, in spite of its elimination from the text of the treaty. The most relevant aspect pertaining to the European Parliament is therefore its substantial increase of competences in the budgetary and legislative fields and as a constitutive power of the EU at the same time. The Lisbon Treaty continues and even caps the tendency of previous reforms of incorporating civic legitimacy into the legislative and budgetary powers, thus reflecting the leaning towards an increasing democratization of the European decisional system.

THE EUROPEAN COUNCIL

A novelty brought about by the Constitution and the Lisbon Treaty altogether is deeming the European Council an institution of the Union for the first time since its foundation and, as a consequence, subjecting it to the rules of the European system. Regulating the European Council is stipulated in article 15 of the TEU, alongside the other communitarian institutions:

[3] Carbone, Maurizio (ed.), National Politics and European Integration: From the Constitution to the Lisbon Treaty, Edward Elgar, 2010

"The European Council shall provide the Union with the necessary impetus for its development and shall define the general political directions and priorities thereof". It is added that it will not perform a legislative function, which still corresponds to the Council.

Another novelty is represented by the creation of the President of the European Council office, whose term of office is set at two and a half years, renewable once. The attributions of the President of the European Council, as per article 15.6 of the TEU are:

- To chair and drive forward the work of the European Council;
- To ensure the preparation and continuity of the work of the European Council in cooperation with the President of the Commission, and on the basis of the work of the General Affairs Council;
- To endeavor to facilitate cohesion and consensus within the European Council.

The Treaty also stipulates the mandatory presentation of a report to the Parliament at the end of every European Council's reunion, as well as its obligation to represent the EU in the CSDP area. By the imposition of this function the framers of the treaty try to ensure the continuity, the visibility and the coherence deemed necessary for the EU's representation, both internal and domestic. The president effectively becomes "the visible face" of the Union, whom the citizens can identify with both the leadership of the European Council and the EU in its entirety. The office of permanent President of the European Council changes the nature of the institution, starting with the permanent character of the office, which will impact on the inter-institutional balance and dialogue, since a new player enters the game.

Finally, this innovation can also lead to a change in the intergovernmental character of the institution because, for the first time, we have at the fore front a leading figure that does not represent a state. His functions – leading the institution and facilitating a consensus by drawing together the common interests of the Member States - can determine a shift in the institutional dynamic. This undermining of the state that holds the presidency of the Council is also determined by the specific state's losing of the European Council Presidency and External Relations Council positions, which decreases the clout of the prime-minister and the foreign minister respectively during the time of that Presidency.

THE COUNCIL

The main modifications pertaining to the functioning of the Council regard the improvement of its effectiveness in the context of an increased number of members. It is the case of replacing the current system of rotating Presidencies of the European Council and the Foreign Affairs Council on the one hand and the adoption of a qualified majority voting system on the other hand. The same objective of increasing the effectiveness of decision-making procedures determined the decision of extending the number of categories that no longer require a unanimous vote, but a qualified majority vote. Another change refers to the improvement of the democratic functioning of the Council, and we have in mind the obligation that all Council works are made public when it acts in the prosecution of its legislative capacities.

The debate about the retaining or replacing of the rotating Presidencies of the different configurations of the Council of Ministers went along the debate about the introduction of the permanent Presidency and it ended with the following conclusions:

- Maintaining the current system for most of the configurations of the Council;
- Organizing Presidencies along a "three state team" lines (collective teams of three consecutive Presidencies which coordinate the activities for a period of eighteen months inside which each state takes up the coordination responsibilities for six months);
- Establishing two permanent Presidencies: the Foreign Affairs Council, which will be led by the Union's High Representative for Foreign Affairs and Security Policy and the Euro group, the Economic and Financial Affairs configuration of the Council (ECOFIN) which gathers the members of the Euro zone, which will designate a permanent President (for a two years and a half term) from its own ranks.

The new formula for the qualified majority voting procedure was also subject to great debate. In order to better understand the stake at play, one needs to remember that a similar problem had determined the failure of the Brussels IGC in 2003, generating negative effects in regards to the political momentum of the reform process: the European Convention had advanced a twofold type of majority, taking into account both the number of states and the population, a proposal ratified by the IGC and found in the Lisbon Treaty. Article 16.4 of the TEU states that: "a qualified majority shall be defined as at least 55 % of the members of the Council, comprising at least fifteen of them and representing Member States comprising at least 65 % of the population of the Union.".

The Polish renegotiation, enacted with the occasion of the 2007 IGC led to the postponement of this provision's coming into force until 2014. In addition to that, it is stipulated that until the 31st of March 2017 any state can ask for the maintaining of the present European legislation voting system. The double majority voting system has the advantage of both efficiency and adaptability. Unlike the model of triple majority established at Nice, still functioning today, the new formula allows an easier decision-making procedure, reducing at the same time blocking possibilities. At the same time, the new formula also has the indisputable advantage of being a model much more transparent towards the European citizen, allowing him to better and easier know the manner in

which a decision was taken, which states approved it and what is their combined population. To this is added the advantage of adaptability, because by eliminating the weighting factor, there is no need for a further revision of rules every time the EU enlarges. Finally, the change adds a touch of democratization to the procedures, by recognizing indirectly in the weight of every government's vote the weight of that state's ratio in the total population of the EU.

THE COMMISSION

The Commission is on the losing side of the institutional reform, being the only institution that does not emerge strengthened out of this process. There are nevertheless two chapters that underscore a possible reform, both trying to enact the consolidation of the democratic dimension and the increase of its functional efficiency:

- Its election by the EP;
- Its composition.

The first provision will increase the influence of the EP in the election of the Commission, as the Lisbon Treaty states that: The European Council shall propose its candidate for President of the Commission in accordance to the results of the EP elections". This seems a step forward towards a more political and not only technical Commission, but not a very bold move if we consider that the right to advance proposals for the office remains a prerogative of the European Council[4]. This small step forward nevertheless allows the European political parties to move forward, in the direction of the personalization of European politics. In this way, the old proposal of Jacques Delors that the parties may nominate before the European elections a top-list leader could become reality. Evidently, the European council could not ignore such a nomination. This important element has the potential of becoming a window of opportunity for the real democratization of the Commission.

The problem of the Commission's composition was also the focus of other heated constitutional arguments:

- Efficiency dictates a Commission with fewer portfolios;
- Representativeness entails the maintaining of the "one country-one commissioner" principle.

In the end, the Constitution outlined the first line of argument, a solution maintained by the Lisbon Treaty. The number of commissioners will be 2/3 of the number of Member States, including the President and the Vice-president, who is also the High Representative for the Common Foreign and Security Policy (CFSP) and the Common Defense and Security Policy (CDSP). The reduction of the number of commissioners will come into force on the 1st of November 2014, thus ensuring that the first commission of the Lisbon Treaty maintains the "one country-one commissioner" representative principle. The new form of article 17.5 of the TEU states that through a European council Declaration a rotation system between Member States will be set, that takes into account the Union's demographic and geographic diversity. The reform strengthens the powers of the President in imposing functions on the members of the Commission. This is a fundamental change because it has the potential of leading to more homogenous and efficient Commissions unlike the current situation when, as a result of the imposing of selected commissioners by the supporting Member States we are often dealing with a very heterogeneous mix of personalities. Indirectly, the Commission's powers appear strengthened by the Lisbon Treaty, because the Commission stands to play a role in inter-institutional mediation and as a legislative initiator as a result of the extension of the qualified majority voting and co-decision procedures[5].

THE HIGH REPRESENTATIVE OF THE EU FOR FOREIGN AFFAIRS AND SECURITY POLICY

Finally, we consider it important to discuss the possible impact on the Commission's nature and functioning determined by the establishment of the High Representative of the Union for Foreign Affairs and Security Policy office. The person holding the office will be simultaneously named and mandated by the Foreign Affairs Council and the Commission. He will also hold the positions of Foreign Relations Commissioner and Vice-president of the Commission. Although the change holds important advantages in terms of coherence, efficiency and foreign action visibility, the character of Commissioner and Vice-president of the Commission, on the one hand, and the position of permanent President of the Foreign Affairs Council can modify its nature and functioning.

For the first time the institutions cease being insulated, being difficult however to estimate the impact of this change on the inter-institutional relations and balance. The same line of argument can be extended towards the European External Action Service, which will support the work of the High Representative and which, according to the treaty's provisions, will be staffed with personnel from the General Secretariat of the Council, the Commission and personnel detached from the foreign ministries of the Member States to this true "European ministry" of foreign affairs. The traditional collegiality of the Commission is affected too, because the High Representative is no longer on equal footing with the other members, but is conferred a special and enhanced legitimacy by his appointment by the Council. One must also take into account the fact that

[4] Fuerea Augustin - Manualul Uniunii Europene, Ed.4, Editura Universul Juridic, București, 2010
[5] Fuerea Augustin - Manualul Uniunii Europene, Ed.4, Editura Universul Juridic, București, 2010

the independence of the Commission, especially when it comes to Foreign Affairs, can be affected, given that one of its members must accept, if it is the case, instructions from the Member States. This risk is certain in the case of the CFSP, but reality also points to numerous instances in which it is difficult to extricate the CFSP from foreign policy. At the same time the hierarchy issue comes forth in regards to the overlapping representation competences of the President and Vice-president of the Commission.

The impact of these changes on the Commission, as well as the effects of several other changes can only be analyzed after a couple of years' time and, as in the previously analyzed case, the concrete effects will depend highly on the personalities of the High Representative and of the President of the Commission[6].

Conclusion

Given the increase in the role of the national parliaments in the decision making procedures of the EU, the modification of the national legislation is warranted, so that the Parliament becomes involved in the national system of European affairs coordination (at least concerning the major issues on the European agenda). The periodic presentation of reports to the national Parliament concerning the issues on the EU agenda could prove useful. Instituting the practice of presenting in front of the Parliament the mandate followed at the European Councils, or at least at the most important Council reunions, already upheld by several Member States would be an interesting development.

TREATY OF LISBON AND THE MAIN CHANGES AT THE COURT OF JUSTICE OF THE EUROPEAN UNION

Honorius CIRCA*

Abstract

This paper analyzes the Court of Justice of the European Union after the Lisbon treaty and the changes that will be performed in order to increase the role of the Court in EU. We will discuss the Lisbon reform and the legacy of the European Constitution and the changes to the organization of the judiciary in the Union and to the appointment of its members. An important part of the paper will be dedicated to the procedure for future amendments of the Statute of the Court of Justice of the European Union and the creation of Specialized Courts. The conclusion of the paper will treat the future of the judicial structure of the Union and the challenges of the greater complexity of the decision-making process and of the binding nature of the Charter of Fundamental Rights. A new phase of judicial activism has begun in the European Court of Justice, a phase focused on the protection of fundamental rights. The European Charter of Fundamental Rights, as well as the Lisbon Treaty has strengthened the position of the Court of Justice.

Keywords: *European Court of Justice, European Union, Lisbon treaty, Charter of Fundamental Rights*.

The Lisbon reform and the legacy of the European Constitution

Lisbon operation consisted in getting through the back door what had been unable to pass through the front door. The body of the failed European Constitution signed in Rome on 29 October 2004 was maintained practically intact, although it was stripped of any constitutional status.

It is worth recalling the above so as not to consign the work of the Convention on the future of Europe to a historical footnote. This Convention gave rise to the 'Draft' European Constitution, which finally became the 'Treaty establishing a Constitution for Europe 'with hardly any significant changes, and this was signed, as I have already stated, in Rome in October 2004. In particular, the endeavors of the Convention with regard to the Court of Justice of the European Union –which scarcely underwent any changes in its transition from Rome to Lisbon – continue to be very useful; specifically, the findings of the Discussion circle on the Court of Justice, whose Final Report was approved for submission before the Convention members on 25 March 2003.

Changes to the organization of the judiciary in the Union and to the appointment of its members. The name of the 'institution 'and of the judicial 'bodies 'of the Union.

With regard to the judicial system of the Union, the Lisbon Treaty follows, as with many other aspects of the reform, the path of the European Constitution, both with regard to its detail amendments and its flaws. With regard to the former, of note is the change in terminology, with an institution that is now called the 'Court of Justice of the European Union', composed of the following bodies: 'Court of Justice', 'General Court'(Court of First Instance in the TEC), and 'Specialized Courts'.

This puts an end to the confusion caused by using the same term, 'Court of Justice', for two different things, the judicial institution and the supreme body within this institution. Under the new regulation, this term will be reserved for the supreme body of the institution representing judicial authority within the Union. This institution, furthermore, shall be deemed to refer specifically to the 'European Union', thereby putting an end to the inconsistency of a Court of Justice which, up to Lisbon, was not of the Union, but rather of 'the European Communities', when the truth is that this Court, apart from exercising its powers within the Community framework (first pillar), also acted in the area of police and judicial co-operation in criminal matters (third pillar)[1].

A similar situation occurred with the name of the 'Court of First Instance', which was wrong to the ears of Spanish lawyers prior to the Nice reform, in so far as its decisions could be appealed to the Court of Justice on points of law only. And this reform made the situation even worse by giving the Court 'of First Instance 'powers to hear appeals lodged against the decisions of the Judicial Panels. And the same might be said, then, with regard to the opposite transformation of the 'Judicial Panels 'into 'Specialized Courts'. The former name would appear to suggest on first glance that they were chambers specialized as to their subject matter within one overall jurisdictional body, which as we have seen, was not and is not the case.

National judges as judges of the Union

It is notable that there is no explicit reference to national judges as an essential part of the European judicial structure, with Lisbon having limited itself to incorporating the consolidated doctrine of the Court of Justice in U.P.A. v. the Council (2002): 'Member States'–provides paragraph two of article 19.1 TEU post Lisbon –'shall provide remedies sufficient to ensure effective legal protection in the fields covered by Union law'. It is also notable that the whole range of powers-duties that the Court of Justice has placed in the hands of the national judges has not been duly reflected. This is made even worse if one takes into account the fact that national constitutional texts are becoming ever more ineffective at providing legal recognition for the absorption of this range of powers-duties, which on occasion are not just remote from the exercise of jurisdictional powers in purely internal terms, but are actually contrary to it appointment of the members of the Court of Justice and General Court (the panel ex Article 255 TFEU).

With regard to the appointment of the members of the Court of Justice of the European Union – specifically of the Court of Justice (including the Advocates General) and the General Court –we may highlight the introduction of a preliminary stage (article 255 TFEU) which provides for the creation of a panel (composed of seven personalities chosen from former members of the Court of Justice and the General Court, members of the higher national jurisdictional bodies, and lawyers of renowned experience) in order to assess the suitability of the candidates for the exercise of the functions of judge and Advocate General of the Court of Justice and the General Court, prior to the Governments of the Member States proceeding to make any appointments by common accord.

The rules for the formation and functioning of the panel have been set forth in an annex to Council Decision 2010/124 of 25 February 2010. From these rules, we may highlight the following:

1) the General Secretariat of the Council is in charge of performing secretariat services for the panel, providing any necessary administrative support, of which the most important is probably the translation of documents (and the Council is also responsible for bearing the cost of refunding the expenses of panel members);

2) panel members are appointed for a term of four years, which may be renewed just once;

3) the panel shall be quorate when five of its members are in attendance;

4) upon receipt of the information on the proposed candidate (which may be amplified by the nominating Government at the request of the panel), the panel shall hear the candidate 'behind closed doors'(except in the case of renewal, in which case this hearing stage is omitted);

5) Its deliberations shall also be 'behind closed doors', culminating in a reasoned opinion as to the suitability or unsuitability of the candidate. Although these rules say nothing about the scope of the opinion, it does not bind Member States in the event that it should be negative with regard to a particular candidate. Whether it is, or ought to be, a de facto dissuasive element in their decision is another matter.

The procedure for future amendments of the Statute of the Court of Justice of the European Union and the creation of Specialized Courts.

With the Lisbon reform, the procedure to be followed for future amendments of the Statute of the Court of Justice of the European Union (which appears as Protocol no. 3 annexed to the Treaties) shall be the ordinary legislative procedure, governed by article 294 TFEU, with the innovation, provided for by article 19.2 TEU and confirmed by article 281 TFEU, that the proposal may originate not just from the Commission (after first consulting with the Court of Justice), but also from the Court of Justice (after first consulting with the Commission)[2].That is how is stands, unless the amendment refers to Title I of the Statute (concerning the 'Statute of Judges and Advocates-General') and, in what constitutes a departure from the previous régime, to article 64 (concerning the modus operandi for the purposes of governing the linguistic régime of the Court of Justice of the Union), both subject to the ordinary procedure for the reform of the Protocols, which is that of the Treaties themselves.

The third variation introduced by Lisbon refers to the creation of the 'Specialized Courts', which must also follow the ordinary legislative procedure (article 257 TFEU), like the amendment of the majority of the Statute, with the same innovation referred to above to the effect that the proposal may originate not just from the Commission (after first consulting with the Court of Justice), but also from the Court of Justice (after first consulting with the Commission).

Alterations to competences. Full submission of the Area of Freedom, Security and Justice to judicial control.

We may highlight the effort made by Lisbon towards a horizontal approach to the question of judicial protection in the European Union, reducing the variable jurisdictional geometry created by the Treaty of Amsterdam, which we should recall set up a double communitisation process with regard to the third pillar (which up to then had been dedicated to 'co-operation in the areas of justice and home affairs').

On the one hand, communitisation consisting in the transfer of part of the third pillar – that concerning visas, asylum, immigration and other policies related

[2] K. Lenaerts, 'The European Court of Justice and Process-oriented Review' College of Europe, Research Paper in Law 01/2012

to the free movement of persons and judicial co-operation in civil matters – to the TEC; communitisation which, however, was not complete, as this transfer was subject to a sui generis régime with regard to the general Community régime, which in relation to judicial control (article 68 TEC), consisted of providing for a special régime on preliminary rulings, whilst at the same time expressly excluding the jurisdiction of the Court, within the context of the progressive elimination of the controls on persons crossing internal borders, to rule on 'any measure or decision relating to the maintenance of law and order and the safeguarding of internal security'. On the other hand, 'signs 'of communitisation, but to a significantly lesser degree than the previous operation, consisting in the introduction of some features close to the Community régime in that part of the third pillar that remained as 'police and judicial co-operation in criminal matters'. With regard, specifically, to the judicial structure of the Union, a qualified opening to review by the Court of Justice took place, with a recognition of its powers to give preliminary rulings on the validity (excluding conventions between Member States) and the interpretation of the system of the third pillar, although these powers were subject to being accepted by each State (in which it was furthermore necessary to specify which jurisdictional bodies of the State in question were entitled to go to the Court of Justice, i.e. whether it was all of them or only those against whose decisions there was not judicial remedy under national law). It was also admitted that the Court had jurisdiction to consider the lawfulness of the decisions and the framework decisions by way of proceedings for annulment, although this was limited to being initiated by the States or the Commission, as well as to rule on any dispute between Member States, or between a Member State and the Commission.

However, its jurisdiction 'to review the validity or proportionality of operations carried out by the police or other law enforcement services of a Member State or the exercise of the responsibilities incumbent upon Member States with regard to the maintenance of law and order and the safeguarding of internal security'(article 35.5 TEU) was expressly excluded. Lisbon will see a reunification in systematic terms of the policies concerning border controls, asylum, and immigration, and in co-operation in civil, criminal, and police matters, as they are all envisaged within the 'Area of Freedom, Security and Justice' (Title V TFEU), which has become one more policy to be added to the traditional ones of the Community, and in this respect, fully subject to the general judicial régime of the Union, with the sole peculiarity of article 276 TFEU, which took over from article35.5 TEU (in its pre-Lisbon version) transcribed above[3]. To this peculiarity might be added the provisions of article 10 of Protocol no. 36 on transitional provisions, which excludes (for a maximum period of five years as from the date of the entry into force of Lisbon, i.e. 1 December 2009) the use by the Commission of the infringement procedure, and maintains the powers of the Court of Justice unaltered (especially those linked to preliminary rulings) in relation to the acts of the Union in the field of police and judicial co-operation in criminal matters which have been adopted, and not amended since then, prior to the entry into force of the Lisbon Treaty.

The special régime of the Common Foreign and Security Policy.

Within the framework of the CFSP, the starting point in terms of its judicial régime can be found in paragraph one of article 275 TFEU, which is a product of Lisbon. This precept, which implements the provisions of article 24.1 TFEU, provides that 'the Court of Justice of the European Union shall not have jurisdiction with respect to the provisions relating to the common foreign and security policy nor with respect to acts adopted on the basis of those provisions'. Notwithstanding the foregoing, the following paragraph states that the Court shall have jurisdiction as follows:

1. To control that the measures and procedures of the CFSP do not encroach on the non-CFSP competences of the Union (along the lines laid down by the Court of Justice prior to the Lisbon reform, which had already allowed in 1998, in Commission v. Council, its jurisdiction over measures and procedures of the third pillar –which at the time, prior to Amsterdam, was excluded from the jurisdiction of the Court – that infringed powers pertaining to the European Community). This should be realized through the classical channels of control of the lawfulness/constitutionality over the European Institutions; indeed, not just direct control through actions for annulment (article 263 TFEU), but also indirect control, through preliminary rulings on validity (article 267 TFEU) and pleas of illegality (article 277 TFEU).

2. To decide on actions for annulment lodged by individuals, for any of the reasons listed at article 263 and under the conditions envisaged in paragraph four of the same precept (which I shall set forth below) against CFSP decisions in which restrictive measures are imposed against them. To these competences it would be necessary to add that held by the Court to control measures which are likewise restrictive imposed within the framework of the general régime of the Union in the enforcement of decisions adopted in turn within the framework of the CFSP. It would also be necessary to add, finally and as a consequence of Lisbon, the jurisdiction of the Court of Justice to exercise prior control over any international agreement (including, therefore, those envisaged within the scope

[3] K. Lenaerts, 'The European Court of Justice and Process-oriented Review' College of Europe, Research Paper in Law 01/2012.

of CFSP), to test its compatibility with the Treaties within the framework of article 218.11 TFEU.

The changes to procedure. Proceedings for annulment.

The new regulations governing proceedings for annulment include, first of all, the extension of those activities of the Union that are open to being challenged, covering the actions of the European Council and of those bodies or organisms of the Union that are 'intended to produce legal effects vis-à-vis third parties'(paragraph one of article 263 TFEU; paragraph five, meanwhile, qualifies this by providing that 'acts setting up bodies, offices and agencies of the Union may lay down specific conditions and arrangements concerning actions brought by natural or legal persons against acts of these bodies, offices or agencies intended to produce legal effects in relation to them).

With regard to the capacity to bring actions, the reform concerning the role of national Parliaments and of the Committee of the Regions for the purposes of challenging the actions of the Union on the grounds of infringement of the principle of subsidiarity may be highlighted, taking the form of an annexed Protocol (Protocol no. 2 on the application of the principles of subsidiarity and proportionality). With regard to this Committee its new powers to bring proceedings for annulment with the aim of safeguarding its prerogatives (paragraph three of article 263 TFEU) is now extended with the aim of safeguarding the principle of subsidiarity in relation, we should note, to 'legislative acts for which the Treaty on the Functioning of the European Union requires consultation in order to be approved'. Within the framework of the Convention on the future of Europe, the Final Report by Working Group I 'Subsidiarity' proposed 'an innovation, by also allowing the Committee of the Regions, the competent consultative body representing all the regional and local authorities in the Union at European level, the right to refer a matter to the Court of Justice for violation of the principle of subsidiarity. This referral would relate to proposals which had been submitted to the Committee of the Regions for an opinion and about which, in that opinion, it had expressed objections as regards compliance with subsidiarity'. The absence of any reference to this last point, both in the European Constitution and subsequently in the Lisbon Treaty, would seem to lead to the discarding of the condition consisting in requiring the Committee to have issued prior and express objections to subsidiarity on the occasion of the opinion compulsorily requested. With regard to national Parliaments, the possibility that they might challenge 'legislative acts' ('non-legislative acts 'are thus also excluded) refers to national legal orders, in the sense that the right continues to vest with the Governments of the Member States, which shall 'transfer 'the corresponding proceedings, where appropriate and inconformity with their respective legal systems, 'on behalf of the national Parliament or one of its chambers'. In similar manner to the situation affecting the initiative powers of the Committee of the Regions, the proposal of the Final Report of Working Group I to the effect that the initiative powers of national Parliaments were to be conditional on the fact of having delivered a reasoned opinion under the early warning system, was not expressly embraced either by the European Constitution (first), or (subsequently) by the Lisbon Treaty, and so it would appear that no such condition exists. With regard, finally, to the locus stand of individuals (paragraph four of article 263 TFEU), we may highlight its extension for the purpose of challenging 'a regulatory act which is of direct concern to them and does not entail implementing measures', making use of the invitation formulated by the Court of Justice in the aforementioned case U.P.A. v. Council (2002).

In effect, focused on a literal reading of the former article 230 TEC (which referred to the 'direct and individual 'concern of the private applicant) that was odd, not just, in a general sense, in view of the flexibility of interpretation to which we were accustomed, but also, in particular, in view of the flexibility that Plaumann v. Council (1963) seemed to enshrine on the side of openness, in the specific context of proceedings for annulment ('the provisions of the treaty regarding the right of interested parties to bring an action must not be interpreted restrictively), the Court of Justice excluded, as a rule (i.e. except in one-off cases involving very specific circumstances, such as in Codorniu v. Council, 199443), individuals 'rights to directly appeal general provisions.

This restriction, criticized not just by learned opinion but also, in their personal capacity, by Judges and Advocates General of Luxembourg, led to the Court of Justice, in its Report on certain aspects of the application of the Treaty on European Union (1995), to ask itself whether proceedings for annulment, 'which individuals enjoy only in regard to acts of direct and individual concern to them, is sufficient to guarantee for them effective judicial protection against possible infringements of their fundamental rights arising from the legislative activity of the institutions'. Despite this, the Court upheld its case-law on this matter in U.P.A. v. Council.

Prior to the Lisbon Treaty, and in view of the uncertainty surrounding the term 'legislative activity', the problem was not so much the restrictions arising from the case law of the Court of Justice with regard to judicial review (familiar to those affecting the national legal systems themselves and which allow in any event indirect channels for judicial review, in the European system by way of a plea of illegality and a preliminary ruling on validity), but rather in its extension to activities which it would appear could not be strictly considered as being 'legislative', but rather 'executive', in the sense of either complementary thereto, or of the exclusive intervention (implemented

following legislative activity, or through the Treaty itself) of a Commission that did not have the same status as the European Parliament and the Council. In other words, the national legal systems did not so much ban the direct judicial review of norms in absolute terms, but rather placed intense restrictions on *locus standi* for such judicial review in the case of Parliamentary Acts46, in terms which recall the restriction traditionally operated by the Court of Justice –and this is where the problem lies –in general terms, i.e. an abstraction made from the legislative or executive nature of the provision in question.

Following the Lisbon reform, paragraph four of article 263 TFEU provides as follows: 'Any natural or legal person may, under the conditions laid down in the first and second paragraphs, institute proceedings against an act addressed to that person or which is of direct and individual concern to them, and against a regulatory act which is of direct concern to them and does not entail implementing measures'(such as, for example, a European measure banning the use of certain fishing nets, or the use of certain substances in the manufacture of certain products). The main problem raised by this new version of article 263 consists in determining the exact scope of the words 'regulatory acts 'contained at the end of the paragraph that has just been transcribed. Against those who argue that these words ought to be interpreted so as to cover directly applicable general provisions, irrespective of their nature (i.e. legislative, autonomous non-legislative, delegated, or implementing measures), I for my part consider that this is no more than a simple error, and that the real intention of the 'drafters 'of Lisbon was not to confer powers on individuals to start proceedings for judicial review of 'legislative acts', but rather to limit this to 'non-legislative acts 'approved under the form of 'delegated acts 'or 'implementing acts'(or even resulting from 'autonomous 'on-legislative activity'), irrespective of the typology chosen (therefore including 'decisions 'that are generally applicable); and within these acts, limited to those that concern them directly and do not entail implementing measures. In effect, it should not be forgotten that with the drafting of the European Constitution, the terms of this opening to the private applicants of the action for annulment were the subject of intense debate within the Discussion circle on the Court of Justice. These terms in the end were limited to 'regulatory acts 'in contrast to the 'legislative acts', with regard to which the traditional restrictive approach was maintained in the sense of 'direct and individual concern'. And Lisbon saw the disappearance of the distinction created by the European Constitution (Part I) between 'laws 'and 'regulations'(at articles I-36 and I-37); the error had consisted in maintaining the expression 'regulatory acts 'in the Lisbon Treaty, included in the provisions dedicated by the European Constitution (Part III) to the Court of Justice (at article III-365)53.

Finally, linking paragraph four of article 263 TFEU with article 275 TFEU mentioned above (which refers to the former for the purpose of conferring individuals with the power to challenge restrictive measures imposed within the framework of the CFSP), one would have to conclude by noting the coincidence, for the purpose of bringing actions for annulment by individuals, between challenging any exclusively-CFSP restrictive measure (which by definition cannot be deemed to be 'legislative acts', as article 24 TEU expressly denies this nature to all acts approved within this framework), and any restrictive measure imposed on the basis of article 215 TFEU (which likewise by definition cannot be deemed to be 'legislative acts 'under any circumstances, as they are adopted by the Council, and the simple 'information 'thereof served subsequently on the European Parliament is not classified as a 'special legislative procedure').

Infringement procedure and procedure for the enforcement of judgements.

With regard to the infringement procedure, the wording of articles 226 and 227 TEC is maintained, with amendments being introduced into the procedure for the enforcement of judgements ex article 228 (260 TFEU post Lisbon). This procedure is first of all simplified: the Commission, having offered the offending Member State the possibility of filing allegations on the charges it has drawn up, may apply to the Court of Justice for the imposition of a lump sum and/or penalty payment without any need to first issue, as under the TEC, a reasoned decision offering a fresh and last chance to the Member State to properly enforce the judgement that declared it to be in breach (the non-enforcement of which judgement is part of the origin of the application for the imposition of the monetary penalty). To this is added, as a second innovation, the possibility that the infringement procedure brought by the Commission (not, therefore, by the Member States), may be accompanied simultaneously (in the same proceedings), 'where appropriate', by an application for the imposition of a lump sum and/or penalty payment in situations where the infringement refers specifically to the breach of 'the duty to report on the transposition measures for a directive adopted in accordance with a legislative procedure'. On the other hand, Lisbon states, with regard to the moment as from which the lump sum/penalty payment would be applicable if imposed within the framework of a simultaneous declaration of infringement, that if the Court of Justice were to accept the application filed by the Commission, 'the payment duty would take effect on the date prescribed by the Court in the judgement'; a confusing wording which, if we follow the clarifications supplied by the debate on the European Constitution, ought to be interpreted to mean that 'the sanction would apply after a certain period had elapsed from the date the judgement was delivered'.

Preliminary Rulings

In order to complete the innovations in the traditional jurisdictional system of the Union, we may also highlight the refinement introduced by Lisbon, within the framework of preliminary rulings, in article 267 in fine TFEU. This refinement reads as follows: 'If such a question [on interpretation or validity of European Union Law] is raised in a case pending before a court or tribunal of a Member State with regard to a person in custody, the Court of Justice of the European Union shall act with the minimum of delay.' It should be noted in this regard that, in anticipation of the Lisbon reform, the Council amended the Statute of the Court of Justice towards the end of 200762, by adding article 23 a, pursuant to which the Rules of Procedure 'may provide for an expedited or accelerated procedure and, for references for a preliminary ruling relating to the Area of Freedom, Security and Justice, an urgent procedure. 'This latter possibility would be realized by the Court shortly afterwards64, by including in these Rules the urgent preliminary ruling procedure (PPU) regulated in detail at article 104 b, the main characteristics of which are:

1. a distinction is made, for the purposes of greater speed, between parties who may participate in the written stage of the procedure (which may be omitted altogether in cases of 'extreme urgency'), and those who may do so at the hearing stage, which is limited to the parties to the main proceedings, the Member State to which the originating jurisdictional body belongs, the European Commission, and where appropriate, the Council and the European Parliament where one of its acts is involved (other interested parties, and in particular the Member States other than that to which the originating jurisdictional body belongs, do not have this power, but are invited to the hearing);

2. there is considerable speeding-up of the internal processing of cases, given that as from their arrival at the Court of Justice, all those relating to the Area of Freedom, Security, and Justice are attributed to a Chamber of five Judges specifically appointed for this purpose for a one-year period, which has the task of approving the application for the urgent procedure, and must reach its decision, after hearing the Advocate General, in a short space of time;

3. in order to ensure the desired speed, proceedings take place, basically, in practice, by electronic means.

The future of the judicial structure of the Union.

The challenge of the greater complexity of the decision-making process and of the binding nature of the Charter of Fundamental Rights ('typically 'constitutional issues). By way of a final reflection, it could be argued that the balance of the innovations introduced by the Lisbon reform into the judicial process does not seem to be aimed at overcoming the moderation frontier. This moderation is otherwise emphasized if we confine ourselves to the discourse which underlies the European Constitution in constitutional terms, and which was not reflected in the judicial structure, which is traditionally uncomfortable about differences or even qualifications within itself when it comes to tackling the control of a legality that is always understood in accordance with the widest sense of the term (i.e. without distinguishing control of legality in the strict sense of control of constitutionality), with a Court of Justice that has for years been simultaneously exercising controls pertaining to both a contentious and a constitutional court. This would not have any further consequences were it not for the fact that the increase of the European jurisdiction, in quantitative terms (with the avalanche of new Member States still to be finalized) and qualitative terms (with the elimination by Lisbon, on the one hand, of the procedural and substantive restrictions that arose under the special régimes ex articles 35 TEU and 68 TEC, and the moderate opening, on the other hand, of the CFSP to judicial control) will entail a risk that it will be more difficult for the Court of Justice to dedicate, in suitable manner, to the resolution of typically constitutional disputes, such as those concerning the distribution of public powers (both horizontally and vertically), or with due respect for fundamental rights; and incidentally, the complexity of such disputes will be amplified with the Lisbon reform. In effect, with regard to the distribution of powers amongst the various Institutions of the Union, and between the Union and the Member States, Lisbon contains, behind an apparent simplification (arising both from the non-legislative norms / legislative norms pairing, which in turn result from the ordinary legislative procedure / special legislative procedure pairing, and from the detailed cataloguing of the competences of the Union), numerous questions of major constitutional significance which the Court of Justice will be required to tackle judgement by judgement. This is not the place to dwell on such questions in detail. But we can, at least, mention some of them:

The ordinary legislative procedure / special legislative procedure pairing, each one in the singular, is not accurate, for the simple reason that there are numerous special legislative procedures (some of a semi-constitutional nature, as they are subject to being subsequently approved by the Member States). Having accepted this, one must descend into the detail of the articles of all primary Law of the Union, including the Protocols, in order to uncover possible refinements to the consequences which lead the proceedings towards one procedure or the other (for example, in the different treatment of the early-warning system linked to the principle of subsidiarity), or questions raised by the choice of one procedure or the other; or clarifying the precise scope of the exercise of the delegation

envisaged in article 290 TFEU, which, by being linked to legislative acts adopted by way of a special procedure, can notably strengthen, through its control, the practically irrelevant role by hypothesis performed by the European Parliament in the drafting of the delegating act.

In the context of the principle of subsidiarity referred to above, not only would it be necessary to go deeper into questions linked to the exercise of control over it in formal terms, but also in substantive terms, especially in view of the reinforced presence, with Lisbon, of the national Parliaments in the drafting stage of Union Law (which would in turn require an assessment of its effect on the constitutional system itself, both for the Union and for the Member States).

The non-legislative activity of the Union also raises important questions, not just with regard to the boundary (which has yet to be defined) between delegated acts and implementing acts (i.e. whether recourse to one or to the other depends on the discretion of the European legislator, or whether, on the contrary, each one has its own constitutionally-defined territory), but also to the legal nature of the 'autonomous 'on-legislative activity' (which, for example and as I stated above, may give rise to doubts as to whether or not it may be challenged directly before the Court of Justice by individuals).

The traditional problems that have surrounded the choice of the legal basis may intensify after Lisbon, in the context, for example, of the definition of the boundaries between the CFSP and all the other powers attributed to the Union. Thus, for example, in 2008 the Court of Justice annulled an exclusively CFSP decision in Commission v. Council87, which had been approved in execution of a common action, also CFSP, on the contribution of the European Union to combat the destabilizing accumulation and proliferation of small arms and light weapons, arguing that 'taking account of its aim and its content, the contested decision contains two components, neither of which can be considered to be incidental to the other, one falling within Community development co-operation policy and the other within the CFSP'; and as such, according to the Court, 'since Article 47 EU precludes the Union from adopting, on the basis of the EU Treaty, a measure which could properly be adopted on the basis of the TEC, the Union cannot have recourse to a legal basis falling within the CFSP in order to adopt provisions which also fall within a competence conferred by the TEC on the Community'(we should recall that this precept provided that no provision of the Union Treaty would affect the Treaties constituting the European Community or the Treaties and subsequent acts that have amended or completed them). In all likelihood, the same case would pose greater complexity in the post Lisbon age, taking into account the fact that article 40 TEU (which, we should recall replaces and reforms the former article 47) creates a balance between the general régime of the Union and the special régime constituted by the CFSP, precluding the effect of 'the application of the procedures and the extent of the powers of the institutions 'in both directions.

With regard to the effect that the incorporation of the Charter of Fundamental Rights of the European Union into the Treaties may have on the work of the Court of Justice, it is sufficient to note that:

1. It shall be called upon to provide certainty in the land of legal uncertainty caused by the special characteristics of the United Kingdom and Poland;

2. It will have to tackle a foreseeable proliferation in the invocation and application of the Charter in an area that is as sensitive and susceptible to this as the Area of Freedom, Security and Justice, which following Lisbon is now subject to its complete judicial) It will have to pay close attention to the evolution of the constitutional traditions of the Member States (which have grown in number and sensitivities), not just as a hermeneutic tool when it comes to interpreting the Charter, but also as a source of inspiration for completing it, where appropriate, by way of the general principles of Union Law.

Conclusion

The Lisbon Treaty made significant challenges for the newly named Court of Justice of the European Union (ECJ). These changes include: the removal of the three pillar structure of the Treaty on the European Union, changes to the composition of the ECJ, the establishment of an advisory panel to review proposed nominations to the Union Courts, exclusions of competence of the Court by the Treaty on the Functioning of the European Union, the enlargement of the reference procedure from national courts, the Charter of Fundamental Rights, accession of the EU to the European Convention on the Protection of Human Rights and Fundamental Freedoms, changes to *locus standi* and increases in the Courts' case load.

The Lisbon Treaty provisions strengthen ECJ role in the construction of Union and also clarifies the role of the national parliaments. It may also constitute a substantial breakthrough for regional parliaments with legislative powers if they become truly conscious of the importance of adequate scrutiny of legislative proposals.

These novelties are the result of the political will to stimulate participation of national parliaments in EU matters and to bring Europe closer to its citizens. Moreover, regional and local authorities across Europe will witness important progress as a result of the Lisbon Treaty, towards the recognition of multi-governance in the European Union. A more inclusive Europe seems too favored: better involvement of regional and local expertise in the quest for a more cohesive Europe together with a reinforced principle of subsidiarity and an increasing role granted to the national parliaments. Many concrete novelties ensure that EU governance will evolve into more advanced multi-level forms; the most general ones are of utmost

interest to local and regional authorities as they could change the way of working and cooperating with the other levels of government participating in the European decision-making process.

STATE VERSUS STATE: WHO APPLIES BETTER EU LAW?

Ioana Mihaela DIMITRIU[*]

Abstract

Each Member State is responsible for the implementation of EU Law within its own legal system. Non-compliance means failure by a Member State to fulfil its obligations under EU Law. An action for failure to fulfil obligations directed against a Member State which has failed to comply with its obligations under European Union law may be brought by the Commission or by another Member State. In the history of European integration only six times one Member State has directly brought infringement proceedings against another State. Of the six cases, only four proceeded to judgment. The European Institutions and the Member States should continue to develop their work to ensure that EU law is correctly applied and implemented.

Keywords: *infringement procedure, member states, european commision, article 259 TFEU.*

1. Introduction

To ensure the application of EU law by Member States there were created mechanisms to enforce obligations of States under the Treaties. As stated in the Treaty on European Union, one of these mechanisms is the so-called infringement procedure.

Although the procedure is implemented mainly through art. 258 TFEU with the European Commission having an essential role, also the Member States may bring an action before the Court of Justice for a declaration that another Member State has failed to fulfil its obligations under EU law.

However, in the history of the European Union there were only 6 cases when a Member State has brought an action before the Court of Justice against another Member State. The aim, in both types of proceedings, is the correct application of EU law in order to ensure the functioning and sustainability of the European Union.

As we shall see in the following analysis, the procedure has some specific features, but also some important limitations. Both the Commission and ultimately the Court of Justice will decide wherever one state has failed to fulfil its obligations - *the defendant State* either one state had misinterpreted EU law - *the applicant State*.

2. The principle of sincere cooperation

European Union and the Member States have *mutual obligations*. 'In the EU the Council was established as an institution representing the interests of Member States in this international organization. Mutually, in the Member States, a duty of loyalty and good faith to fulfil the obligations arising from treaties was also established'.[1]

'The principle of sincere cooperation', as it is regulated in the article 4 (3) TEU, was considered by some authors *the international law principle of good faith in the execution of treaties*, established in article 26 of the Vienna Convention.[2]

Correlative to international law, in the European Union law Member States culpable behaviour may constitute in the following: *an action* (when European rules instituted obligation not to do) or *inaction or omission* (when European rules have instituted obligation to do).[3]

As it is appreciated in the literature 'the principle (*of sincere cooperation*) cannot be invoked autonomously, but only if the provisions of primary or secondary EU law had already established clearly defined obligations for Member States'.[4]

In an attempt to define what 'obligations' means, let it suffice to say that the breach must be in respect of a 'pre-existence, specific and precise' obligation and that, in essence it will refer to a breach of a Treaty provision, or a breach of binding secondary legislation or of a general principle of Union law.[5]

In these circumstances *the obligation of sincere cooperation* becomes a general obligation, incidental to others. The term *duty of loyalty* does not appear in the text of the treaty, but it is a creation of literature. Court of Justice is speaking of 'duty of solidarity', 'principle of loyal cooperation', 'duty of loyal cooperation and support'.[6]

This principle has a correspondent between the principles of international law, namely the 'duty of

states to cooperate' or 'principle of international cooperation'. In this respect, UNO Charter provided in article 1 paragraph 3, for a purpose 'achievement of international cooperation in solving international problems of an economic, social, cultural or humanitarian character, and in promoting and encouraging respect for human rights and fundamental freedoms for all without distinction as to race, sex, language or religion'.

By contrast with the general rule under international law, EU law provides for an effective enforcement regime against Member State in breach of its Treaty obligations. The principal enforcement actions brought before the European Court are actions brought by either the Commission on behalf of EU, or by another Member State against a Member State that has failed to fulfil its Treaty obligations.

The question arises here about the moment when the Member States better respect the obligation of sincere cooperation: when they bring an action to the Court of Justice against another Member State in order to respect the EU Law or when they settle the dispute amicably? Regarding this question, we can argue that the principle of sincere cooperation under EU law may apply on three levels:

- 'sincere cooperation with European Union' (as an organization) in order to respect the EU law;
- 'sincere cooperation with the State that failed to fulfil its obligations'.
- 'sincere cooperation with the other Member States beside the State in breach'.

3. The evolution of the proceedings under articles 258 and 259 TFEU

Since the onset of the first European community (European Coal and Steel Community) the Member States wanted to create a supranational institution – the High Authority – to watch and to highlight the interests of the Community. To carry out its tasks, the authors of the original Treaties have established that the institutions created under the Treaties have own authority, thus guaranteeing their independence from Member States.[7]

Article 88 of the ECSC Treaty gave exclusive jurisdiction to the High Authority to initiate the action. High Authority was empowered to declare a failure by a State's obligations incumbent without prior recourse to the Court. Subsequently the state could bring the matter to the attention of the Court, that according to the wording of the treaty, 'shall have unlimited jurisdiction in such cases'.[8]

Later, The Rome Treaties introduced the possibility for the Member States, that in addition to the Commission, to initiate an action for failure to fulfil the obligations.[9] Adjustments to the Treaties till the present time did not affect the procedure itself as regulated for the first time in the ECSC Treaty. Small differences, as can be seen in the table below, are purely terminological and do not affect the procedure itself, especially as these occur only after the Lisbon Treaty.[10]

[7] See in this respect articles 8-19 of ESCS Treaty (Paris, 1951), articles 124-135 of EAEC Treaty and articles 155-163 of ECC Treaty (Rome, 1957).

[8] See also Nicoleta Diaconu, *Dreptul Uniunii Europene. Partea Generală*, Ed. Lumina Lex, Bucureşti, 2007, p. 300.

[9] Referral right was recognized also to the individuals that can lodge complaints to the Court. The Maastricht Treaty has introduced the possibility of initiating an action also for the European Central Bank against national central banks.

[10] **Article 170 of the EEC Treaty**: A Member State which considers that another Member State has failed to fulfil an obligation under this Treaty may bring the matter before the Court of Justice.

Before a Member State brings an action against another Member State for an alleged infringement of an obligation under this Treaty, it shall bring the matter before the Commission.

The Commission shall deliver a reasoned opinion after each of the States concerned has been given the opportunity to submit its own case and its observations on the other party's case both orally and in writing.

If the Commission has not delivered an opinion within three months of the date on which the matter was brought before it, the absence of such opinion shall not prevent the matter from being brought before the Court.

Article 227 of the EC Treaty (former article 170 EEC): A Member State which considers that another Member State has failed to fulfil an obligation under this Treaty may bring the matter before the Court of Justice.

Before a Member State brings an action against another Member State for an alleged infringement of an obligation under this Treaty, it shall bring the matter before the Commission.

The Commission shall deliver a reasoned opinion after each of the States concerned has been given the opportunity to submit its own case and its observations on the other party's case both orally and in writing.

If the Commission has not delivered an opinion within three months of the date on which the matter was brought before it, the absence of such opinion shall not prevent the matter from being brought before the Court.

Article 259 TFEU (former article 227 EC): A Member State which considers that another Member State has failed to fulfil an obligation under the Treaties may bring the matter before the Court of Justice of the European Union.

Before a Member State brings an action against another Member State for an alleged infringement of an obligation under the Treaties, it shall bring the matter before the Commission.

The Commission shall deliver a reasoned opinion after each of the States concerned has been given the opportunity to submit its own case and its observations on the other party's case both orally and in writing.

If the Commission has not delivered an opinion within three months of the date on which the matter was brought before it, the absence of such opinion shall not prevent the matter from being brought before the Court.

4. State versus state: article 259 TFEU

A Member State may bring an action against another Member State if considers that the latter has not fulfilled obligations assumed under this Treaty.

The procedure provided by article 259 TFEU is complementary to that of article 258 TFEU, proving certain particularities but also similarities. If the procedure based on article 258 TFEU provides exclusive competence to initiate action to the European Commission, the provision of article 259 reserve this competence only to Member States (any of the 28 EU Member States).

Member States cannot directly address the Court, but must first notify the Commission. The Commission then delivers a reasoned opinion after having heard the arguments of the Member States concerned, thus ensuring *the adversarial principle*.[11]

Delivering the reasoned opinion is not mandatory but requires the applicant Member State to wait three months before applying to the Court of Justice.[12] This period of three months has the nature of a *dilatory term*, within the Treaty stops the State to address to the Court.[13]

In terms of initiating the action, some authors[14] consider the infringement procedure from two perspectives: *bilateral* and *multilateral*.

- Article 258 TFEU: bilateral perspective
  Commission is exclusively competent to initiate
- Article 259 TFEU: bilateral perspective
  The initiative is solely up to the Member State
- Article 259 TFEU: multilateral perspective
  Member States must first bring the matter before the Commission

Sometimes, the Commission decides to take over the action and bring it before the Court of Justice of the European Communities.[15]

There are cases when the Commission encouraged the two States to resolve the dispute amicably and declined to issue a reasoned opinion 'given the sensibility of the underlying bilateral issue', but the Court ultimately upheld the conduct of the UK and found against Spain.[16]

In these circumstances it can be assumed that the multilateral perspective implies either closing the procedure laid down in article 259 TFEU by the Commission taking over the action,[17] either to hinder or even inhibit the initiation of the Member States.

The conditions required for an action to be admissible are:

1. must be based on an alleged breach of obligations deriving from the treaties;

2. conduct (action or inaction) be attributed to a Member State;

3. be brought to the Court over 3 months from the notification of the Commission.

As the Member States have *locus standi* in the procedure laid down in article 259 TFEU, they should not demonstrate an interest in initiating an action. However, Member States that have initiated an action so far have shown particular interest in each case.

Contentious procedure is similar for both situations, the proceedings before ECJ scrolling down in 2 phases: written (written pleadings) and oral (oral pleadings).

1. Written stage

a. *Application initiating proceedings* – procedural document initiating proceedings;

b. *Defence* – reply of defendant state to the application;

c. *Reply* – reply of applicant state to the defence;

d. *Rejoinder* – reply of defendant state to the reply;

e. *Application for leave to intervene* – if the case.

2. Oral stage

ECJ may decide to hold an oral stage to hear the parties about the pleadings lodged in the written stage. The main purpose of the hearing is to allow the parties and other interested persons to reply to the arguments put forward by other participants in their written pleadings. The oral phase can be held also by request of any interested party.

5. Limitations of the procedure provided by art. 259 TFEU

As regulated in the international law, Member States are entitled to invoke the responsibility of

[11] Given the sensitivity of the subject, the Commission may refrain from delivering a reasoned opinion within the meaning of article 259 TFEU, and may invite the parties to find an amicable solution (see, in this regard, case Gibraltar, C-145/04, *Spain v. United Kingdom*). Sometimes Commission decides to take over the action, as it did in case C-232/78, *Commission v. France* (action brought by Ireland against France) and C-1/00, *Commission v. France* (action brought by the United Kingdon against France).

[12] See case C-388/95, *Belgium v. Spain*, where Commission didn't delivered a reasoned opinion in time.

[13] Notes for the guidance of Counsel in written and oral proceedings before the Court of Justice of the European Communities (http://curia.europa.eu/jcms/upload/docs/application/pdf/2008-09/txt9_2008-09-25_17-37-52_275.pdf).

[14] Hans Smit, Peter Hherzog, Christian Campbell, Gudrun Zagel, Smit & Herzog on The Law of the European Union, Lexis Nexis, 2011, 259-2.

[15] See for example Case C-1/00, *Commission v. France*, judgement of 1 December 2001.

[16] Case C-145/04, *Spain v United Kingdom*, paragraph 32: 'The Commission considers, following an in-depth analysis of the Spanish complaint and an oral hearing held on 1 October, that the UK has organised the extension of voting rights to residents in Gibraltar within the margin of discretion presently given to Member States by EU law. However, given the sensitivity of the underlying bilateral issue, the Commission at this stage refrains from adopting a reasoned opinion within the meaning of Article 227 [EC] and invites the parties to find an amicable solution'.

[17] In this regard we mention the action brought by the Commission in response to France's complaint against the Netherlands, case 169-84, *Cofaz c. Comisia*. See also case C-1/00, *Commission v. France*, judgement of 1 December 2001.

another Member State pursuant to article 259.[18] Even if the mechanism provided by article 258 TFEU is considered more advanced than the existing system in international law because of two specific elements: **1.** existence of a particular institution - European Commission - designated to protect and promote the interests of the European Union; and **2.** recognition by Member States of the compulsory jurisdiction of the Court of Justice of the European Union, as provided in the EU accession process (there is no need for an explicit recognition[19]), the action for failure to fulfil an obligation is much limited in case of the procedure provided by article 259 TFEU. This limitation is obvious taking into consideration the infringement procedure purpose, namely to compel the State who breached its obligation to comply and to stop the infringement. If a Member State may, in addition, claim for damages or compensation remains an open question.[20] The literature argued that the lack of such interstate repair mechanism constitute a gap in the European legal order, which could be covered by other methods of enforcing state liability as provided for by the Treaty or by recourse to State responsibility in international law.[21]

Proceedings for failure to fulfil an obligation initiated under article 259 have been very rarely used because of the preference of the Member States, for political reasons, to ask the Commission to act under article 258, and only after to intervene before the Court by the side of the Commission, than to assume the role of applicant.[22] This draws our attention to other limitation caused by the discretionary power of the Commission to initiate proceedings, issue long discussed for the application of article 258 TFEU.[23]

There is no text in the treaties that prevent Member States to resolve disputes through political negotiations or 'political deals' outside the legal framework of the European Union. However, if a judicial determination of the inconsistency of a Member State's conduct with the EU law is sought, the procedure under article 259 constitutes the only solution available to Member States. This conclusion follows from the interpretation of article 344 TFEU, which forbids Member States to submit 'any dispute concerning the interpretation or application of the Treaties to any method of dispute settlement not provided for in the Treaty'.[24]

Yet, even if the procedure laid down in article 259 remains the only mechanism available for the Member States to enforce EU law, it doesn't mean that the European legal order is completely separated from the international law of state responsibility.[25]

6. Case-law under art. 259 TFEU

In the history of European integration only six times a Member State has directly brought an action for failure to fulfil the obligations before the ECJ against another State. Of the sixth cases, only four proceeded to judgment, the other two were settled amicably.

6.1. Cases that proceeded to judgement

A. Case 141/78, France v United Kingdom

This is the first case of interstate infringement proceedings and the action was brought on 14 June 1978 by France against the United Kingdom with respect to sea fisheries.

The applicant claims for a declaration that by adopting on 9 March 1977 and by bringing into force on 1 April 1977, 'Sea Fisheries, Boats and Methods of Fishing, the Fishing Nets (North-East Atlantic) Order 1977', the United Kingdom has failed, in the sea fisheries sector, to fulfil its obligations under the EEC Treaty.

In 1977, Britain unilaterally adopted an order (Order no. 440) pursuant to which all trawlers were required to use a particular type of fishing net so as to reduce the proportion of by-catches and preserve the fish stock. In the same year, the master of a French fishing vessel was arrested and convicted of infringing order or having used nets of a mesh smaller than the minimum authorised by the order. France challenged the consistency of the UK order with Community law on the grounds that the area of sea fisheries was an exclusive Community competence.

Commission refrained from initiating parallel infringement proceedings. Instead, it intervened on the side of France. The Court sided with France and decided that United Kingdom has failed to fulfil its obligation under the Treaty (judgement of the Court from 4 October 1979). The provision of the Treaty relating to agriculture covered all questions relating to the protection of maritime biological resources.

[20] Hans Smit, Peter Herzog, Christian Campbell, Gudrun Zagel, *cited supra*, 259-2.

[21] Simma Pulkowski, Of Planets and the Universe: Self-Contained Regimes in International Law, 17 EJIL (2006) 483.

[22] See, for egz., case C-195/90, *Commission v. Germany*, where Belgium, Denmark, France, Luxemburg and Netherlands had intervened sided the Commission.

[23] Also see Paul Craig, Grainne de Burca, Dreptul Uniunii Europene, 4th ed., Ed. Hamangiu, București, 2009, p. 545-549.

[24] For a more detailed commentary on article 344 TFEU, see Hans Smit, Peter Herzog, Christian Campbell, Gudrun Zagel, *cited supra*, 259-3. The authors cited case Iron Rhine, *Belgium v. Netherlands*, where it was suggested that not every reference to Community law triggers an obligation on the Member States to refer a case to the Court of Justice. We mention also case C-459/03, *Commission v. Ireland*, where ECJ decided that Ireland failed to fulfil its obligation to respect exclusive jurisdiction in this matter.

[25] Hans Smit, Peter Herzog, Christian Campbell, Gudrun Zagel, *cited supra*, 259-3.

Therefore, a Member State could not adopt any unilateral measures in the area. Thus, the United Kingdom has failed to fulfil its obligations under article 5 of the EEC Treaty, Annex VI to the Hague Resolution and articles 2 and 3 of Regulation no. 101/76.

B. Case C-388/95, *Belgium v Spain*

This second case was brought on 13 December 1995 by Belgium against Spain concerned a Spanish law that made the use of the name of the production region conditional upon bottling in that region.

The applicant claims for a declaration that, by maintaining in Royal Decree no. 157/88 laying down the rules governing designations of origin and controlled designations of origin for wines and regulations implementing it and in particular Article 19(1)(b) thereof, the Kingdom of Spain has failed to fulfil its obligations under Article 34 of the EC Treaty (now, after amendment, Article 29 EC), as interpreted by the Court of Justice of the European Communities in its judgment of 9 June 1992 in Case C-47/90 *Delhaize v Promalvin* [1992] and Article 5 of the EC Treaty (now Article 10 EC).

Belgium was supported by other four Member States that intervened (Denmark, the Netherlands, Finland and the United Kingdom). This coalition of non-wine producing countries led by Belgium challenged the consistency of the law with Community law. On the other side, Italy, Portugal and the Commission intervened in support of Spain.

Spanish rules govern the bottling of wines bearing the designation of origin 'Rioja'. Belgium considered that those rules which, in particular, require the wine to be bottled in cellars in the region of production in order to qualify for the 'controlled designation of origin' (*denominación de origen calificada*) were detrimental to the free movement of goods.[26] Spain contended that its rules conformed with Community law. The Court sided the defendant, reasoning that while the law constituted a measure having an effect equivalent to quantitative restrictions on exports, it was justified since it constituted a necessary and proportionate means of protecting a designation of origin (judgement of the Court from 16 May 2000).

C. Case C-145/04, Spain v United Kingdom

A third complaint, brought on 18 March 2004 by Spain against United Kingdom, was of symbolic rather than economic importance.

By its action Spain seeks a declaration that, by enacting the European Parliament (Representation) Act 2003 ('the EPRA 2003'), the United Kingdom of Great Britain and Northern Ireland has failed to fulfil its obligations under Articles 189 EC, 190 EC, 17 EC and 19 EC, and under the Act concerning the election of the representatives of the European Parliament by direct universal suffrage, annexed to Council Decision 76/787/ECSC, EEC, Euratom of 20 September 1976, as amended by Council Decision 2002/772/EC, Euratom of 25 June 2002 and 23 September 2002.

Case C-145/04 is unusual because it is the sequel to a judgment of the European Court of Human Rights *Matthews v. United Kingdom* in which that Court found that the United Kingdom had failed to organize European Parliament elections in Gibraltar contrary to Article 3 of Protocol No. 1 to the European Convention on Human Rights. To comply with that judgment, the United Kingdom Parliament passed the European Parliament (Representation) Act 2003 which contains a Section 9 combing Gibraltar with an existing electoral region in England and Wales to form a new electoral region.

As a consequence, voters in Gibraltar were represented in the European Parliament as of 2004. Spain objected to the extension of a British voting district to include 'qualifying Commonwealth citizens' who are not UK citizens on two grounds: First because its Section 16 extends the right to vote in Euro elections in Gibraltar to 'qualifying Commonwealth citizens' who are not United Kingdom Citizens. Second, because the Act includes Gibraltar in an existing electoral district in England. The Advocate General sided (on this ground) with Spain[27] and suggested that the Court should find against the United Kingdom and uphold Spain's claim about the extension of the right to vote in Gibraltar to 'qualifying Commonwealth citizens' who are not United Kingdom citizens. But he suggests that the rest of Spain's claim should be dismissed.

The European Commission, by contrast, considered the UK act of Parliament to be consistent with Community law since it was 'within the margin of of discretion presently given to Member Stated by EU law'. In light of the 'sensibility' of the territorial conflict on Gibraltar, however, Commission deliberately refrained from adopting a reasoned opinion but intervened on the side of the defendant before the Court.

The Court of Justice agreed with Spanish position that Community law did not forbid the extension of voting rights to non-citizens (judgement of the Court from 12 September 2000). In particular, the term 'peoples of the Stated brought together in the Community' need not to be interpreted as synonymous of 'nationals of the Member States' (as Spain contended). Hence, 'in the current state of Community law, the definition of the persons entitled to vote and to stand as a candidate in elections for the European Parliament falls within the competence of each Member State'.

[26] Belgium considered that the incompatibility of the Spanish rules had already been established by the Court in its judgment of 9 June 1992 in the Delhaize case (Case C-47/90). Spain considered that the Delhaize judgment did not affect it specifically and that other wine-producing Member States had adopted similar provisions.

[27] The Advocate General in case C-145/04 was A. Tizzano.

D. Case C-364/10, *Hungary v Slovakia*

This is the newest inter-state case brought on 8 July 2010 by Hungary against Slovakia for refusing the Hungarian President entry into Slovakian territory.

Hungary has argued that Slovakia infringed the free movement of EU-Citizens - Article 21(1) TFEU and Directive 2004/38 on the right of citizens of the Union and their family members to move and reside freely within the territory of the Member States.

Taking the view that the entry of its President into Slovak territory could not be refused on the basis of that directive, Hungary asked the Commission to bring infringement proceedings before the Court of Justice against Slovakia. The Commission, however, expressed the view that EU law did not apply to visits made by the head of one Member State to the territory of another Member State and that, in those circumstances, the alleged infringement was unfounded.

Hungary subsequently decided to introduce, of its own motion, infringement proceedings before the Court against Slovakia. The Commission decided to intervene in the proceedings in support of Slovakia.

The Court finds that, as the Hungary head of state is of Hungarian nationality, he enjoys the status of EU citizen, which confers on him the right to move and reside freely within the territory of the Member States. However, the Court observes that EU law must be interpreted in the light of the relevant rules of international law, since international law is part of the EU legal order and is thus binding on the European institutions.

The Court decides that EU law did not oblige Slovakia to guarantee access to its territory to the President of Hungary. Similarly, while Slovakia was wrong to rely on Directive 2004/38 as a legal basis for refusing the President of Hungary access to its territory, the fact that it did so does not constitute an abuse of rights within the meaning of the Court's case-law. In those circumstances, the Court dismisses Hungary's action in its entirety.

6.2. Cases that were settled amicably

A. Case 58/77, *Ireland v France*

The action was brought on 10 May 1977 by Ireland against the French Republic[28] and the applicant claims that the Court should declare that the prohibition imposed by the French Republic on imports of mutton and lamb coming from Ireland when the domestic price of mutton and lamb in France is lower than a given threshold price constitutes a quantitative restriction on imports or a measure having equivalent effect and amounts to a failure to fulfil its obligations under articles 30, 31 and 32 of the EEC Treaty and under the Act annexed to the Treaty concerning the accession to the EEC and the EAEC of the Kingdom of Denmark, Ireland and the United Kingdom concluded at Brussels on 22 January.

By order of 15 February 1978 the Court of Justice of the European Communities ordered the removal of the case from the register. In this case the Commission was intervening.[29]

B. Case C-349/92, Spain v United Kingdom

The action was brought on 4 September 1992 by Spain against the United Kingdom[30] and the applicant claims that the Court should declare that, by maintaining tax legislation in force which assesses Sherry and British Sherry in differentiated form, the United Kingdom has failed to fulfil its obligations under article 95 and 30 of the EEC Treaty and of the Spanish Act of Accession to the European Community.

By order of 27 November 1992 The President of the Court of Justice of the European Communities ordered the removal from Register of the case.[31]

The orders of the President of the Court of Justice are not public and cannot be consulted in order to see the motivation of the removal from the register of the two above mentioned cases.

7. Conclusion

Finally we conclude over some interesting issues concerning the procedure as provided for Member States by the Treaties.

Interpretation of the Member States action should be achieved in relation to art. 344 TFEU[32] under which Member States have pledged not to submit a dispute concerning the interpretation or application of the Treaties to any method of settlement other than those provided for therein, Court of Justice of the European Union being the only jurisdiction to settle any dispute which opposes two Member States concerning the interpretation of EU law.[33] However, there are situations that challenge the application of this article: (i) EU accession to the European Convention on Human Rights; (ii) bilateral agreements between Member States on the promotion and protection of investments.[34]

Case-law examination reveals that Commission's role is not limited in this procedure only to the status of intermediary institution between Member States and the Court, but it has various roles, ensuring compliance

[29] OJ No C 78, 30.03.1978.
[30] OJ No C 256, 3.10.1992.
[31] OJ No C 340, 23.12.1992.
[32] For an interesting analyses on article 344 TFEU (ex-article292 TCE), see Gerard Conway, Breaches of EC Law and the International Responsability fo Member States, EJIL (2002), Vol. 13 No. 3, 679-695.
[33] This was also argued by the Commission in C-364/10, *Hungary v. Slovakia*, pct. 23.
[34] Ion Gâlea, Tratatele Uniunii Europene. Comentarii și explicații, Ed. C.H. Beck, București, 2012, p. 520-521.

with treaties, whether it's under art. 258 or 259 TFEU. The Court of Justice has repeatedly stated that the goal of the infringement procedure is 'to give the member state an opportunity, on the one hand, of remedying the position before the matter is brought before the court and, on the other hand, of putting forward its defence to the Commission's complaints'.[35]

European Commission acts as a mediator. In the case of *Hungary v. Slovakia*, Commission Vice-President emphasised that 'everything possible had to be undertaken in order to avoid any repetition of such situations and stated that he was confident that a constructive bilateral dialogue between the two Member States could resolve the dispute.'

European Commission can intervene and support one of the states before the Court, as it did in all 4 cases settled by pronouncing a judgment. Although there are not sufficient cases, the conclusion is simple: *Commission has never lost by the side of one State.*

Recourse to the procedure lay down in Art. 259 TFEU is clearly a rarity in the European system; actions were brought at intervals of 17, 9 and 6 years. Member States, pursuant to the obligation imposed by art. 4 TEU on the principle of sincere cooperation, either decide to resolve any disputes between them (by negotiation) or turn to Commission to take complaints by virtue of its role as guardian of the Treaties.

Although proving an interest is not required by the Treaties, practice has proved that its existence is decisive. We can say that a dilemma arises in terms of establishing who better applies EU law. On the one hand, compliance with art. 4 TEU divert Member States from the procedure lay down in art. 259 TFEU, but promote one of the basic principles of European construction. On the other hand, refraining from art. 259 TFEU procedure and accordingly ignoring a breach of EU law by another Member State may lead to the interpretation that an indirect violation of the EU law may happen.

We conclude by emphasizing that recourse to the procedure established by art. 259 TFEU was concurrent to other types of disputes, usually political, and the purpose of the procedure was to gain a strategic advantage in international relations at the expense of a correct application of European law. In the present international context the struggle for an important economic position is at its high levels and on the verge of a conflict outbreak. Thus, Member States prefer to leave to the Commission the enforcement of EU law.

BUILDING A BANKING UNION IN THE EUROPEAN UNION – A SOLUTION TO THE FINANCIAL CRISIS?

Monica (ŞAGUNA) FIGHIROAE*

Abstract:

The financial crisis of 2008 highlighted the need for a deeper integration of the banking system, as a warranty to support long-term financial stability. It was argued that the grounds of the crisis lie also in an uncoordinated national response to the failure of banks, in a fragmentation of the Single Market in lending and funding and, therefore, a better regulation and supervision of the financial sector can ensure financial stability and growth in the European Union.

In order to restore the proper functioning of the internal market and to avoid future crisis, the European Commission launched a set of initiatives, in order to assure a safer and sounder financial sector for the single market; are included here: stronger prudential requirements for banks, improved depositor protection and rules for managing failing banks and a single rulebook for all the 28 Member States of the European Union. The single rule book is the step towards the Banking Union sits.

The banking union consists of three pillars: a Single Supervisory Mechanism, a Single Resolution Mechanism and a joint deposit-insurance scheme.

As on 4 November 2014 the European Central Bank assumed responsibility for euro area banking supervision, the Banking Union is still under construction.

In this framework, the purpose of my paper is to analyse the process of building a Banking Union in Europe. Therefore, the objectives of my paper are to explore the steps to fulfilling a real integration of the European banking system, as a solution to the financial crisis.

Keywords: *Banking Union, European Central Bank, financial crisis, euro area, integration*.

1. Introduction:

As we well know, the financial crisis started at the end of 2009 as a banking crisis in the United States of America, but it spread quickly and evolved as a debt crisis in the Eurozone and, afterword, in Europe as a whole. The questions about the future of the Euro and also of the European Union increased, while many voices criticized and argued the measures taken by the European leaders in order to respond to and prevent any negative effects and, in the end, to prevent the collapse of the banking system.

A problem to one credit institution can spread quickly to other financial actors, while affecting depositors, investments and even the entire economy, a fact which represent a real threat to the stability of the financial system in European Union. Actually, this threat was frequently explained by the use of the *"too big to fail"* theory[1].

Therefore, having in mind that European Union's banking system is vulnerable to shocks, in response, the European Union and its member states have been focusing on strengthening financial sector supervision. In this context, given the economic interdependence within the member states, which was accentuated by the crisis, the issue of a deeper integration was launched.

Consequently, my paper covers the process of building a Banking Union in Europe, as a potential solution, meant to prevent any future crisis and to strengthen the Euro zone.

The importance of my study lies in the fact that it covers a highly topical issue, which is now of real relevance for the integration of the European Union, in the banking sector, being a subject of interest not only for specialists, but also for any citizen of the member states.

In this highlight, the objectives of my paper are: to explore the steps towards a real integration of the European banking system, by building a Banking Union for the Euro area; to understand why the Economic and Monetary Union needs a Banking Union, and, finally, to analyse this project, seen as potential solution to the financial crisis.

To answer at these objectives, I will start by dividing my paper in two sections: The steps towards a Banking Union (A), Banking Union as a potential solution to the financial crisis (B).

The topic is of recent development, but, given its great importance, the existent specialized literature has debated this subject. This paper will try to make an

* Monica (Şaguna) Fighiroae, PhD Candidate, Faculty of Law, „Nicolae Titulescu" University of Bucharest (e-mail: **monica.saguna@yahoo.com**).

[1] For further details on *"too big to fail theory"* see George G. Kaufman, *Too Big to Fail in Banking: what does it mean?*, special paper 222, LSE Financial Market Group Special Paper Series, at Loyola University Chicago and Federal Reserve Bank of Chicago, June 2013, ISSN 1359-9151-222.

According to Kaufman, "A TBTF firm is generally a large complex firm that is perceived to require either or both special regulation to discourage failure while alive and/or a special resolution regime when dead in which governments can intervene and not have the insolvent firm resolved through the usual resolution (bankruptcy) processes that apply to other firms in the same industry, at least with respect to allocating losses.".

objective and understandable analysis of an issue on which we can argue, without exaggerating, that changes the face of the European Union.

2. Content

A. The steps towards a Banking Union

Looking back in the history of the European Union, we can say that Banking Union is indeed the most important European project undertaken, as a form of deeper integration, since the building of the Economic and Monetary Union and the introduction of euro as a common currency of the member states.

The project was launched in the summer of 2012, but evolved surprisingly quickly. The idea was to fight against financial fragmentation problem, which was seen as one of the euro crisis causes.

Even if last year European Central Bank assumed the responsibility for euro area banking supervision[2], moment considered to be of great importance, the project is still under construction. It is built on several legislative acts, by which is meant to ensure the stability of the financial system and to prevent triggering in the future one of the crisis realities – meaning to ensure that banks and their shareholders and no longer taxpayers, will carry the risks and will pay for eventual losses.

It is important to point out that banking union is designed for the countries in the Euro Zone, which are *de jure* involved in the project. But, according to the SSM Regulation, the European member states which have not adopted the euro as national currency may opt in, but on a voluntary basis.

The project is based on a concept of common financial market regulation, the so-called Single Rulebook. It consists on horizontal sets of rules, which apply to all member states of the European Union, namely capital requirements for banks[3] (CRD IV package) and provisions of the Bank Recovery and Resolution Directive (BRRD)[4].

The Banking Union project is built on three pillars:

- a European system for banking supervision - Single Supervisory Mechanism (SSM), by which European Central Bank (ECB) is in charge;
- a European mechanism for the resolution of insolvent banks - Single Resolution Mechanism (SRM), which implies a European Resolution Authority and a European Resolution Fund to finance resolution measures; and
- a joint deposit-insurance scheme – which implies common standards for deposit guarantee schemes of member states.

Hereinafter some basic information about the three pillars of the European Banking Union project:

Regarding the first pillar, the legal framework at EU level for Single Supervisory Mechanism is based, at this moment, on following acts:

- Council Regulation No 1024/2013 of 15 October 2013 conferring specific tasks on the European Central Bank concerning policies relating to the prudential supervision of credit institutions (known as SSM Regulation);
- Regulation (EU) No 468/2014 of the European Central Bank of 16 April 2014 establishing the framework for cooperation within the Single Supervisory Mechanism between the European Central Bank and national competent authorities and with national designated authorities (known as SSM Framework Regulation);
- Decision of the European Central Bank of 31 January 2014 on the close cooperation with the national competent authorities of participating Member States whose currency is not the euro (ECB/2014/5);
- Regulation (EU) No 1163/2014 of the European Central Bank of 22 October 2014 on supervisory fees (ECB/2014/41).

Under the SSM Regulation, European Central Bank is responsible for the direct supervision of the credit institutions considered to be significant in the euro area, while national supervisors will continue to carry out the supervision for the other credit institutions, considered to be less significant, but under its ultimate responsibility. According to the first article of the regulation, its scope is to contribute to the safety and soundness of credit institutions, to the stability of the European financial system and to ensure consistent supervision.

In order to prevent a potential conflict of interests, there were established clear rules to assure the organizational and operational separation of the European Central Bank competences in the area of supervision and of monetary policy.

November 4, 2014 marked the ending of the preparatory phase for the SSM, which included an in-depth examination of the resilience and balance sheets of the biggest banks in the euro area: European Central Bank assumed responsibility for euro area banking

[2] ECB assumed responsibility for Euro Area supervision on November 4, 2014.

[3] The main legislative texts are:

Directive 2013/36/EU of the European Parliament and of the Council of 26 June 2013 on access to the activity of credit institutions and the prudential supervision of credit institutions and investment firms, amending Directive 2002/87/EC and repealing Directives 2006/48/EC and 2006/49/EC (CRD IV);

Regulation (EU) No 575/2013 of the European Parliament and of the Council of 26 June 2013 on prudential requirements for credit institutions and investment firms and amending Regulation (EU) No 648/2012.

[4] Directive 2014/59/EU of the European Parliament and of the Council of 15 May 2014 establishing a framework for the recovery and resolution of credit institutions and investment firms and amending Council Directive 82/891/EEC, and Directives 2001/24/EC, 2002/47/EC, 2004/25/EC, 2005/56/EC, 2007/36/EC, 2011/35/EU, 2012/30/EU and 2013/36/EU, and Regulations (EU) No 1093/2010 and (EU) No 648/2012, of the European Parliament and of the Council (BRR Directive).

supervision, which meant a clear and important step towards Banking Union.

SSM Regulation established the ground rules for the functioning of the Single Supervisory Mechanism. The operational arrangements needed for the implementation of the tasks conferred upon ECB by the Regulation are contained in the Framework Regulation, which further develops and specifies the cooperation procedures established in the SSM Regulation between European Central Bank and the national competent authorities within the Single Supervisory Mechanism and ensures the effective and consistent functioning of the SSM.

As for the Member States whose currency is not the euro, ECB decision of 31 January 2014 establishes the procedure to be followed in order to enter in a close cooperation with the European Central Bank.

As for the second pillar, the legal framework at EU level for Single Resolution Mechanism is based, at this moment, on following acts:

- Directive 2014/59/EU of the European Parliament and of the Council of 15 May 2014 establishing a framework for the recovery and resolution of credit institutions and investment firms and amending Council Directive 82/891/EEC, and Directives 2001/24/EC, 2002/47/EC, 2004/25/EC, 2005/56/EC, 2007/36/EC, 2011/35/EU, 2012/30/EU and 2013/36/EU, and Regulations (EU) No 1093/2010 and (EU) No 648/2012, of the European Parliament and of the Council (known as BRR Directive);
- Regulation (EU) No 806/2014 of the European Parliament and of the Council of 15 July 2014 establishing uniform rules and a uniform procedure for the resolution of credit institutions and certain investment firms in the framework of a Single Resolution Mechanism and a Single Resolution Fund and amending Regulation (EU) No 1093/2010 (known as SRM Regulation);
- Council Implementing Regulation (EU) 2015/81 of 19 December 2014 specifying uniform conditions of application of Regulation (EU) No 806/2014 of the European Parliament and of the Council with regard to ex ante contributions to the Single Resolution Fund;
- Intergovernmental Agreement (IGA) on the Single Resolution Fund;
- Communication from the Commission on the application, from 1 August 2013, of the state aid rules to support measures in favour of banks in the context of the financial crisis;

The Bank Recovery and Resolution Directive entered into force on 2 July 2014 and had to be transposed into national law by the Member States by December 31, 2014.

It establishes a common framework for the recovery and resolution of banks and investment firms across the European Union and provides the ways in which the credit institutions in difficulty can be rescued without requiring taxpayer bailouts.

The BRRD sets out the rules for the resolution of banks and large investment firms in all European Union Member States. Banks are required to prepare recovery plans to overcome financial distress. Authorities have also a set of powers to intervene in the operations of banks to avoid them failing or to restructure them, allocating losses to shareholders and creditors, by following a clearly defined hierarchy. There are also provided powers to implement plans to resolve failed banks in a way that preserves their most critical functions and avoids taxpayers having to bail them out.

As for the financing, member states are required, to set up ex-ante resolution funds to ensure that the resolution tools can be applied effectively. In the case of euro area Member States, from 2016, these funds will be replaced by the Single Resolution Fund.

The Single Resolution Mechanism is designed for the euro area. The main purpose of the Single Resolution Mechanism is to ensure that eventual future bank failures in the banking union are managed efficiently, with minimal costs to taxpayers and the real economy. The manner of implementation is similar to the Single Supervisory Mechanism, meaning that European Central Bank will have the ultimate responsibility for the resolution of all banking cases in the euro area, but the tasks will be divided between the Single Resolution Mechanism and the national authorities; similar to the first pillar, the Single Resolution Mechanism will be directly responsible for the significant banks and cross-border cases.

Without prejudice to the main purpose - that any resolution is first financed by a bank and its shareholders, and if necessary also partly by a bank's creditors - there will also be another funding source available to appeal to, if neither the contributions of shareholders nor those of a bank's creditors are sufficient. To this end, the Single Resolution Fund (SRF) was established through an Intergovernmental Agreement, which contains the provisions relating to the transfer of contributions and mutualisation of the SRF.

The Single Resolution Fund together with European Stability Mechanism (ESM) facility and the Directive 2014/49/EU of the European Parliament and of the Council of 16 April 2014 on deposit guarantee schemes (DGS) represents the third pillar of the Banking Union.

The objective of Directive 2014/49/EU is to ensure a quick compensation of bank account holders in case of a bank failure. The current deadline for compensation of 20 working days is reduced to seven working days. The DGS sets the threshold of 100 000 euro for depositor protection. It requires higher amounts to be protected if they are temporarily high balances arising from, from example house sales. Also, the directive provides a funding mechanism in several steps and restrictions on investment of the financial means, with the scope to ensure that the deposit guarantee schemes dispose of financial means that are proportionate to their liabilities and that these financial means are safeguarded against potential losses.

B. Banking Union as a potential solution to the financial crisis

The project of Banking Union was promoted and presented by the European leaders as a viable solution to the financial crisis. But, first of all, before trying to understand the reasons why it can be a real solution and if it is indeed a solution and not a disguised form of centralising power and decisions at the European Union level, we have to answer at one important question: *why Economic and Monetary Union needs a Banking Union?*

With a euro crisis as a premises, Banking Union was designed as a fundamental complement to the Economic and Monetary Union (EMU) and to the internal market; if EMU had the purpose to promote a single currency in the European Union, Banking Union is to align responsibility for supervision, resolution and funding at a centralized – European Union level and to harmonize the rules across the euro area.

The Report of the Four Presidents *"Towards a genuine Economic and Monetary Union" (EU, 2012)*[5] argues that the euro area needs stronger mechanisms to ensure sound national policies so that Member States can reap the full benefits of the EMU. This is essential to ensure trust in the effectiveness of European and national policies, to fulfil vital public functions, such as stabilization of economies and banking systems, to protect citizens from the effects of unsound economic and fiscal policies, and to ensure high level of growth and social welfare.

Its conclusion is that the EMU requires an integrated financial framework or a Banking Union built on three pillars: a single supervisory mechanism, a single resolution mechanism and a single deposit guarantee scheme. President Van Rompuy also adds that there is a crucial need for a Single Rule Book and for an harmonized application of EU rules.

Indeed, despite of the critics launched by the Euro sceptics, the EMU and the single European currency attracted obvious advantages and benefits to individuals, to business and to the whole economies of the member states, like: stable prices for consumers and citizens; the exclusion of the currency risk between euro area countries has been eliminated, which contributed to foster growth and maintain stability; greater security and more opportunities for businesses and markets; more integrated financial markets; moreover the trade and the labour mobility were stimulated.

However, all this advantages were not sufficient for the euro member states to avoid the sovereign debt crisis, which had great negative impact on them and threatened also the survival of the single currency.

The crisis brought important lessons, but one of the most important was that the monetary union was incomplete and the fragmentation of the banking system was one of its causes.

This is why how banking union fully completes the EMU and European leaders believed that its achievement is to create a "genuine" EMU. The EMU needs a Banking Union, because a stable financial system is necessary to safeguard the stability of the euro area and ensure the effective transmission of a single monetary policy.

Christian Noyer in *"Why the Economic and Monetary Union need a banking union"*[6] argued the importance of the project for the euro in an objective and conclusively manner. He said that the key to banking union can be summed up as follows: the aim is to find a way to ensure that banks in the euro area are considered precisely as that, as "euro area banks", and not as "Irish", "German" or "Italian" banks. In other words, the goal is to ensure that credit conditions in the euro area will not depend on *where* you are but on *who* you are, which is what should be expected of an efficient financial market.

Crisis management process in European Union implied a set of important measures meant not only to solve the problem in the near future, but to create a stable system, no more vulnerable to shocks. The EU response to crisis is not the topic of this paper, but, in order to create a full view of the context, the package of measures implied important actions like: the implementation of adjustments programs, the creation of the European Financial Stability Facility (EFSF) and European Stability Mechanism (ESM), the adoption of the "six-pack" and the Treaty on Stability, Coordination and Governance (TSCG)[7], the adoption of the Single Rule-Book, the ECB framework for Outright Monetary Transactions etc.

Banking Union project is one of these measures, advanced as a major potential solution to the financial crisis, but a measure which involves much more than the foregoing ones, first of all because it represents a transfer of sovereignty from national to European level and the enhancement of the European Central Bank's role and importance.

First of all, by the implementation of this project, as part of crisis management programme, it can reduce fragmentation of European banking markets, because an integrated system would involve uniform means of enforcement and would annihilate national distortions

[7] It is formed by Five Regulations and one Directive (that is why it is called six-pack) and covers not only fiscal surveillance, but also macroeconomic surveillance under the new Macroeconomic Imbalance Procedure;

of actions which are to affect the stability of the financial system. In this line, the responsibility for the banking supervision and for the financial support is transferred at a centralised level.

While Single Supervision Mechanism helps to uniform the supervision practices and the risk management in the participating member states, the Single Resolution Mechanism enables intervention in a timely manner to address weak banks and prevent contagion across the system.

The main reason it is necessary to create a banking union with a supervisory mechanism at the EU level has to do with the importance of financial stability and market integration, which are not occurring at the same time at the national level. This is what Shoenmaker calls 'the financial trilemma.' This theory suggests that policymakers can choose only two of the three following objectives: financial stability, financial integration and national financial policies (such as bank supervision and resolution). This is because 'national financial policies usually fail to recognize the externality generated by cross-border banks in difficulty.' In fact, financial integration at the EU level gives rise to the supranational interdependence of financial agents.

Regulating these supranational relations requires extra information about the activities of institutions located outside the jurisdiction of the national authorities. No national central bank or parliament has access to all the required information about financial institutions located outside of its territory. However, the activities of these banks influence the banking sector and they cannot exercise authority over the cross-border financial institution. At the same time, the national supervisory institution does not have enough information about the financial institutions that are established in its territory, and whose activities go beyond national boundaries. Monitoring these institutions is difficult for the national mechanisms.

Therefore, the national authorities are not able to extend robust supervisory mechanisms to these cross-border entities, and may provide troubled banks across the border with capital flow while having no control over the capital injection's effects. Another possibility is that the national authorities may not provide enough funds to troubled institutions due to a lack of information and control, which in turn leads to financial instability.

Moreover, national supervisors are more vulnerable to regulatory capture. Both of these elements undermine financial stability, and therefore, combining these three objectives is not possible at the national level. In this regard, Benoît Cœuré, member of the ECB's executive board stated that: "by setting the incentives correctly, a fully-fledged banking union permits an internalization of this externality, making sure that banks strengthen their capital and liquidity on sunny days and can continue to lend on rainy days".

Additionally, in a highly integrated financial system such as the European Union, reducing moral hazard and excessive risk-taking requires a consistent set of regulatory incentives, based not only on common rules but also on integrated supranational powers in banking supervision. Therefore, integration in the banking sector that underlies the financial integrated market is necessary to stop reckless risk-taking by banks in the internal market[8].

The question if a banking union would have prevented the sovereign debt crisis was addressed in a paper of the International Monetary Fund, entitled *"Would a banking union have prevented this crisis?"*. The conclusion was that, arguably, it would not have halted the sovereign debt crisis in some countries. But a well-functioning banking union could have substantially weakened, if not broken, the adverse sovereign-bank-growth spirals, maintained depositor confidence, and attenuated the liquidity and funding freezes that followed.

The rate cuts of the European Central Bank would more likely have fed through to lower borrowing costs for the private sector. A strong banking union would also have limited the concentrated exposures of banks to certain risks. For example, euro-area-wide supervisors would arguably not have allowed size, structure and concentration risks to grow as they did in countries such as Spain, Ireland, or Cyprus, or for general banking weaknesses to have accumulated in some other places. That said, as the United States and other recent experiences suggest, supervision would have had to strive to be of a high standard. Merely reorganizing supervisory structures would not of itself have addressed the buildup of systemic risk or the too-big-to-fail problem[9].

3. Conclusions

As a conclusion, the study focused on the European Banking Union a project, a long debated subject nowadays, a topic of high interest which is believed to be a solution to the financial crisis.

In the first part, there were covered the steps towards a Banking Union, mainly from the legal point of view, steps which were passed by the European leaders in a fast manner, given its importance in crisis context and for the architecture of the European Union.

Second part, tried reveal to why Economic and Monetary Union needs a Banking Union and why it is

seen as a potential solution for the financial crisis. Is it real solution and not a disguised form of centralising power and decisions at the European Union level? Like the debate on euro currency, there is not a single answer, because there will always be Euro sceptics to deny and question the decision taken at European level. And this project is natural to be questioned having in mind, first of all, that in implies a transfer of sovereignty from national to European level.

My opinion is that the arguments for the first view, that Banking Union is a real solution to the financial crisis, are strong and, in the same time, relevant. But, their authenticity is to be confirmed in practice. What is for sure is that this new architecture is to reduce the negative effects of a future crisis, if it doesn't succeed in preventing it at all.

As a suggestion for future researches, I believe that an interesting paper would consist into analysing the "pros" and the "cons" for a non-euro member state to enter in a close cooperation with the European Central Bank before adopting the euro currency.

THE TRAINING OF LAWYERS - A CONSTANT IN EU'S OBJECTIVES, IN A SOCIETY OF KNOWLEDGE

Augustin FUEREA[*]

Abstract:

The Union shall contribute to the development of quality education by encouraging cooperation between Member States and, if necessary, by supporting and supplementing their action, while fully respecting the responsibility of the Member States for the content of teaching and the organisation of education systems and their cultural and linguistic diversity. Also, the Union shall implement a vocational training policy which shall support and supplement the action of the Member States, while fully respecting the responsibility of the Member States for the content and organisation of vocational training.

Keywords: *Union European, training policy, education, law practitioners.*

Introduction

It is very well known that today's international society is marked by very profound changes which are happening very fast, being often placed at strategic interferences. Increasingly more, economic accumulations are based on information and innovation, both turning into essential development resources, in general. The same society of information that is a source of wealth for some people, represents at the same time, a potential factor of exclusion for others. A careful analysis of realities highlight the fact that the main goal pursued by those who founded the European Union (in 1992, with the signing of the Maastricht Treaty) was and still is to make from this European area, not only a space economically competitive, but equally, a social space, close to citizens and their problems. In this context, lifelong learning becomes crucial. Its stake is to provide economic competitiveness and social cohesion, development, favouring thus the exercise of active European citizenship. For lifelong learning to become reality, it is essential that the role of professional training is grounded on new bases, including in contemporary Romania, which as far as integration concerns, is related to requirements specific to a new future.

Successive European political structures revealed common themes, offering national strategies, a new element called lifelong learning, reference element for any natural evolution, providing the context for practical cooperation, such as, for example, mutual exchanges and pilot projects.

Obviously, the pace of economic and social development has accelerated. In Europe, more than ever, enterprises need a qualified and thoroughly informed staff. Employers choose, more rarely, unskilled workforce, seeking for capabilities endowed with performant reasoning, including in the field of technical competence. The evolution has merely reinforced the role of lifelong learning, which has become crucial for developing a professional career.

2. The right to education[1]

Article 165 of the Treaty on the Functioning of the European Union (TFEU) is the legal basis of actions undertaken, both at EU and Member State level, in order to continue training throughout life, for all professional categories, including lawyers, meaning those who, „although representing an autonomous profession, are an integral and necessary part of the judicial activity, fulfilling a central role in the implementation of EU legislation"[2]. The Commission considers that, „in order to foster a genuine European culture in the judicial and law enforcement field, is essential to speed up training on Union-related issues, and this should become systematically accessible for all professions involved in the implementation of the area of freedom, security and justice"[3]. The Union's action in the fields of education and professional training aims at[4]:

- developing the European dimension in education, particularly through the learning and dissemination of Member States' languages;
- favouring the mobility of students and teachers, by encouraging the academic recognition of diplomas and periods of study;
- promoting cooperation between educational institutions;
- developing exchanges of information and

experience on issues common to educational systems in the Member States;

− encouraging the development of youth exchanges and exchanges of socio-educational trainers and supporting youth participation to the democratic life of Europe;

− encouraging the development of distance education,

− developing the European dimension of sport, by promoting fair-play and openness in sporting competitions and cooperation between bodies responsible for sports, and by protecting the physical and moral integrity of sportsmen and sportswomen, especially of the youngest.

To achieve these objectives, the European Parliament and the Council shall adopt incentive measures, excluding any harmonization of laws, regulations and administrative provisions of the Member States, deciding in accordance with the ordinary legislative procedure and after consulting the Economic and Social Committee and the Committee of the Regions. The Council also adopted recommendations[5] to the Commission's proposal[6].

The European Union and Member States are making considerable efforts to continuously raise the level of competence in all areas. The efforts that our country should also pragmatically report to, are made in order to reduce the number of young people leaving school without a qualification. Also, solutions are sought for those who drop out of school, to be offered an alternative in the sense of finding a training opportunity in order to subsequently find a job.

The principle increasingly common in the Member States of the European Union is that according to which each person must have also the right to learn throughout his life: it concerns a lifelong learning, based on the reality of our times. The process of knowledge and lifelong learning requires considerable force. First, it tends to blur traditional distinctions between initial education and continuing education, formal and informal requirements and, not least, general and professional education. Secondly, it is useful to know, now when Europe opens its doors for our country in terms of rights and obligations, that establishing a continuous education system leads to a profound review of the role of vocational training, which includes its modes of transmission, financing and insurance so that education could remain accessible to a larger number of people.

Whatever differences may exist between their systems of continuing education, all EU Member States are working towards the same purpose, more important than any other: to bring this change to an end. The European labour market needs skilled and flexible people because, only in this way, the European Union will become one of the biggest competitors in the field of global competition. Lifelong learning is the source of this success, is the factor that can provide continuous updating of requirements and optimal exploitation of the potential of information. Therefore, now more than ever, vocational training systems in the Member and associated States need to be integrated into a common European strategy.

Retrospectively, we see that, in this area too, the Member States have set common goals. Initially, there was an exchange of ideas concerning the objectives to be achieved and the joint actions they will develop in order to achieve them. Thus, the Union played an important role in the development of national policies and cooperation. The conjunct views of the social partners served at European level, to develop a common strategy, by aligning first, the national legislation in the very important field of continuing education.

Subsequently, it was concluded that, at European level, a clearly defined policy framework was required for Member States to be able, through efforts both individual and common, to reorganize their national education systems. Such a framework would allow, obviously, to better highlight issues of common interest and the connections between lifelong learning and the European strategy, in favour of the employee. Also, the achieved political framework stimulates the debate on the means used to achieve lifelong learning and contributes to building consensus throughout the Union on training objectives and measures to be taken in order to achieve them. It was also demonstrated, theoretically and practically, that the institutionalized political framework favoured the application of an effective system for the exchange of information and experience at European level, on the one hand, and created the necessary conditions to achieve a forum for examining and analysing the ways in which the decision-making process could be improved.

The European policy framework is not, however, the only solution; it is necessary, but not sufficient. Issues, such as the content and organization of continuing education, are incumbent upon Member (and the associated) States, meaning that they have the freedom to choose how they will develop and implement the policy in the field. The continuing education reform occurs as a result of the fight against the lack of qualification, and also in response to the specific needs of adults who, most often, didn't get the initial education. Thus, for example, the UK and Ireland are trying to achieve greater flexibility to meet these needs, through networking and learning centres funded by private enterprises, especially created for this purpose. In Finland and the Netherlands, emphasis is placed respectively on long-term planning and cooperation of all partners involved, and Germany tries to make all young people benefit of vocational training through a well-developed and thoroughly organized system. Denmark also attaches to this

[5] About the legal status of recommendations, see Roxana-Mariana Popescu, *Introducere în dreptul Uniunii Europene,* Universul Juridic Publishing House, Bucharest, 2011, p. 49.

[6] Art. 165 TFEU para. (4).

reform by expanding higher education programs of short duration, with professional vocation.

The future of the European Union is closely linked to economic performance, and more. To this end, the EU launched a genuine structured cooperation framework („Rolling agenda") consisting of an initiative that allowed the materialization of the role that Community cooperation has in education. The aforementioned structured cooperation framework is not placed in a purely „pragmatic" perspective meant to simplify or relaunch actions already existing, but in this way, it can be considered that the European Union set a new strategic goal, with the purpose of education reform, in general and continuing education, in particular. And that, especially since the development of a society which meets the requirements of the XXI century (of knowledge and innovation) is essential to launch a genuine process of economic and social renewal of Europe. Innovation and knowledge are key factors for the competitiveness of the Union and for Europe's ability to fight, including against unemployment, so harmful to the entire international society. The investment in human resources is a prerequisite for successful economic and social development.

The Lisbon Treaty has given the European Union competence[7] to „support the vocational training of magistrates and judicial staff[8]" in the field of judicial cooperation in civil and criminal matters. The entry into force of the Lisbon Treaty enables the Union „to show more ambition in responding to the daily concerns and aspirations of European citizens"[9]. And this is due to the strengthening of the role of the European Parliament, as co-legislator and to a greater involvement of national parliaments, and also to the introduction of qualified majority voting in the Council, in most policy areas[10].

3. The initial and continuing vocational training of lawyers according to provisions of the European Union.

According to a press release from the European Commission[11], its target is to train 700,000 specialists in EU law by 2020. This happens in the context in which „there are about 1.4 million law practitioners in the European Union (...). The Commission wishes to create conditions for at least half of these legal practitioners to participate to European judicial training at local, national or European level by 2020"[12]. It has also been established as additional objective that „all legal practitioners should benefit during their careers of at least one week training in EU law"[13].

The objective is not new. In 2006, the European Commission stated in its *Communication on judicial training in the European Union*, the need to develop vocational training for lawyers and to make more effective and visible the progress recorded in creating an area of freedom, security and justice.

To this end, the Commission itself emphasizes the need to train legal practitioners in the field of European Union law, by inviting „national governments, high Councils for the Judiciary, professional organizations and educational institutions in the field, both at EU and national level"[14], by asking them „to commit in order to integrate EU law into their training programs and to increase the number of classes and participants"[15].

The Commission shall facilitate access to EU funding to support quality training projects, including the e-learning type modules. Under EU multiannual financial framework, the Commission proposed that the European judicial training should become a top priority in order to prepare more than 20,000 legal practitioners per year, by 2020. Training half of the legal practitioners of the European Union until 2020 is a shared challenge.

It is very important to remember that „in order to help creating a European judicial culture based on mutual trust, the Commission has launched since 2014, an exchange program for new judges and prosecutors, lasting two weeks. The Commission supports the training through the European e-Justice portal - which is the „single window of the EU" for legislation and access to justice in all EU countries - and by sharing practical guidelines on training methodologies and evaluation"[16].

We cannot ignore the fact that, as determined by the Commission in its Communication, „the European judicial training can take place either during the initial training or in the permanent training. This training concerns the following aspects: EU law, including substantive and procedural law, together with the

related case law of the Court of Justice of the European Union and knowledge of national judicial systems".

The primary legal basis of vocational training is the Treaty on the Functioning of the European Union which, in Article 81 paragraph (2), section (h) and Article 82, paragraph (1), section (c) invites the EU to „support the vocational training of magistrates and judicial staff in both civil and criminal field".

The judicial training is, essentially, a national responsibility, as outlined in the Council Resolution on the training of judges, prosecutors and judicial staff in the European Union[17].

A similar significance has the report of 9 May 2010 of the former European Commissioner Mario Monti, entitled „A New Strategy for the Single Market"[18] which required European leaders to eliminate remaining bottlenecks affecting innovation, and hampering the growth potential of the EU.

The Stockholm Programme[19] adopted by national governments in December 2009, sets out measures aimed at creating a single area of justice in the EU and requires effective action at European level to support training efforts and to develop training mechanisms at EU level. In turn, the European Parliament has consistently emphasized that a qualitative judicial training contributed significantly to improving the functioning of the internal market and facilitated the exercise of rights by citizens.

In late 2010, the Commission consulted the Member States, members of the Justice Forum, the European Judicial Training Network and its members[20].

Currently, we are in the third development phase of EU programs of education, training and youth (Lifelong Learning and Youth in Action), of which also institutions of vocational training in the legal field can benefit[21].

On 13 September 2011, the European Commission presented the Communication entitled *the Establishment of a climate of confidence in justice at EU level. A new dimension of European judicial training*[22]. From the first pages, the Commission recalls one of its objectives, namely to allow half of European Union lawyers to participate in European judicial training activities by 2020, by using all available resources at local, national and European level in accordance with the objectives of the Stockholm Programme. To achieve this objective, the participation and cooperation of all stakeholders, at national and European level, are required.

According to the European Commission, „the European judicial training in the field of the EU acquis, both at national and at European level, is still modest"[23]. For example, in May 2011, 51% of judges and prosecutors declared that they had not participated before to judicial training activities in the field of Union law or of the law of another Member State, while 74% declared that the number of cases involving the Union law increased over the years. 24% of judges and prosecutors have never participated in training courses on EU law because such courses have not been at their disposal. Activities vary greatly from one Member State to another, the annual number of trained judges or prosecutors ranging from 240 to 13 000. The Commission funded or co-funded 162 projects involving almost 26 000 participants from 2007 to 2010[24].

Regarding the training of lawyers, it must include initial and continuing training. „Every new lawyer should know right from the start EU law. The initial training, organized before the employment or when getting the job, must be complemented by lifelong learning, to help legal practitioners have knowledge up to date and to know where and how to acquire new skills and information „[25].

In order to achieve these goals, each Member State should take all possible measures to ensure that its national bodies responsible for training lawyers, disseminate information on legal systems, develop and stimulate direct exchanges between lawyers in different Member States, including by taking an active role in the Exchange Program of the Judiciary, by promoting projects of „twinning" and by any other appropriate means[26].

Only by pursuing such training programs in Romania, as is the case of all Member States of the European Union, we can talk about recognition of diplomas and professional qualifications under the existing acquis in the field (Directive 2005/36 / EC of the European Parliament and the Council on the recognition of professional qualifications).

3. Conclusions

At EU level, it is considered that for the construction of a European area of justice for citizens and businesses, it is necessary to improve European judicial training. The European training of lawyers

must be based on joint actions of: Member States; European partners and the European Commission.

We conclude by showing that lifelong learning is the starting point to promote active European citizenship and of a society based on social inclusion, not exclusion, leading to fulfilling a wish difficult to accomplish, but not impossible, namely that of a finality corresponding to efforts made so far. This finality will be translated through a united Europe, a Europe of all people, from which, in no case, Romania and Romanians, with all their potential, often confirmed, shall miss.

POLITICAL MIGRATION, THE ROMANIAN POLITICIANS' "DISEASE". COMMENTS ON CONSTITUTIONAL COURT DECISION NO. 761/2015

Claudia GILIA[*]
Ioana PANAGOREȚ[**]

Abstract

After 1989, the Romanian society has been in a continuous constitutional, legislative, and political effervescence. Building a democratic state, a state of the rule of law, based on fundamental values, such as human dignity, freedom, fundamental rights and freedoms, political pluralism, is a long process. Democratic, fair, free and regular elections are a crucial element for the proper functioning of the political institutions. But are they sufficient to ensure a functional and representative democracy? Our answer is no. There are many other elements that are needed in order to achieve such an important goal to a functioning society. One of these elements which we would like mention is, in our opinion, important to progress and representative democracy of any state: the legitimacy and political stability of the bodies exercising power at all levels. In our study, we address a number of issues concerning a phenomenon that grinds the foundation of the representative democracy, namely political migration. In our opinion, this phenomenon, that has invaded the political life in Romania, is one of the serious "diseases" of both the political class, and the Romanian society. Obtaining power at any price seems to justify any political treason, metaphorically called "political migration". In our study, the phenomenon of the political migration will be analyzed mostly under Constitutional Court Decision no. 761 of 17 December 2014 concerning the unconstitutionality of the Law on the approval of Government Emergency Ordinance no. 55/2014 regulating measures concerning the local public administration. By Ordinance no. 55/2014, Pandora's Box has been opened once again within the local public administration as, for a period of 45 days, the local elected were provided the permission to express in writing, only once, their option of either becoming members of a certain political party or national minority organization, or becoming independent without losing their mandate. In our opinion, the above-mentioned ordinance has done nothing else but regulate a situation that actually exists among all the elected representatives of the local public administration in Romania. Regardless of the reasons that the Government or the Parliament gave, the enactment of the political migration is doing nothing else but infecting politicians with an incurable virus which will only lead to a malformed democracy.

In our opinion, the lawmakers should regulate the ways in which the elected officials, who ignored the citizens' choice of voting, can be penalized (one of the penalties would be, in our opinion, the loss of their mandate). Although we analyze the effects of an action of the elected officials – party-switching – however, we should find out which are the elements leading to an action which is abnormal in a society where the will of the people must be sovereign.

Keywords: *representative democracy, political migration, political parties, citizens, elections.*

Introduction

By being anchored in a sphere of public interest, the topic of this study covers multidisciplinary issues, because it addresses both elements of local public administration in Romania, and of representative democracy.

An approach to the theme of the political migration, whether in relation to parliament or local public administration, is very important for a country's political and administrative "health", and also for the rules and principles of representative democracy and of elective democracy.

Therefore, we believe it is necessary to analyze the effects that the enactment of Government Emergency Ordinance no. 55/2014 produced, the solutions the Constitutional Court proposed, and the impact of this phenomenon on society and political life of Romania. By the research we performed, we draw attention to the issues of political decisions defeating the citizens' decisions, while the principles and values of democracy and the rule of law are put between brackets, so that the governing bodies can satisfy political party interests.

To perform a thorough research of the proposed objectives, we studied the specific legislation on local public administration in relation to the topic in analysis, the jurisprudence of the Constitutional Court, documents issued by international organizations, politicians' viewpoints.

Since Law no. 393/2004 ceased political migration in local local public administration in Romania, the enactment of Government Emergency Ordinance no. 55/2014 brought back to debate this negative phenomenon. The theme of our research is a topical issue; the Romanian Parliament failed to give a legislative solution to this problem which was considered by the Constitutional Court. Almost all studies in this field have focused on political migration phenomenon within the Romanian Parliament, but not within local public administration, which is why our

study is one of the few at the moment, dealing with the subject.

2. Study background and Constitutional Court's position

The object of the unconstitutionality exception occured from the provisions of the Law approving Government Emergency Ordinance no. 55/2014 on measures in local public administration[1].

The initiators[2] of th unconstitutionality objection presented a number of arguments to indicate the Court that the emergency ordinance issued by the Government is unconstitutional.

2.1. Government breached Article 115 paragraph (4) of the Constitution

Government breached Article 115 paragraph (4) of the Constitution, as the Ordinance was adopted although there was no extraordinary or emergency situation, whose regulation could not be postponed.

From the explanatory memorandum of the emergency ordinance it results that it was issued for 2 main reasons, namely that local public administration authorities encounter difficulties in establishing political majorities to ensure political stability after the reorganization of some of the political parties, political alliances, and electoral alliances, and that it is necessary to remove the blocking of the alternate members' right to be validated, following the dissolution of the political or electoral alliances whose candidates they were.

With regard to these arguments, the authors of the unconstitutionality objection showed that "as long as the deliberative bodies of the local public administration meet and discuss projects, a majority inevitably forms either in favour or against the project under discussion; the fact that the Government intends its decisions to have a certain direction cannot be a reason for enacting an emergency ordinance, otherwise Article 121 of the Constitution is violated". In the notification it was also included the following provision: "there is no connection between alternate members and local elected officials in place at the date of issuing of the emergency ordinance under review, moreover it is unconstitutional to introduce a new category of elected members, namely the alternate members, into the law regulating the election of the local public administration officials, since the electoral rights cannot be established by the means of an emergency ordinance".

In relation with this point of the objection of unconstitutionality, the Romanian Government sent the Constitutional Court the following reply: "In its analysis on constitutionality, the Constitutional Court must consider - *politically* and *legally* - the existing facts at the time of issuing Government Emergency Ordinance no. 55/2014". This refers to the fact that some local elected officials left factually and legally "the construction which, by means of the citizens' vote, allowed them to have access to public function, that is the Social Liberal Union. By adopting this emergency ordinance, the Government claims that the local elected officials were allowed to return to the normal legal framework without being "threatened" that they would lose their mandate. Thus, the negative impact on the functioning of the local public authorities, which was generated particularly by the changes in the political majority resulting from 2012 election, was removed".

In the Government's view, "the dissolution of the alliance created the need to regulate the following phenomenon: some of the local elected officials, who were part of the alliance that obtained mandates by assuming the common political program and the commitment to the electorate, found themselves in the totally unreasonable situation that, after the splitting, they would become opponents of the obligations they had electorally assumed, as they were forced to breach the mandate they had obtained". The Government believes that *"it was absolutely necessary either to enable the elected ones choose between implementing the political program they assumed by the time of the elections, or remain in the party in which they are formally enrolled (that leading to the abandonment of the political program which was originally assumed), or act as independents"*.

The Government also claimed that: "in order to ensure the freedom of association, the freedom of expression and the freedom of conscience to the local elected officials who are being in the above mentioned hypothesis, it was necessary to enact such an ordinance, and the loss of the mandate, for reasons of internal regulations and discipline of a political party, has no reason under Article 53 of the Constitution".

The President of the Chamber of Deputies[3] submitted the Constitutional Court a letter[4] indicating that the criticized emergency ordinance does not contradict Article 115 paragraph (4), of the Constitution, *as it promotes solutions to improve the efficiency of the local public authorities*, and emergency *refers both to the need of removing the*

[2] The notification was made by senators and deputies of the National Liberal Party. Additional information is to be found information here: *http://www.senat.ro/legis/PDF%5C2014%5C14L617SC.pdf*

The Expert Forum Report, "Political Errors in 2014. What to do?", states that out of the 3,180 mayors, a number of 552 mayors migrated (17.4%), out of the 40,022 local councillors, a number of 4,607 local councillors migrated (13.8%), and out of the total of 1,338 county councillors, a number of 184 county councillors (11.5%) left the party on whose lists they were included as candidates. The main party beneficiary of political migration was the Social Democratic Party. For details: *http://expertforum.ro/wp-content/uploads/2015/01/Raport-EFOR_Erorile-politice-din-2014.pdf*

[3] We need to note that the President of the Senate did not submit the Constitutional Court any position on the issue.

[4] Letter 2/5786, 15 December 2014

blockages in meeting the legal conditions required to validate the decisions, which are meant to ensure political stability following the reorganization of some of the political parties, political or electoral alliances, and removing the blockage of the alternates' right to be validated following the dissolution of the political or electoral alliances whose candidates they were[5].

By analyzing the objections of the initiators, and Government and the President of the Chamber of Deputies' viewpoints, the Constitutional Court concludes, in relation to the breach of Article 115 paragraph (4) of the Constitution, that: *"the whole explanatory memorandum of the emergency ordinance under analysis focuses on the existence of some "political rupture" that occurred during mandate of local authorities, and on the need to remedy the adverse effects thereof. In other words, it is about the necessity of issuing an emergency ordinance to create the needed framework so that political majorities, within local public authorities other than those resulting from the elections, can coagulate. Such a reason, no matter how it is expressed, cannot be considered an extraordinary situation which may require the adoption of an emergency ordinance. Setting up or breaking political alliances belong to the normal democratic exercise and they cannot justify measures which, directly and brutally, change the political configuration of the local public authorities and alter the voters' will. The fact that the majorities initially established, by the means of the political alliances, are now subject to change is not an extraordinary situation within the meaning of Article 115 paragraph (4) of the Constitution. Also, the need for a political advantage so that certain decisions of local public administration authorities can be adopted, regardless of political party benefiting from this political advantage, is not an extraordinary situation within the meaning of Article 115 paragraph (4) of the Constitution"*.

Also, according to the Constitutional Court judges, *"the fact that a political alliance, which presented itself in elections with joint lists of candidates, ceases its existence does not mean that the local elected officials or the alternates, who stood on its lists, lose their political affiliation - they remain members of political parties that made up the alliance. (...) It is obvious that the real purpose of the emergency ordinance is to guide the local elected officials in a certain policy direction and to enable the creation, in this way, of a new political majority, which, of course, cannot be considered an extraordinary situation in the meaning of Article 115 paragraph (4) of the Constitution"*.

2.2. The emergency ordinance contradicts Article 115 paragraph (6) of the Constitution

According to the authors of the notification, the ordinance contradicts Article 115 paragraph (6) of the Constitution as it affects the fundamental institutions of the state, reference being made, in this respect, to Articles 121 and 122 of the Constitution. They said that "the emergency ordinance affects the legal status of the political parties and induces instability in local public administration, all these elements "affecting" the proper functioning of these fundamental institutions".

In relation to this count, the Government stated that the purpose of the ordinance was to not affect the fundamental institutions of the state, so that they can "function in accordance with the political program which the electors assumed and voted when they voted a political alliance, but to avoid disruption in local public administration authorities". In the view he expressed, the President of the Chamber of Deputies consideres that none of the provisions of Article 115 paragraph (6) of the Constitution are being violated, given that the criticized emergency ordinance establishes a suspension, for a period of 45 days, of the legal effects under Article 9 paragraph (2) letter h^1) and Article 15 paragraph (2) letter g^1) of Law no. 393/2004 concerning the Statute of the local elected officials, while local and county councillors, and candidates who were declared alternates, could express only once their written option on whether they wished to become members of a certain political party or national minority organization, or to become independents, without them losing the status they acquired following the elections. Such a legislative solution does not contradict Article 16 of the Constitution, as it is an expression of the right to free association, under the Constitution, and under the Universal Declaration of Human Rights, and the Charter of Fundamental Rights of the European Union.

The Court noted that the mayor, city council and county council, which are regulated by Articles 121 and 122 of the Constitution, are fundamental institutions of the state within the meaning of Article 115 paragraph (6) of the Constitution, though the normative act under analysis does not make provisions concerning their constitutional status. According to the Constitutional Court, "the emergency ordinance does not make provisions in relation to the status of these institutions, but it makes provisions on the possibility

[5] It is interesting, however, the opinion that the President of the Chamber of Deputies, Valeriu Zgonea, expressed in an interview, a few months ago: *"I personally, as President of the Chamber of Deputies and as vice-president of Social Democratic Party, think that the debate and adoption of the ordinance was a mistake, a mistake for Romania of 2014, a democratic state, and that it was mandatory and urgent by means of an ordinance, because of the tense situation we had in councils. Today, we must make a law to reject that ordinancer, as requested by the Constitutional Court, but by being fair and observe the provisions of the Constitution. I think that the people who opted in that period of 45 days, should not lose their mandates."- http://www.mediafax.ro/politic/interviu-zgonea-psd-sustine-alegerea-primarilor-intr-un-tur-ordonanta-55-a-fost-o-mare-greseala-video-13784679.*

which mayors, presidents of county councils, local councillors, county councillors, and candidates, who were declared alternates, have as to express only once their written option on whether they wished to become members of a certain political party or national minority organization, or to become independents, without them losing the status acquired following the elections, and the political configuration of these institutions will not be regarded as being part of their constitutional status".

At this issue of the notification, the Court did not find that Article 115 paragraph (6) of the Constitution was breached.

2.3. Breach of Article 147 paragraph (4) of the Constitution

The authors of the notification noted in their request to the Constitutional Court that the emergency ordinance *breaches Article 147 paragraph (4) of the Constitution in what concerns the binding character of the Constitutional Court's decisions, since it does not comply with its jurisprudence*.

In the Government's view, the Constitutional Court is not able, by itself, to show the absolute and final constitutionality of a legal text, so that the use of the *per contrario* argument has no legal power.

The Court stated that, since the time of introduction of Article 9 paragraph (2) letter h^1, and of Article 15 paragraph (2) letter g^1 of Law no. 393/2004, these were subject of constitutional review. In the case under review, the Constitutional Court stated the following issues:

- Concerning Article 9 paragraph (2) letter h^1)[6], its objective is "to prevent the political migration of the local elected officials from one political party to another, and to ensure stability in the local public administration so that it can express the political configuration as it resulted from the voters' will.

Under its jurisprudence[7], the Court reiterated that "the electorate votes a person to perform a public function in local public administration, considering the political program of the party whose candidate he is at the time of the elections and which he will promote during his mandate as local or county councillor. *However, since a local elected official is no longer a member of the party on whose list he was elected, it means that he no longer meets the requirements of representativeness and legitimacy needed to fulfill the political program for which the voters opted. Therefore, to keep him in the public function is no longer justified."* As the Court noted on another occasion: *"Preserving the position as a local or county councillor in the event that he no longer belongs to the party on whose list he was first elected would mean to convert his mandate in a mandate as an independent or possibly belonging to another political party which the councillor joined later. However, under the current electoral system that makes provisions for voting a list of candidates for municipal and county councillors, this hypothesis cannot be accepted because the running mandate, which is being continued in this way, no longer meets to the original will of the electorate, which gave its vote to a candidate by taking in consideration the party that, at that time, he represented*"[8].

- Concerning Article 15 paragraph (2) letter g^1 of Law no. 393/2004[9], the Court stated in its previous decisions that the reasoning of this (*article – our note*) was the fact that, following his resignation from the political party whose candidate he was, "the mayor lose consecutively also the voters' endorsement, that was initially gained by virtue of his candidacy on a candidate list supported by a certain political party during election campaign and which finally the electors voted." The lawmaker opted for such a regulation aiming to reduce the political migration and the political opportunism, phenomena whose existence has been proved by the reality of the past few years. *"The change during the mayor's mandate of his political affiliation might affect the interests of the community itself, on the one hand by disturbances and instability which it could generate in the local public administrative structure through which he exercises the powers the law vested him with and which may affect the effectiveness of his actions in performing his powers and, on the other hand, by the lack of certainty regarding the fulfillment of the objectives promoted during the election campaign, by whose virtue the electors voted him."*[10]

We need to note that Law no. 393/2004 concerning status of local elected officials includes an oversight, namely it states that "*termination of position as a mayor, before the expiry of the normal mandate, may also occur by losing, after his resignation, of his membership of political party or national minority organization on whose list he was chosen*", although elections, by means of which mayors and presidents of county councils are elected, is uninominal voting. Regardless of the used voting system, candidates are nominated by political parties. According to electoral regulations, the candidacies may be submitted by the political parties, individually or united into a political or electoral alliance. At the time of the elections, regardless of how they were proposed, candidates present the voters a political program that they wish to implement in their communities. These programs consequently reflect the political party and the candidate's vision for the future in relation to the

[6] Article 9 (2) h^1 provides: " *The position as a local or county councillor ceases normally before the expiry of the normal duration of his mandate in the following cases: (...) loss of membership of political party or national minority organization on whose list he was elected*".

[7] Decision no. 1167 on 11 December 2007, published in the Official Gazette of Romania, Part I, no. 4, 3 January 2008.

[8] Decision no. 280 on 23 May 2013, published in Official Gazette of Romania, no. 431, Part I, on 16 July 2013.

[9] Article 15 paragraph (2) letter g^1 states that: "Position as a mayor terminates before the expiry of the normal mandate, under the following circumstances: (...) *losing, after his resignation, of his membership of political party or national minority organization on whose list he was chosen".*

[10] Decision no. 153 on 12 March 2013, published in Official Gazette of Romania, no. 352, Part I, on 14 June 2013.

problems and practical solutions to tackle the community issues.

In the case under review, the Court argues that *the penalty of mandate losing*, regardless of how membership of a political party is lost (by resignation or exclusion), refers to "*only local and county councillors*, who are elected within *an election list*. Therefore the votes by the electors were for the political party, namely for the list it supported, and not for the individual candidates, which lead to the political configuration of the local council / county council reflected in the number of seats obtained by the political parties. Thus, the legislative solution provided by Article 9 paragraph (2) letter h[1]) of Law no. 393/2004 is a requirement arising directly from the provisions of Article 8 paragraph (2) of the Constitution, a contrary legislative solution - which should not tie the termination of local or county councillor mandate with the loss of membership of a party or national minority organization on whose list he was elected – that being acceptable only in case the local and county councillors' election system changes".

The Court also stated that: "due to the lack of regulations for another election system, the Court can only find, in the present case, a violation of Article 147 paragraph (4) of the Constitution. However, the situation is different in terms of mayors and presidents of county councils, for which uninominal voting is provided, as the Court reasoning has considered the constitutionality of a way of mandate loss (resignation from the political party), without though drawing the conclusion that the lawmaker could not remove or modify provisions concerning this way of mandate loss. Thus, concerning the local or county councillor, termination of mandate, following the loss of membership of the political party on whose list he was elected, is a direct and implicit requirement of Article 8 paragraph (2) of the Constitution. Not the same conclusion can be drawn in relation to mayors and presidents of county councils, for which the lawmaker opted for the loss of mandate in case of resignation from the political party, such an option not arising (due to the uninominal voting by means of which they are elected), implicitly or directly from Article 8 paragraph (2) of the Constitution".

According to most constitutional judges, "the constitutional text does not necessarily require a legislative solution", leaving the lawmaker the possibility to tie or not the keeping of mandate of the elected ones by uninominal voting with the loss of membership of the political party by resignation. The Constitutional Court finds that the emergency ordinance breaches Article 147 paragraph (4) of the Constitution only in relation to local and county councillors.

In a separate opinion that two of the judges of the Constitutional Court expressed about the electoral lists which the Social Liberal Union presented in 2012 local elections, it says: "Candidates, although were nominated also by specifying the political party to whom they belonged, their candidacies belonged to the Social Liberal Union's election list".

The previous jurisprudence of the Constitutional Court strengthens the arguments the two judges expressed:

- *Decision no. 273 on 24 February 2009* - "citizens, through their votes, express choices between different political programs of the parties participating in the elections and less choises about the candidates, in relation to their features, merits or promises for which they have no limits in making them during the election campaign"[11];
- *Decision no. 280 on 23 May 2013* - "the elector's vote expresses his option for a political party program and not for a particular candidate";
- *Decision no. 915 on 18 October 2007* - "ensuring stability within the local public administration to express the political configuration, as it resulted from the will of the electorate".

The Constitutional Court thus expresses regarding the loss of mandate by local and county councillors who left the political party which proposed them and allows the lawmaker to decide in respect of mayors and presidents of county councils. However, the Constitutional Court did not take into consideration that both mayors and presidents of county councils were nominated by a political party or an electoral alliance or a political alliance and presented the voters a particular political program that reflected their vision on the community.

On the other hand though, we must not forget that the local elected officials, who left the political formations which proposed them as candidates, did that based on a legal document issued by a Romanian state authority, namely the Romanian Government, who invoked the blockages in the lawmaker and local executive bodies, which prevented local elected officials to implement the political programs they presented the citizens in 2012 elections.

Perhaps those local elected officials preferred to "abandon" the parties which supported them in order not to "abandon" the goals which they proposed the citizens of their communities.

Political and administrative life from Romania is highly tumultuous, and the political parties have always tried to come to power through setting up electoral and political alliances that defied political logics or ideology, but which met the parties' interests. In support of our statements, we give a few examples: Liberal Democratic Party + Social Democratic Party (December 2008 - October 2009) and Social Democratic Party + National Liberal Party + Romanian Popular National Union + Conservative Party (February 2011 - February 2014).

[11] Decision no. 273 on 24 February 2009, published in Official Gazette of Romania, no. 243, Part I, on 13 April 2009.

In our opinion, regardless of the solutions to be found by the lawmaker, major issues for Romanian politics and administration remain: *political instability, inconsistency in implementation of projects for local communities, lack of a solid political culture, lack of dignity and honour, a governing system supporting political parties or groups' interests, a legislation that both allows the manifestation of harmful phenomena such as political migration and, at the same time, is unable to address the society evolution and the changing demands of democracy and the rule of law.*

And in this tumult, the following question remains: *what happens to Romanian citizens' votes, to their aspirations which they expressed at the time of the voting, which were hijacked by changing the political "switch" at a given time?*

The solution to all these problems should coagulate efforts of many forces in society: *The political parties* are those ones who, through their elected representatives, create different structures of power, *the parliament* is the one that makes regulations to govern the state, and last but not least *the citizens*, because they are the recipients of the government decisions, and those ones who, by their votes, determine the configuration of the public authorities.

Unfortunately, the ordinance opened again, although for only 45 days, Pandora's Box. If, by issuing the ordinance, they wanted to solve the real problems of the Romanian administration, this thing did not happen though.

But both those who came to power and the opposition have addressed this issue from the viewpoint of the moment interests. The speeches and solutions are still demagogic for both political camps. The core problem remains, because it is determined by the quality of the political class.

Putting parentheses to the provisions of Article 9 paragraph (2) letter h^1 and of Article 15 paragraph (2) letter g^1 of Law no. 393/2004, for 45 days, even for a noble purpose - the proper administration of state affairs - did nothing else but hijacked the will the electors expressed in 2012.

3. Conclusions

By the research we performed, we analyzed the Constitutional Court decision with regard to a negative phenomenon that affected the smooth conduct of the public affairs, namely the possibility given to local elected officials to move to a different political party than the one whose candidates they were at 2012 local elections.

When year of this study, the issue under review has not found legal regulation. Political transits issue has always been a topic of particular interest to the public.

When writing this study, the problem under review was still not solved by means of a legal solution. Political migration has always been an interesting subject mainly to public opinion. Although the political class disagrees with this phenomenon, when it comes to taking constitutional[12] or legislative[13] actions in this sense, everything remains suspended in time. Citizens are tired of seeing how the will they expressed in national elections is changed by the elected officials' will. The citizens' sovereign will, which was expressed at the time of voting, is negotiated during mandates and, unfortunately, negotiation does not aim at the citizens' welfare, but at the elected officials' welfare.

The phenomenon of political migration dishonors the politicians and demobilizes the electorate, who wonders: What is the point of voting if my vote does not count? I wonder whom to choose, if

[12] In 2013, in a proposal to revise the Constitution, the Parliamentary Committee proposed a formula to stop political migration in case of parliament members, as follows: "Article 70 is amended and it will have the following content: "The mandate of Senators and Deputies: (1) Senators and Deputies shall begin their mandate on the date of the Assembly of the Chamber to which they belong, provided that their election is validated and their oath is taken. The oath shall be established by organic law. (2) The Deputy or Senator function shall cease: a) on the date of the assemblies of the newly elected Chambers; b) in case of resignation; c) in the case of disenfranchisement; d) in case of incompatibility of political function; e) on the date of resignation from the political party or political group from which he was elected or *on the date of its enrolling at another political party or a political formation*; g) in case of death."

In the Constitutional Court Decision no. 80/2014 (Official Gazette no. 246/04.07.2014), the Court declared, however, that the amendment of the provisions of Article 70 paragraph (2) letter e) "suppresses a guarantee of fundamental rights and freedoms - representative mandate stated through Article 69 of the Constitution, by violating the review limits set by art 152 paragraph (2) of the Constitution. The Court arguments were as follows: *"(...) under this constitutional Article, responsibility for a particular policy option, evidenced by resignation from the political party from which he was elected, or by enrolling at another political party can only be a political one, at most moral, but under no circumstances legal. Therefore, the sanction of losing a parliamentary mandate affects significantly the interests of the voters they represent and ignores one of the parliamentary democracy foundations – the representative mandate. The provisions of the proposed law are designed to restrict the freedom of parliament member to join a parliamentary group or another, or to become independent in relation to all parliamentary groups. However, this freedom of choice should act according to one's own political affinities, and according to the possibilities that different parliamentary groups offer, in order to make use of the electorate's interests, as representative mandate is a guarantee of promoting and respecting citizens' fundamental freedoms and rights of in parliamentary democracy.*"

In support of its decision, the Court also presented the provisions of the Report on the imperative mandate and similar practices by the Venice Commission, at its 79th plenary session, on 12 to 13 June 2009. According to the report, *"One of the problems in modern democracies, from the point of view of parliamentary stability and fidelity to voters' choices is the practice of elected representatives abandoning parties in whose lists they were elected. [...] Once elected, deputies should be accountable primarily to the voters who elected them, not to their political party. This flows from the fact that they hold a mandate from the people, not from their party. The fact that a deputy has resigned from or has been expelled from the party should therefore not entail their expulsion from parliament."*

(For details, please visit: *http://www.venice.coe.int/webforms/documents/default.aspx?pdffile=CDL-AD%282009%29027-f*)

[13] Law no. 393/2004.

the one I choose says that today he is from a right-wing party, but tomorrow he would claim that he is from a left-wing party, or vice versa?

In our view, not even the Constitutional Court succeeded in giving a solution to stop this phenomenon. In our opinion, the Court judges have even suggested a differentiated approach, an unequal treatment, to the issue of political migration when political migration focused on local and county councillors, and when it focused on mayors or presidents of county councils.

This study is in the line the authors followed in conducting their previous research of disapproving this harmful phenomenon for the political class in Romania and extremely harmful to any democracy.

We expect this study to be one more warning, which we bring to the attention of the policy makers to enact regulations that take into account firstly the causes, and secondly the effects of this phenomenon.

Also, through this study, we would like to remind the Romanian citizens that thay are part of the equation of power, by the votes the give, at various times, to political parties and their candidates at elections, therefore, deeper and more radical response to these phenomena which destroy the idea of representation, is required.

In the face of such malformations of democracy, the voice of demos in Romania is too weak, and memory too short.

As a conclusion of the research study, a reflection of Winston Churchill's words: "*Some people change party for the sake of their principles, other change their principles for the sake of a party*."

THE RIGHT TO A CLEAN ENVIRONMENT. INTERNATIONAL RECOGNITION OF A HUMAN RIGHT TO A CLEAN ENVIRONEMENT BY ECTHR JURISPRUDENCE

Oana Maria HANCIU[*]

Abstract

European Convention on Human Rights (ECHR) does not specifically recognize a right to a clean environment, nor speaks specifically about environmental issues. However, there are many cases in the ECtHR jurisprudence which indirectly have a linkage with environmental protection.

Often, throughout its decisions, ECtHR considers a positive obligation of States to take all necessary measures to protect human life and thus to provide a suitable environment for human living.

The paper analyses the linkage between human rights and the international environment law and the role of ECtHR jurisprudence in enshrining an international human right in the field of environmental protection.

Keywords: *right to a clean environment, environmental protection, positive obligation of States, ECHR, international human right.*

1. Introduction

In recent years the issue of environmental protection has become of international interest. We must say that at international level and also at European level environment is of general interest. This development of international environment issues led to an increase in environmental cases in the national courts and international courts.

The first attempts to give individuals a human right to a clean environment and to enforce it in courts came in the 1070s, when the Council of Europe draft a Protocol to the European Convention for the Protection of Human Rights and Fundamental Freedoms of 1950, dealing with the individual right to a clean environment and unimpaired environment. The efforts failed because this elaboration was not politically acceptable. In 1985, after various debatesat academic and political level, European Union adopted a directive which provided for an environment impact assessment for public or private projects which were likely to have a significant impact on the environment[1]. Later the directive was replaced by a new directive[2] which established public access to information on environment as compulsory.

On this background, it has been suggested by the doctrine that we already can speack about an international human right to a clean environment[3].

Recently, the three regional Human Rights Courts[4] had been involved in environmental protection cases as a consequence of the environmental issues that affect more and more humans.

This paper will focus on the jurisprudence of the European Court of Human Rights (ECtHR) which, although does not specifically recognize a right to a clean environment, nor deals specifically with environmental issues, solved many cases indirectly linked to environmental protection. The increase in the ECtHR environmental case law is due to the fact that the exercise of certain Convention rights may be hampered by the existence of damage to the environment and exposure to environmental risks.

Due to the degree of flexibility in interpreting the admissibility requirements set out in Article 34 and Article 35 of the Convention, the Court case law indirectly supports international recognition of a human right to a clean environment.

The essential admissibility requirements concern the status of victim and he exhaustion of domestic remedies, that is within a period of six months from the date on which the final decision was taken. Above all, the case law submitted to the Court must be in regard to human rights violations.

The Convention had been interpreted by the Court in a very dynamic and evolving way[5], so that the linkage between human rights and the environmental protection determine in an indirect way the qualification of many cases.

2.The admissibility requirements before the ECtHR

According to Article 34 the applications must be submitted by a person, a nongovernmental

organization or a group of individuals. The essential condition is that the claimant should be a victim of a violation by one of the High Contracting Parties of rights set forth in the Convention or in the Protocols thereto.

Article 35 (1) of the Convention establishes the admissibility criteria, most of them being procedural, like, the six month[6] and the exhaustion of all domestic remedies.

Article 35 (3) gives more admissibility criteria such as, manifestly ill-founded applications[7], and no significant disadvantage[8], criteria that *require the Court to assess the merits of the case at this preliminary stage*[9].

Regarding the rules of admissibility, the Court spelt out in many decisions that, those rules must be applied with some degree of flexibility and without excessive formalism[10].

As the Court stated in the decision in Georgia v. Russia (II), the latter criteria apply only to individual applications , not to inter-state cases.

The former European Commission of Human Rights pointed out that the applicant cannot complain as a representative for people in general, because the Convention does not permit such an *action popularis*[11]. There are though exceptions in this matter,[12] and in some decisions the Court stated that an NGO might act in certain circumstances as a representative for actual victims.

Paragraphs (2) and (3) of the Article 35 of the Convention stated that apart from the conditions from paragraph (1) the admissibility criteria required for the admission of an application are the conditions *ratione: materiae, personae, loci and temporis*.

The compentence *rationae personae* for an application has to be brought against a High Contracting Partie and that the claimant to have the so called victim status. This is a *sine qua non* condition. The Court established that in order that the Convention to be more effective, the application can be submitted not only by the direct victim, but also by the indirect victim.

The compentence *rationae materiae* refers to the fact that the Court will examine only those application that are concerning the rights and the freedoms contained in the ECHR and its Protocols. An exception in this case is when a particular right which is not contained in the Convention is still protected by the Convention conditions, when this right is affecting in an indirect way rights covered by it. It is the case of environmental rights, which even if there are no setteled by the Convention, the breaking of this rights affect human rights.

The competence *rationae loci* means that the applicant must be within the jurisdiction of a contracting state in respect of Article 1 of the Convention.

The last compentence, *rationae temporis* is in accordance with general principle of international law, principle of non-retroactivity of treaties, for this purpose the Court does not has the competence to examine complaints that took place before the entry into force or the ratification of the Convention by a High Contracting Partie.

3. International recongnition of a human right to a clean environment by ECtHR jurisprudence

European Court of Human Right had recognized by her case-law the relationship between the protection of human rights law and the environment and that in an indirect way environmental degradation affects human rights. This relationship became a concern of the international community, which realized that environment degradation affects the wholl community and as a consequence their rights to a clean environment.

The ECHR is not meant to cover and guarantee the right to a clean environment. However, the Convention and her Protocols indirectly ensure a protection of environmental matters, in this respect the numerous cases before ECtHR creates a real and effective environmental jurisprudence.

The doctrine had stated that individual′s right to a clean environment has not a conventional guarantee other than by attraction by another right and under its support[13].

The Court stated in Loizidou v. Turkey, paragraph 71, *that the Convention is a living instrument which must be interpreted in the light of present-day conditions is firmly rooted in the Court's case-law.*

Even if the violation of the right to a clean environment is not protected by the Convention, because it cannot be invoked directly to the Convention, can be the cause of violation of other rights that are guaranteed by it[14].

In recent years, the Court has examined an impressive number of complaints in which individuals have spelt out that a breach of one of their Convention

[6] According to Protocol 15 of the Convention, when it will be ratified the period of si months will be reduced to four.
[7] Preliminary examinationof the merit of an application decides if the applicant has failed or not to substantiate his allegation.
[8] The Court has stated that the violation of a right must attain a minimum level of severity to be addimited by an international court.

[14] Mircea Dutu, Dreptul international al mediului, Ed. Economica, Bucharest, 2010, p. 159.

rights has resulted from adverse environmental factors[15].

There are a number of human rights that have relevance in the field of environmental protection, and the ECtHR jurisprudence had guaranteed the protection of environment in case-law matters that related to the environment which could affect the right to life, ,the right to respect for private and family life as well as the home, the right to an effective remedy, the right to property and the right to the peaceful enjoyment of one's possessions.

3.1. Right to life and the environment

The right to life contained in Article 2 confers a positive obligation on States to take all the necessary measures to safeguard human life.

The positive obligation on States may apply in the context of dangerous activities, such as the case of industrial activities, which by their very nature are dangerous, such as the operation of waste-collection sites[16].

In the case of Oneryıldız v. Turkey the Court found the violation of Article 2 of the Convention. The facts that determinate such decision were that a methane explosion occurred at the municipal rubbish tip in April 1993, killing thirty-nine people who had illegally built their dwellings around it. Nine members of the applicant's family died in the accident. The applicant complained in particular that no measures had been taken to prevent an explosion despite an expert report having drawn the authorities attention to the need to act preventively as such an explosion was not unlikely.

The Court found that there had been a violation of Article 2 of the Convention *in its substantive aspect, on account of the lack of appropriate steps to prevent the accidental death of nine of the applicant's close relatives*. Regarding its procedural aspect, the Court held that *had been a violation of Article 2 on account of the lack of adequate protection by law safeguarding the right to life.*

On the other hand, in L.C.B. v. the United Kingdom, the applicant's father had been exposed to radiation while serving as a catering assistant in Royal Air Force at Christmas Island during four nuclear tests in 1950s. The applicant was born in 1966 and in 1970 was diagnosed with leukaemia. Her medical records suggest a possible cause - „ Father Radiation".The applicant alleged that the State failed in warning and advise parents about the impact of nuclear test on their future children and also for the State failure to monitor her health. The Court considered that there is no violation of Article 2 on the basis that the applicant had not established a causal link between the exposure of her father to radiation and her own suffering from leukaemia.

3.2. The Right to respect for private and family life, for home and environment.

Althought environment degradation does not involve a violation of Article 8 of the Convention, in an indirect way environmental factors can directly and seriously affect private and family life.

Article 8 of the Convention protects the ,,right to respect" various interests and implies an extensive right to environmental matters. The State has the positive obligation to adopt measures the protection of the rights in this article.

In Kyrtatos v. Greece case the applicants denounce an illegal act of urban planning that destroyed a swamp protected under the Greek Constitution. Court found that there was no violation of Article 8 on the consideration that assuming that the environment has been severely damaged by the urban development of the area, the applicants have not brought forward any convincing arguments showing that the alleged damage to the birds and other protected species living in the swamp was of such a nature as to directly affect their own rights under Article 8 § 1 of the Convention. It might have been otherwise if, for instance, the environmental deterioration complained of had consisted in the destruction of a forest area in the vicinity of the applicants' houses, a situation which could have affected more directly the applicants' own well-being.In consideration of the second limb of the complaint, the Court found that the disturbances coming from the applicants' neighborhood as a result of the urban development of the area (noises, night-lights, etc.) have not reached a sufficient degree of seriousness to be taken into account for the purposes of Article 8.

In Tătar v. Romania, the applicants, father and son, complain that the technological process used by a company in their gold mining activity put their lives in danger because an important part of company activity was located close to their homes. In January 2000 an environmental accident occurred at the company. A United Nation report showed that a dam had breached, releasing an important quantity of sodium cyanide and contaminated tailings water into the environment. The applicants also alleged that the authorities did not take any action even if one of the applicants, lodged numerous complaints about that their lives were threatened (in particular the health of his asthmatic son). In this case the Court held that there had been a violation of Article 8 of the Convention, on the consideration that the Romanian authorities had failed in their duty to assess, to a satisfactory degree, the risks that the activity of the company operating the mine might entail, and to take the necessary measures in order to protect the rights of those concerned, to respect their private lives and homes, and more generally their right to enjoy a healthy and protected environment. The Court pointed out that pollution

[15] Manual on Human Rights and the Environment, Council of Europe Publishing, Strasbourg, 2012, p.8.
[16] Oneryıldız v. Turkey [ECHR], paragraph 71.

could interfere with a person's private and family life by harming his or her well-being, and that the State had a duty to ensure the protection of its citizens by regulating authorizing, setting-up, operating, safety and monitoring of industrial activities, especially activities that were dangerous for the environment and human health.

3.3. The Right to an effective remedy and the environment

Article 13 of the Convention speaks about the cooperative relationship between the Convention and national legal system. Article 13 establishes the States obligation to protect human rights and gives to individuals the guarantee of effective remedy if the human rights shall be violated.

In Kolyadenko and Others v. Russia, the applicants lived near the Pionerskaya river and water reservoir. They were affected by a heavy flash flood in the town Vladivostok because the authorities had released the water without any prior warning and failed to maintain the river channel. They also complained that their homes and property had been severely damaged. The Court held that there had been a violation of Article 2 of the Convention in its substantive aspect and in his procedural aspect, because Russia had failed in its positive obligation to protect the relevant applicants live and that there was not a judicial response to this event for the accountability of the authorities in charge. The Court held that there was a violation of Article 8 of the Convention and of article 1 of Protocol no. 1 (protection of property) of the Convention finding that the responsible authorities had failed to do everything in their power to protect the applicant's rights. About Article 13 of the Convention the Court held that there had been no violation on the fact that the outcome of the proceedings provided by Russian law had been unfavorable for the applicants, and they could not demonstrated that the available remedies had been insufficient for the purpose of Article 13.

3.4. Protection of property and the environment

Article 1 of Protocol No. 1 to the Convention guarantees the right to the peaceful enjoyment of one's possessions. The Court has found that the provisions of Article 1 of Protocol No. 1 apply in cases concerning environmental issues based on the premise that the protection of one's possession needs to be practical and effective.The general interest in the protection of the environment can justify certain restrictions by public authorities on the individual right tothe peaceful enjoyment of one's possessions[17].

It is the case of N.A. and Ors. V. Turkey were the Court held that had been a violation of Article 1 of Protocol no. 1 to the Convection on the consideration that the applicants, even if they had acquired the disputed plot of land in good faith, had not received any compensation for the transfer of their property to the Public Treasury or for the demolition of the hotel

4. Conclusion

Environmental protection is in a close relationship with human rights protection and this was recognized by human rights jurisprudence.

Through the jurisprudence of ECtHR has been recognized an individual right to a clean environment, derived from the circumstances in which Articles 2, 8, 13 of the Convention and Article 1 of Protocol no. 1 to the Convention have been applied.

The developing environmental issues had given reason for ECtHR to expand her jurisprudence in this sense with the condition that the violation of the rule of law should be held only if the applicant is sufficient affected and there is a direct link between the alleged victim and the violation. Also the applicant should have a legitimate interest, meaning that the environmental damage should have a direct impact on him.

The environment protection cannot be separated by the concept of human rights. It was demonstrated that environmental damage has a great impact on humankind, especially in connection with the right to life, right to health, the right of property.

The challenges of the future in protecting the environment and the more and more obvious fact that environmental problems affect in a direct way human rights will determine an intensification of environmental jurisprudence and more evident international recognition of the human right to a clean environment not only by ECtHR but also by others international courts.

Considering this facts it is necessary that the States and international organisations be more receptive to an enforcement of the right to a clean environment, considering the possibility of a new Protocol to the ECHR that regulates directly a human right to a clean environment.

As the Supreme Court of Costa Rica said, any doubt about the interpretation or application of a law should be resolved in favour of nature protection – *in dubio pro natura*[**].

THE ROLE OF NON-GOVERNMENTAL ORGANISATIONS IN CREATING STANDARDS IN INTERNATIONAL ENVIRONMENTAL LAW

Oana Maria HANCIU*

Abstract

The participation and influence of non-governmental actors in areas of international environmental governance has increased tremendously over the last decades.

Some of these non-governmental organization (NGOs), like International Union for Conservation of Nature, World Wide Fund for Nature or Greenpeace, have a global character and an intense activity in promoting environmental protection. Of great importance is the fact that some NGOs have gained a consultative status in international and regional organizations influencing the process of drafting and adopting norms of international environmental law.

The study analyses the contribution of NGOs in international environmental field and their essential role as ,,guardians of the environment" in promoting and respecting the provisions of international environmental agreements, in particular of Aarhus Convention.

Keywords: *non-governmental organisations, international environmental governance, guardians of the environment, Aarhus Convention, NGOs consultative status.*

1. Introduction

Non-governmental organizations (NGOs) had a very important influence on environmental international law. NGOs are not formed by governments initiative, and there are not governments representatives either., nor an organization formed for a profit purpose..

Antonio Donini wrote about United Nations that ,, The Temple of States would be a rather dull place without NGO."[1] His observations expressed the reality that NGOs existence is vital for today international society.

The history of NGOs is dating for more than 100 years. One of the first NGOs that acted in environmental matters was The Society for Protection of Birds (now the Royal Society) founded in United Kingdom in 1889. The next environmental organization that was a pioneer in this field was Sierra Club, founded in the United States on May 28, 1892.

In 1903 was created in United Kingdom the world's first international conservation organisation, the Society for the Preservation of the Wild Fauna of the Empire. In the following years the number of environmental NGO had increased significantly.

Among the most relevant international organisations in environmental field are World Wide Fund for Nature(WWF)[2], International Union for the Conservation of Nature (IUCN)[3], Friends of the Earth (FoE)[4] and Greenpeace.

The important role of NGOs was shaped by their high presence at Stockholm conference (1972) and Rio conference(1992). At Stockholm conference more than 400 intergovernmental and nongovernmental organizations attended and at Rio conferences over 8000 NGO. This huge presence of international NGOs drew public and political attention to their work on environment protection and environment justice. At Rio Conference NGOs got involved in an active manner, by preparing the hearings, lobbing at the meatings and influencing the members of national delegations in matters of environment. Their positive influence was felt also at Johannesburg Conference works from 2002. Of great importance is the fact that some NGOs have gained a consultative status in international and regional organizations influencing the process of drafting and adopting norms of international environmental law.

Sometimes the weakness of States and the lack of political action in environmental issues, in this case, determined private individuals grouped in NGOs, to create a pressure for change on international organizations and multinational corporations or to take actions themselves by lobbing in environmental issues and research on environment.

The aim of this study is to focus on the influence of NGOs in drafting and adopting standards in international environmental law. It is widely recognised the importance of NGOs in protection of the environment and of human rights. Their value was recognized also by Aarhus Convention which gives

[2] WWF was founded on April 29, 1961 based in Morges and from 1979 at Gland (Switzerland).

[3] IUCN was founded in 1948 in Marges (Switzerland)

[4] FoE was founded in 1969. It became the international network Friends of the Earth International (FoEI) founded in 1971 by four organizations from France, Sweden, England and the USA.

them the right of taking part in the compliance mechanism or to bring matters into court by themselves.

2. Legal status of NGOs and their influence in environmental matters

NGOs definition had been given by Article 2 of Suzanne Bastid's resolution[5] which stated that the international associations are groups of persons or of societies, freely created by private initiative, which are engaged in some international activity of general interest, without seeking pecuniary profit and without any object of a purely national character.

World Bank defines also a non-governmental organization (NGO) as "private organizations that pursue activities to relieve suffering, promote the interests of the poor, protect the environment, provide basic social services, or undertake community development".

A first step in the direction of cooperation between United Nation and NGOs was outlined by the Article 71 of United Nation Charter which states that ,,The Economic and Social Council may make suitable arrangements for consultation with non-governmental organizations which are concerned with matters within its competence. Such arrangements may be made with international organizations and, where appropriate, with national organizations after consultation with the Member of the United Nations concerned".

Today UN ECOSOC[6] Resolution 1996/31 governs the relationship between ECOSOC and NGOs by establishing the eligibility requirements for consultative status[7], rights and obligations of NGOs in consultative status and procedures for the withdrawal or suspension of consultative status. NGOs that have consultative status can attend international coferences and events and make oral and written statements on this events, lobbing and networking.

The relationship between ECOSOC and NGOs is positive for both sides. ECOSOC has the opportunity to avail itself of valuable and expert advice from NGOs, the NGOs in turn also have the opportunity of expressing their views and influencing the work of the Council.

After obtaining a consultative status with ECOSOC, an NGO has the duty to send a report of activity every four years. This guarantees that an NGO is respecting and is continuing to meet the requirements established at their accreditation.

But there are voices that had been criticized the work of ECOSOC's Commitee in garanting the accreditation of NGOs because of lack of due process and the huge political influence in accreditation[8].

It is also important the discussion about NGOs personality, because it is essential in determining the immunities and the rights of an NGO and their standing before courts[9]. NGOs have legal personality only in municipal law, not in international law[10].

Because usually the NGOs interests cross national borders they face problems like conflicting laws and the impossibility to carry out their purpose. In the lack of NGOs international legislation, some transnational NGOs have managed to sign agreements with States that gives them rights and immunities.

International legal personality had been difficult to achieve from two points of view. Firstly because States did not not want to reduce control of NGOs activities and secoundly, even NGOs fear that they may lose their autonomy.

NGOs legal status had been to the attention of the Council of Europe who drafted the European Convention on the Recognition of the Legal Personality of International Non-Governmental Organizations in 1986, which sets a common legal basis for the existence and work of NGOs in Europe. Article 11 of the European Convention on Human Rights protects the right to freedom of association, which is also a fundamental norm for NGOs.

NGOs developed over the years into strong advocacy networks that have influenced environmental politics[11].

Not all domestic NGOs work at international level, but some of them developed strong links with international NGOs. It is the case of some environmental protection organization or human rights organization that formed effective communication network by linkage with each other with the purpose of emerging into an international advocacy network.

NGOs can form global networks with national offices, like WWF, FoE or Greenpeace. Often the national offices are autonomous and have their own priorities and funding. By their structure, NGOs can be of universal interest (as International Union for Conservation of Nature) or of regional interest

(African Wild Fondation –Kenya or European Environmental Bureau - Belgium).

In the same time it is worthy to mention that not all NGOs have the same goals and visions. There is not a homogeneous global community of environmental NGOs[12]. In spite of they advocate for the cooperation between human rights and the environment, NGOs have different objectives, priorities mostly depending on their size, goals, ideology and on their capability to transcend national borders.

2.The role of NGOs in environmental litigations

The most striking issue concerning the presence of NGOs in environmental litigations is the way they are representing public interest and the possibility of bringing matters to court themselves.

By adopting the Aarhus Convention[13], the rights of environmental NGOs had been strongly reinforced in national, international and European Law.

According to Christian Schall, in determing public interest there are three factors *inter alia*: (1) there is a public interest in the outcome of the litigation; (2) the applicant has no personal, proprietary or pecuaniary interest in the outcome, or if such interest exists, it does not justify the litigation in a economic way; (3) the issued raised by the litigation are beyond the immediate interests of the parties[14].

NGOs can participate in procedures before international courts and tribunals in two forms, as party (or third party) and as *amicus curiae*[15].

2.1. Access by NGOs in procedures before international courts and tribunals

a) NGOs difficulties in standing before international courts and tribunals

International Tribunal of the Law of *the Sea*, unlike International Court of Justice where by the competence ratione personae, only States may be parties in cases before the Court, access to Tribunal jurisdiction is opened not only to States Parties of the Convention of United Nation on Law of the Sea from 1982, but also to non-state entities[16].

Article 187 of the Convention states that juridical persons and State enterprise may have access as parties before the Tribunal of the Law of the Sea. There are thought opinions that only profit-organisation can stand in proceedings before the Tribunal[17], and in this case it is difficult for NGOs to overcome this practice.

European Court of Justice, can be invoked by Member States, EU institutions , by individuals but also by national courts. Regarding NGOs they can stand before Court only if their members themselves lodged a complaiment to the Court Article 230, para.4,of the EC Treaty states that ,, An natural or legal person may institute proceedings against a decision addressed to that person or against a decision which, although in the form of a regulation or addressed to another person, is of direct and individual concern to the former.” Of relevance is the Greenpeace case to the European Court where the Court held that ,, the association formed for the protection of the collective interests of a category of persons can not be considered to be directly and individually concerned for this purpose of the forth paragraph of Article 173 of the Treaty by a measure affecting the general interest of the category, and is therefore not entitled to bring an action for annulment of where its members may not do so individually…”.

b) Effective access for NGOs before human rights bodies: European Court of Human Rights, African Commision on Human Rights and Inter-American Court of Human Rights

Human Rights systems in Europe, Inter-America and Africa are the exception bodies that allow not only the States to bring case to the Court by also give the possibility to individuals and NGOs to stand before courts. The three Courts form a network of international human rights treaties of international and regional application[18].

The requirements for admissibility before *European Court of Human Rights* (ECtHR) are set out in Article 34 and Article 35 of the Convention. According to Article 34 the applications must be submitted by any person, group of individuals or NGOs. The primary condition is that the claimant to be a victim of a violation by one of the High Contracting Parties of the rights set forth in the Convention or in the Protocols thereto. We must say that the quality of victim is a *sine qua non* condition for the applicants. As the Court stated in many decisions, in order for applicants to be able to claim to be a victim, they must produce reasonable and convincing evidence that a violation affected them personally. In this case we speack about direct victim status. There is also the possibility of representation, indirect victim status, this is the case of NGOs, that act in certain situations as

representatives for the direct victim[19]. There is though an exceptional case, when an NGO is bringing a case to the Court which does not fall into any of the above classification (direct victim or indirect victim). It is the exemple of Valentin Câmpeanu v. Romania case, and even if it is not a case with link to environment, it is a good exemple of how an NGO may stands before the Court even if it is not direct victim or indirect victim. In this case the Court found that Valentin Câmpeanu was a vulnerable person with no next-of-kin, so it was a direct victim in the sens of Article 34 of the Convention ,, of the circumstances which ultimately led to his death and which are at the heart of the principle grievance brought before the Court". The Court stated that the NGO in this case can not stand as indirect victim but in some exceptional circumstance and bearing in mind the serious nature of allegations, the NGO should act as representative for the victim, notwithstanding the fact that the victim had no power to act on his behalf and that he died before the application was lodged under the Convention. The reason way the Court held as admissible *ratione personae* this case was as it stated: ,, To find otherwise would amount to preventing such serious allegations of a violation of the Convention from being examinated at international level, with the risk that the respondent State might escape accountability under the Convention as a result of its own failure to appoint a legal representative" to act for the victim.

In Asselbourg and Greenpeace Luxemburg v. Luxemburg the Court examined whether the applicants are the victims of violation of Article 8 of the Convention within the meaning of Article 34 of the Convention. Regarding the claim of Greenpeace Luxemburg, the Court held that that NGO can stands as a representative of its members or employes, in the same way, a lawyer represents his client.

In their applications before the Court NGOs can invoke rights as, the right to life (Article 2), the right to fair trail (Article 6), the right to respect for private and family life (Article 8), freedom of expression (Article 10), freedom of assembly and association (Artcile 11).

Under the *Inter-American Human Rights* system the applicants, individuals or NGOs, may lodged a claim but only to the Inter-American Human Rights Commision not to the Inter-American Court of Human Rights. According to Artcile 23 of the Rules of Procedure of the Inter-American Human Rights Commision the applicants does not have to demonstrate that they have the victim status.

In Yanomami Indians v. Brazil20 case, the Commision determinate that was violated the right to life because of the environmental degradation of Yanomami lands and the health problems following this. The case was submitted by several individuals that were directly affected by living conditions of Indians and the Commision treated them as legitimate representatives of Indians.

According to Articles 55 and 56 of *African Commision on Human and Peoples Rights* (ACHPR) individuals and NGOs may logded a petition to ACHPR. For this petition to be held admissible there must be an identification of the victim and the State Party to the Commision must be found responsible for violation of one of the rights protected by it. NGOs may participate before ACHPR as legal representatives or as amicus curiae.

The African Commision has a very small number of decisions in respect to environmental NGOs and most of them lack of effective enforcement mechanism.

2.2.1. Access of NGOs as *amicus curiae*

The role of NGOs as *amicus curiae* in international litigations procedures, although very modest in influencing courts judgements, became more a practice than an exception in courts.

NGOs have benefited from the intensification of international litigation procedures to gain access to the courts, often as "friends of the court" (*amicus curiae*). The advantage of participation as *amicus curiae* is that in this case NGO is not a party to the dispute but is nevertheless allowed to contribute in many ways to the work of the Court, by acting as a valuable source of information, sensitize the Court on particular issues, raise the attention of public opinion etc.

For exemple, International Court of Justice had been reductant to NGOs *amicus curiae* participation to their hearings. Yet, Article 34 paragraph 2 provides that ,, the Court may request the public international organizations informations relevant to cases before it…". In the case Gabcikovo-Nagymaros the Court admitted unofficially that received written NGOs submissions.

In ECtHR the Court invites an *amicus curiae* submission or a third-party seeks to provide information to the Court on its own initiative. Rule 44 of the Court provides that, once notice of an application has been given to the respondent State, the President of the Chamber may invite, or grant leave to, any person concerned who is not the applicant, to submit written comments or, in exceptional cases, to take part in hearings

Amicus curiae participation should not be confused with the third party intervention, as the latter is designed to protect the legal interest and rights of the intervening entity likely to be affected by the Court judgement[21].

[21] Beyerlin, Ulrich. "The Role of NGOsin International Environmental Litigation." (2001).

3. Conclusions and future perspectives

The role of environmental NGOs as ,,guardians of the environment" has increased tremendously over the last decades. Important was the enormous presence of NGOs at the three most important conferences on environment: Stockholm, Rio and Johannesburg.

Their contribution in lobbing governments and international organizations by influencing negociation on international environmental agreements had been also considerable.

Of great importance is the fact that some NGOs have gained a consultative status in international and regional organizations influencing the process of drafting and adopting norms of international environmental law.

Unfortunately, NGOs does not have proper access to justice in international courts and tribunals, exception being the access of NGOs before human rights bodies: European Court of Human Rights, African Commision on Human Rights and Inter-American Court of Human Rights.

NGOs influence on environment international standards is not as it was expected at the begings, mostly because its hard to overcome the political will and the governments interests.

Over the years NGOs developed strengths and weaknesses regarding their activities. The most important strengths for NGOs are the independence and the good public reconnaissance. The weakness is mainly about the fragmentation of environmental NGO, about the fact that most of them act without a common vision and a common purpose and sometimes the huge number of environmental NGO and the very different manners in approaching environmental protection creates confusion and lack of effectiveness in relation with States and international organizations.

In sum, even of the increased number of NGOs in taking part in the mechanism of environmental law making and the participation, in different forms, in international juridical procedure, the legal status of NGOs in international law did not progres much.

On consideration of this facts, it is obvious the need for environmental standards, in the form of an international convention, that shall regulates the status and the activities of NGOs at international level.

THE CAPACITY OF INTERNATIONAL ORGANIZATIONS TO BEAR INTERNATIONAL RESPONSIBILITY

Ovidiu-Emilian IVANESCU[*]

Abstract

The status of international personality is not exclusively reserved for states. In modern days, the international organizations have legal international personality and also have the capacity to be internationally responsible for their conduct. Some particularities of the legal personality of international organizations are decisive in determining their international responsibility. The study will establish the connection between the foundations of the personality and responsibility of an international organization. It will be also analysed the situation of third parties in establishing the responsibility of an international organization.

Keywords: *Responsibility, International Organization(s), International Legal Personality, International Responsibility, Attributable to.*

Introduction

The responsibility of international organizations creates specific issues regarding the imputability in international law. The International Law Commission(ILC) had to face complex problems, to which international law does not answer unequivocally, had to base its findings on a fragmented practice and marked by a great pragmatism and on a limited importance of jurisprudence and less conclusive. The complexity of the problem is related to the particularity modes of international organizations activity. Indeed, they often act through the Member States or using their organs. At the same time, Member States exercise strong influence on the operation and decision making within the organization. The imputability study of conducts related to activities of international organizations should take into account the control interrelations and power between the organization and its members. They impact both on the responsibility of international organizations and the responsibility of Member States following facts organization.

The responsibility is the final test of international personality.

The legal personality is translated by the ability to be the holder of rights and obligations and, therefore, have the responsibility in case of obligation's infringement. The identical imputability with the legal international entity which has to answer for a crime committed by a person who does not have the same quality.

Indeed, the ability to commit a wrongful international act belongs by definition only to international law subjects. This is the situation when a conduct can be attributed to an entity, contrary to international law, can be considered a subject of international law. Similarly, international personality has the effect of making susceptible subject likely to be considered responsible for any internationally breaches attributed to it. By this mean the international imputability organization of the breaches is both a consequence but also an indicator of its international personality.

The legal personality allows to the international organization to activate similar to a self- governing subject.

The international organization became a law subject, able to be entitled, on his right, of their rights and obligations. It can be the beneficial owner of those obligations put on its task under the law of international responsibility if an infringement of its international obligations can be attributable to it.[1]

The responsibility for breaching its obligations allows to third parties to submit their claims directly to the organization. It was seen as representing a certain risk for the third parties. Concrete means of responsibility are less developed in case of international organizations than in the case of states. This acknowledgement powered its argumentation in favour of the Member States' subsidiary responsibility.

International responsibility as an index and consequence of the separate personality of an international organization (**1.**) may rise special difficulties to people who complain about its activity (**2.**).

Content

1. Legal personality of international organizations - the foundation of their responsibility

Necessary relationship between responsibility and personality was highlighted many times. The international responsibility of international organizations assumes that they have a legal international personality, that they are international law subjects, different than Member States. The international personality of the organization, so her actual existence in the international order, is essential to its ability to see that those wrongful acts they committed were required to it.

The responsibility of the international organization for those wrongful conducts which are imputed is a "necessary condition"[2] of their legal personality.

The possession of international legal personality just make the distinction between international organization and simple common organs of several states[3], like the tripartite administration NAURU[4].

States must be directly responsible for the State's conduct which wouldn't be only their instrument without possessing any autonomy to them, without their own will.

To have an international personality, the organization must have a distinct will[5].

The international organization's legal personality of international law was recognized by the International Court of Justice (ICJ) in the evaluation notice of April 11th, 1949. This legal international personality is distinct from the one that states form and it depends on the will of these states so as shown in the evaluation notice of the Organization in which it finds its foundation, without a required disposition, which would be expressly conferred.[6]

Those kind of explicit assignments are very rare and scarce, organizations must have an independent will, distinct from that of Member States. This criterion is considered as "the foundation stone" of the international personality[7], "its fundamental criterion".

International organizations are, like States, legal entities which act by individuals or groups. International organizations are "secondary" international law entities, to the extent that they are, themselves made up of states that are also at the origin of their creation and execution of the will of organizations. The issue of international responsibility award is made more complex by the double position of the state towards the organization also like a founder and performer.

The legal personality of international organizations, and therefore their ability to answer for their actions in the international law, depends on the states' will, the primary subjects and entire body of international law. International organizations often remain closely linked to their creators and are very dependent, hence resulting difficulty to divert their will to that of their members and operate attributing their acts.[8] Member States tend to try to guide the organizations' action those they created in a way according to their interests and it tries "to provide at least partial control".[9] However, organizations often receive certain autonomy towards their members, due to the dynamics created by the establishment of their own organs. They are often the place of some complex power games and, if their action is submitted to Member States' will, the opposite is also true: Member States may act under its control or following the instructions of the organization. The creation of an organization has just the effect of restricting action' states freedom, even if the transfer of competences to the organization is based on a voluntary basis.

International organizations are responsible as law international subjects for those international law breaches that they commit. Their capacity to be responsible for their international law violations, which are attributable to them can be deduced of their capacity as holders of international obligations and therefore of their international legal personality.[10] This principle is summarized by Ian Brownlie which believes that " If an organization has a different legal personality from that of the Member States, and action which left to the states would create responsibility, it is reasonable to be attributed the organization's responsibility.''[11] If it is the consequence of the international personality of the organization, the responsibility is, also, "often presented as the ultimate test of the effectiveness of the legal personality of a given entity." [12] Other authors emphasize the logical connection between the legal personality of the organization and its capacity to be internationally responsible. The responsibility of the organization depends on its legal personality and depends on "how

the organization is conceived"[13] either as an independent subject or even beneficiary of autonomy to Member States, either as a simple instrument for them. This can be deducted from the Founding States' will organization's own organs to assign a specific mission, in short to translate "the organization's character placed in some ways in front of his members."[14]

The legal personality of international organizations is functional, it is according to the specialized principle and it is limited by the Founding Treaty. International organizations' responsibility occurs for all documents are held liable in all cases where responsibility for conduct can be assigned , as either enter or not within its powers.[15]

International organizations form an united whole, and for assigning responsibilities, we cannot make any difference between the most integrated organs of the organization – as secretary office and organs composed of states' representatives. Finn Seyersted wrote about United Nations (UN) that, resulting from distinct legal personality of organizations, Member States, in this position as members of the internal organ, cannot be declared responsible for the acts of the organization.

Indeed, "it requires a clear delegation setting of power, that Carta doesn't provide", this would lead to the transformation of organizations in a kind of federation, which was not desirable. [16] Member States act as organs of the Organization and not directly as isolated states. In case that an organization has international personality, which means a distinct will of their members, the action of the last one in the decision-making organs of the organization is without influence on imputability of conduct to the organization. Their collective act is, in this hypothesis, considered as an act of the organization, and will be also bear the responsibility.

The vote doesn't create obligations to the state when is deciding in an international organization, so this isn't a unilateral act of the state. One state isn't responsible for the wrongful conduct of an organization which was accomplished by applying a decision taken by vote, only when the vote can be assimilated with aid or assistance in committing the illegal act, which implies that the act wouldn't have been adopted without vote rule. Basically the organization is the only one responsible for its wrongful acts that committed, the responsibility of Member States of the decision-making organ that have adopted the act that led to the violation of any of its obligations to the international organization cannot be engaged. The vote doesn't express an unilateral manifestation of the will. Indeed, the state is not tied by his affirmative vote, but by the decision according to the procedure provided by the Founding Treaty of the organization's member which it is. The obligation results from the power of the adopted act and not from the expression of the will of the state.

The international organization must be sufficiently independent to possess freestanding personality in front of founding states and quite coherent to set "a center of imputation" of international legal relations who are outstanding.

Creating an international law subject hasn't the objective to create a unique actor who has the function to centralize the action of various states in a particular field. This will be the organization's action, founded in its name, and not in that of an individual state, which means that international responsibility that could result from this action will be that of the organization. After Charles Visscher, "legal personality condition is one of concentration: concentration of wills oriented to follow the statutory goals, concentration of responsibilities by charging exclusive legal entity of the civil consequences of collective decisions made in the usual way", or after Evelyne Lagrange, " the legal personality gives to the organized community its legal unit."[17] The State's creation of an international organisation has the purpose to create a new person which will bear the responsibility of the action that fallow to be committed. The organization is acting on its own behalf and not as representative of its members.[18] Acting as international law subject, the organization is entitled to rights and indebted to obligations, and - in case of violating thereof - it will be the only responsible.

This conclusion led to great difficulties, related mostly to the rarity of cases in which a third party injured can turn against an organization in front of international jurisdictions. There have been imagined yet detours that led to greater confusion in this area.

2. Third parties' situation against specific risk of international organizations

International organizations are responsible for the facts that are attributable to them. Although , certain ways of adjusting disagreements especially judicial, which can be used against states are ineffective in terms of international organizations.

In some instances, third parties have been affected by the inherent difficulties in applying the responsibility of international organizations. Many detours of this difficulty were imagined, most often being the evocation of the international personality absence, of a specific organization to approach the direct responsibility of Member States.

Multilateral treaties for the protection of human rights, without exception - are not opened only to the states adhesion, although they are often the work of international organizations.[19]

The difficulty was showed especially in front of the European Convention of Human Rights.

This state of fact, although leading to an issue of responsiveness, may have an incidence on the imputability issue of the litigious act itself, or at least of the responsibility for this act, and with the desire of ensuring the effectiveness of the European system of human rights protection could push to the temptation to modify certain points of States' law responsibility and international organizations. As an author presented it, "in front of the international inability in which could be an individual faced with the situation of asking directly concerned in front of an international surveillance in Strasbourg, it is tempted to try to make a state which would be part of the Convention to bear responsibility violation"[20].

The Union's accession to the European Convention of Human Rights will adjust the acts of the latter issue, the issue can still be about the conduct of other organizations. It should be emphasized that such an assumption of temptations was issued especially by the doctrine, European Court of Human Rights remain reserved on this subject.

The will to avoid that states pass by their obligations, taking refuge behind international independent personality of an international organization, the inability to bring an organization before the ICJ and fears of the organization's insolvency were an argument presented in favor of subsidiary responsibility of the Member States of the Organization for wrongful acts committed by it.

The relationed issues of distinct legal personality of the former European Communities were the subject of a rich jurisprudence of the European Convention of Human Rights organs.

Complaints about the attributable conduct of the European Union were directed against it or against all Member States.

These complaints brought against Community acts were declared inadmissible based on the competence's absence ratione personae of Court when they aimed specifically European Communities. Instead of this, the Court did not directly answer the question about a possible collective responsibility of all Member States when the petition was directed against them.

The first of these cases is that one of Confederation francaise democratique de travail(CFDF) petition directed against the European Community and alternative against "the community of their Member States" and "their states individually."[21]

The union complained that it was not appointed by the Council of the European Communities as a representative organization called to establish candidates' lists for the ECSC Consultative Committee, although it, given its importance, was the second among the five organizations recognized as representative in France.

European Commission of Human Rights declared the request, because it is directed against the European communities which have their own legal personality[22], as inadmissible *ratione personae*, which are not party to the Convention[23], and thus benefit of "total immunity"[24] of it. She concludes about "the corporate member states", a notion that has not been defined by the applicant, but the Commission has treated it as part of the European Community Council. After this decides regarding the request as inadmissible ratione personae on France, it still not accepting the right of individual appeal, the Commission estimated that the responsibility of other states cannot be considered for attended the Council decisions of the European Community, and in failing states, in circumstances of the case, their "jurisdiction", according to article 1 of the Convention[25]. The Commission did not recognize any collective responsibility or secondary of European Community Member States, based on the autonomy of members of their communities. She doesn't agree to recognize a "community of Member States" that would exist outside the organization's institutions. This recognized the possibility that Member States, taken collectively, to respond for their international

[25] Frederic KRENC, "La decision *Senator Lines* ou l'ajournement d'une question delicate", ", Revue trimestrielle des droits de l'homme(RTHD), Bruylant, Bruxelles, 2005 , p. 124, §7.

organization's performed acts whose members are, would mean to deny international distinct legal personality of European Commission. The responsibility of a "Member States' collectivity" of the European Community, different and parallel to the last one, would emptied the substance of organization's autonomy.

Another request directed also against "European Community, subsidiary, against the community of Member States and their Member States individually" for the European community organs' acts, was tried and declared inadmissible, as being directed against them. The Commission then examines the problem, namely "whether the act in question, committed by an organ of the European Community may engage the responsibility of each of the 12 Member States of the European Community on the Convention's ground." The Commission did not decide on this point and declare the request as inadmissible because there weren't used all of the Communities appealing means. Other applications directed against the European Community or against institutions were systematically declared inadmissible ratione personae. This solution was recently confirmed by the European Court of Human Rights, which estimated that "although the holder of sovereign powers transferred in this way, the international organization in question can not, as long as it is not part of the Convention, to see her responsibility held for procedures carried in front of her organs or decisions given by them."[26]

In front of the inability to attract an organization directly before the European Court of Human Rights , were submitted requests against the completeness of their Member States, putting in question the responsibility of Member States for its organization's acts. If any real form of secondary responsibility was denied by the Court, states may be responsible for not taking the necessary measures accomplished during the transfer of powers to the benefit of the organization.

Not having the means to put into practice, the organization's, requests were directed against the North Atlantic Treaty Organization (NATO) member states which are parties to the European Convention on Human Rights. However, the European Court of Human Rights did not decide on the question of responsibility for acts committed by NATO member states during military operations against the Federal Republic of Yugoslavia.

Despite these procedural issues, and whatever advantages to the third party get in touch with an organization, no rule which imposes responsibility subsidiary of the members of an organization have appeared in international law.

Conclusions

The problem of imputability of an international organization or its Member States of their wrongful conduct, translate all its complexity between these different subjects. However, a guiding thread running throughout this study: responsibility depends on the mean margin of the international law subject, the capacity to adopt an autonomous conduct. One subject under the will of other could not be the holder of responsibility. The Member States, in principle, are not responsible for the imputable international organizations violations, except where they do not exercise control of it, situation in which it cannot be considered as an entirle law subject due to the inexistence of a distinct will from that of the states. This lack of autonomy may be general, and in this case the organization does not possess international personality, she is just a normal organ or Member appears only in special case, situation in which the organization is subject to control or coercion of one or more states. In parallel, a State is not responsible for committed acts after the application of the international organization's decision unless it in this case have no margin maneuver.

However, relations between international organizations and their members are generally complex activities of international organizations or States within their adherence to an international organization is likely to give rise to responsibility all actors, depending on the method and the actual degree of control over committing the wrongful act.

THE EFFECTS OF PRELIMINARY RULINGS

Iuliana-Mădălina LARION*

Abstract

The study analyses the effects of the preliminary rulings rendered by the Court of Justice for the judicial body that made the reference and for other bodies dealing with similar cases, for the member states, for the European Union' s institutions and for EU legal order. Starting from the binding effect of the preliminary judgment for national judicial bodies, which requires them to follow the ruling or make a new reference, to the lack of precedent doctrine in EU law, continuing with the possibility to indirectly verify the compatibility of national law of the member states with EU law and ending with the administrative or legislative measures that can or must be taken by the member states, the study intends to highlight the limits, nuances and consequences of the binding effect. It mentions the contribution of the national courts and of the Court of Justice of the European Union to the development of EU law, such as clarifying autonomous notions and it emphasizes the preliminary procedure's attributes of being a form of judicial protection of individual rights, as well as a means to review the legality of acts of EU institutions. The paper is meant to be a useful instrument for practitioners. Therefor, it also deals with the possibility and limits of asking new questions, in order to obtain reconsideration or a refinement of the legal issue and with the problem of judicial control over the interpretation and application of the preliminary ruling by the lower court.

Keywords: *preliminary ruling/judgment; binding effect; precedent doctrine; interpretation; validity.*

Introductory notes

Article 267 of the Treaty on the Functioning of the European Union establishes the Court of Justice's jurisdiction to give preliminary rulings concerning the interpretation of the European Union's treaties and the validity and interpretation of acts of the institutions, bodies, offices or agencies of the Union. The European Court answers questions referred by national courts or tribunals of the member states, dealing with a European Union law issue that is applicable in a pending case.

The national judicial body that asks the question suspends the national proceedings and waits to receive the preliminary rulling.

Once the Court of Justice renders the preliminary ruling[1], the judgment or order is sent back to the national court wich made the reference and it is published on the official web-site of the Court of Justice[2]. The study covers the thematics of the legal effects of these rulings.

Depending on the object of the question or questions asked by the national courts, the effects of the preliminary rulings can be divided into two separate issues: the effects of rulings on the interpretation of treaties, of acts of the institutions, bodies, offices or agencies of the European Union (EU) and the effects of rulings on the validity of acts of the institutions, bodies, offices or agencies of the EU[3].

The other important criteria is the subject that observes the ruling and the effects are different for the national judicial body that made the reference, for the other judicial bodies in the same member state or in the other member states, for the institutions of the European Union, for the member states and, of course, for the Court of Justice itself, with respect to that particular case or to subsequent cases.

It is important for national judicial bodies, member states and institutions of the EU to understand and apply correctly EU law, as they may otherwise be subjected to national or international sanctions. Therefor, it is also importand for them to have a complete image of the legal effects of the preliminary rulings that interpret EU law or decide on its validity.

The study intends to analyse in a synthetic and structured manner the limits, nuances and consequences of the binding effect of these rulings, covering, at the same time, all the aspects that can be of interest for legal practicioners, administrative bodies or state authorities, in order for them to find it a useful instrument.

There are few national doctrinal works that deal with the effects of the preliminary rulings in detail. Foreign authors have been more preoccupied on covering this subject, but their books might not be as easily accessible to Romanian readers. The study tries to present and aknowledge the existing contributions by prominent national and foreign authors.

[1] At present, only the Court of Justice has jurisdiction to decide on preliminary questions, even if article 256 paragraph 3 of the Treaty on the Functioning of the European Union renders jurisdiction to the General Court to hear and determine questions referred for a preliminary ruling, in specific areas laid down by the Statute. The Statute of the Court of Justice has not yet been modified in this respect.

[2] www.curia.europa.eu

[3] The Court of Justice does not have jurisdiction to decide on the validity of the treaties that establish the European Union. They are international conventions and are subject to the will of the member states, acting within the limits of public international law.

2. Binding effect of preliminary rulings

2.1 Binding effect for national courts of the member states

A. The national court that made the preliminary reference and the parties to the main action

Fist, it must be noted that the words "courts or tribunals of a member state" have an autonomous meaning in EU law, describing any national judicial body from a member state, established by national law, permanent, that has the power to apply national law and to render a definitive decision, independently, after following an adversarial procedure[4].

The Court of Justice[5] shall establish if a judicial body fulfills these conditions and may give on order of inadmissibility if the body does not have legal standing to ask a preliminary question of if the body asks the question outside its judicial function.

If this body receives an order of inadmissibility for these resons, it may not ask a new preliminary question. Also, the body may not ask new questions if the first one was declared inadmissible on the ground that the national dispute does not need the application of EU law.[6]

If the Court of Justice renders a preliminary ruling, the judgment is binding on the body that sent the question in the sense that it must observe the solution, as well as the reasons for which it was given[7], as more important rules are presented in the part dedicated to the grounds of the judgment, not in the operative part, which contains the concise answer to the preliminary questions[8]. The preliminary judgment is binding in the main action that gave rise to the reference (*inter partes litigantes*), but cannot be ignored by other courts dealing with the same legal issue (*erga omnes*)[9].

The practical consequence is that the national body cannot use a different interpretation of the EU act to give a solution in the national dispute and may not apply the act if it was declared void. This effect is *ex tunc*, for both types of judgments, meaning that the rule, as interpreted by the Court, must be applied by the national courts even to legal relationships arising and established before the preliminary judgment[10].

The national court does not have the power to limit the effects in time of the preliminary ruling. Only the Court of Justice may do so and only in the judgment whose effects are limited[11], for reasons like respecting the principle of legal certainty[12] or avoiding serious financial consequences[13]. If this is the case, the national court cannot establish a different application in time.

Sometimes, the European Court's rulings "are so detailed that they leave national courts little room for discretion in how they decide the dispute in hand."[14], but there is also the possibility that the national judicial body gives a solution without using the preliminary ruling because, as one author observed[15], depending on the procedural moment of the national dispute when the question was referred, the national court may directly give a solution to the case or it may continue to administer evidence or supplementary evidence or it may ascertain the parties will to desist or to settle the litigation amiably.

If the national judicial body gives a solution in the main proceedings based on the Court of Justice's response, it is not recommended to just copy or quote parts of the preliminary judgment. The grounds and solution rendered by the Court should be integrated in the arguments of the decision given by the national judicial body[16].

The judicial body of a member state may refer new preliminary questions, on different EU law issues or on the same issue, if the need of claryfing the effects or motivation of the fist preliminary ruling arises[17]. The new questions may be about an act that was not declared void, as the Court can analyse new reasons for annulment.[18]

The Court of Justice has stated that an interpretation it has given binds the national court in question "but it is for the latter to decide wether it is sufficiently enlightened by the preliminary ruling

[17] For example, three preliminary questions were sent by British courts in the Factortame dispute: cases C-213/89, C-221/89 and joint cases C-46/93 and 48/93.

[18] Broberg and Fenger, 2010, 413. Arnull et al., 2006, 528.

given or wether it is necessary to make a further reference to the Court."[19]

It was emphasized that the preliminary ruling procedure is a non-contentious one. Thus, only the national court may decide whether it has obtained sufficient guidance from the preliminary ruling delivered in response to its question or to the question of a lower court or whether it appears necessary to refer the matter once more to the Court of Justice. Accordingly, the parties to the main action cannot rely on article 43 of the Protocol on the Statute of the Court of Justice of the European Union in order to request the Court to interpret judgments delivered in pursuance to article 267 of the Treaty on the Functioning of the European Union.[20]

This early jurisprudence has been enshrined in the Rules of procedure[21]. Article 104 states that article 158 of the Rules of procedure, relating to the interpretation of judgments and orders, shall not apply to decisions given in reply to a request for a preliminary ruling.

This is not the case with errors in the preliminary judgments. Article 103 provides the right of an interested person, *i.e.* including a party to the main proceedings, to ask that clerical mistakes, errors in calculation and obvious inaccuracies affecting judgments or orders to be rectified by the Court of Justice. The request must be made within a period of two weeks from the delivery of the judgment or service of the order.

One author[22] expressed the contrary view that, since there are no parties to the non-contentious preliminary ruling procedure, only the Court of Justice can rectify errors. The same author noted that not even the national court that sent the question can ask for rectification.

This argument may be a valid one in relation to the means provided by article 155 of the Rules of procedure, regarding the failure of the Court to adjudicate on a specific claim or on costs and the right of a party to ask the Court, within a month after service of the decision, to supplement it. The point of view that only the Court of Justice can supplement its judgment *ex officio* is supported by a literal and systematic interpretation of the texts: in article 103 the term used is not „party", but „interested person". Also, article 103 is included in the part of the rules of procedure dedicated to the preliminary ruling procedure (Title III), whereas article 155 is in Title IV „Direct actions", Chapter 9 „Requests and applications relating to judgments and orders".

The judgment of the Court cannot be the object of a question on its validity or interpretation under article 267 of the Treaty on the Functioning of the European Union. The Court stated that a preliminary ruling does not rank among the acts of the EU institutions whose validity is open to review by the means of a new preliminary question.[23]

Another issue that may arise is if the preliminary judgment has a binding effect for the national court which sent the question with respect to the part of the ruling that exceeds the question or questions asked (*ultra vires* answers). In our opinion, the entire judgment must have a binding effect, as the Court of Justice tries to offer a useful answer and this might entail extracting the real question from the imperfect questions that have been reffered, with the result of an apparent *ultra vires* judgment. A contrary interpretation would open up a Pandora's Box of uncertainty as to what part of the judgment is binding, at the discretion of the national court that made the refference, whereas all other courts have to observe the judgment in its entirety.

French and British courts have expressed a different opinion, based on the argument that the Court of Justice does not have standing to decide on the facts or to apply law in the main proceedings, but they seem to have reconsidered this position in recent cases[24].

Although examples of nonconformity are rare[25], it must be stressed that EU law does not provide sanctions for the national judicial bodies that don't apply correctly the preliminary rulings. It is for the national law of each member state to establish efficient legal means to prevent and amend such a situation. Otherwise, the state might be the subject of an infringement procedure[26] or of an action in engaging state responsibility[27].

Thus, the final decisions of national judicial bodies might be challenged in national courts by the parties to the main action. In what regards judgments rendered by national courts in the strict sense of the word, in Romanian civil procedural law the parties to the national dispute that want to complain of the incorrect interpretation and application of a the preliminary ruling by the national court may use the regular appeal procedure (article 466 and the following

of the Civil Procedural Code) or the appeal in cassation (article 488 paragraph 1 point 8 of the Civil Procedural Code[28]).

If the decision of the court is final, Romanian law does not provide a specific procedural means for the parties to criticize this aspect. The motion for annulment (articles 503-508 of the Civil Procedural Code) and the motion for revision (articles 509-513 of the Civil Procedural Code) provide specific grounds for changing a definitive judgment and the incorrect use of a preliminary ruling is not one of them, as it could, în some cases, entail the censoring of higher courts by lower courts in applying material law.

However, Romanian administrative law stipulates, in article 21 paragraph 2 of Law no. 554/2004, as a suplementary reason for revision of judgments in this field, the situation when a definitive judgment is given by disrespecting the principle of priority (supremacy) of EU law, stated by article 148 paragraph 2 coroborated with article 20 of Romania's Constitution[29].

This paragraph was declared contrary to the Romanian Constitution by the Romanian Constitutional Court[30] and then repelled by Law no. 299/2011, wich was itself declared contrary to the Romanian Constitution, with the effect that the paragraph in question is still in force and is applicable in the manner described by the Constitutional Court.[31]

This last decision states that Law no. 299/2011 is a forbidden limitation of the procedural means that ensure the uniform application of EU law, as interpreted by the Court of Justice of the European Union (CJEU). In stating the grounds, the Romanian Constituional Court emphasizes the binding effect of preliminary rulings for member states and makes references to Romanian case law subsequent to cases C-402/09 Tatu and C-263/10 Nisipeanu, concluding that the lack of such a revision motive would be equivalent to denying the binding force of CJEU's judgments for national courts of the member states and that depriving the litigant of these effects would mean to disconsider the principle of priority (supremacy) of EU law.[32]

B. Other national courts

The other national courts from the same member state as the court that sent the question or from the other member states must observe the preliminary ruling. Its binding effect (*erga omnes*) means that the EU act must be applied according to the interpretation given to it by the Court of Justice and that the EU act declared void cannot be applied in other pending or subsequent cases. This effect is justified by the role of the preliminary ruling procedure in ensuring a uniform interpretation and application of EU law in all member states.

The ruling can be applied without having to send a new question[33], even by a court that pronounces a final solution in a case, with no possibility of appeal.[34]

"The ruling is also binding on appellate courts or courts of review dealing with the same case, although they may also put further questions to the Court of Justice to clarify the initial ruling."[35]

At the same time, other national courts cannot ignore a preliminary ruling on the ground that they consider it to be wrong or inequitable. In British law "it is provided by section 3(1) of the European Communities Act 1972 that any question as to the meaning or effect of any of the Treaties, or as to the validity, meaning, or effect of any Union instrument, must, if not referred to the European Court for a ruling, be decided in accordance with the principles laid down by any relevant decision of the European Court."[36]

Indeed, as was shown above, the possibility to ask new questions cannot be used as an instrument to contest the validity of a preliminary ruling, as this would call in question the allocation of jurisdiction between national courts and the Court of Justice under article 267 on the Treaty on the Functioning of EU[37].

The Court of Justice stated that if a judgment declaring an act of an institution to be void is directly addressed only to the national court which reffered the preliminary question, it is sufficient reason for any other national court to regard that act as void for the purposes of a judgment it has to give[38]. Otherwise, "chaos would result."[39]

The other national courts may not ask new questions on the same points of law, in similar cases, even if they are courts of final resort, unless they have serious grounds to believe the Court of Justice might

[28] Article 488 paragraph 1 point 8 of the Civil Procedural Code states: "The cassation of judgments can be asked only for the following reasons of illicitness: […] 8. When the judgment was given by infringing or incorrectly applying material law." (our translation)

[29] The paragraph was introduced by article 30 of Law no. 262/2007, in force from 2 August 2007.

reconsider its case law. They may also ask about the effects of the ruling. For example, about the grounds, the scope and the consequences of the nullity, in the case of a judgment declaring an EU act void[40].

If it finds no reason to reconsider its case law, the Court of Justice shall dismiss, as inadmissible, the questions whose answer can be found in its previous jurisprudence.

2.2. Effect for the European Union's institutions

The preliminary judgments are a means to review of the legality of the acts of EU's institutions, bodies, offices or agencies of the Union, supplementary to the direct action for annulment[41].

The effect of a judgment declaring an act void is *ex tunc* and *erga omnes*, *i.e.* the act is to be considered inexistent since the moment it came into force and can no longer be applied by anyone. The institutions must, therefor, retract or reppel the act and, if the act is only partially void, to modify and/or amend it.

The institutions must observe the judgments rendering a certain interpretation of their acts, as they must apply the act in accordance to that interpretation. The effect of a judgment on interpretation is also *ex tunc* and *erga omnes*[42].

This is the reason for which EU institutions are allowed to intervene and express their point of view in the written and/or oral procedure before the Court of Justice in preliminary actions[43]. Article 96 paragraph 1 letters c) and d) of the Rules of procedure of the Court of Justice stipulate that the European Commission and the institution which adopted the act the validity or interpretation of which is in dispute shall be authorised to submit observations.

The Court of Justice has reserved to the EU "institution concerned the exclusive right to draw conclusions from the invalidity of its act and take the necessary measures to remedy the situation."[44] In spite of that, it can offer alternatives for the institution for the period of time needed to take the appropriate measures in order to comply with the Court's judgment.[45]

2.3. Effect for the Court of Justice of the European Union

A. Case law

There are no *stare decisis* or precedent doctrines[46]. However, the European Court of Justice "tends to follow previous decisions to maintain consistency and will cite previous judgments or parts of a judgment as a basis for a current decision."[47]

The Court can reconsider its case law in similar cases, on the same point of law, if there are serious grounds to do so.

The preliminary judgment and order are not subject to appeal in EU procedural law. The Court expressly stated that its judgments cannot be the object of an exceptional review procedure either. [48] The Court of Justice decides as a first and last instance court[49]. From this perspective, the preliminary judgment can be considered final[50].

B. EU law

The Court of Justice's judgments are not sources of EU law. But, by rendering preliminary rulings, the Court of Justice has defined autonomous notions in EU law, contributing to EU law development. For example: the definition of measures having equivalent effect to quantitative restrictions on imports or exports[51]; the direct effect doctrine[52]; the invention of state liability for breaches of EU law[53]; its case law on the free movement of persons inspired the adoption of Directive 2004/38/EC etc..

The doctrine[54] noted that the preliminary reference procedure contributes to the development of EU legal and judicial orders in four ways: the development of EU law by new interpretations of the norms, resolving uncertainties, correcting injustices and enunciating principles; maintaining the institutional balance through judicial review by private parties; ensuring the uniformity and consistency of EU law in all member states, as all Union courts are part of a single judicial order and legal territory; the

[54] Chalmers, Davies and Monti, 2010, 157-158.

administration of justice in national disputes by tapping into the expertise of the Court of Justice.

Two authors[55] expressed the view that the Court of Justice's emphasis on maximum uniformity through the preliminary ruling procedure has the potential to jeopardize legal integration because the European Court's insistence on accepting references and its unwillingness to trust national courts undermines the role of national courts as a network of EU courts. Also, its attachment to uniformity runs strongly against any claim that may be made by the EU to be evolving into a more mature legal order.

Two main arguments run against such a conclusion. First, the increasing number of preliminary refferences is due to the need of national courts to engage in dialog with the European Court. Thus, the increasing number of preliminary rulings can be interpreted not as an expression of distrust between the Court of Justice and national courts, but as an expression of success[56], of the good cooperation throughout time. National courts perceive this dialog as a fruitful one.

At the same time, one must not forget the objective reality that the number of member states has increased considerably, reaching 28, that the number of EU acts has increased and the complexity of the legal issues is higher than it was ten or twenty years ago. All of these factors have a great influence on the need for dialog through preliminary references.

Besides, as another author observed: "The increase in cases and increasing case backlog is argued to have led to a change in attitude on the part of the ECJ and it is now less willing to accept all references without question." [57]

Secondly, it is arguable if a more mature legal order implies an even greater independence in rendering judgements on EU law issues at a national level, greater than the possibility of dialog left at the discretion of the national courts, without endangering the uniform application of EU law in all member states.

In this respect, it can be noted that the preliminary ruling procedure inspired the introduction in the Romanian civil procedural law of the means provided by articles 519-521 of the Civil Procedural Code that allows a chamber of the High Court of Cassation and Justice, of the court of appeal or of the tribunal to ask the High Court of Cassation and Justice to give a preliminary judgment on a point of national law that is necessary for solving the pending dispute, if the point of law has not been the object of a ruling of the High Court. The court that refers the question must suspend the proceedings until it receives an answer from the High Court. The answer is binding for the court, from the moment it is given, as well as for the other national courts, from the moment it is published in the Oficial Journal of Romania.

Like the preliminary ruling procedure, this internal procedure is free of costs and it allows the parties to send written observations, but, unlike the preliminary ruling procedure, it entitles other national courts dealing with similar cases to suspend the proceedings until the preliminary decision is given.

2.4 Effect for the member states and their nationals

The authorities of a member state are under the obligation to take all necessary measures to ensure that EU law is observed and implemented correctly on their territory. Thus, in order to comply with preliminary rulings, the states may find themselves obliged to take administrative measures (for example: repayment of a pollution tax, with interest[58]) or legislative measures (changing the law that provides the pollution tax[59]) and even offer compensation for damages[60].

The preliminary ruling procedure allows for an indirect verification of the compatibility of national law with EU law[61]. Though the Court of Justice has stated in numerous occasions that it does not have jurisdiction to apply law in the main action[62], the compatibility can often be deduced without any reasonable doubt from the grounds of the ruling[63].

When a national court or administrative authority has given a decision which conflicts with a subsequent Court judgment, one effect can be the need to reopen or review the case, even if the decision is final.[64] One author observed that: "Legal certainty will prevent it being reopened unless four criteria are met: there is an administrative body that has the power to reopen the decision; the administrative decision in question has become final as a result of a judgment of a national court ruling at final instance; that judgment is based on a misinterpretation of EU law and the court failed to refer; the person concerned complained to the

[63] See Dollat, 2010, 390.
[64] Judgment of 13 January 2004 in case C-453/00 Kühne&Heitz, paragraphs 23-27.

administrative body immediately after becoming aware of that decision of the Court"[65]. The author also noted that these conditions are cumulative and restrictive and that there is no general obligation to reopen cases simply because they conflict with subsequent preliminary rulings.

As shown above, if member states do not take efficient measures, the European Commission may start the infringement procedure or private persons may file a motion in order to engage the state's responsibility for the way national courts and other internal authorities apply EU law.

For the nationals of the member states, the preliminary ruling procedure is an indirect way of acces to the Court of Justice, as the parties to the main action may ask judicial bodies to refer preliminary questions. The Court's jurisprudence gave powerful rights to individuals to use article 267 of the Treaty on the Functioning of EU, which has encouraged more litigation and more references to be made[66]. Thus, private persons can highlight different possibile interpretations of an EU act and put forward motives for declaring an EU act invalid[67]. This ensures a form of protection of individual rights, keeping in mind that individual acces by means of the direct action for annulment[68] is highly limited[69].

It has been pointed out that the Court's narrow interpretation of the availability of direct actions for private parties has caused them to raise such issues in front of national courts, asking for the referral of preliminary questions. In this respect, an important role is played by interest or pressure groups such as trading associations or unions that can present well-documented motions and make concerted attacks, often by group action[70]. For example, in Romania, in the last few years, there have been group actions, consumer actions and actions brought by the national institution with power to enforce consumer protection legislation, all in the field of unfair provisions in credit agreements, which have resulted in a few preliminary questions reffered to the Court of Justice regarding the interpretation of some provisions of Council Directive 93/13/CEE of 5 April 1993 on unfair terms in consumer contracts[71].

However, the Court indicated that the preliminary ruling procedure cannot be used to examine the validity of an EU act when the interested party could have, without any doubt, challenged it by virtue of a direct action in annulment.[72]

3. Conclusions

"It is hard to exaggerate the importance of the preliminary rulings procedure."[73] Its utility is probably best understood when dealing with the final product of the procedure: the Court of Justice's judgment on the interpretation or on the validity of an EU act.

The study approached the main issues of the effects of the preliminary rulings by analysing them with respect to the subject that observes the ruling, as well as the type of ruling: judgment or order, concerning either the interpretation or the validity of an EU act.

The result is a synthetic, but structured and comprehensive presentation of the theme, meant to be a useful instrument for practicioners, researchers and other persons interested in a concise material about specific issues on the preliminary ruling procedure, a vast topic, which may entail further research on subjects such as the effects of the preliminary ruling for non-member states[74], in relation to article 96 paragraph 1 letters e) and f) of the Rules of procedure of the Court of Justice or on comparative law regarding the obligation of national courts to suspend proceedings while the Court of Justice gives an order or a judgment on the preliminary question, correlating national procedural provisions with article 23 of the Protocol on the Statute of the Court of Justice of the European Union.

REDUCING ADMINISTRATIVE BURDENS AND INCREASING LEGAL CERTAINTY AND TRANSPARENCY OF BUSINESS - DIRECTIVE 2012/17/EU OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL OF 13 JUNE 2012 AMENDING COUNCIL DIRECTIVE 89/666/EEC AND DIRECTIVES 2005/56/EC AND 2009/101/EC OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL AS REGARDS THE INTERCONNECTION OF CENTRAL, COMMERCIAL AND COMPANIES REGISTERS

Silvia-Claudia Călin-MIHALCEA[*]
Gabriela FIERBINŢEANU[**]

Abstract

The Directive 2012/17/EU of the European Parliament and of the Council of 13 June 2012, modifies three important company law directives, and is introducing also a new business registers interconnection system (BRIS). As article 2 from the consolidated version of the Treaty on European Union provides[1] the Union has set itself as an objective, promotion of economic progress through an area without internal frontiers but we must observe that such an approach needs permanent cross-border access to specific legal regulations and formalities applicable to the performed operations in each Member State. This article aims to point the steps to be made to achieve the goal of the Directive 2012/17/EU underlining the measures to be taken in each Member State in the process of implementing it.

Keywords: *interconnection, administrative burdens, BRIS, fees, implementation levels.*

Introduction

Interconnection of companies registers and facilitation of the access to information from a national commercial register for any interested person, irrespective of its geographical location should represent an impossible to ignore objective at EU level and beyond, not only in considering a stable legal environment but also in considering the possibility of carrying out the activity in states other than their own.As remarked in other occasion[2], issues around the interconnection of business registers can be resumed in three categories[3] - failure in updating business information in the register of foreign branches, difficult cooperation between registers in cross-border merger procedures and difficult cross-border access to business information . As the European Parliament stated following the financial and economic crisis there is need to restore trust in the markets but whereas the fact that business registers are not interconnected may cause economic losses and problems not only for stakeholders or for the companies employees but also for the consumers and the public having in mind lack of transparency, efficiency and legal certainty[4].We shall examine the sections in the three company law directives need to be improved and, as earlier said, the calendar of the measures need to be taken to ensure that the aim of the Directive 2012/17/EU[5] is achieved.

1. Directive 89/666/EEC of 21 December 1989[6] concerning disclosure requirements in respect of branches opened in a Member State by certain types of company governed by the law of another State defines the list of documents and particulars that companies have to disclose in the register of their branch. The disclosure requirements concern the address and the activity of the branch;the company's place of registration and registration number;particulars of the company directors;accounting documents and information on the closing of the branch but without establishing a legal obligation for the registers to exchange data, often we can find ourselves in a situation when despite the striking –off of a company from the home register, its branches continue to

[5] OJ L 156, 16.06.2012

[6] OJ L 395, 30.12.1989

function and operate because the information about the striking - off has not reached the register where the brunch is registered.

The business register of the branch is not in a position to constantly monitor updating of the information on businesses so that is not in position to have information about any changes in the registered data on the foreign company (including its removal from the register) unless the company provides this information or a complaint is received. In this case, without effective means of enforcement, a significant number of companies do not comply about the data. Consequently, the register provides misleading information to the market so that the quality problem is under the question.

The new introduced article 5a) provides now that the register of the company shall, through the system of interconnection of registers, make available, without delay, the information on the opening and termination of any winding-up or insolvency proceedings of the company and on the striking-off of the company from the register, if this entails legal consequences in the Member State of the register of the company.This information will be received without delay by the register of the brunch so that at the end where a company has been dissolved or otherwise struck off the register, its branches are likewise struck off the register without undue delay.We must notice that the syntagma "without delay" is been used almost in every paragraph of article 5 a) as a sign of understanding the importance, at economic level especially, of the rapid exchange of information between registers.Also to be noticed is that the second sentence of paragraph 4 [7]shall not apply to branches of companies that have been struck off the register as a consequence of changes in the legal form of the company concerned, mergers, divisions, or cross-border transfers of its registered office.We condsider that an exchange of information is also necessary in this matter because any changing procedures concerning the company must be also registered at the brunch register ensuring the transparency of data .

2. Directive 2005/56/EC of the European Parliament and of the Council of 26 October 2005[8] on cross-border mergers of limited liability companies requires the registers to cooperate across borders without indicating the right channels of communication which could overcome difficulties as the language or the period of time alocated for notices between Member States. Many communications between the competent authorities are done via mail, and predominantly in the language of the issuing authority and this leads to a rather extended uncertainty for the involved companies regarding the final registration of the merger. Also, after a cross-border merger or transfer of registered office is registered by the business register of the country of destination, the company appears to exist in both Member States until it is removed from its former register. Creditors may be misled by the content of the register.Unfortunately such a transition period is unavoidable, but the lack of communication prolong this beyond the necessary time.

The Directive applies to mergers of limited liability companies:formed in accordance with the law of a Member State;with their registered office, central administration or principal place of business within the EU;if at least two of them are governed by the law of different Member States.As article 13 paragraph 2 provides, *"The registry for the registration of the company resulting from the cross-border merger shall notify, without delay, the registry in which each of the companies was required to file documents that the cross-border merger has taken effect. Deletion of the old registration, if applicable, shall be effected on receipt of that notification, but not before*".The Directive Directive 2012/17/EU modified article 13 paragraph 2 as follows "*The registry for the registration of the company resulting from the cross-border merger shall notify, through the system of interconnection of central, commercial and companies registers established in accordance with Article 4a(2) of Directive 2009/101/EC and without delay, the registry in which each of the companies was required to file documents that the cross-border merger has taken effect. Deletion of the old registration, if applicable, shall be effected on receipt of that notification, but not before*"At the first reading not many changes were made, the difference is given only by the introduction of the communication procedure through the system of interconnection of central, commercial and companies registers.The explanation can be found in the fact that there was nothing else to improve on the original form of the article 13 the only problem being the absence of a clear mechanism offering a quick and reliable form of communication.

3. Directive 2009/101/EC of the European Parliament and of the Council of 16 September 2009[9] on coordination of safeguards which, for the protection of the interests of members and third parties, are required by Member States of companies within the meaning of the second paragraph of Article 48 of the Treaty, with a view to making such safeguards equivalent responded to the need to disclose the basic documents of the companies so that third parties can have acces to information concerning companies, with accent on the persons auhorised to bind the company, and also to the copies of the compulsory acts sustaining registered

[7] article 5a, paragraph 4: Member States shall determine the procedure to be followed upon receipt of the information referred to in paragraphs 1 and 2. Such procedure shall ensure that, where a company has been dissolved or otherwise struck off the register, its branches are likewise struck off the register without undue delay.

[8] OJ L 310, 25.11.2005

[9] OJ L 258, 1.10.2009

operations.For a more business-friendly legal and fiscal environment it is not enough to have a frame alowing acces to the registration processes because companies or the large public need to search the register on a country-by-country basis not having a tool creating the posibility to acces

information in a centralized manner no matter where the register or the enquierer is situated.The new introduced article 4a) establishes the system of interconnection of registers and also a European central platform as a part of this construction so that the Member States shall ensure the interoperability of their registers within the system of interconnection of registers via the platform.

4. Time limits. Costs. Free availability of information As mentioned above, exchanging information is to be made "without delay"but the time limits are design in the article 2a) amending Directive 2009/101/EC so that national legislator can apreciate correctly the necessary changes to be made in the provision of the civil and commercial laws governing the activity of trade registers.According to those new provisions, Member States shall take the measures required to ensure that any changes in the documents are entered in the competent register and are disclosed, in accordance with Article 3(3) and (5), normally within 21 days from receipt of the complete documentation regarding those changes including, if applicable, the legality check as required under national law for entry in the file. Member States shall ensure that up-to-date information is made available and shall provide the information required for publication on the European e-Justice portal, with the observation that the Commission shall publish that information on the portal in all the official languages of the Union. The exchange of information between registers shall be free of charge and the fees charged for obtaining the documents through the system of interconnection of registers shall not exceed the administrative costs. Member States shall ensure that through the system of interconnection of registers will be available freee of charge the name and legal form of the company; the registered office of the company and the Member State where it is registered; the registration number of the company or any other further documents and particulars choosen by Member State.In regard of the funding of the system of interconnection of registers, it entails participation by the Union and by its Member States in the financing of that system. According to the principle 24 of the Directive 2012/17/EU the Member States should bear the financial burden of adjusting their domestic registers to that system, while the platform and the portal serving as the European electronic access point should be funded from an appropriate budget line in the general budget of the Union. Maintenance and functioning of the platform shall be financed from the general budget of the Union and may be co-financed by fees for access to the system of interconnection of registers charged to its individual users(article 4d inserted in Directive 2009/101/EC**).** By means of delegated acts and in accordance with article 13a, article 4d gives the power to the the Commission to adopt rules on whether to co-finance the platform by charging fees, and, in that case, the amount of the fees charged to individual user.A delegated act adopted in the conditions of article 4d, shall enter into force only if no objection has been expressed either by the European Parliament or the Council within a period of three months of notification of that act to the European Parliament and the Council or if, before the expiry of that period, the European Parliament and the Council have both informed the Commission that they will not object.

5. BRIS Project The scope of the new system, Business Registers Interconnection System (BRIS), is to increase the confidence in the European Single Market, to ensure a safer business environment for consumers and also for business partners, and to provide a higher legal certainty regarding the stored data in the trade registers.The BRIS project represents the convergent action of DG MARKT, DG JUST and DIGIT and covers European Central Platform (ECP), interconnection of the domestic business registers with this ECP, and the connection of the ECP with the e-Justice Portal that will become the European access point for searching information on companies in the interconnected business registers. The role of each of the components is as follows: European Central Platform will organize the traffic between the e-Justice Portal and the domestic business registers, data about company is indexed in ECP which maintains the relationships between companies and their foreign branches in order to send notifications only to those domestic business registers that are concerned, and to facilitate the display in the search results of data on a company's foreign branches and at last, on the e-Justice Portal will be made the payment for the information that is not free of charge. The three systems need to colaborate so that the e-Justice portal should offer the search module in order to disclose information, and provide access to payment facilities, facilitating mechanism will enable the communication between the e-Justice portal and the BRs, and between the BRs and the domestic BR systems should store and provide access to domestic information about registered companies and also are responsible to act on notifications received from other national business registers.BRIS system should cover several business needs: the need for a search facility allowing users to search in the whole of the EU and the need for a mechanism to interconnect the business registers of the Member States allowing them to inform each other in case of cross-border company mergers and of companies being striked of. In order to make the communication and the research easier and clear for all interested parties, new paragraphs were added in article 1 of the Directive 89/666/EEC with the idea of finding a common point of identification of the company so that the article stipulates that Member

States shall ensure that branches have a unique identifier allowing them to be unequivocally identified in communication between registers through the system of interconnection.The elements to be comprised in the structure of that unique identifier shall make it possible to identify the Member State of the register, the domestic register of origin and the branch number in that register, and, where appropriate, features to avoid identification errors.

6. Administrative burdens Over 112 000 branches registered in EEA countries belong to companies registered in different countries. In the field of the Cross-Border Mergers Directive, the United Kingdom reported four inbound and four outbound mergers in 2008. In 2009, one inbound and eight outbound mergers took place and so far in 2010 there have been six and seven respectively. In Estonia the figures are three inbound and one outbound in 2008, four and five in 2009 and one and none so far in 2010.[10] In some calculations, the cost of disclosure of accounting documents of the company of the branch was estimated at EUR 304 million a year and disclosure of information on the address, activities, trade register, name and legal form of the branch was estimated at EUR 43 million. Improving interoperability between countries within these areas will create the possibility of reducing not only these administrative costs but also waiting time . In cases of crossborder mergers where business registers do not currently communicate directly, the companies will still need to notify the former register themselves. Estimates suggest that this costs between EUR 8 and EUR 1 200 each time, out of which around 75 % are considered to be due to administrative burdens. In cases where the former register is notified by the new register, the lack of agreement on and standardisation of the technical details of the notification result in more time being spent on the registration on the part of the registers. The exact figure will depend on the extent of uncertainties in each individual case and the need for clarifications and translations.[11]

7. Implementing the Directive – stages at EU level

The Directive 2012/17/EU will be implemented in diferent stages:by 7 July 2014, Member States need to transpose into national law those provisions that are not impacted by the specification of technical details for the system and by 7 July 2015 the Commission will have to adopt the implementing acts including the technical specifications for BRIS. No later than two years after the adoption of the implementing acts Member States will have to ensure interoperability of the business registers via the central platform and transpose into national law the remaining provisions (as per Art. 5(2) of the directive). As can be observed there are two transposition levels so that Member States will have to communicate twice the national law provisions. Through implementing acts, the Commission shall adopt, according to article 4 c inserted in the Directive 2009/101/EC the technical specification defining the methods of communication by electronic means for the purpose of the system of interconnection of registers; technical specification of the communication protocols;the technical measures ensuring the minimum information technology security standards for communication and distribution of information ;the technical specification defining the methods of exchange of information between the register of the company and the register of the branch ; the detailed list of data to be transmitted for the purpose of exchange of information between registers, as referred to in Article 3d of the Directive, in Article 5a of Directive 89/666/EEC, and in Article 13 of Directive 2005/56/EC;the technical specification defining the structure of the standard message format for the purpose of the exchange of information between the registers, the platform and the portal;the technical specification defining the set of the data necessary for the platform to perform its functions as well as the method of storage, use and protection of such data;the technical specification defining the structure and use of the unique identifier for communication between registers; the specification defining the technical methods of operation of the system of interconnection of registers as regards the distribution and exchange of information, and the specification defining the information technology services, provided by the platform, ensuring the delivery of messages in the relevant language version; the harmonised criteria for the search service provided by the portal; the payment modalities; the technical conditions of availability of services provided by the system of interconnection of registers; the procedure and technical requirements for the connection of the optional access points to the platform.

Conclusions

"The significance of the data held in different business registers can vary and that this can in turn have legal consequences, not only for companies but also for their workers and for consumers, that may vary from Member State to Member State" stated the European Parliament in the resolution of 7 September 2010 on the interconnection of business registers. As the Internal Market and Services Commissioner

[11] Commission staff working document impact assessment - Accompanying document to the Proposal for a Directive of the European Parliament and of the Council amending Directives 89/666/EEC, 2005/56/EC and 2009/101/EC as regards the interconnection of central, commercial and companies registers, 2011

Charlie McCreevy declared when the public consultation on identifying better ways to cooperate between business registers was released by the European Commision: " Improving access to up-to-date and official information on companies for creditors, business partners and consumers could serve a means to restore confidence in the markets. Business registers play an important role in ensuring transparency and legal certainty in Europe."[12]

The steps reffered to in the Green paper elaborated by the Commission in 2009[13] were taken.All Member States shall participate in the decisional process having reliable information on companies, in all official languages of the EU, in a centralized manner and at the same quality of service across the EU. We can only hope that strengthen cooperation in the case of cross-border procedures, such as cross-border mergers, seat transfers or insolvency proceedings, interconnection of business registers and cross-border access by electronic means to business information will ensure an appropriate degree of transparency and legal certainty in the markets all over the EU and will reduce administrative burdens from the shoulders of european contributors.

WASTE ELECTRICAL AND ELECTRONIC EQUIPMENT FRAMEWORK LEGISLATION AND MANAGEMENT SYSTEM IN EUROPE

Maria-Loredana NICOLESCU*

Abstract

Waste electrical and electronic equipment (WEEE) has become one of the most significant waste streams due to the increasing amounts and environmental impact. It is very important to know how to manage the WEEE quantities, what laws are in force in this field and what policies are available to apply.

This paper presents the e-waste legislation and management system from some of the European countries, as examples. The hierarchy of the management systems is presented according to the framework Directive and legislative approaches. There are also shown the "take-back" policy, the "polluter pays" principle and the "extended producer responsibility" principle. The goal of this research is to highlight the WEEE framework legislation in Europe and to present the EU policies for the WEEE management system.

Keywords: *waste electrical and electronic equipment, legislation, the "polluter pays" principle, take-back policy, the principle of extended producer responsibility.*

1. Introduction

WEEE management is an important issue, taking into account the increase of WEEE quantity from the last years, the opportunities for recovery of materials from recycling and not least the harmful effects on the environment and human health. Due to the various hazardous substances contained in waste electrical and electronic equipment, the risk on human health and environment increases if WEEE treatment is not done properly. The restrictions regarding the use of certain hazardous substances in electrical and electronic equipment are covered by the European Directive 2002/95/EC (RoHS Directive) recast as the 2011/65/EU Directive. The Directive 2002/96/EC was replaced by Directive 2012/19/EU, signed on 4th of July, 2012, in Strasbourg, which introduced higher WEEE collection targets. The new Ditrective was not fully transposed into the national legislation of each EU Member State, so the collection rate remains 4 kg/inhabitant/year as envisaged in the old Directive.

The Directive 2012/19/EU defines electrical and electronic equipment or "EEE" as "equipment which is dependent on electric currents or electromagnetic fields in order to work properly and equipment for the generation, transfer and measurement of such currents and fields and designed for use with a voltage rating not exceeding 1000 volts for alternating current and 1500 volts for direct current".

The categories of electrical and electronic waste, covered by 2012/19/EU Directive, are showed in table 1:

Table 1. Categories of electrical and electronic equipment (EEE)

Category 1	Large household appliances
Category 2	Small household appliances
Category 3	IT and telecommunications equipment
Category 4	Consumer equipment and photovoltaic panels
Category 5	Lighting equipment
Category 6	Electrical and electronic tools (with the exception of large-scale stationary industrial tools),
Category 7	Toys, leisure and sports equipment
Category 8	Medical devices (with the exception of all implanted and infected products)
Category 9	Monitoring and control instruments
Category 10	Automatic dispensers

Source: 2012/19/EU Directive, http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:L:2012:197:0038:0071:en:PDF

Waste electrical and electronic equipment (WEEE) is a waste type consisting of any electrical or

*Graduate Teaching Assistant, PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **maria.loredana_nicolescu@yahoo.com**).

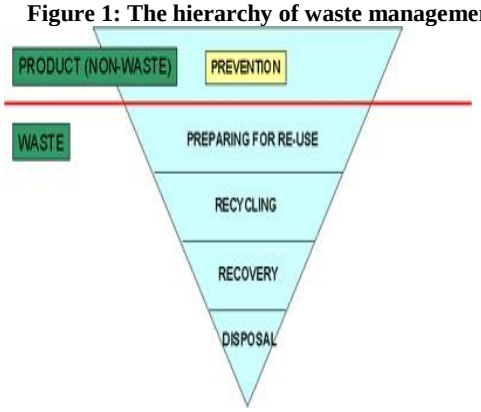
electronic device, broken or abandoned.[1] According to OECD, *electronic waste*, also known as *e-waste* is "any device that uses a power source, that has reached end of life". Managing waste electrical and electronic equipment needs a specialized collection, transport, treatment and final disposal system.[2]

2. Legislation and WEEE management system in Europe

In the last two decades, the number of environmental policies and legislation underwent substantial changes regarding the environment and its protection. One of the important points taking into consideration is related to the product, in order to reduce its environmental impact resulting from the use throughout its entire life cycle - from design, production, consumption, up to the end of life.[3] These policies and laws are almost all based on the principle of extended producer responsibility (EPR). EPR concept has become a principle of environmental policy established in many countries. EPR is a method of integrating the principles of sustainable development in international trade, based on international environmental law, a principle known as "Polluter Pays Principle".[4]

In Europe there is a framework directive in the field of waste, Directive 2008/98/EC which introduced the "polluter pays" principle, this being a guiding principle at European and international level. In this directive has been introduced the extended producer responsibility, representing "one of the means to support the design and production of goods which take into full account and facilitate the efficient use of resources throughout their life cycle, including their repair, reuse, disassembly and recycling without compromising the free movement of goods in the internal market". Directive 2008/98/EC established the concepts and definitions of waste management, recycling and recovery being basic elements. This explains the stage where waste ceases to be waste and become secondary raw materials, the so called criterion of end-of-waste. The Directive lays down some basic principles in waste management: it is assumed that the waste is managed without endangering human health or harming the environment and in particular without risk to water, air, soil, plants or animals, without causing a nuisance through noise or odors, and without adversely affecting the countryside or places of special interest. The legislation and the policy of the EU Member States apply the following hierarchy of waste management in represented in Figure 1[5]:

Figure 1: The hierarchy of waste management



Source: http://ec.europa.eu/environment/waste/framework/index.htm

According to the EU strategy, the waste management systems hierarchy is based on minimization, reuse, recycling, recovery and, in the second stage, on the elimination.[6]

Traditionally, in the EU and elsewhere, a legislative approach on environmental issues was one of "command and control", and at this stage the emphasis is on extended producer responsibility, those who produce the goods being responsible for environmental impact throughout the entire life cycle, by recycling, reuse and disposal.[7] The policy instruments of the extended producer responsibility include various types of taxes such as advance recycling fee, delivering the product at the end of its life cycle for recycling ("take-back policy"), raw material costs and combinations of these instruments. Other policies include "pay-as-you-throw", waste

collection taxes and a ban on waste storages.[8] Holland was the first country in Europe which adopted and fully implemented the take-back policy. The Dutch approach involves a scheme of allocating the cost. It is based on the national system of collection points and has units with the purpose of dismantling equipment at their end of life.[9]

More and more countries in Europe are implementing "take-back" laws which require the manufacturer to take the used products at the end of their life.[10] Currently, the attention is focused on so-called "brown goods" (computers, mobile phones, etc.), but also on "white goods" (refrigerators, air conditioners, etc.), cars and batteries that require handling and special treatment.[11]

"Extended Producer Responsibility" - EPR is an indirect legislative policy of the European Commission designed to protect the environment through the WEEE management.[12] The Organization for Economic Cooperation and Development (OECD)[13] has defined EPR as "an environmental policy approach in which a producer's responsibility is extended to the post-consumer stage of the product life cycle, including the final step of eliminating them". EPR was also defined by Lindhqvist[14] as "... a matter of policy to promote a product's improvements through its full lifecycle through extending the product manufacturer's responsibilities regarding different parts of the product's life cycle, and especially at the return of the equipment, the recovery and final disposal of the product".[15] Due to environmental concerns, the legislation on extended producer responsibility includes reference to the entire supply chain, with manufacturers, importers and retailers, being responsible for the collection and recovery of end-of-life (EOL) products.[16] The main aims of extended producer responsibility are[17]:

- the prevention of waste generation and their reduction
- the reuse of products (equipment)
- the increased use of recycled materials in production
- the reduction of the consumption of natural resources
- the inclusion of the environmental costs in product prices
- the recovery of the energy when incineration is considered appropriate.

EPR was first established in Germany in 1991 by the passage inserted in the "Ordinance on the avoidance of packaging waste".[18] EPR aimed at motivating producers on environmental issues of "design" as much as possible at the source, the design of the product to reduce the cost of waste management. An example is to design a product that is energetically efficient during use, that generates less waste and is less dangerous, and especially at the end of its life there are facilitated the recovery, reuse and recycling.[19] In EPR, equipment manufacturers can outsource recycling and the global deficit is charged to the consumer when buying a new product.[20] EPR policy is based on the "polluter pays" and it is characterized by shifting responsibility away from municipalities, including the treatment and disposal costs in the product price and taking into consideration the environmental impact.[21]

In Finland, it was developed an awareness project "AWARE-NESS" (WEEE Advanced Recovery and Recycling Management System), project launched in the summer of 2003, which was focused on the WEEE Directive's influences on producers. The aim was to assist companies to establish a consensus on the details of implementation of the WEEE Directive. In addition, the project aims to initiate cooperation between companies regarding different product categories and choose the optimal recycling processes of obsolete products. Awareness project comprises two sub-projects named SELMA and RecISys. Selma focused on management issues regarding operational recycling and developed communication activities between national authorities and companies. The main objective of ReclSys was to develop an online information system. Through this information system is possible the control of recycling processes, the reporting towards the authorities, the customer information regarding the entire recycling industry. In the Finnish system, institutions may contact the participating companies in the business of WEEE recovery to remove and retrieve equipment from the designated reception places. Most electronics retailers also take back the old equipment in association with buying a new one. The regional waste management companies also receive electronic waste. Most of the times, there is a fee paid to lift the waste and it varies between 1-36 euros depending on the category of the equipment. Yla-Mella et al.[22] evaluated the take-back and the recycling of WEEE system in Finland and they noticed that there are more business operators involved in the recovery of WEEE, but only a few of them deal with collected elements for recovery. The WEEE are normally collected and pre-treated by some operators before there are being transported elsewhere for treatment and effective use of materials.

Legislation on e-waste management was introduced into Switzerland in 1998 when the Ordinance on "The Return, the Taking Back and the Disposal of Electrical and Electronic Appliances" (ORDEA) came into force.[23] Switzerland has two separate WEEE recycling systems operated by two Producer Responsibility Organizations: the SWICO (The Swiss Association for Information, Communication and Organizational Technology) Recycling Guarantee and the S.EN.S (Stiftung Entsorgung Schweiz) System. SWICO manages "brown goods" namely electronic equipment such as computers, TVs, radio and others, while S.EN.S handles "white goods" such as washing machines, refrigerators, ovens, etc.[24] The SWICO Recycling Guarantee was created in 1993 by the SWICO Association of manufacturers and importers of office electronics and IT equipment in Switzerland. In 1994, when SWICO came into force, only electronic and IT equipment were covered. In the next years, were included further categories such as mobile telephone, equipment used in the graphics industry, telephones and telephone switchboard systems, consumer electronics, as well as dental equipment.[25] SWICO is a nonprofit company organized by industry with over 400 member companies.[26] Participation was originally voluntary, but it was mandated by a national ordinance in 1998.[27] In the Swiss system, the producers have full responsibility of the implementation and operation, covering the entire spectrum of WEEE, and the entire system is financed through recycling fees[28]. The retailers, the manufacturers and the importers must take-back their equipment free of charge and manage it in "an environmentally tolerable way".[29] Until January 2002, consumers had to pay a fee to voluntary

recycle of their electronics through the SWICO system. Since 2002, the consumers were able to return their "end of life" electronics free of charge as the free system came into force.[30] Swiss Foundation for Waste Management (S.EN.S) was established in 1990 as a non-profit organization that operates with recover solutions from manufacturers, importers and retailers, having as initial work field the recycling of refrigerators and freezers. Today, S.EN.S is responsible for household appliances, construction, gardening, electrical and electronic toys, lighting equipment and so on. SWICO and S.EN.S. established the take-back policy and the recycling system financed by advanced recycling fees (ARF), the fee being paid by the consumer when he buys the electrical and electronic equipment (EEE). They both created a regulation that outlines the prerequisites for the recycling companies to be commissioned for either of the systems. In 2002, the overall recovery of IT equipment was estimated at 60–70% in Switzerland[31]. By the effort of these systems, about 75,000 tonnes of electrical and electronic devices were collected, sorted and dismantled and subsequently treated in Switzerland in 2004[32] while about 68,000 tonnes were collected in 2003[33]. Sinha- Khetriwal et al. (2005) observed that Switzerland was the first country in the world that established a formal system to manage e-waste.

In several European countries, the laws of the waste electrical and electronic equipment are differentiated by the responsibility belonging to the manufacturer/importer or local governments as the Khetriwal Deepali Sinha, Philipp Kraeuchi and Rolf Widmer presented in their paper "Producer Responsibility for e-waste management: Key Issues for Consideration e Learning from the Swiss experience ", Journal of Environmental management xx, 2007: 1-13[34]:

- In Switzerland came into force in July 1998, the "Ordinance on the return, take back and disposal of electrical and electronic equipment," the manufacturer/importer being responsible;

- In Denmark, since December 1999, it was imposed the "Statutory Order from the Ministry of Environment and Energy no. 1067" with the responsibility of local government;

- Netherlands must comply since January 1999 the disposal under the "White and brown Decree", the responsibility belonging to the manufacturer/importer

- Norway has signed since July 1999, the "Regulation of electrical and electronic discarded products", the manufacturer/importer being responsible for WEEE management;

- Belgium signed in March 2001 the "Environmental policy agreements on obligations to waste electrical and electronic equipment take-back. In this case the manufacturer/importer is responsible for the management of WEEE;

- In Sweden is in force since July 2002, the responsibility of manufacturer by Ordinance of electrical and electronic products (SFS 2000:208);

- Germany follows since March 2005 "The law governing the sale, the return and the environmental-friendly disposal of electrical and electronic equipment (Law ElektroG)" with the responsibility of the manufacturer/importer.

European legislation on waste electrical and electronic equipment (WEEE) refers to[35]:

- Directive 2012/19/EU of the European Parliament and of the Council of 04 July 2012 on waste electrical and electronic equipment (WEEE);
- Directive 2002/96/EC of the European Parliament and of the Council of 27 January 2003 on waste electrical and electronic equipment (WEEE). Consolidated version;
- Directive 2003/108/EC of the European Parliament and of the Council of 8 December 2003 amending Directive 2002/96/EC on waste electrical and electronic equipment (WEEE);
- Directive 2008/34/EC of the European Parliament and of the Council of 11 March 2008 amending Directive 2002/96/EC on waste electrical and electronic equipment (WEEE).

Secondary legislation on WEEE refers to: (http://ec.europa.eu/environment/waste/weee/legis_en.htm):

- Commission Decision 2004/249/EC of 11 March 2004 concerning a questionnaire for Member States reports on the implementation of Directive 2002/96/EC of the European Parliament and of the Council on waste electrical and electronic equipment (WEEE);
- Commission Decision 2005/369/EC of 3 May 2005 laying down rules for monitoring compliance of Member States and establishing data formats for the purposes of Directive 2002/96/EC of the European Parliament and of the Council on waste electrical and

electronic equipment (notified under document number C(2005) 1355);

- Council Decision 2004/312/EC and Council Decision 2004/486/EC, as well as acts related to the accession of new Member States, provide for some derogations, limited in time, as concerns the targets set by Directive 2002/96/EC (WEEE).

Regarding various substances used at electrical and electronic equipments production, there is Directive 2002/95/EC of the European Parliament and of the Council of 27 January 2003 on the restriction of the use of certain hazardous substances in electrical and electronic equipment. On the other hand, WEEE recycling provides considerable opportunities regarding raw materials available on the market. EU legislation promotes the collection and recycling of WEEE in accordance with 2002/96/EC WEEE Directive. The legislation presumes the creation of some collection schemes where consumers give used equipment, without charge. The purpose of these systems is to increase recycling and reuse of such products. Currently, a third of EU WEEE compliance schemes is reported by the compliance systems such as they were separately collected and properly managed, the WEEE being[36]:

1) collected by the unregistered businesses and treated properly

2) collected by the unregistered businesses and treated improperly or even illegally exported abroad

3) disposed as part of the residual waste (for example, in landfills or incinerators).

The European Commission has revised the WEEE Directive, in order to increase the amount of collected and treated WEEE, to reduce waste and to give to the Member States the tools to fight against illegal export of waste more effectively. Reforming the 2002/96/EC Directive ended with the signing of the new Directive, 2012/19/EU Directive, on 4th of July 2012 at Strasbourg, which introduces higher collection target of WEEE. Until the total transposition of this Directive into the national law of each Member State, the current collection rate of 4 kg/inhabitant remains in force, following that, at the middle of 2016, the minimum collection rate being 45%, calculated based on the total weight of WEEE collected in one year, expressed as a percentage of the average weight of EEE placed on the market in the three preceding years.[37] In the second stage of the Directive, starting from 2019, the minimum collection rate to be achieved is 65% of the annual average weight of EEE put on the market in the three previous years in each Member State or, alternatively, 85% of generated WEEE in the respective state territory.[38] Norway, Sweden, Denmark, along with Italy, Ireland, Belgium, Luxembourg, Germany, Finland and Austria recorded the highest annual WEEE rate collection, over 8%, according to the European statistics (Eurostat)[39] sources, reporting for 2010, table 2.

Source: http://appsso.eurostat.ec.europa.eu/nui/submitViewTableAction.do

The current WEEE collection rate of 4 kg/capita/year from private households, as universal rate, does not reflect the economy of each individual Member State and therefore lead to sub-optimal targets for some countries and too ambitious for others.[40]

For example, Romania, like other countries from Central and Eastern Europe, will benefit from a transition period, translated by creating, in the first stage between 2016-2019, a collection rate of 40- 45% and delaying the achievement of the collection rate of 65% (applicable in the EU starting with 2019) until a date decided by the every Member State, but not later than 2021.[41]

The 2012/19/EU Directive provides to the EU Member States the necessary tools to combat illegal waste export more effectively. The illegal WEEE shipments disguised in legal shipments of used equipment against the EU rules of waste treatment is a serious problem. The new Directive requires to the

[40] ST17367 Proposal for a directive of the European Parliament and the EU Council on waste electrical and electronic equipment (WEEE), Brussels, December 8th, 2008.

[41] Ecotic, accessed March 15, 2014, www.ecotic.ro, http://www.ecotic.ro/uploads/original/8d4b99097775110adebcd6b4c26f50d8934d3cb7. pdf.

exporters to test and provide documents for such transfers. An improvement is the harmonization of national registration and reporting under the Directive. Member States registers for electrical and electronic equipment producers will be integrated more closely. Administrative burden is expected to be significantly reduced.[42]

3. Conclusions

The changes in European legislation regarding waste electrical and electronic equipment have as goal the alignment of Member States national legislation in a common objective and also accelerate his achievement. EU waste policy has evolved in the last 30 years passing through a series of action plans for environment and legislative framework that aims to reduce the negative environmental and health impact and create an efficient economy in terms of resources and energy.[43]

There are still countries in Europe that are not complying the 4 kilograms/capita/year collection target. As the new Directive introduces higher targets, it should be taking into consideration the solutions for this problem, may be for a more efficient WEEE management.

CONSIDERATIONS ON POLITICAL PARTIES

Erhard NICULESCU[*]

Abstract

Political parties are the engine of social life, without which citizens would not be able to express political will. According to the law of political parties, they fulfill a public mission guaranteed by the Constitution. That is why, considering the subject very current, we considered it important to analyze in this study, in the notion of political pluralism: the concept of political party but also its constitutional dimension. To this end, the study shows the view of the doctrine combined with the jurisprudence of the Constitutional Court.

Keywords: *Constitution, political party pluralism, citizen, jurisprudence.*

1. Introduction

Political parties have had an overwhelming role in the modernization of political life[1]. Strictly, parties are more than a century and a half old[2]. According to Giovanni Sartori relationship between citizens and parties is defined as: "citizens in Western democracies are represented by the parties[3]". It is stated that the term *party* was used to designate factions that divided the ancient cities and clans of the Middle Ages and clubs of deputies from the revolutionary assemblies and committees which prepared the census election in constitutional monarchies[4]. In the U.K. political parties emerged in the form of affinity groups in Parliament, associated with networks of relations in the country, groups that divided in terms of governance in fact[5].

Therefore, we explain further, what the political parties are, combining doctrine, case law and the jurisprudence of the Constitutional Court of Romania. As rightly pointed out in doctrine, the concept of political party allows the correct interpretation of art. 8 of the Constitution in the sense that political parties contribute to defining and expressing the political will of the citizens[6]. We speak of this view of the special relationship that exists between the state and political parties. State expresses the community, while political parties express ideologies and interests of social groups that coexist within the nation[7].

According to Dan Claudiu Dănişor there are two phases of the approach of defining political party[8]. A first phase insists on doctrinal element of the party and its function in the state or its base class. A second phase emphasizes more on the institutional element of the political party.

As far as we are concerned, we understand the parties as *associations*, social groups. Social groups are of two kinds: some voluntary as for example: companies and associations in general, whose role is so great today; others are natural, such as primitive tribe and clan which are naturally constituted, as was the Roman *gens*, like family, as are the nations today[9].

According to the jurisprudence of the Constitutional Court of Romania[10] in the sense of the constitutional text to which it is devoted, the *right of association* is a recognized prerogative of the citizen, whose exploitation is the expression of conscious and free will. The Court shows that association occurs by consideration of the common reasons that close associates and ensures communication between them, ideological or professional etc.; is essential the existence of a system of common values and interests as a premise and some final common goals. In addition, the argument held by the Court that: "the option of association is based on the conviction that achieving the desired purpose is only possible due to the concerted action of a organized and structured community, therefore, logical and functional." The conclusion of the above highlighted decision is that "in a state of law is not possible to convert the right of association into an obligation."

2. Content

2.1. Doctrinal and legal definitions of the political party

Dimitrie Gusti said that "*political party* is one of the most suggestive and interesting collective personalities (...) is a free association of citizens, permanently united by interests and common ideas of a general nature, association which seeks in a full public light to reach the power to govern in order to create a social ethical ideal."[11]

According to Vasile Gionea "*political party is an association of people* who are organized based on common interests or views to conquer the power of state with the vote of the people."[12] Lucreţiu Pătrăşcanu defined the party as "*a group of people who defend certain class interests and struggle for political power: the determinant element of its structure is the nature of the interests it represents and for whose satisfaction unfolds its entire activity. By their content, class interests determine also adherence or lack of adherence of a political body to a social or political system within which it works, as also all interests set their objectives pursued and the decide the means by which it intends to use to achieve them, in relation to the existing rules of law. "*[13]

In another opinion is stated: "*political parties and groupings contribute to the expression of suffrage. They are formed and carry out their work freely. They must respect the principles of national sovereignty and democracy.*"[14] A party consists of groups and individuals who perceive the need to orient a certain conception regarding government policy and are interested to guide the evolution of the global society in a certain direction.[15] One author states that, whatever definition we embrace a common denominator is detectable in the ability of political parties to form the means by which citizens exercise their right to participate in the current policy configuration and administration of sovereignty.[16]

From the definitions of the political parties highlighted so far, stand off some features that once understood, will help us to deepen the concept of political party:

- political parties are associations or permanent groups of individuals united freely by common political beliefs and ideological affinities;

- political party is a legal entity (moral) has an independent organization; has corporate assets; works to achieve a legitimate aim;

- by definition, the political party tends to assume responsibilities in the exercise of power;

- parties are distinguished from mere political clientele, factions, clans or camarilla; parties differ in their willingness to exercise power by pressure groups and clubs that do not participate in elections and parliamentary life, but pressure on parties, government etc.

- peculiarity of parties is to personify a trend, to make taking shape a conception of man and society and fight to conquer power by attracting voters;

- legally, the political party is an association and the incorporation and operation are subject to legal conditions set for any association; therefore any political party acquires legal personality from the moment of its registration.[17]

Political parties are defined in the Organic Law no. 14/2003: *"the political associations of Romanian citizens, with the right to vote, that participate freely in the exercise of their political purpose, fulfilling a public mission guaranteed by the Constitution"*. The law also expressly states that political parties are public legal entities. Previously, in the Law no.27 / 1996 parties were defined as *"associations of Romanian citizens with the right to vote* (....)". Also, in the old regulation there was the provision that: political parties are public legal entities. Tudor Drăganu considered that the expression "*political parties are public legal entity*" is a legal nonsense because what characterizes public legal entities is that they can issue binding acts by way of unilateral expressions of the will, attribute lacked by the political parties.[18]

In addition, we note that in the Romanian Constitution political parties are not defined, but only mentioned, in the context of political pluralism. From this point of view, as shown by an author, constituent legislature consciously avoided a normative constitutional definition (omnis definitio periculosa est) of the political parties from at least two reasons:

a.) If political parties are the expression of the separation between state and society in a democratic political system, it requires a separation of the state and the party, the party-state is characteristic of totalitarian regimes. Therefore, a definition at the constitutional level would present many inconveniences, both to legislate subsidiary and for the existence and functioning of political parties to form party system in Romania.

b.) The political parties, even if they have a major influence on the exercise of state power as institutional structures, these remain in the civil society area, being the expression and even the most efficient carrier of pluralism (political) of society. Reason which does not justify a normative constitutional definition of the political parties.[19]

2.2. Political and constitutional dimension of the political party

As shown in doctrine, political parties are a product of representative liberal democracy.[20] The parties through their activities and actions, by the perception and exercise of the constitutional role these have, largely establish the constitutional regime and quality of life.[21] Constant presence of associative phenomenon for political purposes to impose and develop scientific interest especially in the matter of modern parties, maintain aimed to unravel concerns: the distinct nature and sustainable associations generally of the party type, in particular, based on their mode of formation; role and objectives of the parties, their concrete forms of involvement in the functioning of the state; factors that accredits parties as actors linking social body, coagulated state in the nation, the fundamental institution of the political system.[22]

Position and location of parties in contemporary Constitutions have a great importance and has multiple meanings and not coincidentally in the Romanian Constitution, the concept of political parties appears in the title *"General Principles"* and in the context of supreme values of the political pluralism and in two fundamental constitutional principles of the organization of the state power: democracy and sovereignty.[23] Therefore, political parties are directly related to fundamental rights. According to art. 21 of the German Constitution, "parties will participate in the development of the peoples' political will." In the revised Romanian Constitution, we expressly find the notion of party, political party or other forms of association in articles such as art. 8 paragraph (2); art. 40 paragraph (3), art. 73 paragraph (3) letter b; art. 146 letter k; art. 9; art. 62 paragraph (62); 64 paragraph (5) and so on. According to art. 73 paragraph (3) letter b) of the Constitution, the organic law regulates: *"organization, operation and financing of political parties*".

The constitutional role of the political parties in our country is approved by the provisions of art. 8 paragraph (2) which states that parties *contribute to defining and expressing the political will of the citizens*. If we interpret this text, we can conclude that the political will is the will of the citizens and the party is the mean that contributes to the defining and expressing of the political will. These goals of the parties to contribute *to defining and expressing the political will of the citizens,* determines otherwise and their constitutional status, i.e. the set of principles and rules governing the formation and the rights and obligations of the parties in a pluralistic and democratic state.[24]

According to the jurisprudence of the Constitutional Court, the parties do not have a direct mission in forming or expressing the political will; general will as political will results from the vote and is expressed by the representatives and by referendum, and by voting is elected the parliament and not the parties, parties having only the role of mediation between the electorate and parliament for its establishment by the voters.[25] The characterization of the party as fulfilling a public mission guaranteed by the Constitution is not contrary to art. 8 paragraph (2).[26] "Defining and expressing the political will is a mission, as it refers to citizens in general can only be public. Party is a public legal entity and its mission can only be public, since regards a public interest and pursues the formation of a general political will of which it depend representativeness and legitimacy necessary to implement its political program." [27]

Referring to another interpretation that we can make to art. 8 paragraph (2) of the Constitution, in accordance with the provision that *political parties contribute to expressing the political will of the citizens*, we show that we should corroborate with art. 30 on freedom of expression to shape this constitutional role of political parties. The Constitutional Court jurisprudence has established that "the party expressing the political will of citizens, according to art. 8 paragraph. (2) of the Constitution is the political realization of freedom of expression provided for in art. 30 of the Constitution. Otherwise, it would mean that this freedom is different as exercised by citizens in an associative structure or outside such a structure, which is contrary to art. 30 of the Constitution".[28]

According to the doctrine[29] the contribution that parties have in defining and expressing the political will of the citizens is not only a right of the parties but also an obligation. Therefore, the author shows that the law allows the Bucharest Court to declare the

termination of the party if it does not designate candidates, alone or in alliance in two successive legislative election campaigns, in at least 18 constituencies or did not have any general meeting for 5 years, according to article 47 of the law on political parties. These directives were judged by the Constitutional Court as being compliant with the Constitution, because the purpose of the party is defining for it and includes inter alia, the obligation to participate with candidates in the election, such an activity is the natural result of institutional expression of the political will of the members of that association, not to exercise that power entails the impossibility of the association to have the status of a political party.[30]

As shown unduly in the doctrine, there can be identified two dimensions of the relationship, connection of the parties with the fundamental rights: freedom of establishment and functioning of political parties and the purpose of political parties.[31] The earlier Organic Law of Political Parties, was Law no. 27/1996 which was amended by Law No.14 / 2003.[32]

Chronologically speaking, however, we mention that prior to 1989 there was no law on political parties, as it exists today. All modern type political systems in Romania were characterized in terms of institutional and functional plan – except the period between January 21, 1941 and August 23, 1944, by: existence of party pluralism and free competition between them (during 1865 – February 11, 1938 August 23, 1944 and December 30, 1947, December 28, 1989-present); the exclusively constitutional role of the single party (between December 1938 / January 1939- September 5, 1940, September 6, 1940 - January 20, 1941, December 30, 1947 – December 22, 1989).[33]

However, Decree Law No. 8 / 31.12.1989 on the registration and operation of political parties and public organizations in Romania[34] was the first bill after the 1989 Revolution which have paved the way for multi-party system, though it had only a number 5 articles. This bill is closely related to the Decree-Law no. 2 / 12.27.1989 regarding the establishment, organization and functioning of the National Salvation Front Council. In 1996 with the adoption of the political parties law no. 27/1996, Decree-Law No. 8 / 31.12.1989 was recalled. We can talk about at this time of reactivation of historical parties, such as the National Liberal Party or Christian Democratic National Peasants' Party or Romanian Social Democratic Party, which were registered at the Bucharest Court or the establishment of other new parties such as: Romanian Ecologist Party or Democratic Union of Hungarians in Romania etc.

The Decree-Law No. 8 / 31.12.1989 on the registration and operation of political parties and public organizations in Romania is expressly stipulated in article 1 that: "*In Romania the formation of political parties is free*". It also provides an exception that refers to fascist parties or those that spread ideas contrary to the constitutional and legal order in Romania. Therefore, this act does not state the definition of a political party but specifies that the registration and operation of political parties shall be made in accordance with the provisions of this Decree-Law.

The Political Parties Law no.27 / 1996 has established more stringent legal conditions, among other things, on the establishment of political parties, which led to a sensible reduction in their number.[35] On the other hand, art. 8 paragraph. (2) in conjunction with the appropriate constitutional text of freedom of association, political parties are introduced as topic of constitutional order.[36]

3. Conclusion

Political parties were born from the need to express human desires and aspirations outside of each of us, ordinary people, for a better life. Along the way, political parties have gained recognition and legal protection. As shown in this study, political parties have not only a political dimension but also constitutional protection, being the form of expression of political pluralism.

THE CURRENT TRENDS OF CONSTITUTIONALISATION OF THE NEW CIVIL CODE AND OF THE NEW CIVIL PROCEDURE CODE - SELECTIVE ASPECTS

Nicolae PAVEL[*]

Abstract

By this approach, the proposed study opens a complex and complete vision, but not exhaustive on: The current trends of constitutionalisation of the new Civil Code and of the new Civil Procedure Code. The subject of the scientific endeavor will be circumscribed to the scientific analysis of its parts, as follows: 1) Preamble. 2) The first judicial review of the constitutionality of the law established in the United States and in Romania – their consequences. 3) Reflection of the constitutional principles in the new Civil Code and the new Code of Civil Procedure. 4) Reflection of the dispositions of new Civil Code and of the new Code of Civil Procedure in the Constitutional Court decisions. 5) Compliance with Romanian Constitution of new Civil Code and of new Code of Civil Procedure - the current trends of constitutionalisation of the law. 6) Conclusions.

Keywords: *judicial review of the constitutionality of the law, constitutional review, new Civil Code, new Civil Procedure Code, constitutional provisions in civil mater, constitutional provisions in civil procedure, current trends of constitutionalization.*

1. Introduction

The subject of the scientific endeavor will be circumscribed to the scientific analysis of the four major parts of it: 1) The first judicial review of the constitutionality of the law established in the United States and in Romania - their consequences. 2) Reflection of constitutional principles in the new Civil Code and the new Code of Civil Procedure. 3) Reflection of the dispositions of new Civil Code and of the new Code of Civil Procedure in the Constitutional Court decisions. 4) Compliance with Romanian Constitution of new Civil Code and of new Code of Civil Procedure - the current trends of constitutionalisation of the law.

In our opinion, the area studied is important for the constitutional doctrine, for the doctrine of civil law and civil procedure law, the general theory of law, for the legislative work of drafting laws as well as for the legislative technique, because through this scientific approach, we aim to establish through a diachronic and selective approach a complex and complete reflection, albeit not exhaustive of the current sphere, under the form of the entire selective aspects, regarding the topic under discussion.

In order to fully but not exhaustively cover the field of study, after the prerequisite explanations, the selective examination of the first judicial review of the constitutionality of the law first done in the United States and in Romania will follow, having as a consequence the establishing of the jurisprudential base of this review in the two countries. I have also selectively analyzed the diachronic evolution of this review in the United States of America and Romania.

This topic regarding "the current trends of constitutionalisation of the new Civil Code and of the new Civil Procedure Code" was performed according to a logical scheme of the analysis of the "compliance with the Romanian Constitution of the new Civil Code and the new Civil Procedure Code" thereby highlighting the contribution of the Romanian Constitutional Court to constitutionalise the law.

From the perspective of full but not exhaustive coverage of the area regarding "Current trends of constitutionalising the New Civil Code and the New Code of Civil Procedure", a flowchart was introduced on the evolution and consequences of this review regarding the conversion of the law under the influence of fundamental law.

Through this approach, we aim to pinpoint the theoretical, constitutional and legal sources of law regarding the direct consequences of constitutionalising of the Romanian law on the simplification of the Romanian legal system.

Even if the constitutionalisation of the law turns back in time to the first written constitution in the world, the theoretical interest to take it up again is determined by the fact that the existing literature has not always paid enough attention to some theoretical aspects of the constitutionalisation of the law.

Furthermore, it is our opinion that the literature does not retrospectively approach the review of the constitutionality of laws and its direct consequences.

In addition, the study focuses on the valorization of the constitutional and legal regulations in diachronic and selective approach regarding the review of the constitutionality of laws including under the legal regime of the New Civil Code and the New Code of Civil Procedure.

2. The first judicial review of the constitutionality of the law established in the United States and in Romania – their consequences

2.1. The first judicial review of the constitutionality of the law established in the United States and in Romania – its consequences

The compliance with the Constitution, established in the title of the study, involves reviewing the constitutionality of laws which appeared shortly after the adoption of the first written constitution. The first written Constitution in the world is the United States Constitution adopted in 1787.[1] That is the reason why elected within the present study the first judicial review of the constitutionality of the law, approached from a historical perspective, established in the United States, in the famous Marbury versus Madison[2] decision in 1803, although the Constitution did not give the right to the Supreme Court of the United States to rule on the constitutionality of the law.

The cause is itself curious. In 1800 and very shortly after the presidential elections, the administration of President John Adams proceeded to appoint 42 judges, including William Marbury, who were only justices of the peace in the District of Columbia. Taking into account the *spoils system* (rewarding positions to loyal supporters of the winning candidates) in force in the US, one could obviously draw the conclusion that the interested ones owed their nomination to their federalist sympathies. Unfortunately for them and though the appointments were determined according to the legal rules in force, they had not yet been notified, when, following the presidential elections, President John Adams was replaced by Thomas Jefferson. The new administration and especially James Madison, the Secretary of State, who was authorized to monitor these appointments, was not willing to compromise at all and issued only 25 appointments, among which William Marbury was not present.[3]

He pleaded his case in front of the Supreme Court so that it would coerce the administration into issuing his appointment, though he was not at all interested, because the duration for which he was appointed had almost expired. The Supreme Court presided by the famous John Marshall was in a bit of a mess. President Marshall will preside with great strategic ability for the Court, asserting his authority without causing discomfort to President Jefferson's political adversaries.[4]

For this he will present a surprising argument which made him paradoxically touch on the matter, while declining the competence of Court. To simplify matters, it can be said that this argument can be summed up as follows: Thus the real problem consists in determining who can compel the administration to proceed with the issuance of this appointment. It is clear that a 1789 Federal law regarding the legal organization seems to ascribe this competence to the Court to give the administration the execution order firstly through a *writ de mandamus*, but this 1789 law is contrary to the Constitution, for it does not ascribe to the Court but a mere appeals competence, with the exception of a few competence cases listed firstly, among which there is obviously not the one who is subjected to it (according to art. 2 section 2 in the Constitution).[5]

In exchange for its own satisfaction, the Court asserted its right to review the government's administrative acts and the right to review the constitutionality of laws, though there was no susceptible text to fundament its competence in the field.[6]

Regarding the interpretation of the United States Constitution and federal jurisdictions, we specify the following: "Having to judge disputes which presuppose a conformity assessment with the Constitution, the federal jurisdictions must interpret this constitution, which is all the more necessary as the federal Constitution is a relatively short and very old text. Finally, we have to remember a statement of one of the *United States Supreme Court Presidents*. *Still, one has to insist that everything occurs as if the judges could add something to text by interpreting it.* As the *Chief of Justice* declared "The Constitution is what the judges say it is".[7]

2.1.1. Conclusions regarding the diachronic evolution of the constitutional review in the United States of America

The legal reasoning allowed the foundation of the constitutional review in the United States of America, making its unanimous acceptance possible and its current exercise, even by those people who would have initially denied the judges' competence to check the constitutional regularity of laws.

2.2. The first judicial review of the constitutionality of the law established in Romania and its consequences

We should specify that the doctrine of comparative law was analyzed as a Romanian precedent - the constitutionality of laws in Romania in the early twentieth century until 1938. In short, within the study, it is stated that since 1902 in Romania, and then much more successfully in 1912, the Court of

Cassation, in the absence of any express empowerment, recognized the Romanian judge's right to refuse to enforce a law that it would have considered unconstitutional, at the request of one of the parties during the trial. And besides, it was taking such a bold decision for the era and, dare we say it, even innovative in Europe.[8]

In 1911-1912, the Ilfov Court and then the High Court of Cassation and Justice arrogated the right to check the constitutional regularity of laws in the famous tram business from Bucharest. Through a special law adopted in 1909, the Bucharest municipality was allowed to create a Tram Society equipped with statutes drafted by the municipality and approved by the Council of Ministers. In December 1911 an allegedly interpretative law was adopted that brought important changes to already adopted statutes, practically leading to the drafting of completely new ones.[9]

Since the amending law was intentionally declared interpretative, it was logical to think that its effects would have to occur at the time of the interpreted law, that is since the adoption of the statutes of the Bucharest Tram Society in 1909. Faced with severe problems, the Tram Company did not hesitate to ask the Ilfov Court to deem unconstitutional the allegedly interpretative law.[10]

The Court's decision was also subsequently confirmed through a decision of the High Court of Cassation and Justice. Thus, to sum up, the courts stated that, since a constitution distinguished between ordinary and constitutional laws, it places the latter ones above the former one in the norm hierarchy.[11]

Since the constitution establishes that the courts are independent, it recognized their power and duty not to enforce laws which may be contrary to a constitutional provision. A judge's main task is to resolve the conflict of laws, so he always has to make sure the most legally binding prevails to the prejudice of the lesser legally binding, moreover when the lesser legally binding law breaks the one which is superior. Since the Constitution is not just a list of vague principles, but a true legal norm which is directly enforced, the judge did not exceed his usual authority when he settled a conflict between two law, one of which was constitutional and the other one lesser legally binding.[12]

2.2.1. The diachronic evolution of the constitutional review of laws in Romania – selective aspects

During 1923-1947 the constitutional review of laws in Romania was achieved only by the Court of cassation in united sections, pursuant to the provisions of art.103 of the 1923 Constitution,[13] which established: "Only the Court of cassation in united sections has the right to judge the constitutionality of laws and to declare inapplicable the ones who are contrary to the Constitution. The judgment of the unconstitutionality of laws is limited only to a specific case. The Court of cassation will pronounce itself as it did on the past on attribution conflicts. The right to an appeal in cassation is constitutional".

The 1938 Constitution kept the same system regarding constitutional review, established by art. 75, paragraph. (1) in the Constitution.

During 1948-1989, the constitutional review of laws was conducted by the *Constitutional Commission* of the Great National Assembly, pursuant to art. 53 of the Constitution of the Romanian Socialist Republic from August 21, 1965,[14] with additional reprints, which established: "While exercising the review of law constitutionality, the Great National Assembly elects a constitutional commission during this legislature".

After the revolution in December 1989, the Romanian Constitution from December 8, 1991,[15] with additional reprints, within Title V, entitled *The Constitutional Court*, regulated the constitutional review in Romania.

3. Reflection of constitutional principles in the new Civil Code and the new Code of Civil Procedure

3.1. Theoretical aspects regarding the ratio between constitutional principles and the New Code principles

I have set to do this study because I have noticed that the afore-mentioned thoughts are not biunique, the legislator selectively choosing the constitutional principles in the field.

Regarding the *principles of law* concept from the doctrine regarding *the general theory of law*, I have selected the following opinion for the present study: "The principles of law are those general ideas, guiding postulates or governing precepts which orient the

[8] Gérard Conac, A Romanian Anteriority: the Control of Law Constitutionality in Romania from the beginning of the the twentieth century till 1938): Public Law Review, nr. 1/2001, 1.

[12] *Ibidem*, op. cit. 74-75.

[13] The Romanian Constitution from 1923 was published in the Official Gazette, Part I, no. 282 from 20.03.1923

[14] The Constitution of the Socialist Republic of Romania from August 21, 1965, was published in the Official Gazette, no. 1, from August 21, 1965.

[15] The text of the Romanian constitution was published in Romania's Official Gazette, Part I, no. 233 from November 21, 1991.

drafting and the implementation of legal norms in a branch of law or to the level of the entire law system. They have the force and meaning of superior, general norms which can be expressed in the texts of normative acts, usually in Constitutions, or if they are not clearly expressed, they are deduced in the light of acceptable supported social values."[16]

From the constitutional doctrine, regarding the constitutional principles, we remember the following opinion for this present study: "The first title, named *General Principles*, includes norms related to the unitary structure of the state, its republican government form. In chapter I, named *Common Dispositions*, the constitutional principles enforceable to the field of rights and liberties are established".[17]

Still considering the constitutional doctrine, regarding the constitutional principles, we retain the following opinion for this present study: "*The principle rights* are those rights and liberties which represent true principles to exercise all the other rights and liberties, including here the universality of rights, equality, non-retroactivity of the law, free access to the legal system, etc.[18]

Regarding *the general principles of civil law*, we retain the following opinion for the present study: "The legal principle can be established by a text in relatively general terms to inspire several applications, asserting as a superior authority, such as the general principles from Title I of the Romanian Constitution, which establishes the principle of sovereignty, nationality, equality as well as the fundamental rights and obligations of citizens, which are even required of the Parliament in its lawmaking activity".[19]

Regarding *the fundamental principles of the civil trial*, we retain the following opinion for the present study: "The fundamental principles represent essential rules which determine the structure of the trial and govern its entire judicial activity". Some of these principles are related to the organization of courts and the status of magistrates, but with implications for the civil trial too, others refer to the judgment activity".[20]

3.2. Reflection of constitutional principles in the new Civil Code

From the systematic analysis of the normative content of the new Civil Code[21] it turns out that the constitutional provisions on the subject are reflected in the following articles: **Art. 4**: *The Primary Enforcement of international human rights treaties*. (1) In matters regulated by the present code, the provisions on rights and liberties shall be interpreted and enforced in accordance with the Constitution, the Universal Declaration of Human Rights, pacts and other treaties to which Romania is a party. (2) If there are inconsistencies between the pacts and treaties on fundamental human rights, to which Romania is a party, and the present Code, international regulations have priority, except when the present code contains more favorable provisions. **Art.5**: *The Primary Enforcement of the European Union Law*: In matters regulated by the present code, the norms of EU law primarily apply, regardless of the quality or status of the parties; **Art. 27:** *Foreign citizens and stateless ones*: (1) Foreign citizens and stateless ones are assimilated according to the law, with Romanian citizens regarding their civil rights and liberties. (2) The assimilation is also enforced for foreign legal persons. **Art. 30**: *Equality before the civil law:* Race, color, nationality, ethnic origin, language, religion, age, sex or sexual orientation, opinion, personal convictions, political and union adherence, to a social or disadvantaged category, wealth, social origin, cultural level, as well as other similar situations do not have any influence on the civic capacity.

3.3. Reflection of constitutional principles in the new Code of Civil Procedure

From the systematic analysis of the normative content of the new Code of Civil Procedure,[22] it results that the constitutional provisions on the subject, are explicitly or implicitly reflected in the following articles: **Art. 3**: *The primary enforcement of international treaties regarding human rights:* (1) In matters regulated by the present code, the provisions on rights and liberties shall be interpreted and enforced in accordance with the Constitution, the Universal Declaration of Human Rights, pacts and other treaties to which Romania is a party. (2) If there are inconsistencies between the pacts and treaties on fundamental human rights, to which Romania is a party, and the present Code, international regulations have priority, except when the present code contains more favorable provisions. **Art. 4**: *The Primary Enforcement of the European Union Law*: In matters regulated by the present code, the norms of EU law primarily apply, regardless of the quality or status of the parties; **Art. 6**: The right to a fair trial, within a reasonable and predictable time: (1) Everyone has the right to a fair trial, within a reasonable and predictable time by an independent and impartial court, established by law. To this end, the court is to use all measures allowed by law and to ensure a quick trial. (2) The provisions of paragraph (1) are enforced accordingly even in the case of forced execution. **Art.**

8: *Equality*: In the civil trial, the parties are guaranteed the exercise of their procedural rights equally and without discrimination. **Art. 12**: *Bona fide:* (1) The procedural rights must be exerted in good faith, according to the aim for which they have been recognized by the law and without breaking the procedural rights of the other party. **Art. 13**: *The right to a defense*: (1) The right to a defense is guaranteed. **Art. 18**: *The language of the trial:* (1) The civil trial shall be in Romanian. (2) Romanian citizens who belong to a national minority have the right to express in their native language in front of courts, according to the provisions of the law. (3) Romanian and stateless citizens who do not understand or who do not speak Romanian have the right to know all the documents and materials, to speak in court and draw conclusions, through an authorized translator, if the law provides otherwise. (4) The requests and procedural documents shall be drafted only in Romanian.

4. Reflection of the provisions of the New Civil Code and the New Code of Civil Procedure in the Constitutional Court decisions.

4.1. Reflection of the provisions of the New Civil Code in the Constitutional Court decisions.

4.1.1. *DECISION no. 96 from February 28, 2013 referring to the unconstitutional exception of provisions of article 383 paragraph. (2) from the Civil Code*[23]

When motivating the unconstitutionality exception, it is alleged that the criticized legal provision conflicts with the constitutional principle *of equal rights*, given that the court which pronounced the divorce may grant the spouses to keep the married name, a decision motivated by the best interest of the minor who resulted from this marriage.

Examining the unconstitutionality exception, the Court ascertains that the author of the exception asserts that the unconstitutionality of the same legislative solution, this time comprised within art. 383 par. (2) from *the new Civil Code*, showing that granting one of the spouses the right to keep the married name and after the dissolution of the marriage is detrimental to the other spouse's right to bear a name and is not justified by the necessity of protecting the child's superior interest resulted from the marriage, given the fact that the spouse who was granted to keep the name can remarry at anytime.

The court also states that the criticized legal text does not create privilege or discrimination, being applicable to all people who would find themselves in the hypothesis regulated by the legal disposition, so both for the wife who had the husband's name during marriage and for the husband who was in the same situation.

For all the reasons presented, the Constitutional Court *deems unfounded the unconstitutionality exception* of provisions of art. 383 par. (2) of the *Civil Code*.

4.1.2. *DECISION no. 227 from May 9, 2013 referring to the unconstitutionality exceptions of dispositions of art. 403 from the Civil Code* [24]

When motivating the unconstitutionality exception, it is alleged that the dispositions of art. 403 from the Civil Code *are unconstitutional*.

It is also asserted that the extension of applicability of this legal text is called in question regarding the status of minors born outside the parent's marriage, *since the new Civil Code* does not have a separate chapter related to the status of minors born outside the parent's marriage, *unlike the former Family Code*.

Examining the unconstitutionality exception, the Court ascertains *that the object of the unconstitutionality exceptions is constituted by the provisions of art. 403* of the Law. *no. 287/2009* regarding the Civil Code, republished in Romania's Official Gazette, Part I, no. 505 from July 11, 2011.

The Court notes that, in reality, the points made do not constitute a genuine criticism of unconstitutionality, but represent issues related to the interpretation and enforcement. As it is clear from the provisions of art. 126 para. (3) of the Constitution, only the courts can rule on the interpretation and application of the law, the High Court of Cassation and Justice having the power to unify the judicial practice.

Thus, it is clear that the things showed in the *unconstitutionality exception are aspects whose solution exceeds the competence of the Constitutional Court*, which also determines *the inadmissible nature of the plea of unconstitutionality*.

For these reasons, the Constitutional Court *rejects as inadmissible the exception of unconstitutionality* of art. 403 of the Civil Code.

4.2. Reflection of the provisions of the New Code of Civil procedure in the Constitutional Court decisions.

4.2.1. *DECISION no. 266/2014 referring to the exception of unconstitutionality to the provisions of art. 200 of New Code of Civil Procedure, as well as, of those from art. 2 par. (1) and. (12) and art. 601 from Law no. 192/2006 regarding mediation and organization of the mediator profession, in effect from 25.06.2014* [25]

When motivating the exception of unconstitutionality, its author asserts that the provisions of art. 200 from the Code of Civil Procedure are unconstitutional as the application of these procedural dispositions extends to aspects which pertain to the proper judgment of the petition form request.

[23] Decision no. 96/2013 was published in the Official Gazette Romania, Part I, no. 165 from March 27, 2013.
[24] Decision no. 227/2013 was published in the Official Gazette Romania, Part I, no. 428 from July 15, 2013.
[25] Decision no. 266/2014 was published in the Official Gazette of Romania, Part I, no. 464 from June 25, 2014

Examining the exception of unconstitutionality, the Court finds that the object of the unconstitutionality exception, as it was noted by the notification ruling, is constituted by the provisions of art. 200 of the Code of Civil Procedure, as well as, those, of art. 2 par. (1) and art. 601 of Law no. 192/2006 on mediation and the mediator profession, published in the Official Gazette of Romania, Part I, no. 441 of May 22, 2006, as amended and subsequently supplemented.

To determine the object of mediation and where the parties may resort to mediation, the Court observes that, as is apparent from art. 2 par. (5) of Law no. 192/2006, the parties may resort to mediation when it comes to the rights that they may possess.

For these reasons, the Constitutional Court admits the exception of unconstitutionality raised by the company CEZ Vânzare – SA from Craiova, Dolj County, through trustee EOS KSI Romania Trading Company –Ltd. in Bucharest, file no. 14.501/215/2013 of the Craiova Court - Civil Division and finds that art. 2 par. (1) and (12) from Law no. 192/2006 on mediation and the mediator profession are unconstitutional.

4.2.2. *DECISION no. 348 from June 17, 2014, referring to the unconstitutionality exceptions of dispositions of art. 650 par. (1) and of art. 713 par. (1) from the Civil Procedure Code*[26]

On the grounds of unconstitutionality exception, the author argues that the criticized legal provisions are unconstitutional, as they establish a subjective criterion when it is decided that the territorial jurisdiction of the courts resolves civil disputes. Article 713 of the Code of Civil Procedure establishes the competence of law enforcement of appeals court for enforcement, a court which is defined in art. 650 par. (1) of the Civil Procedure Code as the court in whose jurisdiction the judicial executor's office who performs the execution is. When examining the unconstitutionality exception, the Court decides that the object of the unconstitutional exception is represented by the dispositions of art. 650 par. (1) and art. 713 par. (1) from the Code of Civil Procedure.

When examining the exception of unconstitutionality, the Court holds that the provisions of art. 650 par. (1) of the Civil Procedure Code determine the court in whose jurisdiction the judicial executor's office is; he also performs the execution as the enforcement court, and the dispositions of art. 713 par. (1) from the Code of Civil Procedure establish the judgment competence of the appeals to be enforced in favor of the enforcement course, a court which is defined in art. 650 par. (1) of the Code of Civil Procedure as being the court in whose circumscription there is the judicial executor's office who performs the execution.

For these reasons, the Constitutional Court rejects as unfounded the exception of unconstitutionality raised by the same party in the same file of the same court and finds that the dispositions of art. 713 par. (1) from the Code of Civil Procedure are constitutional regarding the critics.

5. Compliance with Romanian Constitution of new Civil Code and of new Code of Civil Procedure - the current trends of constitutionalisation of the law.

5.1. From the constitutional doctrine, I selected the following aspects of the current trend of constitutionalization of law as a result of compliance with the Romanian Constitution and the New Civil Code New Code of Civil Procedure [27]

1. The main effect of the Constitution supremacy and of the existence of the Constitutional Review*l aws made by a judicial authority* is the *constitutionalization of law*. This is a complex *legal phenomenon* that affects the whole legal system through the interaction established between the legal norms of the fundamental law and other legal norms inferior to the Constitution. 2. The constitutionalisation of law is defined as a *general process*, which involves a certain amount of time, beginning with the adoption of the constitution and continued mainly under constitutional jurisdiction control especially created by the fundamental law to ensure its supremacy, a process that gradually affects all branches of the legal system. 3. It consists of *the progressive interpretation* of the norms in the constitution and of those inferior to the constitution and is manifested through two phenomena: one *ascending* of quantitative increase of constitutional norms and another *descending*, going deeper into these rules. 4. The *multiplication* of constitutional norms is achieved primarily through the collection by the fundamental law of rules and principles specific to other legal norms which grants constitutional value to them. 5. Conversely, the dissemination of constitutional norms in the legal system materialize through the impregnation of law branches with constitutional norms directly applicable which take into account the specificity of the field in which they are applied, but which tend to impose the standards with a bigger legal impact. The law constitutionalisation does not necessarily presuppose, but it can be supported by the existence of *favorable conditions*. 7. The practice of various countries has shown that the process of constitutionalisation of law is much more *accelerated* in the field of *fundamental rights*, where the direct applicability of constitutional norms is more easily perceived. 8. *The citizens' direct public access to constitutional justice* is a catalyst of the process of constitutionalisation, although it does not constitute an absolutely necessary condition for it to manifest. 9. As a direct *consequence* of

[26] Decision no. 348/2014 was published in the Official Gazette of Romania, Part I. no. 529, from July 16, 2014.
[27] Ioan Muraru and Elena Simina Tănăsescu, op. cit.: 80-82.

constitutionalisation, *the transformation of law* under the influence of fundamental law means the deduction of new legal rules based on existing ones by canceling legal norms contrary to the Constitution and by interpreting and applying legal rules so that they are consistent with those contained in the fundamental law. 10. Indirectly, this transformation involved a simplification of the legal system, through which the latter is prevented from becoming rigid and is stimulated to permanently liberalize itself.

5.2. From the constitutional doctrine, I selected the following aspects:[28]

1. Constitutionalisation of law is the effect of supremacy of the Constitution. Constitutionalisation is a complex legal phenomenon involving the entire legal system and consists of the interaction between legal constitutional norms and other legal rules of constitutional law which have a diminished legal power, inferior to the Constitution. 2. The phenomenon of the constitutionalisation of law appeared as a transformation process of some legal rules of certain branches of law in constitutional rules. Therefore, constitutionalising law designates a process of transformation of some rules and principles of law rules and constitutional principles. 3. The process of constitutionalisation does not occur on its own. It presupposes the existence of two conditions: a) the first and most important condition is the existence of a Constitution. b) the second is the existence of a judicial body that can ensure the supremacy of the Constitution. 4. There are a series of consequences resulting from the process of the constitutionalisation of law. These consequences are either direct or indirect. Among direct consequences there are: a) the general obligation of the entire society to observe the constitution. b) the annulling of legal norms contrary to the constitution. c) the interpretation of legal norms in accordance with the constitutional text. 5) The indirect consequences of the law constitutionalisation phenomenon are the modernization, unification and simplification of the legal order.

Making the most out of the above mentioned things, I can assert that through the constitutionality review, some principles of law have a constitutional value.

6. Conclusions

In our opinion, the aim of the study regarding current trends of constitutionalisation of the new Civil Code and of the New Civil Procedure Code - Selective aspects has been achieved.

The main directions to reach the set aim were the following:

1) The first judicial review of the constitutionality of the law established in the United States and in Romania – their consequences. I selected for this study the first judicial review of the constitutionality of the law established in the United States and in Romania, as in our opinion, for the review of constitutionality, the following conditions must be met: a) the existence of a Constitution. b) the existence of a judicial-type mechanism to ensure the supremacy of the Constitution. Both countries met those conditions at that moment. Furthermore, the foundation of the constitutional review, established in the two countries, continued in the two country, under the conditions specified above. Regarding the diachronic evolution of the constitutional review in Romania, various forms of review were highlighted, taking into account the historical evolution of the Romanian state.

2) Reflection of the constitutional principles in the new Civil Code and the new Code of Civil Procedure.

The paragraph begins with the tackling of some theoretical issues regarding the relationship between constitutional principles and the principles of the New Codes. The following concepts-principles are contained within these theoretical aspects.

They are established by the general theory of law and by the constitutional doctrine: a) principles of law. b) general constitutional principles. c) rights principles. d) general principles of civil law. e) the fundamental principles of the civil trial. Following these theoretical studies, I proceeded to identify the constitutional principles in the New Civil Code and the New Code of Civil Procedure.

3) Reflection of the dispositions of new Civil Code and of the new Code of Civil Procedure in constitutional provisions. From the analysis of a significant number of Decisions taken by the Constitutional Court, I only referred to the ones which concerned the seizing of the court, only those which referred to the principles of the two codes.

4) Compliance with the Romanian Constitution of the new Civil Code and of the new Code of Civil Procedure - the current trends of constitutionalisation of the law.

5) From the constitutional doctrine, I selected the following aspects regarding the current trend of constitutionalization of law as a result of compliance with the Romanian Constitution of the New Civil Code and New Code of Civil Procedure: a) The definition of the concept of constitutionalisation. b) The multiplication of constitutional norms. c) The dissemination of constitutional norms within the legal system as a whole. d) The direct consequence of constitutionalisation is represented by the right under the influence of the fundamental law. e) The simplification of the law.

6) The four parts of the study may be considered a contribution to the broadening of research regarding current trends of the constitutionalisation of the new

[28] Ştefan Deaconu, op. cit: 96-98.

Civil Code and the new Code of Civil Procedure – selective aspects, in accordance with the current trend in the field.

7) I would also like to specify that the study above is beginning of a complex and complete vision, which is not exhaustive on the area under analysis..

8) Given the selective approach of the current trends of the constitutionalisation of the new Civil Code and the new Code of Civil Procedure – Selective aspects, the key-scheme proposed may be multiplied and extended to other relevant subsequent studies, given the vastness of the area under analysis.

THE CONTROL EXERCISED BY THE COURT OF JUSTICE IN LUXEMBOURG ON INTERNATIONAL AGREEMENTS TO WHICH THE EUROPEAN UNION IS A PARTY

Roxana-Mariana POPESCU[*]

Abstract:

The European Union as subject of international law can conclude external agreements, under a procedure which is the object of art. 218 of the Treaty on the Functioning of the European Union (TFEU). Regarding the legal force of such agreements, the Court of Justice of the European Union ruled that they were part of the EU legal order. In addition, pursuant to provisions of art. 216 para. (2) TFEU, these agreements „link Union institutions and their Member States". However, it should be noted that the competence of the Court of Justice in Luxembourg reflects also its ability to rule, at the request of a Member State, the European Parliament, the Council or the Commission on the compatibility of an international agreement with constitutive treaties, whether prior to the entry into force of an international agreement or later. Considering this aspect, in the contents of our study, we shall highlight, by using the specialized doctrine and case law in the field, the role that the Court of Justice of EU has in the field of control over international agreements. This analysis will consider the control aimed at formal validity (compliance with the procedure of adoption), on the one hand, and the control on the substance (compliance of the agreement with EU primary law).

Keywords: *European Union, international agreement, Court of Justice of the EU, „constitutional" review, a posteriori control.*

1. General aspects

Through this study, we propose an analysis of CJEU competences on the control of international agreements[1] to which the EU is a party. To achieve this goal, we shall conduct a thorough study of the French, English and Romanian doctrines, an important place being reserved to historical jurisprudence, but also to recent jurisprudence of the Court of Justice of the European Union. In this research, we shall resort to a range of research methods, specifically: the logical method, the comparative method, the historical method and the quantitative methods. Thus, in analyzing the CJEU jurisdiction in international agreements to which the EU is a party, we shall use, in particular the historical method, but also the logical method in the approach to capture structural and dynamic aspects from historical and evolutionary perspective. In deciphering considerations and grounds of regulations and goals pursued by the solutions proposed by the court in Luxembourg, we shall use, predominantly, the logical method for capturing their theoretical and practical implications, and synthesizing research results in conclusions drawn and presented at the end of the analysis.

We shall start from the fact that the proposed research is a current approach, given the realities Romania is currently facing and which have very profound and various consequences on the Romanian society after 2007, which is increasingly and firmly anchored in the context of universal and regional international society of the stage. EU legal order (i.e., including international agreements to which the EU is a party) is of particular importance for the evolution of the organization, for which, we believe that efforts are needed to acknowledge peculiarities that it involves, their understanding and learning in order to adopt and implement them, including by specialists in our country[2].

2. Constitutional review

The European Union, as subject of international law can conclude external agreements under the procedure laid down in art. 218 TFEU. According to the Court, once published in the Official Journal of the European Union, the agreements to which the EU is a party „are part of the Community legal order"[3]. In addition, pursuant to provisions of art. 216 para. (2) TFEU, these agreements "link Union institutions and their Member States". However, as stated in the legal doctrine[4], this binding effect resulting from art. 216

para. (2) „must be, however, relativized" and this because, in the jurisdiction of the Court of Justice in Luxembourg, it is found also its ability to rule, at the request of a Member State, the European Parliament, the Council or the Commission on the compatibility of an international agreement with constitutive treaties, whether prior to the entry into force of an international agreement or later. Given the Court's judgment in *Kadi* Case[5] where the Court referred to the „constitutional principles of the Treaty"[6], in doctrine, such control was described as a „constitutional review"[7].

Thus, art. 218 TFEU provides that „a Member State, the European Parliament, the Council or the Commission may obtain the opinion of the Court of Justice on the compatibility of an envisaged agreement with provisions of the Treaties. In the case of a negative opinion of the Court, the agreement shall enter into force only if it is amended or if Treaties are revised. In other words, in practice, a negative opinion given by the Court leads to the impossibility of ratification of the agreement or to its ratification, but only after the revision of Treaties. In both cases, however, this would lead to a blockage in the European Union, at least for a certain time, if we also consider the fact that the revision procedure involves, in certain stages, the unanimity vote. However, regulating the capacity of the Court to give an opinion prior to ratification of the agreement, is a way to overcome another blockage that may arise, namely that that would result, as the Court[8] observed since 1975, from the "legal challenge of the issue of compatibility with the Treaty, of international agreements that commit" the Union.

The issuance of a negative opinion results, naturally, in the impossibility of entry into force of the Agreement which was the subject of that opinion. The case law of the Court in Luxembourg is constant regarding the issuance of negative opinions when it finds the establishment, by agreement, of a court system, different from that regulated at EU level.

Thus, in Opinion 1/76[9], the Court concluded that the *Draft Agreement establishing a European Fund for retention of inland waterway vessels* is not compatible with the Treaty. The draft established a judicial system that assigned certain competences to a body (background Court), which by its composition, was different from the Court of Justice established by the Treaty. The Court had to decide, in the field of the European Fund, on actions brought against Fund bodies or against states, and on actions undertaken for failure of obligations brought against the States on which the Statute would have had binding status (and not against the Community, at the time, as it was). However, the Court would have been competent to rule on prejudicial actions of which it would be informed by national courts, under certain conditions. With respect to these actions, it was mentioned the fact that they could have as object not only the validity and interpretation of acts adopted by bodies of the Fund, but equally, the interpretation of the Agreement and the Statute. Regarding this last point, the Court stated, since 1974[10], that an agreement concluded by the Community with a third country is, in respect of the Community, an act adopted by one of the Community institutions, and under the provisions of Community Treaties, the Court within the Community legal order is competent to decide preliminary rulings on the interpretation of an international agreement"[11]. Under these conditions, there would be the issue whether provisions on jurisdiction of the Fund Court are consistent with those of the Treaty relating to the jurisdiction of the Court. According to the Court, „the establishment of a judicial system such as that provided by the statute, which on the whole ensures effective legal protection of individuals, cannot elude imperatives arising from participation of a third State. The need to establish actions and proceedings which will ensure equally for all individuals, compliance with law in the activities of the Fund, can justify (...) the establishment of the Tribunal. Although, initially, the Court approved the concern to organize, within the Fund, a legal protection adapted to difficulties of the situation, the Court was obliged to have some reservations about the compatibility of the "Fund Tribunal" structure with the Treaty"[12].

The Court had the same position in 1991, when it issued another negative opinion[13], this time on *the Draft Agreement between the Community, on the one hand, and the European Free Trade Association (EFTA), on the other hand, on the creation of the European Economic Area (EEA),* draft which provided, inter alia, a review mechanism on the

interpretation of the Agreement, representing, otherwise the action brought by the Commission before the Court. In fact, the judicial system that was meant to be established, aimed at three objectives, namely: 1. settlement of disputes between Contracting Parties; 2. settlement of internal conflicts within EFTA and 3. strengthening the legal homogeneity within the EEA. These powers would „be exercised by a Court of the European Economic Area (EEA Court), which would be independent, but would be integrated from functional perspective, in the Court of Justice, and by an independent Court of First Instance of an EEA, operating, though, by the EEA Court or by the Court itself"[14]. According to the draft, provisions of the Agreement were to be interpreted in accordance with the jurisprudence of the Court of Justice, prior to signing the agreement. In addition, „in the application or interpretation of provisions of that Agreement or of provisions of the ECSC and EEC Treaties, as amended or supplemented, or of acts adopted pursuant to those treaties, the Court of Justice, the EEA Court, the Court of First Instance of EC, the Court of First Instance of the EEA and Courts of EFTA States will take due account of the principles arising from decisions ruled by other Courts or Tribunals, so as to ensure an interpretation of the Agreement as uniform as possible[15]. In this context, the main issue which the Court had to solve was to examine whether „the judicial system envisaged is likely to undermine the autonomy of the Community legal order in pursuit of its specific objectives"[16]. Once the problem defined, the Court grounded its reasoning on the particularity of the Community legal order that is based on „a community of law"[17] and concluded that „the jurisdiction conferred upon the EEA Court under the agreement may affect the division of powers defined by the Treaties and thus, the autonomy of the Community legal system which is enforced by the Court of Justice (...). This exclusive jurisdiction of the Court of Justice is confirmed[18], including by the Treaty," whereby Member States undertake not to submit a dispute concerning the interpretation or application of this Treaty to any method of settlement, other than those provided for therein"[19]. „Therefore, the assignment of this competence to EEA Court is incompatible with Community law"[20]. The result of this negative opinion was, naturally, the following: the Agreement was revised and the new draft agreement was the subject of another opinion[21] of the Court, this time of a favorable one.

In 2011, the Court maintained its position on the establishment of a parallel judicial mechanism, even if, it was about the establishment of a specialized court. Opinion 1/09 had as object the compatibility examination of the *Draft agreement on the European and Community Patents Court with European Union law*. Under the agreement, the European and Community Patent Court would be an institution outside the institutional and judicial Union, having legal personality under international law. Competences of the Tribunal would be, some of them exclusive „in relation to a number of actions brought by individuals in the field of patents, particularly actions for infringement or potential infringement on patent, revocation actions and specific actions for damages. In this regard, Member States' courts are deprived of these competences and keep, therefore, only tasks that do not fall within the exclusive competence of the European and Community Patents Court"[22]. The Court, in the exercise of its functions, had to interpret and apply EU law[23]. The Court's reasoning has as starting point reiterating „the fundamental elements of the legal and judicial system of the Union, as established by the founding Treaties and developed by the Court"[24], namely: 1. unlike ordinary international treaties, the founding treaties of the Union established a new legal order, completed with its own institutions, for which the States have limited their sovereign rights in areas increasingly more extensive and the subjects of which comprise not only Member States, but also their nationals and 2. the essential characteristics of the Union legal order thus constituted, are in particular, its primacy over the law of Member States and the direct effect of a whole series of provisions applicable to Member States and their citizens. The Court held that, „unlike other international jurisdictions on which the Court has ruled until present time, the European and Community Patents Court has the task to interpret and apply not only the international agreement provided, but also law provisions of the Union. In addition, the Court found that by creating this jurisdiction, courts should be deprived of the possibility or, where appropriate, of the obligation to refer to the Court for preliminary reference in the patent field, given that the draft agreement provides a mechanism of preliminary references which reserves only to the European and

Community Patents Court, the possibility of reference, depriving national courts of this possibility"[25]. Given that a Member State is bound to fix the damage caused to individuals by breaches of EU law which it is responsible of, and that, if a breach of EU law is committed by a national court, the Court may be referred to in order to find a violation of obligations by the Member State concerned, the Court noted that a decision of the European and Community Patents Court that would violate EU law, could not be the subject of proceedings for infringement and could not draw any patrimonial liability of one or more Member States. Therefore, the Court held that „by the fact that it assigns exclusive jurisdiction to settle a number of actions brought by individuals in the Community patent field and to interpret and apply EU law in this area in favor of an international court which is outside the institutional and judicial framework of the Union, the envisaged agreement would deprive the courts of Member States, of powers concerning the interpretation and application of EU law[26]„. The Court, therefore, concluded that the envisaged agreement, through which a European and Community Patents Court would be settled, is not compatible with EU law.

As a conclusion, we can say that proceedings of the opinion issued by the Court, before the entry into force of the Agreement to which the EU is a party, help to ensure integrity and compliance with EU treaties. As mentioned above, the opinion of the Court may intervene also after the entry into force of international agreements to which the EU is a party.

3. A posteriori control

Regarding the control exercised by the Court after the entry into force of an agreement to which the EU participates, control exercised through the action for annulment, in the specialized literature, several arguments were outlined to support the theory according to which this type of control is purely theoretic, in practice being impossible to accomplish. Thus, it is argued that the existence of a procedure of *a priori* opinion precludes the possibility of the Court to review the compatibility of the agreement with EU law, *a posteriori*[27]. On the other hand, the Court's declaration of incompatibility of an agreement entered into force with European Union law, leads to international liability of the European Union, and this because the Union cannot rely internationally on the judgment in annulment delivered by the Court because, according to Vienna Convention on Treaties (1969) and the Convention on the Law of Treaties concluded by states and international organizations (1986), a State or an international organization cannot exempt from liability by invoking its own internal rules. And last but not least, according to TFEU, only acts of the Union's institutions[28] may be subject to an action for annulment[29].

However, in practice, the situation is different. There are opinions in the specialized literature[30] that support the argument that the Court cannot exercise *a posteriori* control on agreements to which the EU is a party as long as a regulated procedure of *a priori* opinion „distorts the content of the Treaty because if it was not asked, the Court would see failed the power to rule *a posteriori*"[31]. At the same time, it was discussed, including the fact that the Luxembourg Court did not distinguish between „act" and „agreement" as it ruled since 1971: „the action for annulment must (...) be open regarding all provisions adopted by the institutions, irrespectively of their nature or form, which are intended to have legal effect"[32]. According to the Court, „to determine whether the contested measures are acts within the meaning of Article 173[33], it is necessary (...) to examine their substance. According to the jurisprudence of the Court, acts or decisions which may be the subject of an action for annulment (...) are those measures which produce binding legal effects likely to affect the interests of the applicant by modifying in a specific manner, its legal status"[34]. On the other hand, „the form in which acts or decisions are made is, in principle, irrelevant regarding the possibility of attacking them, by an action for annulment"[35]. Furthermore, in Opinion 1/75[36], the Court stated explicitly on the *a posteriori* control, as follows: „since the question whether the conclusion of a particular agreement falls or not within the

competence of the Community and if, as appropriate, these powers were exercised in accordance with the Treaty, being in principle susceptible of being submitted to the Court of Justice, directly under Article 169[37] or Article 173[38] of the Treaty or by the proceedings for preliminary ruling, it must be, therefore, admitted that the Court may receive the preliminary procedure of Article 228[39]„. In Opinion 1/91, the Court considers that such a control is justified by the existence of a „legal order that must be protected"[40]: „The EEC Treaty, although concluded as an international agreement, constitutes the constitutional charter of a community of law"[41]. Regarding this last point, we recall the observation of the General Advocate Maduro P., from his Conclusions presented on 16 January 2008 in *Kadi* Case, „although the Court takes great care to respect Community obligations under international law, it seeks, first of all, to preserve the constitutional framework created by the Treaty. It would be wrong to conclude that, since the Community is bound by a rule of international law, Community Courts must bow to that rule and apply it unconditionally in the Community legal order"[42].

Therefore, the practice does not preclude the possibility of the Court of Justice in Luxembourg to achieve a „constitutional review"[43] on international agreements to which the Union is a party. It should be noted that even at EU level, there is a difference between acts authorizing the conclusion of agreements and enforcement provisions of the agreement. Moreover, the Court itself distinguishes between „act authorizing the signing of the agreement" and „act concerning its conclusion": „the act authorizing the signing of the international agreement and that stating its conclusion are two distinct legal acts involving completely distinct obligations for stakeholders and the second act is not in any way the confirmation of the first. Under these circumstances, the lack of action for annulment of the aforementioned first act does not constitute an obstacle to bringing such an action against the act of concluding the agreement envisaged, and it doesn't make inadmissible an opinion which raises the question of its compatibility with the Treaty"[44]. Therefore, the provisions on international agreements are likely to be cancelled. From the case law of the Court in the area, we stop at two cases that dealt with the conclusion of international agreements to which the EU is a party. The first case[45] refers to the signing by the European Commission, of an agreement with the United States, in the competition matter. The Court that was not requested an opinion before the entry into force of the Agreement, recognized its jurisdiction to control the act signed by the European Commission: „it is clear from the text of the agreement that it seeks to produce legal effects. Consequently, the act whereby the Commission sought to conclude the agreement must be the subject of an action for annulment"[46]. The Judgment of the Court was seeking the annulment of that act, because the Commission was not competent to sign the act as that power was conferred upon the Council.

In the second case[47], the Court declared partially void the act concerning the conclusion of the framework agreement on bananas (the Uruguay Round), for breach of the principle of non-discrimination.

If the two previous cases dealt with the review exercised *a posteriori* by the Court, over the acts authorizing the conclusion of an agreement, we shall still remember two actions that have focused on the *a posteriori* review exercised by the Court on acts of enforcement of an international agreement to which EU is a party, namely *the Hellenic Republic v./Council of the European Communities*[48] and *the Hellenic Republic v./Commission of the European Communities*[49]; in both cases, the Court submitted to control, the special aid granted to Turkey by the EEC Association -Turkey Agreement.

Through this type of control, the Court, with its judgment, may prevent the Union to apply in its legal order, the agreement that was the subject of annulment, which, internationally, means that the EU does not execute its obligations, following, however, to be held accountable, but as noted in the specialized literature, the Court may „be prudent"[50], resorting to general

principles of international law, such as the principle of consistent interpretation[51].

4. Conclusions

We believe that the Court in Luxembourg, through the control that it can have on international agreements to which the EU is a party, behaves, in terms of international law, as a national constitutional Court, if we consider the opinion of the General Advocate P. Maduro expressed in the Opinion from *Kadi* Case[52], namely: „the ratio between international law and Community law is governed by the Community legal order itself, and international law can interact with this legal order only under the conditions set by the constitutional principles of the Community".

PLACE OF INTERNATIONAL AGREEMENTS TO WHICH THE EUROPEAN UNION IS PART WITHIN THE EU LEGAL ORDER

Roxana-Mariana POPESCU[*]

Abstract:

The various categories of international agreements to which the European Union is part that are currently multiplying and diversifying by increasing participation of the Union in international relations are true sources of law for the European Union's legal order. However, apart from the fact that they oblige the Union internationally, integrate into its legal order and become sources of law. In terms of the level of international agreements to which the EU is part in the Union legal order, we notice, at the end of the study, that it is inferior to the primary law, but superior to the derivative law.

Keywords: *International agreements; the European Union; the EU's legal order; jurisprudence of the European Union's Court of Justice.*

1. Introductory considerations

In this study, we propose to highlight the place that the international agreements to which the European Union is part, occupy within the union legal order and to identify the legal effect that such agreements have on the Union's legal order. The approach has, as a starting point the particularity of the agreements to which the Union is part, in respect of their direct implementation and invocation, not only in the legal orders of the Member States and in front of the national courts, but also within the EU legal order and in front of its Court of Justice[1]. In addition, we note that, although the Court of Luxembourg has held since 1974[2], that once came into force, the provisions of an agreement are „part"[3] of the European Union law, things are not so simple, because not a few times, „in the field of international agreements, a series of political considerations appear"[4]. Moreover, „the question whether the provisions of a specific agreement have a direct consequence is not disposed of only by reference to the legal criteria defined, initially, in the Van Gend and Loos decision".[5]

2. The European Union's competence to conclude international agreements

According to public international law science, legal subjects are considered, at this level, all those entities that meet the following cumulative conditions: participate in the creation of the international law rules; have the capacity of recipients of these rules and have the ability to assume and exercise rights and acquire obligations within the international legal order[6]. In other words, are subjects of international law, „those entities involved in legal relations governed by the rules of international law and which may be holding direct rights and obligations in the international legal order". In other words, subjects of international law are „those entities involved in the legal relations governed by the international law rules and which may be holders of direct rights and obligations in the international legal order".[7]

Specialized doctrine considers that one of the most important changes to the European Union through the entry into force of the Treaty of Lisbon on December 1, 2009 is the express indication of its legal personality. By all account, until such date, the European Union had been attributed by the doctrinarians, an implicit legal personality, taking into account the provisions of Art. 24 and 38 of the Treaty on European Union, which articles granted the Union the competence to conclude international agreements. Once with the entry into force of the Treaty of Lisbon, the European Union became the subject of international law, by participating in international relations by virtue of legal personality which Article 47 of the Treaty on European Union (TEU) gave it. Thus, the shortest article of the Treaty on European Union enshrines, for the first time in the history of the Union, the legal personality of this entity: „the Union has a legal personality". What legal effect does this

text produce?[8] It is relatively easy to answer, namely: since December 1, 2009, we can say that, on the international scene, a new subject of law appears, namely the European Union, if we relate to the definition given in Article 1.1, of the Convention of 1975 on the representation of States in their relations with international organizations having universal character and Art. 2 of the Convention on the law of treaties of 1969.

Endowment of the European Union with legal personality:

- is the result of a prerequisite with regard to the clear determination of the legal status of the Union at international level, in general and European, in particular;
- „contributes to improving the perception of the Union and its capacity for action, facilitating the political and contractual activity of the Union at bilateral and multilateral levels on the international scene, as well as to its presence in other international organizations;
- contributes to the visibility of the Union and provides the citizens of the Member States with an identity in relation to the Union;
- constitutes a critical element in the establishment of a system for the protection of fundamental rights at Union level;
- helps to correct the malfunctions resulting from that stilt structure".[9]

We conclude by specifying that, with effect from December 1, 2009, the Union turns out from a special subject of international law into a derivative one, if we consider Art. 1 third paragraph of the TEU, as amended by the Treaty of Lisbon, article according to which 'the Union shall take the place of the European Community and succeeds to it". Having acquired legal personality, the European Union has the capability of representation (the right of active and passive legation), the ability to negotiate and conclude international agreements, the right to sue in court, the ability to become a member of an international organization (if its statute allows it) and the ability to adhere to international conventions (such as the European Convention on Human Rights).

In addition, the consequences of legal personality granted to the EU, are also the following: only the Union is empowered to conclude international agreements in its areas of competence; the Union has its own budget, officials and offices and has also the opportunity to sign contracts.

In its capacity as a subject of international law, even if it is a special one, the European Union „may conclude agreements with one or more third countries or international organizations, where the treaties so provide or where the conclusion of an agreement is necessary either in order to achieve, within the framework of the Union's policies, one of the objectives established by the treaties or is provided by a binding legal act of the Union, whether it can influence the common rules or may change its scope".[10] „The Treaty of Lisbon simplifies appreciably, the procedure of negotiation and conclusion of international agreements, the unique legal personality of the EU allowing the removal of duplicate procedures (different on stilts). At the same time, it takes place (at least to some extent) a clarification of the EU's external competences, basically resuming the jurisprudence of CJ, as well as a strengthening of the role of the European Parliament „.[11]

Prior to the Treaty of Lisbon, „the Community lacked an explicit external competence, except that in certain cases: monetary policy, the common commercial policy (CCP), research, environment, development cooperation, economic and financial cooperation with third countries, association with one or more States or international organizations. The former Art. 300 of the Treaty establishing the European Community (EC) restricted the conclusion of international agreements by the European Community to cases in which the provisions of the Treaty set forth the conclusion of agreements and seemed to exclude any implicit external competences."[12] However, the Court of Justice has established the existence of implicit external competences of the European Community in the *AETR*[13] decision, decision in which it mentions the principle of parallelism between internal and external competences. According to the principle, „every time when, for implementing a common policy envisaged by the Treaty, the Community has adopted provisions which lay down, regardless of form, common rules, the Member States are no longer entitled, individually or collectively, to enter into obligations with third countries which affect those rules."[14] In such situations, the Community was competent, in order to ensure coherence between internal and external rules.

[14] Section 17 of decision.

Subsequently, in the *Kramer*[15] decision, the Court claimed that „assuming international commitments is within the competence of the Community (...), because such jurisdiction derives not only from its explicit rendering through the Treaty, but may implicitly result from other provisions of the Treaty"[16], a matter which is also resumed in the Opinion 1/76[17]: „whenever the Community law has established for the Community institutions, internal powers in order to achieve a specific objective, the community has the competence to assume international commitments necessary for attaining this goal, even in the absence of a specific disposition in this regard"[18]. In other words, the Community also became competent when the conclusion of an agreement was necessary to achieve one of the objectives of the Community, without subordinating this power to the existence of an internal Community rule.

3. The direct effect of international agreements to which the Union is part

The agreements concluded by the Union, according to Article 216 second paragraph of the Treaty on the Functioning of the European Union (TFEU), „shall be binding on the institutions of the Union and for the Member States". Agreements to which the Union is part may be described as being, on the one hand, classical-type agreements when they are concluded with third countries or international organizations, they became mandatory only for the States or organizations which are parts thereto and, on the other hand, as the specific agreements the European Union law, acquiring its characteristics (immediate, direct and priority implementation). In the latter case, the question arises whether such agreements have a direct effect, or not i.e. if they are clear and unconditional enough to be able to be invoked by private individuals. This is because, as it was established on a jurisprudential manner, in order that a rule of law of the European Union has direct effect, it must be clear, precise and unconditional. Strictly formal, those agreements concluded by the Council and published in the Official Journal are, by the very fact of their publication, placed not only in the Union legal order, as well as in the national legal order of each Member State, without the need for ratification or publication at the national level.[19] In this way, the agreement concluded becomes binding upon the Member States and their private persons (individuals and legal entities) will be able to invoke its provisions before the national courts.

The conditions under which international agreements to which the EU is part have a direct effect in the internal legal order of the European Union have been established by the Court in Luxembourg, once with the issuance of judgment in the case of *Demirel*.[20] Thus, according to the Court, „a provision in an agreement concluded by the Community with third countries is regarded as being directly applicable when, having regard to the content, the subject matter and nature of the agreement, it sets out a clear and precise obligation whose performance or whose effects do not depend upon the intervention of any subsequent act"[21]. In this way, according to the Court, the assessment is made according to the nature and structure of the international agreement, accuracy, clarity and unconditional nature of the rules contained therein.

4. The relation between international agreements to which the EU is part and the primary law of the European Union

Since the issuance of judgment in the *Haegeman*[22] case, the Court has embraced the monistic theory regarding the relationship between the Union's legal order and the international one[23]. The situation is entirely different when we consider, however, the relationship between the primary law of the European Union and international law, namely the priority of one over the other and this is because, the Court, in this situation, varied the application of the monistic theory. Thus, in terms of the relationship between the primary EU law and international law, the Court pointed out that, where the „international agreement (...) has already been concluded, (...) the State or Community institution (...) could introduce an action for annulment against the Council decision to conclude the agreement and could request, on this occasion, interim measures by means of an application for judge's order"[24]. In addition, in Article 218, eleventh paragraph 1 of the TFEU, the last sentence, we find again the jurisprudential matter on the relationship between the

primary EU law and international law: „in the event of a negative opinion of the Court, such agreement may enter into force only after its amendment or revision of the Treaties".

According to the treaties of the European Union, the Court of Justice of the European Union is competent including in relation to the issuance of approvals on the compatibility of a future agreement to which the Union is part and the EU law, thus conducting an *a priori* control. Within such control, the Court checks „the compatibility of agreements with the provisions of material law and with those concerning the powers, procedures and organization of the Community institutions, especially those relating to the delimitation of competences in the fields of" negotiation and conclusion of international agreements „[25]. Thus, according to the Court, „compatibility of an agreement with the Treaty may depend on, not only the substantive law, but also those which provide for the competence, procedure or institutional organization of the Community". After a careful analysis of the Court jurisprudence, we find that it has exercised its jurisdiction to conduct an *a priori* control was exercised over and over again. In this regard, we recall: Opinion 1/76 on the Draft Agreement establishing an European Fund for those vessels sailing on inland waters[26], Opinion 1/91 of the Draft Agreement between the Community, on the one part, and the countries belonging to the European Free Trade Association, on the other hand, with regard to the creation of an European Economic Space[27] and Opinion 2/94[28] on accession of the Community to the European Convention for the protection of human rights and fundamental freedoms[29].

As regards *a posteriori* control, its performance by the Court of Luxembourg raises issues within the international legal order. In accordance with him regulations occasioned by its jurisprudence, „the question of whether the conclusion of a certain agreement is within the competence of the Community or not and whether, in a given case, this competence was exercised in accordance with the provisions of the Treaty, is a problem which may be subject to the Court's analysis[30]". How problematic may be the consequences of such a decision is revealed by the Court's decision to annul the agreement on the implementation of the rules in the field of competition, signed on September 23, 1991 between the Commission and the authorities of the United States of America[31]. This precedent is able to highlight situations of legal uncertainty in the relations of the Union with external partners that can sensitize the bilateral or multilateral framework and, in particular, may involve the international liability of the Union[32].

Basically, the rule of international law or of the obligations arising out of international commitments on the measures belonging to the secondary legislation of the European Union may be the subject of an analysis of the Court of Justice of the European Union, such as its own jurisprudence regulates[33]. Pursuant to article 216 second paragraph, both the Member States and the institutions of the Union must take steps that are in strict compliance with the international law. Court jurisprudence has introduced the mention that the obligation to observe the international commitments by the Member States continue both in legal relations with partners, as well as in their relations with the European Community (nowadays, in their relations with the European Union). Thus, although a measure taken within the European Union is not in conformity with an obligation born by virtue of an international agreement, the Union must comply with/implement the provisions of international law, in the detriment of measures belonging to the secondary law. The Court, in accordance with Art. 216 of the TFEU, has the power to check the compliance with this obligation.

From this rule, it was also the Court that led the way to introducing some exceptions via two cases related to the implementation of GATT and WTO rules, respectively. In the first case, Germany has challenged the compliance with the provisions of GATT for a Council regulation on the organisation of the market as regards bananas[1]. Although the Court recognized the applicability and superiority of GATT rules in the community legal order, it considered „the spirit, the general framework and the terms of the international agreement in question"[2] as representing

[1] ECJ Judgment, October 5, 1994, *Germany v. / Council of the European Union*, 70/87, (http://www.ier.ro/sites/default/files/traduceri/61993J0280.pdf).

[2] Pt. 105 of the judgment.

an additional condition in the context of the analysis of the incompatibility of Community measure with the said agreement. In this case, the Court concluded that, „thanks to the spirit, the general framework and the terms in which the referenced provision has been designed, it cannot be regarded as establishing a rule of international law, directly applicable in the internal legal order of the Contracting Parties, so that such provision cannot represent a foundation for challenging the lawfulness of secondary law measures."[3]

In connection with the request addressed to the Court by Portugal, to annul the decision of the Council to conclude agreements in the field of textiles between the European Community, on the one hand, and India and Pakistan, on the other hand[4], given that they would not abide by a set of rules and principles of the WTO, the Court refused to consider the legality of Community measures on the grounds that this would constitute an unbalanced application of WTO rules, provided that the principle of reciprocity is fundamental to the WTO[5]. Moreover, the Court held that the courts of the most important members of the WTO do not examine the lawfulness of national laws in the light of the WTO[6], this attribute belonging to WTO mechanism for the resolution of disputes. Implementation by the court of a control of compatibility of secondary law rules with the WTO rules would deprive the Community (now the Union) from the advantage of negotiations that it would be equipped with as a member[7].

The relationship between the agreements concluded by the Member States before the entry into force of TEC or before the accession to the European Union, as appropriate as well as the European Union law, is given by Article 351 of the TFEU[8], article which states the following: „the provisions of the treaties shall not affect the rights and obligations arising from agreements concluded before January 1, 1958 or, for acceding States, before the date of accession; between one or more Member States, on the one hand and one or more third countries, on the other hand". However, Member States are required that, if the scope of some of these agreements are not compatible with the treaties, „to use all appropriate means to remove the incompatibilities detected". The logic of this provision is represented by the" the imperative of uniformity of European Union law"[9], and, in doctrinal interpretation, it was the one that represented the Foundation of the Court's judgment in ERTA case and not the doctrine of implied powers. In Klabbers' opinion, "the court deduced the Community's ability to conclude agreements with third countries in the field of road transport in order to ensure the uniformity of Community law and not necessarily because that would have been the intention of the parties to the TEC or that such jurisdiction should be implied"[10].

LEGAL ASPECTS OF INTERNATIONAL TERRITORIES IN THE SUBMARINE AREA

Nicolae PURDĂ*

Abstract

United Nations Convention on the Law of the Sea held in Montego Bay in 1982, in Part XI, has established a radically distinct legal regime on soil and subsoil bottoms seas and oceans, beyond the limits of national jurisdiction of coastal States, different rules for other parts of the sea, including sea water above the free zone.

The entry into force of the Convention of 1982 on November 16, 1994, was possible only after the adoption on 28 July 1994 in New York, of the Agreement on Implementation of Part XI of the Convention of 1982, which amends the legal regime of submarine territories beyond the limits of national jurisdiction established by the 1982 Convention.

Keywords: *Law of the Sea, the international submarine territories, international authority, company, room for settlement of disputes relating to underwater territories.*

1. Introduction:

The issue of the legal regime of seabed generated an extensive analysis of the doctrine and raised complex issues in international practice of the states, especially after the sharp development of exploration technologies to great depths which allowed the identification of mineral resources including polymetallic nodules.

Polymetallic nodules are rock formations, mainly of iron and manganese hydroxide, arranged in concentric layers around a nucleus. This nucleus is converted often microscopic mineral crystallization process magnesifere through.

The composition of polymetallic nodules from 42 elements, but economically significant nodules, industrial capitalized, are rich in manganese, iron, nickel, cobalt and copper.

Research has allowed the identification of more than 150 worldwide operating fields and the rate of multiplication of nodes is high operating current pace.

Currently, it is estimated that around 15% of the seabed is covered with polymetallic nodules, the most important deposits being at depths ranging between 4000-6000 meters.

In the scientific research carried out in the Pacific Ocean there have been identified the most promising concentrations of polymetallic nodules in its limits focusing richest clusters of ferro-manganese concretions from what have been identified to date. Here indeed the first pioneers investors have defined perimeters in the exploitation and subsequent transition to commercial scale operation.

Other areas that contain these minerals are considered to be: Blake Plateau in Georgia (USA), Southern Province Red Clay Bermuda area of San Diego Garcia and Madagascar in the Indian Ocean sea area south and southwest coasts adjacent South Africa, the Galapagos in law and Equatorial Peruvian shores.[1]

2. Shaping the legal status of the International Zone underwater territories

For a long time in doctrine and practice it was tried as international legal status of these underwater areas to be based on classical thesis: "res nullius", according to which these areas are considered to belong to the first discoverer, it will benefit from exclusive access and unlimited resources available in the area; "Res communis omnium" according to which the submarine territories beyond the jurisdiction of coastal States - seabed water column above them, and for the basement, follows the legal regime of the high seas.[2]

The Declaration on 1 November ISSUED 1967 in the United Nations General Assembly, Ambassador Arvid Pardo, Permanent Representative of Malta to the United Nations, stressed the underwater exploration and exploitation Need for territories beyond the limits of national Jurisdiction in the interest of humanity.[3]

On December 18, 1967 was adopted United Nations General Assembly Resolution no. 2340 (XXII) on the importance of protecting soil and subsoil beneath the high seas beyond the limits of national jurisdiction of shares that may become detrimental to humanity.

United Nations General Assembly adopted on 15 December 1969 the Moratorium Resolution no. 2574 (XXIV) which proclaims to establish an international regime for underwater territories beyond the national

jurisdiction of states that "Member and natural or legal persons are obliged to refrain from all mining activities in the territories resources submarines, including related basement "and that" no claim to a part of this area and its resources will not be recognized "

On 17 December 1970 the United Nations General Assembly adopted Resolution no. 2749 (XXV), which was adopted the "Declaration of Principles that govern submarine territories, including subsoil beyond the limit for the national jurisdiction", according to which "submarine territories, including related basement located beyond the limits of national jurisdiction and its resources constitute the common heritage of humanity."

Although some developed countries argued that the Declaration of Principles is not mandatory and that it does not create a temporary system for these territories, most states have argued that recognizing and formulating the principle - the common heritage of humanity - by adopting Resolution 1970 is a presumption ,, juris de jure " that such a rule and principle is part of positive international law, and combat thus, these texts have a tendency worth a mere recommendation.[4]

Negotiations on the legal regime applicable area and international mechanisms have to be established for the exploration and exploitation of its proved increasingly difficult, and actually a confrontation between two orientations conceptual world or between the Group of 77 and states highly developed capitalist.

Third UN Conference on the Law of the Sea, has developed works between 1973 - 1982, during the 11th Session through negotiation committees and groups.

The conference succeeded, after complex negotiations, sustained and prolonged harmonize a new law of the sea, enshrined in one Convention - United Nations Convention on the Law of the Sea.

The text of the Convention was adopted on 30 April 1982 and was opened for signature on 10 December 1982 in Montego Bay, Jamaica.

The Convention entered into force on 16 November 1994. Entry into force of the Convention, however, was possible only after the adoption on 28 June 1994 in New York Agreement on Implementation of Part XI of the 1982 Convention which brings substantial changes legal regime of submarine territories beyond the limits of national jurisdiction (set of Convention of 1982).

Romania signed the Convention on 10 December 1982, and by Law no. 110 of 10 October 1996 has ratified and acceded to the 1994 Agreement on implementation of Part XI of the 1982 Convention.

3. Legal Regime of the initial provisions of the Convention Areas 1982

The Zone initial regime was established by the provisions included in Part XI of the Convention.

In pursuit of the business in the area, the Member shall comply with the provisions of the Convention and principles of the Charter of the United Nations and other rules of international law, showing concern for the maintenance of peace and security, promote international cooperation and mutual understanding.[5]

The principles underlying the definition of the legal status of the area can be grouped into 3 categories:[6]

The fundamental principle that defines the legal status of the area - the area and its resources are the common heritage of humanity

- General principles and specific principles

General principles legally binding on the entire area of the area and its resources, and on all States and other entities involved in activities in this area are:

a) The principle of national non-closeness

b) The principle of inalienable resources Zone

c) The principle of using Zone in the legitimate interest of all Member

d) The principle of using exclusively peaceful purposes Area

e) The principle of effective participation of developing States in the work done in the area.

The specific principles whose application is only on certain specific issues of the area or its resources are:

a) The principle of respecting the legal status of the area;

b) The principle of liability for damage Zone

c) The principle of respect for the rights and legitimate interests of coastal States

d) The principle of protection of the environment and to human life and activity in the area correlation with other activities in the marine environment.

3.1.1 Common heritage of humanity in the area

The 1982 Convention sets out a series of articles and essential elements of legal contents.

Thus, art. 136 provides concise and unequivocally that "the area and its resources are the common heritage of humanity". This concept is developed in art. 137 para. 2 of the Convention which states that "all rights belong to all humanity Resource Area" and in art. 140 para. 1, which states that "the activities of the area will be carried out in the interest of all humanity".

The concept of common heritage of humanity has produced two significant changes in international law: on the one hand exclude the idea of freedom of the sea-bed mining, and on the other hand resulted in

[4] Dumitru Mazilu, *International Public Law*, Fifth Edition (Bucharest : Lumina Lex Publishing House, 2010), 565.
[5] Art. 138 of the 1982 Convention on Law of the Sea.
[6] Laura Magdalena Trocan, *The legal regime of submarine territories* (Bucharest: "CH Beck" Publishing House, 2008), 89 – 90.

the internationalization of these spaces and the institutionalization and internationalization system established for mineral resources exploitation of underwater territories.[7]

3.1.2. The principle of national non-closeness

Convention of 1982 enshrine this principle in art. 137 para. One saying that no state or person or entity is not entitled to claim or exercise sovereignty or sovereign rights over any part of the zone and its resources or to acquire a part of it. The Convention also reiterates that any such claim, no exercise sovereign rights and no approximation act will not be recognized.

3.1.3. The principle of inalienable resources of the Zone

The 1982 Convention states in art. 137 par. 2 that all resource rights belong to the Area of the entire community to act on behalf of the Authority. These resources are inalienable.

This character inalienability apply to all mineral resources solid, liquid or gas that can be found on the seabed or the subsoil thereof, including polymetallic nodules.[8]

3.1.4. Principle areas using legitimate interests of all states

Activities will be carried out in the interest of all humanity, be it the riparian countries or countries with no coastline and especially considering the interests and needs of developing States regardless of their geographical situation, whether it's peoples who have not attained full independence or autonomy regime recognized by the United Nations. For this purpose, the Authority will ensure equitable sharing, on a nondiscriminatory basis, the financial benefits and other economic benefits derived from activities in the Area, through an appropriate mechanism.[9]

3.1.5. The principle of using exclusively peaceful purposes Area

The area is open to use exclusively peaceful purposes, returning absolute obligation of all States, coastal or landlocked.[10]

On this point the emphasis emphasize the exclusively peaceful nature of the Activities of States in area, unlike the provisions applicable to other actions in the high seas waters.

The consecration of this principle has been prepared by a series of measures agreed by the international community before deployment of the 3rd UN Conference on the Law of the Sea.[11]

Marine scientific research in the area will also perform exclusively peaceful purposes and in the interest of all humanity (Art. 143 para. 1 of the 1982 Convention).

3.1.6. The principle of effective participation of developing States in activities in the Area

In the process of developing the system of exploitation of the common heritage argued thesis setting up preferential rights in favor of developing countries. In art. 140 para. 1 of the 1982 Convention states that "activities in the area will be carried out (...) and taking into account in particular the interests and needs of developing States (...)". Pursuant to Article 148 "effective participation of developing States in activities in the Area is encouraged (...)", taking due account of the special needs and interests of these states. ".

3.1.7. The principle of respect for the legal regime Zone

According to art. 139 para. 1 of the 1982 Convention, States Parties are obliged to ensure that activities in the Area, either by themselves or by public enterprises or by natural or legal persons possessing their nationality or effectively controlled by they or their citizens to comply with the provisions of Part XI.

Under the provisions of art. 153 paragraph 4 of the Convention, the Authority shall exercise the necessary control activities undertaken in the area to ensure that the relevant provisions of Part XI and the corresponding Annexes, as well as rules, regulations and procedures of the Authority and work plans approved.

3.1.8. The principle of liability for damage in the Zone

In art. 139 para. 2 stipulates the principle of liability for damage caused as a result of non-compliance related to activity in the area.

As for responsibility for how respected the legal regime of the area, identify two different situations: Liability for breach of an international obligation in accordance with art. 139 of the 1982 Convention and the nature of civil liability of the contractor for damage caused by unlawful acts committed by him in carrying out operations, as shown in art. 22 of Annex III to the Convention of 1982 and of art. 229 of the 1982 Convention.[12]

[7] Ibidem art. 93.
[8] Art. 133 letter A Convention of 1982.
[9] Ibidem art. 140.
[10] Ibidem art. 141.
[11] As the 1963 Treaty prohibiting nuclear experiments in the atmosphere, in outer space and under water and the Treaty of 1971 to prohibit the installation or placement on the soil and subsoil seas and oceans to the limit of 12 nautical miles from the shore of nuclear weapons and other weapons of mass destruction.
[12] Laura Magdalena Trocan, *op. cit*., p.114.

3.1.9. The principle of respect for the rights and interests of coastal States

In accordance with Art. 142 para. 1 of the 1982 Convention in case of resource deposits areas that extend beyond its limits "activities in the area will be held duly taking into account the rights and legitimate interests of coastal states under whose jurisdiction such deposits lie.

In order to avoid any infringement of such rights and interests, establish a system of consultation with the State concerned, including the procedure prior notice. Moreover, where activities in the Area may result in the exploitation of resources that are still in limiting national jurisdiction of a coastal State is required prior consent of it.[13]

Bringing harm the interests of coastal states and the violation of the Convention of 1982, which also have obligations for the contractors carrying out activities in the area, punished by those responsible, including related causes, such as damage or threat of pollution of the marine environment, as result of such activities.[14]

3.1.10. The principle of protection of the environment and human life and activities in the area correlated with other activities undertaken in the marine environment

Marine Environment Protection Zone is an obligation for both Zone users and for system administration charge of Institutional Area.

Duties consist users adopt the most effective measures to prevent and reduce polluting factors, and the Authority (the mechanism that manages the area and its resources) consist in adopting rules, regulations and procedures appropriate to prevent, reduce and control pollution of the marine environment, including coastline, including the face and other risks that threaten the marine environment, paying particular attention to the need to protect against the harmful effects of certain activities such as drilling, dredging, excavation, waste disposal construction and operation or maintenance of installations, pipelines and other devices used for these activities.[15]

Similar obligations incumbent on the same subjects and in terms of marine flora and fauna.

Protection of human life and it is an important issue of the legal regime of the area. In this way users are required to adopt the most effective measures to ensure the protection of human life and the Authority is required to adopt rules, regulations and procedures in addition to the regulations of international law.[16]

Activities in the area must be consistent with the other activities undertaken in the marine environment, which is why the 1982 Convention stipulates in art. 147. Two conditions that must be fulfilled facilities used for activities in the area. Among other conditions, noted that facilities for activities in the area will comply with certain rules, will be surrounded by "security zones" will be used exclusively for peaceful purposes and does not have the status of islands.

Convention of 1982 in art. 147. Three retained to address any compatibility issues, using reasonable criteria states that other activities undertaken in the marine environment will be carried out taking into account reasonably activities in the area.

It should be noted that in terms of objects of archaeological or historical nature found in this protected maritime sector, the 1982 Convention requires that they be stored or disposed of in the interest of all humanity, taking into account in particular the preferential rights of the State or country of State of origin or cultural origin or the State of historical or archaeological origin.[17]

3.2. The institutional structure Area

The institutional structure exploration and exploitation Area consists of[18]:

1. A specialized international organization - the International Authority Territories Submarine

2. An operational body of authority - Enterprise

3. A specific mechanism for settling disputes - Room for regulating differences on teirtoriile submarine, which is included in the structure of the International Tribunal for the Law of Sea

3.2.1. International Submarine Authority Territories

Authority appears to represent the organization through which Member - Party organizes and controls activities in the Area for administering and managing their resources, according to the provisions of Part XI of the 1982 Convention and the Agreement in 1994.

From the Convention of 1982 and the Agreement of 1994 on the following features of Authority[19]:

- is a specialized intergovernmental organization with universal
- uses jurisdiction over an internationalized space and on operators Zone
- has international legal personality;
- is based on the principle of sovereign equality of Member States
- has tripartite structure

[13] Art. 142 paragraph 2 of the Convention, 1982.

[14] See par. 3 of art. 142 of the Convention of 1982, which refers to the relevant provisions of Part XII of the Convention of 1982 and especially art. 235, which covers "expresis verbis" to a liability of international law of the Member.

- National And its property as persons acting in here, in each State enjoy the privileges and immunities necessary for the performance of functions.

Authority has the responsibilities: to ensure that activities in the area, to promote the harmonious development of the world economy; adopt regulations needed to conduct business in the area, its exploitation, protection and preservation of the marine environment.[20]

Activities in the area will be conducted either by the company or by States Parties or natural or legal persons having the nationality of a State Party, but in combination with the Authority. (Art. 153 para. 2 of the Convention of 1982).

In the area any activity can take place only by permit, issued by the Authority, which supervises the exploitation of local resources according to the principles of a "healthy commercial basis".[21]

Authority is the principal organs of an Assembly which meets general functions corresponding to the type of duties vested in the normal legislative bodies of other international organizations, a restricted composition Council, with executive functions and a Secretariat whose status and functions differ from those of other international organizations.

Assembly consists of all members of the Authority and is considered the supreme organ of it. Assembly in collaboration with the Council establishes the general policy of the Authority.

For the implementation of the general policy of the Authority, the Assembly meets regulatory functions, functions of administrative, financial functions - economic and other functions of operational nature (regulated by art. 160 of the 1982 Convention).

The Council is the executive body of the Authority anticipates general policy and ensure achieving the goals set by the Assembly.

The 36 members of the Council are elected component based on the criteria established by the 1982 Convention, taking into account the principle of ensuring an equitable geographical distribution of seats in the Assembly Council of the investments and the catches made in the area of mineral resources, the status developed country or developing the rule that the representation of Member States landlocked and geographically disadvantaged to be approximately proportional to their representation in the Assembly.[22]

In order to achieve, in cooperation with the Assembly, the general policy of the authority, the Council meets regulatory functions, functions of administrative, financial and economic functions, functions of supervision and control and other functions of operational nature (governed by Article 162 of Convention 1982)

The bodies referred to function structure of the Board are: Planning Commission Economic, Legal and Technical Commission, established under the provisions of Article 163 paragraph 1 of the 1982 Convention.

The Authority shall comprise the organizational structure authorized to provide a permanent Secretariat and perform administrative tasks of this organization.

Secretariat shall comprise a Secretary General and the staff of the Authority needs. The Secretariat is headed by a Secretary General elected by the Assembly from among candidates proposed by the Council for a period of 4 years. He is the chief executive of the Authority and shall act in that capacity in all meetings of the Assembly, Council and its subsidiary bodies have.

1982 Convention entitling the Secretary General to conclude, with the approval of agreements, to ensure consultation and collaboration with other international intergovernmental organizations and NGOs.

3.2.2. Company

The **Company** International Authority is the entity that runs directly exploration activities, mining of minerals extracted from the area in accordance with the 1982 Convention and the Agreement of 1994 and the general policy established by the Assembly and Council directives Authority.[23]

The activities of the Enterprise consist of transport, processing and marketing of minerals extracted[24]

The activity of the company is managed by a Board of Directors and a CEO. The governing bodies of the company are aided by qualified personnel.

Director General of the enterprise is its general representative and chief administrator.

Featuring legal personality distinct from that of the Authority, Company may enter into contracts and other agreements with the State or international organization or you could sit and separate justice authority.

3.2.3. Dispute Resolution Chamber on submarines territories

It is composed of 11 judges elected by the International Tribunal for the Law of the Sea, among its members, for a period of 3 years.

The room has a double competence, both contentious and advisory.

The Chamber has jurisdiction to consider and resolve, mainly the following categories of disputes resulting from activities in the Area: disputes between States Parties concerning the interpretation or application of Part XI and Annexes which refers to it; disputes between a State Party and the Authority

[20] Raluca Miga – Besteliu, *op.cit*., 227.
[21] Ibidem, 228.
[22] Marian Ilie, *op. cit.*, 224.
[23] Art. 170, paragraphs 1 and 2 of the 1982 Convention.
[24] Art. 1 paragraph 1 of Annex IV of the 1982 Convention.

concerning the acts or omissions attributable to the Authority or of a State Party or acts contrary to the Convention Authority; differences of the parties to a contract; disputes between the Authority and an applicant for a refusal to contract or juridical problems arising out of the contract negotiations and any dispute for which the competent Chamber is expressly provided for by the 1982 Convention.[25] Regarding the competence of the Chamber by the provisions of Article 189 of the 1982 Convention, are set some limitations.

Chamber judgment is final and shall be binding only on the parties resolved the dispute and only, which must be suppressed from the date of its delivery.

The camera also has the power to give advisory opinions at the request of the Assembly or the Council on legal issues that may arise during the development of their activity.[26]

4. The current legal regime of the Zone, according to the 1994 Agreement.

United Nations Convention on the Law of the Sea, adopted in 1982 although it was not entered into force only after approval by the UN General Assembly Resolution 48/263 by 28 June 1994 Agreement on the Application of Part XI on such terms and conditions exploration and exploitation of resources in the international area of submarine territories.

The peculiarity of the current regime Zone resource exploration is that the provisions of the 1994 Agreement and Part XI of the Convention Against din1982 be interpreted and applied together as a single instrument.

Resources of the area can be explored and exploited in accordance with the principles governing the area, according to the 1982 Convention, Part XI, Annexes III and IV thereof, and according to the provisions and provisions of the 1994 Agreement.

This Agreement states that although refers to the application of Part XI of the Convention, in reality has functions of an agreement amending the provisions of Article 2 resulting from the Agreement of 1994 provided that in the event of any inconsistency between any agreement and Part XI of the 1982 Convention shall prevail provisions of the 1994 Agreement and the provisions of Article 4 which refers to the expression of consent of States or other entities to become parties to the 1982 Convention or the Agreement.

The provisions of this Agreement shall be brought substantive changes to the initial provisions of the 1982 Convention, meaning[27]:

a) conferring additional powers in administering Authority on other resources in the area. Powers and functions of the Authority shall be those expressly conferred on its mos, by convention, giving the subsidiary will be invested with powers compatible with the Convention, which necessarily involve the exercise of those powers and functions relating to activities in the Zone[28]

b) alteration zone management decision making mechanism. Thus, if according to the 1982 Convention, the Assembly was considered the supreme organ of the Authority and is authorized to establish its overall policy, as agreed in 1994 (Section III of the Annex), the general policy of the Authority will be established by the Assembly, in collaboration with the Council, which is reflected in the increased role for the Council in making decisions.

c) minimizing the expenditure of States Parties based on "savings requirements" measure that affects the functional capacity of the Authority and the mechanisms established by the Convention.

d) introducing the concept of "pioneer investor" that are preserved substantial rights of exploitation in the area, for companies in industrialized countries that have explored and exploited subsea fields before adoption of the Convention. According to the Agreement, pioneer investors will be provided with 36 months instead of 6 months from the entry into force of the 1982 Convention, in order to apply for approval of a plan of work on mining.

e) ensure technology transfer to business and developing states, only on the basis of fair and reasonable commercial terms or agreements concluded only by joint ventures.

Also, although the 1994 Agreement Preamble reaffirms the principle of the common heritage of humanity, the regime established institutional framework provides a modest, with little chance of reaching the exploitation of resources in favor of developing countries. Therefore it is estimated that common principle of humanity on the international area is in recession.[29]

Certain provisions of the 1982 Convention and the annexes are simply removed by the Agreement.

Thus, if in the 1982 Convention spoke of a fair sharing of the benefits of financial and other economic benefits derived from activities in the Area, the Agreement no longer refers to such a division.

Establish a system of compensation in order to help our developing member of the 1982 Convention, not appearing in the 1994 Agreement, limiting it only to nurse.

[25] Marian Ilie, *op.cit*., 226-227.
[26] Art. 159, paragraph 10 of the 1982 Convention.
[27] Marian Ilie, *op.cit*., 232.
[28] Section 1, paragraph 1 of the Annex to the 1994 Agreement.
[29] Ion Diaconu, *Manual of Public International Law* (Bucharest: Lumina Lex, 2007), 232.

The Convention of 1982 on the limitation of production, were eliminated by the 1994 Agreement and have been replaced by general principles[30]

The Agreement has been removed and a number of provisions relating to the procedure for selecting applicants for authorization of production which, according to the regulations of the Convention of 1982 attributed Authority discretion.

According to the 1994 Agreement, the provisions of Article 155 paragraph 1, 3 and 4 of the Convention of 1982 was repealed and the provisions of Section IV of Annex thereof, states that, in terms of reviewing seabed mining regime, the Council make recommendations to the Assembly.

1994 Agreement but also brings some new elements. Thus potential investors will be able to request the Authority to approve a work plan on exploring a mining site in reasonable conditions (which were not found in the Convention of 1982)

Another novelty refers to the fact that the application for approval of a plan of work must be accompanied by an assessment of the potential impact of proposed activities on the environment.

Section IX of Annex to the Agreement contains provisions required for setting up the structure of the Board of "Finance Committee" composed of 15 members, of which, necessarily, a representative of each of the five states with the most great contribution to the administrative budget of the Authority.[31]

Given the above data, we estimate that the provisions of the 1994 Agreement correspond to a great extent the objectives pursued by industrialized states, but also diminishes the benefits of developing states.[32]

With all its imperfections 1994 Agreement allowed the materialization of one of the most magnificent works ever made legal, but constiuie and an acceptable alternative to a situation that would not have led nonexistent than the uncertainty, tension and confrontation in international relations.[33]

5. Conclusions

Entry into force of the Convention on the Law of the Sea on 16 November 1994 following the adoption of the Agreement, determined in addition to the establishment of a specific legal regime submarine territories, as authority for the international seabed - the piece de resistance of this new regime to take birth among other international organizations, with the assurance that almost all countries, especially the major industrial powers, she will ensure existence.

The exploration and exploitation of the area, appears to be a genuine compromise between those who wanted to reserve exploitation of ocean and sea bottoms, private companies and those belonging to developing states that, in turn, wanted all activities in The area to be conducted by a single entity - authority - so the operation to be performed on behalf of the entire international community.

RECONCILIATION OF LANGUAGE VERSIONS WITH DIVERGING MEANINGS IN THE EUROPEAN UNION

Laura-Cristiana SPĂTARU-NEGURĂ*

Abstract

As emphasized in a study published last year, when multiple legal orders and languages co-exist within a single legal regime, there is potential for divergences between the legal texts. The European Union gives rise to such divergences, having in mind that it integrates 28 Member States and 24 official languages. After discovering how the multilingual and multicultural environment of the European Union affects its legislative and judicial processes and arguing the problem of translation divergences between the authentic texts of the European Union, it is nowadays our concern to analyse the reconciliation of language versions with diverging meanings in the EU legal order.

The present study is part of a more complex research on this theme and it is meant to approach certain important points of the master thesis prepared in Switzerland for a LL.M. program.

Keywords: *European Union, translation, divergences, conflicts, reconciliation.*

1. About Language and Multilingualism

Language is "a companion to culture, as the essential core of national or minority group identity".[1] Multilingualism can be seen as "a democratic value to be protected, a fundamental right of minority groups, an obstacle to deliberative democracy and a hindrance to legal certainty and the possibility of uniform law, a cultural asset of Europe to be promoted and protected, a competitive advantage of businesses on the market and a prerequisite for the free movement of EU citizens".[2]

But why the EU does not agree on a common language?

As from the 1st of July 2013 "the European Union has 28 Member States, the last Member State entering the European family being Croatia. Each Member State has its own legal system, which can be classified under the criteria of René David in civil law countries or common law countries. Almost every Member State has its own official language, in the EU being recognized 24 languages per total.[3] Moreover, "depending on how languages are defined and what inclusion criteria are used, more than 100 regional and minority languages are spoken in Europe".[4]

However, despite *the struggle* of Europeans to keep their linguistic diversity, we noticed that the number of languages spoken in Europe has certainly dropped: "[m]any languages have disappeared, and some European states gave even managed to impose an almost perfect linguistic unity on their territory: English in the UK, German in Germany, French in France or Italian in Italy. Some states even share the same official language".[5]

As some authors point out "there is an important difference in the way multilingualism and multijuralism play out: while it is entirely possible and, indeed, necessary for individual participants in the legislative and adjudicative processes of the EU to act sometimes or even regularly in a language that is not their mother tongue", it is rather difficult and generally not required to forget one's legal background and to adopt a foreign one".[6]

The concept of "multilingualism" can be strong, meaning that all official language versions are equally authentic, or week, meaning that one language version is authentic, while the others are official translations. In the history of the European construction, we can find both strong and weak multilingualism. For example, the EU adopted the strong multingualism, because all language versions of an act are authentic, while the European Coal and Steel Treaty adopted the weak multilingualism, because the French version was considered to be authentic. An example of today's weak multilingualism would be the case law of the European Court of Justice, because the authentic version is the language-of-the-case version.

From the doctrine and from the ECJ's case law, we notice that by adopting the strong multilingualism,

[2] Kjaer and Adamo, *Linguistic Diversity*, 2.

[3] However, it must be emphasized that until 2007, Irish was an authentic language of the Treaties but was not included among the official and working languages of the EU. Irish became, with the accession of Ireland, an authentic language of the Treaties but it did not acquire the status of an official language under Regulation No. 1 until 2007 when the regime was extended to Irish with some limitations.

[6] Theodor Schilling, "*Multilingualism and Multijuralism: Assets of EU Legislation and Adjudication?*, German Law Journal, vol. 12, no. 07, 2011, 1461 (footnote omitted).

the EU faces many problems, leading to contradictions or variations between the language versions of the EU acts.

In many ECJ cases, it was underlined that multilingualism is essential to the EU legal order. For instance, in the case *Kik v. OHIM*, it was said that:

Multilingualism is an indispensable component of the effective operation of the rule of law in the Community legal order, since many rules of primary and secondary law have direct application in the national legal systems of the Member States.[7]

Another example can be discovered in the *CILFIT* case, where the Court stated:

It must be borne in mind that Community legislation is drafted in several languages and that the different language versions are all equally authentic. An interpretation of a provision of Community law thus involves a comparison of the different language versions.[8]

2. Reconciliation of Language Versions with Diverging Meanings

The meaning of the EU law cannot be derived from one version of the official languages, therefore the languages are interdependent and "[h]ence EU citizens cannot purely rely on their own languages when they want to know what the EU law says on a particular issue. In principle, the EU citizens must know the law in each and every official language because the meaning of the law is anchored not in one single language version, but in all the language versions taken together".[9]

The differences between the languages are inevitable because they are not absolute copies one of each other. In this case, the EU multilingualism leads to "legal miscommunication, misinterpretation, incoherent and divergent texts and, ultimately, an obstacle to achieving what lies at the very core of the rule of law, namely legal certainty".[10]

But to what extent must language be regarded as *a barrier* to the development of a uniform European law?

If the EU legislator wants to legislate, therefore to communicate despite the diversity, translators and interpreters are required. They are the ones who can bridge the gap between different nationalities, facilitating the passage from one river bank to the other. Can we speak just in one language? Or what is the language of democracy in Europe? Habermas suggested that the common language in Europe should be English.[11]

"Legal translation is a special form of translation where linguistic signs are closely related to the legal systems to which they originally belong".[12] It is special because the legal language is a specialised sub-language used by jurists and the legal norms found in legal texts are enforceable. Because law is not an exact science, its language is polysemantic. For example, depending on the context, by the word *law* (in other languages, *drept, derecho, droit, diretto*) we can designate the objective law or the subjective law. Moreover, law contains legal concepts specific to a legal culture or system, for which there are no other equivalents in other legal systems (*e.g. common law, consideration, equity*).

"To be imbued with life and full meaning, the word/term must be used in conjunction with quasi-legal vocabulary (collocations) in addition to general vocabulary".[13]

But which European institution intervenes when translation conflicts arise? Well, the European Court of Justice (formed by the Court of Justice, the General Court and the Civil Service Tribunal) is the judicial authority of the multilingual European Union, ensuring the uniform interpretation EU law in 24 of the official languages. It ensures the observance of law "in the interpretation and application" of the treaties. It has to ensure that the Member States comply with their obligations, reviews the legality of the EU institutions' acts and interprets the EU law at the request of the national courts.

In the last year's study[14], we have analyzed the ECJ's case law on translation conflicts between the authentic texts of the European Union and the legal consequences of such judge-made definitions.

A normal continuation on the divergences between language versions problem is the reconciliation of the texts. It is obvious that there are diverging meanings between all 24 official languages versions, but the problem is how do we reconcile the diverging meanings?

The European institutions are familiar with this question. During the years, several methods of reconciliation have been discussed and observed in the ECJ's case law, among which the preference for the majority meaning, the preference for the clear meaning, the preference for the liberal meaning. *Unfortunately, the Court did not prefer and adopt just one method.*

[14] Laura-Cristiana Spataru-Negura, "*Some Aspects Regarding Translation Divergences Between the Authentic Texts of the European Union*", CKS 2014 proceedings, Bucharest, 2014, 368-387.

Sometimes, in reconciling the divergent language versions, the Court uses the context and the purpose. For example, in case *Givane v. Secretary of State*, the Court presupposed that a literal interpretation can solve the problem of diverging meanings, but underlined that it has not enough:

Since a literal interpretation of the words "for at least two years" […] does not provide an unequivocal answer to the question referred, it is necessary to place that expression in its context and to interpret it in relation to the spirit and purpose of the provision in question. [15]

Thus, we should interpret this passage as saying that literal interpretation can be used to reconcile diverging meanings, BUT that this was not possible in the respective case.

We notice that the Court regularly uses a *standard phrase* when explaining the need for multilingual interpretation, which is:

It must be borne in mind in this regard that, according to settled case-law, the necessity for uniform application and accordingly for uniform interpretation of a Community measure makes it impossible to consider one version of the text in isolation, but requires that it be interpreted on the basis of both the real intention of its author and the aim he seeks to achieve, in the light, in particular, of the versions in all languages.[16]

However, there are situations when a comparison of the different official versions will not solve the interpretative problem, but it will still have an important role because it can demonstrate that a particular wording is misleading. When using the purpose to solve the interpretative problem, the Court often uses the wording of various articles of the act of its preamble. For example, in the case *Commission v. Germany*[17], the Court used in order to establish the purpose of the act the wording of Article 13 and the preamble of the directive. Of course that it is important how the ECJ finds and construes the purpose of a legal act. Apart from looking to the preamble or various articles of the act, the ECJ could also consult the *travaux préparatoires*, because the choice of the proper word could have been part of the discussions in the legislative bodies.

We consider that the teleological method used in interpreting the EU law is the most used method in establishing legal meaning by the ECJ.

But when multilingual interpretation is going to be engaged and which languages should be considered as mandatory consultation languages? First of all, we consider that English and French should be the consultation languages, because these are "*de facto* originals in the legislation process of the Union, in the sense that a crushing majority of all documents are drafted first in one of these languages. As *de facto* originals they are potentially better prepared than other language versions and better reflect the intention of the legislator".[18] Another reason would be that they represent the most important legal cultures: civil law and common law. The need for uniformity[19] throughout the European Union could be another reason to choose these languages as consultation languages. "[T]he search for their meaning [varying linguistic expression of laws] does not start out with the aim of reconciling the various language versions, but originated in the need to represent the precepts and values of the Community legal system in a uniform way".[20] The uniformity is needed because "a Union whose rules are interpreted and applied differently in each Member State is a Union on paper only".[21]

We consider that if the national courts will use their own language version, interpreted with the help of the two mandatory consultation languages (English and French), the uniformity could be achieved, because the same languages would be used in all the Member States. Although there might be critics regarding the privileged position given to French and English by this recommendation, we consider that they already enjoy a special position, being considered *de facto* originals in the legislative process of the European Union. Of course, that in the event of difficult cases, the national courts retain the possibility to refer them to the ECJ.

As regards the moment when national courts should consult other language versions, we underline that these mandatory consultation languages should be employed automatically in the interpretation process. As for the multilingual interpretation by the ECJ, this does not happen regularly. The ECJ either trusts its AGs with the performance of language comparison,[22] or it conducts its own comparison, sometimes

But sometimes, important language differences discovered by the AGs are ignored by the Court – *e.g.* Case C-265/03 *Igor Simutenkov v Ministerio de Educacion y Cultura, Real Federacion Espanola de Futbol* [2005] ECR I-2579.

including more languages[23] and arriving at different conclusions[24].

The multilingual interpretation can have two outcomes: either all the official language versions have the same meaning, or they do not. Sometimes, the ECJ understands the language comparison as looking for the literal meaning or the usual meaning of words, at least.[25]

3. Conclusions

The EU law is very special, because it is an autonomous legal order, characterized by multilingualism (24 equally authentic official languages) and multijuralism (28 national legal systems). The increase of the official languages in the EU (from 4 in 1958 to 24 in 2013), determines the multilingualism in the EU institutions to be even more complex. We have to keep in mind that with the 24 official languages, the European institutions have to manage 552 linguistic combinations both for translation and for interpretation: each of the 24 languages must be transposed in the 23 other official languages. This fact requires the recruitment of an important number of translators and interpreters.

From all the ECJ's cases mentioned in this study, it appears that the Court is compelled to apply different interpretation techniques that correspond to the nature of the actual discrepancy between the language versions of the EU legal acts that it is called upon to interpret. In order to avoid such discrepancies, a continuous effort of strengthening the quality of the drafting and the translation of the multilingual EU law is compulsory. Although the principle of equal authenticity of all language versions is incompatible with cases that result in an interpretation that gives precedence to one version over the other, the ECJ realized that solutions are needed. We have to borne in mind that these solutions do not have to overlook the principle of effectiveness, which ensures maximum adhesion to the EU objectives. Thus, in a judgment in 2000, the ECH stated that "whenever a provision of Community law was capable of diverse interpretation, preference must be given to the one which is best adapted to safeguarding its effectiveness, while preserving the principle that, in the case of disparity between the various language versions of a Community text, the provision must be interpreted as a function of the system and purpose of the legislation of which it forms part".[26] In another case[27], the Court reiterated that, when an EU provision is capable of different interpretations, preference shall be accorded to the best suited to preserve the effectiveness of that provision.

An examination of the ECJ case-law[28] highlights "how solutions to problems of interpretation of multilingual texts reflect specific characteristics"[29] of the EU's legal system. This analysis shows that the Court does not yet have a clear policy on how to solve the practical problem of authenticity of texts of all language versions of Community legislation.

Of course that the meaning of the EU law cannot be derived from one version of the official languages, therefore the languages are interdependent. In this case, the EU multilingualism leads to incoherent and divergent texts that are an obstacle to achieving legal certainty.

GENERAL CONSIDERATION REGARDING EU LAW IN THE DOMAIN OF CULTURAL HERITAGE

Alexandra STĂNCIULESCU*

Abstract

The cultural heritage is a rich and diverse mosaic of cultural and creative expressions, our inheritance from previous generations of people and our legacy for those to come. In the terms of the Convention concerning the protection of the world cultural and natural heritage, the cultural heritage includes: monuments, such as architectural works, works of monumental sculpture and painting, elements or structures of an archaeological nature; groups of buildings and sites, such as works of man or the combined works of nature and man and areas including archaeological sites, all of these being of outstanding universal value from the point of view of history, art or science. Because of its substantial importance for the evolution of humanity, all nations in general and the European Union in particular, should have the duty of ensuring the identification, protection, conservation, presentation and transmission to future generations of the cultural and natural heritage. EU law states through the Treaty on the Functioning of the European Union at article 167 that the action of the Union shall be aimed at encouraging cooperation between Member States and, if necessary, supporting and supplementing the action in areas such as: improvement of the knowledge and dissemination of the culture and history of the European people; conservation and safeguarding of cultural heritage of European significance and others. While policy in this area is primarily the responsibility of Member States, regional and local authorities, the EU is committed to safeguarding and enhancing Europe's cultural heritage through a number of policies and programmes. Due to the lack of such policies and programmes, the lack of consistent terminology and legal definitions, especially between EU languages, the lack of information and data on the crimes that affect cultural goods, the purpose of the essay is to emphasize the need of a rigorous legal program and policy and to observe the legislation concerning this area existing in Member States.

Keywords: *European Union; cultural heritage; EU law; Member States legislation; European Commission*.

Introduction

The subject of the study, "General considerations regarding EU Law in the domain of cultural heritage", is a matter concerning public law. Europe's cultural heritage, both tangible and intangible, is our common wealth – our inheritance from previous generations of Europeans and our legacy for those to come. It is an irreplaceable repository of knowledge and a valuable resource for economic growth, employment and social cohesion[1]. It is our responsibility as humans to respect our history and help perpetuate our most important values, which coexist in both the tangible and intangible cultural heritage. As humans we have to provide the society our better moral assets and all acts and facts relevant to our culture must stand as testimony for the future. Nowadays we live in a world that, from the point of view of technology, evolves so fast, that we are caught up in the so called "machineries", that we look forward so much for the future, that we forget to remember our past, responsible for all our gained knowledge until present. But this should not be a bad thing, because in our matter of subject it can be constructive. Society today, encompasses a diversity of cultures in a civilization based on science and technology. Whereas cultures, with their beliefs and values breathes the air of virtual, the universal civilization is more comfortable with reality[2]. Inside this civilization we find that economic, social, military and cultural dimensions have great impact and for peoples to live in a democratic system, international and regional organizations are a solution. European Union has a major role as an actor on the international stage. And because 28 states are members of this organization and others have already signed an association agreement, it seems reasonable to say that the actions of these countries should be in line with the principles and policies of EU. Our cultural heritage and way to preserve and valorize it, is a major factor in defining Europe's place in the world and its attractiveness as a place to live, work and visit. Cultural heritage is a shared resource, and a common good. Like other such goods it can be vulnerable to over-exploitation and under-funding, which can result in neglect, decay and, in some cases, oblivion. According to the Treaty on the Functioning of the European Union, heritage protection is a primarily matter for national, regional and local authorities. We understand the meaning of the principle of subsidiarity and its importance, but, after careful researches, we have come to the conclusion that the legally effective norms and policies regarding cultural heritage are not efficiently implemented. In other words, the purpose of the study is to observe the effective regulations and instruments that have the role to protect, to preserve

and to promote European cultural heritage and to state why there is a necessity of upgrading and diversifying them. The way we have chosen to respond to the undertaken objective is the examination of the opened sources and the analytical and comparison methods on the acts and facts. The element of innovation of the study is that there haven't been any specialized studies which relate to this subject. But it represents a present problem, approached by the institutions of the European Union, in 2014, the main purpose being an integrated approach to cultural heritage for Europe.

Content

Translating from the Latin "patrimonium", the word patrimony/heritage means paternal legacy. UNESCO[3] defines this concept, inserting in its meaning the duty that falls upon each one of us to pass on the legacy, which we gain from the past, to the future generations. Beyond the intrinsic wealth, the cultural heritage doesn`t represent a personal property, but a defining attribute for maintaining and perpetuating the social cohesion and identity. During the French Revolution, when the concept of nation was beginning to appear, Henri Jean Baptist Grégoire[4] (1750-1831) said that the common heritage was one of the bindings of society. The patrimony is an alive and perennial concept, which, over the time, enrichen with new meanings and extended to much more domains.

In a general way, modern law defines the concept of patrimony as all the rights and obligations that cand be measured in money, which belong to a natural or legal person[5]. During the time of Justinian, the elements of the patrimony, in the terms of what romans call them during the clasic law, were the real rights and the personal ones. The real right emanated from the legal relationship between a person and all the other member of the society and the personal right emanated from the legal relationship of two determined persons. The first classification we take a special account of lays out in Justinian`s Institutiones, which divides things in two categories: res in patrimonium and res extra patrimonium. The first ones could have made the object of a private property, but the others were considered outside the patrimony, because through their nature they couldn`t have made the object of property. In the same category were included the things, which, by their destination, couldn`t be in the property of a person and as an example, these were considered to be the temples or the walls of the castles[6].

Nowadays, in the civil law, the concept of patrimony has a technical and precise meaning, but because of its several specific meanings, this concept appears in other branches of law. For example, "the public interntional law talks about common heritage of humanity and its object is the free sea and also the mineral resources, solid, liquid or gaseous in situ[7], which are found on the bottom of the seas and in their undergrounds. It is obviously that this kind of use of the heritage concept has in view all of these resources and the free sea, belonging to the entire community." [8]

In the history of Romanian civil legislation, we come across the concept of patrimony without having a clear definition allocated to it. Over the time, the importance given to it is evolutionary. For example, if in the Romanian Civil Code from the second half of the 19th century (1864), we find only a few implicit and explicit references to the patrimony, in the civil legislation adopted after 1950, the concept of patrimony is much more invoked.

"The most general reference to the concept of patrimony – of an implicit manner – was made in the art. 1718 former Civil Code, which according to it "whoever is legally bound, is under the obligation to carry out his debts with all his assets, movable and immovable, present or future."The reference to all assets that belong to the debtor, "present and future", which were use to warrant the fulfilling of the obligations owed to the creditor, had in consideration all his goods, in their universality. The former Civil Code referred explicit to this concept, when it regulated the so called separation of property. According to art. 781 former Civil Code, the creditors of a deceased person could have demanded "a separation of property between the deceased and the heir", in order not to cause the confusion – as in the reunion – between the deceased person`s patrimony and the inheritor`s own patrimony." [9]

The examples can continue with the dispositions of art. 238 from Law no. 31 of 16 November 1990 on trading companies - republished, as they were modified through the Law no. 441/2006 and the Emergency Ordinance no. 82/2007 referring to the merger and division of trading companies[10]. Also, the Law no. 215/2001 regarding local public administration, republished[11], which states that according to art. 119, the patrimony of the territorial-

administrative entity is consisted of all movable and immovable goods which belong to its public domain, its private domain and the patrimonial obligations that such administrative unit can have.

In Romania, we find the concept of patrimony in several special normative acts, intended to determine the legal regime of some categories of goods. For example, in art. 1 par. 2 from the Law no. 182 of the 20th of October 2000 regarding the protection of the movable national heritage[12], with the subsequent modifications, „the national cultural heritage includes the totality of objects identified as such, regardless of the ownership right over them, representing a testimony and an expression of the values, beliefs, knowledge and traditions in continous evolution; it comprises all the elements resulted from the interaction, in the course of time, between human and natural agents". Also, the Law no. 311 of the 8th of July 2003[13] regarding museums and public collections – republished states that "the museum patrimony represents the totality of goods, rights and duties with patrimony value belonging to a museum or, if the case may be, of the public collections. The goods that compose the museum patrimony may be subject to the public ownership right of the state and/or of the territorial-administrative entities, or, if the case may be, of the private property right". Also, Ordinance no. 43 of the 30th of January 2000 on the protection of the archaeological heritage and declaring certain archaeological sites as national interest areas – republished[14], refers to the archaeological heritage as signifying the ensemble of archaeological objects comprising: 1. the archaeological sites registered in the National Archaeological Repository, except the ones that have been destroyed or disappeared and the sites classified in the Historical Monuments List, situated underground or underwater, comprising archaeological vestiges: habitations, necropolis, structures, buildings, groups of buildings, as well as sites with located archaeological potential, as defined by the legislation in force; 2. movable objects, objects or traces of human existence, together with the ground where they were uncovered. The Law no. 26 of 29 February 2008 on the protection of intangible cultural heritage refers to the intangible cultural heritage as signifying the totality of practices, representations, expressions, knowledge, abilities – along with the instruments, objects, artifacts and cultural spaces associated with them – which the communities, groups or, if the case, individuals recognize as an integral part of their cultural heritage.

Over the time, the concept of cultural heritage has known several definitions and interpretations. The International Centre for the Study of the Preservations and Restoration of Cultural Property has found not less than 60 definitions of the cultural heritage and cultural property, the oldest one dating from year 6 AD. Keep in mind the next definition offered by UNESCO, which says that "the cultural heritage may be defined as the entire corpus of material signs - either artistic or symbolic - handed on by the past to each culture and, therefore, to the whole of humankind. As a constituent part of the affirmation and enrichment of cultural identities, as a legacy belonging to all humankind, the cultural heritage gives each particular place its recognizable features and is the storehouse of human experience." [15]

According to the Convention concerning the Protection of the World Cultural and Natural Heritage adopted by the General Conference of the UNESCO on 17 November 1972, the following shall be considered as cultural heritage: **monuments:** architectural works, works of monumental sculpture and painting, elements or structures of an archaeological nature, inscriptions, cave dwellings and combinations of features, which are of outstanding universal value from the point of view of history, art or science; **groups of buildings:** groups of separate or connected buildings which, because of their architecture, their homogeneity or their place in the landscape, are of outstanding universal value from the point of view of history, art or science; **sites:** works of man or the combined works of nature and man, and areas including archaeological sites which are of outstanding universal value from the historical, aesthetic, ethnological or anthropological point of view.

Romania is intense implicated in the UNESCO actions, especially within the conventions that it is a part of:

- the Convention concerning the Protection of the World Cultural and Natural Heritage (1972), adopted by Decree no. 187/1990[16];

- the Convention on the Means of Prohibiting and Preventing the Illicit Import, Export and Transfer of Ownership of Cultural Property (1970), adopted by Law no. 73/1993[17];

- the Convention for the Safeguarding of the Intangible Cultural Heritage (2003), adopted by Law no. 410/2005[18];

- the Convention on the Protection and Promotion of the Diversity of Cultural Expressions[19] (2005), adopted by Law no. 248/2006[20];

- Convention on the Protection of the Underwater Cultural Heritage (2001), adopted by Law no. 99/2007[21].

European wide, Romania has ratified the following conventions:

- the UNIDROIT[22] Convention on stolen or illegally exported cultural objects, adopted in Rome on 24 June 1995 and ratified through Law no. 149/1997[23];

- the European Convention on the Protection of the Archaeological Heritage (revised), adopted in Valetta on 16 January 1992 and ratified through Law 150/1997[24];

- the Convention for the Protection of the Architectural Heritage of Europe, adopted in Granada on 3 October 1985 and ratified through Law no. 157/1997[25];

- the European Landscape Convention, adopted in Florence on 20 October 2000 and ratified through Law no. 451/2002[26].

The ensemble of legal instruments that have as main purpose the protection and conservation of cultural heritage of all kind doesn`t stop here. It can be completed with a long list of legal norms. We will name only a few of them:

- Decree no. 672/2006 regarding the submission for ratification before the Parliament of the Second Protocol to the Hague Convention of 1954 for the Protection of Cultural Property in the Event of Armed Conflict, adopted in Hague on 26 March 1999;

- Government Ordinance no. 47/2000 establishing certain measures for the protection of historical monuments included on the World Heritage List, as approved by Law no. 564/2001 – published in the Official Journal of Romania no. 695 of 1st of November 2001;

- Law no. 6/2008 concerning the legal status of technical and industrial heritage;

- Government Decision no. 493/2004 for approval of the methodology for monitoring historical monuments included on the World Heritage List – published in the Official Journal of Romania no. 380 of 30th April 2004;

- Council Regulation (EC) no. 116/2008 on the export of cultural goods;

- the Order of the Minister of Culture no. 2436 of 8th July 2008 regarding the elaboration of the National Programme for safeguarding, protection and highlighting the intangible cultural heritage, etc. [27]

World wide, the organs and organizations specialized in cultural heritage or which take action in order to prevent and combat the crime phenomenon against art are:

United Nations Educational, Scientific and Cultural Organization (UNESCO) - UNESCO has adopted a three-pronged approach: it spearheads worldwide advocacy for culture and development, while engaging with the international community to set clear policies and legal frameworks and working on the ground to support governments and local stakeholders to safeguard heritage, strengthen creative industries and encourage cultural pluralism[28].

1. The International Council of Museums (ICOM) – in general, The International Council of Museums works for society and its development and it is committed to ensuring the conservation, and protection of cultural goods[29]

2. International Centre for the Study of the Preservation and Restoration of Cultural Property (ICCROM) - ICCROM is an intergovernmental organization dedicated to the conservation of cultural heritage. Its members are individual states which have declared their adhesion to it. It exists to serve the international community as represented by its Member States, which has the currently number of 134[30]. Romania is a member state since 19th January 1960[31].

3. Getty Research Institute (GRI) - The J. Paul Getty Trust is the world's largest cultural and philanthropic organization dedicated to the visual arts. The Getty Conservation Institute advances the practice of art and cultural heritage conservation worldwide[32].

4. Smithsonian Institute – the Smithsonian is the world's largest museum and research complex, consisting in 19 museums and galleries, the National Zoological Park and nine research facilities and its vision is to shape the future by preserving our heritage, discovering new knowledge, and sharing its resources with the world[33]

[19] Romania was the first country from Europe and 4th from the world which ratified the Convention on the Protection of the Diversity of Cultural Expressions.

5. International Foundation for Art Research (IFAR) - The International Foundation for Art Research (IFAR) is a 501(c)(3) not-for-profit educational and research organization dedicated to integrity in the visual arts. IFAR offers impartial and authoritative information on authenticity, ownership, theft, and other artistic, legal, and ethical issues concerning art objects[34]

6. Art Loss Register - The ALR is the world's largest private database of lost and stolen art, antiques and collectables. Its range of services includes item registration, search and recovery services to collectors, the art trade, insurers and worldwide law enforcement agencies[35]

7. Association for research into crimes against arts (ARCA) - The Association for Research into Crimes against Art (ARCA) is a research and outreach organization which works to promote the study and research of art crime and cultural heritage protection. Association seeks to identify emerging and under-examined trends related to the study of art crime and to develop strategies to advocate for the responsible stewardship of our collective artistic and archaeological heritage[36]

8. Museum Security Network (MSN) - Its original aim was to be a source of information for cultural property protection professionals. Gradually, the Museum Security Network Google Group has become the main channel for the distribution of news and information pertaining to cultural property protection, preservation, conservation, and security[37]

9. Legislative institutes and agencies for the implemention of law

10.The International Institute for the Unification of Private Law (UNIDROIT) - The International Institute for the Unification of Private Law is an independent intergovernmental organization and its purpose is to study needs and methods for modernizing, harmonizing and co-ordinating private and, in particular, commercial law as between States and groups of States and to formulate uniform law instruments, principles and rules to achieve those objectives[38]

11.The United Nations Office on Drugs and Crime (UNODC) - UNODC is mandated to assist Member States in their struggle against illicit drugs, crime and terrorism[39]

12.The World Customs Organization (WCO) - The World Customs Organization, established in 1952 as the Customs Co-operation Council (CCC) is an independent intergovernmental body whose mission is to enhance the effectiveness and efficiency of Customs administrations[40]

13.INTERPOL - INTERPOL is the world's largest international police organization, with 190 member countries and its mission is to prevent and fight crime through enhanced cooperation and innovation on police and security matters[41]

14.EUROPOL - Europol is the **European Union's law enforcement agency** whose main goal is to help achieve a safer Europe for the benefit of all EU citizens. Their mission is to assist the European Union's Member States in their fight against serious international crime and terrorism[42].

For a correct and flawless approach of the subject, we must clearly establish the object of the national, European or international regulations, specifically we must establish what does the cultural heritage, in all his forms, resume at. We have observed that the cultural heritage comprises two subdomains: tangible cultural heritage, which is formed of the movable and immovable cultural heritage and the intangible cultural heritage.

According to the Romanian legislation, the movable national cultural heritage includes objects of exceptional historical, archaeological, documentary, ethnological, artistic, scientific and technical, literary, cinematographic, numismatic, philatelic, heraldic, bibliographic, cartographic and epigraphic value, representing material evidence for the evolution of the natural environment and for the relation of humans with it, the potential creativity of man and of the Romanian contribution to the universal civilization[43]. We will observe that we will find a part of this definition in the one given by the UNESCO Convention concerning the Protection of the World Cultural and Natural Heritage. The classification offered by the Romanian law has no implementation on the European Union level, the movable and immovable cultural heritage having no freestanding definition. A referrence to the types of goods that the law talks about is given by the UNIDROIT Convention on stolen or illegally exported cultural objects, which determines that "for the purposes of this Convention, cultural objects are those which, on religious or secular grounds, are of importance for archaeology, prehistory, history, literature, art or science and belong to one of the categories listed in the Annex to this Convention" [44]. In concrete, the convention refers to the following cultural goods:

[43] Law no. 182 of 25th of October 2000 regarding the protection of the movable national heritage.
[44] UNIDROIT Convention on stolen or illegally exported cultural objects.

(a) rare collections and specimens of fauna, flora, minerals and anatomy, and objects of palaeontological interest;

(b) property relating to history, including the history of science and technology and military and social history, to the life of national leaders, thinkers, scientists and artists and to events of national importance;

(c) products of archaeological excavations (including regular and clandestine) or of archaeological discoveries;

(d) elements of artistic or historical monuments or archaeological sites which have been dismembered;

(e) antiquities more than one hundred years old, such as inscriptions, coins and engraved seals;

(f) objects of ethnological interest;

(g) property of artistic interest, such as:

(i) pictures, paintings and drawings produced entirely by hand on any support and in

any material (excluding industrial designs and manufactured articles decorated by hand);

(ii) original works of statuary art and sculpture in any material;

(iii) original engravings, prints and lithographs;

(iv) original artistic assemblages and montages in any material;

(h) rare manuscripts and incunabula, old books, documents and publications of special interest (historical, artistic, scientific, literary, etc.) singly or in collections;

(i) postage, revenue and similar stamps, singly or in collections;

(j) archives, including sound, photographic and cinematographic archives;

(k) articles of furniture more than one hundred years old and old musical instruments.

Continuing with the definition series, by immovable national cultural heritage we understand an ensemble of immovable goods, buildings and lands situated on the Romanian territory, significant for the national and universal history, culture and civilization. The immovable goods and the ensemble of immovable goods of archaeological, historical, architectural, religious, urban, artistic, landscaping or technical and scientific value are considered historical monuments[45]. Projections of this definition shall be found in the two European conventions regarding this domain. Thus, according to the Convention for the Protection of the Architectural Heritage of Europe it is considered that the architectural heritage comprises the following immovable goods:

- monuments: all buildings and structures of conspicuous historical, archaeological, artistic, scientific, social or technical interest, including their fixtures and fittings;

- groups of buildings: homogeneous groups of urban or rural buildings conspicuous for their historical, archaeological, artistic, scientific, social or technical interest which are sufficiently coherent to form topographically definable units;

- sites: the combined works of man and nature, being areas which are partially built upon and sufficiently distinctive and homogeneous to be topographically definable and are of conspicuous historical, archaeological, artistic, scientific, social or technical interest.

Further more, the European Landscape Convention defines the landscape the area, as perceived by people, whose character is the result of the action and interaction of natural and/or human factors and the landscape protection means the actions to conserve and maintain the significant or characteristic features of a landscape, justified by its heritage value derived from its natural configuration and/or from human activity.

The intangible cultural heritage means the practices, representations, expressions, knowledge, skills – as well as the instruments, objects, artefacts and cultural spaces associated therewith – that communities, groups and, in some cases, individuals recognize as part of their cultural heritage. For the purposes of this Convention, consideration will be given solely to such intangible cultural heritage as is compatible with existing international human rights instruments, as well as with the requirements of mutual respect among communities, groups and individuals, and of sustainable development. As defined above, the intangible cultural heritage is manifested inter alia in the following domains:

- oral traditions and expressions, including language as a vehicle of the intangible cultural heritage;

- performing arts;

- social practices, rituals and festive events:

- knowledge and practices concerning nature and the universe;

- traditional craftsmanship.

The first European community appeared in 1951 for a 50 years term, through the signing of the Treaty establishing the European Coal and Steel Community. The primary purpose of this community was the avoidance of a new world conflagration and its major objective resumed to the achievement of a supranational control over the main branches of the arms industry, namely coal and steel. Paul-Henri Spaak`s report constituted the keystone in realizing the European Economic Community and the European Atomic Energy Community, their constituent treaties being signed in Rome, entering into force from 14 January 1958. After the institutional merge of the Commissions and the Councils of Ministers from the three communities from 1965, an important stage in accomplishing the internal market within the European Economic Community, was the moment when the

[45] Law no. 422 of the July 18th 2001 on the Protection of Historical Monuments – Codified.

Single European Act entered into force (1987) [46]. According to the preamble of this treaty, the European Communities of that time were determined to work together to promote democracy and improve the economic and social situation by extending common policies and pursuing new objectives. Although, the formulation is general, it is the first time when an expansion of the community policies is wanted, at the same time with an EU extension. The most important changes and innovations were brought by the Treaty on European Union, signed in Maastricht on 7 February 1992. Firstly, the concept of European Union is introduced and it represents a sui generis entity, based on three pylons: the community pylon; foreign affairs and security policy; justice and home affairs[47]. Secondly and what`s important for us directly, a new title was introduced, Title IX, called "Culture" Thus, art. 128 stipulated:

„1. The Community shall contribute to the flowering of the cultures of the Mernber States, while respecting their national and regional diversity and at the same time bringing the comrnon cultural heritage to the fore.

2. Action by the Community shall be aimed at encouraging cooperation between Member States and, if necessary, supporting and supplementing their action in the following areas:

- improvement of the knowledge and dissemination of the culture and history of the European peoples;
- conservation and safeguarding of cultural heritage of European significance;
- non-commercial cultural exchanges;
- artistic and literary creation, including in the audiovisual sector.

3. The Community and the Member States shall foster cooperation with third countries and the competent international organizations in the sphere of culture, in particular the Council of Europe.

4. The Community shall take cultural aspects into account in its action under other provisions of this Treaty.

5. In order to contribute to the achievement of the objectives referred to in this Article, the Council:

- acting in accordance with the procedure referred to in Article 189b and after consulting the Committee of the Regions, shall adopt incentive measures, excluding any harmonization of the laws and regulations of the Member States. The Council shall act unanimously throughout the procedures referred to in Article I89b;
- acting unanimously on a proposal from the Cornmission, shall adopt recommendations."[48]

Through the Maastricht Treaty, the European Union undertakes some obligations referring to the cultural heritage, but what we will see is that the ambiguous formulation, used by the above art. 128, is the reason why the European Union didn't act in a concrete way regarding this domain, but until later on. On 1st of May 1999, the Amsterdam Treaty entered into force. This is the one that amends the Treaty on European Union and the treaties establishing the European Communities. The amends didn't apply to culture aspects, namely to cultural heritage. Having into consideration the extension by 10 states that was preparing to take place in 2004, an institutional reform was becoming to be necessary. So, because of that reason, the Treaty of Nice was signed in 2001 and it contributed with the needed adjustments. Content modifications were brought within the common security and cooperation policies, but also within the domain of police and judicial cooperation in criminal matters. The last one is of a distinguished importance, because the European Judicial Cooperation Unit is introduced.

Eurojust is enabled to facilitate proper coordination between Member States' national prosecuting authorities and is supporting Member States for criminal investigations in cases of serious cross-border crime, particularly in the case of organized crime, taking account, in particular, of analyses carried out by Europol. Which also implies illicit trafficking of cultural goods. Further more, the Treaty of Nice proclaims the Charter of Fundamental Rights of the European Union, which will ulterior achieve legal personality as the fundamental treaties. With regard to the Charter of Fundamental Rights of the European Union and in particular Articles 11[49], 21[50] and 22[51] thereof, the cultural and creative sectors make an important contribution to the fight against all forms of discrimination, including racism and xenophobia, and are an important platform for freedom of expression and for the promotion of respect for cultural and linguistic diversity. Last, but not least is the Treaty of Lisbon which includes the European Union among the subjects of international law, conferring to it legal personality. This status implies the achievement of a more powerful and coherent position on the external plan, the EU having now the competence to take action, in a more efficiently way, against the criminal groups that handle with the trafficking of persons and also to promote and sustain actions regarding the criminal prevention and combating terrorism. Acquiring legal personality means that the EU can directly get involve in promoting the conservation and protection of his cultural heritage. The Treaty of Lisbon mentions in art.

[49] Freedom of expression and information.

[50] Non-discrimination.

[51] Cultural, religious and linguistic diversity.

2 that the union "shall respect its rich cultural and linguistic diversity, and shall ensure that Europe`s cultural heritage is safeguarded and enhanced". "Culture" is approached in Title XIII of the Treaty on the Functioning of the European Union and the changes that appear refer only to the last paragraph, because the European Parliament became a law-making institution along with the Council. Therefore content changes don't apply to this chapter. An interesting fact is that there is no legal definition of the European cultural heritage, as there is no list of movable or immovable cultural goods at the EU level.

The builders of Europe were the people who launched the process of European construction by founding the Council of Europe in 1949 and setting up the European Coal and Steel Community (ECSC) and the European Economic Community (EEC). We are grateful to the following persons: Winston Churchill (Prime Minister of the United Kingdom); Konrad Adenauer (Chancellor and Minister for Foreign Affairs of the Federal Republic of Germany); Robert Schumann (French Republic Minister for Foregin Affairs); Paul-Henri Spaak (Prime Minister and Foreign Minister of Belgium in the 40s and 50s); Alcide de Gasperi (Prime Minister of the Republic of Italy); Ernest Bevin (United Kingdom Secretary of State for Foreign Affairs). The Council of Europe advocates freedom of expression and of the media, freedom of assembly, equality, and the protection of minorities. A first instrument which has approached the issue of the European cultural heritage has been the European Cultural Convention, settled in Paris, on 19 December 1954. In art. 1 of the convention it is stipulated that „each Contracting Party shall take appropriate measures to safeguard and to encourage the development of its national contribution to the common cultural heritage of Europe". Nowadays, all 47 Member States of the Council of Europe, including all 28 EU Member States, have ratified the convention, plus Belarus, the Holy See and Kazakhstan. The Council of Europe is activly involved in the domain of cultural heritage and the high number of adopted conventions stand as evidence. We will enumerate them:

- Convention on the Conservation of European Wildlife and natural Habitats, entered intro force on 1 June 1982;
- European Convention on Offences relating to Cultural Property, opened to signature on 23 June 1985;
- Convention for the Protection of the Architectural Heritage of Europe entered into force on 1 December 1987;
- European Convention on Cinematographic Co-production, entered into force on 1 April 1994;
- European Convention on the Protection of the Archaeological Heritage (revised), entered into force on 25 May 1995;
- European Convention for the Protection of the Audiovisual Heritage, entered into force on 1 January 2008;
- European Landscape Convention, entered into force on 1 March 2004;
- Council of Europe Framework Convention on the Value of Cultural Heritage for Society, opened for signature on 27 October 2005.

The Lisbon Treaty increased the scope for European Union action in many areas where the Council of Europe already has significant experience and expertise. This has led to increased cooperation on issues such as fighting human trafficking, the sexual exploitation of children and violence against women. It has also opened the way for the European Union itself to sign up to the European Convention on Human Rights, and to other Council of Europe agreements. Therefore, in accordance with the objective of the European Union to supervise the protection and development of the European cultural heritage, and also with the fact that it gained legal personality, we consider that an important step towards realizing this objective, in a concrete and efficient way, should be the ratification of the conventions that regard the cultural heritage theme, under the aegis of the Council of Europe. Acceding to the European Convention for the Protection of Human Rights and Fundamental Freedoms will allow the unification of the jurisprudence regarding the protection of human rights on the European continent, thus consolidating the protection level of the EU citizens, which they should enjoy[52]. We can`t invoke the same reason to convince about the importance of EU ratifying the convensions regarding the cultural heritage, but we can establish a direction in this way by analyzing the legislation in matter.

The organs of the EU have only those competencies which have been attributed to them in the treaties (the principle of attributed powers). The regulatory capacities of the European Union are currently limited to the development of supportive measures:

- Art. 167 Treaty on the Functioning of the European Union – "…the European Parliament and the Council acting in accordance with the ordinary legislative procedure and after consulting the Committee of the Regions, shall adopt incentive measures, excluding any harmonization of the laws and regulations of the Member States…"
- Art. 36 Treaty on the Functioning of the European Union – "…shall not preclude prohibitions or restrictions on imports, exports or goods in transit justified on grounds of public morality, public policy or public security; the protection of health and life of humans, animals or plants; the protection of national treasures possessing artistic, historic or archaeological value…"

[52] http://www.mae.ro/node/4492

This is the only primary legislation of EU we found on cultural heritage. Secondary legislation of EU on this domain contains:

- 2013/743/EU - Council Decision of 3 December 2013 establishing the specific programme implementing Horizon 2020 - the Framework Programme for Research and Innovation (2014-2020);
- 1295/2013/EU - Regulation of the European Parliament and of the Council of 11 December 2013 establishing the Creative Europe Programme (2014 to 2020);
- Council Regulation (EC) No 116/2009 of 18 December 2008 on the export of cultural goods;
- 1352/2008/EC - Decision of the European Parliament and of the Council of 16 December 2008 amending Decision No 1855/2006/EC establishing the Culture Programme (2007 to 2013);
- 1855/2006/EC - Decision of the European Parliament and of the Council of 27 December 2006 establishing the Culture Programme (2007 to 2013);
- 2011/711/EU - Commission Recommendation of 27 October 2011 on the digitization and online accessibility of cultural material and digital preservation;
- 2011/831/EU - Council Decision of 1 December 2011 on the practical and procedural arrangements for the appointment by the Council of four members of the European panel for the European Union action for the European Heritage Label;
- 1194/2011/EU - Decision of the European Parliament and of the Council of 16 November 2011 establishing a European Union action for the European Heritage Label;
- 2010/238/EU - Commission Recommendation of 26 April 2010 on the research joint programming initiative Cultural Heritage and Global Change: a new challenge for Europe;
- 2001/C73/04 - Council resolution of 12 February 2001 on architectural quality in urban and rural environments;
- 94/C235/01 - Council conclusions of 17 June 1994 on drawing up a Community action plan in the field of cultural heritage;
- Council Directive 93/7/EEC of 15 March 1993 on the return of cultural objects unlawfully removed from the territory of a Member State, which was amended afterwards, but today the is a proposal from 2013, not published in the Official Journal, for a Directive of the European Parliament and of the Council on the return of cultural objects unlawfully removed from the territory of a Member State. The purpose of this proposal is to recast Directive 93/7/EEC and strengthen EU law in this field.
- 86/C320/01 - Resolution of the Ministers with responsibility for Cultural Affairs, meeting within the Council of 13 November 1986 on the protection of Europe's architectural heritage;
- 75/65/EEC - Commission Recommendation of 20 December 1974 to Member States concerning the protection of the architectural and natural heritage.

In essence, the European Commission`s recommendation from 1974 invites the Member States to ratify the convention concerning the protection of the World Cultural and Natural Heritage, justifying that since the architectural and natural heritage is generally felt to be a determining factor in the quality of life, both these initiatives are of major importance for the protection and improvement of the environment in the Community.

The Resolution from 1986 emphasizes a very important aspect regarding the approach to our subject: „...Recognizing that this resolution **does not result in any modification of the powers of the Community and the Member States regarding the protection of the architectural heritage**, but considering that they should take greater advantage of each other's experience; Agree to develop effective cooperation on aspects of Europe's architectural heritage, opening this to other European countries where appropriate; Agree to encourage the exchange of experience and the transfer of information on the architectural heritage, in particular through the **standardization of terminology and the establishment of a network of data bases prepared in this area in the Member States**…"

A very important step was made as result of the European Commission`s recommendation from 26 April 2010. This recomandation reffered to the development of a common strategic research agenda establishing medium to long-term research needs and objectives in the area of preservation and use of cultural heritage in the context of global change.

The Decision of the European Parliament and of the Council from 16 December 2011 has approached a new initiative, taking the shape of the programme named „European Heritage Label", which afterwards became an action of the Union. Through this Decision, some definitions became official on the EU area:

a. "sites" means monuments, natural, underwater, archaeological, industrial or urban sites, cultural landscapes, places of remembrance, cultural goods and objects and intangible heritage associated with a place, including contemporary heritage;

b. "transnational site" means:

(1) several sites, located in different Member States, which focus on one specific theme in order to submit a joint application; or

(2) one site located on the territory of at least two Member States;

c. "national thematic site" means several sites, located in the same Member State, which focus on one specific theme in order to submit a joint application.

The European Commission`s recommendation on the digitization and online accessibility of cultural material and digital preservation talk about the Digital Agenda for Europe which seeks to optimize the benefits of information technologies for economic growth, job creation and the quality of life of European citizens, as part of the Europe 2020 strategy. With this occasion we find out about Europeana, Europe`s

digital library, archive and museum, which was launched on 20 November 2008. The overall target for 2015 of 30 million objects is in line with Europeana's strategic plan, and a stepping stone for getting Europe's entire cultural heritage digitized by 2025.

Regarding the proposal to recast Directive 93/7/EEC, The European Commission proposes to enable Member States to recover any cultural object identified as national treasure that was unlawfully removed from their territories on or after 1 January 1993. For this purpose, the scope of the definition of cultural goods would be extended to include all those classified as "national treasures of artistic, historic or archaeological value" in line with the laws of EU countries. It would also extend the deadline for initiating proceedings, make use of the EU's internal market information system to facilitate cooperation and exchanges between countries' authorities and place the burden of proof on the possessor.

The decision of the European Parliament on establishing the Culture Programme (2007 to 2013) states that an active cultural policy aimed at the preservation of European cultural diversity and the promotion of its common cultural elements and cultural heritage can contribute to improving the external visibility of the European Union (we have a further more reason to sustain the necessity of a clear legislation in the domain). For this reason and, also beacause of the final evaluation of the impact that the cultural programmes Kaleidoscope, Ariane, Raphael and Culture 2000, set out respectively in Decisions No. 719/96/EC[53], 2085/97/EC[54], 2228/97/EC[55] and 508/2000/EC[56], had on the communities, significant funding was earmarked for establishing a Community action programme for the European Capital of Culture event for the years 2007 to 2019[57]. The specific objectives of the programme are to promote the transnational mobility of cultural players, to encourage the transnational circulation of works and cultural and artistic products and to encourage intercultural dialogue.

Since its adoption, Regulation (EEC) No 3911/92 of 9 December 1992 on the export of cultural goods has been amended on several occasions. For reasons of rationality and clarity, it is repealed in order to be replaced by the current regulation, Council Regulation (EC) No 116/2009 of 18 December 2008 on the export of cultural goods. This regulation establishes exactly the list of cultural goods which make the object of the export rules. Therefore, in order to ensure that uniform controls are carried out on these exports at the external borders of the European Union, the categories of cultural pbjects are:

1. Archaeological objects more than 100 years old which are the products of:

- excavations and finds on land or under water;
- archaeological sites
- archaeological collections.

2. Elements forming an integral part of artistic, historical or religious monuments which have been dismembered, of an age exceeding 100 years.

3. Pictures and paintings, other than those included in categories 4 or 5, executed entirely by hand in any medium and on any material (which are more than 50 years old and do not belong to their originators)

4. Watercolours, gouaches and pastels executed entirely by hand on any material (which are more than 50 years old and do not belong to their originators).

5. Mosaics in any material executed entirely by hand, other than those falling in categories 1 or 2, and drawings in any medium executed entirely by hand on any material (which are more than 50 years old and do not belong to their originators)

6. Original engravings, prints, serigraphs and lithographs with their respective plates and original posters (which are more than 50 years old and do not belong to their originators)

7. Original sculptures or statuary and copies produced by the same process as the original, other than those in category 1 (which are more than 50 years old and do not belong to their originators)

8. Photographs, films and negatives thereof (which are more than 50 years old and do not belong to their originators)

9. Incunabula and manuscripts, including maps and musical scores, singly or in collections (which are more than 50 years old and do not belong to their originators)

10. Books more than 100 years old, singly or in collections

11. Printed maps more than 200 years old

12. Archives, and any elements thereof, of any kind or any medium which are more than 50 years old

13. a. Collections and specimens from zoological, botanical, mineralogical or anatomical collections; (as defined by the Court of Justice in its judgment in Case 252/84, as follows: 'Collectors' pieces within the meaning of heading No 97.05 of the Common Customs Tariff are articles which possess the

Decision as amended by Decision No 477/1999/EC (OJ L 57, 5.3.1999, p. 2

[54] Decision No 2085/97/EC of the European Parliament and of the Council of 6 October 1997 establishing a programme of support, including translation, in the field of books and reading (Ariane) (OJ L 291, 24.10.1997, p. 26). Decision as amended by Decision No 476/ 1999/EC (OJ L 57, 5.3.1999, p. 1).

[55] Decision No 2228/97/EC of the European Parliament and of the Council of 13 October 1997 establishing a Community action programme in the field of cultural heritage (The Raphael Programme) (OJ L 305, 8.11.1997, p. 31). Decision as repealed by Decision No 508/2000/EC (OJ L 63, 10.3.2000, p. 1).

[56] Decision No 508/2000/EC of the European Parliament and of the Council of 14 February 2000 establishing the Culture 2000 programme (OJ L 63, 10.3.2000, p. 1). Decision as last amended by Council Regulation (EC) No 885/2004 (OJ L 168, 1.5.2004, p. 1).

[57] Romania was designated the European Capital of Culture in 2007.

requisite characteristics for inclusion in a collection, that is to say, articles which are relatively rare, are not normally used for their original purpose, are the subject of special transactions outside the normal trade in similar utility articles and are of high value – also applies to b.)

b. Collections of historical, palaeontological, ethnographic or numismatic interest

14.Means of transport more than 75 years old

15.Any other antique items not included in categories 1 to 14

a. between 50 and 100 years old

- toys, games
- glassware
- articles of goldsmiths' or silversmiths' wares
- furniture
- optical, photographic or cinematographic apparatus
- musical instruments
- clocks and watches and parts thereof
- articles of wood
- pottery
- tapestries
- carpets
- wallpaper
- arms

b. more than 100 years old

The cultural objects in categories 1 to 15 are covered by this Regulation only if their value corresponds to, or exceeds, the financial thresholds applicable to certain categories (in euro):

Value:

- Whatever the value
- 1 (Archaeological object)
- 2 (Dismembered monuments)
- 9 (Incunabula and manuscripts)
- 12 (Archives)
- 15 000
- 5 (Mosaics and drawings)
- 6 (Engravings)
- 8 (Photographs)
- 11 (Printed maps)
- 30 000
- 4 (Watercolors, gouaches and pastels)
- 50 000
- 7 (Statuary)
- 10 (Books)
- 13 (Collections)
- 14 (Means of transport)
- 15 (Any other object)
- 150 000
- 3 (Pictures)

The Regulation of the European Parliament and of the Council from 11 December 2013 brings up a new element of interest, namely that the Union is a party of the 2005 UNESCO Convention on the Protection and Promoting of the Diversity of Cultural Expressions, which underlines that cultural activities, goods and services have both an economic and a cultural nature, because they convey identities, values and meanings, and must not, therefore, be treated as solely having commercial value. In addition, it stipulates that the Commission Communication entitled "Europe 2020 – A strategy for smart, sustainable and inclusive growth" (the "Europe 2020 Strategy") defines a strategy that aims to turn the Union into a smart, sustainable and inclusive economy delivering high levels of employment, productivity and social cohesion. This Regulation establishes the Creative Europe Programme for support to the European cultural and creative sectors. For the purpose of the regulation, new definitions are applied and, for our interest, we mention:

a. "cultural and creative sectors" means all sectors whose activities are based on cultural values and/or artistic and other creative expressions, whether those activities are market- or non-market-oriented, whatever the type of structure that carries them out, and irrespective of how that structure is financed. Those activities include the development, the creation, the production, the dissemination and the preservation of goods and services which embody cultural, artistic or other creative expressions, as well as related functions such as education or management. The cultural and creative sectors include inter alia architecture, archives, libraries and museums, artistic crafts, audiovisual (including film, television, video games and multimedia), tangible and intangible cultural heritage, design, festivals, music, literature, performing arts, publishing, radio and visual arts;

b. "SMEs" means micro, small and medium-sized enterprises, as defined in Commission Recommendation 2003/361/EC[58];

The specific objectives of Creative Europe are "to support the capacity of the European cultural and creative sectors to operate transnationally and internationally; to promote the transnational circulation of cultural and creative works and transnational mobility of cultural and creative players, in particular artists, as well as to reach new and enlarged audiences and improve access to cultural and creative works in the Union and beyond, with a particular focus on children, young people, people with disabilities and under-represented groups; to strengthen the financial capacity of SMEs and micro, small and medium-sized organizations in the cultural and creative sectors in a sustainable way, while endeavouring to ensure a balanced geographical coverage and sector representation."[59]

Regardless, the Council' Decision on establishing the specific programme implementing Horizon 2020 - the Framework Programme for

[58] Commission Recommendation 2003/361/EC of 6 May 2003 concerning the definition of micro, small and medium-sized enterprises (OJ L 124, 20.5.2003, p. 36).

[59] Regulation of the European Parliament and of the Council of 11 December 2013 establishing the Creative Europe Programme (2014 to 2020).

Research and Innovation (2014-2020) is the newest in this domain. Horizon 2020 is the financial instrument implementing the Innovation Union, a Europe 2020 flagship initiative aimed at securing Europe's global competitiveness. By coupling research and innovation, Horizon 2020 is helping to achieve this with its emphasis on excellent science, industrial leadership and tackling societal challenges. The goal is to ensure Europe produces world-class science, removes barriers to innovation and makes it easier for the public and private sectors to work together in delivering innovation[60].

Recent declarations show that the issue of protecting the cultural heritage has attracted the European Commission`s attention. The lack of a formal frame of regulations, but also the lack of a rigorous defined vocabulary, have started to make a point. The crimes against the cultural heritage are continuously increasing and, only now, when we confront ourselves with such illegal phenomenon, we realize their real value. Now, when we find ourselves in the era of advanced technologies, of robots and intelligent machines, our history seems to point out on the lack of perpetuation. Indeed, responsible are both the states and their citizens, but in a context where 28 of the Europe`s countries are a part of, what it seems to be, the world`s most powerful economic organization, having policies in all the important domains, economic, social, cultural, energetic, the only thing that remains to say is that the European Union must implement real and applicable measures regarding the protection of cultural heritage. What represents a scientific, archaeological, artistic, historical, etc. value for a Member State, must be equally for the Union itself.

The issue regarding the patrimony and the culture, in general, has remained, a long period of time, underestimated within European general policies. Not only should we show interest for the crimes against the cultural heritage, but also because of its nature, it is a very fragile patrimony and it is exposed to multiple risks due to ageing, adverse environmental conditions, and human pressure.

In July 2014, the European Commissioner for Education, Culture, Multilingualism and Youth, Androulla Vassiliou, said: "*Europe needs to maximize the intrinsic, economic and societal value of cultural heritage. It should be the centre of heritage-based innovation, seizing the opportunities created by digitization and promoting our heritage expertise worldwide. Across the EU, we need to encourage a more people-friendly approach in heritage sites and museums, using new techniques and technologies to attract visitors and reach young people in particular. In short, we need to bring history alive. I am pleased that heritage stands to gain from stronger European support over the next seven years.*"[61]

The vice president of the Commission for Education and Culture himself, the Romanian Mircea Diaconu, has elaborated a project report entitled "Towards an integrated approach to cultural heritage for Europe". The project was debated by the members of the Commission for Education and Culture since the beginning of this year and the reactions were obviously positive. The discussion emphasized the idea of participatory governance, as a democratic model and as a valuable alternative, which can be applied for the purpose of boosting the instruments of cultural policies. Also, it was taken into consideration the theme of digitizing the cultural heritage, not so much with the purpose of archiving it, but with the intention of getting in touch with the young generation about the European cultural history, through new technologies[62]. Mircea Diaconu declared that in September 2015, he will propose to the Council and the European Parliament to adopt a European normative act that will regulate the European cultural heritage.

At the same time, the Council of Europe is continuing its mission and announces the Conference of Ministers responsible for Cultural Heritage which will take place in Namur (Belgium) on 23 and 24 April 2015 in the context of the Belgian Chairmanship of the Committee of Ministers of the Council of Europe. The conference is aimed at defining the conditions for elaborating a European strategy for cultural heritage. This strategy, while confirming the role of heritage as the touchstone of European values, should also project heritage as the means of their transmission and the ideal tool for intercultural and intergenerational dialogue.

So, as the role of the EU is limited, for the moment, to promoting cooperation between the cultural operators of the different Member States or to complementing their activities in order to contribute to the flowering of the cultures of EU countries, while respecting their national and regional diversity, these are the first measures that the European Union will apply:

- The Council adopted conclusions establishing a Work Plan for Culture (2015-2018). This is a strategic document setting out the priorities for European cooperation in cultural policy-making for the next four years, focusing on topics that represent a clear EU added value and encourage cross-sectorial cooperation. And we will quote from the press release from 25 November 2014: "The Work Plan has four sectorial priorities (accessible culture; cultural heritage; creative economy and innovation; and cultural diversity, including culture in EU external relations), which are complemented for the first time by two cross-sectorial priorities (digital shift and statistics). They are all structured around the Europe 2020 strategy for growth and jobs. The focus is on topics that represent a clear EU added value and

[60] http://ec.europa.eu/programmes/horizon2020/en/what-horizon-2020.
[61] http://europa.eu/rapid/press-release_IP-14-854_en.html
[62] https://www.mirceadiaconu.eu/

encourage cross-sectorial cooperation, taking into account the dual nature - economic as well as cultural - of culture."[63]

− The Council adopted conclusions on participatory governance of cultural heritage, inviting member states to promote a more active involvement of civil society and of the private sector in the governance of cultural heritage, at local, regional, national and European levels. "Cultural heritage is one of the priorities of the new Work Plan for Culture. It is a common good, a shared resource that requires a collective responsibility. The involvement of all interested parties in decision-making, planning, implementation, monitoring and evaluation of cultural heritage policies and programmes can increase public awareness of the values that it represents, reinforce transparency and accountability in the use of public resources, and build trust between citizens and public authorities."[64]

In conclusion, we all understand the importance that the protection and conservation of the cultural heritage represents. The reasons are both historical and moral and also economical. As members of the European Union, which gave up to a part of their sovereignity, through the treaty, the states are encouraged to act for the purpose of sustaining and developing the cultural domain. If the Union encourages the cooperation between Member States, supporting and supplementing their action in this sector, then the Member States will do the same thing, if the Union will act directly by implementing efficient policies and adopting a rigorous legal frame.

Another reason to point out the necessity to adopt general policies, but also normative acts in the cultural heritage domain, would be the fact that the Treaty on the Functioning of the European Union also establishes citizenship of the Union, which complements national citizenship of the respective Member States and is an important element in safeguarding and strengthening the process of European integration. For citizens to give their full support to European integration, greater emphasis should be placed on their common values, history and culture as key elements of their membership of a society founded on the principles of freedom, democracy, respect for human rights, cultural and linguistic diversity, tolerance and solidarity. It is essential to promote cooperation and cultural exchanges in order to **respect** and promote the diversity of cultures and languages in Europe and improve knowledge among European citizens of European cultures other than their own, while at the same time heightening their awareness of the common European cultural heritage they share.

Finally, as an example, we will present a few statistics referring to the profile of cultural policies of some of the European Union Member States.

Romania

- Funding (2010)

- Culture as share of total central government spending: **2.10 %** ⇩
- Government expenditure on culture: **885 131 974 Euro** ⇩
- Government expenditure on culture per capita: **41.00 Euro** ⇩
- Share of spending on culture by central government: **18.87 %** ⇩

- Employment (2009)

- Share of cultural workers in total employment: **0.75 %** ⇩
- Share of self-empoyed in cultural employment: **7.80 %**
- Share of self-empoyed in total employment: **32.78 %**

- Markets (2012)

Conclusions

Firstly, the study is aiming to approach general considerations regarding the EU legislation on cultural heritage. The main directions of the study are the following:

- General definitions of the patrimony/heritage;

- National Romanian legislation on cultural heritage and definitions;

- International and European Conventions regarding cultural heritage that Romania ratified;

- International organs and organizations that specialized in cultural heritage or which take action in order to prevent and combat the crime phenomenon against art;

- Comparison between Romanian and International definitions regarding cultural heritage and slight references on the subject regarding the European Union;

- A short history on the evolution of the treaties, starting with the constitutive treaties and continuing with the ones that modified them and an analysis regarding the norms on cultural heritage from each of the treaties;

- A short presentation of the European parents and the contributions brought by the Council of Europe in the domain of cultural heritage;

- A short motivation on why should the European Union involve in general policies on cultural heritage, in accordance with its new legal status, conferred by the Lisbon Treaty;

- A presentation of the primary and secondary EU legislation on cultural heritage and a short analysis of them;

- The recent interests of the European Commission on cultural heritage;

- Declarations made by some members of the European Parliament on the subject and the work of the Council of Europe in present;

- The future applying measures adopted by the European Union on cultural heritage;

- Conclusions on the presented facts

- Statistics referring to the profile of cultural policies of some of the European Union Member States

On a global basis, it is shown an evolving interest on the revolution of cultural and creative industries, based on technology, communication infrastructure, networks, but also on traditions and cultural manifestations. The biggest global centers of creativity, like New York or London, are characterized by clearly regulations on the copyright laws, local educational systems, strong transportation hubs and support from the local administration authorities. The newest programmes and initiatives that European Union has come with, are believed to have a greater impact on society, regarding the aspects of cultural heritage, but in the same time, if we look back on the programmes applied until 2013, we will find several similarities, which didn`t make a difference in the mind of European citizens. The number of criminal acts on cultural goods has been increasing and the number of reactions to these offences have been stagnated. And when we talked about reactions, we mean that individuals are directly confronted with these problems, even though the national/European authorities should be more aware of them, taking into consideration the importance and high value of these objects for humanity in general. In these words, the study emphasize the necessity of awareness in all levels, especially social, economical and political levels, with a directly projection on the European Union.

For further more research, I suggest a more extensive approach of the effects of certain policies and programmes, with an evaluation of the real impact on the civic education in the domain and on the criminal phenomenon on cultural heritage. Statistics are all the time well received and they have a certain influence on the way authorities react to this problem.

GENERAL PRINCIPLES OF THE EUROPEAN LEGAL SYSTEM IN TERMS OF THE TREATY OF LISBON

Florin STOICA*

Abstract:

Space widening European Community by joining several new states, reveals serious problems related to legal identity, social identity, sovereignty. The aim of this article is to explore some of the new principles created by the European law system, to show the necesity of creating an unique concrete system of law, in European community, with general principles.

Even if, all the states in their accession process, knows about their required concessions, we can observe the difficulty of a new member in adapting the European principles established by treaties.

Keywords: *European Law System, European principles, Lisbon Treaty, European Union, typology.*

1. Introduction

Reflecting the unity in diversity issue, the basic principle in the European landscape, we find that, as two drops of water aren't physically identical, there cannot exist two identical legal systems, and also no universally valid legislation, however, similarities exist between these systems, at the level of general principles and values.

Every state has enacted its law, in line with its own social and political demands, its legal traditions and with its eigenvalues. Each law system reinvents himself, according to its own identity, Savigny highlighting that "law is therefore not an absolute measure, which might be applied indiscriminately everywhere, as it is moral".

Creating a single European state, a United Europe, puts a delicate problem, namely that of the relationship between the national and the unique European identity, more specifically, congruence between national values and those of the European Union. The issue brought, is that states are ready or not to give up specificity elements and become a whole with common principles, whether or not, or could be, a European law system in the true meaning of the concept.

In order to succeed the alignment of the national law systems at a supranational law system, it is necessary to take into account the peoples socio-cultural variables.

Although we cannot talk about a universal timeless law system , we can conclude that there are a number of elements of continuity in law preceding ages and history.

Therefore, we can identify a number of legal principles and values, that are rooted in Roman law, and which survived. These principles will be listed and comparatively presented.

The existence of a single European law system, of a European law typology, can be built upon these principles and values, but they do not imply unification, but rather a harmonization of the national principles and values[1]. Therefore, in the content of the article, we will try to prove that European common values and principles can be the basis of a single law system and of the creation of new law types, the typology of European law.

In order to achieve the proposed objectives, in the following, we will start from the origin of the single European principles, we will determine their role in creating a new law system, we will try to prove the existence of a new law typology, and also we will try to show the Union current perspectives as a federal type state.

2. General Principles of the European legal system in terms of the Treaty of Lisbon

2.1.The European Union, a new legal typology

Integrating an over nationalized legal order, connecting to supranational interests, sovereignty reconfiguration, synchronizing the national values with those of the EU and harmonizing the legislation, are some of the topics that are on the discussion table at the European Community level. However, on the road to a United Europe, a delicate problem is raised – the compatibility between national values and those of the European Union. Therefore, the twenty-eight national identities are threatened by this process, so that we ask ourselves, on the other hand, if the European peoples are prepared to give up at their specific elements and embrace their "unity in diversity".

It is possible that European Union law, which is characterized by multilingualism and multijuridism, be considered a new type of law, emerged in the panorama of the world law systems?

We consider that only if the European Union is based on an independent legal will and on principles and values, that are within the legal eternal, for both the individual reason and as well for the national identity of the Member States, the "unity in diversity " is possible and so the existence of a new legal family.

The general law principles which are imposed to the European institutions, represent a legality pillar of the European Union, and are situated on a higher place in the hierarchy of secondary EU regulations. It should be noted that these principles are applied also to the Member States, when and to the extent that they act in European law.

In the discussion about the European Union law, as a new legal typology, first requires the existence of an autonomous will[2] which control the legal decision-making process of the EU, will that does not represent a simple arithmetic sum of individual wills of the Member States; thus, States shall undertake to submit separate legal demands of their own. Besides an independent will which controls legal creation, the new typology also implies the existence of some general principles that control the building and the development of the essential directions of the European legal order.

Regarding globalization, which is considered a new factor of the right configuration, currently it is observed a trend toward harmonization or approximation of the law in the world. Doctrinally, "the most sensitive" law harmonization is carried out at the regional level, where the European Union represents the best example (regulations and directives are applied in 28 states). Likened by Jacques Delors as an "unidentified political object", the European Union is largely a sui generis construction, borrowing from different types of institutional construction[3].

Referring us to the European Union, it can be noted that, since it was not founded by a nation or a people, it could not be assimilated to a nation, a State or to a constitutional structure. It is a sui generis international organization, created on the basis of some treaties concluded between sovereign States who have decided that this jointly exercise some competencies for an indefinite period of time. It is also interesting the classification pronounced by Germany's Federal Constitutional Court, the European Union being classified in the Staatenverbund category (from German, "union of states"), following the Maastricht decision from October 1993. In the Maastricht Decision, it is underline that the objective behind the Union was to create a "union of states ... as a union as close as possible to the peoples of Europe (organized as member states), and not as a state based on the people of a single European nation"[4].

International legal order is based on the states cooperation, without prejudice to specific powers of state sovereignty, the law of the European Union is a common right of the Member States, the Court of Justice of the European Communities interpreting that this right constitutes a "its own legal order, integrated in the legal system of the Member States"[5]. In the same decision, the Court emphasizes that under the rules adopted was established Community of indeterminate duration equipped with its own institutions, with its own legal personality, legal capacity, and the ability to representation and with powers international real springing from a limitation of powers or a transfer of powers of the Member States to the Community".

By analyzing the original and derived law of the European Union, I have noticed that the Union's regulatory process has evolved significantly, from the rules of mostly economic nature, at the present European new legal regulations have "specific features[6]", which enriching their meanings and their significations. It can be noted that an institutional law of the EU has been created, with all that this implies: sources of law, defining principles and regulations that outlines a specific legal order.

The union law is governing the legal relationships within the European Union, but also between the Union and the Member States, underlines the Union institutions' status, defining also its functions and competencies.

Through various legislative instruments and creative jurisprudence of the European Union's Court of Justice, gradually, have been created:

- An *institutional union law* that includes all legal reglementations governing the European Union components' structure and functioning;
- A *material union law* that covers all legal rules that secure EU's objectives and the measures by which they are carried out;
- A *procedural* union law *that covers* all legal procedures governing the European Union's law.

Thus, another argument for the creation of a new legal order is the fact that the institutional, material and procedural law, of the European Union outlined a specific legal order.

The Union's legal will represents the Union law's essence and it should not be seen as a simple

[5] *Case 6/64 M. Flaminio Costa v. ENEL* [1964] . Is there a principle enshrined Costa essential in the relationship between Community law and national law of the Member States; where there is a conflict between a Community rule and a national rule contrary , the Community rule will always take priority , so a higher legal force. See Dan Vătăman , *European Union Law* , university course , Publisher Universul Juridic, Bucharest, 2010, page 24.

[6] Dumitru Mazilu , European integration . Community law and European institutions , Bucharest , Publisher Lumina Lex, Bucharest,2006, p.55

arithmetic sum of the individual wills of the states, but as a separate legal will. This fact is normal, because we are talking about a Union, so the typical features' problem arises, even if there are special features.

Within the complex process of implementation and application of the European law regulations, the general law principles occupy a very important place. The majority of the general law principles are not enshrined in the European Union's legal order, but in some cases we have encountered references in the Treaties. The reference to these principles can only be made where the Union's law is lacunar, because if there are provisions in this respect, their application is mandatory.

Also, general law principles acquire authority within the Union law through jurisprudential practice, "but it is always based on their consecration in a legal system organized either at the Member States' level, either common to Member States or resulting from the European Union's nature "[7].

2.2 General principles of Community law

2.2.1 Particularities of creating general law principles specific to the community law

Even if, in the ECSC Treaty, are not mentioned the general principles as a source of community law, the European Court of Justice has considered that it would be able to rule the existence of applicable general principles, based on the fact that these principles were already recognized within the Member States' legal systems. Thus, in Algera[8] business, the European Court of Justice stated that it was necessary to recognize the principles from Member States' national legislation, but also from their doctrine and their jurisprudence (12 July 1957), by using as a basis the rules imposed by those legislations, in order to establish the existence of a principle in terms of unilateral acts, which creates rights. In Article 215, of the EEC Treaty, is mentioned the use of common general principles common to the Member States' law, in order to establish the non-contractual rules of the community. However, the Court extrapolated, because the use of these principles should not be limited to this area, this type of principles being use in various fields. Subsequently, the court has established a distinction between principles, qualifying some of these general principles as "fundamental rights".

General principles applicable to the Community law come, therefore, from a jurisprudential construction. The Court has qualified at the beginning of its career, also a good rule extracted from treaties provision, or their global interpretation.

As a source of law, the general law principles have their authority from the fact that they are common to the Member States' rights and are noted in this manner by the Court, as indicated in the Hoechst decision: a general principle "will be essential in the community legal order as a common principle rights of Member States", (21 September 1989).

It is not necessary to gain authority in Community law as a general principle to exist within the legal systems of all the Member States. The Court did not proceed, in fact, never to an exhaustive examination of national rights and was bounded to establish (sometimes just to affirm) that the principle is contained in a certain number of national legal systems.

But, not at all insignificant differences between legal systems constitute an obstacle to a principle consecration as a general principle, which will be imposed in the community law (Hoechst decision).

As we have underlined above, in the European Court's existence, there are a number of general principles Member States that have been overlooked by it, in the sphere of the fundamental rights. Today they constitute the most important part of the general principles.

The jurisprudence had as start the International decision Handelsgesellschaft (17 December 1970), where the fears expressed by the German jurisdictions, which had indicated that they may not apply community law where it would not be compatible, with the persons' fundamental rights guaranteed by the German Constitution. The Court of Justice stated that "the respect of fundamental rights is an integral part of the fundamental law principles which compliance is ensured by the Court of Justice"[9]. At the same time, the guarantee of that these rights had "to be ensured within the structure and the objectives of the Community". The Court shall not be considered, therefore, being related to the compliance with National Constitutions prescriptions, but it's "being inspired from the constitutional traditions common to all Member States".

Another additional step has been consumed through Nold[10] decision, in which the Court has indicated that, in order to affirm that general law principles existence, it could be based, not just on the domestic law of the Member States, but also on other international instruments, to which the Member States have cooperated or acceded (14 May 1974). Therefore, the European Convention of Human Rights and Fundamental Freedoms was obviously the main international instrument targeted. Through a joint declaration (5 April 1977), the Assembly, the Council and the Commission underlined 'the paramount importance they attach to fundamental rights, as reflected in the Member States' constitutions, as well as from the European Convention mentioned.

[10] Clarence J. Mann, "*The function of Judicial Decision in the European Economic Integration* ",BRILL, 1972, page 275

The posterior jurisprudence of the Court of Justice has shown that this Convention constitutes the primary reference tool in terms of fundamental rights (15 May 1986, Johnston). In fact, the Court doesn't hesitate to make reference to the European jurisprudence of the Human Rights Court.

Subsequently, through Maastricht Treaty is confirmed what was resulted from the Court's jurisprudence, the Article F2 states that "the Union respects fundamental rights as guaranteed by the European Convention of Human Rights, signed in Rome on 4 November 1950, and as they result from the constitutional traditions, common to the Member States, as general principles of Community law".

Thus, fundamental rights have acquired a double foundation: The treaty which obliges the Union to respect them and a double external source, the European Convention on Human Rights or constitutional traditions common to the Member States.

Since January 1981, the Council of Europe has stated a favorable position, for joining the European Convention of Human Rights, which supposed in any case an adaptation of this Convention, but the Court of Justice, notified with a request for an opinion, has estimated that in the present status of the treaties, the community was not competent to dictate it rules in the matter of human rights or to conclude international agreements in this area[11]. Subsequently, in Nice, in December 2000, has been solemnly adopted the U. E's fundamental rights Charter, moment from which the Court started to have as bedside book the fundamental human rights. Today, the European Court of Justice, the fight assiduously to protect fundamental rights.

2.2.2. The general principles content

The European Convention contains fundamental rights within the meaning of Community law, rights that give a sense to its general principles.

But, other general principles are or will be applicable in Community law only because they are common to the States' constitutional traditions (fundamental rights) or common to their fundamental legal systems, applicable in Community law:

- The equal treatment principle ;
- The property's respect ;
- Free exercise of economic and professional activities
- Respect for private and family life , home and correspondence (26 June 1980, National Panasonic; 5 October 1994 /Commission);
- Freedom of association;
- Respect right to defense[12] (13 February 1979, Hoffmann-La Roche (205), Roche);
- Religious freedom;

However, at institutional level, we identify other principles:

Principles underlying the organization and functioning of the European Union institutions

-The principle of legality

-The autonomy of the European Union toward internal legal order

-The principle of subsidiarity

-The principle of conferral

-The principle of proportionality

-The principle of institutional unity or single institutional framework

-The principle institutional balance

2.2.3 Principle of legality

The principle of legality is unanimously considered as one of the fundamental principles of the legal European civilization, being included for a long time ago under the legal systems of all European states and in the international criminal matters treaties, fact that explains the very low volume of judgments of the Court that target this fact. Part of *ius congens, the* legality *principle* has an absolute character, statement that cannot be contradicted by the paragraph's 2 provisions.

Aborted to the judge appreciation, the punishment has become indefinite and random. This uncertainty was even more worrying as the punishments were of a very wide variety and, for serious offenses, of a high cruelty. First affirmed by Montesquieu, reloaded by Beccaria, the idea has found consecration once with its inclusion in the Declaration for human rights, in 1789, and French Criminal Code in 1810, after which it was integrated in the legal systems of all European states. The principle was also adopted by Romanian criminal law, with the criminal legislation from 1864, since then being permanently present in our criminal regulations, except for the period during the communist regime. Nowadays, in the Romanian law, the legality principle is guaranteed both by the provisions of Article 23 of the Constitution as well as by those of Article 2 of the Criminal Code.

The existence of this principle is based on both justifications related to the criminal policy of the states, as well as for reasons of criminological nature. The legality of criminalisation is one of the essential guarantees of the right to the liberty and legal security. At the same time, if the penalities are determined only by law, the legality principle is justified by the fact that social values protected by criminal law can be determined only by the social exponents of society from which it become.

To determine the concept of "criminal punishment" we must refer to of Article 6. The concept of "criminal matters" is determined by three criteria: the internal qualification, the nature of criminal act and of the nature of punishment, the Article 7 shall apply only to those sanctions are punishments in the normal sense of the term, excluding

[11] Philippe Manin *Les Communautes europeennes: L'Union europeenne : droit institutionnel (Etudes internationales) (French Edition., 1999. page 275*

[12] I. P. Filipescu, A. Fuerea, *Private international law*, Universul Juridic, Publishing House, 2012, page 49

any other measures to be taken in criminal matters, as well as for parole.

The principle of legality can be summarised in the formulation, which was launched by Beccaria: *nullum crimen sine law, nulla poena sine lege. As a result*, the principle of legality imposes obligations also to the legislator and to the legal power.., However, we should highlight that the principle of legality is viewed as a fundamental right of the person. As a result, there is no breach of the principle of when apparent infringement of the rules which involves creates the relevant person a more favorable situation.

To understand the principle of legality that we must start from definition of law, in Court vision, must be distinguished between a formal aspect and one material involved in European concept, stand-alone, the "law".

When we think of concept of formal law, the Court emphasizes the fact that it corresponds to that is used in other texts of the Convention and enclose both legislative law of origin, as well as the origin case law. From several points of view the solution of the Court is logical, in the first place, one of the aims of this COURT is to ensure uniform interpretation and application of the provisions of the Convention on Human Rights. In Europe there are countries in which the main source of law is the precedent, as well as the United Kingdom or Ireland. Furthermore, in almost all member Continental Europe's there are various categories of judicial decision which are sources of law, and binding on all courts.

In the process of creating law, are involved both components of executive power, as well as those laws, in addition, by interpretation carried out in the court rooms are developing the bill abstract, adding, in many cases, whole new. Case-law of the Court has been folded to this new reality. The Court has avoided to prioritize these powers of the state, refusing to impose only formal law, adopted by legislator, as well as source of law. Therefore, the Court said that it is not possible requires Member adoption of legal rules which does not need to be a certain degree of interpretation specialized, so that they can be applied to concrete situations. But, under the circumstances in which this interpretation shall be carried out by[13] courts of law and in a good measure of doctrine reduction concept of law from those laid down by supposing it would lead to the need to reduce, to a large extent, the role of judge. Thus, the cancellation of his posibilities to interpret the law contravenes legal tradition of European states, and the Court may not compromise such traditions.

From the formal point of view, the term "law", within the meaning of Article 7, shall be able to understand not only the law in the strict sense of the word, but the applicable law in a given situation, including the law created by judicially way.

The Court considers that, in the fields covered by the law writing, "the law" is the text in force, such as it was interpreted by competent courts.

The principle of legality requires, in the first place, a limit on the exploiting of criminal law as regards both acts by which they incriminate certain facts, as well as with respect to acts by which shall be determined and imposed.

The Court accepts that and sources of law only the law and judicial decisions, stating that the latter may have, in principle, only the role of interpreting the law. The idea Court comes from its general attitude as to limit the maximum role executive power, suspected of the temptation standing different kind.

The principle of legality implies an obligation on Member to adopt rules of grief set out in terms that are sufficiently clear to ensure predictability. If determinations which it entails the obligation of clarity we've presented by analysis potentiality matter. For instance, in the case law French it was considered that a rule which penalize them *contrary to the provisions of Article 16 of the social security code, it is not sufficiently* clear, whereas it is impossible to be deducted exactly what type of infringement of those provisions should be penalized. European Court for Human Rights in the case law, with the same qualification that has been discussed in relation to the Greek law to prosecute "proselytism", without determine exactly what acts shall enter into this concept. The Court was based on its findings and on the fact that there was a Greek courts fluctuating case-law in respect of certain acts - as well as distribution of religious literature - which does not have anything abusive in them. However, the European court considered the law inside have a sufficient degree of predictability.

Case-law of the Court has rarely been confronted with the retroactivity of criminal law. Because this area is covered by any manual of criminal law, we will be limited to Court presenting solutions in a few situations, that you had, to solve them. Thus, the Court found a breach Article 7 when a person has been penalized for an omission continues, which has been incriminated only at a certain point in the course was committed.

Article 7 (2) provides: This Article shall not prejudice the trial and punishment of any person for any act or omission which, at the time when it was committed, was criminal according to the general principles of law recognised by civilised nations.. All doctrine is convinced by conjectural origin of this provision, driven by the desire to editors Convention cannot be called into question convictions promulgated by the Nuremberg Tribunal, given that this court has ignored the principle of legality, sanctioning unpunished acts of legislation German from the time they were committed. Recently, the Court applied the same mood and disputes in relation

[13] Costica Voicu, a general theory *of the right*, university course, Publisher Universul Juridic, Bucharest, 2006, page 145.

to the former Yugoslavia Criminal Court, which confirm the ordinary term of the clause.

2.2.4. The autonomy of the European Union toward internal legal order

By changing the Lisbon Treaty, Article 2, paragraph 5 of Treaty on European Union, EU is hereby established an obligation to fulfill the requirement set out in international law.

By amendment to the Treaty of Lisbon, Article 2, paragraph 5/TEU becomes an key article in the interests of small and medium-sized countries which have the status of EU member "one of the legal guarantees established by the Treaty of Lisbon to the observance of national identity not only Member States but also the national, sovereign, unitary, independent and indivisible nature of those Member States which, like Romania, are enshrined in the Constitution those national legal character of their state.

When EU expressly assumes, through Article 2 (3), Parag.5/T[14]EU in the Lisbon Treaty modification , the obligation to " strictly comply and develop international law, including to respect the UN Charter's principles " shall mean a recognition by the Union (as original political entity[15], with *some state elements*, but endowed with legal personality and becoming so, *a subject of international law*, although a *derived one*, born out of the Member States' will) of the coordinator and interstate character, of contemporary international law[2] (where the state is the only topic of international, sovereign and originating law), but also a fundamental principle of the state's sovereignty[16] , inscribed in the United Nations Charter , on which it is based the international legal order.

An explicit reference to "strict observance of international law" is, according to art. 2 / TEU, paragraph 5 is a direct obligation of the Union to refrain from any action which would harm the rights of states as reflected in international law and as protected by the principles of the UN Charter. Even though art. 2, para. 5 / TEU refers to relations between the EU and the "wider world" (ie third countries, regardless of their status, the candidate countries for EU membership, the countries that have started accession negotiations, to countries that do not have vocation, according to the Copenhagen criteria / 1993 to become EU member states), we consider it necessary, by applying legal argument a fortiori, a respect for international law and the principles enshrined in the UN Charter, the Union and in its relations with EU Member States.

Thus, art. 2, paragraph 5 / TEU, the amendment introduced by the Lisbon Treaty, should be seen as a logical continuation of a legal relationship initially (in connection with Art. 3.a and art. 3.b / TEU) between the EU and Member States based on specific legal principle of European integration, namely the principle of conferral (plus, according to art. 3.b/TEU the principle of subsidiarity and proportionality). But this legal principle "integration" (as the legal foundation of progressive failure of powers by the states of the EU institutions) should not be considered a legal principle opposed to the principle of state sovereignty. In other words, even if ECJ case law sees "Community law" as a distinct orders both in relation to national legal orders of the Member States[17], but also in relation to the international legal order, this should not be interpreted as a "isolation" of the Community legal order (now by the Lisbon Treaty, an "order of law Union") to international law.

On the contrary, the two types of legal systems remain interconnected, since the quality of EU membership does not exclude participation, as a sovereign state, these states, international legal relations nor make them disappear quality sovereign subject of international law and that the original EU Member States have in relation to international law. Moreover, we believe that the existence of a "Community law" can not exclude international law relations established between EU Member States and between them and third countries (not EU membership).

The existence of the EU as a legal entity under the Lisbon Treaty of, we cannot speak of a disappearance of nation - states or a loss of their national character and sovereign. Moreover, the Union implies forms (CFSP, for example, police cooperation, intergovernmental cooperation, cooperation in civil matters, energy) the member states are the primary decision holding role, but also in terms of implementation of the measures established. In addition, article. 3 parargraph a /TEU in the Lisbon Treaty change, it makes clear that the decline hypothesis national - state sovereignty and the principle is rejected. Even in areas subject integration (or empowerment Union exclusively or shared), Member States that have freely decided to give a series of sovereign powers to the Union. The very existence of the Union as such is due to the free and sovereign Member States that have completed the realm of international law, a multilateral treaty to that effect.

Far from being a historical concept, obsolete, sovereignty remains the foundation of modern international law and its consequence (legal equality of all states) is a legal guarantee to protect fundamental states (in particular SMEs) in relations with other states. As stated Titulescu (the "diplomatic documents", Bucharest, Ed. Politics, 1967), "the abolition of sovereignty is not only impossible to predict a solution but if we embarked on this path, take

[14] Treaty of European Union
[15] Luciana- Alexandra Ghica (coord.), *The European Union Encyclopedia*, (Bucharest: Ed. Meronia, 2005), page 25.
[16] Ludovic cling, Martian.I. - Leads, *public international law*, (Bucharest: Ed. Educational and pedagogical), pages 33- 35.
[17] Augustin Fuerea, *European Union Manua*l 3rd edition revised and added , Publisher. Universul Juridic, Bucharest, 2006, page. 164-165

the world into chaos and anarchy ".The essential character of sovereign equality for all international law emerges from the opinions of experts who believe that "denying the sovereign state is to deny international law" between the international legal order and the principle of state sovereignty there is a mutual conditionality[18]. Permanent Court of International Justice highlight the fact, in the interwar period, the importance of sovereignty to international law, stating that "we must recognize and apply this principle that underpins international law itself."

We must consider the principles of Community law applicable in the relations between the Union and the Member States (cf. Art. 3.a, para. 1, para. 3 / TEU, Art. 3.b, paragraph.1-4 / TEU, amendment Treaty of Lisbon) like legal principles laid down by Member States (and not the Union, which is a sovereign state) by international treaties (although with a specific aspect of integration) under their own free and sovereign. Therefore, these principles of Community law are not only superior (not required, not relativize and does not remove the application) principles of sovereignty and equality of states, but I can not even make the existence and the scope in any way.

3.5. The principle of proportionality.

Proportionality principle acquires multiple meanings, these are identified in legal doctrine and especially in the Romanian legal doctrine in modern and contemporary period, emphasizing the idea of continuity in understanding this principle. The main connotations of this principle found in doctrine, ideas are expressed through fair balance, proper ratio, reasonableness, fairness and logical plan through dialectical reasoning of proportionality. Analysis of doctrine reveals the importance of this principle, whose purpose is to translate legal rules to substantiate the concept of legitimacy in law and to constitute as an essential criterion that allows the boundary between legitimate manifestations of state power and on the other hand excess power in the activity of the state.

Argues that the doctrine of proportionality is not only a simple legal instrument but also a principle of law.

Proportionality is seen a modern synthesis of classical principles of law. This principle is right outside the home and won the state and legal system rather late. As a principle of proportionality law involves ideas reasonableness, fairness, tolerance, and appropriateness of the measures necessary to state the facts and the legitimate aim pursued.

That principle appears enshrined in EU law legal instruments in the constitutions of states, and the Constitution explains research increasingly common concerns and especially the identification of its size. Proportionality is not only a principle of rational law, but at the same time, it is a principle of positive law, a principle with normative value. The proportionality is a legal criterion which considers the legitimacy of state power interference in the exercise of fundamental rights and freedoms.

This principle is explicitly or implicitly enshrined in international legal instruments[19], or most constitutions of democratic countries. Constitution expressly governing principle in art. 53, but there are other constitutional provisions that it involves. In constitutional law, the proportionality principle also applies in particular to protect human rights and fundamental freedoms. It is considered as an effective criterion for assessing the legitimacy of state intervention by limiting certain rights situation. The principle of proportionality is present in the public right of most EU countries. However, some distinctions must be made:

a) countries which establish the principle was made explicit in the constitution and legislation (Portugal, Switzerland, etc.), and

b) countries where it is not expressly mentioned in legislation or case law. The latter can include: Greece, Belgium, Luxembourg etc;

c) countries where this applies to public law as a whole (ex. France and Switzerland), on the other hand

d) the countries in which its use is limited to the scope of EU law. Moreover, even if the principle of proportionality is not expressly enshrined in the constitution of a state doctrine and jurisprudence considers as part of the concept of rule of law.

The principle of proportionality is applied not only constitutional law but also in other branches of law. Administrative law is a criterion that allows delineation of discretion, the administrative authorities in respect of the excess power that is made judicial review of administrative acts of abuse of power. It is also expressly provided by law as a criterion for individualization of administrative sanctions Application of the principle of proportionality exists in criminal law or civil law.

In European Union law, the principle of proportionality is expressly provided by Article 5 para. 4 of the Treaty on European Union and regulated, along with the principle of subsidiarity "Protocol on the application of the principles of subsidiarity and proportionality", in the sense necessary adequacy of resources and decisions of European institutions to the legitimate aim pursued.

Case law has an important role in analyzing the principle of proportionality, applied in concrete cases. Thus, the European Court of Human Rights is

[18] Raluca Miga-Beşteliu, *International law , Ch. All beck, publisher, 2007, page* 90-91

[19] Article 29 , paragraphs 2 and 3 of the Universal Declaration of Human Rights , Article 4 and 5 of the International Covenant on Economic, Social and Cultural Rights; Article 5, paragraph 1, article 12, paragraph 3, article 18, article 19, paragraph 3 and Article 12 paragraph 2 of the International Covenant on Civil and Political Rights; Article 4 of the Convention - Framework for the Protection of National Minorities; The AVA art.G European- revised Social Charter; Articles 8, 9, 10, 11 and 18 of the European Convention on Human Rights and Fundamental Freedoms.

designed as a ratio proportional fair, equitable, between the facts, means limitation on the exercise of rights and legitimate aim pursued or that a fair between individual interests and the public interest. Proportionality is a criterion that determines the legitimacy of interference Contracting States in the exercise of rights protected by the Convention.

Therefore, it is necessary proportionality increasingly more as a universal principle enshrined in most modern legal systems, explicitly or implicitly found in constitutional and recognized by national and international jurisdictions.

As a general principle of law, proportionality requires a considered fair relationship[20] between legal measures adopted social reality and the legitimate aim pursued. Proportionality may be considered at least as a result of the combination of three elements: the decision, its purpose and the facts to which it applies. Proportionality is correlated with the concepts of legality, opportunity and discretion. In public law, breach of the principle of proportionality is considered excess freedom of action left to the authorities, and, ultimately, abuse of power. There is interference between proportionality and other general principles of law, namely: the principles of legality and equality and the principle of fairness and justice.

The essence of this principle is considered fair relationship between the components. The question then is whether the phrase "fair relationship" is synonymous with that of "appropriate relationship" doctrine sometimes used. We believe that there are some differences, because the concept of "just" can have a moral dimension, while "adequate" and not necessarily mean this.

Summarizing, we can say that proportionality is a fundamental principle of law enshrined explicit or inferred from constitutional regulations, laws and international legal instruments, based on the values of rational law, justice and equity and expressing the existence of a balanced and appropriate, between actions, situations and phenomena limiting measures taken by government authorities to what is necessary to achieve a legitimate aim in this way are guaranteed fundamental rights and freedoms, and avoid abusive litigation.

There are significant concerns contemporary Romanian doctrinarians to establish proportionality connotations[21]. The author noted that proper proportionality is the phrase "right balance". It expresses the idea that "proportionality or the right balance is as cutting objective in concreto legal situation determined. It can appear and in the abstract, but such remains essentially or exclusively formal requirement without practical effect "Answering the question what are the structures constituting the proportionality same author stresses the idea of" respect "that is specific proportionality. Unlike mathematics, law, proportionality is not a problem of quantity but also qualitative, "expressing the requirement of adequacy between a legitimate aim ... means employed to achieve this objective and the result or effect produced by the installation of these means . Proportionality transition from a judgment based on binary logic to a logic-based gradual reasoning ".[22]

So we can talk of a "dialectical reasoning, consubstantial proportionality" or as we called us "proportional reasoning" based on a comparative report of a qualitative nature, specific legal value of a syllogism formalism designed to overcome specific abstract and impersonal dimension of legal standard and thus raise the particular to the universal concrete. For example, the principle of equality enshrined as one of the foundations of any democratic society and law, the proportionality which performs a logical relation, value of different elements in their concreteness, exceeds its abstract nature and inevitable trend smoothing, being found as universal concrete dialectical relationship between legal norm and diversity abstract reality. Applying "proportional reasoning" can be said that the principle of equality, looked quantitative dimension is only a particular case of the principle of proportionality.

At the end of this brief analysis on the principle of proportionality mention doctrinal conclusion that Professor Ion Deleanu to subscribe: "Thus said and briefly, the installation of proportionality - contextualized and circumstantial - the shift from rule to metarule from normativity to normality, the the legal norm hypostasis before the discovery and appreciation of its meaning and purpose. Benchmark in such reasoning which is, above all, the ideals and values of a democratic society, as the only political model considered by the Convention (Convention "European" Human Rights and Fundamental Freedoms) and, otherwise, only one compatible with it ".

3.6. Principle of institutional balance

It is assumed that each institution must act in accordance with the powers conferred on it by the Treaties, so as not to affect in a negative manner tasks other EU structures.

Brings together institutional balance on the one hand the separation of powers and competences on the other institutions and collaboration and cooperation between the same institutions of the Union.

With the Lisbon Treaty classic institutional triangle, Council, Commission, Parliament, undergoing a comprehensive reform.

If in 1951 the Treaty of Paris which established the European Coal and Steel Community brought to the fore the High Authority (now the Commission), and since 1957 the Rome Treaties debut long period

[20] M.Guibal, *De la proportionnalité,* în L'Actualite juridique Droit administratif, nr.5/1978, pg.477-479.
[21] Ion Deleanu, The fundamental rights of parties in civil, Universul Juridic Publisher, Bucharest, 2008, pp.365-406
[22] Ion Deleanu, The fundamental rights of parties in civil, Universul Juridic Publisher, Bucharest, 2008, pp.366

prevalence of the Council, as last treated to increase successive powers of the European Parliament are at present, with the Treaty of Lisbon, the exponential growth of these powers. PE peer adopted EU legislation with the Council. Mr Jerzy Buzek, EP President emphasizes that the function runs "advantage of the new powers received in a serious, responsible and constructive". Moreover, voters and political controls the European Commission has an important role in adopting the EU budget and conflicts including the High Representative for Foreign Affairs and Security Policy of the Union on organizational setting new institution.

All this translates into a lobby and increasingly powerful interest groups in addition to PE. But after the scandal MEPs receiving money for amendments, institutional transparency and the need for a correct relationship between lawmakers and lobbyists should be emphasized more than ever. Given the new institutional dynamics Lisbon instituted based on a delicate relationship between Parliament and Council, the scandal may affect the inter-institutional balance and their relationship with the European Commission on the quality of European legislation. This relationship fragile egos threatened by political and institutional suspicions, was affected by the scandal "money for amendments", as he called in the press, and worsened to Member States and cooperation between representatives of Parliament.

European Union Council was unbalanced but even its internal operation. Thus, there Councils have a permanent president (CAGRE and ECOFIN) and there Councils who rotating presidency. There was no political will at the time of Lisbon for the establishment of permanent presidents of all Councils of Ministers, thus rotating presidency now has a more symbolic value and lead to tensions between state representatives and delegates of the permanent representatives of the Union.

The delicacy of the new institutional balance it best reflects the position of the European Union High Representative for Foreign Affairs and Security Policy. The relations that it will establish its surrounding institutions depends on the success of this function.

In describing the institutional balance after the Lisbon Treaty Araceli Mangas argues that "there is a new constitutional model. Basic coordinates are maintained even if evolve in the same way that previous reforms have added or changed and held balances[23], 2005. In practice the last two years, however, how the Council and European Parliament relate to each other has changed considerably. The decision process was difficult and the task of reaching a consensus has become a real art. In this process, considerably increased role of Parliament rapporteurs and informal meetings attended by representatives of the Commission. Council remains first violin in the legislative process and the Union's decision, while Parliament is the political message wearer.

The Lisbon Treaty unfinished process? Conclusions can only be preliminary and only time will prove whether the current perception of the legal and institutional ambiguity Union is just a step to be exceeded or the premise of a new treaty.

3.7. Principle of subsidiarity

Under the shared competence between the Community and the Member States, the principle of subsidiarity as set by the Treaty establishing the European Community, defines the conditions under which the Community has a priority for action in relation to the Member States.

General spirit and purpose of the subsidiarity principle lies in providing a degree of independence of an authority subordinate to a superior authority, especially a local authority to the central power. There is, therefore, a division of powers between the various levels of government, institutional principle is the foundation of states with a federal structure. When applied in a Community context, the principle serves as the criterion governing the sharing of competences between the Community and the Member States. On the one hand, it excludes Community intervention when a material can be regulated effectively by Member States at central, regional or local level. On the other hand, the Community exercises its powers when Member States are unable to sufficiently fulfill the objectives of the Treaties.

For the purposes of art. 5 par. (2) EC, intervention by Union institutions principle of subsidiarity requires fulfillment of three conditions:

a. not be a subject under exclusive Community competence;

b. the objectives of the proposed action can not be sufficiently achieved by the Member States;

c. the action can be better achieved its scale or effects, through a Community intervention.

The scope of the subsidiarity principle has not been clearly defined, he continued to lead to divergent interpretations. However, the Community aims to clearly limit its action to the Treaties' objectives and providing new measures at a level as close as possible to the citizen. Also, in the preamble of the EU Treaty are a particular focus on the links between the subsidiarity principle and rule closer to the citizen. Once in force, the Lisbon Treaty should put an end to differences of interpretation regarding the scope of the principle of subsidiarity. In fact, the new Treaty defines the areas falling within the exclusive competence and shared competence of the Union. Art. 4 Parag. (2) TFEU contains the following list belonging shared competence: internal market; social policy; economic, social and territorial cohesion; agriculture and fisheries, excluding the conservation of

[23]Araceli Mangas, *La Constitucion European*, 2005,pag. 98.

marine biological resources; the environment; consumer protection; transport; trans-European networks; energy; area of freedom, security and justice; common safety concerns in public health.

The subsidiarity principle applies to all EU institutions. The rule has practical significance, especially for the Council, Parliament and Commission. The Lisbon Treaty enhances both the role of national parliaments and that of the Court of Justice in controlling the subsidiarity principle.

Treaty of Lisbon introduces an early warning mechanism, whereby national parliaments have eight weeks to submit the opinions on draft legislation, which sent them necessarily at the same time with the European Parliament and the Council. If a third of national parliaments challenges the conformity of a draft legislative act with the principle of subsidiarity, reasoned opinions, the Commission must review its project and motivate potential to maintain (procedure "yellow"). This threshold must be one quarter of national parliaments, if it is a legislative draft act on the area of freedom, security and justice. In addition, if a simple majority of national parliaments challenges the compliance of a draft legislative act with the principle of subsidiarity ('orange card') and the Commission maintains its proposal, the matter shall be referred to the Council and the European Parliament, which shall act in a first reading. If it considers that the proposal is not compatible with the subsidiarity principle can reject a majority of 55% of the Council or a majority.

3.8. Principle of award of powers in the European Union

The principle governing the award of delimitation of competences in the European Union, according to art. 5 paragraph. 1 TEU. The principle of conferred powers has its counterpart in public international law principle of specialty called international organizations. The principle of conferred powers was established, initially, by the Treaty establishing the European Economic Community (CEECs), later confirmed by the Treaty establishing the European Community (TEC) in art. 5, which was translated by the Lisbon Treaty in the European Union's Treaty on (TEU).

Under the principle of conferral, the Union shall act only within the powers that have been assigned by the Treaties Member States to achieve the objectives set out therein (Art. 5 TEU). Therefore, Member by their willingness to transfer skills Union objectives. Still the same article provides that ,, competences not conferred upon the Union in the Treaties remain with the Member States "(Art. 5 TEU). From this last provision means another principle, that the jurisdiction is not conferred upon the Union by the Member States treated as a residual jurisdiction3. With special reference to the power of attribution of Union institutions are provisions art. 13 TEU, which provide that each institution ,, act within the powers conferred by the Treaties, in accordance with the procedures, conditions and objectives set by them. " The Court of Justice, confers jurisdiction - according to art. 5 TEU (Art. 5 TEU) - has the nature of an irreversible transfer, further stating that it is "a community room with own tasks and more specifically, with real powers arising from a limitation of competence or transfer powers from the States to the Community; transfer that occurs in states of their legal, internal Community legal order for the benefit of the rights and obligations corresponding provisions of the Treaty and drives (...) a final limitation of their sovereign rights ". Irreversible transfer the concept of the Lisbon Treaty, however, should be viewed subject to the provisions under which any Member State may decide ,, (...) to withdraw from the Union "(Art. 50 TEU). Therefore, the transfer is irreversible, possibly during the State of the Union is a member.

Prerogative powers are divided according to several criteria.

1.According to TFEU and the Court of Justice, as the scope and nature of the powers conferred Communities / Union that are unprecedented in international law, prerogative powers are divided into: a) control skills and competencies of action; b) international skills and competencies internal type state.

2. Depending on the relations established between national competence of Member States and Union (institutions), Treaties confer on: a) an exclusive competence of the Union; b) a shared competence with the Member States.

3. After the award of technical skills in doctrine emerged following classification task skills:

a) express powers (explicit);

b) subsidiary skills (complementary);

c) implied powers (by extension).

Powers of control resulting from the fact that every time treaties binding on the Member States, they granted simultaneously Union institutions, mainly the Commission, the general power to control their execution (Art. 258 TFEU). Also, the Court of Justice of the European Union Commission supervises, it fulfills its function of supervising the application of EU law (Art. 17 TEU). In a number of cases, special institutions of the Union Treaties confer jurisdiction derived authorization, which authorizes, approves or denies the acts adopted by Member States (Art. 428, 1309, 1310, all TFEU). In particular, the Commission has the responsability to implement the safeguard clause authorizing states to derogate from their obligations. Power control is exercised through non-binding acts (eg the Committee which draws attention to the risks for the offenses or conduct recommendations suggesting complies with applicable law) or mandatory (Commission decisions in matters of authorizations or derogărilor13).

Powers of action.

In certain areas and under the Treaties, the Union shall have competence to carry out actions to support,

coordinate or supplement the actions of Member States, without thereby superseding their competence in these areas (art. 2 para. 5 TFEU).

The Union shall have the following competences:

- to carry out activities in research, technological development and space, in particular to define and implement the programs, the exercise of those powers may have the effect of preventing Member States to exercise its jurisdiction (art. 4 par. 3 TFEU);

- to take action and conduct a common policy in the areas of development cooperation and humanitarian aid, the exercise of those powers may have the effect of depriving the Member States of the opportunity to exercise its jurisdiction (art. 4 par. 4 TFEU);

- to carry out actions to support, coordinate or supplement the actions of Member States (Art. 6 TFEU).

At European level, these actions relate to the following areas:

a. to protect and improve human health;
b. industries;
c. culture;
d. tourism;
e. education;
f. civil protection;
g. administrative cooperation.

A construction element of originality Community / Union led and it determines the exercise of international type and type of internal - state.

International Union competence is brought to light by:

- the power of information and consultation. For example, according to art. 337 TFEU (ex 284 TEC) "to the tasks entrusted to them - so in a general way - the Commission may request and receive information and carry out all necessary checks" and in T EURATOM are considered those provisions specific obliges Member States to inform or consult the Community institutions, especially before adopting measures which they consider to be taken (article 34);

- the power of coordination of policies and behaviorsof the Member States. Thus, according to art. 5 paragraph. 1 TFEU, Member States shall coordinate their economic policies within the Union. In this Union:

1. take measures to ensure coordination of the employment policies of the Member States' labor, in particular by defining guidelines for these policies;

2. may take initiatives to ensure coordination of Member States' social policies.

This power is exercised through recommendations, which calls for a certain behavior, but "not binding" of the Member States (Art. 288 para. Last TFEU). Another example is that the Commission, in specific cases provided for in the Treaties, shall adopt recommendations (art. 292, last sentence, TFEU). Also, the Council adopted the recommendations (according to Art. 292 para. 1TFUE, or under Art. 168 TFEU).

Coordination can take and binding form, for example, in the form of a directive, Member States of destination linking the outcome to be achieved, leaving to the national authorities in respect of form and methods.

The Directive is therefore a specific instrument for coordinating national laws (under Art. 50 TFEU, the European Parliament, Council and Commission, and Art. 53 TFEU, the European Parliament and the Council). Another example of coordination is achieved proficiency in some cases, through the Member States' decisions to the Council (art. 126 § 9 TFEU). Through internal type powers, the Union has, in particular, the power that it exerts direct impact on citizens of Member States. They shall be performed by:

• Regulation, which is obviously the legislative power of the Union. Has general, impersonal, is directly applicable in the Member States, giving rise at the same time, the rights and obligations not only for Member States but also for their citizens (art. 288 para. 2 TFEU);

• decisions (Council or Commission) that "binds" addressed by individuals (Art. 288 para. 4 TFEU);

• Court open to individuals who may act under the action for annulment (Art. 263 TFEU);

• international agreements which the Union may conclude with third countries or international organizations, through which creates legally rights and obligations for individuals on the Member States territory of the (according to Art. 216 TFEU).

• Special agreements with neighboring countries, according to art. 8 paragraphs 1 and 2 TEU, the Union develop a special relationship with them, in order to establish an area of prosperity and good neighborliness, founded on the Union's values , characterized by close and peaceful relations based on cooperation. These agreements may contain reciprocal rights and obligations and the possibility of undertaking activities jointly. Their implementation is subject to periodic consultation.

3. Conclusion

European Union as a state, as a political and legal construction, will be a subject of controversy doctrinal level. This controversy revolves around the idea of the existence of a new typology, legal, namely European Union law. Legal identity of the European Union is a reality, maturity are general principles, principles adopted and brought together in each member state.

In creating a legal order, the order European Union law, are required more formal sources of law, while they exist, are subject to the social context and realities.

Thus, general principles have become essential parts being used in processes being put forward by general advocates but also European judges. General principles represent any derivatives with primary law

or the European Union. The role is to ensure cohesion principles of Union law and adaptation to change European realities.

Treaty of Lisbon was a step forward in terms of Union constitutionalization, the European Union has gained a valences of a federal state[24] with a constitution and supranational institutions.

The general principles of law U.E. ensure the functioning of Union institutions generating, also, the separation of powers. They will easily lead easily to a homogenization of the law, homogenization, which debuted at security and justice.

DISPUTED MATTERS ON THE CONCEPT OF PUBLIC AUTHORITY

Elena Emilia ȘTEFAN*

Abstract

The issue on the submitting of the statement of assets and interests is a subject of great interest within the Romanian society. Starting from this subject, this study aims to analyze which are the legal entities required under the legislation in force to submit the statement of assets and interests and the penalty incurred for the failure to do so.

Furthermore, we consider relevant, in order to have an overview on the set out issue, to establish the significance of the concept of public authority. Not incidentally, we understand to discuss these two concepts, respectively the statement of assets and interests and the public authorities due to the fact that they were closely related within the judicial practice. Therefore, the qualification of a legal entity as a public authority leads to the obligation of the employees of the respective entity to submit the statement of assets and interests.

Keywords: *contentious administrative law, public authorities, statement of assets and interests, Financial Surveillance Authority, civil servant.*

1. Introduction

Following the occultism practiced by the totalitarian regime removed on December 22nd, 1989, the transparency became an imperative matter for the public life[1]. *De facto*, this means that the public offices and functions fulfilled for personal scopes, generally material scopes, shall be avoided[2].

According to the accepted legal principle, the statement of assets is usually analyzed under the name of obligation of disinterestedness and makes part of the category of the duties which equally aim both the professional and the private life of the civil servant[3]. The statement of assets and the statement of interests represent personal deeds and they can be revised only under the terms of this law[4]. (...) Another author showed that the law seeks to prevent the cases of abuse, corruption, the use of the service in order to achieve outstanding material advantages[5].

Each and every state has its own enacted law according to its social and political demands, to the traditions and values that it defends[6]. Therefore, the activity of the public administration bodies is governed by a mandatory set of rules and principles of conduct which aim to ensure it a social utility as high as possible[7]. As shown in the accepted legal principle, „the characteristics of any society and form of social power are the following: a particular regulatory system and a set of conduct rules".[8]

According to art. 1 par. (5) of the reviewed Constitution, in Romania the observance of the Constitution, of its supremacy and laws is mandatory, therefore, all the categories falling under the scope of the law shall be bound to submit the statement of assets and interests due to the fact that, as shown in the Constitution in par. (2) of art. 16:"*No one is above the law*". Along with the same lines, as the accepted legal principle noted, the compulsoriness of the rules of law is ensured, if necessary, by the coercive power of the state[9].

The following concepts shall be discussed within this study: public authority, civil servant and then the categories bound to submit the statement of assets and interests shall be analyzed. Therefore, the procedure of investigating the civil servants and/or high officials, performed by the integrity inspector shall be presented, and in the end we shall present a case study.

2. Content

2.1. The public authority concept

The main meaning of the concept of *public authority* is that of public body, namely an organized group of people performing public powers, within the state or the local level, or within another form, an organizational structure which acts as a public power in order to achieve a public interest.[10] According to another opinion, the concept of public administration has a double meaning: organization and activity.[11]

According to the legislation, in what concerns the concept of *public authority*, art.2 par.(1) letter b) of Law no. 554/2004[12] of the contentious administrative, the private legal entities which, according to the law, have obtained the public status or are authorized in order to provide a public service under the public power regime are assimilated to the public authorities.

The Constitution of 1991, as well as the reviewed version of 2003 established and maintained several autonomous central administrative authorities and the legislation fully developed this special category of bodies without combining them in a separate unitary system, such as the local public administration which is also autonomous[13]. By means of being autonomous authorities which fulfill administrative tasks, they are not subject to the administrative custody regime, such as the autonomous authorities of the local public administration (county councils. local councils, city halls, etc.)[14].

2.2. The civil servant concept

The meaning of the *civil servant* concept results from the case law of the Romanian Constitutional Court. Therefore, one of the decisions is read as follows: "as shown in the legal literature, according to the criminal law, the concept of civil servant and office holder has a broader meaning that the one awarded in the administrative law, due to the nature of the social relations protected by the incrimination of certain actions which are dangerous in social terms and to the fact that the actions of protecting the assets and promoting the community interests require a better protection by means of the criminal law[15]".

According to the status of the civil servants, the public office represents all the duties and responsibilities established under the law in order for the public power prerogatives to be achieved by the central public administration, local public administration and the autonomous administrative authorities.[16]

1.3. The obligation to submit the statement of assets and interests

"Upon the assignment of a public office and the termination of the service, the civil servants shall be bound to submit, under the terms of the law, the statement of assets, to the head of the public authority or institution. The statement of assets shall be annually updated, according to the law."[17]

The recent accepted legal principle showed that (...) this obligation is incumbent on all the civil servants and high official and for a while it was regulated by Law no. 115/1996, currently being regulated by Law no. 144/2007 on the establishment of the National Integrity Agency, as further amended and supplemented.[18] The provisions of this normative act (Law no. 176/2010) are applicable to the category of persons "who are bound to declare their personal assets and interests", among them being placed the civil servants, including the ones having a special status, namely they perform their activity within all the central or local public authorities, or as the case may be, within all the public institutions".[19]

According to the aforementioned Law no. 176/2010, art.2, the statements of assets and the statements of interests are filled in according to the enclosed model, respectively Appendix 1 and Appendix 2 and the certified copies together with the personal numeric code of the declarant shall be submitted to the Agency. Paragraph (2) of art.3 of the law states that: "*the statements are made in writing, on own risk and include the rights and obligations of the declarant, his/her spouse and dependent children*".

Law no. 176/2010 expressly shows in art. 4 the following: "the statements of assets and interests shall be submitted within 30 days as of the date of the designation or appointment, or as of the date of entering the service".[20] The persons provided in this law shall be bound to annually submit or to update the statements of assets and interests, no later than June 15th.

1.4. The procedure of investigating the civil servants performed by the integrity inspector

The scope of the Agency is to ensure the integrity in what concerns the performance of the public offices and functions and to prevent the institutional corruption by means of assessing the statements of assets, the data and information on the personal fortune, as well as the modification of the assets, the incompatibilities and the potential conflict of interests that the persons referred to in art.1 may be subject to throughout the performance of the public functions and offices[21]. According to the legislation in force, the investigation of the civil servant performed by the integrity inspector, in terms of assessing the acquisition of assets, in relation to the incomes earned or the investigation of the incompatibility condition consists of several stages that we will summarize in the following lines.

In this respect, the Law grants a Section entitled: „The assessment of the conflicts of interests and the incompatibilities", namely Section III of the content of Chapter II: "Procedures of the National Integrity Agency" of Title II entitled: "*The procedures intended to ensure the integrity and transparency of the public functions and offices*" of law no. 176/2010.

A. *The assessment of the conflicts of interests and the incompatibilities*[22]

- a.1. the integrity inspector analyzes the statement of assets and interests drawn up by the civil servant (art. 20 par. 1 of law no. 176/2010)
- a.2. if the integrity inspector finds that the civil servant does not justify, in full or in part, the fortune earned, the integrity inspector informs the latter and invites it, by means of a written invitation, to provide an explanation. The invitation sent by the integrity inspector shall be delivered by registered letter with acknowledgement of receipt.
- a.3. the investigated civil servant may be present in person, according to the invitation of the integrity inspector, at the indicated hour and location, in order to provide its explanation on the situation it is investigated for. On this occasion, the investigated person shall be entitled to submit any data or information which it considers to be relevant.
- a.4. if, after the expiry of the 15 day deadline as of the receipt of the invitation delivered by the integrity inspector, the civil servant fails to respond, the law provides the possibility that the integrity inspector draws up the assessment report. It is important to mention that the integrity inspector, in the absence of the acknowledgement referred to in par.(1), shall draw up the assessment report following the fulfillment of a new procedure for the notification of the investigated person.

B. *The issuance of the assessment report*

- b.1. the assessment report has the following content, according to art. 21 par.(3) of law no.176/2010, namely it consists of four sections: the description part of the *de facto* situation; the explanation of the person subject to the investigation, if expressed; the assessment of the conflict of interests and the incompatibilities; conclusions.
- b.2 the assessment report shall be communicated to the investigated persons within 5 days as of its completion, by the integrity inspector, and as the case may be, to the criminal investigation bodies;

C. *the appeal of the assessment report*

- c.1. the report on the assessment of the conflict of interests or the incompatibilities, according to art. 21 of law no. 176/2010 may be appealed before the competent contentious administrative court, within 15 days as of its receipt;
- c.2. if the report on the assessment of the conflict of interests was not appeal within the 15 day deadline as of its receipt, the Agency notifies, within 6 months, the competent bodies on the initiation of the disciplinary procedure; if the case may be, the agency notifies, within 6 months, the competent contentious administrative court on the cancellation of the instruments issued, adopted or drawn up on the violation of the legal provisions on the incompatibilities.
- c.3.if following the assessment of the statement of assets, as well as of other data and information, the integrity inspector founds the existence of an incompatibility condition or of a conflict of interests, it shall draw up a report to be delivered to the investigated person (...) , according to art.22 par.(4) of law no.176/2010.
- c.4. Furthermore, the law also states that in what concerns the conflict of interests, all the legal or administrative acts concluded directly or by means of intermediaries, under the violation of the legal procedures on the conflict of interests, shall be declared void. In addition to the appeal on the nullity of the respective acts, the court shall order the restoration of the parties.

2.5. Penalties for the failure to submit the statement of assets

According to art.27 of law no. 176/2010, the failure to fulfill the obligation to respond to the requests of the Agency, provided by this law, shall be sanctioned by a civil fine amounting to RON 200 for each day of delay. According to art.28 of law no. 176/2010, the action of the persons who willingly submit false statements of assets or interests represents the offense of misrepresentation and shall be punished according to the Criminal Code.

Furthermore, the law also provides civil sanctions for certain situations, as follows:

- according to art. 29, par.(1) the failure to submit the statements of assets and interests on the provided deadlines, as well as the failure to declare in the respective statement the amount of the earned income

[21] Art. 8 par (1) of Law no. 176/2010 (...)

[22] In this respect see **Cristian Clipa,** *op.cit.*, 2011, pp. 350-352

or to declare the income by reference to other documents represent an offence and shall be sanctioned with a fine amounting between RON 50 and RON 2,000.

- according to art. 29, par.(2) the failure to fulfill the obligations provided for by art.6 of the persons in charged with the implementation of the provisions of this law, represents an offense and shall be sanctioned by a fine amounting between RON 50 and RON 2,000. The same penalty shall apply to the head of the respective unit, if it fails to fulfill the obligations provided by this law.
- according to art. 29, par.(3), the failure to apply the disciplinary penalty or the failure to appeal the termination of the public function, as the case may be, if the ascertainment instrument remained definitive, represents an offense and shall be sanctioned by a fine amounting between RON 50 and RON 2,000, if the committed action does not represent a crime.

The ascertainment and the sanctioning of these offences provided by this law shall be performed by the authorized persons within the Agency according to the provisions of Government Ordinance no.2/2001[23].

3. Case study

It was shown in one case that, following the notification of the Financial Surveillance Authority, N.M was given a warning by the National Integrity Agency for committing the offence provided for by art.1 par.(1) of law no.176/2010, namely for the failure to submit the statement of assets and interests within the legal deadline.[24] The case raised several issues that the court had to clarify: if the Financial Surveillance Authority is a public authority according to the law; if the special status servants are assimilated to the civil servants in what concerns the obligation to submit the statements of assets and interests.

The Financial Surveillance Authority, under the provisions of art.1 par.(2) of Government Emergency Ordinance no. 93/2012 [25] is an autonomous administrative authority, with legal personality, independent, which fulfills its duties by means of taking over and reorganizing all the duties and prerogatives of the Securities National Commission, Insurance Surveillance Commission and Private Pension System Surveillance Commission.

Furthermore, according to the provisions of Government Emergency Ordinance no. 93/2012 the members of the council of the Financial Surveillance Authority are designated by the Parliament and the annual report of the Financial Surveillance Authority is discussed within the joint meeting of the two Chambers. According to the law, the Financial Surveillance Authority is an authority under the provisions of art.1 item 31 of law no. 176/2010, in connection to its certification, regulation, surveillance and control duties.

In what concerns the qualification of the special status servants as civil servants, the court noted that according to art.1 item 31 of law no. 176/2010: „the provisions of this law shall be applicable to the following categories of persons who are bound to submit the statements of assets and interests: 31. *The persons with management and control functions, such as civil servants, including the special status civil servants who perform their activity within all the central or local public authorities or, as the case may be, within all public institutions*". Furthermore, on the date of applying the penalty, the court noted that, the applicant had the capacity of a management and control person, even if it was not a civil servant. Therefore, the court considered that the applicant's claim on the absence of its capacity of civil servant was truth, but not likely to remove the penalty since the provisions of the aforementioned article state the punishment of both the civil servants and the persons with management and control functions – even if they do not have the capacity of civil servants.

4. Conclusions

The submission of the statement of assets and interests is contemplated by a special regulation, as presented in this study. As shown on other occasions, the legislative amendments occurred at a certain point in time raise serious issues for a certain field in what concerns the construction and implementation of the normative acts[26]. Therefore, in our opinion, an important factor for the compliance with the law is on the one side, the legislative coherence and on the other side, the unification of the legislation on fields, so that the legislation is no longer subjectively construed[27].

The judicial practice notes that, despite the lack of the capacity of civil servant, the persons are bound to submit the statement of assets and interests, if they perform their activity within an assimilated public authority, under the law.

OPINIONS ON THE RIGHT TO NON-DISCRIMINATION

Elena Emilia ŞTEFAN*

Abstract

This study aims to analyze the non-discrimination concept, as regulated by the national and foreign legislation. It is important to know that there are international documents which protect the right to non-discrimination, so that these documents will also be contemplated by this study.

In Romania, the competent authority established in order to investigate and to apply civil sanctions for the deeds or acts of discrimination is the National Council for Combating Discrimination. In this respect, this study shall be focused on the presentation of the role and the activity of this institution in fighting against discrimination.

Keywords: *discrimination, law, National Council for Combating Discrimination, plaintiff, contentious administrative.*

1. Introduction

The right of all persons to equality before the law and protection against discrimination represents a fundamental right recognized by the Universal Declaration of Human Rights, by the United Nations Conventions on the elimination of all forms of discrimination against women, by the International Convention on the elimination of all forms of racial discrimination, by the United Nations Treaties on the civil and political rights and on the economic, social and cultural rights and by the Convention for the protection of human rights and fundamental freedoms, which all member states have signed.[1] As the foreign accepted legal principle noted, "the discrimination principle suggests that individuals in equal situations or equivalent circumstances, to be subject to an equal treatment"[2](...). In what concerns Romania, the recent accepted legal principle, the accession to the European Union also implied the establishment of the constitutional grounds[3]. According to the provisions of art. 148 par.(4) of the Constitution, the authorities of the Romanian state have undertaken to ensure the fulfillment of the obligations under the treaties establishing the European Union, the mandatory community regulations and the act of accession[4]. According to art. 1 of the reviewed Constitution, Romania is a state subject to the rules of law[5]. The Romanian Constitutional Court, under the construction of this text, noted that: "the state subject to the rule of law is a mechanism of which operation involves the establishing of an order where the recognition and valorization of the individual's rights cannot be conceived in an absolute and discretionary way, but only in relation to the compliance with the rights of the others and the community as a whole".[6]

One author noted that article 4 par. (2) of the Constitution lists the criteria of the non-discrimination[7]. Art. 4 par. (2) reads as follows: "Romania is the mutual and indivisible country of all its citizens, irrespective of the race, nationality, ethnic origin, language, religion, gender, opinion, political affiliation, wealth or social origin". Furthermore, art. 16 par.(1) of the content of the fundamental political and legal settlement of the Romanian state sets out the following: "the citizens are equal before the law and the public authorities, without any privilege or discrimination."[8]. Decision no. 164/2010 of the Romanian Constitutional Court approaches the same subject: "paragraph 1 of art. 16 is correlated with the constitutional provisions of art. 4 par.(2)". On the other side, the Constitutional Court provided that: the text of art. 16 par.(1) in conjunction with the text of art. 4 par.(2) of the fundamental law, concerns the prohibited discriminations and not the permitted discriminations,

therefore it does not concern the positive discrimination, but the negative discrimination(...).[9]

2. Content

2.1. The general status of the legislation on discrimination

Internationally, several normative acts create the general framework of the non-discrimination and we selectively present them herein. For example, art. 14 of the Convention for the protection of human rights and fundamental freedoms is entitled: „the prohibition of the discrimination" and provides the following: "the performance of the rights and freedoms recognized by this Convention must be ensured without any distinction, especially on the following grounds: sex, race, color, language, religion, political opinions or any other opinions, national or social origin, the affiliation to a national minority, wealth, birth or any other situation".[10]

Furthermore, art.1 of Protocol 12 to the protection of human rights and fundamental freedoms entitled: "the general prohibition of the discrimination" provides the following:

"1. The performance of any rights provided by the law must be ensured without any discrimination, especially on the following grounds: sex, race, color, language, religion, political opinions or any other opinions, national or social origin, the affiliation to a national minority, wealth, birth or any other situation.

2. No person shall be discriminated by a public authority based on grounds referred to in paragraph 1".[11]

The Charter of Fundamental Rights of the European Union provides in art. 20 entitled "the equality before the law" that all persons are equal before the law and art. 21 fully approaches discrimination[12]. Therefore, according to par.(1) of art. 21: "the discrimination of any kind, on the grounds of gender, race, color, ethnic or social origin, genetic characteristics, language, religion or beliefs, political or other nature opinions, affiliation to a national minority, is prohibited (...)." and according to par.(2) „in what concerns the scope of the Treaties (...) the discrimination on the grounds of nationality is prohibited".

Another document that relates to the concerned subject is Directive 2000/78/EC establishing a general framework for equal treatment in employment and occupation[13]. We find in this document several provisions, such as:

- Art. 1 „The scope: this Directive has as main scope the establishing of the general framework for combating discrimination on the grounds of religion or belief, disability, age or sexual orientation as regards employment and occupation with a view to putting into effect in the Member States the principle of equal treatment".
- Art.2 The discrimination concept defines the direct discrimination and indirect discrimination, as follows:

„Direct discrimination: shall be taken to occur where one person is treated less favorably than another is, has been or would be treated in a comparable situation (...)

Indirect discrimination: shall be taken to occur where an apparently neutral provision, criterion or practice would put persons having a particular religion or belief, a particular disability, a particular age, or a particular sexual orientation at a particular disadvantage compared with other (...)."

Directive 2002/73/EC of the European Parliament and Council for the amendment of Directive 76/207/EEC of the Parliament on the implementation of the principle of equal treatment for men and women[14] is another document which falls under the scope of the discussed subject.

2.2. National legislation

Nationally, the legislation on the right to non-discrimination was also drawn up. For sure that each and every inventory of the normative acts firstly begins with the nominalization of the fundamental law which includes several articles on the right to non-discrimination, such as: art. 4, art. 16, etc.

Following the Constitution, Government Ordinance no. 137/2000 on the prevention and sanction of all forms of discrimination[15] is the next document that we refer to. This normative act defines the **discrimination** as being: "any distinction, exclusion, restriction or preference on the grounds of race, nationality, ethnicity, language, religion, social category, beliefs, gender, sexual orientation, age, disability, non-contagious chronic disease, HIV, infection, affiliation to a disadvantaged category, as well as any other criteria of which scope or effect is the restriction, removing, recognition, use or performance,

[15] Government Ordinance no. 137/2000 on the prevention and sanctioning of all forms of discrimination, published in Official Journal no. 431/2000

on an equal footing, of human rights and fundamental freedoms or of the rights recognized by the law (...)".

Another extremely important document nationwide is Law no. 202/ 2002 on equal opportunities between men and women[16] which regulates the measures to promote equal opportunities and equal treatment between women and men, in order to eliminate all forms of discrimination on the grounds of gender, within all the fields of the public life of Romania. The concept of *equal opportunities* is defined as follows: „the taking into account of the different abilities, needs and aspirations of both men and women and respectively, their equal treatment".

According to the international legislation, the types of discrimination are defined in art. 4 of this normative act, as follows:

- the direct discrimination shall be taken to occur where one person is treated less favorably than another is, has been or would be treated in a comparable situation, on the grounds of gender.
- the indirect discrimination shall be taken to occur where an apparently neutral provision, criterion or practice would put persons having a particular gender at a particular disadvantage compared with other persons of other gender, except the case when this provision, criterion or practice is objectively justified by a legitimate scope, and the means of achieving this scope are appropriate and necessary (...)".

References on the right to non-discrimination are also found in the criminal legislation, both in the old Criminal Code and in the current Criminal Code[17], as follows:

- art. 317 of the previous Criminal Code (normative act currently repealed) entitled „incitement to discrimination" provided that the "incitement to hatred on the grounds of race, nationality, ethnicity, language, religion, gender, sexual orientation, political opinion and affiliation, beliefs, wealth, social origin, age, disability, non-contagious chronic disease or HIV/AIDS infection" was punished with imprisonment between 6 months and 3 years or with fine.
- art. 369 of the current Criminal Code entitled "incitement to hatred and discrimination" provides that the "incitement of the public by any means to hatred and discrimination against a certain category of persons" shall be punished with imprisonment between 6 months and 3 years or with fine.

3. The Case Law of the Constitutional Court

In what concerns the principle of equality[18], the Constitutional Court, in its constant case law reflected by means of Decision no. 148/2001 or Decision no. 685/2012, provided the following, by means of general mandatory considerations: "the violation of the principle of equality and non-discrimination exists when a different treatment is applied to equal cases without any objective and reasonable grounds, or if there is a disproportion between the scope aimed by means of the unequal treatment and the used means.[19]" The discrimination is the result of a different legal treatment applicable to the same categories of legal subjects or situations that do not differ objectively and reasonably.[20]

On another occasion, the Constitutional Court showed that: "The legal situation of several categories of persons justifies the implementation of a different treatment, in order for a better fulfillment of the justice".[21]

In what concerns another case, the Constitutional Court provided that: „The cultural traditions and social realities are still in progress towards achieving a factual real equality between genders, so that it cannot be concluded that currently, the social conditions in Romania support an absolute equality between men and women. Beyond the normal changes which occur within the society in terms of mentality, culture, education and in what concerns the traditions, the provision of an equal treatment between genders is more and more necessary in the context of the European trend which requires the states to comply with the standards of the non-discriminatory equal treatment between men and women".[22] The violation of the principle of equality and non-discrimination exists when a different treatment is applied to equal cases without any objective and reasonable grounds, or if there is a disproportion between the scope aimed by means of the unequal treatment and the used means.[23]

4. The National Council for Combating Discrimination

The National Council for Combating Discrimination (C.N.C.D.) is the public authority, under parliamentary control which performs its activity in the field of the discrimination. It was established in 2002 under Government Ordinance no.137/2000. The activity performed by it is in accordance with Government Resolution no.

[16] Law no. 202/ 2002 on equal opportunities between men and women, published in Official Journal no. 150/2007

[17] The new Criminal Code was adopted by means of Law no. 286/2009 on the Criminal Code published in Official Journal no.510/2009 and entered into force in 2014

[22] Decision no. 1237/2010 of the Constitutional Court, published in Official Journal no.785/2010.

[23] Decision no. 107/1995 of the Constitutional Court, published in Official Journal no. 85/1996.

1194/2001 on the organization and operation of the National Council for Combating Discrimination[24] The dedicated web page of this state authority is the following: http://www.cncd.org.ro/. Government Ordinance no. 137/2000 is the one establishing that the C.N.C.D. is held liable for the implementation of the legislation in the field of discrimination, that it ascertains and sanctions the offences falling under its scope. C.N.C.D. has the material competence in all the fields for the actions of discrimination, as well as the territorial competence, namely a nationwide competence.

In connection with the activity report on 2013[25]**,** compared to previous years, as of the establishment of C.N.C.D., 2013 stands out due to the following: "the highest number of petitions (858); the highest number of petitions on the grounds of nationality (61) and sexual orientation (13); the highest number of resolutions issued by the Ruling Council (824); the highest number of ascertainments of discrimination actions (135); the highest number of fines (110) amounting to RON 267,800 (compared to 2012 when the 35 fines amounted to RON 114,000)".

The activity report of 2013 showed that C.N.C.D. carried out an opinion survey: „Perceptions and attitudes on discrimination" with the support of the Romanian Institute for Assessment and Strategy. The opinion survey was carried out throughout October-November 2013 on 1,415 persons over 18 years old of the rural and urban area and who were distributed questionnaires.[26] The conclusions of the survey were the following: 67% of the respondents believed that the discrimination occurs „often" and „very often"; 46% believe that the discrimination would remain the same in the following years; only 11% hoped the discrimination would decrease and 28% expressed their concern that the discrimination would be more common.

The activity report of C.N.C.D. of 2012 showed that, in relation to the previous years, in 2012, a series of discrimination criteria recorded a percentage increasing dynamics[27]. Therefore, the non-contagious chronic disease, HIV infection, nationality, gender, beliefs and language are the criteria which record an increase in the total number of complaints, in relation to the latest 4 years.

In what concerns the cases settled by C.N.C.D. or submitted directly to the court, having as scope the ascertainment of the discrimination, the practice improves yearly. According to the activity report of 2012, under art. 27 of Government Ordinance no. 137/2000 C.N.C.D. was party in 556 civil cases (...). We hereby present selectively, several cases of C.N.C.D. which were settled and sanctioned with fine.

Case no. 1. Therefore, a press release was posted on the Cuțu-Cuțu Association, which was subsequently modified and entitled as follows: „Câinii nu sunt evrei ca să fie duși la Auschwitz" (Dogs are not Hebrew, so they cannot be taken to Auschwitz). Under resolution no. 207/July 4th, 2012, the Ruling Council ascertained the violation of the provisions of art. 2 par.(1) in conjunction with art. 15 of Government Ordinance no. 137/2000 and punished the plaintiff with fine amounting to RON 1,000. The Council showed that the comparison between the Holocaust and the stray dogs is degrading.

Case no. 2. The Ruling Council took notice of the allegations of plaintiff G.B made on GSP TV tv station addressed to the Muslim people and people from Arab countries, throughout January 8th-18th 2012: „I was disgusted to see that thousands of Romanian people took the streets to defend an Arab against President T. B. (...) How is it possible to defend an Arab against the president of my country. An Arab minister should never be designated". Under Resolution no. 88/February 29th, 2012 the Ruling Council ascertained that the plaintiff's allegations represent a differentiation on the grounds of nationality, ethnicity (the Arab) and religion (the Muslim) which results in the violation of the dignity, therefore, they fall under the scope of the provisions of art. 2 par.(1) of Government Ordinance no. 137/2000 and G.B. was punished with civil sanction amounting to RON 3,000.

According to the provisions of art. 20 of Government Ordinance no. 137/2000 in conjunction with art. 6 of law no. 554/2004[28] of the contentious administrative, the resolution of the Ruling Council may be appealed before the contentious administrative within 15 as of the pronouncement of the ruling. In what concerns the legal nature, the Decision of the Ruling Council of C.N.C.D. is a jurisdictional administrative act. Furthermore, the law provides the possibility of the persons who consider themselves to be victims of discrimination to resort directly to the court of law and to request damages and restoration.

5. Conclusions

Within the actual society, we often witness cases of discrimination. C.N.C.D. is the national authority specially established in order to supervise the compliance with the law in the field of the discrimination and, as we showed, it is an extremely active authority in punishing and preventing the actions of discrimination. In a society that wants to be democratic, it would be ideal if the actions of discrimination did not exist. We do not lack

THE RELATIONSHIP BETWEEN EUROPEAN UNION LAW AND ROMANIAN LAW IN THE CONTEXT OF THE LAW UNIFORMIZATION AT EUROPEAN LEVEL

Dan VĂTĂMAN*

Abstract

Taking into account the specific of the European Union law, which was synthesized by the Court of Justice of the European Union as "an own legal order integrated into the legal systems of the Member States", the aim of this study is to highlight the peculiarities of EU legal order, especially with regard to implementation of European legislation into national law of the Member States. For a full understanding of way in which the EU law is applied into Romanian law, a particular emphasis was given to the actions taken by the Romanian authorities to fulfil the commitments assumed in the Accession Treaty, especially with regard to the transposition and application of Union law. Also, were analysed the constitutional provisions and those contained in the four new codes concerning the application of EU law in the Romanian law.

Keywords: *applicability of European Union law, Romanian law, legal order, implementation of legislative acts, law uniformization.*

1. Introduction

The complexity of the European Union and its legal order are not easy to understand, this difficulty is due, in part, even to the wording of the Treaties themselves, especially that certain concepts which are used in the Treaties are unfamiliar to the general public.

For this reason, in the research activity I have focused on the EU legal order through the prism of its peculiarities, with a focus on the process of adopting EU legislation and implementation of legislative acts into national law of the Member States. Thus, I emphasized the direct applicability and priority of EU law into national law of the Member States and the obligation for Member States to transpose and implement EU legislation, in this connection being analysed the relevant jurisprudence of the Court of Justice of the European Union.

Given Romania's status as a full member of the European Union and, especially, the fact that this goal has required extraordinary efforts from both the Romanian authorities and the Romanian citizens, I considered that is necessary to deepen the relationship between European Union law and Romanian law in the context of the law uniformization at European level, with the ultimate aim of accurate understanding the two systems of law. As a result, for a full understanding of way in which the EU law is applied into national law, in the first stage of research I have focused on the actions taken by the Romanian authorities to harmonize the national legal system to the provisions of the Community acquis for the accession of Romania to the European Communities / European Union. In the second phase of the research activity I have highlighted the efforts of Romania to fulfil the commitments undertaken by the Accession Treaty, especially with regard to the transposition and application of Union law. Further I analysed the constitutional provisions and those contained in the four new codes concerning the application of EU law in the Romanian law, taking into account the views expressed in the doctrine.

2. General aspects concerning applicability of EU law into national law of the Member States

According to specifications of European Court of Justice, EU law is distinct from national legal systems and however it is imposed to Member States and their nationals, being an internal law of the European Union which is integrated into national law of each Member State.

Thus, between the legal order of the European Union and the legal order of Member States are developed relations based, on the one hand, on the principle of integrating EU law into national law of the Member States (principle that is translated by building at EU level of an autonomous and independent legal system, absorbed in the law systems of the Member States) and on the other hand, the principle of primacy of EU law over national law of the Member States. As a result, for the EU law are defining the following features: direct applicability and supremacy/priority of application.[1]

The direct applicability or direct effect means that EU law confers rights and imposes obligations directly not only on the Union institutions and the Member States but also on the Union's citizens. The principle of direct effect of European law was enshrined by the Court of Justice of the European Union in the judgement of Van Gend en Loos of 5

* Professor PhD, "Titu Maiorescu" University, Bucharest, Romania (e-mail: **danvataman@yahoo.com**).

[1] Dan Vătăman, *European Union Law*, Bucharest, "Universul Juridic" Publishing House, 2010, pp. 9-10.

February 1963[2], occasion on which the Court states that European law not only engenders obligations for Member States, but also rights for individuals. As a consequence, any individual or legal person may therefore take advantage of these rights and directly invoke the provisions of the Treaties and EU legislative acts adopted by institutions on the basis of the Treaties (regulations, directives and decisions) before national and European courts.

Regarding the supremacy or priority of EU law, the Court of Justice of the European Union formulated the so-called "communautaire" thesis according to that in relationship between national law of Member States and Community law, the latter must be supreme in the event of any conflict. This principle was first enunciated in the Case Costa v. ENEL[3] when the Court stated that by creating a Community of unlimited duration, having powers stemming from a limitation of sovereignty, or a transfer of powers from the States to the Community, the Member States have limited their sovereign rights, albeit within limited fields, and thus have created a body of law which binds both their nationals and themselves. The principle of EU law supremacy was consolidated by judgment of the Court in the Case Simmenthal[4], where the Court stressed that Community law would take precedence even over national legislation which was adopted after the passage of the relevant EC norms. Thus, the existence of Community rules rendered automatically inapplicable any contrary provision of national law, and precluded the valid adoption of any new national law which was in conflict with the Community provisions.

3. The obligation of Member States to transpose and implement EU legislation

The European Union is founded on law and pursues many of its policies through legislation and is sustained by respect for the rule of law. Therefore, the success in achieving EU goals as set out in the Treaties and in legislation depends on the effective application of EU law in the Member States, this because laws do not serve their full purpose unless they are properly applied and enforced. According with European Commission the application and enforcement of EU law involves many actors – the European institutions, the Member States, including local and regional authorities and courts.[5]

With the entry into force of the Lisbon Treaty were established powers of the European Union and were attributed to European Commission some monitoring and enforcement functions. Thus, in accordance with provisions of Treaty on European Union (TEU) was maintained fundamental obligation of Member States to ensure fulfilment of the obligations arising out of the Treaties or resulting from the acts of the institutions of the Union[6]. At the same time, the European Commission is responsible for ensuring the application of the Treaties and of measures adopted by the institutions pursuant to them, for this purpose overseeing the application of EU law under the control of the Court of Justice of the European Union.[7]

As shown in the provisions of TEU cited above, while Member States have the responsibility to implement timely and accurately the EU legislation and to apply and implement correctly the entire acquis, the European Commission has to monitor the efforts of Member States and to ensure that their legislation is in conformity with EU law.

For this purpose, the Commission may contest on their own initiative the way in which the Member State implement the EU law but it also acts on the basis of petitions received from the European Parliament and complaints from citizens, businesses, NGOs and other stakeholders that reveal potential violations of EU law, for instance incorrect transposition or bad application of EU law.[8]

According to Article 258 of Treaty on the Functioning of the European Union (TFEU), the European Commission has the power to initiate the formal infringement procedure by referring the case to the Court of Justice of the European Union, with the possibility to request financial sanctions.[9]

I highlight that according to the case law of the Court of Justice of the European Union, the European Commission has the authority to decide whether it is necessary an infringement procedure[10] and, when it takes this decision, the time at which initiates the

procedure[11]. The Commission also has the freedom to decide if and when refer the case to the Court of Justice[12].

4. Relationship between European Union law and Romanian law

4.1. The process of legislative harmonization with the European Union law before Romania's accession to the European Communities / European Union

The harmonization process of Romanian legislation with the Community acquis represented a legal obligation under the Europe Agreement Romania-European Union, ratified by Romania by Law no. 20/1993[13]. The negotiations started with a preparatory phase or a screening of the acquis which was conducted by the Commission, and afterwards was necessary to adopt the basic legislation in order to harmonize national legislation with EU law before the Romania's accession to the European Communities / European Union.

In the first years, the process of approximation of the Romanian legislation with Community norms was carried out according to the National Program for Accession of Romania to the European Union, this document included clear responsibilities, divided on the acquis chapters.

Starting with 2003, this programme has been replaced with other Romanian internal programmatic documents. Thus, in 2003, the process of legislative harmonisation was carried out according to the Legislative Programme for Supporting the European Union Accession Process for the period November 2002 – December 2003, which was part of the Priority Action Plan for European integration (November 2002 – December 2003). The Programme essentially aimed at fulfilling the requirements expressed by the European Commission in the Country Report 2003.[14]

The next year marked important progresses in the harmonization process of the Romanian legislation with the Community legislation. In order to assure a fluid and effective legislative process, which would allow Romania to meet the deadlines of the measures it had assumed in the preparation for accession, the Ministry of European Integration, following consultation with other ministries and responsible institutions in the field, drew up The Priority Legislative Programmes (at law level) for the Accession to the European Union, for the first and second semesters of 2004. The two programmes contained the relevant legislation for both the negotiations chapters and the political and economic criteria that Romania had to meet. The adoption of these laws is necessary to finalise the negotiations by the end of 2004.[15]

The Brussels European Summit (16-17 December 2004) endorsed the closure of negotiations and "noted with satisfaction that progress made by Romania in implementing the acquis and commitments entered into as regards, in particular, Justice and Home Affairs and Competition, has made possible to close formally all the outstanding chapters with Romania on 14 December 2004 and accordingly looked forward to welcoming it as a member from January 2007". The European Council also considered that Romania will be able to assume all the obligations of membership at the envisaged time of its accession, provided that it continues its efforts to that end and completes in a successful and timely way all necessary reforms and commitments undertaken in all areas of the acquis, in particular the important commitments regarding Justice and Home Affairs, Competition and Environment. [16]

Therefore, the process of legislative harmonisation continued in 2005, too. At the proposal of the Ministry for European integration, the Government adopted up The Priority Legislative Programmes (at law level) for the Accession to the European Union, for the first and second semesters of 2005. The two programmes contained implementing and legislative measures resulting from commitments undertaken by Romania in the accession process.

The year 2006 was crucial for Romania's accession to the EU, whereas the Commission has closely monitored the fulfilment of commitments in the process of negotiation and preparation for accession, an essential aspect being the further harmonization of Romanian legislation and adoption of laws fully compatible with the Community acquis.

Consequently, the Romanian authorities have taken measures to ensure a fluid and efficient legislative process and, at the same time, to allow meeting deadlines for completion of the measures undertaken in preparation for Romania accession to EU and to avoid registration of delays. In this respect, were finalized The Priority Legislative Programmes (at law level) for the Accession to the European Union, for the first and second semesters of 2006.

[15] Ibid.

[16] Presidency Conclusions of the Brussels European Council (16/17 December 2004) - http://www.consilium.europa.eu, accessed on 23 January 2015.

In its report of September 2006, the Commission stated that Bulgaria and Romania have made further progress to complete their preparations for membership and they have reached a high degree of alignment. However, the Commission also identifies a number of areas of continuing concern and areas where will initiate appropriate measures to ensure the proper functioning of the EU, unless the countries take immediate corrective action.

In the case of Romania, the Commission showed that our country have made far-reaching efforts to adapt their legislation and administration to the laws and rules of the European Union. However, the Commission stressed that further efforts were needed in several areas, such as social policies and employment including public health, genetically modified organisms, motor insurance, capital requirements for credit institutions and investment firms, money laundering and the fight against fraud and corruption, financial management and control of future structural funds and animal diseases. Taking into account the progress made by Romania with regard to the political, economic and acquis criteria, the Commission considered that Romania has demonstrated their capacity to apply EU principles and legislation and will be able to assume the rights and obligations of membership of the European Union from 1 January 2007. [17]

4.2. The efforts of Romania to fulfil the commitments undertaken by the Accession Treaty

As a result of the progress made, on 1 January 2007, Romania became a member state of the European Union, this quality involving not only rights but also obligations. Thus, Romania's accession to the European Union has meant an integration to a space of well-defined rules, a failure in applying these rules can generate corrective measures such as: safeguard measures, financial corrections of EU funds, competition policy measures and infringement procedures.[18]

Along with these measures, the Treaty of Accession of Romania to the European Union includes three provisions which allow the Union to remedy difficulties encountered as a result of accession: a general economic safeguard clause; a specific internal market safeguard clause; and a specific justice and home affairs safeguard clause[19]. In addition to these safeguard clauses, there was a clause according to that the Council may, acting unanimously on the basis of a Commission recommendation, decide that the date of accession of that State is postponed by one year to 1 January 2008.[20]

Pursuant to the provisions of the Act of Accession, whilst noting the considerable efforts to complete Romania's preparations for membership, the European Commission has identified some remaining issues, in particular in the accountability and efficiency of the judicial system and law enforcement bodies, reason which warrant the establishment of a mechanism for cooperation and verification of the progress of Romania to address specific benchmarks in the areas of judicial reform and the fight against corruption. As a consequence, by Commission Decision 2006/928/EC of 13 December 2006 has been established a mechanism for cooperation and verification of progress in Romania to address specific benchmarks in the areas of judicial reform and the fight against corruption[21].

The Co-operation and Verification Mechanism (CVM) and specific benchmarks[22] was put in place to improve the functioning of the legislative, administrative and judicial system and to address serious deficiencies in fighting corruption. The purpose of the Cooperation and Verification Mechanism is to ensure that measures are taken to provide assurance to Romanians and to the other Member States that administrative and judicial decisions, legislation and practices in Romania are in line with the rest of the EU.

Based on inputs from the Romanian authorities, complemented by expert missions, the European Commission presented a series of evaluation reports in which are presented a summary and detailed assessment of how far Romania has come in meeting the benchmarks set out in the CVM.

According to the latest report presented by European Commission at 29 January 2015, since then CVM reports have charted the progress made by Romania and have sought to help focus the efforts of the Romanian authorities through specific recommendations. The CVM has played an important role in the consolidation of the rule of law in Romania as a key facet of European integration. Monitoring and cooperating with the work of the Romanian authorities to promote reform has had a concrete impact on the pace and scale of reform. The 2014 CVM report noted progress in many areas, and highlighted the track record of the key anti-corruption institutions as an important step towards demonstrating sustainability.

[17] Communication from the Commission - Monitoring report on the state of preparedness for EU membership of Bulgaria and Romania, COM (2006) 549 final, Brussels, 26.9.2006.

[18] Dan Vătăman, *History of the European Union*, Bucharest, "Pro Universitaria" Publishing House, 2011, p. 110.

[19] Articles 36, 37 and 38 of the Act concerning the conditions of accession of the Republic of Bulgaria and Romania and the adjustments to the treaties on which the European Union is founded - OJ L 157/203 of 21.6.2005.

[20] Ibid, Article 39.

[21] OJ L 354 of 14.12.2006, pp. 56–57.

[22] The four benchmarks are summarized in the Annex of Decision 2006/928/EC, as follows: a) Ensure a more transparent, and efficient judicial process notably by enhancing the capacity and accountability of the Superior Council of Magistracy - Report and monitor the impact of the new civil and penal procedures codes; b) Establish, as foreseen, an integrity agency with responsibilities for verifying assets, incompatibilities and potential conflicts of interest, and for issuing mandatory decisions on the basis of which dissuasive sanctions can be taken; c) Building on progress already made, continue to conduct professional, non-partisan investigations into allegations of high-level corruption; d) Take further measures to prevent and fight against corruption, in particular within the local government.

At the same time, it noted that political attacks on the fundamentals of reform showed that there was no consensus to pursue the objectives of the CVM. [23]

As can be seen, although the reports on the progress made by Romania in the CVM reflects the sustainability and irreversibility of the reforms implemented, to eight years after accession these reports still contain recommendations on matters related to the judicial independence, judicial reform, integrity and fight against corruption.

If we refer to the positive aspects of reform should be noted that from the date of accession to the European Union, Romania has pursued an ambitious legislative program comprising the new legal Codes, action which had a special importance to the modernisation of the Romanian judicial system. However, the challenges facing the judicial system are still numerous, these issues were approached in the "Development Strategy of the judicial system 2015-2020"[24], document which sets the directions of action, strategic and specific objectives to achieve a modern judicial system.

In my opinion, following analysis of planned measures to be taken during the period 2015 - 2020, it is clear that Romanian authorities want to eliminate the concerns expressed by the European Commission relating to the judicial independence, judicial reform, integrity and fight against corruption, and through the adopted measures pursuing the institutional and legislative strengthening of judicial system.

4.3. Provisions of the Constitution and of the new legal Codes concerning the application of EU law in the Romanian law

With regard the relationship between international law and national law, the Romanian Constitution provides that "the Romanian State pledges to fulfil as such and in good faith its obligations as deriving from the treaties it is a party to". At the same time, the Constitution states that "if a treaty Romania is to become a party to comprise provisions contrary to the Constitution, its ratification shall only take place after the revision of the Constitution".[25]

In addition to these provisions, the Constitution sets the priority of international treaties on human rights in this regard showing that "constitutional provisions concerning the citizens' rights and liberties shall be interpreted and enforced in conformity with the Universal Declaration of Human Rights, with the convenants and other treaties Romania is a party to". More than that, "where any inconsistencies exist between the covenants and treaties on the fundamental human rights Romania is a party to, and the national laws, the international regulations shall take precedence, unless the Constitution or national laws comprise more favourable provisions".[26]

In addition to recognizing the priority of international treaties to which Romania is a party, the Constitution clarifies the relationship between national law and EU law. Thus, in connection with the integration of Romania into the European Union, the Constitution establishes that "the provisions of the constituent treaties of the European Union, as well as the other mandatory community regulations shall take precedence over the opposite provisions of the national laws, in compliance with the provisions of the accession act, these provisions shall also apply accordingly for the accession to the acts revising the constituent treaties of the European Union".[27]

A normal question arises, respectively if the term "national laws" includes constitutional provisions or, in other words, to what extent the priority of the EU law applies over the constitutional norms, especially the Romanian fundamental law enshrines the principle of supremacy of the Constitution, according to that "in Romania, the observance of the Constitution, its supremacy and the laws shall be mandatory".[28]

On this subject there are several currents of thought, one claiming supremacy of the Constitution, inclusive over to European Union law, and another which claiming priority of consistent and unconditional application of all European Union law rules over all national law rules, inclusive over to constitutional provisions.

In its jurisprudence, the Romanian Constitutional Court has not yet examined the relationship between Romanian constitutional law and EU law. But, as shown in a concurrent opinion formulated to the Decision no. 1656 of Constitutional Court, "EU legal order and internal constitutional order are complementary sets of legal rules, and the relationship between them is not based on a hierarchy of norms, so the concept of ‹‹supremacy›› is replaced by the concept of ‹‹priority››. Moreover, nor the Court of Justice of the European Union in its case does not use the concept of a ‹‹lower or upper›› legal order".[29]

The principle of EU law priority was enshrined in the new Romanian Civil Code, entered into force on 1 October 2011, which states that "in matters governed by Code, the rules of EU law shall apply with priority,

[23] Report from the Commission to the European Parliament and the Council on Progress in Romania under the Co-operation and Verification Mechanism, COM (2015) 35 final - http://ec.europa.eu, accessed on 30 January 2015.

[24] Development Strategy of the judicial system was adopted by Government Decision no. 1155/2014, published in the Official Journal of Romania, Part I, no. 19/12 January 2015.

[25] Article 11 of Constitution of Romania, published in Official Journal of Romania, Part I, No. 758 of 29 October 2003.

[26] Ibid, Article 20.

[27] Ibid, Article 148.

[28] Ibid, Article 1(5).

[29] Concurrent opinion formulated by Judge Iulia Motoc to the Decision no. 1656 of Constitutional Court of 28 December 2010, published in the Official Journal of Romania, Part I, no. 79/31 January 2011.

regardless of the quality or status of the parties"[30]. Thus, the consecration of EU law priority in relation with national law encourages subjects of law (individuals and legal entities) to invoke European rules before national and European courts, when they consider that their rights have been violated.

In correlation with these provisions are those contained in Article 4 of the New Civil Code, according to that "where any inconsistencies exist between the covenants and treaties on the fundamental human rights Romania is a party to, and the national laws, the international regulations shall take precedence, unless the Constitution or national laws comprise more favourable provisions".[31]

These provisions are relevant in the context of the major legislative changes at the European level regarding human rights, and here I refer to the fact that the Charter of Fundamental Rights of the European Union has become legally binding on the EU with the entry into force of the Lisbon Treaty[32]. More than that, by the Lisbon Treaty was established that "fundamental rights, as guaranteed by the European Convention for the Protection of Human Rights and Fundamental Freedoms and as they result from the constitutional traditions common to the Member States, shall constitute general principles of the Union's law", reason for that "the Union shall accede to the European Convention for the Protection of Human Rights and Fundamental Freedoms"[33].

EU law priority was also enshrined in in the new Romanian Civil Procedure Code, which stated that "the rules of EU law shall apply with priority, regardless of the quality or status of the parties"[34]. Also, the Civil Procedure Code provides that "in matters governed by Code, the provisions concerning the citizens' rights and liberties shall be interpreted and enforced in conformity with the Universal Declaration of Human Rights, with the convenants and other treaties Romania is a party to". In addition, the Code stated that "where any inconsistencies exist between the covenants and treaties on the fundamental human rights Romania is a party to, and this Code, the international regulations shall take precedence, unless the Code comprises more favourable provisions"[35].

The principle of application with priority of international treaties and EU law was also consecrated by new Criminal Code and new Criminal Procedure Code. Thus, in case of application of criminal law in space, the Criminal Code states that these "shall apply unless otherwise provided by an international treaty to which Romania is a party"[36].

Also, setting out the principles and limits of the criminal procedural law, the new Criminal Procedure Code provides that "the rules of criminal procedure are aimed at ensuring the effective exercise of judicial functions of guaranteeing the rights of the parties and other participants in criminal proceedings such a manner that to respected the provisions of Constitution, the constituent treaties of the European Union, the other EU regulations on criminal procedure and the covenants and treaties on fundamental human rights to which Romania is a party"[37].

5. Conclusions

Based on the legal provisions contained in the new codes, the Romanian juridical doctrine[38] considered that the provisions of international convenants, the EU law and other rules contained in international treaties signed by Romania are integrated in national law, with mention that through these categories of rules should understand both "primary" rules and "derived" rules from the decisions of the two European courts, European Court of Human Rights[39] and Court of Justice of the European Union[40].

Taking into account the views expressed in the doctrine and based on the results of research activity, I believe that application with priority of international treaties and EU law in national law is a fundamental requirement in the context of Romania's integration into the Euro-Atlantic structures.

[32] According to Article 6(1) of TEU, "the Union recognises the rights, freedoms and principles set out in the Charter of Fundamental Rights of the European Union of 7 December 2000, as adapted at Strasbourg, on 12 December 2007, which shall have the same legal value as the Treaties".

[33] Article 6(2) of TEU.

[34] Article 4 of New Civil Procedure Code – Law 134/2010, republished in the Official Journal of Romania, Part I, no. 545/3 August 2011, in the basis of Article 80 of Law 76/2012.

[35] Ibid, Article 3.

[36] Article 12 of New Criminal Code - Law no. 286/2009, published in the Official Journal of Romania, Part I, no. 510/24 July 2009, as amended and supplemented.

[37] Article 1 of New Criminal Procedure Code - Law no. 135/2010, published in the Official Journal of Romania, Part I, no. 486/15 July 2010.

[38] Ion Deleanu, Valentin Mitea, Sergiu Deleanu, *Treaty of Civil Procedure. Revised and supplemented edition*, Bucharest, "Universul Juridic" Publishing House, 2013, p. 58.

[39] According to Article 46 (1) of Convention for the Protection of Human Rights and Fundamental Freedoms, the High Contracting Parties undertake to abide by the final judgment of the Court in any case to which they are parties, thus being established the binding force of the Court judgements.

[40] Under Article 51 of Charter of Fundamental Rights of the European Union, the provisions of the Charter are addressed to the institutions, bodies, offices and agencies of the Union with due regard for the principle of subsidiarity and to the Member States only when they are implementing Union law. They shall therefore respect the rights, observe the principles and promote the application thereof in accordance with their respective powers and respecting the limits of the powers of the Union as conferred on it in the Treaties.

Regarding the relationship between European Union law and Romanian law, I am convinced that in the context of Romania's status as a Member State of European Union, any recognition of the national legislation priority would be a breach of assumed obligations and also a serious violation of the provisions of the European Treaties.

At the same time, taking into account the provisions of the European Treaties consolidated through the reform realised by Lisbon Treaty, I express conviction that entire national legislation, including constitutional provisions, must be harmonized with European law. Thus, in accordance with the normative evolutions at European level, I think that at the future revision of the Romanian Constitution must be introduce a new paragraph in Article 5 (Citizenship) which should reflect the provisions of Article 2 (1) TFEU, according to that: "Every person holding the nationality of a Member State shall be a citizen of the Union. Citizenship of the Union shall be additional to and not replace national citizenship". Also, should be completed Article 17 of Romanian Constitution in light of the provisions of Article 2 (2) TFEU, pursuant to which the European citizens have the right "to enjoy, in the territory of a third country in which the Member State of which they are nationals is not represented, the protection of the diplomatic and consular authorities of any Member State on the same conditions as the nationals of that State".

Moreover, taking into account the progress made by Romania in the European integration process, I am convinced that for the future revision of the Romanian Constitution must be taken into account the reform carried out by Lisbon Treaty as well as the judgments of the Court of Justice of the European Union concerning the consecration of the direct effect and priority of EU law. Thus, is urgently required that Article 148 of the Romanian Constitution to be modelled in accordance with Article 5 of the New Civil Code and Article 4 of the New Civil Procedure Code, which similarly provide that "the rules of European Union law shall be applied with priority, regardless of the quality or status of the parties".

In view of the above mentioned information, I am confident that this study represents a scientific support that allows future developments of research in the field of European Union law, thereby enabling interested parties to understand and apply the provisions of the treaties on which the European Union are founded and also the acts adopted by Union institutions in application of the treaties, allowing them to correlate theoretical knowledge with the ability to apply them in practice.

APPLYING INTERNATIONAL HUMANITARIAN LAW TO CYBER-ATTACKS

Dan-Iulian VOITAŞEC[*]

Abstract

Technology plays an important role in everyday life. Technological advancement can be found in every field of government including the military. Because of this, new means and methods of conducting hostilities have emerged. Cyber warfare starts to represent the latest challenge at an international level. States and non-state actors have started to implement new security policies and new defences against cyber-attacks but also have embraced using cyber-attacks as a method of conducting hostilities. The question that has to be answered regarding the use of cyber-attacks is what is the legal regime that governs such attacks and if IHL can apply to cyber warfare?

Keywords: *jus ad bellum, jus in bello, cyber-attacks, cyber-warfare, Tallinn Manual.*

1. Introduction

Our world is changing at an increasing rate and this change is caused, mostly, by the rapid advancement of technology. This accelerated technological evolution has led to the development of new means and methods of conducting hostilities. Cyber-attacks represent the latest threat and states and international organizations have begun to develop new defence strategies and new methods to combat these threats. If states and non-state actors resort to using cyber-attacks what is the threshold that these attacks have to reach to trigger a response under article 51 of the UN Charter from the victim state? Also, can a computer attack or a series of computer network attacks trigger the beginning of an armed conflict? International Humanitarian Law (IHL) is a set of rules which seek, for humanitarian reasons, to limit the effects of armed conflict. It protects persons who are not or are no longer participating in the hostilities and restricts the means and methods of warfare[1]. IHL is a branch of international law and applies only to armed conflict. The question that this article wants to answer is does IHL apply to cyber-attacks? At this moment there is legislation, at a national level, that deals with cybercrimes (cracking, copyright infringement, child pornography, ID theft, fraud, etc.) but there is no international treaty that mentions the applicability of IHL to computer network attacks during situations of armed conflict. As a response to this situation in 2009, the NATO Cooperative Cyber Defence Centre of Excellence[2], invited an independent "International Group of Experts" to produce a manual on the law governing cyber warfare. In April 2013, The Tallinn Manual on the International Law Applicable to Cyber Warfare was published. Even though this is not a binding document it represents a first effort to comprehensively and authoritatively analyse this subject.

2. Content

Conflict is governed by two distinct branches of law, *jus ad bellum* which governs the situations in which states can resort to force as an instrument of their national policy and *jus in bello* which governs the conduct of hostilities. The latter applies only in situations of armed conflict. The term *attack* can be found in both branches of law but its meaning differs.[3] Due to this situation there must be a clear distinction between cyber-attack governed by the norms of jus ad bellum and those governed by jus in bello.

At this moment no definition of cyber-attacks is recognised at an international level. NATO Glossary of Terms and Definitions defines computer network attacks (CNA) as "action taken to disrupt, deny, degrade or destroy information resident in a computer and/or computer network, or the computer and/or computer network itself[4]". The Glossary also states that a CNA is a type of cyber-attack.

In the Tallinn Manual, the term cyber operations is used to *define employment of cyber capabilities with the primary purpose of achieving objectives in or by the use of cyberspace*[5]. Cyber operations are not

limited to cyber-attacks. While a cyber-attack is defined as a *cyber operation, whether offensive or defensive, that is reasonably expected to cause injury or death to persons or damage or destruction to objects*[6]. In this case, the term cyber-attacks applies to situations of armed conflict. In this article the terms cyber operations and cyber-attacks will be understood as defined in the Tallinn Manual.

Not all cyber-operation and cyber-attacks are unlawful. There is a threshold that cyber-operations must reach to be considered use of force. Rule 10 of the Tallinn Manual states that "a cyber operation that constitutes a threat or use of force against the territorial integrity or political independence of any State, or that is in any other manner inconsistent with the purposes of the United Nations, is unlawful[7]." This rule references Article 2(4) of the UN Charter which states that "All Members shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any State, or in any other manner inconsistent with the Purposes of the United Nations." This article is now regarded as a principle of customary international law, thus is binding for all states[8]. A cyber-operation will be considered unlawful when it constitutes a threat or use of force. There are two exceptions from the prohibition set out in art 2(4) of the UN Charter – uses of force authorized by the Security Council under Chapter VII and self-defence in accordance with Article 51 of the UN Charter. The prohibition does not apply to non-state actors, organized groups, individuals and terrorist groups if the actions of the said groups cannot be attributed to a state.

According to Rule 11 of the Tallinn Manual "A cyber operation constitutes a use of force when its scale and effects are comparable to non-cyber operations rising to the level of a use of force."[9] To understand what criteria a cyber operation has to meet to be considered use of force we must look at non-cyber operation that reach the threshold of use of force.

The UN Charter does not provide a definition for the term *use of force* and does not provide the necessary criteria to determine the situations in which actions of a state may be regarded as uses of force. During the 1945 San Francisco Conference, Brazil wanted to include economic coercion as a use of force but the proposition was rejected.[10] Due to this fact cyber-operations aimed at economic coercion will not be considered use of force. The lack of criteria by which to determine when an act could be considered use of force, the International Group of Experts took into consideration the decision of the International Court of Justice (ICJ) in the Nicaragua Judgement. The ICJ stated that the "scale and effects" are to be considered when determining whether a certain action amounts to use of force. The International Group of Experts agreed that "scale and effects" are qualitative and quantitative factors that would apply when determining if a cyber operation qualifies as a use of force. ICJ distinguished between the most grave forms of use of force (armed attack) and other less grave forms[11]. All armed attacks are uses of force and all cyber operations that reach the threshold of armed attack and could be attributed to a state will be considered uses of force. This distinction is important given the fact that an action that amounts to use of force is a violation of Article 2(4) of the UN Charter while an action reaching the threshold of armed attack could trigger an armed response from the victim state under Article 51 of the UN Charter.

Not all cyber operations are uses of force. Because the question of what actions amount to use of force remained unanswered, the International Group of Experts created a series of factors to help states in determining if a certain action reaches the threshold of use of force. These factors are not formal legal criteria[12]:

a) *Severity* – an action, including a cyber operation that causes damage, destruction, injury or loss of life is more likely to be regarded as a use of force.

b) *Immediacy* – there is a higher probability that an operation that produces immediate effects will be considered a use of force.

c) *Directness* – in the case of armed actions, cause and effect are closely related. Cyber operations in which the cause and effects are clearly linked are more likely to be characterized as use of force.

d) *Invasiveness* – refers to the degree to which a cyber operation manages to intrude the computer systems of a State. The higher the security levels of a computer system, the greater the invasiveness of the action. This rule shall not apply to cases of cyber espionage; it will only apply to actions that reach the threshold of use of force.

e) *Measurability of effects* – This factor derives from the greater willingness of States to characterize actions as a use of force when the consequences are apparent.[13]

f) *Military Character* – a link between a cyber operation and a military operation increases the likelihood of being characterized as a use of force

g) *State involvement* - The clearer and closer a nexus between a State and cyber operations, the more

[12] Tallinn Manual – p. 49.
[13] Idem p. 51.

likely it is that other States will characterize them as uses of force by that State[14]

h) *Presumptive legality* - International law is generally prohibitive in nature. Acts that are not forbidden are permitted. In the absence of a treaty or a customary rule an act is presumed to be lawful. Thus actions that are not expressly prohibited by a treaty or a customary rule shall not be interpreted by states as use of force.

The conditions in which a state, that is the target of a cyber operation that reaches the threshold of armed attack, can exercise the right of self-defence are defined in Rule 13 of the Tallinn Manual: „A State that is the target of a cyber operation that rises to the level of an armed attack may exercise its inherent right of self-defence. Whether a cyber operation constitutes an armed attack depends on its scale and effects."

The right of self-defence is reflected in Article 51 of the UN Charter: "Nothing in the present Charter shall impair the inherent right of individual or collective self-defence if an armed attack occurs against a Member of the United Nations, until the Security Council has taken measures necessary to maintain international peace and security. Measures taken by Members in the exercise of this right of self-defence shall be immediately reported to the Security Council and shall not in any way affect the authority and responsibility of the Security Council under the present Charter to take at any time such action as it deems necessary in order to maintain or restore international peace and security."

ICJ, in the Nicaragua Judgement[15], confirmed the customary status of the right of self-defence. The Court held that Article 51 of the UN Charter can only apply if there is a natural[16] or inherent right of States to self-defence and this right has a customary nature. Also, the ICJ noted that a State can resort to armed force in accordance with the right of self-defence only if it was the target of an armed attack[17]. As was the case of actions that reach the threshold of use of force, actions that constitute armed attacks are not defined in any international document. There is a direct link between armed attack and use of force. All actions that reach the threshold of armed attack will be considered uses of force. However, not all uses of force will be qualified as armed attacks. This distinction was made by the ICJ in the Nicaragua and Oil Rigs case.

In the case of cyber operations the International Group of Experts concluded that certain action could reach the threshold of armed attack. The Group of Experts' opinion is based on the ICJ's view in the Legality of Nuclear Weapons Advisory Opinion "that the choice of means of attack is immaterial to the issue of whether an operation qualifies as an armed attack[18]". To reach the threshold of an armed attack, a cyber operation has to cause damage, destruction, injury or loss of life. Cyber espionage operations, information theft and cyber operation causing short term disruption of non-essential services will not be qualified as armed attacks. If a cyber operation reaches the threshold of armed attack then the victim state can exercises its inherent right of self-defence. The International Group of Experts believes that a state can exercise its right of self-defence if it is the victim of a cyber-operation that can be qualified as an armed attack, launched by a rebel or terrorist group. This view is based on the response of the international community to the situation that occurred on the territory of the United States of America on September 11, 2001. The action launched by the terrorist organization Al Qaeda was characterised as an armed attack triggering the right of self-defence of the United States.

International Humanitarian law[19] applies to all situations of armed conflict regardless of a formal declaration of war and irrespective of whether the parties involved recognise the state of armed conflict. None of the rules that form IHL explicitly deal with cyber operations. For situations of international conflict, common Article 2 of the 1949 Geneva Conventions states that the provisions of the Conventions shall apply in full "to all cases of declared war or of any other armed conflict which may arise between two or more of the High Contracting Parties, even if the state of war is not recognized by one of them" and "to all cases of partial or total occupation of the territory of a High Contracting Party, even if the said occupation meets with no armed resistance." Additional Protocol I to the Conventions states that its provisions shall apply to all situations stated in common Article 2 and to situations of "armed conflicts in which peoples are fighting against colonial domination and alien occupation and against racist regimes in the exercise of their right of self-determination". Common Article 3 to the Geneva Conventions deals with situations of non-international armed conflict stating that the hostilities take place on the territory of one of the high contracting power. Additional Protocol II (AP II) to the Geneva Conventions, in Article 1 includes additional rules for application such as control of a territory by an organized armed group, under responsible command that can carry sustained and concerted military operations. AP II differentiates between situations of internal disturbance and tensions such as riots, isolated and sporadic acts of violence and armed conflicts. The

[17] ICJ - Case Concerning Armed Activities on the Territory of The Congo (2005): "Article 51 of the Charter may justify a use of force in self-defence only within the strict confines there laid down. It does not allow the use of force by a State to protect perceived security interests beyond these parameters. Other means are available to a concerned State, including, in particular, recourse to the Security Council.
[18] Tallinn Manual – p. 54.
[19] Laws of Armed Conflict (LOAC) in some Manuals.

term armed conflict was not defined in the Geneva Conventions or in the Additional Protocols. A definition of armed conflict was given by the Appeals Chamber of the International Criminal Tribunal for the Former Yugoslavia in the Tadic case: "An armed conflict exists wherever there is resort to armed force between states or protracted armed violence between government authorities and organised armed groups or between such groups with a state. International humanitarian law applies from the initiation of such armed conflicts and extends beyond the cessation of hostilities until a general conclusion of peace is reached; or, in the case of internal conflicts, a peaceful settlement is achieved. Until that moment, international humanitarian law continues to apply in the whole territory of the warring States or, in the case of internal conflicts, the whole territory under the control of a party, whether or not actual combat takes place there.[20]" According to the definition given in the Tadic case, resort to armed force is a requirement to be in a situation of international or non-international armed conflict. Will IHL apply if a cyber operation rises to the threshold of armed force? According to Rule 20 of the Tallinn Manual "cyber operations executed in the context of an armed conflict are subject to the law of armed conflict." The rule states that IHL will apply to cyber operations executed both in international and non-international armed conflicts. In the context of cyber operations launched against Estonia in 2007, IHL does not apply because the situation did not rise to the level of an armed conflict. The only situation were IHL could be applied to cyber operations was the 2008 conflict between Russia and Georgia but those operations could not be attributed to any party to the conflict. The International Group of Experts agreed that there must be a nexus between the cyber operation and the armed conflict for IHL to apply to the operation in question but there were two different opinions regarding the nature of that nexus. According to one view, IHL governs any cyber activity conducted by the party to the armed conflict against its opponent while the second view noted that the cyber operations must be undertaken in furtherance of the hostilities[21].

Given the way that Rule 20 was formulated one could say that a cyber operation could not be considered the start of an armed conflict. If we look closely at Rule 22[22] of the Manual that defines: "*An international armed conflict exists whenever there are hostilities, which may include or be limited to cyber operations, occurring between two or more States*" and Rule 23[23] which states that "*a non-international armed conflict exists whenever there is protracted armed violence, which may include or be limited to cyber operations, occurring between governmental armed forces and the forces of one or more armed groups, or between such groups. The confrontation must reach a minimum level of intensity and the parties involved in the conflict must show a minimum degree of organisation*" we can see that the International Group of Experts addressed the situations in which armed conflicts of international or non-international nature could be limited only to cyber operations, if said operations reached the required threshold. It is safe to note that a cyber operation launched by a state or a rebel group that causes physical damage to life or property could be considered the start of an armed conflict if all the necessary conditions are met.

Even though no specific instrument of IHL deals directly with cyber operations, the Martens Clause could be considered. The Clause can be found in Hague Convention IV[24], the 1949 Geneva Conventions[25] and Additional Protocol I[26]. The text in the Hague Convention IV states that: "Until a more complete code of the laws of war has been issued, the High Contracting Parties deem it expedient to declare that, in cases not included in the Regulations adopted by them, the inhabitants and the belligerents remain under the protection and the rule of the principles of the law of nations, as they result from the usages established among civilized peoples, from the laws of humanity, and the dictates of the public conscience." The Martens Clause reflects customary international law and ensures that cyber operations launched during an armed conflict are not conducted in a legal vacuum. Opinions stating that IHL should not apply to cyber operations could be dismissed by citing, in addition to the Martens Clause, Article 36 of Additional Protocol I: "In the study, development, acquisition or adoption of a new weapon, means or method of warfare, a High Contracting Party is under an obligation to determine whether its employment would, in some or all circumstances, be prohibited by this Protocol or by any other rule of international law applicable to the High Contracting Party."

It is important to remember that the role of IHL is to limit the effects of armed conflict not to prohibit the use of armed force. Jus ad bellum is the body of

[20] The Prosecutor v. Dusko Tadic – International Tribunal for the Former Yugoslavia, para. 70 - http://www.icty.org/x/cases/tadic/acdec/en/51002.htm Accessed on 2.03.2015.

[21] Tallinn Manual – p. 69, Rule 22, para.5: "*Consider a cyber operation conducted by State A's Ministry of Trade against a private corporation in enemy State B in order to acquire commercial secrets during an armed conflict. According to the first view, the law of armed conflict would govern that operation because it is being conducted by a party to the armed conflict against a corporation of the enemy State. Those Experts adopting the second view considered that the law of armed conflict does not apply because the link between the activity and the hostilities is insufficient."*

[24] Hague Convention IV, preamble.

[25] Geneva Convention I - art.63; Geneva Convention II, art. 62; Geneva Convention III, art. 14; Geneva Convention IV, art. 158.

[26] Additional Protocol I to the Geneva Conventions, art.1 para. 2.

law that limits the situations in which states may resort to armed force. In the opinion of Professor Yoram Dinstein[27] the usage of International Humanitarian Law as a term designated to incorporate both the Hague Law and Geneva Law, could cause the false impression that the role of IHL is truly humanitarian in nature. The use of armed attacks is permitted under IHL if the fundamental principles of this branch of law are respected. As with conventional attacks, cyber-operations are permitted during situations of armed conflict if the principles of military necessity, proportionality and the humanitarian considerations are respected. Application of IHL rules to cyber operations serves to limit the effects of the operations on the civilian population.

3. Conclusions

International Humanitarian Law applies to cyber operations launched both during situations of international armed conflict and non-international armed conflict. Fortunately, until the present time, no cyber operations reached the threshold necessary to be considered an armed attack but that moment may come sooner than imagined and the international community must be prepared to respond in a timely manner. The horrors of the Second World War should never be repeated and states and international organizations should pay more attention to emerging means and methods of warfare and, if that is the case, create the necessary legislation to protect the civilian population.

HARMONIZATION OF NATIONAL PROCEDURAL PROVISIONS CONCERNING THE ENFORCEMENT OF INTELLECTUAL PROPERTY RIGHTS

Paul-George BUTA*

Abstract

This short paper looks at provisions concerning very specific aspects provided for at international, regional and national level and analyzes the level of harmonization between such. Given the importance of provisional measures (and especially of preliminary injunctions) for the protection of intellectual property rights, the provisions concerning this subject were the main focus of our analysis. Found in TRIPS, the EU IP Enforcement Directive and national Romanian statutory provisions, we've concluded that these are not directly applicable in disputes in Romanian courts and were therefore, as a result of multiple international obligations, supposed to be harmonized. We've looked at different aspects in parallel with the development of implementation mechanisms and found that, despite the aforementioned obligations, not even the Directive is fully TRIPS compliant, let alone the Romanian national statutory provisions. We've therefore concluded that, even if common sense would dictate that protection at more levels would equal more protection this is not necessarily true, given the fact that multiple harmonization requirements create more opportunity for divergent implementation results – influenced by either benign factors (different national legal traditions, different interpretations) or malign (lack of perspective and/or understanding, rush to implementation).

Keywords: *harmonization, intellectual property rights, provisional measures, preliminary injunctions, TRIPS, IP Enforcement Directive, procedures.*

1. Introduction

It is generally accepted that intellectual property is only protectable by legal means which makes the legal protection of intellectual property to be regarded as more valuable than its physical embodiment[1].

Without going into the details of it, we could shorthand legal protection in this case to mean the possibility of asserting a claim related to intellectual property rights against someone with a correlative duty to act (or abstain from certain acts)[2]. Therefore enforcement of intellectual property rights goes to the core of their value and is intrinsically linked with the very existence of such value.

There is no surprise therefore that provisions concerning the enforcement of intellectual property rights were inserted in acts existing at national, regional and international level.

Such provisions deal with both material and procedural aspects of the enforcement of intellectual property rights. Since for the purposes of comparison aspects of material law require a more comprehensive analysis (as they require, among other factors, that particularities of given legal systems be taken into account), for present purposes we will limit ourselves to provisions dealing with procedural aspects.

Of the procedural aspects dealt with at all levels, the ones dealing with provisional measures[3] (and especially preliminary injunctions) would appear to us as being the most salient in terms of the need of harmonization. We base this mainly (but not exclusively) on the following assumptions: (1) preliminary injunctions are the most effective tool for right-holders to maintain exclusivity, which in turn is the essence of intellectual property rights; and (2) preliminary injunctions are the first enforcement mechanism of choice since they provide relief on an urgent basis which in turn requires that foreign right-holders should be able to obtain such relief without engaging significant costs and time for researching local legal particularities in order to obtain such relief (which would no longer be reasonably fast and efficient, let alone effective).

For present purposes therefore we will focus on the procedural provisions dealing with preliminary injunctions.

The present article looks at the influences that such provisions have one on another in a unidirectional perspective, downwards from the international level in order to verify whether there is an obligation for harmonization and whether the provisions are indeed harmonized (and if so, to what extent).

We will first set out the provisions as found at the three relevant levels, analyze whether an obligation for harmonization exists in respect of the instruments where such provisions were found and, finally, check

Dresdner Bank AG* (C-261/90), decision of 26 March 1992 in ECR I-2149, par. 34 as "measures which, in matters within the scope of the Convention, are intended to preserve a factual or legal situation so as to safeguard rights the recognition of which is sought elsewhere from the court having jurisdiction as to the substance of the matter"

whether the provisions are harmonized (and, if so, to what extent) or not.

2. The provisions at the international level

At the international level we can note the reluctance to include procedural provisions in the WIPO-administered treaties though we can find general obligations imposed to this effect in article 2 par. (1) of the Paris Convention for the Protection of Industrial Property and in art. 15 of the Berne Convention for the Protection of Literary and Artistic Works.

More specific reference is to be found in articles 14 and 23 of the WIPO Copyright Treaty and the WIPO Performances and Phonograms Treaty, respectively. Paragraph (2) of each of those articles indicates that „Contracting Parties shall ensure that enforcement procedures are available under their law so as to permit effective action against any act of infringement of rights covered by this Treaty, including expeditious remedies to prevent infringements and remedies which constitute a deterrent to further infringements".

The most detailed and complex provisions concerning preliminary injunctions for infringement of intellectual property rights are to be found however in TRIPS.

Section 3 of the third part of the treaty deals solely with provisional measures. Although the section only comprises one single article (art. 50), it is both comprehensive and self-sufficient. A proper analysis however would require that attention be also paid to the provisions in Section 1 of the same part, entitled „General Obligations".

In that sense, provisions under paragraphs 1 and 2 of art. 41 would also apply in respect of preliminary injunctions. These require that members of WTO ensure that enforcement procedures as specified in TRIPS: (1) are available; (2) to permit effective action against infringement rights covered by TRIPS; (3) are to include: (a) „expeditious remedies to prevent infringements" and (b) „remedies which constitute a deterrent to further infringements"; (4) are not applied so as to create barriers to legitimate trade; (5) provide for safeguards against their abuse; (6) are fair and equitable; (7) are not unnecessarily complicated or costly, or entail unreasonable time-limits or unwarranted delays.

Art. 50, however, contains the provisions most relevant to the scope of this article.

Paragraph (1) demands that judicial authorities have the power to „order prompt and effective provisional measures: (a) to prevent an infringement of any intellectual property right from occurring, and in particular to prevent the entry into the channels of commerce in their jurisdiction of goods, including imported goods immediately after customs clearance; (b) to preserve relevant evidence in regard to the alleged infringement".

The second and fourth paragraphs deal with *ex parte* procedures and allow enforcement provisional measures to be taken *ex parte* „where appropriate, in particular where any delay is likely to cause irreparable harm to the right holder, or where there is a demonstrable risk of evidence being destroyed" but with the express requirement that „the parties affected shall be given notice, without delay after the execution of the measures at the latest" and that „a review, including a right to be heard, shall take place upon request of the defendant" to decide, in a reasonable period of time, whether the provisional measures are to be modified, revoked or confirmed.

Paragraphs 3 and 5 deal with the standard of proof in such claims (judicial authorities are to be able to demand that the applicant provide „any reasonably available evidence in order to satisfy […] with a sufficient degree of certainty that the applicant is the right holder and that the applicant's right is being infringed or that such infringement is imminent, and to order the applicant to provide a security or equivalent assurance sufficient to protect the defendant and to prevent abuse" as well as "information necessary for the identification of the goods concerned by the authority that will execute the provisional measures".

As further safeguards against abuse par. (6) provides that provisional measures are to cease or be revoked if a claim on the merits is not filed within "a reasonable period […] not to exceed 20 working days or 31 calendar days, whichever is the longer".

Moreover paragraph (7) indicates that upon revocation, lapse or a finding of non-infringement or inexistence of a threat of infringement "the judicial authorities shall have the authority to order the applicant, upon request of the defendant, to provide the defendant appropriate compensation for any injury caused by these measures".

In respect of the provisions of art. 50 TRIPS it has been stated that these are to be analyzed as implementations of art. 41 par. (1) TRIPS' call for expeditious procedures[4] and therefore any "delays and other domestic mechanisms endangering the effectiveness of provisional legal protection will thus cause concern to the extent that they cannot be justified by art. 41.5"[5].

Commentary of the provisions generally indicates that, as an effect of the provisional nature of the relief sought, such would only be justifiable where delay in imposing the measure would result in irreparable damage to the right-holder, where the

[4] Sascha Vander „Article 50" in Peter-Tobias Stoll, Jan Busche, Katrin Arend (ed.) *WTO – Trade-Related Aspects of Intellectual Property Rights*, (Leiden: Martinus Nijhoff Publishers, 2009): 740

[5] Daniel Gervais, *The TRIPS Agreement, Drafting History and Analysis*, 2nd ed., (London: Sweet & Maxwell, 2003), par. 2.422 cit. in Sascha Vander „Article 50" in Peter-Tobias Stoll, Jan Busche, Katrin Arend (ed.) *WTO – Trade-Related Aspects of Intellectual Property Rights*, (Leiden: Martinus Nijhoff Publishers, 2009): 740, note 4

measure would be warranted under a balance of convenience test and where there is considerable likelihood of a de facto infringement[6].

Also interestingly it has been argued that art. 50 TRIPS only applies "to the period after release by the customs authorities"[7] which would make the customs authorities' practice of allowing the continuing detention of seized goods subject to the mere lodging of a claim for interim relief questionable (the filing of a main claim for infringement of the right based on which the customs intervention was accepted being necessary). However, given that the provision of art. 50 par. (1) letter a) is merely exemplary, a wider interpretation could be allowed.

When read in conjunction with art. 50 par. (3) it is clear that the provision covers both actual and imminent infringements[8].

In order for measures to be taken *ex parte* there would need to be "special reasons" such as delay that would cause irreparable harm or a "demonstrable risk of evidence being destroyed" but „the presence of a special reason may in general be assumed to the extent that informing the defendant runs the danger of seriously impeding or excluding the enforcement of the claimant's IPRs"[9].

3. The provisions at EU level

At EU level the relevant provisions are included in Directive 2004/48 of 29 April 2004 on the enforcement of intellectual property rights.

The directive's preamble (par. (3)) indicates that "the means of enforcing intellectual property rights are of paramount importance for the success of the Internal Market" so as to underline the importance of these provisions.

Paragraphs (4) and (5) of the preamble mention the relationship with TRIPS provisions reminding that "all Member States, as well as the Community itself as regards matters within its competence, are bound by the Agreement on Trade-Related Aspects of Intellectual Property (the "TRIPS Agreement")" which "contains, in particular, provisions on the means of enforcing intellectual property rights, which are common standards applicable at international level and implemented in all Member States".

The preamble also indicates however that the "directive should not affect Member States' international obligations, including those under the TRIPS Agreement" and that the directive "does not aim to establish harmonized rules for judicial cooperation, jurisdiction, the recognition and enforcement of decisions in civil and commercial matters, or deal with applicable law".

The need for the directive has arisen, as par. (7) of the preamble indicates, since "despite the TRIPS Agreement, there are still major disparities as regards the means of enforcing intellectual property rights. For instance, the arrangements for applying provisional measures, which are used in particular to preserve evidence, the calculation of damages, or the arrangements for applying injunctions, vary widely from one Member State to another. In some Member States, there are no measures, procedures and remedies such as the right of information and the recall, at the infringer's expense, of the infringing goods placed on the market".

Paragraph 22 underlines the necessity for provisions dealing with provisional measures in order to secure "provisional measures for the immediate termination of infringements, without awaiting a decision on the substance of the case", such measures being "particularly justified where any delay would cause irreparable harm to the holder of an intellectual property right". These would need however to be applied only in respect of act carried out on a commercial scale[10] (without prejudice to the possibility of Member States applying such measures also in respect of other acts).

Moreover the preamble indicates that such provisions are to observe the rights of the defense, to ensure "the proportionality of the provisional measures as appropriate to the characteristics of the case in question" and to provide "the guarantees needed to cover the costs and the injury caused to the defendant by an unjustified request".

The general obligation under art. 3 imposes that such measures are (1) available ("Member States shall provide"), (2,3) that they include measures, procedures and remedies necessary to ensure the enforcement of the intellectual property rights that are effective, proportionate and dissuasive, (4) are applied so as to avoid the creation of barriers to legitimate trade, (5) provide for safeguards against their abuse, (6) are fair and equitable and are not (7) unnecessarily complicated or costly, or entail unreasonable time-limits or unwarranted delays.

As mentioned in par. (7) of the preamble, one of the issues the EU legislator had taken with TRIPS related to the measures for the preserving of evidence.

Art. 7 of the directive therefore creates a uniform mechanism to address this.

Such measures may be requested even before the commencement of proceedings on the merits of the case by a party who has presented "reasonably available evidence to support his claims that his intellectual property right has been infringed or is about to be infringed". The court may order "prompt

[6] Sascha Vander „Article 50": 741
[7] Idem
[8] Idem: 742
[9] Idem: 744
[10] Defined as acts "carried out for direct or indirect economic or commercial advantage; this would normally exclude acts carried out by end-consumers acting in good faith" – par. (14) of the preamble.

and effective provisional measures to preserve relevant evidence in respect of the alleged infringement, subject to the protection of confidential information". Art. 7 (1) exemplifies such measures as the detailed description of the allegedly infringing products/services (with or without the taking of samples) and the physical seizure of the allegedly infringing goods (and also, where appropriate, of the materials and implements used in the production and/or distribution of these goods and the documents relating thereto).

Article 9 deals with provisional and precautionary measures and requires that courts in Member States may either (a) issue an interlocutory injunction intended to prevent any imminent infringement, (b) forbid, on a provisional basis and subject, where appropriate, to a recurring penalty payment where provided for by national law, the continuation of the alleged infringement and/or (c) order the seizure or delivery up of the goods suspected of infringing an intellectual property right so as to prevent their entry into or movement within the channels of commerce.

An injunction as under (a) or (b) above can be entered also against an intermediary whose services are being used by a third party to infringe an intellectual property right (however the directive indicates that "injunctions against intermediaries whose services are used by a third party to infringe a copyright or a related right are covered by Directive 2001/29/EC".

In addition to the above, where the alleged infringement is committed on a commercial scale, Member States must ensure that courts can, where the "injured party demonstrates circumstances likely to endanger the recovery of damages", order the precautionary seizure of the movable and immovable property of the alleged infringer, including the blocking of his bank accounts and other assets (to which end "competent authorities" can order the communication of bank, financial or commercial documents, or appropriate access to any such relevant information.

Just as in the case of claims for the securing of evidence, in claims for provisional measures provided by art. 9 the court may ask that the right-holder provide any reasonably available evidence as to the alleged infringement or such imminent infringement. In addition to this, in claims for provisional measures the directive specifically allows courts to demand that the right-holder furnish reasonably available evidence so as to satisfy the court with a sufficient degree of certainty that the applicant is the right-holder.

The directive provides that any of the measures mentioned above could be taken *ex parte*, "in particular where any delay is likely to cause irreparable harm to the right-holder" or, in the case of measures to secure the preservation of evidence, "where there is a demonstrable risk of evidence being destroyed". In such cases the "affected parties" shall be given notice of the measures taken at the latest immediately after execution of the measures. Moreover such parties are entitled to an *inter partes* judicial review "within a reasonable period after the notification of the measures" so as to determine whether the measures are to be modified, revoked or confirmed.

Moreover, in respect of any of the measures indicated, the directive provides that any such measure taken is to be revoked or ceases to have effect, upon request of the defendant, where the applicant does not institute court proceedings leading to a decision on the merits within a period to be determined by the court instituting the measures but not longer than the longest of either 20 working days or 31 calendar days.

Also in respect of any of the measures mentioned above, the directive allows (but does not require) the courts to make the measures subject to the right-holder lodging "equivalent security or an equivalent assurance" in order to compensate the defendant for any prejudice suffered should the provisional measures be revoked, lapse due to any act or omission by the right-holder or where it is subsequently found that there has been no infringement or threat of infringement of an intellectual property right.

In such cases moreover the courts must have the authority to "order the applicant, upon request of the defendant, to provide the defendant appropriate compensation for any injury caused by those measures".

When comparing the provisions of the directive with those of TRIPS we can observe some differences, such as: the types of measures such as those enumerated by art. 7 par. (2-4) of the directive are not indicated in art. 50 TRIPS[11], the possibility to forbid the continuation of the alleged infringement by lodging of guarantees[12], the possibility of freezing assets[13].

4. The provisions at the national level

Article 978 of the Romanian Code of Civil Procedure provides that the interim measures provided therein and concerning interim measures for the protection of intellectual property rights apply in respect of both patrimonial and non-patrimonial rights (if concerning intellectual property) and that article 255 of the Romanian Civil Code provides interim measures for "other non-patrimonial rights".

The interim measures that can be requested of the court are provided for by article 979 of the Code of Civil Procedure and generally relate to a claim that the

[11] Although they are considered to be of the kind had in mind when enacting the provisions - Sascha Vander „Article 50": 742

[13] Idem: 23

court provisionally order the forbidding or the provisional cessation of the alleged breach of an intellectual property right (article 979, letter a)) and/or the securing of evidence (article 979, letter b)).

Although not expressly provided, as in the case of the 2nd thesis of letter a), pursuant to the first thesis, the forbidding of an infringing act can be ordered only provisionally, for a period of time precisely determined, this being of the essence of the provisional measures and the procedure of the presidential ordinance by which such measures are to be ordered.

This measure thus aims at provisionally forbidding the perpetration of the illicit action, if such action is imminent, while the forbidding for the future of the illicit action, which has already started and continues, makes the object of the measure provided by the 2nd thesis.

With respect to the provisional measures for the securing of evidence, provided by art. 979 paragraph (2) letters a) and b), these are those that the legislator considered as being the most frequent and useful for the provisional protection of the intellectual property rights and that is why it stipulated that the courts may order them "especially", therefore not exclusively. Consequently, the claimant may request, and the judge may order, the taking of provisional measures other than those expressly provided for in the statutory provision.

With respect to the conditions that need to be met in order for such interim relief to be granted, three such conditions are normally identified within the provisions of art. 979 par. (1) of the Civil Procedure Code: (1) that the claimant make credible proof of the fact that his intellectual property rights are the object of an illicit action. This means that the claimant has to prove both the act of breach of his intellectual property right and its illicit character[14]; (2) that the illicit action be either actual or imminent, only in this case the urgency for the taking of the provisional measures being justified. The mere evidencing of the actual or imminent character of the act is enough to show urgency since, where there is an express legal provision allowing such measures by way of presidential ordinance – as in this case – the court must no longer verify such condition, such being presumed by effect of law; and (3) the existence of a risk that the illicit action causes a prejudice difficult to recover. There needs to be a show of imminent harm (i.e. even one that has not yet occurred yet but will certainly occur, if the circumstances presented by the claimant do not change) but such damage does not include damage that is only possible. In respect of the possibility to repair such harm, the law does not require that such damage be impossible to repair but only that it be repaired with difficulty.

Par. (3) of art. 979 provides some supplementary conditions for the taking of provisional measures where damage is caused by means of the written or audio-visual press. In such cases the court can't order the provisional cessation of the prejudicial act unless: a) the damage caused to the claimant is severe; b) the act is not a clearly justified act in accordance with the provisions of art. 75 of the Civil Code; and c) the envisaged measure is not disproportionate as to the damage it causes.

The procedure for taking the provisional measures for the protection of intellectual property rights is provided by article 979 of the Code of Civil Procedure[15] where par. (4) provides that "*The court settles the request in line with the provisions concerning the presidential ordinance, which apply accordingly*".

Consequently, for taking such provisional measures, the court will apply the provisions regarding the special procedure of the presidential ordinance (art. 997 – 1002 of the Code of Civil Procedure), although these are to be applied only where they do not contradict (or as long as they "correspond") to those of art. 978-979.

Mention must be made of the fact that art. 999 of the Civil Procedure Code provides that the claim for interim relief is to be judged with the summoning of the respondent and with the providing for the respondent of the possibility to file a statement of defense. However, paragraph 2 of art. 999 provides that, upon receipt of the claim for interim relief the court may, in situations deemed as special emergencies by the court, order that the claim be ruled upon without summoning either of the parties and that the court may rule on the claim in chambers, relying solely on the claim as filed, on the very day the claim is filed.

5. Harmonization with TRIPS at EU level

Although the harmonization of national legislations of EU Member States in order to match the level of protection provided by TRIPS was indicated as one of the goals of the IP Enforcement Directive[16], there were eminent voices that indicated that the EU Member States were already bound to respect those rules[17] and that, prior to proposing the directive, the EU Commission did not undertake any study to suggest the EU Member States did not[18].

The issue of the effect of TRIPS on EU law was analyzed by the Court of Justice in its Opinion of 15 November 1994 regarding the competence of the Community to conclude international agreements

[14] Mihaela Tăbârcă, *Drept procesual civil*, vol. II, (Bucureşti: Universul Juridic, 2013), 713-718
[15] Mihaela Tăbârcă, *Drept procesual civil*, vol. II, (Bucureşti: Universul Juridic, 2013), 745-761
[16] Par. (7) of the preamble of the Directive
[17] As a result not only of their own WTO membership but also as a matter of Community law since the EU was itself a member of the WTO
[18] William R. Cornish, Josef Drexl, Reto Hilty and Annette Kur, "Procedures and Remedies for Enforcing IPRs: the European Commission's Proposed Directive", *E.I.P.R.* 25 (2003): 447

concerning services and the protection of intellectual property - Article 228 (6) of the EC Treaty[19].

There the Court has indicated that: "Some of the Governments which have submitted observations have argued that the provisions of TRIPs relating to the measures to be adopted to secure the effective protection of intellectual property rights, such as those ensuring a fair and just procedure, the rules regarding the submission of evidence, the right to be heard, the giving of reasons for decisions, the right of appeal, interim measures and the award of damages, fall within the competence of the Member States. If that argument is to be understood as meaning that all those matters are within some sort of domain reserved to the Member States, it cannot be accepted. The Community is certainly competent to harmonize national rules on those matters, in so far as, in the words of Article 100 of the Treaty, they 'directly affect the establishment or functioning of the common market'. But the fact remains that the Community institutions have not hitherto exercised their powers in the field of the 'enforcement of intellectual property rights', except in Regulation No 3842/86 [citation omitted] laying down measures to prohibit the release for free circulation of counterfeit goods. It follows that the Community and its Member States are jointly competent to conclude TRIPs".

Later, in *Dior*[20] and *Merck Genéricos*[21], the Court has decided that it itself can, despite the separation of competences mentioned in Opinion 1/94, decide on the interpretation of art. 50 TRIPS even for rights not having been the subject of harmonization.

Moreover the Court has held that, in principle, "the provisions of TRIPs, an annex to the WTO Agreement, are not such as to create rights upon which individuals may rely directly before the courts by virtue of Community law", however, inasmuch as art. 50 of TRIPS contains procedural provisions, which are „ intended to be applied by Community and national courts in accordance with obligations assumed both by the Community and by the Member States", in the case of „a field to which TRIPs applies and in respect of which the Community has already legislated, as is the case with the field of trade marks, it follows from the judgment in *Hermès*, in particular paragraph 28 thereof, that the judicial authorities of the Member States are required by virtue of Community law, when called upon to apply national rules with a view to ordering provisional measures for the protection of rights falling within such a field, to do so as far as possible in the light of the wording and purpose of Article 50 of TRIPs. On the other hand, in a field in respect of which the Community has not yet legislated and which consequently falls within the competence of the Member States, the protection of intellectual property rights, and measures adopted for that purpose by the judicial authorities, do not fall within the scope of Community law. Accordingly, Community law neither requires nor forbids that the legal order of a Member State should accord to individuals the right to rely directly on the rule laid down by Article 50(6) of TRIPs or that it should oblige the courts to apply that rule of their own motion"[22].

In what procedural provisions related to the interim protection of intellectual property rights there was, at first sight, a distinction to be made, when analyzing the utility of a directive, between the fields where there was prior harmonization and those where there was none. This means that the directive would have been useful in its harmonization aim, for those fields where there was an uncertainty as to the level of direct effect of TRIPS (were there no national provision to enable direct effect of the provisions in national law). In such cases, harmonization by means of the directive would have achieved the same result on account of the Member States' obligation to transpose the directive into their national law.

Objections raised by Cornish in that there was no prior analysis to this effect would still be valid nonetheless.

Despite the above the directive set out to secure a "TRIPS-plus" harmonization[23], an example of such being the mandatory right of information (which was optional under art. 47[24] or 50 par. (5) of TRIPS)[25].

Massa and Strowel have argued that this TRIPS-plus harmonization was diluted by the TRIPS-minus scope (making the remedies available just for infringements on a commercial scale)[26] even though the directive leaves Member States free to extend those remedies to other situations as well.

It is this last aspect that for Massa and Strowel the national legislator was to overcome by its approach in implementation. The authors have suggested that a commutative approach (which would mean enacting an umbrella law on procedures and remedies for all IPRs) was preferable to a distributive approach (which

would mean interspersing amendments in each IPR law)[27].

6. Harmonization at national level

In Romania there has been little research on the compatibility of the national provisions with TRIPS[28] but significant effort has gone into analyzing the implementation of the EU IP Enforcement Directive[29].

It has been argued[30] that the national provisions, before implementation of the Directive, being already aligned with the provisions of the European act, were more favorable than the provisions of TRIPS in that they made the payment of security for the covering of the eventual liability of the respondent optional at the behest of the court, rather than mandatory as under TRIPS[31].

Köröși has also shown that the provisions of art. 50 par. (4) and (6) TRIPS were not transposed in Romanian law[32] thereby making the Romanian provisions even more favorable to the right-holder[33].

She has however argued that this disadvantage (which is also at odds with the provisions of art. 9 par. (5) of the Directive) is mitigated by the direct effect of TRIPS provisions in Romania[34].

Nonetheless, the Romanian legislator has finally opted for an apparently "commutative" approach to implementation of the Directive by adopting a stand-alone Emergency Government Ordinance (no. 100/2005) which is, as some commentators have suggested, a translation of the Directive[35]. The same author declared that, contrary to Massa and Strowel, a distributive approach would have been preferable.

The scope of the implementation act is however different than that of the Directive since the EGO applies only to industrial property rights while the Directive applies to intellectual property rights. The fact that the Romanian legislator has excluded copyright and related rights from the scope of the Directive implementation act would have been, however, appreciated by Massa and Strowel[36]. Implementation in respect of copyright has however occurred by a distributive approach implemented by means of Emergency Government Ordinance no. 123/2005[37]

Ciocea argues[38] that the imposition, by means of art. 7 of EGO 100/2005 of the lodging of security for the compensation of the defendant the Romanian legislator has gone beyond the scope of the Directive (though, as seen above, such an approach had been recommended by Spineanu-Matei in order to secure compliance with TRIPS).

The implementation act is further criticized as being too broad and not providing express procedures that would properly implement the provisions of the Directive[39].

Ionescu argues that the provisions of EGO 100/2005 do not contravene TRIPS but do go further than TRIPS in providing for the right-holder (thus being seen as TRIPS-plus) in that they allow for the measures to be taken against not just the alleged infringer but also intermediaries, that they provide for a right of information, that the measures can be taken before a claim for infringement is filed and that they provide for the possibility of asset freezing[40].

Ionescu importantly points out that the implementation act provides for the annulment of the measures where there is no claim on the merits filed within 20 working days or 31 calendar days, whichever is the longest, thus filling a gap in harmonization with both TRIPS and the Directive[41].

Another fault identified with the implementation act was the lack of clarity in respect of the court having jurisdiction to instate such measures, which made the procedures provided for even more reliant on the common procedures provided for by the Code of Civil Procedure[42].

Finally, with the new Code of Civil Procedure, the provisional measures were harmonized across the intellectual property right spectrum by reducing all special provisions to a reference to the procedures provided by the Code of Civil Procedure[43].

With this new development some of the aspects previously objected to were corrected – e.g. the lodging of security was again made optional, to be left to the discretion of the court.

However, since the 'special' provisions in the Code of Civil Procedure still reference the common provisions regarding the procedure for the presidential ordinance (still in the same Code of Civil Procedure but under a different heading) while only mentioning that the common provisions are to apply "accordingly", there is even more uncertainty as to the conditions to be met by a claim for such measures, the court having jurisdiction and the application of other 'common provisions' in the Code of Civil Procedure such as the 20% cap on the security to be lodged (which is generally provided for by the Code for all the cases where the law does not specifically provide an amount).

7. Conclusions

The present short article underlines a paradox in the enforcement of intellectual property rights: although providing for protection of these rights (which is paramount for their existence, which in turn is essential for the current state of the world economy and life in general) at multiple levels is meant to insure better enforcement, in fact the multiple obligations to harmonize, the uncertainty of direct effect (or direct horizontal effect) and the differences in existing national legislation and legal traditions transform even genuine harmonization efforts into opportunities to uneven the scales even more, creating significant differences in the level and efficiency of enforcement of intellectual property rights.

APPROPRIATING CREATIVE WORKS PROTECTED BY INTELLECTUAL PROPERTY RIGHTS

Cornelia DUMITRU[*]

Abstract:

The ownership, either public or private, is an expression for appropriating goods. Consequently, the appropriation takes the form of private (i.e. private property) and common forms (i.e. public property). The common law property defines appropriation as „a deliberate act of acquisition of something, often without the permission of the owner", but the intellectual property rights do not protect goods. Particularly in this case „the object" of appropriation does not represent a „res nullius" simply because the intellectual property right arises from the act of creation, therefore the appropriation of somebody else's creation becomes equivalent with stealing (plagiarism). Consequently, if we are to admit that the authors have a right of ownership over them, then ownership in intellectual property law has (it must have) other manifestations than those known and accepted in the common law of property.

Keywords: *appropriation, goods, intellectual rights, property, authors*.

1. Difficulty of properly qualifying intellectual property rights and its consequence on the „ownership" and control over intellectual creations

Trying to determine and clarify the legal nature of the rights the authors have over their intellectual creations, we should firstly consider the concept of „appropriation" and treat it with special attention. First of all we should draw attention to the fact that most of lawyers/jurists use the concept as a default one, not taking into consideration any particular explanation or demarcation. This comes from the customary use of „appropriation" in the common law of property. However, considering „ appropriation" within the frame of the special right of authors over their intellectual creations, we must delineate special uses of the concept.

Accordingly, „intellectual property law" is seen as a particular kind of law because its nature is difficult to be determined and stated categorically despite the fact that it has been enshrined as such in both conventional law and legal systems of the countries in continental Europe. The intellectual property law is still referred to as controversial as long as disputes relating to it have never ceased or been exhausted not even nowadays - neither in terms of recognizing its existence, legitimacy and necessity, nor in terms of its legal nature. There are opinions that it should not be recognized at all for the reason that copyright is the enemy of access to information and knowledge and, therefore, is an enemy of freedom[1].

From its early beginning, in France, the country that speaks and writes the most about it, copyright was considered among the rights of property, even if it was referred to as a particular kind of property, different than the concept of property which the common law deals with[2]. Meanwhile, this status came to be denied by jurisprudence[3], in order to reaffirm it again nowadays, quite categorically[4]. However, since there are cases when the Contemporary French doctrine still challenges this qualification, most often than not the current doctrine qualifies intellectual rights of the authors as property rights.

It is worth mentioning the contribution of those specialists that considered the rights of the authors over their intellectual creations as property rights, apart from the real estate property rights and obligations; moreover, their attitude must be positively assessed as they had that perspective on copyright long before the adoption of the first international

[*] PhD Candidate, "Nicolae Titulescu" University, Bucharest (e-mail: **cornelia_dumitru1973@yahoo.com**).

[1] This is the case of The Libertarians, The Pirate Party in Germany and the Nordic Countries, but also of many challengers, quite vocal lately, supporting the current known as „copyleft", in opposition to copyright, as shown.

[2] Le Chapelier, in its report to the Law of Representation, on the 17th of January 1791, referred to the intellectual right as "**A property of a kind quite different from other properties**"; more than that, even the authors of the French Civil Code of 1804 avoided to regulate about this kind of property in their monumental legislative work - the reasons for this state of facts being understandable.

[3] For example, in a Decision of the Court of Cassation in France (the case of Grus, Sirey, 25 July 1887) it was recorded that „the rights of the author and the monopoly which they confer are unjustly designated as *property*, either in common language or in legal parlance". Therefore, the Court stated that, „far from being that kind of property similar to the one the Civil Code defined and regulated for the movable and immovable goods, the copyright gives the holders the exclusive privilege of a temporary use and interest. This monopoly over interests and exploitation include the right of reproduction and selling copies of the work and is regulated by law, making it subject to international conventions, as well as the right resulting from the realization of inventions, industrial designs or trademarks which constitute what is known as industrial property". The problem to which judges had to answer at that time was whether or not the President of the Republic was competent to conclude commercial treaties by himself (Article 6 of the Constitution of 1852) as a consequence of the issue of copyright, or if, because it was ownership, the competence was shared with the Parliament.

[4] It is worth noticing that in France jurisprudence had a great influence over categorizing the intellectual rights of the authors; denying their legal nature and reconsidering the authors' rights over intellectual creations as property rights, is a Praetorian work to a large extend.

convention (in 1883) which was to consecrate the concept of „industrial rights". Thus, in a paper edited in 1874, entitled „***Embriologie juridique***", the Belgian lawyer Edmond Picard proposed the establishment of a new category, that of „intellectual rights", without being able neither to impose his opinion, nor to determine the adoption of a such legislative solution, not even in his own country, despite the reputation he enjoyed.[5] As a consequence, the Belgian law of copyright (1886), which is a rigorous application of the „intellectual property rights", does not use the concept advanced by Picard. They preferred instead the term „property" in order to denote the rights of authors, inventors or mark holders and not the one proposed by the above mentioned specialist. However, Edmond Picard continued criticizing the theory that assigns the nature of property rights to copyright, on the ground that „the desire to enter by force, hammering these new rights in the category of real estate rights is certainly a scientific heresy"[6].

Anyway, it is within the boundaries of the scientific research ethics to assign authorship of this idea to the one that used it first, while admitting that this matter had been previously tackled in similar terms long before Picard; for example, in a study (1869) belonging to Alfred Bertauld, professor of civil law at the University of Caen. Consequently we must say that, at the time these theories were formulated, the term „intellectual property" had not been enshrined in international conventions yet – i.e. the Paris Convention of 1883 protecting the „industrial property" and the Berne Convention of September 9, 1886 dealt with the „Protection of Literary and Artistic Works" without qualifying in any way the rights of the authors. The term „intellectual property" was to be fully recognized (internationally) once the Stockholm Convention of 1967 was adopted for the establishment of the World Intellectual Property Organization.

The same attitude (namely, denying the property nature of copyright), can be traced in the past centuries with other practitioners, such as A-Ch. Renouard, H. Desbois and P. Olagnier in France and J. Kohler and I. Kant (the latter of philosophical positions) in Germany.

Auguste-Charles Renouard, for example, criticized those opinions qualifying authors' rights as property rights, stressing the need to maintain a fair balance between the public interest and the interest of the author, while highlighting that recognition of a property right in favour of the authors does not necessarily weigh in their favour, except as a (sacred) right to reward. Thus, Renouard said: „*The author is entitled to receive from the public/society a fair price for his service*", considering that the price is an equivalent for „*the exclusive right of reproduction*". Further on, he considered that „*the immaterial world is, by its nature, rebellious to the jealous use that property involves*" because „*thinking is, by its nature, impossible to be appropriated*". We must never forget that Renouard was the one who advanced the term „copyright" as a set of prerogatives of authors and, besides that, he had an important contribution in affirming the importance of moral rights of authors! The same attitude is to be traced at Proud'hon.

Closer to modern times, Paul Olagnier, after the adoption of the Berne Convention in 1886, argued that the property right of authors can be imagined only for undisclosed works, while Henri Desbois supported, in turn, that „free public access to any creation contradicts the exclusiveness of *usus* when considering ownership".

Immanuel Kant[7] (addressing the same issue on philosophical premises, this time), discussed the relationship author/editor, on the one hand, and the relationship author/consumers, on the other hand, calling for „personal rights" of creation, awarded to the publisher not to the author, as expected, in opposition to „real rights" of the material work. Kant analysed therefore copyright as a personal right, as opposed to ownership of the tangible goods. According to the theory developed by Kant, intellectual work is a discourse that the author sends to the public by means of language, so that any impairment of the work itself represents, in fact, impairment of the author's personal rights. Kant's perspectives on „personal rights" made J. Kohler say that the „personal doctrine" (of copyright) „is the bastard child of a genius who was unfamiliar with the legal system."

Many authors have considered these „personal rights" as monopoly rights, or the rights of customers, while others determined them as rights of intangible assets, or as exclusive rights (Romanian legislative system adopting this perspective), all of which are rather preoccupied to clarify the content of this particular right than to identify its legal nature.

Thus (considering only the most important Romanian laws on the matter):

- According to art. 1(1) of Law no 8/1996 on copyright and related rights, „copyright vests in the author and embodies moral and patrimonial attributes" (similar to the complex/dual rights, not to the property rights);
- According to art. 31 of Law no 64/1991 on patents, „the patent gives its owner the exclusive right to exploit the invention over its term";
- According to art. 36 of Law no 84/1998 on trademarks and geographical indications „trade mark confers to its holder an exclusive right on the mark";

[5] Edmond Picard (1836-1924) was a lawyer, Professor at the Free University of Brussels, where he had as a PhD Candidate a Romanian (Matila Ghyka, who defended his thesis in 1909); he is also known as writer, publicist, and Senator of the Belgian Socialist Party. He was one of the most esteemed Belgian specialists in "intellectual property" rights.

[6] Andree Puttemans, *Intellectual property rights and unfair competition*, (Bruxelles: Bruylant, 2000), 21.

[7] Kant's reputation, not only in his hometown, Königsberg, today Kaliningrad, but in Prussia as well, was so great that it caused a whole industry of copyists to meet numerous requests of granting access to his courses purchased through his students.

- According to art. 30 of Law no. 129/1992 on the protection of designs „for the entire duration of the design registration, the holder has the exclusive right to use and to prevent their use by third parties not having his consent".

The reasons why the Romanian legislature adopted this solution are difficult to decipher. Our opinion is that one of the possible reasons why Romanian legislator didn't qualify this particular kind of rights as ownership could be the difficulty in considering them as such owing to the particular characteristics of intellectual creations which confer upon them features that differentiate between them and common law property and make them goods with characteristics requiring a distinct legal regime.

Taking for example concepts like appropriation and the ratio of appropriation, we can see that they are crucial in the common law of property, because the rapport of appropriation creates appropriation. Therefore, our attention is focused on analysing the case of intellectual creations, where, as we have already seen, the Romanian legislator avoided systematically qualifying them as property rights.

2. Common law property and the appropriation of goods/assets in common law

2.1. Appropriation. General terms

The meanings of the term „appropriation" (Late Middle English: from late Latin *appropriatio(n-*), from *appropriare* 'make one's own'), as it is used in common law of property, should not generate confusions as they are used as such for a long period of time. Such definitions are: „The act of taking something for your own use, usually without permission"[8] or „The action of appropriating something: *dishonest appropriation of property.*

The real question here is to what extend the „appropriation" is important for the common law of property? The answer is: extremely important! Because the appropriation rapport is the key point that generates „property rights". Moreover, the common law of property approaches the concepts of „ownership" and „property" as implicitly understood: there can be no property, at least in the classical sense of the term, without an appropriation act, the rapport of appropriation creating appropriation.

Appropriation of property by the right-holder is the act which excludes or deprives others of having free access to the same asset.

As a subjective representation, the concept of property - complex concept with historical, philosophical, sociological, and legal meanings as well - is the result of a long evolution of legal thinking in the continental law system and is constantly evolving. Therefore, in all times and in all systems of law, appropriation was and still is the legal act through which an asset (unassigned or belonging to another) is possessed; the act or fact that creates property. As a consequence, we may say that it can be no property right in the absence of appropriation.

Appropriation of assets/goods, says Valeriu Stoica, *initially manifested as simple possession, a possession which then founded the subjective religious and juridical representations reflecting the reality of this appropriation.* Both private and public property is an expression of private property, respectively a communitarian appropriation of property. Private appropriation is more than just the individual possession of the goods (personal property) and community ownership does not include any form of joint or collective possession of the goods. The relation private appropriation vs common appropriation of goods is governed, in a liberal society, by the principle of private property development[9].

Professor Valeriu Stoica, whose work we have referred to above, makes a categorical distinction between tangible and intangible assets referring to the possibility of their appropriation. Thus, he argues that „things ONLY can be appropriated, but not everything can be appropriated"; likewise, he considers that „in contradistinction to tangible goods, which are naturally likely to be appropriated, intangible assets can be appropriated only if there is a law authorizing such. In other words, in order for a tangible asset not be appropriated, a specific prohibition of the law is needed, while an incorporeal property can only be appropriates if there is a law authorizing such"[10].

The above mentioned Romanian jurist states, however, like many French jurists, that the concept of property is flexible enough to include intellectual property rights. Still we cannot but find that the Romanian legislator described the rights of authors over their creations differently, either as complex rights in relation to original creations protected by copyright, or as exclusive rights in relation to new and utilitarian creations.

Under these conditions, can we state, against the law and the qualification of these rights by special laws that the authors' rights over their creations still have the legal nature of property rights? The answer may be yes, if and only if we equate between complex rights and property rights, on the one hand and / or between the exclusive rights and property rights, on the other hand; on condition that we find all the attributes of property rights governed by special laws.

---

[9] Valeriu Stoica, *Drept civil. Drepturile reale principale*, (Bucureşti: Humanitas, 2004), 15

[10] Valeriu Stoica, *Drept civil*, 15 - „*spre deosebire de bunurile corporale, care sunt în mod natural apropriabile, bunurile incorporale devin apropriabilenumai cu autorizarea legii. Altfel spus, pentru ca un bun corporal să nu fie apropriabil este nevoie de interdicţie a legii, în timp ce un bun incorporal devine apropriabil numai dacă există o autorizare a legii*".

2.2. The object of private property rights / public property rights. Methods of appropriation

The first question we have to answer nowadays is: what are the objects of property rights and which forms do they take in common law? This information is to be found in The New Romanian Civil Code: art. 553 and 557 referring to assets, objects of private property rights, respectively, art. 858-859 and art.863, referring to public property.

Thus, according to art. 553 NCC, „All the assets of private use/interest belonging to either individuals, or legal persons (private or public), including assets that make up the private domain of the state and territorial administrative units, represent the object of private property"[11]. The definition seems broad enough to include intellectual creations among the „objects" the text of the law refers to, assuming that intellectual rights over creation have the legal nature of property rights as real rights.

With reference to the object of public property, art. 859 NCC stipulates about „assets that belong to the state or territorial administrative unit, which, by their nature or by the statement of the law, are of domestic or public interest, provided they are covered by one of the ways prescribed by law". In fact, there are two categories of objects in question here:

- First category, which is the exclusive object of public property, namely: soil resources of public interest, the airspace, the waters with energy potential of national interest, beaches, territorial waters and natural resources of the economic zone as well as the continental shelf and other assets established by organic law.

And

- A second category, represented by „other assets" belonging to the state or territorial administrative units, public or private field, but only if they were acquired by one of the ways provided by law.

Our opinion is that intellectual creations belong to the second category mentioned above, as long as we admit that intellectual property rights have the legal nature of property rights. In other words, assuming that the intellectual rights over creations are property rights, they can be „object" of public property rights, representing public domain, either considered at international, or national / local level.

Special laws governing intellectual property state about „public domain" quite differently when speaking about intellectual creations. Their perspective is similar to neither administrative / financial laws, nor to the New Civil Code. Customizing the discussion to the „public domain" for intellectual creations, the law states that those works / creations which are no longer under a period of protection can be exploited freely by any user. Therefore, we are speaking about a special type of „public domain" with an open access, restricted by the condition of respecting the moral rights of authors over their creations.

As for the methods of acquiring property rights, which are in fact methods of appropriating property, art. 557 NCC states that „a property right can be acquired, under the law by convention, legal or testamentary inheritance, accession, usucapio as a result of good faith possession (for movable assets and fruits), by occupation, tradition and by court decision, when the asset is implicitly transferring property. (2) In those cases provided by law, the property may be acquired by the effect of an administrative document. (3) The law may regulate other ways of acquiring property".

Concerning the public property rights, art. 858 NCC states that „public property relates to those property rights belonging to the state / territorial administrative unit over the goods/assets which, by their nature or by the statement of the law, are of public use/interest, on condition that they are acquired as provided by the law". This statement is consistent with the principle that authorities are prohibited everything, unless specifically allowed by the law, while for individuals, the principle is that everything is allowed, unless prohibited by the law.

As far as the methods of appropriating public property assets are concerned, the legislature passed a surprising solution, thus regulating, through art. 863 NCC, as marginal „cases of public property appropriation", the following acquisition modalities:

a) By tender, made under the law;

b) Expropriation for reasons of public utility, under the law;

c) By donation or legacy, supported by law, if the property, by its nature or by the will of the disposal, becomes of public use/interest;

d) By convention for consideration, if the property, by its nature or by the will of the acquirer, becomes of public use/interest;

e) By transfer of property from the private domain of the state to its public domain or from the private domain of the administrative-territorial unit to its public domain, under the law;

f) Other means provided by law.

Therefore, in our attempt to identify methods of acquiring property rights, we should consider the following:

- In comparison to the Law no. 213/1998, „natural way" is no longer provided as a means of acquiring public property rights. Nevertheless, our opinion is that it would be worth considering due to the fact that a natural event could produce geographical changes requiring a special assessing of the state property over goods/assets ranging from those provided in art. NCC 859 (on public property);

[11] Original text: art. 553 NCC, „*sunt obiect al proprietății private toate bunurile de uz sau de interes privat aparținând persoanelor fizice, persoanelo rjuridice de drept privat sau de drept public, inclusive bunurile care alcătuiesc domeniul privat al statului și al unităților administrativ-teritoriale*".

- in case of donation, the asset can turn into public use, by the will of the disposal;
- in case of acquiring property through „Convention for consideration", the nature of the asset and the will of the acquirer are to be taken into consideration in order for the property to migrate into public domain and become of public use;
- regarding „Convention for consideration" as a way of acquiring public property rights, it seems that it is likely to undermine the principle of entitlement to public property by the state's own methods (procurement, expropriation, donation or bound) and that the domain of application, if any, must be clarified.

That is why it is worth noticing that, unlike the rules of the old Civil Code (art. 644-645), the present Romanian law does not represent, in itself, a method of acquiring property rights. Nevertheless, the law can stipulate other ways of acquiring property (either public or private), the doctrine claiming that the present solution was adopted as a consequence, under the influence of critics that were made to the former way of acquiring property. Likewise, it is to be observed that the texts that have generated the most criticism, respectively art. 5 and 20 of Law no. 15/1990 on the reorganization of state economic units as autonomous companies are still in force, even if they provide that autonomous administrations and companies established through reorganization are the rightful owner of their transferred patrimony.

The problem arising here is whether or not any of the methods of acquiring property, covered by art. 577 NCC, is applicable to intellectual creations, even assuming that their rights have the nature of property rights? The answer is obviously negative, on the premises that the new Civil Code stipulates for the qualification of copyright as property rights in art. 577 line (3) which provide ***that the law may regulate other ways of acquiring property***.

3. Categories of intellectual creations and their characteristic features

Intellectual creations are numerous and varied as gender and target and destinations. What unites these works and how to justify their grouping in the same category, putting them under the same umbrella? What distinguishes them from the goods of common law, so that they may need special laws to protect them? Why did the authors feel the need to have their creations protected by special laws derogating from the general law and why did such protection need centuries of struggles? Why did the legislature need to decouple „intellectual property" of „ordinary property"? How and why can the property rights have contents and attributes of intellectual and moral order, when property rights are patrimonial, by nature, as defined by the Civil Code?

3.1. Object of protection by intellectual property rights

In terms of the Stockholm Convention and the TRIPs, which states upon the intellectual property rights, they are property rights related to intellectual activity in the industrial, scientific, literary and artistic fields. Creations under discussion here could be: literary artistic and scientific works; performances, phonograms and broadcasts; databases; inventions in every field of human activity; industrial designs; configuration schemes (topographies) of integrated circuits, undisclosed information; trademarks and services etc.

Therefore, all these are products of creative activity, but their destination is different: some, having aesthetic or evolutionary function (i.e. literary, artistic and scientific works), others, utility functions (inventions, topographies of semiconductor products), others, hybrid products, interweaving both aesthetic and utilitarian functions (i.e. designs and patterns) and others, the function of favouring trade and protecting consumers through the information they provide about the products marked (trademarks and geographical indications). The result of these observations is that intellectual property not only differs from the common law property, but intellectual creations differ between them as well!

3.2. Characteristics of intellectual creations

First of all we may say that the intellectual property rights deals with property that is achieved through creative intellectual activity and its object is the protection of the authors 'rights. Unlike the common law of property, or the civil law, dealing with people in general and goods made by physical effort, not involving creative activity, the legal perspective on intellectual creations, however, reflects a relationship between creators and consumers, between creators and users of intellectual creations that can be both creators and non-creators of works, between the two categories of persons and goods is an important difference that justifies a difference in treatment. Some authors say, exaggerating on purpose, in order to reveal its importance and specificity, that intellectual property right is exclusively designed for scientists and artists.

i) The most obvious link between these creations is their common origin and their divergent nature (unlike the assets in common law): they are the result of a creative effort, the result of their authors' intellectual activity which is rightfully considered an extension of the personality of the authors.

ii) Intellectual creations are characterized by their nature of intangible assets, with spiritual existence (most of the time existing in the conscience of the author and its public), regardless of any retaining on/in some specific medium. Most often they are of ideal and abstract existence (computer programs are perhaps the best example to demonstrate the abstract character of creative intellectual property). They are and should be treated separately from their material

support, even when this distinction is more difficult, as it is, for example, the case of works of fine art. Nevertheless, the common law distinguishes between and tangible and intangible assets[12], but they are not products of intellectual activity. In common law, both tangible and intangible assets have economic value, being valued in money. Claiming rights and goodwill are typical examples of intangible, even if the universality may include tangible and intangible, intellectual creations as well.

iii) In common law, the distinction between an „asset" and „the right of property over that asset" is relatively simple. When speaking about intellectual property things are not so simple, because, firstly, we need to make the distinction between intellectual creation itself and the material incorporating it. Only then we can distinguish between „creation" and „the right over creation". Just so we understand why a book buyer is not the owner of the work incorporated into the book; why the holder of a painting (which, in terms of the common law, represents a movable asset and its possession equals, according to civil law, property) is nothing but the holder of the tangible, not the rightful owner of the painting; why the owner of a car (that car including several creations and intellectual property rights, such as inventions, designs etc.) does not hold rights to these works and cannot dispose of them, even if he can freely dispose of his car that comprises all the above mentioned; why the inventor or the author of a design is the right holder of the object of his invention, but not the owner of all the products that are obtained due to the exploitation of his patent or certificate. Intellectual creation is not represented by the product itself but the idea exploited, the expression of it, the way it is described to be materialized in an object.

iv) Generally accepted common law definitions of „assets" (goods of economic value that are useful to satisfy man's spiritual or material need, susceptible of appropriation as economic rights)[13] and „heritage" (universality of rights and obligations with economic value belonging to a subject of law) are not satisfactory and applicable to intellectual property, because the intellectual creation does not necessarily need to have economic value, not even to satisfy a specific material or spiritual need, in order to be protected by the law. The fact that intellectual property rights and their object (creations) have today a major economic role, implicit economic value, or spiritual status does not change their nature, because the law does not protect individual rights on condition of economic/artistic/scientific value. The real conditions that need to be met are as follows: originality, or, where appropriate, novelty, inventive step, industrial applicability, distinctiveness, etc. In other words, the economic value of the intellectual products is neither important nor required. Economic value, i.e. the value that represents quality and condition of the goods/assets in the common law[14] is not necessary when intellectual creations are involved. Intellectual creations are independently protected irrespective of any economic or artistic value. However, the economic value of an intellectual creation and the value of the creation itself are subjective and difficult to determine.

v) The result of creative work is not to be identified or confused with the product itself. Unlike other man-made goods, intellectual creations have no material substance and remain so even when they are fixed on a material (in the form of words, musical notes, lines, colours, designs etc.), or in electronic format. Property over support and property over creation are and remain distinct and subject to different legal rules, as distinct are to be treated the creation itself and the product which it materializes in The books we read are just copies of intellectual works and their purchase do not confer to the buyer any rights on the work. The copy of a paper (authorized or unauthorized) belongs to its buyer, not the work set in this paper. Thus, intellectual creations are to be treated separately from their material support, even when this distinction is difficult to be done, as, for example, in case of works of fine art.

vi) As intangible assets, intellectual creations are joined by another common feature, which is a major „fault" for them all: being spiritual products, nobody can protect them against being used by others through the means of simple possession, as it happens with tangible goods, for that they can be operated simultaneously by several people. Once the product of intellectual creation (literary, artistic or scientific, invention, design, model etc.) was made public, its creator cannot exercise, in fact, control of its use.

Consequently, materiality of the tangible good in common law (electricity being an exception, commonly invoked as an intangible good suitable to support the equivalence with the intellectual property - intangible – in order to be classified as property right) prevents possession from being exercised by several people simultaneously (except co-owners) over the same asset. In addition to that, it is noticeable that material objects having generally a well-defined functionality are unlikely to be used by several people simultaneously for the same or different purposes. We cannot speak of territorially differentiated possession over an estate, i.e. a piece Romanian land cannot be possessed, simultaneously, in Romania and in Hungary. Not even movable assets are more malleable

[12] The law knows two categories of intangible assets: firstly, the rights with a tangible object which are, in fact, intangible because they are not identified with their object (i.e. usufruct, debts, etc.); secondly, the absolute intangible assets. The latter case speaks about rights which are not attached to any tangible, such as a merchant's customers or intellectual property rights.

[13] Gheorghe Beleiu, *Drept civil român*, (Bucureşti:Şansa, 1995), 91

[14] The meaning of "good" implies economic value which is useful to satisfy man's spiritual or material need and is susceptible of appropriation as economic rights. In order to be in the presence of good, in the sense of civil law, two conditions must be met: 1) the economic value must be able to satisfy a material or spiritual need of man; 2) be capable of appropriation (attribution) as economic rights - Gheorghe Beleiu, *Drept civil român*, 97

in this regard: one and the same car, calculator, pen, etc., cannot be possessed in Bulgaria and Romania concurrently.

Possession of tangible goods involves contact between man and object, independently of the territory where such contact is made. Instead, intellectual creations, not being constrained of materiality or possession for use, can be used in different countries at the same time, by multiple users.

Moreover, what is inconceivable for material goods becomes rule with intellectual creations: the possibility of concomitant use of several people in different places without making the work/creation unavailable to others (as happens in the case of electrical energy which can be used by a consumer not independent of other potential consumers). It is somewhat similar to the use of public goods, which is, in principle, non-competitive and may be exercised concurrently by multiple people (i.e. roads, schools, hospitals etc.). In this case, concomitant use requires, as a rule, the presence in the same place, while in the case of intellectual creations; concomitant use may be exercised in different places. The possibility of concomitant use in different places by multiple users represent a characteristic feature of intellectual works, most often this being the reason for which they were created.

vii) Intellectual creations have common features with public assets and utilities, thus explaining both the subjective position of consumers towards them and their delayed protection and legislation. Similar to public assets and utilities, whose consumption by one person does not prevent another person to do the same, intellectual creations are, in principle, non-rivalrous in the sense that their use is not competitive and the result of their usage does not represent their disappearance, more than that, their appropriation by an individual, if we admit that it is possible and necessary, does not make them unavailable for another user. Instead, public utility consumption implies the presence in the same place, whereas, intellectual creations allow concomitant use in different places.

viii) Intellectual creations quality and ability to be quantitatively unlimited makes them differ from common law property which is limited. In other words, intellectual property is unlimited, while property of tangible goods is limited. Many of the intellectual creations are ephemeral – this meaning that information technology or new solutions can change so fast that some creation could be left aside before obtaining the title of protection. The Internet practice shows us that many creations (if not all) are highly vulnerable to acts of unauthorized use.

ix) The products of intellectual are extremely mobile, especially nowadays. Unlike the assets in the common law, intellectual creations are, nowadays, able to move instantly and globally, while in ancient times, they were escorting their creator, wherever they went, even though their movement was slow. As far as their ability to move is concerned, we find that boundaries are absolutely useless, works „traveling" indifferent to both territorial limitations of the law or the means by which they propagate, being, practically, impossible to control under the current state of the art when the perfect host, the cyberspace, sets no borders or limitations.

x) Unfortunately, all the intellectual creations have a major „fault": the rights over intellectual creations are, as determined by law, transferable rights. The most common forms of capitalization of creation are contracts of assignment, licensing and franchising. Likely to be used simultaneously by multiple people, assigning rights over these creations can be held simultaneously by multiple people, the transferor being able to maintain the right of using that protected work. Once the works are in circulation/use, the authors cannot control their use any more. If the work was made public, the public is subjected to the temptation of using it whenever he pleases, or whenever he can make a profit out of it, and this temptation increases as the work is more valuable. Thus the author cannot authorize each use and cannot control unauthorized uses.

xi) On the other hand, assessing rights over intellectual creations is not completely transferable (i.e. moral rights), and more than that, it is limited (as acts inter vivos) to the economic rights, not having as a result, ipso facto, the assignment of the property rights to the purchaser. In the case of copyright, for example, there operates not only the presumption of favouring the author's economic rights even if not expressly assigned, but also the failure to assign those rights regarding some unexpected usage of the work was not known at the time of the assignment of rights, even if the transfer was complete at the time of the occurring change. This means that the rights of the transferee are not identical in content with the rights of the transferring author. While, under certain conditions, the exercise of moral rights belong to the successors, them having the duty of ensuring compliance with the moral rights of their authors (authors, meaning persons whose succession they take), it means that neither the successors can be assigned with economic rights only.

xii) The moral side of intellectual rights over creations, which some authors consider to be bizarre even if it is consecrated by the law systems inspired by the Berne Convention, determines the difficulty in qualifying these rights. The law attaches moral and patrimonial attributes to the author's property, while the property is basically patrimonial in common law practice. Furthermore, the two categories of rights have distinct legal regimes. Therefore, it is highly artificial to bring together two distinct legal regimes which belong to two antithetical categories of *summa divisio* (moral rights are inalienable, imprescriptible and perpetual, while patrimonial rights are limited in time). The inalienable character of moral rights is the strongest argument in rejecting their qualification as property rights. According to art. 555 of the New Civil

Code, „private property is the right of the owner to possess, use and dispose of property exclusively, absolutely and perpetually, within the limits established by law". In this case the right of assignment is inherent to the property right, even if it is not considered a specific feature. An appropriated good may only be affected by a temporary perpetuity. Thus, attaching the moral and patrimonial prerogatives of the author to the property rights leads necessarily to a misinterpretation of this right.

3.3. Necessity and opportunity of appropriation

Since the Romanian legislator did not qualify the authors 'rights as property rights, we can conclude that appropriation of such rights is neither possible nor necessary. Therefore, art. 577(3) has not to be considered by authors with respect to their works; as a specific feature of the intellectual creations.

At this point we agree that intellectual creations should not be appropriated, at least not in the classical sense of the concept of appropriation. According to common law, appropriation represents the act of taking something for your own use, while an intellectual creation belongs to its author through the act of creation. In other words, the author cannot appropriate something that rightfully belongs to him simply because he is the holder-creator and it would be pointless for him to make such an action. Appropriation is worth discussing only for the work of others, but in this case the act of appropriation would constitute a violation of the rights of the true author.

If we assume, however, that appropriating creations protected by intellectual property rights is possible in some particular ways for these kind of assets which are not at all similar to the ones in common law, then we find that there are assets (such as: registered as a trademark, the same sign can be registered by more applicants for different goods and/or services) that can be appropriated by more people at the same time. Then, there are cases (geographical indications/signs, for example) that cannot be appropriated by any private or public person because they are, by definition, available to any producer in the designated geographical indication and exclusion from the use of any manufacturer is unthinkable. At the same time, it is important to mention that, speaking about indications, the manufacturer has a right of use, not a property one.

While the common law refers to appropriation (at least so it happened in the beginning) in terms of taking into possession something that does not rightfully belong to you, when speaking about „intellectual property", the asset which represents the exercise of the right is the creation of the author himself; it is an asset that never existed before it was created by its author. That is why an intellectual creation is so personal that it seems part of the author himself or an extension of its author. How to say then that the author is not, naturally, „master" of his own creation? That it does not naturally belong to him, needing an act of appropriation, while the ties between author and his work are so close that their separation is impossible and meaningless?!

Consequently, when speaking about „intellectual property rights" and only about them, we do not deal with things from the outside world within the meaning of the common law; we deal with the author's own spiritual creation. Therefore, the creation is so inseparable from its author that it makes it impossible for the associated rights to be transmitted and the appropriation to be assumed by third parties. This means that none other than the true author can be expected and can claim for himself the authorship of a work. In case the work was made by somebody else, the act of appropriation has to have legal consequences, unless this happens any time after the author's death or when the work has fallen into the public domain and can be freely used. The author of an intellectual creation, and only he alone can claim anytime and anywhere, authorship of the work and to him only the property rights recognized and granted by the mere act of creation. The successors of the author, as holders of real rights, will never have all the rights the true author used to have over his creation. Another category of users of the creations, the third parties (customers, holders) have the right to freely use a creation after the author's death or when the work has fallen into the public domain, but they will never be assumed as authors, provided they are usurpers, plagiarists or pirates. Moreover, the true author cannot transmit his authorship as „paternity" over an intellectual creation is inalienable.

Exception to the rule of inequality between the authors' rights and the intellectual rights transmitted to third parties are the trademarks and geographical indications/signs. This happens due to the fact that, most often, trademarks are likely to be chosen only from those in the public domain (that are available because they have been registered as provided by others), and the right over trademarks is more like an occupational right than a copyright in itself. In case trademarks are protected by copyright the intellectual work protected this way will belong to its author forever.

Classifying intellectual creations as „intangible assets", we may state another distinction between them and the goods/assets in common law. There is an opinion that the common law speaks only about the appropriation of tangible assets, while the intangible can be appropriated only for the cases when the law provides so, or, in the words of one of the specialist in the domain: „In order for a tangible asset not to have the ability of being appropriated, a special provision of the law is requested, while, for the appropriation of an intangible asset authorization of the law is required"[15].

[15] Valeriu Stoica, *Drept civil*, 128.

If that were the case, then the copyright (free of formalities) could not be generated by the mere fact of producing a certain work, the same as patent right, arising from the invention itself, should also be authorized; instead, they are considered distinct rights and are not subject to authorization.

Moreover, if special authorization from the law would be required in case of „appropriating" own creations, for which the author is a priori considered the rights holder, quality provided by the law since the eighteenth century, this would represent a step back in time before 1586, when the lawyer Marion Simon, baron of Druy, obtained the cancelation of a bookstore privilege from the Parliament of Paris, on the claims that: „people recognize to each other the property over works they made or invented, and following the example of God, who is the master of both heaven and earth / day and night, the author of a book is its master and as such he may have free dispose of it". Otherwise, if we accept that the rights of authors over their intellectual creations are natural rights, it is pointless to discuss the problem of appropriation in this respect. Therefore, those assets belonging naturally to an individual do not need appropriation, they only need recognition and, eventually, special protection of the law in case of abuse.

The common law of property, art. 557 NCC, stipulates that „property rights may be acquired under the law, by convention, legal or testamentary inheritance, access, adverse possession as a result of good faith possession of movable and fruit, by occupation, tradition, and by court decision, when the property itself is being transferred. (2) In the cases provided by law, the property may be acquired by the effect of an administrative act. (3) The law may regulate other ways of acquiring property". However, apart from law, none of these ways of acquiring property is common to intellectual creations. But in terms of the law, it is worth noticing that if intellectual creations, authors' rights do not originate in a certain law, them being implicitly assigned to the creation once their paternity established. The law can only recognize and protect them.

Consequently, the authors' rights do not arise due to some human authority; they are natural rights, like the rights to personal liberty, physical integrity, life and like any natural right, as any other intrinsic right that is not based on the process of legislating, they may even come in contradiction with state law. Their belonging to the category of natural rights explains why copyrights are, at least in some of their components, „perpetual".

Thus, authors' rights do not extinguish, they belong to the authors, either dead or alive, even if the term of protection established by law has passed and the creation has fallen into the public domain. In case the author has assigned his rights to the transferee, he is still considered the author of that creation, the transferee being nothing but the holder, not getting the authorship over creation. Moreover, the rights of authors have gained recognition during the Enlightenment, i.e. in the times when natural rights were conceptualized and the foundations for human rights were laid.

In conclusion, we must acknowledge that the Romanian legislator did not qualify authors' rights over their creations as property rights. The complex dual right recognized for authors of new and original creations, as well as the exclusive rights for authors of new and original creations cannot be regarded otherwise than the legislature did.

If we consider „appropriation" as a manifestation of the author's will to act as master of his own creation and if we admit that the rights afforded to authors had all the attributes of property rights, then and only then „appropriation" makes sense; otherwise, it is useless with the intellectual rights.

RIGHTS CONTENT ON DESIGNS

Ovidia IONESCU[*]

Abstract

Our intellect characterizes us and helps us make a difference in life. Due to our intellect we can understand the world around us, our personality is shaped and developed and, depending on such development, we can learn new things that are beneficial to us both as individuals and the humankind as a whole.

Intellectual property focuses on the intellect and the protection of everything that is a creation, represents an important element of day-to-day life and ensures the adequate progress of things deriving from and related to said aspect.

Authors are the creators of intellectual property, and their creation must be protected. Furthermore, they benefit from a protection system, respectively a protection title, as well as patrimonial and non-patrimonial rights in connection with their achieved creation and in full dependence thereupon.

Keywords: *intellectual property, patrimonial rights, non-patrimonial rights, author, protection title.*

1. Introduction

The field covered by this paper is intellectual property and the themes of the study aim rights content on designs. The importance of the proposed study is to identify the effects of protection and the rights acquired by the authors as a result of mind product protection and the objectives of the paper are to introduce the reader in the intellectual protection area and understand the effects of protection and its importance by showing related structured procedure and a simpler way to understand. I intend to respond to the objectives set by showing main effects of rights on designs and models and their importance, including identification of relevant articles of Law 129/1992 on the protection of designs and models as republished. I would like to show among other aspects presented herein that state of knowledge is high in the matter addressed and the subjects reveal this.

Our intellect characterizes us and helps us make a difference in life. Due to our intellect we can understand the world around us, our personality is shaped and developed and, depending on such development, we can learn new things that are beneficial to us both as individuals and humankind as a whole.

Intellectual property focuses on the intellect and the protection of everything that is a creation, represents an important element of day-to-day life and ensures the adequate progress of things deriving from and related to said aspect.

Authors are the creators of intellectual property, and their creation must be protected. Furthermore, they benefit from a protection system, respectively a protection title, as well as patrimonial and non-patrimonial rights in connection with their achieved creation and in full dependence thereupon.

Law no. 129/1992, as republished, on the protection of designs and models distinguishes between the author of the design or model and the holder of the registration certificate of the design or model.

Thus, Art. 3 of this law states:

"(1) The right to be issued a registration certificate belongs to the author of the design or model or his/her successor in title for designs or models independently created.

(2) If several people independently created a design or model, the right to be issued the registration certificate belongs to the person who filed the first application for registration.

(3) If the design or model was created as a result of contracts with creative purpose or by employees in their work duties, the right belongs to the person who commissioned."[1]

The conclusion that can be drawn from this article is that the right to have a registration certificate issued belongs to the author of the design or model or his/her successor in titles for designs or models independently created or if the model or design has been created as a result of a contract with creative purpose or by employees in their work duties, the right belongs to the person who commissioned it - in the absence of contrary contractual provisions explicitly or implicitly stipulating the creative purpose.

With regard to the above, let us take an example in order to clarify convincingly: a person invents a product and puts it up for sale, it being successful in the outlet market. To be sure that product is to be marketed, will be recognized by the consumer, will have the quality of the initial product and the creator will be acknowledged all the rights of creation, it is necessary that the person who created it is protected in terms of acknowledging that, in terms of product appearance - it belongs to that person, that person has the right to market the product and product quality is

[*] PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **ovidiaionescu@yahoo.com**).

[1] Law 129/1992 on the protection of designs and models, republication 3 in the Official Gazette no. 242/04.04.2014.

recognized, having thus the right to be paid for the product created.

In doctrine, according to Professor Viorel Ros designs and models "are combinations of lines or colours presenting an original character or shapes in volume which gives the product its own and new features, which distinguish it from other products"[2], and "Products of the spirit must also be protected outside the national borders of their author, when used according to their vocation, in other states"[3], and thus "Productions of the spirit are, of course, the most direct and personal creation, the most legitimate and less likely to be appealed <property>".[4]

Law no. 129/1992 on the protection of designs and models, as republished[5], in art. 2 d), defines design or model as „appearance of a product or a part thereof, rendered in two or three dimensions, resulting from the combination of the main features, particularly lines, contours, colours, shape, texture and/or materials of the product itself and/or its ornamentation".

The protection of the intellectual property also provides economic development, encouraging legality of competition, favouring the creative spirit of the individual and trade of products created both domestically and internationally and it contributes to the development of commercial relations.

The balance between creation and its knowledge at international level (which encompasses marketing) can only be kept by a more complex and complete legal system, better implemented in as many countries as possible. Therefore the international treaties have a very important role, and their implementation at national level, however in a closer implementation.

Creating a design or model also implies the birth of their protection rights and the need of its registration through a legal procedure. Given that in the matter of designs and models there is plurality of protection, the author of a design or model will have rights arising both from his/her capacity as author and rights arising from their registration with the State Office for Inventions and Trademarks (OSIM)[6].

Thus, Art. 5 of Law 129/1992, as republished on the protection of designs and models provides in paragraph 2 that: "**(2)** The protection of registered design or model under this Law shall not exclude or prejudice the protection of copyright thereof."[7]

Therefore, by making a design and model two distinct categories of rights are born, namely: non-patrimonial rights and patrimonial rights. Non-patrimonial rights are perpetual and patrimonial rights are limited in time.

According to art. 5 paragraph 1 of Law no. 129/1992 on the protection of designs and models, as republished, rights on a design or model acquired under this legislation, shall not prejudice the rights on unregistered designs or models[8], trademarks and other distinctive signs, patents and utility models, typefaces and topographies of semiconductor products. Also, the protection of design or model registered under this law, does not exclude or prejudice its protection by copyright.

Non-patrimonial copyrights, known as moral rights of the author are inalienable and imprescriptible rights arising from copyright acknowledged by most legislations of the states[9] and whose content is not expressed in monetary form. Non-patrimonial copyrights is a legal expression of the link between the work and its creator, they precede patrimonial rights, survive them and have permanent influence exerted on them.

Non-patrimonial rights are independent of patrimonial rights, the author of a design or model keeps these rights even after assignment of his/her patrimonial rights[10].

The moral rights are exclusively acknowledged to the author and he/she enjoys in principle the following moral rights:

a. Right of authorship (paternity right);

The right to claim recognition of authorship of a design or model is called in the doctrine "the right to paternity of the work" and is enshrined in art. 3 paragraph 1 of Law no. 129/1992 on the protection of designs, republished, being based on the need to respect the natural link between the author and his/her work. Thus, this right is exclusively recognized to the creator. If the design is a collective achievement, the performers are acknowledged as co-authors[11].

The right to authorship is the most important prerogative which forms the intellectual rights in general and consists in the acknowledgement of rights of true author of a design. This right cannot be the object of a waiver or alienation by acts inter vivos, unlike the right to be issued the registration certificate for the design or model which is transmissible, as shown in the analysis of art. 3 paragraphs 1 of the law.

[7] Law 129/1992 on the protection of designs and models, republication 3 in the Official Gazette no. 242/04.04.2014.

[8] For details on unregistered designs or models, see Ciprian Raul Romitan, *Protection of unregistered Community design*, in "Revista română de dreptul proprietății intelectuale", no.1/2009, pp.182-189.

[9] In the copyright system, moral rights of the author are almost ignored, they are not protected separately. According to art. 4 - 142 of the US Copyright Act, the author has exclusive rights he/she can exercise in contractual conditions such as to guarantee the integrity, but if an author transfers his/her rights without imposing such terms, he/she loses such rights. According to this law, moral rights of the author are a form of property right called right of publicity (e.g., the California Civil Code, Section 3344 regulates the right of publicity).

[10] Ciprian Raul Romitan, *The moral rights of the author*, Universul Juridic Publishing House, Bucharest, 2007, p.48.

[11] Viorel Ros, *works cited*, p.521, Ioan Macovei, *Intellectual property law treaty*, C.H. Beck Publishing House, Bucharest, 2010, pp. 260-261.

In accordance with Art. 50 of the same law indicated above, "unlawful acquirement, in any way, of the authorship of the design constitutes an offense and is punishable with imprisonment from 3 months to 2 years or a fine."

b. Right of disclosure, i.e. the right to decide if, when and how the work will be disclosed to the public;

Art. 30 of Law no. 129/1992 on the protection of designs and models, republished, states that "Throughout the duration of the design registration, the holder has the exclusive right to use and to prevent their use by a third party who has not his/her consent. The holder has the right to prevent third parties from performing, without his/her consent, the following acts: reproduction, manufacture, sale or offering for sale, marketing, importing, exporting or using a product in which the design is incorporated or to which it applies or storing such a product for those purposes."[12]

Thus, the disclosure of the design or model, bringing it to the attention of third parties, time and method for disclosure to the public, belong to the author, but to benefit from protection, he/she must obey and fall into the legal rigors and procedures.

c. Right to decide under what name the work will be disclosed to the public (right to name);

Right to a name is provided in art. 41 par. 1 of the Law no.129/1992 on the protection of designs and models, republished, which states that "The author has the right to have his/her surname, first name and capacity mentioned in the registration certificate, and any documents or publications concerning design or model."[13]

The author has thus the right to have his/her surname, first name and capacity mentioned in the registration certificate issued by the State Office for Inventions and Trademarks - OSIM.[14], and any other documents or publications on design, and these data will be recorded in the employment record of the author.

d. Right to claim the observance of the integrity of the work, known as the right to inviolability of the work,

The same art. 30 of the above mentioned Law regulates this feature of the work.

e. Right to withdraw the work (right of withdrawal).

Art. 36 d) of Law no. 129/1992 on the protection of designs and models, republished, provides that "exclusive exploitation right arising from the registration of design ceases d) by waiver of the holder of the registration certificate", i.e. by withdrawal of work.[15]

The above rights must be recognized to the authors of designs and models on the basis of the principle of unity of art[16] and in the specific protection they are supplemented with the following rights:

a. right to be granted a specific protection title, recognized by art. 3 of the law mentioned;

b. right to transfer the rights upon issuance of the registration certificate, a right provided by art. 30 and art. 34 of the law;

c. exclusive right to exploit the registered design or model, a right provided by art. 30 of the law;

d. right to have full name and authorship mentioned in the registration certificate to be issued by OSIM, and any documents or publications concerning design or model, as stipulated in art. 37 of the Law;

e. priority right of first deposit[17].

Concurrently, art. 41 par. 2 of Law no. 129/1992 on the protection of designs and models, republished, provides that data in the registration certificate for the design or model be recorded in the employment record.

Patrimonial rights are rights acknowledged to the creator of a work, in the case of our analysis, of a design or model which is the economic component of copyright and which can be transferred to another person, for consideration or for free[18].

If the author of the design or model is also the holder of the registration certificate, he/she will be the exclusive holder of the patrimonial rights[19]. In this case, as provided in art. 39 par. 1 of Law no. 129/1992 on the protection of designs and models, republished, which states that "The author, holder of the registration certificate of the design or model, enjoys patrimonial rights established under contract with people who exploit the design or model.", the author-holder of the registration certificate of the design or model enjoys patrimonial rights established under contract with

[13] Law no. 129/1992 on the protection of designs and models, republished,

[14] State Office for Inventions and Trademarks is the specialized body of central government, sole authority in Romania in ensuring the protection of industrial property, in accordance with national legislation and the provisions of international conventions and treaties to which Romania is a party, in accordance with provisions of GD no. 573/1998 on the organization and functioning of OSIM, as amended, art. 68 of Law no. 64/1991 on patents, republished, art. 96 of Law no. 84/1998 on trademarks and geographical indications, republished and art. 48 of Law no. 129/1992 on designs, republished. The organization, functioning and powers of OSIM are provided in GD no. 573/07.09.1998 on the organization and functioning of the State Office for Inventions and Trademarks, as amended by GD no. 1396/2009.

[15] Law no. 129/1992 on the protection of designs and models, republished,

[16] Viorel Ros, *works cited*, p.520.

[17] For details, see Badea Liliana, *Establishment of regular national deposit on industrial designs* (Case Study), paper presented at the Seminar "Industrial property protection in the context of new regulations", Tulcea, August 30 - September 2, 2004.

[18] European Union, *Terminology glossary on intellectual property (industrial property, copyright and related rights)*, a PHARE programme for OSIM and O.R.D.A., 2005, p.52.

[19] Viorel Ros, *works cited*, p.521.

persons who exploit that design or model. In the event of an assignment contract, the author's patrimonial rights are established in the contract, according to art. 39 par. 2 of Law no. 129/1992, republished, which states that, "In case of concluding a contract of assignment, the author's patrimonial rights are established in this contract."

If the author of the design or model is not also the holder of the registration certificate, his/her patrimonial rights are limited. The author has, as mentioned, only those rights based on his/her employment contract or contract of assignment of the patrimonial rights on design or model.

Art. 2 letter c of Law no. 129/1992 on the protection of designs and models, republished, defines "registration certificate" as "title of protection granted by the State Office for Inventions and Trademarks for registered designs."

From the analysis of art. 3 paragraph 1 of the law, according to which the right to have registration certificate issued belongs to the author of design or his/her successor in title for the designs and models independently created, it results that the right to have the registration certificate of a design or model issued, is transferable.

Utilization of a registered design or model may be made personally by the holder of the right, by reproduction, distribution, importation for sale, public exhibition or indirectly, by assigning the right of utilization. According to art. 38 par. 1 2nd sentence of Law no. 129/1992 on the protection of designs and models, republished, rights arising from the registration may be transferred in whole or in part. The transfer may be made by succession, assignment or license.

Transfer by succession of patrimonial rights on designs or models is subject to common law, and in terms of duration and territorial boundaries, the provisions of the special law, i.e. Law no. 129/1992 on the protection of designs and models, republished, shall be taken into account.

The assignment may be total if it relates to all the rights conferred by the registration certificate of the design or model or partial if it relates to only some of the rights conferred by the registration certificate. Partial assignment of rights arising from the registration certificate of a design or model determines a co-ownership regime[20].

The license may be exclusive, in which situation the licensor undertakes not to transfer the rights of exploitation of the design or model to others, or non-exclusive if the licensor retains a right to exploit the design or model and/or may grant the right to exploit the design or model to others also. However, the license may be total if it relates to all the rights conferred by the registration certificate, or partial if it relates to only some of the rights conferred by the registration certificate.

Note that, according to art. 38 par. 3 of Law no. 129/1992 on the protection of designs and models, republished, transfer of rights shall be registered with OSIM in the Register of designs and models and produces effects to third parties only from the date of publication in the Official Bulletin of Industrial Property (BOPI) of OSIM[21] of notice of transfer. The registration of transfer of rights on designs or models in dispute is suspended until the date of the final judgments on rights (par. 4).

Although Law no. 129/1992 on the protection of designs and models, republished, makes no reference on this point, having regard to the provisions of art. 55 of the legislation analysed, according to which, in the case of legal persons, registration certificates of designs and models in force represent intangible assets and may be registered in the property of the holder; transfer of patrimonial rights for these persons can be done by division, merger, liquidation, absorption[22].

In art. 37 special law also provides that holders of registration certificates of designs or models may mention on products the sign D or the letter "D" uppercase, enclosed in a circle, accompanied by the holder's name of by the certificate number.

According to art. 34 par. 10 of Law no.129/1992 on the protection of designs and models, republished, as of date of publication of the application, the natural person or legal entity entitled to have the registration certificate issued, shall temporarily enjoy the same rights conferred on the holder. This provisional protection lasts until the issuance of registration certificate unless the application was rejected or withdrawn[23].

The exclusive right of exploitation arising from the design or model registration provided for in art. 30 of the law referred to above shall cease in the following cases:

a) at the expiry of the validity date (period of validity of a design or model registration certificate is 10 years from the establishment of the regular deposit and can be renewed for 3 successive periods of 5 years);

b) by cancelling the registration certificate. Date of cancellation of registration certificate is the date the court judgment ordering or finding the nullity of the registration certificate, becomes final[24];

---

[20] Gheorghe Bucsa, *Protection of designs and models. Case studies and case law,* OSIM Publishing House, Bucharest, 2008, p.54.

[21] It has 12 annual issues and includes applications for registration of designs and models submitted to OSIM, lists of registered certificates, changes in legal status etc.. For details, see Gheorghe Bucsa, Tiberiu Popescu, *works cited,* pp.49-50. For further study, see also Stefan Cocos, *The a, b, c of protection and enhancement of industrial property*, Rosetti Publishing House, Bucharest, 2004, pp.210-212).

[22] Viorel Ros, *works cited,* p.536.

[23] See Ioan Macovei, *works cited,* p.262.

[24] Teodor Bodoaşcă, *Intellectual property law,* C.H. Beck Publishing House, Bucharest, 2006, p.313.

c) by holder's forfeiture of rights for failure to pay fees for maintenance in force of the design or model registration certificate;

d) by waiver of the registration certificate holder[25].

As a conclusion on the above, we can say that the exclusive right of exploitation is temporary (as mentioned above, the validity of a registration certificate is 10 years from the date the regular deposit is established and can be renewed for 3 successive periods of 5 years) and territorial (exclusive exploitation rights is limited to the territory of the state which issued the registration certificate).

According to art. 30 of Law no. 129/1992 on the protection of designs and models, republished, the following deeds constitute infringement of the exclusive right of exploitation of the design or model: reproduction, without right, of the design or model for the manufacture of products with identical appearance, manufacture, offer for sale, sale, import, use or storage of such products for circulation or use, without the consent of the holder of design or model registration certificate, in the period of validity thereof[26]. All disputes arising from the infringement of the exclusive right of exploitation, in accordance with art. 43 of the law fall within the jurisdiction of the courts under common law.

Concurrently, according to art. 52 par. 4 of Law no.129/1992 on the protection of designs and models, republished, for damages caused, the holder is entitled to damages under common law, and may request the competent court to order the seizure or, where appropriate, the destruction of counterfeit goods. This applies to materials and equipment used directly in the crime of counterfeiting.

The infringement proceedings[27] fall also in the jurisdiction of the courts and also action for unfair competition, whose conditions of exercise are regulated by Law no. 11/1991 regarding control of unfair competition[28]. Art. 2 of this legislation defines the unfair deed as any deed or fact contrary to fair practices in industrial or commercial activity. In order that unfair competition action be admitted, it is necessary to fulfil the prerequisite on action in tort[29].

Under art. 53 of Law no. 129/1992 on the protection of designs and models, republished, holder of a registered design or model may request the court: to order precautionary measures when there is a risk of infringement of rights on a registered design or model and if the breach is likely to cause irreparable harm or if there is a risk of destruction of evidence. In taking precautionary measures ordered by the court, establishment by the applicant of a sufficient security to prevent abuse may be requested. For ordering precautionary measures common law provisions[30] are applicable.

In accordance with art. 35 par. 2 of Law no. 129/1992 on the protection of designs and models, republished, throughout the period of validity of the registration certificate the holder has the obligation to pay fees for its maintenance in force. For the payment of fees for certificate maintenance in force, OSIM granted a grace period of 6 months, instead charging increases. Under paragraph 3 of the same article, failure to pay such fees shall cause the forfeiture of rights.

We should mention that the Romanian legislator, as well as legislators in other states of the European Union has not provided the obligation for the certificate holder to exploit registered design or model. Therefore, the inaction of the holder of registration certificate does not attract penalty of forfeiture of rights for non-exploitation[31].

2. Conclusions

The main focus in the present paper was about the content of the rights on designs or models, with the expectation of an optimal impact of these results, in terms of presentation of elements that define the procedure, what needs to be followed and what must be done so as their author benefit from their protection.

A suggestion for future activities would be a comparison of application of design and model protection in different countries, depending on their accession to international conventions, to see the implementation of international conventions at national level and alignment of countries to these so as an uniform national or international protection be implemented.

---

[25] According to art. 35 par. 3) of Law no.129/1992 republished, O.S.I.M. grants a grace period of 6 months for the payment of fees for maintenance in force, which are subject to penalties. Failure to pay such fees shall cause the forfeiture of rights (paragraph 4). Under paragraph 5) the forfeiture of rights shall be published in the Official Bulletin of Industrial Property of OSIM.

THE THEORY OF ESSENTIAL FACILITIES. THE PRINCIPLE OF ACCESS TO INVENTION IN CASE OF ABUSIVE REFUSAL TO LICENSE

Irina CUCER LISNIC*

Abstract

Essential facilities designate specific inputs which are essential for the production of other downstream goods.

Inputs are situated upstream and so are eligible for intellectual property protection. In order to foster competition in the downstream, holders of these inputs should be forced to give access to potential users, by offering them operating lidcenses. In other words, one must respect the exclusive right of intellectual property holder to freely exploit his invention or must he be sacrificed in favor of downstream competition ?

In the present analysis we intend to analyze some of either controverted or less known judicial aspects related to the theory of essential facilities.

Keywords: *compulsory licenses, essential feature, dominance, abuse, input, effective competition.*

1. Generalities

It has been widely assumed that the compulsory licenses for the intellectual property rights, based on art. 102 of the Treaty establishing the European Union, stand as an example for the cases of essential facilities. According to the logic on which the theory of "essential facilities" is based, the owner of a facility which cannot be reproduced by way of the ordinary process of innovation and investment and in the absence of which the competition on a market is impossible or restricted, must share it with a rival.

Hence, the term essential facility means the entirety of material and non-material installations owned by a dominant and non-reproducible enterprise; as a result the third parties` access to these installations is indispensable for them to carry out their activity on the market, and it concerns the situation when one may obtain a forced access to an intangible asset owned by a dominant enterprise.

The theory has its origin in the American competition case law from the beginning of the last century when a conflict of access to railroad infrastructure had to be resolved[1]. In this case, St. Louis was the only area with railroad infrastructure which granted access to the railroad infrastructure of other areas and the association with *Terminal Railroad Association of St. Louis* owned a fraction of the operation of the railroad in St. Louis, as a result, it actually controlled the entire access to such infrastructure, which caused it to be called to trial in order to be obligated to grant access to other operators in exchange for reasonable and non-discriminatory tariffs. The USA Supreme Court compelled *Terminal Railroad Association of St. Louis* to grant access in exchange for reasonable tariffs on the grounds that the railroad is a public utility and the association *Terminal Railroad Association of St. Louis* acted as a cartel, with the risk of excluding other users of the railroad. At that moment, The Court referred to the competition aspect of the business and did not introduced the term essential facility, it being applied subsequently, the theory assigning it three cumulative conditions in order to be applied: the use thereof is indispensable for an operator which provides a specific service, it is impossible or at least difficult to multiply the infrastructure in this case and, finally, the functional control exercised by way of monopole or a group of associates acting unitary. The subject matter was not fighting the monopoles, but merely the abuse of a dominant position for vertical integration, which imposed the intervention of the competition authorities.

In Europe, the theory of essential facilities was applied for the first time in 1992[2], following a complaint of B&I (an Irish ferry operator), when the Commission established that Sealink (a British ferry operator, which was also the harbour authority in Holyhead, Wales) abused its dominant position when it modified its schedule in such way that this modification affected the loading and un-loading operations of B&I, following the reduction of the available time. In other words, the Commission held that the deed of the owner of an essential facility to use its power on a market in order to consolidate its position on a related market is an abuse according to art. 82 of the EEC Treaty [art. 102 of TEEU]. This happens when such owner grants his competitors access on the related market under conditions that are

* PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **lisnic_irina@yahoo.com**).

[1] Case *United States v. Terminal Railroad Ass'n*, 224 U.S. 383 (1912);

[2] Case *Be-I Line v. Stena-Sealink*, CJEC, 11 iun. 1992 (IP/92/478).

less advantageous than his own services, without any objective justification. The Commission ruled by way of decision that Sealink to adopt a different schedule or return to the initial one. The Commission assessed that there is a risk of an "irreparable prejudice" to be produced due to increasing the interruptions in the loading and un-loading procedures as well as the effects of such on the services offered.

The term essential facility is not directly connected with the actual completion and efficient competition. The actual competition is defined as the competition exercised on the market, whereas the efficient competition means the best potential competition on the market. It is possible that a non-competition situation, meaning the absence of actual competition, to meet the criteria of an efficient competition. The theory showed[3] that several markets reserve for themselves an efficient competition and the CJEC[4] explicitly says that the purpose of the competition policies is to preserve on the market the possibilities of an efficient or potential competition. This means the possibility of third enterprises to compete with the enterprise in the dominant position, the latter not having the right to compromise the actual competition and thus having particular obligations including to allow the competitors to create an actual competition. This is why one observed that an enterprise in a dominant position might attempt an assault upon the competition even in the absence of an abusive practice considering the obligation pointed above, to ensure an actual competition on the market. In this context, if the enterprise owns an essential facility, it also has the correlative obligation to maintain the market competition.

One observed that such logic resembles the one in the domain of asymmetric regulations, used in case of networks industries[5], where the dominant position of the enterprise is not a consequence of its merits, but one of public power, situation in which, even in the absence of an abuse, such company must license third parties.

The background of the theory of essential facilities is the notion of abuse and monopole. If we were to refer it by comparison to the property law in the Civil Code, transposing this definition to the intellectual property law, we might say that the intellectual property is a material good that belongs to a person and the competition law is an easement of such good. The owner of the good may use it in an absolute manner but the limits of exercising the ownership right have been introduced under art. 556.

The theory of the abuse is comparable to the abuse of dominant position.

The essential facilities assign the specific inputs, indispensable to producing other downstream goods. The inputs are thus situated upstream and may benefit from the protection of the intellectual property, and in order to favour the downstream competition, the owners of such inputs should be compelled to allow the access of the potential users, by way of offering them operating licenses.

In other words, must one respect the exclusive right of the owner of the intellectual property to exploit freely its invention or should one sacrifice it in favour of the downstream competition?

This problem occurred in numerous contemporary businesses regarding the competition law and there have been considerable discussions on this topic. In order to address the question, we remind that a patent gives the owner an exclusive right to prevent the use by third parties, more specifically to produce or to sell without the owner`s authorisation during the legal protection period of 20 years as of constituting the regulated deposit.

The European competition law acknowledges the intellectual property, but if such concerns an input which is indispensable to the downstream production, a license refuse in this sense is deemed as abusive behaviour, considering the dominant position on this market. Such classification of an abuse based on art. 102 of the TEEU lead to the theory of the so-called essential facilities.

In a dynamic vision, the innovative enterprise owns an essential facility generated by an invention and finds itself in a forceful position for its direct competitors and enterprises situated downstream which need access to such essential resource. The problem is extremely delicate and it is up to the competition authorities to analyse the enterprise`s action which owns the facility whether it is guilty of abuse of dominant position meaning if an increase of the prices requested by such suppresses the technological competition and thus the efficiency.

The use of essential facilities theory in European case law accredited the thesis of the expropriation of the owner of intellectual property rights in the superior interest of the competition, but the articulation between the two domains is much more complex.

In USA, where the intellectual property law is deemed intangible under the competition requirements, the problem was brought into question in the 70s in the famous case *FTC v. Xerox*, when FTC[6] imputed to the photocopy machines manufacturer that it created a portfolio of thousands of patents, which increased on annual basis, that lead to a sort of monopole over the photocopy machines markets, thus blocking the entry of other competitors on this market. *Xerox* was accused of restrictive and market monopole practices[7] and FTC`s objective was to allow competition. By way of decision ruled on February 17,

[6] Federal Trade Commission of USA.
[7] Antitrust Litigation, 203 F. 3d 1322.

2003[8] the American justice condemned *Rank Xerox* forcing it to ensure access to competitors to the parts and computer programs thus to form an efficient market competition.

The guidelines of JD[9] and FTC in this domain are based on three principles:

– the intellectual property is treated in the antitrust domain as any other form of property;

– there is no assumption that an intellectual property right automatically creates a market power;

– protection by license of an intellectual property right is *a priori* pro-competition but there is no obligation for the owner of the intellectual property right to license third parties in order to ensure competition on the same market.

The Supreme Court mentioned in the case of *Verizon Communications v. Law Offices of Curtis V. Trinko* that the enterprise has no obligation to license competitors save for particular situations, when its refusal may have anti-competition consequences.

In European case law, as of the case of *Volvo*[10], but even more significant the case of *Magill*[11], the principle of access to work subject to an abusive refusal of license grounded by the theory of essential infrastructure has been materialised.

This principle works for the particular situation of an enterprise in a dominant position owning a material or non-material infrastructure, non-reproducible and to which the access of competitors is indispensable for carrying out their activity.

The fundamental feature of an "essential facility" case is that once the abuse was identified, there is an obligation to offer access to the facility.

In general, it is pro-competition to allow the companies to keep for their exclusive personal use the goods they acquired or built, and to expect from the other companies to acquire and to build their own products corresponding to their use, in case they need such goods to be competitive. The possibility to be compelled to share a facility, whose cost is substantial, must always have a certain effect of discouragement of the investments. Nevertheless, in case there is an abuse of exclusion according to art. 102, paragraph b of TEEU, more specifically if a dominant company owns or controls the access to something that is essential to allow its competitors to compete, it may be pro-competition for the company to be compelled to allow access to a competitor, (only) in case its refusal to proceed so has serious enough effects on the actual or potential competition. This obligation occurs, even when the refusal is proven, only when the competitor cannot obtain the products or the services from another source and it cannot build or invent by itself, and only in case the owner has no legitimate justification for the refusal. In other words, the exception applies only when the "dominant" competition is possible, and when such is possible, only in case it allows access to this facility. Anyway, these conditions are necessary, but not enough, for a duty to contract.

We mention that based on art. 102 paragraph b of TEEU, there is an obligation to allow the first license in non-discriminatory terms under the aforementioned requirements. It is not an abuse to deny the access solely because the claimant would be in a better position, should it allow access to it, or because another competitor might occur. The refusal to distribute a facility, irrespective of it importance, is not normally an abuse, which we shall explain when we address the "additional abusive behaviour".

We remind that the enterprise is dominant on the market by supplying a product or a service that is essential to the competitors which operate on a secondary (marginal) market and there is no real or possible source for such product or service, or if there is no satisfactory substitute for such, and the competitors could not produce it by themselves. Objectively, the competitors cannot offer their services on the secondary market without access to that product or service. If they can offer their services, even if with serious disadvantage, the advantageous facility cannot be elementary.

The refusal to supply the product of the service would cause damage to the consumers (this requirement is expressly provided by art. 102, paragraph b, which is, at least usually, and probably, always, the relevant provision in art. 102).

The damage caused to the consumers may occur because the refusal creates, confirms or strengthens the dominant position of the company on the secondary market (as seller on that market, and not only because of its control over an essential factor of production). This usually represents the "limitation" or reduction of the existing competition in a way it would not have been thus restricted. Nevertheless, if the competition on the main market has already been restricted by the intellectual property rights of the dominant company, isn`t there an abuse from the company to exercise such? The prejudice caused to the consumers can be also produced by preventing the apparition of a new type of product or service that offers clear advantages for the consumers, which would compete with the product of the dominant company.

However, there is no objective justification for the refusal to contract.

There are no set criteria to determine the appropriate price in case of obligatory forced access to the elementary facility by compulsory license.

The phrase "essential facility" does not create another different type of breach of the right or the legal norm. In addition, it does not create an abuse where, otherwise there would not be an abuse. A dominant company is never obligated to compensate its

[8] Case *Verizon Co. v. Law Office of Curtis V. Trinko*, US Supreme Court, LLP 358, US 905.
[9] Department of Justice of USA.
[10] CJEC, 5 October 1988, *AB Volvo c/ Erik Veng (UK) Ltd*., Nr. 238/87, *Rec.* p. 6211.
[11] CJEC, 6 April 1995, *RTE etITP Ltd c. Commission*, 241 et 242/91, Rec., p.743.

competitors for the disadvantages they have (of course, save for those the company itself created).

If there is an obligation to allow access, then there is also an obligation to allow access in on-discriminatory terms, and these terms may correspond to the terms imposed by the dominant company for its operations (because terms less favourable would cause a certain degree of blocking, against the provisions under art. 102, letter b). If this kind of operations does not exist, but art. 102 letter c applies, it suffices that these terms to meet the requirements under art. 102 letter c.

In case *Oscar Bronner*[12] one argued that it is necessary to demonstrate that the owner of the intellectual property rights prevents the apparition of a new product for which there is a potential demand, situation in which the theory of essential facilities is applied.

We remind that in the case of *Magill*[13] the Court of Justice deemed as abusive the refusal expressed by the Irish television channels to broadcast the programs grill of *Magill* in view of it editing a weekly guide to regroup the TV programs of six national channels. The denial to make available to *Magill* the TV programs was deemed discriminatory and not allowing a license to reproduce was deemed as not reasonable, which constitutes itself an abuse of dominant position of the Irish television channels on upstream market and obstructing the apparition of a new offer for the one which is not a direct competitor in a downstream market.

Also, in the case of *IMS*[14] the Court found that this enterprise comprised a data base regarding the sales in German pharmacies under the form of a 1860 modules structure and a derived 2847 modules structure, which became a standard due to its practical aspect based on the German postal codes and the free distribution thereof to pharmacists; in the same time NDC decided to opt for the use of this structure but IMS refused to sell its data base and the Court applied the theory of essential facilities deeming that the owner of the infrastructure must ensure the access to competitors in order to make the competition possible.

The difference between this and the previous case, in grounding the defence, is that the essential facility was granted to a company that operated on the same market, and not as in the previous decisions, on a downstream market.

In cases of *Microsoft*, the courts have changed the grounds for the sentencing thereof, insisting on the idea of the prejudice caused to the consumers by affecting the technical progress.

If, in the case of *Volvo*, the actual behaviours which can be deemed abusive are indicated (the arbitrary refusal to deliver spare parts to the independent repairers, fixing the prices of the spare parts at a inequitable level, the decision of not producing spare parts for a certain model, although many cars of the same model were in circulation), in the case of *Magill* there is a general rule connected to the exceptional circumstances which can be qualified as abuse of dominant position generated by a refusal of license of intellectual property rights.

Thus, the Court showed that there is no real or potential substitute to the weekly television guides which Magill wants to publish and that the television channels were the only brute source of information regarding the programs, as raw material indispensable to make a weekly television guide, and the refusal to license constitutes an obstruction to the apparition of a new product (...)"for which there is a potential demand from the consumers[15]" and finally, that "this refusal was unjustified". By "raw material" it was considered the information owned by the television channels as a simple raw material, regardless of its nature and without out any interest in the intellectual property rights.

There are thus three conditions to classify a refusal to license as abusive:

– an obstruction to the apparition of a new product for which there is a potential demand from the consumers, which means the indispensable character of the product protected by intellectual property rights;

– the absence of an objective justification of the refusal to license to be examined whether it is objective and proportional, always grounded on "exterior factors of the dominant enterprise[16]";

– the total exclusion of the competition on the derived market, more specifically, following the refusal to license by the owner of the intellectual property right, it reserves for itself a monopole on a derived market, except for the market of the product covered by the intellectual property right. This way, it is forbidden to extend a monopole to a derived market, such being deemed as abusive.

The appreciation of the connection between the main market and the derived market assumes a sufficient connection that is appreciated on a practical basis so that the responsibility of the owner of the dominant position on the main market to be disjointed towards the adjacent one; in this sense, the dimension of the derived market is of significant importance.

In case of *Tiercé Ladbroke*[17], TPI CE stated that "the refusal to license cannot be revealed as a breach of art. 86 of the EEC Treaty [art. 102 of the TEEU]

[12] CJEC, November 26, 1998, case *Bronner c. Media Print* C7/97.

[17] TPI, June 12, 1997, *Tiercé Ladbroke s.a. c/ Commission*, 504/93, p. 923.

unless it concerns a product or a service which is either essential for exercising the activity in question, in the sense that there is no real or potential substitute, either it is a new product whose apparition is obstructed and which has a potential and constant demand from the consumers".

According to above, it appears that a judicial obligatory license mechanism was instituted at European level, the Commission deeming that it has the right to set forth the conditions of license and to impose thereof, which under the aspect of contractual freedom is a measure which must be appreciated as exceptional, accepted as a necessity in regulating the markets[18].

This aspect was theoretically analysed[19], having been deemed that such an intervention to create obligatory licence without legal support cannot be but exceptional, interpreted *strict sensu* and should be expressly provided in the legal norms.

However, this matter is not easy to accomplish because the intellectual property is subjected to norms at national level, thus the mechanism on non-voluntary license should be provided by the national legal texts, which may lead to legislative fragmentation and different interpretation, but more specifically it is contrary to the competition law norms which are of European essence, including the praetorian way in which the European judge acts, who took the liberty to interfere in the existence and exercise notions of the intellectual property rights.

In our opinion, we deem that we are in the presence of a rule of competence and based on grounds, in order to achieve a unique internal market and the observance of the competition principle, the competence falls under the Commission and the CJEU regarding the exercising of the intellectual property rights. The refusal to license must be deemed as a reference to exercising the intellectual property rights, and not the existing thereof.

In this context, we ask ourselves whether the system of obligatory license, which is not grounded on a text of law, can fall discretionary in the hands of the European authorities, in the absence of *non*-subjective principles to guide their means of action?

The question remains opened and obviously pertains by the competition and promotion policies of the technical progress.

We join the theoretically opinion which states the absence of an indispensable precision to remove the arbitrary aspect in the aforementioned assessment.

2. The conditions of the essential facilities theory

In order to accede to a principle of access to the infrastructure protected by intellectual property rights, save for Magill case, in which we find it in an incipient form, clarifications have been subsequently brought in a continuous evolution of the case law.

Thus, the conditions which must be observed in order to apply this principle have been delimitated, in the case of IMS the conditions of application from the case-law regarding the abusive refusal to licence as well as in the case of *Oscar Bronner*[20] are indicated, although it does not concerns intellectual property rights. In the case of *IMS*[21] it was mentioned that the conditions must be met cumulatively, more specifically: the existence of an obstruction to the apparition of a new product for which there is a potential demand from the consumers, the exclusion of the competition on the derived market and the absence of an objective justifications to deny the license. Without direct indication, there is also a forth condition, more specifically the one regarding the indispensable feature of the product or service for which the access is requested, but such is self-understood from the previous three conditions.

We shall further examine these conditions:

a. The indispensable feature of the product or service

This must be deemed as a prior condition, in the absence thereof the enunciated principle cannot be applied to an actual situation. In the case of *Oscar Bronner*, CJEC stated that "in order to invoke the case of Magill in sense of the existence of an abuse according art. 86 of the EEC Treaty [art. 102 of the TEEU], not only the refusal of the service must be in such way that it removes any competition whatsoever on the market from the service petitioner, but it must also not be objectively justified, unless, but in equal measure, the service itself is indispensable for carrying out its activity, in the sense that there is no real or potential substitute to this service." One finds that by the way of stating the grounds, the theory of essential infrastructure in the intellectual property law was complied with. One must also note that in the case of *Oscar Bronner* the court used the phrase of absence of a real or potential substitute with reference to a service indispensable for carrying out an activity, by referring to a service or a product constituting the upstream market owned by an enterprise in a dominant position following the monopole conferred by an intellectual property right. Regarding the assessment of the indispensable feature, one must understand it depending on the proven facts, depending on the inexistence of an alternative solution to that service or

product. The alternative solutions, regarding the case law, must concern a "real or potential" substitute, which makes the term substitute to be very broad so that the products and the services can be even less advantageous.

The absence of alternative solutions does not suffice in order to establish the indispensable feature of the product or the service, it is necessary to ascertain "the existence of regulatory or economical technical obstructions which would make impossible or at least very difficult for an enterprise to try to operate on the said alternative products or services market, to cooperate, in the end, with other operators[22]. Depending on these, one may establish whether the obstruction is nullifying for the derived market in the development of a new alternate product or service.

We deem that an enterprise is in absolute impossibility in case of economical non-viability of development of an substitute for the product bearing intellectual property rights in order to have access on the derived market. We deem that the term regulatory obstruction has a legal source, i.e. legislative, by which the enterprises receive a monopole in carrying out their economical activities, such as: power grids, methane gas, railroads and others. Besides these legislative sources there may exist regulatory ones, norms or certificates particular to the activity or product in the respective case.

As regards the intellectual property, the source is legislative by way of allowing the owner of the intellectual property rights by the lawmaker a monopole of exclusive exploitation of its creation. The term technical obstruction is more complicated because it refers to a third party`s impossibility to enter on a derived market, in other words, to accede to technical means to allow it to create and develop an infrastructure which challenges the one from which it requests access. This wide meaning competes with the regulatory obstruction in case there are technical norms for a product, regarding putting in on the market, with certain particular characteristics.

We reiterate that in the case of *Microsoft*[23], it had a dominant position on the operating systems market and denied the supply of operative data Sun Microsystems which would allow it to operate on the derived market of server operating systems. Actually, the data concerned "the protocol specifications of server to server communications". The Court defined the inoperability as "the capacity for two computer programs to change information and to mutually use this information so that each computer program to be allowed under the means provided". These data were extremely specialized and hermetic, thus Sun Microsystems, in order to activate in a viable manner on the server operation market, had to come up with operation systems capable to communicate with the Windows operating systems found in every informatics environment, considering the extremely powerful position Microsoft had in this domain, which determined the Commission to deem these data as "extraordinary characteristics"[24], protected by the intellectual property, and Microsoft owned more than 90% of the market and *Windows* is the "fact norm" for these operation systems, thus any competitor cannot trade in a viable manner its products if it is unable to achieve a high degree of operability with such. This means there is no other way but to know what Windows created, whereas its information is irreplaceable. As regards the term economical obstructions, this means that creating an alternate product or service is not economically profitable when comparing it to the economic efficiency of the original product or service.

Thus, the European Commission sentenced Microsoft on March 24, 2004 for abuse of dominant position following the limitations of the inoperability regarding the operation systems for servers and sales connected to *Media Player*. From this case, it appears that voluntary limitation of inoperability was the result of a strategy for committing an abuse of dominant position targeting the transmission by way of crossbar effect of the market power in the domain of operation systems for PC to operation systems for servers. The Commission retained that it had a dominant position following the entry barriers set up by own networks in the domain and the enterprise`s practices which indicate the said strategy. The Commission deemed that the interface protocols are necessary for the viability of every alternate offer to the extend *Windows* was not yet the market standard but was becoming cvasi-inexorable and that meant that although the Microsoft strategy did not have as immediate effect the elimination of competition, this still induced a significant risk in this sense. This is why the Commission deemed that such practices obstruct the innovation and are in the detriment of the competitors, which are to pay extremely high prices, and in the same time lead to decreasing the consumers` freedom of choice. Microsoft`s refusal to allow licenses to the competitors meant that those competitors are prevented from developing advanced versions of their products. The penalty consisted of a 500,000 EUR fine together with the obligation to supply to the competitors information regarding the interoperability in order to transmit information protocols of client to server and server to server communication and to authorize the use thereof for the development and distribution of competitive products on the operation systems market[25]. In motivating the decision, the court showed that a dominant operator has specific obligations in preserving a structure of the actual competition, *a fortiori* which means the European

[22] CJEC, April 29, 2004, *IMS Health*, caz precitat.

[25] TPICE, Decision of September 17, 2007 in the case of *Microsoft Corporation c. Commission* (case T-2001/04).

vision in applying the theory of essential facilities and granting obligatory licenses: "although the enterprises are mainly free to choose their commercial partners, a dominant enterprise`s refusal to deliver may, in certain circumstances, act as an abuse of dominant position."

In the case of *Oscar Bronner*, the Court stated that the economic obstruction cannot be deduced from the fact that reproducing the infrastructure was not profitable and consequently, the economical activity of the license petitioner must be reported in quantitative terms to the one of the infrastructure owners.

Following the analyze of the aforementioned cases it appears that an abuse of dominant position by not allowing a license to competitors may exist only if the existence of the competitive enterprises is compromised and it limits the technical development on the consumers` detriment in a direct and/or indirect manner thus by affecting the actual competition`s structure. At the same time, one must notice that the enterprise in the dominant position cannot use any price to allow the third parties access to the essential facility found on its property, because it would commit another abuse of dominant position. But this price aspect is hard to quantify and regulate by the competition authorities, because there are no criteria regarding the amount of the technological advance comprised in the essential facility, which creates a legal uncertainty[26] with effects on the innovation determination on behalf of the essential facilities owners, these not being certain that they can benefit from the innovation effort.

Thus, to invest in an alternative product or service that is not profitable may be considered an economical obstruction, if the profitability is appreciated in the conditions thereof. In this sense, one may proceed arithmetically by establishing the development and functioning costs of an alternative product or service by an enterprise which cannot obtain profit from its economical activity. However, the problem of the economical obstruction is more subtle, because the economical obstruction makes that any investment in an alternative product or service to be an economical nonsense.

We deem that the difference depending on the nature of the obstructions must not be made absolute in the performed analysis, which is how the judges have proceeded in the aforementioned cases, where they gathered information and finally ruled only upon the economical obstruction, the other two not being defined. At the same time, we notice that the obstruction in the creation of an alternate product or service actually means barriers in entering on a market limited by the product or service protected by the intellectual property, owned by the enterprise in the monopole position. OCDE performed a synthesis on this problem[27] which defined the term of entry barrier pointing out that "the important thing in the actual cases is not to know whether an obstruction responds to the definition of the entry barrier like in other case, but to question oneself with regards to a pragmatic manner over the possibility, opportunity and measure in which an entry can intervene taking into account the actual situation of every business".

b. The risk of excluding the competition on the derived market

The main problem consists of distinctly identifying the two markets, the main one and the derived one, which, in the case of *IMS Health*[28], the court stated that "it is determinative to be able to identify two stages of different production, connected by the fact that the upstream product is an indispensable element for providing the downstream product", in other terms, one may identify an upstream input market. Such market can be but potential, "in the sense that the enterprise in the monopole position which operates in this market to not trade in an autonomous manner the inputs in this case, but to exploit them in an exclusive manner on a derived market, restraining or completely removing the competition on this secondary market".

Following these arguments, it appears that the enterprise in the dominant position operates on the main market, but not on the derived market. What happens when it operates on the derived market as well? Does the principle of essential infrastructure still apply?

In our opinion, the condition of the distinct markets is no longer complied with and thus, the principle cannot be invoked. Under this aspect, we deem the European case law confusing in the case of IMS where the supply is made on the same market of the product, but it is used as argument the obstruction of the new product protected by intellectual property rights.

c. The condition of the existence of the obstructions at the apparition of a new product

The condition was mentioned in the case of IMS, according to which "the enterprise requesting a license must not limit oneself to reproduce products or services which are already offered on the derived market by the owner of the intellectual property rights, but to intend to offer new products or services which the owner cannot offer and for which there a potential demand from the consumers". According to the formulation, the condition of the new product sets a double protection: of the interests of the owner of the intellectual property rights and of the interests of the consumers.

The novelty, by reference to the product already offered by the owner, implies the delimitation of the

[26] The legal uncertainty is a general principle of the European law established by the CJEC in the case of SNUFAP v. The High Authority CECA on March 22, 1961 and implies the expectancy of the rule and its stability. In this case, the uncertainty concerns the expectancy of the resources flow resulting from innovation.

[27] OCDE, The competition and the entry barriers, Synthesis, February 2007, available on http://www.oecd.org/.

[28] CJCE, April 29, 2004, C – 418/01.

notion. We deem that it means the existence of certain sufficient elements of particularity of the product already offered by the owner on the derived market. To impose the novelty seems to be a condition much too severe for the petitioner by reference to the novelty of the product covered by the intellectual property law. In reality, we deem that there is novelty when a consumer can find differences between this product and other competitors` products; to this it must also be added the potential character of the consumers` request which at the moment of requesting the access to the essential facility, they are not satisfied with the equivalent products already existing on the market.

The condition of the new product allows the attenuation of the problem of the particular merit acknowledged to the owner of the intellectual property rights to deny the access of third parties which only aim at proposing a product already offered by the owner. In case law and doctrine, the condition of the new product was deemed to materialize the idea of the competition on merits.

In the communication of the Commission regarding the application of art. 102 of TEEU[29] it has been set forth that: "according to the caselaw it is not illegal for an enterprise to occupy a dominant position and this enterprise may participate at the competition game through its merits". This is why it looks unjust that the creation effort supplied by an enterprise to obtain a place on the derived market to be reduced up to zero by obligations set in order to cede a license over its right, whereas the third party did not place any effort to obtain a place on the derived market. This is also the subject matter of art. 102 of TEEU which does not protect the less successful enterprises than the dominant enterprise.

As regards the novelty by reference to the consumer`s request, we deem that it has been pursued that this condition to remedy the appreciation difficulties regarding the novelty criterion, in the sense of appealing to a less subjective criterion and not connected to the owner and the competitors on the derived market, but which would allow the consumers to distinguish between the offered products and the ones already existing and to request them which leads to amelioration of the allocation of the possible resources.

The novelty criterion in the analysed context is different from the novelty which characterises the patented inventions, having distinctiveness in the competition law. Because the abusive refusal to license can only be applied in the derived products of the essential infrastructure, in this sense, in the case of IMS, it was estimated that "the refusal to license cannot be deemed abusive save for the case the enterprise which requested the license does not expect to limit only to substantially reproducing the goods and the services which are already offered on the derived market by the owner of the intellectual property rights, but also has the intention to produce goods or services with different characteristics which may compete with the goods or the services of the owner of the intellectual property rights and thus, to meet the specific needs of the consumers which are not satisfied with the existing goods and services". Therefore, the novelty cannot be assimilated to the absence of the ability to be replaceable in the sense of the competition law. If the new product cannot non-replaceable to the already offered product, there is no risk of competition between the rightful owner and the license petitioner. In the case of *Microsoft*[30], the Court insisted on the fact that the damage brought to the consumers is primary in order to characterise the obstruction of the apparition of a new product and consequently, it deemed the novelty condition needs to be appreciated, according to art. 82 paragraph 2, letter b of the EEU Treaty, according to which the practices consisting in the limitation of the markets production or the technical development causing damage to the consumers are abusive.

In other words, the condition of the new product is nothing but an element amongst all the others which should be viewed per ensemble.

3. The additional abusive behaviour as a condition of the remedy principle by compulsory licenses

According to the case law, the refusal to license is illegal only to the extent that is has an "additional abusive behaviour". In addition, the Court retained that allowing the compulsory license assumes in all cases the existence of *exceptional circumstances*.

The additional condition is justified because, on one hand, the dominant position is never illegal. Thus, even if the dominant position is based on intellectual property rights, the competition law cannot end this position by way of allowing compulsory licenses. On the other hand, a dominant enterprise`s denial to license an intellectual property right could not normally be an abuse because it would mean that the dominant enterprises be actually prevented from acquiring and exercising the intellectual property rights for their own use. However, it cannot be deemed as illegal the deed of a dominant enterprise that uses the owned intellectual property rights according to the purpose for which such were conceived.

Thus, a compulsory license can be requested only in certain circumstances, and a simple refusal to allow a license over an intellectual property right is not illegal based on art. 102. To support the contrary, it means to consolidate a rule which would contradict the concept of intellectual property, as well as the principle provided under art. 102 which states in all cases the existence of an abuse.

[29] JOCE No. C 45 du February 24, 2009, p. 7, point 1.
[30] TPICE, September 17, 2007, case *Microsoft Corp. c/ Commission*, Nr. T-201/04, *Rec.* p. II-3601, point 332.

Obtaining and exercising the intellectual property rights are deemed as pro-competition, even when the owners are dominant enterprises, because they will not be encouraged to obtain new patents, unless they are free to exercise the rights they own.

However, the case law does not explain "additional abusive" as well as the way it is accompanied by the refusal to contract. Save for the fact that a refusal to license cannot be itself an abuse, the case law does not offer a clear approach for any future cases. The Court simply resumes at offering a few examples of situations whose subject matter is "additional abusive behaviour". There are the typical situations of essential facilities found on two markets in which the dominant enterprise monopoles a clearly identifiable main market. There is also the example which was presented in the case of Magill, regarding the granting of television licenses, where the refusal to license prevents the consumers from a new type of product, which was not produced by the dominant company and for which there is a clear unsatisfied demand. In the decision in the case of *Microsoft*, the Court ruled that there might be a compulsory license in case the refusal would limit the technical development of the competitors, thus causing damages to the consumers. As a result of a lack of adequate explanations, it was deemed necessary to conceive an enumeration of all the circumstances which in courts` view have set exceptional circumstances. It appears that there is no clear rule.

It is obvious that the refusal to allow a license can be deemed illegal only to the extent that it is directly connected by an "additional abusive behaviour". An abuse that lacks any connection would affect the legality of the refusal to license. Based on art. 102 letter b, the additional abusive behaviour must imply a serious damage caused to the consumers and can also manifest outside the market to which the intellectual property right refers to.

As already explained, the characteristic of the essential facility is that when an abuse is identified, the remedy implies not only the cease of the abuse but also the compulsory access to that license. Therefore, automatically it must be a relation between the abuse and the compulsory access.

The relation between the refusal to license and the additional abusive behaviour, which makes the refusal to license illegal, must argue why a compulsory license is an adequate remedy for the additional behaviour.

Therefore, the connection is explained by the fact that the refusal makes the other behaviour possible, strengthens or aggravates its anti-competition and exploitation effects. Probably the connection is the fact that to simply end the other abuse does not suffice and would not be an efficient remedy. The compulsory license must be the adequate remedy for the additional abuse.

So, we are in the presence of an "additional abusive behaviour" if the dominant enterprise would refuse to license in other way than in anti-competition conditions (for example, save for the condition that the owner of the license not to challenge its intellectual property rights) or in exploitation conditions (for example, in case it would insist on royalty payment of the license owner`s rights or on excessive prices) or in the case it would refuse to license for an intellectual property right even if it would have committed to allow the license in view of a standard to which it agreed. A remedy at the market level by allowing a compulsory license seems more efficient and less bureaucratic than continuing the surveillance by a competition authority in order to ensure that the initial abuse would not repeat itself. Continuing the surveillance may though be necessary in cases of setting excessive and discriminating prices.

The behaviour or the additional element must be a behaviour forbidden by art. 102 of TEEU. Practically, the dominant enterprise must commit deeds or cause effects among the ones punishable by art. 102. Otherwise it would be in the presence of a normal result of the exercise of the intellectual property right on the market. The additional element cannot simply be an economical monopole, because such is, at least temporary, many times, the result of the application of an intellectual property right. The behaviour must bring an anti-competition effect which would cause damages to the consumers.

All the elements that prove the simple dominant position cannot constitute the condition of "additional abusive behaviour". However, the behaviour, and not the market situation, constitutes an abuse. The characteristics of the market determined by the legal monopole conferred by the intellectual property right, may lead, temporary or permanently, to an economical monopole, may explain the dominant position, but they cannot constitute an abuse. Thus, the fact that simple intellectual property right represents an unique source difficult to duplicate or "reinvent", very valuable, does not equivalates to an "abusive behaviour", characteristics which generate a considerable competition advantage.

The case of Bronner is an important case for the "essential facilities", especially due to the general attorney`s opinion, although the intellectual property is not the subject matter. A newspaper editor who had the only home delivery service in Austria refused to offer home delivery services of a competitor newspaper. The Court said that the refusal would be illegal only if it would eliminate the entire competition by the petitioner, without objective justification, and if the service would be indispensable because there would not be a real or potential replacement. But there were alternatives to home delivery and it was possible to develop a competitor system of home delivery. There was no prove that it would be non-economical for the competitors, acting together if it would be necessary, to create the second home delivery system with a coverage similar to the existing one.

For example, in the case of *Volvo vs. Veng* and *CfCRA vs. Renault* the Court stated that the freedom of an intellectual property right to refuse to license is the core of its right and that the refusal to license cannot be contrary to art. 102. The Court retained that "one must note the fact that exercising an exclusive right by the owner of a registered draw or a model as regards the car body board can be forbidden by art. 82 [art. 102 of TEEU] if such implies, from a dominant position enterprise, certain abusive behaviours, such as the abusive refusal to supply with spare parts to the independent repairers, establishing inequitable prices for the spare parts or the decision to cease the production of spare parts for a certain model, even if many cars of such model are still in circulation, provided that such behaviour would affect the trade changes between the member states".

In this case, the general attorney argued that the refusal to license might be illegal should the excessive prices be combined, which is contrary to art. 102 paragraph a of TEEU. In the conventional theory regarding the compulsory granting of licenses, as an aspect of the right to essential facilities, this commentary would be hard to digest, because the excessive prices have nothing to do with the essential facilities. Also, the excessive prices for the products intended for the dominant market would constitute an abuse for the same market for which the compulsory license was granted. It had always retained that in the cases of essential facilities there must always be two markets. If there would not be two markets, the dominant company would be compelled to share the competitive advantage with a direct competitor.

Thus, the case *Volvo vs. Veng* suggest a principle that applies to the exploitation abuses, more specifically if an identifiable abuse was committed, the compulsory access by way of license would be an efficient and adequate remedy.

In the case of Microsoft, the Court retained that the additional abuse must not necessarily prevent the development of a new product for which there is a clear and unsatisfied demand. The abuse might "limit the technical development" of a competitor according to art. 102 paragraph b of TEEU, if the damage caused to the consumers is obvious enough. This finding is important because it complements one of the omissions of the conventional law over the "additional abusive behaviour". This consolidates the theory pursuant to which the additional abusive behaviour can be any kind of abuse forbidden by art. 102 of TEEU. In addition, it becomes clear that at. 102, paragraph b of the TEEU offers a comprising and clear definition of the exclusion abuse, which is necessary for the judicial security.

In the case of *IGR Stereo Television*[31], IGR, a group owned by all German manufacturers of television equipments, was also the owner of certain patents for stereo receivers necessary to equipping the German televisions with stereo reception systems. They unified their patents for a stereo television system and the German authorities approved their system. IGR licensed only its own members, establishing that licensing other traders would occur subsequently and only in limited quantities. The patent was used to stop the distribution by Salora, a Finnish company of stereo television in Germany. The Commission appreciated that the intellectual property right does not justify the refusal to license. The case is not well known, but it is important because it shows that in case of agreements to share technologies, each party can have a legal obligation to grant licenses to third parties.

FGR Stereo v. Salora is, consequently, an important precedent in cases in which companies agreed to set a standard, based on the fact that the licenses for certain patents can be essential to allow the use of the standards as well as in cases of patents clusters and participative associations.

Thus, the condition of the existence of the "additional abusive behaviour" must refer to an abuse according to the provisions of art.102 of TEEU instead of the simple exercise of the intellectual property rights, even if there are prejudices caused to consumers, makes a clear interpretation.

If there would be a duty to contract, even if there were no abuses committed, simply to create a bigger competition, this would represent a regulation rule, which does not comply with the principles of the competition law. All cases of essential facilities implied identifiable abuses. In case the abuse is discriminatory, the obligation to contract in non-discriminatory conditions is clearly the adequate remedy. In case there is a refusal to contract for the first time, the abuse must consolidate the dominant position or to disadvantage the competitors in a new way. In these situations, a prejudice caused to the consumers would result from the refusal to contract, and the refusal would limit the production, commercialization or technical development of the competitor or the newcomers. In each of these cases, the obligation to contract may clearly be the adequate remedy.

In conclusion, the principle of essential facility is in fact a remedy principle. We have not identified clues out of which to result that the case-law of the Union`s courts suggests that the Union`s law would impose, in accordance to art. 102 of TEEU, an obligation to allow access to a facility, simply because it is essential. This fact is contrary to the principles according to which a dominant position is not illegal and that it will not apply a remedy if an abuse was not committed.

[31] The Commission, Report XI on the Competition Policy, 1982, p. 63.

4. Arguments pro and con to the theory of essential facilities

The demarcation line between the inherent and extrinsic limits of protection, between keeping the functionality of the industrial property system and the salvation of the free competition, between the protected technology and the replacement technology becomes more fine because it is the intellectual property right itself which provides rules by opening the protection system through exclusive rights to a real competition between the dependent complementary technologies towards the intra-technological competition. Such device of inherent limits favouring the intra-technological competition should be efficient if the exclusive right does not degenerate in a very broad monopole right in order to be individually exploited by a single enterprise.

Normally it is about saving the possibility of the development of secondary markets, the diversification of protected products based on products that are dependent partially, technically and economically on the firsts. In the end, the problem that the law seeks a solution to is similar to the one subsidiary to the rules defining the patented invention in front of the exclusion of very wide real knowledge in order to be *internalized* in an useful way through an exclusive right granted to a single owner such as findings, scientific theories or mathematics methods, etc. The provisions of art. 52 para. 2 letter a and c of the CBE does not aim only to maintain the public domain of knowledge but also to avoid the appropriation of knowledge whose application is very wide and unpredictable to be usefully entrusted to an individual and exclusive exploitation. The theory emphasized the very broad blocking effect that a patent produces on discoveries, scientific theories, mathematical methods or plans and principles of intellectual activities and on the other hand the transaction costs required for operating a very wide exclusivity.

The case law in the matter of competition law sentences an enterprise which owns an exclusive right and dominates a market to license the third parties who want to create new products, dependent on a protected product on a derived market where the dominant enterprise has no firm objectives but where there is a certain or probable demand[32]. These solutions are much commentated and do not need further explanations[33].

One recalls that competition law cannot intervene if its particular application criteria are met, namely the existence of a dominant position in the market and the fact of abuse characterized by the use of an invention for which there is an actual or real potential demand on a neighboring market and the dominant enterprise refrains itself to satisfy without valid justification. The crucial problem of this case-law is not that it does not allow third parties to penetrate the exclusive right by a license application which the owner will not refuse without abuse. Consequently these licenses will not allow them to make direct intra-technological competition to the dominant enterprise, but only to serve or develop secondary markets for complementary or substitution derivatives thus to enter into a barriers and technological diversification competition.

Often the problem is better to grasp and define the nature and importance of the knowledge to which access must be granted in order to maintain effective competition through merit, in every market. Consequently, the only fact, although the owner of the information did not disclose it, concerning its person, its enterprise and its business has by definition a factual or legal monopole on such information without this meaning that there is a dominant position on the market information. Such an approach would deny *a priori* any possibility of competition for obtaining the concerned information. Therefore, the information must have particular qualities and in any case we must preserve the assimilation in Magill case law to an essential facilities theory. The dangers related to the investments uncertainty or sub-remunerations, innovative inputs also reduce the risks of innovation require an approach and focuses on specific restrictions on competition rather than a statutory approach as found in the essential facilities theory.

In the field of intellectual property, the theory of essential facilities should be used with reluctance, as did the US competition authorities, considering that as a brake on development.

However, a compulsory license is not in complete contradiction with the intellectual property protection because it also causes an innovation effort to overcome competitors amid the dissemination of knowledge in the technical field.

Therefore, a policy of compulsory license is a compromise between the interests of innovators and society as a whole.

Such compulsory licensing implied the issue of the prevalence of competition law on intellectual property law, with major consequence of legal uncertainty given the unfounded access requests of the opportunistic enterprises and damage innovation. More surprising is that such a theory was taken over in European law after the American Supreme Court has abandoned it.

According to the American case law[34], the concept of essential facility designates an indispensable resource owned by an innovating

[33] Microsoft Decision: abuse of dominant position, refusal to license TPI of September 17, 2007, Case no. T-201/04, *Microsoft/Commission*, Rec. 2007 II, p. 621, 637.

[34] Case *United States v. Terminal Railroad Assn. of St. Louis*, 224 U.S. 383.

company that would allow competitors to carry out their activity on the relevant market, but it is impossible to be acquired by reasonable means (financial, technical and temporal). If the court reaches such a conclusion, it can force the holder of the facility to open their access under reasonable conditions, so to ensure the competition.

In Europe, the competition policies applied the theory of essential facility to the intellectual property rights in a much broader way, on the idea that the inventor has a competitive advantage vis-a-vis the subsequent enterprises, requiring arbitration. Yet, a compulsory license in profit competitors may compromise innovation.

The European case law has applied the theory of essential facilities by dragging from physical infrastructure to intangible assets, when the US Supreme Court reiterated its rejection of the theory. The two opposing views exist because there are different views on competition, as one gives importance to the market structure or the analysis of innovation concerns. The European vision admitted the obtaining of a forced access to an intangible asset, owned by a dominant enterprise in the form of compulsory licenses, which caused the competition law to prevail on intellectual property rights. It was considered that [35] the application of the theory of essential facility to intangible assets creates a climate of legal uncertainty regarding the possibility of opportunistic enterprises to have unfounded access to such structures which affects the companies` innovation concerns.

The theory of essential facilities, by its logic, is not irreconcilable with the essence of intellectual property, since it aims to impose mandatory sharing and forced contract, while the main objectives of intellectual property rights aim to provide exclusivity to its owner. The theory of essential facility, allowing limitation up to suppression of the intellectual property right owner to prohibit the exploitation of its right by third parties, allows this way for the idea that the refusal itself to license constitutes an abuse of a dominant position to be validated. Moreover, the exclusive right of exploitation is reduced to a mere right to be paid.

Another negative effect of the application of the theory of essential facilities to intellectual property rights is represented by the diminishing of the concerns to create, to innovate. To this it is added the uncertainty of the conditions for the application of essential theories for a very wide interpretation made by the European Commission and Court of First Instance of the European Union, as was done in the Microsoft case where the CFI considered that the risk is simple enough to be considered competition is exclusive. Finally, this theory has as negative effect the practical difficulties of setting the price of access to resource.

This theory comes to accentuate the current phenomenon of regulation of the intellectual property law by competition law, which has not happened in the past, with the consequence of increased legal uncertainty for the creator, creation of killer patent portfolios, scientific incompetence of competition authorities, etc.

Opposite to the analyzed case-law trends, we notice that the intellectual property and the competition are not absolutely incompatible as long as the intellectual property does not degenerate into abuse or abusive monopole.

We consider that both the legislator as well as the courts must turn their attention to the notions of *abuse* and *unfair monopole* and ensure regulations or interpretations that are consistent with the theory of abuse of rights, but also excluding the possibility that the enterprises less inventive to call upon vexatious measures.

All that implies a right implies the possibility of misuse and the abuse must be excluded in order to allow the coexistence of rights.

We believe that intellectual property is a two-edged weapon: it stimulates the innovation by protecting a monopole, but also blocks access to goods under monopole, goods which may be necessary to produce other goods needed in the market.

In other words, the monopole may have the effect of preventing third parties to innovate. It is a movement that creates a vicious cycle which imposes a regulation of intellectual property in a new way to overcome these drawbacks.

This way we wish to say that it would wrongly blame the competition law which sought a solution to prevent abuse of rights in case of monopole caused by intellectual property and which is only a palliative in waiting for a regulation of the intellectual property law and that's why competition law intervention should be limited to exceptional circumstances.

We believe that competition law is best to a quality innovation stimulation that will positively be passed on to the consumer.

The technical compulsory license can bring a balance within the intellectual property law by reference to competition law, although it constitutes a limitation of the intellectual property law, the introduction of compulsory license has the effect of producing an incentive to innovation that would allow innovators to remunerate their investments and ultimately, to encourage the dissemination of knowledge within the company. The legal license is considered as having a high degree of difficulty in terms of setting the tariff access to essential facility. Therefore, a rigorous theoretical framework in which the legal uncertainty generated by limiting intellectual property rights to be reviewed is necessary for an optimum dosage of legal and judicial measures.

[35] Frédéric Marty, Julien Pillot, *Politiques de concurrence et droits de propriété intellectuelle: La théorie des facilités essentielles en débat, disponibil pe : http://www.gredeg.cnrs.fr/working-papers/WP-anciens/Old/Intangibles_facilites_essentielles_contentieux_concurrenti els.pdf*

In conclusion, three fundamental principles must prevail in the case of essential facilities theory[36]:

– the obligation of the owners of an essential resource to share its use with third parties should only be exceptional especially when the monopole comes as an innovation effort of its owner;

– the irresistible need of third parties to use that resource and the fact that they do not seek merely to share the monopole rent to be proved;

– the refusal to license a third party shall not itself be deemed illegal and should not be condemned save for proving the abuse of dominant position of the monopole holder to remove the competitors from the market.

5. Granting licenses in other cases of abuse

The principle of remedy is not limited to any particular type of abuse. Apart from cases of suppression of a new and desirable type of product, a compulsory license could be an adequate remedy for establishing excessive prices, contrary to art. 102 lit. a, as suggested by the Court, and of course in cases of discrimination. As already mentioned, compulsory licenses would be appropriate where the company has committed itself to grant licenses to a standard. Where a dominant enterprise makes two products that must work together, it may be required to be licensed all intellectual property rights involved in the interface that make them work together, so as to allow competitors to make each product compatible with the other (but not to copy any of the products). This would be a natural part of a judicial remedy in a case of "binding", under art. 102 lit. d or in a case of "grouping". In a case of fraud or "patent thicket" (the deliberate multiplication of questionable patents in order to obstruct competitors), a compulsory licensing for all patents may be the only effective remedy. Where a dominant enterprise acquires unduly intellectual property rights, it may be requested to license third parties. In addition, if an intellectual property right has been used to complement or enhance an exclusionary abuse committed in another way, the right cannot be used to obtain unlawful indirect result.

It is well established in European competition law that a behavior which in isolation could be legal, it can be illegal if combined with illegal behavior in one strategy of exclusion. However, in cases where the abuse is the monopolization of a second market, the essence of the abuse is blocking the current competition and where there is competition to be blocked, there is normally no abuse. Intellectual property rights provide even to a dominant enterprise the right to refuse to open a market for its competitors.

The theory of remedy also clarifies in a useful way, the issue of imposing compulsory license indecisions on interim measures. In accordance with the established practices, the provisional measures should be taken to maintain or restore a situation as it was before the alleged abuse to occur. According to the theory of remedy, the abuse should not be a refusal to grant licenses, but another type of behavior. The provisional measures, if they were justified, would be necessary to restore the situation as it was before starting that other behavior. If no license was given or promised, then no license should be decided by way of interim measures. This means that interim measures should not be imposed in cases where abuse prevents the development of a new type of product for which there is a clear and unsatisfied demand because, by definition, a license in this case would change the previous situation. But provisional measures would constitute as appropriate action if a dominant company would obstruct or reduce existing competition, where the other conditions for interim measures were complied with. Therefore, the theory of remedy explains and confirms the view of the President of the Court of First Instance, that 'the Commission would not normally have to decide to grant a compulsory license in an interim measures decision. However, if it would be appropriate that by interim measures to end obstruction or handicap competition created by the alleged abuse, the fact that they could be removed only if permitted licensing of intellectual property rights, it should be allowed this to make the provisional measures ineffective.

It should be recognized that it would be difficult to use a compulsory license as a remedy in cases of excessive pricing under art. 102 lit. a. The essential difficulty is to establish appropriate royalty rate. It must be small enough to allow licensees to sell the product or service at a lower price than the dominant enterprise, and not just to be on the "price umbrella" safe of the dominant company in order to share his excessive prices.

Art. 40 para. 1 of the TRIPS Agreement recognizes that the practice or concession conditions in licensing of intellectual property law that restricts competition may have adverse effects on trade and hinder the transfer and dissemination of technology can be regarded as illegal. The agreement recognizes the compulsory licensing scheme granted by public authorities concerning a patent in exchange of an adequate remuneration of internal law and provides a procedure preceding the grant of a compulsory license agreements, measures which aim to prevent such licenses relating to the hindered competition.

THE NOTORIOUS, REPUTED AND FAMOUS TRADEMARKS

Andreea LIVĂDARIU[*]

Abstract

The owner of a trademark that has a reputation in Romania or in the European Union may request to court to forbid the infringer from using, without its consent, a sign identical or similar to its trademark, but for products or services different from those which are sold or provided under said trademark. According to Law no. 84/1998, the notorious (well-known) trademark is the trademark which does not necessarily have to be registered under the Trademark law protection. The Romanian doctrine sustains that famous trademarks do exist.

In this paper, we shall attempt to find (if it really does exist) the difference between notorious (well-known), reputed and famous trademarks, the criteria by means of which these trademarks shall be distinguished and the evidence by means of which the notoriety, reputation or fame of a trademark may be argued. We shall also present the legal regime and our analysis will be based on the Trademark law, doctrine and case-law studies.

Keywords: *notorious (well-known) trademarks, reputed trademarks, famous trademarks, likelihood of confusion, likelihood of association.*

1. Introduction

The Romanian literature speaks of notorious trademarks, reputed trademarks, famous trademarks[1] (or of the highest repute[2]), as categories of distinctive signs of commerce benefiting from different legal regimes. Different and somehow preferential, given the fact that, in order to benefit from legal protection, distinctive trademarks must usually be recorded, and thus must pass through the OSIM (*State Office for Inventions and Trademarks*) filter.

But do these types of trademarks really exist or are they just a creation of doctrine? How could they be defined and what differentiates them? What is the legal status they enjoy and what are their means of protection?

Hugo Boss, Versace, Kalvin Klein, Knorr, Lavazza are unregistered trademarks in Romania, which the Romanian law protects. Are they notorious trademarks, reputed trademarks or famous trademarks? What is their legal regime and how can they be protected against usurpers?

These are the questions we aim to answer further below.

2. Are there really famous and reputed trademarks?

According to Law no. 84/1998 (hereinafter referred to as the Trademark Law), the **notorious trademark** is the *widely known trademark in Romania, by the audience segment targeted by the products or services to which it applies, without the need for the trademark registration or use in Romania in order to be opposed* (art. 3 letter d)). The law also reminds the notorious trademarks when listing and defining *the previous trademarks* as the *trademarks that, at the date of filling the application for registration or, where appropriate, at the date of the claimed priority, are notorious in Romania in the meaning of art. 6bis of the Paris Convention for the Protection of Industrial Property* (art.6, para. (2) letter f), and also when listing the criteria according to which the notoriety of a trademark is examined (art.24 para. (1)).

The Regulation for implementing the Trademark Law provides rules for determining and proving the notoriety in art. 19, these being the sole provisions from this legal act that address the notorious trademarks.

However, the Paris Convention admits the existence and the need to provide protection for notorious trademarks, under art. 6bis which provides that the *EU countries undertake, either ex officio if their legislation allows it or at the request of the interested party, to refuse or cancel the registration and to forbid the use of a manufacturer trademark or a commercial trademark that constitutes a reproduction, imitation or translation, capable of creating confusion, **of a trademark that the competent authority, from the country of registration or use, will rule that said trademark is notoriously known as the trademark of a person entitled to benefit from this Convention and as being used for identical or similar products**. The same procedure shall be followed when the essential part of the trademark constitutes a reproduction of any such notorious trademark or when an imitation may be confused with it*.

[*] PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest; lawyer in the Bucharest Bar Association (e-mail: **andreea_livadariu@yahoo.com**).

[1] Viorel Roş, Octavia Spineanu-Matei, *Dragoş Bogdan, Dreptul proprietăţii intelectuale. Dreptul proprietăţii industriale. Mărcile şi indicaţiile geografice* (Bucharest: All Beck, 2003), 100-112.

[2] Yolanda Eminescu, *Regimul juridic al mărcilor* (Bucharest: Lumina Lex, 1996), 83-85.

Concerning the **reputed trademark**, the Trademark Law neither defines it nor mentions it in any way, but it does speak of the registered trademarks reputation, namely of trademarks which "have a reputation", of "the Community trademark reputation" and the "previous trademark reputation" (art. 6 para. (3) and (4) letter a), art. 36 para. (2) letter c), art. 90 para. (2) letter c)). The published literature[3], however, defined reputed trademark as being the "*trademark known by a significant part of the audience targeted by the products and services for which the trademark is registered*", according to the same authors "a significant part of the audience targeted", meaning something more than insignificant, but less than a "widely known trademark", such as the notorious trademark.

Not only is **the famous trademark** not defined, but it is not even mentioned in any way by either the Law or the Paris Convention. It is, however, accepted by the doctrine, according to the French model, as the trademark "*known by most of the general public, not only in France, but abroad as well and which acquired autonomous value, independent of the product or service which it usually designates"*[4].

It was also said that the famous trademark (or of the highest repute) would be the one that gained world fame and this feature would justify the need to be protected, including when an identical or similar sign would be registered for different products or services.[5]

In our opinion, neither the reputed trademark nor the famous trademark have any independent existence; therefore we cannot classify the trademarks (depending on the degree of distinctiveness) in notorious, reputed and famous trademarks.

We shall present below the arguments regarding the inexistence of the reputed trademark as a stand-alone trademark.

Rigorously analysing the provisions of art. 6 para. (3) and (4) and art. 36 para. (2) letter c), we shall notice that **the Romanian Trademark Law neither establishes, nor protects the "reputed trademark", but establishes and protects the *reputation* of the registered trademark, whether it is notorious or not,** as an attribute, a quality, a feature gained through usage and recognition by the audience targeted by the products and services the trademark designates and which distinguishes it from other trademarks.

The law claims that a trademark is refused upon registration or, if registered, is liable to be cancelled if it is identical or similar to *a previous Community trademark* (art. 6 para. (3)) or to *a previous trademark registered in Romania* (art. 6 para. (4)) and if it is intended for products or services which are not similar to those for which the previous mark was registered, when the previous Community trademark/previous trademark registered in Romania enjoys a reputation in the European Union/in Romania and if:

- in the case of the previous Community trademark, **an unfair advantage were obtained from the *distinctive character* or *the reputation* of the Community trademark**, from the subsequent trademark use.

- in the case of the previous trademark registered in Romania, **an unfair advantage were obtained from the *distinctive character* or *the reputation* of the previous trademark** or **if the use were *detrimental for the distinctive character* or *for the reputation of the previous trademark***, from the subsequent trademark use.

In relation to the provisions mentioned above, it should be taken into consideration that, according to art. 6 para. (2) letter f), earlier trademarks are trademarks that, on the date of submitting the application for registration or, where appropriate, on the date of the claimed priority, are notorious in Romania, in the meaning of art. 6bis of the Paris Convention.

Also, art. 36 of the Trademark Law, governing the counterfeiting action, entitles the trademark owner to ask the competent court to prohibit third parties from using, in their commercial activities, without its consent, a sign that is identical or similar to the trademark, for products or services different from those for which the trademark is registered, when the latter **has acquired *a reputation* in Romania and if the unlawful usage of the sign were detrimental to the distinctive character of the trademark or *detrimental to its reputation*** (para. (2) letter c)).

In conjunction with the legal texts mentioned, we may conclude that the Trademark Law provides protection for the reputation of a trademark, whether it is a notorious trademark in Romania, a Community trademark, a registered trademark in Romania or a different previous trademark, among those provided for by art. 6 para. (2) of the Law.

The Law does not protect the "reputed trademark" as a trademark different from the notorious trademark, but recognizes and protects the reputation of the trademarks, when appropriate, including **the reputation of notorious trademarks**! (and this fact results from art. 6 para. (4) letter a), in relation to art. 6 para. (2) letter f)).

Regarding famous trademarks, this cannot exist as a trademark different from the reputed trademark, as it is not legally regulated under national or conventional law (namely by the Paris Convention for the protection of industrial property and by the TRIPS Agreement).

Secondly, from a semantic point of view, there is no difference between famous and notorious; on the contrary, the two adjectives are synonyms: according

[3] Viorel Roş, Octavia Spineanu-Matei, Dragoş Bogdan, *op. cit.*, 112.

[4] A. Bertrand, *La propriété intellectuelle. Livre II. Marques et brevets. Dessins et modèles*, (Paris: Delmas, 1995) apud. Viorel Roş, Octavia Spineanu-Matei, Dragoş Bogdan, *op. cit.*, 107.

[5] Yolanda Eminescu, *op. cit.*, 84.

to the Explanatory Dictionary of the Romanian Language, "**famous**" means *renowned, famed, illustrious*, while "**reputed**" ("of repute") means *famous, famed, renowned, glorious, illustrious*.

Thirdly, but perhaps the most important part, since the jurisprudence did not feel the need to recognize a third category of trademarks, alongside the notorious trademark and the reputed trademark, we may admit that only a false need may boost the recognition and protection of the famous trademarks *per se*.

In conclusion, for the reasons set out above, the famous trademark is a doctrinal creation[6], whose existence, if accepted, would be ineffective because such a category of trademarks would not find applicability in practice.

Therefore, our opinion remain that there are no notorious, reputed or famous trademarks as trademarks with a different legal regime; however, notorious trademarks exist, as they are recognized by national and conventional law. There are no reputed trademarks, but the "of repute" concept does exist and the Romanian Law makes available, to the trademarks owners, means of protection for these trademarks. There are no stand-alone famous trademarks; the concept of "famous trademark", should we admit its existence, it is at most a synonym for the notorious trademark.

3. The legal regime of the notorious trademark.

In essence, the notorious trademark is a trademark with a distinctive power, superior to other registered or unregistered trademarks. This is due to the fact that the notorious trademark is the trademark widely known, in Romania, by the audience targeted by the products and/or services to which it is applied/ which it designates.

For that matter, the published literature admits that the notoriety is a way of acquiring the exclusive right of a trademark, in relation with the fact that "the notoriety of the sign chosen as a trademark has the same effects as its registration: the trademark owner is protected in terms of the use and registration of said sign by other parties"[7].

Concerning its provisions, the Law grants unlimited protection to the notorious trademark, as **even a holder of an unused trademark on the Romanian territory** may subject to national courts an action for annulment or an infringement action against the person who takes over its trademark or may oppose the registration of such trademark to the State Office of Inventions and Trademarks. However, notoriety must be proved according to the criteria and methods set out by the Trademark Law and its Implementing Regulation, namely: the notorious trademark degree of distinctiveness (initial or acquired) in Romania; the notorious trademark duration and extent of use in Romania in relation to the products and services for which a trademark is sought to be registered (if the notorious trademark is used in Romania); the notorious trademark duration and extent of advertising in Romania: the notorious trademark geographical area of use in Romania (only if the trademark is used in our country); the degree of knowledge of the notorious trademark on the Romanian market, of the targeted audience segment; existence of identical or similar trademarks for similar or identical products or services, belonging to someone other than the person who pretends that its trademark is notorious (art. 24 para. (1) from the Law).

The trademark notoriety must be proved by its owner, by any evidence, as "acts" may be presented (art. 19 para. (6) of the Trademark Law Implementing Regulation) such as those concerning the marketing/sale of products or services under the known notorious trademark, the import or export of the products on which the notorious trademark is applied, the advertising of products and services under notorious trademark known in Romania.

However, in order to establish that a trademark is notorious, it should be well-known, on Romanian territory, by the Romanian audience segment towards targeted by the products and services for which the trademark is used (art. 19 para. (1) of the Trademark Law Implementing Regulation). The quoted legal text provides for two *sine qua non* conditions ruling the trademark notoriety, conditions that have as reference elements the Romanian territory and the Romanian audience segment targeted by products or services. According to the law, the good or less good knowledge of the trademark is examined in relation to these elements.

The notorious trademarks are recognized by both the Paris Convention (as revised in Hague in 1925) and the TRIPS Agreement. The Paris Convention enforces the Paris Union members (among which Romania as well) to refuse, ex officio or upon request, the registration or to prohibition on using a trademark which constitutes a reproduction, imitation or translation of a trademark which *"the competent authority of the country of registration or use shall consider to be notoriously known as already being the trademark of a person entitled to benefit from this Convention and as being used for identical or similar products"*, the same being true where the essential part of a trademark constitutes "a reproduction of a notoriously known trademark or an imitation that may be confused with it" – art. 6bis.

Given the context, it should be noted that the Romanian translation of the Paris Convention (under Decree no. 1177/1968) is slightly unfortunate and likely to lead to "confusions", given that the terms "well-known" and "noitoirement connues" from

[6] Andre Bertrand, G.H. Bodenhausen and Yves Saint-Gal are among foreign authors that admit the existence of the famous trademark.
[7] Viorel Roș, Octavia Spineanu-Matei, Dragoș Bogdan, *op. cit.*, 103.

English and French were translated into Romanian as "notoriously known", although the correct translation would have been "notorious".

According to art. 16 item 3 of the TRIPS Agreement, with respect to art. 6bis of the Paris Convention, the notorious trademark shall also be protected against identical or similar signs which will be registered for products or services different from those designated by the "**registered trademark**". The published literature granted, to the quoted text, an interpretation according to which the protection imposed on notorious trademarks by means of art. 6bis of the Paris Convention is also extended to the products or services that are different from those sold under the notorious trademark, conditional on the **prejudice of the trademark owner interests**, as well as the **registration of the notorious trademark**: "*TRIPS expands the protection area for the notorious trademark, including products and services that are not identical or similar (...); however, the protection shall be extended only for registered notorious trademarks, and not for unregistered notorious trademarks as well. However, TRIPS does not intend to amend the Paris Convention and dispose of the registration of notorious trademarks in all cases"*[8].

4. Civil law means for protecting the notorious trademark

As with other trademarks, notorious trademarks may be protected by owners either under the administrative proceeding, by introducing opposition proceedings (under art. 19 in conjunction with art. 6 and with reference to art. 24 of the Law), or during legal proceedings, the notorious trademark right owner having available, where appropriate, the action of infringement, annulment or unfair competition (as regulated in art. 36 of the Law).

If the action of annulment seeks the annulment of a registered trademark which conflicts with the notorious trademark, the action of infringement tends to force the usurpers to stop using signs meant to cause damage to the notorious trademark right owner and to pay compensation for damages caused.

The action of infringement may also be used by the notorious trademark right owner for defending the reputation of its trademark.

According to art. 36 para. (2) letter c), when a sign identical or similar to a trademark is used for products or services different from those for which the notorious trademark is registered, its owner may bring an action of infringement, if the unlawful use of the sign is meant to cause damage to the trademark reputation. The action is also brought against a notorious trademark owner, under the condition that said trademark had been registered.

The published literature states that the extension of trademark protection (notorious or not) on products and services different from those for which the trademark was registered constitutes an attenuation of (and not a derogation from) the effects of the trademark specialty rule. [9]

By comparison to the provisions of the Trademark Law analysed above and in relation to the fact that both a registered trademark and a notorious trademark (registered or not) may gain a reputation, we believe that the owner of a trademark with a reputation may bring, if necessary, an action for the acknowledgement of the trademark reputation.

At the same time, we believe that the existence or inexistence of the trademark reputation shall be proved within the action for the reputation acknowledgment, taking into account the criteria for examining the notoriety, as defined and provided for in art. 24 para. (1) of the Law and art. 19 of the Regulation.

3. Conclusions

Neither the provisions of Law no. 84/1998 on trademarks and geographical indications, nor the Paris Convention, nor the TRIPS Agreement do not allow us to classify the trademarks based on their degree of distinctiveness, in notorious trademarks, famous trademarks and reputed trademarks. As stated from the interpretation of the legal provisions, if the recognition and existence of the notorious trademark is certain, the other two categories do not exist.

In reality, the Law, by recognizing the reputation of a trademark, does not protect the concept of "reputed trademark", but the trademark reputation itself, reputation that may coexist with a notorious trademark, registered or unregistered, and also with a registered trademark, according to common-law. However, what must be remembered is the fact that, in order to have its reputation protected, the notorious trademark must be registered.

However, an interesting problem is the fact that any person that registers a trademark wishes for the sign thus registered to gain reputation among the audience segment targeted by the products or services it designates.

However, if it does not gain reputation, does the trademark still perform its function of differentiating the products and services and of indicating their origin? May we claim, concerning such a trademark, that it lacks distinctiveness? In essence, could a trademark without reputation be cancelled? What is the boundary between the reputation and distinctiveness required both at the time of submitting the application for the registration and for its survival in the commerce? The answers to these questions,

PUBLIC DOMAIN PROTECTION. USES AND REUSES OF PUBLIC DOMAIN WORKS

Monica Adriana LUPAȘCU[*]

Abstract

This study tries to highlight the necessity of an awareness of the right of access to the public domain, particularly using the example of works whose protection period has expired, as well as the ones which the law considers to be excluded from protection. Such works are used not only by large libraries from around the world, but also by rights holders, via different means of use, including incorporations into original works or adaptations. However, the reuse that follows these uses often only remains at the level of concept, as the notion of the public's right of access to public domain works is not substantiated, nor is the notion of the correct or legal use of such works.

Keywords: *copyright, public domain, exceptions and limitations, innovation, right of access, technological means of protection, TPM, protection system, access to culture, copy control mechanism, Circumvention of TPMs.*

1. Public domain protection?

I mentioned a so-called "protection" of the public domain and it might seem inappropriate that I talk about the protection of a sector that includes works that are meant to be used freely, meaning unprotectable, whose main characteristic is that they can be used in any way without the consent of the author/proprietor, and without payment of any fee.

But the free use must not be confused with the right of ownership. Large defined the public domain as being "a place of sanctuary for individual creative expression, a sanctuary conferring affirmative protection against forces of private appropriation that threatened such expression."[1]

Public domain works can be used in any way, it's true, can suffer any form of transformation, adaptation, remixing, incorporations of any kind, but none of these forms should lead to a way of appropriation of the public domain work, damaging other users or in the detriment of other types of uses. It's true that a new work is created, with patrimonial and moral rights that are distinct from the ones held by the original work. But all of these new rights can be exercised only as far as the new contribution is concerned, this original component being different from the one which belongs to public domain.

Because there won't always be a clear demarcation between the two types of works, or rather between the public domain work and the added value of the new contribution, there are cases in which the proprietors of the new work have tried to exercise their exclusive exploitation rights over the work as a whole, including over the public domain component, forbidding any form of usage. These uses are completely inappropriate and disadvantageous for society, because it can be deprived of exercising the right of access to the public domain work.

Mostly, everything starts from a misperception of what a "public domain work" means. The majority of people thinks that it's an abandoned material, when, in fact, it's a material that belongs to everyone, meaning a material upon which we all have rights and the protection that is mentioned in the title refers exactly to this aspect, namely the protection of the rights that every person holds over public domain materials, rights that need to be protected in the same way that regular works are protected by copyright.

The most discussed case of private appropriation is that of Disney Enterprises, Inc., a producer who, following the exhaustion of the exploitation rights in its 1938's adaptation, started a series of trademark registrations of several character names such as "Snow White" who, before belonging to its film adaptation, belonged to a story that was part of the public domain ("Snow White" - as part of the Brothers Grimm anthology). Actually, the replacement of a determined and limited in time form of protection is being attempted, with an infinite one (through mark renewals) and maybe the perseverance of defending intellectual property rights as efficiently as possible would be admirable, if this form of protection wouldn't cover elements that belong to public domain and that should remain in this sphere of free use.

Another example is that of the works management done by libraries and museums. There is now a fairly high frequency of efforts to digitize works owned by museums and public libraries. Although works that these institutions present to the public digitally belong to the public domain (most works' protection periods have expired), the access to these is marked by copyright references that belong to said libraries and museums. Since the work in question is not protected by copyright, the only right that could be claimed is over photographic reproduction. But photographic reproductions of public domain materials cannot be protected, as they lack the main

quality – originality. This was argued in a case discussed before U.S. courts, but could easily be argued before any other court (including the European ones), because a digital copy is just a form of reproduction; if the original belongs to the public domain the copy has to belong to it as well. These things seem clear and simple, but the copyright references of libraries and museums are mentioned to the damage of the public, which perceives the access to these works as being restricted.[2]

Libraries and museums have gone from copyright references to publicly communicate the works by submitting to open licenses, such as creative commons, but isn't the access to this licensing system allowed solely to authors/owners? It's the case of the National Library of Spain, which uses open licensing (licensing systems that should not be confused with copyright), in order to communicate works that belong to the public domain. It's what can be called an attempt to limit the use of works that should be available to anyone.

2. What is public domain and what is the importance of the right of access?

The report issued by WIPO in 2010 on the protection of traditional knowledge and traditional cultural expressions of folklore[3] has held that the public domain "consists of intangible materials that are not subject to exclusive IP rights and which are, therefore, freely available to be used or exploited by any person."

The definition does not transpose a normative text; the sphere of what public domain involves being rather inferred/understood in relation to what a work that benefit or could benefit from copyright protection means. Perceived more as a symbol of non-property (the opposite of property), the public domain seems to contradict protection itself, although there are plenty of opinions who argue that, on the contrary, innovation, in its essence, depends on the existence of a rich/vast public domain.

We support this opinion, adding that the position according to which the act of creation itself is the result, not only of the individual effort, but of the multitude of resources made available throughout the years, needs to be affirmed. Among these, a substantial part is represented by the public domain materials, a range of works whose protection rights have expired, for example, or which do not fulfill the conditions to be protected by copyright, any one of them being available to be taken and used for the development of future works. One could say that the creative act itself can be dependent on the existence of a public domain that the author can access and that should contain a wide enough variety of quality works.

The aforementioned WIPO report clarifies the types of works that can belong to the public domain; this nuancing is important because each type comes with specific abusive forms of use or with specific limitation forms of subsequent access.

WIPO identifies three categories in the sphere of public domain: (i) works whose protection term has expired, (ii) works that do not meet the legal conditions to be protected by copyright and (iii) invalidated materials (if we consider the US legislation from before 1978, for example, these would be works that have not been registered or those that, after their registration, have never been renewed).

Freedom of use, the first of the characteristics that are presented as a common denominator of all the aforementioned categories, actually represents an effect of the lack of any intellectual property rights. The work, although it can belong to a certain author, will be available for use, in principle, without restrictions, without the need of any payments or requesting said author's permission. A second common characteristic of all the works belonging to the public domain is accessibility, a characteristic that, moreover, emphasizes the freedom of use because a free work that cannot be accessed, is in fact a work that carries restrictions, one being unable to refer to these as public domain works.

Concretely, freedom of use and accessibility are not just features derived from the definition of public domain, since they mark the existence of certain rights that automatically arise in each person's patrimony. Accessibility is only one aspect of the right of access, while the characteristic of being free cannot be accepted in the lack of a right of usage without restrictions, all of these generating, independently, as well as corroborated, the need for symmetric exploitation.

This is the context in which we can talk in detail about the existence of a right of access that can be exercised by any person, regarding any public domain work and without which the public domain itself is under the risk of remaining at the level of concept, with repercussions on innovation itself.

I think of the right of access to public domain as being one of the cultural rights, considered a natural component of human rights, without which the human personality cannot assert itself in its entirety.

Edmond Kaiser maintained, in his study "Terre des Hommes" ("Lands of People") that cultural rights are "acknowledged as one of the most important conquests of the human spirit," the states' obligation being that of "insuring the access to training, education, participation in the cultural life, in order to guarantee the normal development of the individual, in a world that is increasingly more complex and demanding."

Is the existence of this right of access to public domain works certain? And what value does this right

have in relation to copyright? In order to answer these questions, some aspects correlated with the very functions of copyright need to be mentioned.

The copyright limitations, for example, have been discussed and sustained from the very first forms of copyright regulation, and they are especially correlated with its social function.

The social function of copyright imposes a double limitation – in its duration – and in exercising certain prerogatives. In order to explain the limitation in exercising copyright, Adoph Diez talks about a tension relation between copyright and modern society's need for information. From this perspective, we could, in reality, consider that, in addition to the categories indicated by the abovementioned WIPO report, one can also talk about a free use category resulted from copyright limitations and exceptions.

What justified the existence of these limitations? Was the protection system always thought out to be limited, or is it in its nature that rights not be exclusive or that this exclusivity manifest itself within certain limits? There are interpretations that explain the existence of these limitations as a regulation of exception, conceived to lead the work to its destiny of being devoured by the consumer and to finally become a part of the cultural heritage, which needs to be continuously enriched. The limitative nature of copyright is explained, as well as the purpose of the regulation derived from the copyright's social function, which is that of also satisfying the public's need of information/knowledge. This perspective is not at all wrong, but without a detailed explanation of what a regulation is in the field of copyright, the majority will perceive the existence of limitations as being similar to a series of legislative favors awarded by authors and owners to society in general. Whereas in reality, copyright limitations and exceptions "translate" into fact real rights of access to protectable works or to works in general (if we take into account the works from the public domain).

Anyway, to not recognize the rights of the public (with the right of access in a leading role) in this field is equivalent to deny the process preceding any regulation and the fact that any provision, regardless of the domain, has as main purpose social order, which is made by attempting to create an equilibrium between holders of various conflicting interests. In the field of copyright, the norm is the expression of an attempt to maintain the interests of authors/copyright holders in order, on one hand, with the interests of the general public, of access to culture, on the other hand.

The above mentioned tension relation represent, in fact, the legal relationship regulated by the norm, the subjects remaining the same, regardless of whether or not they are expressly highlighted. There is, without a doubt, a relation between owners and the object of the protection, namely protectable or protected works, but the copyright regulation itself is the prioritized expression of the relation between authors and the rest of the people, categorized as being the general public, society in general, if you will, whose interest is of access to information/culture is contrary (somewhat and to a certain level) with the interest of the author to protect that work and narrow/limit the access to the work without its consent.

Guaranteeing certain rights to a category of subjects, for example to owners, will always correspond with the existence of certain obligations assigned to the other category of subjects, the obligation to not reproduce a protected work without the owner/author's permission, for example, actually being the expression of the owner's rights to authorize or forbid the reproduction of said work. It is what the doctrine considers to be an indissoluble connection between the subjects of judicial relation, manifested throughout the ongoing judicial relationship.

In general, the norm goes into effect according to certain situations, mostly determined, or at least relatively determined. Outside of those situations, the norm does not have effect, respectively, the obligation cannot be imposed, which leads to the birth of the corresponding right – which can at least be accepted as a right to non-conform to the norm.

It is easier to highlight these aspects in the context of the limitations accepted by the current legislation, and, if you take into account the characteristics of the public domain and the fact that its existence is manifested just as any limitation of exercise the exclusive rights, the same explanations can also be used as regards to the right of access to public domain works. The rule of symmetry mentioned above is also applied to the public domain. If you consider, for example, the works that became part of the public domain as a result of the expiration of the protection period, we would be dealing with a norm that indicates a protection up to a certain date, after which the norm would cease to function in the sense of the existence of certain rights over the works. The inexistence of the patrimonial rights actually represent the owners/author' corresponding obligation to abstain from exercising them, thus being confirmed the correlative existence of the right of access to these works.

But what is the right of access in the context of a confusing regulation, which does not emphasize it clearly? And what value does this right have in the lack of obligations of correct use of public domain works?

The correct use is actually a legal use, in the context of guaranteeing right of access. With exact reference to another type of work in the public domain, different from the ones whose protection period has expired, Yolanda Eminescu noted, in 1987, regarding folklore materials, that these should be used correctly and exactly. It was mentioned the necessity of limiting the usage, as well as the necessity to "ban the deformation of folkloric works to preserve, unaltered, this important legal indissoluble fund of cultural identity of a people."

It's most certainly the specific nature of folkloric works that entails particular discussions, but the

common denominator between any type of works in the public domain sphere, is the fact that the inexistence of rules of exercising the right of access implicitly leads towards abusive forms of use that restrain future uses, ultimately altering the public domain fund.

3. The right of access and the technological means of protection as an abusive form of exercising the owners' rights

In order to prevent and limit any actions on protected works, to the benefit of the rights holder, the possibility of using "efficient technology" has been created, meaning technologies that "allow control by the right holders through application of an access control or protection process, such as encryption, scrambling or other transformation of the work or other subject-matter or a copy control mechanism."

The definition of technological measures of protection has been integrated at European legislation through the Information Society Directive[4]:

"(...)"Technological measures" means any technology, device or component that, in the normal course of its operation, is designed to prevent or restrict acts, in respect of works or other subject-matter, which are not authorised by the rightholder of any copyright or any right related to copyright as provided for by law or the sui generis right provided for in Chapter III of Directive 96/9/EC. Technological measures shall be deemed "effective" where the use of a protected work or other subject-matter is controlled by the rightholders through application of an access control or protection process, such as encryption, scrambling or other transformation of the work or other subject-matter or a copy control mechanism, which achieves the protection objective."

This type of technology meets the efficiency conditions required by the European norm only in the case in which the control is as efficient as to ensure the achievement of the goal of protection, namely the prevention and ban of some unauthorized acts by the author/holder. Basically, the possibility not only of a copy control is created, but more importantly, a control of access is created, equivalent with the possibility to exercise the rights granted to holders, exclusively, unlimitedly.

This type of technology allows, at any point, abuses by the rightholders, to the disadvantage of the users/public, with serious repercussions over the availability that has to define public domain works, in order to allow access to culture, to information, ultimately stagnating development, progress.

Point 4 of the same Article 6 from the Directive, presents itself as an 'attempt' to balance interests by so-called provisions meant to protect the beneficiaries of the copyright exceptions provided by the same directive, however, without any of these provisions being more than a simple recommendation, if we consider the fact that neither one of these provisions is supported by methods of sanction of the non-conforming holder.[5]

"*Member States shall take appropriate measures to ensure that rightholders make available to the beneficiary of an exception or limitation provided for in national law in accordance with Article 5(2)(a), (2)(c), (2)(d), (2)(e), (3)(a), (3)(b) or (3)(e) the means of benefiting from that exception or limitation, to the extent necessary to benefit from that exception or limitation and where that beneficiary has legal access to the protected work or subject-matter concerned.*

A Member State may also take such measures in respect of a beneficiary of an exception or limitation provided for in accordance with Article 5(2)(b), unless reproduction for private use has already been made possible by rightholders to the extent necessary to benefit from the exception or limitation concerned and in accordance with the provisions of Article 5(2)(b) and (5), without preventing rightholders from adopting adequate measures regarding the number of reproductions in accordance with these provisions."

Therefore, although there are clear provisions[6] that regulate the cases of violation of the technical protection methods and there are obligations addressed to efficiently protect these instruments of control ("legal protection of anti-circumvention measures"), there is no obligations assigned to Member States in order to guarantee the right of access for the beneficiaries of the copyright exceptions, nor are there any sanctions provided for the abusive use of technical measures. And this is largely because of the fact that the interests of the two parties are not considered as needing equal protection, an aspect that is also nuanced by the preamble of the Directive, "(39) Such exceptions or limitations should not inhibit the use of technological measures or their enforcement against circumvention."

The aspects above mentioned exclusively nuance the situations of copyright exceptions and especially of certain exceptions, through precise identification, one also being able to mention that the application through analogy for other types of exceptions, which are not

[4] Art. 6, point 3 of Directive 2001/29/EC of the European Parliament and of the Council of 22 May 2001, on the harmonization of certain aspects of copyright and related rights in the information society.

[5] References to Articles 5(2)(a), (2)(c), (2)(d), (2)(e), (3)(a), (3)(b) or (3)(e) of Directive 2001/29/EC of the European Parliament and of the Council of 22 May 2001 on the harmonization of certain aspects of copyright and related rights in the information society, correspond to the following exceptions: private reproductions, specific acts of reproduction made by publicly accessible libraries, educational establishments or museums, or by archives, ephemeral reproductions that are transitional, for the benefit of people with a disability, for the sole purpose of illustration for teaching or scientific research.

[6] Art.6 pt.1, of Directive 2001/29/EC of the European Parliament and of the Council of 22 May 2001 on the harmonization of certain aspects of copyright and related rights in the information society, "Member States shall provide adequate legal protection against the circumvention of any effective technological measures".

specified in the European text, could not be accepted. For these reasons, it cannot be assumed that the text would apply to other types of free uses that, even without being identified as exceptions, have the same effects, and we are particularly referring to the examples of public domain work usage. Particularly, we're talking about what is actually called "retelling a story" from public domain, or about the situations in which certain public domain works or fragments of them, are taken over and integrated into original works, or about the case of adapting works from the public domain. Each of these is an example of situation in which the public has the right of access to the public domain work, as it does not carry exclusive rights and because the access to it should be free, therefore unrestricted. But this right of access is only theoretical, since we cannot talk of its actual exercising in the context of the existence of technical protection measures, to which the Member States have obliged themselves to a legal and unconditioned protection.

The situation deserves to be summed up – the protection of technological measures needs to be legal and the measures need to be efficient, including through the sanction of any form of violation/circumvention of TPM, whereas, as far as the general public is concerned, Member States are obliged to only take "appropriate measures" and that only to some of the forms of free use, which do not include, as I mentioned, the use of public domain works, but only those forms of use corresponding to the exceptions noted in Article 6.

Legalizing TPM indisputably led to the impossibility of enforcing the provisions relating to copyright exceptions and limitations, as prof. Lawrence Lessig, correctly, classified it as a transposition of "copyright abuse", indeed referring exclusively to fair-use. His assessment was supported by the reality of many processes initiated by owners, also being just as pertinent referring to the well-known warning that marks the beginning of any DVD or VHS recording, through which the reproduction of any part of said recording, without permission from the producer, is strictly forbidden. This example represents a blatant denial of the fair-use doctrine, of what is represented by the copyright exceptions and limitations, implicitly of the notion of private copy, of user and consumer rights, of the possible public domain components, and of society in general.

The American correspondent of the aforementioned European Directive is the Millennium Copyright Act, at least as far as the technological protection means are concerned, and the means of sanction any forms of circumvention.

"Section 1201(a)(1) of the Copyright Act prohibits the act of "circumvent[ing] a technological measure that effectively controls access to a work," including, for example, by-passing password protection or encryption intended to restrict access to paying customers. Section 1201(a)(2) prohibits the manufacture or sale of "any technology, product, service, device, component, or part thereof' primarily designed for the purpose of circumventing access controls on copyrighted works. Additionally, § 1202(b) prohibits the manufacture or sale of products, devices or services primarily designed to circumvent "a technological measure that effectively protects a right of a copyright owner"-for example, a technological measure intended to prevent reproduction of a copyrighted work. The authors of Fair's Fair[7] said, "the ban against circumvention devices can prevent many users from making a fair use of protected works. The problem illustrates a more general threat. A legal prohibition against circumventing the protective measures adopted by copyright owners leaves those owners with virtually absolute control over the terms of use."

There are currently DVDs or e-books sold with restricted access, although many of them contain collections or public domain works, such as stories whose protection period has expired, or legends belonging to traditional knowledge or folklore[8].

Inevitably, the issue of the existence or not of a right of access is, most of the time, unresolved in these situations because reference may be made to the multitude of **other** free resources, available as alternatives, and which allow, to the same extent, the user's access to public domain works, such as the versions available in public libraries. But the issue of the right of access should not be studied from the perspective of other alternative resources that are available. Encrypting an e-book will represent in any case an abusive form of use of the public domain works it contains and this is because, by applying technological protection methods, the nature of these free materials change, through their restriction.

In all these cases, we obviously also need to consider the interest of the owner who uses those technological protection methods. Even if, most times, these collections do not represent aspects of originality and the only valuable component resides in its public domain material, it needs to be accepted that there are also situations in which the owner's interest especially require protection, the most obvious cases being those of adaptations, of the type of retelling, as well as of the public domain works' integration as part of original works. Each of these shows, without a doubt, particularities but the most important aspect, and the most common, of these examples is the fact that the right of access needs to be guaranteed and, if the solutions to protect both interests are not impossible to find, even in the event in which there is not a clear

[7] Robert C. Denicola, Fair's Fair - An Argument for Mandatory Disclosure, University of Nebraska, 2004.
[8] http://www.elefant.ro/ebooks/fictiune/literatura-romana/literatura-romana-clasica/legende-populare-romanesti-167551.html. http://www.polirom.ro/catalog/ebook/povestile-fratilor-grimm-2572/redirect.html.

divide between the public domain material and the original work[9].

Coming back on European ground, we have to admit that, despite the provisions mentioned, the recent jurisprudence has nuanced interpretations of Directive 2001/29/EC that are closer to what it could be called an equilibrium of interests. The year 2014 meant quite a lot if we consider the decision taken in January 2014 by the European Court of Justice, which decided that circumventing a protection system may be lawful[10], from which we hold:

1 "'Technological measures' within the meaning of Article 6 may include measures incorporated not only in protected works themselves but also in devices designed to allow access to those works;

2 When determining whether measures of that kind qualify for protection pursuant to Article 6 where they have the effect of preventing or restricting not only acts which require the rightholder's authorisation pursuant to that directive but also acts which do not require such authorisation, a national court must verify whether the application of the measures complies with the principle of proportionality and, in particular, must consider whether, in the current state of technology, the former effect could be achieved without producing the latter effect or while producing it to a lesser extent."

It's interesting to study the problem of protecting technologies created not only to prevent copying, but to restrict interoperability as well, being a way to emphasize the fact that technologies applied by owners are not protected unconditionally, but only if they conform with the definitions provided by law[11]. A correct interpretation leads to the conclusion that, beyond the limitations expressly provided by the law, one cannot talk about a correct/legal use, the protection, as a final effect, being unobtainable. If the technological protection measures have the effect of restriction of those acts that are not subject to holder authorization (by effect of the law), these TPM are obviously examples of abusive TPM, whose violation can be considered legal.

Indeed, CJEU ruled that the manufacturer of the console is protected against that circumvention only in the case where the protection measures seek to prevent illegal use of videogames, thus being understood that legal protection cannot be ensured to other forms of restriction.

Legal protection cannot be granted to restrictions aiming at the public domain component, as these type of measures also have the purpose of forbidding/limiting some forms of use that do not need the permission of the authors/owners.

4. Other dangers: Information society and the impact on the public domain sphere.

The public domain is diverse in its content, works whose protection period has expired being only one of the categories that belong to this sphere. Another category is that of materials that, in accordance with the internal or international legislation, cannot be protected by copyright[12].

These types of materials are, most of the times, located outside of copyright protection, as effect, for example, of provisions that establish the exemption from protection of ideas, mathematical concepts and formulas, theories, procedures and methods of function. Mathematical formulas, concepts and functioning methods, are, in accordance with the legislation corresponding to copyright, types of materials that are included in the public domain sphere, naturally, from their very development.

But as diverse as the sphere of public domain is, it is just as fluctuant, certain legislative changes or court decision leading to a narrowing of the public domain sphere, by considering some material/information, which are by nature excluded from protection, as being protectable, such as functioning methods, or simple data.

I'm referring to the case of Oracle v. Google[13], the most recent decision regarding them stating that "the APIs are protected by copyright, both in regards to their source code, as well as the structure, sequence and organization of the Java library (API packages)."

Taking into account their component[14], and the purpose for which these APIs were used in programming, objectively established as being – the

[9] GPL licenses for open-source software have the particularity of maintaining the source code available for any other subsequent use. Similarly, the rightholders that take over, in any way, public domain materials, should be obliged to allow the access of public to that material, in a format free of any other intervention, in order to ensure the access is unrestricted.

[10] Advocate General Eleanor Sharpston, Opinions in Case C-355/12 Nintendo v PC Box, September 2013 http://curia.europa.eu/juris/document/document.jsf?docid=141822&mode=req&pageIndex=1&dir=&occ=first&part=1&text=&doclang=EN&cid=1931439 http://curia.europa.eu/juris/document/document_print.jsf?doclang=EN&text=&pageIndex=1&part=1&mode=req&docid=141822&occ=first&dir=&cid=1931439.

[11] Article 6 of Directive 2001/29/EC of the European Parliament and of the Council of 22 May 2001 on the harmonization of certain aspects of copyright and related rights in the information society – "Technological measures" means any technology, device or component that, in the normal course of its operation, is designed to prevent or restrict acts, in respect of works or other subject-matter, which are not authorized by the rightholder.

[12] This paper exclusively takes into account the public domain related to copyright, but, evidently, any work or material that does not carry exclusive rights and that can be freely used, regardless of their rights, trade secrets, patents, etc., falls in the sphere of what the public domain is.

[13] U.S. appeals court decided Oracle could copyright parts of the Java programming language, which Google used to design its Android smartphone operating system - see the full text of the decision: https://www.eff.org/files/2014/11/10/oracle_v_google_13-1021.opinion.5-7-2014.1.pdf.

[14] All SSO details/components – structure, sequence and organization – lack protection, as they **represent** functioning methods.

insurance of interoperability, it goes without saying that this decision has the potential to significantly affect the public domain sphere, by considering these materials/information (if we can call them that) as being protectable by copyright.

This decision would affect everything open-source stands for, and innovation in general, the EFF[15] mentioning that the freedom to reimplement and extend existing APIs represents the key to progress both in the development of hardware products, as well as software. With a higher emphasis on the need for software compatibility, the following explanations are offered: "When programmers can freely reimplement or reverse engineer an API without the need to negotiate a costly license or risk a lawsuit, they can create compatible software that the interface's original creator might never have envisioned or had the resources to create. Moreover, compatible APIs enable people to switch platforms and services freely, and to find software that meets their needs regardless of what browser or operating system they use."

Pamela Samuelson recently said[16], referring directly to the dispute between Google and Oracle:

" (...) a computer program designed to be compatible with another program must conform precisely to the API of the first program which establishes rules about how other programs must send and receive information so that the two programs can work together to execute specific tasks".

"(...) once that the API exists, it becomes a constraint on the design of follow-on programs developed to interoperate with it."

The digital era is supposed to be favorable to the spread of information and innovation in general, but also bears, as we've seen, multiple threats to the public domain.

5. Conclusions

An excessive control of copyright actually means a denial of the citizens' right of access to the public domain, a denial of the importance of public domain in general and a denial of the special role the public domain has in innovation.

The context of the existence of technological protection methods and of some confusing regulations of what a legal use of the public domain means, has lead to numerous actions, such as the Communia Association, which issued, in 2014, a set of recommendations, from which we can mention the ones with implications involving the public domain[17].

"Pt.6 Any false or misleading attempt to misappropriate Public Domain material must be declared unlawful. False or misleading attempts to claim exclusivity over Public Domain material must be sanctioned.In order to preserve the integrity of the Public Domain and protect users of Public Domain material from inaccurate and deceitful representations, any false or misleading attempts to claim exclusivity over Public Domain material must be declared unlawful. There must be a system of legal recourse that allows members of the public to get sanctions imposed on anyone attempting to misappropriate Public Domain works.

Pt. 7 The Public Domain needs to be protected from the adverse effects of Technical Protection Measures. Circumvention of TPMs must be allowed when exercising user rights created by Exceptions and Limitations or when using Public Domain works. The deployment of TPMs to hinder or impede privileged uses of a protected work or access to public domain material must be sanctioned. Technical Protection Measures such as Digital Rights Management systems can have adverse effects on the Public Domain. Access restrictions imposed on works can remain in effect even after a work has passed into the public domain and over time Protections Measures can become orphaned making access to protected works impossible. Most current TPM 'solutions' do not take into account user rights created by Exceptions and Limitations thereby limiting their effectiveness and undermining the inherent checks and balances of the copyright system. Given the above, circumvention of TPMs must be allowed when exercising user rights created by Exceptions and Limitations or when using Public Domain works."

EU DIRECTIVES IN THE FIELD OF COPYRIGHT AND RELATED RIGHTS

Ana-Maria MARINESCU[*]

Abstract

The aim of this article is to underline the evolution and the importance of the European Directives in the field of copyright and related rights, their contribution to the development of the law and the national implementation, namely their transposition into Romanian Law no. 8/1996 on copyright and related rights. For this purpose, the article will analyze the historical evolution of the European Directives in the field of copyright and related rights and their most important dispositions. Given the wide range of subject matter with which it is concerned, the European Directives in the field of copyright and related rights address to enforcement, protection of databases, protection of computer programs, resale right, satellite and cable, term of protection, rental and lending rights, copyright and related rights in the information society, orphan works and management of copyright and related rights. Taking into account the wild range of subjects that European Directives in the field of copyright and related rights address, it is important to observe the permanent interest of the European legislator on the harmonization of the law on copyright and related rights. In this way, the result was the adoption of 7 directives in a 10-year interval between 1991 and 2001, and of 4 directives, including the one for the modification of the Directive on the term of protection, also in a 10-year interval between 2004 and 2014. Despite the extensive process of harmonization, copyright law in the Member States of the European Union is still largely linked to geographical boundaries of sovereign states.

Keywords: *directive, copyright and related rights, enforcement, protection of databases, protection of computer programs, resale right, satellite and cable, term of protection, rental and lending rights, copyright and related rights in the information society, orphan works, management of copyright and related rights, evolution, harmonization, national implementation.*

1. Introduction

At the present 11 Directives in the field of copyright and related rights are in place in the European Union[1]:

a). Council Directive 91/250/CEE from the 14th of May 1991 on legal protection of computer programs, published in the Official Journal of European Communities no. L 122 from the 17th of Mai 1991, replaced by the Directive 2009/24/EC of the European Parliament and of the Council of 23 April 2009 on the legal protection of computer programs, published in the Official Journal of the European Union no. L 111/16 from the 5 of May 2009;

b). Council Directive 92/100/CEE from the 19th of November 1992 on the rental and lending right and other rights related to copyright in the field of the intellectual property, published in the Official Journal of EC no. L 346 from the 24th of November 1992;

c). Council Directive 93/83/CEE from the 27th of September 1993 on the harmonization of certain provisions regarding copyright and neighboring rights applicable to the broadcasting of programs via satellite and cable retransmission, published in the Official Journal of EC no. L 248 from the 6th of October 1993;

d). Council Directive 93/98/CEE from the 29th of October 1993 on the harmonization of the duration for the protection of copyright and certain neighboring rights, published in the Official Journal of EC no. L 290 from the 24th of November 1993;

e). European Parliament Directive and that of the Council 96/9/CE from the 11th of March 1996 on the legal protection of databases, published in the Official Journal of European Communities no. L 077 from the 27th of March 1996;

f). European Parliament Directive and that of the Council 2001/29/CE from the 22nd of May 2001 on the harmonization of certain issues of copyright and neighboring rights in the information society, published in the Official Journal of European Communities no. L 006 from the 10th of January 2002;

g). European Parliament Directive and that of the Council 2001/84/CE from the 27th of September 2001 on resale right for the benefit of the author of original works of art, published in the Official Journal of European Communities no. L 272 from the 13th of October 2001;

h). European Parliament Directive and that of the Council 2004/48/CE from the 29th of April 2004 on insuring the observance of intellectual property rights, published in the Official Journal of European Communities no. L 157 from the 30th of April 2004;

i). Directive 2006/116/EC of the European Parliament and of the Council of 12 December 2006 on the term of protection of copyright and certain

related rights, published in the Official Journal of the European Union no. L 372/12 from 27 December 2006, amended by the Directive 2011/77/EU of the European Parliament and of the Council of 27 September 2011 amending Directive 2006/116/EC on the term of protection of copyright and certain related rights, published in the Official Journal of the European Union no. L 265/1 from 11 October 2011;

j). Directive 2012/28/EU of the European Parliament and of the Council of 25 October 2012 on certain permitted uses of orphan works, published in the Official Journal of the European Union no. L 299/5 from 27 October 2012;

k). Directive 2014/26/EU of the European Parliament and of the Council of 26 February 2014 on collective management of copyright and related rights and multi-territorial licensing of rights in musical works for online use in the internal market, published in the Official Journal of the European Union no. L 84/72 from 20 March 2014.

Having in mind the wide range of subjects concerning copyright and related rights described by the Directives, it is important to analyze their historical evolution, their main dispositions, the level of harmonization and their national implementation into the Law no. 8/1996 on copyright and related rights[2].

The research of the EU Directives in the field of copyright and related it is an important part of the general research on copyright and related rights, being a part of the legislation structure in the field, together with the international framework.

The international vocation[3] of copyright and related rights is underline by international conventions and treaties like: Berne Convention for the Protection of Literary and Artistic Works (1886), Rome Convention for the Protection of Performers, Producers of Phonograms and Broadcasting Organizations (1961), WIPO[4] Performances and Phonograms Treaty (1996), WIPO Copyright Treaty (1996), and Trade Related Aspects on Intellectual Property Rights (TRIPS - 1994). All above mentioned international conventions and treaties are adopted and transposed into our national legislation.

Copyright and related rights has to be protected also outside the national frontiers, on the territory of other states[5], and, of course, has to be protected on a harmonize level inside the European Union. The instrument chosen by the European legislator in order to fulfill this aim is the directive, defined as binding the Member State only for the result, leaving the Member States the competence to choose the forms and the ways for fulfilling the objective[6]. As it was underlined in the doctrine[7], this is the main difference between directive and regulations. The regulations are compulsory, having as the law a general influence, unlike the directive which binds only as regards the result.

The Romanian literature in the field, limits to presents the European Directives in the field[8], as a collection of laws, or tackles in a comprehensive manner to some subjects of the Directives[9].

2. Content

As I mentioned before, at the present 11 Directives in the field of copyright and related rights are in place in the European Union.

The first Directive, on computer programs, was adopted in 1991. The **Directive on the legal protection of computer programs (91/250/EEC)** was a real European "first" for copyright law, the first copyright measure to be adopted. The objective of the Directive was to harmonize Member States' legislation regarding the protection of computer programs in order to create a legal environment which will afford a degree of security against unauthorized reproduction of such programs[10]. In the sense of the Directive, the object of protection is the 'computer programs`, which shall include their preparatory design material[11]. So, the protection in accordance with this Directive shall apply to the expression in any form of a computer program, with the exception of ideas and principles which underlie any element of a computer program, including those which underlie its interfaces that are not protected by copyright[12]. The only criteria that will be applied to determine the eligibility for protection of a computer program is if it is original in the sense that it is the author's own intellectual creation[13].

Another important disposition of the Directive regards the authorship of the computer programs created by an employee in the execution of his duties or following the instructions given by his employer. In

[12] Art. 1 (2).

[13] Art. 1 (3).

this case, the employer exclusively shall be entitled to exercise all the economic rights in the program so created, unless otherwise is provided by contract[14].

Directive 91/250/EEC has been repealed and replaced by Directive 2009/24/EC and has been transposed totally into the Romanian legislation.

The second Directive adopted in the field of copyright and related rights was the **Rental Right Directive** in 1992 which harmonized the rights of commercial rental and lending. In this case, the most important fact of the Directive is that harmonizes certain related rights of fixation, reproduction, broadcasting and communication to the public and distribution at levels in excess of the minimum norms of the Rome Convention[15]. The related rights beneficiaries are the performers, phonogram producers, film producers and broadcasters.

Directive 92/100/EEC has been repealed and replaced by Directive 2006/115/EC and had been transposed into Romanian Law no. 8/1996 on copyright and related rights.

In 1993, two more Directives were adopted.

The **Satellite and Cable Directive** was described in the special literature as a direct response to the deployment of new technologies of transmission of broadcast programs, by satellite and cable that greatly facilitated the broadcasting of television programs across national borders[16], envisioned in this way the establishment of an internal market for broadcasting services.

Also, one of the most important characteristics of the Directive is that introduce a scheme of mandatory collective rights management with regard to acts of satellite and broadcasting. In this way, according to article 9 (1) of the Directive *"Member States shall ensure that the right of copyright owners and holders or related rights to grant or refuse authorization to a cable operator for a cable retransmission may be exercised only through a collecting society"*. Thereupon, *"Where a rightholder has not transferred the management of his rights to a collecting society, the collecting society which manages rights of the same category shall be deemed to be mandated to manage his rights. Where more than one collecting society manages rights of that category, the rightholder shall be free to choose which of those collecting societies is deemed to be mandated to manage his rights. A rightholder referred to in this paragraph shall have the same rights and obligations resulting from the agreement between the cable operator and the collecting society which is deemed to be mandated to manage his rights as the rightholders who have mandated that collecting society and he shall be able to claim those rights within a period, to be fixed by the Member State concerned, which shall not be shorter than three years from the date of the cable retransmission which includes his work or other protected subject matter"*[17].

Law no. 8/1996 on copyright and related rights transposes the above mentioned dispositions of the Directive[18] , cable retransmission right being a case of compulsory collective management[19] together with the private copy remuneration[20].

In 1993, also the **Term Directive** was adopted, which harmonized the term of protection of copyright and related rights of 70 years *post mortem auctoris*, and set the duration of related rights at 50 years.

The Directive has been repealed and replaced by Directive 2006/116/EC on the term of protection of copyright and certain related rights. According to article 1 of this Directive *"The rights of an author of a literary or artistic work within the meaning of Article 2 of the Berne Convention[21] shall run for the life of the author and for 70 years after his death, irrespective of the date when the work is lawfully made available to the public"* and according to article 3 the duration of related rights is:

"(1) The rights of performers shall expire 50 years after the date of the performance. However, if a fixation of the performance is lawfully published or lawfully communicated to the public within this period, the rights shall expire 50 years from the date of the first such publication or the first such communication to the public, whichever is the earlier.

(2) The rights of producers of phonograms shall expire 50 years after the fixation is made. However, if the phonogram has been lawfully published within this period, the said rights shall expire 50 years from the date of the first lawful publication. If no lawful publication has taken place within the period mentioned in the first sentence, and if the phonogram has been lawfully communicated to the public within this period, the said rights shall expire 50 years from the date of the first lawful communication to the public.

(3) The rights of producers of the first fixation of a film shall expire 50 years after the fixation is made. However, if the film is lawfully published or lawfully communicated to the public during this period, the rights shall expire 50 years from the date of the first such publication or the first such communication to the public, whichever is the earlier. The term 'film' shall designate a cinematographic or audiovisual work or moving images, whether or not accompanied by sound.

(4) The rights of broadcasting organisations shall expire 50 years after the first transmission of a broadcast, whether this broadcast is transmitted by wire or over the air, including by cable or satellite."

[17] Art. 9 (2).
[18] Art. 121.
[19] Art.123^1 (1) g).
[20] Art.123^1 (1) a).
[21] Art. 2 Protected Works: 1. "Literary and artistic works"; 2. Possible requirement of fixation; 3. Derivative works; 4. Official texts; 5. Collections; 6. Obligation to protect; beneficiaries of protection; 7. Works of applied art and industrial designs; 8. News.

Three years later, in 1996, the **Database Directive** was adopted. The Directive created a new exclusive *"sui generis"* right for database producers, valid for 15 years, to protect their investment of time, money and effort, irrespective of whether the database is in itself innovative ("non-original" databases). The Directive harmonized also copyright law applicable to the structure and arrangement of the contents of databases ("original" databases). The Directive's provisions apply to both analogue and digital databases[22].

As it was mentioned in the doctrine[23], Law no. 8/1996 on copyright and related rights regulates the databases as object of copyright as derivate works, but transposing the Database Directive, envisages a *sui-generis* right of the makers of databases, and not a right for copyright. Therefore, the Law talks about the makers of databases and not of creators/authors[24]. However, this *sui-generis* right on databases is not excluding the possibility of protection of the databases or their content through copyright and other rights (art. 122^4). This is reason why the databases are still enumerated by the Law no. 8/1996 as object of protection as derivate works.

In the light of the *sui-generis* right, the maker of a database has the exclusive economic right to authorize and prohibit the extraction[25] and/or re-utilization of the entire or of a substantial part of the database, evaluated qualitatively or quantitatively[26].

In 2001, was adopted the **Directive of copyright and related rights in the informational society**. The final text is a result of over three years of thorough discussion and an example of co-decision making where the European Parliament, the Council and the Commission have all had a decisive input[27].

As it was mentioned in the press release of the Directive[28], its aim was to stimulate creativity and innovation by ensuring that all material protected by copyright including books, films, music are adequately protected by copyright. It provides a secure environment for cross-border trade in copyright protected goods and services, and will facilitate the development of electronic commerce in the field of new and multimedia products and services (both on-line and off-line via e.g. CDs).

The Directive harmonizes the rights of reproduction, distribution, communication to the public, the legal protection of anti-copying devices and rights management systems. Particular novel features of the Directive include a mandatory exception for technical copies on the net for network operators in certain circumstances, an exhaustive, optional list of exceptions to copyright which includes private copying, the introduction of the concept of fair compensation for rightholders and finally a mechanism to secure the benefit for users for certain exceptions where anti-copying devices are in place.

Adoption and implementation of the Directive enabled the Community and its Member states to ratify the 1996 WIPO Treaties - the so-called Internet Treaties[29].

Implementing this Directive, Law no. 8/1996 on copyright and related rights regulates in Chapter VI, articles 33-38, the Limitations on the Exercise of Copyright. These limits are strictly provided by the law, they cannot be extended by analogy[30], as in case of the exceptions on copyright and related rights.

Also, the limits and the exceptions has to be enclosed to the so-called 3 steps test[31]: that such uses conform to proper practice, are not at variance with the normal exploitation of the work and are not prejudicial to the author or to the owners of the exploitation rights[32].

Analyzing the legal norms, the doctrine[33] underlined the following categories of limitations for public use:

1. The reproduction with the scope of quotations (art. 33 (1) b)-d);

2. The reproduction of visual works placed in public places (art. 33 (1) f);

3. Information on actuality problems;

4. temporary acts of reproduction that are transient or incidental forming an integral and essential part of a technical process and the sole purpose of which is to enable transfer, in a network between third parties, by an intermediary or the lawful use of another protected object and that should have no separate economic value on their own, are excepted from the reproduction right[34];

[33] Roș, Bogdan, Spineanu-Matei, *Dreptul de autor și drepturile conexe - Tratat*, 311-322.

[34] Art. 33 (3).

5. The alteration of a work shall be permissible without the author's consent and without payment of remuneration in the following cases[35]:

(a) If the alteration is made privately and is neither intended for nor made available to the public;

(b) If the result of the alteration is a parody or caricature, provided that the said result does not cause confusion with the original work and the author thereof;

(c) If the alteration is made necessary by the purpose of the use permitted by the author;

(d) If the alteration is a short review of the works by didactic purpose, mentioning the author.

6. For the purpose of testing the operation of their products at the time of manufacture or sale, trading companies engaged in the production or sale of sound or audiovisual recordings, equipment for the reproduction or communication to the public thereof and also equipment for receiving radio and television broadcasts may reproduce and present extracts from works, provided that such acts are performed only to the extent required for testing[36].

One of the most important limit regulated by the Directive and the one that had been controversial at the level of the Member States till recently is the private copy.

Article 34 (1) Law 8/1996 on copyright and related rights define the private copy: the reproduction of a work, without the author's consent for personal use or for use by a normal family circle, provided that the work has already been disclosed to the public, while the reproduction does not contravene to the normal use of the work or prejudice the author or the owner of the utilization rights.

In order to compensate the prejudice broth to the copyright and related rights holders, the Romanian legislator established a levy system for the private copy remuneration[37]: For the media on which sound or audio-visual recordings can be made or on which reproductions of the works graphically expressed can be made, as well as for apparatus dedicated for copying, in the situation provided for in paragraph (1), a compensatory remuneration established by negotiation, according to the provisions of this law, shall be paid.

The private copy exception doesn't apply to computer programs[38], for which is permitted only a copy for archive or safety, in the manner in which this is necessary for using the computer program[39].

On the one hand, the Directive generated a series of documents and consultations very important in the information society economy, like:

1. The Green Paper on copyright in the knowledge economy (16.07.2008)[40]. With this Green Paper, the Commission plans to have a structured debate on the long-term future of copyright policy in the knowledge intensive areas. In particular, the Green Paper is an attempt to structure the copyright debate as it relates to scientific publishing, the digital preservation of Europe's cultural heritage, orphan works, consumer access to protected works and the special needs for the disabled to participate in the information society. The Green Paper points to future challenges in the fields of scientific and scholarly publishing, search engines and special derogations for libraries, researchers and disabled people. The Green paper focuses not only on the dissemination of knowledge for research, science and education but also on the current legal framework in the area of copyright and the possibilities it can currently offer to a variety of users (social institutions, museums, search engines, disabled people, teaching establishments).

2. The public consultation on "Content Online" (October 2009) with the need to create a genuine Single Market for creative content on the internet, focused on three area of actions:

- Make sure creativity is rewarded so that creators, rightholders, and Europe's cultural diversity can thrive in the digital world;
- Give consumers' clearly-priced, legal means of accessing a wide range of content through digital networks anywhere, anytime;
- Promote a level playing field for new business models and innovative solutions for the distribution of creative content across the EU.

In the press released of the public consultations[41], is noted that in Europe, the cultural and creative sector (which comprises published content such as books, newspapers and magazines, musical works and sound recordings, films, video on demand and video games) generates a turnover of more than € 650 billion annually and contributes to 2.6% of the EU's GDP, employing more than 3% of the EU work force. European policymakers therefore have the responsibility to protect copyright, especially in an evolving economic and technological environment.

As part of the ongoing discussions on the priorities for a European Digital Agenda, and adding to similar debates currently taking place at national level, the Commission now wishes to focus the debate on practical solutions for encouraging new business models, promoting industry initiatives and innovative solutions, as well as on the possible need to harmonize, update or review the applicable rulebook of the EU's single market.

3. Communication on Copyright in the Knowledge Economy (19.10.2009) aiming to tackle

[35] Art. 35.

[41] *Idem.*

the important cultural and legal challenges of mass-scale digitisation and dissemination of books, in particular of European library collections.

On the other hand, the private copy system and levies was one of the most controversial subject in the field of copyright and related rights. A mediation process took place at the level of EU in the period 02.04.2012-31.01.2013, date when the mediator António Vitorino presented its recommendations[42].

The core elements of the recommendations refer to:

- The private copy remunerations between Member States have to be collected at the level of the State were the final consumer reside (this principle results from the European Court of Justice case C-462/09 - Stichtung de Thuiskopie vs. Opus Supplies Deutschland GmbH)[43].
- The general possibility to establish remunerations for devices and equipment depends on the place where de product is capable to make copies, this is way the scope is that the product to be remunerated only one time in the European Union.
- Non-application of private copying levies to professional users.
- Shift the liability to pay levies from the manufacturer's or importer's level to the retailer's level while at the same time simplifying the levy tariff system;
- Oblige manufacturers and importers to inform collecting societies about their transactions concerning goods subject to a levy.
- Place more emphasis on operator levies compared to hardware-based levies in the field of reprography.
- The levies should be visible for the final consumer.
- Ensure more coherence with regard to the process of setting levies by defining 'harm' uniformly as the value consumers attach to additional copies in question (lost profit).
- Ensure more coherence with regard to the process of setting levies by providing a procedural framework that would reduce complexity, guarantee objectiveness and ensure the observance of strict time-limits, for example:
- In the case of a new product being introduced on the market, the decision as to the applicability of levies should be taken within 1 month following its introduction. The provisional level of tariffs applicable should be determined not later than within 3 months following its introduction.
- The ultimate level of the applicable levy should, to the extent possible, not be superior to the one imposed temporarily. If nevertheless this were the case, the resulting difference should be payable gradually and could be split into several instalments.
- The final tariff applicable to a given product should be agreed or set within 6 months period from its introduction on the market.

In the view of the Recommendations and in light of the Directive of copyright and related rights in the informational society, it is necessary that the Romanian legislation to be harmonized at this level, by amending and completing the dispositions of Law no. 8/1996 regarding the private copy system.

In 2001, after barely surviving its perilous journey between the Commission, the European Parliament and the Council (and back again), the **Resale Right Directive** was finally adopted[44].

The resale right – as an inalienable right, which cannot be waived, even in advance - was provided, for the benefit of the author of an original work of art, to receive a royalty based on the sale price obtained for any resale of the work, subsequent to the first transfer of the work by the author[45]. The right shall apply to all acts of resale involving as sellers, buyers or intermediaries art market professionals, such as salesrooms, art galleries and, in general, any dealers in works of art[46].

The European Court of Justice Decision in the case C-518/08 (VEGAP vs. ADAGP) stated that art. 6 (1) Resale Right Directive[47] must be interpreted in the sense that is not opposing to a national disposition which reserve the benefit of the resale right only to the legal inheritors of the author, excluding the testamentary legatees[48].

For stating this Decision, the Court took into account on the one hand, the fact that the Directive is intended to assure a certain level of remuneration of authors and this purpose is not compromised by the devolution of the resale right to some legal subjects by excluding others after the death of the artist. On the other hand, although the EU legislator had in mind that legatees to benefit of the resale right after the death of the author, didn't considered that is advisable to interfere in the field of the inheritance national laws, leaving to each state the competence to define the categories of legatees. Results that in the light of the Directive the Member States have the liberty to establish

[45] Art. 1 (1).

[46] Art. 1 (2).

[47] Article 6 Persons entitled to receive royalties

1. The royalty provided for under Article 1 shall be payable to the author of the work and, subject to Article 8(2), after his death to those entitled under him/her.

2. Member States may provide for compulsory or optional collective management of the royalty provided for under Article 1.

[48] Marinescu,"Gestiunea colectivă a dreptului de autor şi a drepturilor conexe. Jurisprudenţă română şi europeană în domeniu": 126-128.

the categories of persons which can benefit of the resale right after the death of author.

According to article 21 of Law no. 8/1996, as stated also in the doctrine[49], the resale right applies only to an original work of graphic or plastic art or of a photographic work. Also, as stated in the doctrine[50], having in mind the frugifer nature of the resale right, it least all the life of the author and is the subject of being inherited for 70 years after the death of author, according to article 25 of Law no. 8/1996[51].

The **Directive on the enforcement of intellectual property rights** such as copyright and related rights, trademarks, designs or patents was adopted in April 2004.

The Directive requires all Member States to apply effective, dissuasive and proportionate remedies and penalties against those engaged in counterfeiting and piracy and so creates a level playing field for right holders in the EU. It means that all Member States will have a similar set of measures, procedures and remedies available for rightholders to defend their intellectual property rights (be they copyright or related rights, trademarks, patents, designs, etc.) if they are infringed. The similar set of measures refers to: measures for preserving evidence[52], right of information[53], provisional and precautionary measures[54], corrective measures[55], injunctions[56], alternative measures[57], damages[58], legal costs[59] and publication of judicial decisions[60].

Directive 2011/77/EU of the European Parliament and of the Council of 27 September 2011 amending Directive 2006/116/EC on the term of protection of copyright and certain related rights extended the term of protection for performers and sound recordings to 70 years. In this way the Directive narrows the gap between the copyright term of protection for authors (currently life plus 70 years after the authors' death) and the term of protection for performers (currently 50 years after the performance). Consequential the performers will receive remunerations over a longer period of time.

The Directive also strengthens the position of performers with a number of accompanying measures[61]:

- A 20% fund for session musicians, paid by the record companies. This remuneration ensures that performers who are forced to sell their rights against a one-off flat fee obtain additional payments during the extended term. The fund would apply to all recordings which benefit from the term extension.

- A 'use it or lose it' clause, which means the record company will have to cede control over its copyright to performers if it does not market the sound recording containing the performance. If a record company does not market a recording despite the performers' request, the performers will get their rights back and can market the recording themselves.

- A 'clean slate' provision, which means that producers are not entitled to make any deductions from the contractual royalties due to featured performers during the extended term.

According to art. 2 of the Directive Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive by 1 November 2013.

In Romania, the Directive was transposed through Law no. 53/2015 for the modification and completion of Law no. 8/1996. The Law no. 53/2015 was adopted after the term prescribed for the implementation of the Directive, Romania being for a short time in the pre-infrigment procedure.

Directive 2012/28/EU of the European Parliament and of the Council of 25 October 2012 on certain permitted uses of orphan works sets out common rules on the digitisation and online display of so-called orphan works. Orphan works are works like books, newspaper and magazine articles and films that are still protected by copyright but whose authors or other rightholders are not known or cannot be located or contacted to obtain copyright permissions[62]. Orphan works are part of the collections held by European libraries that might remain untouched without common rules to make their digitisation and online display legally possible.

[51] Art. 25.—(1) The economic rights provided for in Articles 13 and 21 shall last for the author's lifetime, and after his death shall be transferred by inheritance, according to civil legislation, for a period of 70 years, regardless of the date on which the work was legally disclosed to the public. If there are no heirs, the exercise of these rights shall devolve upon the collective administration organization mandated by the author during his lifetime or, failing a mandate, to the collective administration organization with the largest membership in the area of creation concerned.

(2) The person who, after the copyright protection has expired, legally discloses for the first time a previously unpublished work to the public shall enjoy protection equivalent to that of the author's economic rights. The duration of the protection of those rights shall be 25 years, starting at the time of the first legal disclosure to the public.

[57] Art. 12.

[58] Art. 13.

[59] Art. 14.

[60] Art. 15.

[61] http://ec.europa.eu/internal_market/copyright/term-protection/index_en.htm

[62] Art. 2.

For the purposes of establishing whether a work or phonogram is an orphan work, the libraries, educational establishments and museums, as well as by archives, film or audio heritage institutions and public-service broadcasting organisations shall ensure that a diligent search[63] is carried out in good faith in respect of each work or other protected subject-matter, by consulting the appropriate sources for the category of works and other protected subject-matter in question. The diligent search shall be carried out prior to the use of the work or phonogram.

The Directive establish also the mutual recognition of orphan work status[64], in this way a work or phonogram which is considered an orphan work in a Member State shall be considered an orphan work in all Member States. By consequence, Member States shall ensure that a rightholder in a work or phonogram considered to be an orphan work has, at any time, the possibility of putting an end to the orphan work status in so far as his rights are concerned[65].

The permitted uses of orphan works are set out in article 6 of the Directive, for this Member States shall provide for an exception or limitation to the right of reproduction and the right of making available to the public provided for respectively in Articles 2 and 3 of Directive 2001/29/EC to ensure that the libraries, educational establishments and museums, as well as by archives, film or audio heritage institutions and public-service broadcasting organisations are permitted to use orphan works contained in their collections in the following ways:

(a) by making the orphan work available to the public, within the meaning of Article 3 of Directive 2001/29/EC;

(b) by acts of reproduction, within the meaning of Article 2 of Directive 2001/29/EC, for the purposes of digitisation, making available, indexing, cataloguing, preservation or restoration the libraries, educational establishments and museums, as well as by archives, film or audio heritage institutions and public-service broadcasting organisations shall use an orphan work only in order to achieve aims related to their public-interest missions, in particular the preservation of, the restoration of, and the provision of cultural and educational access to, works and phonograms contained in their collection. The organisations may generate revenues in the course of such uses, for the exclusive purpose of covering their costs of digitising orphan works and making them available to the public.

Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with this Directive by 29 October 2014. By present, in Romania the collective management organisations submitted to the Romanian Copyright Office (ORDA) proposals for transposing the Directive, but the Directive wasn't implemented yet.

The last of the Directives adopted by the European Union is the **Directive on collective management of copyright and related rights**.

Chronologically the predecessors of the Directive were the Recommendation 2005/737/EC regarding the trans-border management of copyright and related rights for the on-line music services, adopted by the European Commission at 18.10.2005, the public hearings on governance of collective management in the European Union (Brussels, 23.04.2010) and the proposal of the Directive (11.07.2012)[66].

The Directive 2014/26/EU on collective rights management and multi-territorial licensing of rights in musical works for online uses aims at ensuring that rights holders have a say in the management of their rights and envisages a better functioning of the collective management organizations in the EU. The Commission will work closely with the Member States in order to achieve a correct transposition of the provisions of the Directive into national law by the transposition date of 10 April 2016. *De lege ferenda*, the transposition of the Directive 2014/26/EU on collective rights management and multi-territorial licensing of rights in musical works for online uses into Romanian Law on copyright and related rights requires a minimum set of provisions taking into consideration the fact that Romania implemented already the principles of the Recommendation 2005/737/EC[67].

The main dispositions of the Directive refer to:

- Definitions[68] – more than 14 definitions are set by the Directive, some of them can be implemented also into the Law no. 8/1996, for example the definition of user;
- General principles[69] like the fact that collective management organizations act in the best interests of the rightholders whose rights they represent and that they do not impose on them any obligations which are not objectively necessary for the protection of their rights and interests or for the effective management of their rights.
- Membership rules of collective management organisations[70] including the electronic ways to communicate with the members;
- Rights of rightholders who are not members of the

[67] Ana-Maria Marinescu, "Analiza Directivei 2014/26/UE a Parlamentului European şi a Consiliului privind gestiunea colectivă a drepturilor de autor şi a drepturilor conexe", *Revista Română de Dreptul Proprietăţii Intelectuale* nr. 3 (2014): 112-121.
[68] Art. 3.
[69] Art. 4.
[70] Art. 6.

collective management organisation[71], which in my opinion had to be set down also in the Statue of the collective management organisations;

− General assembly of members of the collective management organisation[72], including the possibility of the members to vote through a representative or for voting by electronically means;

− Supervisory function[73] which, in my opinion, is not set very clearly, because interfere with the functions of the Censors Commission establish by the Romanian laws. If this function will be done by external auditors, it will be very expensive for some of the collective management organisations in Romania;

− Collection and use of rights revenue[74], deductions[75] and distribution of amounts due to rightholders[76]. In my opinion, the weak spot of the Directive is the distribution of amounts due to rightholders. The provisions regarding this point of the Directive were better set in the proposal of the Directive than the Directive itself.

− Management of rights on behalf of other collective management organisations[77];

− Relations with users: Licensing[78] and Users' obligations[79];

− Transparency and reporting divided in 5 parts[80]:

a) Information provided to rightholders on the management of their rights;

b) Information provided to other collective management organisations on the management of rights under representation agreements;

c) Information provided to rightholders, other collective management organisations and users on request;

d) Disclosure of information to the public;

e) Annual transparency report.

Most of the transparency measures mentioned before are already set down in Law no. 8/1996[81] and in some cases, for example the annual transparency report, it is provided by the Law no. 8/1996 in the form of the annual report. So, in my opinion, the transposition of these provisions have to very well compared in order not to excessive load the obligations of the collective management organisations.

- Enforcement measures divided in 3 parts:

a) Complaints procedures[82] set by the collective management organisations for dealing with complaints, particularly in relation to authorisation to manage rights and termination or withdrawal of rights, membership terms, and the collection of amounts due to rightholders, deductions and distributions.

b) Alternative dispute resolution procedures[83] between collective management organisations, members of collective management organisations, rightholders or users regarding the provisions of national law. In my opinion, this disposition address to a very wide range of subjects, and *de lege ferenda* could be implemented only as regards, on the one hand, collective management organisations and, on the other hand, collective management organisations and users.

c) Dispute resolution[84].

In the present, in Romania, we are in the stage of the First Compliance Table. For this, the collective management organisations communicated to the Romanian Copyright Office their proposals of implementing the Directive.

3. Conclusions

The European Directives adopted till 2004 refer to a wide range of subjects according to the needs of economic and technical evolution of the society. In my opinion, the most ambitious of them is the Directive of copyright and related rights in the informational society. Also, as I mentioned previously, it was the Directive that generate most of the controversial.

After 2004, we can observe a period extremely relaxed for the European Union for adopting new Directives, therefor were adopted only Directives that repealed and replaced older Directives.

After 2011, we can observe a new wave of EU Directives one more important than the other, culminating with the adoption of the Directive on the collective management of copyright and related rights, which in my opinion is the first supra-national act on the management of copyright and related rights, because till it adaptation some of the Directives were referring to the collective management of rights[85].

The new generation of Directives (term of protection, orphan works and collective management), demonstrate again the interest of EU on finding legal solutions to problems that we can find in practice, but also a way to preserve a field that is bringing so much money to the EU and international economy. If we think that the phonograms of Beatles or Elvis were

approaching the term of 50 years of protection, we will understood we it was a need to extended the term of protection for performers and sound recordings to 70 years. If we think that UE are functioning more than 250 collective management societies, that are managing annually revenues for more than 6 milliards EURO, and the remunerations resulted from music using represent approximately 80% from the revenues collected by the collective management societies[86], we will understood we it was a need to adopt a Directive on collective management of copyright and related rights.

Analyzing the Directive on collective management of copyright and related rights, I can affirm that its impact on the collective management activity for sure cannot be measured now: maybe it will ultra-regulate the activity of the collective management societies, or maybe it will modernize the Law no. 8/1996 on copyright and related rights which is already exceeded by the practical situations. It will take years to quantify the impact of the Directive, at least as regards its benefits, but is sure that the way in which the collective management activity is done is not neutral[87] for the EU and that the role of the collective management is growing in the universe of the digital era[88].

In Romania the level of harmonization is pretty high, except the fact that the Directive on orphan works wasn't implemented till now and it will be implemented after the term prescribed for transposition. If the Directive on the term of protection and the Directive on the orphan works, were transposed in the national legislation after the term stipulated in the Directives, hopefully this will not happen and the scenario will not repeat in the case of the Directive on the collective management of rights. For this, of course, there is a need also for some political will.

PROTECTION OF INVENTIONS IN THE PHARMACEUTICAL SECTOR THROUGH SUPPLEMENTARY PROTECTION CERTIFICATE

Viorel ROŞ*

Abstract

The topic of health is nowadays, more than ever in the history of mankind, one that enjoys an entirely special attention. It concerns, albeit at a different level, the sick and the healthy, doctors and patients, the young and the elderly, women and men. It concerns governments and individuals, medicine and herbal medicine researchers, and beneficiaries of the research activity.

The paper below is aimed to present special issues regarding the patent for medicinal products and authorisation of placement on the European market of medicinal products.

Keywords: *health, medicinal products, research activities, supplementary protection certificate, costs, temporary monopoly, territorial monopoly, authorisation procedure.*

1. Health care policies worldwide and health care institutions in the EU

Health is a component of the standard of living that also comprises the health care, enshrined as a universal human right under art. 25 of the Universal Declaration of Human Rights[1], and in harmony with that the **World Health Organization** has stipulated in its **Constitution** that its objective is the attainment by all peoples of the highest possible level of health.

The "**Alma-Ata Declaration**" adopted in 1978 formulated the organization's disease fighting strategy. The "**Ottawa Charter**" of 1986 formulated the organization's concept on health and maintaining it through the disease fighting strategy. The organization is responsible for managing certain health risks on a worldwide basis, establishing the health research agenda, offers technical assistance to the Member States, monitors and assesses the people's health, and approaches the most complex population health challenges.

Lately, some of the WHO's actions in the health care domain have been controversial, the organization having even been accused of bioterrorism in the form of the support given to certain manufacturers of vaccines that are actually biological weapons, and of affiliation to international corporate crime syndicates. These accusations must be regarded with reservation, however they cast doubt on the overall activity of this organization and on the efficiency of its actions.

The topic of health, defined by the World Health Organization as a „***state of complete physical, mental and social well-being and not merely the absence of disease or infirmity***", or as a state that „***should ensure a physical and mental state allowing a person to become productive and useful to society***", is nowadays, more than ever in the history of mankind, one that enjoys an entirely special attention. It concerns, albeit at a different level, the sick and the healthy, doctors and patients, the young and the elderly, women and men. It concerns governments and individuals, medicine and herbal medicine researchers, and beneficiaries of the research activity.

The international cooperation in the health domain takes most complex forms. Over the past years, a special attention has been paid to the cooperation and promotion of new medical technologies and new (original, innovating, or generic) efficient medicines to be made available to the population, including the poor countries' people for whom the access to generic medicines (much cheaper than the innovator ones) is essential. In 2001, the "**Declaration on intellectual property and public health**" was adopted at the Conference in Doha, which offers an answer to the concerns expressed by the developing countries about the need for a more facile and less burdensome access to a range of essential medicines designed to fight major epidemics, at the same time offering the necessary assurances to the manufacturers of pharmaceutical products on the observance of the intellectual property rights, with a view to encouraging the furthering and development of the research activities.

The European Union has also implemented concrete actions in the public health domain, the health care concerns targeting not only the diagnosis and treatment, but also prevention. The basic principle of the health care policies of the European Union has become, „**health in all policies**", and the Lisbon Treaty has emphasized the importance of the health policy, stipulating that, „*a high level of human health protection shall be ensured in the definition and implementation of all Union policies and activities*". In its turn, the Charter of Fundamental Rights of the European Union proclaims, under art. 35 (Health care),

* PhD, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **viorelros@asdpi.ro**).

[1] Adopted at 10 December 1948 by the Resolution no. 217A, in the third session of the UN General Assembly.

that „*Everyone has the right of access to preventive health care and the right to benefit from medical treatment under the conditions established by national law and practices. A high level of human health protection shall be ensured in the definition and implementation of all Union policies and activities*".

From the historical viewpoint, the Community health care policy originates from the health and safety provisions, developed pursuant to the free circulation of the persons and goods within the internal market, which has made possible the coordination of the health care activities and actions. The consumption and dependence on drugs, the expansion of serious diseases like cancer, the new diseases like AIDS, the crisis caused by the bovine spongiform encephalopathy (BSE), all these represent major health issues, which in conjunction with the ever freer circulation of the patients and medical personnel within the EU have secured the public health an even more important role on the EU's agenda. Amid the crisis caused by ESB, the Directorate General or Health and Consumers of the Commission (DG-SANCO) has assumed the coordination of all the health related domains, including the medicines, albeit the main responsibility for the protection of health, and in particular of the health systems, further lies with the Member States. The strengthening of the specialized agencies like the **European Medicine Agency** (EMA) and the establishment of the **European Centre for Disease Prevention and Control (ECDC)** evidence the increased commitment of the EU to the health policy.

The European health policy is aimed at:

(i) Offering all the Union citizens access to high quality health care;

(ii) Preventing diseases;

(iii) Fostering a healthier life style, and

(iv) Protecting citizens from health threats like pandemics.

And in order to ensure **the efficiency of its actions, the European Union has created its own instruments of action, both at regulatory and institutional levels**.

Thus, with reference to medicines, the **legislative process**, which started in 1965, **aimed at securing high standards in the pharmaceutical research and industry, harmonizing the national procedure for the grant of licenses for medicinal products, and implementing regulations on publicity, labelling and distribution**. Recent evolutions include the „***pharmaceutical package***", approved by the European Parliament (EP) in early 2011.

The community research programmes regarding the health care and public health date back to 1978, and refer not only to the main diseases, but also to aspects such as health issues influenced by age, environment and lifestyle, irradiation risks and human genome analysis. As regards the mutual assistance, the Member States have agreed to mutually assist one another in case of disasters and very serious diseases. Many such issues have come into the public eye over the past two decades, for example the bovine spongiform encephalopathy (BSE), swine flu, and more recently the H1N1 flue.

Recently (2012-2013), the European Parliament has defined its position also as regards the enactment of the legislation on the cross border health services, and the **revision of the legal framework concerning the medical devices and advanced therapies**. The European Parliament has consistently promoted and promotes coherent public health policies, also through: **notices, studies, debates, written declarations and reports**, on its own initiative, regarding multifarious aspects such as, *inter alia*: EU health care strategy; radiations; protection of patients under medical treatment or in under diagnosis process; health information and statistics; respect for life and caring for patients in terminal stages; European charter for children in hospital; health determinant factors; biotechnology research, including the transplants of cells, tissues and organs, and surrogate mothers; rare diseases; safety and self-sufficiency in supplying blood for transfusions and other medical purposes; cancer; hormones and endocrine disruptors; electromagnetic fields; drugs and their impact on health; smoking; breast cancer and in particular women's health; ionizing radiations; European health card comprising essential medical data readable by any doctor; nutrition and diets and their impact on health; ESB and its consequences, food safety and health risks; e-health and telemedicine; resistance to antibiotics; biotechnology and its medical implications; medical devices; cross border health services; Alzheimer disease and other dementia diseases; alternative medicine and herbal medicines; capacity of response to the H1N1 pandemic flue; and the advanced therapies. The (EU) Regulation no. 282/2014 of the European Parliament and of the Council of 11 March 2014 on the establishment of a third Programme for the Union's action in the field of health (2014-2020) continues the previous programme. The Regulation is the result of the successful negotiations carried out in the final phases of its preparation between the Commission, Parliament and Council with regard to three main aspects: budget allocation, modes of adoption the annual work programmes, and co-financing of the joint actions designated to create incentives for improving the participation of the less prosperous Member States.

As regards the **institutional framework** required for the attainment of the health care health programmes and policies, the following have been established in the European Union:

(i) Consumers, Health and Food Executive Agency,

(ii) European Foundation for the Improvement of Living and Working Conditions,

(iii) **European Medicines Agency MA),**

(iv) European Centre for Diseases Prevention and Control,

(v) European Agency for Safety and Health at Work, and

(vi) European Food Safety Authority.

From the viewpoint of the topic discussed hereunder, particularly important are the regulations that **have instituted the supplementary protection certificate for medicinal products** and **supplementary protection certificate for plant protection products**, and the institution with special competences in the field of medicinal products, being the **European Medicines Agency (EMA).**

2. Special issues regarding the patent for medicinal products and authorisation of placement on the market of medicinal products.

The connection between the people's health and the research and development activity is so close that we do not exaggerate in the least when stating that without the new medicinal products created pursuant to the research and development activities in the health domain the humankind health would be in great jeopardy. That is why it is natural the concern for this field at global, regional and national level. And the shift to the personalized medicine or precision medicine, recently announced as a political project in the US, will make the research more intense but also more costly, since this medicine will have to treat individually, with adequate medication for each patient. The personalized medicine also entails a surge in the number of medicinal products in the near future, but also the manufacture of smaller quantities thereof, therefore their prices will be increasingly higher, as the manufacturers can only eliminate the risk of not covering their investments by increasing prices.

Without examining the causes of this phenomenon, we can however say that there is an increased need for new medicinal products, that there is a permanent need in this domain of innovation, new medicines and higher efficiency, and that their manufacture and placement on the market **is conditional not only on the issue of patents**, but also on the **authorisation of their placement on the market, procedure that actually shortens the actual lifetime of a patent**.

However, certain medicinal products exist on the market that are no longer protected by a particular protection title, and these are, and have to be, bioequivalent to the original medicinal products.

The medicinal products protected by patent are also known as „***original***", „***organic***" or „***innovator***" medicinal products. These are manufactured, as a rule, by large pharmaceutical companies, which in order to achieve these products spend for research and development, and thereafter for preclinical and clinical trials, huge amounts, and even higher amounts for marketing and promotion activities. For example, if in the 70s of the last century the average price of an innovator medicine was 138 million dollars, and in the 80s was 231 million dollars, in 2007 the average cost reached 897 million dollars, and nowadays is over 1.38 billion dollars. As regards the term of achievement of a new medicine, this is 15 years on the average. In Europe, a new medicine is obtained from 5,000 through 10,000 synthesized molecules.

The high costs of achieving original active substances, researching, developing, launching in the market and maintaining these products, and the need to ensure the recovery of the investments and the manufacturers' profit also justify the concern for extending the duration of the monopoly conferred by the patent through various methods.

Pursuant to the expiry of the practical life span of the patents for inventions, which is shorter than the life span of the patent due to the lengthy procedures of authorisation of the placement on the market of the patented medicinal product, these companies lose the monopoly of exclusive manufacture rights, which allows the placement on the market of medicinal products not protected by patent, called generic medicines, whose prices is much lower.

This class of medicinal products, called **"generic"**, is actually represented by medicines equivalent to the original product, having the same quantity and quality composition of active substances and the same pharmaceutical form, the bioequivalence with the original medicinal product being proven under prior appropriate studies. The various salts, esters, ethers, isomers, mixtures of isomers or derivatives of the active substance are deemed the same as the active substance, inasmuch as they do not vary significantly as regards the safety and/or efficiency characteristics. The various pharmaceutical forms of oral administration with immediate effect are deemed as one and the same pharmaceutical form.

The generic medicine is subject to the same rules regarding the manufacture and pharmacovigilance, and has to present the same quality, efficiency and safety characteristics. The sale price thereof is, however, different from that of the original medicines, being 20% through 90% smaller than that of the original medicines, since their manufacturers do not have to recover the investments in their achievement. Due to their quality and price, generic medicines are very attractive, their low prices allowing the access to these of sick people with no income or low income, therefore they balance the health budgets of the poor economies and contribute to an increased standard of living of the consumers, stimulating the further innovation. Meanwhile, the therapeutic efficiency of these medicinal products lowers or even vanishes for reasons related to the adaptation and/or modification of the pathogenic agents of diseases, therefore without the research and development activity in the pharmaceutical industry the risks are huge. However, the research and development activity of the manufacturers of generic medicinal products is limited, their profit being generated by the fast placement on the market, and without the costs entailed by the research and development.

In other words, the original medicinal products are expensive because they entail costly research activities, and the expenses have to be recovered, while the generic medicinal products, which are much cheaper, can only be manufactured after the expiry of the term of protection of the intellectual property rights over the original medicinal products and at the expense of those. However, generic medicinal products cannot be manufactured if original medicinal products are not manufactured upstream. This does not mean that generic medicinal products are only manufactured based on original medicines.

3. Medicine patenting, actual lifetime of the medicinal product patent and consequences of its short lifetime

The protection through patent of medicinal products is recent. In France, it was only through a decree of 30 May 1960 that the solution of the French lawmaker of 1844 was invalidated, and the patenting of medicines was admitted, a "special patent for medicine" being crated. The rationale of exclusion stems from the interpretation given to the condition of industrial applicability, and the fact that medicinal products can be found in nature, and these are actually discoveries, the case of penicillin being maybe the best example. Nowadays, however, in truth, pharmacy is considered an industry, and medicines, manufactured.

What is a medicinal product? In a simple definition, the medicinal product is a substance used to prevent, cure, alleviate or treat disease or, in a wider definition, a medication is a substance or a composition which contains curative or preventive properties with regard to humans or animal illnesses for the purpose of medical diagnostic or to restore, to correct or to modify organic functions. According to another definition, a medicine is a preparation used to prevent, diagnose, treat a disease, trauma, or to restore, correct or modify organic functions.

Art. 1 (a) of the Regulation no. 469/2009 defines the medicinal product as "*any* ***substance or combination of substances*** *presented for treating or preventing disease in human beings or animals and* ***any substance or combination of substances which may be administered to human beings or animals with a view to making a medical diagnosis or to restoring, correcting or modifying physiological functions in humans or in animals***".

Generally, medicines are classified into indispensable, secondary or adjuvant, comfort and placebo type. The general basic law of the medicinal product, which does not take exception, is that medication acts on the functions of the body, modifying them in a positive (stimulatory) or negative (inhibitory) way.

Medicinal products have been prepared for a long time solely based on plants (e.g., alkaloids like digitalin or morphine), animals (e.g., vaccines) or minerals (e.g., aluminium). Nowadays, medicines are manufactured by the pharmaceutical industry, which offers a higher accuracy and safety of use. In parallel, the pharmacy proposes more and more synthetic products, which copy more or less truthfully natural substances, or are entirely original.

A medicinal product contains one or more active ingredients. Generally, the essential active ingredient gives its name to the medicinal product. Each essential active ingredient is identified in three different ways from the scientific, legal or commercial viewpoint. The scientific denomination is the exact chemical name of the active ingredient. It is typically less used due to its complexity. The international common denomination (DCI) corresponds to the generic name of the active ingredient in medicine. The commercial name is given by the pharmaceutical laboratories, which create new medicines by modifying the molecular structures of the original substances to increase their therapeutic efficiency and reduce secondary effects. One and the same active ingredient may be marketed as medicinal product by two different laboratories, two commercial names may correspond to the same substance, possibly with different presentations and/or doses.

In this domain, patents may also refer to a product or a procedure. No patents are granted for treatment methods, however the products, substances, compositions used in treatments are not excluded from patenting.

Generally, the **medicinal product has an active substance, a molecule** and **other parts that make the active substance therapeutically usable**, conferring the pharmaceutical form of the medicine, the types of claims encountered in practice in respect of innovator and patentable medicinal products being as follows:

- Product claim, where the claimed substance is new and the result of an inventive activity. The protection granted by the product invention covers all the types of manufacture and use of the substance, even those not related to the pharmaceutical domain;
- Claim to scope as the „first medical indication", where the claimed substance is technically known but the invention reveals for the first time a medical use thereof;
- Claim to scope as „a second or other medical indication", possible where the substance is also known as medicinal product but the invention consists in a new use in the medical field, in which case in order to be patentable it should also not be obvious;
- Claim to use for „a second or other medical indication", possible where the use of a substance already known as medicinal product is new and inventive for the treatment of another affection;
- Claim to a medicinal product preparation process, where the process in itself is new and includes an inventive activity, and not the substance.

Significant for the examined topic are the first four types of claim, which put up for discussion the active ingredient or combination of active ingredients, the only ones susceptible to supplementary protection.

At the same time, the Regulation provides for in art. 1 (c) that the basic patent (which must exist for a supplementary protection certificate to be granted) may also protect „***a process to obtain a product or an application of a product, and which is designated by its holder for the purpose of the procedure for grant of a certificate***".

Similarly to any other domain, the product newly obtained through a creative activity and susceptible of industrial application is protected by patent, the **pharmaceutical product** designated for marketing being difficult, impossible even, to protect by secrecy, the modern techniques allowing the reproduction without much difficulty of the medicinal products.

The patent is that protection title conferring its holder a **temporary and territorial monopoly**[2]: of **exclusive exploitation**, being to manufacture and market the product and prohibit third parties from performing any act of use without his consent on the **territory** in which the protection title is effective, over the period of validity of the patent.

As regards the **term of the exclusive monopoly conferred by the patent**, this is twenty years from the regular filing date (art. 33 of the Romanian patent law, which is consistent with the regulations of other law systems, the community law and the international conventions).

The exploitation monopoly is territorially limited, in principle, since the patent is effective where the law is effective, the protection outside the borders being able to the obtained either based on a patent requested in the country where the applicant has an interest, or through a patent obtained in accordance with the Washington Treaty of 1970 (PCT), or through an European patent.

Mention should be made that the Community law also limits the **effects of the territoriality** of the national patents in the EU. The Treaty on the Functioning of the European Union enshrines the principle of free circulation of goods, which contradicts the territorial nature of the monopoly related to the national patent. In order to eliminate the contradiction between the two legal orders, the Community case law referring to the analysis of art. 30 of the TFEU has evidenced a specific object of the patent right, and a principle of the right exhaustion Community-wide, thus restricting the exercise of right in the name of the free circulation, but preserving the existence thereof. The specific object of the right conferred by the patent, that the Treaty does not want to affect, is to ensure its holder, in order to compensate the creative effort of the inventor, the exclusive right to use the invention for the purposes of manufacturing and putting into circulation for the first time the industrial products, either directly or through the grant of licenses, and the right to challenge any counterfeiting, infringements of his right. However, once a product covered by patent is put into circulation for the first time in an European Union country, with the holder's consent, the latter can no longer oppose to the product circulation in other Member States by calling forth parallel patent rights (valid in those countries).

Another exception from the exploitation monopoly is, with reference to medicinal products, the so-called **Bolar provision**[3], an exception meant to favour the placement on the market of generic medicinal products immediately after the expiry of the protection conferred by patent and supplementary certificate of the original medicinal product. In accordance with this provision of exception, the **manufacturers of generic medicinal products may commence the preparations for the authorisation of the placement on the market of a generic medicinal product prior to the expiry of the period of protection of the original product, and file the authorisation documentation so that the generic medicinal product can be placed on the market immediately after the original product is no longer protected by patent and supplementary protection certificate**.

Obtaining a patent for a medicinal product is possible solely provided that the **claimed active substance benefits from novelty**, in other words the substance is not known either in the medicine or other domain, therefore is different from the known substances due to its technical characteristics, such as a new formulation, dosage or synergistic combination. The new medicinal product will be patented provided that it also meets the other two conditions imposed by the law, being: the inventive activity (the patent should be granted for ingenious achievements involving an intellectual effort that has to be rewarded) and industrial applicability (that includes besides uses the redundancy of achievement of the medicinal product).

The placement on the market of innovator medicinal products, protected by patent, is however also conditional upon **obtaining the marketing authorisation for medicinal products**, which requires studies, tests, verifications and authorisation formalities, the procedure taking a long time (up to 12 -15 years), which makes the actual lifetime of a medicinal product patent much shorter.

This means that the term of protection of the new achievement through patent is not equal to the actual lifetime of the patent, the latter one being significantly shorter in the case of the medicinal products. However, this short actual lifetime makes the activity of research and development, and of achievement of new innovator medicine unattractive, since the relevant investments cannot be recovered in such a short time. The solution to this problem is to extend the term of

[2] The territorial limitation of the right of exclusive exploitation is, in the EU, contrary to the principle of free circulation of goods (commodities).

[3] The name comes from the case Roche Products vs. Bolar Pharmaceutical examined by the US Federal Tribunal in 1984 regarding the manufacture of generic medicinal products, Bolar being the manufacturer thereof.

protection through the supplementary protection certificate.

However, mention should be made of, and is essential to emphasize, the **absolute independence of the patent from the marketing authorisation for medicinal products**. This means that where any medicinal product may be marketed solely provided that it has been authorized for placement on the market, the medicinal product does not necessarily has to be patented. For example, generic medicinal products are not covered by patent, however in order to be patented their prior authorisation is compulsory. And where there is an existing patent for a medicinal product but subsequently such patent is cancelled or revoked, the marketing authorisation does not have to be withdrawn, the same as the withdrawal of the marketing authorisation will not affect the validity of the medicinal product subject to the withdrawn authorisation.

4. Medicinal product marketing authorisation

The patent for a **new medicinal product** is a protection title for the **patented medicinal product**, and confers its holder an exclusive exploitation right over twenty years from the regular filing date. In order for the medicinal product to be placed in the market, the Directive 2001/83/EC of the European Parliament and of the Council of 6 November 2001 on the Community code relating to medicinal products for human use (which has replaced the Directive 65/65/EEC) has instituted the **obligation to obtain an authorisation prior to marketing** in all the Member States of the European Union. With reference to medicinal products for veterinary use, the code was adopted by the Directive 2001/82.

The procedure is lengthy both for the applicant (holder of the patent) and in terms of the formalities to be performed by the latter and of those in charge of the authorities issuing the authorisation. It is a procedure whereby and in the course of which the national authority or, as the case may be, the European one verifies, in order to approve the placement on the market of a medicinal product, its safety, efficiency and quality. The studies indicate that this procedure involves filling out about 1,850,000 pages of over 4,000 files measuring 230 meters in height and 500 kilometres in length, and lasting sometimes up to 12 - 15 years.

The medicinal product marketing authorisation can be obtained on the basis of a centralized procedure, in respect of the whole territory of the European Union, by the European Medicines Agency (EMA), or of a domestic procedure, by the National Agency for Medicines and Medical Devices. The similar body in the US is the US Food and Drug Administration (FDA).

5. Domestic authorisation procedure

In our law, the marketing authorisation for (original or generic) medicinal products is regulated by the Law no. 95/2006 on the health reform, updated in 2013, which transposes the Directive 2001/83/EC, Chapter 3 (Marketing authorisation), Section I (Marketing authorisation for medicinal products). No medicinal product may be placed on the market in Romania without a marketing authorisation (MA) issued by the National Agency for Medicines and Medical Devices, in accordance with the provisions of this law, or an authorisation issued according to the centralized procedure.

Medicinal products that have to be authorized by the European Medicines Agency under the centralized procedure are excluded from the grant of this marketing authorisation. The issued authorisations may enjoy mutual recognition in other Member States of the European Union. As of 1 January 1998, the mutual recognition procedure is compulsory in respect of the medicinal products that are to be marketed in another Member State than the one where the medicinal product has been first authorized. The procedure of mutual recognition of the marketing authorisation has been introduced by the Council Directive 93/39/EEC, in accordance with the provisions of Directives 65/65/EEC and 73/319/EEC.

6. Centralized procedure of marketing authorisation for medicinal products in the EU

The creation of a single market for medicinal products as well has been a concern of the Communities ever since the establishment thereof[4]. In order to attain the relevant objectives, the centralized procedure of marketing authorisation for medicinal products has been instituted, and the body(ies) in charge of the verification of the conditions established by the Community rules, and of the grant of the authorisation has(ve) been nominated, being the European Commission, the technical procedures being carried out through the European Medicines Agency (EMA) based in London.

The procedure of centralized authorisation of marketing for new medicinal products is currently regulated by the Regulation (EC) no. 726/2004 of the European Parliament and of the Council of Europe 31 March 2004 laying down Community procedures for the authorisation and supervision of medicinal products for human and veterinary use and establishing a European Medicines Agency. EMA

[4] Directive 65/65/EEC was the first Community legal enactment concerning the pharmaceutical products. This regulated the regime of the marketing authorizations for medicinal products and data exclusivity. Other legal enactments regulated the pharmacovigilance – Council Directive 75/319, labeling and packaging of medicinal products - Directive 92/27/EEC, while the Council Regulation 1768/1992 created the supplementary protection certificate for medicinal products.

verifies and monitors the safety, efficiency and quality characteristics of the medicinal products for both human and veterinary use.

As regards its scope of application, the Regulation no. 726/2004 provides for that no medicinal product appearing in the annex thereto may be placed on the market within the Community without a prior authorisation granted by the Commission, which acts in this regard and performs its verification duties through the European Medicines Agency (EMA).

In order to obtain an authorisation, the applicant has to make available to EMA comprehensive data pertaining to the characteristics, safety and efficiency of the medicinal product, in accordance with art. 8.3 of the Directive 2001/83/EC of the European Parliament and of the Council, amended by the Directive 2002/82/EC of 27 January 2003.

EMA has established **two Scientific Committees** (for medicinal products of human use and for medicinal products of veterinary use) and one **(Scientific) Paediatric Committee**, responsible for preparing the notices regarding the medicinal products falling within their ambit of competence, the notices of these committees underlying the authorisation to be issued by the European Commission.

The committees have to present their notices within 210 days from receiving the relevant request, and for these purposes may perform tests on the medicinal product, raw materials or intermediary products, or may perform inspections at the medicinal product manufacturing plant. Each authorisation proposal has to be taken into consideration by the Committee on the basis of the **scientific criteria** regarding the quality, safety and efficacy of the respective medicine. These three criteria allow the assessment of the risk-benefit ratio in respect of any medicinal product. The Committee first verifies the compliance with the conditions of issue of a marketing authorisation. If the authorisation conditions are deemed not complied with, the applicant will be informed thereof, and may submit to EMA within fifteen days a notice re-examination application.

On the basis of the (positive) notice of the EMA Committee, the European Commission prepares a draft decision regarding the application for medicinal product authorisation. The final decision is made pursuant to a procedure of consultation of the EU Member States. If the draft decision of the European Commission is not consistent with the EMA notice, the Commission will attach to its draft decision an annex explaining the reasons of the divergent opinion, which will be submitted to the Member States and the applicant.

The marketing authorisation will be **rejected** if the:

- Applicant has not properly and sufficiently demonstrated the quality, safety and efficacy of the medicinal product;
- Information is inaccurate.

The Commission may impose on an applicant, at EMA's recommendation, the obligation to perform: a post-authorisation safety study and/or a post-authorisation efficacy study.

The authorisation issued by the Commission is valid in all the Member States of the European Union for 5 years, and can be renewed upon request. Once renewed the marketing authorisation will be valid for indefinite term, unless the Commission opts for a new period of validity of five years.

Generic medicinal products are also subject to the authorisation procedure, however in their case, when the active substance is equivalent to a previously authorized medicinal product, the results of the preclinical tests are no longer required. This procedure of authorisation of the generic medicinal products is known as the „**abridged procedure**", since while the new medicinal products require the submission of preclinical tests providing data about the product safety, efficacy and quality, article 10 of Directive 2001/83 sets forth that the manufacturers of generic medicinal products may use and rely on the data and results already obtained by the original manufacturer. With reference to the **generic medicinal products** of the medicinal products of reference authorized by the EU, these can be subject to a decentralized authorisation procedure provided that the Europe-wide harmonization is maintained.

With reference to the medicinal products for **veterinary use**, these follow the rules applicable to the medicinal for human use, subject to the specific adaptations.

The refusal to issue a marketing authorisation in the centralized procedure shall be deemed a prohibition to market the medicinal product on the whole territory of the EU.

Any marketing authorisation for a medicinal product not followed by the actual marketing thereof for three consecutive years becomes invalid.

After its placement on the market, in order to ensure the people's protection by preventing, detecting and assessing the adverse reactions of the medicinal products for human use, inasmuch as the safety profile of the medicine cannot be fully known except after its marketing, the supervision of medicinal products (pharmacovigilance) is instituted. In respect of the medicinal products manufactured in the EU, the authorities responsible for pharmacovigilance are the relevant authorities of the Member States that have issued the authorisation. With reference to the medicinal products imported from a third country, the responsible relevant authorities are the issuers of the import authorisation. These will inform the Committee for medicinal products and the Commission about any case where the manufacturer or importer do not comply with their obligations. The holder of a marketing authorisation for human use or veterinary use is obligated to implement all the necessary changes, taking into account the manufacture methods

and technical and scientific progresses, in accordance with the Directives 2001/83/CE and 2001/82/CE.

Whenever urgent action is essential to protect human health or the environment, a Member State may suspend the use on its territory of an authorized medicinal product.

Notwithstanding the legislative efforts of the European Commission and of the Council, one cannot talk as yet about a single pharmaceutical market of all the EU Member States, mainly because the health provisions are the responsibility of each State, and their governments apply differentiated policies in terms of social, ethical values or GDP level. However, inasmuch as nowadays a harmonization has been achieved on large scale in the European Union in respect of the marketing authorisation system and mutual recognition and related formalities, the distortion effects regarding the operation of the single market are created by the regulation of the medicinal product pricing. In the majority of the Member States, the price of the prescribed medicinal product has to be determined prior to its release and based on the social security system, in order to maintain the control of the health budget. Thus, certain national policies encourage the sale of generic medicinal products, by fighting the practices of request and establishment of supply prices, and obligating the pharmacies to offer the cheapest product. Other Member States have instituted medicinal product pricing control measures.

7. Supplementary protection certificate for medicinal products

In all the invention domains the actual lifetime of the patents is shorter than their term of validity (which is 20 years from the regular filing date). However, in the case of the medicinal products, due to their specificity, in particular the long and costly research entailed by them, but also the tests and formalities required for the purposes of their placement on the market (which can last more than twelve years[5]), a compulsory condition for their marketing, the actual lifetime of the patents is shorter than in any other field.

As already mentioned, the expenses incurred to create a new medicinal product and placing it on the market have increased over 40 years by 1,000% (from 138 million to 1.38 billion dollars). However, the protection through patent of the new medicinal products, within the limits of the actual patent lifetime, does not allow the recovery of the investments in the achievement of new medicinal products, and implicitly is not likely to encourage the activity of research and development in this field. That is why all over the world means have been sought for to achieve a balance between the interests of the industry (investment recovery and profit) and people's health interests (new and state of the art medicinal products), respectively solutions likely to make attractive the achievement of new medicinal products for the benefit of the pharmaceutical industry and the consumers.

Similar solutions were adopted in US in 1984, when the intellectual property law was amended to provide the possibility to extend a patent term through a „patent term extension certificate", followed by Japan in 1988, which adopted an extension procedure called the „registration of extension of a patent right term".

Similar measures were adopted in Europe at the end of the 80s of last century in France, Italy and Germany, which made possible the extension of the patents for medicinal products for human use and veterinary use, and for phyto-pharmaceutical products in the countries where the longer protection term allowed the recovery of investments and obtaining of higher profits.

However, at the same time the development of certain heterogeneous laws in the European Communities could also create hindrances against the circulation of products within the single market, therefore a new instrument has been created to solve the problem Community-wise: the supplementary protection certificate for medicinal products, and a similar one for plant protection products.

The supplementary protection certificate for medicinal products was instituted by the **Regulation (EEC) no. 1768/92** of the Council of 18 June 1992 concerning the creation of a supplementary protection certificate for medicinal products (CSPM), the **European Medicines Agency** being established under the same act. This Regulation was repealed by the **Regulation no. 469/2009** of the European Parliament and of the Council of 6 May 2009 concerning the supplementary protection certificate for medicinal products, which however did not significantly change the previous text, actually the new act codifying the prior regulation and its successive amendments.

Subsequently, the Parliament and the Council passed the **Regulation no. 1901/2006 on medicinal products for pedriactic use** and amending the Regulation (EEC) no. 1768/92, Directive 2001/20/EC and Regulation (EC) no. 726/2004, whereby: a **Paediatric Committee** has been established within the **European Medicines Agency**, and the right to the **extension of the supplementary protection certificate for medicinal products of paediatric use by another 6 months** has been regulated to reward the research, preclinical tests and clinical studies required in respect of this class of medicines, and designed to guarantee their safety, high quality and efficiency for use by the target population.

Four years after the passing of the Regulation no. 1768/92, the European Parliament and the Council passed the **Regulation no. 1610/96 of 23 July 1996 concerning the creation of a supplementary protection certificate for plant protection products**,

[5] In the case of the medicinal product for human use called "Circadin" the obtaining of its marketing authorization lasted more than 15 years. Thus, at the authorization issue date, 28 June 2007, the patent was due to expire within less than five years.

designed to ensure a protection level for the innovations in this domain equivalent to that secured for the medicinal products, having regard to the contribution of this class of products to the continuing improvement of good quality food, and with a view to ensuring an effective protection to cover the research investment, and generate the resources required to maintain a high level of such research.

In the Romanian law, provisions regarding the obtaining of such supplementary protection certificates have been included in art. 30 of the Patent Law no. 64/1991[6], the Law no. 28/15.01.2007, however the text as revised[7] merely makes reference to the first two regulations (**Regulation (EEC) no. 1768/92**, respectively **Regulation no. 469/2009** and **Regulation no. 1610/96)**, without referring as well to the **Regulation no. 1901/2006 regarding the extension of the supplementary protection certificate for medicinal products for paediatric use**. However, even in the absence of any specific reference in the Romanian patent law to this last regulation as well (on medicinal products for paediatric use), such regulation is, like all the other regulations[8], of direct applicability in the Romanian law. The authority competent to issue the supplementary protection certificate for medicinal products is the State Office for Patents and Trademarks.

Previously, in order to comply with the criteria of accession to the European Union, the Law no. 581/2004 on the supplementary protection certificate for medicinal products and plant protection products was passed, which was to become effective at the date of Romania's accession to the European Union[9]. However, this law had no effects, and was specifically repealed by the Law no. 107/2007, because as of the date of our country's accession to the EU the aforementioned regulations have become of direct applicability in our country as well, therefore the supplementary protection certificates are granted by the national authority pursuant to the implementation as such thereof.

The basic patent related to the supplementary protection certificate may also be a European patent, granted by the European Patent Office[10]. Article 63 of the European Patent Convention referring to the term of the European patent stipulates under paragraph (2), point b) the **possibility to extend its term**, and confers the contracting parties the possibility to extend the term of a European patent in respect of products requiring authorisation immediately after the expiry of the legal term of the patent[11].

8. Subject matter of the supplementary protection certificate

The subject matter of the supplementary protection certificate is the „product", which means the „***active ingredient or combination of active ingredients of a medicinal product***". Medicinal product means any substance or combination of substances presented for treating or preventing disease in human beings or animals and any substance or

[6] In the form prior to the amendment brought by the Law no. 83/2014 on employee inventions, the provision referring to the supplementary protection certificate being included under art. 31. Subsequent to the law modification, the texts have been renumbered, and this provision is now included under art. 30 thereof.

[7] Art. 30 paragraph (3) of the Law no. 64/1991 republished has the following contents: *„In respect of the patented medicinal products or plant protection products a supplementary protection certificate may be obtained in accordance with the terms of the Regulation (EEC) of the Council of 18 June 1992 concerning the supplementary protection certificate for medicinal products, and of the Regulation (EC) no. 1610/96 of the European Parliament and of the Council of 23 July 1996 concerning the creation of a supplementary protection certificate for plant protection products."* The Guideline no. 146 of the general director of OSIM concerning the supplementary protection certificate for medicinal products and plant protection products was published in BOPI no. 12 of 29.12.2006.

[8] Art. 288 al. (2) of TFEU provides for that the treaty „shall be directly applicable in all Member States".

[9] The Law no. 93/1998 has introduced the „**transitional protection certificate**" for the „inventions having as subject-matter substances obtained by nuclear and chemical methods, pharmaceuticals, methods for diagnostic and medical treatment, disinfectants, food stuffs and spices and new plant varieties, bacteria and fungi strains, new animal breeds and silkworms", in favor of the holders of patents having a priority date before 21 January 1991, issued in a Member State of the Paris Union for the Protection of Industrial Property or of the World Trade Organization, and not patented in Romania. This transitional protection certificate is subject solely to the regime established by the patent law, and has the same subject matter of the invention, and the conferred rights are identical to those conferred by the basic patent. The transitional protection starts at the date on which an application is filed with OSIM, and ceases at the date on which the validity of the patent for invention expires, or on which the patent is cancelled or at the date of forfeiture of the patent owner's rights, and does not exceed 20 years of the date of the regular filing in the country of origin.

[10] This office was established by the Munchen European Patent Convention of 5 October 1973, effective as of 7 October 1977. Its establishment is the expression of the joint political will of the European countries to create a uniform patenting system in Europe. **The European patent has the same effects in Romania as the national patents issued by OSIM, subject to the compliance with the conditions laid down in art. 6 paras. 2-5 of the Law no. 611/2002 regarding the adhesion of Romania to the Convention on the Grant of European Patents**. In pursuance of art. 64 para. (1) of the Convention, ***„A European patent shall confer its proprietor from the date on which the mention of its grant is published in the European Patent Bulletin, in each Contracting State in respect of which it is granted, the same rights as would be conferred by a national patent granted in that State***". Some authors have stated that the „patent thus issued must be validated in each nominated State in order to be effective" (Bernard Remiche, Vincent Cassiers, Droit des patents d`invention et du savoir-faire. Bruxelles, Larcier, 2010, p. 49), while others are of the opinion that after being issued, in the countries nominated by the applicant, patents are subject to the national law of each State. According to art. 63 of the Munchen Convention, the patent thus issued „shall confer its proprietor in each Contracting State the same rights as would be conferred by a national patent granted in that State". This means that only a patent thus issued may be cancelled in accordance with the law of the State of destination, however we do not believe that the validation is required, or that OSIM may decide to revoke the patent.

[11] Romania adhered to this Convention and to the Act revising it adopted at Munchen on 29 November 2000 by the Law no. 611/2002 (OJ no. 844/22.11.2002).

combination of substances which may be administered to human beings or animals with a view to making a medical diagnosis or to restoring, correcting or modifying physiological functions in humans or in animals.

Therefore, there is no full identity between the subject matter of a patent for medicinal protect and the subject matter of the supplementary protection certificate. Unlike the patent, the **supplementary protection certificate does not refer to the entire medicinal product**; it only covers the **product** referred to under art. 1(b), respectively the **active ingredient or combination of active ingredients of a medicinal product, and not the medicinal product as a whole**, the last one also comprising those components that make the active ingredient therapeutically usable (adjuvants).

The recital 10 of the Regulation explains the **definition of the product** as follows: „*The protection granted (by the SPC) should furthermore be **strictly confined to the product which obtained authorisation to be placed on the market as a medicinal product***". And art. 4 of the Regulation defines the subject matter of the protection through supplementary certificate as follows: „***Within the limits of the protection conferred by the basic patent, the protection conferred by a certificate shall extend only to the product covered by the authorisation to place the corresponding medicinal product on the market** and for any use of the product as a medicinal product that has been authorised before the expiry of the certificate.*"

The definition given by the Regulation to the „product" making the subject matter of the SPC demonstrates its double nature: on the one hand basic patent, and on the other hand administrative authorisation of placement on the market of the medicinal product. Furthermore, the Regulation institutes quantity and quality limits as regards the subject matter of the protection conferred by the supplementary certification relative to the subject matter of the protection conferred by the patent.

Quantity limits because if **a granted patent refers to several products**, the certificate may be obtained **solely for those in respect of which a marketing authorisation for medicinal product exists**, but also because if there are **several patents of products with the same active substance a single supplementary protection certificate will be granted**, and **not as many certificates as patents for products with the same active substance an owner holds**[12]. However, with reference to **owners of patents for different products comprising the same active substance**, **as many supplementary certificates as owners of patents for different products** having applied for the protection supplementation will be granted[13].

Quality limits because the supplementary protection certificate does not have a subject matter identical to that of the patent, respectively of the patented product, but only to the essential part thereof, being the active ingredient or combination of active ingredients, as the case may be. In the case of the combinations of active ingredients, supplementary protection certificates may be obtained as well for an individual active ingredient, if this complies with the basic condition to be deemed an active ingredient.

The case law of the national courts, in agreement with the interpretations given to the provisions of the Regulation no. 469/2009 by the ECJ, has ruled that a combination between an active ingredient and a polymer, when the active ingredient is already known, cannot substantiate the issue of a supplementary protection certificate. The specialized literature also affirms that a substance without its own therapeutic effect, serving only to obtain a certain pharmaceutical form of the medicinal product, cannot be deemed an „active ingredient", which in its turn allows the definition of the „product". A substance like that, associated with a substance having its own therapeutic effects, cannot create a „combination of active ingredients" within the meaning of article 1 point (b) of the Regulation no. 469/2009. The fact that the substance without any own therapeutic effect allows the obtaining of a pharmaceutical form required for the therapeutic efficacy of a substance endowed with therapeutic effects is not of a nature to invalidate this interpretation[14].

The patent claims are important because they determine the subject matter and extent of the patent protection. The claims, in the case of medicinal products, should however refer as well to the therapeutic indications, inasmuch as the medicinal product does not tend to protect a substance in general, but its use as a medicine in the treatment or prevention of certain affections. In that regard, the ECJ has ruled that article 3 point (a) of the Regulation (EC) no. 469/2009 concerning the supplementary protection certificate for medicinal products must be interpreted as precluding the competent industrial property office of a Member State from granting a supplementary protection certificate where the active ingredients specified in the SPC application include active ingredients not identified in the wording of the claims of the basic patent relied on in support of that application[15].

Where the claims in relation to one and the same patent refer to a single active ingredient but entail the grant of several marketing authorisation, a single supplementary certificate will be granted, and its coverage will not be limited by the specialty of either

[15] Case C-6/11, Daiichi Sankyo Company c/ Comptroller General of Patents, Designs and Trade Marks, Order of 25 November 2011.

one of the authorisations. At the same time, if two patents have as subject matter (different) processes for obtaining the same active product, only one certificate may be obtained.

Accordingly, the regulation concerning the plant protection products defines under article 1 the „plant protection products" as the active substances and preparations containing one or more active substances, intended to protect plants against all harmful organisms, influence the life processes of plants, destroy undesirable plants, or prevent undesirable growth of plants. The Regulation comprises definitions of the active substance, preparations, plant products, harmful organisms, which have allowed a more clear interpretation of the regulation in these matters, however not entirely unambiguous. The definitions of the „product", „basic patent" are similar to those under the regulation concerning the medicinal products.

A more accurate definition of the terms of „product" and „active ingredient would facilitate, however, the establishment of those forms of active ingredients in a medicinal products that may be deemed to represent the product within the meaning of the regulation.

The **ECJ** has had the occasion to rule in relation to several cases on the meaning of „**active ingredient**", and it is interesting that the court has referred in its solutions also to considerations of appropriateness of instituting the certificate, and not only to the legal rules and principles and its case law.

Thus, in the case C-631/13, Arne Forsgren c/ Österreichisches Patentamt settled by the judgment of 15 January 2015, the Court ruled under paragraph no. 51, the same as in other occasions, that „***It is appropriate, consequently, to refer to the fundamental objective of Regulation No. 469/2009, which is to ensure sufficient protection to encourage pharmaceutical research, which plays a decisive role in the continuing improvement in public health"***, concluding that „*In that regard, it follows from paragraph 25 above that the term «active ingredient». for the purposes of applying Regulation no. 469/2009, relates to* ***substances which produce a pharmacological, immunological or metabolic action of their own*** *(....)",* and that *„In the light of the* ***wording*** *and* ***purpose*** *of Regulation No. 469/2009, it must be held that Article 1(b) of that regulation does not permit an «active ingredient» to be categorised as a carrier protein conjugated with a polysaccharide antigen by means of a covalent binding, unless it is established that it produces a pharmacological, immunological or metabolic action of its own*".

In the case C-210/13, Glaxosmithkline Biologicals SA and Glaxosmithkline Biologicals, Niederlassung der Smithkline Beecham Pharma GmbH & Co. KG c/ Comptroller General of Patents, Designs and Trade Marks, settled at 14 November 2013 by motivated order (considering, therefore, that the answer to a question referred for a preliminary ruling by a British court may be clearly deduced from existing case-law or admits of no reasonable doubt), the court concluded that, „*Article 1(b) of Regulation (EC) No. 469/2009 of the European Parliament and of the Council of 6 May 2009 concerning the supplementary protection certificate for medicinal products must be interpreted as meaning that,* ***just as an adjuvant does not fall within the definition of «active ingredient»*** *within the meaning of that provision, so* ***a combination of two substances****, namely an* ***active ingredient*** *having therapeutic effects on its own, and* ***an adjuvant*** *which, while enhancing those therapeutic effects,* ***has no therapeutic effect on its own, does not fall within the definition of «combination of active ingredients» within the meaning of that provision***".

In the case C-443/12, Actavis Group PTC EHF and Actavis UK Ltd c/ Sanofi, settled by the judgment of 12 December 2013, the ECJ ruled that, *„In circumstances such as those in the main proceedings, where, on the basis of a patent protecting an innovative active ingredient* ***and a marketing authorisation for a medicinal product containing that ingredient as the single active ingredient, the holder of that patent has already obtained a supplementary protection certificate for that active ingredient*** *entitling him to oppose the use of that active ingredient, either alone or in combination with other active ingredients, Article 3(c) of Regulation (EC) No 469/2009* ***must be interpreted as precluding that patent holder from obtaining – on the basis of that same patent but a subsequent marketing authorisation for a different medicinal product containing that active ingredient in conjunction with another active ingredient which is not protected as such by the patent – a second supplementary protection certificate relating to that combination of active ingredients***".

In the case C-484/12, Georgetown University c/ *Octrooicentrum Nederland, settled by the Judgment of 12 December 2013, the ECJ ruled that, „It should be noted in that regard that, where the holder of a patent obtains an SPC relating to an active ingredient on the basis of the MA for the first medicinal product placed on the market comprising, among its active ingredients, the active ingredient protected by the basic patent (…), such as, in the main proceedings, an SPC relating to HPV-16 on the basis of the MA for Gardasil,* ***the wording of Article 3(c) of Regulation No 469/2009 itself precludes that holder from obtaining, on the basis of that same patent, another SPC relating to the very same HPV-16 as a «product»*** *on the basis of a subsequent MA for another medicinal product which also contains HPV-16,* ***unless, in that other medicinal product, the «product» that is the subject of the SPC application relates in fact to a different HPV-16 falling within the limits of the protection conferred by the basic patent relied upon for the purposes of that application*** *(...)".*

In the case C-493/12, Eli Lilly and Company Ltd c/ Human Genome Sciences Inc settled by the Judgment of 12 December 2013, the ECJ ruled that, *„Article 3(a) of Regulation (EC) No 469/2009 must be interpreted as meaning that, in order for an active ingredient to be regarded as «protected by a basic patent in force» within the meaning of that provision,* ***it is not necessary for the active ingredient to be identified in the claims of the patent by a structural formula. Where the active ingredient is covered by a functional formula in the claims of a patent issued by the European Patents Office, Article 3(a) of that regulation does not, in principle, preclude the grant of a supplementary protection certificate for that active ingredient****, on condition that it is possible to reach the conclusion on the basis of those claims, interpreted inter alia in the light of the description of the invention, as required by Article 69 of the Convention on the Grant of European Patents and the Protocol on the interpretation of that provision, that the claims relate, implicitly but necessarily and specifically, to the active ingredient in question, which is a matter to be determined by the referring court*".

9. Conditions for the grant of the supplementary protection certificate

The application for the supplementary protection certificate has to be submitted by the holder of a basic patent or his successor in rights to the **intellectual property office of the country that has issued the first marketing authorisation for the medicinal product**. The application for the grant of a certificate has to comply with the requirements under art. 8 of the Regulation no. 469/2009.

The certificate application has to be lodged within six months of the date on which the first market authorisation was obtained for the respective product as medicinal product. If the marketing authorisation was obtained prior to the grant of a basic patent, the certificate application has to be lodged within six month of the date on which the patent was granted.

The supplementary protection certificate cannot be granted unless in the State where the grant of the certificate is applied for, and at the date of submission of the application for the grant of a certificate:

(a) **The product is protected by basic patent in force;**

The patent has to be in force in the country where the marketing authorisation for the medicinal product was obtained. The patent may be national, similar to the national one or a European patent. If the same basic patent protects several different „products", it is possible, in principle, to obtain several SCPs in relation to each of those different products provided, *inter alia*, that each of those products is „protected" as such by that „basic patent" within the meaning of article 3, point (a) of the Regulation no. 469/2009 read in conjunction with article 1, points (b) and (c) thereof, and is included in a medicinal product in respect of which a marketing authorisation has been obtained.[16]

(b) **A valid authorisation to place the product on the market as a medicinal product has been granted** in accordance with Directive 2001/83/CE or Directive 2001/82/CE, as appropriate;

This authorisation has to be granted by the relevant authority in the country where the grant of the supplementary protection certificate is requested, the competence to grant the supplementary certificate belonging to the intellectual property office where it operates, and which has granted the marketing authorisation.

The medicinal product patent and the marketing authorisation are independent, that is, if any medicinal product may be marketed only if authorized for placement on the market, the medicinal product does not necessarily has to be patented. However, in order for a supplementary protection certificate to be granted, it is required both a basic patent and a valid marketing authorisation for the medicinal product containing the active ingredient or combination of active ingredients in respect of which the supplementary certificate is applied for.

(c) The product has not already been the subject of a certificate;

This condition connects the patent, authorisation and certificate. Only the patented product, in respect of which a marketing authorisation for medicinal product has been obtained, may benefit from a single protection supplement. In other words, this condition is inferred from the unicity of the certificate for the same active product and holder of patent or patents relating to the same product.

In the case of several holders of patents where the active ingredient is the same, each one of them may obtain a supplementary protection certificate. In other words, the unicity of the product or combination of active products is relevant in connection with the holder(s) of the patent(s). Where several patent holders exist, each having a marketing authorisation for his product with the same active ingredient, each patent holder is entitled to obtain a supplementary certificate for the same active ingredient and same product.

In the case of the combination of active ingredients in respect of which a single basic patent exist, the solution to the problem is different. The ECJ has ruled that where, on the basis of a basic patent and a marketing authorisation for a medicinal product consisting of a **combination of several active ingredients**, the patent holder **has already obtained a supplementary protection certificate for that combination of active ingredients**, protected by that patent within the meaning of Article 3(a) of Regulation (EC) No 469/2009, Article 3(c) of that regulation **must be interpreted as not precluding the proprietor from also obtaining a supplementary protection**

[16] ECH, Judgment of 12 December 2013, Actavis Group PTC and Actavis UK, C-443/12, paragraph 29.

certificate for one of those active ingredients which, individually, is also protected as such by that patent holder[17].

The ECJ has also ruled that where a basic patent includes a claim to a product **comprising an active ingredient** which constitutes the sole subject-matter of the invention, for which the holder of that patent **has already obtained a supplementary protection certificate**, as well as a subsequent claim to a product comprising a combination of that active ingredient and another substance, article 3, points (a) and (c) of the Regulation (EC) no. 469/2009 precludes the holder from obtaining a second supplementary protection certificate for that combination[18].

(d) **The authorisation referred to in point (b) is the first authorisation to place the product on the market as a medicinal product.**

The Regulation no. 469/2009 does not specify whether the first authorisation to place the product in the market is that from the Member State or that from the Community. However, the interpretation given by the specialization literature and the case law in in the sense that, „it follows without doubt from the general context of the Regulation that for the purposes of examining the pre-conditions under art. 3, point (d), the first authorisation to place the product in the market is that obtained in the respective Member State".

This condition has to be examined solely where multiple authorisations to place the product (active ingredient) in the market exist, no issue arising in the case where a single authorisation exists. The case where the holder of rights over the patent has obtained multiple authorisations for the same product also does not raise any special issues, the first one within the meaning of art. 3(d) of the Regulation 469/2009 being the first one in the chronological order of their granting. Where the authorisation(s) to place a product on the market as medicinal product is required, obtained or held by one of the same person, things are simple. No special issues can arise as well where several holders of patents for medicinal products with the same active ingredient obtain each authorisations for placement on the market of the medicinal product: in respect of each one of them entitled to obtain a supplementary certificate, the first authorisation will be taken into consideration.

However, what happens where an authorisation for a medicinal product for veterinary use is obtained, and thereafter an authorisation for a medicinal product for human use, both medicinal products having the same active ingredient, and consequently supplementary protection certificates are requested for both of them?

Asked to rule on the question: *"Is the grant of a supplementary protection certificate in a Member State of the Community on the basis of a medicinal product of human use authorized in that Member State precluded by a marketing authorisation for that product as a veterinary medicinal product granted in another Member State of the Community (...), or is the sole determining factor the date on which the product was authorized in the Community as a medicinal product for human use?",* the ECJ ruled that, "having in view the fact that the term «product» used in the regulation refers to any active ingredient in the medicinal product, and a certificate may be granted for the product under the authorisation corresponding to a medicinal product, irrespective of its human or animal use (…), it follows, first, that the decisive factor for the grant of the certificate is not the intended use of the medicinal products, and, second, that the purpose of the protection conferred by the certificate relates to any use of the product as a medicinal product without any distinction between use of the product as a medicinal product for human use and as a veterinary medicinal product use." However, in these circumstances the Court ruled that, „The grant of a supplementary protection certificate in a Member State of the Community on the basis of a medicinal product for human use authorised in that Member State is precluded by an authorisation to place the product on the market as a veterinary medicinal product granted in another Member State of the Community (….).

However, recently the ECJ has refined its position, ruling that, *"Articles 3 and 4 of the Regulation (EC) no. 469/2009 (...) are to be interpreted as meaning that, in a case such as that in the main proceedings, the mere existence of an earlier marketing authorisation obtained for a veterinary medicinal product does not preclude the grant of a supplementary protection certificate for a different application of the same product for which a marketing authorisation has been granted,* ***provided that the application is within the limits of the protection conferred by the basic patent relied upon for the purposes of the application for the supplementary protection certificate***"[19].

The issue of the first authorisation is important for the third parties willing to manufacture generic medicinal products, which are interested in the expiry of the protection term, computed as regards the certificate from the date of the first marketing authorisation. The specialized literature has stated that, „the status of the first authorisation of placement on the market within the Community is necessarily related to the product, and cannot be interpreted as being related to the applicant, since in the case of

[17] ECJ, Judgment of 12 December 2013 in the case C-484/12, Georgetown University c/ Octrooicentrum Nederland.

[18] ECJ, Judgment of 12 March 2015 in the case C-577/13, Actavis Group PTC EHF and Actavis UK Ltd c/ Boehringer Ingelheim Pharma GmbH & Co. KG.

[19] ECJ, Judgment of 19 July 2012 in the case C-130/11, Neurim Pharmaceuticals (1991) Ltd c/ Comptroller-General of Patents. Subject matter: Medicinal products for human use. Supplementary protection certificate. Regulation (EC) no. 469/2009. Article 3. Conditions for obtaining a supplementary protection certificate. Medicinal product having obtained a valid marketing authorization. First authorization. Product subsequently authorized as a veterinary medicinal product and a human medicinal product.

several authorisations for the same product only one of these can be the «first»".

Mention: In accordance with art. 10(5) of the Regulation no. 469/2009, the Member States may provide for that a certificate may be granted by the authority referred to in article 9, paragraph (1) without examining the conditions laid down in article 3, points (c) and (d) of the Regulation. Romania has not formulated such a reserve, therefore the compliance with the conditions has to be verified as a whole.

10. Rights conferred by the supplementary protection certificate

In accordance with art. 5 of the Regulation no. 469/2009, the supplementary protection certificate confers the same rights as conferred by the basic patent, and is subject to the same limitations and the same obligations, however such protection "shall extend only to the product covered by the authorisation to place the corresponding medicinal product on the market and for any use of the product as a medicinal product that has been authorized before the expiry of the certificate".

With reference to the duration of the certificate, art. 13 of the Regulation provides for that:

(1) The certificate shall take effect at the end of the lawful term of the basic patent for a period equal to the period which elapsed between the date on which the application for a basic patent was lodged and the date of the first authorisation to place the product on the market in the Community, reduced by a period of five years.

(2) Notwithstanding paragraph 1, the duration of the certificate may not exceed five years from the date on which it takes effect.

(3) The periods laid down in paragraphs 1 and 2 shall be extended by six months in the case where Article 36 of Regulation (EC) No 1901/2006 regarding the extension the supplementary protection certificate for medicinal products for paediatric applies. In that case, this period may be extended only once.

As regard the expiry of the supplementary protection certificate, except for the cases applicable to patents as well (elapse of period of validity, holder's renunciation, failure to pay the relevant taxes), this becomes invalid also where and as long as the product covered by the certificate is no longer authorized to be placed on the market pursuant to the withdrawal of the corresponding marketing authorisation(s), in accordance with Directive 2001/83/CE or Directive 2001/82/CE. The authority that has granted the certificate may decide on the lapse of the certificate either of its own motion or at the request of a third party.

In pursuance of article 15 of the Regulation, (1) the certificate shall be invalid if:

(a) It was granted contrary to the provisions of Article 3 of the Regulation;

(b) The basic patent has lapsed before its lawful term expires;

(c) The basic patent is revoked or limited to the extent that the product for which the certificate was granted would no longer be protected by the claims of the basic patent or, after the basic patent has expired, grounds for revocation exist which would have justified such revocation or limitation.

Any person (who has an interest, we believe) may submit an application or bring an action for a declaration of invalidity of the certificate before the body responsible under national law for the revocation of the corresponding basic patent. In the case of Romania, only the courts are competent to declare the invalidity of a certificate.

Article 16 of the Regulation no. 469/2009 regulates the revocation of a certificate extension, possible only in the case of medicinal products for paediatric use. The Regulation no. 469/2009 provides for that the extension of the certificate duration may be revoked if it was granted contrary to the provisions of article 36 of Regulation (EE) no. 1901/2006 regarding the extension of the supplementary protection certificate for medicinal products for paediatric use. Any person may submit an application for revocation „to the body responsible under the national law for the revocation of the corresponding basic patent". Since the revocation can only be declared by the body that has granted the certificate, it follows that this is the relevant authority to order the revocation upon request. However, this solution is valid in our jurisdiction solely where the act whose revocation is requested has not entered the civil circulation.

In accordance with art. 31 of the Patent Law no. 64/1991 as republished, the protection coverage is determined by the content of the claims, which is interpreted on the basis of the relevant description and drawings.

Throughout the validity thereof its holder enjoys the exclusive monopoly of exploitation on the territory of Romania of the product and/or the process making the subject matter of the certificate, that is, the manufacture, use, offering for sale, sale or import for the purposes of using, offering for sale or selling such product, in its pure form or processed as a medicinal product.

Any deeds committed in breach of the provisions of art. 31 of the Law no. 64/1991 as republished shall be deemed counterfeiting. In respect of any losses caused to him the holder is entitled to damages in accordance with the general law, and may request the courts to order the confiscation or, as the case may be, destruction of the counterfeited products. The same sanction may be imposed as well in respect of the materials or equipment that have directly served to the commission of the counterfeiting deeds. Not only the certificate holder but also the beneficiary of a license is entitled to relief, in accordance with the general law.

However, the fact has to be taken into consideration that albeit the certificate is a protection

title granted on the basis of a patent, these two represent different protection titles, and distinct from intellectual property, therefore the rights pertaining to the payment of damages or the confiscation measure granted in relation to an action brought forward by a patent holder cannot be automatically extended to the supplementary certificate. In other words, a distinct action has to be brought forward in court in respect of each of these two titles.

The limitations regarding the rights of the certificate holders refer mainly to the exceptions laid down in article 33 of the Invention Law of Romania, possible in the case of medicinal products, as follows:

- The right to exclusive private and non-commercial use (art. 33, point c);

- Use for experimental, solely non-commercial purposes of the subject matter of the patented invention, that is, in respect of which a supplementary protection certificate has been obtained (art. 33, point e). However, the fact should be noticed that in the case of medicinal products the use for experimental purposes of commercial nature is allowed, since the Directive 2001/83/EC on the Community code relating to medicinal products for human use provides for under art. 10, paragraph (6) that, *"Conducting the necessary studies and trials with a view to the application of paragraphs 1, 2, 3 and 4 and the consequential practical requirements shall not be regarded as contrary to patent rights or to supplementary protection certificates for medicinal products"*. The aforementioned paragraphs refer to the studies and authorisations regarding generic medicinal products, however these **clearly are aimed at marketing these medicinal products**.

Of course, the class of limitation of rights within the meaning of art. 5 of the regulation may also include the existence of certain licenses, which if validly executed in respect of the patent may extent over the certificate, inasmuch as that is stipulated in the agreement. The compulsory licenses (art. 43-45 of the Law no. 64/1991) also apply to the protection certificates. However, it has to be noticed that the time limits provided for by the law in respect of the patents cannot apply to the supplementary protection certificates, the case law having not ruled on the issue of the interpretation of the cases of non-application or insufficient application of the invention.

TAXATION OF PERFORMERS' RIGHTS IN ROMANIA

Mariana SAVU[*]

Abstract

*In accordance with the Law no. 8/1996 („**the Law**"), the performers are required to exercise their rights through **collective management** for a range of economic rights provided for in article 123[1] of the Law. A number of non-profit associations of various intellectual property right holders were established in this sense.*

*Among them, CREDIDAM is the **Performers'** Association, apart from that of authors (UCMR-ADA) or of that of phonogram producers (UPFR). Thorough a series of ORDA's Decisions, these Associations have each of them received a certain role in the collection of the rights which must be collectively managed.*

CREDIDAM activity is strictly regulated by Law; the duties and activities that it can carry on are performed under the provisions of the special law, the Law 8/1996 on copyright and related rights, and under their own Articles of Association. As a trustee, CREDIDAM activity consists in collecting the remuneration due to performers by the companies that use their artistic performances, and distribution of the appropriate remuneration to the artists, depending on the actual use of the Repertoire based on which they empowered CREDIDAM."

Keywords: *Performers' Association, intellectual property right, collecting the remuneration, artistic performances, distribution of the appropriate remuneration to the artists.*

1. Introduction

The rights related to copyright or "neighboring rights" as they were referred to in the French doctrine and jurisprudence, were regulated for the first time by the Romanian law by Law no. 8/1996 on copyright and related rights[1]. Romanian Legislator was inspired by the provisions of the International Convention for the Protection of Performers, Producers of Phonograms and Broadcasting Organizations, signed in Rome on October 26th, 1961[2] and the Convention for the Protection of Phonogram Producers against Unauthorized Copy of their Phonograms, signed in Geneva on October 29th, 1971[3].

The rights related to copyright are intellectual property rights, other than copyrights, which are enjoyed by the performers, for their own performances, the producers of audio recordings and the producers of audiovisual recordings, for their own recordings, and the broadcasting and television organizations, for their own shows and program services.

The collective management of copyright and related rights emerged when the first laws on copyright and related rights began for the first time to be adopted, a practice that has developed over the centuries with the evolution of scientific progress. Thus, we may say that copyright has been collectively managed since the late 18th Century.

The first Performers' Associations were established in France. At first, the roles of professional associations – that of fighting, inter alia, for the full recognition and consideration of copyrights – were combined with the elements of the collective management of rights.

Establishment of the first organization of this kind is strongly related to the name of Beaumarchais. He was the one who led the legal „battles" against the theatres which had certain legal reservations in respect of the recognition and consideration for moral and economic rights of authors.

In Romania, the collective management of related rights was regulated for the first time by Law no. 8/1996 which, by the amendments brought to it by Law no. 285/2004 in June 2004, by Government's Emergency Ordinance no.123/2005 in September 2005, and by Law no. 329/2006 in 2006, has undergone significant amendments and supplements.

Following the adoption of this Regulation, many organizations were created in Romania for the management of copyright and related rights, currently operating a number of 17 Collective Management Organizations.

2. Content

A) On the Romanian territory, CREDIDAM is the most representative Collective Management Association for Performers' Rights.

CREDIDAM represents both performers from Romania and from abroad, the latter having the possibility to receive their due remuneration either by direct CREDIDAM membership, or by means of a foreign collective management association that has a Management Bilateral Agreement signed with CREDIDAM for mutual representation. Thus, CREDIDAM has both the right and obligation to collect the related rights due to performers from a series of legal entities, which are bound to pay such remunerations, for a number of over 12000 performers – members - and of nearly 1000000 foreign performers represented under the 33 international bilateral agreements. Such activity involves, on the one hand, maintaining a permanent communication with performers and with representatives of the Authorities regulating the activity of Collective Management Associations and, on the other hand, the development and organization of collecting and distribution capacity of the amounts owed by various debtors.

In accordance with the legal provisions, CREDIDAM undertakes the obligation of collecting and distributing the remunerations under the management mandate as granted by the right holders. The distribution of collected amounts is performed subject to the law, to the Articles of Association and to the Distribution Rules, as approved by the General Assembly. Amounts from the remunerations collected by CREDIDAM are directly distributed to the holders of rights, the performers, depending on the actual use of their own performances, after deducting a management quota (fee) in order to cover the operating expenses.

The management quota (fee) for the members of this Collective Management Association - CREDIDAM – complies with the maximum percentage as provided by Law no. 8/1996, with subsequent amendments and supplements. For the non-members, the management quota (fee) is given by the actual expenses borne for the management of rights (both collection and distribution), but it does not exceed 25%.

The remaining amounts are taxed according to the provisions of the law on taxation. Distribution of remunerations to the beneficiaries of rights is carried out every six months.

If bilateral agreements concluded with the partner Management Associations from abroad provide otherwise, the distribution to foreign beneficiaries shall be made according to the agreement.

Because of the great number of debtors from which CREDIDAM is required to collect the amounts due to performers, the association is often in a position to initiate Court actions in order to recover due amounts. Consequently to such actions, the amounts to be recovered arrive at a distance of three or four years from the date that they should have been paid by the debtors. The large number of such actions (there are over 568 active cases on trial before the Courts of Justice) leads to a time-lag between the moment the amounts would be due and the one when the amounts can be effectively recovered from the debtors and distributed to the performers. The number of legal actions also involves an additional effort in coordinating the work of attorneys representing CREDIDAM's interests in disputes with users. The communication of legal solutions as well as the supervision for developing a unitary jurisprudence is essential for CREDIDAM activity.

As artistic performances of some performers, members of CREDIDAM, are also broadcasted abroad, CREDIDAM proceeded to signing the 33 bilateral agreements as well as to "uploading" the repertoire in international joined databases. (IPDA[4] and VRDB[5])

Upon his/her enrollment as a member in the Association, each performer pays a fee of RON 10. Subsequently, the actual collection activity of the amounts owed by the debtors that use the repertoire managed by CREDIDAM is conducted by withholding a management quota/fee of the money due to artists, governed by a special Law No. 8/1996 on Copyright and Related Rights and which may not exceed the maximum of 15%.

According to the Law on Copyright and Related Rights, the management quota/fee which CREDIDAM enjoyed was up to 15% of the collected and distributed amounts, amount which has to be used for both the collection activity and the distribution one of the collected remunerations. By way of example, within the collection activity CREDIDAM uses the management fee for the issuance of the approximately 10500 invoices/year, for notifying the users, paying utilities (rent, phone bills, internet connection subscription, subscription for „internet boxes" allocated for use to each member by the organization, based on USERNAME and PASSWORD, salaries, postage, stamp duties, expert fees, attorney fees, arbitration fees – a single arbitration carried out in order to develop certain methodologies means costs of approximately RON 50000, and in 2012 we had four arbitrations which were subsequently cancelled by the Courts or their solutions were modified), as well as for expenses caused by the distribution of collected remunerations.

The authorization granted by artists is a special delegation both from the point of view of its granting method (under Law no. 8/1996 on Copyright and Related Rights) and from the point of view of costs, because the Principal does not transfer money into the

[4] International Performers Database Association
[5] Virtual (Musical and Audiovisual) Recordings Database

account of the organization. In order to receive the management fee, CREDIDAM is the one that has to endeavor to collect and distribute the amounts of money in order to withhold the management fee in order to be able to run its activity. Any economic blockage affects the activity of this collective management organization. A major issue is the one regarding VAT. Although the collective management associations are non-profit organizations without carrying out economic activities, they are subject to VAT payment. If the organization has issued an invoice in order to collect remuneration, and the user refuses to pay it until the due date, CREDIDAM is bound to pay the relating VAT to the State Budget by the 25th day of the following month, which, because of the fact that the amount was not collected, will be paid only from the management fee. The CREDIDAM Articles of Association does not allow this money to be covered from the amounts payable/due to artists.

From this brief description of the complex activity carried out by the Collective Management Association CREDIDAM, we have to ensure ourselves that the provisions of the Fiscal Code are legally applied to the actual facts:

- The activity carried out by CREDIDAM, a Collective Management Association, is governed by Law 8/1996 on Copyright and Related Rights,
- The revenues gained by CREDIDAM are revenues from the intellectual property due by the users to the holders of rights related to copyright, more precisely to the performers,
- Community Principles on the generating event and on the chargeability of VAT establish that revenues due for the period before becoming a VAT payer, are not subject to VAT.

To the extent that such an association deems that one of its rights is affected by the tax authorities as far as the interpretation and application of legal provisions in tax matters are concerned, then it may address to the Court of Justice.

According to art. 8 paragraph 1 of Law no. 554/2004,

„A person who/which incurred damages regarding one of his/her/its legal rights or regarding a legitimate interest because of an unilateral administrative act, and received an unsatisfactory response to his/her/its prior complaint or has received no response within the period of time as provided by art. 2, paragraph 1, letter h, may notify the competent Administrative Court in order to request for the cancellation of all or part of the act, the repair of caused damage and, possibly, the repairs for moral prejudice. The person who/which considers that he/she/it incurred damages regarding one of his/her/its legitimate rights or interests because of failure to settle it within due time or by an unjustified refusal to settle an application/request, as well as by a refusal to perform a certain administrative operation required for the exercise or protection of such legitimate right or interest, may also notify the Administrative Court."

Likewise, according to art. 11, paragraph 1, letter c of Law 554/2004,

„The requests for cancellation of an individual administrative act, of an administrative contract, for the recognition of a claimed right and for the repair of the caused prejudice, may be submitted within 6 months since: (...) c) the expiry of the deadline for solving the prior complaint (...)"

According to art. 2, paragraph 2 of Law no. 554/2004, „the unjustified refusal to solve the request regarding a legitimate right or interest or not responding the applicant within a due legal term, are assimilated to the unilateral administrative acts".

Accordingly, under art. 8, paragraph 1, in conjunction with art. 11, paragraph 1, letter c and with art.2, paragraph 2 of Law 554/2004, the entity is entitled to submit a file to the Administrative Court by which, as a result of failing to settle the Tax Complaint within the legal term, requests for the cancellation of the assimilated harmful tax administrative acts.

The practices of the Supreme Court also comes to support the above, the High Court of Cassation and Justice ruling as a principle, by the Decision 1224/2009 on the plea of inadmissibility of the action raised by the Tax Authorities for not solving the appealed Tax Complaint, that the latter is culpable for not solving such Tax Complaint within due legal term, for which reason the Supreme Court held as admissible the direct intimation of the Court, learning that „the refusal of the Defendant obviously constitutes the grounds for not solving the administrative complaint, which resulted in prejudicing the Plaintiff and to the right of the latter to notify the Court of this case of unsolved prior complaint within the legal term".

The Supreme Court considered the Constitutional Court's Decision no. 409/2004, which established that the procedure of appealing against the tax administrative acts before the Tax Authorities, which is currently regulated by the provisions of art. 205 and seq. of the Fiscal Code, does not grant jurisdiction, having the nature of a prior complaint, as the one provided by art. 7 of the general Law no. 554/2004. In this case, by silencing the special law, the general rules in art. 11, paragraph 1, letter c) of law 554/2004, which completely value the right to notify the Court supposing that the prior complaint was not solved within the legal term, become incidental if the Tax Authority failed to solve the complaint within the legal term.

Basically, after the expiry of the legal term for solving the preliminary procedure (the tax complaint), within which the competent authorities, culpably, has not issued any solution, by granting the Administrative Courts the proper jurisdiction to settle the case for the cancellation of the tax administrative act and of the assimilated act, represented by the lack of response to the complaint, the bodies which had to solve the complaint are automatically discharged from solving the administrative procedure, they no longer having the right to issue any solution.

The 45 day term provided by art. 70, paragraph 2 of the Fiscal Code for solving a complaint, is an imperative deadline provided by law, not a simple recommendation, similar to the 30 day term required for the taxpayers, within which they can submit the tax complaint (as provided by art. 207 of the Fiscal Code) and which is an imperative deadline, provided under the penalty of forfeiture. Therefore, in case of exceeding the 45 day term for solving the administrative procedure, the competent bodies are deprived of the right to issue a solution.

To construe otherwise the regulations of the fiscal procedural law would mean a serious violation of taxpayers' right of access to justice, by being forced to wait indefinitely (sine die) for the issuance of a solution by the tax authorities in the prior administrative procedure and could lead to serious abuses by tax authorities, which could deliver anytime a solution in the preliminary procedure, even after solving the dispute before the Litigation Courts, the issuing moment being practically at their discretion.

B) The Tax Administrative Act as negotium, subject of the cancellation action.

The presence of elements that lead to the cancellation of the tax administrative acts issued during tax inspections also bring the cancellation of the assimilated administrative act represented by the lack of an answer to the administrative complaint.

The legal report of taxation right emerges after the issuance by the competent Tax Authorities of the tax administrative act, a document by which taxpayer's duties are regulated. On this report, the creditor is the State, which is the rightful collector and it has the obligation to pursue for the accurate collection of the amount which is to be paid by the taxpayer – i.e. the debtor. The Tax Negotium includes several rights and obligations of the subjects in the Tax Report, which emerge in certain tax administrative acts, of instrumentum[6]. Such tax administrative operation, generically called negotium, is so contained in a number of interdependent acts, that give substance to the tax decision and which lead together to its effectiveness.

Unilateral acts may be seen as producing final legal effects only when they become irrevocable. Only from this point the rightful subject is aware of the entire content of the legal report generated by the Tax Administrative Authority, the right and obligations established by the latter and especially their grounds.

The opposite of this principle could lead to legal uncertainty which is impermissible particularly in the field of taxation law, where the consistency and predictability of the acts are core principles. As Professor Antonie IORGOVAN claims, related to prior complaints in the administrative law, this preliminary stage of the administrative complaint (appeal), where the will of the two fiscal subjects of the taxation report meet, „values exactly the principle of revocability of administrative acts"[7].

In this respect it is also the art. 216 paragraph 3 of the Fiscal Code, which provides that, if the tax administrative act is cancelled, a new one shall be concluded „which will take in consideration the only the reasons of the decision". Thus, the decision for solving the complaint appears as the last form of consent of the Administrative Authority, a binding and final form both for the taxpayers and for the Tax Administrative Authority.

The role of complaint's settlement decision is to show the reasons, to confirm or to deny the acts previously issued by the tax authorities, together forming a whole, a single tax administrative negotium, which creates rights and obligations for taxpayers. In this respect it is also art. 213, paragraph 1 of the Fiscal Code which provides that: „In solving the complaint, the competent body shall check the grounds de facto and de jure which gave rise to the issuance of the tax administrative act."

The decision for the settlement of the complaint completes the decision of the administrative authority by adding the instrumentum to the tax control instruments, by which the Tax Authority finally decides upon its obligations, the decision for solving the complaint no longer being administratively revocable. The finality is provided right in the end of the Decision for the Settlement of the Complaint, which generally provides that „this decision is final in the administrative complaint system".

By developing the preliminary procedure of the administrative complaint, in general, and the tax complaint, in particular, procedure which is performed before the issuer of the act, a new phase in issuing the tax administrative act has been established. This phase, which gives the possibility to the issuing authority to revoke the administrative operation or to strengthen the tax negotium, leads to the emergence of a new instrumentum. All these instrumentums compose the challenged tax administrative act and the illegality grounds for any of the former entail the cancellation of the whole.

C) The collective management associations do not owe any income tax

The collective management associations which rights emerge only from the intellectual property rights do not pay income tax. From checking the records of the Ministry of Finance, we see clearly the factual

[6] The taxation law doctrine lists, among the rights and obligations of the taxation law subjects, the following: achievement of prior procedure acts; finding taxable earnings and assets or issuance of tax debt securities, amendment of the obligations included in the tax debt securities and payment of financial debts – budgetary. In this respect: R. BUFAN, B. CASTAGNEDE, A. SAFTA and M. MUTAŞCU: *Treaty of Taxation Law. General Part*, Volume I, Ed. Lumina Lex, 2005, pag. 302 – 303

[7] This principle also emerges from the jurisprudence of the European Community Court of Justice which held that the principle of revoking the administrative acts that create subjective rights involve, in particular: a person's right to be heard before the individual measure is taken, the person's right of access to their own file and the obligation of the Administration to motivate its decision. A. IORGOVAN, L. VISAN, A-S. CIOBANU, D-I. PASARE: *The Law of Administrative Offenses. Comments and Jurisprudence*. Universul Juridic 2008, pag. 169 – 173.

basis of these claims for the collective management associations, of which the most important are: UPFR, UCMR-ADA, ADPFR, ARDAA, UNART, COPYRO, DACIN-SARA, PERGAM.

Both ORDA[8] and the European Association of Performers (AEPO - ARTIS[9]) sent detailed information about the lack of any incidences of economic activities for the purposes of tax on revenues (corporation tax) over the field of collective management associations.

However, the tax inspection bodies argue that for the management fees which are imperative in order to support the operational expenses, the collective management associations should pay an income tax. In my opinion, the reasoning of tax inspection bodies is based on misunderstanding the manner in which the copyright and related rights collective management system is organized both in Romania and in the EU Member States. Although the collective management associations are non-profit organizations that participate in the fulfillment of legal obligations of debtors and, although the operation and organization method of this activity is established by normative acts, the control bodies have thought that this is an economic activity.

Directives and treaties to which Romania is part of, define:

- „revenues/incomes from intellectual property rights" mean revenues collected by a collective management association on behalf of right holders, whether they come from an exclusive right, from a remuneration right or from a right to compensation. By way of example here we have the compensatory remuneration for private copying;
- „management fee" means the amount charged by a collecting society (in Romania by a collective management association) in order to entirely cover the costs relating to the management services for copyright and related rights;

The Tax Inspection bodies think that the activity of collection of rights related to copyrights is an economic activity carried out by CREDIDAM with the purpose of gaining profits, subject to the laws governing the economic activity specific to NGOs as provided by art. 15, paragraph 3 of the Fiscal Code.

This point of view is inconsistent with Law no.8/1996 on copyright and with CREDIDAM Articles of Association, both leading to one conclusion only, that such management quota (fee) obtained as a result of the collecting activity should be included as in-cash or in-kind contributions of members or sympathizers as provided by art. 15, paragraph 2, letter b of the Fiscal Code.

C.1) Operation of CREDIDAM activity as a collective management organization

In accordance with art. 124 of the Law, „the copyright and related rights collective management organizations, as referred to as collective management bodies/organizations within the law text, are, for the purposes of this Law, legal entities established by freedom of association which main object of activity is to collect and distribute those rights which management is entrusted to them by the right-holders." In order to exercise this rights' collecting and distribution activity, the organizations should be based on Articles of Association providing for, according to art. 127 of the Law, inter alia:

(1) the Articles of Association of the collective management organization has to include provisions regarding:...

i) the methods for establishing the commission fee due by the right-holders to the collective management organization in order to cover the operative required expenses;...

From these legal provisions it results that, precisely according to the law, CREDIDAM has the right to receive a commission fee in order to cover only its operating expenses.

Such commission fee is apart from the membership fee which is a small one, and it is paid upon registration of a new member.

The reason for the existence of such commission fee is the one of a contribution fee received from the members, through which they participate to the common expenses of the organization. Besides that, the Explanatory Dictionary of the Romanian Language defines the contribution fee as follows: "money/cash contribution to a common expense paid by the members of an organization". This commission fee is determined by art. 18, paragraph 2 of the Articles of Association:

The amounts resulting from the remunerations collected by CREDIDAM are directly distributed to the right-holders in proportion to the real use of their own performances, deducting a management quota (the commission fee) for covering the operation expenses.

The management quota (the commission fee) for the members of the CREDIDAM collective management association is the maximum percentage provided by the Law no. 8/1996...

These provisions of the Articles of Association are therefore supplemented even by the legal provisions:

Art. 134 (2) The collective management shall be exercised according to the following rules: ...

b) the commission fee due by the right-holders who are members of a collective management organization for covering the operation expenses of the same, as provided by art. 127 paragraph (1) letter i), combined with the commission fee due to the collective management organization which is a sole collector in accordance with the provisions of art. 133 paragraph (2) letter c) and paragraph (4), cannot exceed 15% of the annually collected amounts;

All these provisions should have leaded the Tax Inspection Bodies to the obvious conclusion that it is not a economic activity, but to the conclusion that it is only a contribution of the members to the CREDIDAM operation expenses.

[8] Romanian Office for Copyright, public control body/authority, which oversees and controls the collective management organizations
[9] International Structure of Performers' Collective Management Organizations

C.2) CREDIDAM does not carry out an economic activity classified by gaining a profit

The Fiscal Code defines the activity as any activity performed by a person with the purpose to gain profit. The revenues are accounting elements defined by Order 3055/2009 as being an increment of the economic benefits registered during the accounting period, as inflows or increases in assets or reduction of debts, which are reflected in increases in equity, other than those resulting from contributions of the shareholders.

Consequently, the taxable activity, in terms of tax on returns, is the one pursuing for economic benefits that would result in an increase in equity.

The same concept also emerges from the economic activity in terms of VAT, which is characterized by the purpose of continuously gaining income (art. 127 paragraph 2 of Fiscal Code) Even if this definition is mainly used in relation to VAT, the thing which characterizes an economic activity in all fiscal areas contrary to any other simple activity is the continuity purpose of gaining income, i.e. the continuity in increasing the equity of the taxpayers.

These considerations are not applicable in respect of an amount that a collective management organization shall retain in order to cover its expenses. There can be no economic activity, for the continuity in obtaining benefits in order to increase equity in relation to an amount for which retention is required by a legal provision, and the management quota (fee) which any collective management organization may withhold is covered by a special law which governs the operation of such legal entities.

CREDIDAM does not play the role of a company collecting debts/receivables, a company having as object of activity the purchase of receivables due and unpaid at a lower price in order to generate a profit by their recovering at the original price. The undersigned is an organization which, for the purposes of the law, performs a service to a certain category of taxpayers, thus approaching more to an organization performing a public service based on a special authorization granted by the artist.

The CJUE (Court of Justice of the European Union) stresses in the Case C-467/08, *Padawan*, that CJUE has established that, regarding the remuneration for private copying, this payment system: complies with the requirements of this "proper balance" to be provided that persons who have the equipments, devices, and digital reproduction supports and, on that basis, make this equipment, de jure or de facto, available to private users or provide the latter with a reproduction service, are debtors of the obligation to finance an equitable compensation, to the extent that they are able to pass on the real task of such funding on the private users (paragraph 50).

The Law 8/1996 requires a certain mechanism for collecting copyrights, which has a dual role:

- To facilitate the communication between lenders, performing artists and debtors, the persons who use their works, and
- To facilitate the collection of fees and taxes due by performing artists for these amounts – instead of checking over 12000 performing artists, the inspection bodies analyze a single entity.

Such an explanation was also retained by the Courts which concluded:

„Copyrights and related rights are not part of the category of trade deeds covered by art. 3 letter 'c' of the Commercial Code, which is limited to publishing companies, bookstores and art objects, when they are sold be persons other than the authors.

Criticism regarding the civil nature of this dispute as established by the Court is not well grounded. The Commercial Law provides that, even if carried out by a trader, deeds concluded with the author or the artist himself/herself by which the latter capitalizes his/her property rights derived from the artistic creation, are not classified as commercial deeds.

This is our case here, the Plaintiff is the agent of the holders of the related rights, and the activity carried out by the Defendant for the purpose of cable retransmission of phonograms does not entail the commercial nature of a legal report existing with the Plaintiff and which only limits to the collection of remunerations due to artists" Civil Judgment nr.809/R/2008 of Cluj Court of Appeal.[10]

Withholding a commission fee in order to cover CREDIDAM operation expenses does not represent an economic activity. It represents the contribution of the members required for the proper operation of the collecting and distribution of the collected amounts mechanism as established by law. Within this mechanism CREDIDAM acts as agent which existence is required by law.

This contribution is not an income generated by an economic activity but a method enforced by law to the members, in order to support the activity for which the association was established. Even if covered expenses would be less than the amounts resulting from the application of the commission fee (which, in reality, it is hard to imagine), the remaining amounts were not subject to tax on profits, but represented amounts for future expenses.

In conclusion, the Tax Inspection Bodies misinterpreted the commission fee withheld by the collective management organization under the provisions of its own Articles of Association, as approved by ORDA, and of the Law no. 8/1996, as being the result of an economic activity, the same representing in fact a form of in-cash contribution of the members which is enforced by the Law no. 8/1996, and CREDIDAM cannot exclude it from its Articles of Association and on which it depends the carrying out of CREDIDAM activity as being the only source of

[10]Available at: http://jurisprudentacedo.com/Casarea-acesteia-si-trimiterea-cauzei-spre-solutionare-Judecatoriei-Cluj-N-iar-in-subsidiar-modificarea-sentintei-in-sensul-respingerii-actiunii-ca-neintemeiata.html.

income from which it covers all the expenses related to the operation of the association (see art. 134, paragraph 2, letter 'b') of the special law).

D) Tax on nonresidents' revenues

The Tax Inspection Bodies appreciate that the tax rate on nonresidents' revenues is of 16% instead of 10%, taking into consideration that such revenues also gained from intellectual property rights would benefit from a different rate in relation to the nationality of the recipient.

Both from the provisions of art. 118, paragraph 1 of the Fiscal Code and from the Double Taxation Conventions concluded with the States toward which the distributed amounts were sent by CREDIDAM, it results that tax cannot exceed 10% of the paid amounts. Because we have here amounts payable to beneficiaries of the European Union Member States, we will apply the most favorable taxation rate, i.e. the 10% one.

Moreover, the percentage of tax treatment differences between Romanian citizens and the European Union ones would be a violation of the principle of freedom to provide services and of freedom of people migration. Knowing that revenues from Romania are subject to 16% taxation rate and not to 10% taxation rate, for the simple fact that they are not residents in Romania, performers from Europe would cease to transfer broadcasting rights toward the Romanian area.

In case C-290/04, FKP Scorpio Konzertproduktionen GmbH, the European Union Court of Justice has determined that, in the matter of income tax due for artistic performances, the mere existence of withholding procedures to the source for nonresidents' revenues which is not applicable to residents, is a violation of the freedom to provide services under European Union treaties (paragraph 28-39).

If the mere existence of different procedural provisions implies the violation of Community principles, the existence of different tax percentages even more represents a breach of Community regulations.

In accordance with the provisions contained under the Title Withholding tax on taxable revenues obtained by nonresidents from Romania, art.116, paragraph (4) of Law 571/2003 on Fiscal Code, "Tax is calculated, respectively withheld at the moment when the revenue is paid and should be paid to the State Budget until the 25th day, inclusively, of the month following the month in which the revenue was paid.[…]"

E) Correct calculation and payment of due VAT

In my opinion, as far as the collected VAT is concerned, it is important to correctly understand the timing of the chargeable event and chargeability of VAT. The Tax Inspection Bodies think that they depend on the issuance of an invoice and not from the actual performance of the service. As a starting point for understanding the method by which VAT is construed, one should take into account that collection and distribution operations are carried out by the collective management organizations under a legal mandate grated by its members.

Any expenses related to the initiation and completion of a taxable operation is susceptible of being subject to VAT deduction. Thus, in case C-32/03, Skatteministeriet, CJUE (the European Union Court of Justice) has determined that even the services required in order to close a company which no longer carries out any business, are subject to VAT deduction (paragraph 23).

Based on the provisions of the Fiscal Code and on the VAT principles, the reasoning for VAT calculation and payment was the following:

- VAT is due at the moment of taxable debt chargeability.
- According to art. 134^{2} of the Fiscal Code, chargeability of the tax is liable when its generating event occurs. Only by way of exception, the tax chargeability becomes liable upon the date of issue of the invoice, only if the invoice was issued before the date when its generating event occurs;
- According to article 134^{1} of the Fiscal Code the generating event occurs either on the date of goods' delivery or on the date of services' performance.

The generating event is represented by the services enjoyed by debtors through using the rights related to copyright of CREDIDAM members. Such related rights are born, according to Law 8/1996, on the date of fulfilling the legal conditions depending on the method of use. They are due for each year, as the licenses for use are granted on annual basis.

Therefore, if the VAT generating event is reflected over a period of time during which CREDIDAM was not a VAT payer because its revenues did not exceed the limit as provided by law, such operations are not subject to VAT, regardless of the date on which the invoice is issued.

Such reasoning results:

- Either from the provisions of point 45 paragraph 2 of the final thesis of Methodological Norms according to which:

By exception to the provision of art. 155 paragraph (19) of the Fiscal Code, the invoice does not have to include a specification regarding the VAT registration code for the operations carried out before the taxable person, according to article 153 of the Fiscal Code, becomes subject to VAT liability.

- Or from the Letter no. 270105/15.02.2006 of the Ministry of Public Finance – General Department for Indirect Taxes' Legislation[11], which retains the same solution regarding the invoicing of amounts due by users before the date when the Undersigned became a VAT payer.

In conclusion, there is no reason to justify VAT collection for the operations carried out before the date

[11] Unpublished

of registration of the collective management organization as a VAT payer.

F) The social security contributions withheld at the source for revenues from intellectual property rights

The withholdings at source for the remunerations distributed to the holders of related rights, i.e. the performers, are:

a. The Unemployment Fund individual contribution due by the persons who gain professional income (with the remark that starting with 01.07.2012 CREDIDAM has no longer the obligation to withheld this contribution);

b. The Unemployment Fund contribution for professional income;

c. Social Security individual contribution due by the persons who gain income from intellectual property rights;

d. Health Insurance individual contribution due by the persons who gain income from intellectual property rights.

The remunerations collected by CREDIDAM are not directly transferred into the property of right-holders. Distribution of such amounts is carried out, at 6 months legally predetermined periods of time depending on the criteria as set by the Distribution Rules and Law 8/1996. Since the time of collection and up to distribution, amounts collected by CREDIDAM are kept in special bank accounts and produce interests. These interests, which are entirely distributed to the artists together with the main amount of their due rights, were taxed by CREDIDAM as revenues from intellectual property rights or as revenues from interests.

This was also the opinion of the Ministry of Public Finance, National Agency of Tax Administration, General Department for Complaints Settlement, asserted in a Point of View dated October 31st, 2013, we quote: „in our opinion, the interests distributed to the members of the association neither can be classified as revenues from interests, as long as the holders of bank deposits are not the CREDIDAM members, but the association itself, nor as revenues from other sources, as long as they represent a civil fruit of the remunerations received on the basis of an invoice from all the categories of users provided by law.

We estimate that revenues from such interests are classified as revenues from intellectual property rights, because they are covered by the legal nature of the main amount which generated them."

Tax Authorities' classification of interests as revenues from other sources instead of revenues from intellectual property rights, is not in compliance with the legal provisions.

Tax Authorities' reasoning is erroneous considering the following provisions:

- The Art. 52, paragraph 1 of the Fiscal Code classifies the revenues from intellectual property rights as revenues from independent activities, i.e. the relationship of a part from the whole[12].
- The Art. 48, paragraph 2, letter b of the Fiscal Code provides the rules for determining the annual gross revenues from independent activities (self-employment). It is expressly emphasized that interests are part of the gross revenues gained from independent activities[13]. If they are incorporated into the category of revenues from independent activities, as a whole, and being their civil fruit; likewise they are part of the category of revenues from intellectual property rights, as their civil fruits.
- The Art. 52, paragraph 2 of the Fiscal Code sets that for such revenues from intellectual property rights, the percentage withheld at source shall be of 10%.

For reasons related to the proper management of revenues due to holders of related rights, the collective management organization CREDIDAM was prudent enough to also collect the interests related to the period of time prior to the distribution.

The Law no. 8/1996 does not allow to the collective management organizations to apply to the remuneration due to right-holders any accounting treatment specific to credit institutions to distinguish between actual remuneration and interests. Consequently, according to this accounting treatment, the revenues distributed and paid to the right-holders was treated in terms of taxation according to the income tax rules, thus we withheld at source the corresponding 10% taxation rate by way of advance tax, in accordance with the legal rules regarding NGOs, as nonprofit organizations. Consequently, there is no additional payment liability to be borne by the collective management organizations as difference relating to the tax on interests, because in reality, the Law makes the revenues' beneficiary (i.e. the performer) responsible for such a liability, i.e. the 6% difference which is regulated by the Annual Statement no. 200.

It is obvious that the amounts owed by the debtors of copyright related rights are receivables of the CREDIDAM members, and the interests relating to them are also part of the amount of gross revenues relating to such rights. The interest represents, under these circumstances, a civil fruit of the revenues which are deposited in the bank account up to the moment of the effective distribution. The only role played by these interests is to maintain the value of the amounts by reporting them to the period of time during which they stay under the property of the collective management organization, i.e. for maximum 6 months.

Furthermore, according to articles 117 and 124 of the Fiscal Code, the taxpayers have the right to gain interests for the amounts which were paid to the State Budget but which were not due. The principles of legal

[12] ART. 52 Withholding at source the tax representing prepayments for certain revenues from independent activities (1) For the following revenues, the taxpayers that are legal entities or other entities which have to manage accounting, are required to calculate, withhold and transfer the tax by withholding at source, representing prepayments from the paid revenues: a) revenues from intellectual property rights;

[13] (2) Gross revenues include: a) collected amounts and the equivalent in RON of the in-kind revenues resulted from activity performance; b) **interest** revenues from trade receivables (claims) or from other receivables (claims) used in relation to an independent activity;

certainty as well as the avoidance of enrichment based on unjust cause, lead to the conclusion that such interests should be calculated starting with the date on which the undue amounts have been paid.

3. Conclusions

De lege ferenda

According to the Fiscal Code, non-profit organizations are exempt from the income tax (corporation tax) for certain types of income listed exhaustively, including fees and registration fees of members and contributions in-cash or in-kind from members and sympathizers. Compared to these legal provisions, it is necessary to clarify the tax treatment of the fee payable by the holders of copyrights and related rights to the collective management association for covering the expenses necessary for its operation, by changing the relevant provisions of the Tax Code.

Clarification regarding the exemption subjects. The fiscal code defines the non-profit organizations as any association, foundation or federation established in Romania, in accordance with the law in force, but only if the revenues and assets of the association, foundation or federation are used for an activity of general, community or non-patrimonial interest.

According to Government's Ordinance no. 26/2000 on associations and foundations, the common law regarding the non-profit organizations, associations and foundations are defined as non-profit legal entities, of which associates pursue to perform certain activities of general interest or in the interest of communities or, as appropriate, in their non-profit personal interest.

On the other hand, the collective management organizations are defined by Law no. 8/1996, on copyright and related rights, as legal entities established by freedom of association, which main object of activity is to collect and distribute those rights which management is entrusted to them by the right holders. According to art. 125, paragraph 1 of Law no. 8/1996, the collective management organizations operate as non-profit associations.

Therefore, although the legislator uses non-unitary vocabulary, susceptible of creating confusion, the collective management organizations are undoubtedly non-profit organizations, as their operation as associations, their object of activity and their non-profit purpose are all expressly regulated by the Law no. 8/1996.

Consequently, the collective management organizations are susceptible to benefit from the exemption from the revenues tax regulated by the Fiscal Code.

1. Clarification regarding the categories of exempt revenues

The Fiscal Code exempts the non-profit organizations from the payment of revenues tax for the contributions and registration fees of the members and for the in-cash or in-kind contributions of members and sympathizers. To a certain extent, also the revenues from economic activities carried out by non-profit organizations are exempt.

In terms of the revenues of non-profit organizations, the Government's Ordinance no. 26/2000 also expressly distinguishes in art. 46, between the contributions of members and the revenues from direct economic activities.

Therefore, it is a clear distinction between the revenues of non-profit organizations from economic activities and other categories of revenues. As far as the collective management organizations are concerned, the art. 127 of Law no. 8/1996 regulates the charging of a commission fee for covering the expenses required for the operation, which fee shall be withheld from the holder of copyrights or related rights from the amounts due to each of them, after calculating the individual distribution. Therefore, the commission fee, as a category of revenues, is distinctly and expressly regulated by the legislator, apart from the revenues from economic activities and having a precise destination, to cover the operation required expenses.

From this point of view, the management fee paid by the holders of copyrights is a real contribution required for the effective operation of the specific activity of collection and distribution of copyrights or related rights by the collective management organizations.

Since the reasoning of this fee is the same as the one underlying the regulation of contributions or donation as revenues of non-profit organizations and since this fee does not correspond to an economic activity, but for financing the specific activity to the interest of the performers, the tax treatment of such fee should be the same.

Since the vocabulary used by the legislator for defining the non-profit organizations and their specific categories of revenues is non-unitary, as mentioned above, the express listing of management contributions within the category of incomes for which the non-profit organizations are exempt from the payment of revenues tax is compulsory.

2. Proposal for the amendment of the Fiscal Code

Therefore, the art. 15, paragraph 2, letter f of the Fiscal Code shall appear as follows:

„b) in-cash or in-kind contributions of the members and sympathizers, as well as the commission fees owed by the right-holders to the collective management organizations, according to the special law".

SMALL AND MEDIUM ENTERPRISES (SMES) – DETERMINANTS FOR INTELLIGENT GROWTH AND SUSTAINABLE DEVELOPMENT OF LOCAL COMUNITIES

Constantin BRAGARU[*]

"Smart, sustainable, inclusive growth is the key to job-creation and the future prosperity of Europe".

Jose Manuel Barroso

Abstract

The EU Cohesion Policy faced many challenges over the last five years, especially because of the long-term consequences of economic crisis. The recession generated regional and intra-regional disparities within European Union and undoubtedly created economic and social contrasts between member states. In order to remedy this situation, European Union reformed its Cohesion Policy for the next period of time, 2014-2020, focusing on fewer key priorities mainly on investments in local growth, capabilities, local economic potential and support for small and medium-sized enterprises.

The present paper presents the impact of economic crisis on European SMEs and, in particular, on the Romanian SMEs decline. The article also highlights the Romanian SMEs perspectives in terms of financial support that will be provided by the European Reformed Cohesion Policy for the next six years to come in order to build sustainable local communities.

Keywords: *capabilities, growth, investments, potential, support, small and medium-sized enterprises, local communities.*

1. Introduction

The European Commission had significantly increased the SME financial support through 2007-2013 operational programmes. Furthermore, in March 2008, European Council expressed strong support for an initiative to further strengthen SMEs' sustainable growth and competitiveness, named the "*Small Business Act*" (SBA) for Europe that was rapidly adopted.

The "*Small Business Act*" aimed to improve the overall policy approach to entrepreneurship, to irreversibly anchor the "Think Small First" principle in policymaking from regulation to public service, and to promote SMEs' growth by helping them tackle the remaining problems which hamper their development. This initiative also set 10 principles to guide the conception and implementation of policies both at EU and Member State level, namely:

- Create an environment in which entrepreneurs and family businesses can thrive and entrepreneurship is rewarded;
- Ensure that honest entrepreneurs who have faced bankruptcy quickly get a second chance;
- Design rules according to the "Think Small First" principle;
- Make public administrations responsive to SMEs' needs;
- Adapt public policy tools to SME needs: facilitate SMEs' participation in public procurement and better use State Aid possibilities for SMEs;
- Facilitate SMEs' access to finance and develop a legal and business environment supportive to timely payments in commercial transactions;
- Help SMEs to benefit more from the opportunities offered by the Single Market;
- Promote the upgrading of skills in SMEs and all forms of innovation;
- Enable SMEs to turn environmental challenges into opportunities;
- Encourage and support SMEs to benefit from the growth of markets[1].

After five years of insecure economic environment, the statistics say that the European SMEs

[*] Associate Professor, PhD, "Nicolae Titulescu" University of Bucharest, (e-mail: **costin_bragaru@yahoo.com**).

[1] COM(2008) 394 final - Communication from the Commission to the Council, the European Parliament,the European Economic and Social Committee and the Committee of the Regions: "*Think Small First"* A *"Small Business Act"* for Europe, Brussels, the 25th of June 2008. European Commission, Enterprise and Industry, 2013 SBA Fact Sheet, Romania. The Small Business Act (SBA) Fact Sheets are produced by DG Enterprise as part of the SME Performance Review (SPR), which is its main vehicle for economic analysis of SME issues. They combine the latest available statistical and policy information for the 28 EU Member States and nine non-EU countries which also contribute to the EU's Competitiveness and Innovation Framework Programme (CIP). Produced annually, the Fact Sheets help to organise the available information to facilitate SME policy assessments and monitor SBA implementation. They take stock and record progress. They are not an assessment of Member States' policies but should be regarded as an additional source of information designed to improve evidencebased policy-making. For example, the Fact Sheets cite only those policy measures deemed relevant by local SME policy experts. They do not, and cannot, reflect all measures taken by the government over the reference period. More policy information can be found on a database accessible from the SPR website.

resisted the crisis better than large enterprises[2]. Member states implemented SBA and adopted policies to avoid financial market collapse. But all this policies couldn't assure growth, competitiveness and maintaining control of public spending. 2012 was the year that registered a loss of 610.000 jobs at EU level and SMEs contribution to the GDP diminished from €3.44 trillion that was collected in 2011 to €3.39 trillion in 2012. Annual Report on European SMEs 2012/2013 (based on Eurostat Statistics) provides an overview of the position of SMEs in the European economy between 2008 – 2013 (and a trend analyze for each SME size), in terms of business demography, employment and added value and reflects through its statistics the decline and low performance of SMEs.

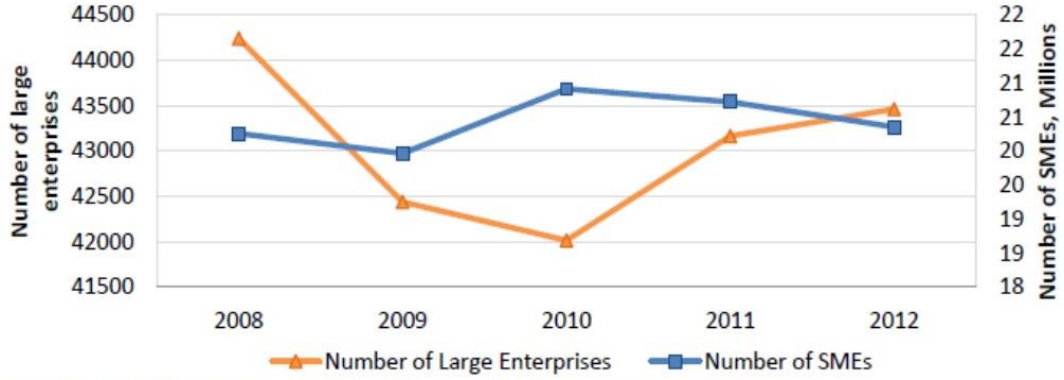
2. The dynamics of business demography 2008 - 2012[3].

Between 2009 and 2010 the number of SMEs reached almost 21 million firms and from 2010 till 2012 the total number of SMEs decreased, returning to the levels of 2008.

The number of micro-enterprises underwent large fluctuations. Between 2009 and 2010, the number of micro-firms increased with a net growth of almost 1 million units. In 2011, however, their number reduced by more than 200,000. The negative trend continued throughout 2012 albeit at a lower rate. In 2012, the number of micro-enterprises was just 120,000 units above the 2008 level.

The number of small firms was negative. Despite a 2.4% growth in 2010-2011, of the 1.37 million small companies that existed in 2008, there remained only 1.35 million in 2012.

The trend in the number of medium firms was negative until 2010. Although it is acknowledged that a number of large enterprises crossed over to the SME size-class, between 2008 and 2010, the sector lost approximately 6,000 firms (with their number reducing by almost 3%). Slight growth was recorded in 2012, which brought the number of medium sized firms to a total of 220,000



Note: Number of Large Firms: Left Axis; Number of SMEs in million: Right Axis

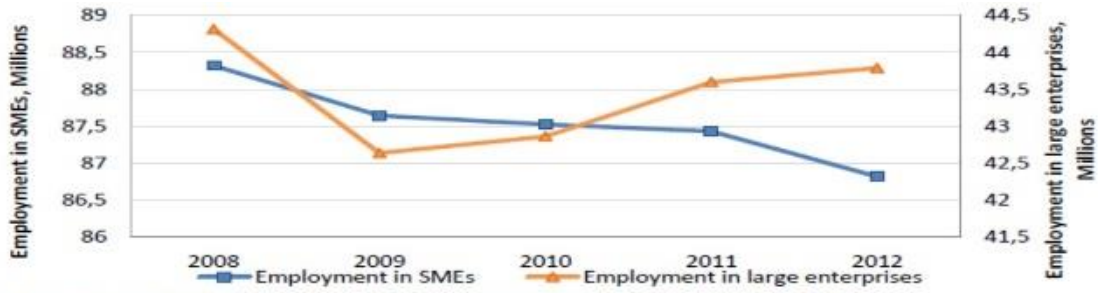
[2] European Commision, *A recovery on the Horizon? - Annual Report on European SMEs* 2012/2013, October 2013

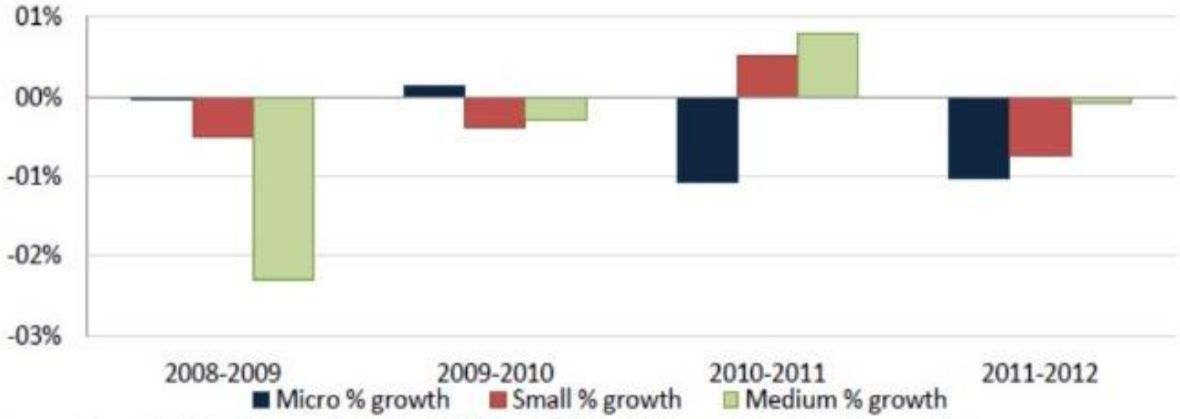
[3] Ibidem

Employment dynamics 2008 - 2012[4]. 2009 was a very difficult year for the European SMEs because there were registered 677. 000 job losses.



Note: Employment in SMEs in million: Left Axis; Employment in Large Firms: Right Axis.
Source: Eurostat, National Statistical Offices, DIW, DIW econ, London Economics

Trend analyze for each SME size



Source: Eurostat, National Statistical Offices, DIW, DIW econ, London Economics

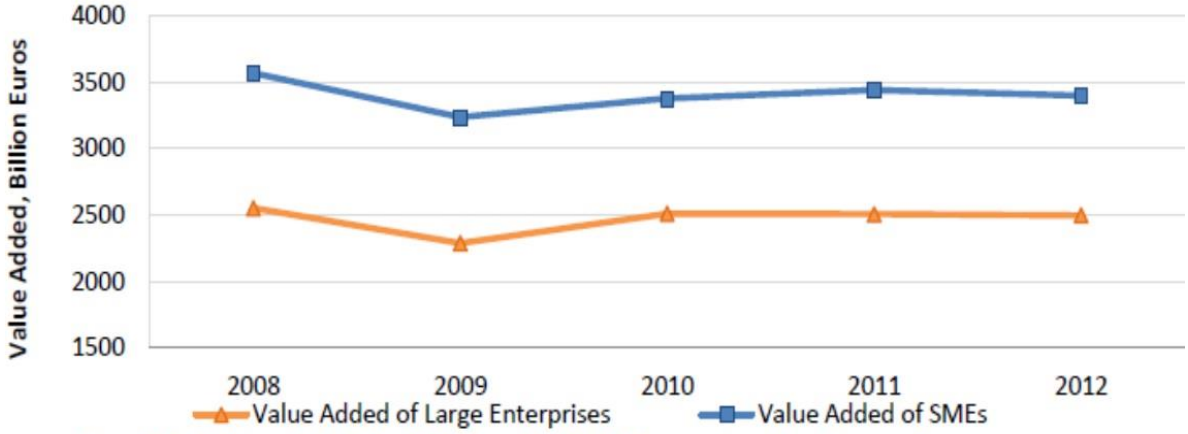
Micro-enterprises performed well between 2008 and 2010, but they showed a negative trend in 2011 and 2012. In 2012, micro-enterprises lost 387,250 jobs. Between 2008 and 2012 the total loss of employment was of 757,400 jobs.

The trend for small enterprises was negative. Enterprises employing between 10 and 49 people performed very poorly during the 5-year period of interest. The trend was negative. In 2012, small sized enterprises lost 202,600 jobs bringing the count to more than 300,000 jobs lost between 2008 and 2012.

The major source of job losses in 2009 was in medium sized enterprises, which lost over 530,000 jobs. Medium sized enterprises reversed this trend in the following year. In 2012, medium sized enterprises took a further hit registering a loss of 20,000 jobs. In that year they employed 438,500 fewer people than in 2008.

Value added dynamics 2008-2012[5]

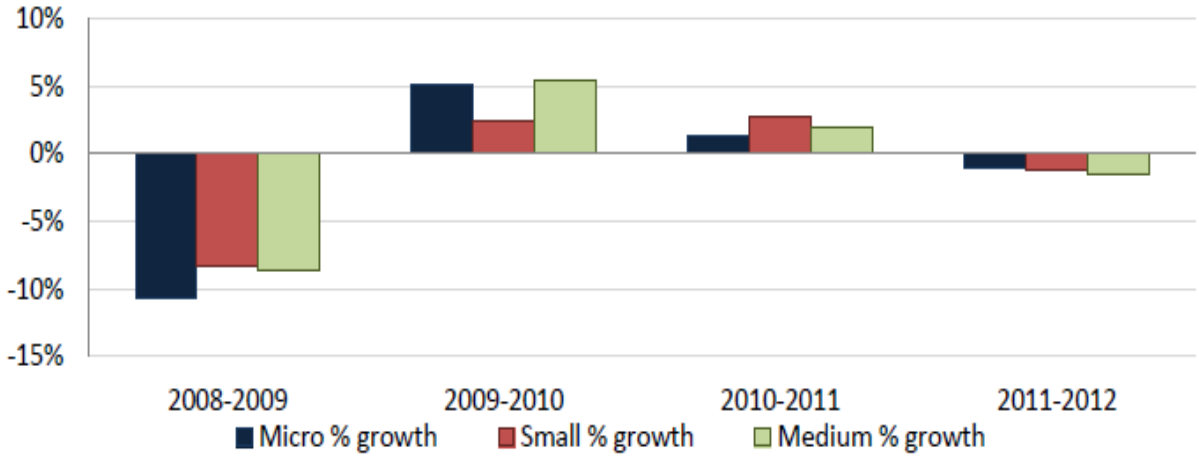
(The dynamics of value added was similar for SMEs and large enterprises)



Source: Eurostat, National Statistical Offices, DIW, DIW econ, London Economics

Trend analyze for each SME size

[4] Ibidem
[5] Ibidem



Source: Eurostat, National Statistical Offices, DIW, DIW econ, London Economics

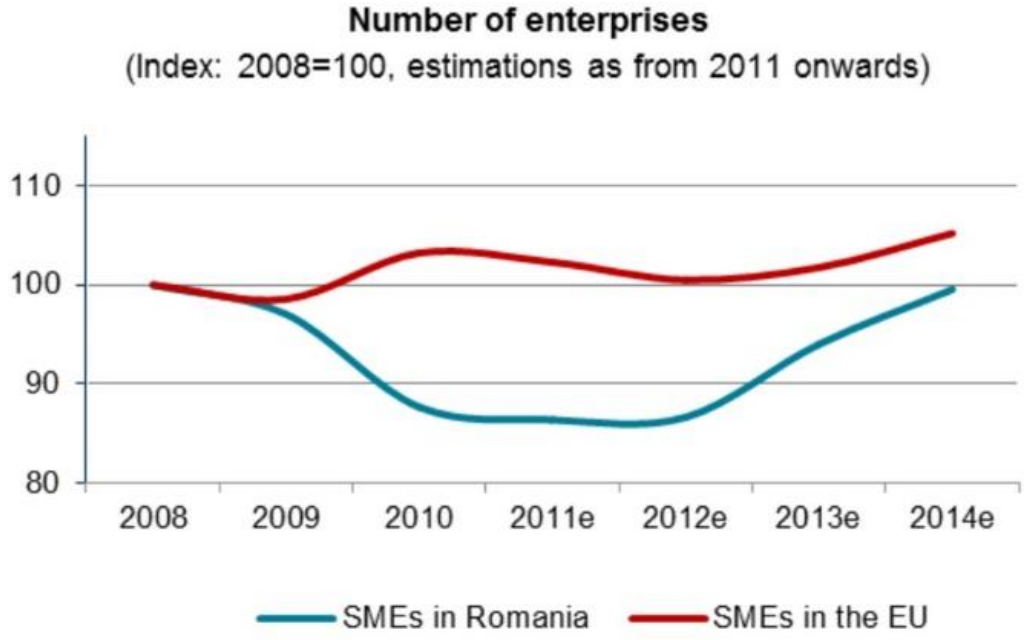
Micro-enterprises experienced the largest loss in 2009, losing €141 billion in value added. The following year, some of this loss was recouped but, at the end of 2012, the value added lost by micro-enterprises was €78 billion. In 2012 alone, micro-enterprises lost circa €14 billion in value added.

Small sized enterprises did not perform much better. In 2009, the value added of small firms reduced by €95 billion. Over the next two years, only a third of this loss was recouped and, in 2012, small companies recorded a further loss of €13.2 billion.

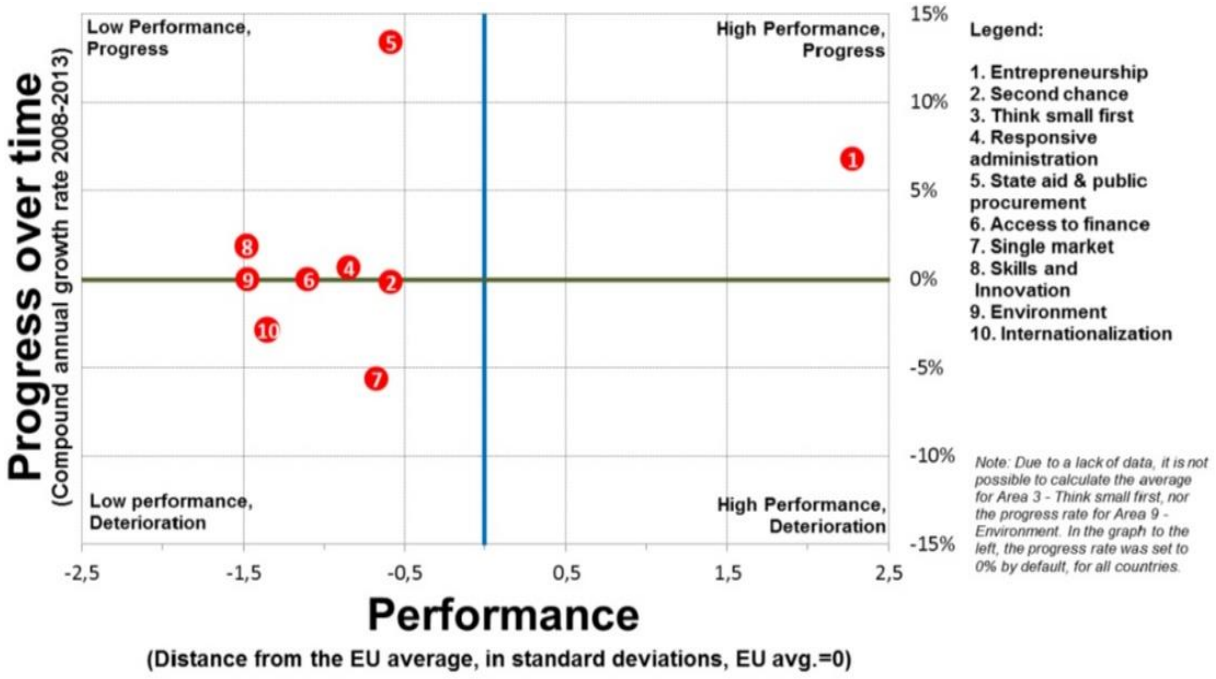
Medium sized enterprises experienced the same dynamics: in 2009, they lost €96 billion in value added; they partially recovered in 2010 - 2011 and lost again €16.9 billion in 2012.

3. SMEs in Romania

Analyzing Romania's economic situation for the last five years, DG Enterprise (under European Commission) considers that Romanian SMEs are below average and its SBA profile has changed little. "*The country's performance is below par for seven out of nine SBA principles and is above average only for 'Entrepreneurship', albeit there by a large margin. In 2012, only a few new measures in the areas of the single market, state aid and public procurement, the environment and internationalization were actually introduced. Overall, it is acknowledged that the economic crisis and general instability have severely hampered progress on SME policies*."



Romania's SBA performance: Status quo and development 2008-2013



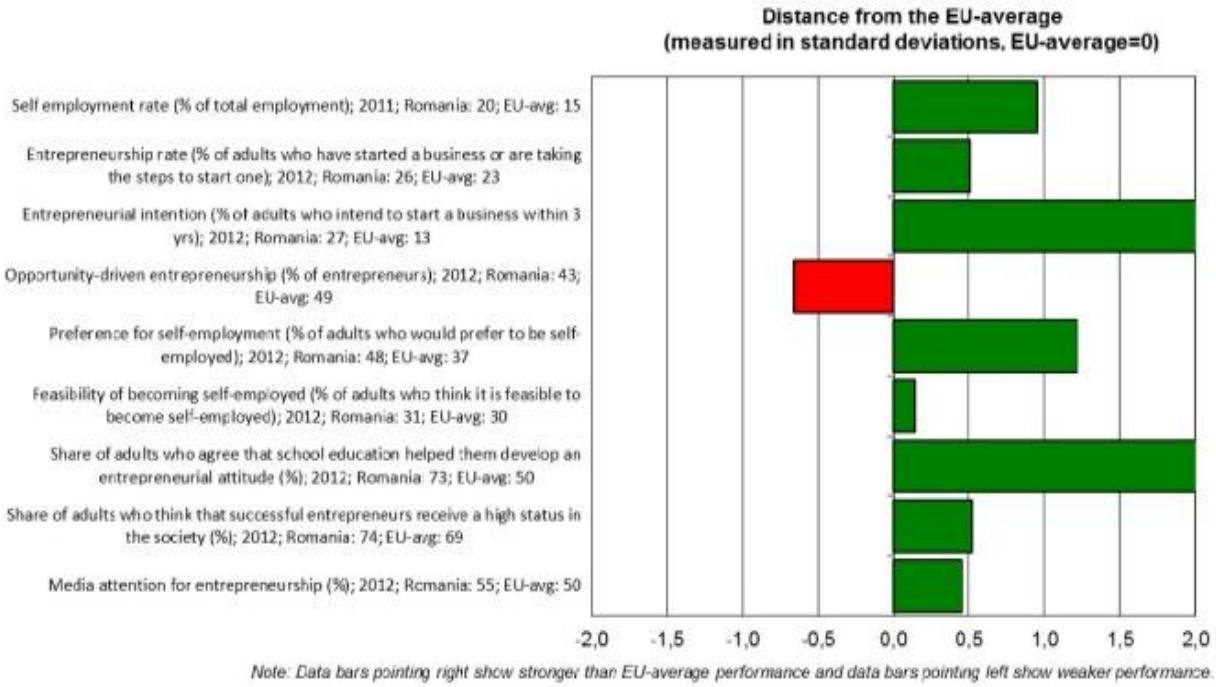
It is important to take a look over the implementation of SBA principles in Romania.

1. Entrepreneurship

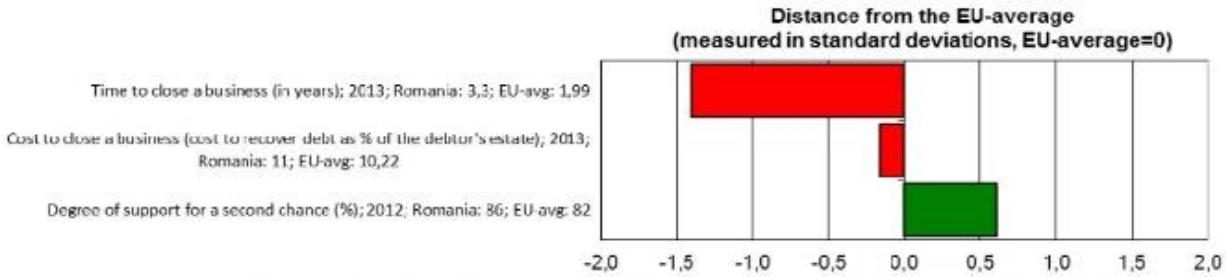
Entrepreneurship is by far the best performing SBA area for Romania. Entrepreneurial culture in Romania is widely seen as well established and entrepreneurs are willing to start their own businesses despite the numerous and relatively well-known obstacles and challenges they face.

2. Second chance

'The indicators measuring 'Second chance' reveal a relatively unfavourable environment for re-starters. Honest entrepreneurs whose businesses have failed and who want to start again have to put up with longer times for closing a business (3.3 years in Romania compared with an EU average of 2 years), even though the corresponding cost (11% of the debtor's estate) is similar to the EU average.

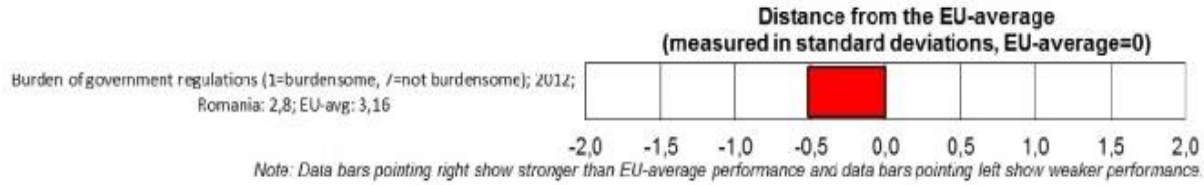


Note: Data bars pointing right show stronger than EU-average performance and data bars pointing left show weaker performance.



Note: Data bars pointing right show stronger than EU-average performance and data bars pointing left show weaker performance.

3. Think small first



Note: Data bars pointing right show stronger than EU-average performance and data bars pointing left show weaker performance.

For 'Think small first', there is only one indicator available, which measures entrepreneurs' perception of the burden of government administrative requirements for permits and reporting. It is worse than the EU average. However, it is not possible to draw any general conclusions on this basis.

4. Responsive administration

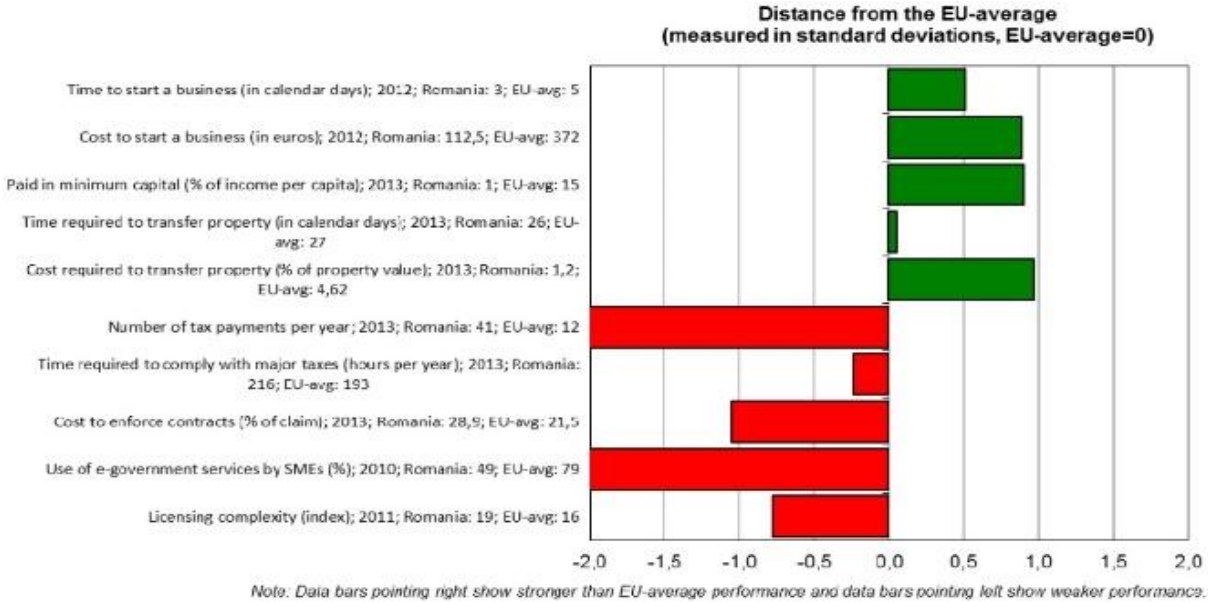
Romania provides a less business-friendly environment for SMEs than the EU average, despite its comparatively good performance on start-up conditions and property registration and transfer procedures. In Romania, it is possible to start a business in three days at a cost of around €100-125, which is both faster and cheaper than the EU average.

Despite significant progress, reducing the number of yearly tax payments from 66 to 41, the gap with the EU is still considerable, suggesting that further improvements are both possible and necessary.

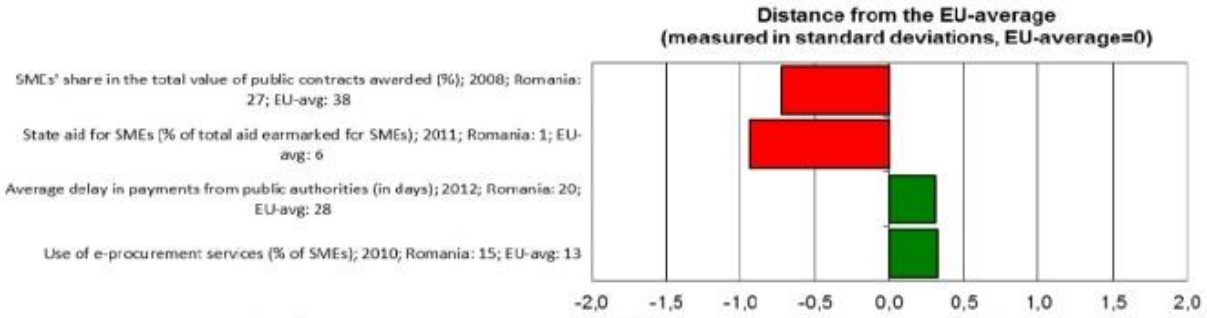
5. State aid and public procurement

Romania scores slightly below the EU average on state aid and public procurement, but recorded the highest jump in the past five years. Romanian SMEs make better use of e-procurement services than their EU counterparts, and also seem to receive payment quicker from public authorities. But the share of state aid earmarked for SMEs decreased to only 1 % in

2011, and SMEs' share of the value of public procurement contracts was still very low in 2008, at 27% compared with an EU average of 38%.



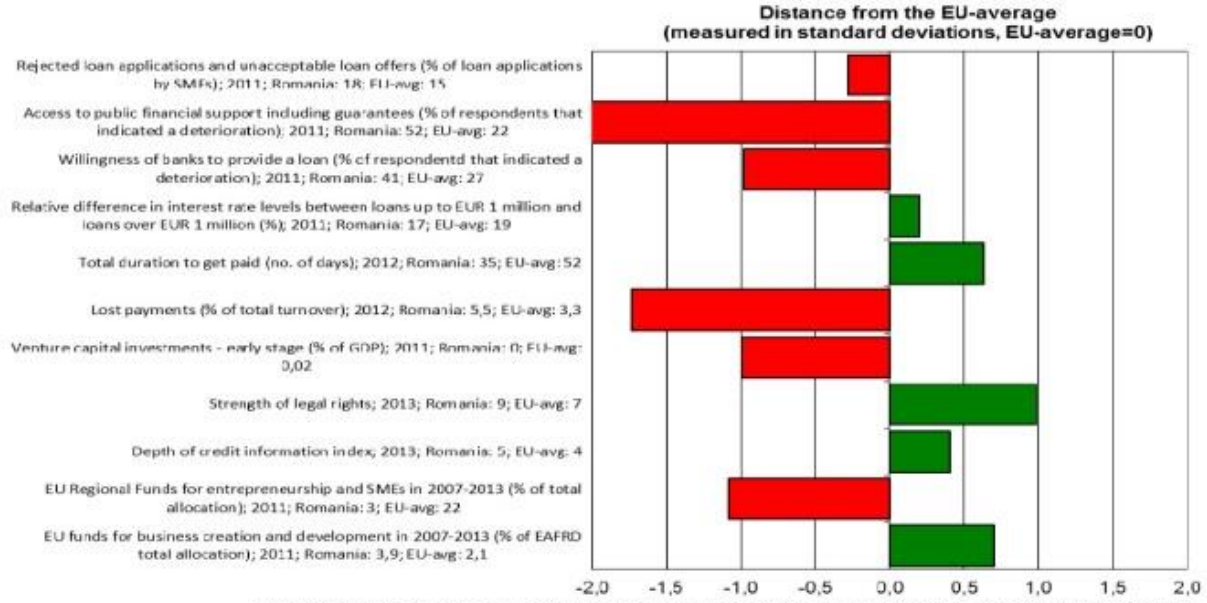
Note: Data bars pointing right show stronger than EU-average performance and data bars pointing left show weaker performance.



Note: Data bars pointing right show stronger than EU-average performance and data bars pointing left show weaker performance.

6. Access to finance

Access to finance remains difficult and costly for SMEs in Romania. The latest figures on loans date from 2011. The proportion of Romanian business owners who report a deterioration in banks' willingness to provide loans has remained stable at 41%, which is high and well above the EU average of 26%.



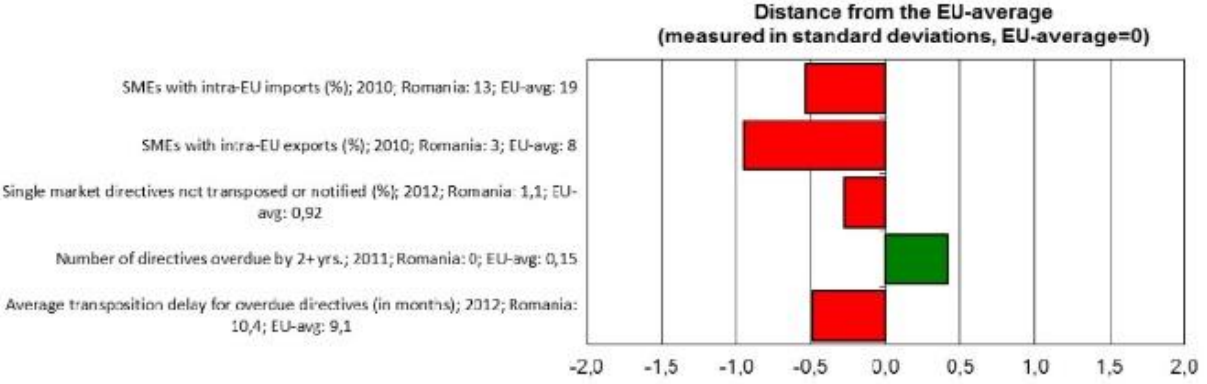
Note: Data bars pointing right show stronger than EU-average performance and data bars pointing left show weaker performance.

7. Single market

Romania's score on single market issues is below the EU average and reflects Romanian firms' low competitiveness on the internal market and beyond.

8. Skills and innovation

Romania lags far behind in this area, which covers both skills/training and innovation aspects. All but one of the core indicators relating to innovation are below the EU average. Romanian SMEs are less likely to introduce innovation, to collaborate with each other or to innovate in-house. However, firms that do innovate are more successful than their EU peers in turning these new products and processes into sales

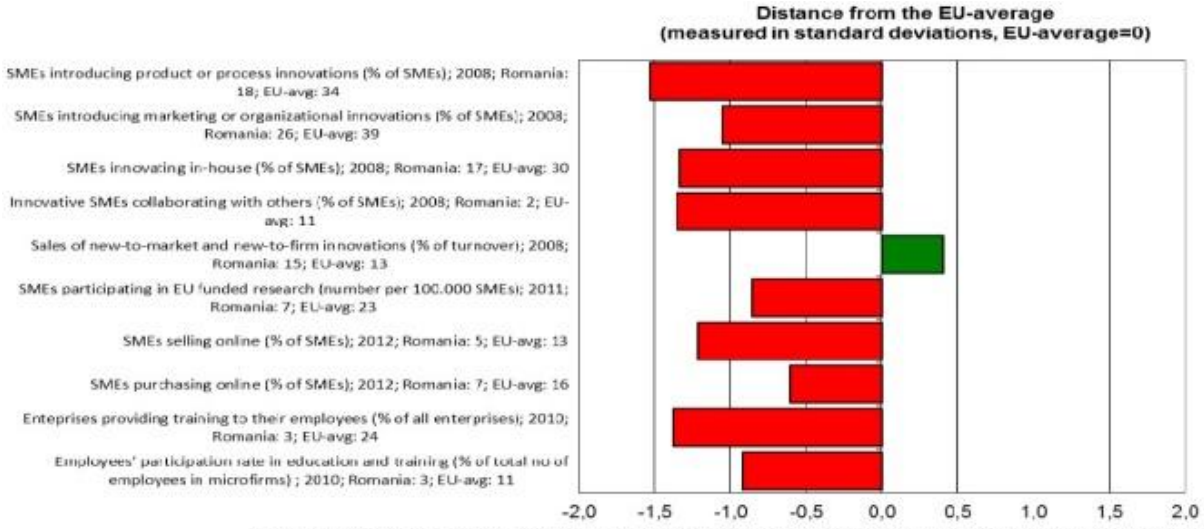


Note: Data bars pointing right show stronger than EU-average performance and data bars pointing left show weaker performance.

revenue. Apart from the innovation-related indicators, Romanian SMEs also perform below par in other aspects, such as IT-readiness, which is defined as ability to sell products and make purchases online. Also, Romania is not successful in attracting and retaining talent — e.g. R&D scientists and talented executives — and in providing them with competitive salaries.

10. Internationalisation

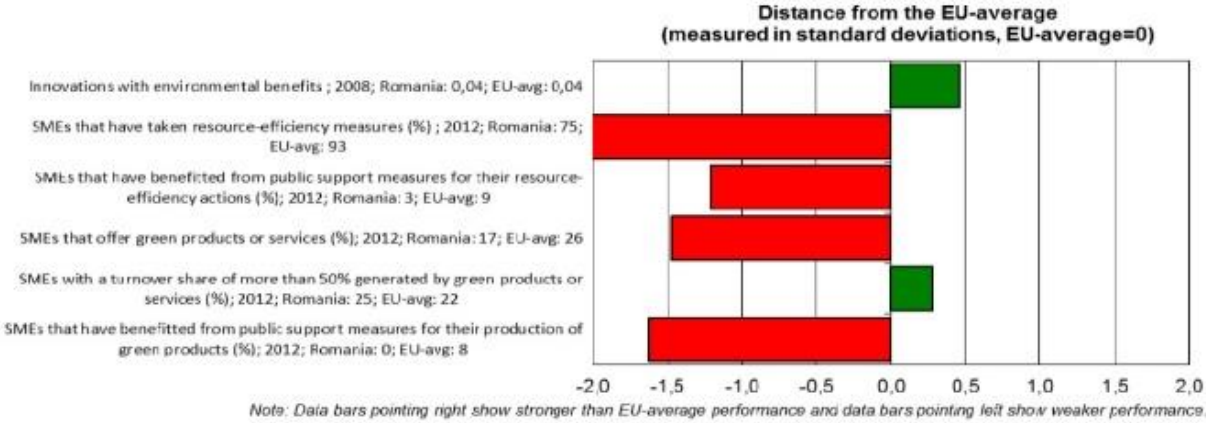
Based on the available indicators measuring internationalisation, Romania is well behind the EU average. The general framework conditions for trading are — without exception — less favourable than in other EU countries, on average. It is therefore not surprising that the indicators reflecting the performance of Romanian companies in markets outside the EU remain modest.



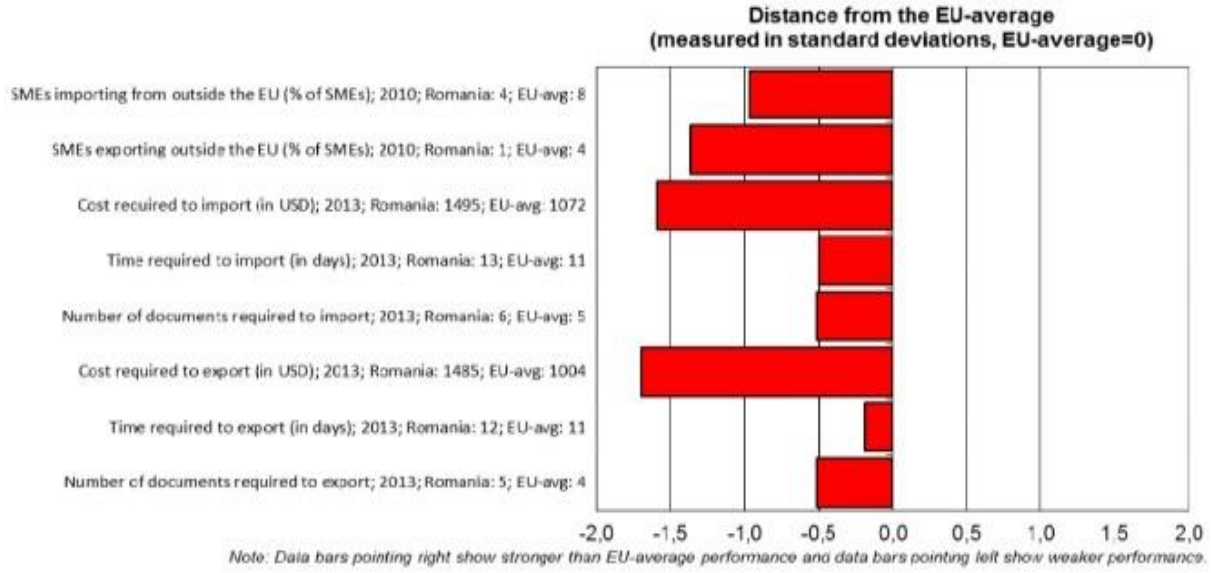
9. Environment

Romania scores well below the average on this dimension, but its performance varies somewhat across the individual indicators. Romanian SMEs are much less likely to take steps to increase their resource-efficiency compared with the European average. This is partly because they do not receive public support for such measures to the same extent as their European peers. Similarly, only 17% of companies in Romania, compared with an EU average of 26%, have begun to exploit the opportunities offered by demand for green products and services, although those who have done so are more successful in generating a significant proportion of their revenues by selling these green products. Overall, the trend towards environment-friendly processes is felt in Romania, but is much weaker than in the rest of the world.

As the Annual Report on European SMEs 2012/2013 noted *a further consequence of the crisis was that the distribution of losses in employment and value added was very unevenly distributed among the Member States*. Romania is one of that states in which SME performance in terms of value added and employment was negative.



In 2013 European Commission issued for Romania among eight country specific recommendations one dedicated to improvement of SMEs economic performance. EC advised that the Romanian authorities should ensure a coherent e-government and undertake efforts to ease access to finance and to reduce the administrative burden on SMEs. Romania should also improve the efficiency and independence of the judiciary system and the



effectiveness of policies to prevent and combat corrupt practices, notably in the area of public procurement[6].

development. The objective under the reformed Cohesion Policy will be to double the current support to around €140 billion for 2014-2020, partly through the increased use of financial instruments.

4. What's need to be done to reach Intelligent Growth and Sustainable Development in Romanian Communities. Future approach of European Cohesion Policy 2014 – 2020

Enhancing the competitiveness of small and medium-sized enterprises (SMEs) is one of the key priorities of European Cohesion Policy 2014 – 2020.

Cohesion Policy Funds[7] will promote entrepreneurship and support SME's growth by tackling the problems which hinder their

This increased investment will help SMEs to:

- Access finance with grants, loans, loan guarantees, venture capital, etc.
- Tap into business know-how and advice, information and networking opportunities including
- cross-border partnerships.
- Improve their access to global markets and mitigate entrepreneurial risk.
- Exploit new sources of growth such as green economy, sustainable tourism, health & social services, including the "silver economy" and cultural and creative industries.

[6] *2013 European Commission's recommendations for Romania in brief,* http://ec.europa.eu/europe2020/europe-2020-in-your-country/romania/country-specific-recommendations/index_en.htm

[7] EU COHESION POLICY 2014-2020**,** *Targeting Investments on Key Growth Priorities,*

- Train entrepreneurs, managers and workers to be adaptable to new challenges.
- Invest in human capital and in organisations providing practice-oriented vocational education and
- training.
- Forge valuable links with research centers and universities to promote innovation.
- New simplified and common rules and measures make it easier for SMEs to access Cohesion Policy Funds in 2014-2020. These include:
- online reporting of how the Funds are used;
- clearer eligibility rules;
- more targeted and less frequent audits for small operations; and
- wider scope and simplification of the set-up and access to financial instruments.

Romania, as member state and within The Small Business Act for Europe, should draw up a "strategic policy framework for inclusive start-ups" presenting a comprehensive vision of entrepreneurship support. It also should include actions to raise awareness and develop entrepreneurial skills, as well as measures to help start-ups to launch and access to finance, notably micro-finance.

5. Conclusions on revitalizing Romanian SMEs

In the present paper we tried to describe Romanian SMEs performance over the last five years based on the statistics offered by the European commission databases. We also wanted to raise the awareness of the importance of developing this sector and the fact that Romania must accelerate positive developments for SMEs, like a basse for intelligent sustainable development,by reducing unemployment and increasing common weal of local communities.

Although entrepreneurship chapter has a raising trend, our country must further on encourage entrepreneurship, private initiatives and improve business support infrastructure. Encouraging the development of microenterprises will have a positive impact on the local communities economy. Some governmental programmes to simplify administrative burden is necessary. In order to reach intelligent growth in local communities Romania must implement actions supporting entrepreneurship by reducing time needed for and the cost of registering new businesses, offering specialised (electronic) services to the business community, and new strategies and plans for better and accelerated development of SMEs and the business environment at substantially reduced cost (further promotion of The One-Stop Shop)[8].

In the next period of time European funds are vital for our sustainable development and, of course, for SMEs. The access to equity is one of the most important obstacles for SMEs in seed and development phases. Private financial funds are particularly seen as difficult to access, while bank loans and guarantees, sometimes vital for business development, are too costly and lack flexibility[9]. This obstacle must be taken into consideration by the Romanian government and new measures to ease the access to investments funds must be adopted and implemented. Mistrust in financial institutions is a negative factor with dramatical consequences on local economies. Alongside mistrust, another negative factor that affects Romanian SMEs performance in the terms of absorption of european funds is the uncertainty linked to the extremely burdensome reporting process and the time taken to receive payment/reimbursement of structural funds.

CONSUMER'S BEHAVIOUR – AN APPROACH FROM THE PERSPECTIVE OF BEHAVIOURAL ECONOMICS

Viorel CORNESCU[*]
Roxana ADAM[**]

Abstract:

The consumer and his behaviour have concerned all economists, no matter if they are theoreticians or practitioners. Naturally, research in the domain has revealed new aspects, new theories and has led to the creation of schools of thought in time. Standard or neo-classic economics, which lays stress on absolute rationality, the maximization of results, modelling etc., cannot wholly decipher economic mechanisms or efficiently explain and guide the economic life of society. That is why, if we take as a starting point the observation that man lies at the heart of economy, we understand that the attempts to explain his role and the manner in which he behaves in economic life are more and more numerous and involve the use of concepts from different domains of study: psychology, sociology, etc. The present study aims at analysing the consumer's behaviour from a perspective which already has a consistent and well-outlined profile in the economic science and is known as behavioural economics.

Keywords: *standard economics, limited rationality, consumer's behaviour, behavioural economics.*

JEL Classification: A12, B12, B29, D03, D11.

1. Introduction

The theory regarding consumer's behaviour refers to the manner in which the consumer, who is supposed to be a rational individual, takes decisions as regards the purchasing of goods. The phrase **consumer's behaviour** refers to buyers and clients of products and services, as well as to persons who use these products and services. This lexical construction **denotes** the decision of buying in itself and not only. Consumer's behaviour is a way of acting, which implies the decision-making process of the consumer (as an economic agent), as well as all the activities he performs for being informed, being able to purchase, use, evaluate, etc., some consumer goods.

The consumer's behaviour and actions have interested researchers for a long time; once the consumer society started to develop, the interest paid in this topic increased. Recent studies (Kotler and Keller, 2012) have revealed that the consumer's behaviour has become a factor with a direct impact on a business performance although *for more than 300 years, economists like: Nicholas Bernoulli, John von Neumann and Oskar Morgenstern have studied the fundamentals of the consumer decision-making process* (Richarme, 2005). In order to understand the consumer, that is – his decisions, the *utility theory* was created, according to which the consumer is *"an economic and rational individual" (*Zinkhan, 1992), who only manifests self-concern. *Utility theory* has provided a theoretical framework for analysing the decision-making process under uncertainty circumstances; according to this theory, individuals choose the result that enhances their welfare.

Traditionalist economists have analysed human behaviour in a quite rigid manner (total rationality), from a purely economic perspective (standard economics), failing to consider psychological and sociological aspects in their analysis. Recent research (Simon, 1955; Kahneman and Tversky, 1979) have pointed out that consumers are not completely rational. The utility model revealed to have major faults; subsequently, Herbert Simon developed the concept of *"satisficing"*[1] (Simon, 1977, p. 37), according to which the individuals' rationality is limited to cognitive and emotional capacities. Prospect theory, which is a contribution brought by Daniel Kahneman and Amos Tversky, has described certain economic behaviours that could not be explained through the previously developed theories that had considerably approved predictions regarding decision-making.

When approaching consumer's behaviour, the elements of behavioural economics are indispensable; however, we consider that the basic elements of the standard theory cannot be neglected; thus, it is only the harmonization of concepts related to the consumer behaviour as revealed by the two economic approaches that can help us outline a rather complete perspective over the consumer and his behaviour.

2. From neo-classic to behavioural economics

Neo-classic (standard) economics used an empirical approach and, similarly, theoretical

[1] The original phrase used to define this theory is: the theory of "satisficing".

modelling, which has quite rarely been reflected in empirical reality. At the same time, empirical research used by the neo-classic theory ignores some limitations, of which some are very important depending on circumstances. Nevertheless, behavioural economics – which is new in the theory of economics – has been analysed from a neoclassic perspective as an unsophisticated theoretical result based on abnormal empirical results (Sontheimer, 2006, p. 237). Considering the characteristics and arguments revealed by the two theories, we appreciate that the statement - according to which the general framework of neo-classic theory is rather simplified in comparison with the one proposed by behavioural economics - is appropriate; however, one cannot ignore important contributions brought by neo-classic theories, such as the demand and offer law, etc.

Angner (2012, p. XV) states that behavioural economics has developed as a reply given to neo-classic economic theory and that important parts of behavioural economics can be understood only in contrast with the standard theory. According to behavioural economics, standard economics is a normative theory. According to Simon (1997), traditional economics and behavioural economics have evolved separately, postponing the synthesis that we need to fully understand the economic world around us. Discussing about the tension that exists between the supporters of the two concepts, Sontheimer (2006, p.237) underlines the fact that: *"neither of the two parts sees the other one correctly"*, while MacFadyen (2006, p. 188) considers that: *"instead of regarding these two approaches as contradictory in nature, we should regard them as being convergent"*.

According to Mullainathan and Thaler (2002, p. 2), behavioural economics takes the standard economic models as a starting point: "*The research programme of behavioural economics has included two components: 1. the identification of the manner in which behaviour is different from the standard model; 2. pointing out the manner in which this behaviour matters in the economic context.*"

The standard theory appreciates that: (i) agents have well-defined and stable preference, (ii) agents use in the decision-making process all the information that is available and (iii) agents act in order to enhance objective functions. Sontheimer (2006, p.237) mentions 3 characteristics that distinguish behavioural economics from neo-classic economics in practice: (i) unconditional and dominant commitment of behavioural economists to empirical research; (ii) there is an insistent concern with maintaining a link between empirical deeds and the economic theory; and (iii) the stress laid mainly on procedural rationality and less on rationality.

The main connection between the two theories is given by the individual's economic behaviour. Both theories put the stress on intentional behaviour, which individuals adopt in order to achieve their motivation-driven goal; their decisions are not usually made at random or in an arbitrary way. Intentional behaviour does not have the restrictive meaning of neoclassic economics, i.e. the one of an optimizer, maximizing factor or rationality supporter, in the sense of consistency and it excludes the neurologically-impaired persons' behaviour. Thus, if there is a change in the paradigm in the future, this could derive from the study of decision-making factors in relation to emotions and feelings (Sontheimer, 2006, p. 245).

Behavioural economists enjoy a wider and wider appreciation from researchers. For those who are familiar with this concept or those whose interest in the domain is still a novelty, such as Herbert Simon, George Akerlof, Daniel Kahneman, Amos Tversky, Richard H. *Thaler*, Vernon Smith or Gerd Gigerenzer, such theories are well-known. In fact, these authors have built and raised the foundation of behavioural economics. Since the charm of science is to search for a better understanding of the world in which we are living and since history has proved that the new theories are most often created by improving or contesting the existing theories, the appearance and development of behavioural economics has generated a series of contradictory debates as to the precedent theory, neoclassic economics and the new theory, behavioural economics.

In specialized literature, the concept of rationality has been insisted upon; disruptive analyses have been made for understanding standard concepts which were generally accepted until not long ago and opinions were supported or contested, etc. Another perspective developed by economists was to build links between the two concepts or to search for common approaches that were rooted in the former theory. In this respect, in order to highlight the great neo-classicists' concerns in relation to the complex human behaviour, we intend to present a few ideas that are underlined in behavioural economics and whose roots are much older.

Camerer and Loewenstein (2004, p. 5), while analysing the historical context in which behavioural economics has evolved, write about Jeremy Bentham[2] whose concept of utility formed the foundation of neo-classical economics; Jeremy Bentham wrote about the psychological basis of the utility concept, and his knowledge in utility determinants starts to be appreciated only now (Loewenstein, 1999). They remind of Francis Edgeworth and his *Theory of mathematical psychology* in which his famous "box" charter illustrates the results of two negotiators and has included a simple model of social utility, in which a person's utility has been affected by the other person's earning.

Until recently, the best known masterpiece of Adam Smith was the book *The Wealth of Nations*, written in 1776, thanks to the concept of the *invisible*

[2] Jeremy Bentham was a British philosopher, jurist, and social reformer. He is regarded as the founder of modern utilitarianism.

hand, which explained general welfare through the idea that each individual pursues one's own interest; however, in the last decade another work of Adam Smith has drawn attention, *The Theory of Moral Sentiments*. Adam Smith anticipated ideas that can be linked to the existing concepts developed in behavioural economics, such as: correctness, the power of the will, aversion towards loss. In the next lines, we are going to present some of these perspectives.

The approach of rational agents - which are run by selfishness and aim at maximization - has often made Smith famous; consequently, we would like to present one of the first perspectives that was developed by Smith as to human nature and that contradicts the precedent perception over his work. Thus, Smith (1759/1892) states that: *"however selfish man may be supposed, there are evidently some principles in his nature, which interest him in the fortune of others, and render their happiness necessary to him, though they derive nothing from it except the pleasure of seeing it."* We can notice that the author regards with understanding the people's likability for the others; in other words, individual "selfishness" is depicted as part of the moral system of our society. According to him, cruel selfishness could manifest itself when honour is at stake and when honour is also wrongly understood. Words like "happiness", "disappointment", "expectations", etc. offer the human being a human dimension that was neglected by many economists that studied his works. Similarly, we may say that the previous quotation reflects a form of altruism, too, if we think that people experience a form of pleasure when they act for the others' welfare unconditionally.

About 200 years before Kahneman and Tversky (1979), Smith identified the regular nature of choice-making which has come to be known as *aversion towards risk* (Ashraf, Camerer and Loewenstei, 2005, p. 132). The most remarkable statement made by Adam Smith is the one quoted by Camerer and Loewenstein (2004, p. 5): *"we suffer more [. . .] when we fall from a better to a worse situation, than we ever enjoy when we rise from a worse to a better"* (1759/1892, p. 311). We consider that this paragraph speaks for itself about Smith's level of comprehension as regards the economic agent, i.e. man. Another reference made to the recently developed concepts is: *"the pleasure which we are to enjoy ten years hence, interests us so little in comparison with that which we may enjoy to-day"* (inter-temporal choices); *"the chance to win is more or less overrated by any person and the chance to lose is underrated by most people"* (overconfidence); many other references on this matter have been made by Ashraf, Camerer and Loewenstein (2005).

Albanese (2006) considers that Adam Smith did not say that the individual attempts to satisfy his own interest in a selfish manner. We can forget once and for all the wrong interpretation that the *economic agent* is selfish (Albanese, 2006, p. 16).

Converging towards the macro level and trying to understand the theory of consumption, we cannot fail to mention John Maynard Keynes' contribution in the area. D'Orlando and Sanfilippo (2010, p. 1036) appreciate that Keynes' representation of economic behaviour seems to be seriously grounded on the psychological features of human beings. According to the two authors, particularly in the consumption theory developed by Keynes, references to a maximizing behaviour are absent; however, the theory seems to have more in common with behavioural economics than with the traditional neo-classic approach, especially for the crucial role granted to the *rules of thumb*. Peach and Milan (2009, p. 891) appreciate that Keynes' works constantly underlined the importance of psychological factors in the human decision-making process and that these factors were included in his analysis of economic issues. Keynes explicitly brings into evidence the importance of the psychological dimension in analysing human behaviour, which he uses to support his departure from neo-classic tradition; he uses ideas like: salary rigidity, animal spirits, the illusion of having money, conventions and uncertainty; all of them suggest that Keynes refused to impose the concept of rationality as a decisive criterion for human behaviour.

Carabelli (2003, p. 218) appreciates that "*for Keynes, the substance or the object of economics (as a science) was represented by the economic agents' thoughts and opinions. The deliberate nature, reasons and human actions represent, at this point, the material of economics (as science)"*. According to Baddeley (1999, pp. 197-198) *"Keynes argues that the scientific theories should be capable to face the real world and should not force deeds to comply with theoretical hypotheses"*.

This short introduction to neo-classic economic theories is meant to bring into evidence the fact that ideas and concepts which are developed and debated by behaviourists are rooted in the neo-classical economists' approaches. In consequence, we can state that behavioural economics has followed the natural direction of development in research in an attempt to answer more questions which, asked or not, were difficult challenges to neo-classical supporters. Considering the above references, we appreciate that the main difference between behavioural economics and the standard theory consists in the behavioural supporters' luck to enjoy the foundation built by neo-classic economists and to find the right concepts to answer the questions that have troubled both groups in time.

The new trend created by contemporary economists is also to learn from outside the "classical" sphere of the economic area, i.e. from *psychology and/or sociology* in order to determine a clear image about the *human decision-making process*, in comparison with the one offered by rational choice

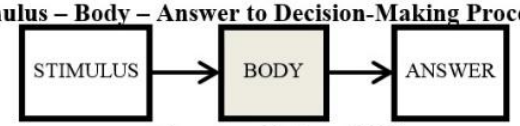
theory. In 2002, Daniel Kahneman, the behavioural economist and experimental psychologist, won the Nobel Prize in Economics for his work and for the research activity that he pursued with Amos Tversky. In his research activity, Daniel Kahneman approached different topics: heuristics and the biases[3] which people tend to have in relation to certain tasks and judgements (including provisions and evaluations) under uncertainty circumstances, the risky choice model – the prospect theory, loss aversion in riskless choice, categorizing effects and their implications for the rational agent's models; intuitive judgement and choice, the connection between preferences-attitudes, etc.

Other research activities in the area have revealed that choices made by individuals are based on intuition even if they do not rely on a minute decision-making process, while distinguishing between intuition and rationale[4] (Daniel T. Gilbert, 1989; Timothy D. Wilson, 2002; etc.). These two "systems of thought" with different capacities (Stanovich and West, 2000) have also been approached by Thaler and Sunstein (2008, p. 19) under the name of reflective system and automatic system. System 1 (automatic system) is implicitly characterized through automatism, associations, judgement based on experience (intuition), unconscious processes and affective associations. While the implicit system (system 1) refers to judgements that directly illustrate impressions which arise from the easily accessible mental content (Higgins, 1996), one of the functions revealed by the second system (the explicit system) is to monitor or verify mental and behaviour operations (Kahneman and Frederick, 2002). In comparison with system 1, system 2 is more analytical, and its limitations are associated with the concept of limited rationality (Samson and Wood, 2010, p.2).

The cognitive approach is another important approach in behavioural economics and it derives from cognitive psychology. Notes on cognitive psychology have existed ever since the first philosophical theories were created: Socratic thinking which gravitates around self-knowledge (Plato, 360 BC); the first theories about human memory that were developed by Aristotle and St. Augustin, who define it as follows: *"when we have knowledge and perception instead of things, we have memory"* (Aristotle, 1972, p. 50) or when the individual has a representation of the self: *"something which, I do not know, scares me […] this is my soul and this is who I am."*(St. Augustin, 1998, p. 354); or as Descartes defines it in his *Meditations* (Descartes, 1640), in which he analysed the way knowledge is mentally represented. Even if these philosophic ideas were born early, cognitive psychology was created as an area of study in the 1950's (Cziko, 2000) (see Figure 1), once Hebb developed his model.

In contemporary studies, Cognitive Psychology emphasised the existence of a large number of factors considered fundamental in inter-personal processes, of which we mention: perception, learning, memory, thinking, emotion and motivation (Sternberg, 1996). In the decision-making process, consumers are influenced by psychological factors that act at cognitive level; they do not have to be carefully analysed to understand the way in which consumer behaviour is reflected. To understand how subtle these factors are, we are going to refer to *motivation* in relation to a study whose subjects were a group of children that waited to be (and were) rewarded with a bow and a gold star for drawing a few images. In the subsequently made analyses, these subjects played less with the drawing materials in comparison with the children that were unexpectedly rewarded and in comparison with the children that did not receive any outer motivation (Lepper *et al*., 1973). In this case, psychological research indicated the fact that outer rewards can do more than justify choice and finally can reduce inner motivation. This example is part of an incomplete list of manifestations which can occur individually, by activating influence factors and it serves for underlying the complex and diverse nature of the inherently subtle matters that these factors may arise.

Figure 1: Stimulus – Body – Answer to Decision-Making Process Model



Source: Cziko, 2000.

Standard economics neglected human nature a long time and promoted an idealist economic behaviour, which described how rational people behave and should behave. We can say that the term *"rational"* used to be the bible of the neo-classic economics and individuals who did not act

[3] Bias, English term that could be translated by „tendențiozitate", „părtinire" or „idee preconceptă". For a while the term was translated as „prejudice"; however, this is not an accurate translation because, on the one hand, it has the same meaning as the English term *prejudice*, and, on the other hand, because the Romanian term *tendențiozitate* refers to an attitude which manifests itself not only – and not basically – at the rational level of judgement; bias manifests itself at the level of attitude, emotion, motivation or at the level of will. (Translation from English by Dan Crăciun; Kahneman Daniel, *Gândire rapidă, gândire lentă*, Ed. Publica, Bucharest, 2012).

[4] Psychologists Keith E. Stanovich and Richard F. West suggested using the name „*System 1*", as an equivalent of the intuitive system, which is defined through the actions of the involuntary mind that manifest themselves fast and automatically, whereas „*System 2*" is defined as an equivalent of the judgement system, defined through mental actions that are tiring and require a lot of conscious concentration, e.g. difficult calculations in mathematics. These terms are mainly used in the study of psychology, but they have been adopted and introduced in behavioural economics by Kahneman D., too.

"*rationally*" were some sinners occupying a marginal position in society. The analogy made has a religious connotation and is used metaphorically in order to point out the fact that the term *"rational"* may have been used and accepted by researchers for a too long time; departures from this interpretation perspective were treated as exceptional cases or behavioural errors. Although the concrete definition of rational behaviour was avoided and most often the term was vaguely defined, the term *"rational"* seemed unanimously accepted as good for a long time; whatever fell out of the so-called sphere of it (i.e. *"the irrational"*) used to have, in general, negative connotations.

Now, making a retrospective analysis, we know that *the rational*, as applied in economics, was used to label behaviour that illustrated the different economic behaviours that we discussed before. What we consider to be weak point of neo-classic theory is the fact that many theories did not distinguish between what should happen and what really happens. In other words, out of the wish to treat many of the normative theories as being positive, the ideal behaviour was associated with real behaviour and, thus, economic theory found itself enshrined in a foggy veil. According to Richard Thaler's vision, according to the standard theory, the individuals' behaviour corresponds to the one of Econs, which is different from the one of the Humans, characterized by limited calculation capacity and influenced by feelings, emotions, etc.

The economic agent's rationality – as developed by the classic theory – was contested by Herbert Simon[5], who firstly introduced the concept of limited rationality. This concept comes up with the idea that the individuals' rationality involved in the decision-making process is limited because of the limited information that they have access to, because of cognitive limitations, the individuals being obliged to make a decision within a strict period of time. It is well-known that on the basis of subjective utility, as it was developed by Savage (1954), one can build theories of limited rationality by modifying one or more hypotheses; some of the examples given by Simon are: replacing the fixed set of decision-making alternatives with a method that provides alternatives; replacing the maximization of a utility function with a satisfaction strategy. The main departures from Savage's theory have to do with the limited cognitive capacity that human beings have for discovering alternatives, for calculating through different methods the consequences of these alternatives under certain or uncertain circumstances or for making comparisons. *The term "limited rationality" is used to denote rational choices which are made by consumers depending on their cognitive limitations and in relation to their knowledge and calculation capacity. Limited rationality is a central topic in the approach of behavioural economics and it is mainly concerned with understanding how the real process of decision-making influences the adopted decision.* (Simon, 1997, p. 291)

Simon's studies reveal that economic agents lack the capacity and do not have all the resources to reach an optimal value; they actually look for a satisfying solution. The author made an analogy with the two blades of the scissors: one represents the individual's cognitive limitations, while the other one represents the environmental structures. *"Exactly as someone cannot understand how the scissors cut if that person looks at one blade only, in the same way a person cannot understand human behaviour if he/she studies either just knowledge or just the environment. This seems to be self-understood; however, psychology basically follows the path of mentalism, trying to explain human behaviour through attitudes, preferences, and logic or brain imagery, ignoring environmental structures in which humans live."* (Gigerenzer, 2012, p. 112)

According to Simon (1978, p. 2) the matter of allotting rare resources can be positively or normatively dealt with. In the economic theory, the positive or the normative one, this matter has not been studied from a simple perspective, but from the perspective of the *rational* allotment of resources. The rational individual illustrated by the standard theory is a utility maximizing factor, who will always choose the best solution. Differently from other researchers, who are contemporary with Simon, Simon approached human rationality in its daily meaning, which is different from the meaning given by economists to the concept of maximizing factor; the author is more concerned with the processes on which the choice relies rather than on the result of choices. Correlating this with rationality seen from the perspective of other social sciences on the basis of a functional analysis, the author considers that behaviours are functional if they contribute to the achievement of certain goals, no matter their nature.

Herbert Simon discussed about the need to focus on qualitative questions. According to him, before analysing quantitative aspects, it is necessary to identify the main cause that triggers the process. Institutions should be more concerned with questions like: *"which are the structural conditions that make the purchasing of the insurance rational or attractive*?", and not with questions like: *"how much insurance against floods is a person going to buy?"* At the same time, he sees mind as having limited resources, considering that maximization of utility or profit cannot be applied to situations in which the optimum action depends on uncertain environmental events or on other rational agent's actions (imperfect competition), and, no matter how complex computational models are, they are far from approximating the complex world in which we live.

[5] Winner of the Nobel Memorial Prize in Economic Sciences in 1978.

Simon (1978) made a distinction between substantive rationality and procedural rationality. Substantive rationality represents the measure according to which adequate actions are chosen and it is oriented towards the nature of choice (i.e. the choice) and the results generated by it. Procedural rationality is oriented towards choice within the limits of cognitive power, while focusing on the procedures that determined the choice (the manner in which the choice was made).

Consequently, limited rationality refers to human restrictions that are involved in the processing of information that is necessary for making a decision; these restrictions are due to different limitations: (i) knowledge (information), (ii) available time and (iii) calculation capacity (Simon, 1982; Gigerenzer and Goldstein, 1996). Limited rationality is not an equivalent of irrationality. For example, heuristic judgement (cognitive shortcuts taken in the decision-making process) can be regarded as rational thanks to its adaptation capacity and the exploitation of environmental structure (Gigerenzer, Todd and the ABC Research Group, 1999, p.13). This is optimal within the limits of human cognitive processing capacity. (Samson and Wood, 2010, p. 2).

3. Consumer's behaviour – a multi-disciplinary approach

In a simple approach, consumer's behaviour can be analysed starting from the question: *"*How do we know what we want?*"*– not as obvious a question as it may sound – to *"*What do we do with something we no longer want? *"* (Statt, 2001). For the beginning, it is important to clarify who the consumer is. Standard definitions that we find in dictionaries are rather dry. E.g.: the consumer is the *person who consumes goods resulted from the production process* (DEX, 1998) or the consumer is *the person who consumes material goods for satisfying his/her needs* (NODEX, 2002).

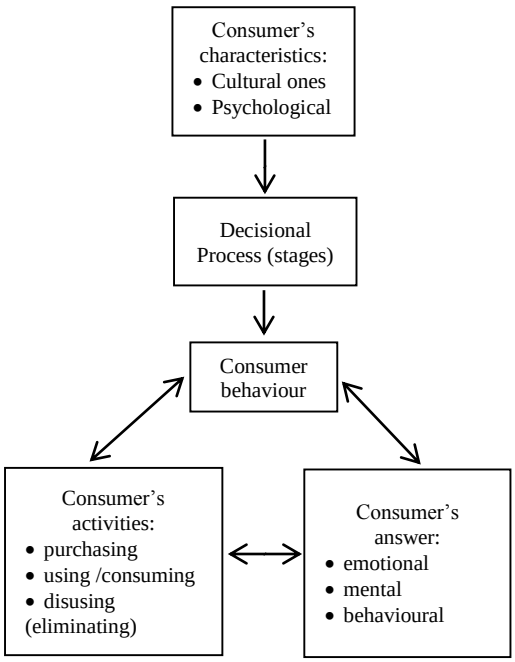
A more elaborate definition was given by Solomon (2006), according to whom the consumer is a person who identifies a need or a wish, makes an acquisition and then uses the product. Apart from these dictionary definitions that we find in economics textbooks or in specialized literature, the consumer is – in the everyday reality – represented by all of us: me, you, every family member, friends, acquaintances, unknown persons, etc., in other words, the consumer is the entity that consumes goods in order to satisfy certain needs. Consumers are bearers of needs and, in a large sense, they represent the population.

Consumer's behaviour has been defined in different ways in the course of time. Faison and Edmund (1977) laid the stress on people's needs; Engel et al. (1986) emphasised the actions performed by individuals; Kotler (1994) took buying as a landmark; in 1995, Solomon et al. brought into evidence the individuals, needs and processes on which consumer is based; in other recent studies (Englis and Solomon, 1995) the author has placed actions and needs in a central position.

An analysis of the definitions that can be found in specialized literature reveal the fact that *consumer's behaviour is regarded as part of the economic behaviour of the people, which, in its turn, is a form of manifestation for human behaviour in general* (Cătoiu and Teodorescu, 1997, p.13). Taking this idea as a starting point and correlating it with the definitions of the concept, we would like to represent the relationships between the most frequent frequently met elements and the researchers' attempts to define consumer behaviour.

Taking into consideration the scheme representing consumer behaviour according to Kardes, Cronley and Cline (2011) and correlating it with that proposed by authors like Hoyer and Maclnnis (2008), we would like to systematically represent our vision on consumer's behaviour in the chart below:

Figure 2: A graphical definition of the consumer's behaviour



Source: Adapted after Kardes, Cronley and Cline (2011, p. 8) and Hoyer and Maclnnis (2008, p. 1).

The systematic description starts from the premise according to which consumer's behaviour is made up of three areas: the characteristics of the consumer, the consumer's decision-making process and consumer behaviour, as a result of interaction between the segments that precede it. The pillars on which consumer's behaviour characteristics rely are – as specialized literature most often states – the following ones: consumer culture and psychological nucleus. The scheme splits consumer's behaviour into consumer activities and consumer's answers. The classification of consumer behaviour according to the

performed type of activity is useful because the consumer's answers to stimuli may be different since this is influenced by the need to buy, consume and disuse certain products or services (Kardes, Cronley and Cline, 2011, p. 9). At the same time, it is necessary to take into consideration the consumer's emotional, mental and behavioural answers to goods and to the used marketing method.

Understanding consumer's behaviour is a key matter for economic agents because consumer's behaviour is a complex process and many marketing decisions are based on hypotheses about the consumer's behaviour. At the same time, knowing the factors that influence decision-making is important for every individual because, understanding what determines us to take a decision, we may become more aware of the question whether a decision to consume a certain good in a certain quantity is – considering the theoretical aspects defined before – determined or influenced by one of those factors. If these factors could be gathered in a single model, we could know in totality and at the same time the intensity with which they influence consumer behaviour; consumer behaviour could be determined through mathematical formulas and on the basis of these formulas one could elaborate long-term forecasts as regards consumer's decisions.

Consumer behaviour is a complex phenomenon, well anchored in psychology and sociology; economists, psychologists and sociologists have tried to analyse the factors that influence the individual's decisions. The most important factors that influence consumer behaviour have been considered those of a personal, psychological and sociological nature. Personal factors include characteristics that are specific for a person, such as demographic factors: age, sex, etc. Social factors are represented by: opinion leaders, reference groups, family members' influence, social class, cultural level, etc. Psychological factors include: perception, motivation, personality, attitude, etc. At the same time, researchers have conceived categories of factors like: situational factors (Dickson, 1982), consumers' involvement (Rothschid, 1979), etc. For example, in a study written by Acebron *et al*. (2000) on the consumption of fresh food (prawns), the authors pointed out the consumers' habits and previous experience because they have a direct influence on the consumer's decision to buy. The authors consider that the image of the product has a serious impact on the decision to buy and recommends the continuous improvement of the product's image to encourage consumers to buy.

Frequently, consumer's behaviour is also approached and analysed from the perspective of marketing; the most common perspective is the one created by Acebron *et al*. (2000), i.e. encouraging consumption. Our perspective is different from the one of specialists in marketing; we consider that it is necessary for consumer's behaviour to be known in order to avoid economic dis-balance and to find a balanced approach between consumption, as it is economically defined, and human nature, as it is defined by humanists. The financial crisis in 2008 revealed, besides other financial aspects, the problem of the hyper-consumerist American society. This recent experience has proved that exaggerated consumerism does not bring economic benefits on a long term and that correlating this idea with the negative effects of consumerism over the environment and, most important, the psychological effects of hyper-consumption over the individuals (such as: inducing a negative state to individuals through publicity in order to determine consumers buy a certain product), we consider it is important to study and understand consumer behaviour not for encouraging consumption but for knowing the consumer better and for producing goods and services that should correspond to his needs.

As to the psychological characteristics that influence consumer behaviour, they may appear under different forms. The most often used concepts in specialized literature are: attitude, perception, motivation, personality, emotional states and memory (the capacity to learn).

Apart from psychological characteristics which influence the consumer's decisions, a person's features also play a key role in the decision-making process. These characteristics obviously make people different from each other. Demographic characteristics, such as: sex, age, income level, the level of education, etc. are fundamental for the consumers' decision to buy and may determine a departure from a consumer's general decision-making models (Lee, 2005). Yet, the most often encountered demographic variables are: age and sex.

In most specialized literature, social factors include: the reference group, opinion leaders, the social class, cultural level, etc.

Other factors that may influence consumer's actions are: the ability to process information, the level of knowledge and understanding, consumption preferences, as well as biases and heuristic elements.

The matter regarding the factors that influence consumer behaviour may be compared with an endogenous matter occurring in an econometric model; in other words, many of the above mentioned factors can influence each other; thus, the degree of importance is hard to establish for each of these factors. However, we consider that the main factors which influence consumers' decisions are the ones we have mentioned above; yet, they are not the only ones since they barely represent a part of the multitude of elements that influence consumer behaviour. We can say without being wrong that consumer behaviour is determined by multiple factors and is a multi-disciplinary concept.

4. Conclusions

Economics, as the most important domain of our society (opinion which we do not consider far-fetched, given the role of economics in today's society), has a continuous dynamic nature. This fact has determined us to try to understand and explain how economics functions; it has made us elaborate analysis methods, find solutions for the economic processes to run in our favour and for us to be able to ensure a good living standard; thus, economics has offered us the possibility to act and to develop the other domains of the social area. In this context, we understand the dynamics of economics, the evolvement of economic ideas, the efforts made by specialists to elaborate new theories and to upgrade the old ones, to extend economic research towards other social spheres and to study economic phenomena while being aware of the fact that man lies at its centre, with all his characteristics (psychological, educational, social, cultural etc.).

It is natural for new theories to appear, some of them leading to the creation of new schools of thought, which do not deny what has been accomplished in the history of economics in time, but which add knowledge, new elements, new perspectives for understanding economic life, by allowing new directions appear and develop. Behavioural economics is part of this analysis effort and it explains economic life by making reference to other sciences, particularly to psychology.

The consumer as an economic agent is identical with each of us and his behaviour should be approached from more perspectives, with the result that this fact will bring us benefits. Behavioural economics, which is based on standards economics, comes and amends the latter one with new concepts and ideas that enhance the explanatory power of economics, and, particularly, its power to economically act at micro, and at macro level.

THE COUPLE'S COST-VALUE PERCEPTION IN THE ENTERPRISE MANAGEMENT

Valentin Gabriel CRISTEA*

Abstract

In this article, I will talk about the possibility to relate the costs and value created for the client. The customer is not a very precise mathematical model, value for the client will be considered a minimum variable. Accounting management tools being limited to the couple's cost-value research, it is necessary to other areas call for investigation related to these notions.

Keywords: *cost, value, target cost, ABC, ABM.*

1. Introduction

In recent decades, management accounting specialists have reported the following fact: cost control does not ensure sustainable economic success of the enterprise, more precisely, the higher production costs do not generate turnovers proportionate. Thus, the specialists in the domain have removed the operations without any added value, which increases costs, but the value remains the same[1].

The concern of the specialists in the domain was to develop the tools and integrative models that cost and value given together: "The challenge is to optimize the company's offer, adapting costs to the value that its product represent for the customer."[2]

Among the researchers who wrote in the domain, we mention Lorino 1995 with his paper "Conducting value processes" on Lebas and Mévellec 1999 with the paper "Managing simultaneously cost and value" or McNair et al. 2001with their paper "cost management and value creation: the missing link ".

We ask ourselves if we can manage our costs generated by the production activities of the enterprise and the customer value obtained. Modeling realities by management accounting tools is relatively difficult concept of customer value through its imprecise definition.

The scientific community has stated the following: costs are measurable, they are the result of both parties inside and outside the enterprise.

In most enterprises, formal systems are used for calculating costs and recurring products and customer service.

The study of customer value definition will lead us to say that it is not the price paid by the client in some cases.

The complexity of the concept of customer value, given by the cumbersome hierarchy of values, causes a problematic relationship between cost and value.

2. The value for the customer

In the year 1998, Ittner and Larcker spoke about the shareholder value that is different value for stakeholders: employees, customers, suppliers, communities.[3] Researchers in the domain have wondered whether the costs incurred by the customer and the value created by the company for the same customer can be put into a connection. They found that customer value is treated as either production costs or a service that determines the price his. A condition in which the management of the couple cost-value be the practical and conceptual interest is the following: the amount of cost to be decoupled.

An innovative direction is the consideration of the price as one of the attributes of the product could result in value.

The value is a "social construction" because customer value measurement is difficult because customers are numerous and have confused preferences.

About value, Smith spoke in 1776. He released two conceptions of value: use value and exchange value.

Value in use is the "value of property is assessed objectively and be of general (bread offers a number of calories), either subjective and therefore varies from one individual to another. Value in use is relative as necessary, the conversion value is relative to another good. "[4]

Exchange value is "the rate at which a product is marketed in another commodity. It is synonymous with the relative price"[5].

The classical economists stated that "use value is the sum of the costs necessary to produce good". In contrast, neoclassical economists believed that "use

[4] Echaudemaison 1989, p. 456

[5] Echaudemaison 1989, p. 456

value corresponds to the utility that a person has in an object"[6].

In the management cost-value for the customer, it is required to see which of the two values we mean: use value or exchange value. The neoclassical economists refer either to the value in use "good or service in question satisfy certain needs of the user"[7] or the exchange value expressed in monetary terms the price.

We wonder if the price of that good or only value indicates an attribute of him. Some researchers believe that customer value is the price it pays to acquire a good or service[8]: as Simon (2000), who wrote in his article on accounting and value that "price - found during a transaction on the market - is the value expression; or conversely, that the value of property is the basis for its price"[9], while Lorino finds that" price may be an indicator stood a sign of value, but not the value"[10] and McNair et al., 2001, said that " the market price is a proxy of the net present value that the customer will get from the product or service purchased."[11] Mévellec showed that " price is, however, crystallization of the value. "[12]

We conclude that the cost approximates the value, and the two concepts are not identical.If the price expresses the value of a product or service, the customer agrees to pay for product attributes.

Bromwich has defined attributes, showing that the attraction of a product to the consumer is due to a set of characteristics. "The products have a set of characteristics that offer customers. These attributes attract customers through various elements of quality, such as operational performance, reliability, warranty conditions, physical aspects as the finishing and service elements such as safety supply or after-sales service. "[13] Mévellec (2005) stated that the value source is in its attributes. He said: "The value is the result of a set of characteristics perceived by the client having a useful dimension."[14]

We must emphasize that, the quotations above, the price is not equal to the market price or the price on which the customer will pay in the end.

Although the management accounting systems easily keep track of prices paid by customers and the turnover generated, it is difficult to anticipate market price and the price on which a customer agrees to pay. We wonder if we can measure customer value as the price that he accepts to pay?

Another basic question is: If the client can be assimilated price to pay, then it is better not to use the term customer value, but limit price or turnover. Can the cost-value management replace the traditional costs - profit management? Can the term value for the customer explain the profit?

3. The price is an essential element of value

Other researchers considered the price a component of the value and the value is a synthesis of the various features of the property.

Aurier et al., in year 2004, had been continuing the previous definitions appeared in marketing literature, stressing that "the overall value of a product is the result of confrontation between benefits and sacrifices associated with consumption"[15]. The overall assessment of the utility of a product is the overall value of a product.

Barwa and Meehan, in year 1999, had been talking about perceived value ratio - price that determined the consumer behavior: " value perception by customer is given by assessing on which the client has for all benefits resulting from a product or a service compared to the total cost represented by its purchase price. "[16]

Lorino notes that "value appears in the relationship between features and price."[17] In 1997, he wrote: "The value is the judgment made by the company (which include market and potential customers), the usefulness of supply of services offered by the company in response to their needs. This decision is reflected in sale prices, quantities sold market share, revenue, image quality, reputation "[18]. His opinion refered to the idea that the customer appreciates the price first and then the value.

Porter, in year 1986, stated that "value is the amount that customers are willing to pay for a product or service offered."[19] He justified that "a higher value is produced by lower prices than competitors for equivalent benefits or providing unique benefits that only serve to compensate for a high price,"[20] showing that the value was a mix between price and customer benefits.

[20] Porter 1986 p. 13

Researchers who say that price is one of the explanatory factors of value are almost strategy and marketing. Their approach to the current value has the following characteristics:

Barwa and Meehan, in 1999, had been noting that there was no value other than the value perceived by the customer. Jalla, in 2002, claimed that it is an assessment of mental representations of dependent clients' expectations.

Competitors' tenders define value. We affirm the value of a product or service may diminish without any of its attributes to be changed just because a competitor has changed its offer: "Economic value to the consumer is the relative value of a product offers to consumers in a particular application. This indicates the maximum amount he is willing to pay, assuming he is fully informed of product and tenders competitors. "[21]

4. The value is a "social construction"

All researchers argue that price is an indicator of value or one of its components.

The value is determined by the market and depends on customer preferences. However, it is not found and built by the company. There is a piece of information that should be sought outside the enterprise and can not be calculated internally against costs.

Value is issued market information is not independent of a given enterprise. This unequivocally we can get on the market.

Wishbone and Desrumeaux, in 2001, doubted the existence of a market as such, that had an independent life, independent of the actors that compose it. They considered that the value was a given business required from outside. They also compared the value with a building in which actors: individuals, organizations involved intervene in a manner on the market, fix the market value and try to form the rules of the game, priorities. They stated that "value is a reality constructed by actors and organizations that are on the market."[22]

At Gadrey, in 1988, we find the idea that the value is a notion of interpretation. He said that the production of a service depends on the social environment, the players and their systems of values. "These are the economic reports, social and institutional rules that decide what the outcome is essential service, its primary production."[23]. The value that a customer attributes of a good or service will be linked to its socio-economic environment, to its "value system".

For Lorino, the value is actually an interpretation. He says "products have value if they have the ability to satisfy a need felt by a social group"[24]. We ask ourselves if some products provide more value than others, if they consume more resources than create value is "a matter of law, a matter of interpretation of the complex relative usefulness of different types of features for different social groups."[25]

Bréchet Desrumeaux, in 2001, had been observing, analyzing client concept that this actor is not monolithic and coherent, but multiple and changeable. To define a basket of attributes that the client is sensitive and establish a hierarchy of these attributes is very difficult. They emphasized: "From the demand side, to appreciate what is good for the customer is achieved through a stack of attributes, or a gamble and experimentation. "[26]

For Mévellec, in 2000, "value concept is unclear, both because of fluctuations in customer behavior and because of the difficulty of interpreting signals received from the environment. "[27] For the minimum level, a list of attributes and their relative weight is a complex task, which leads to unstable results.

If customers are many and do not form a homogeneous group, they are traditionally classified into segments and treat customers one by one. List of significant attributes for each of the segments is not the same and the importance of each customer segment attached to different attributes is not the same.

In an interview in the magazine Marketing Magazine in 1997, Dubois reported: "We have shown that evolution was a mass marketing to segment marketing, niche marketing, and individual marketing."[28]

If the scale of analysis refers to a single customer, the list of attributes and user preference scales may not be stable over time.

The situational marketing, customer preferences and behavior of a dependent situation "because he no longer builds the basis of the characteristics of goods or consumers but based on situations that they face."[29]

Dubois spoke about a person changing consumer as "chameleon as is neither green nor red nor yellow, but can be effective, however, today's consumer is neither sensitive nor permanent mark or the price or quality."[30] We conclude that the list of attributes that determine the value is variable as the relative weight

[30] Dubois 1996, p. 13

of attributes; they depend on the situations in which the customers are.

Organizations have not only customers and customer segments. They have other different customer groups, called quasi-customers. Their lists of attributes are different or have different values. For example, when undertaking Samsung Oţelinex Targoviste provides meals at school canteens municipal. Samsung's first customer is the recipient Oţelinex Targoviste school cafeteria table, then several categories of "quasi -guest" revolve around paying customer: the child, the parents who pay a part of the meal, the staff will dine, teachers who are working with children in the afternoon, school doctors. We wonder how we define the value of a product "table-room"? We have a mix of preferences for different categories of quasi-customers, some quasi customers are privileged over others? Who will define the list of attributes and their relative values?

Often, the term client is hiding behind various actors within the same organization. In the capital goods markets, a provider has several interlocutors: the company will acquire the equipment (which will focus on the cost of the piece goods), the purchasing department of the company will be more sensitive to its purchase price, the operator will use the machine and be more attentive to its functionality. We ask ourselves, who is the client and on which preferences and the company will build a list of attributes to determine the value of its bid.

Many studies of marketing show that the value created as it is perceived by the enterprise is in general different from the value created as it is perceived by the customer[31].

More events will interpolate between the value as it is produced by the enterprise (objective attributes of the product or service) and customer perceived value[32]: appropriate communication service that could increase unnecessarily expectations "super selling" service or past experiences that make the customer to change his expectations, value attributes and perceptions.

Value perception of customer fluctuates depending on the parameters that are not verified or verifiable by the company. Thus, it depends on other clients, influencing customer or degrade the image he had made about a luxury. It may depend on the subcontractors, suppliers less control.

So there is a gap between the value produced by the company and the value perceived by customers[33], the latter being the only way to change the customer's willingness to pay. Analyzing data collection modes and management decisions resulting from these two types of information, we find that are different[34]. Researchers propose models designed to manage customer value and cost without reference to the value created by the company or perceived by the customer, shows the relativity of the concept of value.

The concept of customer value was not dependent on a variety of clients and their situations. We will try to connect this value and the used costs in order to generate value and cost-value couples.

In 2001, McNair et al. showed that the challenge of connecting customer value, price and costs of various methods have been around tools of management accounting (ABC, target cost, ABM, TQM, Strategic Cost Management).These tests proved "incapable of evaluate specific relationships between internal cost structures and externally defined value. "[35] McNair et al. bring a few arguments to support their view. Gervais[36] identified and analyzed four tools for managing torque-cost value: management activities and processes, value analysis, target cost and cost characteristics. We will examine two of these tools, target cost and ABC / ABM to see to what extent they can contribute to explaining the cost-value relationship:

- cost target was chosen because it relates the features, customer value and cost management for future product. Value analysis techniques considered as one of the target service costs.
- ABC / ABM offered a broad vision of the organization, linking various operations and the end user connected costs and the value created for the customer. Gervais said: feature costs is a variant of ABC / ABM.

5. The target cost

De Ronge, in 2000, stated: "future product cost, called target cost is determined a priori and is the result required by the market selling price and profit level imposed by long-term strategy of the company."[37] The resulting target cost is decomposed using either organic method - the product is broken down into parts - or functional method - the product is decomposed into functions, similar to the notion of attributes "[38].

The definition of value for customer reserved for the target cost is explicitly the selling price. This method raises two fundamental issues that were mentioned by Lorino in 1994 and he resumed it in a book published in 2005 in the same terms:

1. "The description of a product as an additive combination of functions is always realistic and possible? A product has no systemic existence

[31] Carmon Ariely 2000
[32] Parasuraman et al. 1985
[33] Parasuraman et al., 1985
[34] Berry şi Parasuraman 1997; Malleret 1999
[35] McNair şi colab. 2001, p. 34
[36] Gervais, M. (2005) *Contrôle de gestion*. Economica, 8e édition, capitolul 11.
[37] De Ronge 2000
[38] Lorino 1994

whereby he would be nothing more than the mere sum of its parts, even if such parts are defined on a functional basis rather only on a technical basis and organic? "[39]

2. "The assumption that the cost structure must be identical to the structure of value is justified?"[40]

Meysonnier, in 2001, echoed these two aspects: "Two elements are essential in addressing the target cost. At first the idea that the overall value of a product for a client attributes can be properly decomposed into independent and cumulative. Then that must or for each component of the new product, the same level of importance in the cost amount that the value of a customer provides, if a component is 15% of customer perceived value, it must weigh 15% of the total cost.[41]

In the first scenario: the attributes are independent variables and they would combine in a manner forming additive value of a product.

Horvath's article, in year 1995, on the first hypothesis proposed an illustration of a target cost applications in French. The chosen example is linked to an alarm clock. A market survey was used to determine what features customers are looking for an alarm clock and what degree of importance (on a scale of 1-9) give them to these functions. These imports were then converted into percentages, but the conversion method is not explicit; the total percentage for all functions is 100, suggesting that the alarm clock customer value is equal to the sum of its functions.

First hypothesis contradicts intuition, by comparison with industrial processes and the development of marketing concepts, especially those applied to services.

1. No one can say that attributes are independent. For example, designing a clock will have value to the customer unless a basic function such as accuracy is accomplished correctly. There would therefore be independent of attributes, there would be no addition to the attribute values.

2. Comparison with concepts from industrial environments can illuminate and reinforce this point: the assembly industry (such as electronics), the reliability of a finished product depends on the reliability of components, but a multiplicative manner. Indeed, if 99 pieces are correct, but a centime is defective, the quality level will not be 99%, but 0% (the phone will not work); in the same way service management is sometimes enough detail defect (eg, a light above the sink in a hotel room can change the perception of quality that the customer will have a satisfactory service. In industry, we distinguish defects criticized by others: they have a decisive impact on the quality of the product made or perceived.

3. Naumann and Jackson, in 1999, made similar distinctions in marketing. For example, hygiene factors (those for which the supplier must meet a minimum quality required, otherwise resulting in dissatisfaction) and satisfaction factors generate positive perceptions. Parasuraman et al., in 1991, showed that most of distinguished clients a level of service "adequate", below which customers had a negative judgment of that service and a level of service "wanted" beyond which customers will be taken a positive decision.

Attributes have different roles: some can be eliminatory (as a note to an examination subject), some may be affected by a negative note, and others have impact on the total amount in all cases.[42] The value of a product can not be calculated as an arithmetic mean using the value attribute.

Lorino stated in 1994 that functional analysis attempted to provide an answer to the above-mentioned problem by distinguishing between "necessary functions" related to technical performance and use of an object and "reusable functions" or prestigious positions related of needs. The management accounting textbooks, Demestère and Touchstone, in 2004, stated that technical solutions, mentioned by Lorino, were not repeated and deepened.

Meyssonier in 2001, showed that the need to preserve "the identity of the whole product, even if it is sometimes at odds with logic decomposition and additivity of the attributes "[43] and Mévellec in 2005, denied that the overall amount would be equal to the sum of attributes: "However, it is difficult to claim that the overall amount is the sum of unit values of these characteristics."[44]

Due to the complexity hierarchy of attributes common analysis can treat dependent variables or preferably nonlinear variables. It can replace additive preferences with multiplicative preferences. Joint analysis can give an attribute value, but a marginal amount and the sum of these values will be the total marginal product.

In conclusion, the joint analysis by decomposing the overall value of a product in "sub-values" on attribute works well on two conditions:

- Firstly, the product can be effectively decomposed in attributes, which are not the cases with products that the client has retained as a "global experience", for example a play (Aurier et al 2004);
- Secondly, the customer is a consumer can collect frequently or ex-ante information to build his judgment. This condition can be difficult to meet, especially for services at which customer forms an opinion after he has experienced.

[39] Lorino 1994, p. 40
[40] Lorino 1994, p. 41
[41] Meysonnier 2001, p. 124
[42] Loosa 1997
[43] Meysonnier 2001, p. 125
[44] Mévellec 2005, p. 57

So one can establish a relationship between an attribute and a value.

In the second hypothesis, the optimal cost management and value can be obtained respecting proportionality between cost and value.

Horvarth, in 1995, wrote in his article on the second hypothesis: "The goal is that each target cost component generates an amount corresponding to the value that the consumer costs confer"[45]. He strengthens the above proposal on page 78, showing that there is a "zone of optimal value" the proportionality between cost and value is well defined.

Meyssonnier in 2001, said: "The application of such a principle can lead to a waste of product level attribute only to meet an adequacy between cost and value when a lower cost as possible."[46] It may be that a function of very high value to occur at a very low cost or indispensable function with a limited amount to cost a lot to produce.

In conclusion, the contribution approach the target cost to management of couple cost-value is:

- In general, it allows to verify the adequacy between the estimated cost of the product and the future market price; it can be seen that the concept of value is the same price;
- In particular, it can help to set objectives for components or characteristics of the product cost. It should be based on two premises to determine these objectives in relation to attributes value. If the second hypothesis is accepted, we must return to traditional methods of target-setting costs which are not related to customer value: comparison with previous products, internal goals.

The second hypothesis explains the development of tools that manage the couple costs-value, showing their great and attractive character, which makes these instruments be current.

6. Conclusions

In this article, we presented the joint management of costs and customer value is described with various difficulties. The definition of customer does not meet a unanimous opinion. Opinions differ when it comes to a synthesis between price and product functionality. Value builds in view of future profits that the client will get the use of a product, the price can be considered as an indicator of value. The appreciation of the benefits that a customer will get a product is not stable and steady because the client can change options and is not a homogeneous reality. The overall value of a product must be decomposed into its attributes or value, not in all cases, the amount of attribute values is equal to the total value of the product. Building a business model which will link costs and the value must consider two issues: a) large enterprises, given the complexity of work processes, we can not always isolate strictly necessary activities to achievement an attribute; b) costs precedes the value in time. Decisions are based on a comparison of the costs and the value of such aggregates that are not achieved at the same time.

Value is a term with positive connotations: any company is carrying values, but rarely has negative values. The value for the client in the company is focused on its customer service. The general interest is to create value for its customers before generating turnovers.

Practitioners in business enterprises do not agree with the concern of researchers for academic rigor in defining customer value or cost method to verify the validity of the assumptions target. Managers seek effective solutions, operational, the aesthetic and the rigor judgment are not essential. Managers take into account the nature of the processes within the enterprise. Management information systems support business decision. Managers will not use the information arising from the management system, they will select from several information of all kinds, will be completed with other information, will update and discuss with their collaborators.

ECONOMIC NATIONALISM'S VIABILITY UNDER GLOBALIZATION

Elena Mihaela ILIESCU*

Abstract

The path undertaken by the world economy is irreversible - the world economic system is a system based on interdependencies, cooperation and multilateralism but economic openness is not full. Each country, in order to protect their national interest call, in different proportion, depending on the circumstances and of the economic-social and political interests, for different forms of the economic nationalism, forms that have adapted continuously to the demands required for integrating on the foreign markets. The recent global economic crisis intensified the rhetoric and the economic nationalism's practices but it is not about rebirth, but of renewal, of remodeling the nationalist policies, globalization being a premise of the new economic nationalism. The scope of this paper is to emphasize using empirical data the fact that nationalism and globalization, from an economical point of view, are not antagonistic policies, they coexist and influence each other, both generating contradictory effects, in terms of provided opportunities and risks.

Keywords: *globalization, economic nationalism, protectionism, national economy, neo-nationalism.*

1. Introduction

The feeling of economic insecurity instilled by the global economic crisis triggered in 2008 generated strong reactions against free movement of economic goods, labor force, technology and capital. This conjuncture represented the ideal ground for the economic and political nationalism's rise as a leverage to defend the national interest[1].

Moreover, the resurgence of nationalism, according to the experts from the Global Economic Forum in Davos, represents one of the 10 greatest challenges of humankind for 2015.

However, since most states have enrolled on the globalization and capitalism path, this concern seems unfounded from an economical point of view. The politician Clare Short, who stated that: "People have accused me of being in favor of globalization. This is equivalent to accusing me of being in favor of the sun rising in the morning"[2] suggestively highlights the globalization process irreversibility.

Because of this, in many countries, considering the strategic importance of integration on the global market, the economic nationalism was reassessed, remaining thus an important aspect in economic theory and practice. It means that economic nationalism never disappears, but during economic growth, it is dimmed, disguised.

It has been noted that, in time of economic crisis, there is an increase in the nationalist economic policies of the states, as a defensive method against fierce foreign competition. On consequence, national economies, although actors on the global economy's stage, continue to protect their internal markets.. this is because, to cope with the harsh conditions caused by the integration with foreign markets.

Although, protectionism through custom barriers was decreased together with the decrease and even elimination of duties, currently other levers are being used, non-tariff, like encouraging domestic businesses, anti-immigration measures, resources nationalism, invoking some causes such as population health, environmental protection, national culture, etc.. For example, in industry, some economic goods are produced within the national boundaries under the pretext of ensuring national security, avoiding thus the reliance on exports (France protects the agricultural sector, USA protects the defense sector). The argument for protection national industry is invoked also when foreign investments are restricted and the local investors' rights are supported. Nationalists, who value the national values, also support the production of cultural goods.

These practices derived from the belief of decision makers that a focus on domestic markets will lead to a faster and lasting economic recovery. In this case, to support the objectives feasibility, a historical one accompanies the nationalist discourse also. However, a long-term comprehensive approach of the nationalist slogans such as "by ourselves" or "we do not sell our country" is not possible in terms of the interconnection arising from economic globalization in all its aspects - commerce, production, finance and technology. Moreover, reality has shown that during the periods in which the protectionist measures have been reduced, economic growth was recorded.

Consequently, we can say that the two approaches of the international economic relations (unilateralism / nationalism, or multilateralism / globalization) are ubiquitous and indispensable but the intensity and forms under which they manifest differs from country to country, depending on the historical period, the socio-economic and political context.

* Lecturer, PhD, Faculty of Economics, "Nicolae Titulescu" University of Bucharest (e-mail: **mag_mihaela@yahoo.com**).

[2] (http://www.atlantic-community.org/app/webroot/files/articlepdf/Globalisation%20and%20Nationalism.pdf)accessed 12/03/15)

It means that theory and especially practice cannot fit constantly in the proverbial bed of Procrustes, since they are volatile and constantly adaptable.

That is why, in order to be able to evaluate the advantages and risks of the economic nationalism's different approaches, the analysis ought to be comparatively addressed, from a historical perspective.

2. Brief review on the conceptual approaches regarding the economic nationalism

Nationalism, secular ideology, relies on creating a common identity, satisfying the humankind need of belonging, from a psychological, organizational, economic standpoint[3].

We speak of nationalism, considering as reference point the forming of the national sovereign state. States' sovereignty recognition and enactment was made by the Treaty of Westphalia in 1684, along with tree other fundamental principles: equality between nation states, respecting the treaties and prohibition of interference in other countries' internal affairs.

From this perspective, the economic nationalism is based on "the economic and political independence policy, the reason for defending national sovereignty, progress and prosperity of its own nation and state"[4].

Regardless of the period to which we refer, the economic nationalism refers to a set national policies, that regulate a country's economic relations with "the rest of the world", in order to protect their domestic economy.

The use of the "economic nationalism" concept is relatively recent although in practice the phenomenon is quite old (sec. XV). According to Polish economist Michael A. Heilperin's studies, the concept itself was first used "„in the title of a book by Leo Pasvolsky, published by the Brookings Institution in Washington in 1928: Economic Nationalism of the Danubian States".[5]

However, the historical roots start from the mercantilist economic doctrine embraced in Europe, in sec. XV - XVIII, whose representatives (Frederick List, Alexander Hamilton, Thomas Mun, William Petty, etc.) argued that a nation is stronger if the value of exports is greater than the value of imports. The mercantilists were followers of statism, of state interventionism with the purpose of defending the national interests.

Subsequently, at the beginning of the XIX century, the concept of protectionism was introduced, so that in the XX th century to implement the term-economic nationalism. Currently, protectionism is considered the economic nationalism traditional form of manifestation.

Throughout 19th to 21st century the nationalist economic policies approach has changed, constantly adapting to the historical periods specifics. Thus, the manifestation forms were differentiated by country, under the influence of historical and cultural particularities.

For example, the Western capitalist countries have used the nationalist politics as a shield in the way of the global spread of nationalism - socialism started in the 30s in Germany, in the context of the Great Depression of 1929 - 1930[6].

It is an exclusionist nationalism, that focuses on nation n not on the individual, on homogeneity, social and economic standardization, imposing limits on terms of ethnicity, language, culture.

The followers of this trend considered that state intervention for defending the branches considered of importance, the national interests, in general represented the only ingredient capable of ensuring the national economies' efficiency and effectiveness, and the international capital was seen as the main factor that triggered the Great Depression. Therefore, the need for a new marketplace, labour force international division and the increase in the international commerce were incompatible with the classical nationalism. This is graphically highlighted in an article published in the journal of Foreign Affairs on April 1934, where Leon Trotsky (writer, Marxist theorist) stated that: " Only twenty years ago all the school books taught that the mightiest factor in producing wealth and culture is the world-wide division of labor, lodged in the natural and historic conditions of the development of mankind. Now it turns out that world exchange is the source of all misfortunes and all dangers. Homeward ho! Back to the national hearth!.... The legend of the bed of Procrustes is being reproduced on a grand scale. Instead of clearing away a suitably large arena for the operations of modern technology, the rulers chop and slice the living organism of economy to pieces."[7]

After the Second World War, the nationalism of the `30s was to blame, and thus considered the source of many conflicts.

Consequently, as the global economic flows intensified, the national policies evolved, the classical nationalism being replaced with liberal nationalist

strategies, that focused on opening outwards from a political and economical point of view, based on territorial aspects, on the membership in a particular geographic area and not on social and political homogeneity and thus considered a globalist nationalism (neo-nationalism). Nationalist - globalists accept ethno cultural diversity created by globalization, being emotionally attached to a geographical space but open in relation to "rest of the world". The global economic agents maximize their results through marketing the differences, peculiarities and traditions[8].

Moreover, at the European Union level, the introduction of the euro, the existence of the European Parliament and of other integrative practices of the Eurozone, suggests the idea of a regional nationalism, the nationalism sentiment being transferred at a supranational level.

3. Succinct description of the manifestation empirical forms of the global economic nationalism

After 2008, the start year of the global economic crisis, the cross-border capital flows have slowed their growth rate to 1.9% annually, compared to the annual average of 7.9% during 1990-2007[9], which generated numerous debates, controversies on the appropriateness of nationalist strategies in the globalization context. This is because there is an intensification and diversification of the nationalists practices, in particular by increasing protectionist measures. The experts even fear a return to the nationalist methods of the '30s and a reduction of globalization. Yet, the high degree of national economies interconnect does not allow this. Of course, we are speaking about a "tamed" form of the economic nationalism, a globalist economic nationalism, adapted to the conditions imposed by the markets and by international institutions.

If during the interwar period, until the mid-70s, customs duties were extensively used as barriers to foreign competition[10], currently countries use much less this instrument.

Furthermore, the ascension of foreign trade and the involvement of supranational governmental organizations ((World Trade Organization, European Union, United Nations) led to a gradual reduction of customs duties and even to their elimination in some cases. Although tariff liberalization was more pronounced before the crisis (between 2002 and 2007 was noted a reduction in the custom duties average, by about 5%) it continued in the post-crisis period, but at a slower pace. Thus, according to data released by United Nations Conference on Trade and Development (UNCTAD) in 2012, the average level of the custom duties on a global scale was of 2% (les than 1% in developed countries and between 4% and 10% in emerging countries).

In contrast, non-tariff barriers have increased substantially. Thus, the modern economic nationalism appeals to new leverages, diversified so to sustain the national economy before foreign competition[11]:

- increases in trade restrictions under the pretext of environmental standards, national security, protecting national industries, particularly of branches regarded as strategic (quotas, administrative authorizations, health or technical guidelines or ordered marketing arrangements)
- policies of favoring domestic firms;

A relevant example in this sense is represented by France, where, in order to protect domestic industry from foreign investors, in 2005 by a decree signed by the Minister of Economy, have been established 11 sectors regarded as strategic and in which the sale, merger or transfer operations ought to be made only with the state. In 2014, in the context of a possible takeover of the French company Alston by the American company General Electric, the government created the necessary framework for safeguarding the national interest adding other five strategic areas: energy, transport networks, water supply, communications and public health protection.

- resource nationalism;
- the nationalism in consumption - for example, in Romania, the employees of French companies receive cars produced in Hexagon, BRD longer grants reimbursement for the purchase of cars Dacia, Renault, Nissan;
- campaigns "buy local products";
- Subsidy;
- preferential financing
- favoring national suppliers in procurement;
- Influencing the exchange rate through this intervention of the central banks, such as currency devaluation to boost exports, external debt reduction, discouraging the repatriation of foreign investors' profits;

In these circumstances, according to the report „Indirect Tax in 2013: With change comes complexity" drawn up by Ernst & Young, one of the largest financial advisory and audit companies in the world the WTO reported annually the implementation of new measures that restrict trade - for example, between October 2011 and May 2012 there were implemented no more than 182 measures.

Therefore, the US, France, Germany, countries known for their nationalist policies, currently maintain their trajectory. Great Britain after 1800 opened its

[8] Anwar Anaid - Globalist Nationalism: A Theoretical Approach To The Nature Of Nationalism In The Modern Global Political Economy, European Scientific Journal, vol.10, No.16, June 2014, pg. 141-142)

[9] http://www.economonitor.com/blog/2013/09/the-new-economic-nationalism-part-1-a-juche-world/, accessed 02/03/15)

[10] In 1930, through the law of Smoot - Hawley, the US imposed a custom tariff of 40% for all products, Great Britain gave up the tradition of free trade in 1921, establishing in 1931 and 1932 tax fees on three quarters of the products, etc

[11] http://www.economonitor.com/blog/2013/09/the-new-economic-nationalism-part-1-a-juche-world/, accessed 02/03/15)

borders to free trade, but now falls into the European nationalist trend. China and Japan have also adopted nationalist strategies. In these circumstances, the emerging countries and those dependent on the global economy must adapt because the shift towards domestic markets pose a challenge to countries with low economic resources or depend on export.

For example, Germany, the fourth largest economy in the world, is also extremely vulnerable, economy's welfare depending on exports, meaning, the willingness and ability of importers to buy their products.

Given that exports (half remaining in the EU) contribute with more than 50% to the country's GDP, the country's production capacity substantially exceeds the consumption capacity, even if they would have boosted domestic consumption. Germany depends therefore on these exports in order to maintain its economic growth, low unemployment level and social stability.

Economic nationalism represents a challenge for the emerging countries whose economic growth depends on foreign investments and international trade. Such is the case of Romania whose exports are mainly oriented towards the EU states and the products are with a lower degree of added value. Furthermore, 80% of present goods on store shelves are imported.

China has seen a remarkable growth in the recent years but, although it has enjoyed the benefits of an open economy, in order sustain growth they promoted a nationalist policy, imposing strict conditions for foreign investors, planning thus financing through a 5-year project, etc.

In short, all these practical situations lead to the conclusion that, given the high degree of interdependence in the global economy, the position action of the national states on the international stage is strongly influenced by the economic conjuncture and the socio-political interests on this stage, but also by their degree of development and the dependency to external markets.

Analyzing the economic nationalism phenomena both in terms of theory and especially of reality, I consider to be fully justified its comparison to a game of balls. Where the balls, being of different size, power and beauty collide with each other in order to determine the winner[12].

4. Conclusions

The global financial crisis generated a reorientation towards the nationalist policies and reduction of employment in the global economy, the advantages of economic and monetary integration fading in this context. The evolution of empirical data supports the idea that globalization and nationalism from an economical point of view are not antagonist polices, they coexist, influence each other, generating tensions and conflicts. Nevertheless, since the globalization process is dominant in terms of economic nationalism, according to J.M.Keynes, it requires a "rational and quantitative interventionist policy". Economic agents' pragmatism who aim to maximize their results put a mark on the economic system functioning, at all its levels. Therefore, although economies openness is not full, each maintaining certain barriers, the path undertaken by the global economy is irreversible- the global economic system is one based on cooperation and multilateralism.

THE IMPACT OF COMPENSATION PAYMENTS ON EMPLOYMENT, IN REGIONAL STRUCTURES

Nicoleta JULA[*]
Dorin JULA[**]

Abstract

Compensation payments are considered active labour market policies designed to increase efficiency, to mitigate unemployment and to sustaining employment. We tested this hypothesis for the period 1993-2013, in territorial structures (42 counties) through a dynamic panel model (confirmed by Granger causality tests – Toda-Yamamoto version), and by means of error correction model. We found that the dynamics of regional employment are positively related to expenditure incurred for active policies and there are negatively correlated with the ratio between the unemployment average indemnity (and support allowance) and the average net nominal monthly salary earnings. But, the connexion between employment and compensation payments converges extremely slowly for a long-term stable relationship.

Keywords: *employment, compensation payment, dynamic panel models, causality tests, error correction model.*

1. Introduction

This paper offers a presentation of econometric models for analysing the impact of economic policy measures on the dynamics of employment, on territorial structures (NUTS-3) level.

In details, we analyse the impact of expenditure incurred for active policies to stimulate the increase of employment on the dynamics of employment, during 1993 – 2013.

As a methodology, we used a dynamic panel data model and an error correction model (ECM) – built in the general frame of vector autoregressive (VAR) analysis.

2. The data

We used the data from national statistics, like:

- for the data concerning *expenditures for unemployed social protection* the source is National Institute of Statistics, TEMPO Online, table SOM102A - Annual expenditures to unemployed social protection by expenditure categories, macroregions, development regions and counties (thousand RON);
- for *unemployment* the source is National Institute of Statistics, TEMPO Online, table SOM101A – Registrated unemployed by categories of unemployed, gender, macroregions, development regions and counties, at the end of the month (number of persons);
- for *civil economically active population* the source is National Institute for Statistics, TEMPO Online, table FOM103A – Civil economically active population by activity of national economy at level of CANE Rev.1 section, gender, macro regions, development regions and counties: 1992-2008 and FOM103D – Civil economically active population by activity of national economy at level of CANE Rev.2 section, gender, macro regions, development regions and counties: 2008-2013, thousand persons;
- for *the average net nominal monthly salary earnings* – National Institute for Statistics, TEMPO Online, table FOM106A – Average net nominal monthly salary earnings by economic activities at level of CANE Rev.1 section, categories of employees, macro regions, development regions and counties, 1990-2008) and FOM106E – Average net nominal monthly salary earnings by economic activities at level of CANE Rev.2 section, sex, macro regions, development regions and counties: 2008-2013, RON;
- for *gross domestic product*, by macro-regions, development regions and counties – National Institute for Statistics, TEMPO Online, table CON103C – GDP by macro regions, development regions and countries, calculated according CANE Rev.1, for 1995 - 2008) and CON103I – GDP by macro regions, development regions and countries (ESA 2010), calculated according CANE Rev.2, for 2000-2012, millions of RON.

We are evaluated the econometric characteristic of these time series. To be exact, we tested for stationarity (Im, Pesaran and Shin unit root test for panel date series). The results are presented in the following table:

Im, Pesaran and Shin Unit Root Test
Null Hypothesis: Unit root
Probability of null hypothesis

TM	0.519	0.013	0.004	0.022	0.002

The above results are generated by the software EViews-8.

Legend:

OCUP = employment (thousand persons);

GDP = gross domestic product (millions of RON);

CHS = unemployment indemnity (and support allowance, until 2006), thousand RON;

CHA = CPSS – CHS, expenditure for active labour market policies to stimulate the increase of employment (thousand RON), where:

CPSS = expenditures for unemployed social protection (thousand RON);
CSN = average net nominal monthly salary earnings (RON);
CMS = CHS/SOM, i.e., average unemployment indemnity (and support allowance), thousand RON/person, where:
SOM = unemployment (number of persons).
The above table shows the following characteristics of series:

Series	Nature of series:
OCUP	I(1)
$\frac{CHA}{GDP}$	I(0)
$\frac{CHS/SOM}{CSN/1000}$	I(0)
@pc(GDP)	I(0)

So, the series concerning civil employment is integrated of first order, denoted I(1), and the other are stationary, symbolized I(0).

3. Causality relationship between employment and active labour market policies

We analyze the causality relationship between dynamics of employment (OCUP) and expenditure incurred for active policies to stimulate the increase of employment (CHA), as share to gross domestic product (GDP), namely, $\frac{CHA}{GDP}$. The Granger Causality Test is applied on a model with two control variables: the first control variable is the ratio between the unemployment average indemnity (and support allowance – until 2006), CHS/SOM, toward average net nominal monthly salary earnings, CSN, namely, $\frac{CHS/SOM}{CSN/1000}$, and the second control variable is the percentage change in GDP, namely, @PC(GDP). The results are presented in the following table:

VAR Granger Causality/Block Exogeneity Wald Tests
Sample: 1993 2015
Included observations: 630
Dependent variable: d(OCUP)

Excluded	Chi-sq	df	Prob.
$\frac{CHA}{GDP}$	26.78092	2	0.0000
$\frac{CHS/SOM}{CSN/1000}$	7.404576	2	0.0247
@PC(GDP)	9.317361	2	0.0095
All	50.82695	6	0.0000

The above results are generated by the software EViews-8.

If we reject the hypothesis that expenditure for active labour market policies to stimulate the increase of employment (CHA), as share to GDP, $\frac{CHA}{GDP}$, does not Granger Cause the dynamics of employment, then the error is insignificant (less than 0.01%). Therefore, we reject the hypothesis of non-causality (as defined by Granger). Further, we reject both the hypothesis that the ratio between the unemployment average indemnity (and support allowance), CHS/SOM, toward average net nominal monthly salary earnings, CSN, namely $\frac{CHS/SOM}{CSN/1000}$, does not Granger Cause the dynamics of employment and the same relationship between the GDP growth and the dynamics of employment.

It is interesting that the relationships between dynamics of employment and the evolution of expenditure for active labour market policies to stimulate the increase of employment are not reciprocal interactions. In the next table, we can observe that if we reject the hypothesis that dynamics of employment does not Granger Cause the expenditure for active policies to stimulate the increase of employment (CHA), as share to GDP, $\frac{CHA}{GDP}$, then the error is about 78.6% (see table below), much higher than standard significance level (5%).

Also, the available data do not signal the existence of a causality relationship between expenditure for active policies to stimulate the increase of employment, as share to GDP, $\frac{CHA}{GDP}$, and the ratio between the unemployment average indemnity (and support allowance), toward average net nominal monthly salary earnings, $\frac{CHS/SOM}{CSN/1000}$. If we reject the hypothesis of non-causality between these two variables, then the error is larger than 30% (see table below).

Dependent variable: $\frac{CHA}{GDP}$

Excluded	Chi-sq	df	Prob.
d(OCUP)	0.4809	2	0.7863
$\frac{CHS/SOM}{CSN/1000}$	2.3779	2	0.3045
@PC(GDP)	169.16	2	0.0000
All	236.69	6	0.0000

The above results are generated by the software EViews-8.

Like in employment case, we do not reject the hypothesis that GDP dynamics is Granger cause on expenditure for active labour market policies to stimulate the increase of employment.

4. Vector Error Correction Model

Granger causality test assesses only the possibility of a link between two variables, without estimating direction and intensity of such a link. We evaluate further the possibility that between the dynamics of employment and expenditure for active policies to stimulate the increase of employment to be a long-term stable connection. Econometric test whether these series are cointegrated.

4.1. Tests for cointegration

Because the series are relatively short (1993 – 2013), for increased confidence, we use two panel cointegration tests: *Kao (Engel-Granger based) Residual Cointegration Test* and *Fisher (combined Johansen) Panel Cointegration Test*. The EViews-8 results are presented below.

Kao Residual Cointegration Test

According to *Kao (Engel-Granger based) Residual Cointegration Test, rejecting the Null Hypothesis* (no cointegration) involves an error of 0.02%, below the standard 5%. Accordingly, we reject the null hypothesis: we do not have econometric arguments to accept the hypothesis that the series are not cointegrated.

We present also the EViews-8 results for *Fisher (combined Johansen) Panel Cointegration Test* with no deterministic trend in the data, and no intercept or trend in the cointegrating equation:

Johansen Fisher Panel Cointegration Test

MacKinnon-Haug-Michelis (1999) p-values

In above table, in the first column, there are the 42 Romanian counties. In order to reduce the publishing space, we have not presented the final three tables of Johansen test (hypothesis of at most 1, 2 and 3 cointegration relationship).

The *Fisher (combined Johansen) Panel Cointegration Test* reject the null hypothesis: no cointegration relationship between the variables, both in panel (as common relationship – first above table of test) and in individual cross section (all the 42 counties – the second above table).

4.2. The model

Given the results of cointegration tests, we build a Vector Error Correction (VEC) model.

$$d^2(OCUP_{it}) = \beta[d(OCUP_{i,t-1}) + a_1 d\left(\frac{CHA_{t-1}}{GDP_{t-1}}\right) + a_2 \frac{CHS_{t-1}/SOM_{t-1}}{CSN_{t-1}/1000} + a_3 @PC(GDP_{t-1})] +$$

$$+ b_1 d^2(OCUP_{i,t-1}) + b_2 d^2(OCUP_{i,t-2}) + b_3 d\left(\frac{CHA_{i,t-1}}{GDP_{i,t-1}}\right) + b_4 d\left(\frac{CHA_{i,t-2}}{GDP_{i,t-2}}\right) +$$

$$+ b_5 d\left(\frac{CHS_{i,t-1}/SOM_{i,t-1}}{CSN_{i,t-1}/1000}\right) + b_6 d\left(\frac{CHS_{i,t-2}/SOM_{i,t-2}}{CSN_{i,t-2}/1000}\right) + b_7 d[@PC(GDP_{i,t-1})] +$$

$$+ b_8 d[@PC(GDP_{i,t-2})] + e_{it}.$$

where

$d^2(X) = (1 - L)^2 X_t$, and L is lag operator: $L(X_t) = X_t - X_{t-1}$;

$@PC(X_t) = [(X_t - X_{t-1})/X_t]\cdot 100$, one-period percentage change (%);

$OCUP_{it}$ = employment, in county *i*, year *t*, thousand persons;

SOM_{it} = unemployment, in county *i*, year *t*, persons;

GDP_{it} = gross domestic product, in county *i*, year *t*, millions RON;

CHS_{it} = unemployment indemnity (and Support allowance, until 2006), in county *i*, year *t*, thousand RON;

CHA_{it} = expenditure for active policies to stimulate the increase of employment in county *i*, year *t*, thousand RON;

CSN_{it} = average net nominal monthly salary earnings, in county *i*, year *t*, RON

If $\beta < 0$ is econometrically significant, then the model evolves towards a long-term equilibrium relationship:

$$d(OCUP_{i,t-1}) + a_1 d\left(\frac{CHA_{t-1}}{GDP_{t-1}}\right) + a_2 \frac{CHS_{t-1}/SOM_{t-1}}{CSN_{t-1}/1000} + a_3 @PC(GDP_{t-1}) = 0$$

In other words, the long-term equilibrium relationship is:

$$d(OCUP_{i,t-1}) = -a_1 d\left(\frac{CHA_{t-1}}{GDP_{t-1}}\right) - a_2 \frac{CHS_{t-1}/SOM_{t-1}}{CSN_{t-1}/1000} - a_3 @PC(GDP_{t-1})$$

For the above model, we selected VAR process with lag = 2 by using VAR Lag Order Selection

Criteria from EViews-8, with lag – max = 15, as follow:

Lag	LR	AIC	SC	HQ
1	NA	12.82	13.28	13.00
2	102*	11.85	12.8*	12.2*
3	23.47	11.91	13.30	12.47
4	11.24	12.12	13.98	12.87
5	15.22	12.27	14.58	13.20
6	25.14	12.23	15.01	13.35
7	25.23	12.16	15.40	13.46
8	13.53	12.28	15.98	13.77
9	18.64	12.27	16.44	13.95
10	25.12	12.08	16.71	13.94
11	9.92	12.22	17.31	14.26
12	19.77	12.05	17.60	14.28
13	24.12	11.67	17.69	14.09
14	15.31	11.51	17.99	14.11
15	13.63	11.3*	18.27	14.11

* indicates lag order selected by the criterion

LR: sequential modified LR test statistic (each test at 5% level)

AIC: Akaike information criterion

SC: Schwarz information criterion

HQ: Hannan-Quinn information criterion

In above table, excepting AIC (inconclusive, lag = 15 is not acceptable), all other criterions indicate the lag = 2.

5. Results and conclusions

The EViews-8 results of the model are as follows:

Vector Error Correction Estimates

Determinant resid.cov.	32330
Log likelihood	-6390.2
AIC	21.871
Schwarz criterion	22.169

In order to reduce the publishing space, we have not presented the cointegrating equations for the other variables: $\frac{CHA}{PIB}$, $\frac{CHS/SOM}{CSN/1000}$ and $@PC(GDP_{t-1})$.

In the model, $\beta = -8.77E\text{-}05 < 0$, is negative and significantly different from zero (t-stat = -5.28629). This means there is a long-term relationship between dynamics of employment and the exogenous variables from model:

$$d(OCUP_{i,t-1}) = 5402.507\, d\left(\frac{CHA_{t-1}}{GDP_{t-1}}\right) -$$

$$- 5086.404 \frac{CHS_{t-1}/SOM_{t-1}}{CSN_{t-1}/1000} +$$

$$+ 639.835 \ @PC(GDP_{t-1})$$

and all variables are significantly different from zero. But, the connexion between employment and compensation payments converges extremely slowly for this long-term stable relationship.

In other words, the raise of the expenditure for active policies to stimulate the increase of employment (CHA) was associated, in the period under review, with a positive trend in employment as long-term trend. Also as a long-term trend, increase in payments for unemployment indemnity and support allowance, in relation to average net nominal monthly salary earnings had a negative effect on employment growth, probably by stimulating a behavior of discouraging job search. Obviously, as was anticipated, the link between gross domestic product growth, @PC(GDP) and the dynamics of employment, d(OCUP) is positive on long term and significantly not null.

NEW CHALLENGES FOR TRADE PROMOTION ACTIVITY IN ACTUAL GLOBAL WORLD ECONOMIC FRAMEWORK

Octavian-Liviu OLARU[*]

Abstract

Export promotion strategy has to play play an important part in the development strategies of countries, especially of developing countries that seek to make exports an engine for economic growth. General category of Trade support institutions (TSI) exist in every country to help businesses developement, promote and sell their goods and services abroad.

Within TSI, we can consider that a TPO traditionally has a the leading role in "promoting" international trade, focusing on the most important activities in the field, in cooperation with the other component institutions of a national TSI. There may be more than one TPO per country, they are not homogeneous and can take many forms.

There has not been a revolution in trade promotion activity over the the past 20 years, but there has certainly been an evolution in the context of new prerequisits of the global world economic framework).

Keywords: *foreign trade promotion, services, TPO, efficency, export.*

1. Introduction

Export promotion schemes can play an important part in the development strategies of countries, especially of developing countries that seek to make exports an engine for economic growth. Membership in the World Trade Organization (WTO) is a critical tool for participation in the multilateral trading system. It requires opening domestic markets to international trade – where exceptions and flexibilities have not been not negotiated – but also provides huge market opportunities for domestic producers.

To design successful export development strategies, it is fundamental that governments and private exporters have a clear understanding of the applicable WTO rules and their implications for their specific individual characteristics.

The rules are complex. This book highlights the relevant rules contained in the WTO Agreement on Subsidies and Countervailing Measures (ASCM), covering manufactured goods, and the WTO Agreement on Agriculture (AoA).

In recent decades, global integration – together with openness to trade – has been a catalyst for strong economic growth for many countries, generating employment and reducing poverty.

Countries that have reaped the most benefi ts from international trade have focused on national trade policies and regulatory reforms that created a business-friendly environment so that fi rms could achieve export success. However, because trade policy is a complicated process that demands balancing competing and disparate interests, the process of reform is challenging for both the public and private sectors. Meeting these challenges calls for action on two fronts.

First, governments must take a holistic view of the policies, laws and regulations needed. They must be implemented in the right sequence to create a mutually reinforcing framework that fosters competitiveness and a business-friendly environment. Policies, laws and regulations should work together in synergy to achieve 'export impact for good'. Ministries, departments and government agencies must work in tandem to ensure policy coherence.

Second, for the reform process to strike the right balance among various interests, governments must secure the buy-in of all stakeholders, especially from the private sector.

2. Actual global economic trends

After growing by an estimated 2.6 percent in 2014, the global economy is projected to expand by 3 percent this year, 3.3 percent in 2016 and 3.2 percent in 2017, predict the World Bank specialists, in January 2015.

The fragile global recovery lie increasingly divergent trends with significant implications for global growth. Activity in the United States and the United Kingdom is gathering momentum as labor markets heal and monetary policy remains extremely accommodative. But the recovery has been sputtering in the Euro Area and Japan as legacies of the financial crisis linger.

Risks to the outlook remain tilted to the downside, due to four factors. First is persistently weak global trade. Second is the possibility of financial market volatility as interest rates in major economies rise on varying timelines. Third is the extent to which low oil prices strain balance sheets in oil-producing countries. Fourth is the risk of a prolonged period of stagnation or deflation in the Euro Area or Japan.

Growth in high-income countries as a group is expected to rise modestly to 2.2 percent this year (from 1.8 percent in 2014) in 2015 and by about 2.3 percent in 2016-17. Growth in the United States is expected to

[*] Professor, PhD, Faculty of Economics, "Nicolae Titulescu" University of Bucharest (e-mail: **livolaru@yahoo.com**).

accelerate to 3.2 percent this year (from 2.4 percent last year), before moderating to 3 and 2.4 percent in 2016 and 2017, respectively. In the Euro Area, uncomfortably low inflation could prove to be protracted. The forecast for Euro Area growth is a sluggish 1.1 percent in 2015 (0.8 percent in 2014), rising to 1.6 percent in 2016-17. In Japan, growth will rise to 1.2 percent in 2015 (0.2 percent in 2014) and 1.6 percent in 2016.

Trade flows are likely to remain weak in 2015. Since the global financial crisis, global trade has slowed significantly, growing by less than 4 percent in 2013 and 2014, well below the pre-crisis average growth of 7 percent per annum.

3. A new concept of trade promotion institutions

General category of Trade support institutions (TSI) exist in every country to help businesses developement, promote and sell their goods and services abroad. This category includes institutions governmental and nongovernmental institutions with a wide range of activities (TPOs – Trade promotion organizations, ministries - with an interest in export development, chambers of commerce and industry, economic development agency - with export focus, foreign trade representatives/offices, regional economic groupings -ith export focus), as well as specific sectoral bodies (exporters' associations, trade associations, chambers - agriculture and other sector specific, sector based bodies - industry and services) and institutions with specific functions (export credit and financing bodies, standard and quality agencies, export packaging institutes, international purchasing and supply chain management bodies, training institutions, trade law and arbitration bodies).

There is no standard format for a TSI and often more than one exists in each country.

Within TSI, we can consider that a TPO traditionally has a the leading role in "promoting" international trade, focusing on the most important activities in the field, in cooperation with the other component institutions of a national TSI. There may be more than one TPO per country, they are not homogeneous and can take many forms.

In some countries TPOs are part of governmental bodies, in others they are statutory agencies created by public law, in others, private sector bodies (e.g. chambers of commerce in Austria). Sometimes they are a combination of public and private enterprise (e.g. Swedish Trade Council).

One TPO may represent smaller nations while larger nations may be represented by TPOs at regional and local/city levels. However, one is generally recognised as the national TPO in international meetings because of its public law and funding status. Nevertheless, export customers will use the most convenient TPO that can best meet their needs. A few TPOs have responsibility for promoting tourism, but more combine their exporting role with that of promoting inward investment.

TPO services can be those demanded by the exporting community, perhaps in response to a customer needs analysis, or in response to an analysis of the requests received. TPOs may also use information from around the world to identify opportunities in markets and sectors as yet unnoticed by the country's exporters. This would be seen as proactive work by the TPO, with the balance of responsive and proactive services being at the TPO's discretion. However, many TPOs offer only a fraction of large range of specific activities due of limited resources or legal powers, customer demand, or competition from other component of the national TSI.

The main groups of functions with the greatest potential for a TPO are the folowing:

Information. The main objective of a TPO is to put sellers in touch with buyers abroad and facilitate the development of that contact. TPOs can provide information about buyers and sellers, for example size, turnover, contact details, market reputation, customer attitudes, competitiveness, methods of doing business, market size, TPOs assemble and distribute information via publications, websites, selective e-mail and in person at enquiry points. They may also delegate this task to provincial offices and agencies closer to the exporter.

TPOs can make information available to exporters via the following channels:

- Websites (either open access, or access limited to registered users).
- Distribution systems which attempt to match information to users by means of a pre-established profile (often known as Selective Dissemination of Information). This is normally sent by e-mail or by text (SMS) or postal delivery where the infrastructure or culture does not support e-delivery.
- Publications.
- Information centres (with personal, telephone or e-mail contact with TPO staff, or combinations of methods)
- Announcements in newspapers, trade magazines or on radio where other more targeted methods cannot be widely used.

Advisory services. The TPO is seldom organized in such a way that it could provide advisory/consultancy services of that kind. It essentially provides intelligence on foreign markets, and then connects potential suppliers and purchasers. Where a TPO can provide such advisory or consultancy services, it would be a very useful adjunct to the NSB's conformity assessment services, as the conflict of interest would not arise. In this case the NSB and TPO should cooperate closely to ensure that the TPO advisory/consultancy service is successful in helping upgrade the product, process or service so that it meets stated requirements, and can be tested and certified.

Promotion in target markets. Once a TPO has identified details of potential buyers and markets, and the exporter has decided to develop the opportunity, it can facilitate contact between buyer and seller. This could involve providing and/or subsidising participation by the exporter, either alone or with other enterprises, at an international trade fair. It can also organise buyer/seller missions to and from the target market. All these activities are aimed at developing the contact between buyer and seller, and making the exporter more aware of the export market conditions.

Support abroad. TPOs with networks of offices or representatives overseas can provide additional help to the country's exporters – this is particularly important for SMEs without agents or distributors in a new market able to deal with local requirements in the local language.

SMEs often need to use the TPO's overseas offices, the country's embassy or other representatives to make these introductions and identify translation and interpreting services. Larger TPOs with extensive overseas networks can assist exporters with such local market knowledge. However, TPO employees are expensive to relocate in foreign markets, and are usually supplemented by local staff who can provide local language capabilities and knowledge at lower cost.

Import promotion offices have been established in some developed economies to support SMEs from developing economies gain access to their markets. Typical examples include the Netherlands Centre for the Promotion of Imports from Developing Countries (CBI), or the Swiss Import Promotion Programme (SIPPO).

Role of TPOs in trade development. The TPO focus changed with the arrival of the Internet, enabling exporters to search for market information directly rather than through a TPO, and to contact potential buyers via e-mail, business etworking sites or electronic marketplaces. In response, some TPOs began to intervene earlier in the export process ("going-up-stream") to help exporters become export-ready in developing and adapting their products. This has challenged TPOs to equip themselves with additional skills. If TPOs do not provide assistance in export-readiness then it may become the responsibility of separate small firms agencies (the United Kingdom's Business Link network is one example). Some TPOs (e.g. those of Sweden and Norway) in developed countries provide more detailed support ("going downstream") and offer full cost consultancy services in competition with the private sector.

TPOs in developed markets usually direct customers to sources of advice rather than themselves becoming involved in specializations such as packaging, transport, financing and insurance, which require knowledge and skills not usually possessed by government officials. Thus they have not traditionally provided information about technical regulations or standards required by exporters to meet market needs. In view of the globalisation of trade and greater movement of goods between countries, it is more important than ever that exporters have better information on market entry requirements.

Actualy, TPOs service has been extended to helping exporters set up overseas subsidiaries and generate profit from manufacturing abroad (outward investment). In parallel with globalisation and the transfer of manufacturing facilities to lower cost economies is a dependence on selling services (such as professional advice, construction activities, transport). TPOs have had to develop mechanisms to assist service suppliers, whether professionals – e.g. architects, lawyers, accountants, or onsultants – e.g. business or internationally tradable services. The tools developed for selling goods (e.g. trade fairs) are not necessarily relevant to selling services. Here, trade missions that concentrate on personal introductions have generally been more effective. However the provision of market information is common to selling goods and selling services.

Although the range of TPO services provided may seem quite wide, in reality it is relatively narrow. Surveys show that, even in developed markets like the UK, some 40 % of exporters are unaware of the existence of a TPO. Large companies tend not to need TPO services because they generally sell established products to established markets, and know their buyers and markets well. If they wish to enter a new market, they will probably appoint an agent or distributor, or set up a local office and not require TPO services. An exception might be a service organization, such as a large distribution or construction company, requiring diplomatic support to reach decision makers in the local ministry. Service organizations such as banks, and professionals such as architects and surveyors will rarely call on the TPO because it is unlikely to have the necessary knowledge and expertise.

TPO customers tend to be SMEs. In most sectors, micro businesses are normally considered to be too small to export, particularly if substantial amounts of working capital or effort is required to penetrate a foreign market. SMEs wishing to enter new markets or sell new products into existing markets may seek TPO help to find buyers and undertake market research. Such a service is likely to be low cost or free of charge.

4. The value chain approach

The value chain approach is used by many organizations to show how fragmented activities can be coordinated to reveal interconnections and inter-dependences between international traders and economic operators in different countries. Value chains highlight the fact that most products and services are produced by a complex and sequenced set of activities. Developments in global markets over the past few decades have greatly increased the complexity of inter-company linkages and the ways in

which the activities of different organizations are coordinated.

From a policy perspective, value chains are increasingly utilized to address two key issues in business development and trade promotion:

How to mobilize, and work with, the private sector to promote development, reduce poverty, and shift from supplyside to demand-side interventions.

How to support the productive activities of small producers and marginalized populations in the context of globalization.

Developing a value chain for a product or service in a specific country will focus attention on the coordination of fragmented production and distribution systems, and the options open to an enterprise in managing relationships along the chain. It is also an opportunity to identify the points at which TPOs could lend support. Any gaps can be easily identified, and programmes to develop appropriate capacities can be established. This may be more valuable to the SME sector than to large exporters already familiar with the sequence of processes and players, who have developed their own methods of dealing with potential gaps.

Case study – Tourism. Tourism is a multi-dimensional service industry. In most countries where the importance of tourism is recognized, the industry falls under the auspices of a specific government body or tourism board.

The principal role of the TPO would be to help promote home market image building and tourism during trade fairs and similar events. This is as important as promoting any manufacturing industry, particularly as tourism is a major foreign exchange earner in many countries. Links between TPOs and tourism boards can be of significant value where home market image building is planned. The challenge however, is that the key TPO home country customers are more likely to be exporters than hotels, restaurants and tourism service providers.

Similarly, the normal TPO target audience in foreign markets would be the retail consumer seeking to buy the product, rather than the business community.

The service sector is growing, and the international standardization community is increasingly involved in developing standards to provide guidance in the quality of service delivery.

5. Conclusions

Generally, TPOs have become more global in their outlook. Once they would have helped only those firms exporting products manufactured or originating in their own country. Today, if there is enough added value in the TPO's country as part of a global supply chain, the TPO recognizes the need to assist this customer (foreign companies, as a part of the global supply chain).

More and more, TPOs have a mandate to assist enterprises in their country to invest overseas in order to increase efficiency and reduce costs by outsourcing. This generates dividends that can be repatriated to the home country. Some TPOs have also embraced the role of encouraging foreign direct investment, which gives them the supply capability to export competitive products.

Other TPOs have joined forces with tourism promotion in Western Europe, a sizeable export earner in its own right in many countries. Yet others have pursued the development of an enterprise upstream by taking on responsibility for the development of small firms and exploitation of new technologies.

The way TPOs communicate with their customers has certainly evolved over the past 15 years. From a situation where all contact was by post, telephone or telex, TPOs now communicate by e-mail, through web sites or SMS, and have organized their enquiry response facilities in call centres, frequently offshore.

Customer care has also been streamlined. An enquiry from an enterprise was once handled by a local office, routed to headquarters and then sent to the overseas network if the headquarters deemed it necessary. This rigid way of working has been replaced by TPOs, such as those in the UK and France, making substantial reductions in the size of their headquarters. They now facilitate the transfer of enquiries directly from customers or local offices to the overseas network of trade representatives and vice versa. This trend is likely to strengthen in the years ahead, with continued reductions in head office staff.

These are clear indicators that TPOs have been moving with the times and the situation is not as it was two decades ago ago.

Not only are national TPOs continuing, but in several European countries, such as France, Spain and the UK, there exist important regional TPOs. This trend has emerged with the devolution of powers within countries, but is also driven by customer demand for a service that is more focused on their area and their individual needs.

The number of customers who continue to seek assistance also supports the need for TPOs. The way in which they expect their needs to be satisfied may be changing (such as using the TPO web site rather than the traditional trade information centre), but they still appear to be seeking support.

However, while recognizing the value of their service to the needs of small and medium-sized enterprises (SMEs), we should not overlook the fact that in virtually every Western European country, most exports and most outward investment goes on without any intervention or knowledge by the national TPO. This situation has not changed in the last 40 years.

What TPOs are doing might be described as being at the margins. The average European SME knows about marketing and selling and needs little help from government organizations to do this in the

home market. But to go abroad, they need help in accessing information, perhaps in analysing it and certainly in having an outreach.

TPOs, with a network of offices abroad, have a major advantage. The TPO can assist SMEs, which usually have no such network and need help to make contacts in an overseas market and to set up meetings. A large enterprise usually has no such need, unless it is the political influence of an ambassador to open the doors of a large public organization.

Services, once called "invisible exports", account for the majority of a country's production. Getting information on overseas markets and penetrating them when there is nothing tangible the exporter can show is quite a different challenge. Most TPOs do not yet recognize this, partly because they do not know how to respond to enquiries and partly because their staff do not have the skills and knowledge to do so.

In keeping with the experience of the EU countries in field of specific practices and techniques aiming to foster their international economic relationship, foreign trade promotion activity has to represent for Romania, one of the most important components of the national economy development strategy. This activity has to be developed in accordance with the provisions of the international agreements in which Romania is a signatory part, as well as with the international market rules and procedures. Within this framework, the promotion of the Romanian companies dealing with foreign trade activity by an adequate conceived system of governmental and non governmental TPOs is acquiring new dimensions, having to become one of the main pillars of the XXI century economic development of the country. This problem has to be taken into consideration by the Romanian governmental and non-governmental bodies, taking in view that each economic operator acting in the field of foreign trade should take big efforts in order to penetrate and maintain its position on a very competitive international market.

Being aware of both the importance of the promotion activity in attaining the strategically objective of growing efficient exports and the fact that the high costs implied by the export promotion activities could be prohibitive for many Romanian exporting companies, especially for SMEs, the governmental decisions makers together with the Romanian business community, have to take a lot of measures looking for redressing this situation.

For a national export strategy to be effective, strong linkages with other economic and developmental strategy initiatives are required. Strategy makers must look beyond existing export capacity and work towards ensuring that new export capacities are generated.

Promoting export-oriented foreign direct investment must go in tandem with promoting exports in the international market place.

Developing higher value-added export performance must be directly supported through, for example, developing strong backward linkages in industry and forward linkages in agriculture. Romanian strategy makers must look at "on-shore" domestic production issues, as well as "off-shore" market development issues when developing their future responses.

For a strategy to work, the private sector — perhaps the key player in implementing export strategy — has to be fully involved and committed to the overall process. The private sector has to "buy in" and feel responsible for the success or failure of the strategy. There must be a real and effective partnership between the public and private business sector.

THE INSUFFICIENCY OF FINANCIAL ANALYSIS FOR THE PERFORMANCE OF NON-PROFIT ORGANIZATIONS

Delia Corina MIHĂLŢAN*

Abstract

The paper work is based on the hypothesis that the financial analysis is insufficient when it comes to reflecting the performance of nonprofit organizations. Our main argument is the social purpose of non-profit organization, which is the reason why the analyst has to find optimal solutions for analyzing their performance while taking into account their social impact.

Our research focused on the conceptualizations of the performance of non-profit organizations and the adequacy of the existing models for analyzing it.

The research results refer to the limits of financial analysis regarding the performance of non-profit organizations because it can only offer relevant information regarding its effectiveness.

Keywords: *non-profit organization, financial analysis, performance, specific ratios, social impact.*

1. Introduction

The responsibility towards the stakeholders determines any entity to present financial/accounting information regarding its activity. Many times, the information in raw form doesn't say much to the user, hence the necessity to analyze them, to measure their performances based on them so that the stakeholders' requests be fulfilled.

The responsibility of non-profit organizations towards the interested parties takes shape based on the next reasons:

- the institutional purpose determines value creation;
- the social constraint determines social responsibility;
- the economic and financial constraint determines economic sustainability.

In this context, financial analysis, amongst others, becomes important for the non-profit organizations also, and not just for the corporations. However, based on the hypothesis that financial analysis isn't sufficient for nonprofit organizations and we intend for this study to expose the needs financial analysis responds to, as well as the reasons why it doesn't satisfy the stakeholders' informational needs from a non-profit organizations.

In order to achieve these objectives, we will focus our attention on the specialized literature to especially highlight those characteristics of non-profit organizations that distinguish them from companies and that have an impact on the needs that a financial analysis would respond to. Thus, we will try to identify analysis methods that adapt to their specific.

Currently, the non-profit sector in our country is poorly developed, and Romanian literature in this domain is poor, very few authors treat the aspects of financial analysis in the frame of non-profit organization. At an international level, things are different. Among the authors' concerns, the sector of financial analysis is found, some of them building a series of models of analysis appropriate for the non-profit sector.

2. Aspects that influence performance analysis

The performance is basically shown through the information from the enteritis's result account, however non-profit organizations, through their particularity, don't achieve profit. This would be one of the first aspects which argues that the elements that generate results don't provide a sufficient basis to analyze their performance. Thus, the classical financial analysis performance can't be sufficient.

"Performance measurement tools and techniques were frequently tailored to the particular contextual features and dynamics of each nonprofit organization and on the basis of their appropriateness to organizational values, goals and working practices."[1]

2.1. The performance's points of view in the non-profit sector

A number of authors believe that the non-profit sector, performance is often judged by its three points of view:

- Economics: attempting to minimize resource consumption (inputs in the system);
- Efficiency: trying to optimize the relationship between inputs and outputs (consumption of resources/results);
- Effectiveness: the outputs are compared to the

* PhD Candidate, "Valahia" University of Târgoviște (e-mail: **dellya_c@yahoo.com**).

objectives.[2]

According to Cadena-Roa, Luna, Puga, associational performance has been considered as the dependent variable which can be regarded in four dimensions: efficacy, efficiency, legitimacy, and relevance. For our purposes, efficacy refers to the association's capacity to achieve its stated goals. Efficiency considers the association's ability to mobilize resources in an optimum way to achieve those goals. Legitimacy is considered both as internal and external; internal legitimacy reflects the association's capacity to have full cooperation from its members to achieve the stated goal; external legitimacy alludes to the importance that non-members confer to the association's activities and which moves them to support it. Finally, relevance refers to the social, political, economical, and cultural importance of the association's anticipated goals and unanticipated consequences. The associations may or may not be aware of their own relevance since this has been considered from a macro-perspective.[3]

Through the figure below we present the schematization of the relationship between an organization's features of performance management. Given the Figure no. 1, for performance analysis in non-profit organizations, it's necessary to identify the inputs, outputs and objectives of the system for them to be correlated. According to some authors[4], when identifying them, some problems are met that have to do with the measuring of:

- *the objectives* – non-profit organizations have diverse goals, some of them can only be identified, without being able to be measured in a relevant way for the performance analysis; certainly, the objectives that can be taken into consideration regarding the performance's analysis are the budgeted ones, respectively the expected revenues and expenses;
- *the outputs* – many of these can't be measured in value, for example, the progress of a child with disabilities who benefits from a foundation's program with activities in this field; however, an output indicator would be the actual amount of resources consumed in a program (expenses), but a big consummation of resources doesn't necessarily guarantee the results.

We note that the performance's analysis is not just the financial results and it's strongly imprinted by the non-profit organization's objectives which will materialize in outputs of which measurable values many times isn't representative for the performance analysis.

Figure nr. 1 -The relationships between the performance's points of view -

2.2. The non-profit organizations' working environment.

In order to evaluate and to predict the associative performance, in specialized literature there is this tendency to neglect the environment in which the association works and to show only importance only to the intra-associative characteristics.

According to some recent theories, the associations' performances depends on the relationships the associations have with the environment they work with, not just on the internal factors and the achieved goals.

"Organizations are viewed as closed-systems and attention is set on internal management efforts to improve performance—basically considered in terms of efficiency and effectiveness. Often, when those studies refer to the environment, they consider it mainly as the context, failing to analyze the reciprocity of influence between the association and the environment."[5]

"If we want to improve theoretically and empirically the way we measure associational performance, we should move beyond traditional theories and see organizations as open-systems whose performance is the result of organization–environmental interchanges. More recent theories stress that associational performance depends not only on internal factors as those reviewed in the previous sections ("Decision-Making" and "Cohesion"), nor on the merits of their goals, but also on the relations they hold with the environment."[6]

The organizations are means of collective action that are environment oriented. They are dependent on the environments in which they operate, being incomplete typical systems. In this way they are exposed to the external vulnerability and uncertainties. The figure bellow represents the main components of a non-profit organization and we can observe that all

[6]Giacomo Manetti, The Role of Blended Value Accounting in the Evaluation of Socio-Economic Impact of Social Enterprises, Voluntas (2014) 25:443–464, DOI 10.1007/s11266-012-9346-1, apud Aldrich and Marsden 1988, Scott 2003.

of the three dimensions influence and are influenced in the same time by the environment in which the non-profit organization operates as presented in Figure no 2. We can see that starting with the social aspects (purchase of input elements, human resources management, projection of internally generated elements), continuing with the economic ones (output production, association's legitimacy provision and relevance for the interested parties, cost management, registered growth) up to the environment protection management, the environment is important for all the processes.

"What we mean by environmental relations includes the structural characteristics of the system where they are rooted and those of the system or systems they want to exert influence on. It also includes the reactions to associational activities from institutions, stakeholders and other publics. Thus, we call environmental relations to:

- the characteristics of the system where associations are rooted,
- the characteristics of the target system and,
- the responses from it.

In a nutshell, considering internal factors as given, what associations may achieve depends not only on their actions, but also on the way the environment enables or constrains associational strategic actions."[7]

"There are certain accounting practices that measured not only economic performance but also social results achieved using various indicators of outcome and impact. Many of these attempts relied heavily upon voluntary information regarding quality to the detriment of quantitative and monetary assessment. In recent years, however, accountancy has made several attempts to create and implement quantitative-monetary measuring tools which can measure in monetary terms the social and economic output of, not to mention the impact generated by, all kinds of organizations (Blended Value Accounting, or BVA for short). The logic of a blended value analysis suggests that, first all organizations, create both financial and social value, and that, secondly, the two types of value creation are intrinsically connected rather than being in opposition in a zero sum equation (i.e. to generate more social value, an organization must sacrifice its financial performance)."[8]

Some authors (e.g. Manetti) have been promoted social return on investment ratio (SROI) as a way to enable the social enterprise sector to better understand the wider impacts of their services and activities and quantify the total value generated in monetary terms. The end result of the process of implementation of SROI analysis is an indicator that represents the return in socio-economic terms for every monetary unit spent on the project and/or in the organization as a whole.

3. Measuring performance through financial analysis.

Performance measurement represents one of the management's and the financial-accountant department's concerns. From the management's perspective, over time, all sort of strategies have been created, two of them being:

- the strategic model developed by Moore which is based on three pillars: social and financial value creation, sustainable support of donors and sponsors, and the organizational survival.
- the "Matacena"model which was tested by Bagnoli and Megali and is based on: social efficiency dimension, institutional dimension and economic, and financial dimension.

From the financial accounting's perspective, the performance analysis can be done considering those elements that have values that can be measured in a manner that is relevant to calculate performance indicators. In most cases, performance is analyzed on types of activities done by the non-profit organization, namely: fund-raising activity and the activities related to the undertaken programs. The indicators we present can be analyzed for a single undertaken activity, but also in relation to the activities undertaken in the past, in order to analyze the evolution in time of the performances achieved by those activities.

3.1. Performance of fund-raising activities

Within the fund-raising companies the consumed resources and the results are easy to be quantified because they have goals referring to obtaining financial or even materials resources. In order to analyze the companies' fund-raising performances, we can calculate the following indicators:

[8] Giacomo Manetti, The Role of Blended Value Accounting in the Evaluation of Socio-Economic Impact of Social Enterprises, Voluntas (2014) 25:443–464, DOI 10.1007/s11266-012-9346-1, apud Aldrich and Marsden 1988, Scott 2003.

- The campaign's efficiency – by comparing the total revenues generated by that campaign to the total expenditure undertaken to implement the campaign. This indicator will show how profitable the undertaken campaign is and whether the expenses are too high compared to the generated revenues
- The campaign's effectiveness – by comparing the generated revenues to the ones hoped
- The campaign's economy – by comparing the campaign's expenses to the total expenses undertaken by the non-profit organization;

The performance can be analyzed in a more specific way applying a series of indicators to the donations, whether financial or material. Thus, for the received donations, Acumen Integrat developed the following indicators:

Table nr. 1 - Indicators concerning the donations -

The Indicator's name	Explanation
The cost per monetary unit collected	It measures the amount of costs determined by collecting monetary unit from sponsors or partners.
The average value of a donation.	It measures the average value of a received donation, by comparing the total of the donations received during a certain time period.
The efficiency of a donations' transport costs	It measures the percentage represented by the transports costs of a donation out of its total value.
The delivery time of the donation	It measures the necessary time for a donation to arrive at its destination after someone has made a commitment to offer a donation.
Received donations	It measures the percentage of donated products that were actually received, out of the number of products solicited from donors

Source: projected based on www.indicatorideperformanta.ro

Taking into consideration that the fund-raising activities operates with financial resources, we can observe that it's quite easy to build analysis models for the performances achieved. The problem comes up when we talk about according a support that is one of material resources. Most of the times, these can be measured in value, but there are cases when a monetary value cannot be attributed to them due to some circumstances or characteristics of the donated materials. This would be a limit concerning the analysis of the performances achieved in the fund-raising zone.

3.2. Programs' performance

In order to identify the indicators that can be used in analyzing program performance, the model of how every program work has to be known, as well as all its elements: goals and objectives, resources (inputs), activities, outputs and outcomes. Outputs represent what a program actually does (e.g. informs a certain number of people regarding harmful effects of drugs consumptions), whereas outcomes are the results it produces (e.g. fewer drugs consumers). Depending on how these elements can be measured, the indicators can be projected in order to reveal the programs' performance.

In Poister's opinion, "non-profit programs should be planned and managed with an eye toward specifying and achieving desirable results. They should be viewed as interventions involving service delivery or enforcement activity that is designed to address some problem, meet some need, or impact favorably on some unsatisfactory condition in a way that has been defined as serving the public interest. The positive impacts so generated constitute the program's intended results, which would justify support for the program in the first place. A program's intended results, or its outcomes, occur "out there" in the community, within a targeted area or target population."[9]

In order to analyze the performance, a model such as the one presented in the Figure no. 3 can be used as "an organizing tool for identifying the critical variables involved in program design, the role played by each in the underlying logic, and the presumed relationships among them. Briefly, resources are used to carry on program activities and provide services that produce immediate products, or outputs. These outputs are intended to lead to outcomes, which are the substantive changes, improvements, or benefits that are supposed to result from the program. Frequently, these outcomes themselves occur in sequence, running from initial outcomes to intermediate and longer-term outcomes."[10]

Of all the elements involved in the programs model, the only resources that can be measured in value are the consumed resources and the number of beneficiaries. Generally, the relevant types of performance measurement include measurements of output, efficiency, productivity, service quality, effectiveness, cost-effectiveness, and customer

satisfaction. Thus, in order to be able to analyze the conducted programs' performance, the involved resources for running the programs, the programs' beneficiaries and the staff involved are taken into consideration

If we want to analyze the performance from a financial perspective, we focus on the resource consummation, output measure, the number of beneficiaries, employees and volunteers. When calculating the costs of involved resources, the total resources consumed in the program, as well as how much fixed assets wears out for the period in which they were used to carry out the program will be taken into consideration. Resource consumption also includes the share of the expenditure on the utilities and maintenance related to the means used in the program. Likewise, the expenditure with the employees and the volunteers involved in the program under analysis has to be taken into consideration.

The relevant indicators concerning the financial performance can be calculated by reporting the following costs to the number of beneficiaries:

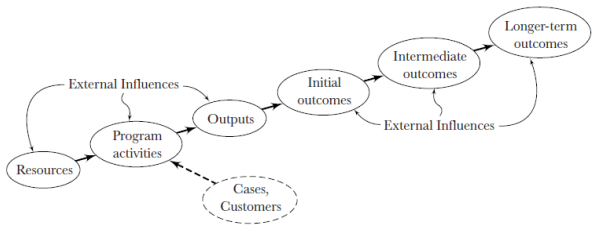
- costs of resources used in the program;
- costs of employees' wages;
- costs involving volunteers.

Output measures are important because they represent the direct products of nonprofit programs. They often measure:

- volumes of programmed activity;
- amount of work that is performed;
- the number of cases that are dealt with by a program.

In the financial performance analysis, the outputs are important as relevant information concerning the financial efficiency by comparing the costs with the achieved outputs can be obtained. Thus, efficiency indicators look at the ratio of outputs to the monetary cost of the collective resources consumed in producing them

Figure no. 3 - Generic logic program model -



Source: Poister, 2003:37

Concerning the financial performance analysis of the conducted programs in the non-profit organizations, the existing limits are connected to:

- Efficiency, in the sense that the maximum outcomes can't be quantified in value, due to the social goal of the organization, so the social impact of the changes brought in the program beneficiaries can't be quantified;
- Effectiveness, because the goals and the outcomes of a non-profit organization aren't of a financial nature, but a social one, these being able to be measured through non-financial indicators which are the tools of performance management;
- Economy, meaning that there are no parameters that provide indications of economic management of resources required for a particular program.

4. Conclusions

By exposing the characteristics of performance at the level of non-profit organizations, our study has confirmed the hypothesis that a financial analysis of the performance at the level of these types of entities would be sufficient to convey its global performance. Where the classical financial analysis can't answer the stakeholders' needs, the performance's management activities has to intervene by using specific tools in order to analyze the performance in non-profit organizations.

The performance in the non-profit organizations is seen as having social, economic and environmental facets. All of these are influenced by the environment in which the organization operates. The performance is defined in relation with the organization's goals, the consumed resources, the outputs and the achieved results from the activities, taking into account the outcomes (social impact).

At the level of non-profit organizations, we addressed the performance of fund-raising activities and of programs. In the first case, we concluded that a performance financial analysis would offer enough information concerning the conducted activities, with the very rare exceptions where material resource are donated which can't be quantified in value. In the second case, things are different. The main problem is connected to the fact that, most of the time, the outcomes of the conducted programs can't be quantified in money, which represents a limit when we talk about their efficiency and effectiveness analysis.

Beyond these limits, the performance can be analyzed with the specific tools of the performance management in the frame of non-profit organizations, a domain that can represent a new field of research that would bring benefits to the Romania's civil society.

THE ASSESSMENT METHODOLOGY PDCA/PDSA – A METHODOLOGY FOR COORDINATING THE EFFORTS TO IMPROVE THE ORGANIZATIONAL PROCESSES TO ACHIEVE EXCELLENCE

Cristina Raluca POPESCU[*]
Veronica Adriana POPESCU[**]

Abstract

In the paper "The Assessment Methodology PDCA/PDSA – A Methodology for Coordinating the Efforts to Improve the Organizational Processes to Achieve Excellence" the authors present the basic features of the assessment methodology PDCA/PDSA that is designed to coordinate the efforts to improve the organizational processes in order to achieve excellence.

In the first part of the paper (the introduction of the paper), the authors present the general background concerning the performance of management business processes and the importance of achieving excellence and furthermore correctly assessing/evaluating it.

In the second part of the paper (the assessment methodology PDCA/PDSA – as a methodology for coordinating the efforts to improve the organizational processes to achieve excellence), the authors describe the characteristics of the assessment methodology PDCA/PDSA from a theoretical point of view.

We can say that in the current state of global economy, the global performance includes the economic, social and environmental issues, while, effectiveness and efficiency acquire new dimensions, both quantitative and qualitative. Performance needs to adopt a more holistic view of the interdependence of internal and external parameters, quantitative and qualitative, technical and human, physical and financial management of, thus leading to what we call today overall performance.

Keywords: *Assessment Methodology PDCA/PDSA, Coordinating Efforts, Improve the Organizational Processes, Achieve Excellence, Business Process Management.*

1. Introduction

Given that currently in Romania there are not many studies dedicated to performance management business processes and the use its tools in Romanian institutions, we believe that an article in this field may represent a step forward in our contemporary society which is evolving and transforming.

A feature of recent years specific to the business world and not only is the concept of performance (Venkatraman, N., Ramanujam, V., 1986). Organizations increasingly face unexpected challenges, which require a very competent management situation (Verboncu, I., Zalman, M., 2005). This places an emphasis on achieving performance strongly in all areas. Organizations are continually concerned either to achieve performance or maintain their performance or to improve performance or to measure the performance obtained.

The new global economy, characterized by economic liberalization, globalization, increased competition close, the transition from the industrial economy to an economy based on knowledge, information and knowledge, the social, environmental restrictions to the needs of sustainable development, many financial crisis felt globally have determined the changing requirements directed to various economic entities and diversify their responsibilities towards all categories of owners of interest to society as a whole. In this new economic system, companies can also be seen as "cells" on which the health of all its "body" depends (Zairi, Mohamed, 1997). Therefore, we cannot talk about the viability of a company in a competitive environment, unstable and turbulent, without taking into account the importance of performance.

Improving the business processes or business process excellence means in real life a continuous confrontation with a multitude of complex situations or very complex, which creates difficulties, not infrequently caused by unprofessional approach to business. Such situations can be explained by complex: multiple interdependencies between processes, which can cause major conflict situations in processes, the high number of activities and processes, the variety of their high involvement human factor insufficiently prepared to cope with unforeseen situations, internal constraints and external dynamics in business-related events, and so on.

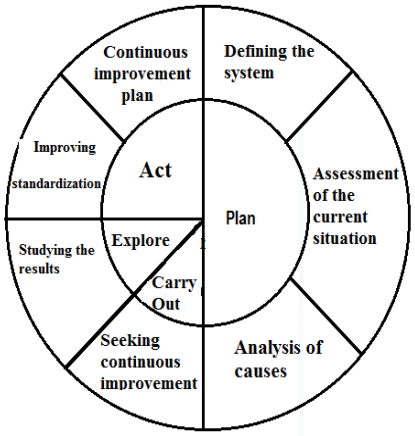
We believe that one of the most important assessment methodologies that are able to coordinate the efforts to improve the organizational processes to achieve excellence is the assessment methodology entitled PDCA/PDSA. This particular type of assessment methodology is analysed below.

[*] Associate Professor PhD, the Bucharest University of Economic Studies, Bucharest (Romania), (e-mail: **popescu_cr@yahoo.com**).
[**] Associate Professor PhD, Commercial Academy of Satu – Mare, Satu – Mare (Romania) and the Bucharest University of Economic Studies, Bucharest (Romania), (e-mail: **popescu_va@yahoo.com**).

2. The assessment methodology PDCA/PDSA – as a methodology for coordinating the efforts to improve the organizational processes to achieve excellence

The PDSA methodology for improving organizational processes originally developed in the 1930s Walter A. Shewhart, has its roots in the scientific method (Francis Bacon in 1620) (see Figure no. 1: PDSA Cycle – Walter A. Shewhart).

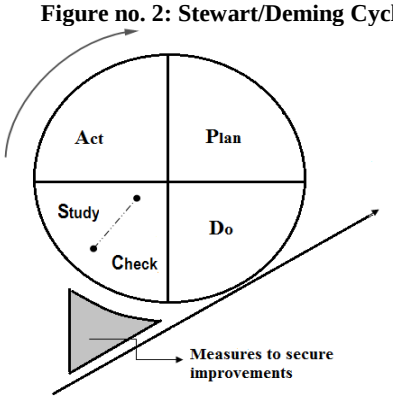
Figure no. 1: PDSA Cycle – Walter A. Shewhart



Source: Authors' adaptation after Walter A. Shewhart cycle in the process of continuous improvement

After the modification of W. E. Deming in 1950, this process can be found under the name PDCA, or "Deming Cycle". PDCA, designed to be used as a dynamic model, allows a continuous improvement process, every improvement meaning initiating a new cycle. Being a dynamic model, it implements the ideas and concepts that allow reconsideration process at any time. After applying the improvements deemed necessary, there may be a new cycle, which includes the latest enhancements. This process of continuous improvement processes contribute to the maturation subject to change (see Figure no. 2: Stewart/Deming Cycle).

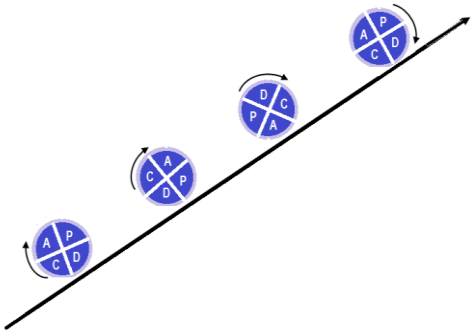
Figure no. 2: Stewart/Deming Cycle



Source: Authors' adaptation after Stewart and Deming cycle in the process of continuous improvement

Continuous improvement cycle can be graphically represented by the so-called "ramp of continuous improvement" (see Figure no. 3: Continuous improvement cycle).

Figure no. 3: Continuous improvement cycle



Source: The authors

Each concept that brings change can be represented by a spiral PDSA/PDCA. The ramp of continuous improvement can be sketched at an individual level, one cycle being followed by another, suggesting a spiral or a ladder.

Some of the ISO Standards (SR EN ISO 9000:2006, 2006; SR EN ISO 9001:2008, 2008; SR EN ISO 9004:2010, 2010) that are using PDCA methodology are able to improve organizational processes, such as the ISO 9001 defined for quality management (SR EN ISO 9001, 2009), ISO 14001 defined for environmental management (SR EN ISO 14001, 2000) and OHSAS 18001 defined for occupational safety and health management (OHSAS 18001, 1999).

The generic name comes from the initials PDCA methodology steps taken in a cycle: Plan - Do - Check - Act (Plan - Do - Check - Act), while PDSA cycle comes from the initials Plan - Do - Study - Act (plan - Do - Study - Act).

Prior to considering what needs improvement, identifying elements that provide opportunities in this regard. The aim is to select those elements of intervention that bring the greatest benefits in relation to the effort. Therefore, the planning phase is performed in two main steps.

I. The planning phase (Plan - Planning) aims to develop a plan of action to achieve change with the objective of continuous improvement; step is performed in two steps:

a) The first step, the identification of the problem involves: (a1) selection problem analysed; (a2) correct definition of the problem and determine precisely the elements on which it will intervene; (a3) setting measurable objectives and associated metrics in an effort to solve the problem for subsequent evaluation of progress; (a4) determining the coordination and implementation plan to improve.

b) The second step, the analysis of the problem involves: (b1) identifying processes that affect the question; (b2) choosing a pilot process; (b3) determining the actions taking place in the pilot

process, depending on how they take place in time; (b4) A graphical representation of the pilot process; (b5) pilot validation graphical representation of the process; (b6) identify potential cases they may face in the pilot process; (b7) data collection and analysis on the issue raised in the pilot process perspective; (b8) checking or reconsideration of the elements of the problem; (b9) identify the causes that generate the problem; (b10) collecting additional data, if deemed necessary; (b11) further actions of the other processes that impact on the problem, following the same steps as for the pilot process.

II. The implementation phase (Do - Execute) either to implement the proposed improvements or experimental testing of the proposed improvements, which will be implemented in a real system; this phase is performed also in two steps:

a) The first step in developing the solutions involves: (a1) to define the set of criteria on which the proposed solutions will be evaluated; (a2) determining the possible solutions to be applied to the root causes associated with the subject matter of discussion; (a3) choosing the best solutions in the set originally proposed; (a4) promoting this solution and promote it so that there is support for its implementation; (a5) planning solution selected.

b) The second step, the implementation of the solution selected, includes: (b1) implementation at experimental (pilot); (b2) identifying shortcomings and developing new improved solutions; (b3) applying the solution selected system-wide; (b4) to document improvement by developing procedures; (b5) additional data collection if using specialized mechanisms are necessary.

At the end, it is checked to what extent opted for solutions are interrelated to prevent possible conflicts between processes.

III. The verification phase (Check - Check/Study) involves checking the ability to meet the objectives set, closely following the conduct of key activities, to ensure that what was to be implemented properly understood, trying to identify and intervene in a timely manner, avoiding other problems that may arise in the process.

Therefore, this step involves gathering relevant data solution implemented by analyzing data in relation to the planned objectives. The verification stage is an important and also a mandatory step, allowing verifying the manner in which the system works according to the changes applied.

IV. The action phase (Action - Act) requires final verification of the effects of change, to determine whether it can be adopted. The proposed solution can be finally adopted, resumed or abandoned by its results.

If the change results in improving the solution adopted, but not before being subjected to partial or full standardization procedure, enabling exploitation.

Accepting the solution involves the deployment of a new series of actions that take into account: training staff to implement the solution; monitoring the effects of the implemented solution; identify opportunities for refining the solution and those that could contribute to its improvement. Conversely, if the solution has been ineffective assuming consumption of time and resources being accepted hardly holds or members, or if improvements are significant, it must be abandoned.

It will resume PDCA cycle, seeking to improve elements that do not meet expectations, extending to the new segments that can be considered. The resumption of the cycle involves time and increasing complexity of how the problem will be addressed. In his approach to continuously improve organizational processes, W. E. Deming defines a more evolved version of PDCA methodology, called FOCUS - PDCA. The FOCUS acronym comes from the initials of the main steps which define the methodology: Clarify – Find – Organize – Understand – Select (Identify – Organize – Clarify – Understand – Select).

3. Conclusions

The manner to carry out the management process in order to ensure the company's success depends on its position against competitors. Performance management processes and related terms include: strategic planning, financial planning and budgeting, performance measurement and monitoring, human resources management, project management and software, business process management, knowledge management, risk management, quality management, and so on. All these processes are carried out based on scientific management, integrating all management and many others may be necessary, depending on the specific. It is a modern approach achieved with methods and methodologies, tools and techniques that can be integrated in various forms of design, development and improvement of processes specific organizations.

Companies began to feel a pressing need for new and better methodologies for measuring organizational performance. In response to requirements arising from both the external environment and the internal organizations, practitioners, specialists, scientists, consultants, efforts to develop new methods for assessing organizational performance. The first steps have been registered in an attempt to improve financial performance measurement methods: the development and implementation of concepts such as activity-based management, economic profit, cash flow analysis and stakeholder analysis.

Reassessment concept implies defining performance indicators that reflect as close to reality operation. The identification and use of appropriate indicators for assessing the performance of an organization should consider putting them in correlation with long-term goals that they have in mind. Performance indicators should be properly identified, mainly due to the general vision that can

provide the performance of the organization. On their basis will be able to assess whether the strategy chosen by the organization after implementation and execution has helped increase its value.

The conclusions of this paper are:

PDSA methodology: PDSA methodology for improving organizational processes originally developed in the 1930s Walter A. Shewhart, has its roots in the scientific method. After the modification of W. E. Deming in 1950, this process can be found under the name PDCA, or "Deming Cycle". PDCA, designed to be used as a dynamic model, allows a continuous improvement process, every improvement meaning initiating a new cycle. Being a dynamic model, it implements the ideas and concepts that allow reconsideration process at any time. After applying the improvements deemed necessary, there may be a new cycle, which includes the latest enhancements. This process of continuous improvement processes contribute to the maturation subject to change.

PDCA methodology: The generic name comes from the initials PDCA methodology steps taken in a cycle: Plan - Do - Check - Act (Plan - Do - Check - Act), while PDSA cycle comes from the initials Plan - Do - Study - Act (plan - Do - Study - Act).

This dynamic environment subject to such constraints affecting the efficiency of type PDCA methodology developed to support continuous improvement effort, not to allow systematic completion of the four steps necessary steps. It is believed that PDCA assessment methodology, although provides a very systematic approach, is time and resource consuming. The time is compressed so much that PDCA is no longer able to ensure accuracy. Due to this fact, it is believed that by using this method there is a conflict between accuracy and time in which to reach a conclusion.

THE ASSESSMENT METHODOLOGIES PTELR, ADRI AND CAE – THREE METHODOLOGIES FOR COORDINATING THE EFFORTS TO IMPROVE THE ORGANIZATIONAL PROCESSES TO ACHIEVE EXCELLENCE

Cristina Raluca POPESCU[*]
Gheorghe N. POPESCU[**]

Abstract

In the paper "The Assessment Methodologies PTELR, ADRI and CAE – Three Methodologies for Coordinating the Efforts to Improve the Organizational Processes to Achieve Excellence" the authors present the basic features of the assessment methodologies PTELR, ADRI and CAE that are designed to coordinate the efforts to improve the organizational processes in order to achieve excellence.

In the first part of the paper (the introduction of the paper), the authors present the general background concerning the performance of management business processes and the importance of achieving excellence and furthermore correctly assessing/evaluating it. Aspects such as quality, quality control, quality assurance, performance and excellence are brought into discussion in the context generated by globalization, new technologies and new business models. Moreover, aspects regarding the methods employed to ensure the quality, maintaining it and continuous improvements, as well as total quality management, are also main pillars of this current research.

In the content of the paper (the assessment methodologies PTELR, ADRI and CAE – as methodologies for coordinating the efforts to improve the organizational processes to achieve excellence), the authors describe the characteristics of the assessment methodologies PTELR, ADRI and CAE from a theoretical point of view.

Keywords: *business process management, assessment methodologies, PTELR, ADRI, CAE, organizational processes, quality, quality control, performance, excellence, globalization.*

1. Introduction

The paper entitled "The Assessment Methodologies PTELR, ADRI and CAE – Three Methodologies for Coordinating the Efforts to Improve the Organizational Processes to Achieve Excellence" is dedicated to theoretical contributions to knowledge development in modeling business performance in the XXI century in the context of the approach to excellence. The paper presents in a concise manner some theoretical contributions to the knowledge development in modelling business performance in the XXI century in the context of the approach to excellence and describes, from a theoretical point of view, the assessment methodologies PTELR, ADRI and CAE, which are three methodologies for coordinating the efforts to improve the organizational processes to achieve excellence.

The quality of products or services or their management, is a decisive factor in the activity of any society whose dynamic is changing and developing, under any market economy. The concept of "quality", first found in Aristotle's philosophical system, is of great importance in our lives of all, quality is a powerful strategic management for global organizations that determines the highest degree measure competitiveness of products or service organizations, companies or firms both domestically and internationally.

In terms of the approach and quality management systems, identify over time, evolving carried out in several stages, each with specific characteristics: quality inspection stage, stage quality control by statistical methods, step to ensure quality, quality management stage, the stage of total quality excellence.

The new approach takes into account the quality control by focusing specifically on preventing and eliminating defects being applied in all areas by all parties:

- Quality control of the product design begins and ends with the delivery of its client;
- Control is performed both specialized inspection staff and by each person involved in the manufacturing or service provision;
- To achieve the goals of "quality assurance" is necessary to involve all departments of the company.

In this new context it is necessary to conduct periodic audits to analyse the observance of the quality system adopted his efficiency, the need for change, able to increase the quality and competitiveness. Since this is a system of relations between the coordinating and his subordinates, so between people, quality achievements in this field and effects achieved will create new end features including managers and work climate created between team members.

[*] Associate Professor PhD, the Bucharest University of Economic Studies, Bucharest (Romania), (e-mail: **popescu_cr@yahoo.com**).
[**] Professor PhD, the Bucharest University of Economic Studies, Bucharest (Romania), (e-mail: **popescu_gh_cafr@yahoo.com**).

In the current economic context, marked by the growing importance of quality as a determinant of the competitiveness of organizations, there is a concern for both febrile production units and those providing services, the use of new techniques and tools applicable to quality management, the main purpose to continuously improve performance in order to achieve a higher degree of satisfaction and complex customer requirements, with maximum efficiency and effectiveness.

Quality and excellence are relative and subjective values to which it tends, though not always successfully. Quality, defined in relation to the cultural, economic and social needs, expectations and requirements of customers in science and technology in continuous progress, is developing permanently.

The methods employed to ensure the quality, maintaining it and continuous improvement, total quality management meet.

Total quality management, managerial concept that takes shape, centres its activities on quality and full involvement, awareness and responsibility of all employees. TQM concept consisting of a set of complex processes, aims to continuously improve product and service quality, customer satisfaction purposes. Quality assurance system has been the subject of international standards ISO 9000 which were taken in Romanian standardization. In the years 2000 - 2001 appeared in the new version of ISO 9000 which covers quality management system, also taken in Romanian standardization.

The elements with major impact on the modern approach to quality strategy found in three elements that have brought significant changes in the modern era, internationally:

- Globalization of markets in which we approach most of the true meaning of the phrase: "Our customer, our master", while the customer requirements may seem exaggerated sometimes unexpectedly;
- New technology, which is in a boom, driven by a variety of factors, including a role they have e-commerce and e-Business to Business market;
- New business models characterized by excellence and transparency strongly supported the crucial role they have resources "intangible" (man-pawn mainly found in relationships with customers, partners and suppliers, intellectual capital, technology, know-how built the products, technologies, manufacturing or other economic links in the chain, top management).

The fourth stage of quality, total quality management defines the framework for introducing new concepts such as "zero defects", "quality circles", including the Japanese principle of "CWQC - Company Wide Quality Control" Kaoru Ishikawa defined meaning to "control the quality of enterprise-wide".

The road to total quality excellence organizations must continuously watch:

a) Ensuring full customer satisfaction (requirements, needs, expectations), depending on the type of products and / or services they perform and / or provides each department, department or functional structure of the organization;

b) Regular analysis within each department, department or functional structures, to:

- results and the state in which the plans for achieving performance indicators established;
- flexible and rapid feedback to requests and events, regardless of when they are asked by customers;
- risks related products and / or services performed and / or supplied;
- costs due to effective and efficient use of resources;

c) Emphasis on improving processes that can lead to the best results;

d) Obtain advantages to maintain the competitiveness by improving organizational capabilities;

e) Motivating employees to ensure their active participation and involvement to achieve organizational goals and objectives proposed;

f) Ensuring and maintaining the trust of all stakeholders in enhancing organizational effectiveness and efficiency.

The key concepts of TQM are "excellent", "exceeding customer expectations", "zero defects" total involvement provided by the organization and management primarily of its elite and collaborating organizations.

International Organization for Standardization (ISO - International Organization for Standardization) 9000 series of standards adopted on quality management in response to increased market globalization challenges, the result of a long process of evolution, which began in the US Being generally accepted in 1950, the results of ISO take the form of international standards, guidelines and other similar documents whose objective involves the development of standardization and facilitating the international exchange of goods and services. Initial regulations aimed at improving the performance quality of organizations, then complemented by a series of quality assurance standards, including those corresponding industries, thus extending gradually their range of applicability, culminating in the adoption in 1987 of a series of ISO 9000 standard is applicable to this form especially by organizations in the field of production. Subsequently, to make it applicable not only in production organizations, the standard was revised and officially adopted in 1994 by the International Organization for Standardization.

These standards and regulations are widely used in the international market, in accordance with the technical requirements that meet standards of quality, safety, hygiene and environmental protection, deadlines, costs and requirements on the content of social elements.

The standards have come to be regarded as frequently as practical tools that allow addressing those urgent challenges which the international community must face.

The public or private sector managers have come to refer spot on the application of international standards ISO in organizations they represent, and this is a major asset for attracting, maintaining and winning new customers, while focusing on improving their work.

To excel in business means being better than the other competitors, particularly through performance management, financial, quality, thus highlighting both the situation of an organization performing the superlative way and all the factors due to which it has come to excel. "Business excellence" highlights a complex system of performance appraisal which gives the organization a maximum level of credibility in the market. Evaluated and compared with well-defined benchmarks, the performance achieved by an organization can determine a "business excellence", its specific. Moreover, to achieve public recognition of the excellence award is made by the quality attributed to the fulfillment of a complex set of criteria and performance evaluations conducted in the most discerning and transparent way possible.

All of criteria and sub-criteria global reference that can quantify overall performance of an organization, consisting of both the drivers and the practical results thereof, may obtain coveted ensure quality, which is the attribute model of business excellence.

There are many countries that have developed over time through sustained efforts, their own models of excellence, then using them as structures in a process of assessing and recognizing performance in organizations through special programs providing awards in recognition of the value and performance.

2. The Assessment Methodology PTELR – a theoretical approach

J. Naisbitt (Naisbitt, John, 1982) predicted, more than three decades ago, the development of a new paradigm of thinking imposed by globalization. The management science, in front of many challenges such as the globalization of business in a galloping pace, constantly raises issues of adaptation of organizations in terms of the external environment, the global market is found most often in the form of a system of interdependent markets characterized by competition closer every day.

In the current situation, organizations cannot take decisions independently, as they did in the last few decades, which puts organizations in a position to reconsider priorities if successful management intend, characterized by excellence, is expressly preoccupied respond swiftly to customer requirements vis-à-vis: delivering quality products and services in a timely manner, ensuring their high performance, coming up with tempting offers at prices or rates, providing a wide range of types of buyers.

Given the information revolution that allowed the transition from classical to integrate production output by computer (CIM - Computer Integrated Manufacturing), management companies had to develop competitive strategies increasingly complex by: tracking multiple aspects regarding the quality of products/services delivery their timely adaptation to consumer needs, low cost; simultaneous tracking of multiple market segments; following the development of new products.

It should be noted that between globalization and enterprise activity tightly reflected including management activities need to adapt the current situation that arises more often focus on driving business networks, the dissolution of the company functions on loyalty management and competition, which takes extremely varied forms.

In the current economy, we note the decisive role of the globalization process, supported by three significant factors influence resizing markets, deregulation, and power organizations to integrate activities worldwide. Specifically:

a) The area of international trade was essentially scaled by integrating new states in Latin America, Central and Eastern Europe and in Southeast Asia;

b) There have been taken action on de-regulation, which provides trade facilitation, with positive consequences, particularly visible in services;

c) By globalization many organizations have proven competence to integrate their activities, particularly research and development, supply, production and marketing worldwide.

As a result of globalization of markets and businesses, the globalization of competition has made its presence felt acutely. Therefore, the consequences of success or failure in competitive national market will not long be limited to that country, but have an important impact on the overall competitiveness of the company, being felt worldwide.

Rush globalization results in an inevitable interpenetration of national economies recovered in the growing importance of the role of trade, investment and foreign capital in gross domestic product (GDP).

Companies that do not meet the criteria imposed by the accelerating pace of globalization, it is conceivable to resist. Conditions in this context are closely related: who is stronger stand, who is faster, more creative, who face in the best manner competition. Challenges and responsibilities are so high, more so in this context that any defect, however small, in a country allows a link in the chain weakening economic interdependence, which in turn may cause a blockage of the entire gear.

As a conclusion to briefly review past issues, businesses today operate in an environment of competition at its best; the "speed" leads posted at all levels, distinguishing between those who adapt and those who fail. We are dealing with borderline

situations where the speed with which firms fail to develop, promote and capitalize on their new products and services is a critical element of competitiveness (Chen, J.M., Tsou, J.C., 2003).

In addition, the life cycle of the supply of products and services is becoming less (Gunasekaran, 2002), which translates into shortening product life cycle, which can seriously affect the company that has provided a relatively reduced to recoup the investment (Seghezzi, 2001).

In conditions of fierce competition in the market, the company is continuously subject to the need for innovation. There are situations where the company is located in the state in which you have to resort to radical changes in the supply of products and services to succeed in achieving superior financial performance (indicators are taken into consideration such as the rate of profit, return on investment, and net updated financial internal rate of return). Moreover, competitive advantage is provided and the ability of the company to be the first to bring to market the product or service requested, subject to the qualification and quality expected (Cole, 2002).

The result of these challenges can have unpleasant consequences if an effort to achieve maximum performance is maintained and correlated.

The effects imposed by the "speed" with which we have achieved "any", "however" significantly reduce: the time that would be spent on new product development, production and delivery times, the possibility that all generated by new circumstances to cause fewer errors or non-compliance, for the supply of goods or services "anyway" is excluded in achieving performance.

This dynamic environment subject to such constraints affecting the efficiency of type PDCA methodology developed to support continuous improvement effort, not to allow systematic completion of the four steps necessary steps. The PDCA assessment methodology, although a very systematic approach, is time and resources consuming. The time is compressed so much that PDCA is no longer able to ensure accuracy. We are faced with a conflict between accuracy even tackling and time in which to reach a conclusion.

Therefore, from a methodological point of view, should be identified new solutions able to solve the conflict without complications or major shortcomings.

Altshuller (Altshuller, 2000) propose to solve this conflict the method TRIZ (www.triz.org) that would allow innovative use of three principles: 1) conducting preliminary actions; 2) replacement of components deemed rigid with others characterized by flexibility; 3) more efficient use of the possible "downtime".

Based on these three new principles, Cole (2002) proposes a new methodology to improve adapted to the new environment defined by dynamism and uncertainty: PTELR, from the phrase: "Probe and learn as alternative approach" – "Probe/Probe and learn as alternative approach". PTELR methodology acronym comes from the initials of the four main phases that compose it: Tests - Test - Evaluate - Learn - Refine.

We recognize the crucial steps in the methodology of PDCA methodology, but carried out in an accelerated pace, with modifications adapted to the "speed" facing humanity globally.

"Probe/Probe and learn" is essentially an accelerated plan PDCA cycle. Unlike the conventional PDCA, probe/prove and learning is a process in which we are confronted with many difficulties on planning, plus those from the stages of implementation and verification. "Probe and learn" is a process of renewal being totally consistent with the ultimate goal of continuous improvement. Rapid learning and accelerate product development is a first requirement in this era in which firms operate increasingly more Internet. Briefly, learning and the process are two of the continuous improvement principles (Cole, 2002).

If planning phase (P) is allocated a minimum of time, execution stage (Do) is allocated a time almost exaggerated somewhat justified by the fact that at this stage develop a "prototype" of the system, tested and evaluated later. Based on lessons learned from the errors identified in the prototype, the process is improved. We notice that PTELR methodology is based on rapid learning, first of errors identified during the evaluation process which takes place in late stages of execution and, secondly, the results obtained by applying iterative methodology.

PTELR methodology assumes that generating error is part of the learning process. Errors are sometimes beneficial, should not always be avoided or suppressed, but rather minimized by careful management of probing and learning processes. Companies should learn to manage errors in the future this step is an important indicator of their success. Contributing to identify errors "useful" without error "enemy", companies enrich their experience and allow progress.

PDCA is a methodology of continuous improvement, innovation PTELR is continuous methodology (Cole, 2002), which is recommended to be used in companies that have already implemented the EFQM model.

PTELR methodology being developed exclusively for accelerated dynamic processes that involve a high level of innovation is not yet sufficiently complete and tidy and is therefore less represented. In conclusion for a highly dynamic process is recommended PTELR methodology.

When it is considered that the process proves mature enough, it is preferable that the methodology to be replaced PTELR FOCUS-PDCA methodology.

3. The Assessment Methodology ADRI – a theoretical approach

Organizational performance can be evaluated using size: approach, implementation, results and

improvement, based on which defined methodology known under the acronym ADRI being used so MBNQA (2006, Criteria for Performance Excellence, Baldrige National Quality Program) American model of organizational excellence and the Australian model of organizational excellence ABEF (2012, Australian Business Excellence Awards 2005, Standards Australia International Ltd.). Acronym ADRI methodology for continuous improvement of organizational performance is named after the initials that define the process: Addresses - Conducting (Implements) - measure results – Improves (2012, Australian Business Excellence Awards 2005, Standards Australia International Ltd.).

ADRI assessment methodology is practical dimensions to browse the steps of: approach, implementation approach (deployment), assessment of effectiveness (measurement results) and improving the approach in all aspects of the organization, through careful examination of each element, trying to find answer appropriate questions each stage:

A. Approach – "thinking and planning":

- What wants to achieve for that element - that is the intention had?
- What goals have been set?
- What strategies, structures and processes have been developed to achieve the intended intention and why would they be chosen?
- What performance indicators, quantitative and qualitative, were designed to track progress?
- How to approach aligns with the principles of Business Excellence model promoted by ABEF or MBNQA?

B. Conducting (Implementation) – "implement and make":

- How were these strategies, structures and processes put into practice?
- How is their implementation throughout the organization?
- To what extent were accepted and incorporated as part of normal operations?
- How to approach aligns with the principles of Business Excellence model promoted by ABEF or MBNQA?

C. Results (measurement results) – "monitoring and evaluation":

- What are the trends of performance indicators for this "product / service"?
- How to compare these results with the best known performance?
- What is how to measure and monitor the results of the principles of Business Excellence model promoted by ABEF or MBNQA?
- To what extent these results can be an indicator of performance for the entire organization?
- How do we know that these results lead to a correct approach and conduct?
- What can be communicated or interpreted and who can use these results?

D. Improvement – "Learning and Adaptation"

- What is the process of analyzing opportunities and that is the effectiveness of the approach and its implementation for "product/service" respectively?
- How to use the results for "product/service" respectively?
- What were the elements learned and to what extent the approach used to improve learning and deployment of business processes?
- How to approach aligns with the principles of Business Excellence model promoted by ABEF or MBNQA?

4. The Assessment Methodology CAE – a theoretical approach

The Canadian model of organizational excellence CAE proposes its own methodology to improve processes associated (Vokurka, R.J., Stading, G.L., Brazeal, J., 2000), which can be regarded like a route to be traveled step by step, the target being represented by achieving excellence in each process or activities addressed.

The CAE methodology as described by Vokurka, comprising in the cycle to improve the process, ten stages:

- The first step is to establish principles of quality. Once established, quality principles will be made known to all parties directly or indirectly concerned, proceedings having their promotion.
- The second stage begins with a review of criteria for measuring the quality of ongoing and applied the necessary changes, if any.
- In the third stage are tests that measure the quality performance in practice of the process at that time considered a "milestone". Based on the findings will be made useful conclusions for the improvement plan.
- The fourth step is important in turn, by the fact that now the improvement plan is developed.
- The fifth step involves spreading the message about the quality that emerges from the improvement plan outlined. Important in this stage is that everyone involved in the process to be put in issue the objectives set, you must accept.
- The sixth stage involves the implementation of the improvement plan.
- The seventh step is to carefully monitor how responsible is implemented the improvement plan.
- Eighth stage is one in which the retesting quality, verify the progress.
- A new phase is to identify successes, including the conclusions made in the previous step, the main purpose being to determine a performance reference standard that is found which subsequently will need to be maintained.
- Any vulnerability surprised, is a weak point in the process chain link, so that necessary corrective plan defines the following as the last step, tenth, if necessary improvements to resume the cycle, but based on another level, maintaining permanent

attention to progress through the continued close monitoring quality at each stage.

The real concern is not confined solely to maintain performance achieved, but the continuous improvement process that repeats the cycle.

3. Conclusions

In order to resume the main ideas discussed from a theoretical point of view in our current research, we can state the following elements:

A. The assessment methodology PTELR:

- PTELR methodology assumes that generating error is part of the learning process.
- Errors are sometimes beneficial, should not always be avoided or suppressed, but rather minimized by careful management of probing and learning processes.
- Companies should learn to manage errors in the future this step is an important indicator of their success. Contributing to identify errors "useful" without error "enemy", companies enrich their experience and allow progress.
- PTELR is continuous methodology, which is recommended to be used in companies that have already implemented the EFQM model.
- PTELR methodology, being developed exclusively for accelerated dynamic processes that involve, a high level of innovation is not yet sufficiently complete and tidy and is therefore less represented. In conclusion for a highly dynamic process is recommended PTELR methodology.

B. The assessment methodology ADRI:

- The organizational performance can be evaluated using size: approach, implementation, results and improvement, based on which defined methodology known under the acronym ADRI being used so MBNQA American model of organizational excellence and the Australian model of organizational excellence ABEF. Acronym ADRI methodology for continuous improvement of organizational performance is named after the initials that define the process: Addresses - Conducting (Implements) - measure results - Improves.
- ADRI assessment methodology is practical dimensions to browse the steps of: approach, implementation approach (deployment), assessment of effectiveness (measurement results) and improving the approach in all aspects of the organization, through careful examination of each element, trying to find answer appropriate questions each stage.

C. The assessment methodology CAE:

- The Canadian organizational excellence proposes its own methodology associated CAE process improvement that can be seen like a route to be travelled step by step, the target being represented by achieving excellence in each process or activities addressed.
- Any vulnerability surprised, is a weak point in the process chain link, so that necessary corrective plan defines the following as the last step, tenth, if necessary improvements to resume the cycle, but based on another level, keeping the attention and careful progress through continuous quality monitoring at each stage. The real concern is not confined solely to maintain performance achieved, but the continuous improvement process that repeats the cycle.

A PRESENTATION OF THE ROLE PLAYED BY ACCOUNTING IN ECONOMIC DEVELOPMENT

Simona-Florina SĂLIȘTEANU[*]
Olivera Ecaterina OROS[**]

Abstract

The aim of this paper is to describe and analyze the importance and the role played by accounting in economic development. The accounting system must respond to the needs and expectations of the nations, but, underlining the fact that we are in the era of globalization, it must respect simultaneously the international standards. Considering that the accounting has an essential impact in economy, we intend to present the contributions of the accounting system in the economic development. Accounting does not only provide modalities of control for economic entities, but it can also be useful for the national economic planning.

Keywords: *economic development, accounting, accounting information, international standards, accounting system.*

1. Introduction

The purpose of this article, framed in the area of the economic studies, is to analyse, to underline and to make remarks in what regards the role of accounting in the economic development.

It is considered that in the economic development of countries an important role is played by accounting and that the success of the progress in an economy is influenced by the performance of the accounting systems used at micro and macro-economic level. Starting with the second half of the 20th century a striking feature of the macro-economic theory is "the use of accounting methodology for planning and control at the level of the state – a method of obtaining an over-all picture of economic activity in essential".[1]

The research question of this article is: "Which is the importance of accounting in the economic development?". In order to respond to this question we conducted a qualitative research of the specific literature, research based on several inductive processes of collecting and analyzing data. For centralise the gathered information we used as techniques: documentary research, reviewing the documents, analyze and systematic comparison. We consider it appropriate to start this study with the defining of the concepts analyzed: economic development and accounting.

2. Content

Geneviève Causse affirmed that "the economic and social development of one country is defined in relation to the basic needs of humans and in relation to the characteristics of socio-economic structures of the regarded country"[2].

The economic development must lead to a growth of the people welfare, as a result of the combined and planned actions of government, the private sector and the communitys. "The development of a country is measured with statistical indexes such as income per capita (per person) (GDP), life expectancy, the rate of literacy, et cetera."[3]

In the last century the economic development represented one of the political issues between countries, especially between the socialist and occidental ones.

On the academic research area were conducted many studies regarding the economic development. Rostow and Lewis, were among the first authors that presented models of economic growth, models focusing on the role of investments.

Some authors, like Perroux, make differences between economic growth and economic development. The accent is put on the economic duality of countries - exists simultaneously a traditional sector and a modern sector.

Because were many development models with very different results, the World Bank and the International Monetary Fund - IMF made pressures for the implement "The structural adjustment Program",

and new privatization policies and trade liberalization. "These outreach programs for the world market have determined the appearance of a minimum harmonization regarding regulations, including accounting regulations"[4].

The accounting arised from human's need, as an economic being, to represent the own socio-economic reality. "Over time, this form of representation has evolved and individualized in a distinct body of knowledge that was meant to explain the practices used to represent an economic and social reality (an exchange of products, a business)."[5]

The process of defining the accounting as scientific field was a complex one, and was made in close relation with the socio-economic development.

In the economic theory accounting it is defined "as a knowledge tool of economic realities in the form values (utilities) and their sources of origin (resources)"[6]. But, from the perspective of economic development, the accounting must be seen as a large system with multiple dimensions: legal, economic, social and political.

In the current literature many authors have focused on studying the role of accounting in economic development. Researchers like Enthoven (1973), Perera (1989) and Mirghani (1982) suggested that the accounting has a major role in achieving a higher level of the socio-economic development. Wallace (1990) and Susela (1999) considered that it is impossible to describe the exact role of accounting in economic development, this relation being influenced by various factors. M.S. Haque treated in his paper "Restructuring Development theories and Policy" (1999) the role of accounting under conservative, reformist and radical traditions. He concluded that "the exact role of accounting within each national socio-economic development will depend, to a large extend, on the development paradigm that is under consideration"[7].

The conservative tradition of development sustains the idea that the accounting is a technical instrument which can contribute to the effort of achieving some better socio-economic living conditions. Accounting collects, analyzes, interprets data and reports them to the final users, being a help in the economic decision making.

Another role played by accounting is that of attestation. This means that, the Accountant, as a key figure of managerial staff, is an honest person who conducts his own activity in compliance with the laws and with the accepted policies and principles. This role has gained significance after the recent financial scandal Such as Enron (2001), WorldCom (2002), Tyco (2002) and so on. The accounting information provided from the individual economic entities are partially used in the national income accounting, and are "important for assessing the effectiveness of particular national development policies and the performance of the economy as a whole"[8].

A.J.H. Enthoven (1973) considers that the accounting sustains the advancement of the economic development, assuring through its efficient systems the necessary support for extant institutional structures.

From the perspective of the reformist tradition, the accounting has the role of uncovering the illegalities, the unfair economic practices, providing thus the necessary and correct data for making adjustments in structural issues. The published information must satisfy the needs of all users not only for the dominant stakeholders (e.g. shareholding).

Reformists sustain that accounting information must be useful in the process of evaluation of the effects obtained through the particular national policies. The accounting helps in this way in determining whether the promoted policies have the expected results or should be abandoned. In the developing countries the accounting also contributes in establishing relations with international financial institutions, by providing the necessary information for making agreements.

Under the radical tradition, the accounting techniques are represented as unsuitable and perhaps even obstructive in obtaining the national development, government having the most important role.

Accounting has the role to support the government, which is the main actor of economic development, to make decisions at both macro and micro economic levels.

As a preliminary conclusion we can affirm that the accounting meets various roles in economic development depending on the paradigm taked in consideration.

In what regards the role and implication of the accounting at micro and macro-economic levels were made numerous studies.

At macroeconomic level, we assist to an increased interest from the academic society in what regards the usefulness of the accounting methodology in control and planning. But, the use of the accounting for planning purposes is not a recent practice, a rudimentary form being used even in ancient times, in the Nile area and in Ancient Greece.

K. S. Most concluded in 1970 that the "interest in accounting, as evidence for a positive theory of public finance has grown with the availability of

national income accounting models"[9]. He also remarked that the researchers became concerned in problems like planning and control, because "as the economic functions of government expand, the technical aspects of finance, of public accounting and of the control of expenditure, assume a new importance".[10]

In the specific literature we founded various and very different opinions referring to the role of accounting at microeconomic level.

Although early theorists from economic field showed a concern in the business and accounting practice, classical and neoclassical economists have not shown a particular interest to accounting methodology.

Contrary to their opinion, G. Causse believes that the accounting plays an important role in economic development of states and that the achievement of development depends on the performances of the accouting systems used.

Accounting, at economic entities level, has the role of:

- providing the necessary data for internal and external users;
- satisfying the informational needs of the management;
- meeting the control needs of the owners;
- supplying the necessary databases for economists and planners.

By publishing superior quality data (relevant, pertinent, reliable, for example) the accounting contributes to the development of financial markets, leading indirectly to a channeling of the funds for investment and development.

The public accounting has an essential function in economy, because by its own principles and procedures, sustains the control activity of public funds, funds which have considerable importance in the economic and social life of developing countries.

The national accounting "aligns the economic terminology, in characteristic quantities (national income, for example) or indicators (investment rate, for example) and presents periodically comprehensive and consistent information on the economic activity of a country"[11], data which represent a basis for economic planning.

In his paper "Développement et comptabilité", G. Causse has submitted as indirect effects of the accounting in economic development, the following:

- improves the functioning of the tax system;

Accounting, by establishing the procedures and by respecting the legal, fiscal reglementations contributes indirectly to the tax collections. This process is often slowed by a poor performance of bookkeeping or even a fraudulent one.

- the rational evaluation of projects;

When one state must evaluate the developing plans proposed by the specialized organisms, it uses techniques that are specific to accounting (cost- benefit analysis, for example). "A faulty accounting can lead to the acceptance of unviable projects or unattractive, which is very damaging in a context of scarce resources".

- support for regional integration;

The actual context of accounting harmonisation facilitates the commercial and financial transactions within a transnational framework.

- the attraction of investors thanks to the transparency of accounts;

The investors need the assurance that their business will bring profit. For estimating the potential earnings, they ask for correct and objective documents, in accordance with the international legal framework. Only a quality accounting system can sustain their exigences.

- increases accountability in the management of funds.

Recently, was raised the question of the growth of the social and economic responsibility of accountants. They need to properly manage the funds which have been assigned to them; because they have a moral responsability for the whole society, in the extent that they administrate public funds.

At the end of the last century we assisted, amid globalisation of the financial markets and trade, to a repositioning of the entire economic environment.

More than 100 countries have adopted the International Accounting Standards and many others expressed the intention to adopt them. "Although in its first version, the IAS/IFRS have mainly targeted and focused on the developed countries, above all, large corporations, a strong diffusion of these standards has been interested among the developing countries"[12].

By adapting accounting regulations with the international standards, countries become more attractive to foreign investors, because they can use similar information in fundamenting the investment decisions. It is also more easily to audit and control the economic entities at the level of the state. In the academic environment, most of the economic studies were conducted in the direction of analyzing the impact of the adoption of IFRS in already developed countries. Only few studies were focused on analyzing the data from developing contries. The conclusions of these studies were very different so it couldn't be established a precise relation between adopting the IFRS and economic growth. In the article called "An

[12] C. Zehri, A. Abdelbaki, *"Does adoption of international accounting standards promote economic growth in developing countries?"* International Open Journal of Economics, Vol. 1, No. 1, July 2013, p.01; Available online at http://acascipub.com/Journals.php

analysis of the factors affecting the adoption of international accounting standards by developing countries" Zeghal and Mhedhbi showed that in the developing countries with high economic growth the IFRS adoption is well accepted. Contrary to them "Woolley (1998) has observed that, in an Asian context, no significant differences could be noticed in terms of economic growth among IFRS adopting and those applying their local standards."[13] G. Causse sustaind that the "developing countries are not considered stakeholders in standardization institutions, and standards are not established in consideration of the context of these countries."[14]

3. Conclusions

After reviewing of the academic literature, we can conclude that the accounting not only participates directly at the economic development of countries, but also sustains the national economic planning, by providing the data and the specific instruments. As Hoarau and Teller sustained in 2001, that the accounting must be oriented towards ""substantial value", that is to say integrating resources that ensure long term development potential of economic entities and their environment, not only towards "shareholder value""[15].

Another conclusion drawn from this research is that accountants are important persons in the managerial team, because they ensure the credibility of accounting by being honest and by respecting the legislation and the economic and financial reglementations.

The broad role of accounting is also highlighted by the importance of accounting information in the economic environment. The information satisfy the needs of internal and external users and are also useful in the process of evaluation of the results obtained through the particular national policies. The accounting, by publishing good-quality data, can promote financial stability, facilitate the absorption of domestic and international funds, create a safe investment environment and foster investor confidence.

"A strong and internationally comparable reporting system facilitates international flows of financial resources while at the same time helping to reduce corruption and mismanagement of resources"[16].

For all that, it is impossible to sustain that accounting has only certain roles in economic development. Its involvement in economy is very various, being influenced by the characteristics of the considered countries, and it may differ according to the dominant paradigm.

The accounting is also used at microeconomic level as an aid in the management of economic entities.

So, we can affirm with conviction that the accounting has an essential role in the economic development.

As a future direction for research we find it appropriate to investigate which are the characteristics that accounting must meet to be a support for economic development. We also find it appropriate to study how and if the economic development of the states influences the evolution of accounting.

THE IMPACT OF BASEL III AGREEMENT ON THE ROMANIAN BANKING SYSTEM

Mihaela SUDACEVSCHI*

Abstract

Basel III Agreement is a set of regulations on the banking system, which aims to ensure the system stability, by applying new standards on the capital level and on the liquidity level adequacy and also, on the reduction of banking risk, implied by the financial crisis. Romanian commercial banks will be forced, by the Basel III Agreement implementation, to reduce the risk of capital, using the balance sheet restructuring and by improving the capital quality. The aim of this paper is to analyze the impact of implementing new capital requirements, stipulated by Basel III Agreement, on the Romanian commercial banks, how they will react to the new standards and the decisions they will be able to adopt to respect the standards.

Keywords: *Basel III Agreement, liquidity level, commercial banks, capital standards, leverage ratio.*

1. Introduction

The stability and solvency of the banking system are a precondition for proper functioning of the financial system. In order to adapt and increase the flexibility of the current monitoring system, the authorities responsible for international banking regulation have initiated a reform process of calculating necessary capital for risk coverage, through the Basel Committee.

There are many different kinds of risk against which bank's managements need to guard. The major risk is credit risk, which means the risk of counterparty failure, but there are many other kinds of risk which could affect the bank's results, such as investment risk, interest rate risk, exchange risk or concentration risk.

Global economic and financial crises have demostrated numerous weaknesses in banks' risk management practices. Many banks and financial institutions did not have enough capital and the capital which they had, it was not good enough to cover looses suffered. In response, Basel Committee on Banking Supervision (BCBS) has collectively reached an agreement on reforms to „strengthen global capital and liquidity rules with the goal of promoting a more resilient banking sector", which is being referred to as „Basel III".

Basel III focuses on three main areas – capital, liquidity and systemic risk, with their influences on the bank's activities.

The Basel Committee reforms refer both to micro prudential and macro prudential measures[1] and improves a new framework for risk management at the level of banking system.

Thus, at the micro level, Basel III regulates capital adequacy, introducing a higher quality of capital, improves the coverage of the risks, especially related to capital market activities, requires much higher levels of capital to absorb the types of losses associated with crises and a global liquidity standard to supplement the capital regulations.

In addition, the macro prudential elements are: a leverage ratio (like a new element for limiting the volume of debt in the banking system in boom periods), new measures to raise capital levels or drown it down in stress periods to reduce procyclicality and, for global systemic banks, a higher capacity of loss absorbency.

2. Basel III Agreement Requirements

Basel III objectives are broken down in three parts:

- Capital reform
- Liquidity standards
- Systemic risk and interconnectedness

1. Capital reform refers to quality, consistency and transparency of capital base, the risk coverage and leverage ratio. Basel III Agreement requires banks to hold 4,5% of common equity and 6% of Tier I capital. Also, in this part, Basel III introduced "additional capital buffers":

- A "mandatory capital conservation buffer" of 2,5%
- A "discretionary counter - cyclical buffer", which would allow national regulators to require up to another 2,5% of capital during periods of high credit growth.

Capital conservation buffer – is intended to ensure that institutions are able to absorb losses in stress periods lasting for a number of years. This kind of capital buffer solves the regulatory paradox after which higher minimum capital should not be used to absorb losses falling below the minimum requirements, leading to a withdrawal of the banking

* Associate Professor, PhD, Faculty of Economic Studies, "Nicolae Titulescu" University of Bucharest, Romania (e-mail: **msudacevschi@univnt.ro**).

[1] Walter, S. (2010),Basel III and Financial Stability, Speech at the 5th Biennial Conference on Risk Management and Supervision, Financial Stability Institute, Bank for International Settlements, Basel, 2010, http://www.bis.org/speeches/sp101109a.htm

license. With the introduced capital buffers and the associated distribution constraints falling below the requirements, a "softer" regulatory tool is introduced.[2]

The Basel III rules have been implemented in the EU from the beginning of 2014.

Capital requirements fall under the provisions of CRD IV/CRR regulatory package, starting with 2014. These requirements are applicable to all EU member states and establish standardized and uniform rules for covering the risk involved in banking activities. Thus, credit institutions have to respect the own funds requirements:

Total capital of at least 8% of RWA (Risk – weighted assets);

Tier 1 capital of at least 6% of RWA;

CET 1 (Common Equity Tier 1) capital of at least 4,5% of RWA.

The European Union capital adequacy rules recognize two layers of capital – Tier 1 and Tier 2. Criteria for these instruments are contained in CRR, which will have direct application in each UE member state.

Tier 1 includes only permanent shareholders' equity (common stocks) and disclosed reserves (created or increased by appropriations of retained earnings or other surplus, e.g. share premiums, retained profit, general reserves and legal reserves, and also include general funds – such as a fund for general banking risk in certain EC countries)[3]

Tier 2 under Basel III includes: undisclosed reserves, revaluation reserves, general provisions/general loan-loss reserves and hybrid (debt/equity) capital instruments with a maturity of not less than five years.

Tier 1 can be subdivided into CET 1 (Common Equity Tier 1) and AT 1 (Additional Tier 1).

The capital adequacy indicators in the Romanian banking system remained at high levels, which followed an upward course (Table no.1)

Table no. 1 - Own Funds and Capital Adequacy Indicators *(Percent)*

	2013-Jun.	2013-Dec	2014-Jun
Percent in total own funds	**100**	**100**	**100**
Tier 1 capital	**92,5**	**91,1**	**87,7**
Tier 2 capital	**7,5**	**8,9**	**12,3**
Total capital ratio (a) (› 8%)	**14,7**	**15,5**	**17,0**
Tier 1 capital ratio (›6%)	**13,6**	**14,1**	**14,9**

Source: NBR

(a) – Total capital ratio refers to own funds of the institution, calculated as a percentage of total risk exposure amount. This indicator stood at 17 percent in June 2014, above the requiremqnt level of 8 percent.

(b)–Tier 1 capital ratio is calculated as a percent of total risk exposure value of an institution, and for Romanian banks recorded a high level of 14,9 percent in June 2014.

In the Romanian banking system, the quality of own funds it was always maintained at a high level, complying the requirements set by the CRD IV/CRR regulatory package. The own fund of banks, Romanian legal entities rose by about 13 percent in June 2014 – June 2014 period, as a result of the 20 percent decline of the total volume of prudential filters regulated at national level, in 2014, according to CRD IV regulatory framework, as a result of the capital increases made by shareholders in 2013 and 2014, and of course as an answer of the improvement in the financial performance of banks, during 2014.

Counter - cyclical buffer allows national authorities, like national banks, to require up to an additional 2,5% of capital during periods of high credit growth. National authorities will pre-announce the decision to raise the level of the buffer by up to 12 months, but the decision to decrease the level of the buffer will take effect immediately.

Banks may be able to use in downturns the flexibility provided by the capital conservation buffer, but in the same time, they may prefer to reduce credit extension rather than being subject to restrictions on capital distributions (dividends, share repurchases and especially discretionary bonus payments to staff) if they do not meet the additional capital requirements.[4]

The new CRD IV/CRR regulatory package supplements the set of capital adequacy indicators calculated based on the total risk exposure amount via the introduction of the leverage ratio.This ratio measures the risk associated with funding sources, other than equity. This is a simple and transparent indicator of the assessment risk which is not the subject to modeling errors and quantifying measures of asset risk associated.

Leverage ratio is defined as:

$$Leverage\ ratio = \frac{Total\ assets}{Total\ equity + Subordinated\ debt}$$

The leverage ratio is expressed as a percentage, being calculated as an institution's capital measure (Tier 1capital) divided by that institution's total exposure measure (the sum of the exposure values of all assets and off-balance sheet items not deducted when determining the capital measure indicator). The exposure value of an asset is its accounting value, remaining after specific credit risk adjustments;

[2] Bundesbank (May, 2011): Basel III – Leitfaden zu den neuen Eigenkapital und Liquiditatsregeln fur Banken.

[3] Basel Capital Accord. International Convergence of Capital Measurement and Capital Standards (July 1988, updated to April 1998),

[4] Rafael Repullo, Jesus Saurina – "The countercyclical capital buffer of Basel III: a critical assessment", CEMFI Working Paper, No. 1102, Madrid, June 2011

additional regulated value adjustments and other own funds reductions related to the assets item have been applied.

A higher value of this ratio means a higher vunerability to negative shocks which lower the value of assets or financing liquidity. An excessive leverage could increase the dependency of a bank regardind the potentially volatile short-term funding sources and to expose it to the risk of increasing funding liquidity.[5]

The leverage ratio was initially introduced as an additional feature, the implementation of which is flexibly decided by supervisory authorities and is expected to become a mandatory measure starting with 2018.

For the Romanian banking system, the leverage ratio level stood at 8% (at the end of 2013) and 7,9% (in June 2014), being calculated based on a methodology established by the NBR, as a ratio of Tier 1 capital to average bank assets at accounting value. These values registered by the leverage ratio reflecting the high capitalization of bank assets at the accounting value, which is a common feature of the countries in the region. (For the banks from France, Italy and Nederlands, which have subsidiaries in Romania, the level of this indicator stood at roughly 5 percent.

2. Basel III introduced new **liquidity standards**, actually 2 required liquidity ratios[6], which promote the resilience of a banking sector:

LCR – Liquidity Coverage Ratio

NSFR – Net Stable Funding Ratio

LCR was published in December 2010 and refers of banks liquidity risk profile. In this way, Basel Committee requires a bank to hold sufficient high-quality liquid assets to cover its total net cash outflows over 30 days. The LCR will be introduced as planned on 1st January 2015, but the minimum requirement will start at 60%, rising in equal annual stages of 10 pp. to reach 100% to 1st January 2019. This plan of introducing LCR (shown below, Table no.2), is made to ensure the ongoing financing of economic activity.

Table no.2 – The plan of introducing LCR

	2015	2016	2017	2018	2019
Minimum LCR requirements	**60 %**	**70 %**	**80 %**	**90 %**	**100 %**

Source: NBR

The Liquidity Coverage Ratio (LCR) requires banks to have sufficient high-quality liquid assets to withstand a 30 days stressed funding scenario that is specified by supervisors.

$$LCR = \frac{Stock\ of\ HQLA}{Total\ net\ outflows\ over\ the\ next\ 30\ calendar\ days} \geq 100\ \%$$

"HQLA" – assets should be liquid in markets during a time of stress and, ideally, be central bank eligible.

Assets are considered to be HQLA if they can be easily and immediately converted into cash at little or no loss of value.

The LCR standard and monitoring tools should be applied to all internationally active banks on a consolidated basis, but may be used for other banks and on any subset of entities of internationally active banks as well to ensure greater consistency and a level playing field between domestic and cross-border banks. The LCR standard and monitoring tools should be applied consistently wherever they are applied.

Net Stable Funding Ratio (NSFR) is a longer – term structural ratio, designed to address liquidity mismatches. It covers the entire balance sheet and provides incentives for banks to use stable sources of funding.

$$NSFR = \frac{Available\ funding}{Required\ funding} \geq 100\% \quad [3]$$

The NSFR has a time horizon of one year and has been developed to provide a sustainable maturity structure of assets and liabilities.

Stable funding means all those types of equity and liabilities expected to be reliable sources of the funds under an extended stress scenario of one year.

This measure implies taking into account certain criteria:

- Notation different profiles of assets and association with their recommended levels of stable resources (depending on their risk)
- New weighting of assets requiring a certain level of funding (according to their risk):
- Between 0% and 5% for cash accounts and government securities
- Between 65% and 85% for personal loans and mortgages
- 100% for all other assets

This weighting can be interpreted as a level at which an asset should be financed with stable resources.

New weighting in the quality of financing (according to their stability):

- 100% for Common Equity
- 80% to 90% for customer deposits
- 50% for loans with low collateral or unsecured

[5] Bordeleau, E., Crowford, A. and Graham, C. – Regulatory Constraints of Bank Leverage: Issues and Lessons from the Canadian Experience, No. 15, 2009, Bank of Canada

[6] http://www.bis.org/publ/bcbs189.pdf

This weighting can be interpreted as maximum levels at which these resources can finance an asset. This should result in getting more diversified funding by the banks so as not to be dependent on a certain type of resource.

Banks will have to assess the stability of their balance sheet resources as a percentage and the need for funding for individual assets.

Accordingly to the agency theory, the optimal financial structure of the capital results from the compromise between various funding options (equity, debts and hybrid securities) that allow the reconciliation of conflicts of interests between the capital suppliers an managers.[7]

The requirements of Basel III Agreement related on liquidity risk are expected to have impact both upon the internal process in the banks as well as upon the business model.

Organizational impact means[8]: external reporting supplemented by the new liquidity ratios; preparation of a cash flow-based liquidity gap profile; monitoring tools – regular reporting to the supervisory authorities.

On the other hand, the impact of liquidity risk requirements on the business model will be reflected by longer maturities and higher stability of liabilities, as well as reduced term transformation and higher costs for refinancing.

3. Systemic risk and interconnectedness. Systemic risk was a major contributor to the financial crisis in 2008. It can be defined as financial system instability and might be very dangerous, because "a failure of one financial business may infect other, otherwise healthy businesses"[9]. For this reason, the National Bank of Romania is currently considering the possibility of introducing a measure of quantify financial market stress, because isolated vulnerabilities in certain sectors may negatively affect, via contagion effects, the performance of the entire system.

3. Conclusions

If Basel I and Basel II agreements, by their requirements, contributed to a better capitalization of banks, after that it was felt the need to introduce more complex prudential policies, which have led to the decision to develop the new Basel III Agreement.

The new rules introduced by implementing Basel III, will put huge pressure on small banks, in particular in terms of the calculation of the risk. Thus, they will no longer be allowed to grant loans as easily, and one of the categories of customers at risk to lose the SMEs. Under the conditions in which small banks will become inaccessible to the SMEs in search of financing, they will move toward strong institutions. But, as they have not looked very pleased in the last period in to take risks, they will try to do it, most likely, to make a natural selection to customers by increasing the cost of loans.

Thus, the implementation of Basel III will have dramatic effects in a market already plagued by limitations on crediting. Basel III is a framing device on the international financial institutions for a set of minimum regulatory requirements, in particular regarding capital, liquidity and leverage. This framework, Basel III, is designed to strengthen the resilience of banks and for the entire banking system, due to the hard lessons learned from the recent financial crisis, having revealed that many banks in the advanced economies were undercapitalized, illiquid and over leveraged. In the same time, "measurement of bank performance involve analysis of both quantitative and especially qualitative indicators, primarily aimed to determinate the soundness of the bank, the extent of its exposure to the various risk categories and especially its level of efficiency."[10]

Basel III Agreement is seen both as an opportunity and as a challenge for banks. This regulatory framework can provide a solid foundation for the next developments undertaken in the banking sector and ensure that excesses made in the past can be avoided. Basel III Agreement will change the way banks manage their risks, but in the same time, the equity management, too.

THE ACCOUNTANT PROFESSIONAL AS A CURRENT USER OF PROFESSIONAL JUDGMENT

Viorica Mirela ŞTEFAN-DUICU[*]

Abstract

Professional judgment governs the evolution of a process in the absence of any relevant procedural regulations. In this paper we will describe both the building components of the professional judgment and the accounting professional as a practitioner whom use most often the expression of the above mentioned type of judgment.

Keywords: *professional judgment, practitioners, economics, decision making, financial statement.*

1. Introduction

Within a company, professionals are required to get involved in activities that do not always provide predictable trajectories. Their job's specifics impose the professionals to assume responsibilities stated in their job description as also responsibilities that are forming along the situations get more particular. At this point, the professionals assume the exercitation of decisions starting from the idea that a package of information, of hypothesis and demonstrations can be preferred to a certain situation, not generalized instead of an absolute ideological package. In order to differentiate these two categories, the action of a rigorous formulated professional judgment is required.

Professionalism (professional consciousness) is complex, discretionary, requires practical and theoretical knowledge, qualification and also the acknowledgment that people without experience cannot understand, fully read and evaluate at a high level the results of the practiced labor.[1]

Professional practice, without a strong judgment to stand as foundation cannot be labeled more than a technical labor.[2]

Professionals use the professional judgment as a fundamental logical form comprising of a correlated stream of arguments[3]. According to prof. David Tripp, the professional judgment suits into 4 shapes:

- Practical (that type of judgment almost instantly formulated)
- Diagnostic (generalized judgment within the professional practice)
- Reflective (judgment of evaluation and justifying nature that emerges when the practitioner reflects in detail over its own actions and effects, weighting all alternative strategies)
- Critical (judgment that cumulates both a critical and reflexive attitude and also the diagnostic profess of the professional practices)

Prof. Della Fish and Prof. Colin Coles are proposing the following classification of professional judgment[4]:

- intuitive

– emerges in the situations that require an immediate reaction and supposes the quick establishment of the working instruments and the required skills needed to resolve the issue that emerged. It does not involve a preexisting judgment, this type of understanding being labeled usually as technical of "instrumental"[5].

- strategic

– has an urgent character that supposes a wide spectrum of possibilities.6 It is based on practices that are highlighted in well established procedures.

- reflective

– seeks situations that emerge in practice along with a high level of uncertainty. This category implies a profound thinking in the solving process, a cumulus of personal thinking process, of own skills.

- deliberative

– it is described by the moral character of decisions and focuses both the entity's interests and also the individual's.

Professionals see these practices in these circumstances as being moral concurrent ideas that can generate conflicts and dilemmas hard to solve[7].

2. Accounting professionals.

Forming the accounting type of professional judgment at a global level is based, accordingly to the guide issued by the Institute of Authorized Accountant of Scotland (ICAS), on several principles[8]:

- Principle 1: Knowledge gathering and analysis

An accounting professional judgment can be issued only after the collection and analysis of data. In order to better understand the purposes, legal framework and economic substance of the transactions, the accounting practitioner must go through several stages:

- Reading the relevant documentation
- Taking into consideration the cash-flows expected from the transaction and the impact on the entity's cash.
- Establishing the purpose to be pursued on each part involved in the transaction in order to understand the economical reality
- The identification of affiliated transactions that must be performed in order to establish the economical substance
- Taking into consideration the uncertainties and the possible range of result from the transaction
- Identifying the effect of the concluded transaction on the assets and liabilities of the entity and also over the operational capacities.

- Principle 2: Assessment of accounting guidance

An accounting professional judgment can be issued only within an accounting applicable framework with extended applicability

In the absence of relevant standards or in the case of a conflict generated by the notions found in more than one standard the following actions are in place:

- Consultation of the conceptual framework for the general principles regarding the definition, recognition and measurement of assets, liabilities, revenues and expenses;
- Consultation of law regulated accounting documents for additional guidance;
- Establishing the existence of general valid accounting practice.

- Principle 3: Process for making a judgement

An accounting professional judgment can be issued only after certain demarches with an equitable character, high accurate and concrete have been carried out taking into consideration the following aspects:

- Taking into consideration and evaluate the pallet of alternative accounting methods;
- Allocation of sufficient time for consulting the experts;
- Elimination of own conflicts of interest, of bias and misconceptions in order to ensure an objective judgment;
- Organization of meetings designed to support the decision taking with professional advisors, auditors and other personnel that have the ability to support the decision making.
- Initiation of approval procedures for the judgments made by superior forums.
- Identifying the time intervals at the end of which a reevaluation of the professional judgment is required. For example: at the end of the financial period or before concluding new agreements.

- Principle 4: Documentation of judgment

An accounting professional judgment implies proper documentation.

The entity must provide the following documentation regarding the accounting professional judgment:

- Presentation of the transaction;
- The accounting laws to be taken into consideration;
- Professional judgment used – final decision;
- Time given for taking the decision;
- Presentation of all alternative options and justification of the final option taken;
- Expressing, if applicable, the uncertainty of the decisional process;
- The sensitivity of the accounting professional judgment to changes that can occur in hypothesis or circumstances related to the transaction;
- The demarche carried on prior to a decision take: highlighting the sources used, discussions carried forwards (when, where and with whom), noting the person/entity that takes the decision and the date at which this process ended;
- Approval of demarches regarding the decisions: who approved and when;
- When it is necessary the reevaluation of the professional judgment and in what period.
- Presentation of the closeout regarding accounting significant judgment.

Objectivity – as a fundamental principle of ethics in the accounting profession states that an accounting professional must carry its activity impartially by elimination of all intrusions regarding misjudgments, bias, conflicts of interest or compatibility, confusions of unwanted influences that could intervene in the professional or business judgments. [9]

The International Accounting Standard (IAS) 1 presentation of financial statements mentions the use of professional judgment in the following situations:

- For the determination of the best presentation method of the information regarding the name of the reporting entity, the way the financial statements are referring to a group of entities of an individual entity,

[8] "*A Professional Judgement Framework for Financial Reporting - An international guide for preparers, auditors, regulators and standard setters"* published by the Technical Policy & Services Board of The Institute of Chartered Accountants of Scotland (ICAS), p. 8, August 2012.

[9] *"Codul Etic Naţional al Profesioniştilor Contabili*", Ediţia a V-a, revizuită şi adăugită în conformitate cu Codul Etic Internaţional al Profesioniştilor Contabili elaborat de IFAC, revizuit în iulie 2009, Colecţia Doctrină – Deontologie, Editura CECCAR, Bucureşti, 2011.

date of the balance sheet or the period regarding the issue of the financial statements, the presentation currency and de decimals used for the amounts stated in the financial statements. „For example, when an entity presents the financial statements electronically, separate pages are not always used; an entity then presents the above items to ensure that the information included in the financial statements can be understood. An entity often makes financial statements more understandable by presenting information in thousands or millions of units of the presentation currency. This is acceptable as long as the entity discloses the level of rounding and does not omit material information." [10]

- In the eventuality of separate presentation of additional elements, the professional judgments is based on "the nature and liquidity of assets; the function of assets within the entity; and the amounts, nature and timing of liabilities. [11]
- In the classification by destination of expenses when an entity presents separately cost of sales from the other expenses. [12]
- An entity has the obligation the present the summary of its significant accounting policies or in the other notes the professional judgment made by the management in applying the accounting policies and the effects it has over the amounts stated in the financial statements. [13]
- In the application of an entity's accounting policies, the management uses professional judgment in order to determine: „(a) whether financial assets are held-to-maturity investments; (b) when substantially all the significant risks and rewards of ownership of financial assets and lease assets are transferred to other entities; (c) whether, in substance, particular sales of goods are financing arrangements and therefore do not give rise to revenue; and (d) whether the substance of the relationship between the entity and a special purpose entity indicates that the entity controls the special purpose entity." [14]
- The information regarding the main hypothesis regarding the following periods and regarding other sources of uncertainty over the estimates at the balance sheet's date require subjective professional judgment made by the management of the entity.[15]

IAS 8 Accounting Policies, Changes in Accounting Estimates and Errors mentions the use of professional judgment in the following situations:

- In the absence of a standard or applicable interpretation in a specific manner over a transaction or another event, the management must use professional judgment in order to issue and apply an accounting policy that contains viable and relevant information that comply with the provisions and guidance of the standards, with definitions, criteria of recognition etc. from the general framework.[16]
- For the estimation of elements from the financial statement that cannot be evaluated with accuracy due to inherent commercial activity's uncertainty. The estimation are based on information available at the latest. [17]
- IAS 16 Property, Plant and Equipment mentions the used of professional judgment in the following situation:
- In the recognition of fixed assets in accordance with the specific circumstances of an entity (in some cases it will be appropriate to aggregate insignificant individual elements, such as molds, measure and control equipment, tools and other similar elements and to apply recognition criteria of the aggregated value of the above mentioned[18])
- In estimation of useful lives of assets, the professional judgment is applied in accordance with the experience of the entity with a similar asset. „The useful life of an asset is defined in terms of the asset's expected utility to the entity. The asset management policy of the entity may involve the disposal of assets after a specified time or after consumption of a specified proportion of the future economic benefits embodied in the asset. Therefore, the useful life of an asset may be shorter than its economic life. The estimation of the useful life of the asset is a matter of judgement based on the experience of the entity with similar assets." [19]
- When choosing the depreciation methods and in the useful life assessment of assets. „Therefore, disclosure of the methods adopted and the estimated useful lives or depreciation rates provides users of financial statements with information that allows them to review the policies selected by management and enables comparisons to be made with other entities." [20]

IAS 21 The Effects of Changes in Foreign Exchange Rates mentions the use of professional judgment in determining the functional currency that presents the most accurate the economic effects of events, transactions and common conditions when this currency is not obvious. [21]

IAS 23 Borrowing Costs mentions the use of professional judgment in determining the borrowing costs that can be directly attributable to an asset with a long production cycle asset[22].

IAS 29 Financial Reporting in Hyperinflationary Economies refers to the use of professional judgment at the time it is needed to restate the financial statements. Professional judgment is applied also in restating the financial statements along the involvement of other procedures. [23]

IAS 34 Interim Financial Reporting mentions the use of professional judgment in the evaluation of the materiality threshold "to ensure that an interim financial report includes all information that is relevant to understanding an entity's financial position and performance during the interim period." [24]

According to IAS 36 Impairment of Assets the identification of an asset's cash-generating unit involves use of the professional judgement." [25]

According to IAS 37 Provisions, Contingent Liabilities and Contingent Assets the professional judgment of the entity's management determines the estimates of results and financial effects along with the support of independent experts and with the experience of similar transactions. [26]

IAS 38 Intangible Assets refers to the use of professional judgment in establishing whether an asset that comprises both tangible and intangible elements is a tangible or intangible asset. „For example, computer software for a computer-controlled machine tool that cannot operate without that specific software is an integral part of the related hardware and it is treated as property, plant and equipment. The same applies to the operating system of a computer. When the software is not an integral part of the related hardware, computer software is treated as an intangible asset." [27]

IAS 39 Financial Instruments: Recognition and Measurement states that „in some cases the observable data required to estimate the amount of an impairment loss on a financial asset may be limited or no longer fully relevant to current circumstances. For example, this may be the case when a borrower is in financial difficulties and there are few available historical data relating to similar borrowers. In such cases, an entity uses its experienced judgement to estimate the amount of any impairment loss. Similarly an entity uses its experienced judgement to adjust observable data for a group of financial assets to reflect current circumstances"[28]

IAS 40 Investment Property mentions that professional judgment is used in assessing whether a real-estate property is a real-estate investment or not (the entities establish the criteria) and in order to assess which of the real-estate properties meet the conditions to be restated as real-estate investment. [29]

3. Conclusions

"In a market economy in which competition is the main selection criterion for companies, decision taking concerning the financing sources is an extremely difficult process."[30]

The professional judgments will always influence the decisional mechanism both by the conjunctions created and by returns "that means that there is a difference in size and hence a difference in importance"[31] when the future evolution of companies is taken into consideration.

Accounting professionals represent one of the most important categories of practitioners due to the fact that their professional judgments serve as material support for the activities carried forward by financial analyst, auditors and other categories of general practitioners.

Professional judgment is a concept that completes the activity of all practitioners.

This type of judgment appears at helping element of high importance in the decision-making process.

The intervention of this type of judgment represents and extension of decision taking power of the practitioner, the practitioner having the possibility to highlight his main native skills or practice accumulated skills.

The professional accountant used all categories of material elements transposed in laws, specific Codes, job descriptions, internal regulations, procedures; in the absence of such express regulations the professional judgment is used as a principal or auxiliary instrument.

EXPLAINING POWER OVER THE INVESTEE - THE RIGHTS THAT GIVE THE POSSIBILITY TO DIRECTS THE INVESTEE`S RELEVANT ACTIVITIES

Adrian ŞTEFAN-DUICU[*]

Abstract

The links created on all levels between the parent company and its subsidiaries have generated along time debates regarding the subterfugii to the regulations applicable in the audit activity in order to protect the above mentioned entities. Throughout this paper we will progressively describe the pylons that represent the foundation of the regulations subject to the audit activity in this organizational environment.

Keywords: *financial statements, subsidiaries, audit activity, regulations, interests.*

1. Introduction

Power arises from rights. Sometimes assessing power is straightforward, such as when power over an investee is obtained directly and solely from the voting rights granted by equity instruments such as shares, and can be assessed by considering the voting rights from those shareholdings. In other cases, the assessment will be more complex and require more than one factor to be considered, for example when power results from one or more contractual arrangements

In the consolidation process, one of the most significant steps is the determination of the power the investor has over the investee.

A thorough analysis must be performed on all aspects of the control and weather the investor has or doesn't the power to direct the investee's relevant activities. An investor with the current ability to direct the relevant activities has power even if its rights to direct have yet to be exercised.

Evidence that the investor has been directing relevant activities can help determine whether the investor has power, but such evidence is not, in itself, conclusive in determining whether the investor has power over an investee.

2. Attention over „the possibility to direct" and not to effectively apply the power

The power rezides in rights. To have power over the investee, an investor needs, to have rights that provide the posibility to direct the relevant activties of the investee.

Therefore, establishment of the power is made on the investor's posibility to direct the relevant activities of the investee. The International Financial Standard Consolidated Financial Statements - IFRS 10 does not require the investor to use its power. An investor that has the posibility to direct the relevant activities of another company has power over it even though this power is not exercised.

Moreover, the evidence that states an investor has directed the relevant of an investee can aid in determining the investor has or hasnt' power, but this proof alone is not the determining factor in assesing that the investor has the power.

An investor can have the power over an investee even if other entities have rights that provide them the ability to direct the relevant activities (eg. Another entity has a significant influence).

3. Rights that give an investor power over an investee

The rights that can give an investor power can differ between investees.[1] Different types of rights that, either individually or in combination, can give an investor power over an investee include, but are not limited to:

- Rights in the form of voting rights (or pontential voting rights);
- Right to appoint, reappoint or remove key members of the investee's management personnel who have the rights to direct the relevant activities;
- Right to appoint, reappoint or remove another entity that directs the relevant activities;
- Rights to constrain the investee to intro or veto in matters that can benefit the investor;
- Other rights (such as rights written in management agreements) that give the owner the posibility to direct relevant activites.

4. Evidence to be taken into consideration when the assessing is difficult in matters of deteming wether the rights of an investor are enough or not in order to provide power

When there is difficult to asses whether an investor's rights are sufficient to provide power, the

[*] PhD Candidate, "Valahia" University of Targoviste (e-mail: **adrian.stefanduicu@gmail.com**).

[1] The International Financial Standard Consolidated Financial Statements - IFRS 10:B14.

investor should consider evidence regarding whether it has the practical ability to unilaterally direct the relevant activities. Also, considerations must be given to whether:

- the investor can, without having the contractual right to do so, appoint or approve the investee's key management personnel who have the ability to direct the relevant activities;
- the investor can, without having the contractual right to do so, direct the investee to enter into, or can veto any changes to, significant transactions for the benefit of the investor;
- the investee's key management personnel are related parties of the investor (e.g. the chief executive officer of the investee and the chief executive officer of the investor are the same person); and/or
- the majority of the members of the investee's governing body are related parties of the investor.

In some cases there can be indications that the investor has a special relationship with the investee, suggesting that the investor has more than a passive interest in the investee.

The existence of any individual indicator or a particular combination of indicators does not necessarily mean that the power criteria are met. However, having more than a passive interest in the investee indicates that the investor has other related rights enough to give it power or provide evidence of existing power over the investee. In combinations with other rights, the following may indicate that the investor has power over the investee[2]:

- the investee's key management personnel who have the ability to direct the relevant activities are current or previous employees of the investor;
- the investee's operations are dependent on the investor, such as in the following situations:
  - the investee depends on the investor to fund a significant portion of its operations;
  - the investor guarantees a significant portion of the investee's obligations;
  - the investee depends on the investor for critical services, technology, supplies or raw materials;
  - the investor controls assets such as licenses or trademarks that are critical to the investee's operations; and/or;
  - the investee depends on the investor for key management personnel, such as when the investor's personnel have specialized knowledge of the investee's operations;
- a significant portion of the investee's activities either involve or are conducted on behalf of the investor; and/or;
- the investor's exposure or rights in terms of returns from its involvement with the investee is disproportionately greater than its voting or other similar rights. For example, there may be a situation in which an investor is entitled or exposed to more than half of the returns of the investee but holds less than half of the voting rights of the investee.

The higher the exposure, or right, to the variation of profits by involving within an investee, the higher the stimulant for the investor in obtaining enough rights that provide power. Therefore, having a high exposure to profits uncertainty represents an indicator of power for the investor.

However, taking into consideration the investor's exposure is not enough for assessing whether the investor has od doesn't have power over the investee.

5. Substantive rights

In assessing whether an investor has it has the power or not, an investor is taking into consideration only the substantive rights in relationship with the investee. Substantive rights that are to be taken into consideration are the one held by the investor and other third parties. For an right to be substantive, its owner must have the practical ability to use that right.

Determining whether the rights are substantive on not, judgment must be applied by taking into account all factors and circumstances. The international standard IFRS 10 states a non-exhaustive list of factors to be taken in consideration:

- Whether there are barriers (economical or other) or not that can prevent the owner/owners or not in using their rights.
- When the use of rights implies an agreement between more individuals or when the rights are owned by more than one individual, whether there is or not a mechanism that supplies for the parties the practical possibility to collectively use the rights if they choose to;
- Whether one or more parties that owns rights would benefit or not from using the rights.

Moreover, for the rights to be substantive it must be used in the moment in which the decisions regarding the relevant activities must be taken.

Examples for the identification of substantive rights:

1. The investee holds the annual shareholders meeting in order to take decisions that will direct the relevant activities of the company. The next shareholders meeting will be in 8 months from now.

However, the shareholders that individually or collectively hold at least 5% of the voting rights can request an extraordinary meeting that can modify the actual policies regarding the relevant activities, but also have the obligation to inform the rest of the shareholders with the extraordinary meeting with at least 30 days in advance. The policies that alter the relevant activities can be modified only within an extraordinary or normal shareholders meeting. Those policies may include the approval for the sale of the company's significant assets and also purchase or disposal of significant investments.

[2] The International Financial Standard Consolidated Financial Statements - IFRS 10:B19.

2. An investor holds the majority of the voting rights over an investee. The investor's rights are substantive due to the fact that the investor can take decision that can direct the relevant activities of the company at the time it is needed. The fact that these actions must be announced within 30 days ahead does not prevent the investor in using the voting rights that he holds in order to direct the relevant activities from the moment he obtained the shares.

3. An investor that holds an option for purchasing the majority of shares from an investee due in 25 days. This option grants the investor substantive rights and the possibility to direct the relevant activities of the company even though he hasn't used its option.

4. An investor holds a forward contract for the purchase of majority of investees' shares with no other rights. The maturity term of the option is 6 moths. Opposing to other examples presented above, the investor does not hold the possibility to direct the investee's relevant activities. Present owners have the possibility to direct the relevant activities due to the fact that they can alter the policies regarding the relevant activities before the forward agreement reaches maturity.

Substantive rights that can be used by other parties can prevent an investor to control the investee. These rights do not require that the owner has the possibility to take decisions. As long as the rights are not protective, substantive rights held by a third party can prevent an investor to control the investee even though the rights provide to their owner only the possibility to approve or deny decisions in relationship with the relevant activities.

6. Protective rights

In determining whether certain rights provide the investor with power over the investee or not, an investor must determine if its rights or the rights of other are protective or not.

Protective rights are determined as rights designed to protect the interests of a party which owns these rights without giving the respective party power over the investee.

Taking into consideration the nature of the protective rights, an investor that only holds protective rights cannot own the power and cannot prevent another party to hold the power over an investee.

Examples of protective rights include:

- The right of a party that has granted a loan to prevent the loaned parties to run certain actions that ca significantly alter the credit risk from the loaned to the loaner.
- The right of a party that holds non-controlling interests over an investee to approve significant capital expenditures than normally needed or to approve the investee to issue capital or expenditure instruments and
- The right of a party that has granted a loan to execute the asset of the loaned entity in the situation in which the loaned party does not fulfill its contractual provisions in respect of reimbursing the loan.

In certain situations, structured entities are incorporated for holding one asset. The procurement of this asset is financed through a loan for which the assets represent also the role of collateral guarantee. In the situation of non-compliance with the contractual provisions, the loaner holds the right to own the asset but does not own the recourse right over other assets the loaned structured entity or over another's entity assets. At the moment the entity is incorporated, it shal own only the above mentioned assest and the loan used for procurement.

The fact that a structured entity holds only one asset does not modify the evaluation that the entity that has granted the loan holds or doesn't the protective rights to seize the asset. If the rights are protective by nature, it should be treated as such no matter if these rights refer to one or more assets held by the entity of if it refers to only one asset. The purpose of the rights needs to be settled for the party that has beneficiated from the loan if it is intended to provide the loaner the power over the loaned party or only protection of the interests' for the loaner by the loan agreement.

Example: Potential rights that prevent the shareholders of the majority of voting rights to have control:

Entities A, B, and C hold 60%, 20% and respectively 20% of shares in Entity D. There is an exception at the time the potential rights are used for decisions made over the relevant activities of Entity D that are being made only by the majority of votes at the general shareholders assembly.

Despite the fact that shareholders of Entity D have signed an agreement in which Entities B and C have potential rights at the shareholders assemblies regarding the acceptance or decline of actions taken by Entity A regarding the relevant activities. If Entities B and C use their potential rights, the proposed actions will be approved only of the shareholders on minimum 75% of voting rights agree.

In the above described circumstances, the rights owned by Entities B and C are not only protective rights. Potential rights do not only protect the interests of Entities B and C but also provide the possibility to prevent another party (Entity A) from taking unilateral decisions regarding the relevant activities of Entity D. Taking into consideration potential rights held by Entities B and C, Entity A does not hold control of Entity D.

7. Relevant activities are directed by voting rights

Frequently, voting or other similar rights provide power for the investor, individually or in combination with other agreements. For example, the general case in which an investee has a pallet of financing and operational activities that significantly affects its

profits that require significant decisions to be taken constantly.

I. Power by a majority of voting rights

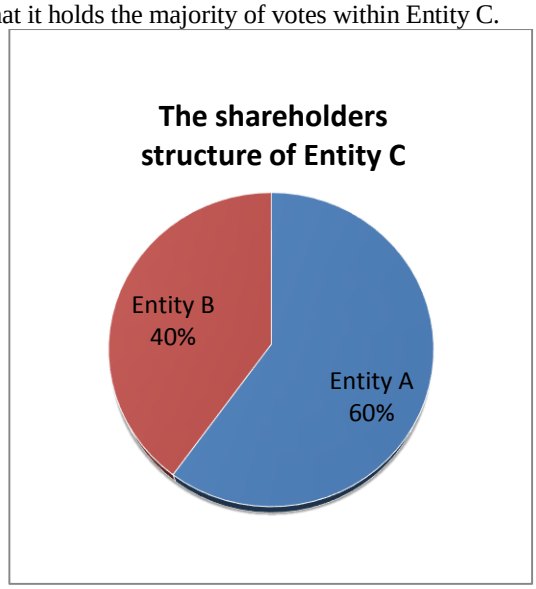
An investor that holds the majority of voting rights within an investee holds the power in the following situations (except the above mentioned ones):

- Relevant activities of the investee are directed by a single vote of the majority voting holder or
- A majority of members from the governance body that directs the relevant activities of the investee is named by a vote of the majority voting rights owner.

Example: Relevant activities of an investee are directed by a shareholder with a majority of voting rights within the investee:

Entities A and B hold 60 % and respectively 40% of the ordinary shares of Entity C. Relevant activities of Entity C are directed by the majority of voting rights within the shareholders assemblies. Each ordinary share carries by itself a vote in the shareholders assembly. If no other factors are taken into consideration (eg. Agreements between the shareholders of Entities A and B that have other provisions) the relevant activities of Entity C are directed by the entity that holds the majority of votes.

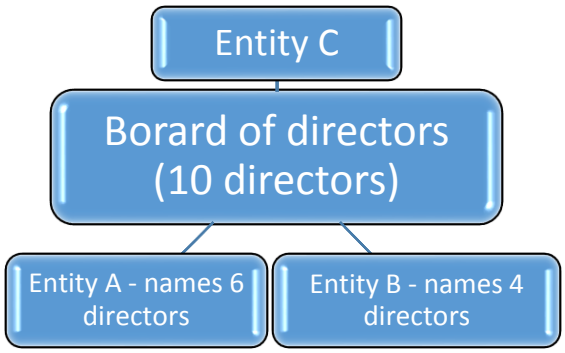
As a result, in absence of other significant factors, Entity A holds the power over Entity C due to the fact that it holds the majority of votes within Entity C.



Source: elaborated by author

Example: Relevant activities of an investee are directed by a governing body and the majority of the members are named by the shareholder that holds the majority of the voting rights in the investee

Entities A and Entity B hold 60%, respectively 40% of the Entity C ordinary shares'. The investee is governed by the Board of directors. Entities A and B are entitled to name 6, respectively 4 directors, proportionally with the shares they own. As a result, in the absence of other relevant factors, Entity A holds the power over Entity C due to the fact that it has the right to name the majority of directors in the Board, therefore to direct the relevant activities of Entity C.



Source: elaborated by author

II. Majority of voting rights but no power

An investor that holds more than half of the voting rights of an investee will have power over the investee through these rights only if the rights are significant and provide the investor the ability to direct the relevant activities, ability that is mainly made by determining the operational and financing policies.

Sometimes even though the investor holds the majority of voting rights of an investee, it doesn't necessarily hold the power. This situation is found at the time the investor holds the majority of voting right, put these votes are not substantive. Accordingly to IFRS 10, there are two situations:

- The situation in which another entity holds rights that provide the possibility to direct the relevant activities of an investee and that entity does not represent an agent of the investor, the investor does not possess the control over the investee.
- The situation in which the relevant activities of the investee are directed by a Government, Court House, Administrator or another regulatory factor. In these circumstances, the owner of the majority of voting rights cannot have the power.

It is not to be assumed that naming and administrator or liquidator will prevent the entity that holds the majority of voting rights will have the power. Rather than otherwise, it is necessary to be taken into consideration if the power held by the administrator or liquidator is enough to prevent the investor in directing the relevant activities of the investee. Although most often is the case of liquidation, these situations do not lead to the loss of control held by the entity that holds the majority of voting rights.

III. Power obtained with less than the majority of voting rights

The international standard IFRS 10 provides the information that an investor that holds less than the majority of voting rights of an investee can have the power over the investee. An investor can have the power in the following circumstances by:

- An agreement between the investor and the other parties that hold voting rights;

- Rights that are provided by certain contractual provisions;
- Voting right of the investor, if there are sufficient to provide the practical ability to direct the relevant activity;
- Potential voting rights;
- A combination of the above mentioned.

8. Power in the situation in which voting rights have no significant influence over the profit of the investee

In contradiction with the above mentioned situations, in certain circumstances voting rights can have no impact on the investee's profits (ex. The situation in which an contractual agreement determines the direction of the relevant activities and the voting rights have impact only in the administrative responsibilities).

In the situation the investee is structured in such a manner that voting rights do not represent a dominant factor in determining the controlling part, an investor must, also, give increase attention for these aspects when it takes into consideration the purpose and the structure of the investment:

- Risks at which the investee has been incorporated to be exposed;
- Risks at which the investee's has been incorporated to transfer towards involved parties and
- If the investor is exposed at any of the mentioned risks.

In such circumstances, considerations regarding the risks include not adverse risks but also the favorable risks.

All the risks attributable to an investee do not necessarily associate with the relevant activities. Even though a certain risk can be present and affect the involved parties, the entity does or doesn't have in its structure means to diminish the risk. As a result, a relevant activity may not be found in relationship with that risk (for example the documents of financing the entity may include activities to diminish the exposure risk).

In the situation in which a risk is associated to a relevant activity, an investor won't be able to influence the variability of returns that can occur from that risk. As a result, the estimation of the first and third element of control (the power of an investor over and investee and the ability to use its power to influence the amount of profit of an investee) would be concentrated on other present risks to which the relevant activities are associated.

Nevertheless, if a relevant activity cannot be associated to any risks, the variability that emerges from that risk must be analyzed from the point of view of the decisional factor that can be the principal or the agent.

Example: Risks that is not associated to any relevant activities

An entity is incorporated for the procurements from a financial institution mortgages over some residential investments with a value of 100 Million UM at a fixed rate on 30 years. The entity is financed by 100 Million UM on a period of 3 years and guaranteed with subordinated debt titles.

Every month, the owner of the subordinated debt titles receives interest payments along with the interest reimbursement from the mortgages and any encashment of principal is used to cover the installment subordinated to the loan. The documentation regarding the incorporation of the entity forbids it to cease its mortgages, procurement of investment ar hiring derivative transactions.

Therefore, the entity exposes its investors to the following risks:

- Credit risk – the risk that mortgages will not be paid;
- Prepayments risk – the risk that the mortgages will be reimbursed in advance and the amount of interest will be reduces;
- Interest risk – the risk that the net book value of fixed installments of mortgages will fluctuate along with the modification of the interest rated on the market.

Due to restrictions in place, the possible actions to be taken in order to manage the prepayments risk or the interest risk do not exist, therefore no relevant activity can be associated to these risks.

Analyzing the fact that an investor has or not the power over an investee in influencing the amounts of profits will, in this case scenario, focus on the credit risk. In this respect, the investor must identify the activities associated to the credit risk and who holds the ability of taking decisions in this matter.

9. Conclusions

In appling the consolidation standard's provision a thorough analysis must be performed due to the fact that there are lots of aspects to be taken into consideration. As we presented in the above analysis, there are several steps and details to be taken into consideration in order to properly asses wether an investor has the relevant rights that provide control over the relevant activites of the investee.

EVOLUTION OF ECONOMY AND ITS IMPACT ON INSURANCE MARKET – A STATISTICAL ANALYSIS

Sandra TEODORESCU[*]

Abstract.

The economic context has a strong impact on the insurance sector. On the one hand, the decisions related to sector regulation could influence the life of the insurance companies. On the other hand, taxes and other measures that may affect purchasing power, economic instability represent a threat. It is a fact that insurances are products that customers and companies access them when economic conditions are predictable and budgets could be accurately predicted.

The paper mainly analyzes in terms of indicators, the impact of the economy on the insurance sector. We are talking about the interrelationships between Gross Written Premiums (the insurance "Budget") and some macroeconomic indicators characterizing the Romanian economy, such as Gross Domestic Product, net average earnings, the average number of employees etc. Statistical analysis is performed for a 12-year period during 2002-2013. This analysis is based on official statistics published by the National Institute of Statistics, the National Forecasting Commission and the National Bank of Romania. The methodology consists of correlation and regression analysis. Of the variables used in the study we mention: Gross Domestic Product, the number of employees, employment, net average earnings, the activity rate of the working age population (15-64 years), non-governmental domestic credit. The analysis of correlation between the studied variables reveals that is a strong correlation between Gross Written Premiums and GDP, the number of employees, average earnings and non-government domestic credit.. Thus, economic growth, rising incomes, the increasing number of employees and facilitating credit conditions could be some elements that would lead to sustainable growth of the insurance market.

Keywords: Gross Written Premiums*;* Gross Domestic Product; insurance market*;* correlation *and* regression analysis.

1. INTRODUCTION

The economic history of the last 25 years has induced, as in the past, the conclusion of a permanent correlation between the growth indices in this field with the progress of the insurance sector. The general rule is that a prosperous society tends to defend, and thus, welfare, while as a society under the poverty has little interest in the protection of poverty.

Thus, in its simplest expression, the quarter of the century separates us from communism, alternated the long period of turbulence and decline, during the transition from centralism and dirigisme, to market dominance, as later, during the crisis of 2009-2012, with well experienced growth period during 2006-2009 and a slow recovery, still fragile, in the coming years by 2012. However, we must admit, that even in the difficult years and even in the relatively more comfortable years, Romanian society has not benefited of a comprehensive vision and, therefore, could not be managed neither dramatic effects nor the relatively favorable ones.

Increasing and decreasing curves of the economy have been harmonized with insurance penetration rate, but at least in the auspicious periods, their development was not generally as expected. Finally, the loan policy has increased more in the years 2005-2008 and then record a constantly decline, much aggravated by the fluctuations of currencies, such as recently, the Swiss franc and the US dollar.

All these, the fragile and inconsistent economic growth, catastrophic decrease of the number of jobs, the loan policy at the discretion of banks, should not suffer any damage, even if their borrowers have exhausted all the resources, outlined a framework unfavorable to the insurance market, led modest rates of growth or alternated stagnation with decline periods. Adding and historical factors (lack of a culture of saving and protecting property, possible to complete in time) and some psychological factors (Romanian fatalism and distrust that has been lost through mismanagement or in consequence of a cataclysm, however unpredictable, not can be recovered anymore) we have almost complete picture of the situation in this field, in early XXI century.

In Romania, insurance penetration rate is still very low, ranking us among the last places among the countries of the European Union. Insurance penetration in Romania has been on a downward trend in the period 2011-2014, as a result of internal macroeconomic context and the international financial situation. Thus, reporting total Gross Written Premiumss (GWP) by insurance companies in the first half of 2014 to the Gross Domestic Product (GDP), insurance penetration in GDP amounted to 1.42%, down compared to the same period of past, when it was

[*] Associate professor, PhD, Faculty of Economic Sciences, "Nicolae Titulescu" University of Bucharest, Romania (e-mail: **tsandra@xnet.ro**).

1.61%, according to data from the Financial Supervisory Authority.

For 2015, the National Forecasting Commission estimates, similar to 2014, an economic growth of 2.5%, according to data contained in the autumn forecast. However, most analysts expect a growth between 2.2% and 2.5%.

Unemployment in Romania is anticipated by the International Monetary Fund to decrease slightly, from 7.3% in 2013 to 7,2% in 2014 and 7.1% in 2015. The Romanian employers report that will continue to increase its number of employees and in the first quarter of 2015, but growth will again be modest, says the latest edition of the Manpower Employment Outlook Labor. Most active labor market are forecast in the manufacturing and finance, insurance, real estate and business services.

The loan policy is expected to recover slightly in 2015, after two years of decline, due to the increasing number of loans in local currency, to facilitate credit conditions and slowing bank deleveraging. The National Bank of Romania aims sustainable revival of lending, such as to contribute to a balanced and sustainable economic growth.

As before, the insurance industry will be influenced by developments in the local economy, which depends on global economic developments, especially European ones. 2015 could be the year a slight increase in the insurance market. The positive elements in the economy or in industrial growth, export growth, increased individual consumption and markets developments, closely related to the insurance market will favorably influence the insurance market.

Among existing threats are: the relatively low purchasing power of the population, lack of trust of potential customers, economic instability. Economic growth, which might reflect the incomes of Romanians, investment and development projects from European funds, goods or services in continuous development, decrease unemployment by increasing the number of employees, an facilitating credit conditions could be, for insurance market, the opportunities of 2015.

2. DATA DESCRIPTION

The statistical data used in the study are the official statistics data, published by the National Institute of Statistics, National Forecasting Commission and the National Bank of Romania. The variables used in the analysis of the correlation are:

- Insurance Gross Written Premiums – GWP (RON);
- Gross Domestic Product –GDP (million RON);
- Net Average Earnings –NAE (RON);
- Non-Governmental Domestic Credits – NGDC (million RON);
- Average Number of Employees – ANE (thousands of people);
- Employed population – EP (thousands of people);
- The activity Rate of the Working Age Population (15-64 years old) – RWAP (%)

The period covered by analysis is 2002-2013.

3. STATISTICAL ANALYSIS

The methodology consists of correlation and regression analysis, to assess the impact of some macroeconomic indicators on the volume of insurance Gross Written Premiums.

3.1. CORRELATIONS BETWEEN GWP AND SEVERAL MACROECONOMIC INDICATORS

The correlation between Gross Written Premiums (GWP) ratio and each macroeconomic indicator is listed below:

Table no.1.

Correlations. Marked correlations are significant at p < .05000 N=12

	GDP	**ANE**	**EP**	**NAE**	**RWAP**	**NGDC**
GWP	0.95	0.89	0.38	0.96	0.37	0.97

One can notice that the correlation matrix shows that the best correlation between the GWP and the macroeconomic indicators are $r_{GWP;GDP} = 0.95$, $r_{GWP;NAE} = 0.96$, $r_{GWP;ANE} = 0.89$, and, respectively, $r_{GWP;NGDC} = 0.97$, where $r_{X,Y}$ represent the correlation coefficient between the variables X and Y. All these correlation coefficients indicate the strongest relationship between variables.

3.2. EMPIRICAL ANALYSIS

In the first part of the analysis and study the dependence of the amount of insurance and some indicators with significant correlation coefficients.

1) From regression results[1] the linear regression equation for the GWP dependent variable and independent variables are following:

$$GWP = 0.0185 * GDP - 779.5683 \quad (1)$$
$$GWP = 4.5 * ANE - 23949.9 \quad (2)$$
$$GWP = 6.753 * NAE - 476.167 \quad (3)$$
$$GWP = 0.0244 * NGDC + 1833.216 \quad (4)$$

or, after normalization:

$$GWP = 0.918258 * GDP, \quad R^2 = 0.843 \quad (5)$$
$$GWP = 0{,}872167 * ANE, \quad R^2 = 0.7606 \quad (6)$$
$$GWP = 0.925004 * NAE, \quad R^2 = 0.84119 \quad (7)$$
$$GWP = 0.907017 * NGDC, \quad R^2 = 0.82268 \quad (8)$$

[1] *See Tables 5-8, Appendix*

The coefficients of the independent variables: Gross Domestic Product (GDP), Average Number of Employees (ANE), Net Average Earning (NAE) and Non-Governmental Domestic Credits (NGDP) are significant for a probability of 95%.

- According to the model (1), if GDP would increase by EUR 1 million, the GWP would increase by an average of 0.0185 million RON.
- According to equation (2), the regression coefficient indicates a change in the volume of GWP, an average of 4.5 million USD, an amendment to the ANE with 1000 employees.
- According to the equation (3) if the net average earnings would increase by 1 RON, then GWP volume would increase on average by 6.753 million RON.
- A change of 1 million USD of NGDC volume will be accompanied by a change in the volume of Gross Written Premiums, an average of 0.0244 million RON, according to (4).

Figure 1. Graph of the regression line (1) (obtained with Statistica)

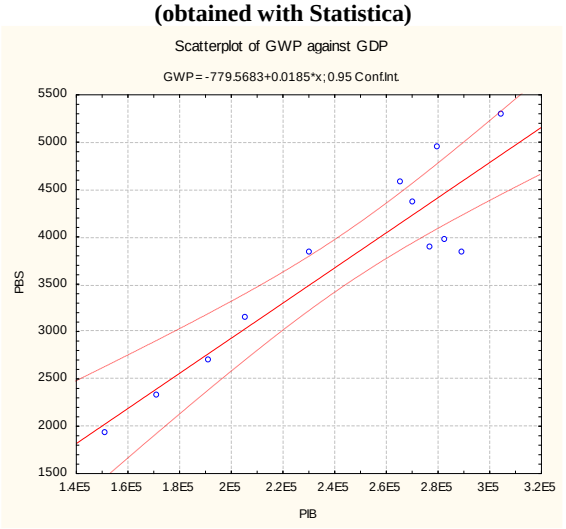

Figure 2. Graph of the regression line (2) (obtained with Statistica)

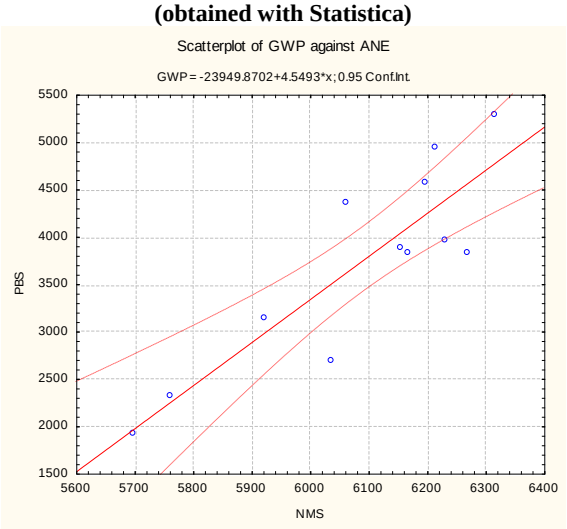

Figure 3. Graph of the regression line (3) (obtained with Statistica)

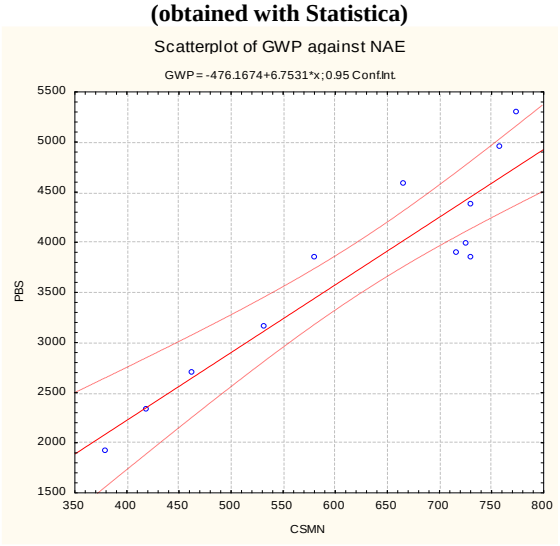

Figure 4. Graph of the regression line (4) (obtained with Statistica)

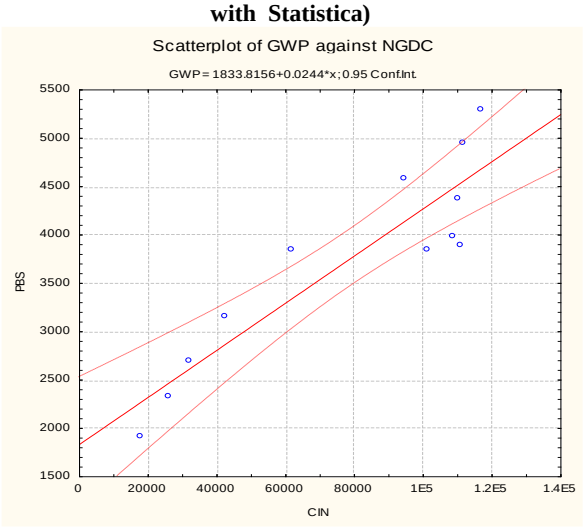


In the second part of the analysis, we study the dependence of the amount of insurance, on the one hand, and Gross Domestic Product (GDP), Average Number of Employees (ANE), Net Average Earnings (NAE) and Non-Governmental Domestic Credit (NGDC) volume on the other.

Multifactorial regression equation[2] is:

$$GWP = 0.00425 * NGDC + 10.924 * NAE + 2.73 * ANE - 14114.4$$

or, after normalization:

$$GWP = 0.15817 * NGDC + 1.49638 * NAE + 0.52368 * ANE$$

The coefficients of the independent variables are significant for a probability of 95%.

Thus:

- if non-governmental domestic credits volume would increase by EUR 1 million, the Gross Written Premiums would increase on average by 4250 RON,

[2] *See Table 9, Appendix*

while other factors remain stable.

- if the net average earnings would rise by 1 RON and other factors of influence would remain constant, the amount of insurance would increase on average by RON 10.9 million.
- if the average number of employees would increase by 1,000 persons, the Gross Written Premiums of insurance would increase by EUR 2.7 million, if other factors remain stable.

4. EVOLUTIONAL SCENARIOS

4.1. HYPOTHETICAL SCENARIO

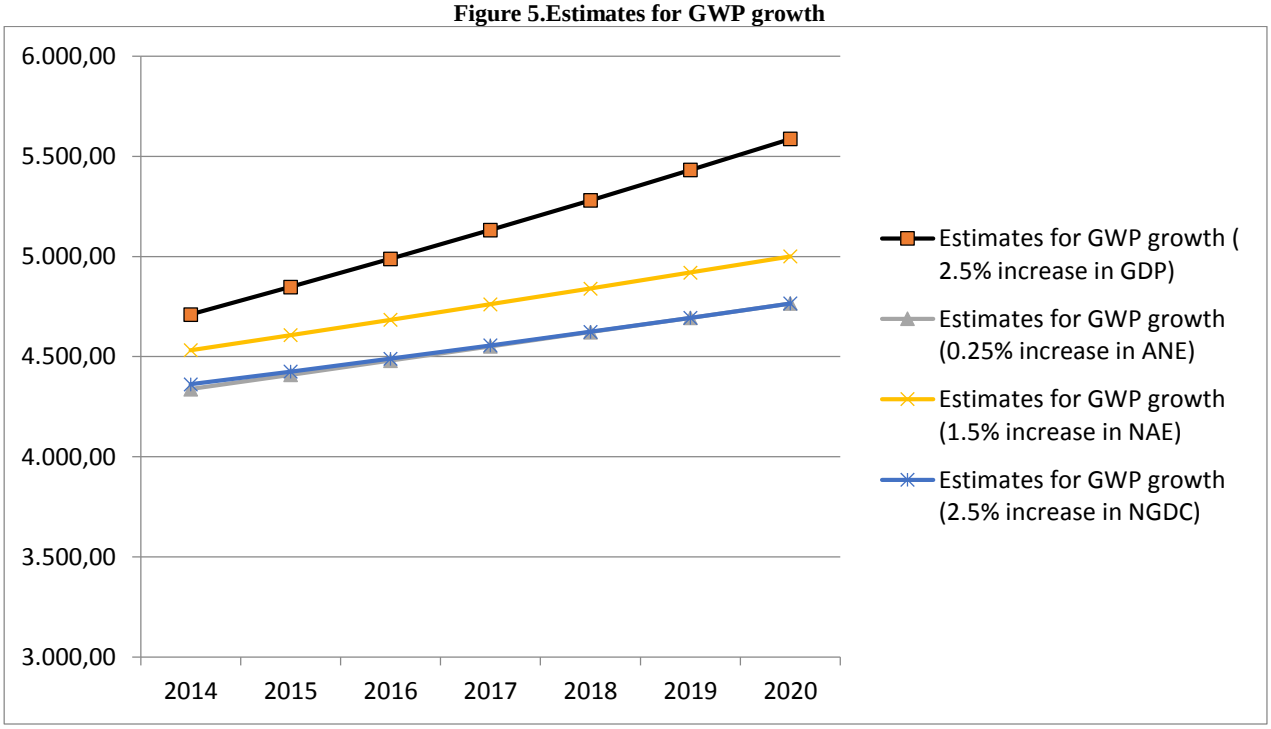
To calculate the economic impact of macroeconomic indicators on Gross Written Premiums from insurance, we assume that the indicators will increase as follows: GDP increases by 2.5% per year, NAE increases by 1.5% per year, NGDC increases by 2.5% per year and, respectively, ANE increases by 0.25% per year during 2014-2020. *If the indicators increase with mentioned percentages, what will be the impact on Gross Written Premiums, during 2014-2020?*

The estimates for Gross Written Premiums growth rate for 2014-2020 are noted in the table below, using the regression equations (1)-(4) and an evolution analysis of the indicators during 2002-2013.

Table no.2. **(million RON)**

Year	Estimates for GWP growth (2.5% increase in GDP)	Estimates for GWP growth (0.25% increase in ANE)	Estimates for GWP growth (1.5% increase in NAE)	Estimates for GWP growth (2.5% increase in NGDC)
2014	4,710.24	4,338.34	4,532.35	4,361.67
2015	4,847.48	4,409.06	4,607.48	4,424.88
2016	4,988.16	4,479.96	4,683.74	4,489.67
2017	5,132.35	4,551.04	4,761.14	4,556.08
2018	5,280.15	4,622.29	4,839.70	4,624.15
2019	5,431.64	4,693.72	4,919.43	4,693.93
2020	5,586.92	4,765.33	5,000.37	4,765.45

Figure 5.Estimates for GWP growth



4.2. HYSTORICAL SCENARIOS

- *If the financial crisis that emerged in 2009 reoccurs in 2014, what will be the impact on Gross Written Premiums growth?*

The estimated value of Gross Written Premiums for 2014 (assuming that the crisis reoccurs) used in the above mentioned multifactorial linear regression equations are shown in the following bold font value:

Table no.3

Predicting Values for variable: GWP (mil.RON)			
	B-Weight	**Value**	**B-Weight - * Value**
GDP	-0.02431	279652.1	-6799.3
NGDC	0.00425	111543.6	474.1
NAE	10.92441	759.5	8296.9
ANE	2.73154	6213.0	16971.1
Intercept			-14114.4
Predicted			**4828.4**
-95.0%CL			4003.1
+95.0%CL			5653.8

$GWP_{2014/2002}$ =4828.4 million RON, represents GWP (2014/2002 - current period/period of reference) which transformed again using the consumer price index, is $GWP_{2014} = 10.525{,}43$ million RON

- *If evolution during 2000-2008 (the economic boom period of Romania), reoccurs in 2014, what will be the impact on Gross Written Premiums?*

The estimated value of Gross Written Premiums for 2014 (assuming that the economic boom reoccurs) used in the above mentioned multifactorial linear regression equations are shown in the following bold font value:

Table no.4

Predicting Values for variable: GWP (mil.RON)			
	B-Weight	**Value**	**B-Weight - * Value**
GDP	-0.02431	325291.8	-7909.0
NGDC	0.00425	138807.1	590.0
NAE	10.92441	823.4	8994.8
ANE	2.73154	6381.0	17429.8
Intercept			-14114.4
Predicted			**4991.4**
-95.0%CL			4152.7
+95.0%CL			5830.1

In this case, $GWP_{2014/2002} = 499.4$ million RON, respectively $GWP_{2014} = 10{,}880.75$ million RON (transformed using the consumer price index).

5. CONCLUSIONS

Analysis of the relationship between economic growth and the insurance market, which took into account the current year (2015), for which it was investigated the correlation between Gross Written Premiums of insurance (GWP) and some macroeconomic indicators Gross Domestic Product (GDP), the Average Number of Employees (ANE), Employed Population (EP), Net Average Earnings (NAE), the activity Rate of the Working Age Population (RWAP), Non-Governmental Domestic Credit–(NGDC), filed, in context, two scenarios: one hypothetical, the other historical. Forecast is prudently positive, estimating the expected economic growth (in industry, exports, services, European funds) with consequences for consumption growth, enabled the new tax code and regulations (which will be at the debate in the near future), in a European context and favorable due to a possible increase in investments.

Hostile factors are those which could cause instability and lack of confidence that could maintain insurance penetration rate in the future in the same downward trend.

AN ANALYTIC HIERARCHY PROCESS APPLICATION FOR THE BEST DRIVER SELECTION IN UNIVERSITIES

Bülent BAŞARAN[*]
Musa KEVEN[**]

Abstract

Drivers are responsible for the safety and timely delivery of passengers and materials. Universities employ a certain number of drivers and this responsibility is true for them as well. University drivers are usually sent to different duties. Not only road, weather and traffic conditions but also size and type of vehicles change in different duties. Some drivers are more appropriate for some duties while some others are not. Evaluation of alternatives and assigning the best driver to a specific duty is very important for designating authority in universities. The aim of this study is to search whether the Analytic Hierarchy Process (AHP) is applicable to such an environment. In order to do this, the criteria that are necessary for driver selection have been specified. Two examples, which can be encountered in a university environment and contain two different duties, have been given. Based on those criteria, four alternative drivers have been evaluated for both examples. Priority orders of those four alternative drivers are different for both examples when looking at AHP results.

Keywords: *multicriteria decision making, analytic hierarchy process, managerial decision, services, assignment.*

1. Introduction

Since knowledge society grows faster and expands beyond the borders, individuals in knowledge society need to travel frequently, faster, and safely. Universities play a major role in the movements of intellectual people to contribute this expansion. There are many kinds of equipments and materials need to be moved or transported without any damage in the universities of today's knowledge society as well.

Developing knowledge society needs to make decisions with many criteria more than ever before so that multicriteria decision making becomes very important. Making a decision becomes more complicated and it may take a longer time. In order to get rid of those problems, decision makers need to increase their multicriteria decision making abilities. Additionally, developing standard schemes and templates for the similar decision making situations will contribute to increase the speed of any decision.

One of the multicriteria decision making methods is Analytic Hierarchy Process (AHP). There are many application areas of AHP because it is appropriate for many situations. Some multicriteria decision areas about selection among alternatives include supplier or firm (Roman *et al.*, 2014; Koç and Burhan, 2014; Bruno *et al*. 2012), production process (Sharma and Agrawal, 2009), strategy (Lin and Wu, 2008; Wu *et al.*, 2012), planning (Sayyadi and Awasthi, 2013), etc. There are also some researches in literature related to selection of person or employees by using AHP or fuzzy AHP (Ünal, 2011; Doğan and Önder, 2014; Jabri, 1990; Zolfani and Antucheviciene, 2012; İbicioğlu and Ünal, 2014; Eraslan and Algün, 2005; Özdağoğlu, 2008; Swiercz and Ezzedeen, 2001; Torfi and Rashidi, 2011; Güngör *et al*. 2009). On the other hand, there could not be found any research about driver selection by using AHP in literature. Because of this reason, the aim of this study is to search weather AHP is applicable to prioritization of drivers in terms of different duties in universities and develop a useful multicriteria scheme in order to make similar decisions faster.

This paper is organized as follows: to be able to evaluate appropriateness of drivers to duties, necessary criteria are described in second section. Third section explains basic AHP multicriteria decision-making approach. Fourth section gives two real examples about the best driver selection in a university and fifth section is the conclusion section that summarizes findings with recommendations and gives some possible future directions.

2. Criteria for the Best Driver Selection

2.1. Vehicle to be Driven (V)

Vehicles should be well equipped and serviced prior to departure. Bad conditions of vehicles affect drivers badly while good conditions of vehicles decrease the risk of doing an accident and loosing life or property. Size and age of vehicles are among the contributing factors to young driver crashes (Scott-Parker *et al*., 2015). Type of duty, readiness of vehicle, and even sometimes cost of travel can change the type of vehicle that the driver have to use during travel. For example, some duties need a car while some others require a truck or a bus. Some drivers perform well on some kind of vehicles while some others do not. Therefore, decision makers need to consider type (V_1),

comfort (V_2) and driving safety (V_3) of the vehicle before assigning a driver to any duty.

2.2. Road to be Used (R)

Duties can take place in the city that the university is already located on or in other cities or destinations away from the university. Because of this reason, long or short distance travels is a major concern for any driver. Sometimes drivers can not be in a good condition to go a long distance since they can be tired, do not have much time or enough experience. Traffic is heavy and complicated on some roads and high ways especially in big cities. Slower speeds, longer trip times and increased queuing occurs in urban traffic network with traffic congestion. Driving is very difficult in traffic congestion because drivers have no freedom of choice with respect to driving decisions, they are forced to follow the leading vehicles, and they can hardly maintain desired speed and adjust lane choice (Wang *et al.*, 2011). Finding an address can be difficult for some drivers if they are not familiar with the city or location that the duty will take place. Roads can be dangerous because of not only their construction materials but also geographical conditions. They can have many curves, holes, and bumps. Road infrastructure is among actors influencing young driver road safety in the study of Scott-Parker *et al*. (2015). On the other hand, climate changes from region to region. Rainy, snowy and icy roads are possible challenges that the drivers must deal with. It has been proven that the choice of speed, reaction time and driving behavior of drivers are negatively affected during adverse weather conditions (Chakrabartya and Guptab, 2013). Some drivers may be much careful in bad weather conditions and dangerous roads. Therefore, decision makers need to consider distance (R_1), traffic density (R_2), weather condition (R_3), and surface quality (R_4) of the road before choosing a driver for any duty.

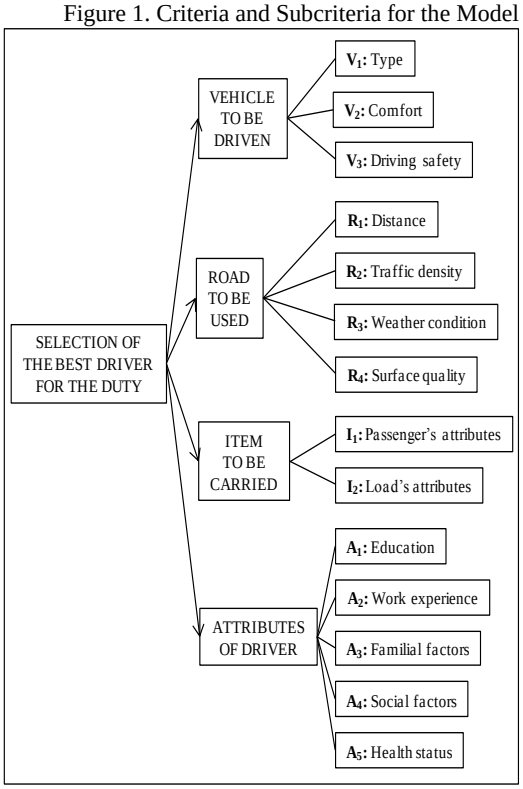
2.3. Item to be Carried (I)

The most important responsibility of drivers is to carry items to destinations without causing any damage, harm, or dissatisfaction. Items include humans, animals, products, devices, materials, and equipments. Passengers can have different kind of attitudes, attributes, and careers. They can be academicians, bureaucrats, students, athletes, managers, workers etc. They can expect different behaviors from drives. For example, bureaucrats or managers may expect dialogue that is more formal while students or workers may be comfortable with informal communications. Some passengers like travel with some music while some others like it within a quiet atmosphere. Some drivers' personalities are more appropriate for traveling with some kind of passengers. Items like devices, equipments or materials have to be carried without any physical damage. Sometimes they need to be handled by the driver and moved to or from the vehicle. They can be heavy, light or fragile. Some drivers are not strong enough to carry them. Therefore, decision makers need to consider passenger's attributes (I_1) and load's attributes (I_2) when choosing the best driver for any duty.

2.4. Attributes of Driver (A)

Personnel attributes of any driver are very important criteria in order to make a good selection for decision makers. Without concerning those attributes, the link that connects drivers with above-mentioned criteria is not established properly and any decision becomes ambiguous. Drivers may come from different backgrounds and living conditions. Their education levels may be different. Higher education helps drivers when communicating with passengers in a formal way. It has been shown that the higher education facilitates to overcome stress as well (Özmutaf, 2006). The drivers with higher education can easily deal with stress. Additionally, work experience is as important as education for being a good driver. In the research of Güngör *et al*. (2009), İbicioğlu and Ünal (2014), Özdağoğlu (2008), Doğan and Önder (2014), and Torfi and Rashidi (2011), work experience and education are included personnel selection criteria. Experienced drivers are familiar with the conditions of vehicles, roads and loads. They can rarely make mistakes. Familial and social factors can affect drivers as well. Married drivers have to thing about their families. Driving after hours can be stressful and wistful for them. Drivers with some social problems like bad living conditions and credit debts can be more pensive and careless. Some criteria such as bringing familial problems to work, being in a healthy condition, having abilities in the social relations with other people are included in ideal performance evaluation forms in the study of Eraslan and Algün (2005). Some kind of illnesses may affect the driving safety as well. For example healthy eyes, ears, and nerve system are very important for driving safely. Therefore, decision makers need to consider education (A_1), work experience (A_2), familial factors (A_3), social factors (A_4), and health status (A_5) of drivers when deciding which driver is more appropriate for the duty. All of the above mentioned criteria and subcriteria are shown with their abbreviations in Figure 1.

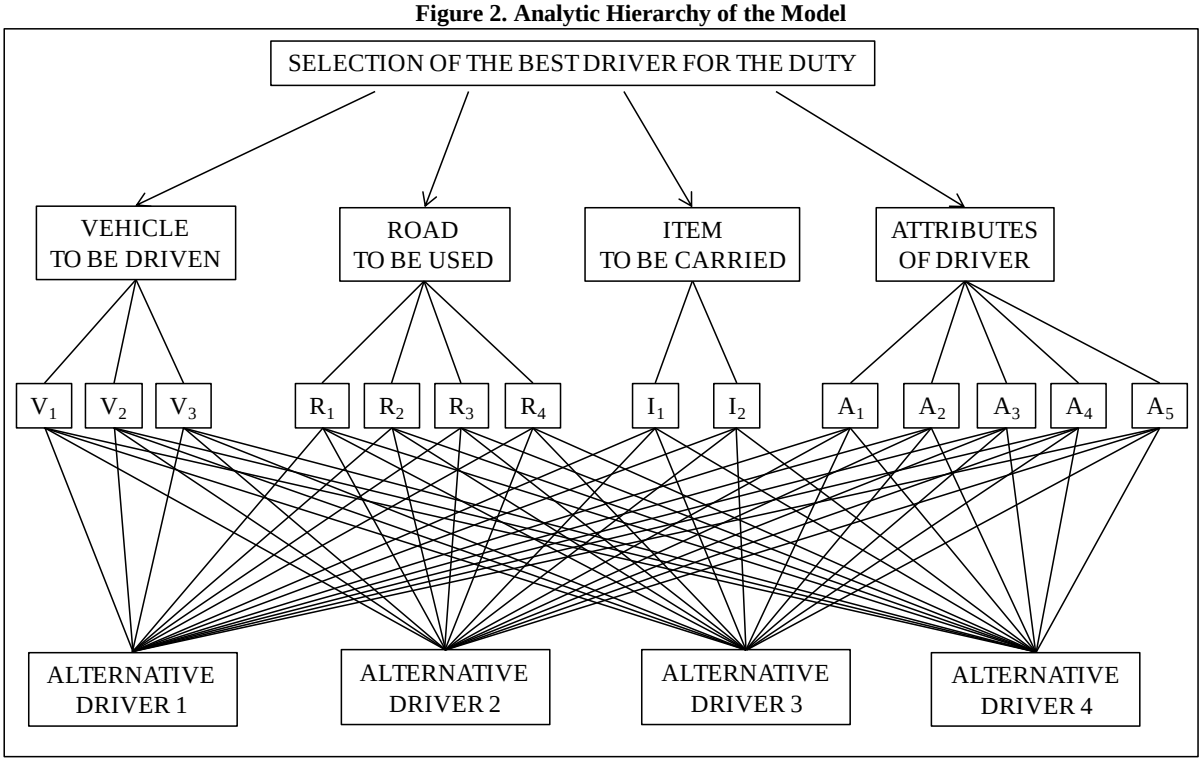
Figure 1. Criteria and Subcriteria for the Model



3. Analytic Hierarchy Process

AHP is one of multicriteria decision-making method that was originally developed by Saaty (1980). The approach allows the decision maker to structure complex problems in the form of a hierarchy or a set of integrated levels. Generally, the hierarchy has at least three levels, namely, the goal, the criteria, and the alternatives (Liberatore et al., 1992). The goal of this study's problem is to select the best driver of a university in terms of a certain duty. The goal is placed on the first level of the hierarchy as shown in Figure 2. The second level of the hierarchy occupies the criteria and subcriteria that are defined in previous section. The alternatives are four drivers in the third level in Figure 2.

Figure 2. Analytic Hierarchy of the Model



AHP is a measurement theory, which is performed by pairwise comparisons, and depends on the opinions of experts for defining priority measures (Ahmed *et al.*, 2006). First, each criterion is compared with others in terms of importance level in AHP. For example, when comparing criteria A_i and A_j, linguistic preference judgments and numerical ratings of them are used as shown in Table 1.

Table 1. The Fundamental Scale (Saaty, 2006)

Intensity of Importance	Definition	Explanation
1	Equal importance	Two activities contribute equally to the objective
3	Moderate importance	Experience and judgement slightly favor one activity over another
5	Strong importance	Experience or judgement strongly favor one activity over another
7	Very strong or demonstrated importance	An activity is favored very strongly over another; its dominance demonstrated in practice
9	Extreme importance	The evidence favoring one activity over another is of the highest possible order of affirmation
2, 4, 6, 8	Intermediate values when compromise is needed	

The number of comparison for n criteria is $m = n(n-1)/2$. Obtained pairwise comparisons are shown in a single matrix. Priority weights of criteria are calculated by using this matrix. The maximum eigenvalue is found and normalized eigenvector is calculated corresponding to this eigenvalue. The elements of this normalized eigenvector give the weights of criteria.

Having made all the pairwise comparisons, the consistency is determined by using the eigenvalue, λ_{max}, to calculate the consistency index, CI as follows: $CI = (\lambda_{max} - n)/(n-1)$, where n is the matrix size. Judgment consistency can be checked by taking the consistency ratio (CR) of CI with the appropriate value in Table 2. The CR is acceptable if it does not exceed 0.10. If it is more, the judgment matrix is inconsistent. In order to obtain a consistent matrix, judgments should be reviewed and improved (Al-Harbi, 2001).

Table 2. Average random consistency index (RI) (Saaty, 2006).

n	1	2	3	4	5	6	7	8	9	10
RI	0	0	0.52	0.89	1.11	1.25	1.35	1.40	1.45	1.49

4. An Application on University Drivers

The application took place a public university in Turkey. There is a driver crew consisting of nine drivers in the university. The drivers can be assigned to some different duties within a day. Sometimes the time of a duty can exceed working hours. Although there are nine drivers to choose for a duty, about four of them are usually available and appropriate because of some reasons when selection is a matter of concern.

In order to show that the priority order of drivers can change from duty to duty, AHP is applied on the same four drivers in two different duties. These duties are given as two examples below.

4.1. Example One

The university arranges talk meetings about topics in history and culture once a week. Usually one speaker is brought from another university or institution. The speakers may be academicians, authors, journalists and experts in their fields. The first example is about this kind of event. That week's speaker is a dean of a faculty of science and letters of a university in İstanbul. That speaker will be taken from İstanbul and brought to the university in the other city. That will be the duty of selected driver and the vehicle to be used for that duty will be an automobile. The designating authority, which is usually a senior staff member related to drivers, will decide which one of the four drivers is the most appropriate for this duty. Therefore, this senior staff member has made pairwise

comparisons and below matrices have been filled accordingly. CRs are in parentheses at the top of matrices.

Main Criteria (CR = 0.07).

	V	R	I	A		
V	1	5	3	5	=	0.064
R	1/5	1	1/3	3		0.271

B	1/3	1	3	1/3		0.249
C	1/5	1/3	1	1/5		0.560
D	1	3	5	1		0.095

4.2. Example Two

There will be a national folk dances competition in Antalya. Antalya is a city located on south coasts of Turkey. This event will continue six days. The university plans to send its folk dances club, which consists of 40 students, for that event. A bus will be dedicated and two drivers be assigned to this bus for that duty. The same senior staff member in example one has made pairwise comparisons here again and below matrices have been filled accordingly. CRs are in parentheses at the top of matrices.

Main criteria (CR = 0.07).

	V	R	I	A		
V	1	3	5	5	=	0.064
R	1/3	1	3	5		0.172
I	1/5	1/3	1	3		0.271
A	1/5	1/5	1/3	1		0.544

Vehicle to be driven (CR = 0.00).

	V_1	V_2	V_3		
V_1	1	1	7	=	0.111
V_2	1	1	7		0.111
V_3	1/7	1/7	1		0.778

Road to be used (CR = 0.09).

	R_1	R_2	R_3	R_4		
R_1	1	3	5	5	=	0.102
R_2	1/3	1	7	5		0.053
R_3	1/5	1/7	1	3		0.549
R_4	1/5	1/5	1/3	1		0.297

Item to be carried (CR = 0.00).

	I_1	I_2		
I_1	1	1/7	=	0.875
I_2	7	1		0.125

Attributes of driver (CR = 0.09).

	A_1	A_2	A_3	A_4	A_5

4.3. Analysis of the Results

As can be seen in pairwise comparison matrices in the sections 4.1 and 4.2, all CRs are below 0.10. These mean that the results are consistent. Table 3 shows AHP results of both examples. Overall CRs are also below 0.10 for two examples as shown at the bottom of Table 3. Therefore, inconsistency is not a matter of concern for both examples. Although the drivers are same for both examples, their priority orders are not equal. Driver C is the most demanded one for the duty in example one while driver B is the most appropriate one for the duty in example two when looking at the alternative section of Table 3. Driver B is the least appropriate one in example one however. Because of two drivers are needed, driver B and C should be chosen for the duty in example two. On the other hand, only driver C should be chosen for the duty in example one.

Since the priority orders are different for different duties, the results show that AHP is applicable for such a driver selection process in universities. The most important problem here is that the frequency of this kind of selection process is quite a few in universities although AHP usage takes time. It is known that making pairwise comparisons and having consistent comparison matrices take time for any decision maker. However, AHP methodology is still beneficial because the same or similar duties repeat in certain periods even though they can be seen different at the beginning. After doing AHP and assigning the most suitable driver to a certain duty, it is also possible to find another duty similar to this one and assign the same driver without any calculation or deeply thinking in the future.

Table 3. AHP results of both examples

	Example 1	Example 2
Main Criteria		
Vehicle to be driven	0.064	0.064
Road to be used	0.271	0.122
Item to be carried	0.122	0.271
Attributes of driver	0.544	0.544
Subcriteria for vehicle to be driven		
Type	0.105	0.111
Comfort	0.258	0.111
Driving safety	0.637	0.778
Subcriteria for road to be used		
Distance	0.127	0.102
Traffic density	0.223	0.053
Weather condition	0.487	0.549
Surface quality	0.162	0.297
Subcriteria for item to be carried		
Passenger's attributes	0.750	0.875
Load's attributes	0.250	0.125
Subcriteria for attributes of driver		
Education	0.061	0.053
Work experience	0.483	0.431
Familial factors	0.048	0.171
Social factors	0.194	0.081
Health status	0.213	0.265
Alternatives		
Driver A	0.225	0.248
Driver B	0.179	0.283
Driver C	0.361	0.264
Driver D	0.235	0.205
Overal consistency ratio	0.05	0.07

5. Conclusions

A driver's license shows only a permit that a driver can use a certain kind of vehicle. It does not explain a driver's abilities or attributes. Some drivers can be appropriate for weather, road and vehicle conditions as a whole while some others can be advantageous for several of those conditions. Recognizing the attributes of any driver is very important for the authority that in charge of assigning the driver for a duty since taking account of those attributes in the assignment process increases the safety of travel. Thus, the risk of doing accident decreases and any conflict or friction between the driver and passengers does not appear.

The most important contribution of this study to literature is the specification of criteria for evaluation of any driver. Those criteria are divided into four main categories such as vehicle to be driven, road to be used, item to be carried, and attributes of driver and those categories are divided into fourteen subcriteria. Illustrating the applicability of AHP in the selection of best university drivers by using those criteria is another contribution of this study to literature. The criteria have been tested by using ordinary AHP method within two examples. It is possible to say that the results are promising. Some possible extensions of this study may be searching the applicability of fuzzy AHP, TOPSIS, and fuzzy TOPSIS methods in future researches.

OLD AND NEW ECONOMIC GLOBALIZATION

Elena MĂRGULESCU[*]

Abstract

The retrospective of the theoretical approaches of the phenomenon of economic globalization in the last three decades emphasizes the movement of attention from the globalization of markets, from the'80s, to the globalization of production and services in the current decade. This trend is essentially the result of implementing new strategies by multinational and transnational companies. We try in this context to draw a line between the "globalization of markets" and the "globalization of production and services". A feature of the globalization of production and services is the implementation of the arbitrage strategy in respect of one or more production factors. But the "globalization of production and services' gains a new content due to the new possibilities offered by the "modularization" of production. Following, the arbitrage strategies began to address new factors, as for example the "functions" of production resulting from the restructuring of the product value chain.

Keywords: *globalization of markets, globalization of production and services.*

1. Introduction

When talking about the economic globalization phenomenon one can easily observe the large diversity of opinions among scientists regarding, on the one hand, the unfolding of the globalization phenomenon, and, on the other hand, its definition and its difference from internationalization.

The economic globalization was considered by different authors as:

- a process of establishing production facilities around the world in order to obtain scale economies (F. Livesey, 1993, "Dictionary of Economics")
- a process of creating a worldwide market as a result of a certain alignment of consumer needs, of the standardization of goods and of the development of communications and mass-media, through the flexibility of companies (De Luca G., MinieriS., Verrili A.,1998)
- a specific stage of capital internationalization everywhere there are resources and markets (C.A.Michalet, 1985, "Le capitalism mondial")
- A system of interconected markets, the globalization of markets implying their integration and the development of „global strategies" by those companies seeking a worldwide presence (A.P. Rhoen, 1996, "International Trade")
- The increased interconnections between countries and societies which lead to the fact that events, decisions and actions taken in one part of the world have a sizable effect on people and communities situated faraway from one another. Globalization has two features: the sphere and the intensity of action (Dunning J.H."The Advent of Alliance Capitalism" and"The New Globalizm and Developing Countries" –1997).
- The unavoidable integration of markets, states and technologies (Th. L. Friedman, 1999, Lexus and the olive tree)

Finally, this diversity of opinions leads to three different perspectives on the globalization process and three groups of researchers:

- the optimists, who accept the positive outcomes of globalization(A.Giddens, D.Harvey, R.Robertson G. Barraclough, J.H.Dunning, D, Moberg, Bimal Gosh, etc.)
- the pesimists, who stand against the globalization process (J.Mander, J.Stiglitz, D.Korten, etc.)
- the moderates, with a balanced view on globalization (Paul Hirst and G.Thompson).

One thing is certain, though. The fact that the topic of globalization is approached by so many authors indicates that globalization is not yet a well-defined, well-structured concept, and any new scientific contribution is welcome.

Content

Regarding the unfolding of the process of the economic globalization, the polemic mainly focused around the explanation of whether globalization is just an advanced stage of the internationalization of relations between companies and states, or it is an altogether different qualitative stage.

In the second case, we can witness two different scenarios: that of quantitative accumulation which generates a new quality, and the other of the appearance of new factors which created an original aggregate, which could not be reached by previous accumulations. Some authors, through their methodological enterprise, come closer to the second model of defining globalization, others dwell on sequential aspects or effects of international relations

[*] PhD, Faculty of Economics, "Nicolae Titulescu" University of Bucharest (e-mail: **elena.margulescu@univnt.ro**).

that they assimilate to globalization, from an approach that is not necessarily scientific.

Like other researchers who have studied the global evolution of companies in the past years, we have noticed that both the theoretical model of convergence (Ricardo/Samuelson) and the model of the national diversity of capitalism (Michel Albert, P.Hall-Harvard and D.Saskice-Duke, with the German-Japanese and American-British models), while having their share of truth, are much too generalised. Starting from the macroeconomic level of the functioning of national economies, it is more difficult to infer the concrete reaction of companies to the different limitations and opportunities.

The conclusions of a study completed in 2005 by researchers from MIT, regarding the real strategies of companies, were very different from the predictions of the two models. These elements determined us to approach globalization as well from a microeconomic perspective, as a sum of strategies of restructuring and relocation of the international activities of the companies.

Next, we wanted to get closer to our view on the particularities of the actual globalization processes through a comparative analysis of the characteristics and implications of the "old globalization" and those of "the new globalization". We thought that Richard Baldwin's scientific approach was interesting enough to be mentioned here. He tried in 2006 to clarify the paradigms of the old and the new globalization, seeing the phenomenon as a process characterised by two important decouplings.

The first decoupling, brought about by the rapid drop of transport costs, ended the necessity to manufacture products close to the areas of consumption, allowing the spatial separation between the manufacturers and the consumers.

The second decoupling was brought about by the significant reduction of the international communications and activity coordination costs in the last decade, which ended the necessity to have almost all the production stages in the immediate proximity. In addition, in more recent times, the decoupling of some activities and functions happened through the offshoring of business services. In this way, the second decoupling spatially dissociated factories from offices and lead the global competition to the level of the functions hosted by these structures.

Historically, comparisons are made between the first globalization (1870-1914) and the second globalization (postwar and especially since the'80s) and it argues that the world economy reached only in the 80s the same high levels in terms of capital mobility, foreign direct investment (FDI) and trade which were specific to the first globalization, but with the difference that freedom of immigration is not at the levels of that time. While labor migration has played a major role in the first stage of globalization, in the second, the effects of globalization mainly result from the reorganization and relocation of production.

If you look at economic globalization as a process of acceleration of the world economy and of the national economies, leading to the unification of international markets and creating a global market (Suzanne Berger, 2006), then globalization today is the result of political, economic and technological shocks that synchronized and mutually strenghtend in the early '80, which led to substantial restructuring of the manufacturing process. Once China began in 1979 to open the economy to the west and the Berlin Wall collapsed in 1989, the most powerful political barriers to trade and capital mobility have been dismantled. An important role also played the policies of the industrialized countries towards the liberalization of capital markets and the elimination of barriers in international trade.

We must also mention another very important element of the current globalization process namely the accession to the status of competitors of developed countries by a growing group of developing countries. If poor countries in the past exported food products and natural resources, currently over 70% of total exports of goods of these countries is represented by manufactured products, and the share of developing countries in the world merchandise trade exceeds 1 / 3 of world trade.

A retrospective of the theoretical approaches to economic globalization in the past three decades stresses the shift of attention from the globalization of markets of the 80's to the globalization of production and services of the past two decades. We have to define these hypostases of globalization against the three categories of strategies that transnational companies apply in a certain mixture: adjustment, aggregation ant arbitrage.

The globalization of markets lexically abreviates an set of TNC strategies that are primarily aimed to exploit the similarities between countries as a source of added value. Differences between countries, whether of cultural, administrative, geographic or economic nature, are addressed in these strategies as a set of constraints that need to be overpassed.

Depending on the nature and extent of these constraints we can draw a line between two extremes:

a) a limited globalization of markets, in which "distances" between countries exist and are significant, justifying the emphasis put by companies on strategies of adaptation to the characteristics of each market;

b) an extended globalization of markets, characterized by a significant reduction or even disappearance of the "distances" between countries, which brings to attention the aggregation strategies that enable companies to achieve significant economies of scale based on the international standardization of products.

The globalization of production and services expresses essentially those company strategies meant to exploit the differences between countries, addressing to these national features as to opportunities of realizing added value and not as to

constraints to be overpassed. The difference of approach is obvious and, in order of making clearer the need of customizing the business strategies to the two dimensions of current economic globalization, we propose the following definitions:

a) The strategies of market globalization involve the realization of a product in other countries, depending on the particularities of demand and exploiting, as much as it is possible, the similarities between markets in respect of demand.

b) The strategies of production and services globalization involve an international value chain structuring based on the particularities of the production factors supply on the international market.

The traditional forms that international specialization has taken until now are well-known: inter-sectorial, inter-branches and intra-branches, as well as intra-product. Each of these specializations has the merit of creating new trade flows between different regions and countries and thus generating development.

Nevertheless, in the past 10-15 years we have witnessed the appearance of a new specialization which takes place at the level of the distinct functions of the process of the creation and offer of a new product, which we think we can call as "functional" specialization. This new wave of functional specialization already generates new and qualitatively different dimensions of the phenomenon of economic globalization.

This kind of specialization highly contrasts with the vertically integrated structures of many TNCs and originates in the following two processes:

a) *The modularization of manufacturing* becomes possible within a range of industries due to the technological and organizational changes in the past 15 years. The new "Lego" model of production started in sectors like electronics and clothing where the digital technologies enabled the digital transfer of all the technical details of new products from the designer to the manufacturer, safe and with the possibility of control of the project implementation. This modularity generated a wave of outsourcing which rapidly advanced from fazes of the production process to the production process as a whole, enabling few TNCs to draw out completely from manufacturing, a function which was undertaken by a new type of companies, the "contract manufacturers". They specialized exclusively on the turnkey supply of manufacturing services, an activity which must be differentiated from the previous system of sub-contracting when a brand owning TNC is searching for additional production facilities for some of her original components or equipments. In this case we talk about the entire production function outsourcing related to the manufacturing of a commodity or a full set of commodities.

b) *The reconfiguration of the global value chain* is based on the same functional specialization which exceeds this time the field of the manufacturing process and can be found anywhere along the route of innovation and technology development – manufacturing – distribution and marketing – post sales services. The value chain becomes more and more fragmented as the functions implied by a certain business are differentiated into ever more specialized activities, going to those very narrowly specialized. His growing modularity generates also an increased competition along the value chain, and for every function or set of functions that a company preserves within his own walls it faces with rivals that focus all their resources to become top performers of that function. It has been reached a point when every activity retained by a company within its own structure has to be tested against the performance of the best competitors in the world. Even integrated companies like Sony, which made an option for an independent fulfillment of a much diversified set of functions, are confronting today with the dilemma of selecting the outsourceable functions. Even in many high-technology sectors manufacturing, logistics and distribution have become standardized to a great degree and that for they become tradable packages of activities.

A feature of the globalization of production and services is the implementation of the arbitrage strategy in respect of one or more production factors.

The arbitrage of "traditional" factors of production (cost of labor, capital, innovation) is not a new strategy, but its magnitude is remarkable lately.

Recently, the arbitrage strategies began to address new factors as for example the cost of a "function" resulted from the process of "modularization" or the cost of assembling a number of negotiable "functions".

In this way, within the "globalization of production and services", we have to distinguish between the "modern" component - the strategies of the arbitrage of functions resulted from the "functional" specialization, as opposed to the "classic" component - the strategies of the arbitrage of those production factors that are usually taken into consideration in economic analysis (and which ignores the opportunities of the "functional" specialization).

In respect of the production globalization we have to mention that only between the years 2000-2003, foreign companies have massively relocated their production to China, founding there around 60,000 factories. But we should not fall in the extreme of considering the period of "the globalization of markets" as an outdated historical period. Even now, most MNC are guided by strategies that aim to eliminate the constraints induced by the "distances" between countries. They have not yet connected to the new valences offered by the strategies of production or services globalization, with which they coexist in the last two decades.

Conclusions

Economic globalization represents in its core, the outcome of the implementation by companies of strategies meant to develop their business internationally, such as to overcome the "distances" that separate countries (globalization of markets), or to incorporate the positive effects of these "distances" into a global value chain (globalization of "production").

If talking about the traditional strategic incentives of TNCs regarding foreign investments, we can remember those formulated in 1993 by J.Dunning (inspired by Jack Behrman, 1972) who finds four large incentives categories:

a) search for resources
b) search for markets
c) search for efficiency
d) search for strategic assets

In spite of almost two decades past from the systematization formulated by J.Dunning, the means of the implementation of these strategies are still actual for many companies.

However, in the time passed from Dunnings systematization, new opportunities aroused from the above mentioned "modularity of manufacturing" and "functional" specialization.

In this context we can see that strategies from the "early" category of "market" globalization (based on the adaptation-aggregation mix) have uncounted less alteration compared with the strategies from the "new" category of "production" globalization (based on the concept of arbitrage of factors offered by different nations).

This is the reason for us to consider that an analyses on globalization should focus more on the strategies connected with the globalization of "production" and mainly on its new dimensions which are to be found in the arbitrage of some "classic" factors, but mainly in the arbitrage of these new factors represented in fact by the "functions" of the global value chain.

In this new competition framework there are two essential quests for a strategy making company:

- the selection of specific functions of the global value chain, both of those to keep inside and of those to outsource. A certain trend is already on sight, namely the choice of the TNCs to focus on the less tangible functions of the value chain, such as those knowledge-intensive as product definition, R@D, managerial services and brand management.
- the selection of the best integrators for the outsourced functions and of their location. Some of these integrators have meanwhile reached the status of a TNC.

BRAND COMMUNICATION ON SOCIAL NETWORKS

Otilia-Elena PLATON*

Abstract

The communication represents a basic element for the marketing activity that helps companies to achieve their objectives. Building long-term relationships between brands and consumers is one of the most important objectives pursued by marketers. This involves brand communication and creating multiple connections with consumers, even in the online environment. From this point of view, social networks proved to be an effective way of linking brands and consumers online. This paper aims to present some aspects involved by the usage of social networks in brand communication by analyzing several examples of online marketing campaigns implemented on Facebook on the occasion of Valentine's Day by six different brands.

Keywords: *online marketing, brand communication, online marketing communication, social networks, Facebook.*

1. Introduction

Many points of view reveal that social networks have improved the way brands are relating with their consumers, offering new means of communicating and interacting with them.

For the marketing communication, the development of social networks coincided with the emergence of a new way of transmitting messages between companies and consumers. This new media has provided an alternative of communication and has managed to create innovative ways of making known the activity of the brands. The online marketing communication represents a successful method that helps companies to create complex and varied connections between brands and their audience.

Starting from this assumption, this paper approaches the issue of online marketing communications through social networks and its importance in building the relationship between brands and consumers.

Marketing communications comprise a set of elements designed to act together in order to support the brand. Primarily, this paper will present the most important theoretical aspects regarding brand communication on social networks. Secondly, the paper will present some specific case studies reflecting this concept. The case studies present six different online marketing campaigns implemented on Facebook on the occasion of Valentine's Day.

The research presented in this paper is based on a secondary data analysis which aims to demonstrate that the usage of social networks in brand communication can provide advantages for the online marketing activity.

With the help of this exploratory study will be identified some examples of online marketing communication tactics that can be used by marketers in order to relate more actively with their consumers.

2. Social networks and brand communication

2.1. Theoretical aspects

The communication is considered a key component of the marketing activity, "a way of affirming and supporting the competitive advantage"[1] of a company. Marketing communication plays an important role for managing the relationships between companies and consumers on short, medium or long term.

The scientific literature doesn't provide a single point of view regarding the definition of this concept. One way of understanding marketing communication is by regarding it as "the means by which companies are trying to inform, persuade and remind consumers - directly or indirectly - about their selling products or brands"[2].

In the attempt to clarify the meaning of this concept, it should be noted that there are some opinions according to which marketing communication and promotion are two synonymously terms[3]. This approach is incorrect because the ratio between promotion and marketing communications is from part to whole[4].

Promotion can be regarded as a set of discontinuous organized activities that aim to inform and influence the consumer buying behavior, also supporting the process of selling a company's products or services[5]. On the other hand, marketing communication is a more complex concept, which features a diverse set of operational methods, among

[3] Olujimi Kayode, *Marketing communications* (Bookboon.com, 2014), 9.

[4] Gabriela Grosseck, *Marketing si comunicare pe Internet* (Iasi: Lumen, 2006), 189.

[5] Popescu, *Comunicarea în marketing,* 18-19.

which the promotion is just one of the several specific methods used for communication between a company and its audience[6].

Marketing communication can be classified in two categories, depending on the content or the nature of the methods and techniques used [7], namely:

- *promotional communication*: is using temporary promotional tools such as advertising, public relations, sales promotion, direct marketing, sales force etc.

- *continuous communication*: is using permanent tools such as the brand, the packaging, the price etc.

These forms of communication are complementary and are mutually reinforcing, acting coherently in meeting the company's overall marketing objectives.

Within the continuous communication tools, the brand plays a significant role, which is why marketing communications can be seen as the brand's voice[8], representing an important tool that can be used for starting a dialog and building a relationship between a brand and its consumers. Marketing communication represents "the ensemble of all the elements included in the marketing mix of a brand"[9], each of those elements serving to support the overall message of the brand. Marketing communication may prove to be a source of competitive advantage for brands.

Therefore the brand is a key component of the marketing communication[10]. The valorisation of the brand's communicational equity must be realized carefully due to the brand's capacity to transmit messages and influence the consumers.

The Internet is a communication medium that can be used independently or integrated for marketing communication purposes. The use of the Internet is associated with the improvement of the communication process in terms of addressing the consumers. On the Internet, the marketing communication process must adapt and it should be conducted at both an informational and a relational level[11].

The use of the online marketing communication may prove successful in terms of supporting the brand's message. Online marketing communication provides an opportunity for companies to develop the brand's relationship with its consumers.

The emergence of social media was occasioned by the evolution of the Internet from a repository of information and static communication technologies into a multidirectional communication space[12]. This evolution was fulfilled by the transition from Web 1.0 to Web 2.0. Based on the specific features of Web 2.0, social media managed to improve the interaction and communication between individuals by means of a wide range of tools, applications and specific services.

Among all of the social media tools, social networks are those that meet the highest growth today and enjoy the greatest popularity among Internet users.

The pace with which social networks have increased globally is impressive. At the end of 2014, the total number of social networks users reached 1.8 billion persons[13]. The largest number of users was registered by Facebook, which totaled about 1.39 billion members. Used in a coordinated manner, this network can prove to be very successful for brand communication. By using some specific tehniques, like contests and incentives, the promotional communication can support the brand coomunication and can stimulate the consumers to interact with the brand.

2.2. Case studies

This paper analyses six different Facebook campaigns organized on the occasion of Valentine's Day by brands such as: Paralela 45 (tourism agency), Garnier BB Cream (cosmetic products), Huawei Romania (telecommunications equipment), Durex (personal care products), Sensiblu (pharmaceuticals) and Garanti Bank (banking services). These case studies were chosen because they reflect a variety of brands that are using social networks for marketing communication purposes. All of the campaigns were analysed using Facebrands Pro, a social media tool providing analytics for Facebook pages.

2.2.1. Paralela 45 – Surprise your loved one with a special gift for Valentine's Day

The campaign developed by Paralela 45 took place between January, 23 and February 13, 2015. To enter the contest, each user had to post a photo in which he/she appeared next to their loved one and to add a description regarding how much they love each other and how much they deserve to earn the prize. The prize consisted of a two-night vacation in Sinaia.

At the end of the campaign, on February 13, 2015, the total number of the page fans was 45,733, with 13.02% (5,268 fans) more than at the beginning of the campaign. The average growth speed was of +251 fans per day. The total number of engaged fans during the campaign was 3,193 (21.17% of overall engaged users of the page) and the engagement rate reached the average value of 6.98% of all page fans.

The contest generated a rapid increase in the number of page fans, and also a high level of engagement among the fans. The increase of the total fans number was registered especially at the beginning

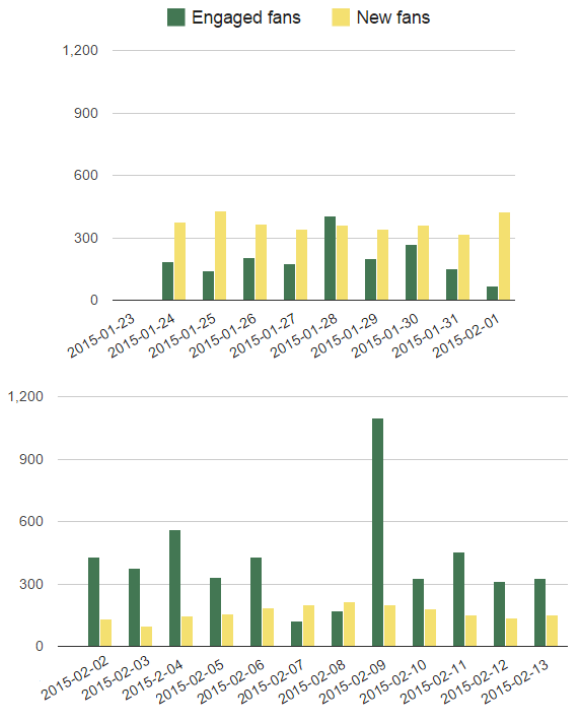
of the campaign, while a high level of engagement was achieved only in the second part of the campaign, as shown below:



Source: Facebrands Pro, 2015.

In terms of interactivity and loyalty, most of the fans interacted only once with the brand during this campaign, as shown below:

Interactivity levels	
1 activities	2483 fans
2 activities	531 fans
3-4 activities	332 fans
5-7 activities	199 fans
8-10 activities	101 fans
11+ activities	256 fans

Loyalty levels		
1 active days	2604 fans	66.72%
2 active days	538 fans	13.78%
3-4 active days	343 fans	8.79%
5-7 active days	194 fans	4.97%
8-10 active days	82 fans	2.10%
11+ active days	142 fans	3.64 %
Total	3903 fans	100%

Source: Facebrands Pro, 2015.

The administrators of Paralela 45 page posted a total number of 204 different activities during the analysed period. The structure of the posts by type of content and the average number of triggered interactions per post for this period were:

Posts by type of content	*Interaction trigger rate by type*	*Commens*	*Likes*	*Shares*
Photo	183	87,72	1,1	76,92	9,69
Link	17	58,94	0,12	51,94	6,88
Video	4	25,25	0,25	20,75	4,25
Total	204	-	-	-	-

Source: Facebrands Pro, 2015.

The fans posted 18 different activities during the same period, namely 13 link posts, 3 status posts, 1 photo post and 1 video post.

2.2.2. Garnier BB Cream – Poetry of love

The campaign developed by Garnier Romania for Garnier BB Cream took place during the period February 1-28, 2015 and was implemented by means of a dedicated Facebook application. In order to participate to the campaign, the consumers had to use the application named "Poetry of Love", available on the official Garnier Romania Facebook page, write a stanza and share it with a friend. To enter the draw for one of the prizes, the consumers had to purchase at least one Garnier BB Cream product and write the product code in the application. The list of prizes contained 28 personalised t-shirts and two romantic weekends at a tree house.

At the end of the campaign, on February 28, 2015, the total number of page fans was 256,766, with 0.74% (1,877 fans) more than at the beginning of the campaign. The average growth speed was of +70 fans per day. The total number of engaged fans during the campaign was 3,553 (4.95% of overall engaged users of the page) and the engagement rate reached the average value of 1.38% of all page fans. At the end of the campaign the poetry of love had 810 different stanzas.

During the analysed period, the fanbase evolution was positive and the fans activity showed a significant increase.

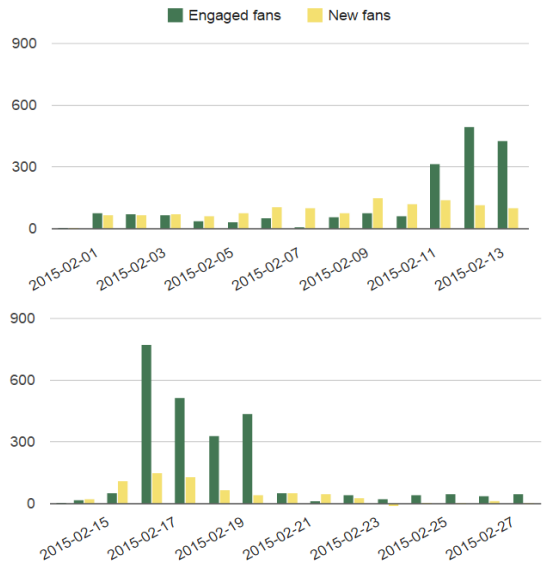
Regarding the interactivity and loyalty of the fans, most of them interacted only once with the brand during this period, as shown below:

Interactivity levels	
1 activities	3116 fans
2 activities	246 fans
3-4 activities	108 fans
5-7 activities	42 fans
8-10 activities	12 fans
11+ activities	28 fans

Loyalty levels		
1 active days	3277 fans	92.23%
2 active days	166 fans	4.67%
3-4 active days	62 fans	1.75%
5-7 active days	21 fans	0.59%
8-10 active days	15 fans	0.42%
11+ active days	12 fans	0.34 %
Total	3553 fans	100%

Source: Facebrands Pro, 2015.

The peaks of engagement were reached right before and after Valentine's Day.



Source: Facebrands Pro, 2015.

The administrators of Garnier Romania page posted a total number of 25 different activities during the analysed period. The structure of the posts by type of content and the average number of triggered interactions per post for this period were:

Posts by type of content		*Interaction trigger rate by*	*Commens*	*Likes*	*Shares*
Photo	20	223,75	10,3	203,3	10,15
Link	3	58,67	8,67	50	-
Video	2	31,50	-	30	1,5
Total	25	-	-	-	-

Source: Facebrands Pro, 2015.

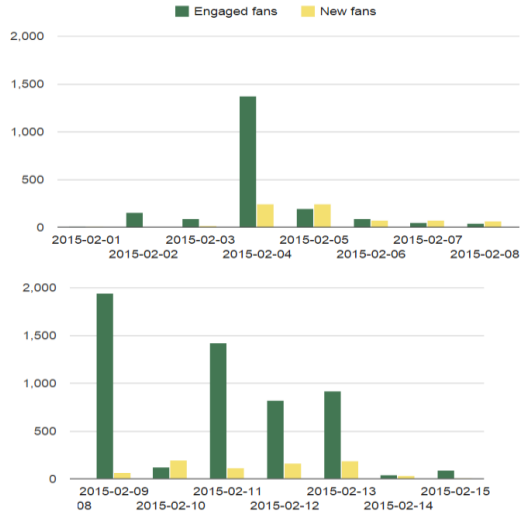
On the other hand, the fans posted 16 different activities during the same period, namely 10 status posts, 3 link posts and 3 photo posts.

2.2.3. Huawei Romania – Find a pair to your phone!

The campaign developed by Huawei Romania took place during the period February 1-15, 2015 and was implemented through a dedicated Facebook application. In order to participate, the consumers had to buy a Huawei Ascend P7 smartphone from Vodafone Romania and to enter the product code in the application. The list of prizes consisted of two Huawei Ascend P7 smartphones and 300 sets containing a phone pouch and a 4GB USB stick.

On February 15, 2015, the total number of page fans was 120,252, with 1.26% (1,494 fans) more than at the beginning of the campaign. The average growth speed was of +107 fans per day. The total number of engaged fans during the campaign was 5,118 (12.94% of overall engaged users of the page) and the engagement rate reached the average value of 4.26% of all page fans.

The fans engagement was more pronounced on the second week of the campaign, when it was also registered an increase of the fan number.



Source: Facebrands Pro, 2015.

Most of the fans interacted only once with the brand during this period, as shown below:

Interactivity levels	
1 activities	3823 fans
2 activities	798 fans
3-4 activities	336 fans
5-7 activities	77 fans
8-10 activities	31 fans
11+ activities	52 fans

Loyalty levels		
1 active days	3903 fans	76.26%
2 active days	775 fans	15.14%
3-4 active days	317 fans	6.19%
5-7 active days	74 fans	1.45%
8-10 active days	30 fans	0.59%
11+ active days	19 fans	0.37 %
Total	5118 fans	100%

Source: Facebrands Pro, 2015.

The administrators of Huawei Romania page posted a total number of 29 different activities during the analysed period, consisting of 28 photo posts and 1 video post. The structure of the posts by type of content and the average number of triggered interactions per post for this period were:

Posts by type of content		*Interaction trigger rate by type*	*Commens*	*Likes*	*Shares*
Photo	28	287,75	7,68	278,14	1,93
Video	1	22	1	21	-
Total	29	-	-	-	-

Source: Facebrands Pro, 2015.

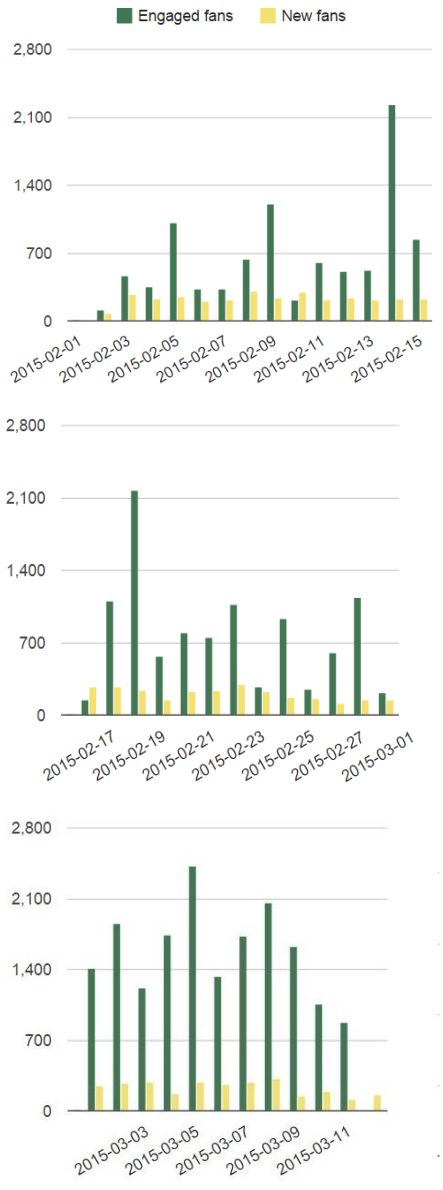
The total number of fan posts was 19, represented by 17 status posts, 1 photo post and 1 link post.

2.2.4. Durex – Why not offer something different?

The campaign developed by Durex Romania took place between 1st of February and 31st of March, 2015 and was implemented through a dedicated Facebook application, called "Give him/her something different!". To enter the contest, the consumers had to first purchase one of the Durex products and then enter the application. After playing a 30 seconds game and introducing the product code, they could enter the draw for winning one of the 10 prizes consisting of a hot-air balloon ride near Bucharest.

After one and a half month of campaign, the total number of page fans was 362,482, with 2.44% (8,649 fans) more than at the beginning of the campaign. The average growth speed was of +222 fans per day. The total number of engaged fans during the campaign was 18,697 (16.08% of overall engaged users of the page) and the engagement rate reached the average value of 5.16% among all page fans.

The engagement peaks were reached right on Valentine's Day and at the beginning of the second month of the campaign.



Source: Facebrands Pro, 2015.

During the analyzed period, most of the fans have interacted only once with the brand, as following:

Interactivity levels	
1 activities	12127 fans
2 activities	3145 fans
3-4 activities	1891 fans
5-7 activities	795 fans
8-10 activities	322 fans
11+ activities	416 fans

Loyalty levels		
1 active days	12432 fans	66.49%
2 active days	3145 fans	16.82%
3-4 active days	1758 fans	9.40%
5-7 active days	725 fans	3.88%
8-10 active days	297 fans	1.59%
11+ active days	340 fans	1.82 %
Total	18697 fans	100%

Source: Facebrands Pro, 2015.

The administrators of Durex Romania page posted a total number of 52 different activities during the analysed period, consisting of 52 photo posts. The average number of triggered interactions per post during this period was:

Posts by type of content		*Interaction trigger rate by type*	*Commens*	*Likes*	*Shares*
Photo	52	810,73	11,04	759,81	39,88

Source: Facebrands Pro, 2015.

The total number of fan posts was 29, represented by 23 link posts, 3 photo posts, 2 status posts and 1 video post.

2.2.5. Sensiblu – How did you meet your half?

The contest organized by Sensiblu took place between 11th and 12th of February, 2015. In order to participate, the users had to post a comment describing how they met their loved one. Three of the most interesting posts were awarded with a set of cosmetic products.

According to Facebrands data, at the end of the contest, the total number of page fans was 105,926, with a fan variation of 77 persons. According to the Sensiblu Facebook page, the contest post registered 476 likes, 404 comments and 232 shares.

2.2.6. Garanti Bank – The Valentine's Day surprise

The contest organized by Garanti Bank on its Facebook page took place on February 11, 2015. To enter the contest, the users had to leave a comment on the contest post writing three words that define Valentine's Day in his/hers opinion. The list of prizes contained 10 boxes of chocolates.

According to Facebrands data, at the end of the contest the total number of page fans was 212,747, with a fan variation of 94 persons.

3. Conclusions

The case studies presented in this paper make possible the formulation of some recommendations for brand communication on social networks.

The use of social networks, or more specifically the use of Facebook, can generate an increase of the consumers' interest for a brand. All these case studies demonstrate that a large number of consumers can be involved in a brand communication activity, especially if the campaigns are offering significant incentives to the consumers.

Facebook is a powerful online marketing tool for brands. Facebook offers the opportunity to create dedicated applications for marketing campaigns, facilitating the development of promotional activities, like contests. Contests are an attractive way of interacting with a large number of consumers on Facebook, due to the fact that the users can obtain some specific benefits from the interaction with the brand. Contests draw the attention of many users which is why they are a popular method to raise the interest among consumers. Promotional communication on Facebook can be used both on short term, to stimulate the sales, and also on long term, to help the developing of the brand community. As it was shown, in all six cases, the brand's fanbase raised at the end of the campaigns and the brand community was enlarged. But for a brand it is not enough to create large communities around it. The communities must be involved in specific interactions with the brand and the companies should create a close and continuous relationships with their consumers[14]. Social networks are not primarily a place to advertise, but a place to communicate and strengthen relationships[15].

[14] Otilia-Elena Platon, Irina Iosub, and Mihail-Cristian Ditoiu, "An analysis of the AIDAT model based on Facebook promotional contests", Procedia Economics and Finance 15 (2014): 1570, accesed March 5, 2015. http://www.sciencedirect.com/science/article/pii/S2212567114006273.

[15] Platon, Iosub and Ditoiu, "An analysis of the AIDAT model", 1571.

All the results presented above can help marketers to develop useful online marketing campaigns meant to attract the consumers' attention and stimulate their interactions with the brand. Social networks offer a new way of interacting and connecting the brands with consumers. The consumers are willing to interact with brands on social networks. These case studies demonstrate that most of the fans prefer to interact with the brands in a simple manner, expressing their interest for a campaign.

Further research direction would imply an analysis of the consumers' perspective regarding the usage of social networks for brand communication purposes.

THE ROLE OF BEHAVIORAL ECONOMICS IN EXPLAINING CONSUMPTION DECISION

Mihaela Andreea STROE[*]

Abstract

The new economic approach starts from the idea that the individual does not need food, but feels the need to feed, or do not require newspapers, but feels the need of information. In this way, those who changes are not human preferences, but the way we satisfy them. At this stage of the paper, we explain the inconsistency in consumer preferences and the exceptions to the standard theory by making light upon what is called in behavioral economics: the effects of property, loss aversion and framing effects. In which concerns the standard economic model, it seems that there are discrepancies between objective measures of sources of comfort / discomfort and measures reported subjective sensations. Many defenders of classical model would argue that the measures are not reported subjective feelings of economic phenomena and therefore are not of interest to economists. However, when such feelings and sensations affect or may affect future decisions, things become relevant for the economy. Limited Rationality implies both that the agent is imperfectly informed decision-making in a complex and dynamic environment, and a limited ability processing.

Keywords: *standard model, exceptions, framming effects, loss aversion.*

1. Introduction

In an ideal world, defaults, frames, and price anchors would not have any bearing on consumer choices. Our decisions would be the result of a careful weighing of costs and benefits and informed by existing preferences. We would always make optimal decisions. In the 1976 book The Economic Approach to Human Behavior, the economist Gary S. Becker famously outlined a number of ideas known as the pillars of so-called 'rational choice' theory. The theory assumes that human actors have stable preferences and engage in maximizing behavior. Becker, who applied rational choice theory to domains ranging from crime to marriage, believed that academic disciplines such as sociology could learn from the 'rational man' assumption advocated by neoclassical economists since the late 19th century. While economic rationality influenced other fields in the social sciences from the inside out, through Becker and the Chicago School, psychologists offered an outside-in reality check to prevailing economic thinking. Most notably, Amos Tversky and Daniel Kahneman published a number of papers that appeared to undermine ideas about human nature held by mainstream economics. They are perhaps best known for the development of prospect theory (Kahneman & Tversky, 1979), which shows that decisions are not always optimal. Our willingness to take risks is influenced by the way in which choices are framed.

Consumption differs from consumption expenditure primarily because durable goods, such as automobiles, generate an expenditure mainly in the period when they are purchased, but they generate "consumption services". Neoclassical (mainstream) economists generally consider consumption to be the final purpose of economic activity, and thus the level of consumption per person is viewed as a central measure of an economy's productive success.

The study of consumption behaviour plays a central role in both macroeconomics and microeconomics. Macroeconomists are interested in aggregate consumption for two distinct reasons. First, aggregate consumption determines aggregate saving, because saving is defined as the portion of income that is not consumed. Because aggregate saving feeds through the financial system to create the national supply of capital, it follows that aggregate consumption and saving behaviour has a powerful influence on an economy's long-term productive capacity. Second, since consumption expenditure accounts for most of national output, understanding the dynamics of aggregate consumption expenditure is essential to understanding macroeconomic fluctuations and the business cycle**.**

2. Content

In the study of consumption, economists generally speak about a common theoretical framework by assuming that consumers base their expenditures on a rational and informed assessment of their current and future economic circumstances. This "rational optimization" assumption is untestable, however, without additional assumptions about why and how consumers care about their level of consumption; therefore consumers' preferences are assumed to be captured by a utility function. For example, economists usually assume (1) that the urgency of consumption needs will decline as the level of consumption increases (this is known as a declining marginal utility of consumption), (2) that people prefer to face less rather than more risk in their

[*] Assist. Prof., Faculty of Economics, "Nicolae Titulescu" University (e-mail: **stroeandreea@univnt.ro**).

consumption (people are risk-averse), and (3) that unavoidable uncertainty in future income generates some degree of precautionary saving. In the interest of simplicity, the standard versions of these models also make some less-innocuous assumptions, including assertions that the pleasure yielded by today's consumption does not depend upon on one's past consumption (there are no habits from the past that influence today's consumption) and that current pleasure does not depend upon comparison of one's consumption to the consumption of others.

But modern theories imply that rationality does not always apply in making consumption decision, most economists bring some plausible refinements to the original ideas. For example, the modern models imply that the marginal propensity to consume out of windfalls is much higher for poor than for rich households.

Research into the consequences of this type of "comparison utility" suggests that observable individual spending behaviour is much the same whether one cares about absolute or relative levels of consumption, because there is nothing that the typical individual can do to change the consumption levels of others. If, however, the pleasure yielded by an individual's current consumption depends partly on a comparison to that person's past consumption habits, then rational consumers will realize that they will be happier if they increase their level of consumption gradually over their lifetimes (instead of equalizing consumption at different ages, as the life-cycle model suggests). Habit formation also implies a very different reaction to income shocks that reflects a gradual adaptation to new circumstances.

While economic rationality influenced other fields in the social sciences from the inside out, through Becker and the Chicago School, psychologists offered an outside-in reality check to prevailing economic thinking. Most notably, Amos Tversky and Daniel Kahneman published a number of papers that appeared to undermine ideas about human nature held by mainstream economics. They are perhaps best known for the development of prospect theory (Kahneman & Tversky, 1979), which shows that decisions are not always optimal. Our willingness to take risks is influenced by the way in which choices are framed, this is to say that they are context-dependent.

The new economic approach starts from the idea that the individual does not need food, but feel the need to feed, or require newspapers, but feels the need of information. In this way, those which change are not preferences, but the way to satisfy them.

In terms of standard economic model, it seems that there are discrepancies between objective measures of sources of comfort / discomfort and measures reported subjective sensations. Many defenders of classical model would argue that the measures are not reported subjective feelings of economic phenomena and therefore are not of interest to economists

However, when such feelings and sensations affect or may affect future decisions, things become relevant for the economy. Another weakness refers to the effect of expectations. There is some evidence that high expectations about the degree of happiness can lead to disappointment.

The conventional model it is assumed that a larger quantity of a good consumed produce more total utility. Regarding the nature of utility, in addition to the types of utility that we had in the previous subsection account, it is clear that the standard economic model for decision making under risk is "theory of expected utility ".

It was widely accepted and implemented as a descriptive model of economic behavior and as a normative model of rational choice; that means that rational people would like to obey the axioms of the theory and, in general, they do it. Decision making under risk can be considered a process of choosing between different possibilities or "gambling".

A prospecting consists of a number of possible outcomes, along with their associated probabilities. Thus, any theory of choice under risk will take into account the consequences of the choices and their probabilities. All theories described so far were models of maximizing preferences, assuming that agents behave "as if" preference would optimize certain features specific to context.

Specific features of these models include the existence of limits of rationality and the consequence of using heuristic decisions.[1]

Limited Rationality implies both that the agent is imperfectly informed decision-making in a complex and dynamic environment, and a limited ability processing; agent targets may also be defined imperfect. One of the best known anomalies of expected utility theory is a phenomenon sometimes called "boredom happiness." For example, the average income in the US increased in real terms by more than 40% from 1972 to the present, but despite the fact that their level of income and welfare are far better, Americans usually say that they are not happier than before . The phenomenon seems to occur because experts can not rely on data reported by subjects; if examined other indicators of happiness or unhappiness, such as the suicide rate, the incidence of depression, we see the same thing. Expected utility theory of diminishing marginal utility and the concave shape of the utility function as the cause of risk aversion. This theory seeks to explain risk aversion in terms of expected value and dispersion. Next, the focus will be on the concepts of ownership effects, loss aversion and framing effects, that they find relevant in explaining consumer decision of the buyer.

[1] Decisions that are based on behavioral heuristic that ignores the often complex flowcharts and methodology of decision, intervening on experience, intuition or mental "shortcuts".

a) The effects of property and loss aversion

In theory individual consumer choices are determined by an order of preference on consumer packages, independent of the effects of allocation. But Kahneman showed that preferences are subject to the current allocations and individuals are risk averse. This contradicts the theory transitivity and reversibility consumer preferences. It seems that more people demand to give up an object than would be willing to pay to get it.

Samuelson calls this effect "status quo" as a preference for current status. All these effects underlying loss aversion prospecting Theory developed as an alternative theory of choice under uncertainty. The essence of the phenomenon is that the utility is not independent of possesion. It has been shown that people who have become good in one way or another, either through purchase or gift, tend to assign a higher evaluation than others would do it. For example, a study by Kahneman, Knetsch and Thaler (1990) made the subjects gift or a cup or a pencil, randomly. Both groups were allowed to exchange goods among themselves on a minimal transaction costs, and if preferences were independent of the effect of ownership, one would have expected that the amount fraction of subjects who changed pen cup and back to equal to one.

It was noted that only a quarter of the subjects were making the transaction. The main factor underlying psychological effects of loss aversion is property. A person is risk averse if they prefer definite prospect (x) any risky prospect which has expected value x. The expected utility theory, risk aversion caused by the concavity of the utility function. This feature is in turn explained by the law of diminishing marginal utility. An example is the observation of asymmetric elasticity of demand for goods in the price. Elasticity to price sensitivity is defined as the amount required in relation to price change, both expressed as a percentage.

Loss aversion consumers are disturbed by price increases gain more than they like you would get the discounts and reduce the amount purchased as a result of price increases more than if they had raised it if the price would be reduced by the same

percentage. Therefore, loss aversion implies that the price elasticity to be asymmetrical, being more elastic demand when price increases than when it drops.

b) Framming effects

This is one of the most important phenomena of behavioral economics which violates the principle of invariance. Numerous studies have established that people answer - in terms of values, attitudes and preferences - depends on the context and the processes involved in getting these answers. For example, when subjects were asked to assess the overall level of happiness, their response was influenced by a previous question related to the number of previous meetings they have had lately. This is an example of the effect of anchor: for this effect, people's answers are "anchored" to the other phenomena existing in their consciousness, no matter how irrelevant they may seem.

Frammng effects are particularly important because they produce a reversal of preferences. This phenomenon is related to situations where individuals are favorable to option A if the question or problem is laid or framed in a way, but changes its option and choose B when the same issue is posed differently. To illustrate the reversal of preferences we refer to a classic, often called the problem "Asian Disaster"[2].

Framing positive:

Option A: save 100 lives with certainty

Option B: 1/3 chance to save the 300 men and 2/3 chance of not save any

Choice: Most choose A.

Framing negative:

Option A: 200 people die for sure.

Option B: likely to die all 300 2/3 and 1/3 chance to save all

Choice: Most choose B.

It should be noted that the options are identical in terms of possibilities result. This example illustrates, in addition to the framming effects, preference reversal, and loss aversion (saving lives is perceived here as a gain and death as a loss). There is also a situation where if individuals are to choose between two prospecting, one of which is clearly in advantage if they would not go to comparison with the status of others, it was concluded that they choose the option that gives them more utility having in consideration the fact that they feel superior to others from the perspective of the choice made. Here is the relevant concept of reference point indicating that views on the same subject are likely to change in time. It is often assumed in the analysis that relevant reference point in assessing gain and loss is the current status of wealth or welfare, but not always so. In particular, the relevant reference point can be the expected state rather than the current state, an example was given when we discussed about anomalies. The reference points are also strongly influenced by the status of others. In this case, the new information changes the reference point, turning what was previously considered a win in a loss. It seems that, in view of these considerations and psychological consumer choices may include some defects that can be explained using us what behavioral economics seeks to develop the foundations and additions to the standard economic model.

Rational consumer behavior is considered to be one that provides maximum consumer satisfaction with a minimum cost maximum efficiency. The fact that there are many needs in the context of limited resources makes the consumer to choose the priority

[2] "Choice, values and frames", D. Kahneman, A. Tversky, American Psychologist, p.341-350.

criterion. The opportunity cost in this context is seen as abandoning consumer value. All decisions about spending an amount of money will be made taking into account the opportunity cost. Additional costs and benefits of an election should be measured not only in money but in terms of risk and comfort. We can refer to a psychological cost defined as the sacrifice made by the buyer in just moments choice of product variants and abandoning others, that ist o say that each decision entails opportunity costs.

3. Conclusions

Tversky and Kahneman's work shows that responses are different if choices are framed as a gain or a loss. When faced with the first type of decision, a greater proportion of people will opt for the riskless alternative, while for the second problem people are more likely to choose the riskier. This happens because we dislike losses more than we like an equivalent gain: giving something up is more painful than the pleasure we derive from receiving it. Decisions are not always optimal. There are restrictions to human information processing, due to limits in knowledge (or information) and computational capacities (Simon, 1982; Kahneman, 2003). People are supposed to be rational when they make the best possible use of limited information-processing abilities, by applying simple and intelligent algorithms that can lead to near-optimal inferences. The idea of human limits to rationality was not new among the econimists, but Tversky and Kahneman's 'heuristics and biases' research program made important methodological contributions, in that they advocated a rigorous experimental approach to understanding economic decisions based on measuring actual choices made under different conditions. A good portion of the research he discusses involves prices and value perception.

As far as we know, the model of rational decision making assumes that the decision maker has full or perfect information about alternatives; it also assumes they have the time, cognitive ability, and resources to evaluate each choice against the others. This model assumes that people will make choices that will maximize benefits for themselves and minimize any cost. Rational decision making models involve a cognitive process where each step follows in a logical order from the one before. By cognitive, I mean it is based on thinking through and weighing up the alternatives to come up with the best potential result.

Indeed, this is true in the majority of time but as well, it is equired to have into consideration tha anomalies that occur in this proccess and the external or psychological factors that is demonstrated to alter the consumption decision.

ASPECTS REGARDING THE USE OF SOCIAL MEDIA IN QUALITATIVE MARKETING RESEARCH

Mirela Cristina VOICU[*]

Abstract

In order to carry out an efficient marketing activity, it is well known that entrepreneurs have to find out, first of all, where and how consumers spend their time, what are the communication channels and forms they prefer and then try to interact with the customers on their territory and on their own terms. The forms of communication that are gaining momentum currently, are taking place online, especially in the social media. A growing number of consumers have become open towards and familiar with social media, sharing their opinions daily through these means. Since the emergence of the social media phenomenon, its use has grown and has become widespread in a short period of time. In response to this phenomenon, social media marketing has developed at a similar pace and in a similar direction, and this is also reflected in the existing opportunities for using social media in qualitative marketing research.

Keywords: *marketing research, social media, consumer behavior, qualitative research, social marketing.*

1. Introduction

In order to carry out an efficient marketing activity, it is well known that entrepreneurs have to find out, first of all, where and how consumers spend their time, what are the communication channels and forms they prefer and then try to interact with the customers on their territory and on their own terms[1]. The forms of communication that are gaining momentum currently, are taking place online, especially in the social media. A growing number of consumers have become open towards and familiar with social media, sharing their opinions daily through these means.

Since the emergence of the social media phenomenon, its use has grown and has become widespread in a short period of time. In response to this phenomenon, social media marketing has developed at a similar pace and in a similar direction.

Thanks to the progress of information technology and the spread of broadband internet connectivity, consumers have now the opportunity to see the stimuli used, usually, in the context of a qualitative research and share important data like images and videos alongside text messages. Making these exchanges, marketers can get a significant amount of symbolic data without the inherent disadvantages of field work, without the high costs and logistical restrictions caused by the transport of persons and the timing of meetings. In these circumstances, all the compromises that occur in organizing and carrying out a traditional qualitative research can be reduced by using the blogosphere as a data gathering medium for the qualitative research.

2. The development of marketing through social networks

Lately we can easily observe that social networks, blogs and other online communities seem to thrive everywhere around us. Nowadays, people use social networks as a primary source for an extremely broad range of information, a phenomenon that keeps gaining momentum. Apart from social networks, people are used to communicate on forums, too; the people they meet there are strangers, but they share the same passions and interests. Online, people communicate sincerely, they share their thoughts openly, and the barrier between an introvert and an extrovert keeps getting slimmer. At the same time, "blogging", as an activity has become widespread and keeps growing, experts from various fields holding it today under close scrutiny.

The beginnings of social media date back to 1979, when Tom Truscott and Jim Ellis from Duke University created Usenet, a system that allowed worldwide conversations between people, by the online posting of public messages. However, the era of "Social Media" as we understand it today started probably about 20 years earlier, when Bruce and Susan Abelson founded "Open Diary", a social networking website that brought together the users of online journals in a single community. At the same time the term "weblog" saw its first use; a year later it was truncated into the term "blog", when a blogger jokingly turned the noun "weblog" into the sentence "we blog". Later, widespread access to high-speed Internet along with increased popularity of the concept of social media, led to the creation of social networks such as MySpace in 2003 and Facebook in 2004.

[*] Lecturer, PhD, Faculty of Economics, "Nicolae Titulescu" University of Bucharest (e-mail: **voicu.cristina.m@gmail.com**).

[1] Hornby, J., 2012, *The case for conversational marketing*, The Knowledge Exchange, SAS Institute Inc., 7 November 2012, http://www.sas.com/knowledge-exchange/customer-intelligence/featured/the-case-for-conversational-marketing/index.html

All these led in turn to the invention of "social media" as a term and determined the importance that social media has today. The most recent addition to this term has been the so-called "virtual worlds" - computer simulated environments, populated by three-dimensional avatars; a well-known example being Linden Lab's creation, "Second Life".

In early 2009, the founder of Facebook, Mark Zuckerberg, equivalated Facebook to a nation claiming that it was the eighth largest country in the world. Since 2014 though, Facebook has exceeded by 1 billion users the limits described previously, reaching the position of third largest country in the world, right after China and India, and before the United States.

It hasn't been long since social media has overtaken email at the top of the online activities, placing itself first in this moment, an assertion that will surely remain valid in the foreseeable future, considering this field's development.

Marketing has reacted to this progress accordingly developing a new specialization - marketing activities through social networks (social media marketing). Thus, according to a survey made by TWI Surveys Inc. on behalf of the Society for New Communication Research, the investments in marketing activities through social networks and conversational marketing will have exceeded the investments in traditional marketing activities as early as 2012.

The explosive growth in using social media and blogging suggests that the society has reached a certain degree of "comfort" in carrying out these activities. This is also revealed by the results of the study "Intel UltraYou", commissioned by Intel and conducted by Mercury Research, according to which Romanians spend, on average, 31 minutes a day to update their social networks accounts, surpassing the European average in this field. Among the existing social networks, Romanians prefer Facebook, which is the most popular network in our country, followed by Hi5, Google+, Netlog and Twitter. 39% of them post at least once a day on these channels and postings consists mainly of photos (69% of the respondents), while 66% of the respondents post opinions, and 62% various information[2]. On the other hand, according to Facebrands, in Romania there are approximately 7.8 million Facebook users[3].

3. Qualitative marketing research characteristics

Researchers in the field of marketing have intensively used in the past few decades, focus groups and in-depth interviews in order to cover the need for information of qualitative nature. These methods are based on the premise that the respondents are aware of the reasons behind their consumer behaviors under certain circumstances, and that they're also willing to share them[4]. Unlike quantitative research, qualitative research involves questioning a nonprobabilistic sample of a relatively small number of consumers, carried out either within individual in-depth interviews (intensive interviews) or group discussions (focus groups).

These qualitative research techniques can contribute to the achievement of a wide range of objectives. Qualitative research can be used either following a quantitative research in order to understand in depth the findings of the latter, or before a quantitative research in an early stage in order to explore and gather information about an area that will be subject to quantitative research that will take place in a later stage. Also, qualitative researches can be made as stand-alone studies, and not as completing stages before or after a quantitative research. On these occasions, making this type of research suffices to achieve the objectives set in the early stages of the research.

Regardless of the place that the qualitative researches occupy within an integrated research program, the above mentioned techniques stand out from those specific to quantitative researches, primarily through the information obtained, data that reflect the abundance of elements (symbolically speaking) that form the basis of the consumers' needs and wishes, and of the criteria governing brand choice decisions, beyond the estimates and inferences made on a representative sample of target population parameters.

However, qualitative research methods, while achieving effectively the objectives they were designed for, have some inherent disadvantages. These methods are somewhat artificial, because they involve extracting the respondent from his role as an actual consumer, during the interview. This is a common disadvantage of standard qualitative research methods, which as such removes the possibility to gather data in a natural setting, as is the case of observation. Also, the presence of the interview moderators is considered invasive and inappropriate. Moderators ask questions for which they hope to receive honest answers, trying at the same time to limit the respondents exposure to the influence caused by moderators' presence (such as, for instance, social desirability). At the same time, qualitative research methods rely heavily on people's memory, considering that the vast majority of surveys require respondents to recall relevant experiences and express opinions based on these memories.

There are voices saying that the days of researches based on focus groups and in-depth interviews are numbered[5]. In this respect, new instruments are being proposed to be used in marketing research, such as mobile applications that enable researchers to observe the consumer during the process of decision-making regarding his purchase. Unfortunately, these tools are quite invasive, up to the point where the consumer would not agree to participate in such research. On the other hand, qualitative research still provides a series of essential information that cannot be obtained otherwise. Also, current changes of the online environment offer new opportunities to improve the methods of qualitative research, with technology eliminating the disadvantages listed above.

4. New opportunities for carrying out qualitative researches online

The use of new technologies for improving the marketing research process is not a novelty. Looking back to its development we can observe how in the past decades technological progress has improved the conditions in which the marketing research is carried out, improvements that concern its effectiveness, costs and process control.

As we all well know, in the beginning, the only method to collect data for marketing research was the personal one, and once the computer-assisted telephone interviewing (CATI) appeared, a series of key research coordinates saw improvement. CATI offered researchers a better control over the data collection process, a systematic treatment of the respondents, a more accurate measurement of the phenomena, a better use of sampling and a better management of the quotas structure, a better representation of the sample in relation to the target population, a faster delivery of data and, last but not least, much lower costs in relation to the personal survey. Then the online research appeared which led to even greater improvements that further lowered research costs. However, quantitative research was the one to benefit the most from technological improvements. There are no reasons why the technological progress cannot be used today to the benefit of qualitative research.

It is well known that blogging and social media allow the handling of information in text, video and audio form; people can both gather information and post it in order to share it with others. These activities are comparable to those made in the process of qualitative marketing research, being characterized by the presence of the interview or focus group moderator who addresses a series of questions to probe participants' behavior. Simplifying further, we can say that qualitative research is a discussion between the moderator and the participants, fueled by a series of questions and answers exchanged between them. Sometimes the moderator presents to the participants certain "things" to which they are asked to express their attitude and opinions, and other times, the moderator requests the participants to show certain "things" so that they can be seen, heard and/or discussed. All these lead us to the conclusion that there are a number of similarities between blogging-specific activities and qualitative research-specific ones. These similarities support the use of the computer and the Internet to conduct the activities specific to marketing qualitative research. To achieve this it is necessary to change the traditional methodology that has dominated the qualitative research for decades in a row, replacing the personal probing of individuals with a survey conducted through online environment. This change should not encounter great difficulties if we take into account the comfort level reached by the people in using this communication environment.

One of the obstacles that might occur in the way of this goal can be represented, according to some, by one of the major disadvantages of using the Internet, i.e. the impersonal nature of communication, a characteristic improper to qualitative research. In these circumstances, the main question that a specialist in the field must answer is whether some critical human particularity is lost while using the Internet, out of the emotions conveyed by the respondent. Not long ago, communication made by means of personal computer was considered poor, cold and shallow. Unlike personal communication, the online one has long been regarded as poor in social cues and characterized by the inability to convey non-verbal information such as voice inflections, facial expressions, posture, body language, etc. In time, however, the society has adapted and developed new ways of expressing these non-verbal cues in written form, using for this purpose new symbols and electronic paralanguages such as emoticons, special strings of characters, deliberate misspellings, absence or presence of corrections, use of capitalization, and even use of images and sounds.

On the other hand, carrying out a qualitative research online allows minimizing and eliminating many of the flaws and shortcomings inherent in traditional qualitative research, and even improving on some aspects. Thus, a website used in research can be designed in such a way as to have a similar look and content with the social networking websites Facebook, Twitter or LinkedIn, and where the population of interest can easily navigate and the respondents are able to fulfill their responsibilities related to the survey and receiving in return the incentives that usually accompany the qualitative research. At the same time, the moderator can post on the website the content of the interview guide drawn up for that research and the recruited participants can access it, see the questions

[5] Stephens, D., 2011, *Death of the Focus Group: Research Meets Mobility*, Retail Prophet, 5 February 2011, http://www.retailprophet.com/blog/advertising/death-of-the-focus-group-research-meets-mobility/

posted by the moderator and respond to them appropriately.

All the elements that make the qualitative research carried out online a viable method, become more relevant when we bring into question two existing realities: widespread Internet access and the ubiquity of digital technology, all of them causing a high level of interpersonal computer communication convenience and readiness for people.

It is clear that the current technology offers specialists the opportunity to identify consumer attitudes and opinions within the marketing research, through the use of images, videos and other stimuli. Consumers are also equipped to provide researchers with the same type of stimuli, while they can upload content on research websites, as they do on Facebook or Youtube, to be seen and analysed by qualitative research experts. People feel comfortable and willing to use their mobile phones to take pictures, make videos which they then send to friends via email, upload them on social networking websites and blogs, and then access those websites to express their opinion on a particular topic using their personal computers or smartphones, without feeling intimidated to express their honest opinion in the presence of strangers.

In addition to traditional qualitative researches, the Internet provides a strong sense of anonymity to survey participants and unwanted influences upon the answers (social desirability) are minimized online. Therefore, the qualitative data collected from the online environment tend to be extremely sincere given that respondents feel safe in an anonymous and private environment, having no fear of telling anything to the moderator. Consequently, these data have a much greater validity than those collected in the focus group sessions that use face-to-face interactions. And more than that, depending on the nature of the survey, the respondent's home may actually be the most natural place for the behavior submitted to the survey, representing thus the best place for data collection. People normally participate in online surveys, because the Internet is an environment where they feel comfortable. An environment familiar to the respondents correlates with the quality of information they provide and the sincerity of the opinions expressed. In contrast with the comfort offered today by the online environment, standard facilities used in traditional focus groups or in-depth interviews are simulated and artificial and do not create all the conditions where people can speak and be listened to. These facilities are limited to one room with audio and video recording equipment, and a one-way mirror behind which the experts are observing. In all cases, the respondents are completely isolated from the environment where the behavior submitted to survey happens naturally.

Another advantage of the focus group conducted online is represented by the fact that respondents do not waste time to get used to the ambient of the room, with the recording instruments or with the other respondents; they only need to become familiar with the moderator and the rules of discussion he proposed.

Regarding the amount of data obtained, the design of an online study allows participants to speak at the same time; the guide containing specific research questions is posted on the website, requiring only the authentication of the participants within a period of time announced during their recruitment. This eliminates the limits of traditional qualitative researches that, due to the way in which they are organized, do not allow the participants to speak simultaneously, but only one at a time. In the typical focus group, the respondent has approximately 10 minutes to provide the information that expresses his opinion during a two-hours-long discussion, while an online participant has 10 times more time to accomplish this.

There is another important advantage of online qualitative research, besides the aforementioned ones. This advantage refers to automatic data transcription and its correlation with quantitative data collected during recruitment, which allows the classification of text and other data into subgroups for comparative purposes. At the same time, all the logistics required by organizing traditional focus groups and in-depth interviews (transport, scheduling, room arrangement, coordination, etc.) are no longer needed online, where no time is consumed with traveling away from the office, home and family. Conducting qualitative research online also leads to a drastic cost reduction, stemming from the way research organizing and implementing takes place. Thus, according to the comparisons made by the experts in the field[6], with six focus groups of nine participants each and lasting two hours, the required costs for an online qualitative research amount to only a third of the traditional costs, taking up to 40% less time (which also includes data analysis and drawing up a comprehensive report of research results) and generating more than twice the amount of information of a traditional qualitative research.

Concluding this presentation, we can summarize the advantages of online qualitative research in comparison with the traditional one as follows:

- computer-mediated interaction promotes honesty, attentiveness and essay-type responses;
- time is used efficiently;
- enables the collection of larger amounts of data;
- respondents no longer have their answers influenced by the physical presence of other persons;
- data can be collected in a familiar setting and right when the studied event takes place;

[6] Rubenstein, P., 2011, *Why (and How) the Growth of Social Media has Created Opportunities for Market Research*, The Industrial-Organizational Psychologist, Vol. 49, No. 2, October 2011, pp. 19-26, http://www.siop.org/tip/oct11/492_features.pdf, http://www.siop.org/tip/oct11/04rubenstein.aspx

- multimedia-data and text-data are collected and integrated;
- the data is better organized and easily sorted for subgroup analysis;
- automatic transcription;
- minimal logistics requirements;
- lower costs of research;
- research participation takes less time for the respondent.

In addition, the applicability of online qualitative research can be intensified through the application of new tools, such as *Concept Visualization*, a relatively new technique that involves outlining some design ideas for a product, while it is subjected to a focus group or panel. Therefore, during the development of an online qualitative research, a graphic designer takes the information circulated during the focus group sessions and drafts new product concepts with the help of specialized software. At the end of the research, the graphic designer will have a set of drafts which may constitute the development or innovation portfolio for a product[7].

The information obtained via online qualitative research can be used by companies for the development of new products and services concepts, idea-gathering for promotion campaigns, the development of competitive advantage, the development of branding strategies, new consumer experiences, brand naming ideas, product packaging ideas, etc. In addition, online qualitative research can contribute to the identification of problems relating to various activities such as customer support, packing, distribution and product display, and last but not least, it allows the company to better understand their customers' perceptions and motivations.

3. Conclusions

A growing number of consumers have become open towards and familiar with social media, sharing their opinions daily through these applications. Thanks to the progress of information technology and the spread of broadband internet connectivity, consumers have now the opportunity to see the stimuli used, usually, in the context of a qualitative research and share important data like images and videos alongside text messages. Making these exchanges, marketers can get a significant amount of symbolic data without the inherent disadvantages of field work, without the high costs and logistical restrictions caused by the transport of persons and the timing of meetings.

Market research specialists have long accepted that in order to achieve certain research objectives, a series of compromises regarding its organizing and conducting methodology must be done; it is rare that such compromises don't exist. In this case, the compromises involve setting a balance between quality, speed and cost. And yet, compromises can be reduced by using the blogosphere as a qualitative research data gathering medium and through a viable methodology which provides qualitative research experts with access to human experience on a scale and reach immeasurable for now.

STUDY CONTESTING TAX RULES ON SOCIAL SECURITY CONTRIBUTIONS BY TAXPAYERS FROM ROMANIA

Adrian Doru BÎGIOI*

Abstract

The management bodies of companies must know and correctly apply tax law. There are, however, the practical situations, when, although they want to respect this, taxpayers are penalized by the tax authorities, because it did not comply with tax obligations. There are many factors that can determine this, among which: circumvent tax rules in order to avoid paying taxes and incorrect application of law. In this study was approached the second factor, namely: analysis of the most common situations in which both taxpayers as well fiscal authorities erroneously apply tax law. To achieve these results, was developed a study regarding the determination degree of contesting the tax rules, in area of social security contributions. Data subject research was extracted in the database officially published by competent insitutions tax. The research was conducted for the period January 1, 2004 and until February 28, 2015. In terms of research methodology, were used both quantitative methods and qualitative methods. Finally, data were centralized by type of articles, they are sorted according to the extent of contestation obtained. The final conclusion is that imprecise definition of the terms tax is one of the main causes which determines incorrect application of tax law. The results can be used especially by the subjects of tax legal relationship, to avoid situations the tax law is applied incorrectly, aspects that may lead to negative situations, both companies and the state institutions.

Keywords: *tax rules, social security contributions, contesting, taxpayers, tax authorities.*

1. Introduction

In compiling this study was started from **Adam Smith's** statement, according to which, "*tax each person is obliged to pay, should be certain and not arbitrary, upon payment, method of payment and the amount of money to be paid must be clear and simple for the taxpayer and any other person".*[1] Starting from this statement, in this study, author aims to determine which tax rules which created the most problems business taxpayers in Romania, in matters of social security. In the last 10 years, tax legislation was amended quite frequently, a major cause being included in the taxable new sources of income. Also, imprecise definition of certain tax rules, can lead to situations where both taxpayers and tax authorities to apply different tax rules. These two reasons have led the author to conduct a series of research studies[2] on determining the degree of contesting rules, in different areas, this paper having as main social contributions. To obtain these consequential, author used data published by official state institutions, analyzing complaints filed by taxpayers and settled by the competent institutions, for a period of 10 years more. The final objective of the research was to highlight mistakes both by taxpayers and tax authorities, so as to avoid such problems in the future.

Taxation concepts are presented in a series of theoretical and empirical studies. Thus, **John Locke,** says, „*the states have governing predetermined laws, which is not changed repeatedly and rules must be applied equally, both the rich and the poor."*[3]

Clemens Fuest, from University of Oxford, with other authors, have developed a study on the relationship between payroll and payroll tax. Data were extracted on samples drawn from the German. The results show that there is an inverse relationship between them. Thus, given that there is a payroll tax increase, while there is a decrease in gross salary fund.[4]

Erik M. Jensen, from Case Western Reserve University School of Law, has prepared an article entitled *The Individual Mandate, Taxation and the Constitution,* the issues addressed in the US Supreme Court in Case National Federation of Business v. Sibelius (NFIB). The author comments on the constitutionality of laws, that establish taxes charged taxpayers.[5]

Paul L. Caron, from Pepperdine University - School of Law and other authors, have developed a paper entitled Occupy *the Tax Code: Using the Estate Tax to Reduce Inequality and Spur Economic Growth,* they discussed issues respecting the principle of equity in terms of tax law. Thus, according to the authors, major social inequality harms, they persisted over generations. From this perspective, the authors criticize the policy states no corresponding tax proceeds from inheritance.[6]

Robert Carroll, together with other authors, have developed an article entitled *The X Tax: The Progressive Consumption Tax America Needs?,* they did an analysis of the influence they have on the economy, income tax and consumption tax. Thus, according to the authors, increasing the income tax affects household savings decline, while increasing the consumption tax, lowering influence consumption.[7]

Avneesh Arputham has prepared a paper entitled *Constitutionality of Taxing Services Provided and Received Outside India,* in which he analyzed the constitutionality of rules issued by the Indian authorities regarding the taxation of services, rendered outside India, just because the service recipient is located in India or have permanent establishment in India.[8]

Emily Cauble from DePaul University - College of Law has prepared an article entitled *Was Blackstone's Initial Public Offering Too Good to Be True?: A Case Study in Closing Loopholes in the Partnership Tax Allocation Rules*, addressed the issues of tax incentives that can benefit some American companies, by forced interpretation of the law or with legal authorities.[9]

2. Content

Subject research data were extracted from the database formally published by the tax authorities, being selected a sample of 2,098 complaints, a total of 68,809 total complaints extracts, which represents a rate of 3.04% of the total complaints filed, the sample being representative. The total number of complaints was determined based on the general rule that, complaint filed by a taxpayer includes in turn, one or more articles challenged. In terms of research methodology, methods were used both quantitative and qualitative methods.

Normative acts were surveyed following: Law no. 19/2000 on public pensions and other social insurance rights, published in the Official Gazette no. 140/1 April 2000, Law no. 76/2002 on unemployment and stimulate employment, published in the Official Gazette 103 of February 6, 2002, Law no. 346/2002 on insurance for work accidents and occupational diseases, published in the the Official Gazette. 454 of 27 June 2002, Law no. 571/2003 regarding the Fiscal Code, published in published in the Official 927 of 23 December 2003, Law no. 95/2006 on healthcare reform, published in the Official Gazette no. 372 of 28 April 2006, Law no. 200/2006 regarding the establishment and use of the guarantee fund for salary payment, published in the Official Gazette no. 453 of 25 May 2006.

In further study, we sorted the data collected and based on quantitative methods, we estimated the extent of contestation of articles in the field of social contributions.

In order processing, we defined the following general empirical testing function:

General function estimating the degree of challenge to the rules in area of social security contributions: (hi(Csi))

We define the function:

$h: R^{+*} \rightarrow R^{+*}$, where

$h_{1i}(Cs_{1i})$ represents general function on estimating the degree of challenge to the rules relating to social security and is given by:

$h_{1i}(Cs_i) = h(\xi_{1i}, \xi_{2i}, \xi_{3i}, \xi_{4i} \ldots \xi_{ni})$, where

$0 \leq h_{1i}(Cs_{1i}) \leq 100$ and

$\xi_{1i}, \xi_{2i}, \xi_{3i}, \xi_{4i}, \ldots \xi_{ni} \in [0; m]$, $i \in [0; 68809]$.

In this case, the degree of challenge to the rules on social security contributions, h_{1i} (Cs1i) is given by:

$$h_{1i}(Cs_{1i}) = h(\xi_{1i})/h(\xi_{1i}) + h(\xi_{2i}) + h(\xi_{3i}) + \ldots$$

$$\ldots. + h(\xi_{ni}) \times 100, \text{ where}$$

,

$\xi_{1,} \xi_{2,} \xi_{3,} \xi_{4,} \ldots, \ldots \xi_{ni}$ - represents the section of the contested tax rules in area of social security contributions

m – represents item number of the laws subject research matters raised by objectors social contributions where, $m \in Z_+$

i – represents tier appeal represents made by taxpayers in matters of social security contributions.

3. Conclusions

After analyzing the results, we obtained the following conclusions:

I. Articles of the Law no. 19/2000 on public pensions and other social insurance rights that were most frequently challenged by taxpayers were as follows:

- Article 24, which has a degree of contestation of 37.5% of the total subject research articles being challenged 354 times;
- Article 23 which has a degree of contesting of 37.2% of the total subject research articles being challenged 352 times;
- Article 18 which has a degree of contesting of 9.9% in the total number of articles submitted research being contested 94 times;
- Article 5 which has a degree of contesting of 9% of the total subject research articles being challenged 85 times;
- Article 31, which has a degree of contesting of 4.9% of the total subject research articles being challenged 46 times;
- Article 27 which has a degree of contesting of 1.4% of the total subject research articles being challenged 13 times;
- Article 3 which has a degree of contesting of 0.1% of the total subject research articles being challenged once;

II. Articles of the Law no. 95/2006 on healthcare reform that were most frequently challenged by contributors were:

- Article 257 which has a degree of contesting of 62.7% of the total subject research articles being challenged 185 times;
- Article 258 which has a degree of contesting of 17.6% of the total subject research articles being challenged 52 times;
- Article 211 which has a degree of contesting of 15.9% of the total subject research articles being challenged 47 times;

- Article 363 ^ 1 which has a degree of contesting of 3.7% of the total subject research articles being challenged 11 times;

III. Articles of the Law no. 76/2002 on the unemployment insurance system and stimulation of employment were most frequently challenged by contributors were:

- Article 26 which has a degree of contesting of 49.3% of the total subject research articles being challenged 327 times;
- Article 2 which has a degree of contesting of 39.7% of the total subject research articles being challenged 263 times;
- Article 19 which has a degree of contesting of 4.2% in the total number of articles submitted research being challenged 28 times;
- Article 31, which has a degree of contesting of 3.3% of the total subject research articles being challenged 22 times;
- Article 23 which has a degree of contesting of 0.9% of the total subject research articles being challenged 6 times;
- Article 24, which has a degree of contesting of 0.9% of the total subject research articles being challenged 6 times;
- Article 27 which has a degree of contesting of 0.9% of the total subject research articles being challenged 6 times;
- Article 29 which has a degree of contesting of 0.6% of the total subject research articles being challenged 4 times;
- Article 20 which has a degree of contesting of 0.2% of the total subject research articles being challenged once;

IV. Articles of the Law no. 346/2002 on insurance for work accidents and occupational diseases were most frequently challenged by taxpayers were as follows:

- Article 101 which has a degree of contesting of 42.9% of the total subject research articles being challenged 54 times;
- Article 5 which has a degree of contesting of 31% of the total subject research articles being challenged 39 times;
- Article 96 which has a degree of contesting of 11.9% of the total subject research articles being challenged 15 times;
- Article 140 with a grade of 6.3% of the total contesting submitted research articles being challenged 8 times;
- Article 108 which has a degree of contesting of 5.6% of the total subject research articles being challenged 7 times;
- Article 6, which has a degree of contesting of 1.6% of the total subject research articles being challenged 2 times;
- Article 10 which has a degree of contesting of 0.8% of the total subject research articles being challenged once;

V. Articles of the Law no. 200/2006 regarding the establishment and use of the Guarantee Fund for salary payment which were most commonly challenged by taxpayers were as follows:

- Article 101 which were contested by 17 times;

VI. Articles of the Law no. 571/2003 regarding the Fiscal Code which were most frequently challenged by taxpayers were as follows:

- Article 296^18 which has been challenged 54 times.

Based on the results it follows that the tax rules with the highest degree of contestation are those relating to the basis for calculating social security contributions, because the authorities have extended the tax base in the period under study and the rules were not very clear in this regard. We recommend more precise definition of terms and their stability while tax.

CHANGES IN INCOME TAX IN ROMANIA

Cristina Elena DUMITRU [*]
Adriana Mihaela IONESCU[**]

Abstract

The Romanian legislation changes quite often, a situation that prevents companies to establish an action plan in the longer term. Income taxes affect the company's liquidity. In many cases legislative changes were announced shortly before application. In this article we intend to identify changes in income tax in Roamnia for a period of time and their implications on the company.

Keywords: *income tax, legislation, impact, profit, tax.*

1. Introduction

Tax legislation plays an important role regarding earnings remained for an enterprise after withholding taxes. Fiscal policy also influences the decision of foreign investors to conduct business in firms established in Romania.

For profit tax or income tax are set different tax rates, different taxable bases and hence the size of the effect on net profit is different.

The purpose of the present study is to present the characteristics of micro enterprises' income tax (definition, conditions, optional of mandatory nature of the application, taxable base, tax rate). The main objective of the study is to highlight changes to micro enterprises' income tax and to identify the frequency of legislative changes.

The period referred to in the study is 2003-2016. Data is extracted from the Fiscal Code and implementing rules (periodically modified variants) published on the website of the National Agency for Fiscal Administration.

"These small companies, which individually do not have a financial power and no substantial taxable bases, but overall can generate significant revenues to the budget,"[1] received a big beating in 2013 by the requirement to apply micro enterprises income tax.

"Authorities found more appropriate (again) to COMPEL taxpayers to pay a tax that has nothing to do with profitability."[2]

Stenzler (2013) made a study on the effect of compulsory of this tax on the companies in Romania and he shows that this tax "is not equitable in relation to different categories of companies by not considering (..) value added, income tax is burdensome for traders and producers.

Taxation system in Romania was studied by other authors. Bîgioi (2015)[3] examines complaints submitted to the National Agency for Fiscal Administration. 8% of total complaints relate to income tax.

2. Content

Profit tax and income tax represent revenue for the state budget. In Romania these taxes are regulated by the Fiscal Code (Law no 571/2003).

Definition of microenterprise

In 2003 a microenterprise is a firm for which the following conditions are met on December 31 the previous year:

a) The company has as main activity the production of goods, services and/or trade;

b) The company has between 1 and 9 employees;

c) Revenues did not exceed the Ron equivalent of 100.000 euros;

d) The share capital is not owned by the state, local authorities or public institututions.

First condition changes in August 2006, with effect from 2007: revenues, other than those of consulting and management, are more than 50% of total revenues.

For 2010 income tax provisions are abrogated by Government Emergency Ordinance no 109/2009, which eliminates the possibility of opting for such a tax.

In 2011, microenterprise income tax becomes an option again, resuming previous conditions, except for the first. Incomes derived can not be related to the

[1] Daniel Stenzler, "How micro enterprises will be affected by income tax?", 2013

[2] Sorin Biban, "Lump-sum tax: How will encourage evasion, instead of it decrease", 2013

[3] Adrian Doru Bîgioi, „Study on the Evaluation of the Contestation Degree of Excise Duty Rules, by Romanian Companies", *Revista Audit Financiar, Anul XIII , nr. 123 - 3/2015, pg. 74*

activities of banking, indurance or reinsurance, capital market, with the exception of persons performing brokerage in these areas, gambling, consultancy and management. The share capital can not be owned by a shareholder or associate (legal person) with more than 250 employees.

Note that the performance of activities of management and consultancy no longer offers the possibility to opt for this type of tax, regardless of the share in total income.

The year 2013 brings substantial changes regarding the conditions for classification as a microenterprise. Thus, there was no restriction on ownership of share capital by a shareholder or associate (legal person) with less than 250 employees, was eliminated the condition of having between 1 and 9 employees, and income threshold decreases from 100.000 euros to 65.000 euros.

In 2014 a microenterprise has allowed to optain income from consultancy and management but less than 20% of total revenues. In addition, the microenterprise should not be in the situation of dissolution with liquidation.

2015 draft amending the Fiscal Code proposes to modify the total income threshold as follows: for 2017- 75.000 euros, for 2018- 85.000 euros, for 2019- 100.000 euros.[4] At the same time, companies with business exploration and development of oil and natural gas deposits are excluded from the application of this tax.

Increased threshold for total revenue will be difficult to overcome it. A newly established trading company will pay 3% on all sales (excluding VAT), although they gain is the profit margin. Convenient in this case is the income tax, but the company will have to have a high volume of sales to benefit from this tax.

The date of payment

Calculation and payment of income tax for microenterprises are made quarterly by the 25th of the month following the quarter for which the tax is calculated.[5] The tax is declared until the date of payment.

Note that for companies that pay profit tax, final tax is declared and paid up to March 25 next year. Final tax is due for the last 3 months of the year, taking into account the profit tax calculated during the year. A microenterprise has a shorter deadline for payment. The income tax for the last 3 months of the year must be payed until January 25 next year. The difference lies in two months. This period has influence on the cash flow of the firm. Equivalent income tax can generate value by investing for two months.

The option to pay income tax

Since 2003 enterprises' income tax is optional.

A company paid profit tax can opt for income tax early next year if the conditions were met and if the company not ever enjoyed in the period prior to this option. A newly established company could opt for income tax from the first year if the condition on the number of employees was accomplished within 60 days after registration of the company.

If at the end of a year, one of the conditions is not met, the company is forced to quit this taxation system starting next year, without the possibility of benefit from this tax, even if the conditions are met again later.

The Government Emergency Ordinance no 138/2004 introduces the possibility that microenterprises with income tax to pot for profit tax starting next fiscal year.

The choice for microenterprises' income tax is possible by 2012, except for 2010 when the law obligates companies to pay profit tax.

2009 brings a novelty: the minimum tax (see paragraph on tax rates)

The year 2013 is atypical. If a company meets the conditions at December 31 the previous year, the company is required to pay income tax since February 2013. Note that this obligation is introduced by Government Emergency Ordinance no 8/20013 published on January 23.

That same year, the law provides that a newly established company fall under this type of tax if, the date of registration, the company has a share capital owned by others than the state or local authorities. Law 168 of May 2013 mentions two exceptions fro newly established firms mentioned above, givind the possibility to choose profit tax: the intention to carry out activities which do not fall under income tax, or the existence of a capital of at least 25.000 euros when setting up the company.

The second exception made final the option for profit tax for the period of existence of the legal person under the condition of maintaining minimum share capital. The law mentions the exchange rate of the National Bank on the date of registration of the legal entity.

Microentities' income tax is compulsory between 2014 and 2016 (with the exceptions listed above).

A legal entity is not required to apply the income tax system starting next year, if at December 31 one of the conditions that define microenterprises is not fullfiled. Type of tax changes during the year if the threshold of total revenues is exceeded during the year (change from 2006).

Thus, if during the year revenues exceed the threshold (100.000 euros or 65.000 euros since 2013) the company will pay profit tax beginning with the quarter in wich threshold was exceeded, taking into account incomes and expenses from early and income tax payments made during the year[6].

[4] Article 46, paragraph (2), Draft of Fiscal Code published on February 18, 2015
[5] Article 112^9, Law 571/ 2003
[6] Art 107^1, Law 571/ 2003

Since 2007 a new condition is added: revenues from consulting and management can not be greater than 50% (20% in 2014) of total revenues. Exceeding this value during the year requires the change mentioned in the previous paragraph, without the possibility of benefit for the next period of this type of tax.

Consulting work involves high income and low costs. For this reason it is more convenient to state that these activities are taxed at 16%.

For 2016 changing the type of tax during the year occurs if during the quarter the company begins to develop activities in banking, insurance, reinsurance, gambling, mining oil and gas fileds.

The novelty is that for calculating the profit tax it takes into account the revenues and expenses incurred in the quarter (not from beginning ofyear, as it was previously).

The tax base

The tax base includes all revenues except:

- Income related cost of inventories of products and services in progress
- Revenue from the production of tangible and intangible assets
- Income from subsides
- Income from provisions and adjustments for depreciations
- Income from interes and penalties cancellation, expenses not deductible in computing taxable profit
- Income from damages from insurance companies for damage to tangible assets or own stocks.

The acquisition value of the cash register is deducted from the taxable base in the first quarte of functioning.

In 2013 are eliminated from the taxable base, the trade discounts granted after invoicing and commercial discounts are added subsequently received invoice.

An important aspect is the exchange gains or losses. For 2013 foreign exchange gains was included in taxable base; the income tax was paied for a possible gain, if we consider monthly revaluation of the debt and liabilities denominated in foreign currencies or according to a currency.

Since January 2014[7] is eliminated from the taxable base the foreign exchange gains and is added the difference between commercisal discounts received and granted after invoicing. Regarding the exchange rate differences, in the tax base is included in the fourth quarter, only favorable difference between exchange gains and losses recorded cumulative from the beginning of the year.

Draft of Fiscal Code for 2016[8] increases tax base with:

- reduced or canceled reserves, representing legal reserves or revaluation of assets reserves which have been deducted in calculating taxable income and not taxed in the period in which the company was paying profit tax;
- - reserves representing tax breaks , established in the period in which the company was paying profit tax

The tax rate

Enterprises'income tax is paid quaterly.

In 2003 the tax rate was 1.5%.

The Government Emergency Ordinance no 138/2004 and Law no 343/ 2006 change tax rat as follows: 2% for 2007, 2.5% for 2008 and 3% for 2009.

In 2009 a company paid the greater of the tax obtained by applying the rate of 3% and annual minimum tax. The annual minimum tax depends on the total incomes obtained in the previous year less the same income falling outside the tax base for microenterprises:

Annual total incomes (lei)	Annual minimum tax (lei)[9]
0 - 52.000	2.200
52.001 - 215.000	4.300
215.001 - 430.000	6.500
430.001 - 4.300.000	8.600

In 2010 income tax is repealed.

Starting 2011, the tax rate is 3%.

The draft for Fiscal Code for 2016 mentions different rates of tax depending on the number of employees:

- 1% (over 2 employees, including)
- 3% (an employee)
- 3% + 1530 lei quaterly (without employees). This amount is updated according to the evolution of the minimum gross salary guaranteed
- 3% for microenterprises without employees and which is in one of the following situation:

1. dissolution followed by liquidationi;
2. temporary inactivity;
3. not active at the head office/ secondary offices

1530 lei amount is recalculated based on the number of days that microenterprise is not in cases 2 or 3.

Change in number of employees during the year change the tax rate in the first quarter of this change.

Note that it is considered that the employee is a person employed by individual labor contract full time, which means that hiring part-time employees involve an additional tax of 1530 lei.

Fixed income tax mandatory for microenterprises without employees is 1530 quarter, ie 510 lei/month. The costs for a full-time employee with

[7] Government Emergency Ordinance no 102/2013 published in November 2013, with effect from January 2014
[8] Draft for Fiscal Code, published on February 18, 2015
[9] Fiscal Code 2009, article. 18, paragraph 3

a minimum gross salary per economy (975 lei since January 2015[10]) are approximately 1196 lei, of wich 724 lei is the net salary and 472 lei are taxes.

Note that the state earns about the same amount as taxes if the microenterprise has no employees or a full-time employee with a minimum gross salary.

Since July 2015 the minimum gross salary will increase to 1050 lei/month, implying a net salary of 777 lei and 513 lei related taxes, as follows:

Tax	Percentage of gross salary	Value
Employee contribution to social insurance	10,5%	110
Employee contribution to unemployment	0.5%	5
Employee contribution for health insurance	5.5%	58
Wage tax		100
Net salary		777
Employer contribution to social insurance	15.8%	166
Employer contribution to health insurance	5.2%	55
Employer contribution to unemployment	0.5%	5
Employer contribution for work accidents	0.15%[11]	2
Employer contribution for wage claims guarantee fund	0.25%	3
Employer contribution for medical leave health insurance benefits	0.85%	9

Certainly from January 2016 will be decided a new increase for the minimum gross salary.

"Ministry of Finance argument in support of this tax grid is that 30.000 of the nearly 500.000 microenterprises operate without employees, which shows that employees have no legal employment."[12]

The arguments of Ministry of Finance for such taxation are[13]:

- microenterprise represents 78.3% of all active companies, achieving a turnover of only 2.4% of the total turnover achieved by the companies in Romania;
- the labor force engaged in micro-enterprises account for 14% of all employees in companies that submit balance sheets;
- 47.2% of micro enterprises registered net loss on December 31, 2013
- microenterprises will be more interested in business fairness and reduce the hidden economy.

At the end of 2013 the number of microenterprises in Romania was 498.583, of which 56.1% had no employees. Is easy to calculate the gain derived from the fix tax imposed on microenterprises without employees.

The Ministry of Finance estimates for the first 3 quarters of 2016 additional revenue of 316 million lei and identifies the following benefits[14] for the economy in the medium term:

- the increase employment by about 101 thousand;
- increasing profit / loss reduction for micro-enterprises with more than 2 employees;
- increased revenue from income tax and social contributions if some of these microenterprises will hire one or two employees to benefit from tax of 1%.

3. Conclusions

The study on microenterprises' income tax took into account the identification of characteristics of this type of tax.

For the period considered is observed changes in all these characteristics: conditions, tax rate, optional character, tax base.

The need to increase state budget revenues changes the taxes imposed on legal persons. This explains the introduction of the minimum tax in 2009. The same explanation is valid on binding nature of the enterprises'income tax with effect from February 2013.

A mandatory profit tax for mangement and consulting activities ensures a higher tax than microenterprises' income tax.

The proposed changes in the Draft of Fiscal Code for the period 2016 – 2018 are considering linking income tax rate for microenterprises with the number of full-time employees (before 2013 a microenterprise was supposed to have between 1 and 9 employees). Measures are designed to stimulate the hiring of labour (the tax rate is smaller for two or mre employees), inexistence of employees imposing an additional quarterly tax.

This additional tax is established so state gain is approximately the same if the microenterorise has no employees or a full-time employee with a minimum gross salary.

Moreover, the law for microenterprise' income tax does not allow to take into account prior fiscal losses for income tax calculation. The prior fiscal losses can be considered if company retursn to profit tax and if the period of 7 consecutive years to recover

[10] Government Decision no 1091/ 2014

[11] between 0.15% and 0.85% depending on the company's main activity

[14] Ministry of Finance, "Tax reform measures and expected results", www.mfinante.ro, February 18, 2015

the loss does not expire[15]. Given the proposal to increase the threshold of total revenues for microenterprises will be difficult, if not impossible, to be able to benefit from tax losses obtained before transition to income tax.

Fiscal Code provides that any change is made by law promoted by 6 month before the entry into force and implementation of change is the first day of the next year[16].

But there were times when modifications have been implemented in a very short time. Government Emergency Ordinance no 8/2013 was published in January 2013 with application since February the same year.

The estimated values of taxes for that year were not available anymore, the cash flow changed for most companies.

Businesses can not adapt to the impact of fiscal changes in a timely manner.

We notice more frequent change of rules on income tax in recent years.

The income tax is much easier to calculate, and in addition, the risk to adjust the tax is removed (the size of expenses and the percentage of its deductibility decrease the profit tax).

TAX OPTIMIZATION FOR BUSINESS START-UPS IN ROMANIA

Maria Zenovia GRIGORE[*]
Mariana GURĂU[**]

Abstract

One of the most important early decisions for an entrepreneur is choosing the optimal form of organization for his business. According to the data provided by the Registry of Commerce, Romanian entrepreneurs usually choose between: Limited Liability Company (LLC) and Authorized Natural Person (ANP).

LLCs offer liability protection for its owner. This advantage has made the LLC a popular business form for smaller companies, who don't plan to grow the business significantly. Newly set-up companies in Romania are required to apply the micro-companies revenues tax *system starting with their first year of operation. For next years, this system is applied only if annual turnover does not exceed EUR 65,000.*

An individual can pursue an economic activity as an ANP. An advantage of the ANP is the reduced number of tax returns field. In adition, in certain circumstances, an ANP may opt for a very advantageous system of taxation of personal income tax, based on predetermined fixed income.

Each one of these entities involves fiscal advantages and disadvantages, which we will try to highlight in this paper.

Keywords: *Tax optimization, Limited Liability Company, Authorized Natural Person, personal income tax, corporate income tax, micro-companies revenues tax.*

1. Introduction

Tax optimization includes any decision which may reduce or streamline tax burden. Newly formed businesses have an important tax planning opportunity. A start-up has several options when it comes to the legal structure of the new business. For a small business there are usually two options: Authorized Natural Person (ANP) and Limited Liability Company (LLC). Each option has different tax consequences, as well as other implications, such as the extent of personal liability for business debts or the way to withdraw profits from the new business, for example, by paying dividends (if the option is a company).

In section 2 we compare taxes owed by companies (separately for micro-companies and ordinary companies) with those due by ANP. We analyze only those taxes that are different for each type of entities: micro-companies revenues tax / corporate income tax / personal income tax (due by ANP), tax on dividends and mandatory social contributions related to commercial revenues. We do not treat value added tax and compulsory social contributions related to wages, because their value is the same regardless of the type of entity (ANP or LLC).

Forecasting income and expenses is very important since the start-up. To make use of tax optimization strategies, it is essential that the entrepreneur estimates the revenues and the expensess for the next few years. This forecast will help him to estimate the overall tax burden and to choose the most effective form of bussines organization (the one that involve the minimum overall tax burden. The practical examples from section 3 illustrate this process.

In section 4 we highlight the advantages and disadvantages of each form of organization, taking into account not only the fiscal aspects, but also by other specific issues such as: setting-up / split-up conditions, legal status, liability for business debts etc.

2. Newly formed business tax optimization

For entrepreneurs who are starting a business it is essential to know what taxes due. These taxes vary depending on the type of entity as follows in table no. 1.

Table no. 1: LLC taxes versus ANP taxes

LLC taxes	ANP taxes
▪ Corporate income tax CIT=16%xFiscal income; or ▪ Micro-companies revenues tax MRT=3%xRevenus ▪ Tax on dividends TD=16%xDividends	▪ Personal income tax PIT=16%xNet income ▪ Individual health insurance contribution IHIC=5,5%xNet income ▪ Social security contribution ▪ SSC=26,3% xMonthly income insured

[**] Lecturer PhD, Faculty of Economics, "Nicolae Titulescu" University of Bucharest (e-mail: **marianagurau@univnt.ro**).

2.1. Tax obligations for Limited Liability Companies

2.1.1. The micro-companies revenues tax (MRT)

According to the Fiscal Code, a mandatory revenue tax system is applicable for Romanian micro-companies which meet both of the following criteria at the end of the previous fiscal year:

- their annual turnover is lower than the RON equivalent of EUR 65,000 euros in the course of a year **(**the exchange rate for converting euro into RON is that of the closing of the previous fiscal year);
- their shares are held by entities other than the state or local authorities;
- the companies are not in winding up with winding-up proceedings.

It is not considered micro-company the entity that:

- derive income from consultancy and management activities, in a proportion greater than 20 % of total revenue (nature of the revenue shall be justified by the contracts and other documents)
- derive income from activities other than banking, insurance and reinsurance, capital market or gambling.

The micro-companies revenues tax (MRT) is mandatory for entities which meet the conditions referred to above.

Newly established companies are required to follow the micro-companies tax regime starting with the first fiscal year, if their shares are held by entities other than the state or local authorities. However, if the share capital is at least EUR 25,000, companies may opt for normal tax regime (corporate income tax-CIT). The option is for good.

The taxable base comprises the revenue derived from any source, with several exceptions:

- Revenue related to the costs of inventories;
- Revenue related to the production cost of work in progress;
- Revenue related to the capitalised costs of tangible and intangible non-current assets;
- Revenue from subsidies for operating activities etc.

The tax rate applicable to micro-company revenues is 3%.

The calculation and payment of the tax is made quarterly, no later than 25 of the month following the quarter for which the tax is calculated.

If, during a fiscal year, a microcompany registers a turnover greater than EUR 65,000 or derives revenues from consultancy and management activities exceed 20 % of its total revenue, the company will pay corporate income tax starting with the quarter in which the limit is exceeded. The tax will be calculated based on expenses and revenues registered from the beginning of the fiscal year as follow:

CIT due = CIT calculated from the beginning of the year - MRT due in that year

2.1.2. Corporate income tax (CIT)

A company whit an annual turnover exceeding EUR 65,000 due CIT.

The standard CIT is 16%.

The taxable base is calculated as follows:

Taxable income = Revenue derived from any source - Expenses incurred in obtaining that taxable revenue - **N**on-taxable revenues + Non-deductible expenses - Deductions

The most relevant types of ***non-taxable revenue*** stipulated by the Romanian Fiscal Code are:

- Dividends received from a Romanian legal person or from a foreign legal person paying profit tax or a similar tax, located in a third country with which Romania has a convention for the avoidance of double taxation, if the Romanian legal person receiving the dividends holds at the date of their distribution at least 10% of the share capital of the Romanian or foreign legal person distributing the dividends, for a continuous period of one year;
- Dividends received by a Romanian company from a subsidiary situated in an EU Member State, provided the Romanian company pays corporate income tax and has held at least 10% of the subsidiary's shares for a continuous period of at least one year prior to the dividends being distributed;
- Favourable fluctuations in the price of shares and long-term bonds, registered by the company in which the shares and long-term bonds are held, as a result of capitalisation of reserves, benefits or share premiums;
- Revenue from reversal or cancellation of provisions / expenses that were previously non-deductible, recovery of expenses that were previously non-deductible and revenues from reversal or cancellation of interest and late payment penalties that were previously non-deductible;
- Revenue from the annulment of a reserve registered as a result of a participation in kind in the capital of other legal entities;
- Revenue from deferred income tax etc.

Expenses fall into three categories: deductible expenses, limited deductibility expenses and non-deductible expenses.

Expenses are deductible only if incurred for the purpose of generating taxable income.

Accordind to the Fiscal Code, the following expenses shall have a ***limited deductibility***: [1]

- Protocol expenses are deductible up to the limit of 2% of (the total taxable revenue - the total expenses related to the taxable revenue, other than protocol and profit tax expenses);
- Social expenses are deductible up to 2% of salary expenses. Social expenses can include: maternity allowances, expenses for nursery tickets, funeral benefits and allowances for serious or incurable diseases,

[1] Law no. 571 of 22 December 2003 regarding the Fiscal Code, as amended and completed.

as well as expenses for the proper operation of certain activities or units under taxpayers' administration (i.e. kindergarten, nurseries, canteens, sports clubs, clubs, etc).

- Meal tickets expenses are deductible up to the limit of one ticket per employee per worked day;
- Health insurance premiums are deductible for employers up to the limit of EUR 250 per employee per year;
- private pension insurance premiums are deductible up to the limit of EUR 400 per person per year;
- Expenses incurred with company vehicles weighing under 3,500 kg and with fewer than nine passenger seats (including the driver's seat) that are not used exclusively for business purposes are deductible up to 50%.

Non-deductible expenses include**:**

- Profit tax expenses;
- Expenses related to non-taxable revenues;
- Interest, fines and penalties due to Romanian or foreign authorities;
- Expenses incurred for management, consultancy, assistance or other supply of services if no written contracts or any other lawful agreements are entered into and the beneficiary cannot justify the supply of such services for the activities performed and their necessity;
- Sponsorship and patronage expenses and those related to private scholarships;
- Expenses recorded without justifying documents;
- Expenses in favour of shareholders, other than those related to goods or service provided by the shareholders at market value;
- Expenses representing fixed assets impairment, when as a result of a revaluation, a step-down in value is recorded;
- Expenses incurred from deferred profit tax and changes in fair value of real estate investments by taxpayers applying the International Financial Reporting Standards;
- Expenses relating to missing or damaged non-imputable inventories or tangible assets, for which no insurance contracts have been concluded etc.

The deductions include:

- interest expenses related to loans contracted from other entities than banks or financial institutions carried over from previous period
- legal reserve fund are deductible up to 5 % of adjusted accounting gross profit and until it reach a fifth part of the share capital;
- fiscal depreciation
- fiscal provisions

CIT is calculated as follows:

CIT = 16% x (Taxable income - Fiscal losses to be recovered from previous years)

CIT due =CIT - Sponsorship and patronage expenses (up to 0.3% of turnover or 20% of the profit tax due, whichever is lower)

As a general rule, the statement and payment of the CIT should be done quarterly, until 25th, inclusive, of the first month following the end of the I-III trimesters. Starting with January 1st 2013, companies may choose to declare and pay the annual profit tax with quarterly advanced payments.

2.1.3. Tax on dividends

If the owner of a LTD decides to distribute the net income of the company in the form of dividends, he will have to pay new tax:

Tax on dividends = 16% x Gross Dividends

Companies paying dividends must compute, withhold and pay the tax. The tax must be paid by the 25th day of the month following that in which the dividends were paid. However, withholding tax on dividends which have been declared but not paid by the end of the year must be paid by 25 January of the following year.

2.2. Tax obligations for Authorized Natural Persons

2.2.1. Personal Income Tax (PIT) calculated in the real tax system

Authorized natural persons are required to fill in certain specific simplified accounting records: the journal of receipts and payments, the inventory ledger and keeping tax records.

Net income (NI) from independent activities and PIT shall be determined as follows:

NI = Gross Revenue - Deductible Expenses

PIT = 16% x NI

As in the case of CIT, expenses incurred by individuals fall into three categories: deductible expenses, limited deductibility expenses and non-deductible expenses. Rules of deductibility are very similar to those in the case of CIT.

Authorized Natural Person has to make quartely advance tax payments for the PIT due during the fiscal year (until 25th, inclusive, of the last month of each quarter). In order to achieve definitive taxation, tax payers shall submit until 25 May of the following year a statement of income, based on which the tax authority determine the difference of PIT to be paid or to be charged.

2.2.2. Personal Income Tax (PIT) calculated on the basis of a fixed income

Natural persons who obtain income from commercial activities that are included in the list drawn up by the Ministry of Public Finance[2] may calculates PIT on the basis of a fixed income annual allowance. This tax system is optional.

[2] Order of the Minister of Public Finance no. 2875/2011 approving the Nomenclature of independent activities in respect of which the net income may be determined on the basis of a fixed income annual allowance.

Local tax authorities shall determine and publish annualy these fixed incomes before 1 January of the year for which they were established. Fixed incomes may be reduced in certain circumstances. For example, the income shall be reduced by 50% for persons who have a contract of employment, for an indefinite period, or for people with disabilities. For women over the age of 60 years and men over 65 years the income shall be reduced by 40%.

For these individuals PIT shall be determined as follows:

PIT = 16% x Fixed income

The calculation and payment of PIT is made quarterly, no later than 25 of the last month of each quarter.

If in the previous fiscal year individuals have recorded an annual gross income of more than EUR 100,000 euros, they have to apply the real tax system starting with the next fiscalyear.

2.2.3. Social contributions due from natural persons authorized

The taxable income obtained by Authorized Natural Persons is subject to social security contributions (SSC) as well as to individual health insurance contribution (IHIC), calculated as follows (Table no.2):

Table no. 2:SSC and IHIC due by ANP

	Social Security Contribution	Individual Health Insurance Contribution
real system	SSC=26.3%x declared monthly income*	IHIC=5.5%x estimated/ obtained monthly income**
fixed income system	SSC=26.3%x monthly fixed income	IHIC=5.5%x monthly fixed income

** Declared monthly income is choosen by the ANP. The insured amount cannot be lower than 35% of the average gross salary (RON 2.415 in 2015) or higher than five times the average gross salary per month that applies in the year concerned.*

***Monthly income = (Revenues - Expenses, excluding social contributions) / 12. The base cannot be lower than the applicable national gross minimum wage (RON 975 in 2015), if the income derived from independent activities is the only income on which health insurance contributions apply*.

SSC is not due if individuals already derive other income (e.g. employment) that is subject of SSC or they receive pensions or unemployment benefits.

Both SSC and IHIC are payable quarterly, in four equal instalments, no later than 25 of the last month of each quarter.

3. Case Studies concerning tax optimization for a start-up

A start-up has several options when it comes to the legal structure of the new business, each one having different tax consequences. For a newly small business the options include:

- Limited Liability Company, obligated to pay Micro-companies revenues tax (MRT) in the first year
- Limited Liability Company, which opt to pay Corporate income tax (CIT) - only if the share capital is at least EUR 25,000
- Authorized Natural Persons, obligated to pay Personal income tax (PIT) calculated in the real tax system
- Authorized Natural Persons, which opt to pay PIT calculated on the basis of a fixed income annual allowance - only if his activity is included in the list drawn up by the Ministry of Public Finance)

Table no. 3 includes the entrepreneur's options for the following years, wich depend on income levels registred in the first year of operation.

Table no. 3: Options on the form of organization from the second *year of operation*

Income levels registred in the previous year	Options
under EUR 65,000	• LLC paying MRT • ANP paying PIT calculated in the real tax system • ANP paying PIT calculated on the basis of a fixed income
EUR 65,000 – EUR 100,000	• LLC paying CIT • ANP paying PIT calculated in the real tax system • ANP paying PIT calculated on the basis of a fixed income
over EUR 100,000	• LLC paying CIT • ANP paying PIT calculated in the real tax system

The entrepreneur has to choose which involves the minimum overall tax burden

We will take an example for each of the three situations in which we can put total revenues: less than EUR 65,000, between EUR 65,000 and EUR 100,000 and over 100,000 EUR.

Case Study 1 (for revenues under EUR 65,000): an entrepreneur residing in Bucharest wants to start a business under the following conditions:

- Object of activity: repairing computers and peripheral equipement (**CAEN code** 9511)
- He is qualified in this field and can prouve it through documents
- Initial capital held: RON 10,000
- He does not obtain other income outside of the business (e.g. wages, pensions or unemployment benefits).
- He estimates that it will get in a year (2015) the

following revenues and expenses:

- Total Revenues from providing services (repairing computers) RON 250,000
- Total Expenses RON 120,000, of which:
- Materials expenses RON 35,000
- Other external charges (energy and water) RON 2,000
- Expenditures on salaries (for 1 employee) RON 60,000
- Expenditures on rent RON 20,000
- Other deductible expenses RON 3,000

The entrepreneur has the following options for the organization of his activity:

(A) LLC paying MRT

(B) ANP paying PIT calculated in the real tax system

(C) ANP paying PIT calculated on the basis of a fixed income. For Bucharest the fixed income for this activity (**CAEN code** 9511) is of 16,200 RON.

If he chooses the ANP form, the entrepreneur will need to submit the Statement Nr. 600 on the income secured from the public pension system. We assume that the income declared is RON 850.

(A1) LLC paying MRT

First, we determine earnings before taxes (EBT), then the micro-companies revenues tax (MRT) and net income (NI):

EBT= 250,000-120,000=130,000 RON

MRT=3%x250,000=7,500 RON

NI=130,000-7,500=122,500 RON

On the assumption that the net income is distributed in its entirety as dividends, the tax on dividends will be:

Tax on dividends=16%x122,500=19,600 RON

Total taxes=7,500+19,600=27,100 RON

The remaining amount for entreprenor is:

Dividends net=130,000-27,100=**102,900 RON**

Entrepreneurs will benefit from this amount next year, when the dividends will be distributed.

(B1) ANP paying PIT calculated in the real tax system

First, we determine monthly taxable base for Individual Health Insurance Contribution (IHIC):

(Revenues-Expenses, excluding social contributions)/12 =(250,000-120,000)/12= 10,835 RON

The social contributions monthly will be:

SSC = 26.3% x monthly income declared = 26.3%x850=224 RON

IHIC =5.5 %x10,835=596 RON

Total annual contributions=12x (224+596)= 9,840 RON

Net income will be:

NI = 130,000 - 9,840 = 120,160 RON

Personal income taxe:

PIT=16%xNI=16%x120,160=19,226 RON

Total taxes=9,840+19,226=29,066 RON

The remaining amount for entreprenor is:

130,000 - 29,066 = **100,934 RON**

Entrepreneurs will benefit from this amount anytime they want during the year.

(C1) ANP paying PIT calculated on the basis of a fixed income

Social contributions monthly:

SSC = 26.3% x 850 = 224 RON

IHIC = 5.5 % x monthly fixed income = 5.5%x16,200/12 =5.5 %x1,350=74 RON

Total annual contributions=12x(224+74)= 3,576 RON

PIT=16% x Fixed income =

16%x16,200=2,592 RON

Total taxes paid=3,576+2,592=6,168 RON

The remaining amount for entreprenor is:

130,000 - 6,168 = **123,832 RON**

Entrepreneurs will benefit from this amount anytime they want during the year.

Conclusion1: For this level of revenues and expenses, optimum choice (which corresponds to a minimum of total taxes) is ANP paying PIT calculated on the basis of a fixed income. If the activity are not included in the list drawn up by the Ministry of Public Finance, optimum choice would be the LLC paying the micro-companies revenues tax**.**

Case Study 2 (for revenues between EUR 65,000 and 100,000 EUR): an entrepreneur residing in Bucharest wants to start a business under the following conditions:

- Object of activity: repairing computers and peripheral equipement (**CAEN code** 9511)
- He is qualified in this field and can prouve it through documents
- Initial capital held: RON 10,000
- He does not obtain other income outside of the business (e.g. wages, pensions or unemployment benefits).

He estimates that it will get in a year (2015) the following revenues and expenses:

- Total Revenues from providing services (repairing computers) RON 360,000
- Total Expenses RON 200,000, of which:
- Materials expenses RON 50,000
- Other external charges (energy and water) RON 4,000
- Expenditures on salaries (for 2 employee) RON 120,000
- Expenditures on rent RON 20,000
- Other deductible expenses RON 6,000

Because revenues are greater than EUR 65,000, the entrepreneur has the following options for the organization of his activity:

(A) LLC paying MRT at the beginning of the activity and paying CIT after having exceeded the ceiling of EUR 65,000 euro.

(B) ANP paying PIT calculated in the real tax system

(C) ANP paying PIT calculated on the basis of a fixed income. For Bucharest the fixed income for this activity (**CAEN code** 9511) is of 16,200 RON.

If he chooses the ANP form, the entrepreneur will need to submit the Statement Nr. 600 on the income secured from the public pension system. We assume that the income declared is RON 850.

(A2) LLC paying MRT and CIT

At the beginning of the activity the company will pay micro-companies revenues tax (MRT). The company will pay corporate income tax (CIT) starting with the quarter in which the limit is exceeded. The tax will be calculated based on expenses and revenues registered from the beginning of the fiscal year, as follow:

EBT = 360,000 - 200,000 = 160,000 RON

IP = 16% x 360,000 = 12,960 RON

NI = 160,000 - 12,960 = 147,040 RON

On the assumption that the net income is distributed in its entirety as dividends, the tax on dividends will be:

Tax on dividends=16%x147,040=23,526 RON

Total taxes = 7,500+19,600=27,100 RON

The remaining amount for entreprenor is:

Dividends net=160,000 - 36,486 = **123,514 RON**

Entrepreneurs will benefit from this amount next year, when the dividends will be distributed.

(B2) ANP paying PIT calculated in the real tax system

Monthly taxable base for Individual Health Insurance Contribution (IHIC):

(Revenues - Expenses, excluding social contributions)/12 = (360,000 - 200,000/12 = 13,333 RON

Social contributions monthly:

SSC = 26.3% x 850 = 224 RON

IHIC = 5.5 % x 13,333 = 733 RON

Total annual contributions = 12x(224+733) = 11,484 RON

Net income will be:

NI = 160,000 - 11,484 = 148,516 RON

Personal income taxe:

PIT=16%xNI=16%x148,516=23,763 RON

Total taxes=11,484+23,763=35,247 RON

The remaining amount for entreprenor is:

160,000 - 35,247 = **124,753 RON**

Entrepreneurs will benefit from this amount anytime they want during the year.

(C2) ANP paying PIT calculated on the basis of a fixed income

Social contributions monthly:

SSC = 26.3% x 850 =224 RON

IHIC = 5.5 % x monthly fixed income =

5.5%x16,200/12=5.5%x1,350 = 74 RON

Total annual contributions=12x(224+74) = 3,576 RON

PIT=16%xFixed income = 16% x 16,200 = 2,592 RON

Total taxes = 3,576 + 2,592 = 6,168 RON

The remaining amount for entreprenor is:

160,000 - 6,168 = **153,832 RON**

Entrepreneurs will benefit from this amount anytime they want during the year.

Conclusion2: For this level of revenues and expenses, the optimum form of organization is ANP paying PIT calculated on the basis of a fixed income. If the activity are not included in the list drawn up by the Ministry of Public Finance, optimum choice would be ANP paying PIT calculated in real system**.**

Case Study 3 (for revenues over EUR 100,000): an entrepreneur residing in Bucharest wants to start a business under the following conditions:

- Object of activity: activities of consultancy in information technology (**CAEN code** 6202)
- Possess documents evidencing qualification in this field
- Initial capital held: 10,000 RON
- He does not obtain other income outside of the business (e.g. wages, pensions or unemployment benefits).

He estimates that it will get in a year (2015) the following revenues and expenses:

- Total Revenues from providing services (consultancy in information technology) RON 500,000
- Total Expenses RON 200,000, of which:
  - Materials expenses RON 50,000
  - Other external charges (energy and water) RON 4,000
  - Expenditures on salaries (for 2 employee) RON 120,000
  - Expenditures on rent RON 20,000
  - Other deductible expenses RON 6,000

Since revenues come entirely from consultancy and management activities, the company does not comply with the conditions for the micro-companies revenues tax system. Therefore, the company will pay CIT from the beginning of the activity. Even if the revenues would be of other nature, during the year the company would have exceeded the threshold of EUR 65,000 and would have become liable for pay CIT.

The entrepreneur has the following options for the organization of his activity:

(A) LLC paying CIT

(B) ANP paying PIT calculated in the real tax system

(C) ANP paying PIT calculated on the basis of a fixed income. For Bucharest the fixed income for this activity (**CAEN code** 9511) is of 26,000 RON. The entrepreneur benefits from this tax system only in the first year. If in 2015 the threshold of EUR 100,000 is exceeded, the entrepreneur will have to go to the real system of taxation in 2016.

If he chooses the ANP form, the entrepreneur will need to submit the Statement Nr. 600 on the income secured from the public pension system. We assume that the income declared is RON 850.

(A3) LLC paying CIT

EBT = 500,000 - 200,000 = 300,000 RON

CIT = 16% x 300,000 = 48,000 RON

NI = 300,000 - 48,000 = 252,000 RON

On the assumption that the net income is distributed in its entirety as dividends, the tax on dividends will be:

Tax on dividends=16%x252,000=40,320 RON

Total taxes=48,000+40,320=88,320 RON

The remaining amount for entreprenor is: Dividends net = 252,000-40,320=**211,680 RON**

Entrepreneurs will benefit from this amount next year, when the dividends will be distributed.

(B3) ANP paying PIT calculated in the real tax system

Monthly taxable base for Individual Health Insurance Contribution (IHIC):

(Revenues - Expenses, excluding social contributions)/12 =(500,000 - 200,000)/12 = 25,000 RON

Social contributions monthly:

SSC = 26.3% x 850 =224 RON

IHIC = 5.5 % x 25,000 = 1375 RON

Total annual contributions:

12x(224+1375)=19,188 RON

Net income will be:

NI = 300,000 - 19,188 = 280,812 RON

Net income will be:

PIT=16%xNI=16%x280,812= 44,930 RON

Total taxes=19,188+44,930 = 64,118 RON

The remaining amount for entreprenor is:

300,000 - 64,118 = **235,882 RON**

Entrepreneurs will benefit from this amount anytime they want during the year.

(C3) ANP paying PIT calculated on the basis of a fixed income (only in the first year of activity)

Social contributions monthly:

SSC = 26.3% x 850 =224 RON

IHIC = 5.5 % x monthly fixed income =

5.5%x26,000/12=5.5%x2.166,67=119 RON

Total annual contributions=12x (224+119)= 4,116 RON

PIT = 16% x Fixed income=16%x 26,000 = 4,160 RON

Total taxes = 4,116 + 4,160 = 8,276 RON

The remaining amount for entreprenor is:

300,000 - 8,276 = **291,724 RON**

Entrepreneurs will benefit from this amount anytime they want during the year.

Conclusion3: For this level of revenues and expenses, optimum choice from the fiscal point of view is ANP paying PIT calculated on the basis of a fixed income. This option is only possible in the first year of activity. For the next years the optimum choice would be ANP paying PIT calculated in real system**.**

4. Conclusions

Analysis of the examples showed that the entity that ensures a minimum payment of taxes is Authorized Natural Person paying personal income taxe calculated on the basis of a fixed income.

For a right decision on the optimal form of organization should be considered both taxes, as well as other non-fiscal issues such as: the setting-up / split-up conditions, liability in the event of insolvency, mandatory professional training in the field of activity etc.

Only a comparative analyse of the advantages and disadvantages of each form of organization will result in a optimal decision.

Synthetic, these advantages and disadvantages are:

Advantages of ANP

- The process of setting-up is shorter, requires fewer papers and the cost is less than in the case of LLC;
- The accounts shall be kept in a simplified system. The cost of an accountant is small;
- Tax returns to be filed are fewer than in the case of LLC;
- ANP will benefit from the income of his business anytime he wants during the year, unlike the owner of a LLC, who has to wait the end of the year and the distribution of the dividends;
- ANPs don't have to pay tax on dividends;
- For split-up an ANP, the process is easier and takes less than for LLC.

Disadvantages of ANP

- Liability in the event of insolvency is a maximum;
- For each CAEN code chosen (each activity), entrepreneurs must justify their professional training in that field;
- The taxable income obtained by ANPs is subject to social security contributions (SSC) and individual health insurance contribution (IHIC).

Advantages of LLC

- Entrepreneurs may choose several CAEN codes, without the need to demonstrate their professional training in the fields of activity chosen;
- The LLC owners are protected from personal liability for business debts and claims. They stand to lose only the money that they've invested in the LLC;
- For entrepreneurs who open their first business, there is a form of LLC which offers significant advantages: LLC-D (for debut. (rule is: they never had shares / social parts at any enterprise in the european economic space). Cost for setting up a LLC-D are zero and the entrepreneur can obtain a non-refundable financial assistance of up to EUR 10,000.

Disadvantages of LLC

- The process of setting-up is longer, requires more documents and the cost is higher than in the case of ANP; in addition, to set up a LLC requires social capital;
- The accounts shall be kept in a double entry system and requires the signature and the stamp an accounting expert;
- As an associate, in order to benefit from company's money, you have to wait the end of the financial year and the distribution of the net income as dividends;
- The LLC owners must pay a tax of 16% on dividends received;

- The split-up of a LLC is extensive and can take quite a lot.

ANP is a suitable form of organization for those who intend to carry out a limited number of activities, with few trading partners. The greatest disadvantage of ANP is unlimited patrimonial liability.

For entrepreneurs who intend to engage in complex activities, with more trading partners, on longer terms and safer, it is preferable setting-up of a legal person, in the form of limited liability (LLC) or joint stock company, depending on the number of founders and their power of participation.

Companies who obtain low income, but have, instead, a high profitability are advantaged by the revenue tax system (applicable for micro-companies). But not all companies comply with conditions for eligibility under this category.

Tax optimization is a continuous process, given that in Romania the tax law changes very often. In the draft law on the new Fiscal Code published by Ministry of Public Finance[3], the government proposes a fiscal reform of the system for taxing the income of the entrepreneurs. Measures which have an impact on optimal decision regarding the form of the organization are:

- elimination of tax on dividends from 1st January 2016
- Reduction of the unique rate of CIT and PIT from 16% to 14% in 2019
- Gradual increase of the ceiling for framing as micro-company, from EUR 65,000 at present to EUR 75,000 in 2017, to EUR 85,000 in 2018 and even EUR 100,000 from 2019
- Alternation of rates of MRT as follows:

- 1% for micro-companies which have more than two employees, including;
- 3% for micro-companies which have only one employee;
- 3% + RON 1,530/quarter for micro-companies which does not have employees.
- 3% for microcompanies which does not have employees and are in one of the following special situations:

- dissolution followed by liquidation;
- temporary inactivity, according to the law;
- nonexisting activities at headquarters / secondary headquarters, in according to a declaration on his own responsibility.

Of all these measures, the elimination of tax on dividends seems to have the most significant impact on the decision of the form of organization. ANP, generally the most advantageous form of organization for small entrepreneurs in this moment, is losing ground in favor of the LLC.

BREAK-EVEN IN THE DECISION MAKING PROCESS

Adriana Mihaela IONESCU[*]
Cristina Elena DUMITRU[**]

Abstract

Integrated in a competitive environment, the companies are forced to know better their costs, to determine as precisely as possible the sales prices and the profit margins achievable per product. When the entrepreneurs initiate a new business, invest in a new project or when they supervise the current work, the study of breakeven allows minimizing of the risks and the uncertainties, and also allows measuring the performance of the projects.

Break-Even is an indicator that allows the company management to set minimal commercial targets to meet the expenses of the enterprise or that sets the degree of utilization of production capacities in relation to a desired level of profit.

It highlights the correlations between the dynamic of production, implicit of income and the dynamic of costs, grouped into variable costs and fixed costs. Used in a prospective fashion, Break-Even allows planning and optimizing of the enterprise's sales and costs, not only short-term but also medium and long term.

Keywords: *break-even, costs, turnover, profit, decision.*

1. Introduction

This paper identifies a simple and effective method of analysis which helps entrepreneurs in planning and optimization of sales and costs, and therefore profits, in the context of an environment governed by the uncertainties and risks.

The study develops the concepts and shows the importance of the break-even analysis in sizing the volume at which production becomes profitable, highlighting the correlation between revenues and costs, or in determining the degree of utilization of production capacities in relation to a desired level of profit.

Break-even analysis is a way to quickly answer a number of important questions about the profitability of a company's products or services. Break-even analysis can be used with either a product or service.

The first part presents the concepts and usefulness of specific indicators. In the second part of the paper, we present case studies with presentation and interpretation of results.

The subject approached in our work was the object of numerous research reflected in academic articles, in professional journals, in accounting and management control books. Existing studies support our demarche and are summarized in the specialized literature section.

2. Break-even analysis - tool in making management decisions

Economic sense is an essential element for success in business, but to lead a company only after flair is certainly a risky act. Any decision, regardless of the extent of its implications, involves accepting risk. Leading an enterprise through decisions involves continuous risk taking. The management accounting and cost calculation becomes useful in decision making because it provides the opportunity to distinguish profitable from the unprofitable activity.

Integrated in a competitive environment with a multitude of products and production processes, enterprises have felt the need to know very well its costs to determine as precisely as possible selling price and profit on each product.

Management accounting is the one that opens the "black box". It shows the stages in the transformation of inputs into outputs.

2.1. Specific indicators break-even analysis. Concepts and utility

Break-even analysis is used to give answers to question such as “what is the minimum level of sales that ensure the company will not experience loss” or “how much care sales be decreased and the company still continues to be profitable”.

Break-even analysis is extremely important before starting a new business (or launching a new product) because it gives answers to crucial questions such as “how sensitive is the profit of the business to decreases in sales or increases in costs”. This analysis can be also extended to early stage business in order to determine how accurate the first prediction was and monitor whether the firm is on the right path or not. Even mature business must take into consideration their current break-even point and find ways to lower that benchmark in order to increase profit.

Owners and managers are constantly faced with decisions about selling prices and cost control. Break-

[*] Adriana Mihaela Ionescu, Lecturer PhD, Faculty of Entrepreneurship, Business Engineering and Management, “Politehnica” University of Bucharest (e-mail: **amihaela.ionescu@gmail.com**)

[**] Cristina Elena Dumitru, Lecturer PhD, Faculty of Entrepreneurship, Business Engineering and Management, “Politehnica” University of Bucharest (e-mail: **cristinaedumitru@gmail.com**).

even analysis is the analysis of the level of sales at witch a company or a project would make zero profit. As its name implies, this approach determines the sales needed to break-even. Break-even analysis can be very useful in following practical situations:

- at starting a new activity;
- when introducing new products into production, in which case can be determined the turnover for the new product;
- with expanding general level of activity of the company;
- when making projects in fixed assets (modernization or automation).

We can use break-even analysis to answer the above questions from a pure cost and profit perspective and when marketing departments are considering strategies that involve the granting of discounts or conduct promotional campaigns. Next question often arises: "Should we offer a discount?" The answer to this question is far beyond simple and straightforward. It involves the examination of many factors such as the competition, the elasticity of demand etc. If the discount offer is made with a final objective to increase profit through an increase in sales volume caution should be exercised on the fact that the expected increase in sale (incremental sales) will be adequate to make up for the "lost" profit from the discount offer.

Break-even analysis is based on categorizing production costs between those which are variable and those which are fixed.

Variable cost consists only of variable expenses delineated in each product, whether direct or indirect, costs that vary depending on the volume business activity without necessarily exists proportionality between costs and changes in production volume variance.

In contrast, **fixed costs** are considered period costs that are borne regardless of production volume and they refer to the full capacity of the company to produce and sell, reflecting entirely in annual profit. Taking into account the fixed costs it is considered to approximate the full costs of the actual values.

The temptation to explore information (cost; result) leads to the study of cost-volume-profit relation.

The cost-volume-profit relation is, in fact, a model for predicting the outcome, which highlights the correlations between the factors that may influence the profits of an enterprise. It involves three elements:

- Cost - the cost of making the product or providing a service
- Volume - the number of units of products produced or hours/units of service delivered
- Profit - Selling Price of product / service - Cost to make product / provide service = Operating Profit

The first two items are information available to business managers, about their own business, products and services. This type of information is not generally available to those outside the business. They constitute important operating information that can help managers assess past performance, plan for the future, and monitor current progress. As for the third item, a business can't stay in business very long without profits.

Based on the distinction between variable costs and fixed costs, break-even analysis is a useful instrument for decision. Using break-even analysis we can analyze a single product, a group of products, or evaluate the entire business as a whole.

Specifics indicators (break-even point, the coverage factor, factor of safety and confidence interval) are used to reveal different aspects of profitability or unprofitability. Each of these indicators has clear meanings and ability to suggest various ways to improve the business.

2.1.1. The Break-Even Point is the sales volume that enables a zero profit. At this critical point total sale equals total expenses (fixed and variable) of the company. When sales are below the break-even point a company is operating at a loss; above the break-even point they will be operating at a profit.

Mathematically, the break-even point (Pe) is calculated as the ratio between fixed costs (CF) and unit contribution margin (cb_u):

$$Pe = \frac{CF}{cb_u}$$

The unit contribution margin is the difference between the selling price (pv) and variable costs (cv):

$$cb_u = pv - cv$$

If the enterprise gets a mix of products, the break-even is calculated based on the medium contribution margin. This contribution is the ratio between global contribution margin (CB) and the amount of product (i) manufactured and sold (qv_i):

$$cb_u = \frac{CB}{\sum q_i}$$

2.1.2. The coverage factor (Fa). This indicator provides information about the product or products that have the highest capacity to absorb fixed costs and make a profit. Production and sale policy will focus on products with the highest coverage factor, permitting optimization of the production and sale program.

The coverage factor can be calculated for each product or global, with the following formulas:

a) *For each product:*

$$Fa_i = CB_i / CA_i * 100$$

CB_i = the global contribution margin for the product i

CA_i = turnover for the product i

b) Global:

$$Fa = CB / CA * 100$$

or

$$Fa = CF / CA^* * 100$$

CB = the global contribution margin for the entire production manufactured and sold;

CA = turnover for the entire production manufactured and sold

CA^* = critical turnover, i.e. break-even sales value

2.1.3. The Dynamic safety coefficient (Ks) indicates how much sales can fall to reach the balance point and not get into the losses. There are three formulas for calculating this coefficient:

a) $Ks = 100* (CA - CA^*) / CA$

CA= sales value

CA^* = critical turnover, i.e. break-even sales value

b) $Ks = R / CB * 100$

R = profit

CB = global contribution margin for the entire production manufactured and sold

c) $Ks = 100\% - g$

100% = the maximum activity level

g = degree of activity in the break-even point

2.1.4. The range of safety or the margin of safety (Is) allows calculating the influence of the reduction in sales volume on the result. It is the excess of expected future sales above the break-even point, in other words it indicates how much sales volume can be reduced without risk of incurring losses.

$$Is = CA - CA^*$$

CA = expected future sales

CA^* = sales at break-even point.

Statistical studies indicate the following situations:

- unstable situation, if CA is increased by up to 10% than CA^*
- relatively stable situation, if CA is increased by up to 20% than CA^*
- comfortable situation, if CA exceeds more than 20% CA^*

2.2 The calculation of specific indicators of cost-volume-profit relation. Break-even analysis - Case study

The company S.C. Silvarom S.A. has the aim to create furniture. The company manufactures and sells three products, A, B, C. Using the information in the table below will analyze indicators expressing the cost - volume – profit relation.

Explanation	**Product**
	A
1. Quantity produced and sold (q_v)	10.000
2. Unit selling price (pv_u)	1.000
3. Total variable costs (CV_T)	6.500.000
4. Fixed costs	
Turnover (CA)	10.000.000
Unit variable cost (cv_u)	650
Unit contribution margin (cb_u)	350
Global contribution margin (CB)	3.500.000
Financial result (R)	

Explanation	**Product**
	B
1. Quantity produced and sold (q_v)	7.000
2. Unit selling price (pv_u)	3.000
3. Total variable costs (CV_T)	22.505.000
4. Fixed costs	
Turnover (CA)	21.000.000
Unit variable cost (cv_u)	3.215
Unit contribution margin (cb_u)	-215
Global contribution margin (CB)	-1.505.000
Financial result (R)	

Explanation	**Product**
	C
1. Quantity produced and sold (q_v)	9.000
2. Unit selling price (pv_u)	4.000
3. Total variable costs (CV_T)	27.500.000
4. Fixed costs	
Turnover (CA)	36.000.000
Unit variable cost (cv_u)	3.000
Unit contribution margin (cb_u)	1.000
Global contribution margin (CB)	9.000.000
Financial result (R)	

Explanation	**TOTAL**
1. Quantity produced and sold (q_v)	26.000
2. Unit selling price (pv_u)	
3. Total variable costs (CV_T)	56.005.000
4. Fixed costs	8.000.000
Turnover (CA)	36.000.000
Unit variable cost (cv_u)	
Unit contribution margin (cb_u)	
Global contribution margin (CB)	10.995.000
Financial result (R)	2.995.000

The calculation of the previous indicators:

Turnover (CA) = q_v * pv_u

CA_A = 10.000 * 1.000 = 10.000.000 lei

CA_B = 7.000 * 3.000 = 21.000.000 lei

CA_C = 9.000 * 4.000 = 36.000.000 lei

Unit contribution margin $cb_u = pv_u - cv_u$

cb_u = 1.000 - 650 = 350 lei

cb_u = 3.000 - 3.215 = - 215 lei

cb_u = 4.000 - 3.000 = 1.000 lei

Unit variable cost (cvu) = CVT/qv

cvu = 6.500.000/10.000 = 650 lei

cvu = 22.505.000/ 7.000 = 3.215 lei

cvu = 27.000.000/9.000 = 3.000 lei

Global contribution margin CB = cbu * qv

CB = 350 * 10.000 = 3.500.000 lei

CB = - 215 * 7.000 = - 1.505.000 lei

CB = 1.000 * 9.000 = 9.000.000 lei

Financial result = Turnover (CA) – Total variable costs (CV_T) *- Fixed costs* = 2.995.000 lei

After analyzing the primary indicators, we can make the following considerations:

The overall activity of the enterprise is profitable, it releasing a positive result (profit) in the absolute amount of 2.995 million lei;

Product A and C are profitable, each having a positive unit contribution margin, 350 lei/unit for A, 1000 lei/unit for C; they have the ability to cover fixed costs and to develop a profit to pay part of the fixed costs not covered by the product unprofitable B; the product B has a negative unit contribution margin (-215 lei/unit), the selling price (3000 lei/unit) cannot cover the unit cost (3215 lei/unit).

Following improve profitability, the company may decide to abandon the manufacture of B if it is found that there is no demand for this product and its production is not economically justified; otherwise, keep the factory and try to recoup by increasing price or reducing costs by reviewing the variable costs that compose it.

Case 1. *The enterprise produces and sells a single product*, A, thus:

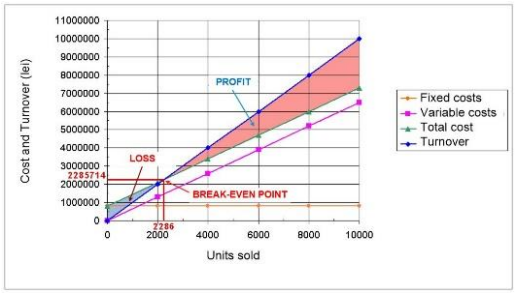
Break-even point:

Pr = CF/cb_u

- Fixed costs (CF) = 800.000 lei
- Unit variable costs (cv) = 650 lei
- Unit selling price (pv) = 1.000 lei
- Quantity produced and sold = 10.000 unit

$cb_u = pv - cv$ = 1.000 – 650 = 350 lei

$Pr = CF/ cb_u$ = 800.000/350 = 2.286 unit.



The company must produce and sell 2.286 units to fully cover variable costs and fixed costs, so that both profit and loss are equal to zero. Any unit of product manufactured and sold over this amount will make a profit of 350 lei as unsold or not manufactured any unit involves a loss of 350 lei.

CA^* = CF / RC = 800.000 / 0,35 = 2.285.714 lei

RC = CB / CA * 100 = 3.500.000 / 10.000.000 * 100 = 35%

The company's activity has evolved a factor of coverage of 35% coverage, which provides coverage of fixed costs and make a profit.

To calculate the break-even point using graphical method is drawn diagram CPV.

OX axis is the quantity produced and sold and OY axis is the cost and turnover.

The break-even point corresponds to a quantity of 2.286 units produced and sold and to a turnover of 2.285.714 lei. In the red area is the profit, the blue area is the loss.

Note that as the quantity produced increases, the share of fixed expense per unit will be lower, since the total fixed costs, maintaining the same level, without being influenced by the volume of production, will be distributed to a larger number of products. This leads to lower costs of production and increase profits.

Case 2. The enterprise produces and sells a mix of products (A, B, C)

The break-even point:

The unit margin contribution is:

$cb_u = CB/\Sigma qv_i$ = 10.995.000 / (10.000 + 7.000 + 9.000) = 423 lei/unit.

$Pr = CF/cb_u$ = 8.000.000 / 423 = 18.912 unit.

The company must produce and sell 18.912 units to cover all expenses through revenues and to obtain zero profit.

Have known the weight of each product:

$g_i = qv_i/ \Sigma qv_i$

g_A = 10.000 / 26.000 = 0,38;

g_B = 7.000/26.000 = 0,26;

g_C = 9.000/26.000 = 0,35

The break-even point for each product: $Pr_i = g_i * Pr$

$Pr_A = g_A * Pr$ = 0,38 * 18.912 = 7.187 unit

$Pr_B = g_B * Pr$ = 0,26 * 18.912 = 5.106 unit

$Pr_C = g_C * Pr$ = 0,35 * 18.912 = 6.619 unit

18.912 unit

The critical turnover for 18.912 units is 48.750.761 lei, as follows:

RC = CB / CA * 100 = 10.995.000 / 67.000.000 * 100 = 16,41%

CA^* = CF / Rc = 8.000.000 / 16,41% = 48.750.761 lei

The coverage factor

– For each product:

$Fa_A = CB_A / CA_A$ * 100 = 3.500.000 / 10.000.000 * 100 = 35%

$Fa_B = CB_B / CA_B$ * 100 = - 1.505.000 / 21.000.000 * 100 = - 7,16%

$Fa_C = CB_C / CA_C * 100 = 9.000.000 / 36.000.000 * 100 = 25\%$

For profitable product A and C, the coverage factor is positive indicating their ability to support fixed costs and generate profit.

Critical analysis of the information obtained shows that A is the most profitable product, with a coverage factor of 35%, followed by the product C. For these products may decide to boost production and sale.

For product B, the selling price should be increased by 7,16% for cover it cost, or the cost should be decreased by 7,16%.

- The global coverage factor:

$Fa = CB / CA * 100 = 10.995.000 / 67.000.000 * 100 = 16,41\%$

$Fa = CF / CA^* * 100 = 8.000.000 / 48.750.761 * 100 = 16,41\%$

16.41 % of value of products produced and sold may cover fixed costs and provide profit. The amount of fixed costs and their share is required to be analyzed, for not having a wrong judgment.

The share of fixed costs in total sales is calculated as follows:

$R_{CF} = CF / CA * 100 = 8.000.000 / 67.000.000 * 100 = 11,94\%$,

This means 11% of turnover is needed to cover all fixed costs, the remaining 4,47% (16.41% - 11.94%) represent potential profit. This information suggests that the production and sales ensure the profitability of the enterprise.

Dynamic safety coefficient

$Ks = (CA - CA^*) / CA * 100 = 67.000.000 - 48.750.761 / 67.000.000 * 100 = 27,23\%$.

The company can decrease sales by maximum 27.23% not to exceed the break-even point.

$Ks = R / CB * 100 = 2.995.000 / 10.995.000 * 100 = 27,23\%$

27,23% of the current activity generates a positive result.

The margin of safety

$Is = CA – CA^* = 67.000.000 - 48.750.761 = 18.249.239$ lei

Sales may register a decrease of 18.249.239 lei to maintain profit.

The last two indicators assessed risk of becoming unprofitable. Negative values indicate losses. As these indicators have higher values, the risk is lower.

Some of the advantages of the break-even analysis are:

- allows to establish the size at which production becomes profitable
- determines the use of production capacity in correlation with a desired level of profit
- allows to establish the production volume required to achieve a certain level of profit
- helps in studying the consequences of increasing sales or turnover
- highlights correlations between the dynamic of production respectively revenue and the dynamic of cost, grouped into variable costs and fixed costs

3. Conclusions

In conclusion, the break-even point is one of the most important information of a business plan. Break-even is a very useful tool, especially when starting a new activity or a project to validate the realism of the project. It helps to reduce risk and uncertainty and to establish a minimum activity level required to avoid losing money.

The objective of the break-even analysis is to reduce uncertainty about the launch of a new project and the objective of the company is as break-even point to be as low as possible. This forces the company to study fixed costs and variable costs as well as turnover.

Also, when the company wants to invest in new machinery and high-tech, the breakeven analysis is recommended to assess the possibility of investing in these fixed assets or to estimate the results of an increase in production volume in relation to new production capacities.

However, a simplistic approach cannot justify a decision on a new project, even if the analysis would measure as accurately as possible the fixed costs and variable costs and would result in turnover depending on the market (selling prices in with respect to product quality). Break-even analysis is important for planning and optimizing sales and costs of the enterprise in the short, medium and long term in various sectors (manufacturing, commerce, services).

Break-even analysis is useful as a first step in developing financial applications, which can be use in invoicing and budgeting. The main purpose of this analysis is to have some idea of how much to sell, before a profit will be made.

The approach that the authors of this paper have done is theoretical and he recognizes the need for some case studies to understand the complexity of situations that involve the use of break-even analysis, could thus overcome the barrier between the academic discourse and the practice, which would be beneficial to both sides. Other lines of research could be identification of additional effective tools to help professionals in the consolidation of information necessary for making management decisions.

MONETARY POLICY AND PARALLEL FINANCIAL MARKETS

Adela IONESCU*

Abstract

Monetary policy is one of the economic policy "tools" through which it acts on the currency demand and supply in the economy. The importance of monetary policy results from its primary objective - price stability, plus limiting inflation and maintaining internal and external value of the currency. Responsibility for achieving these objectives rests with the Central Bank, which has a monopoly in the formulation and the implementation of monetary policy targets. Price stability is the primary objective of monetary policy and also the central objective of economic policy, alongside with: sustainable economic growth, full employment of labor force, balance of external payments equilibrium. To achieve these overall objectives of economic policy, monetary policy acts through currency as an instrument of action and it represents the overall action exercised by the monetary authority to influence economic development and to ensure price stability. In economic processes numerous factors emerge to the sale or purchase of capital available for a shorter or longer period and to achieving their aspirations of maximize capital gains, they are negotiating, they are confronting and agreeing within specific market relationships.

The entirety of relations between various economic issues, enterprises and individuals, between them and the banking intermediaries, as well as the relationship between banks and other credit institutions on the transfer of cash money as specific form of debt and fructification of capital, form capital markets or credit markets.

These markets are carved up according to the nature and purposes of the participants.

Keywords: *structural objectives, operational objectives, monetary variables, bond market, credit market, placing capital, capital circuit.*

1. Introduction

Monetary policies in all countries and in all periods aimed primarily the currency stability, maintaining it at a relatively constant value and purchasing power. Monetary policy can not directly lead to currency stability, no matter how good legislation.

Monetary policy is conducted according to the play of economic forces and the principle of self-regulation.

Effective monetary policies are based on the idea that money embodies cash flows that occur during transactions and domestic and international economic processes. All these flows and exchanges are met in the stability and growth, in balance of payments, in trade balance surplus or deficit of the state. In turn, all these phenomena and economic processes related to the central bank of issue of a country. Any imbalance between transactions, cash flows, either internally or between two or more countries - so internationally, conduce to a currency-based solution, which not only affects the stability and purchasing power of the currency, as well as foreign exchange reserves and the economic power of the one supporting the unfavorable operations.

Monetary policy stands in the global action of the state by specific tools and methodologies on the main economic variables: prices, GDP, employment of labor (unemployment rate), the balance of the balance of payments etc. This action shall be exercised by handling monetary variables, ie certain sizes that are themselves difficult to control, but that monetary policy aims to influence. The target of monetary policy consists of so-called "intermediate targets" such as interest rates, monetary aggregates, the volume of bank credit and the exchange rate.

But in addition to these issues, monetary policy means the multitude of possibilities to act on the currency by currency.

Price stability is the primary objective of monetary policy and also the central objective of economic policy, with sustainable economic growth, full employment of labor and balance of payments equilibrium. To achieve these overall objectives of economic policy, monetary policy acts as an instrument of action by currency and represents all measures exercised by the monetary authority to influence economic development and to ensure price stability.

The government has approved a series of austerity measures due the financial crisis, without aproper analysis of medium and long term effects over economy and population. One of theme asures was the instatement of the minimum income tax that each firm had to pay no matter the profit or loss it had obtained during the financial exercise.[1]

After creating and expanding European Community, later the European Union by the Treaties, EU institutions and Member States were obliged to pursue a policy of deregulation and then abandoning

the monopoly structure, which were organized around the major public services. Thus, in the '80s, states have tried a new technique to finance their public infrastructure needs, which they could build without debt.[2]

2. Content

The contemporary era has long given up the concept of monetary neutrality which in the past hid the essence of monetary relations, so that now monetary policy is recognized as an essential component of economic policy. In a market economy, politics is a deliberate intervention of the state in the economy in order to accomplish certain goals of structural or of a certain juncture nature.

In all market economies the state is considered the center of the policy makers and their promoter under the control of parliament who instructs the administration to execute such orders[3].

Because "interim targets" are quite diverse, it is necessary to choose among them some "operational objectives" i.e. monetary variables that authorities can influence in an effective manner with the tools at their disposal. The interbank interest rate or "exogenous monetary base" are targets in a higher extent under the jurisdiction of monetary authorities than, for example, the interest rate on loans Debenture.

Regarding banking system, securitization is a financial transaction recovery of claims by an investment vehicle, which acquires, gathers and uses them to guarantee securities issues. The balance sheet of the banking institutions include in the active side the decrease of bank loans to all its customers, individuals and legal entities and liabilities, and in the passive side are included the deposits and customers current accounts and also, the loans contracted from other banks or financial institutions, plus the bonds issued by the bank, which, in fact means debts, too. In the context of balance sheet of the banking institutions, securitization means a kind of funding by securities issue.[4]

Finally, the monetary authorities have certain tools, i.e. processes that enable them to act on monetary variables. Some of these tools are direct and binding (credit control, foreign exchange control etc.), but in general, it is considered that they must rely on indirect mechanisms, which preserves the action of market laws and allow to subsist a certain adaptive capacity banking system as a whole.

So monetary policy works using tools on operational objectives, which in turn exerts some effects on intermediate targets, which allows achieving endpoints.

The main objectives of monetary policy are:

- Price stability and therefore of the national currency;
- Ensuring an increase in the number of the employees;
- An appropriate rate of foreign exchange;
- A high rate of economic growth.

To achieve these objectives are also necessary some constraints, which are all four:

- Prevent financial panics;
- Avoid excessive volatility in interest rates;
- Prevent certain sectors of the economy to bear the burden of restrictive policy;
- To gain and maintain the confidence of foreign investors. Goals or objectives are:

Price Stability

This target seems evident in any modern economy, but is far from being realized. Inflation is a danger for not properly redistribute income. Specifically, all salaries, contracts, laws, taxes and accounting procedures are adapted to inflation.

Rising inflation has three drawbacks:

- The maximum price and catalog prices are to be modified frequently;
- As long as the prices cannot be changed continuously, they are out of balance short periods of time between two changes;
- Inflation impels to keeping a very low amount of currency, for currency loses its preserved value without the benefit of a higher nominal interest rate than other assets.

Monetary policy takes into account that inflation cannot always be predicted correctly, and economically it neither can be fully indexed. For example nominal income (salary etc.) is more a subject to taxes than income from real interest.

Monetary policy tries to reduce inefficient allocation of investments fund for periods of inflation. It intends to reduce the impact of inflation on the distribution of income and wealth. Non-anticipation of inflation bother creditors and the retired persons and it's in favor of borrowers. The impact of inflation disadvantages employees if wages are following prices.

Inflation causes insecurity and uncertainty. Families cannot plan their future for a longer period for they do not know what real value will have their fixed assets. People are inclined to save but the lack of inflation anticipation punishes them severely.

Inflation increases government revenue over expenditure and monetary policy must determine the extent for that. The balance should not be broken as

[4] M. Sudacevschi, Ion Niti „ The Innovations on the financial matkets. Useing derivatives for banking market risk coverage"- *Internal Auditing & Risk Management, 2010.*

government is the largest debtor in the economy and therefore it wins from inflation. When inflation increases, the real value of government debt and the interest it has to pay is reduced.

The state has privileges in times of inflation also because the currency and bank reserves that it is holding.

Increasing the Number of Employees

Monetary policy aims as well increasing employment (avoiding unemployment), and determine its most appropriate level.

There are two selection criteria:

- The unemployment rate to be effective in terms of maximizing production;
- A minimum unemployment rate, determined on the basis of monthly tracking of families.

The last is uncertain and less effective, so ultimately lead to accelerating inflation. This is also because unemployment data may not be accurate. For example, are eliminated those who have given up looking for work or those who work part time are not counted partial unemployed.

The number of unemployed depends on the level and duration of compensation payments.

An Appropriate Rate of Exchange

It's taken as read that monetary policy must consider the increase in the exchange rate of the national currency (i.e. exchange rate). This leads to lowering inflation. Exporters win and the direct result is the entry of a larger amount of currency on the national market.

Economic Growth

Monetary policy contributes decisively to a constant rate of growth, which in turn promotes the growth of loans. To promote investment, monetary policy envisages a very real low interest rate. This measure must be accompanied by a restrictive fiscal policy, including maintaining a lower budget deficit.

Constraints:
Preventing financial panic

Financial panic and recession lead to increased unemployment, so no way to increase the number of employees, which was seen to be an objective of monetary policy. Those who bought assets on credit can sell their obligations by paying the creditors. As some of loan applicants fail because they cannot pay off loans, some of their lenders give themselves bankrupt (e.g. banks). Bank failures and their temporary inability to replenish were the main features of financial panics. To prevent financial panics in countries with developed market economy were created reserves (e.g. the USA - the Federal Reserve).

Interest rate stability

Keeping interest rates relatively stable is a monetary policy of balance, but peaks too high for interest rates should be prevented. Financial markets operate more efficiently if interest rates are stable. If increase of interest rates is to high, the value of banks and insurance companies portfolios decreases, which is equivalent to a loss of capital. Financial panics occur also because people have an aversion to risks. Therefore, they prefer to sell their assets at prices below their value. Unstable interest rates lead to fluctuations in exchange rates as well.

Burden on Some Economic Sectors

Tight monetary policy makes some sectors suffer more than others. The most affected sectors are products or services exporting sector and housing construction one.

Restrictive policy goal is to reduce the demand for resources, when this request is excessive and too inflationary.

Maintaining the Confidence of Foreign Investors

Monetary policy should pay more attention to how foreign investors respond to changes in monetary and financial market movements. If a country's assets are declining, foreign investors will withdraw their capital. They sell stocks and obligations held in the country. Therefore, prices of stocks and bonds reduce (increases supply). This cutting down of prices leads to reduced wealth and increased costs of investment and ultimately to economic recession.

The objectives of monetary policy largely overlap with those of fiscal policy to the extent that both are instruments of macroeconomic stabilization. Another possibility which monetary policy has to improve monetary circulation is budget constraint, namely its ability to finance from loans.

Debt, i.e. the budget deficit can be monetized (e.g. the currency issue and stabilizing interest rate).

In general, in a developed market economy monetary policy does not impose laws that increase or reduce aggregate demand.

There are two types of monetary policy instruments: general (indirect) and specific (direct) ones.

The former are used in most contemporary economies and acting on monetary mechanisms without blocking their operation. Thus handling re-discount fee, open market policy and required reserves policy intervention are general tools; they are based, each, on some logic inherent in a particular economic-monetary mechanism: the loan and its historical form - the discount (in re-discount case), financial market (in the case of open market policy), monetary creation (if required reserves policy).

The second category of tools are used only in certain countries and periods and acts directly on the financial position of commercial banks, imposing on them a certain conduct. The selectivity (routing) and rationalization (capping) of loans are coercive procedures that transform ordinary commercial banks in common credit distributor officers to economic

sectors and branches designated by the state power, in proportions determined through administrative means.

At present, the general evolution of monetary policy is characterized by a return to indirect instruments, particularly those that rely on capital markets mechanisms and therefore, on the interest rate action.

Re-Discount Tax Policy

The usual discount rate is the interest rate for loans extended by the bank of issue within the re-discount operations.

The specific name comes from the fact that for a long time the main form of credit by the bank of issue was re-discount based on discount operations. Today the bank's lending operations have diversified and have other structures, but the bank of issue continues to fulfill in the economy the role of a source of credit, related to its main function of issue.

Open Market Policy

Open market operations are operations whereby the central bank buys and sells securities in the money market. Unlike re-discount, which relates directly commercial banks with the central bank, at the initiative of the former, open market operations allow the central bank to take the initiative and intervene in the money market, from which it supplies commercial banks with liquidity. The interest rate related to these operations forms on the mentioned money market – which the central bank can influence however -, that by modulating its cash contribution - achieved through purchases of securities they carry out and by modulating the withdrawal of liquidity - made by sales of securities they perform. Open market policy is historically a natural companion to re-discount policy, both originating in the English economy where they were used complementary in order to ensure the desired direction of trends for liquidity, credit and interest. This tool is applied by the National Bank of Romania who is all the time in the know of the price and interest rate. Also the N.B. of R. grants credit to banks for the recovery of economy, primarily the investment.

Required reserves policy

Required reserves are the primary currency availability that banks must preserve in their assets proportional to the aggregate deposits or other aggregate established by the monetary authorities. Determining the level of required reserves can be done by applying one or more coefficients differentiated by envisaged calculation basis. Thus, as a general rule, for deposits is used a type of coefficient, another factor for term deposits, etc.

Required reserves policy effectiveness depends on the degree of dependency of the commercial banking system to the central bank.

NBR has the capacity to float reserve requirements within certain limits. Increasing reserve requirements affects the money stock (e.g.: if reserves are in excess it's used the money issue).

If reserves are high, banks do not build up anymore deposits for individuals and body corporate or lower interest rates. In developed countries, the required reserve is not changed for decades.

Monetary Policy and Parallel Credit Markets

Money market or credit market comprises the available short-term capital and foreign exchange market, being also a bound compartment to capital flows to and from the outside. As stated, these markets are individualized by functional institutions and the conduct of transactions in these markets. But it is estimated, with good season that on the one hand the boundaries between these markets cannot be clearly defined and on the other hand, the links between these markets are really tight. Thus, events and trends in a market can influence the events and trends in other markets, the more so as since many participants operates in several markets and thus can transfer if deemed favorable, their participation in other markets. Between the two possible extremes respectively "permanent" hiring of capital by purchasing shares/bonds and loans from day to day, there is a differentiated range of ways of placing it in the capital or credit markets, different but gradually close to each other.

Money market or credit market works with large participation of the population, of companies and especially intermediaries of banks, institutions with broad functionality in this market.

The complexity of relationships within the monetary market leads to its specific segmentation, based upon the natural diversity of certain sides of the process of modernization and activation of available capital. The general credit market functionality is provided by the activity of some component markets, each of them with specific participants and specific operations.

The Relationship between Money Market and Classical Parallel Markets

In the money market we distinguish:

- Money market (the classic one);
- Parallel markets.

Money market, the so-called classic one has in fact several aspects:

- Money market or discount market;
- The actual money market.

The first state - money market or short-term discount market comprises a broad framework of the relationship regarding on the one hand the mobilization of monetary availability from companies, people, institutions of credit and on the other hand granting loans to companies or individuals. Specific credit periods in this market are at sight for maximum one year (US) or 18 to 24 months in the European banking systems. The resources that are mobilized on the market are usually current availability of firms and

individuals, respectively balances of the call deposit accounts or current accounts.

Distribution of these resources is carried out by loans to companies in order to meet current needs related in principle to providing in advance the production costs or those related to the movement of goods from the producer to the distribution network. Also, families are beneficiaries to receiving loans mainly for the purchase of housing and consumer goods. Mobilization of availabilities and credit distribution is performed under market conditions, participants to transactions manifesting freely their preferences according to the best interest level that could maximize earnings.

In its second state - the actual money market, there mainly the banks lend to each other the amounts needed to square the interbank operations relations related to the liquidation of balances from mutual operations within 24 hours or more. This particular circuit of available capital has an important role in regulating and establishing record- setting monetary circulation and balanced functioning of the banking system. The smooth operation of the money market is closely related to savings market which can be considered an auxiliary market for the money market. The banks attract their customers based on permanent collaborative relationships and in competitive conditions, mainly resources from the sphere of the savings banks, credit unions, insurance companies, pension funds, investment funds, well-established institutions for mobilizing and specific fruition of an important part of the population savings[5].

Parallel markets were gradually formed in the aftermath of the Second World War, in specific historical and economic development circumstances, which led to structure new credit markets, independent in their operation and with restricted direct communication channels with the other markets belonging to the traditional credit markets. This is the origin of their name as parallel markets. The first existing parallel market in the developed countries is the Euro-currency market, Euro-currency is representing receivables denominated in the currency of a country that is used across national borders by non-residents.

The prefix "euro" initially reveals the location of this market in Europe for dollar-denominated resources (where the name of Euro-dollar comes from) is routinely used today to characterize all such operations carried out in the world, with the object mostly in dollars but pounds and yen as well etc.

The Euro-currency market is a credit market, its main mission is to mobilize and redistribute by credits, with the goal to best taking advantage of the existing availability in this market.

Direct participants in this market are the banks licensed in foreign currency operations, according to the laws of each country. Contracting and negotiations take place between banks independently of their nationality and borders, being agreed different loan terms and amounts and at the interest level appropriate to this market. Obviously, banks issue offers and extend requests in relation to the possibilities and needs of its own clientage. The Euro-currency resources of this market have different origins: exporters, large transnational companies, commercial and issuance banks of various countries, depending on their foreign exchange reserves. In their turn major credit recipients are recruited from importers and the categories listed above.

Euro-currency market plays a major role in the economies of developed countries; provides additional liquidity and related resources to companies' expansion and to the accomplishment of capital exportation. As a parallel market it leads to a significant increase of credit resources, countervailing the national policies and often accounting for inflationary stimuli.

Another parallel market is the market for credit between companies (intercompany market). This market has developed under the challenge of credit restrictions which at the beginning obstructed credit relationships in developed countries and that consisted in the advancement of significant amounts from some firms to others for a short term. This was a form of avoidance of intermediaries, called also disintermediation, which provided participants an extra yield profits at the expense of proper banking intermediaries.[6]

In England, these loans are brokered by specialized brokers between major companies (about 500) and the minimum circulated amounts are about £ 50,000, loans being actually negotiable.

In the US was created an instrument specific to this commercial market – papers, which are negotiable and represent values between 10,000 and $ 5 million USD with terms from 25 to 270 days. These instruments have grown in relevant rhythms, showing increased preference for this option as an expression of deleveraging processes.

In relation to the respective economic characteristics and to national banking systems, appear as parallel markets:

- Financial firms market, in connection with the formation and redistribution of resources for specialized operations as leasing, factoring and others;
- Mortgage market, in connection with the establishment of resources, especially through short-term loans, necessary for the activity of local authorities.

Thus, the nature and specificity of the operations in these markets will be mainly determined by credit institutions which act in those markets.

[6] Vãcãrel Iulian – coordonator, Finanţe publice, Editura Didacticã şi Pedagogicã, Bucureşti 2003.

It is also useful to remember that markets function scope is elastic, in some cases difficult to mark off, while banking brokers' functionality has boundaries and precise sequence rules paramount to knowing and understanding the mechanism of credit.[7]

Considering of the credit process through point of view of market functionality provides a general guidance allowing positioning and receiving concrete knowledge about banking intermediaries in overall connections of the financial market. Monetary authority supervises the money supply in the economy through monetary policy implementation. The changes occurring in the money supply as a result of applying one of the instruments of monetary policy causes a range of transmission effects that lead ultimately to increase or decrease of the demand in the goods and services market.

Long-term stabilization of prices and therefore inflation is the most important goal of any monetary policy. So the existence of parallel markets financial, i.e. credit and currency market may lead to certain results of the monetary policy that widely differ from those anticipated.

In all developing countries informal credit and foreign exchange markets coexist alongside the official ones. The mobility of capital suggests that assets in the informal credit market and foreign financial assets are imperfect substitutes. Thus a complete description of the financial system in a developing economy requires consideration not only of the interactions between formal and informal financial markets but also more the interactions between informal credit markets and currency markets[8].

3. Conclusions

At any time and in any country, the central bank watches national currency stability. In Romania there was a period especially between the two world wars, when there used to be a strong monetary stability and a very strict monetary policy. First, during this period our currency was backed by gold and was convertible. There is a legal parity of Leu, i.e. the amount of gold it contained. When parity increased or decreased as a result of monetary flows and economic situation, the central bank intervened and balanced the demand and supply of money. At that time, the balance was made especially by importing or producing gold. A convertible currency and monetary stability meant maintaining the balance between points of exit and entry of gold.

When it happened to be an unfavorable balance of payments, the central bank was promptly intervening, providing the money and foreign exchange market with gold or foreign exchange. But its cover stock was in danger, so the central bank had to recover the potential loss. If there were no other options, the central bank was forced to restrict the issuance and circulation of paper money, which were covered in gold, and thus increased (relative) gold and foreign exchange reserves. Withdrawing some of the money (notes) in circulation, the percentage of gold cover up against the money in circulation was maintained. Another solution was the central bank to lend domestically discount only with great caution. This was done simply, i.e. by raising the discount rate at the central bank and by a more rigorous management of bills and other debt and securities. Raising interest (discount rate) delays some initiatives, some transactions and thus reduces credit. With an increasing discount rate, the currency becomes more sought after, so increasing purchasing power. It means that prices begin to fall which encourages exports and limit imports. In this way it can be obtained an improvement in the trade balance and it can balance foreign exchange reserves.

The great importance that monetary policy has in any economy has led incessantly in applying safeguards measures of cash and removing currency imbalance factors.

Monetary policies have often considered a control of flows and domestic and international monetary transactions that each country is involved in. There are also required surveillance measures of the exchange rate and of trade with foreign currency and securities.

Many of the instruments of monetary policy from between the two world wars are even now in use in our country.

Internationally monetary policy is lately characterized by a relaxation on the coercive, interventionist and legislation levels. Protectionist policies no longer represent the number one factor in the stability of national currencies. Much more important are the policies of opening and adjustment, those of determining the purchasing power of currencies based on complex calculations and models with a high degree of accuracy and rigor. There are occurring regional developments of monetary policy and creation of monetary unions. The latest and most spectacular is the creation of the European Monetary Union (or the Euro-zone). Weak currencies increasingly depend on reference currencies and international currencies, implicitly on international monetary and financial organizations.

FINANCIAL CRISIS AND THE CENTRAL BANK SYSTEM

Richard POSPISIL[*]
Serghei MĂRGULESCU[**]

Abstract

The financial crisis that began in 2008 gradually developed into a global economic crisis and continues to this day. There is a lot of causes standing behind the creation, depth and process of the crisis, which is the deepest since the thirties of last centrury. One of the reasons can be found in the risky behavior of commercial banks, especially in the excessive lending of credits and mortgages. Its share on the financial crisis have central banks and their failure as the financial supervisory authority. But there is a lot of another causes of failures in the commercial banking system. And some of the causes lies outside the banking system and monetary policy. Its share of the blame has also become from state and its expenditure on the social policy.This article analyzes the role of the commercial banking system and the central banks on the financial crisis including prevention options and measures.

Keywords: *Financial Crisis, Central Bank, Monetary policy, Money, Deficit.*

1. Introduction

Financial and banking crises properly defined consist either of panics or of waves of costly bank failures. These phenomena were rare historically compared to the present. A historical analysis of the two phenomena (panics and waves of failures) reveals that they do not always coincide, are not random events, cannot be seen as the inevitable result of human nature or the liquidity transforming structure of bank balance sheets, and do not typically accompany business cycles or monetary policy errors. Rather, risk-inviting microeconomic rules of the banking game that are established by government have always been the key additional necessary condition to producing a propensity for banking distress, whether in the form of a high propensity for banking panics or a high propensity for waves of bank failures (Calomiris, 2009).

Other risk-inviting rules historically have involved government-imposed structural constraints on banks, which include entry restrictions like unit banking laws that constrain competition, prevent diversification of risk, and limit the ability to deal with shocks. Another destabilizing rule of the banking game is the absence of a properly structured central bank to act as a lender of last resort to reduce liquidity risk without spurring moral hazard.

Macroeconomists and policy makers often remind us that banking crises are nothing new, an observation sometimes used to argue that crises are inherent to the business cycle, or perhaps to human nature itself. Charles Kindleberger (1973) and Hyman Minsky (1975) were prominent and powerful advocates of the view that banking crises are part and parcel of the business cycle, and result from the propensities of market participants for irrational reactions and myopic foresight.

Some banking theorists, starting with Diamond and Dybvig (1983), have argued in a somewhat parallel vein that the structure of bank balance sheets is itself to blame for the existence of panics; in their canonical model, banks structure themselves to provide liquidity services to the market and thus create large liquidity risks for themselves, and also make themselves vulnerable to self fulfilling market concerns about the adequacy of bank liquidity.

In fact, a central lesson of the history of banking crises is: banking crises are not an historical constant, and therefore, the propensity for banking crises cannot possibly be said to be the result of factors that have been constant over time and across countries for hundreds of years, including business cycles, human nature, or the liquidity transformation inherent in bank balance sheets. The structure of the rules governing the banking system within a country – defined by the rules that govern the location, powers, and operations of each of the banks, including government subsidies or special rights granted to favored participants in the banking system and the incentive consequences of those subsidies and rights – has been at the center of the explanation of the propensity for banking crises for the past two centuries. In times and places where politically determined microeconomic rules of the banking game have encouraged risky practices or prevented effective private measures to limit banking crisis risk, the risk of banking crises is high; conversely, the absence of such adverse political rules of the game have resulted in stable banking systems (Calomiris, 2009).

This review offers important insights for policy makers. The crisis of 2007–2009 has sharpened or redefined many public policy questions of central

importance to prudential financial regulation (a means of preventing crises) and the proper role of government assistance policy (a means of mitigating the costs of crises).

2. The Banking Crisis Era Before 2008

In the past thirty years roughly 140 episodes have been documented in which banking systems experienced losses in excess of 1% of GDP, and more than 20 episodes resulted in losses in excess of 10% of GDP, more than half of which resulted in losses in excess of 20% of GDP - these extreme cases include, for example, roughly 25–30% of GDP losses in Chile in 1981–1983, Mexico in 1994–1995, Korea in 1997, and Thailand in 1997, and a greater than 50% loss in Indonesia in 1997 (Caprio & Klingebiel, 1996).

Some of empirical studies of this era of unprecedented frequency and severity of banking system losses has concluded uniformly that deposit insurance and other policies that protect banks from market discipline, intended as a cure for instability, have instead become the single greatest source of banking instability.

It is also significant that the four countries that suffered the most severe bank failure episodes of the pre-World War I era – Argentina, Australia, Norway, and Italy – had two things in common:

a) all of them suffered real estate booms and busts that exposed their financial systems to large losses,

b) prior to these crises all of them had employed unusually large government subsidies for real estate risk taking that were designed to thwart market discipline (Calomiris, 2007).

In Argentina, that subsidy took the form of special mortgage guarantees issued by the government, which guaranteed holders of the mortgages repayment. Banks were licensed to originate these guaranteed mortgages, and then resold them as guaranteed liabilities in the London market, where they were traded as Argentine sovereign debts. The less dramatic banking system losses during the Norwegian and Italian land busts reflected less aggressive, more regionally-focused government policies promoting land development. In Norway, that was achieved through government-sponsored lending and accommodative monetary policy. The Norwegian banks' losses amounted to roughly three percent of GDP, and the Italian banks' losses (which largely reflected exposures to the Roman land market) were roughly one percent of GDP (Calomiris, 2007).

3. The Crisis After 2008

The crisis, like the episodes of historical banking crises described above, was not just a bad accident. On an ex ante basis, subprime default risk was excessive and substantially underestimated during 2003–2007. Reasonable, forwardlooking estimates of risk were ignored, and compensation for asset managers created incentives to undertake underestimated risks. Those risk-taking errors reflected a policy environment that strongly encouraged financial managers to underestimate risk in the subprime mortgage market. Four categories of policy distortions were most important in producing that result.

3.1. Lax monetary policy, especially from 2002 through 2005, promoted easy credit and kept interest rates low for a protracted period.

The history of postwar monetary policy has seen only two episodes in which the real federal funds rate remained negative for several consecutive years: the high-inflation episode of 1975–1978 (which was reversed by the rate hikes of 1979–1982) and the accommodative period of 2002–2005. The Fed deviated sharply from the "Taylor Rule" in setting interest rates during 2002–2005; the federal funds rates remained substantially and persistently below levels that would have been consistent with that rule. Not only were short-term real rates held at persistent historic lows, but unusually high demand for longer term Treasuries related to global imbalances and Asian absorption of U.S. Treasuries flattened the Treasury yield curve during the 2002–2005 period, resulting in extremely low interest rates across the yield curve. Accommodative monetary policy and a flat yield curve meant that credit was excessively available to support expansion in the housing market at abnormally low interest rates, which encouraged the overpricing of houses and subprime mortgages.

3.2. Numerous housing policies promoted subprime risk taking by financial institutions by effectively subsidizing the inexpensive use of leveraged finance in housing.

Those policies included:

a) political pressures from Congress on the government sponsored enterprises (GSEs), Fannie Mae and Freddie Mac, to promote "affordable housing" by investing in high-risk subprime mortgages,

b) lending subsidies for housing finance via the Federal Home Loan Bank System to its member institutions,

c) Federal Housing Administration (FHA) subsidization of extremely high mortgage leverage and risk,

d) government and GSE mortgage foreclosure mitigation protocols that were developed in the late 1990s and early 2000s to reduce the costs to borrowers of failing to meet debt service requirements on mortgages, which further promoted risky mortgages, and – almost unbelievably,

e) 2006 legislation that encouraged ratings agencies to relax standards for subprime securitizations.

All these policies encouraged the underestimation of subprime risk, but the behavior of members of Congress toward Fannie Mae and Freddie Mac, which encouraged reckless lending by the GSEs in the name of affordable housing, were arguably the most damaging actions leading up to the crisis. For Fannie and Freddie to maintain lucrative implicit (now explicit) government guarantees on their debts, they had to commit growing resources to risky subprime loans (Calomiris, 2008, Wallison & Calomiris, 2009). Due to political pressures, which were discussed openly in emails between management and risk managers in 2004, Fannie and Freddie purposely put aside their own risk managers' objections to making the market in no-docs subprime mortgages in 2004. The risk managers correctly predicted, based on their experience with no-docs in the 1980s, that their imprudent plunge into no-docs would produce adverse selection in mortgage origination, cause a boom in lending to low-quality borrowers, and harm their own stockholders and mortgage borrowers alike. In 2004, in the wake of Fannie and Freddie's decision to aggressively enter no-docs subprime lending, total subprime originations tripled. In late 2006 and early 2007, after many lenders had withdrawn from the subprime market in response to stalling home prices, Fannie and Freddie continued to accumulate subprime risk at peak levels. Fannie and Freddie ended up holding $1.6 trillion in exposures to those toxic mortgages, half the total of non-FHA outstanding amounts of toxic mortgages (Pinto, 2008).

3.3. Government regulations limiting the concentration of stock ownership and the identity of who can buy controlling interests in banks have made effective corporate governance within large banks extremely challenging.

Lax corporate governance allowed some bank management (for example, at Citibank, UBS, Merrill, Lehman, and Bear, but not at Bank of America, JPMorgan Chase, Goldman, Morgan Stanley, and Deutsche Bank) to pursue subprime investments aggressively, even though they were unprofitable for stockholders in the long run. When stockholder discipline is absent, managers can set up the management of risk to benefit themselves at the expense of stockholders. An asset bubble (like the subprime bubble of 2003– 2007) offers an ideal opportunity; if senior managers establish compensation systems that reward subordinates based on total assets managed or total revenues collected, without regard to risk or future potential loss, then subordinates have the incentive to expand portfolios rapidly during the bubble without regard to risk. Senior managers then reward themselves for having overseen "successful" expansion with large short-term bonuses and cash out their stock options quickly so that a large portion of their money is invested elsewhere when the bubble bursts.

3.4. The prudential regulation of commercial banks and investment banks has proven to be ineffective.

That failure reflects:

a) fundamental problems in measuring bank risk resulting from regulation's ill-considered reliance on inaccurate rules of thumb, credit rating agencies' assessments, and internal bank models to measure risk,

b) the too-big-to-fail problem (Stern & Feldman 2004), which makes it difficult to credibly enforce effective discipline on large, complex financial institutions (such as Citibank, Bear Stearns, AIG, and Lehman) even if regulators detect large losses or imprudently large risks.

The risk measurement problem has been the primary failure of banking regulation and a subject of constant academic criticism for more than two decades. Regulators use different means to assess risk, depending on the size of the bank. Under the simplest version of regulatory measurement of risk, subprime mortgages (like all mortgages) have a low asset risk weight (50 percent) relative to commercial loans, although they are riskier than those loans. More complex measurements of risk (applicable to larger U.S. banks) rely on the opinions of ratings agencies or the internal assessments of banks, neither of which is independent of bank management.

Rating agencies, after all, cater to buy-side market participants (i.e., banks, pensions, mutual funds, and insurance companies that maintained subprime-related asset exposures). When ratings are used for regulatory purposes, buy-side participants reward rating agencies for underestimating risk because that helps the buy-side clients reduce the costs associated with regulation. Many observers wrongly believe that the problem with rating agency inflation of securitized debts is that sellers (sponsors of securitizations) pay for the ratings; on the contrary, the problem is that the buyers of the debts want inflated ratings because of the regulatory benefits they receive from such ratings.

The too-big-to-fail problem involves the lack of credible regulatory discipline for large, complex banks. The prospect of their failing is considered so potentially disruptive that regulators have an incentive to avoid intervention. That ex post "forbearance" makes it hard to ensure compliance ex ante. The too-big-to-fail problem magnifies incentives to take excessive risks; banks that expect to be protected by deposit insurance, Fed lending, and Treasury-Fed bailouts and believe that they are beyond discipline will tend to take on excessive risk because taxpayers share the downside costs.

The too-big-to-fail problem was clearly visible in the behavior of large investment banks in 2008. After Bear Stearns was rescued in March, Lehman, Merrill Lynch, Morgan Stanley, and Goldman Sachs sat on their hands for six months awaiting further developments (i.e., either an improvement in the market environment or a handout from Uncle Sam). In

particular, Lehman did little to raise capital or shore up its position. But when conditions deteriorated and the anticipated bailout failed to materialize for Lehman in September 2008 (showing that there were limits to Treasury-Fed generosity), the other major investment banks immediately either were acquired or transformed themselves into bank holding companies to increase their access to government support.

4. Conclusions

Banking crises properly defined consist either of panics or of waves of costly bank failures. These phenomena were rare historically compared to the present. A historical analysis of the two phenomena (panics and waves of failures) reveals that they do not always coincide, are not random events, cannot be seen as the inevitable result of human nature or the liquidity transforming structure of bank balance sheets, and do not typically accompany business cycles or monetary policy errors. Rather, risk-inviting microeconomic rules of the banking game that are established by government have always been the key additional necessary condition to producing a propensity for banking distress, whether in the form of a high propensity for banking panics or a high propensity for waves of bank failures.

Some risk-inviting rules took the form of visible subsidies for risk taking, as in the historical state level deposit insurance systems in the U.S., Argentina's government guarantees for mortgages in the 1880s, Australia's government subsidization of real estate development prior to 1893, the Bank of England's discounting of paper at low interest rates prior to 1858, and the expansion of government-sponsored deposit insurance and other bank safety net programs throughout the world in the past three decades, including the generous government subsidization of subprime mortgage risk taking in the U.S. leading up to the recent crisis.

Other risk-inviting rules historically have involved government-imposed structural constraints on banks, which include entry restrictions like unit banking laws that constrain competition, prevent diversification of risk, and limit the ability to deal with shocks. The most important example of these structural constraints was the U.S. historical system of unit banking, which limited competition and diversification of loan risk by preventing branching, and by effectively preventing collective action by banks in the management of crises once adverse shocks had hit.

More recent banking system experience worldwide indicates a dramatic upward shift in the costs of banking system distress – an unprecedented high frequency of banking crises, many bank failures during crises, and large losses by failing banks, sometimes with disastrous consequences for taxpayers, who end up footing the bill of bank loss. This pandemic of bank failures has been traced empirically to the expanded role of the government safety net, as well as government involvement in directed credit. Government protection of banks and government direction of credit flows has encouraged excessive risk taking by banks and created greater tolerance for incompetent risk management (as distinct from purposeful increases in risk). The government safety net, which was designed to forestall the (overestimated) risks of contagion, ironically has become the primary source of systemic instability in banking.

TRENDS OF ROMANIAN BANKING NETWORK DEVELOPMENT

Nicoleta Georgeta PANAIT*

Abstract

Since 2009, two trends occurred in the banking world: downsizing of personnel, on the one hand and the reduction of retail units held, on the other hand. The first trend was most notable in countries with unstable or weak economy. The effects were seen immediately. Reducing of the operating costs and more applied of the territorial structure and staff was a decision that credit institutions in Romania took relatively late. Worldwide banks began a restructuring otherwise dictated by this time not so economic crises new market trends - increasing access to the internet for the population and use of the internet in a growing proportion of internet banking site.

Keywords: *branch network, credit institutions, interbank market, financial stability.*

1. Introduction

According to National Bank of Romania (NBR) banks continue to reduce network of branches, while business volumes maintaining low. In economical view NBR expect a year more stable and ready for a substantial growth.

However, Romania's economic indicators depend very much on the situation in Europe, which is threatened again with the danger of recession.

The professionals from bank industry believe that at this time there are too many banks in Romania compared to the size of the domestic market.

The Romanian banking system dominated by foreign-owned banks, it is a system that needs to respect the requirements of the regulations of our country and especially the requirements of supervisors for parent banks to their subsidiaries in our country. So, accordingly with those options, it will choose in most cases the option of reducing lending or maintaining the same level of exposure.

Romania is exposed to risk in its efforts to ensure its sustainable development and achieve the required convergence of its membership to the EU

The compatibility of Romanian banking system with the market must be seen both at micro and macro.

Financial and banking domestic legislation allows local operation of the following types of institutions: banks (commercial); organizations of credit cooperative; savings and loan banks for housing; mortgage loan; electronic money institutions; payment institutions and non-banking financial institutions.

Each of the entities listed above are applicable to a particular kind of customers in terms of regulations and internal rules.

Commercial banks have an overwhelming part in terms of market share. Some of them or their parent banks holdings into other types of institutions, particularly in the IFNs, which makes them more adapted to market conditions.

Also, we do not find any mortgage bank in the national banking landscape and we have a network of credit unions with a relatively small number of members affiliated.

One of the solutions would be even development and adaptations of the Romanian banking system by setting the holdings by commercial banks for new entities which are better adapted to market, and are focused only on specific market segments[1].

Loan risk is perceived as the main threat to the domestic banking system, at this we could adds the macroeconomic risk and the risk of financial derivatives instruments.

2. Mutation regarding networks of Romanian credit institutions

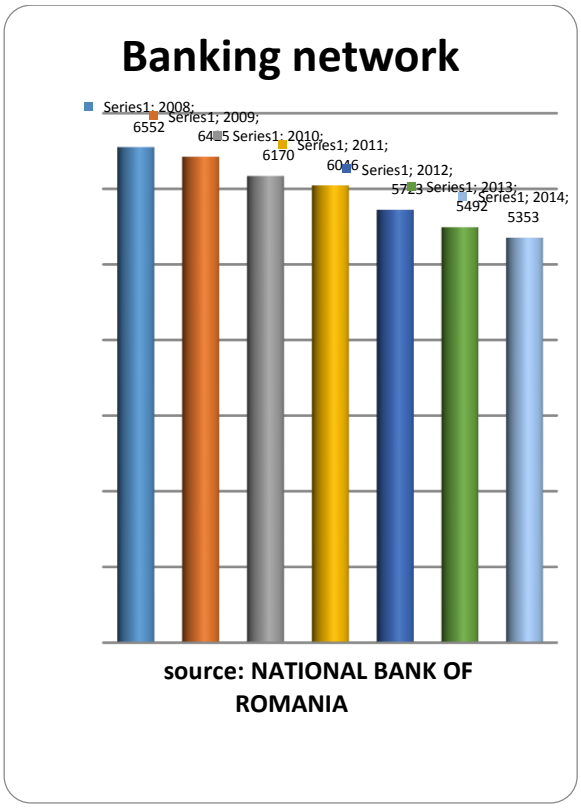
At the beginning of 2015, 14 banks from the 39 credit institutions that operating in Romania had territorial networks that exceeded 100 banking agencies. The situation is not different from that recorded five years ago, with the mention that all banks except Banca Transilvania and OTP Bank have considerably diminished presence in the territory.

It is important to note that the largest 14 banks in Romania by number of agencies dropped to 783 branches in 5782 there were many in December 2009-4999 in December 2014.

The most aggressive banks in the direction of reducing the local network were CEC Bank, BCR and Bancpost (CEC Bank has closed a large number of agents (260) especially in rural areas, Bancpost dropped the most branches, given that the number agencies decreased by almost 80 units, from 286 in 2009 to 207 in 2014, BCR has closed 53 branches in the period 2009 to 2013, but the process was more aggressive in 2012).

* Assist., PhD, Faculty of Economics, "Nicolae Titulescu" University of Bucharest (e-mail: **nico.panait@gmail.com**).

[1] National Bank of Romania (NBR), "Financial Stability Report", 2014.



source: NATIONAL BANK OF ROMANIA

If in the situation of CEC Bank generally we can talk about resizing imposed by the disproportionate number of banking agencies still inherited from the communist period, the BCR and Bancpost had to implement extensive restructuring processes considering the need to reduce costs.

The two credit institutions, which we mentioned above, dropped each to approximately 100 units in recent years.

In contrast, we can find Banca Trasilvania, OTP Bank, Garanti Bank financial institutions that reported a positive evolution of the number of agencies at the end of 2014 comparing with 2009.

In the case of OTP Bank, the bigger number of agencies in its portfolio is given by the acquisition of Millennium Bank last summer; otherwise the Hungarian bank has maintained the same number of units during those 5 years.

Regarding Banca Transilvania the chapter regarding territorial expansion shows the appetite of the financial institution for development. Banca Transilvania is the only operator in the local banking market from the 14 analyzed so far that relied on organic growth in the number of units.

The financial institution originated from Cluj Napoca opened 34 branches in the period 2009 to 2014, increasing its territorial network from 516 to 550 units.

Banca Transilvania has signed a commitment to take over Volksbank, all of the ranches Volksbank (135) will enter in the Cluj – Napoca's bank portfolio

In this way, Banca Transilvania will have a territorial network of about 700 agencies.

In a statement Omer Tetik the General Director of the financial institution, said that Banca Transilvania will decide how many of the 135 units will be kept active Volksbank, but it is expected that many of them are maintained.

In 2014, Garanti Bank opened six new agencies - four in Bucharest, one in Cluj Napoca and one in Timisoara, reaching 84 nationwide, and expanded the network of smart ATMs, with is now over 300 units Bancosmart across the country. Moreover, last year, the financial institution issued corporate bonds of 300 million, the Bucharest Stock Exchange, with a maturity of five years.

BRD, the financial institution which had the most aggressive territorial development in the economical boom (2006 - 2008), in the last 5 years has decreased network with 60 agencies, resizing being established especially in the last two years.

Other banks that have dropped a considerable number of units are the Carpathian Commercial Bank (- 63), Piraeus Bank (- 57), Alpha Bank (- 51), UniCredit Tiriac Bank (- 51) and Volksbank (- 50).

A unique point of view was, the evolution recorded by UniCredit Tiriac Bank, credit institution which started in December 2009 with a number of 235 agencies and between 2009 and 2011 relied on territorial development, inaugurating in two years another 10 units adding a total of 245 branches. But after 2012, UniCredit Tiriac Bank changed its strategy, adopting a comprehensive restructuring process by reducing network to 184 agencies.

Raiffeisen Bank and Banca Romaneasca have reduced territorial networks each with 31 branches in the period 2009 - 2014 ING Bank maintained in this range the same number of branches and 220 units.

TOP BANKS – Territorial Network

Place	Bank	Agencies no. 2009	Employees no. 2014
1.	CEC BANK	1351	1091
2.	BRD	930	870
3.	BCR	661	560
4.	Banca Transilvania	516	550

12.	Volksbank	185	135
13.	Pireaeus Bank	187	130
14.	Banca Românească	146	115

3. Trends in the evolution of European-wide banking network

Worldwide it is estimated that the "digitalization" will lead to the closure of about 40% of bank branches in Europe between 2013 and 2020.

This means that in 2020, in the EU will be 65,000 fewer bank branches, according to the European Central Bank at the end of 2013 there were approximately 220,000 bank branches in the EU.

Most bank branches were closed in Spain, where many banks are trying to recover from the crisis housing market and debt crisis. Bankia, a institution formed from the merger of seven regional banks Spanish, closed 37% of its network of bank branches and 1,100 in 2013.

Other four major Spanish banks in the top 30 European institutions, Santander, CaixaBank, BBVA and Banco Popular Espanol, closed together approximately 1,774 branches.

Some of these branches were abroad, but most of them were banking offices in Spain.

Italy, Cyprus and Germany are also mentioned as having an over-sized banking network. But banks from these three states have closed branches in lower rate than the average 6% in the case of the 26 European banks.

Italian financial institution UniCredit, who gave up to a large number of employees in the past two years (approximately 8,500) stated in the financial report that most of the staff reduction is due to the outsourcing of IT operations.

KBC from Belgium also cited as a reason for restructuring decrease with 22% in the number of employees Credit institution has sold operations from Russia and Serbia.

Other bank such as BBVA, the decline of all posts was justified by restructuring the activities and asset sales.

The most dramatic downsizing programs were for Spanish bank Bankia, who gave up 23% of employees to meet the terms of a financial aid package from the Eurozone.

The pace of reducing staff slowed to by almost half last year, and most banks are approaching the end of the agreed restructuring programs for financial aid received during crisis[2].

Closing branches means: less personal, reducing lease costs and other costs, and can also quickly generate cash from the sale of land and buildings.

4. Reducing the personnel in Romanian banking sector

The evolution of the human resources in the banking sector in last three years showed significant losses compared to pre-crisis period.

Human resources endowed with a limited number of skills, no matter how high they may be, are a marginal cost too much for any employer.

The graph shows that the profitability of the main business grew rapidly in 2011, despite the increase in provisioning costs.

This means that there was a decrease in revenue and / or a decrease in operating expenses (including staff).

In 2011, the number of employees in the banking sector decreased by 5% compared to the end of 2010, and by 12% compared of the peak reached in 2008.

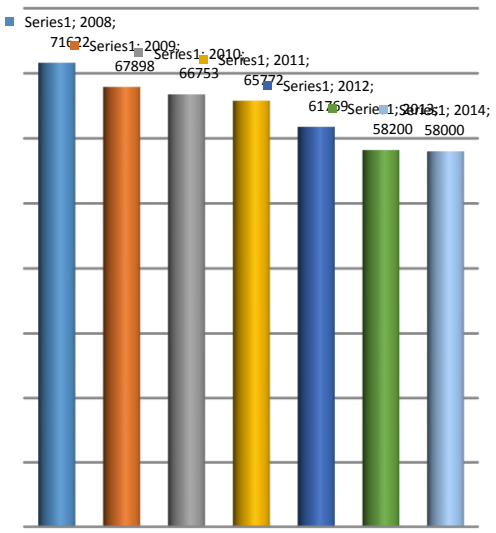
The latest reports of Central European Bank shall specify the dismissal in 2012 of an alarmingly high number of employees in the banking sector in Romania that is over 4,000 and the closure of 323 banking units, placing our country in 2nd place after Ireland.

Negative phenomenon of massive layoffs continued in 2013 reaching the end of the first 6 months to over 2,000 unemployed persons sent concurrently with the closing of over 200 agencies.

Ziarul Financiar estimated that since the crisis began more than 12,000 employees were forced to leave the banking system. At the same time, the number of bank employees decreased by 200 people in 2014 to a total of 58,009 employees.

2 years before, in June 2013, there were 59,823 employees, which means that 1,814 people left the banking system over the last year, most in the second half of last year.

At the beginning of the financial crises, in the end of 2008, there were 71,622 employees in the banking system, which means that the volume of restructuring amounted to 13,613 employees date of banks.



source: NATIONAL BANK OF ROMANIA

Higher profitability of the banking sector attracts through higher wages, labor most qualified; on the other hand, a personal with best preparation is a source of increasing productivity and ultimately to a higher profitability.

In terms of human resources in the Romanian banking system, now the trend is to lose the professionals and professional skills in this area.

5. Conclusions

Last year, only 13 banks succeeded to have a profit after they drew the line, while the remaining 27 had accumulated losses. In the year that just ended, they amounted to almost 1 billion Euros, according to provisional data.

We appreciate that 2014 wasn't a very good year for Romanian banking system.

However, there is some good news if we are looking to indicators that prove the health and stability of the system.

That's mean solvency and liquidity are maintained at great odds.

If we are looking to not performing loans (NPL), they were at the end of the year nearly 14 % calculated on the method IMF and 13% EBA version.

And even better news is that coverage is good, 70 %. But in the first half of 2015 will come some provisions, in particular on account of loans granted by banks to customers who are insolvent.

As the largest bank in terms of assets, no significant changes: most big league players have gained market share before 31 December 2013: Banca Transilvania, UniCredit Tiriac Bank, Raiffeisen Bank, CEC Bank, even ING Bank.

However it continues the decreasing in of heavyweights: BCR and BRD Societe Generale.

If we are looking at the average category of financial institutions, the winners are Alpha Bank, Citibank, Garanti Bank, OTP Bank. In contrast, in the same category, the biggest losses were recorded Volksbank, NBG, Credit Europe Bank and Intesa Sanpaolo.

Banks in Romania have overcome the cost of the event and the risks they have assumed in terms of maturity and currency structure of their assets and liabilities.

We must look differently to the behavior of banks from losses incurred by those from economic downturn to their customers as a result of the recession. It should be noted that the reductions of losses in the banking sector cannot be done through bankruptcy of the clients.

A banker has two solutions to recover a loan from a client whose income is reduced. Whether is considering short-term solution and its repayment on time demanding client bankrupt. This behavior generalized to the entire banking sector can only create systemic risk, because both unpaid chain propagates between businesses and between businesses and banks, and finally between banks.

The second option requires a long-term perspective banker; the key is the relationship with the customer and not profitability moment.

This involves the assumption of profit margins much lower in the short term, but the consolidation of a long-term profitable relationship with the customer. Of course not all cases can be treated as borrowers, because such an attitude could lead to generalized systemic risk. The analysis must be done on a case by case basis, but it requires a change of business model.

Decrease in bank units can become a macro prudential risk if are affected the chances of having access to the resources of balancing the structure of liabilities.

Decreasing the number of agencies in the territory was done most probably without prior consideration of future development banks in two ways:

- territorial profile of future network units must be thought in terms of resources of saving that exist and must be drawn from urban and rural areas respectively.

At the same time, urban areas contain many types of development because Romania has very large cities with high population density, major cities, but low-density and low-density towns.

- profile of products and services offered in banking branch network must be designed considering the clients profile now and in the future.

Such an approach should be accompanied by a multidisciplinary analysis study, leading to understanding and knowledge central element of banking sector activity - and educates the client

regarding the functioning of financial markets and the use of specific products.

The closure of bank branches reflects an online revolution that transforms people's lives, from buying holidays and to borrow books.

In addition, the closing of banks offices it is a way in which financial institutions reducing their costs and strengthen their capital. However decrease networks can be dangerous because it may result in a decrease in the number of customers.

The reform of the regulation and the supervision of the European financial system is an essential part of the EU strategy on the road of recovery of smart, sustainable and inclusive growth, generating jobs and competitiveness strengthened. However these principles are important for:

- the need to strengthen the institutional framework of Economic and Monetary Union to regain confidence and stability in the Euro area
- the need to strengthen the financial services of the EU Market by applying a single set of rules in the field leading to healthy competition and good functioning of financial intermediation

Union Banking is one of the fundamental pillars of the new economic governance framework at EU level.

This construction is a pillar itself to the creation of fiscal union, and a unique surveillance solution mechanism will contribute to the development of a European banking sector safe, responsible and generator of economic progress.

CONSIDERATIONS REGARDING THE CREATION OF A EUROPEAN BANKING UNION – A KEY ELEMENT IN REINFORCING THE BANKING SYSTEM

Mădălina Antoaneta RĂDOI [*]
Alexandru OLTEANU [**]

Abstract

The idea of setting up a European Banking Union, an essential element in the reinforcement of the Economic and Monetary Union (EMU), has become a concrete project and it has been outlined as such after the financial crisis started in 2007.

The setting up of a Banking Union is a new project for the European Union and it comes as an answer to the financial crisis; this project has three major components: the Unique Mechanism of Surveillance (UMS), the Unique Mechanism of Resolution (UMR) and the European Deposit Guarantee Schemes.

At the basis of these infrastructure elements there laid: the Single Rulebook", the unique European regulation framework (made up of the capital requirements: "CDR/CRR IV – CRD IV Directive" and "Regulation regarding capital requirements" provided together with the standards and directions issued by the European Banking Authority "ABE") and a set of rules established for state subsidies.

The large flow of important information which exists in the matter makes it necessary for us to deal with this topic in a consistent and complex argumentation[7].

Keywords: *Banking Union, Unique Mechanism of Surveillance (UMS), Unique Mechanism of Resolution (UMR), the European Deposit Guarantee Schemes, European Fund of Stability, European Mechanism of Stability, Single Rulebook – unique set of rules applicable in the financial-banking sector.*

1. Introduction

European economies depend up to 70-75% on the banking finances, while in Romania the domestic banking sector preponderantly supports economy from a financial point of view; in fact, the banking sector ensures about 92% of the finances granted by the Romanian financial system. 90% of the banking system assets are owned by foreign capital institutions. The risks involved in the process of devising, implementing and observing regulations imply: the possibility of reducing exposure and the withdrawal of foreign capital credit institution.

A report published by the European Commission on 22nd June 2012 provided the need to elaborate a long-term strategy for the creation of a future Economic and Monetary Union, which should contribute to the clarification of reforms and decisions both at EU level, and at the level of each member state.

Considering that the enlargement of European integration is a remedy for surpassing the financial and economic crisis, the European Commission members appreciated that the creation of a Banking Union could represent a new step in the European integration that could complete the Monetary Union.

The concept of Banking Union has been highlighted by the President of the European Commission at a formal reunion of the European Council on 23rd May 2012. This suggestion drew the attention of EU politicians to the need to create a Banking Union. Subsequent to this debate, when the European Council gathered on 28th-29th June 2012, the European Commission decided that it is necessary to elaborate a set of implementation measures. On 12th September 2012, the Commission came out with a set of laws comprising two regulations: the former one that granted the European Central Bank (CEB) surveillance powers and the latter one that modified the regulation for the settlement of the European Banking Authority (EBA) with the result that this Authority could bring into line the functioning statute with the new vision on the European surveillance architecture.

We would also like to underline that about 30 proposals for legislative enhancement have been adopted in the financial-banking system ever since the crisis started and up to the moment when the decision regarding the functioning of a Banking Union was made, so that economy could benefit from real advantages. The European Commission consolidated financial stability of the banking system through state subsidies and stability and adjustment programs.

2. Content

Literature Review

Of the measures adopted by the European Commission for increasing financial stability within EU, one should mention:

[*] Associate Professor PhD, Faculty of Economics, "Nicolae Titulescu" University of Bucharest (e-mail: **madaradoi@gmail.com**).
[**] Professor PhD, Faculty of Economics, "Nicolae Titulescu" University of Bucharest (e-mail: **aolteanu@univnt.ro**).

I. Measures for improving integrated banking surveillance

The main measures adopted for a good functioning of the integrated EU banking surveillance system after 1st January 2011 are:

- setting up a European Banking Authority that deals with banking surveillance, including with banking re-capitalization;
- creating an Authority for European Titles and Markets that is meant to surveil capital markets;
- creating an Authority for Insurances and the European Pension System that could control the insurance sector.

Each of the 28 EU member states is represented in the three surveillance banking authorities; the role of the member states is to contribute to the development of an EU unique banking surveillance system and to the settlement of potential problems between member states, as well as to risk prevention and trust enhancement in the European banking system.

II. Measures for reinforcing the banking system

a) Increasing bank capitalization and solvability

Due to the financial-banking crisis, turbulent events which have occurred on the financial and bank markets have affected under-capitalized credit institutions (from a qualitative and quantitative point of view); as a consequence, these institutions started to need an unprecedented level of support from national authorities (i.e. from the state and the central bank). In order to tackle this issue, in July 2011 the European Commission suggested bank capitalization (CRD IV)[1] by implementing at EU level the global standards approved by G-20 and known as the Basel III Accord.

In this implementation project, EU plays a key role since it has applied these regulations on more than 8, 000 banks, that is on 53% of the global assets.

This is the reason why the European Commission devised a governing framework, which grants the involved national authorities new bank control powers, as well as sanctioning powers, which are applied whenever the bank risk is increased. For example, credit volume may be reduced if there is an artificial price increase, a fact which may lead to a crisis.

b) Banking restructuring facility.

Imposing conditions on the financial banking sector is one of the political demands required by EU member states, which is financially assisted at international level.

The support of the Euro zone member states is made through the European Financial Stability Facility (EFSF), which offers borrowing facilities to countries so that they could obtain the recapitalization of financial institutions, under certain conditions, as well as through structural reforms that are applied in the internal financial sector. Macroeconomic adjustment programs have been supported through this facility and through the assistance offered for maintaining the payment balance in the following countries: Greece (50 billion Euros for bank recapitalization), Portugal (12 billion Euros for supporting bank solvency), Latvia (600 million Euros to contribute to the stability of the financial sector)[2].

c) Increased protection for bank deposits

At present, if a bank goes bankrupt, according to EU legislation, bank deposits in any member state are guaranteed up to Euro 100,000/person. Such a measure avoids harsh economic consequences like the collapse of the banking system in a member state and it prevents a panic situation followed by massive deposits withdrawal.

At the same time, national authorities have created a new structure outside banks and have transferred certain critical functions to this structure, i.e. deposit insurance as a safe measure. One can refer to the case of the Northern Rock Bank, which was split into a "good" part, comprising safe deposits and mortgages and a "bad" one, including non-performing credits[3].

d) Control of state subsidies granted to banks during the financial crisis period

One of the multiple measures taken for surpassing the banking system crisis is the one adopted by the European Commission – as a generally accepted and efficient solution, i.e. the coordination of activities at EU level in order to avoid massive capital and subsidies transfers from one country to another, which would lead to the collapse of the domestic market.

The threshold for granting state subsidies, which is meant to settle the problems that may seriously affect economic growth, is based on a guide elaborated in 2008[4] by the European Commission (in conformity with Art.107 (3) (b) of the TFEU, the Treaty on the Functioning of EU.

In 2009 the efficient restructuring of banks required that the European Commission should adopt a measure that would allow banks to have long-term profitability by analysing the proportion of costs in relation to the total incomes, and to avoid turbulence

[4] European Commission IP/10/918, January 2011;

caused by potential non-observance of competitiveness principles as a consequence of granting state subsidies[4]. Actually, starting with 1st January 2011, any bank that applies for state subsidies is obliged to elaborate and apply a restructuring plan.

The state subsidies control during a crisis period is meant to achieve two objectives: the surpassing of encountered difficulties by banks and their preparation for the post-crisis period. Ever since the end of 2011, the European Commission has intended to apply a post-crisis strategy; however, tensions recorded on the European markets revealed that the measures implemented during the crisis should be further applied. In consequence, it came as a conclusion that the special regulations adopted and applied by the European Commission at EU level for ensuring stability in the European financial-banking should be enforced as long as it is necessary and, when the market conditions allow, a permanent regime should be applied for state subsidies granted to support the financial sector.

e) Other measures

In order to enhance: bank surveillance, protection of bank depositors, capital requirements imposed on financial institutions and crisis management in the banking sector, the following aspects were considered: the analysis of the restructuring reform by Erkki Lükanen group experts; the elaboration of legislative measures for intermediary banks; credible credit ratings; increased surveillance for financial derivatives, hedge funds and uncovered securities; revision of current regulations for trading bank instruments; reduction of disloyal bank practices; reformation of the audit sector and of the accounting record.

The elaboration of a common legislative framework for the future financial crisis is one of the proposals made by the European Commission; this proposal aims at avoiding the mistakes made in 2008. This framework comes up with common financial instruments and legislative preventive measures, whose role is to reduce the budgetary burden that generates effects on the population of member states. The European Stability Mechanism (ESM) has been set up for this purpose; its capacity is to grant funds with a total value of 500 billion Euros for supporting banks in the Euro zone that face difficulties.

III. The components of the European Banking Union[5,6]

The reform in the regulation and control system devised for financial markets was based on complex analyses of the causes which triggered the financial crisis and of the solutions[7] suggested for settling its consequences.

The adopted decisions are part of a more complex concept which was developed by the European Council and which includes 4 pillars; the first pillar makes reference to the setting up of the Banking Union, with its three components: the Unique Mechanism of Surveillance, the Unique Resolution Mechanism, the European Deposit Guarantee Scheme. Pillar 2 comprises the integrated budgetary framework, pillar 3 creates the integrated framework for economic policies, whereas pillar 4 aims at creating a framework meant to ensure democratic responsibility enhancement.

A. The Unique Mechanism of Surveillance (MUS)

The measure taken for adopting this component, which is an essential and advanced component, reconfigures, at pan-European level, the surveillance architecture of banks; its assets value - related to the whole EU banking system - amounts at 42.9 billion of Euro, i.e. 350% of the EU GDP[8].

This component states the responsibilities of the European Central Bank (CEB) as regards direct surveillance of important banks from the member states starting with the 4th November 2014, on the basis of two regulations: one regarding the prerogatives of the CEB in the area of surveillance and another one regarding the harmonization of the functioning of the European Banking Authority with the new vision regarding EU surveillance.

CEB banking surveillance objectives only concern the banks that are qualified as significant within the Euro zone. There are some limitations imposed on non-Euro states, such as the fact that they cannot fully benefit from the mechanisms which EU member states are entitled to. As an alternative to these limitations, it has been established that states from outside the Euro zone can join this mechanism under certain conditions, i.e. through a cooperation system with the CEB.

130 banking groups, which represent about 85% of all banking assets within the Euro zone, have been identified for the CEB to supervise significant banks. Several subsidiaries of credit institutions from outside the Euro zone are also included in the category of banks surveilled by the CEB, i.e. important banks from Romania, which expressed their commitment to be part of the Banking Union.

Apart from the CEB, national surveillance authorities within the Euro zone are going to directly surveil the other banks qualified as significant. However, CEB is the institution responsible for the efficient functioning of banks within the Unique

[5] "Piata financiara" no.4 (221), April 2014, pag.26;
[6] "Piata financiara" no.5 (222), May 2014, pag.18;
[7] The Report of De Larosier Group, February 2009;
[8] Doc/Com (43) of 29th January 2014;

Mechanism of Surveillance, hence its power to decide to directly surveil small banks, too.

Some of the criteria established for a bank to be qualified as significant are: the size of the bank, its importance for economy, trans-border activity, its application for and receiving public financial assistance at EU level through the European Stability Fund or through the European Stability Mechanism, the question whether that bank is one the three most significant banks in the country. The CEB makes the selection of significant banks by assessing banking assets (AQR) through an inventory and an audit that allow them to see the quality of assets and their level of capitalization.

The tests which the banks within the Euro zone must pass may include capital increase; these tests could, why not, finally lead to a re-directing of the financing towards areas that ensure high financial profitability. Each national competent authority will have to make tests that are similar with the ones imposed by the CEB so that they could identify risky portfolios which are potentially over assessed or which are not sufficiently provisioned. A complete assessment should conclude with an aggregated presentation of results, at country level, together with any recommendations for surveillance measures as imposed by the CEB.

For the efficient functioning of the Unique Mechanism for Surveillance, one should also add the three regulation levels: the ECB regulation, implementation norms regarding surveillance taxes, the working procedure of the Surveillance Council, which are completed with internal norms regarding professional secret and information exchange.

For example, apart from the surveillance tax which European banks should pay to the CEB, there are other important costs imposed on banks, which are linked to the setting up of the Banking Union; thus, all these must be induced through a contribution to the Unique Resolution Fund and to the national deposit guarantee schemes in order to ensure the necessary fund required as a guarantee.

B. The Unique Mechanism of Resolution (UMR)

The regulation of this mechanism forms, together with the Directive that provides the setting up of a resolution framework that includes credit institutions and investment companies (the BRR Directive), the new institutional vision in the banking resolution areas, which is based on a unique regulation framework (known as the Single Rulebook).

The directive offers national authorities common instruments and prerogatives for expressing their opinion *ex-ante* and for settling banking crises issues in an organized manner, including by eliminating from the market non-profitable banks. The set of instruments may be structured on three levels: training and prevention, preliminary intervention and resolution.

There is a general rule which obliges member states to make financial arrangements for financing the resolution, such as:

1. Selling the credit institution *in default*;
2. Setting up a "bridge bank";
3. Separating assets;
4. Internal recapitalization.

The resolution is made when preventive and preliminary intervention measures did not manage to redress the financial situation of the bank and did not avoid major difficulties from occurring. If, at this level, the permanent authority considers that it cannot prevent a crisis situation for the bank, and that this situation generates consequences for key functions and the content of these functions, as well as for the financial stability or for the integrity of public resources, the permanent authority must take control over the credit institution and adopt decisive resolution measures at once.

Another important objective is to provide national requirements for making resolution financial arrangements on the basis of contributions paid by banks and in proportion to their risk profile, as well as to the volume of debts; these will ensure supplementary financing for avoiding the financing of state-resolution decisions.

As to the Unique Resolution Mechanism (URM), it is applied to credit institutions from the member states which are subject to this mechanism. The regulation framework established by the BRR Directive is applied to all EU member states.

The main purpose when setting up URM was to oblige banks with financial difficulties to be recapitalized by their shareholders and creditors without resorting to public resources.

The aim of launching the resolution procedure for a bank depends on three conditions:

a) The bank finds itself or is supposed to find itself in a major difficulty;

b) When such a major difficulty situation cannot be avoided through any mechanism of the private sector;

c) When the resolution is publicly intended because the bank is systemic and it may affect financial stability.

The institutions involved in the decision-making process are: the European Central Bank, the Unique Resolution Committee - a newly set up structure, the European Commission, the EU Council and national resolution authorities. The Unique Resolution Committee functions together with the Unique Resolution Fund, which will be created through the contribution of the member states depending on the risk profile of every credit institution and amounting at an estimated level of 55 billion Euros. The Fund will be set up on the basis of an Inter-governmental Accord as regards the transfer and mutual nature of contributions, which will have to be ratified by member states.

This fund is going to have national compartments within each member state, which will collect contributions and transfer them gradually during the transition period; during the first year, there will be a 40% transfer of the fund target level, continuing with other 20% during the second year and maintaining a progressive and equal increase for the next years.

C. The European Deposit Guarantee Scheme

One has to explain that, so far, no supranational deposit guarantee scheme - whereby protection of depositors could be ensured in case a bank goes bankrupt - has been devised. The goal is to create a network of national guarantee schemes, within which member states could benefit from a guarantee fund for deposits, which would be properly financed *ex-ante*.

For concluding the regulation of this scheme, by reconfiguring the existing ones[9], it is necessary to introduce novel elements, like: reducing the period within which depositors are paid from 20 days at present to 7 weekdays; simplifying and harmonizing payment commitments; introducing *ex-ante* financial agreements, which would include a minimum target level that in general amounts at 0.8% of the guaranteed deposits that must be set up within 10 years, i.e. in 2024; simplified access to the information regarding national deposit guarantee schemes; offering loans on a voluntary basis from the national deposit guarantee schemes.

Another novelty is the access granted to these schemes, thanks to the new reconfiguration, to contribute to financing credit institution resolution. The newly regulated reconfiguration was approved by the European Parliament (EP) on 15th April 2014, so that member states are to include its provisions in domestic legislation within a year after its publication.

One should mention that from the point of view of the funds liquidity, the Fund for Deposit Guarantee in Romania (FGDR) currently has resources for paying 27% of the deposits that are covered by the deposit guarantee scheme (in comparison with 0.8% that is required by the new Directive); this means that our country is in a good situation if we consider the European requirement. Similarly, the Fund for Deposit Guarantee in Romania may currently cover 99.9% of natural persons' deposits of Euro 100,000. The Fund for Deposit Guarantee in Romania and the banking system are facing an infrastructure issue, which has to do with the IT area and which should correspond to the European requirements.

We appreciate the pragmatic level of regulation for the protection of bank deposits, which is going to increase the degree of trust invested in the banking system, as well as the clients' loyalty to the system.

3. Conclusions

The creation of the European Banking Union, together with the other measures adopted by the European Council, is a straightforward and long-term project for the Economic and Monetary Union. The European Banking Union is not a new legal instrument but it rather represents a political vision which is meant to ensure a deeper European integration through the recently adopted measures which are supposed to consolidate the banking sector regulation, as well as through other measures that are going to be adopted in the future.

This new project is expected to prevent the appearance of causes as the ones which led to the present financial crisis. This is the reason why banking surveillance should be reconfigured at European level. In fact, this project cannot achieve its goals and accomplish its purpose unless it is correlated with the creation of a European centralized model which could support banks that are no longer financially competitive by applying a unitary approach to the process of an organized withdrawal from the market.

Similarly, one should avoid obliging stakeholders to support the costs of implementing this process; in the future it will be necessary to set up a supranational institution that guarantees deposits. Such a guarantee project will be a very complex, bold and unprecedented process; it will be by far the most important project ever run at EU level ever since the EU was created.

Avoiding the appearance of a rupture between sovereign states and banks may be regarded as an alternative to the direct recapitalization of banks; this regulation is not provided in the present Treaty on the Functioning of the EU (TFEU). In the future, this subject will have to be analysed because it will help specialists identify the best solutions for avoiding the causes which led to the present crisis of sovereign debts that threatens the economic stability of certain states.

At European level, bank credited economies will remain the main development engine. In consequence, the banking systems will play a key role. After applying the new regulation model, some question will remain unanswered: finance promotion and re-crediting, as well as the evolution of capital allotments and bank exposures because the new regulations require a riskless crediting process; in a contrary case, these should be covered *a priori* with capital.

COMPARATIVE STUDY ON MAIN SOLVENCY ASSESSMENT MODELS FOR INSURANCE FIELD

Daniela Nicoleta SAHLIAN*

Abstract

During the recent financial crisis of insurance domain, there were imposed new aspects that have to be taken into account concerning the risks management and surveillance activity. The insurance societies could develop internal models in order to determine the minimum capital requirement imposed by the new regulations that are to be adopted on 1 January 2016.

In this respect, the purpose of this research paper is to offer a real presentation and comparing with the main solvency regulation systems used worldwide, the accent being on their common characteristics and current tendencies. Thereby, we would like to offer a better understanding of the similarities and differences between the existent solvency regimes in order to develop the best regime of solvency for Romania within the Solvency II project.

The study will show that there are clear differences between the existent Solvency I regime and the new approaches based on risk and will also point out the fact that even the key principles supporting the new solvency regimes are convergent, there are a lot of approaches for the application of these principles.

In this context, the question we would try to find the answer is "how could the global solvency models be useful for the financial surveillance authority of Romania for the implementation of general model and for the development of internal solvency models according to the requirements of Solvency II" and "which would be the requirements for the implementation of this type of approach?". This thing makes the analysis of solvency models an interesting exercise.

Keywords: *International Financial Reporting Standards (IFRS), Minimum Capital Requirement (MCR), Solvency Capital Requirement (SCR), risk management, solvency II.*

1. Introduction

The outbreak of the current global financial crisis pointed out eminently an increase of the vulnerabilities at the level of insurance systems. Many studies dedicated to the analysis of the current financial crisis underline the fact that one of the major cause that leaded to its outbreak was presented by the existence of certain weaknesses of the regulation and surveillance frame. So, there is an internationally consensus concerning the revision and rethinking of regulation and surveillance frame of insurance activity, materialized in the approach of the authorities to implement the *Solvency II regime* on 1 January 2016.

The insurance industry is characterized by an inversion of classical business cycle: the insurance companies receive extra pay, representing the remuneration for the services provided, before paying the settlement for damages, namely they are doing their work[1]. The insurance contracts are, basically, the money exchanges for different periods of time[2]. The certitude of the policyholders' contractual obligations, as well as, the incertitude of the frequency and severity of the future settlement requests are different characteristics of the policies. The law of large numbers is applied in order to estimate this incertitude. As the number of the insured risks increases, the average loss comes closer to the estimated loss and the standard deviation becomes as lower as possible, coming closer to zero[3].

When the insurance societies invest the raised funds, they are subject to the same risks as the other financial services institutions. Furthermore, they have to face some risks specific to their field of activity as the sub-quotation of extra pays, the wrong calculation of technical provisions, the unpredictable changes of damages' frequency, the improper reinsurance, etc. Finally, they could face up to a series of general risks, common with all types of business: the incompetent or without the honesty management or a defective administration of the development strategies.

The main function of the insurers is to face up to these risks and to administrate them as they could anytime (or at least in many cases) to fulfil correctly and completely their commitments to the policyholders. This capacity of the insurers to fulfil their commitments is known as **solvency**.

* Postdoctoral Student, Faculty of Accounting and Management Information Systems, Bucharest University of Economic Studies (e-mail: **daniela.sahlian@gmail.com**).

According to Merriam-Webster dictionary, **solvency** is the "state of being able to pay debts"[4]. The debts regarding the insurance contracts are the expected requests and the related expenditures. The current value of these commitments, calculated based on the actuarial methods, is only an estimated value in the end.

The basic problem of insurers' solvency could always be expressed by two essential questions: "would the insurer have the necessary financial resources to cover the damages the policyholder could suffer in the future?" and "If yes, would the insurer be able to pay?"[5]. In this context, the purpose of this research paper is to offer a real presentation and a comparison of the main solvency settlement systems widely used, the accent being on their common characteristics and current tendencies. Thereby, we would like to offer a better understanding of the similarities and differences between the existent solvency regimes in order to develop the best regime of solvency for Romania within the Solvency II project.

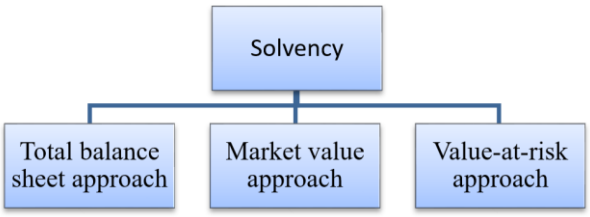
Following research conducted revealed that there are at least three approaches for solvency determination: total balance sheet approach, market - value approach and Value-at-Risk approach (VAR) for the determination of capital necessity and at least three approaches concerning the solvency measure[6]: winding-up approach, going-concern approach and run-off approach.

Fig.1 Approaches concerning the solvency determination



Source: personal overwork of the author

The winding-up approach - an insurance society is solvent if the assets performance value is high enough to face up to the exigibility of debts.

The going-concern approach - the society is supposed to continue to subscribe policies in the near future and the solvency is regularly measured during that period;

The run-off approach - stops the insurance societies from subscribing policies for a short period of time (generally, for one or two years). In this case, the incapacity to maintain an excess of assets on debts does not mean that the society is in the impossibility to satisfy the future requests, but there are not enough resources to start a new business. The regulatory authorities often adopt run-off approaches when they evaluate the solvency of insurance societies because their main arm is to stop the societies to subscribe a new policy.

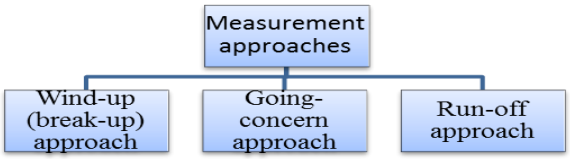
Figure2. Measurement approaches on solvency



Source: personal overwork of the author

The criteria taken into account in the analysis of the solvency models are: the data are taken into account for the determination of capital requirements, the distinction made between (MCR) and (SCR), and the sensitivity of risk profile.

3. Result and discussions

In function of the data taken into account for the determination of capital requirements, the models could be classified in:

- static models, based on data from total balance sheet or profit and loss account and
- dynamic models, based on the estimation of future cash flows.

On static models for the determination of capital requirements, it is considered a fixed position, also called accounting base. The accounting base represents either certain positions of the balance sheet or certain positions of the profit and loss account or eventual "risk" positions as the total exposure to corporate assets with AAA rating. The dynamic models are based on estimations of future cash flows.

The static models are based on accounting and could be divided in:

- models based on simple factors and
- models based on risk factors.

The models based on simple factors are also called simple models because they take into consideration a small number of factors from the accounting positions in order to reach the capital requirements. The size of the factors is not necessary calibrated by a certain level of confidence. The current Solvency I regime is an example of simple model based on factors, because, for life insurances it is reaching to capital requirements by the multiplication of mathematical reserves with a factor of 4% (for the unit-linked insurances, the factor is reduced to 1%) plus a factor of 0,3% added to technical reserves in case of death).

The models based on risk factors are the most frequent in the insurance industry. They apply fixed rates to certain chosen accounting positions. The rates are frequently calibrated in order cover the risk assumed at a certain level of confidence.

As both static models apply well-defined factors, we make reference to them as being based on rules. There are clear rules about which positions should be occupied by the factors that are well-determined.

Similarly to static models, based on accounting, the *dynamic models*, based on the estimation of future cash flows, could be divided into *scenario-based models* and *principle-based models*. In the first category, the calculation methodology of solvency is based on the measurement, made by the insurance company, of the impact of some specific scenarios, on the net value of the goods by the estimation of future cash flows. In many cases, these scenarios are clearly defined by the surveillance organisms and, therefore, we make reference to them as a measurement a rules-based risk. Such example could be given by SST model where the insurance companies have to calculate the impact of a significant decrease in proprieties value over the position of net assets. The insurance companies have to quantify the impact of this re-evaluation both over the assets and over its own capitals and debts. The methodology necessary to reach the real/market values of the elements of the balance sheet is specified by the general principles of the assessment. Consequently, we would consider these models as being based on principles only regarding the assets and debts assessment.

In case of *principle-based models*, there were not established risk assessment and measurement rules but the insurance company has to reach, internal models-based, to its own point of view concerning the capital requirements, following certain calculation principles presented by the surveillance body. An example is the requirement provided by the UK-FSA model for the life insurance companies that have to reach individual capital assessment by help of internal models.

Please note that the sub-classification of the models is not exclusive. For example, it is possible that a model is scenario-based in theory and in practice is a static model, with the scenarios converted in fixed or multiplier factors.

Nevertheless, the analysed models of solvency assessment could be classified according to the above-mentioned rule if some of them have to be subdivided within this classification.

However, it is notable that the models of solvency assessment recently elaborated by the regulation and surveillance organisms, as those from Switzerland, Netherlands and Great Britain include the dynamic model, at least for a part of the underwriting risks, in other words they are flexible. The motivation of this fact could be related to the idea that the standards approach, that contains formulas to establish the minimum solvency requirement are difficult to apply, due to the lack of flexibility. For example, the current solvency regime of UK-FSA uses a risk factor based approach to assess the solvency of the activities of general and life non-profit insurance and a dynamic approach based on cash flows improvement to assess the solvency of life profit insurance. Moreover, UK-FSA requires to life insurance societies to develop their own internal models to assess the requirements regarding the capital.

The main disadvantage of dynamic approaches consists in the fact that they require to make serious implementation efforts.

The models-based solvency adapted to the specific of every company originate from United States and represent the most motivating approach from theoretical point of view. According to this method, a few familiar to the European surveillance institutions, being used only in some Nord-American states, Canada, and Australia, the insurance companies have to do a test that simulate possible financial consequences, starting from the hypothesis of some modifications in the negative sense of the assets value, of the capital or of the society's debts. The difficulty, at the same time the major deficiency of this model consists, mainly, in the selection of the scenario of the test, the taken into account risk factors having to be selected and dimensioned with a special attention in order to obtain a precise view of the solvency of the tested company. The subjective nature of the selection of these work hypotheses, as of the choice of the testing period makes this model a few known.

Table2. Classification of solvency assessment models in function of the data taken into account for the determination of capital requirements

Analyzed models	Static models		Dynamic models	
	Models based on simple factors	**Models based on risk factors**	**Scenario-based models**	**Principle-based models**
European model	Solvency I			
Financial Services Authority of United Kingdom		UK-FSA – (non life and non profit life insurance)	UK-FSA (with profit life insurance– MCR)	UK-FSA (with profit life insurance - SCR)
Financial Assessment Framework of Netherlands		Netherlands - FTK (underwriting risks)	Netherlands - FTK (financial risks)	
MCCSR and MCT of Canada		Canada (life and P&C insurance)	Canada (life segregated funds and P&C – policy liabilities risks)	
Swiss Solvency Test			Switzerland - SST (asset risk scenarios)	Switzerland - SST (additional scenarios for non life insurance
National Association of Insurance Commissioners of SUA;		US- NAIC	-US- NAIC (ALMrisks)	
	Rules-based approach		**Rules-based for risk measurement and principles based for valuation**	**Principles-based models**

Source: Comité Européen des Assurances (CEA)

In function of the difference made between MCR and SCR, the analysed models of solvency are classified into:

- the models that make the difference, as the NAIC model of United States, and
- the solvency models, recently developed, as: SST model of Switzerland, FTK model of Netherlands and FSA model of Great Britain, that are noticeable because they make this difference, but with different approaches.

The solvency assessment regimes of Great Britain, Switzerland and Netherlands encourage actively the companies to develop their model internal capacities of capital risk within their regime of solvency surveillance.

In SST model, the companies are required to define scenarios specific to the company that has to be investigated. In UK-FSA approach, the life insurance companies are required to develop internal models in order to reach the solvency capital requirement (SCR).

According to the sensitivity of risk profile, the models could be classified into:

- model-based adapted to the specific every company,
- risk-based models – risk based capital (RBC);
- models based on the system of the three pillars – Solvency I, Solvency II

Risk - Based Capital (RBC) model large-scale used in United States, was adopted by NAIC for life and health insurance industry for answering to a standard necessity concerning the suitability of the capital considering all risks that every insurer has to face up to during its (technical, investment, commercial, management) activity. The moderate sum of the values appropriate to every risk represents the minimum capital required to the respective policyholder. New versions of this model are used in Canada and Japan.

Many objections raised by the utilization of this model are related to the difficulty and accuracy in calculation, as the lack of transparency in public that this generates.

The model based on the system of the three pillars (SOLVENCY I model) is used in almost all European countries. This system is based on an assembly of three requirements imposed on insurers: proper reserves and assets and minimum imposed margin of solvency. The limits of this approach originated from simplicity, its main quality. Many objections[7] refer to:

- lack of sensitivity to risk: fundamental risks, as credit risk, market risk or operational risk that are not properly taken into account by Solvency I provisions.
- perturbation of well functioning unique markets, and
- non-optimal rules concerning the prudential surveillance of groups: the provisions in force are more and more disconnected from the modality the which the groups are structured and organized in reality.

3. Conclusions

In this context, the next years will be neither easy for the insurance companies nor for the surveillance authorities, having into account the fact that clock is ticking to Solvency II nor the twelfth clock coincides with 1 January 2016.

For the efficient introduction of the future solvency model to insurance domain in Romania, there have made the first steps by approving the Strategy concerning the implementation of International Financial Reporting Standards (IFRS) for insurance domain. The IFRS application, by promoting a performing financial management and a corporate governance culture in insurance societies, represent an absolutely necessary premise for the implementation of the optimal conditions of Solvency II.

During the application process of Solvency II Directive, the insurers could choose between the implementation of the standard (general) model, an internal model or a combination between the two.

The standard model is easier to implement and will treat the risks presented by the specialized companies, this approach being more indicated in case of small-size societies. The assessments will be done on risk classes based on analysis, tests and scenarios, the main risk categories being those resulted in market from the underwriting activity, the operational one or from the non-fulfilment of financial obligations. However, the standard model will not reflect the own characteristics of the company or of the jurisdiction in which this is registered.

However, the internal model involves the identification, measurement and modelling of key components of risk of the insurance companies, as the correlations between these. Giving a high possibility of the specialized companies to establish efficient solutions for risks diminution from costs point of view, will be facilitated the assessment of the capital level necessary to ensure the protection in case of various series of events.

So, the insurers, that have to apply this model, will have the possibility to run more efficiently a business by focusing on domains with high profitability, and will be invested with a high capacity to assess various effects that could not be so easily quantified with the standard model.

The internal models for determining the capital requirements offer a competitive advantage to pro-active players that started the implementation of some coherent systems of risk management. The groups have the opportunity to access the efficiency reserves for capital utilization and to develop unitary platforms of solvency management.

The application of European Directive will influence all the operational processes of the insurance industry and by rapid correction of all solvency aspects, the general frame of insurance surveillance will be radically changed, the difficulty of regulation becoming a competitive advantage.

These being the premises, we could consider that Solvency II is the first major strategic project of European insurers and reinsurers.

FINANCIAL EQUALIZATION TRANSFERS BETWEEN PUBLIC AUTHORITIES BUDGETS

Emilia Cornelia STOICA*

Abstract

This paper presents financial balancing mechanisms that it is applied by the most of the states with competitive market economy, in order to ensure equity between local authorities, as well as the stability of the entire national tax and budgetary system. In this regard, it is described the concept of financial equalization and its structure according to two fundamental criteria:

- equalization in accordance with the financial transfers orientation, distinguishing thus (1) horizontal equalization, which is carried out between local authorities and consists in assigning a part of the richest territorial collectivities resources to the disadvantaged ones; (2) vertical financial equalization, achieved through consolidated transfers the state / federal budget to the budgets by territorial administrative units, both for the operating budget section and for the development one;

- financial equalization according to the regional or local disparities observed as a result of territorial-level analyzes: (1) financial equalization based on balancing public revenues of the administrative-territorial units, which tries to correct the differences between the financial resources of each local authority and (2) the financial balancing based on the costs, which aims to reduce differences between standard costs of public services per capita.

Financial equalization mechanisms have as main objective the reduction as far as the total elimination of the regional or local disparities, which are also described in this article.

Keywords: *equalization, revenues, costs, horizontal, vertical.*

1. Introduction

Financial balancing territorial administrative units is a specific mechanism of public finances aiming to reduce the gap between local public income per capita registered or the inequalities between them. In this way, it is compensated the differences between the financial capacity of localities - measured either by tax revenue per capita, as in Romania, either by the cost of public services produced and/or distributed by the public authorities to the people.

The main purpose of financial balancing is to allow sub-national authorities to produce and/or distribute similar quality and the price/cost public services under similar budgetary expenditure, even if tax revenues vary from one community to another.

The financial balancing is considered a mechanism used by general government along with budgetary decentralization, insofar as it seeks to correct the potential imbalances resulting from the autonomy of local authorities.

The importance of financial balancing is underlined not only by its use in all countries with economy based on competition - either federal or unitary - but also because its objectives are defined in the Basic Law of the State, the Constitution, and is a pillar of fiscal and budgetarynational policy.

The role of balancing revenues and costs consists in reducing budgetary disparities between the communities, encouraging them also to increase their economic and administrative capacity, thus contributing to the macro-financial stability.

2. Regional Disparities

The own local resources category is not only reduced to the exclusive local taxes, but also includes other sources of funding that may be, and in some cases, extremely important. These are fees, charges and prices of use, but also of income from the property of land, businesses, financial assets, and the proceeds of public capital sales fixed, stocks, land, etc.

The concept of own resources does not mean that local authorities have necessarily complete control. Thus, regarding local taxes, it is generally the tax required whose elements are defined by law and the local authority have only to set tax rates, often within the limits established also by law.

Regarding the billing of local public services in general, rights, charges and usage prices may be fixed by the local authorities with some freedom. However, in most countries, limits are set at the national level.

The notion of regional budgetary disparities designate tax levy differences in capacity - or budgetary capacity - of collectivity that coexist in the same geographical area.

The flexibility of local authorities in regard to their own resources may be very large or very small. However, local authorities have an important real power, although defined by the law on their own resources, but it is different regarding the transferred resources, including shared taxes, endowments and grants.

Generally, the percentage of tax sharing amounts to a territorial level and terms of allocation to the

*Associate Professor PhD, Faculty of Economics, "Nicolae Titulescu" University of Bucharest (e-mail: **liastoica@gmail.com**).

different communities of a given level are set by national legislation and thereby, as part of a tax sharing system, the local government position is stronger than it is when it comes to other forms of transfers.

The endowments are, too, free allocation and local authorities can use these free amounts paid to them in the only limits under the scope of their skills and eventually the distinction between operating expenditures and investment.

As for grants, not just their total amount is set each year based on budgetary availability, but also their use is determined by the authority granting them and allocation takes place based on criteria that allow that authority a discretion important.

Public grants to local budgets can be classified and examined according different criteria and as regards the origin of the inputs its are:

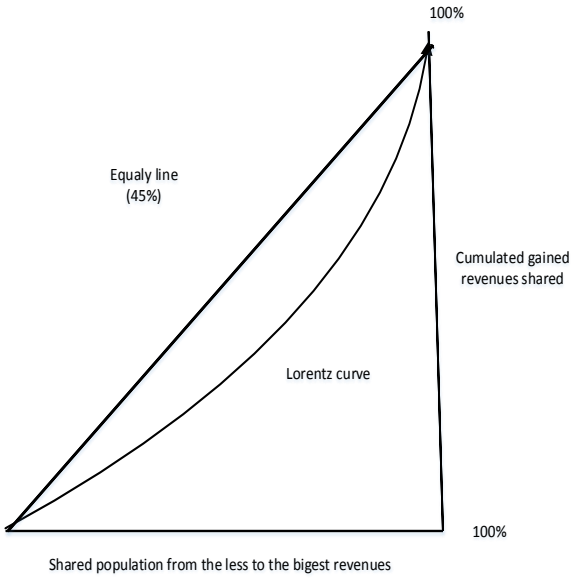
- the contributions of the central state, or the amounts charged to the central government budget;
- the contributions of communities in regional scale and the contributions of other intermediate authorities (provinces, departments, counties, etc.);
- the contributions of the same level of authorities, especially the amounts paid in framework of horizontal equalization mechanisms, or by groups of communities to their members;
- the contributions of international organizations (excluding loans) in particular funding from the European Community.

Local governments provide certain services traditional that might be subject to fees and royalties. Most of these services - garbage collection, road maintenance, building permits, etc. - Could be paid by users and, in theory, it is possible not to provide them at a loss. However, the situation is different when certain free services of the welfare state are decentralized. Given that users are not supposed to pay the cost of these services, they have to be financed by taxes. Thus a redistribution takes place, for example in favor of families with children through free schools, or that of people elderly and sick through free hospitals.

In the case of an important decentralization can result, in terms of horizontal equity, a considerable inequality between people from different communities and thereby it is advantageous to move from one municipality to another, even at the same level of service between the two cities.

The actions taken by public authorities to achieve a near constant level of public income per capita available in all communities shows as the main motivation existence and persistence of regional disparities between the same geographical region.

The differences presented by the GDP/capita, recorded between territorial-administrative units may serve as indicators for measuring regional disparities, especially in the general level of economic development, but along with this information should be found and someones about the life level, and a very significant indicator of this is the GINI index.



The Gini coefficient is a measure of inequality of income distribution in a society. The indicator was built by an Italian statistician, Corrado Gini.

The Gini coefficient varies between 0 and 1, 0 means a perfect equality, 1 total inequality. Representing the Gini coefficient of variation is the Lorenz curve, which shows the orderly revenue in ascending order, and the abscissa population broken down by revenue.

The Gini coefficient measures the area between the Lorenz curve and located right distribution of absolute equality, expressed as a percentage of the total area under the curve.

The Gini coefficient is used primarily to measure inequality of income distribution or heritage, but the economy is often combined with other information, such as democracy indicator (located between -2.5 weakest and +2.5 strongest) in order to analyze the impact of implementing the proposed policies.

(Source: Gini, C. variable is mutable (variability and Mutability, 1912; C. Cuppini, Bologna, 156 pages. Gini, C (1909) Concentration and dependency ratios, Rivista di Economic Policy, 87 (1997) 769-789. http://fr.wikipedia.org/wiki/Coefficient_de_Gini)

Public expenditure per capita for the provision of social services can also highlight, the spread between regions of the same State. Differences in geographical location, number of people, demographic, social protection, also the perceived impact of economic shocks - as recent economic and financial crisis - are responsible for the registration of differences between social costs of public services provided by public authorities of administrative-territorial units to the local population collectivities they run.

Currently, between Member States of the European Union there are significant differences with regard to each of the above indicators.

	GDP/cap -euro -	Total general government expenditure % of GDP	Gini coefficient of equivalised disposable income (source: SILC) Number
EU28	26600	48.5	30.5
Bulgaria	5600	38.3	35.4
Romania	7200	35.1	34.0
Poland	10300	42.2	30.7
Czech Rep.	15000	42.0	24.6
Italy	26500	50.5	32.5
UK	31500	45.5	30.2
France	32100	57.1	30.1
Germany	34200	44.3	29.7
Netherlands	38300	46.8	25.1
Denmark	45100	56.7	27.5
Sweden	45500	53.3	24.9

Thus, both compared to the European average of the 28 member states, as well as to developed countries, Romania and Bulgaria occupies the lowest places in terms of economic development and the public expenditure, showing poor state involvement in national economy. In that regards GINI coefficient, it is situated in the two countries at the highest rates.

3. Financial balancing

Financial balancing is mainly aimed at reducing the gap until cancellation of the differences recorded between local budgetary benefit to the same region.

Financial balancing is not intended flattening financial differences between individually household incomes, but the geographical differences in access to public services. Although both issues relate to the function of redistribution of public finances in each country - that highlights national tax progressivity and/or scope of public social protection programs - financial balancing objective is not identical in each country, as individual redistribution and/or space mechanisms varies considerably from state to state.

Fiscal and budgetary policy distinguishe three missions to the financial stability: equity of the public income distribution between local governments of the country; effectiveness of their use to finance public services necessary to implement a sustainable developments; the stability of public finances which ensures macroeconomic equilibrium of the nation.

Fiscal balance is achieved by financial transfers of the budgetary resources between levels of government, such transfers manifested in various forms, depending on budgetary and fiscal system of each country.

Equity refers to the distribution of public revenues an essential for the proper functioning of the public sector at territorial level, respectively equity between local communities residents, according to which all natural or legal persons from a country have access to comparable public services under similar tax conditions.

Due to financial balancing it can be corrected efficacy spreads between different public services distributed in the community, but also it can reduce the mobility of active people, because there is no financial reason to move from one place to another.

Also, by balancing financial it can be guaranteed the territorial administrative units possibility to respond asymmetric economic shocks, which ensures financial stability not only regionally, but nationally.

4. Taxonomy financial balancing

There are several criteria to classify financial balancing methods implemented in democratic countries. Thus, according to the balance transfers orientation, they can be classified as horizontal or vertical, and according to the disparities type that tries to diminish, we can talk about balance and balancing public revenues per capita costs of public services distributed by local authorities.

As regards the distinction between horizontal and vertical balancing, where the first is observed that transfers occur between sub-national public authorities, while balancing upright - that is to cover the financial deficits recorded at the end of a fiscal year in an administrative-territorial unit - the central government transfers funds to the local authorities.

Such balancing mechanisms are applied practically in all democratic states, some opting for the horizontal, others for the vertical and the third category of states implementing both mechanisms. For example, the European Union countries such as Austria, Denmark, Finland, Sweden apply horizontal balance, taking into account the fiscal capacity / contributor to local communities, while countries such as Italy, Greece, Poland, Portugal use vertical balancing mechanisms of sub-national public finances. Some European countries such as Germany, France

and Romania, implements balancing mechanisms both horizontally and vertically. Formulas balancing changes with a frequency of a few years, according to the legal framework on public finances in each country, to adapt their respective mechanisms to the macroeconomic reality and to the evolution of the state administrative organization, the majority of the European Union Member States pursue a sustained trend decentralization[1].

The distribution scheme of public revenues to balance the different categories of financial territorial communities depends on the level and structure of financial resources available to these communities, on the typology of public services delivered and on the balancing formula / formulas imposed by the state.

Unlike balance income, which is mainly focused on reducing differences in financial capacity - which exhibit the authorities ability to collect revenues tax per capita - financial balance by costs seeks to register in all collectivities of a State about the same costs of public services provided by local authorities, possibly even in accordance with the rules applied consistently across the country.

In practice, there is rarely "pure" systems and, today, most countries use all equalization categories.

The revenue sharing is intended to compensate for differences in revenue raising capacity between sub-national governments. Also, there are a wide variety of models and existing equalization schemes in different countries.

Most transfers are of a fixed amount that is to say, the total amount of subsidies is capped, or the total amount paid is determined using tax-sharing formulas. The "marginal rate of equalization" (or "levy equalization", "tax refund" or "replacement rate"), that is to say, the amount of equalization grants a sub-national government if it loses increase its own tax revenue varies considerably between countries.

Balancing the budget with revenue presented in some cases important perverse effects, because it can cause distortions of taxation in areas that receive equalization transfers, by the proportion that is granted and while their management.

Equalization marginal rates are extremely difficult to calculate and their value must be considered carefully. Statutory rates and equalization numbers may vary to a considerable extent the fact that there are interactions between the tax bases and the equalization formulas fail completely or partially certain tax bases. Often, the effective rate is endogenously defined as the total amount to be paid is decided in the first place before it is calculated the equalization rate for each local authority. The marginal rate of equalization must be clearly distinguished from the average long-term reduction of fiscal disparities sub-national governments. These two indicators can vary in considerable proportions.

Equalization revenue is mostly horizontal while the cost is usually vertical.

Cost equalization covers two types of cost difference. The first is the unit cost of providing a service - eg, maintenance of a kilometer of road is more expensive than plain mountain - and the second focuses on the needs - such needs health care for the elderly are more important in a local authority where the population is older. Both cost difference sources are sometimes difficult to distinguish because ultimately they translate both by differences in the per capita cost of providing services. Most countries have implemented cost indicator systems that take into account both the differences in unit costs and differences in needs, distinguishing general "geographical indicators" - which reflect differences in unit costs due topography - and the "socio-economic indicators" which reflect the different needs due to the social structure of sub-national government.

Unlike revenue sharing, it is vertical in most countries, which means that the unit headquarters often sub-national benefit utilities. While most countries use equalization formulas standardized type of costs in several of them that equalization is based on the amount of expenses recorded in the past or current expenses.

While equalization revenue leaves little room for special interests - because is determined on a basis of assessment and equalization rate - the margin of error and interpretation is more important in the equalization of costs: it is necessary choose criteria explaining the differences in costs, determine their weight and collect relevant data.

The dispersion of the population and its density may impact on the unit cost of providing public services. Small municipalities are more expensive to manage because as schools, hospitals and other public facilities show fixed costs. However, services such as security and the fight against fire result in higher spending per head in urban areas.

5. The role of financial equalization to reduce budgetary disparities

Subsequent fiscal equalization disparities are less than the economic disparities measured by regional GDP, which means that public services are distributed more equitably between local authorities that economic heritage.

Redistributive structure of financial equalization between the various categories of local authorities depends on the sources of sub-national revenues, characteristics of decentralized public services and the equalization formula. Equalization revenues typically results in a redistribution of urban to rural areas due to the lower tax-raising capacity of the latter. The

equalization of costs based on geographical indicators strengthens redistribution towards rural areas. The equalization of costs based on socio-economic needs indicators reduces this redistributive aspect, but in general the urban areas are net contributors to the extent that the highest indicators of tax levy capacity and lowest.

6. Conclusions

Equalization significantly reduces disparities. Most devices used in different countries have an equalizing effect somewhat similar, but in a few countries the disparities are reduced to virtually zero. The horizontal fiscal equalization has an equalizing effect slightly stronger as a percentage of GDP, the vertical equalization.

Their goal is to allow sub-national governments to provide their citizens similar ranges utility for a similar tax burden. Financial equalization is an explicit program of redistribution and, as such, it may conflict with goals such as efficiency of sub-national spending or sub-national tax effort. Financial equalization devices are very specific to different countries and are often an essential part of their institutional framework, so any comparative analysis must be considered very carefully.

Financial equalization is more transparent if it is institutionally separate statistically or other transfer mechanisms.

THE FREE TRADE AGREEMENTS BETWEEN THE EUROPEAN UNION AND LATIN AMERICA. THE PERUVIAN AND MEXICAN CASE

Antonio Manrique de LUNA BARRIOS*

Abstract

The European Union has signed a number of free trade agreements with different countries in Latin America because it is aware of the great importance that this region has gained as a destination for its exports and investments. Furthermore, the European Union wishes to reaffirm its ties with countries in the region because it hopes to consolidate its political and economic position as an international player with its presence in those markets.

In this paper we will discuss the free trade agreements that the EU has signed with Mexico and later with Peru, because they are two examples where Latin American countries have achieved significant economic growth and where the trade has generated significant benefits. Additionally they are two major trading partners of the European Union and they have allowed the EU to continue to expand its zone of influence in Latin America.

Keywords: *Free trade agreement, European Union, America Latina, investments, Peru, Mexico.*

Introduction

In the international scenario states can live in economic independence and they do not have to interact with the other members of the international community. In this context the European Union has taken the decision to sign free trade agreements with different countries of Latin America and with this it has the objective to enter into new markets and to obtain a better position. The premise from which we start with the present investigation is the relationship between states that negotiate agreements to interchange goods and services in a liberal way.

Due to globalization a number of changes have taken place with regard to the economic relationships of nations and the liberalization of global trade. Certain expectations have been created with regard to the benefits of the free trade agreements that have been signed by nations, but the process of commercial opening has not always resulted in direct benefits, especially with regard to the poor parts of population. The expectative of economic growth however was one of the major arguments that convinced Mexico in the beginning and later Peru to sign a free trade agreement with the European Union, including political, economic and social aspects. Regardless of the general interest of Latin America and the European Union in the commercial opening of Latin America for trade and investments the changes come along with the free trade agreements constitute a powerful instrument that contributes to the development of the people in Latin America as long as their interest are respected.

The hypothesis that will be followed with this work considers that the signing of the free trade agreements between Latin America and the European Union provides an excellent opportunity to deepen the economic and commercial relationships between both regions. However, it is considered that modifications will have to be discussed and added, especially in Mexico where the free trade agreement has been implemented a longer time ago.

This investigation also wants to: 1) Contribute to the way in which the free trade agreements are adapted to the real needs of the different countries in Latin America and to their adequate implementation. 2) Promote the use of free trade agreements as a mean that allows the population to reach a better level of economic well-being. 3) Rise consciousness about the importance of free commercial interchange between states.

This present investigation uses due to its nature, a multidisciplinary approach which is reflected in the variety of sources used. Also different bibliographical sources have been used.

In the first part of the present investigation the commercial interests of the European Union in Latin America will be discussed.

1. THE COMMERCIAL STRATEGY OF THE EUROPEAN UNION IN LATIN AMERICA

At the moment the interest of the European Union in Latin America has risen because it considers this region a priority partner and for this reason we are going to analyze the economic relations between the EU and Peru and the economic relations between the EU and Mexico (Piñon, 2005: 17).[1] This new focus of the European trade policy has happened because the EU wanted to find new global partners and strengthen its international position for example in comparison with the United States of America or China. Another

* Professor, PhD, MA, Deusto University, Bilbao, Spain (e-mail: **a.mdel@deusto.es**).

[1] During the Eighties the European Union did not give a lot of importance to Latin America because its main focus was centered on the disintegration of the Socialist block and its policy of neighborhood.

influence was the constant subscription of new free trade agreements of Latin American countries with other countries and the fear of the EU to loose importance and influence in this region. Some authors say that with this new strategy the European Union has started giving more privileges to individual countries and to consider prefer these particular agreements to joint agreements of more than one country or block to block (Ruano, 2013: 619 -644).However, we do not share this vision although the European Union did not reach a block to block agreement with the Andean Community of Nations[2]. It should not be forgotten that this block to block agreement was not concretized because Bolivia and Ecuador decided not to participate regardless of the European efforts to maintain a block negotiation. Another example of the will of the European Union to carry out negotiations from block to block is the Association Agreement that was signed with the Central American Common Market. Taking into account these specific cases we cannot generally say that the European Union does not want to realize wider negotiations with Latin America and that it rushes into specific agreements with particular countries.

Like mentioned above there are several reasons for the EU to negotiate with the Latin American block in general and certain Latin American countries like Peru and Mexico in particular. Among the principle reasons for negotiating we can find: the economic growth of this region, the commercial policy of opening, the claim for entering and getting installed in the international scenario, etc. (Sanahua, 2013: 1-32). Right from the beginning, when there were still block to block negotiations, it was the strategy of the European Union to try to stimulate its relations with Latin America by establishing and presenting itself as an important actor of the international community and this way of acting continued in the individual negotiations with particular countries. However, the economic crisis that affected the EU and the problems that the Eurozone was confronted with have changed the general approach of the EU towards Latin America (Guillén, 2013: 23-41). Instead of merely focusing on a complete region the EU began to accept negotiations with individual countries.

Now we are going to analyze how the EU has conducted its negotiations and how it has reached to sign the free trade agreements with Peru and Mexico.

2. THE NEGOTIATIONS AND SIGNING OF THE FREE AGREEMENT BETWEEN LATINA AMERICA AND THE EU. THE CASES OF PERU AND MEXICO

Now we are going to analyze the antecedents of the free trade agreements between the EU and Peru and the EU and Mexico in order to show two examples of the implementation of free trade agreements in Latin America that have resulted in economic growth.

2.1. The negotiation and signing of the free trade agreement between the EU and Peru

The beginnings of this free trade agreement can be found in the negotiations that took place between the European Union and the Andean Community of Nations (ACN)[3]. With these negotiations an agreement in the following three subjects should be reached: the establishment of a flowing political dialogue, the creation of an area of free trade, investments, etc. It was also tried to reach an intense cooperation between the countries of the Andean Community.

From the commercial point of view this agreement brought many new chances for the countries of the Andean Community simply for the fact of being associated with the European Union and its large market. From the political point of view and in regard to the cooperation between both regions the relations between both regions had been established and improved for a long time. For the European Union this agreement was a great opportunity due to the fact that the European Union wanted to present itself as a major player in the international society and to the fact that the Latin American market presented new challenges and opportunities. But, the special situation of Bolivia and Ecuador had to be considered, a situation that made it necessary to establish a special treaty and to differentiate with respect to these two countries that finally did not participate in the agreement, as we will see later.

[2] The negotiations between the Andean Community of Nations and the European Union were established with the Decision 598 of the Andean Council of Foreign Ministers in an open meeting with the Commission of the Andean Community, that established that the Country Members could negotiate commercial agreements with third countries in a joint way or in block and exceptionally in an individual way. This way it was tried to obtain a major capacity to negotiate in regard to third countries or blocks of countries and to use these agreements as instruments to continue deepening the integration and the levels of economic development between the members of the Andean Community of Nations. Also we must indicate that these negotiations between blocks were affected by the participation of Ecuador and Bolivia in the ALBA-TPC given the fact that this negotiation did not want to develop the cooperation and the political dialogue and that even more it wanted to give more importance to the commercial side and was an excuse to promote a simple free trade agreement. Later, within the framework of the European Union it was established the possibility to establish negotiations only with Peru and Colombia given the fact that within the framework of the Andean Community of Nations no consensus had been reached in topics such as trade, sustainable development and intellectual property.

[3] The Andean Community was founded with the Protocol of Trujillo on the 10 of March 1996 as a substitute of the Andean Pact. The members of the Andean Community at the moment are Bolivia, Colombia, Ecuador and Peru. On the 22 of April 2011, Venezuela left the Andean Community of Nations (ACN) in 2006 but it had to wait five years to leave behind all its obligations and rights linked had the time limit of five years expired which it had to leave behind its obligations and rights linked to of the regional Andean group. In 2006 it also decided to enter into the Common Market of the South (MERCOSUR).

In this context it has to be mentioned that the commercial relations between the EU and the member states of the Andean Community of Nations (among which is Peru) go back to 1990 when the EU established a Generalized System of Preferences called (GSP) – Drugs - with the objective to fight against the production and the traffic of drugs[4] and that was trying to show a compromise of the developed countries in sharing responsibility with the countries in process of development. To approach this transnational problem which does not know frontiers the EU was looking for a method of showing a politics of shared responsibility to confront this problem which is affecting the whole international community.

In 2005 the Generalized System of Preferences Plus (GSPP)[5] was added which was wanted to promote a sustainable development and which had the objective to introduce a new regulatory policy. In regard to this we must say that the custom duty preferences that were given to products coming from member states of the Andean Community of Nations did not include all products and made it necessary that the GSPP was renewed in the year 2009.

Although the GSP and GSPP were criticized due to the temporary character of these customs duty preferences for products from the member states of the Andean Community of Nations it has to be said that the results from this experience were positive. It had become possible that external investments could reach these countries that were trying to benefit from the preferences to introduce their products in the market of the EU.

We have to indicate that the European Parliament and the Council of the European Union approved with the Regulation (EU) No 978/2012 the application of a new generalized system of custom duty preferences. With this regulation generalized custom duty preferences are applied and the Council Regulation (EC) No N° 732/2008 of the Council is abrogated.[6]

The negotiations of the Andean Community of Nations were based on the Decision 598 which declares that the member states could establish commercial agreements with third countries in a common way or as a block. But it was also possible that the member states could negotiate agreements on their own. This way it was tried to obtain a better position for negotiations regarding third countries and blocks of countries and to use these agreements as instruments to continue to deepen the integration and the level of economic development between the members of the Andean Community of Nations. According to the Decision 667 of the Andean Community of Nations (ACN) a general framework was established for negotiations between the trade blocks EU and ACN of the agreement of association between the EU and the ACN[7].

Thanks to the Decision 667 and especially to what is declared in Article 2 of this norm Peru could continue with bilateral negotiations with the EU. This would be helpful in the case that any difficulties should occur in the regular negotiations from trade block to trade block because Peru could continue negotiating individually in the case that for example one of the other ACN members (such as for example Ecuador or Bolivia) would decide to leave the trade block negotiations.

Coming back to the agreement of association that was mentioned before it can be said that the commercial relations resulting from the signing of this agreement brought important changes for Latin America that started to enter into a phase of more economic development and social integration. For the European Union the changes that this agreement brought about for this Latin America block made it more interesting to establish economic relations because the changes showed certain progress in terms of economic, legal and social aspects. It seems that after the signing of agreements with Mexico and Chile had come the moment to give an interesting position to the Nations of Latin America and to face new challenges.

During 2006 a number of meetings took place between the representatives of the Andean Community of Nations and the European Union that led to the fact that on the 14th of July of 2007 the beginning of negotiations about the agreement of association between the European Union and its state member states and the Andean Community of Nations and its member states members started.

However, the negotiation between blocks did not come to an end and did not reach to create a common Andean market. The fact that certain facility had been given to the member states of the ACN so that they could assume their compromise with different time frames, means, and different velocities and depending on their own situation made it complicating and difficult for the blocks to negotiate. Also the Duty Customs Union of the ACN could not consolidate itself within the framework of the ACN since the state members of this organization did not find a common point of agreement in their politics. It also has to be

[4] The European Community was the first one to establish the Generalized System of Preferences in 1971 with the objective to concede unilaterally custom duty preferences for the products of countries which mostly need them.

[5] The GSP Plus was established with the Regulation of the Council of the European Union (EC) No. 980/2005 from the 7 of June 2005.

[6] The new scheme approved by Regulation 978/2012 entered in vigor on the 20th of November 2012 and the custom duty preferences granted with this new order were applicable from the 1st of January 2014. In regard to the actual scheme GSP Plus would only be applicable from the 31st of December 2013, according to the Regulation N° 512/2011.

[7] The decision 667 called general frame for negotiations of the Agreement of Association between the Andean Community and the European Union was adopted on the 8th of June 2007. Later, since a negotiation by blocks was not possible it was allowed that Member States of the ACN could carry out bilateral negotiations with third countries and for this it was necessary to abrogate the Decision 667 with the Decision 738 from the 1st of July 2010.

mentioned that the negotiation between blocks was probably affected by the participation of Ecuador and Bolivia in the Bolivarian Alliance for the Peoples of our America – Peoples´ Trade Treaty (ALBA-TPC)[8]. The ALBA-TPC put more priority on trade topics and less on questions of cooperation and political aspects and could be considered a simple free trade agreement. Finally, in June 2008 the negotiation between blocks failed.

Since it was not possible to reach a common agreement within the block that existed during the negotiations of the Agreement of Association between the EU and the ACN it became necessary to redesign the initial negotiations that had taken place with regard to subjects such as trade sustainable development and intellectual property. These new negotiations took place between the EU and Peru, Colombia and Ecuador. Ecuador later left these negotiations in July 2009.

These new negotiations tried to stay within the regulations of the Article XXIV of GATT and the Article V of GATS that had been established within the framework of the World Trade Organization. This way the negotiations were reestablished in areas such as the rule of origin, the technical barriers of trade, trade and sustainable development, etc. Later, after a new series of negotiations (where the last one had taken place in February 2010 in Brussels) it was officially announced the end of the negotiations in April 2011 and it was established that the agreement would be controlled by the legal procedures of each one of the participating parties.

The Council of the European Union approved the provisional signature and application of the Trade Agreement between Peru and the EU on the 31 of May 2012. Later, on the 26 of June 2012 the agreement was signed and was submitted to the European Parliament and to the Congress of Peru for approval according to the European and Peruvian regulations. Later it was also necessary to get the approval of the national parliaments of the state members of the EU because the individual European states could be affected by the agreement and its regulations in terms of questions regarding the intellectual property, etc.

The European Parliament accepted the trade agreement with majority on the 11th of December 2012 and the Congress of Peru approved it the following day with unanimity.

With regard to the content of the Treaty it can be mentioned that one chapter was designated to sustainable development. Other aspects also were considered such as international regulations in subjects concerning labor conditions and environment. Social aspects have also been considered and a human rights clause has been added with which the treaty can immediately be suspended in case human rights are affected. However, a certain power has been given to diplomatic means and mechanisms that can be established between the parties to solve any upcoming controversy[9].

Now we are going to see some aspects concerning the trade agreement between the EU and Peru. The free trade agreement between the EU and Peru is structured in the following way: Preamble, fourteen titles, fourteen annexes and conjoint declarations. The fourteen titles have the following contents: In the first two titles a number of initial and institutional regulations have been established. In the third title the trade of goods has been regulated, the trade of services, establishments and electronic trade is regarded in the fourth title; you can find subjects such as payments and movement of capital in the fifth title, public contracting in the sixth title and intellectual property in the seventh title. Competition is regulated in the eighth title, trade and sustainable development in the ninth title, the transparency and administrative procedures can be found in the tenth title and the general exceptions in the eleventh title. The solution of controversies is in the twelfth title, the technical assistance and the strengthening of commercial capacities in the thirteenth title and the final regulations can be found in the fourteenth title.

2.2. The negotiations and signing of the free trade agreement between the EU and Mexico

The antecedents of the Free Trade Agreement between the European Union and Mexico can be found in the first Frame Agreement, with economic and trade character that was signed by this country with the European Economic Community (now EU) in 1975. With this agreement, the in those days called European Economic Community, granted to Mexico which at that time was not a member of GATT, the treatment of a most favored nation and this way contributed to the fact that Mexican exports towards Europe were stimulated and created a more favorable environment for the bilateral economic relations. We also have to say that another factor that contributed to the consolidation of this commercial relationship was the second Framework of Agreement of Cooperation which was signed on the 26th of April 1991 and the Joint Solemn Declaration of the 10th of April of 1995 that proposed to widen the relations between both parts with a vision of long-term time limit and that was aiming at reactivating the economic and trade relations that had been affected in the Eighties (González, 2003:139-178)[10]. However, the preliminary

[8] The Bolivian Alliance for the People of our America – People`s Trade Agreement (ALBA-TCP) was established on the 14th of December 2004.

[9] The aspects with regard to a democratic clause, the respect for the human rights and the respect for the state of law that were established in the Agreement of Political Dialogue and Cooperation which was signed in 2003 between the EU and the ACN have been incorporated into the Free Trade Agreement between Peru and the EU.

[10] The diplomatic relations between Mexico and the European Union were established in 1960. However, it was in 1975 when the first Frame Agreement with economic and commercial character was signed between them.

negotiations had to overcome a number of inconveniences that came up from the Mexican authorities since the European institutions planted the need to incorporate a "democratic clause" in the new commercial agreement. The incorporation of this disposition generated a strong initial rejection since it was considered an intervention into internal Mexican affairs and this impasse could only be solved thanks to making the above mentioned clause more flexible and by changing it by eliminating every reference to the expression "internal politics".[11]

Later more negotiations took place and two agreements were signed that had a great impact on the relations between the European Union and Mexico. The Agreement of the Economic Association, Politic Consultation and Cooperation[12] and the Internal Agreement about Trade and Questions related with Trade between the Mexico on one side and the European Community and its state members on the other side.[13] The agreements should lead to an integral association that would be developed with emphasis on the following three subjects: political dialogue between Mexico and the European Union, the creation of a free trade zone and the establishing of an intense cooperation.

Before the global agreement mentioned before was signed an "interim agreement" was negotiated that previously helped to establish certain customs duty liberties. Then with the finalizing of the general global agreement on the 1st of July 2000, the interim agreement was abrogated.

This agreement was a great opportunity for Mexico. From the commercial point of view it opened the market of the European Union for Mexico and provided it with many advantages that are implied with being associated with the European Union considering the size and importance of this market. From the political point of view it brought new perspectives and in terms of cooperation new challenges and chances (Gómez: 2005, 67-75).The European Union on the other hand wanted to get established as an important player in the international community and saw a great change of entering into the Latin American region by negotiating with Mexico. It had always considered Mexico as a valid interlocutor in the Latin American region which would allow the European Union to enter into this region more easily just as it is happening right now. However, the geographical situation of Mexico should not be forgotten. Without any doubt Mexico has always been closely linked to the United States of North America. This connection has even been deepened with the signing of the North American Free Trade Agreement in 1994.

For this reason the European Union tried to enter with the free trade agreement with Mexico into the Mexican market with a similar tariff reduction as foreseen in the North American Free Trade Agreement. On one hand it wanted to have certain "parity with the North American Free Trade Agreement" and it also wanted to protect its own investments. The trade agreement with the European Union represented for Mexico the possibility and the opportunity to diversify its commercial relations with other international players and to change a situation that reflected a high concentration of its commercial relations on the United States of North America. It also meant the increase of influence of Mexico in the world (Green: 2000, 4-5).

With the signing of the free trade agreement there surged a certain concern of Mexico that it would only be used as a platform for the EU to enter into the market of NAFTA. However, there existed some strict norms in this treaty and these norms limited the worries to some extent. In order to benefit from the advantages of the NAFTA agreement the products involved needed a great number of primary resources originally coming from North America. For this reason Europe had to realize that in order to enter into the U.S. market it would have to invest and establish industries in Mexico that would use input from the region of North America and Mexico (World Trade Organization, 2013: 38-52). Although it was hoped that Mexico would become more independent of the commercial relations with the United States of North America after the signing of the free trade agreement with the EU it cannot be negated that the US will continue being the most important trade partner of Mexico at the moment.

With regard to the general content of the free trade agreement between the EU and Mexico (FTA EU-M) we can say that the FTA EU-MX addresses in eleven chapters the following topics: market access, rules of origin, technical norms, sanitary and phytosanitary standards (SPS standards), safeguards, investments and related payments, trade in services, sales in the public sector, competences, intellectual property and the solving of controversies.

[11] The incorporation of the democratic clause in the commercial agreements that are underwritten between the European Union and third countries. The text that almost hindered the commercial negotiations originally was as follows:" The respect for the democratic principles and the fundamental rights, as declared in the Universal Declaration of the Human Rights, inspires the internal and international politics of the parties and constitutes an essential element of the present agreement.

[12] The Agreement of Economic, Political Consultation and Cooperation Association was approved by the Council of Ministers of the European Union on the 14th of February 2000 and by the European Parliament on the 16th of March 2000.

[13] The interim agreement about trade and questions related to trade between the European Union and the United States of Mexico was approved by the Senate of Mexico on the 23rd of April 1998 and by the European Parliament on the 13th of May 1998. The interim agreement referred to entered into effect on the 1st of September 1998.

3. Effects of the free trade agreement between the EU and Latin America

3.1. Effects of the free trade agreement between the EU and Peru

The trade agreement between Peru and the EU has brought a lot of changes and generated the opportunity to participate in a consolidated market such as the European market and not to lose competitiveness in regard to other countries with which the EU has signed a free trade agreement. However, the signing of the trade agreement has a lot of effects and these will be analyzed now:

With the signing of the trade agreement between Peru and the EU it will be easier for Peruvian products to enter into the European market which contains more than 500 million of people. With independence of the other 16 free trade agreements that Peru has signed with other countries so far, the number of potential consumers has the greatest economic impact for Peru so far. However, we should not forget that during the negotiations of the European Commission and Peru the two towers of the Agreement of Association were left aside that made reference to a political dialogue and to a cooperation that should be concreted in a free trade agreement which would permit the liberalization of services, public tenders and investments, etc.

The Treaty gives permanent, reliable and predictable preference access to Peruvian products to the common European market and allows it to introduce into this market a number of goods and services. The new agreement offers Peruvian products more advantages than GSPP[14]. Additionally it will permit a progressive liberalization of the commerce of services.

When the agreement came into vigor (February 2013) it came to a tariff reduction of 99,3,3% which meant a reduction of 100% for the not agricultural products and 75,9% for the agricultural products given the importance and sensibility of this topic in this sector within the European Union.

On the other hand, the EU has the opportunity to export manufactured goods and products to the Peruvian market and to invest capital which allows the European providers to continue selling their products and compensate the decreasing of their sales in the European market during the economic crisis by which Europe has been affected.[15] Considering the situation at the moment the EU has been able to take benefits from the free trade agreement since its investors had the possibility to invest in an interesting destination with great potential and chances. For example, the banking system with origin in Europe (especially Spanish) has established itself in Latin America and especially in Peru and has completed a successful year with great results and in a certain way this has helped to compensate the lacking dynamics of the European market.

With regard to the regulations of the agreement it can be mentioned that the exports have increased and more products are offered now. The products that are offered have become more diversified. The majority of exports from Peru into the EU market are agricultural products[16]. This has contributed to the fact that the conditions of life for thousands of Peruvian families have improved and they have seen that this new export destination can improve their conditions and will result in the fact that extreme states of poverty will be left behind that this country had been confronted with in the past. However, the export of gas and oil has risen as well on a constant level since 2010.

The commercial agreement between the EU and Peru will contribute to improve the level of life of the Peruvian citizens since they will be able to sell their products in the European Union more easily. This way, for example we can say that between 2008 and 2012 the trade balance between the European Union and Peru have been favorable for the last country mentioned before and it can be suspected that in the future due to the liberalization of custom duties that this treaty presents it will continue increasing.

To assure a continuing growth it might be important to establish a system that promotes the creation of cooperatives and mechanisms that facilitate the access to credits and financing for the Peruvian people so that they can obtain a better capacity to respond to the demand for products that come from the market in Europe and that they can develop their skills and capacity in management and business administration. For example, in Peru there are cooperatives for savings and credits. They are businesses of joint property and are managed in an autonomous way and it is their objective to attend the

[14] The agricultural products have a progressive and partial liberalization between 85 and 90 % of the products as well in Peru as in the EU. On the other hand the industrial products and Peruvian fish are free and can enter into the European market since the getting into vigor of the treaty.

[15] We should consider that the President of the United States wants to increase the exports of small and medium sized companies from the U.S. to the Latin American market because these exports mean about four millions of employments for citizens of the United States. Also, he is trying to conquest the market of services. It might be that the European Union has become aware of this new politics of the U.S.A. towards this region and that due to the constant progress has decided to follow the model of the U.S. that has proven to be successful. Before the free trade agreement was signed between the EU and Peru, the second one implemented a free trade agreement with the United States on the 1st of February 2009. Vid. Presidencial Proclamation 8341 – To Implement The United States-Peru Trade Promotion Agreement and for other Purposes.

[16] The EU has kept its subventions for the agricultural producers due to their great importance in the EU, but obviously this practices generates an unfair competence. Also in the area of lacteal products there is a certain advantage given to the milk in powder coming from the EU in comparison with the fresh milk which cannot compete with this range of prices.

needs of their members and partners[17]. We think that the cooperatives are a powerful instrument that can help the Peruvian producers to organize and finance themselves and their activities and to have this way an alternative to the traditional financial system.

It has to be considered that the Micro and Small Businesses (MSB)[18] might also be affected by the free trade agreement between the EU and Peru since the Peruvian industries see themselves replaced by the European companies. This way, for example the Peruvian paper and leather industry that offer a great quality and are of great importance for the Peruvian market could be affected and it could take place a substitution of Peruvian products for European products[19].

Peru needs to improve its business connections and has to strengthen its production circles internally to gain productivity and competitiveness and this way a better distribution of the riches can be achieved that enter into the country. At the same time Peru should strengthen its relations with Bolivia and Ecuador (both members of the Andean Community of Nations which did not come to finalize the negotiations with the European Union and for which reason the negotiations of the Agreement of Association between blocks stopped) because after this process a number of tensions affected in a certain way the process of integration of the Andean region. The process of integration, however, is a process that Peru should not leave aside because of the commercial contacts that it implies and the better position in terms of negotiations that its cooperation would mean in the international scenario (General Secretary of the Andean Community, 2013: 1- 41).

There is a great advantage of the trade agreement. It can count on clear norms, especially with regard to the trade with goods, services and investments. By avoiding insecurity concerns can be abolished that can hinder investments in Peru[20]. The fact that the necessary mechanisms have been established to solve any commercial controversy that can arise with the application of the agreements also is also a great incentive for investments in the country. However, some doubts have risen with respect to the importance that has been given to a political solution between the parties or the recommendation that a group of experts could give when the labor laws are not respected.

Regarding the direct foreign investments in Peru, it can be said that 51,6 % come from the European Union and the United Kingdom. The main sectors are the following: trade, communication, energy, finance, industry, mining, petroleum, services, transport, agriculture, construction, fishing, etc. The sector of communication is the most dynamic one at the moment and capital has been canalized there from Spain, U.K. and Holland.

With improving the grade of industrialization and modernization of the Peruvian companies it will be easier for these companies to be able to enter into the European market. At the same time the European companies should be able to gain experience in a new market with great potential. By getting to know the different tastes and preferences of the Latin American consumers the European companies could use Peru as a platform for future investments in the region. In addition there exists a great opportunity to establish

[17] More information about the cooperatives in Peru can be found in "Texto Único Ordenado de la Ley General de Cooperativas" which was approved by the "Decreto Supremo No. 074-90-TR" from the 14 of December 1990.

[18] According to the recommendation of the European Commission from the 6th of May 2003, based on the Charter of the Small Company emitted from the Council of Europe from Santa Maria da Feira in June 2000, which has gone into vigor on the 1st of January 2005, a small company is an economic union with juridical or physical personality which has less than 10 employees and which annual volume of business or general annual balance does not go further than 2 million of euros, a charging of less than exactly two millions of euros and a balance of 2 million or less euros. Vid. European Commission Recommendation 2003/361/CE, 6 of March 2003 about the definition of micro businesses, small and medium-sized businesses. Within the European Union it was also adopted a "Small Business Act" which is a non-binding instrument for the Member States of the EU to commit themselves to take actions to help and support small businesses. The SBA suggests the following strategy of action: education and formation to promote spirit of entrepreneurship, agilization and reduction of costs for the creation of businesses. Another objective is to facilitate legislation, give adequate training adapted to the needs of small companies and to improve the relationship between administration and businesses by using new technologies. Also the opportunities of the internal market shall be improved, tax and financing, promotion for the new technologies of small companies, support for the globalization of small companies in the new economy. Also the potential and effectivity effectiveness of the representation of the interests of the small company on a national level and on the level of the European Union shall be improved. Vid. Communication from the Commission to the Council, the European Parliament, the European Economic and Social Committee and the Committee of the Regions. Com (2008)394 final "Small Business Act" of 26 June 2008. On the other hand the micro company has been regulated in Peru with the "Texto Único Ordenado" of the "Ley de Promoción de la Competitividad, Formalización y Desarrollo de la Micro y Pequeña Empresa" and the "Acceso al Empleo Decente, Ley MYPE (Decreto Supremo No.007-2008-TR)". In this regulation it is defined that a MASC is an economic union constituted by a natural or juridical, founded with any type of organization or management structure and considered in the vigent legislation. It has to have as an object the development of activities of extraction, transformation, production, commercialization of goods or the providing of services and it should combine two characteristics: the number of employees should not be more than 10 and the amount of maximum sales per year should be till 150 UIT (Tax Unit).

[19] European Commission (2009) Evaluation about the impact about the sustainability of the trade between the EU and the Andean countries. In: http://trade.ec.europa.eu/ doclib/docs/2010/ april/ tradoc_146016.pdf

[20] However, considering the initial fear about investing in this country, it has to be mentioned that Peru has developed a normative framework to protect investments from abroad and has shown a great interest with regard to the international legal order. So, for example, in the Constitution it has to be pointed out the article 70 (that guarantees the invulnerability of the private property). The article 58 (that regulates the private initiative within the framework of a market of social economy). The article 59 (that guarantees the liberty of the companies by the State). The article 62 (that guarantees the liberty of contracting). And other regulations. We should also mention the following norms as a guarantee for the investments: The "Ley Marco" for the growth of the private investment. The Constitutive Agreement of the Multilateral Investment Guarantee Agency (MIGA) of the World Bank. The ICSID Convention of the International Centre for Settlement of Investment Disputes (ICSID), among other dispositions.

certain cooperation between Peruvian and European companies.

There exists a certain risk for the Peruvian companies in case that they are not capable of getting modernized fast enough or that they do not adapt to the new circumstances as required. But the Peruvian companies are also characterized by a great creativity. Also, in Peru the salaries are very low which can be a factor to attract European companies that are trying to get established in this country. However, it is always important that the labor laws are respected, as well as the environmental laws and that the civil society is consulted and not left aside (especially with respect to the Native people) because a situation of social exclusion could affect important sectors of society (people that live in extreme poverty, Native people, women, etc.)

3.1. Effects of the free trade agreement between the EU and Mexico

One of the main effects of the signing of the FTA EU-MX has been the increase of exports of Mexican products to the European market. Among the most important clients of Mexico in the EU can be mentioned countries such as Spain, Germany, the United Kingdom Holland and France and as a total the EU market is made up of 28 countries at the moment and offers access to a number of about 500 million potential consumers which is a great chance and challenge for producers from outside the EU.

European investments have been made in Mexico and they have contributed to the economic growth of the country. The main sectors that the European investments went into were: services (professional, real estate, banking, tourism, hotels, etc.), trade, construction, transport and communications, agriculture, mining, etc. There also entered a great number of direct foreign investments into Mexico, especially from countries such as Belgium (37.7%), Holland (7.6%), Japan (4.4%), Germany (3.6%), United Kingdom (3.3%) and the rest (11.4%).

The FTA EU-MX should be considered as an instrument that permits Mexico to diversify its markets and to reduce the commercial dependence of the United States of North America that has been increased with the NAFTA. As mentioned above the NAFTA is the most important trade agreement that Mexico has signed but with the FTA EU MX it is tried to improve the cooperation and collaboration between Mexican and European. The European Union on the other hand is trying to enter into the Mexican market with its open access that it offers to the United States of North America and Canada.

With the dispositions of the FTA EU-MX, it was regulated that Mexico should enjoy a one hundred per cent tax relief on its industrial products when they entered into the market of the European Union and as the final date was put 2003. Beginning from 2007, the industrial products coming from the European Union and entering into Mexico do the same. But, many of these products come from Mexican branches of European companies. So for example, the exports of Mexican automotive products (that represent more than 17 % of the exports) have assumed an important role within the Mexican exports to market of the European Union. This makes us think that the Mexican industrial exports strengthen the European industry that is being repowered with the industrial products that enter from its Mexican branches into the market of the EU.

It should be mentioned that with the FTA EU-MX certain advantages were granted to the European Union that had not been granted to any other partner with a free trade agreement signed by Mexico at the moment. So, for example it was established that within 10 years starting from the point when the FTA comes into effect a total liberalization of the trade in services would take place.

Considering the situation of Mexico before the FTA EU-MX came into effect in 1999 the exports from Mexico to the European Union had an amount of 4949 million of euros, while the imports of Mexico from the European Union ascended to an amount of 10585. Later after the signing of the free trade agreement the Mexican imports from the EU had risen and reached for example in 2013 an amount of 28000 million of euros and the exports to the market of the European Union had an amount of 19000 million of euros.

However, some of the reasons for this number could be the good performance of the European economy for many years (before the crisis), the stability of Germany (as a motor of the European economy) and the incorporation of the new state members of the European Union. All these factors could have influenced this increase and the increase of the commercial activity does not necessary mean that the Mexican companies have improved their competitiveness or that the Mexican companies have grown.

The fact that many Mexican imports are semi-elaborated could mean that Mexico is used as a fabric of transformation that uses products to later export them again. On the other hand the products that have been imported tend to be products where no transformation has taken place and they include machines and material of transport, chemical products and basic manufactured goods.

With regard to direct investments the FTA EU-MX had the following effects. In order to approve an investment or to grant an incentive for the investment no special requirements were made. State interventions were limited in general and free flow of capital was established. It was also possible to claim the state in case of indirect expropriation. It was the objective to attract capital and technology and thus to strengthen the Mexican industrial sector. But the FTA-EU-MX also established the possibility to take means that prevent the flow of capital when there existed certain risks (for example exchange, monetary or

balance of payments risks.) In case that a risks surged the partner of the agreement would have to be informed and a plan for elimination developed. In general we have to indicate that these dispositions are common in all free trade agreements.

In the following part of the investigation we will analyze the need to introduce changes to the free trade agreements.

4. Possible modifications of the free trade agreements

The free trade agreement between the EU and Peru recently came into vigor in 2013 so the effects of the free trade agreement are currently being observed and it is too early to start thinking of modifications of the free trade agreement. Once the treaty has been well implemented there will come a moment to revise and to reconsider the benefits, effects, problems and other aspects of the agreement between Peru and the EU.

The free trade agreement between Mexico and the EU however has been in vigor since 2000 and for this reason and the fact that circumstances in economy, politics and finance have changed it is reasonable that modifications of this free trade agreement are considered and made according to the wishes and suggestions of Mexico and the EU.

In fact the representatives of the European Union and of Mexico already have had meetings to discuss possible modifications that would permit modernizing the agreement. The European Union would like to modernize the FTA because it wants to achieve that the European companies have better possibilities to benefit from the constitutional reforms that have happened in Mexico in the service, telecommunication and energy sector. Mexico on the other hand would have an interest in obtaining the complete liberalization of the agricultural and fishing products.

After analyzing the situation and considering different approaches and possible solutions the European Commission will elaborate a report and possible modifications or a reform proposal will be suggested. With this report a final decision will be prepared and taken. The European Union will address the chapter of financial services and will realize certain changes. It will also include a chapter which is concerning sustainable development and which will establish clear and binding commitments. The authorities of Mexico on the other hand would like to start the negotiations in 2015 to update the FTA EU-MX that was signed in 2000. They consider that Mexico has not benefited enough from the free trade agreement. They think that foreign direct investments have not created new jobs for Mexican people and that it was merely used to buy companies rather than to build new ones and to create new jobs. They would also want to improve the development of small and medium-sized Mexican companies.

By carrying out this revision the FTA EU-MX is also looking for the adaption of the transatlantic negotiation that is taking place between the European Union and the three states parts of the NAFTA. At this time the European Union and Canada have signed the Comprehensive Economic and Trade Agreement (CETA) that tries to improve access of European services (finance, telecommunication and transport) to the Canadian market. And the European Union and the United States of North America are negotiating the Transatlantic Trade and Investment Partnership (TTIP).

The negotiations of these three state members of NAFTA (Mexico, United States of North America and Canada) all have the objective to strengthen their commercial relations with the European Union and to improve the conditions for trade. At the same time they have to consider and to respect their own markets and their partners and the commitments assumed by them in the NAFTA agreement. So considering these changes and tendencies it might be the perfect moment to revise the FTA EU-MX. With the experiences obtained in the last years it could be an excellent opportunity now to modernize it and to adapt it in a better way to the requirements of Mexico and the European Union. Also new areas of interest of both parties might be found and new synergies could arise.

Conclusion

The free trade agreement between the European Union and Mexico or Peru does not automatically generate a greater flow of trade or commercial activities. It just provides new opportunities and at the same time new challenges for the Latin American companies, especially the small and medium-sized ones.

In order to benefit from the advantages of the free trade agreements it is necessary for Latin America to develop strategies that will strengthen its competitiveness with regard to the competence from Europe and third countries. Latin America will have to gain more experience and invest in innovation, education, infrastructure and development to be able to obtain a stronger position against products coming from outside of the region and to promote its own products going abroad. The new industrial sector has to be strengthened and Mexican and Peruvian entrepreneurs have to receive more support in order to compete with the producers of other countries. It is also necessary that the small and medium-sized companies from Peru and Mexico participate more in the productive chains of foreign companies that have invested in the region and that they are taken into account for production cycles. This way a greater number of people will be able to benefit. But especially in the beginning the states will have to give access to resources and means so that Mexican and Peruvian companies can become more competitive.

It is important that Mexico and the European Union adapt and modify the free trade agreement according to the real needs of the Mexican community

and that more benefits for Latin America and its economy can be generated. In this dialogue it is fundamental to give attention to the interests and concerns of the civil community and that the free trade agreement leads to the creation and development of new poles of development for Mexico and Latin America so that its people can benefit more from these agreements.

Peru and Mexico should not lose the opportunity to interact in such an important market. However, they should not concentrate on only being an exporter of primary material (mainly combustibles and mining products). They should try to invest and to improve the sectors that need to be more developed. Obviously the success of the products of a country does not only depend on the product but also on the market it is entering into and the institution and companies of these countries. For this reason subjects such as competence have to be considered by the parties of the free trade agreement just as well as the industrial and technological development of the country where the products are coming from.

On the other hand the European Union has found two strong partners in the Latin American region that continue to grow constantly and that have taken the opportunity to establish a cooperation between them and the European Union. The EU, Mexico and Peru should benefit from this ties and all parties should continue to promote trade, innovation, transfer of technology, etc.

Additionally this agreement presents an excellent opportunity to promote European values such as the protection of the fundamental rights, sustainable growth, respect for the environment, etc. These subjects are important aspects of the European Community and should be promoted and be made an important part of the free trade agreements.

COOPERATION VS. COMPETITION IN CENTRAL ASIA

Veronica MIHALACHE*

Abstract

The present study highlights the cooperation-competition ratio in the Central Asia region aiming at maintaining a force balance between Russia and China – as main state actors of the Shanghai Cooperation Organization (SCO), and avoiding the dominance of a state over the other member states of the Organization.

Our paper attempts to identify the theoretical arguments that might render a better insight in this organization as a framework meant to mutually balance influence between Russia and China, with the purpose of reciprocally monitoring and limiting their power in a region considered the core of SCO – from a geographical point of view and from the point of view of the two powers' interest.

On the other hand, we should take into account that promoting multipolarity in the global politics is a common interest of China and Russia; both countries started to exclude, to various extents, the Western powers' interests in Central Asia.

Keywords: *regional cooperation and competition, mutual balance, multipolarity, Central Asia, Shanghai Cooperation Organization.*

1. Introduction

In the specialized literature concerning the analysis of the Shanghai Cooperation Organization, studies can be divided according to the identified goals and internal mechanisms based on which the organization is governed. Therefore, the Shanghai Cooperation Organization was described either as the symbol for detente in the relations between Russia and China or as a form of cooperation, aiming at both maintaining equilibrium of power between Russia and China in the region and avoiding the dominance of one country over the others; it was frequently referred to as an anti-American alliance. There are mainly four perspectives upon the Shanghai Cooperation Organization: it represents an expression of regional collaboration aiming at countering terrorism (and subsequently extremism and separatism, which generate the "three forces of the evil" stated in its documents), a mechanism used to restore (normalize) the Sino-Russian relations, counterbalance the United States and determine mutual balance between Russia and China.

None of these theses typify an exhaustive approach of the emergence and further development of the SCO. The main reasons concern the lack of a systematic approach of the organization, the lack of more precise information regarding its activities and also precarious consistency of proofs advanced to sustain one of the theses.

2. SCO, an expression of...

...regional cooperation against terror

One of the perspectives regarding the Shanghai Cooperation Organization conceives that the goal and motivation behind its foundation are to provide a framework for the regional cooperation against terrorism in Central Asia. From this point of view, the central pillar in the development of the Shanghai Cooperation Organization consists of the necessity to forestall the intensification of terrorist activities that threaten the regional stability and security. For example, Richard Weitz highlights the common view that Russia, China and the other four member states from Central Asia share regarding the Islamic terrorist - separatist groups – these are currently considered one of the most serious security threat, carrying the potential to destabilize the entire region of Central Asia[1]. The same point of view is shared also by Subodh Atal[2], who vividly depicted the fear of Chinese leaders of a possible Islamic rise in the region Xinjiang in the North-East of China, whereas Russia is rather disturbed by the challenges posed by the Chechen separatists. Moreover, the governments of the other four SCO member states from Central Asia (Kazakhstan, Kyrgyzstan, Tajikistan and Uzbekistan) face, at different levels, the problems posed by Islamic separatist groups.

Furthermore, the Russian expert Alexander Lukin[3] shows that the region of Central Asia became "aware" of the threats rendered by the international terrorism of the late '90s, before the terrorist attacks

[3] Alexander Lukin, *The Shanghai Cooperation Organization: What Next?*, Russia in Global Affairs, Nr. 2, July-September 2007, accessed May 17, 2008. http://eng.globalaffairs.ru/numbers/20/1135.html

from 09.11.2001, and thus the countries cooperate with the view of enhancing mutual solutions of counteracting Islamic terrorism and separatism, this being considered the main cooperation domain in the field of regional security[4].

Eugene Rumer[5] states that the interest of Russia in SCO lays in the „obvious «maliciousness» of Islamic radicalism", and that for the countries in Central Asia it is „clear the advantage of having two close allies in their own fight against Islamic supporters in the United Nations (UN) Security Council – Russia and China".

...restoring (normalizing) the Sino-Russian relations

Several analysts support the idea that SCO was founded in order to facilitate the normalization of the Sino-Russian relations. From this point of view, SCO can be considered the Central-Asian version of the Organization for Security and Co-operation in Europe (OSCE) and a symbol of detente between the main players of the organization. For example, this is the view of N. Norling and N. Swanstrőm, who conceived that "Shanghai Cooperation Organization was very successful in creating a climate of trust between member states by directly involving them in the process of preventing conflicts"[6]. Furthermore, the two experts added that strengthening the trust generated substantial and efficient effects. They also emphasized the lack of effective military joint actions in order to conclude that the cooperation did not exceed the normalization framework and that the immediate success of SCO was due to the modification of the common norms, shared interests and "progressive approach" [7] that led to arms reduction in the region. Nevertheless, they mentioned and elaborated on the economic collaboration between 1998 and 1999, which also had a series of positive consequences, but not reliant enough to tackle the arising conflicts, to fight against the militant organizations or to approach the disputes over the borders. For this reason, the intensification and institutionalization of cooperation, under the aegis of Shanghai Cooperation Organization, was strongly required.

In the same manner, Richard Weitz demonstrated that the founding of SCO represented an institutionalized expression of the Russian and Chinese common interests in managing the insecurity from Central Asia, a need focused on "strengthening trust by imposing restrictions upon military deployment".

...Counter-balancing the United States of America

This approach can be found in the work of Sun Zhuangzhi, who considers that „Russia and the Central-Asian countries would want to join China in a balance of power concerning the USA, and this would directly serve the interests of the Organisation"[8].

In the same manner, Subodh Atal mentions that the defense policy that China pursues aims at „reaching the geopolitical goals through multilateral dialogue and cooperation, preventing this way the emergence of American unipolarity"[9]. If this thesis proved to be valid, SCO would bear the most profound implications, not only for the regional and international security, as it would represent the beginning of a new multipolar order, but also for its impact upon the theory regarding the balance of power, whose expectations seem to be argued against by the last two decades of unipolarity.

...mutual balancing between Russia and China

From this point of view, Shanghai Cooperation Organization should be considered a framework in which the mutual balance of influence between Russia and China develops. In other words, Russia and China created a security organization with the view of monitoring and mutually limiting their power and influence, in order to avoid the possibility of a country to become more dominant than the other.

This view over SCO is, for instance, also promoted by the foreign policy expert Subodh Atal. As a supporter of the regional cooperation against terrorism thesis, he noticed that certain voices from Russia manifested anxiety when it came to the possibility that the power and superiority of China would increase, insofar as to predict the likelihood of transforming Russia into a vassal[10]. Moreover, it warns about the fact that Russia initiated proceedings to introduce India within SCO as an observer, aiming at balancing the Chinese influence, whereas China at its turn insisted that Pakistan would be included in the

[4] Some events are already well-known: the war of Russia against the Chechen separatists; the civil war in Tajikistan supported by the radical Islamic opposition; the terrorist activities of extremist groups advocating for the autonomy of Xinjiang region and the violent clashes burst between the Tibetans and Chinese law enforcement authorities; radical Islamist migration in Kazakstan, coming from neighbouring countries; the attempt to murder the Uzbek president Islam Karimov; the problems generated by the radical groups in Kyrgyzstan etc.

[7] The progressive approach can be explained by the fact that the SCO member states concentrated on a limited number of problems, and as these were tackled and dealt with, the author starts referring to the compatibility of the norms/values these countries have, given the fact that they are rather weak and fear an external intervention

[10] Idem

organization in order to prevent the formation of a Russia-India alliance.

Moreover, Eugene Boris Rumer appreciates further on that this competition for regional influence and dominance between Beijing and Moscow is actually the symbol of Shanghai Cooperation Organization. Especially for China, SCO consists of a tool to replace Russia from its role of main player in Central Asia[11].

Nevertheless, we believe that each of the previously described theses is characterized by different grades of generality, generating contradictions due to the following reasons.

First of all, as far as the regional cooperation against terrorism is concerned, its plausibility diminishes if we take into consideration the fact that the United States of America, despite their wish to be offered the status of observer within the Organization, were not invited, whilst countries such as Iran, Pakistan, India and Mongol obtained it[12]. This might represent rather an insolence, as the USA, Russia, China and the central-Asian member states of SCO already agreed on the necessity of fighting against international terrorism. Moreover, as the former American Secretary of Defense, Donald Rumsfeld, remarked, it is rather intriguing that Iran, a country well-known for the support provided to international terrorism, was invited as the main observer within an organization whose paramount goal is to eradicate terrorism.

Secondly, regarding the thesis of detente, this has undoubtedly a descriptive character, taking into consideration the sustained efforts made by China and Russia in order to solve the border dispute and to reduce the military tensions from the border line. The detente began during the '80s and intensified between 1989 and 1996. The objectives established – facilitating the process of drawing the borders, reducing the troops and strengthening power – were mainly accomplished the moment Shanghai 5 was created, in 1996. Hence, a treaty regarding the troop reduction was signed in 1997, and the border dispute was almost entirely solved by the year 1999 (except for Tajikistan, for which an additional agreement was signed in 2002). Thus, the theory of detente is valid when describing the normalization of the Sino-Russian relations, but it does not offer a plausible explanation of the reason why the SCO was founded and how it facilitated the whole process of detente.

Thirdly, a few objections were elaborated on the subject of balancing the United States. For example, based on several empirical data, Alexander Lukin[13] stated that „it is groundless to consider the SCO a hostile anti-American group" because in fact all the SCO member states are very interested in having an intensive economic cooperation with the United States, since they have to adapt to an economic system ruled by the United States, if they strive to develop from an economic point of view. Therefore, the creation of an anti-American alliance would contradict their economic interests. Nevertheless, a classical concept of the realism is that a problem countries face is the trade-off between the prevalence either of economic or security objectives. Moreover, it is perfectly true that more benefits can be dragged from a strategy of *bandwagoning*[14] with the unipolarity of the USA than its conterbalancing, even though the *bandwagoning* can also record side effects, putting the state at the risk of becoming a victim of the hegemon state. Another critique was advanced by Alexander Lukin, having as the main argument the content of the official documents of Shanghai Cooperation Organization. In the Declaration of Shanghai Cooperation Organization, art. 2, letter e), it is mentioned that "OCS is not intended against other states or international organizations". This argument though, does not stand given the fact that anti-American attitude can be read between the lines of the Declaration of SCO. Last but not least, the approach of the SCO as a tool for regional balancing is jeopardized by the fact that Russia provides People's Liberation Army with high performing weapons. This comes in contradiction with the fact that the two state actors are trying to maintain latent the influence and power of one over the other. Moreover, the regional balancing is in direct contradiction with the perspective of detente, the Sino-Russian relations having improved and restored a great deal compared to the period of the Cold War.

3. A possible theoretical approach

Formalizing the close relations and creating Shanghai Cooperation Organization proves the theory of structural realism, according to which the international system is anarchic[15] - an environment where there is no sovereign to hold power over the use of violence[16]. An essential characteristic of "life" in an anarchic system is that states tend to pay a great

[11] Eugene B. Rumer, *Op.cit.*

[13] Idem
[14] More extensively in Stephen M. Walt, *Alliances; Balancing and Bandwagoning*, accessed March 13, 2015. http://www.ou.edu/uschina/texts/WaltAlliances.pdf.
[15] Anarchy represents a problem for the main actors of international politics – the states – because anarchy allows the most powerful to exploit and dominate the weakest due to the lack of an arbitrator or a global entity having the power to prevent this situation. This means that states have to rely on their own capabilities with the view of providing their own political independence and physical survival.
[16] Kenneth Waltz, *Teoria politicii internaţionale*, Iaşi, Ed. Polirom, 2006, 167-179.

deal of attention to their relative capabilities[17], because these capabilities are considered to be their key to survival – not only from a physical point of view, but also from the political perspective of maintaining the state autonomy and political independence. Given the fact that states are protected from the abuse of more powerful states based on their relative capabilities, international politics tend to become a competition for acquiring and strengthening relative power and influence. States try to improve their entire range of capabilities, in particular their economic and military power, because the use of military power by other states against them can be disastrous.

Beside all these, structural realism sustains that, in an anarchy states fear a concentration of capabilities, this being able to threaten their own position of relative power[18]. Hence, it can be concluded that counter-balancing the others' power is a predictable strategy pursued by states in general and especially by the most powerful ones, due to the fact they have a chance to defend themselves in case one of them rises over the others.

In addition to the balance of power theory, the realists believe that states can also engage in main strategies of *bandwagoning* (alignment), maintaining the current *status quo*, maximizing the revisionist power[19]. Nevertheless, balancing in the case of unipolarity is much more complicated than in the case of bipolarity or multipolarity due to the great difference between first line states and second line states, which actually make the balancing possible, but which also hit some additional "barriers". Several realists consider that the barriers of the balancing in a unipolar system make this option totally impossible[20]. Others consider that balancing is still a viable option in an international unipolar system, but not in the traditional shape that implies investing in the army, war alliances and technology transfer[21].

Balancing can have different degrees of intensity. The form with the least intense level is called *buck-passing* (passing the responsibilities), which involves the preference of a state to see another state being severely counterbalanced, but at the same time, to hope that a third state would assume the risk to do it[22]. The halfway between a *hard* balancing and *buck-passing* is the *soft* balancing. The best theory of the *soft* balancing concept belongs to Robert Pape[23]. According to him, *soft* balancing aims at opposing a leading state without involving a direct approach. On the other hand, by using *soft* balancing, the states intend to place obstacles in the way of the superior state or coalition by increasing the costs of maintaining the *status quo* through employing four methods: imposing a ban on using their territory, diplomatic movements, creation of exclusive economic alliances, providing solutions through diplomatic collaboration. Thus, the three forms of balancing can be seen as being situated on a scale, with their place determined by their intensity.

In short, we believe that the key to the emergence and evolution of Shanghai Cooperation Organization stands in a mechanism of balancing, as a response to the United States unipolarity. The theory of structural realism concedes this expectation. In the current international system, the major power from the second line has to engage in the process of counterbalancing the United States due to a change in the distribution of power that took place at the beginning of the '90s in favor of the USA, on the background of the USSR collapse, permitting the emergence of a unipolar system. Therefore, given the fact that *hard* balancing is both hard to accomplish and very risky in a unipolar world, it is more likely that states would choose a *soft* form of balancing, at least at the beginning.

4. Conclusions

In conclusion, there are three major moments in the evolution and development of SCO. First of all, the organization (Shanghai 5) was created in 1996, in the context of the USA/NATO intervention in Bosnia, NATO decision from 1995 to expand and also the consolidation of the relations between USA, Taiwan and Japan in 1996. The second milestone of the organization was found in 2001, following the war from Kosovo, the war against terror promoted by the USA in Afghanistan and the retreat of the USA from ABM Treaty. Last but not least, SCO was consolidated and it received a military dimension after the war against Iraq in 2003 and the Iranian nuclear crisis from 2006-2007. In short, the flux of events indicates the fact that SCO can be considered a reaction determined

[17] According to Waltz, the relative capabilities of a state are defined as an aggregate system compound of the size of the territory, population, military power, economic power, resources possessed, political competence and stability.

[18] The improvement of the relative position of a state is a desirable result, although states are much more concerned of a decline. This concern is due to the fact that the deterioration of the international position triggers, in the worst case scenario, a disaster and, in the best case scenario, less maneuvering space.

[19] The four main strategies, balancing, *bandwagoning*, maintaining the *status* quo and maximization of power are large categories that carry several dimensions of variations.

by the actions of exerting and expanding the American international power and influence. More precisely, measures were adopted the moment when the United States actions affected the neighboring area of SCO member states. This cannot be interpreted as if the expansion of American influence and power were the only spring of the development of SCO, but it certainly proved to be of great importance.

On the other hand, Russia became rapidly aware of the rise of China as a key state in Central Asia, context in which the creation of SCO becoming of great use. For China, Shanghai Cooperation Organization is a real tool used for expanding the political influence in the region of Central Asia, given the fact that it had already been created a large platform of interactions with the central-Asian republics. For Russia, this platform was useful as an instrument of monitoring the actions of China and preventing the Chinese dominance. An indicator for the reluctance of Russia to rely very much on China is the fact that Moscow designed the plan of the pipeline from Far East, preferring Japan to the detriment of China, the consequence being the share of its economic dependence.

Bobo Lo, maybe the most seasoned expert in Sino-Russian relations, suggested at the end of an extensive study[24] that he dedicated to this issue: „The strategic partnership between the two countries is a complex one, characterized by ambivalence and ambiguities, in which the reality is far from the appearances." Furthermore, Lo writes that this strategic partnership is an opportunist engagement, an axis of convenience. Other authors rushed into wondering whether we deal with strong and real relations or with a „marriage of interest" [25]. The Sino-Russian relations, especially the manner in which they developed lately, deserve a more thoroughly examination from a geopolitical and geostrategic point of view.

TO BE IS NOT-TO-BE: NIHILISM, IDEOLOGY AND THE QUESTION OF BEING IN HEIDEGGER'S POLITICAL PHILOSOPHY. PART I: BEING AND TIME

Mihai NOVAC*

Abstract

Heidegger's political preoccupations came more explicitly to light after his provisional flirtation with and subsequent rejection of Nazi ideology. Knowingly, his initial interest was far more ontological in nature. On the other hand, that doesn't mean that his Being and Time period was not rich in substantial subjacent political presuppositions and implications. The main focus of my present endeavor lies precisely therewith: basically this is an attempt at a non-esoteric conceptual reconstruction of Heidegger's philosophical path with a special interest in its political presuppositions and, maybe more importantly, implications. Its guiding thread is the relation between the question of Being (Seinsfrage), the so called Dasein (with special emphasis on the Being-towards-death/Sein zum Tode) and his notion of authenticity (Eigentlichkeit as being one's own). As such, what we are dealing with here is some sort of Heideggerian political existential analysis. Thereby I will try to provide (i) a sufficient thematization of the subjacent political stratum of his thought in Being and Time, ii) an account of his flirtation with and, especially, rejection of Nazi ideology as part of (iii) a more general critical analysis of ideological modernity as essentially conducive to nihilism (the so called forgetfulness-of-Being, in its political sense, approximately Heidegger's version of alienation). In conclusion I will try to argue for an individualistic interpretation of Heidegger's political philosophy, one which is essentially opposed to Nazi ideology (as well as to any political ideology whatsoever for that matter). This is the first part of the aforementioned endeavor, corresponding to Heidegger's Being and Time period.

Keywords: *Being (Sein), being (entity/Seiende), Nihilism, Dasein, authenticity (Eigentlichkeit), ideology.*

1. Introduction

The concept of nihilism offers a good starting point in understanding Heidegger's political philosophy. As a *formal* characterization of the corresponding phenomenon, Nietzsche's following insights suffice for now:

"2

What does nihilism mean? That the highest values devaluate themselves. The aim is lacking; *why?* finds no answer.

3

Radical nihilism is the conviction of an absolute untenability of existence when it comes to the highest values one recognizes; plus the realization that we lack the least right to posit a beyond or an in-itself of things that might be *divine* or morality incarnate. This realization is a consequence of the cultivation of *truthfulness*- thus itself a consequence of the faith in morality."[1]

As such, the basic idea behind nihilism would be that there is no *ground*, no necessarily and universally valid principle to any of our ontological, epistemological or moral claims. Noticeably, generally speaking, we could say that there are two main facets of nihilism: the first, metaphysical, the second, moral (the latter usually deriving from the former).

i) With respect to the metaphysical one, the basic claim would be that there is no principle or eternal being, underlying the perpetually changing flux of human experience. Moreover, things themselves, to which we *naturally* ascribe a more or less distinct and stable identity, are not at all as such, but only, provisorily, *appear* to be so (usually due to an inherent identity-seeking propensity of human consciousness), however actually being placed in a permanent state of flux governed by a completely chaotic bundle of impulses. In a nutshell: chaos is the basic feature of the world.

ii) Consequently, if *becoming is all there is*, thereby no eternal ground, no truth subjacent to existence as a whole, then it would appear that, in the words of Ivan Karamazov, *everything is permitted*: in the absence of God there is no immutable standard for good and evil, therefore all moral claims being historically relative and having more to do with ideology, i.e. *the self-righteousness of power*, than with a truly universal human ethics.

I will not provide here a substantial account of the emergence of nihilism in European culture. I have done that elsewhere.[2] Generally and traditionally, nihilism has been criticized for its anomic potentiality: it has been said that when/if adhering to the *general public*, i.e. becoming an actual Weltanschauung-possibility, nihilism would effect (a) the renunciation, on part of the individual, to any *higher aspiration* in

* Lecturer, PhD, "Nicolae Titluescu" University, Bucharest e-mail: (e-mail: **novmih@yahoo.co.uk**).

favor of some sort of *Carpe diem! hedonism* embedded in a (b) Hobbesian general political Lifeworld. Knowingly, the history of the 20th century certainly does not fall short of providing substantial arguments in this respect, with the World Wars being the most notorious, however most certainly not the only, examples thereof. More to the point, as Nietzsche had already warned, 19th century positivistic optimism itself would be undermined by nihilism: if *God becomes dead* than, however secularized, truth and the entire axiological infrastructure resting on it falls along with it. A great deal of both Continental and Anglo-Saxon philosophy, in the first half of the 20th century, could be understood as an, explicit or implicit, attempt at coping with this crisis. Heidegger's philosophy itself could be interpreted as one particular endeavor in this respect, partly capitalizing on Husserl's phenomenology, on the one hand, and Nietzsche's and Kirkegaard's existential philosophies, on the other. Heidegger, however, set about from a new and rather revolutionary angle: to him, the *source and core* of the crisis, was neither epistemological, nor axiological in nature, but rather ontological. In short, its basic feature would consist in the so called *oblivion* or *fogetfulness of Being* (*Vergessenheit des Seins*) stemming from a confusion which is structurally embedded in the entire European culture and Lifeworld: the (mis)interpretation of Being (*Sein*) as entity (*Seiende*), i.e. in *lay terms*, of existence as object. This is his basic initial distinction in *Being and Time* and will consequently draw our attention for the *time-being*.

First, *entity*. For our initial purposes, suffices to say that, for Heidegger, *entity* stands for *any-thing that is*, i.e. corporal beings occupying space in the world: trees, cars, hammers and, of course, humans (in their strictly physical capacity). Provisorily, the Cartesian notion of *res extensa* would be an approximation in this respect.

Secondly (and more complicatedly), *Being*. Generally with Heidegger, I think there are three *reciprocally supervenient* meanings of the notion of Being:

i) the formal-naive connotation: the very *act of being*, i.e. of holding a more or less determinate place in the realm of the real;

ii) the *interdeterminative* connotation: the *relational background*, as I have mentioned elsewhere[3], to which a thing belongs, namely "in which (without our explicit knowing) the respective thing is embedded and which *makes it be precisely that which it is*. As such, what a thing *is*, is determined by the world to which it belongs, namely by the way it, with its specific role and function relates to other things, themselves provided with their own specific roles and functions, *in nuce* by its *Being-connection*. Any particular thing is made possible by a preexisting world which, as long as it is understood, the thing opens. Thus, the entity becomes apparent in its Being, and phenomenology, precisely as long as it is capable of bringing to light (*Aufweisung*) and legitimating (*Ausweisung*) its connection to the Being, becomes (…) ontology."[4]

iii) the existential connotation: what we (but not Heidegger) could call self-awareness, i.e. not *just being*, but being conscious thereof. In this respect, Heidegger restricts the use of the term *existence* to human's (Dasein's) mode of being, as Dasein is the only entity which *does not solely be*, but specifically maintains a constant relation to itself, i.e. permanently understands itself with respect to its own possibilities of being. As the original Latin meaning of *existentia* implies, by existing, Dasein is not just identical with itself, but is, at the same time, outside-itself, i.e. *stands forth to* and thereby *steps out of* itself. In rather Kantian terms, we could say that Dasein is both *transcendental* and (self)*transcendent*. Consequently, for Heidegger, at least during his *Being and Time* era, Dasein is the very *gate to* and *of* Being[5]. More on this later on.

As such, as stated earlier, the question of Being, i.e. *What is Being?*, correlatively *What does it mean to be?*, constitutes both the basic problem of philosophy, in the narrow sense, and the horizon of human existence, in the wide sense – basically, for Heidegger, any conceivable form of human existence (individual *lived-life*, artistic manifestation, cultural configuration etc.) represents, consciously or not, the articulation of a particular understanding of the act of being, a more or less specific answer to the question of Being if you will. And, for some reasons which we will discuss later on, this question has *fallen into forgetfulness*, has ceased to be asked, or better put *performed* and, consequently, we have lived for a very long time[6] lacking an actual preoccupation with Being – bluntly, we have lived without actually knowing it: nihilism is the consequence of this phenomenon.

In other words, according to Heidegger, the founding fathers of the European Lifeworld, i.e. those thinkers that grounded the framework of our existence as Europeans have articulated and passed down a distorted and restrictive understanding of Being, i.e. one that didn't allow the reiteration of the question of Being (which normally should be reenacted with every new cultural configuration, or individual destiny). The very categories and language of our thought and human interaction are, according to Heidegger, tributary to this traditional misinterpretation of Being which followed an ever degenerative path up to the (post)modern age – therefrom, our alienation from our

[3] Mihai Novac, "Esse in Anima: The Phenomenological Ontology of C.G. Jung" in *Applied Social Science: Science and Theology*, Michele Marsonet & Georgeta Rață (Ed.) (Newcastle : Cambridge Scholars), 2013, pp. 79-87.

[4] Idem

[5] That is, of Dasein to Being, and of Being to the world.

[6] After Plato actually.

lives and Being, namely nihilism. That is why Heidegger states that the history of European thought and culture is in fact the history of the *withdrawal of Being* (form the world).

To Heidegger, the sources of this historic distortion are to be found with the very origins of our thought, namely the ancient Greek thought and more particularly Plato. In short, the *oblivion of Being* conducive to nihilism is the gradually sublimated product of the Platonic definition of Being as *immutable presence*, i.e. as perpetually identical and unchanging. In other words, according to Heidegger, Plato's answer to the question of Being was so powerful and (apparently) *natural* that it was taken as definitive, as the only possible one, and consequently the question as such has been forgotten. However, Heidegger claims this was wrong as (i) Plato's definition itself is unsatisfactory and, more importantly, (ii) the question of Being is more important than its answer, as the former is the very driving force of human existence, both individually and culturally.

On the other hand, for Heidegger, just as for Nietzsche, nihilism is not necessarily a strictly negative, but rather an ambivalent phenomenon: on its negative side, it is true that it is conducive to the forgetfulness and negation of Being, culturally, socially and politically manifested through an *overinstrumentalization* of the world, nature and, ultimately, Dasein itself, but on its positive side, it also brings about a potential cleansing of Dasein's *existential horizon* of its deep-rooted misinterpretation of Being, thereby enabling the potential recuperation of our primordial, *abysmal-interrogative* if you will, relation to it (manifested, for example, in the thought of Parmenides and a few of the other pre-Platonic Greek philosophers). In short, for Heidegger, nihilism is the last stage of a sickness which has to be left to run its course as it brings about the death (or rather *suicide*) of an already much too distorted and crooked organism – in this case, apparently, precisely *that which kills us, makes us stronger*. More on this, later on.

As such, a very unfortunate way of reacting to nihilism would be, according to Heidegger, to see it as a recent deviation from an authentic and beneficial tradition which would then, supposedly, have to reinstated (as, for example, the conservatives, Dostoyevsky, Tolstoy and, ultimately, Husserl himself had done). As previously mentioned, the adequate way of relating to nihilism would be to understand it as a direct expression of the essence of Western tradition, thereby enabling or, actually, imposing its entire rejection and subsequent restatement of the question of Being which has been all this time precluded by it.

Knowingly, Heidegger's first (famous) confrontation with the problem of nihilism took place in his 1927 *Being and Time*, which could be generally seen as an attempt at determining the meaning of Being by an analysis of the human being (*Dasein*) in terms of temporality, that is, an understanding of the relation between Being and time by examining the way in which they coexist in (or rather *as*) Dasein. As we have seen before, the question of Being constitutes, for Heidegger, the source and ground of all *ontologies*, i.e. ways and realms of being (and Being) and, as such, of the entire human understanding and existence. Therefore, by forgetting the question, human being actually loses its ground[7] (*Grund*) and, consequently, its freedom (as Heidegger will show in his 1930 lecture on *The Essence of Human Freedom*). As a consequence thereof, human being becomes reduced to a post-modern version of what Nietzsche called in his *Thus Spoke Zarathustra*, *the last man* (*der letzte Mensch*), the antithetical alternative of the *Übermensch*, a mere *calculating animal* governed solely by pleasure seeking and self-preservation and living the gregarious and collectively predetermined life of the *hive*.

However, how did the question of Being come to be forgotten? Generally, we could say that Heidegger gives, along his work, three, progressively fundamental, answers to this question, which I have called, (i) the cultural, (ii) the existential and (iii) the ontological. As yet, we have not discussed all the concepts necessary for an in-depth analysis of the three; however, we have enough for a quick summative preview. A propaedeutic observation relating to the first two *layers* of the forgetfulness of Being: Being came to be forgotten in a very unusual way, that is precisely by being generally taken as self-evident – in other words, precisely because everyone thinks to know, from the very beginning, what *being/Being* means, nobody bothers asking anymore. That is because almost everybody understands this question as *What does it mean for something, or rather, some-thing to be?*, Being is from the very start, from the very initial preconscious formulation of the question, understood as belonging to and being defined by *Thingness* (*Dinglichkeit*). On the other hand, this is not necessarily a self-evident equivalence, i.e. the proposition stating the identity between Being and Thingness is not apodictic. Hence, before stating it, one should examine, first, its source and, then, its comprehensiveness, i.e. whether Thingness is all there is to Being, if you will.

As previously stated, according to Heidegger, the sources of this *reification* of Being displayed by our (post)modern world are threefold: (i) cultural, thereby involving some specific aspect of European culture, (ii) existential, thereby involving some aspect of Dasein and (iii) ontological, thereby involving some peculiarity of Being as such.

This is a personal summative reconstruction of Heidegger's view on the matter. As with any reconstruction, this is bound to involve a certain

[7] Which in fact, as we will see later on, ultimately reveals itself as an abyss (*Abgrund*).

degree of rearrangement and reformulation of Heidegger's arguments. However, while doing so, I think I have remained true to the spirit of his work.

As I have already pointed out, in his understanding, the (i) cultural or intellectual origins of the reification of Being can be traced back to Plato as he originally articulated and handed down a distorted, i.e. reciprocally exclusive, understanding of the relation between Being and time. More explicitly, with his notion of Idea (*ἰδέα*) Plato introduced a definition of being as perpetual presence, which by its unchanging and transcendent character stood in complete opposition to the temporal realm. According to this definition *everything that really is*, has to remain so, i.e. *precisely the way it is*, throughout eternity. Consequently, everything that at some point or another *ceases to be the way it once was*, i.e. disappears, fades or changes, displays a certain degree of participation to the opposing side of Being, i.e. *nothingness* and thereby belongs to Being only in a secondary, provisory and *apparent* manner. As such, from this perspective, physical entities occupied an intermediary realm between Being and nothingness: in opposition to the latter, they *were for some time*, in opposition to the former, *only for some time*. In a nutshell, starting with Plato, the dichotomy between Being and time became the grounding distinction of all European thought.

However, from this perspective, within the temporal realm, some entities remained identical for a longer time than others, this meaning that they participated to Being to a higher degree, than the others did. Thereby emerged a subjacent hierarchy of entities, depending on their degree of participation to Being, displayed in their perdurance (i.e. the amount of time they occupied) – Aristotle's system of categories and its latter scholastic version, the Great Chain of Being, are among its most influential forms. Within this hierarchy, human beings themselves occupied a place which was mostly inferior to other physical entities – as it was obvious that many of the latter endured a much longer time than humans did. As such, in order to overcome its transitory character and adhere to the higher positions of this ontological hierarchy, human consciousness progressively sought to emulate physical objects, i.e. tried to *make itself in their image*. Modern positivism, socially engendered by the industrial ideologies (be it capitalist, be it communist or be it national socialist), is, in Heidegger's view, the apex of this historical tendency towards the reification of consciousness which brought about the alienation of Dasein from its specific way of *Being* and, thereby, nihilism. In a nutshell, an improper understanding of Being led to an improper self-understanding of Dasein itself: paradoxically, in its attempt to avoid nothingness, Dasein has lost itself. However, according to Heidegger, we shouldn't hold Plato solely responsible for this fact, as it was not by coincidence that precisely his reifying view was preferred over the other, more *abysmal* ones (as displayed by Parmenides, Heraclitus or the Greek tragedians).

And this brings us up to the (ii) existential source of the forgetfulness of Being. Basically Heidegger, at least in his *Being and Time* era, tried to understand the forgetfulness of Being as a consequence of the flight of Dasein from the face of death, specifically felt as *Angst*. As such, individual Dasein, faced with the perspective of its own, future but imminent, demise, seeks refuge in a collective and impersonal identity (*das Man* – the *They*/*One*) which would, supposedly, grant it the possibility of an *eternal endurance* (as the community doesn't die, only the individual does). Moreover, in the (post)modern world, as a result of the previously mentioned process of reification, this collective identity is built by analogy to the objectual world. Consequently, on the level of the One, Dasein loses both its personal and its existential characters. Considering that more than half of *Being and Time* is dedicated to this *collectivist self-mystification* of Dasein, we will take our time with it.

First of all, noticeably, when referring to human beings, Heidegger avoids the use of traditional terms such as subject, ego, consciousness, self-awareness and so on, preferring some peculiar notions of his own making[8] such as *Dasein*, in his *Being and Time* period, or *mortals*, in his later works. Without going into much detail, this is because, on the one hand, he considered the subject-object dichotomy along with all its derivative terminology (consciousness, awareness, subjectivity and so on) to be already tainted with the aforementioned reification process and, on the other, he thought to have found another, more fundamental trait of human existence than the *ego cogito*: the *Da-sein*, i.e. the very act of *finding oneself to be already here*, i.e. in a *world*. Consequently, to Heidegger, the *being-in-the-world* (*in-der-Welt-Sein*) constitutes the primordial and irreducible experience of human existence and not the *self-thinking away from the world* as Descartes' notion of *ego* implies. In other words, to Heidegger, these traditional notions already *subimply* an *original divisiveness* between the so called consciousness, on the one hand, the world, on the other, which, in our basic experience of Being, is nowhere to be found. More generally speaking, what we are dealing with in Heidegger's case is, as I have mentioned elsewhere, "that double movement specific to phenomenology, i.e. of removal of *consciousness* from under the exclusive claim of the *subject*, on the one hand, of the *world* from under that of the *object*, on the other, and of placing them in an ontological relation of concrescence in which the two terms, *consciousness* and *world*, constitute reciprocal a priori preconditions of possibility."[9]

[8] At least in this sense.
[9] Idem 3.

For all these reasons Heidegger prefers the term Dasein which he, most notoriously (and obscurely) characterizes as "ahead-of-itself-Being-already-in (the world) as Being-alongside entities which we encounter (within-the-world)." [10] However obscure, this is his most famous and comprehensive definition of Dasein[11] and we will work on it. On its terms, there are three basic existential features (*Existentials*) of Dasein: existentiality (*Existentialität*) - *ahead-of-itself*, facticity (*Faktizität*) - *Being-already-in the world* and falling (*Verfallen*) - *Being-alongside entities which we encounter within-the-world*.

I think the best way of understanding existentiality is, as I have already done, to refer to the very etymology of the term, in Latin *existere* meaning quite literally *standing out*. But *standing out of what* and *to whom*? Quite simply put, *out of itself* and *to itself*. In other words, to Heidegger, Dasein is the only entity which, as different from all the others, manifests its act of being not just by *inertly filling up space*, if you will, but also by *constantly relating to itself*, that is, its way of Being is not so much ontic as *onto-logical* (i.e. has knowledge thereof) and thereby gains access to, what we could call, the *realm of the possible*, as different from the mere ontic entities which are constrained to remain within the boundaries of the *actual*. Without going into much detail, this implies two basic things: (a) that Dasein is originally divided with respect to itself (*nothingness is at the heart of Dasein's Being*, if you will) and (b) that Dasein has no determinate *given* nature or essence by which it is, but, quite simply, *is*. Heidegger expresses this by saying that Dasein *is not*, but *has to be* (*hat zu sein*). Moreover, as we will see later on when discussing falling, not even individuality is a given feature of Dasein, but on the contrary, it has to be gained and, as such, it can always be lost.

As such, existentiality corresponds to the fact that Dasein *stands out of itself by being ahead-of-itself*. This is what Heidegger calls *projection* (*Entwurf*) which is the basic existential governing Dasein's existentiality. How does it work? Basically, the answer would be that Dasein, by existing outside of itself in the realm of the possible, always understands itself with respect to the array of possibilities, i.e. *existential scenarios* or more concretely life paths, which present themselves. In this process, it understands these possibilities (or, better put, itself through these possibilities) by projecting itself along them, i.e. by anticipating its own becoming if following one or another of these existential scenarios. And I think *anticipation* is the best word for describing this, as this is precisely where (or better put, when) this process takes place: in the future! Consequently, in his view, the future is not some expected present state, that is, some *present which hasn't come yet*, but the transcendental source of Dasein's present self-understanding. To use a non-Heideggerian terminology, if self-awareness means self-reflection, then the future is *the place from which Dasein reflects upon itself in order to become aware of itself*. Heidegger partly refers to the German etymology of the term in order to justify his interpretation: the German word for future is *Zukunft*, that is *zu-Kunft*, literally *coming to*, suggesting that the future, properly understood, is *the place from which Dasein comes towards itself*. As such, in Heidegger's view, which is radically different from most of the previous present-oriented philosophies[12], Dasein is a specifically futural entity: "Dasein is its past in the way of its own Being, which, to put it roughly, 'historizes' out of its future on each occasion."[13]

II Now for the second basic existential, *facticity*. We have previously seen that, according to Heidegger, Dasein understands itself through the various possibilities which present themselves to it. Where do these possibilities come from? Simply put, from the *world* to which the respective Dasein belongs, or, to put it in a more Heideggerian language, into which it is *thrown* (*geworfen*). This, again, would amount to three basic things: (a) that Dasein, as existing, is not the source of the possibilities through which it understands itself; (b) that these possibilities are not mere theoretical potentialities, but actual shapes Dasein's existence is bound to take and which consequently matter to it (or better put him/her); (c) that not all possibilities are *compossible*, that is, Dasein cannot realize all of them together and consequently has to choose among them.

One of the several relevant passages in this respect is the following: "As existent, it (*Dasein*) never comes back behind its thrownness in such a way that it might first release this 'that-it-is-and-has-to-be' from its Being-its-Self and lead it into the 'there'. (…) The Self, which as such has to lay the basis for itself, can *never get* that basis into its power; and yet, as existing, it must take over Being-a-basis. To be its own thrown basis is that potentiality-for-Being which is the issue for care."[14] Simply put, Dasein has the possibility to choose neither the circumstances of its birth (its *Da* if you will), nor its death (i.e. the fact that it will, eventually, at some point, die) but only to opt for one or another of the limited array of alternatives which present themselves between these two points. Birth and death are the cornerstones of Dasein's freedom, if you will, and, ontologically speaking, one of the ways in which nothingness belongs to Dasein's Being. The other instance in which nothingness becomes part of

[10] Martin Heidegger, *Being and Time*, trans. John Macquarrie & Edward Robinson (Oxford : Basil Blackwell), 1962, pp. 293/par. 249.
[11] As *Care*.
[12] With the possible exception of Nietzsche.
[13] Idem 10 pp. 41/par. 20.
[14] Idem Martin Heidegger, *Being and Time*, trans. John Macquarrie & Edward Robinson (Oxford : Basil Blackwell), 1962, pp. 330-331/par. 284-285.

its Being presents itself in the context of choosing: by exercising its freedom, Dasein has to choose among several alternatives and consequently, with every actual choice it makes, Dasein rejects, *un-makes* all its alternative counterparts.

"In being a basis – that is, in existing as thrown – Dasen constantly lags behind its possibilities. It is never existent *before* its basis, but only *from* it and *as this basis*. Thus 'Being-a-basis' means never to have power over one's ownmost Being from the ground up. This 'not' belongs to the existential meaning of thrownness. It itself, being a basis, is a nullity of itself.(…) Freedom, however, is only in the choice of one possibility – that is, in tolerating one's not having chosen the others and one's not being able to choose them."[15] Heidegger wraps all this up in the concept of *ontological guilt* (*Schuld*) which constitutes Dasein's primordial and ubiquitous *burden*. Before getting to the third existential, I would ask you to keep in mind the fact that, in Heideggers view, Dasein's *freedom as choice* stems from the permeability of its Being to nothingness and can only manifest itself as such, i.e. as *nullification of the un-chosen alternatives*, if you will. Anticipatively, I should say that only by facing death does Dasein become actually capable of choosing and thereby what we would call an individual.

III And now, for *falling* (*Verfallen*). As mentioned earlier, in Heidegger's view, and contrary to many of the traditional thinkers', Dasein does not necessarily exist as an individual: it is neither born as such, nor does it necessarily become one along its existence; in fact, on his terms, most of us don't ever become one and, moreover, all of those few who do, are always susceptible of losing this status. In short, for Heidegger, individuality is a human capacity which must be gained and maintained through constant effort if it is to be preserved. Then *where* and *as what* does Dasein exist as long as it is not an individual? Quite predictably, within the previously mentioned object-like collective identity called *the One* (das *Man*; frequently also translated as '*the they'*). Synthetically, we could say, in a non-Heideggerian language, that the One (*"they"*) represents the collective impersonal soil (thereby implying both inherited instinctual and socially-constructed behavioral and semantic patterns) of any individual ontogenesis, one which, however, many do not ever leave. We shouldn't hold Heidegger to be an elitist – he doesn't necessarily regard the One/"they" in a derogatory way. Quite the contrary, he considers it one of the essential preconditions of any Dasein ontogenesis (be it individualistic or not) and one of the main environments for the emergence and development of its relation to Being. Anything related to the *semantic structure of the world* (language, rational thought, affective patterns, practical skills and so on) is acquired by Dasein through its existence on this level. Heidegger just claims that, at some point, Dasein's exaggerated belonging to it precludes its potential individual becoming.[16] The One's way of being mainly becomes manifest on the level of the so called *everydayness* (*Alltäglichkeit*) which could be seen as some sort of socio-cultural matrix comprising both the average model of humanity as projected by the culture in cause and the normative expectations (moral and practical) derived therefrom. The proper way of handling a hammer, the occasions on which it is proper to offer flowers, imperatives such as *One should not throw up in public!* are, I think, good examples thereof. *Who shouldn't throw up in public? Everybody but no one in particular* – this is precisely the meaning Heidegger ascribes to the *One-Self*. To put it in his words: "Everyone is the other, and no one is himself. The 'they', which supplies the answer to the question of the 'who' of everyday Dasein, is the 'nobody' to whom every Dasein has already surrendered itself in Being-among-one-another [Untereinandersein]."[17]

As mentioned earlier, a substantial part of Dasein's everydayness consists in its practical skills and activities. Without any risk of overstating, we could say that, in Heidegger's view, on the level of everydayness, the world itself is a giant structure of interconnected meanings, functions and uses which predetermine the identity of any given entity: a hammer, for example, has as destination (*Wohin*) the hammering of nails in order to build houses and shelters for Dasein. In order to properly accomplish this task it has a certain instrumental structure (i.e. shape, weight, resistance and so on) which it otherwise wouldn't have had. On the other hand, it also has an origin (*Woher*) which connects it in a specific way to other things: it has a handle, made out of wood, found in trees, growing in forests. There are some particular nuances but, generally speaking, we could say that nature is progressively assimilated into the *pragmatic meaningful structure* Dasein calls *the world*, as the basic provider of raw material. However interesting, I will not follow here the problem of Dasein's relation to nature, as my present interest lies elsewhere.

As such, the world, on the level of Dasein's everydayness, is a systematic bundle of pragmatic relations and practices. How does Dasein relate to itself, i.e. *exist*, along such a practice? As anyone who was ever involved in any kind of determinate practical activity I think would agree, Dasein relates to itself along such a practice precisely by *losing its sight of itself* and concentrating it almost entirely on the task *at hand* – while practically engaged, *Dasein exists along the present task* (thereby ignoring its past identity, or its future becoming and so on). Consequently, on the level of everydayness, Dasein exists in complete forgetfulness of itself (and the future) and total

[15] Idem.

[16] Conceptually we could see it as some sort of Heideggerian crossbreed between Nietzsche's *existential horizon*, Dilthey's *Weltanschauung* and, maybe, Mannheim's *ideology* (in its maximal sense).

[17] Martin Heidegger, *Being and Time*, trans. John Macquarrie & Edward Robinson (Oxford : Basil Blackwell), 1962, pp.166/par.128.

receptivity to the practices at-hand (and the present). We could say that on this level, Dasein's existence is disseminated among the various practical contexts that make up its daily routine. This, again, is a normal component of Dasein's existence, but one that, if exaggerated, causes Dasein to lose *its grip on itself*, if you will, to become inauthentic (*uneigentlich*). Observation: the German term *Eigentlichkeit* is usually translated as *authenticity*. However, even if its semantic sphere most certainly includes this connotation (i.e. *genuineness*), its primordial, etymological meaning would amount to something like *being-one's-own*. This is also Heidegger's original way of using this concept.

As such, why and in what way does Dasein become inauthentic when exaggeratedly belonging to the One's everydayness? Basically, the answer would be that within this existential sphere things are *already given as such*, i.e. they are more or less univocally and customarily pre-determined (with respect to the existence of any personal Dasein). Hammers are to be handled *in such and such* a way and in no other, flowers are to be offered on *such and such* occasions and in *such and such* ways and in no other, throwing up in public is to be avoided because that isn't the proper way one behaves in public and so on. Again, in Heideggers view, there is nothing wrong with this kind of collective procedural norms and practices as such. The problem arises when they fully take over Dasein's existential sphere and that is because by their predetermined and compulsory character they constrain Dasein's existence and very self-awareness to *the realm of the actual* which is the domain of non-Dasein entities, that is of inert objects, Dasein thereby losing its specific character as a *being of the possible*. In short, under the spell of the One, Dasein's Self *disowns itself*, particularly, it becomes unable to choose.

On the other hand, this is not viewed by Heidegger as an *unnatural* process but, *au contraire*, as I have already alluded earlier on, as the result of one of Dasein's most natural tendencies: that of avoiding its own finitude. In other words, precisely by naturally fleeing away from the existential angst induced by the perspective of its own, future and unavoidable, death, Dasein takes refuge in this collective and impersonal form of identity which, supposedly, grants it some sort of immortality but at the cost of its, shall we say, *personhood*. Moreover, its relation to time is correspondingly modified: in this state, Dasein loses track of its future, as the future is the *time of death*, and concentrates exclusively on the present, as the time of its actual existence. Consequently, it reinterprets time as a perpetual present, i.e. the past as a *present that is no longer*, the present as a *presently present present* and the future as a *present that is to come*. According to Heidegger, the entire history of European thought and culture, at least since Plato, is based on such an interpretation of time: the very notion of objective infinite time as developed within the mathematical sciences of nature and progressively extended over the entire world of Dasein is one of the most fundamental expressions of this process. As we will see later on, in his view, all modern industrial ideologies are, in fact, alternative avatars of this reification by which Dasein reinterprets itself as an object, precisely in order to escape its finitude. In a nutshell, we could say that, *by avoiding death, Dasein loses its life.*

Synthetically, the flight from death causes Dasein to restrain from projecting, which leads it to lose its existentiality. We could also say that given the angst caused by throwness, Dasein reacts by letting its falling take precedence over its existentiality. That is what inauthenticity basically amounts to.

That would be Dasein's permanent problem, one which however, reached its climax in the modern age, according to Heidegger. Now for the antidote. Quite obviously, if this entire alienating process is triggered by Dasein's avoidance of its own finitude, that is, of its death, any eventual solution should start from there. Basically, in Heidegger's view, Dasein's acknowledgement of its own finitude and subsequent confrontation with the existential angst caused by it, pulls Dasein out from under the spell of the One's everydayness and places it in direct relation to itself. Most significantly, by becoming aware that *death awaits it*, Dasein stops acting as if it had *all the time in the world*, that is, all the time needed to successively realize all the alternative life paths presented to it and starts actually choosing among them. To put it *temporally*, its present becomes the image of its intended future. The affective driving force behind this *existential becoming* of Dasein is the very angst it once tried to avoid: by acknowledging its participation to nothingness Dasein becomes now ready and able to exercise its freedom as nullification of the *unchosen alternatives*.

"Death is Dasein's ownmost possibility. Being towards this possibility discloses to Dasein its ownmost potentiality-for-Being in which its very Being is the issue. Here it can become manifest to Dasein that in this distinctive possibility of its own self, it has been wrenched away from the 'they'. (…) The ownmost possibility is non-relational. Anticipation allows Dasein to understand that the potentiality-for-being, in which its ownmost Being is an issue, must be taken over by Dasein alone. Death does not just 'belong' to one's own Dasein in an undifferentiated way; death lays claim to it as an individual Dasein. The non-relational character of death, as understood in anticipation, individualizes Dasein down to itself. This individualizing is a way in which the 'there' is disclosed for existence. It makes manifest that all Being-alongside the things with which we concern ourselves, and all Being-with

others, will fail us when our ownmost potentiality-for-Being is the issue."[18]

Basically, Heidegger highlights four, *equiprimordial*, features of death:

i) its futurity – death is always a problem for the future, never for the present (as once it comes Dasein is no longer). Therefore death is, for each Dasein, a potential, never an actual, reality.

ii) its inexorability – despite its essentially potential character, death is unavoidable, i.e. it is a *necessary potentiality*, if you will.

iii) its *ownness* – each Dasein owes at least one death to Being, that is *its own*. By that, Heidegger concludes on the *non-relational* character of death and, consequently, of any form of existence potentially (but necessarily) ended by it. In other words, in front of death, Dasein cannot be *represented*, i.e. no one else can take the place of any Dasein in front of its own death.

iv) its ubiquity – potentially speaking, death can strike at any moment, in principle, there is no specifically *scheduled* time for its arrival and, as such, each actual moment of being is, for Dasein, a potential moment of *unbeing*.

Heidegger wraps al this up in the concept of *being-towards-death* (*Sein zum Tode*) the conscious acknowledgement of which puts Dasein in touch with its own specific and personal existence. In other words, Dasein has to constantly live its life under the shadow of death if it is to shape its existence in the image of its own project (*Entwurf*) for itself, i.e. become its own authentic (*eigentlich*) Self. Thereby, Dasein stops wasting its time in the perpetual dissemination of everydayness and makes use of each and every moment in the articulation of the existential project it has designed for itself: each present moment becomes a *moment of vision* (*Augenblick*) of its future and *personally intended* becoming. *In nuce*, in the state of authenticity, the future Dasein (instead of the present One/"they") dictates to the present Dasein what to do.

Does the authenticity of Dasein allow for any form of coexistence? I think the answer is 'yes' and one of the key remarks in this respect is to be found in subchapter 26 in *Being and Time* entitled "The Dasein-with of Others and Everyday Being-with":

"With regard to its positive modes, solicitude[19] has two extreme possibilities. It can, as it were, take away 'care' from the Other and put itself in his position in concern: it can leap in (*einspringen*) for him. This kind of solicitude takes over for the Other that with which he is to concern himself. The Other is thus thrown out of his position; he steps back so that afterwards, when the matter has been attended to, he can either take it over as something finished and at his disposal, or disburden himself of it completely. In such solicitude the Other can become one who is dominated and dependent, even if this domination is a tacit one and remains hidden from him. This kind of solicitude, which leaps in and takes away 'care', is to a large extend determinative for Being with one another, and pertains for the most part to our concern with the ready-to-hand.[20]

In contrast to this, there is also the possibility of a kind of solicitude which does not so much leap in for the Other as leap ahead of him (*ihm vorausspringt*) in his existential potentiality-for-Being, not in order to take away his 'care' but rather to give it back to him authentically as such for the first time. This kind of solicitude pertains essentially to authentic care – that is, to the existence of the Other, not to a 'what' with which he is concerned; it helps the Other to become transparent to himself in his care and to become free for it."[21]

This is maybe the closest Heidegger has ever got to Kant's *categorical imperative*. Basically, what he claims here is that Dasein can relate to the Other in two alternative fundamental ways: as an inert (object-like) entity or as an existential being (i.e. endowed with what we would call self-awareness). In the former alternative, the Other is denied his/her *ownness* (that is, more or less, its *autonomy*), in the latter, quite the contrary, by help of Dasein, the Other is *potentiated* in his/her *ownness*.

More explicitly, in both cases, Dasein *meets the Other* as an object of care (*Sorge*). Why care? In short, because as long as the Other affects, in one way or another, Dasein's existence to the point of being noticed by it (in one way or another), than the Other must matter to Dasein (again, in one way or another). However, it depends on Dasein to decide on the kind of care the Other is entitled to. In Heidegger's terms, it is up to Dasein to choose the (sub)existentials of care by which to relate to the Other: either as an object of *preoccupation/concern* (*Besorgen*), which is the realm of the instrumental *inert* entities, or as an object of solicitude (*Fürsorge*), which is the realm of Dasein-like, i.e. existential entities. Most clearly, in the former alternative, the Other is denied its existentiality, its Being if you will, and treated as a tool. As the previous passage would suggest, this does not necessarily imply abusiveness on the part of Dasein, which is however even more *concerning* as even some of the positive, shall we say *helpful*, ways of Dasein's relating to the Other can lead to the latter's *disownment*. Why? Basically because in *caring* for the Other, Dasein may be tempted in helping him/her by taking upon itself the Other's *burden*, i.e. his/her existence if you will, fact which is inauthentic because, (a) it is impossible (as no Dasein can represent the Other in front of his/her own death and, consequently, in front of his/her own

[18] Martin Heidegger, *Being and Time*, trans. John Macquarrie & Edward Robinson (Oxford : Basil Blackwell), 1962, pp.308/par. 263.

[19] Solicitude (*Fürsorge*) is the basic (sub)existential of 'care' responsible for Dasein's relationship with the Other, as different from *Concern/Preoccupation* (*Besorgen*) which guides Dasein's relation to all instrumental entities.

[20] I.e. instrumental entities.

[21] Martin Heidegger, *Being and Time*, trans. John Macquarrie & Edward Robinson (Oxford : Basil Blackwell), 1962, pp. 158-159/par. 122.

existence as well) and (b) because it treats the Other as an inert, *handleable* entity. In short, this form of disownment amounts to Dasein's complacency in the Other's impotency which causes the Other to try to surrender its existence to Dasein (which is impossible and self-denying). Most extremely, Dasein can act with respect to the Other as if being willing and able to take upon itself the Other's *Being-towards-death* fact which is impossible, and denies the Other's own existentiality, more concretely precludes the Other's confrontation with the Angst induced by the perspective of his/her *own* future but unavoidable death (and thereby his/her individualization). As we will see later on, this is the basic motive behind Heidegger's hostility towards the modern political ideologies.

Alternatively, Dasein can *care* for the Other by helping him/her *transparentize* him-/herself for his/her own Being-towards-death and, implicitly, for his/her existentiality and free will. As such, without going into much detail, the key to an authentic *Being-with* (*Mitsein*) lies, for Heidegger, in the acknowledgement of the non-relational character of the *Being-towards-death* of each Dasein: by not avoiding it (and correspondingly not accepting the Other's willingness to avoid it), Dasein takes hold of its own projective nature, if you will, consequently of its existentiality and, at the same time, lets the Other free to do so on its own account. Moreover, the only way Dasein can help the Other on this path to individualization is by serving as an example of conscious assumption of the Being-towards-death (probably, not unlike Socrates did for Plato). As mentioned earlier, this pulls out Dasein's relation to the Other from under the spell of the One and lets the Other be as he/she chooses. The whole of this achievement of authenticity is what Heidegger calls *resoluteness* (*Entschlossenheit*):

"In the light of the 'for-the-sake-of-which' of one's self-chosen potentiality-for-Being, resolute Dasein frees itself for its world. Dasein's resoluteness towards itself is what first makes it possible to let the Others who are with it 'be' in their ownmost potentiality-for-Being, and to co-disclose this potentiality in the solicitude which leaps forth and liberates. When Dasein is resolute, it can become the 'conscience' of the Others. Only by authentically Being-their-Selves in resoluteness can people authentically be with one another – not by ambiguous and jealous stipulations and talkative fraternizing in the 'they'(/One) and in what 'they'(/One) want to undertake."[22]

On the other hand, that would be, from a Heideggerian standpoint, precisely what modern ideologies do not do, i.e. letting both Dasein and the Other become their own individual selves. Basically, the reason for that is threefold:

i) Notwithstanding their doctrinary particularities, modern ideologies always construct a collective (and impersonal) ideological subject, that is some sort of *ideological One*, which regulates the existentiality of each and every individual Dasein adhering to it. In other words, Dasein's belonging to the ideological community is conditioned by its, more or less, total compliance with the core values and behavioral patterns on which the ideological community was built. By this, Dasein lets the ideological One dictate it its array of Being-potentialities which is, quite obviously, inauthentic.

ii) As Marx rightfully noted, *ideologies are the product of the relations of production* which are, by their very nature, instrumental and reifying. Consequently, any ideological One, including that of Marxism, would try to make Dasein in the image of the objects and relations which make up its instrumental world and, consequently, treat it as such, i.e. see its Being-potentialities as being defined by the class interests captured by the ideology in cause. In Marxian words, but from a Heideggerian perspective, precisely because class consciousness is the expression of the mode of production, it is not to be obeyed by any Dasein seeking self-individualization. This is a conclusion which can be most clearly drawn on the basis of Heidegger's thought from this period and one which will be harshly dealt with by his more *Marxian* students (as for example Sartre or Herbert Marcuse did in his *Heideggerian Marxism*).

iii) In perfect keeping with the aforementioned aspects, modern ideology avoids angst (which is the only way Dasein can achieve authenticity) by distracting, or rather, displacing Dasein's attention from *its own* mortality to the so called *quality of life*, particularly to some sort of utopian promise of biological immortality which, however tacit, all modern technological ideologies hold very dear. However, by falling prey to this false illusion of immortality, Dasein loses its will to choose on its own: it feels no compulsion to do so, given that its promised immortality would grant it the possibility of successively living all the alternative life-paths among which, in its mortal state, it would have to choose. In short, by living up to any technological ideology, Dasein exchanges *its own* mortality for a *disowned* immortality. This is an aspect which separates all modern technological ideologies from the traditional religions, given that, in the latter, however differently and intricately solved, mortality is an ever recurrent issue.

All this entitles us, I think, to view Heidegger's political position in his *Being and Time* era as some sort of *ruralist* individualistic anarchism. As with most views of this sort, it is much easier to determine what they oppose, rather than what they stand for politically. At any rate, it is rather obvious that the Heidegger from this period opposes:

i) collectivism (along with any form of *communal hegemony* over the individual self);

[22] Martin Heidegger, *Being and Time*, trans. John Macquarrie & Edward Robinson (Oxford : Basil Blackwell), 1962, pp. 344-345/par. 293.

ii) *technologism* (that is, not technology as such, but the uncritical belief that technology could and should be called upon to solve any human problem);

iii) *urbanism* (that is the belief that the city, with its specific culture and way of life constitutes the natural environment for the accomplishment of humanity – fact which sets Heidegger in opposition to both *burgeois* and proletarian alternatives);

iv) traditionalism (that is the unreflected reverence for the past as the holder of a necessarily beneficial tradition which, if lost, would have to be reinstated – which sets Heidegger in opposition to conservatism);

v) rationalist liberalism (and particularly its contemporary *metaphysical* emulation, i.e. positivism);

vi) Catholic clericalism (and its political expression, i.e. Christian democracy), along with any form of *politicized* religion;

I think all this sufficiently supports Heidegger's interpretation as an individualistic anarchist. As for the *ruralist* aspect of his position, although it will become more apparent in his later works (as his 1934 *Why Do I Stay in The Provinces?*), I think it is safe to say that it is tacitly but all-pervasively present in his *Being and Time* era as well. In short, what I mean by it is that Heidegger seems to have been more favorable, or at least less hostile, to the rural environment with its specific way of life, as it seemed to him to enable a more authentic relation to Being than the modern urban world ever could. However, we shouldn't try by this to view Heidegger as some sort of German version of Tolstoy, as he doesn't favor the rural world by virtue of some traditional collective wisdom which it would supposedly hold. Heidegger's appreciation for the rural world is of a different, maybe even opposed, nature: he favors it because it apparently holds a better outlook for the potential individualization of Dasein. The reason for that is twofold: first, because, seemingly, the rural world has remained less permeable to the reification process which, as we have seen, is very much responsible for the progressive oblivion of Being culminating in the modern industrial world and, second, because by its still non-secularized character, the rural world retains, to some extent, the perspective of individual mortality (a recurring issue in any version of Christianity and, possibly, religion in general) which potentially enables Dasein's confrontation with the angst conducive to its authenticity. *In nuce*, it is not so much that the question of Being is better answered in the rural world, but that it is better asked.

Now, for the summary: I have determined Heidegger's interpretation of modern nihilism as an all-pervasive historical, political and existential trend towards the oblivion of Being stemming from the very core premise of European Lifeworld - the confusion between Being and entity, in lay terms, the definition of Dasein (human being) as object. Following Heidegger, I have traced back the sources of this phenomenon to three basic interrelated factors: (i) the cultural, i.e. Plato's definition of Being as (perpetual) presence, (ii) the existential, i.e. the flight of Dasein from the face of death and (iii) the ontological, involving some aspect of Being as such (which I have intentionally left out of our discussions so far).

I have then concentrated on a basic analysis of Dasein in terms of existentiality, thereby trying to lay bare the *internal mechanics* of Dasein's (self-)reification. Thereupon, I have come to the conclusion that its basic form of manifestation consists in some sort of self-renunciation on part of Dasein to *its own* personal mortal existence in favor of a collective, allegedly immortal but impersonal, object-like identity Heidegger calls the One/'they' (*das Man*). Followingly, I have tried to elaborate Heideger's solution to this problem as consisting in the conscious assumption on part of Dasein of its own finitude, particularly in its lucid confrontation with its own mortality, which is the only way Dasein can achieve the will to choose. Along with Heidegger, I have called this achieved state of *ownness* authenticity (*Eigentlichkeit*). In this context, I have provided a positive answer to the question whether Dasein's authenticity is compatible with its coexistence with the Other, by trying to show that and how any authentic (that is non-reifying) inter-personal relation is based on the mutual acknowledgement of the finite character of human existence. On this basis, I have tried to sketch out a general Heideggerian critique of modern political ideologies as essentially inauthentic. The three basic reasons thereof are that (i) by their collectivism, modern ideologies preclude Dasein's potential individualization, (ii) by their *reifying instrumentalism*, they deny Dasein's existentiality, treating it as a tool and (iii) by their *immortalism* they avoid Dasein's confrontation with its own mortality, thereby lacking it of its incentive to choose. In this context, I have determined Heidegger's political position (in the *Being and Time* era) as some sort of *individualistic rural anarchism* fact which, if true, would make Heidegger's view essentially incompatible with any collectivist ideology. How could a thinking that was so individualistic have fallen victim, even if temporarily, to such an extremely collectivistic ideology as Nazism is disconcerting and troubling. However, that, along with the third (that is the ontological) reason for the oblivion of Being, will make the object of our discussion in the latter part of this endeavor.

CONFLICT AND COOPERATION IN THE EU'S FOREIGN POLICY: THE QUEST FOR POST-LISBON COHERENCE

Monica OPROIU[*]

Abstract

The appointment of a double-hatted High Representative of the Union for Foreign Affairs and Security Policy (HR) and the creation of the European External Action Service (EEAS) were two of the main innovations brought by the Lisbon Treaty to the European Union's external policies. While the appointment of the HR was purely political, the creation of the EEAS entailed a deep restructuring of the EU foreign policy apparatus, unveiling the fierce competition between institutions in the post-Lisbon framework. According to their mandates, the High Representative and the External Action Service should increase coherence in the European Union's external action, thus answering to ongoing criticisms about the lack of a „single voice". This is nevertheless counter intuitive to classical studies of international cooperation which usually predict that an increasing number of actors decreases the likelyhood of cooperation or the efficiency of outcomes.

Based on the critical analysis of EU documents and the academic literature, as well as semi-structured interviews with EU officials in Brussels, this paper makes the case for studying the EU external policies as a fertile ground for both conflict and cooperation between institutions, and argues that the EU's ability to use its instruments for post-conflict stabilisation in a coherent manner in the post-Lisbon era should be a relevant test for its foreign policy. By focusing mainly on the contribution that the High Representative and the EEAS bring to the European Union's involvement in Kosovo, the study explores the concept of coherence, understood as the synergy between EU policies and the activity of the institutions which implement them. Finally, the study will analyse the emergence of an EU "comprehensive approach" to post-conflict stabilisation derived from the experience in the Western Balkans.

Keywords: *coherence, EU foreign policy, post-conflict stabilisation, Western Balkans, High Representative, European External Action Service, Kosovo*.

1. Introduction

The appointment of a new High Representative of the Union for Foreign Affairs and Security Policy and the creation of the European External Action Service were the main institutional changes introduced by the Lisbon Treaty in the foreign policy realm. The former is at the same time Vice-President of the Commission, while the latter helps him/her with implementing the mandate and coordinating the different strands of EU external action better. Although these changes targeted precisely the coherence of the EU's external relations, they were only the latest in a series of initiatives marking the increased institutionalisation of the EU's foreign policy. The study of post-Lisbon coherence in the EU's external action allows a closer look at what is behind the Union's "magnetic power of attraction", that is, at how EU instruments and policies with an external dimension are coordinated in order to enhance dialogue with third countries, apply conditionality and foster transformation in candidate and potential candidate countries. This paper makes the case for studying the EU external policies as a fertile ground for both conflict and cooperation between institutions, and argues that the EU's ability to use its instruments for post-conflict stabilisation in a coherent manner in the post-Lisbon era should be a relevant test for its foreign policy. Based on the critical analysis of EU documents and the relevant academic literature, as well as semi-structured interviews with EU officials in Brussels, it aims to explore some of the challenges that the EU is facing in Kosovo, where enlargement and pre-accession instruments are complemented by proper foreign and security policy initiatives underpinning peace-building and state-building.

The works on EU coherence are plentiful, illustrating both the legal and the political science perspective. Legal scholars focus on the analysis of coherence as a constitutional principle in EU law enshrined in the Treaties, creating an obligation for EU institutional actors to implement a coherent European foreign policy[1]. It is in this context that three main dimensions of coherence have been defined – horizontal, vertical and institutional – with some

variations among authors[2]. On the other hand, empirical studies analyse the existing institutional arrangements and their potential for creating (in)coherence[3] or use case-studies in order to explore the specifics of the three dimensions of coherence[4]. Few of them question whether coherence is an actual concern or just an academic invention[5].

This study analyses the challenges related to horizontal coherence in the EU's external action, more precisely, how the enlargement and pre-accession, and foreign/security policy objectives respectively could be coordinated in order to create synergy in the case of the EU's promotion of the rule of law in Kosovo.

2. Content

I. The principle of coherence

The explanatory framework of this study is centered on the concept of coherence, as understood in an EU context. I examine the academic debates on how to ensure greater coherence of EU external action in general, while also looking at the specific treaty provisions in this regard. I will thus try to answer the following question: How does conflict and cooperation among institutional actors influence the coherence of EU external action? The study analyses the transformation of the EU foreign and security policy apparatus following the entry into force of the Lisbon Treaty and its impact on the coherence of the Union's involvement in Kosovo, with a focus on the policy output, that is, on *horizontal* coherence.

To begin with, the Treaty on the European Union, as amended by the Lisbon Treaty, states that the Union "shall ensure consistency between the different areas of its external action and between these and its other policies"[6] (art. 21.3). Moreover, "The Council and the Commission, assisted by the High Representative of the Union for Foreign Affairs and Security Policy, shall ensure that consistency and shall cooperate to that effect"[7]. This provision is reiterated regarding the foreign and security policy of the EU, as "the Council and the High Representative of the Union for Foreign Affairs and Security Policy shall ensure the unity, consistency and effectiveness of action by the Union"[8] (art. 26). At the same time, "The Member States shall support the Union's external and security policy actively and unreservedly in a spirit of loyalty and mutual solidarity and shall comply with the Union's action in this area"[9] (art. 24.3). Hence, cooperation and loyalty are the other significant concepts which complement consistency in EU external action.

The fulfilling of the EU's objectives requires cooperation between institutions and among member states, respectively. Article 4 states that „Pursuant to the principle of sincere cooperation, the Union and the Member States shall, in full mutual respect, assist each other in carrying out tasks which flow from the Treaties"[10], whereas article 13 (2) shows that „Each institution shall act within the limits of the powers conferred on it in the Treaties, and in conformity with the procedures, conditions and objectives set out in them. The institutions shall practice mutual sincere cooperation"[11]. Last but not least, the Treaty on the Functioning of the EU too, as amended by the Lisbon Treaty, contains a provision stating that „The Union shall ensure consistency between its policies and activities, taking all of its objectives into account and in accordance with the principle of conferral of powers"[12] (art. 7).

The word "consistency" is used throughout the Treaty on EU and the Treaty on the Functioning of the EU in the English version, while in other languages it was translated as coherence (*cohérence* in French,

coherencia in Spanish, *kohärenz* in German, *coerenţă* in Romanian, etc.)[13]. Consistency and coherence thus seem to be equivalent. Ana Juncos argues that, since both terms refer to "harmony" or "harmonious connexion of several parts", "in the normal sense there is no substantive difference between these two terms" and could thus be "used interchangeably"[14]. From a political point of view, both terms are used to express similar types of concerns, which refer to the ability of the EU to speak with one voice in international affairs, by displaying unity of action. From this perspective, the difference in translation in the various EU official languages in not significant, as the message is the same.

But a closer look at the literature of the field indicates that there could be an important difference between the two concepts: while consistency refers to the lack of contradictions, thus having a negative and static sense, coherence entails positive interactions which could create synergies between policies or institutions. In other words, coherence allows for mutual reinforcement between policies or the functioning of institutions. Moreover, it is possible to distinguish between different degrees of coherence, while consistency does not allow for this distinction (something *is* consistent or *not*)[15]. Last but not least, whereas consistency is a necessary condition for a policy, it is not sufficient as well; hence, if consistency is a minimal requirement, coherence designates a higher standard of coordination and synergy in EU external action[16]. As a result, coherence could be defined as "the lack of contradictions between policies, institutions or instruments, plus a variable degree of synergy as a result of policies, institutions and instruments working together in order to achieve a common objective"[17].

Due to the complexity of the EU system, a rich body of literature was created in order to identify various types of coherence, focusing on its internal and external dimensions, as well as on the relation between the member states and the Union and between and within the latter's institutions. Ever since the Maastricht Treaty was adopted, scholars have begun analysing the sources of potential incoherence in the EU's external action in parallel with the novel requirements for consistency, more so as the Union began defining its distinct identity on the international scene. Whilst a certain consensus regarding the existence of three general types of coherence has emerged, there are significant variations among authors. Originally, Christian Tietje identified two types of coherence in EU foreign policy, as institutionalised by the Maastricht Treaty. In his view, the two were vertical (in the relation between the Member States and the Union) and horizontal (between the foreign relations affairs of the EC and the CFSP) coherence[18]. He was also among the first scholars to explain the difference between consistency and coherence and pointed out the translation issue in the various official languages of the treaty[19]. The main argument of his work was that the Maastricht Treaty and the CFSP could be seen as a coherent system governing the development towards "an ever closer union among the peoples of Europe"[20]. Coherence was not necessarily something new, as it had featured in the Single European Act (1987), but with the Maastricht Treaty the requirement for coherence became a constitutional principle[21]. Horizontal coherence was, in his view, governed by only one leading principle, that of a single institutional framework, which actually created an obligation to optimize the Union's functioning and symbolized the close connection between the supranational and intergovernmental structures governing the European Union[22]. Vertical coherence was underpinned by the obligation of loyal and faithful cooperation between the member states and the EC, but this obligation referred to EU institutions as well, as all these actors have to cooperate in order to promote the overall goals of the Community[23].

Few years later, Simon Nuttal buit on Tietje's approach and provided a new categorization of what he termed "consistency": horizontal (between the different EU policies), institutional (between the two different bureaucratic apparatuses, intergovernmental and Community) and vertical (between EU policy and national policies)[24]. At the same time, he showed that after the Single European Act, successive EU treaties failed to define bureaucratic boundaries, which meant that consistency issues had to be tackled through an evolving co-operative practice, like in the case of the relation between the High Representative for CFSP and the Council Secretariat in the aftermath of the Amsterdam Treaty[25]. While issues of institutional consistency are easier to solve, as his example showed, those pertaining to horizontal or vertical consistency require a thorough debate on the nature of the EU's foreign policy and its identity as an international

actor[26]. In fact, this was highlighted by other scholars too, who argued that the discussion about coherence in an EU context is complicated by the fact that finding solutions to existing issues might necessitate some kind of hierarchisation among EU bodies and institutions, thus making it more of a political than legal debate[27].

Other scholars, however, questioned whether the coherence of EU foreign policy was a real problem or just an academic debate. Miguel Angel Medina Abellán provides a historical study of coherence, from the beginning of the so-called European Political Cooperation to the Maastricht Treaty establishing the CFSP, in order to show that coherence has always been a concern, only to become even more important after the Cold War due to the international context[28]. Nevertheless, in his view, there was little improvement on this issue in the Treaty of Amsterdam, but the Treaty of Nice brought substantive modifications[29]. While acknowledging Nuttal's categorisation of institutional, vertical and horizontal consistency, he takes an in-depth look at what is to be coherent in an EU context, reaching a sobering conclusion. His analysis revealed that although coherence as a principle needs to apply to the EU foreign policy, the legal means to enforce it are absent in the second pillar, which implies that "the stipulations contained in Title V must therefore considered as legally binding, but not enforceable"[30]. What is more, even if decision-making procedures in CFSP affect its coherence, other elements such as the latter's objectives and results, as well as the ways in which the instruments of EC and CFSP are combined and the outcomes of the EU's international performance overall represent issues which are more significant than the actual interplay between institutions[31]. And from this perspective, it is not the institutional strcture of the EU that will determine the success of the EU's external performance, but the political will of its member states[32]. In other words, it is the topic of vertical coherence that should actualy dominate the debates in the literature.

More recently, Carmen Gebhard has identified four types of coherence: horizontal (inter-pillar), vertical, internal and external. Her main argument is that the fact that the governance of EU policy is spread across two pillars puts horizontal coherence at the centre of any investigation of the EU's external profile[33]. Moreover, the fact that ESDP has become a de *facto* fourth pillar triggered new challenges, including the reorganization of Council structures, which in turn influenced reforms inside the Commission[34]. Consequently, achieving horizontal coherence is inherently connected with the compatibility, interoperability and credibility of the EU as a bilateral or multilateral partner, and with what she terms "external coherence"[35]. This fourth dimension of coherence is treated more like a technical matter, being ensured by the European External Action Service through an internal coordination process.

The view adopted in this paper is that the "institutional" and "horizontal" types of coherence are very difficult to separate in practice. The removal of the pillar structure by the Treaty of Lisbon aimed precisely to streamline the functioning of the Union, increase its coherence and favour the emergence of a "comprehensive approach" to external action. However, it is difficult to avoid contradictions or overlaps and to create synergies between policies as the EU institutions jealously guard their prerogatives. The next section will analyse the reconfiguration of the EU's foreign, security and defence policy apparatus in the post-Lisbon framework and the main policy consequences of these institutional transformations.

II. The quest for post-Lisbon coherence – HR & EEAS

The Lisbon Treaty, which entered into force in 2009, provided for the appointment of a High Representative of the European Union for Foreign Affairs and Security Policy (HR), who shall *"conduct the Union's common foreign and security policy"* and "*contribute by his proposals to the development of that policy, which he shall carry out as mandated by the Council"*[36] (art. 18.2). The same provisions apply for the Common Security and Defence Policy[37] as well. Basically, the new High Representative's mandate encompasses the old ones of the Commissioner for External Relations and of the former High Representative for CFSP, together with the responsabilities of a Vice-President of the Commission and the permanent presidency of the Foreign Affairs Council.

[37] The European Security and Defence Policy was renamed the Common Security and Defence Policy (CSDP) by the Lisbon Treaty in 2009. I will hereinafter use the term CSDP.

The very complex nature of this new post was meant to enable the High Representative to ensure the coherence of the EU's external action, more precisely, the use of all its elements – from trade to diplomacy, and development cooperation to the security policy also entailing operational capabilities for crisis management. The triple-hatted High Representative's mandate and responsibiliy for coherence in the EU's external relations are detailed in articles 18.4 (referring to the three main duties) and 21.3 (stating the supportive role played by the HR in operationalising the cooperation between the Council and the Commission in ensuring the consistency of the EU's external action)[38]. Based on these arangements, the HR has a role to play in all types of coherence[39], as identified in various classifications in the academic literature.

As Chairperson of the Foreign Affairs Council dealing with CFSP, but also trade and development, the HR can contribute mainly to horizontal coherence. As Vice-President of the Commission in charge of external relations, the HR has the duty to coordinate the Union's external action, including by working together with the other Commissioners entrusted with portfolios having a relevant external dimension (Trade, Development, Humanitarian Aid, Neighbourhood Policy and Enlargement). Again, this contributes to horizontal coherence, understood as maximising synergies between different external policies and the external aspects of other (internal) policies. The "double hat" also embodies the inter-institutional dimension of coherence - the one between the Council and the Commission – to be put into practice through the HR's participation in the College meetings and the chairing of the Foreign Affairs Council, as well as by attending the European Council meetings[40]. Vertical coherence is less within the HR's remit, depending not only on Council meetings but also on the bilateral relations between the HR/VP and member states, which are actually supposed to act based on the principles of sincere cooperation and loyalty, especially for the CFSP[41]. All in all, while the legal preconditions and institutional arrangements for enhancing coherence were there, the HR/VP mainly represented the political level. The coordination effort had to be doubled at the administrative level, where it was entrusted to the European External Action Service.

The Lisbon Treaty envisaged the creation of a European External Action Service in order to help the High Representative perform their mandate. The EEAS is referred to in article 27(3) of the Treaty on the European Union, stating that *"In fulfilling his mandate, the High Representative shall be assisted by a European External Action Service. This service shall work in cooperation with the diplomatic services of the Member States and shall comprise officials from relevant departments of the General Secretariat of the Council and of the Commission as well as staff seconded from national diplomatic services of the Member States. The organisation and functioning of the European External Action Service shall be established by a decision of the Council. The Council shall act on a proposal from the High Representative after consulting the European Parliament and after obtaining the consent of the Commission"*[42]. But the Council Decision no. 427 of 26 July 2010 establishing the organisation and functioning of the European External Action Service, reached after a prolonged negotiation process spearheaded by the HR during the first half of 2010, did not state any specific objectives for the new body. Hence, according to the Council Decision of 2010, the EEAS is supposed to:

- support the HR/VP to fulfil the triple-hatted mandate: conduct the Common Foreign and Security Policy, preside over the Foreign Affairs Council and being Vice-President (VP) of the Commission;
- assist the President of the European Council, the President of the Commission and the Commission in the exercise of their respective functions in the area of external relations;
- support the diplomatic services of the Member States, the General Secretariat of the Council and the Commission, and other institutions and bodies of the Union, in particular the European Parliament and cooperating with them[43].

The Council thus provided only a general list of tasks, which added to the fact that the role of the EEAS was defined in vague terms anyway, also due to the lack of an overarching EU foreign policy strategy[44]. However, these tasks seemed to underpin a desire for coherence in the EU's external relations and throughout 2010 the making of the EEAS triggered a massive restructuring of the EU's foreign policy apparatus. In the end, the actual format of the new body merely reflected the agreement reached by the

EU institutions involved in the negotiation process and not necessarily the necessities of a functional diplomatic body. Finally, when inaugurated in January 2011, the EEAS was staffed through bloc transfers of officials from the Commission and the former General Secretariat of the Council, and through the secondement of national diplomats. But such transfers were made not on the basis of the respective departments' expected contribution to the fulfilment of EEAS objectives, but on the basis of "their activities and their administrative position within the Commission or the General Secretariat of the Council", which resulted in practical difficulties for the EEAS to coordinate some actions of the Commission with impact on foreign policy[45].

As part of the same effort to ensure coherence in the EU's external action, the crisis management structures within the General Secretariat of the Council were transferred to the EEAS as a distinct unit placed under the direct authority of the High Representative – the Crisis Management Planning Directorate (CMPD), the EU Military Staff (EUMS) and the Civilian Planning and Conduct Capability (CPCC). The High Representative became the highest authority governing the CSDP structures, which also include the Political and Security Committee (a preparatory body for the Council which assesses the need for launching missions, among other responsibilities) and the two structures which provide it with advice - the EU Military Committee (EUMC) and the Committee for Civilian Aspects of Crisis Management (CIVCOM), as well as the Politico-Military Group, chaired by a representative of the High Representative.

But the focus on the reform of the CSDP structures, as well as the external political context in which the EEAS started working, marked by the Arab Spring (most notably the developments in Egypt and Libya), took priority over bolder foreign policy initiatives expected from the new body[46]. The necessity to respond to international events also favoured an *ad hoc* approach over the elaboration of a autonomous strategy for foreign policy. At the same time, it is true that only some member states supported after 2003 the idea of adopting a new security strategy or seriously reviewing the one adopted after the war in Iraq. The latter was perceived by external observers more as a foreign policy strategy than a "grand strategy" articulating comprehensive security goals on the long term. Nevertheless, both member states and EU institutions expected a more proactive approach from the EEAS even though they were not necessarily forthcoming in accomodating the new body during its initial phase. The HR set some priorities later in 2011 and making the EEAS work was one of them[47]. At the same time, despite its growing pains, the EEAS proved flexible enough to take on new responsibilities as circumstances changed, supporting the HR as she became the key facilitator in the Kosovo/Serbia talks and in the international negotiations on Iran's nuclear programme. These were later praised as the main highlights of Catherine Ashton's mandate as High Representative (2009-2014).

To sum up, by fusing existing institutions into the new High Representative and the EEAS coordination between institutions is actually transferred to new institutions[48]. This should facilitate coherence between EU policies due to the emerging hierarchical executive and administrative structures – the High Representative is Vice-President of the Commission and Chairperson of the Council and heads the EEAS, which consists of both the former CFSP/CSDP branches of the Council Secretariat and the DG RELEX of the Commission[49]. In helping the High Representative fulfilling her mandate, the EEAS is supposed to cooperate closely with the Commission and the Member States, thus ensuring horizontal and vertical coherence respectively, both at the Brussels headquarters and in delegations. As the Commission holds responsibility for some external relations areas (such as development, trade, enlargement, humanitarian assistance and the external aspects of internal policies), it has to coordinate its activity with that of the EEAS. Despite formal working agreements having been established between the two, this coordination takes place rather through informal channels and networks supported by ex-Commission staff transferred through the EEAS[50], a practice that is not sustainable on the long term.

Another institutional development refers to the transformation of the Commission's former delegations in third countries and permanent representations to international organizations into full-fledged EU embassies abroad, coordinated by the EEAS. By being in the first line of EU external representation in third countries, they have to cooperate closely with the national embassies of the member states or represent the latter's interests when there are no such embassies. It is in this context that the extent to which the EU member states are willing to implement and support a unitary foreign policy coordinated in Brussels by what is desired to be a genuine EU Ministry of Foreign Affairs becomes clear. Unproductive rivalry should be avoided, as well as the temptation to maintain these EU embassies as purely bureaucratic and decorative organisms, without any real contribution to the design and implementation of the EU's foreign policy.

[49] Ibid.
[50] European Court of Auditors, "The establishment of the European External Action Service", 20.

As in the case of the traditional embassies, the EU's ones have to perform the classical duty of providing information to the central headquarters (in Brussels), thus becoming the HR's "eyes and ears" abroad. A network of 139 missions representing the EU in 163 third countries and at international organisations ensures a truly global coverage in terms of geographical and thematic issues[51], but their functioning under both the EEAS and Commission umbrellas remains a challenge. Nevertheless, by being branded (and organised) as Union embassies (not just the Commission's delegations anymore), the efforts of enhancing coherence should be positively perceived by external actors, while the Commission and the EEAS will continue to deal with the difficulties of internal coordination on the ground.

In the context of creating the new EU embassies, the HR initially envisaged to eliminate the EU Special Representatives in various countries or regions, since their Heads of Missions could have taken on their responsibilities. The appointment of the EU Special Representative in Afghanistan as the Head of the EU's embassy in Kabul in April 2010 was thought to set a trend bound to become the general rule in the future[52]. As this transformation has not happen in all cases in the post-Lisbon context, the current status of the EU Special Representatives is an "anomaly"[53]. Having been originally created by the Council and linked to specific crises in an era when there was no EEAS and only the Commission had delegations around the world, the Special Representatives had little connection with the latter and they mainly communicated with the Member States through the Political and Security Committee (PSC)[54]. The Lisbon Treaty partially changed this by putting them under the authority of the High Representative but without fully integrating them in the EEAS. By stating that "*the Council may, on a proposal from the High Representative of the Union for Foreign Affairs and Security Policy, appoint a special representative with a mandate in relation to particular policy issues (...) who shall carry out his mandate under the authority of the High Representative*"[55] (art. 33 TEU), the treaty enabled the HR to use the EUSRs' potential contribution to diplomacy and civilian crisis management as she considered best for the EU's foreign and security policy. This is quite interesting since placing the EUSRs under the exclusive and direct authority of the High Representative meant depriving the member states – which used to appoint the EUSRs – of a useful and flexible instrument for providing foreign policy guidelines. On the other hand, as the EUSRs have not been fully integrated in the EEAS, this "autonomy" fuels "competence conflicts" with the latter, resulting in a potential lack of coherence in the EU's external action in general or crisis management efforts in particular, for example[56].

In 2013, when the first review of the EEAS was undertaken, there were 12 EUSRs, including 8 based in Brussels and 4 based in specific countries, with a combined staff of over 200 political advisors and administrative support; the EEAS argued for their full integration among its ranks, while also retaining a close link to Member States via the PSC[57]. At the same time, the Service pleaded for enhanced flexibility that would allow it to recruit "short-term senior figures (special representatives, co-ordinators or EU envoys) to undertake specific missions as the need arises"[58]. In this context, if maintained, the office of EU Special Representative will cover a broader geographical area and will only be justified where a regional approach is needed – like in the Caucasus, Central Asia or the Middle East and North Africa – including for performing diplomatic "shuttles" in various negotiation contexts which could benefit from a lower level of representation than that of the HR herself.

All in all, the restructuring of the EU foreign and security apparatus by means of the Lisbon Treaty registered a certain degree of success as far as institutional matters were concerned. Beyond the creation of the triple-hatted HR and the EEAS, the complexity of which partially explain their imperfect functioning so far, worth mentioning are the transfer of responsibility from the six-month presidency of the Council to the HR for CSFP and the transformation of former EU Commission delegations into EU embassies around the world, with a strong potential for playing an important political role in negotiations, conflict prevention and crisis management in third countries. As far as coherence in practice is concerned, the case-study on EU involvement in Kosovo will shed some light on how the reorganization of the foreign policy apparatus after Lisbon influenced the Union's performance in post-conflict stabilisation.

III. Rule of law-driven post-conflict stabilisation in Kosovo and the emergence of a post-Lisbon comprehensive approach

To a certain extent, the EU's involvement in Kosovo seems to repeat the scenario in Bosnia and Herzegovina: without playing a major role in the 1999 war and the subsequent political and security arrangements, the EU has gradually positioned itself to the forefront of the international community's stabilisation and conflict resolution efforts. In fact, the EU's involvement in Kosovo provides "a text book example covering all aspects of external assistance as well as security and defence policies"[59].

Kosovo was included in 2003 on the Thessaloniki Agenda confirming the European perspective of the Western Balkan countries, as well as in the Stabilisation and Association Process, as "the overall framework for the European course of the Western Balkan countries, all the way to their accession"[60]. It is in this context that the EU established the European Partnership with Serbia and Montenegro including Kosovo as defined by UNSC Resolution 1244/1999, with a separate plan for addressing the priorities regarding Kosovo[61]. Both the main and complementary priorities, among which the rule of law featured prominently, were meant to help create "a stable future for a secure, democratic and multi-ethnic Kosovo"[62]. The European Partnership was revised in 2006[63] and again in 2008, after the introduction of the Instrument for Pre-Accession (IPA) as the unique framework for providing financial assistance to pre-accession countries. The new document contained 38 priorities in the field of rule of law, grouped under seven headings: the judicial system, anti-corruption policy, money laundering, drugs, police, fighting organised crime and terrorism, and visas, border control, asylum and migration[64]. The envisaged reforms had to be implemented on the long term, with substantive EU technical and financial assistance.

The importance of supporting the rule of law in third countries was emphasized early on by the 2003 European Security Strategy, which showed that "spreading good governance, supporting social and political reform, dealing with corruption and abuse of power, establishing the rule of law and protecting human rights" were the best means of "strengthening the international order"[65]. This not only reveals the self-assumed mission of the EU as an international actor, but also the philosophy behind the EU's peace-building and post-conflict stabilisation endeavours. The EU tries, just as other international organisations and individual Western governments involved in state-building and peace-building, to implement such efforts according to a model of the state that they consider it best supports (domestic and international) peace, that is, a state grounded in democracy, the rule of law and a market-oriented economy. The challenge is, of course, not to limit state-building to the physical creation of institutions, but to foster real change, by supporting endogenous processes favouring the emergence of self-sustaining peaceful institutions[66].

After Kosovo unilaterally declared independence in February 2008, it was recognised by most of EU members including Great Britain, Germany or France. However, five member states[67] refused to do it. Even so, in December 2008 the EU launched the integrated rule of law mission EULEX as part of the efforts to stabilize Kosovo, and gave it an executive mandate enabling it to perform functions of police, customs and judicial systems. Because of the five EU member states not recognizing Kosovo's independence, EULEX had to do its work based on a "status neutral" approach, which entailed significant difficulties in practice. More or less, EULEX was entrusted with building a state that not all EU members recognized.

In the previous rule of law missions, such as EUJUST Themis in Georgia and EUJUST LEX-Iraq, the EU activity focused on criminal justice and reform

of the criminal justice system[68]. With EULEX Kosovo, the concept of rule of law was operationalised more widely and translated into stability, law and order, criminal justice and security in a post-conflict context (ibid.), thus underpinning peace-building. However, the real focus on rule of law promotion in Kosovo seems to be on the latter two – criminal justice and security – with EULEX supporting rule of law dynamics based on the core functions of judiciary, corrections and customs, as UNMIK before it did[69].

As the EU endowed the CSDP with capabilities in the field of justice, police, rule of law and security sector reform, existing Community instruments or internal policies were developed in order to complement them, as is the case with those pertaining to the external dimension of the Area of Freedom, Security and Justice. Activities under the latter refer to the fight against terrorism and organised crime, managing illegal immigration and the failure or malfunctioning of law enforcement institutions, as well as to fostering the rule of law in third countries and regional cooperation, thus requiring „close coordination between the Council and the Commission to guarantee coherence in the EU's external activities"[70]. These developments are in line with the emerging of a different understanding of security in the post-Cold War era. By admitting that the boundaries between "external" and "internal" security threats have become blurred, the EU started promoting a multi-faceted approach which entails the use of the full range of instruments at its disposal, including political, diplomatic, economic, development, military, civilian (policing, judiciary, border assistance, etc.), and the external dimensions of internal instruments such as energy policy – as complementary aspects of a coordinated response to crisis, post-crisis and post-conflict situations around the world[71]. In an embryonic stage, this idea of the "comprehensive approach" was included in the 2003 Security Strategy which acknowledged the paradigm shift in terms of security occurred in the decade after the Cold War and more so after 9/11: "In contrast to the massive visible threat in the Cold War, none of the new [global security] threats is purely military; nor can any be tackled by purely military means. Each requires a mixture of instruments"[72]. The EU with its wide range of instruments for external assistance seemed well placed to try to tackle crises in a holistic manner and to stabilise fragile states emerging from conflicts. But as these instruments were spread across the three pillars and the degree of political interest in intervening varied a lot, the EU did not always make a significant or coherent contribution in this regard. The Lisbon Treaty aimed to streamline the functioning of an enlarged Union and also provide better coordination, efficiency and coherence among CFSP/CSDP and Community instruments[73]. Moreover, as part of the CSDP reform, it acknowledged post-conflict stabilisation as a specific task of EU missions deployed abroad[74]. This added to the substantial reform of the foreign policy apparatus, as detailed in the previous section. At present, EU-driven peacebuilding "makes inroads into different policy areas such as CSDP, development cooperation, the external dimension of the Area of Freedom, Security and Justice (AFSJ), EU enlargement policy, and the European Neighbourhood Policy (ENP)"[75].

For example, in the case of African states CSDP missions and development aid were meant to address specific challenges, while in the Western Balkans the pre-accession framework and stabilisation CSDP missions were combined in order to bring the countries there closer to EU standards. The comprehensive approach was thus not necessarily something new, but the framework for implementing it through a coherent use of all available EU instruments and incentives was improved by the Lisbon Treaty. In other words, both the philosophy and the necessary means were there, but the EU had to make it happen through political will, adequate functioning of its institutions and most of all, through a long term strategic approach to a coherent external action. At the same time, Carmen Gebhard is right to point out that implementing the comprehensive approach is often considered as a predominantly technocratic challenge, which requires institutional actors to work together in sync to provide for what is falsely assumed as a set and static political agenda[76]. In fact, the EU's ability to put the comprehensive approach into practice is affected by "substantial political struggles both between Member

States, but also between major institutional actors, which should be taken as a critical context for any discussions about coherence and comprehensiveness across different policy areas and different phases of the conflict response cycle"[77]. This is nowhere more evident than in the case of Kosovo, where the stance of the five non-recognizing member states complicates most EU initiatives there. Although vertical coherence is beyond the scope of this paper, it is worth noting that this reality should not be either overplayed or underestimated. Despite not recognizing Kosovo as a state, the five EU members generally support its progress in getting closer to EU standards and share the common EU objective of promoting the rule of law there, while requiring the observance of certain wording and rituals according to their official position[78]. At the same time, security concerns are shared by all member states, the impact of which is mostly visible in the visa dialogue and the determination to keep EULEX on the ground as long as necessary.

IV. The current state of play - what challenges for coherence in Kosovo?

The number of instruments used for implementing EU policies in order to consolidate the rule of law in Kosovo has gradually increased over time and the post-Lisbon arrangements had a significant impact on the institutional framework underpinning these policies. The coherent use of the said policies and instruments for rule of law promotion in particular and post-conflict stabilisation in general represents an important test for the European Union from a legal, political, public policy and administrative perspective. While endogenous factors in Kosovo obviously create a special case, this is not the first time the EU acts as a state-builder and assumes executive roles, as Bosnia's case demonstrates too. In both cases the EU employs a myriad of foreign and security policy tools, alongside "traditional" enlargement-related tools. What distinguishes the Kosovo case, among other things, are the following two elements: on the one hand, what the literature has labelled "state-building without recognition" and on the other hand the hostile attitude of the local population/society towards the European project (and Europeanization attempts)[79].

The deployment of EULEX, an integrated rule of law mission targeting the police, judiciary and customs and the biggest civilian EU mission to date, the efforts to mediate between Belgrade and Pristina, the Visa Dialogue, the activity of the EU Special Representative, the Structured Dialogue on Rule of Law, the financial assistance through IPA and IPA II are all instruments of the multifaceted EU involvement in Kosovo. Also, these instruments illustrate a particular approach by the EU which emphasizes the existence of the rule of law as a *sine qua non* condition for Kosovo to eventually become a member of the EU. This is part of the so-called "new approach to enlargement" arguing for "fundamentals first", which means that the rule of law was put at the centre of enlargement policy after Romania's and Bulgaria's accession to the Union. More concretely, this approach provides that "the chapters judiciary and fundamental rights and justice, freedom and security will be tackled early in the negotiations to allow maximum time to establish the necessary legislation, institutions, and solid track records of implementation before the negotiations are closed"[80]. According to the 2012 Enlargement Strategy, the key challenges facing most of the countries in the Western Balkans were: establishing a judicial system that is independent, impartial and accountable and capable of ensuring fair trials, fighting corruption and organised crime, public administration reform, implementing fundamental rights and ensuring the freedom of expression[81]. While strengthening the rule of law and public administration is viewed as "essential for enlargement countries to come closer to the EU and eventually to fully assume the obligations of membership" (ibid., 4), it also serves as the means, among others, by which the EU tries to insulate its member states from external security threats such as instability, illegal immigration and organised crime stemming from state fragility in its vicinity.

The Commission works with the Government of Kosovo in the framework of pre-accession, promoting the rule of law through a technical process based on chapters 23 and 24 of the aquis and the Copenhagen criteria. It also runs the Stabilisation and Assciation Process, which deals with rule of law issues on a technical level. Within the Commssion, DG Enlargement runs the general negotiations, while DG Home is in charge of the dialogue on visa issues, thus holding the big "carrot" of visa liberalisation. The two have to coordinate closely in view of the annual progress reports and while their objective is the same, they sometimes disagree regarding the speed of the process[82]. This is mainly because DG Enlargement needs to deliver tangible results in the pre-accession process, while DG Home needs to be strict and

prioritise the interests of the member states. The latter keep a close watch on the political and technical processes of Kosovo's approximation to EU standards and make decisions based on the Commission's recommendations. Moreover, due to the sensitivity of such issues as migration, the member states are directly interested in Kosovo's progress and in maintaining a firm control on the speed of the process of visa liberalisation, for example. That is why DG Home officials in charge of the Kosovo file regularly brief the member states representatives in COWEB (the Council Working Group on the Western Balkans) on the developments in the visa negotiations, the purpose being that of assuring them that no new migration routes are opened by liberalising the visa regime too soon[83].

The European External Action Service provides the political expertise for the EU's relation with Kosovo, acts as the supervisor of EULEX and mediates, alongside the High Representative, the dialogue between Pristina and Belgrade, with its political and technical components. Starting in 2011, the governments in Belgrade and Pristina engaged in negotiations in view of a normalisation of their relations under the auspices of the EU[84]. Final status issues aside, the talks had to concentrate on the "practical coexistence" of Serbia and Kosovo and the highly political issue of the "parallel structures" run by Serbia in northern Kosovo. In April 2013 a groundbreaking agreement was reached, establishing a power-sharing arrangement in the Serbian-dominated Northern Kosovo (Mitrovica) run by authorities which had been supported by Belgrade after 2008. This was the result of both EU diplomatic efforts and the two capitals' interest in advancing their relationship with the EU[85]. This was a "game changer" in the EU's involvement in Kosovo and was later acknowledged among the main accomplishments of the High Representative Catherine Ashton's mandate, as well as a great success for the EEAS.

EULEX is, due to its executive mandate, the "master of ceremonies"[86] and to a certain extent the most influential EU actor in Kosovo. It is managed by the Civilian Planning and Conduct Capability (CPCC) based in Brussels and thus forms part of the EEAS, being financed from the EU's Common Foreign and Security Policy (CFSP) budget. Launched in December 2008, its aim has been to help the Kosovo authorities to strengthen the rule of law, specifically in the police, judiciary and customs areas. Under the Stabilisation and Association agreement - initialled in May 2014 - Kosovo has to meet certain obligations regarding the rule of law, the judiciary, public administration, electoral reform and the Assembly, human and fundamental rights, protection of minorities, trade and internal market issues[87]. With EULEX helping Kosovo improve its performance with the first two and by tackling serious and organized crime, together with fighting corruption and entrenching the rule of law, the mission enhances the link between CSDP (the civilian component) and the external dimension of the Area of Freedom Security and Justice, which share the objective of "protecting the EU's safe internal space from an «unsafe» external environment"[88]. According to the EEAS, EULEX "forms part of a broader effort undertaken by the EU to promote peace and stability in the Western Balkans and to support the Kosovo authorities as they undertake necessary reforms, in line with their and the region's overall European perspective. EULEX skills and expertise are also being used to support the key objectives in the visa liberalisation process, the Stabilization and Association Process Dialogue and the Belgrade-Pristina dialogue"[89].

In other words, this could be horizontal coherence at its best. The EULEX mission was reconfigured in 2012 and its personnel downsized by 25%, in order to "reflect increasing capacities of the Kosovo authorities"[90]. But the main challenges for

[83] Ibid.

[84] The possibility of such negotiations arose in 2010 and was materialized through a UNSC Resolution introduced by the EU member states. When the talks began, the Belgian EU rotating presidency initially took charge, as Catherine Ashton had just assumed office. Later on, the seasoned diplomat Robert Cooper took charge of the talks on behalf of the HR in 2011 and early 2012. Catherine Ashton herself became involved in the mediation process in the autumn of 2012, in time for the political part of the dialogue, focusing on the issue of Northern Kosovo. In a short article published in EUobserver, Robert Cooper presents some of the characteristics of that process, leading to the Brussels agreement of April 2013. EULEX Kosovo in the current phasing-out stage[91] are not only to transfer responsibility to the Kosovo authorities, but also to facilitate the transfer of capacity-building activities to the projects financed by IPA, a transition which sometimes causes friction between the EEAS and the Commission[92]. There are several reasons for this. On the one hand, IPA-funded projects can be used for supporting the monitoring, mentoring and advising activities of EULEX as it phases out its executive mandate, but the financial regulations in this regard do not allow for fast and flexible responses needed by the specific activity of EULEX[93]. Moreover, EULEX does not have an in-built exit strategy and its mandate is renewed every two years, while the Commission's involvement in Kosovo is open-ended and focused on the long term. The Commission and the EEAS have agreed in principle that the former will continue to pursue through Commission-funded projects the objectives of CSDP missions as they close down, but they still need to figure out the practical arrangements for this[94].

The EU Special Representative in Kosovo was established in 2008 in order to try to ensure intra-EU political coordination and guidance[95]. After EULEX was launched, the EUSR was entrusted with the mandate to provide political advice to EULEX as well, and to generally increase the coordination between the EU Office and the rule of law mission in Kosovo. The Court of Auditors' 2012 Report on the EU assistance to Kosovo noted that "until recently the EUSR has not made a substantial contribution to strengthening coordination between EUO and EULEX", but "the combining in 2012 of the roles of EU SR and Head of EUO is likely to significantly improve coordination"[96]. As both EUSR and Head of the EU delegation in Kosovo, the incumbent has direct contact with the political situation on the ground, on which it reports to the EEAS. At the same time, it has to provide political guidance to EULEX, without being part of a formal chain of command. One main issue at stake in the EUSR's activity is to emphasize a unique message of the EU and to align political priorities and financial assistance, since the EU Office became fully responsible for IPA assistance in Kosovo.

A recent addition in this already crowded scene was the Structured Dialogue on the Rule of Law initiated in 2012 by the former Neighbourhood and Enlargement Commissioner Stefan Fule, who conceived it as a high level dialogue involving himself, Commissioner for Home Affairs Cecilia Malmström for the EU and the Ministers of Justice, Internal Affairs and for European Integration respectively for the Kosovo side. The Dialogue was designed to help Kosovo address the challenges in the field of the rule of law, by initially focusing on the judiciary, the fight against organised crime and corruption. By launching it in the context of the gradual transition from EULEX to the Kosovo authorities, Commissioner Fule wanted the new forum to "play an increasingly important role in confirming priorities and ensuring the necessary close coordination between the key actors"[97]. The forum met again in 2013 and 2014, alongside other established formats such as The Joint Rule of Law Coordination Board co-chaired by EULEX, EUSR and Kosovo Ministry of Justice, the Visa Liberalisation Dialogue and, to a smaller extent, the Stabilisation and Association Process Dialogue. At the same time, it became more and more difficult to organise regular meetings involving so many high-level officials[98].

With so many initiatives in Brussels and Pristina targeting the rule of law promotion in Kosovo, at least two issues become prominent: coordinating them and creating synergies between relevant EU policies on the one hand and entrenching the rule of law in Kosovo without overstretching the local capacity to absorb assistance on the other hand. Neither of them allows for simple solutions.

3. Conclusion

The duty of coherence obliges the European institutions to use the Union's different competences and instruments in a mutually reinforcing way by having regard to the complete set of objectives listed in Article 21TEU of the 'general provisions on the Union's external action'. When tangible results are lacking, there are three types of measures the EU can undertake for enhancing coherence – legal remedies, institutional reform and political initiatives[99]. The adoption of the Lisbon Treaty was just another attempt in a long line of initiatives meant to help the EU overcome turf wars, inefficiency and incoherence in its foreign policy endeavours. By touching sensitive issues like the identity of the EU on the international scene and an eventual hierarchisation among its

institutions, as well as the finality of the integration process, the study of horizontal coherence provides an excellent opportunity for analyzing conflict and cooperation instances in the EU's external action. In the case of Kosovo, due to both the existing stakes and great number of actors involved, rule of law promotion as a cross-over policy entailing both CFSP and non-CFSP areas of activity could become a real test for institutional and horizontal coherence in the post-Lisbon era.

SOVEREIGNTY – FROM CLASSICAL TO SHARED AND BEYOND. THE CASE OF THE EU FISCAL POLICY

Alexandra PLEȘEA-CREȚAN*

Abstract:

Tax policy in the European Union is a goal difficult to achieve in the context of a community that brings together 28 European countries.

This assertion is based on the complexity and the many stages of the European integration process which resulted in the emergence of a supranational structure that does not fit neither into the patterns of federal state, nor of intergovernmental organizations.

Under these circumstances, the fiscal sovereignty the European Union enjoys is quite an atypical one, far form the classical version of sovereignty, which implies very few competences transferred to the European level and many more in the hands of the member states.

The European Union is caught between the need to take further actions in the field of taxation in order to reach fiscal integration and the reluctance of the member states to offer further attributions to the supranational construction regarding fiscal matters.

Keywords: *European Union, sovereignty, fiscal policy, shared competences.*

Introduction

The complexity of issues that led to the debalance of the national states, after two world wars facilitated the appearance of the European Union, a remarkable construction which is not exactly federal, or intergovernmental.

A multitude of factors contributed to its development. However, one of them is still a delicate issue for the supranational structure, the sovereignty.

This paper aims at analyzing the fiscal policy of the European Union from the perspective of the sovereignty concept.

The first part of the article will briefly present the most important aspect of the theory of classical sovereignty, with the states as central actors.

The second part will present the concept of shared sovereignty and how the states manage to cooperate with it.

The last part present the situation of the fiscal policy and what is transferred from national level to the European one.

The hypothesis of this study is to emphasis that, in the case of the EU fiscal policy, the whole idea of sovereignty should be redefined as relative sovereignty.

The classical sovereignty

Sovereignty is a complex concept that can be analyzed from multiple perspectives. Thus, from the perspective of public international law, it is an essential attribute of the state and includes national external sovereignty, as binding will for the whole society.[1]

External sovereignty is absolute, perpetual and individual, as was characterized by Jean Bodin, in „Les six livres de la Republique", published in 1576. Therefore, this attribute ensures total independence of any state from any supranational authority.

But Jean Bodin consider sovereignty as an attribute of the monarch, who enjoys it under a divine right. In this regard, sovereignty is „supreme and absolute power of the sovereign monarch."[2]

The sovereignty as absolute power does not accept any replacing legal authority.[3]

This first attempt to define the concept of sovereignty equate the will of the monarch and the general will. Therefore, at this stage, the monarch's struggle for power takes the form of absolute sovereignty.

From this perspective, sovereignty has become a cover for arbitrary actions of the monarch, its discretionary power representing the rule. The two above mentioned issues were the causes of the necessity to redefine the concept of sovereignty.

[2] Iancu, G., *Drept constituțional și instituții politice*, Ed. C.H. Beck, București, 2010, p. 366.

[3] Isenbauert, M., EC *Laws and the sovereignty of the member states in direct taxation*, IBFD, Doctoral series, Volume 19, 2008, p. 21.

Social movements carried out by the bourgeoisie in the eighteenth century sought to limit the power of the monarch and increase its involvement in the economic life of the society.

Thus, with the French Revolution of 1789, it appears the notion of „sovereignty of the people."

„The monarch can not govern despotically, since sovereignty belongs to the people and as such, it even has the right of resistance to oppression." The theory according to which sovereignty belongs to the people came to replace the theory that sovereignty belongs to the monarch.[4]

Sovereignty which belongs to the people is best explained by the theory of social contract theory developed by Jean Jacques Rousseau.

Social contract theory makes the transition from so-called natural state to the social state. In the first state, the natural one, people have complete freedom, while in the second state, the social one, people are willing to give up full freedom in exchange for ensuring social order.

Therefore, from this point of view, sovereignty is the sum of attributes that each individual gives up in favor of the State.

Part of citizens' rights are opposable to the State, while other rights are transferred to the State for ensuring the general interest of the whole society.

„According to Rousseau, sovereignty is inalienable and indivisible. (…)

Sovereignty is only the exercise of the general will and can never be alienated, and the sovereign (the people), whom is only a collective being, can only be represented through himself. Power can be transmitted, but the will cannot. (...)

The same causes for which sovereignty is inalienable make it indivisible as well."[5]

This definition is the starting point of the French classical theory, according to which citizens form a collective that transfers attributes of sovereignty to the State, the latter having the mission to carry out the general will of the collective.

In contrast, the German school considered the state as being the nation organized according to a specific form of government in a certain area, with the public power as holder of sovereignty.

This theory has been heavily criticized by Hans Kelsen, who tried developing a purely legal theories. He defined the state as a legislative order and a personification of legal rules. In this context, sovereignty is the attribute of the state, which is the rule of law.

In his conception „sovereignty is not a perceptible or a objectively discernible quality of a real object, but on the contrary the condition upon which depends the supreme normative order which, in its validity, is not deducted from any other higher order". From this point of view, the state seems not to have sole responsibility for solving problems, existing aspects that fall under the influence of international law.

Barthelemi believes that the state operates through two categories of legal acts, namely:

a) legal acts of unilateral nature, based on state authority, such as the lawmaking process, and the governance, i.e. all those acts which the State exercises in the form of functions;

b) management instruments (contracts) that the state performs as a private individual, as a legal entity (moral person).

According to the theory developed by Leon Duguit, citizens' conduct must be determined by social norms endowed with binding force. In his view, the very fact that humans are in a society generates the need for creation of a law or a social rule.

The state, by virtue of its sovereignty, is entitled to apply the rules, using the coercive force when needed. From this points of view, Leon Duguit considered necessary to replace the traditional concept of sovereignty with that of „public service".

Analyzing the classical theories of sovereignty, we conclude that sovereignty is characterized by the fact that it is a legal power and supreme power.

Therefore, the state legally exercises sovereignty, which complies with the requirements and expectations of the governed ones, being accepted by them in this way. However, the state exercises sovereignty without a higher will or a higher authority than the will of the state.

If classical theories of sovereignty established supremacy of state sovereignty, what happens to this attribute in the context of EU Members?

In the eighteenth century the Peace of Westphalia marked the transition from empire to independent states, being recognized the principle of state sovereignty.

For a long time the concept of sovereignty developed having as a starting point the system of national states. However, the challenges have emerged after the Second World War, with the formation of supranational institutions and organizations. From this perspective, sovereignty changed the trajectory of its evolution when the European Union emerged.

Through the Treaty of Paris, signed by France, Belgium, Italy, the Netherlands, Luxembourg and Germany, was established the European Coal and Steel Community. This document led to the formation of a supranational body, the High Authority, which function as an executive in the domain of coal and steel.

So in this context it is difficult to speak of sovereignty in the version established by the Peace of Westphalia.

[5] Iancu, G., *Op. cit.*, pag. 367 și urm.

If we consider that the signatory states on the basis of their sovereign wills signed the Treaty of Paris, we could say that the principle of national sovereignty has not changed after its entrance into force. However, the mere existence of a supranational authority which enjoys even a minimal decision-making power in a given economic area, refutes this claim.

In addition, globalization brings new challenges to the classical concept of sovereignty, Member States no longer being able to exercise it in all fields.[6]

Under these conditions, the concept of sovereignty in its classic sense should be redesigned to better adapt to the current reality. Thus, for example, Alfred Verdross, considered one of the founders of international constitutionalism, supports the idea that sovereignty is more suitable approach as a set of skills that can be transferred to the supranational level.

Alfred Verdross believes that sovereignty is defined only in terms of international public law[7], as that set of attributes that provide a state with the independence from other states, but not against the rules of public international law.

Also, Korowicz proposes giving up the idea of „absolute sovereignty" and accepting that of a „relative sovereignty." [8] This new type of sovereignty is more suitable to real situations, which in different forms limits sovereignty.

In this regard, Korowicz shows that sovereignty can be limited simply by concluding international treaties, because they result in restricting the freedom of action of the state.

If states limit their sovereignty, then it should also be considered the birth of international sovereignty via the transfer that occurs between states and international institutions.

Although this transfer appears to be feasible only through the conclusion of international treaties, at a simple analysis of the UN Charter - one of the most important international organizations - we see that it mentions the right of self-determination of peoples, not states. This „suggests that the peoples of the world are the ultimate source of international authority."[9]

These two theories, one that calls for a global state with rules that apply to all national states and the other advocating for the supremacy of international law over national law, it is added a third theory, based on some realistic findings about the inequality of military and economic power of states, argues that the notion of sovereignty loses all meaning.

Thus M.A. Kaplan[10] believes that currently, the international stage is characterized by the fact that it is dominated by a few powerful states, being a bipolar system, in which the idea of state sovereignty loses any meaning or its importance is greatly reduced by limiting it to only a few issues. So if sovereignty does not lose total meaning, it is diluted significantly, losing the specific consistency of the „wesphalian sovereignty".

2. Shared sovereignty

Although the European construction still takes the form of a union of independent states, it may conclude international treaties and agreements obliging Member States, reducing their capacity al international level.

The fact that the European Union enjoys its own legal order established by treaties, entitles us to consider absolutely necessary to redefine sovereignty to match current reality.

The Rome Treaty, following the Paris Treaty, strengthened a number of supranational institutions that arose with the entry into force of the Treaty of Paris - the European Commission, Council of Ministers, the European Parliament and the European Court of Justice.

Therefore, it had been created a supranational decision-making system similar to that of in the Member States, in which the European Commission acts as an executive, the Council of Ministers is the legislative of the community, the Parliament has a consultative role and the Court of Justice comes to resolve conflicts between Member States.

Although the decision-making power of these institutions remains low, there is a new kind of sovereignty shared between Member States and the European Communities.

This new type of sovereignty has evolved along with the European Union, the Maastricht Treaty being the legal document introducing the title „European Union" for the newly formed supranational European organization.

From the perspective of shared sovereignty, three important aspects should be considered at this stage: the emergence of the three pillars of the European Union (European Communities, Common Security and Defense Policy and the pillar of Justice and Home Affairs), European citizenship, the principle of subsidiarity and the emergence of the Euro. All these aspects come to give content to the concept of national sovereignty, being its attributes.

Any independent state, by virtue of its national sovereignty, is entitled to take action in areas related to foreign policy, national security and defense, rights and freedoms of citizens and national currency.

[8] See Korowicz, M.S., *Organisations Internationales et Souverainete des Etats Membres*, Editions Pedone, 1961.

[9] Nagan, W.P., Haddad, A.M., *Sovereignty in Theory and Practice*, 13 San Diego Int'l L.J. 429 (2012), http://scholarship. law.ufl.edu/ facultypub/293, p. 461.

[10] See Kaplan, M.A., *How sovereign is Hobbes's Sovereign?* în King, P. (ed.), Thomas Hobbes. Critical Assessments, Vol. 3, London, Routlege, 1993, p. 742-758.

The subsidiarity principle was enshrined in Article 5 of the Treaty establishing the European Community. This article provides:

Under the principle of conferral, the Union shall act only within the limits of the competences conferred upon it by the Member States in the Treaties to attain the objectives set out therein. Competences not conferred upon the Union in the Treaties remain with the Member States.

Under the principle of subsidiarity, in areas which do not fall within its exclusive competence, the Union shall act only if and in so far as the objectives of the proposed action cannot be sufficiently achieved by the Member States, either at central level or at regional and local level, but can rather, by reason of the scale or effects of the proposed action, be better achieved at Union level.

In areas which do not fall within its exclusive competence, the Community must act in accordance with the principle of subsidiarity, only if and insofar as the objectives of the proposed action can not be sufficiently achieved by the Member States and therefore having the scale or effects of the proposed action, be better achieved at Community level. [11]

Therefore, it is becoming increasingly difficult to accept only the existence of classical sovereignty, limited to national states.

The impact of the next treaties of the Union Europe was not as strong as the one made by the Maastricht Treaty regarding the development of European institutions and the principle of shared sovereignty. These treaties were designed rather to support the EU enlargement.

However, the Lisbon Treaty comes with an extension of decision-making power of the European institutions, in order to make more efficient the integration process.

On one hand, the Lisbon Treaty gives the EU a legal personality, on the other hand the qualified majority voting is extended to new areas. Therefore, the political power of supranational institutions increases considerably.

It is also important to note that the Lisbon Treaty meant the establishment of the EU Charter of Fundamental Rights, a document that provides a series of rights for citizens. Disputes relating to the application and interpretation of the Charter fall under the jurisdiction of the European Court, which means that it is above the national jurisdictions.

The concept of sovereignty has not evolved strictly linear, classical sovereignty being profoundly changed by the emergence and development of the European Union, a supranational structure.

Even if we would support the idea that the authority enjoyed by the EU comes from the Member States[12], it is impossible to deny that a number of actions at EU level take priority over the national ones, even though it applies due express or implied acceptance by Member States.

In the example given, although we would be tempted to say that there is no new kind of sovereignty because supranational structures do not enjoy coercive force necessary to enforce the rules which they develop, we can not deny the fact that EU Member States recognise the priority of EU law over the national one.

So we would say that, at first glance, the EU enjoys sovereignty in the legal sense; it creates legal standards higher than those of the Member States. Furthermore, Member States do not enjoy legal supremacy in the areas entrusted to the European Union. However, it is true that the implementation of EU measures, in the the overwhelming majority of cases, lies with the Member States.[13]

But beyond this idea, the EU is far from enjoying legal sovereignty in the true sense of the word, aspect evidenced by the fact that in public policies with a more pronounced national character (national defense policy, competition policy, fiscal policy) the supranational structure plays a secondary role.

In fact, the entire classification of policies into three categories: those which lie exclusively with the Member States, those which lie exclusively with the EU and those assume shared competences between Member States and the Union, denotes failure of the EU's legitimacy.

The fact that the European Union enjoys its own legal order established by the Treaties should mean the rethinking of the sovereignty concept.

There is a sharing of authority and governance between EU and its Member States; the latter participate in the work of EU, establishing its role and its existence, but their participation is reduced in the communitarised area.[14]

State sovereignty is the ultimate source of autonomy in terms of internal problems related to the organization and functioning of society.

The new institutional structure was charged not only with substantial powers which until then were in the hands of sovereign states, but also received normative powers, in concrete, the power to approve regulations and directives.[15]

3. Fiscal sovereignty: from national to European level

In the context of a new type of sovereignty, the shared one, which is shared between the European Union and its Member States, what happens to the fiscal policy of the Member States and more specifically, their fiscal autonomy?

This is one of the questions we want to answer in detail.

If classical sovereignty implies the full power of the state to set tax rates, taxable income categories and categories of taxpayers, how much would the fiscal power be affected in the case of shared sovereignty.

EU Member States are reluctant to the idea of transfer of fiscal sovereignty to supranational institutions, as this would lead to diminished control over their own financial resources that are to form the state finances.

However, the system of sovereign states with a control focused on the domestic sphere, can facilitate creating and sustaining a unique society, with a distinct cultural and political identity, capable of follow its own vision of a desirable society. [16]

The actions of Member States in this field continues to stress the fact that they are not willing to give up their tax autonomy in favor of the European construction.

Therefore, EU legislation on tax matters continue to be adopted unanimously. However, all terms of direct taxes remains under the regulator of the Member States.

However, we can not deny the existence of three separate decision-making levels: European Union level, composed of all the powers which the Member States have ceded to the Community bodies, which they perform exclusively (antitrust, trade policy, monetary policy in the case of Monetary Union Member States); national level, consisting of exclusive competences, remaining within the sovereignty of Member States[17] and a level of shared competence, which belongs to both EU institutions and Member States.

Although fiscal policy is considered exclusive attribute of the sovereignty of the Member States, in the part related to indirect taxation, the European Union sets limits that must be respected by Member States regarding the Value Added Tax.

However, given that fiscal policy affects other European policies - competition policy, labor policy - through European treaties the powers of States were limited in areas connected to tax policy, to ensure coordination of this policy at Community level. The EU approach regarding fiscal policy is the harmonization of the laws and policies of Member States.

The concept of sovereignty has adapted to the structure and functioning of the European Union. These substantial changes that can not be easily overlooked, even in a situation where we have to accept that there is a new normative order that requires political power to move beyond national states.

Considering sovereignty as the attribute conferring a power of absolute government to an entity in a given territory through will of the people, in this case, at first glance we might consider that the European Union fits neatly into this pattern. But there are atypical features of this structure, which do not fit easily into the patterns of classical sovereignty.

Problematic in terms of the new type of sovereignty is how the national and European systems influence each other. It would be wrong to think that the relationship is a one-sided type.

The increase of duties incumbent to the European Union had the effect of lowering the possibility for Member States to develop public policies independently, without regarding the policies of other members of the European Union[18]. Therefore, although the national state remains the main actor on the international stage, it is not the only one.

From another perspective, the common European economic market prevents Member States from taking unilateral decisions as they affect fair competition, an essential principle of this market.

However, the states, by their own will, accept the European regulations affecting their internal legal order. The above aspects seem to create a paradox, however, the European Union is a non-standard construction, therefore, its degree of complexity is an increased one.

Therefore, increasing the powers that bring the EU closer to model of a structure which enjoys sovereign power has the effect of eroding the national sovereignty.

As the European Court of Justice ruled, the transfer of sovereign powers from the national to the European level works rather as a system of mutual limitation of power for national and European actors. If the former are limited by the principle of supremacy of EU law over national one, the latter are limited by the principle of conferral, which means that the EU can not act in areas where the Treaties do not empowered it to make decisions.

We can say that the European Union has gained ground against Member States in terms of decision making and public policy development. However, the question of sovereignty remains a thorny one, difficult to approach and managed by the European Union. This can be determined by analyzing the Treaties and EU legislation, action which would emphasize the fact that

[16] Ring, D., *What's at stake in the sovereignty debate?: International Tax and the Nation-State*, Boston College Law School, Research paper 153, 2008, p. 17, http://ssrn.com/abstract=1120463

the express term „sovereignty" is not used, but rather references are made to it.

However, in the TFEU art. 114, para. (2) is noted that the provisions of par. (1) of the same Article shall not apply to fiscal provisions. If in general, the European Parliament and the Council, through the ordinary legislative procedure, may adopt measures aimed at harmonization of national laws to ensure the functioning of the Common Market operation in tax matters this procedure does not apply.

Although states continue to maintain fiscal sovereignty, overall, it is increasingly diluted, which could be explained by three aspects:

The emergence and development of international mechanisms and institutions vested with decision-making functions;

- An extensive economic market that goes beyond a single state;
- Failure of States to absorb or mitigate macroeconomic shocks, given that monetary policy is a centralized European one and the fiscal one is decentralized, remaining attribute of Member States. This is confirmed by the economic crisis that states could not „discard" of.

These issues being presented, perhaps the most interesting feature of the new type of sovereignty, the shared one, is how the Member States power is limited by the European Union, and Union power is also limited by the Member States. We could consider this attribute works as a way to control and balance, as in the classical theory of sovereignty where the executive, legislative and judicial powers shall limit each other to ensure avoidance of abuse of power.

Shared Sovereignty implies that both Member States and European Union play the role of the decider in public policy making.

States could argue that the transfer of competences in the fiscal domain to the European Union constitutes acceptance of the loss of their fiscal autonomy. But in an economic crisis which greatly debalanced economies, the need for legitimate institutions with enough power and authority to tax transnational corporations and to share equitably the tax burden, so that the crisis is over, is undeniable.

However, the idea of an international or regional order in which fiscal sovereignty is dispersed and disaggregated[19], we consider being more effective because an event that takes place at international level can not be solved by measures taken solely at national level. Furthermore, the states show a high degree of individualism, reason for which, the measures adopted aim only self-interest.

With the entry into force of the Lisbon Treaty, the EU has acquired legal personality, the treaty expressly stating this fact and detailing its underlying elements. „The Union shall have legal personality". [20]

In each of the Member States, the Union shall enjoy the most extensive legal capacity accorded to legal persons under their laws; it may, in particular, acquire or dispose of movable and immovable property and may be a party to legal proceedings. To this end, the Union shall be represented by the Commission. However, the Union shall be represented by each of the institutions, by virtue of their administrative autonomy, in matters relating to their respective operation. [21]

EU enjoys legal personality in the field of international law, not in the field of private law, treaties being just a series *res inter alios acta* documents, which function on the recognition by Member States[22]. This aspect could raise the question of a possible conflict between the legal personality of the European Union and the legal personality of the Member State.

Conclusions

From the perspective of sovereignty, the European Union does not fold under the classical theory of sovereignty, which implies absolute freedom of states to manage their internal affairs and autonomy towards other states, being rather a pattern of relative sovereignty, which means limiting the power of states in various forms (legislation, transfer of functions).

Tending to claim that states, by virtue of national sovereignty, have signed the EU treaties via their own will, would lead us to the conclusion that classical sovereignty remains the only kind of sovereignty, even after the evolution of the European Union.

Accepting the idea that the authority enjoyed by the EU comes from the Member States[23], it is impossible to deny that a number of actions at Community level has priority over the national ones.

Member States are not willing to cede sovereignty in the tax field to the supranational construction. Therefore, the European Union, on the one hand is forced to rather follow the path of tax harmonization, on the other hand to apply the „contract" type of fiscal governance. Decision making in the taxation field is a heavy one, which requires unanimity and correct application of EU law.

The EU's ability to adopt treaties and agreements with international organizations is expressly enshrined in the Lisbon Treaty. However, states have continued to feel the need to limit this legal personality through the Declaration no. 24 annexed to the Treaty of Lisbon.

According to it „the fact that the European Union has a legal personality will not in any way authoriz the

[23] See Tokar, A., *Op. cit.*

Union to legislate or to act beyond the competences conferred upon it by the Member States in the Treaties."

Although, this repetition show that the sovereignty debate is still based on the international legal personality of the European Union.[24]

Objectives of the European Union and European Single Market are difficult to achieve in the context of confrontation with problems of fiscal sovereignty of Member States and territoriality understood as limitation of the power of taxation. The free movement of people, goods, services and capital among member countries of the Union may be put in peril. And if we add to this aspect the lack of fiscal prudence, the chances of fiscal integration will decrease considerably.

To avoid this very least desirable aspect, we must accept that although the authority enjoyed by the EU comes from the Member States, in some cases it has supremacy over the national level.

Therefore European regulations aimed at a common fiscal policy, through which it is ensured the fiscal prudence and the balance the economy, should be supported by EU Member States as regulations applicable with priority. However, Member States continue to defend their sovereignty in taxation matters against the supranational construction. This endows the European Union with reduced tax legitimacy.

Regarding the issue of sovereignty, transfer of attributes from national to the EU can be seen both as a dilution of sovereignty and as pure will of the Member States.

On the one hand states miss a part of their duties which are naturally theirs on the basis of their sovereignty of to provide the power required for the European construction to achieve its objectives.

On the other hand, in lack of willingness of Member States, the transfer of powers to the European Union can not be achieved.

Thus, as long as treatis vest the European institutions with decision-making power by will of the states, the states can not be classified as semi-sovereign, because they do not cede some attributes, but rather they pool them in the institutional structure of the EU. [25]

The need for sharing of sovereignty between the supranational and national level in the field of taxation and increase of the legitimacy of the EU is justified by the economic, political and social phenomena exceeding the national level.

"EU IN CRISIS: CURRENT CHALLENGES IN THE AREA OF CFSP"/ A LEGAL PERSPECTIVE

Ghenea-Viorel TOMESCU[*]

Abstract

The paper aims to capture - from a politico-institutional and legal point of view - the current challenges that the European project is facing with in the field of Common Foreign and Security Policy (CFSP) / Common Security and Defence Policy (CSDP).

In this context, it has been assessed the consistency and credibility of the EU profile in the crisis management both in its Southern and Eastern neighbourhoods as well as the perspectives of EU - NATO Strategic Partnership and cooperation.

Moreover, the paper critically examines the legal mechanisms and procedures in force in the field of CFSP / CSDP, putting forward, at the same time, some concrete suggestions and proposals for possible improvements.

Keywords: *Lisbon Treaty; Common Foreign and Security Policy; Common Security and Defence Policy EU - NATO Strategic Partnership; Intergovernment Cooperation.*

1. Introduction

Over the last years, the international security environment has progressively suffered an increased deterioration in the EU Neighbourhood - with older or newer crisis situations - both in the South (the endless Israeli – Palestinian conflict / the Middle East Peace Process; the Syrian crisis; the Iranian nuclear file; the highly fluid post-war situations in Iraq, Afghanistan and Libya) and in the East (with the dramatic events in the South-eastern Ukraine over the last year and the annexation of Crimea by Russia in March 2014 as well as with self-proclaimed breakaway regions and frozen crisis in the Republic of Moldova (Transnistria), Georgia (South Ossetia / the Russo-Georgian war; Abkhazia) and Azerbaijan (Nagorno-Karabakh).

As a direct consequence of Russia's increasingly agressive behavior, with obvious and brutal violations of international law, including its military intervention in Crimea, followed by the annexation of this territory as mentioned before, the relations between Brussels and Moscow have experienced a less "happy" period and have progressively become more and more strained with the subsequent sanctionatory regime imposed by the EU to Russia.

All this resulted in an increased concern of the EU and of its Member States towards a better use of the Union's toolbox – both institutional and legal - aimed at increasing the EU profile and efficiency in managing its CFSP/CSDP.

From this perspective, the article seeks, to a lesser extent, to make an inventory of the geopolitical and security challenges faced by the EU foreign policy, focusing mainly on an assessment of the legal instruments offered by Lisbon Treaty in the field of the CFSP / CSDP. At the same time, some concrete proposals and suggestions are advanced aimed at possible improvements or adjustments that could be made in the field.

In terms of **research methodology**, the article **put in mirror, on the one hand, the legal instruments available to the EU within CFSP / CSDP**, and the **specific requirements needed in order to allow the EU to act as a genuine global actor and to efficiently manage the challenges that the Union is facing on the international arena**, on the other hand.

2. Content

2.1. The Political Challenges

Since the very moment of the CFSP's launching as a specific dimension of EU external action (in the context of the entry into force of the Maastricht Treaty[1]), the EU Member States have expressed nuanced approaches as regards the perspectives and objectives of the EU foreign policy. Thus, while some Member States have constantly endeavoured to strengthen the EU's CFSP pillar, other Member States, especially those having a very pro-Atlanticist orientation have been sceptically as regards such a possibility, fearing the weakening or even the undermining of NATO's relevance with the development of CFSP.

In addition, some Member States have openly expressed growing concern about the fact that the development of CFSP will lead to a gradual transfer of power from the national level to Brussels with direct and clear implications in terms of loss - at least partially - of their sovereignty.

As a result of such diverse approaches, the CFSP has remained a privileged domain of the

[1] February 1993 / http://www.eurotreaties.com/maastrichtext.html.

intergovernmental cooperation[2], with direct consequences on the preservation of "unanimity" voting rule as the main voting system within the second EU pillar at the expense of qualified majority voting. At the same time, the unanimity has caused constant and significant difficulties in getting common positions and promoting joint actions as regards important issues of the EU foreign policy.

One of the most striking examples of the difficulties faced by the EU in identifying a common approach or position in the field of the EU foreign policy is unfortunately represented by the Ukrainian crisis.

Thus, since the Ukrainian crisis has entered its military phase, through the annexation of Crimea by Russia, the EU Member States have expressed quite diverse positions, giving the impression of being concerned first and foremost by the protection of their national interests and only to a smaller extent by the promotion of their common interest as EU Member States. Subsequently, despite the sanctions regime imposed to Russia, which repercussions for Moscow can not be underestimated, the Member States have quite often had difficulties in speaking with one voice on the EU foreign policy and, in particular, in terms of the Ukrainian crisis management. Unfortunately, such controversial situation has eloquently been illustrated by the two rounds of negotiations with Russia hosted by Belarus – Minsk I and Minsk II - which outcomes have clearly pointed out once more a rather hesitant Europe having difficulties in defining a common position.

In addition, the format in which the negotiations in Minsk were conducted has raised some controversies due to the fact that the Franco-German tandem spoke on behalf of Europe without an explicit mandate from the EU – namely the European Council (possibly at the EU Council proposal). Against this situation, one may put the question - with all the due respect for the contribution of the two founding members of the European Communities /EU to the progress of the European project - whose interests did they defend in Minsk in the two rounds of negotiations? And wouldn't it have been more appropriate to invite the President of the European Council and the High Representative of the Union for the Foreign Policy and the Security Policy to take part to negotiations and to bring their own contributions to the peaceful settlement of a crisis involving the not only Germany and France but the interests of EU as a whole.

At the same time, we do consider that the format of discussions in Minsk would have been much more balanced if the North Atlantic Alliance were present on its behalf – together the EU - at the negotiations taking into account the community of values and interests of the two organizations. Last but not least, the United States - as the main guarantor for the peace and security of the European and Euro-Atlantic community - should have been invited to take part and to directly engage in any negotiation process related to the Ukrainian crisis.

Of course, one could argue - rightly - that the difficulties in achieving a consensus amongst the Member States on a common EU approach with respect to the situation in Ukraine as well as the complexity of decision-making procedures involved prevented the EU from being represented and not the least from shaping a unitary position at the talks in Minsk.

In this respect, there are still difficulties for the EU Member States to get a common vision and to speak with a single voice with its international partners as well as to efficiently manage the crisis / conflicts in the EU Neighbourhood - both to East and to South - despite the fact that the peace and security of the EU as a whole obviously depends on the peace, security and stability of the ENP region[3].

Actually, the rationale behind the current ENP reform process has been sourced from the need to improve the coherence and efficiency of EU action in its Neighbourhood and has focused – amongst other specific issues[4] - on some priority directions, such as: the need to enhance the ENP political and strategic profile; an increased EU involvement in the peaceful settlement of the frozen conflicts; an enhanced complementarity of the ENP tools with the Lisbon Treaty 's tool box in the fields of CFSP /CSDP as well as other sectors of the EU external action (namely development cooperation, humanitarian assistance; scientific and technological cooperation).

In the same logic, the EU aims at rethinking and adapting the European Security Strategy in order to better address the new risks for peace, security and stability of the European Union. In this respect, a strategic reflection process has already been launched amongst the EU Member States and the EU institutions aimed at updating the basis for a new European Security Strategy[5] in order to make it compatible with the new realities of continuously changing political and security international context. Such a debate represent a useful and necessary step in order to get a common approach from the Member States and the EU institutions including the European Parliament despite the fact that the latter – under the Lisbon Treaty - is still missing significant competences on the EU foreign policy.

[2] "Unanimity" voting system is also used in the "Freedom, Security and Liberty" area (former third pillar of Nice Treaty / judicial co-operation in criminal matters and police cooperation).

[3] Either it speaks about some breakaway regions in the East (Republic of Moldova, Georgia, and Azerbaijan) or about some frozen conflicts in the South (Middle East peace Process; the Syrian crisis).

[4] Increased differention amongst the ENP partner countries; ownership; flexibility; a more focus and tailor made approach.

[5] The previous ESS is dated 2003, with an updated version in 2008.

The strengthening and deepening of the EU - NATO Strategic Partnership has constantly had a special place in EU foreign policy, given the fundamental role played by the Alliance in ensuring the security of the Euro-Atlantic community. But again, we notice some residual stumbling blocks faced by the two organizations in terms of developing their institutional cooperation due to the still unresolved "participation issue" i.e. the dispute between Turkey and the Republic of Cyprus on the situation in the Northern Cyprus.

In our view, the existing blockage in the peaceful settlement of the "Cypriot file" is likely to create difficulties both the EU and NATO, with direct consequences on the efficiency of cooperation between the two organizations.

2.2. The legal framework on CFSP /CSDP

&.1. The Lisbon Treaty and the CFSP

The main improvements brought by the Lisbon Treaty in the field of CFSP / CSDP should be considered from a double perspective, both politico-institutional and legal.

In terms of **political and institutional reforms**, the Lisbon Treaty has created and consolidated new institutions and structures with relevant prerogatives in the field of the EU Foreign Policy namely the European Council, the Foreign Affairs Council and the High Representative for Foreign Affairs and Security Policy.

As for the **European Council**, it has been formalized as a permanent EU institution, headed by a President with a term of two years and six months, renewable once. This institution brings together the Heads of State or Government of the EU Member States, the President of European Commission as well as the High Representative for Foreign Affairs and Security Policy[6]. The European Council's role consists in "providing the Union with the necessary impetus for its development", including in terms of shaping and defining "the general political directions and priorities"[7] for the EU's foreign policy.

When it comes to the **Foreign Affairs Council**, we can't speak about the establishment of a new institution as such, taking into account that, up to the moment of entering into force of the Lisbon Treaty, the foreign ministers of the EU countries used to meet in specialized meetings of the Council, regardless of the formal name of the respective structure.

As regards the **High Representative of the Union for Foreign Affairs and Security Policy**[8], given the restrictive nature of the provisions of Article 13 / TEU, it can not formally be considered as representing an EU institution as such, but rather an office. Despite this, the HR, assisted by the **European External Action Service**, has obviously been meant to play a relevant role in shaping the CFSP, including in terms of "right of initiative" in the CFSP, together the Member States and the European Commission.

At the same time, it's worth mentioning that the HR is acting as a "triple-hatted" body, covering the responsibilities of three former or current Union's high officials: the former High Representative for CFSP/Secretary General of the Council[9]; the President of the Foreign Affairs Council[10]; the Vice-President of the European Commission and Commissioner for External Affairs[11].

As far as the **EU legal framework** is concerned, the Lisbon Treaty has preserved the intergovernmental feature[12] of the CFSP / CSDP - i.e. the unanimity as the main rule[13] in the decision-making procedures while slightly extending - by derogation from the provisions of the above-mentioned rule - the situations where the qualified majority voting is considered to be applicable when adopting a decision based on the following circumstances[14]:

- "defining a Union action or position on the basis of a decision of the European Council relating to the Union's strategic interests and objectives;
- "defining a Union action or position, on a proposal which the High Representative of the Union for Foreign Affairs and Security Policy has presented following a specific request from the European Council, made on its own initiative or that of the High Representative
- "implementing a decision defining a Union action or position;
- "appointing a special representative".

In addition, a decision of the Council, by a qualified majority, can be adopted on the basis of an initiative of the HR establishing "the procedures for setting up and financing the start-up fund, in particular the amounts allocated to the fund"[15] for rapid funding

[6] Without having – in the case of the HR - the right to vote.

[7] Official Journal of the European Union, Consolidated versions of the Treaty on European Union and of the Treaty on the Functioning of the European Union C 115, Volume 51, 9 May 2008.

[8] Official Journal of the European Union, Consolidated versions of the Treaty on European Union and of the Treaty on the Functioning of the European Union C 115, Volume 51, 9 May 2008, art. 18 (1).

[9] Function created by the Amsterdam Treaty, in force since 1999.

[10] With the Lisbon Treaty, the EU Council's powers have been divided between the General Affairs Council (which responsibilities are related to the preparation of the European Council's activity and the management of sectoral formations of the Council, with the exception of the Foreign Affairs Council) and the Foreign Affairs Council.

[11] With clear prerogatives

[13] 9.5.2008 EN Official Journal of the European Union C 115/37, TFEU, Article 31, paragraph 1.

[14] 9.5.2008 EN Official Journal of the European Union C 115/33, Treaty on the European Union, Chapter 2 / Specific provisions on the Common Foreign and Security Policy, Article 31(2).

[15] 9.5.2008 EN Official Journal of the European Union C 115/37, TFEU, article 41, paragraph 3.

from the EU budget of actions to be promoted under the aegis of Common Foreign and Security Policy.

In this context, it is worth mentioning here that in accordance with the provisions of article 31, paragraph 1 / Treaty on the European Union a Member State has the possibility to invoke its **"abstention" or "constructive abstention"** when it comes to vote, meaning in concrete terms that the Member State is not obliged to pass to the implementation of the decision taken by its partners, despite the fact that the decision retains its significance for the Union as such, on the one side, and the Member State that has invoked its constructive abstention should avoid or refrain themselves from acting contrary to the provisions of the decision in question, on the other side.

Of course, there are some limitations imposed by the EU Treaties in connection with the "constructive abstention", i.e. if the Member States making use of constructive abstention - including by making a formal statement to this effect - represent at least 33% of the EU Member States representing at least 33% of the Union's population then the decision can not be adopted. We remark here an increased affordability that has been offered by the Lisbon Treaty when it comes to adopt a decision despite the existence of the "constructive abstention" compared with the Treaty of Nice in the sense that under the previous voting system in order to block the adoption of a CFSP decision it would have been enough to have constructive abstention of the Member States representing 33% of the weighted votes necessary for getting the qualified majority.

At the same time, we can remark that **the adoption of legislative acts as such has explicitly been excluded from the scope of applicability of the Common Foreign and Security Policy as well as for the Common Security and Defence Policy[16].**

Among the most important innovations introduced by the Treaty of Lisbon with direct implications in the field of EU foreign policy, including the implications of the Common Security and Defense, we have to mention **the "solidarity clause"**[17] and the **"mutual defense clause**"[18] respectively. The provisions of the two above-mentioned clauses are likely to strengthen the solidarity between the Member States while enhancing their involvement and participation in terms of countering any armed aggression or terrorist attack against a Member State from a third country, along with providing the necessary assistance in case of natural disasters or man-made disasters.

Last but not the least, we also notice another significant change made by the Treaty of Lisbon - with purely cosmetic appearance - namely **the replace of syntagma "European Security and Defence Policy" with "Common Security and Defence Policy"**. Such a change seems to have only a purely cosmetic effect, as long as, in substance, the mechanism of decision-making process in the field of CSDP remains practically the same. However, politically speaking, the overall demarche of renaming / "rebaptizing" the security and defence policy from "European" to "Common" **has or should have the meaning of a fundamental political commitment**: the passage - somewhere in the future, when appropriate - **to the "communitarization" of the security and defence policy** and subsequently a **possible effective application of the qualified majority voting system** on such matters.

&.2. The way ahead / Proposals for improving the coherence of EU Foreign Policy

Against this background, we can raise the question to what extent the legal framework provided by the Lisbon Treaty can meet the politico-strategic and security challenges faced by the EU on the international scene, including in terms of coherence and efficiency of its external action?

Obviously, the EU cannot have a significant performance on the international scene - as a credible global player - as long as its performance in the field of CFSP often seems similar to that of a car with the brake pedal pressed down.

In our view, an in-depth assessment and reflection on Common Foreign and Security Policy / Common Defence and Security Policy is still needed in order to make full use of Lisbon Treaty's toolbox while trying to adjust and improve where necessary the current strategies and policies on such matters.

The EU **cannot further ignore its inability to speak with a single voice on CFSP/CSDP issues as if nothing had happened.** As a direct consequence, the **EU cannot simply preserve the current decision-making system** in the field, **if it really wants to count as a credible player in the world affairs.**

In this respect, some improvements are needed in order to facilitate the consensus or at least the EU common positions on most important dossiers.

Amongst the **possible solutions**, we suggest:

- **improving the convergence, coherence and coordination amongst the Member States** in terms of **strategic vision and shaping** the EU foreign policy priorities through a wide-ranging debate, involving the EU institutions, the Member States, including the public opinion in the Member States / the European citizens; in order to reach such a crucial goal, the **Europeans need much more solidarity and a clear-cut and shared awareness of the EU common values and interests**; in this respect, the Member States should not be reluctant in asserting their political will to strengthen the EU role as a global actor; at the same time, the political leaders should act at national level as opinion leaders in order to better explain and shape their public opinion about the importance of CFSP for

[16] 9.5.2008 EN Official Journal of the European Union C 115/37, TEU, article 31, paragraph 1.
[17] 9.5.2008 EN Official Journal of the European Union C 115/37, TFEU, article 222.
[18] 9.5.2008 EN Official Journal of the European Union C 115/37, TEU, article 42(7).

their own welfare and security;

- **better use and implementation of "common strategies"**[19] which should be **better suited to geographical regions, strategic partners, groups of states, partner countries and, not the least, outbreaks of crisis**; as a direct consequence, such targeted "common strategies" **should allow the use of the QMV** when it comes to implement "common positions" and "joint actions" previously approved by unanimity within the European Council and / or the EU Council;

- **extension of the scope and applicability of article 31(2)** / TEU related to the use of qualified majority voting system in the field of CFSP, except for decisions with military or defense relevance;

- in addition, **the effective use of the provisions of article 48** (7) / TEU concerning the **"simplified revision procedures";** in this respect, under the provisions of the above-mentioned article the European Council can decide by unanimity - having the consent of the European Parliament and provided that no national parliament expressed its opposition to such a decision – to "switch from unanimity to qualified majority voting system"[20]; again, such a procedure does not apply to "decisions with military implications or those in the area of defense";

- **further development of "battle groups"**[21] **concept** using the provisions of the Protocol on the "Permanent Structured Cooperation in Defense" annexed to the Lisbon Treaty, as a genuine embryo of a future EU enhanced operational capabilities in the field of security and defense;

- o **more active role for the European Defense Agency** in terms of **supporting the development of a genuine European defense industry** monitoring and promoting the**;**

- not the least, **increased efforts aimed at overcoming the current institutional blockage** caused by the "participation problem" while **improving and upgrading the current bilateral legal an institutional cooperation framework between the EU and NATO;** successful demarches on the above-mentioned issues would result in a **more active involvement of the EU in the theatres through the EU-led missions using NATO military assets** (including in terms of strategic command, consultation and communication)[22] as well as through the EULEX Missions in close cooperation with NATO.

3. Conclusions

The **rapid-shifting nature in the current geo-political and international security context**, with a **more and more aggressive and revanchist Russia**, eager to regain its influence and status at global level, **strongly demands –** as a **top priority for the EU foreign affairs** - for a **rapid rethinking** and **reconsideration of the EU's tool-box in managing its foreign policy** aimed at **enhancing the EU engagement and profile on the international scene.**

From this perspective, despite some significant improvements brought by the Lisbon Treaty, mainly in institutional terms, the EU **needs faster and more flexible decision-making procedures in the field of CFSP / CSDP** and, why not, **even a reconsideration of the intergovernmental "hardcore"** of its foreign policy.

In our view, the achievement of such an objective demands a **clear-cut political will of the Member States** - as an **essential prerequisite** - to **deepen their integration on these matters**, along with the awareness by the Member States and the Union's political leaders of the fact that **a more credible and stronger EU's security and defence policy** can **better protect and promote the interests of their citizens and the EU values worldwide.**

PUBLIC POLITICS AND CAMPAIGN CYCLES

Liviu RADU[*]
Carmen RADU[**]

Abstract

The said paper proposes the analysis of public politics' evolution and their implementation during campaign cycles. An important factor in the modern democratic system's evolution is constituted by consolidating the mechanisms of formulating, implementing and evaluating public politics. A campaign cycle usually extends to 4 years as long as a snap election does not take place. The rule is common in the majority of European states. Generally many public politics are implemented in the first and second year of mandate (especially those that are very pragmatic from an economic point of view). However, the last year of mandate is predominantly reserved for popular reforms (pay rises in the public sector, pension indexations and rises, enhanced indemnisations, tax cuts for certain categories of citizens etc.), which often expose the state budget to significant pressures that can deteriorate the balance on a medium and long term.

Keywords: *campaing cycle, free elections, public politics, economic sustainability, public expenditures.*

1. Introduction

The free elections represent the apogee of any domacracy's manifestation (liberal, popular, direct, indirect or participative). However, what is democracy in essence? According to some authors democracy involves the government by the people, who hold the supreme power that they exert directly or through their representantives, chosen through a freely expressed vote, ensured by the electoral system. In other words, and as Abraham Lincoln asserted, democracy is the government of the people, by the people and for the people. On the other hand, do the people know what is good or wrong for them now and in the future? In reality, do the people represent general common interest or the associated groups' interest? Since, most of the times, in societies with a free past (in speech, information and association) the citizens can often reach conflict situations towards the ones they have chosen at a given point. The illustration of a conflictual situation consists of the introduction and application of diverse types of public politics. Public politics are nothing more than a set of rules applied by public authorities in the social, economic and cultural life of a nation. Public politics can be formal, meaning assumed, and informal as an excuse of the incapacity to do something. Unfortunately, the citizens of the ex-socialist camp countries are barely involved in the politics life, lack the knowledge of civil society bonds and just vote. However, what do they vote? Evidently, the political parties and hardly the individuals (president or mayor). Nevertheless, are the electors completely aware of what the political parties and electoral system signify? The political parties represent power (and opposition) presented under two forms: "impose your will" (Max Weber)[1] or "convince others to follow you" (Martin Luther King). According to speciality papers, political parties are groups of people constituted on the base of free consent that acts pragmatically, conscious and organized in order to serve the interests of a class, social group, human communities, with the goal of achieving political power in order to organize and lead society in accordance with the ideals proclaimed in the program platform[2]. "The party is a group of people reunited for the purpose of promoting through the common effort the national interest based on a specific principle accepted by all members" (Edmund Burke) or "… a group of people who wish to control the governamental apparatus by obtaining public functions in legally constituted elections" (Anthony Downs)[3]. In conclusion, political parties can be refered to as groups of interests.

Pluralist political parties are placed in a continous competition by resorting to promises which are often overbet in order to atract the electorate. The smaller a party is, or the farther to the extremeties it is situated, the more the probability of promising „heaven on earth" [4] arises. The overbet politics denote the situation in which political competitors attempt to draw from each other the electoral support by intensifying appeals and promises[5].

2. Content

The main question of our study is: where would the delimitation stand between reforms and populism concerning the political parties' evolution and the state's development?

Democracy represents[6] that certain institutional arangement required to reach political decisions, in which individuals attempt to obtain the power to decide through the means of a competition of votes. In the competition for votes, in which every vote counts, any „weapon" is used in the electoral battle, based on „the end justifies the means" principle. Normally, the politicians promise future actions by invoking the power to decide. However, every time votes are traded on the political market, the transaction risks are bore by the electors. The democracy model started in ancient Greece in which all citizens gathered in the Agora and took colective decisions regarding their statute.

Afterward[7], Charles Louis Montesquien (1689-1755) mentions in his work "The Spirit of the Laws" that

„every man invested with power is apt to abuse it... To prevent this abuse, it is necessary from the very nature of things that power should be a check to power."

Montesquien emphasized in his papers that the power division in a state is exactly the condition of freedom.

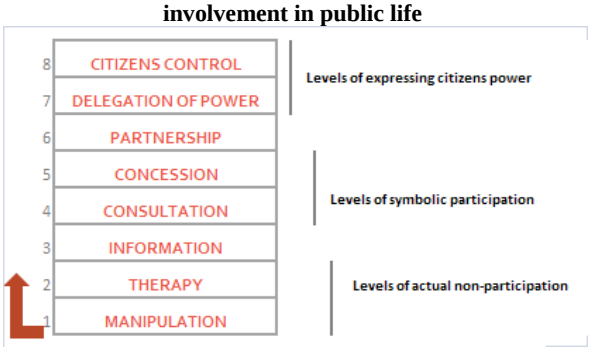
Joseph de Maisre (1753-1821) underlined that "the uncontrolled freedom of the individuals' will represents society's source for decadence. " "Through ambition man has obtained power and his great mistake is abusing it..." In conclusion the author affirmed that "we are all born despots".

Chantal Mouffe[8] affirmed in the same context that "the traditional parties' incapacity to offer a distinctive form of identification around some possible alternatives is that which created a field on which the right-wing populism can flourish. Indeed the right-wing populism parties are most of times the only ones that attempt to create collective forms of identification… Politics always imply the emergence of

"**us versus them**", hence the powerful attraction of their discourse, since it offers collective forms of identification around the people". There have been some changes throughout time and the citizens have started to increase their involvement in political life, evidently with the differences every country implies. Dependent on historical traditions, culture or degree of information the citizens participate more or less in the democratic life. This fact was also highlighted by Arnstein[9] in the ladder of citizen participation in the reform of the society they belong in.

Between the levels of non-participation and the citizens' expression of power, a symbolic participation exists which begins through the level of information. This is also the dividing line between manipulation and participation in the act of government.

Arnstein scale – regarding the citizens' level of involvement in public life



Source: Radu Nicosevici, Corina Dragomirescu, Simona Fiţ, Despina Pascal, Mircea Mitruţiu, quoted work, page 15

Evidently, the least informed or misinformed the citizens are, the easier it is for them to be manipulated. The absence of information or misinformation is an action that falls under the incidence of mass media. Otherwise, the mass media that is affiliated to several political parties can turn at any time toward the side of manipulating the news presented in a sense or another according to interests instead of fulfilling the role of moderator in disseminating information. As Thomas Jefferson judged many years ago, "Were it left to me to decide wheter we should have a government without newspapers, or newspapers without a government, I should not hesitate a moment to prefer the latter."

We shall present a few examples that illustrate the dilemma of public politics versus populist measures:

1) The starting point in the carried out analysis is represented by the Hellenic Republic's situation[10], a country in which adhering to the European Union and introducing the euro currency (measures that required radical economic reforms) lead to the improved perception towards the country and to diminishing the investments' risks and costs. All these meant enormous long-term benefits for everybody but were poorly visible from the level of a Greek citizen. The governments in Athens, along with sindicates in the public sector and other interests groups, have decided to postpone as long as possible any disciplinary measures in budget expenditures since this matter involved political costs. Consequently, the absolutely necessary reforms were delayed, including the

pension's reform or elimination of unjustified administrative expenditures.

By acceding to the government the political parties that promoted an inexpensive populism starting from 1980 to 2010 attracted the expenditure of all loans that were simoultaneously gained with the unprecedented increase of consumption. In this situation the public debt in Greece reached 350 billion euros in 2009. In 2010 the country was approaching bankruptcy and in the year 2012 the New Democracy conservatory party was winning the elections by promising negociations with those who lend Greece and ceasing the austerity measures. In spite of all these, very few reforms were implemented and the situation of Greece hereby presented itself in 2014[11]:

- over 1,5 million unemployed, out of which 65% young persons;
- new unpayed taxes of 1,5 billion euros per month;
- 2,5 million employees and 3 million retired persons;
- annual incomes of 50 billion euros in the greek state;
- 28 billion euros per year for the pensions' budget, out of which 15 billion euros supported by the state budget.

Regardless of the situation, the European countries insisted that Greek debts should not decrease. Spain and Italy would have demanded the same thing had the Helen state's financial debts been reduced. Given that the Greek debt reached in 2014 the sum of 340 billion euros, Spain and Italy's debt summed up together 3000 euros.

Returning to the situation in Greece, the party governing in 2014 did not carry out any kind of reforms and instead imposed new taxes that were increasingly harder to support by the population. Consequently, in January 2015, the elections are won again on the strength of unfounded promises by the right extremist party Siryza. This is the most blatant act of political populism. As a matter of fact, according to the online explicative dictionary, the term "populism" designated a political Russian movement at the end of the 19th century, which envisioned a socialist society, contrary to the western industrialism. Presently, the term "populism" designates a favorable attitude for satisfying the nation's wishes, even in contradiction to its real interests. The populists accuse the elite and criticize the money element or social minorities (ethnic, political or administrative), accused for a possible power seizement. The populists counter them with a majority that they would represent.

At the beginning of 2014 Greece had a public debt of approximately 323 billion euros which exceeded 175% of the country's GDP[12].

Greece's main creditors (Billion euros)

Germany	56
France	42
Italy	37
Other euro area countries	34
FMI	32
Spain	25
International Monetary Fund	20

Source: www.wallstreet.ro

The measures proposed by the Syriza party for the economic domain regard the following actions[13]:

- erasing a great part of the public debt's nominal value and the rest is suggested to be payed in terms of Greece's economic growth;
- increasing the public investments carried out by the government with at least 4 billion euros (targetting the error's annulment caused by the salvation program offered by the euro area and IMF, considered by Siryza to be major errors);
- increasing wages and pensions aiming at stimulating the population's request and consumption, including also an increase in the monthly minimum wage from 683 € to 751 €.
- social measures with a budget of 2 billion dollars intended for the „humanitary crisis" which regard: free electricity for aproximately 300.000 households on the brink of poverty; alimentary funds for other 300.000 families with no income and free medical care for uninsured employees.
- reducing the tax quantum per property with the exception of large ones – a measure that estimated to have a budgetary impact of 2 billion dollars.

All these measure (public politics) seem attractive to the voting citizens. The problem arrises when we analyse the applicability and sustainability of these apparent generous measures.

2) Populist measures existed in France as well. In the electoral campaign of 2012, the president Francois Hollande proposed a tax for large fortunes that almost reached 75% (it was named exceptional contribution of solidarity) [14]. The legislative proposition was moderated after Francois Hollande won the elections. Nevertheless, in December 2012, the measure was

[14] http://economie.hotnews.ro/stiri-finante-19000551-franta-pregateste-ingroape-liniste-fara-ceremonii-celebra-controversata-taxa-75-asupra-salariilor-foarte-mari.htm

initially rejected by France's Constitutional Counsil which considered it to almost be a measure of confiscating fortunes. Finally, the tax was promoted in December 2013 in a highly modified version which represented a tax payed by large companies for employees with incomes over 1 million euros but with a cover of 5% of the business number. The measures determined a number of actors, business men or enterprising citizens to continue their activity abroad (Belgium or Great Britain) and even to renounce their French citizenship.

The French Prime Minister Manuel Valls announced the end of this measure in October 2014 especially because it did not obtain the anticipated results.

3) At the beginning of 2015 a new crisis emerges on a European level. Switzerland's Central Bank decided to renounce the minimum ceiling of monetary exchange, considering that its existence is no longer justified. Thus the Swiss franc's value increased with 30% against the euro and reached a record level. Well before this measure the debtors in CHF had great difficulties in reimbursing the Swiss franc loans.

Campaigns of promoting Swiss francs credits had existed in many European states since 2007. This currency was presented as a viabil solution for those who did not fulfill the loan standards in other currencies. For example, in Romania, the CHF course was 1,99 RON in August 2007. It was clearly an attractive course which seemed the miraculous solution for easily sustained loans. A loan contract represents a bilateral aggrement between a bank and client and both parts assume through it the advantages as well as the risks that reside in the said loan contract. We must take into account the fact that in most cases the clients obtain their incomes in a currency other than CHF. It was forgotten that any currency loan supports some major risks: exchange rate increases, rate interest evolutions in the financial-banking market and, just as important, the evolution of personal income. In 2008 the financial crisis began and it determined evolutions that were difficult to anticipate. Regarding interest rates on the financial-banking market, these evolved favorably in the largest part of the 2007-2015 interval. The problems emerged with the incomes of families that took loans (young families which mostly took real estate loans) in CHF. The crisis generated massive unemployment in many European states and an accentuated decrease of incomes.

BNR exchange rate for the Swiss franc

Year	CHF – RON rate on January the 1st	% variation
2007	2,1044	-
2008	2,1744	3,3
2009	2,6717	22,87
2010	2,8496	6,66
2011	3,4211	20,05
2012	3,5528	3,85
2013	3,6681	3,24
2014	3,6546	- 0,37
2015	3,7273	1,99

Data source: BNR

We can observe in the chart that the maximum variation years in which the CHF increased were 2009 (22,87%) and 2011 (20,05%). These evolutions were also manifested in other European states: Hungary, Poland, Croatia etc. The crisis' climax culminated with the measure taken by Switzerland's Central Bank in January 2015. Some states tried to protect the CHF debtors well before January 2015. In many cases the measures taken were neither moral nor sustainable on a long-term. The costs being assumed by the state budget means nothing else than involving all contributors. The measures taken in Europe either target populism or economic pragmatism[15]:

a) Poland represents the most affected European country by the CHF crisis (over half a million Polish families have credits in Swiss francs). Whithout reaching a concrete measure the opinions oscilated in regard to:

- populist measures (the Law and Justice party presented a proposition that will aid those with CHF credits – the possibility for them to reimburse their loans on the Zlot – CHF exchange course prior to the swiss currency increase);
- waiting tactic, following the CHF trend and stabilizing the situation (deputy primeminister Janusz Piechocinski);
- economic and moral pragmatism (Leszek Balcerowicz, ex-governer of Poland's National Bank, declared it to be imoral and unjust should the State help those who took loans in CHF, thus discriminating the Polish who decided not to assume the risks and take credits in national currency. "When we take a risk and win, it is OK, whereas if we risk and lose, let others come and pay for us") [16].

The CHF situation is supervised and analised by the Committee for Financial Stability, the Polish Government, Finance Ministry, Central Bank and commercial banks representatives.

b) Hungary is the first country to adopt a populist measure in regard to the CHF credits. Governor ORban forced the banks to support the largest part of the currency shock by implementing a mechanism through which the citizens may reimburse

[15] http://economie.hotnews.ro/stiri-finante_banci-19137947-polonia-moral-statul-ajute-cei-imprumutati-franci-cand-riscam-castigam-dar-cand-riscam-pierdem-vina-altii-plateasca-pentru-noi-vezi-cum-reactioneaza-guvernele-din-jur-problema-chf.htm

[16] Dan Popa - http://hymerion.ro/2015/01/19/cum-reactioneaza-tarile-din-jur-la-problema-chf-polonia-ar-fi-imoral-ca-statul-sa-ajute-pe-cei-imprumutati-franci-cand-riscam-si-castigam-e-ok-dar-cand-riscam-si-pierdem-sa-vina-altii-sa-pla.html

the CHF credits at a fixed course well under the market one (256,6 forints for a CHG while presently the level is 319,2 HUF/CHF). The measure was taken in 2010 (propagandistically used by Victor Orban in the electoral campaign) and further denounced by international financial forums as being a measure that endangers the Hungarian and European monetary system's stability.

c) Croatia tried an early approach to resolve the CHF in the year 2011. Prime minister Jadranka Kosor proposed to the banks to reprogram the credits so that the monthly rates' value would be as close as possible to the rate from the moment the credit was given and to practice a fixed rate of the CHG as opposed to the Croatian kuna (the CHF represented 5,8 Croatian kuna or 0,78 euros).

The difference between the real and the fixed exchange rate, respectively the effective cost of this measure, should have been kept as the debtor's particular debt, without interest, for a period of ten years. In this period a favorable realignment of the monetary courses was anticipated in such way that the debt would erase itself. The government forced the banks to accept these measures by imposing their application for debtors in Swiss francs. Furthermore, in a decision that can create precedent, a court of justice in Croatia sentenced in a commercial law file that the banks should transfer the CHF mortgage credits into national currency loans because at the moment when they closed the contracts the clients were not informed of the interest's increases provided that the Swiss franc appreciates.

The judicial decision affected the subsidiaries of nine international banks (Zagrebacka Bank, Privredna Bank, Erste Bank, Raiffeisenbank, Hypo Alpe-Adria-Bank, OTP, Splitska, Volksbank and Sberbanke). The costs of this measure, estimated by economic analysts, are of aproximately one billion euros. The Croatian court also decided that the commercial banks should establish fixed interests and decrease the balance based on the monetary exchange rate that the mortgage contract was finalized. Over 100.000 Croatians contracted loans in CHF, out of which 75% were mortgage loans. The majority of banks in Croatia renounced on giving loans in Swiss francs in 2008.

d) In Romania there are 75.412 physical persons with loans in Swiss francs and 95% of the loans are concentrated in six commercial banks. The CHF financings weigh 4,5% in the total balance of loans in the Romanian monetary system, out of which 3,8% returns to the population and 0,7% to firms. The measures proposed by the political environment have been placed between an extreme populism (the conversion of CHF credits to RON at the rate from the moment in which the contract was signed – the measure's cost being assumed by the state) and economic rationality (the 3 months rates will be payed at the December 2014 rate or the costs will be supported by the bank as well as the clients through individual treaties).

3. Conclusions

Public politics versus populism. The great dilemma of political people. In appearance the public politics, as well as the populist ideas (measures), "sound good for the electors". The difference is given by their sustainability in time, by the real spot in the rational priorities scale, by the real impact factor in the community etc.

As Ivan Krastev[17] mentioned (during the 21st of September 2014 interview with the occasion of the Conference, "And if Europe fails", organized by the New Europe College) the message of the populist regimes is "trust nobody" and thus, the people who trust nobody can change nothing. Due to the increasing economic crisis the populism reaches unprecedented proportions. For example, Hungary's case in which liberal Victor Orban wins the elections by understanding that the resources can no longer be redistributed since they have been exhausted. He redistributes the guilt situation by publicly revealing who is quilty for the economic –financial state in which the country is placed. Unfortunately the example is not singular and the world contains plenty such political liberals, Vladimir Putin or Marie le Pen for example. The countries with such leaders can experience the loss of independency in banks, mass media or NGOS. The main idea of these politicians is "give us more power if you want us to change something in good". Unfortunately, people are tempted to do this because in an authentic democracy power is so difused within society (or interest groups), that it makes it impossible to place a concrete blame. When a political character emerges and assumes a part of the responsabilities or another character with a reconciliation and reconstruction message instead, the population tends to react favorably (voting that which is right). The politician is corrupt, affirmed Ivan Krasnev[18] when he sustained the idea that: "I will fight everybody for your interest" while thinking in actuality of his own interest. The most eloquent example to this extent is of Russian citizens who in spite of voting for Vladimir Putin mention in all surveys that the Russian government is deeply corrupt and totally inefficient. The problem of these politicians is not winning the elections from 4 to 4 years, but the fact that after winning they try to consolidate power

[17] http://www.hotnews.ro/stiri-esential-18150762-pericolul-ascensiunii-regimurilor-populiste-estul-europei-ivan-krastev-dupa-castigarea-alegerilor-incearca-consolideze-puterea-pana-ajung-imposibil-inlocuit-prin-mijloace-democratice.htm

[18] Ivan Krasnev, is the president of the Liberal Strategy Center in Sofia and a permanent member of the IWM Institute of Human Sciences in Wien. He is a member of the founding council of the European Council for Foregin Affairs, a member of the advisory council of the ERSTE Foundation.

until it is impossible to replace them through democratic means. In this situation they can change the electoral system and even the constitution and not care about the minority's interests.

In the European Union, as long as economically stable states such as Germany exist, the populism cannot extend. With this purpose and from the experience of EU member states, on an European level, minimum standards of public consultation are being promoted by aiming at the potentiation of efficient endeavours of the civil participative society. These standards impose clear and precise information, identifying the interested parts, circulating information, terms for participation, acknowledging contributions and formulating responses regarding the populations' needs.

In the entire European Union a special accent is being placed on encouraging the development of an informed civilian society that can decide alongside with competent forums. Here are a few of the advantages that occur when the civilian society pariticipates in the democratic life:

- the mechanisms of structured public consulting offer the groups affected by the law project the possibility to express the support or amendments and argue their opinions;
- the civilian society will be part of the legislative process and will easily accept compromise;
- the civilian society will no longer be able to manifest its discontent towards an approved law project if it had the chance to previously express its point of view;
- the civilian society will become responsible with the legislative process without searching vague possibilities of influencing law projects.

Essentially, should they remain in the level of electoral campaign zest, the populist statements would not at all represent a major problem for the democratic systems.

PUBLIC POLITICS IN THE ENERGY FIELD

Carmen RADU[*]
Liviu RADU[**]

Abstract

The present endeavor proposes the analysis of public politics which regard the energy sector. The energy sector represents a fundamental and determining component in the states' social-economic development, a sector which is related even to national security. The European Union is the largest energy importer on a global scale, importing approximately half of the energy demand and the pessimistic projection is placed at approximately 70% in the perspective of the following two decades. Accomplishing energy security on the European Union's level implies a number of directions for action: diversifying the sources and routes of transport in regard to natural gases; intertwining member countries so that no E.U. state is left isolated in crisis situations; decreasing dependency of conventional sources and increasing energy efficiency; reinforced dialogue with energy suppliers.

Keywords: *energy system, energy security, public politics, economic sustainability, politics regarding energy on the European Union level.*

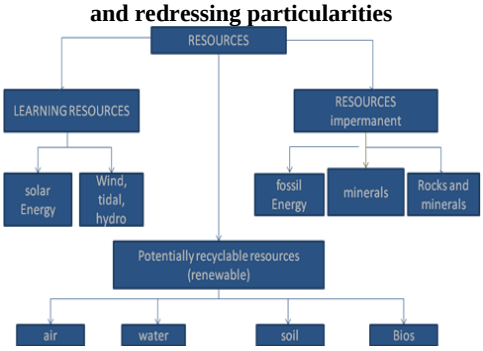
1. Introduction

As far back as the previous years we have been drawing attention (through our studies published at CKS in 2013 and 2014) on the exponential growth of the planet's population while the resources of the said planet are in a continuous decrease. Resources mean energy, hence our current endeavor since the modern society has an industry mainly based on energy.

The main energy resources must be found in appropriate amounts and must be conveniently exploited from a technical, economic and lasting perspective point of view. These sources are represented by fossil fuels (coal, petroleum and natural gas, heavy petroleum and asphalt), pyroschist, biomass energy, hydroelectric power, nuclear power, geothermal energy etc.

Natural resources and especially energy resources have always influenced the evolution of human society, the economic development, national economies of the world's states, the global economy in its ensemble. The interdependency between the existence or inexistence of resources and the level of the world's states' economic development has long been understood and has marked the world's political evolution.

Classifying resources after the exploitation period and redressing particularities



As it was evaluated in the Agenda 21[1] in 1992, "Energy is essential to economic and social development and improvement of life's quality". The pacifist vision of the UNO's members is contradicted by a series of authors who associate the existence of resources with the international degree of power possession and control wielding or even with something more critical such as terrorism. For instance Walter S. Jones[2] considered power to be an international actor's capacity to use its tangible and intangible resources in such way that it can influence the international relations' results to its own benefit. In the same context the expression "energo-fascism"[3] was introduced and through it the American analyst considered that the beginning of military conflicts that aim at fractioning energy resources were defined. Hydrocarbons were especially considered among the resources.

[1] **Agenda 21** represents an action plan that is not mandatory implemented by the United Nations in regard to durable development. It took place in Rio de Janeiro, Brazilia, 1992.

[2] Walter S. Jones, „The Logic of International Relations", Ed. Harper Collins, 1991

[3] Michael T. Klare, „Blood and Oil: The dangers and consequences of America's growing oil dependency", Ed. Henry Holtand Co, New York, 2004

As far back as 1908, since petroleum was discovered in Iran, the British company AIOC – Anglo-Iranian Oil Company[4] immediately started to exploit it (Laurentiu Dologa, 2011). The British used the local cheap workforce and if protests arose they would appeal to workers from neighbor countries for a period exceeding 40 years. Unfortunately many military conflicts are based on holding or controlling the energy resources' exploitation. Proof to that effect is represented by the wars in the Persian Gulf, Angola, Chechnya and more recently Ukraine.

Nevertheless, Robert Cuttler[5] considered that as long as they can generate military conflicts they can also represent a mean for international diplomatic negotiation and thus introduced a new term called "cooperative energy security" that he considers it to be able to insure equity in the relations between producer, exploiter and consumer through diplomatic negotiations. Many authors associate to him with the opinion that the current world is a terrain of continuous searches for certain resources at reasonable prices[6], or that limiting resources could, as a result, determine the large consumers to renounce the energy independence in favor for energy interdependence. The energy interdependency can emerge between producer, exploiter, distributor and consumer as links of the same trophic chain in which everyone aims at promoting their own interests, or the interdependency between large producer corporations and governments, which is also sustained by Yengin Daniel[7], the president of Cambridge Energy Research Associates (CERA). As a matter of fact, Yergin is also known for his statement according to which petroleum is 10% economy and 90% politics, which he gave in order to describe the importance of this energy resource in the 30's of the last century.

2. Content

2.1. Legislative regulations regarding energy

The 1952 treaty constituting the European Coal and Steel Community (ECSC) as well as the 1957 treaty for constituting the European Atomic Energy Community (EURATOM) represented the first modest trials of legislative regulation in the energy fields. Although coal was representative for the 19th century and petroleum for the 20th century, these two vital resources of energy were not legislatively taken into consideration until after the Second World War. A huge petroleum consumption engaged by the international conflagration determined the specialized authorities to foresee the exhaustion of petroleum reservoirs.

In order to fight against the lack of "traditional" energy from the 50's, the six founding states of the European Union attempted to find in the nuclear energy a method of obtaining energy independency. From the very beginning of this organism the member states had a common vision regarding the role and importance of managing energy resources.

a) The Single European Act (1987)[8] marked a turning point for the single market but the energy did not receive a special interest because, at that time, the governments were not willing to abandon a part of their control over the national energy monopolies in favor of opening to the market.

b) The Maastricht Treaty that was concluded in 1992 and recognized under the name of Treaty on European Union brought a couple of additional definitions for the internal energy market without including an energy chapter. The European commission prepared a chapter proposition which Great Britain, Holland and Germany vehemently opposed. The same faith applied to another proposition made by the Commission, which regarded the administration of the Energy Charter by the Energy Commission inside the EC. The proposition to include the Energy Chapter was replaced on the agenda of the next Amsterdam Treaty, in 1997, but was once more rejected. It is interesting that the European Parliament was a strong supporter of the Energy Chapter while her adversaries were the member states. Nevertheless, the EU treaty brought something new for the energy sector by broadening the action surface of the subsidiary principle, valid until that date only for environmental issues.

c) The Amsterdam Treaty (1995) approved for the first time a community initiative in the energy field – Trans-European Energy Networks (TENs), a project that aims at extending the transport, telecommunication networks and the pan-European energy infrastructure beyond the Union's strict border. The purpose of these programs is to enhance the capacity of the national networks to interconnect and interoperate, the process of accessing them as well as to connect the isolated and peripheral areas with the central regions in the Union. A special budgetary line for administrating these programs exists in the Union's budget.

d) The European Charter of Energy. The idea that the economic re-establishment in the ex-communist area as well as the energy supply assurance in countries from the community area could be consolidated through collaboration in the energy field

[8] „Of the European Union's energy policy". The study was elaborated during the Phare project RO 0006.18.02 – Forming public servants from local administration in European business and managing the project cycle, implemented by the European Institute in Romania in collaboration with the human dynamics in the year 2003. The study is part of the Micromonographies Series – European Politics, the updated version.

was launched during the European Council of 1990 in Dublin. Thus the European Charter of Energy emerged, whose final document was signed at Hague by 51 states in December 1991. The framework for legal cooperation that put into effect the Charter's principles was established through the Energy Charter Treaty. The treaty is based on respecting the Internal Energy Market's principles and represents an extension of it towards the entire Europe and further on (Japan is one of the signatories). An important part of the Treaty refers to the energy efficiency and the problems related to the environment's protection. It also includes articles that establish conditions of competition, transparency, sovereignty, taxation and environment. The treaty became effective in 1998.

e) The Green Book of Energy. The European commission plays a central role in the debate carried out by several actors in the energy market. The European Commission's first communication that approaches the matter of a common energy policy dates from 1995 and it was called The Green Charter „For a European Union Energy Policy".

The White Book, "An Energy Policy for the European Union" followed in the same year, then a new sequence of communications in 1996 and 1997, called "Green Paper for a Community Strategy – Energy for the Future: Renewable Sources of Energy", respectively "White Paper: Energy for the Future – Renewable sources of Energy". These documents stand at the base of the present common energy policy and of the European legislation created to put it into practice. The complexity of the problems related to producing energy, transport and energy consumption has increased considerably in the last decades, simultaneous with the aggravation of global environment issues, climate changes and exhaustion of natural resources. In addition to these, the European Union is confronted with a few specific problems among which the most serious is the one related to the pronounced dependency for imported energy resources. Placed also under the pressure of the engagements assumed through the Kyoto Protocol, the European Commission launched in the year 2000 the third **Green Book "Towards a European strategy for the security of energy supply"**. The final rapport regarding the Green Book of Energy was presented by the European Commission on June the 27th 2002. A recent moment which signaled acceleration in the development of the common energy policy took place in the **Barcelona European Council** (March 2002) where the total liberalization of the electric energy market was decided for the industrial and commercial consumers starting with the year 2004.

2.2. The European policy within the energy market domain[9]

The internal market of energy is still fragmented and has not reached the potential of transparency, accessibility and choice. Although the companies have grown beyond national borders their development is still influenced by a series of different national rules and practices. There are still many barriers for an open and just competition. At the same time the member states need to eliminate subventions from the sectors with a negative impact on the environment. Sustainable efforts are made in order to achieve the target of insuring 20% of the consumption out of renewable sources. The European Commission issued the Third Package of legislative previsions dedicated to the internal electric energy and gas market. It establishes the necessary regulatory framework for a complete energy market disclosure and has become effective on the 3rd of September, 2009.

1.The Regional Market. Recent evolutions in the central-eastern European area indicate the development of certain market examples based on different options, projects that are not fully convergent. Nevertheless, the accomplishments made in 2010 and at the beginning of 2011 brought with them the optimistic signal that the differences of opinion and the unequal stage of maturity and liquidity represent obstacles that can be surpassed through collaboration, taking into consideration the mutual interest and imperative implementation of the EU directives. Therefore[10]:

- on April the 4th, 2010 Nord Pool introduced a new bidding zone (Estlink) represented by the Estonia market;
- on August the 20th, 2010 the electric energy market OKTE starts its activity in Hungary;
- on November the 9th, 2010, the connection by price of central-western markets is launched as well as the connection by volume of the regional market CWE, thus formed with the Nordic region;
- on November the 30th, 2010 the Memorandum between the Ministry of Economy, Commerce and Business Medium of Romania and the Economy, Energy and Tourism in the Bulgarian Republic was launched for organizing and implementing the project for connecting electricity markets;
- on December the 15th, 2010, Poland was connected by price to the regional market administered by Nord Pool Spot;
- on January the 1st 2011 Slovakia 's operator in the electricity market, OKTE, starts its activity;
- on January the 1st 2011 the markets in Italy and Slovenia connect.

These legislative elements are meant to insure more safety in food supply, to promote durable development and to insure conditions for a fair market competition. The effective separation of the energy's production and sale from its transport, which is stipulated in this new legislative package, will create more freedom of movement for investors in the energy markets.

[10] http://mmediu.ro/new/wpcontent/uploads/2014/01/20111107_evaluare_impact_planuri_strategiaenergyaactualizata2011.pdf

2. The present energy situation.

The important energy resources are divided only in a few categories: solid fuels, hydrocarbons especially petroleum and gases, nuclear energy and renewable energy. From this entire energy mix 60% are hydrocarbons.

During the year 2000 the weight of energy resources in the global energy balance hereby presented itself: petroleum 36,8%, coal – 25,1%, natural gases – 23,5%, hydropower – 7,0%, nuclear energy – 6,4%, other resources – 1,2%. As a result of the energy crisis considerable changes have been made in the structure of the global energy balance for decreasing the weight of petroleum and natural gases and increasing nuclear and renewable energy[11]

Among this energy mix the solid fuels have the following geographical distribution: 66% of the global total of petroleum is situated in the Close and Middle East. The remainder of petroleum is exploited from diverse regions as follows: 8,3% from North and Central America, 8,2% from South America, 7,2% from Africa, only 6,8% from Europe and 0,2% from Oceania. There are also off-shore reserves in the territorial waters belonging to states in the Persian Gulf regions, North Sea, Gulf of Mexico and Guiney. Natural gases are concentrated in Russia, Iran, Qatar, UAE, Saudi Arabia, USA, Venezuela and in the continental platform: Great Britain, Holland and Norway. In the territorial distribution coal occupies 56,7% of the global reserve in Russia, 24% in USA and 9,4% in China.

As far as the geographical distribution of energy consumption is concerned it is possible to mention that it is totally irregular by recording large differences from a continent to another as well as from a country to another. Thus, in the year 2000 the global energy consumption was dominated by Europe (including Russia) and North America with 60% while the rest of the continents had insignificant consumptions. The larger consumers based on country level and per inhabitant are the USA, China, Russia, Japan, Germany, Great Britain and Canada, with a total sum of 70% of the global energy consumption.

The energy consumption in the EU represents approximately 18% of the global level by comparison to USA's level of 23%[12]. Being a gross energy importer, the European Union is dependent on external resources mainly originating from the Russian Federation, Norway, Africa and the Middle East. In this context and simultaneous with the EU's economic and social development, its dependency will amplify in the following period. Also in the European Union the energy consumer sectors are transports and industry with over 60%, followed by domestic consumers with 25%, services and agriculture with 15%.

The European Union is currently in the situation of representing the most important energy importer. The 27 member states of the EU presently hold only 0,6% of the global petroleum resources and approximately 2% of the natural gases.

The energy's mix evolution in the European Union

Resource of energy	Gross intern energy consumption in the EU %		Tendency
	2011	2030 estimation	
Petroleum	35	33	↑
Gases	24	22	↓
Nuclear Energy	14	14	~
Renewable Energy	10	18	↑
Solid Fuels	17	12	↓

Source: European Commission 2003

Sectors	Final consumption of energy in the EU% (2011)
Transports	33
Industry	26
Household and residents needs	25
Services	13
Agriculture	2
Other sectors	1

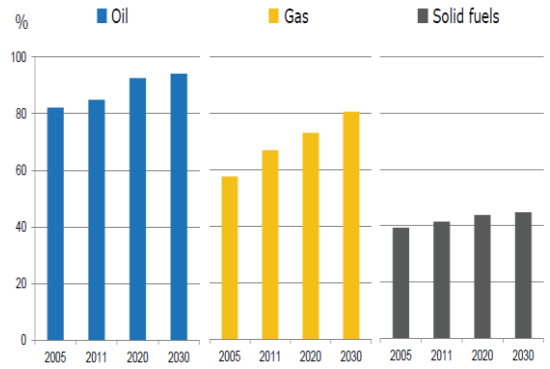
Source: European Commission

The situation is not much different in regard to the coal reserves, the EU has only 4% of the reserves identified on a global level and the energy production capacity represents 18% of the global one. On the other hand, Europe annually imports petroleum, gases and coal with the value of 406 billion EUR (3,2 of the GDP) and it is foreseen that the dependency will rise. According to the European Commission's "EU Energy Outlook by 2020" rapport in the following 15 years the EU will reach the point of importing 70% of its energy requirements.

The petroleum products request is expected to be higher by 50% in 2030, as opposed to the current level. The consumption is expected to increase from the present 85 million barrels per day to 105-115 million in 2030. In order to satisfy this need it is required that in the 2012-2030 period investigations in developing extraction and refinement capacities

The extraction, refinement and the infrastructure for transport and storage require investments of 5950 – 7550 billion USD[13] during the 2012-2030 period for their development in order to satisfy this need.

The percentage of imported fuel in the EU's total consumpion



Source: European Commission 2013

2.3. Romania's situation

The main interest projects promoted by Romania are represented by: Nabucco, P.E.O.P, A.G.R.I (the Azerbaijan – Georgia – Romania interconnector), Interconnecting the national system for transporting natural gases with the one belonging to neighbor states[14].

a. Nabucco. The Nabucco project aims at establishing a pipeline on the Turkey – Bulgaria – Romania – Hungary – Austria track, with a total length of 3296 km. The pipeline will cross Turkey on a 2000 km portion, 400 km in Bulgaria, 460 km in Romania, Hungary 390 km and Austria on 46 km. The pipeline's initial capacity is of 8 billion m^3/year with a linear increase until reaching the designed capacity of 31 billion m^3 natural gases/year in 2020.

In fulfilling the Nabucco project the following six firms are participating – Botas (Turkey), Bulgargaz (Bulgaria), Transgaz (Romania), Mol (Hungary), OMV (Austria) and RWE Gas Midstream GmbH (Germany).

Materializing the Nabucco project is a priority for Romania. The project is receiving support from all the actors involved and has been recognized by the EU as an infrastructure project with primary importance considering that it is the Southern Corridor's central element.

The interstate Nabucco agreement, signed at July the 13th, 2009 in Ankara and confirmed by Romania through the 57/2010 law for ratifying the Agreement between the Austrian Republic, Bulgarian Republic, Hungarian Republic, Romania and Turkey Republic regarding the Nabucco Project, published in the Official Monitor no. 2020 on March the 31st 2010, became effective on August the 1st 2010.

b. PEOP. The PEOP project is part of the European program INOGATE (Interstate Transport System of Petroleum and Gases).

The PEOP will have a total length of 1360 km (out of which 649 km on Romanian grounds), will start from Constanta port and will reach its destination in Trieste port, Italy. In Trieste the pipeline will connect to the Pipeline Transalpine (TAL) system, which supplies Austria and Germany, with the existing possibility of supplying the refineries in northern Italy.

One of the project's counterpoint is represented by the interest shown by suppliers such as Kazakhstan şi Azerbaijan.

c. The AGRI project (Interconnector of Azerbaijan-Georgia-Romania). The AGRI project implies the transport of natural Azerian gases through Georgia and by crossing the Black Sea based on the LNG technology by constructing two terminals (liquation and regasification) in Georgia and Romania. The transport capacity that is taken in consideration at this moment is of 8 billion m^3 natural gases/annually.

[13] Oil Supply Security, Emergency Response of IEA Countries, International Energy Agency, 2007
[14] http://ue.mae.ro/node/425

This project contributes to the consolidation of three-lateral cooperation through concrete common actions in the energy infrastructure domain, more exactly through the transport of Azerian gas in liquefied form from Georgia, along the Black Sea, in a LNG terminal in Constanta.

b. Interconnecting the national transport system of natural gases with the neighbor states. "Romania's Energy Strategy for the 2007 – 2020 period" has established among the main objectives, conformed with the EU policies, to interconnect the National Transport System to the European transport system.

To this extent the strategy for interconnecting the National System of Natural Gases Transport with the natural gases transport systems in the neighbor countries, elaborated by the SNTGN Transgaz Medias S.A., anticipates the action's fulfillment in the following directions:

- Interconnecting with Hungary on the Arad-Szeged relation;
- Interconnecting with Bulgaria, on the Giurgiu-Ruse relation;
- Interconnecting with the Moldavian Republic, on the Ungheni-Iasi relation.
- Interconnecting with Serbia.

The projects for interconnecting with Hungary and Bulgaria have received European financing during the European Energy Program for Recovery.

3. Conclusions

Analyzing the evolution of fossil fuels weight of last century's global energy market emphasizes important modifications. Thus, if at the beginning of the last century coal occupied a dominant position in the global energy balance (over 90%), after the second world war its weight vertiginously dropped in 25 years by reaching 28,7% as opposed to the weight of other sources, such as petroleum, natural gases and nuclear energy, that increase.

The current certain global reserves of fossil fuels can insure an energy consumption over a period of 100-120 years at the present level of production and consumption.

The fuel production on country levels signals a strong concentration in a reduced number of states. Hence, in 1999 only nine states were part of this category: U.S.A., China, Russia, Saudi Arabia, Canada, India, Great Britain, Australia and Germany held approximately 60% of the global production of fossil fuels[15].

Under these conditions the existence of a management is required for the electrical energy demand. The energy consumption will have to be controlled and managed, especially by closely monitoring the energy efficiency and by diversifying the primary energy sources. In order to insure the primary energy supply in Europe, the creation of a new energy partnership has been agreed between the EU and Russia and it will contain precautions related to the network's safety, the investments' protection, and major projects of common interest.

The new and renewable sources of energy presently represent only 6% of the EU's energy balance. If the trend is maintained they will only cover 9% of the total consumption by 2030. The directive regarding the promotion of energy produced from renewable energy sources placed an important step toward attracting the interest for investing in alternative sources. As far as the nuclear energy is concerned, the fears connected to global warming have changed its perception. It is an acknowledged fact that using nuclear and renewable energy, along with the increased energy efficiency, lead to limiting the greenhouse effect caused by the gases issued? by fossil fuels. In order to completely abandon the nuclear energy 35% of the electric energy production requires to be provided from other sources. As a result the nuclear option remains open to the European states that desire it. However, processing and transporting radioactive wastes remains an unresolved matter. The new member and candidate countries that own old reactors are obliged to shut them down or modernize them, as the case is for the nuclear groups in the Dukovany station in the Czech Republic or Kozlodui in Bulgaria. Being a subject of major interest, nuclear safety will become the object of regular rapports, a standard of common practices and a European control and peer-review mechanism will be elaborated. The states will need to build national systems of radioactive wastes deposit.

The energy commerce in the EU covers only 8% in the case of electric energy and still requires interconnection capacities. A development plan exists for the gas and electricity networks and several projects of European interest have been identified. In the same context, the safety for food supply imposes and effort of long-term anticipation and consolidated relations with third countries. Detaching consumption from the economic growth is a tendency of common energy politics, through which the trials of decreasing and ending the negative influences of the energy sector on the environment and social life are carried out. The recommended instrument is the efficient use of energy.

CREATING ELECTRONIC IDENTITY - FUNDAMENTAL OBJECTIVE OF E-GOVERNMENT

Cristina ARITON-GELAN*

Abstract

Providing quality government and administrative services to citizens is a goal of the current trends in terms of creating conditions for a social environment smart, inclusive and sustainable. In this context, the e-government is the main pillar of the information society and one of the main pillars of the knowledge society. The work that we propose aims to provide an analysis of the concept, characteristics and values in the current e-government. Thus, the following objectives are targeted: description of the phenomenon of e-government features and values involved him, in closely related to services provided to citizens and facilitate their participation; analysis of certain aspects of the phenomenon of e-government implementation in Romania, in close connection with the evolution of the phenomenon in an international context and in particular, in the European context; analyzing the main aspects of the methodology for implementing e-government phenomenon in public administration, contained in the National Strategy for the Digital Agenda for Romania 2020. The results of this study follow the outline of the instrument e-government can contribute to social sustainability and determine the impact this phenomenon has on our society in accordance with current trends and conditions.

Keywords: *e-government; public administration; national strategy; electronic identity; digitization of the public sector.*

1. Introduction

The study we propose is part of the administrative sciences, covering a matter of administrative communication techniques. Through this study we intend to analyze how to implement e-government phenomenon in the administrative system in Romania, given that, due to the development of new technologies, it requires increasingly more administrative reform of using information and communication technologies. In this regard we intend to justify what extent e-government is an effective means of communication in public administration, to argue about the advantages and disadvantages of e-communication phenomenon without ensuring visibility of public institutions and services they provide, to realize a short analysis regarding the implementation of e-government phenomenon in Romania closely related to how it manifests in Europe and to analyze the most important aspects of e-government in public administration, contained in National Strategy for the Digital Agenda for Romania in 2020.

In order to achieve the objectives that we have set will provide an analysis of the e-Romania phenomenon, as it appears in projects and programs on the administrative system in Romania and an analysis of national strategies for the Digital Agenda for Romania for 2010 - 2020.

2. E-Government - efficient means of communication in public administration

At the beginning of XXI century, *digital government* or *e-Government* has been proposed as a new model for public services, a model based on the principles of government accountability and facilitate citizens the opportunity to fulfill their obligations to the state. Software development services and Web technologies has provided a way to improve the efficiency and effectiveness of large bureaucratic organizations. Thus, the administrative system in relation to citizens, developed the idea of e-communication that means an electronic communication in which elements such as the use of IT systems, both hardware and software, to give citizens access to information and public services, use websites to inform citizens of a communication by electronic mail have become the most effective means of networking.

In recent years, more and more governments of countries in developing are interested in reforming their administrative systems using information and communication technologies (ICT). This would allow governments to avoid the dilemma between reducing costs and improving quality and creating management structures to operate more efficiently and to involve lower costs. Also, new channels of interaction will increase transparency, increased accountability, and the degree of citizen participation.

Reforming administrative systems using information and communication technologies involves

* Lecturer, PhD, Faculty of Law and Administrative Sciences, "Ovidius" University, Constanța, România (e-mail: **crisdali@yahoo.com**).

developing e-communication phenomenon. The phenomenon has two major objectives: to achieve major improvements in response speed, efficiency and accessibility of public services and to bring the governments closer to citizens. In this regard, among the potential benefits of new technologies for services performed and provided by the government include: reducing administrative costs; faster and more accurate response to the citizens to applications and database queries, including outside normal working hours; access to data present at all levels and administration structures, from any location; increasing the capacity of government; assistance to local and national economies by facilitating the development of government-business environment interface; a means to achieve efficient public feedback.

The introduction of information and communication technologies can help reduce the appearance of corruption opportunities in the sense that it can be detected and removed more easily. There are also situations where ICT system may not have any effect on this phenomenon or even to provide new opportunities for its development.

In addition to the benefit ratio administrative e-communication were identified and a number of disadvantages[1], including:

- Hyper-surveillance of taxpayers, meaning that public authorities can have a very good record of the activities of contributors, by using various technologies for e-Governance (mobile, cameras, etc.). There are times that this action has advantages (such as monitoring terrorist or criminal activities), but outside of them may be a violation of freedoms of citizens;
- Implementation and maintenance of e-Government services involving financial costs ever higher;
- Inaccessibility of e-Government services for certain categories of citizens: what are in locations without Internet connection or those who can't afford the use of computers for various reasons (financial or health reasons - people with visual impairments);
- False sense of transparency may be due to the fact that since the authorities having access to data, they can be altered or removed, without the public to realize this;
- Electronic services can be targets of electronic attacks.

The successful use of e-Government services to citizens and their adoption is dependent on certain requirements that these services should meet. According to GD. 195/2010 on the approval of the National Strategy "e-Romania"[2] these requirements relate to: the trust that citizens must have in government and security electronics electronic versions of official documents received; possibility authentication and electronic signature; transparency in providing public services; accessibility of public services for all citizens without discrimination; easy to use electronic public services through clear and simple structure; data security to protect them; effective cooperation between authorities; modularity e-Government services to keep pace with the latest technology; e-Government interoperability.

2.1. Electronic communication - useful tool for providing public data

The new trend in terms of the visibility of public institutions and services they offer have a number of advantages such as: speed, low costs, the possibility of continuous updating, entry into networks or their initiate, interactivity.

The speed refers to the speed of electronic communications. The technology involved to the evolution of the Internet allows transmission speed smoothly and messages in the most demanding digital form formats (formatted text, complex images, sound, Video). The electronic communication is an effective means of networking between administrative institutions and citizens.

An administrative institution which must distribute documentation, forms, information from databases can introduce a system to contact his office of public relations through a general email address. Team members can establish a "response protocol" that will bring a major improvement in relations with citizens, whereas the latter will receive an electronic response, largely standardized, without consuming too many material resources or time (not will wait days or weeks post, will not have to waste time and money to travel to the headquarters organization resource to solve a problem).

Electronic communication is effective when organizations launched a public action, after the model of the "snowball" requires the participation of other organizations, the media awareness and public raising. The rapidity of electronic data transmission motivate organizations wishing to make known their projects and actions. If human resource, time and cost required for processing information on traditional media and their distribution proactive communication discourages, the use of electronic communication motivates disseminating information to their internal or external recipients.

Relatively small costs involved in electronic communication leads to a desire to shift the communication of traditional media (brochures, reports, catalogs, brochures, posters) to Web pages and e-mail communication. When printing an annual report involves certain costs depending on the complexity of the information and print quality (to which we add the cost of design and distribution), load

[2] Romanian Government, HG. 195 / 2010 approving the National Strategy "e-Romania", 2010.

the same report on the website of an institution may involve a limited communication budgets using Internet connection and paying any telephone. Thus, the costs include the costs of creating a website (with features according to standard design, the amount and complexity of information and security requirements), its maintenance costs and distribution costs of electronic information, which are practically reduced to Internet subscription and telephone costs. In addition, information is more easily taken up by the receiver of information. A direct consequence of electronic communication, both intra and inter-organizational institution is to reduce administrative costs (telephone, fax, mail, courier, printer / copier and supplies for them).

To make known projects and actions set out in a unit of time, for example during a year, we can choose the electronic version of their presentation, which involves placing information on the website of the institution. Maintaining on the site of an institution of news pages, a page in which the events or news that becomes landmarks of organizational and enabling stakeholders to be informed of its activities, is an effective promotional tool. The website can also be updated in real time and the information posted may include links to other useful resources.

Once created a web page should be entering the network or its initiation, a phenomenon known as networking. The phenomenon represents fast networking ability with other sites in the same field or in other fields: government bodies, commercial companies, international organizations or the media. Networking represents very often a defining element in the start of projects, fundraising and exchange of experience.

Interactivity requires a web user involvement in the communication process. There are several ways in which users can be involved in the communication process, namely: contact by email institution on any page of the website, not only in the initial or the dedicated address or phone; to complete registration forms to access the database, to newsletters or other secure parts of the website, which provides to the institutions important information about its public and helps to build an accurate picture of people interested in his work; to mark an address as a permanent source of information.

The introduction of e-communication in the administrative system seems to be a goal of facilitating services provided to citizens. Thus, the interaction of an electronic public services performed by users, the possibility of access to services as varied conditions in order to increase citizens' satisfaction, the possibility of defining and monitoring of workflow are issues that should be considered when which means we relate to effective administrative services. Acceptance of these new ways of interaction, due to the development of new communication technologies, means to implement government policies in reality that citizens face increasingly more and more.

Currently e-Government is a major driver of public administration reform and its modernization[3]. E-Government strategy is formulated, since 2000, as a necessity for all the European Union for all Member States. In this context arises the concept of *electronic State* or *e-state* concept developed by I. G. Androsova[4]. The *electronic State* or *e-state* is the synonym of "State of XXI century», which is capable of providing, in addition to socio-economic development in conditions of uncertainty, and restore citizens' confidence in state institutions, and creating of new channels of participation policy to boost the development of democracy.

Electronic government is reforming the public sector using new information management techniques. The aim is to increase political participation of citizens and to streamline the administrative work through civil society participation in decision-making and ensuring transparency of administrative acts.

3. Implementation of e-governance in Romania and European context

In the context of electronic government (e-Government) must increasingly more as an component essential of the new information society, knowing, in recent years, an exponential growth globally and especially in Europe, the Romanian government promoted and promotes various projects that make electronic services an instrument of public administration reform. Thus, in 2009, the Ministry of Communications and Information Society (MCSI) proposed a national strategy accompanied by an action plan to help steer public sector to the information society, the main instrument of action being the e-government[5].

As a single public authority in organizing and coordinating the implementation of national programs and projects of electronic government and electronic administration (under GD 12/2009[6]), MCSI proposed a unified vision to create a coherent and integrated national system for public services online dedicated of the citizens and businesses. Among its objectives included: to create a society that includes access to all citizens by increasing the usability of information society services; reforming operational models within the government sector and increase operational

efficiency through appropriate use of information and communication technologies.

MCSI aim to achieve a national electronic system dynamically and continuously updated to streamline the relationship between government and citizens, including information on all areas of economic and social life[7]. Thus, while reforming structures and operational models to promote the idea of introducing Digital City model or Digital County by identifying, auditing and development of public services, in conjunction with the translation and trans-dressing in digital format, and promoting this practice in local government and business environment[8]. It was estimated that by the end of 2013, citizens, businesses and central and local government will always benefit from a defined set of e-Government services at a level of quality and maximum safety and ensure increased number of users, sustainability services and updating them.

The strategy proposed by MCSI shall be addressed a new concept of e-Government, namely e-Romania, based on a common vision of creating a coherent and integrated national system for online public services dedicated to citizens, businesses and local and central administration. Through this system every citizen, whether living in Romania or not, every business or government user will be able to inform, to access public services online to solve any administrative problem in the fastest and favorable way.

In 2014, the Ministry for Information Society, in line with the EU's growth strategy, launched in 2010 for the next ten years, which referred to deficiencies in growth patterns in Europe and aims to create an environment more intelligent, more sustainable and more inclusive, proposes a *National Strategy for the Digital Agenda for Romania 2014 - 2020* adapted to the economic and social reality of Romania[9]. This strategy refers to the four areas of action, the first of which relates to e-Government, Interoperability, Cyber security, Cloud Computing, Open Data, Big Data and Social Media and aims to increase efficiency and reduce costs in the public sector in Romania by modernizing the administration[10]. Among the *Objectives 2020* refers to citizens were using e-Government services and the analysis performed that in Romania, in 2013, 5% of citizens using e-Government services, Romania's target in this respect, until 2015 was 35%, compared to that of the EU is 50%[11].

The reason that Romania intends to implement e-Government 2.0 concept is closely related on the one hand with cultural and behavioral changes, and on the other hand on the benefits of the social aspects of interaction between government and users. The e-Government requires a transformative vision, supported by ICT to deliver better public services by government and citizen involvement in government support approaches. The phenomenon involves the modernization of central and local government in providing services to citizens and businesses in an integrated, transparent and secure manner.

In a study conducted by the United Nations on the development of e-Government in 2012 by defining and implementing effective strategies, European countries are on the first place, being followed by the USA and Asia. The less developed in this regard are the countries on the African continent.

Regional and Economic Groupings	Index value	Online Service Component	Telecomm. infrastructure component	Human Capital Component
Africa	0.2780	0.2567	0.1094	0.5034
Americas	0.5403	0.4648	0.3602	0.7958
Asia	0.4992	0.4880	0.2818	0.7278
Europe	0.7188	0.6189	0.6460	0.8916
Oceania	0.4240	0.2754	0.2211	0.7754
World	0.4882	0.4328	0.3245	0.7173

Source: Study on development of e-Government in 2012, conducted by the United Nations[12]

EGDI Index (e-Government Development Index) to provide Romania by the U.S. was 0.5632. This ranking it below the mean value given in Eastern Europe, namely: 0.6333. EGDI it was calculated as a sum of three factors, namely: the percentage use of online services, telecom infrastructure (relative to the percentage of Internet users, the percentage of subscribers to fixed telephony, mobile telephony subscribers percentage, the percentage of subscribers to fixed line Internet subscribers and percentage broadband communication services) and human capital index generated according to the level observed in adult education and school enrollment rates)[13].

As a measure to increase EGDI index, Romania proposes three actions required, namely: the creation of legislation and operational framework for the implementation of *Government Enterprise Architecture*; creation of capabilities of ministries *Government Enterprise Architecture* - delegating and educating the agencies to use it and make it its own initiative; the issue of the *List of e-Government ICT standards* that provide the recommended standards for ICT projects (Required, Recommended, Optional, Rare, Withdrawal, etc.) with cyclic process of these standards (Draft, Approve, Commenting, Withdrawal, etc.). The first action aimed creating the Government Enterprise Architecture for Romania, whose main

[9] *National Strategy regarding the Digital Agenda for Romania*, in October 2014, the Ministry for Information Society.
[10] *Ibidem*, p. 6.
[11] *Ibidem*, p. 35.
[12] Apud. *National* Strategy regarding the Digital Agenda for Romania, in October 2014, the Ministry for Information Society p. 36.
[13] *Ibidem*.

objective was to define a uniform set of standards, policies and architectural guidelines that public entities will be used for investment and ICT initiatives. Benefits subjects were uniform vision for the implementation and promotion of all projects and public entities. The second action aimed to support public entities have adopted as Government Enterprise Architecture and had as benefit a better adoption Government Enterprise Architecture and uniform implementation of its, being provided the same deadlines. Regarding the third action specify that standards will be proposed by the corresponding entity in the ministries and that they will be placed in the approval process completed by the Ministry for Information Society. Like achievement within the three actions estimated half of 2015.

The need to strengthen public administration is also subject to the concern of the Ministry of Regional Development and Public Administration. Thus, *The Strategy for Strengthening Public Administration 2014 - 2020* highlights the need to address the main shortcomings that prevent the administration from Romania to fulfill role expectations of its beneficiaries. Among them were identified: excessive politicization, which is an obstacle to good governance; a political and organizational culture that rule rather as an easy source of income for individuals and / or legal only as a promoter of economic development, able to contribute to the welfare of its citizens who ceases to be regarded as mere taxpayers; the absence of a coherent strategic vision on the long-term future of Romania; insufficient trust in administration (among officials, citizens, between officials and policymakers), that generates resistance to change, concentration of decision-making at the highest level, particularly political (correlated with lack of initiative at the administrative level, low transparency of public administration and a corruption level high perceived); insufficient involvement of partners from academia, business and civil society and even associative structures of administrative-territorial units in defining strategic visions or in terms of real consultation in decision-making[14].

In this context, it established the general framework of public administration reform for the period 2014 - 2020. It is considered that despite financial support from the European Union to increase administrative capacity, resulted in the pre-accession funds and later in financing of the *Operational Program Administrative Capacity Development*, the factors mentioned above have generated excessive bureaucracy and costly to the government, have generated a lack of transparency and efficiency of public spending and also a gradual de-professionalization of public administration. Therefore, it is considered that in the negotiations with the European Commission on the Partnership which will be the basis of grants from structural funds for the period 2014 - 2020 there will be a growing concern, both in the Romanian Government and the European Commission on the modernization of public administration and build capacity for it to effectively fulfill the role of facilitator of socio-economic development of Romania.

Strategy development process was initiated by the Ministry of Regional Development and Public Administration (MDRAP) which, together with the Prime Minister (CPM), defined the main strategic guidelines. The strategy was accompanied by an action plan that included both short-term objectives, aiming the year 2016 as a deadline by which Romania will have to meet all compliance related to public administration domain and long-term strategic objectives, aimed 2020 as correlated with progress within the *Operational Program Administrative Capacity*. It is considered that the proposed action plan and results to be derived from the implementation, monitoring and evaluation will be the basis for reviewing the future strategy and to develop of this strategy to reform public administration in Romania for increasing the quality of service this one.

4. E-Government in public administration - matters contained in the National Strategy for the Digital Agenda for Romania in 2020

In order to achieve a modern and efficient public administration Ministry for Information Society has developed National Strategy for Romania Digital Agenda 2020. National Strategy for Romania Digital Agenda was developed based on the Digital Agenda for Europe 2020, which is the reference framework for development digital economy. The primary objective of the Digital Agenda 2020 it represented supporting economic recovery in Europe to ensure sustainable economic growth, smart and promoting social inclusion and to develop a Digital Single Market[15].

Some of the objectives set by the European Digital Agenda were taken and adapted to the current context of Romania and aligned with the strategic vision of ICT Romania 2020. The aim was to ensure the development of ICT Romania to the countries in the region and establish the premises for integration Romania, in terms of ICT, in the Digital Single Market of Europe. The National Strategy for the Digital Agenda for Romania directly targeting the ICT sector and aims to contribute to economic development and increasing competitiveness of Romania, both through direct action like effective development of the ICT Romanian sector, and indirect actions such as increasing efficiency and cost reduction in the public sector in Romania and improved productivity of the private sector by reducing administrative barriers in

[14] *Strategy for Strengthening Public Administration 2014 - 2020*, Prime Minister's Office, Ministry of Regional Development and Public Administration, Project in June 2014, p. 5.

[15] *National Strategy for the Digital Agenda for Romania in 2020*, Ministry for Information Society, p. 7.

the relationship with the state and improving labor competitiveness in Romania.

E-Government Strategy in Romania, as outlined in this document, focuses on services to adduce life events (Life Events). Life events are important steps in the life of a citizen or an enterprise that are composed of inter-institutional services that serve citizens and business interaction with the Public Administration in Romania[16]. Considering the Digital Agenda for Europe 2020, Romania has defined four key areas of action adapted to the current context, which will be followed as Romania's vision for Digital Agenda program, leading to sustainable economic growth and competitiveness. The first field of action, entitled e-Government, Interoperability, Cyber Security, Cloud Computing, Open Data, Big Data and Social Media aims to increase efficiency and reduce costs in the public sector in Romania by modernizing the administration[17]. This area of action presents the activities undertaken by the Public Administration of Romania to implement the 36 life events (identified as priorities and commitments of Romania) by 2020. in the context of the latest available data from the European Commission on the Digital Agenda Scoreboard (DAS)[18], which follows the progress of Member States towards the targets assumed, this showed that in 2013 only 5% of Romanian citizens using e-Government services, compared to a European average of 41%. In terms of indicators focusing on public services needs of civil society and transparency of public services, Romania had a score of 40, respectively 17, against a European average of 70, respectively 49, it was necessary action to implementation of a good e-Government in Romania.

National Strategy for the Digital Agenda for Romania 2020 includes a SWOT analysis for e-Government and interoperability[19], achieved for 2013 and identifying the strengths, weaknesses, opportunities and constraints e-Government phenomenon.

Strengths identified by SWOT analysis concern: the existence of a strong ICT sector, with national integrity and the presence of major global ICT companies on the market in Romania; well-developed ICT infrastructure in cities, which is in development in terms of Internet access in public areas; the existence of a functional online procurement platforms at government level (www.e-licitatie.ro); MSI existence acting as general coordinator of ICT strategies at the governmental level; CERT-RO existence in cyber security; existence of cyber security strategies and development of electronic public procurement - ESPP.

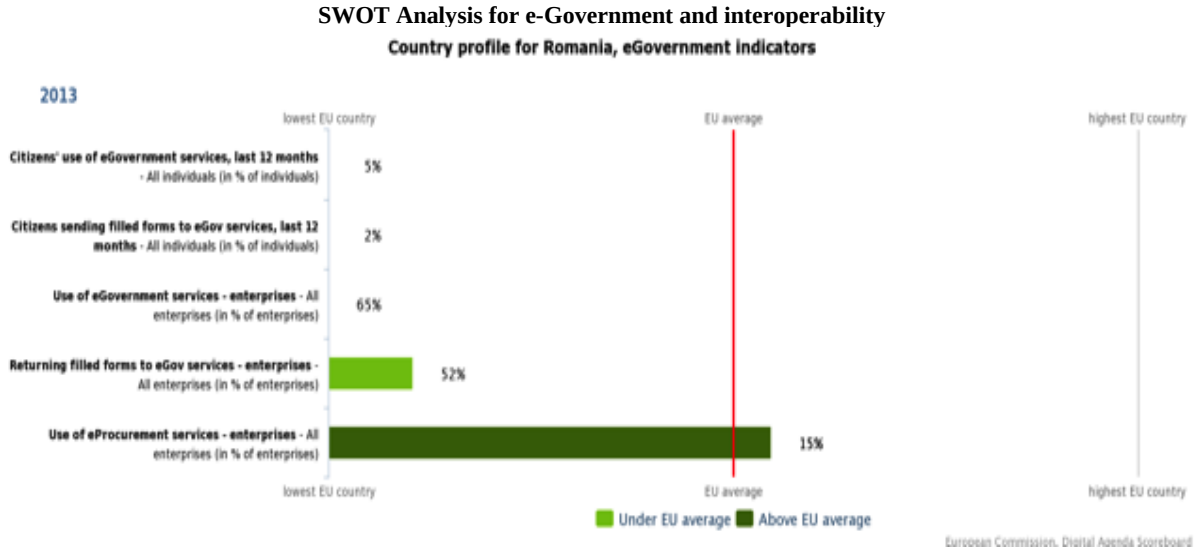
In terms of weaknesses were identified: lack of legislative framework on interoperability government institutions and information systems; lack of insurance security systems of public institutions; lack of public sector investment programs coordinated in a consistent manner; lack of coordination in terms of appropriate security measures; lack of a long-term strategy on public sector ICT staff training; the absence of a single electronic authentication and identification of users; the existence of a relatively small number of computerized public services according to their degree of sophistication; the lack of interoperability in public administration in Romania; lack of functionality online procurement system; lack of a coordinated and consistent communications to promote online government initiatives; the existence of problems of scalability, timeliness and cost-effectiveness in terms of ICT infrastructure developed in various government organizations; granular acquisition hardware and software solutions that do not provide transparency at government level.

The opportunities identified in the SWOT analysis were: the development of an infrastructure for e-Government public services; increasing the use of public services available online; preparation of intra-coordinated project implementation, supporting thus achieving interoperability; European e-Government alignment structures; increasing the transparency of government activity; Cloud Computing technology development and management of data centers; increased use online environment for solving the problems of citizens; low investment funds from the state budget.

Threats or constraints relate to: the digital divide recorded at regional level: rural-urban; decentralization of public authorities and the difficulty to impose the use of interoperability standards; changes in the political environment that may influence growth or to achieve goals; activities organized cybercrime groups; lack of trust in online cyber security systems.

[16] *National Strategy for the Digital Agenda for Romania in 2020*, Ministry for Information Society, p. 25.
[17] *Ibidem*, p. 18.
[18] http://ec.europa.eu/digital-agenda/en/digital-agenda-scoreboard.
[19] *National Strategy for the Digital Agenda for Romania in 2020*, Ministry for Information Society, Annex 3, pp. 127 – 128.

Taking as it's a starting point the results of SWOT analysis is proposing a series of actions to address the most important issues. These related to: implementation of public services online[21]. In this context, increasing the efficiency and transparency of public administration and improving the economic



Source: National Strategy for the Digital Agenda for Romania in 2020

preparing coherent process of computerization of public services based on life events (Life Events) and increase the transparency of public administration; definition of an institutional structure to provide a unified vision, manage centralized and coordinated aspects of computerization of public services and achieve interoperability at European level on the opportunities identified in Romania; use opportunities for European coordination to ensure improved performance interoperability of information systems implemented at national level and to improve cyber security; support the use of open source and standards to facilitate and ensure future interoperability of information systems; introduction of technologies such as Cloud Computing and unified management systems for data centers to reduce administrative costs and increase efficiency in public administration activities; use social media to improve communication both government institutions and private sector representatives to support their activity[20].

For a better implementation of e-Government, National Strategy for the Digital Agenda for Romania in 2020 provides the following: ensuring transparency in the dissemination of information by public services; creating platforms and interfaces of e-Government; effective cooperation between central and local administrative structures, public and private; working procedures for the development of e-Government solutions for business management; creation of a centralized electronic authentication of users and their unique identification of integrating electronic identification requirements resulting from the environment were identified as short-term strategic priories. It is believed that prioritizing government services that relate to Life Events will bring a significant improvement in the way citizens relate to governance because refining those services will facilitate citizens' interaction with public institutions.

Conclusion

The XXI century brings with it the idea of *electronic state* or *e-state*. Romania has made and filed in this a considerable effort to align with the e-Government standards imposed by the EU and required by the actual current of development and evolution of a modern administrative system. If the period 2007 - 2013 the Administration of Romania has seen many institutional reforms that aimed, on the one hand, in order to better adapt insurance obligations country (for example, the establishment of institutions such as Managing Authorities or the National Integrity Agency), and, on the other hand, reorganization to streamline public spending or implement a different political views, since 2014 requires that priority implementation of the e- Government 2.0 concept, which should be based on a common vision of creating a coherent national system and integrated for online public services dedicated citizens, businesses and local and central administration. Analyzes that we conducted on the various strategies that Romania has proposed over the years, since 2009, have revealed that there were ongoing concerns Romanian competent authorities in this regard. These concerns were both the

[20] *National Strategy for the Digital Agenda for Romania in 2020*, Ministry for Information Society, Annex 3, p. 128.
[21] *Ibidem*, p. 25.

legislative and operational level. Suggested strategies aimed both short term goals and long-term strategic objectives in terms of administrative reform. It is also appreciated that the proposed action plan to achieve the objectives and results that will come from the implementation, monitoring and evaluation of actions taken will be the basis for reviewing the future strategy and to develop a strategy to reform continuous and coherent the government of Romania to increase the quality of services provided by it.

SOCIOTHERAPY AS A CONTEMPORARY ALTERNATIVE

M. Kubilay AKMAN*

ABSTRACT

Sociotherapy was launched as a therapeutic system in 20th Century, which has very strong theoretical and historical relations with the discipline of Sociology. Why there was a need to suggest a new way of therapy, while psychotherapy is existing? We have witnessed that there are some social dimensions of psychological problems which require a solution based on "socialization" between therapists and patients. There is a "healing power" in socialization and it has been the basis for all sorts of group therapies, including Sociotherapy as well. In this paper, we will have the opportunity to discuss the theoretical knowledge on Sociotherapy and consider its possibilities for applying contemporary socio-psychological problems in society. Knowledge society gives us a suitable platform to practice various therapeutic disciplines to find out solution for the problems created by the same society. This paper may be seen as a part of this purpose, finding viable and operative solutions to socio-psychological problems that today's individuals experience in their daily lives.

Keywords: *sociotherapy, clinical sociology, group therapy, interpersonal therapy, psychotherapy.*

1. Introduction

When we have a look to therapy-related activities it is obvious that there is a great dominancy of psychotherapy over all other types of therapeutic ways around the world. Discussing the historical, theoretical and scientific reasons of this situation is really a wide topic and not possible at all to cover in the scope of this paper. However, we should at least mention here that the understanding and conception based on "individualism" and consideration of "self" as nucleus of society inevitably bring a person-focused, individual-centered perspective of therapy concept and psychotherapy finds a suitable basis somehow in this discursive intellectual / scientific environment. Individual psychological problems are mostly coming from social causes and limiting their cure, healing and therapy on an individual level prevents possible alternatives to create substantial solutions for them. Our tendency is not to continue through a critique of psychotherapy. However, it is better to know why sociotherapy is not so wide-spread at academies, therapeutic institutes and hospitals. This individualistic discursive perspective has blocked the improvement of sociotherapy until 21st Century, although it has a history and background for decades.

The main focus of psychotherapy is based on the person; however, for sociotherapy the object-situation is more important. Psychotherapists are concerned with intrapersonal systems, as for sociotherapists, the situation and its social conditions are much more determining. Sociotherapy consider social, cultural and environmental issues as effective parts of creating a therapeutic way (Edelson, 1970: 176). This theoretical understanding will be helpful below regarding to understand that how sociotherapy works.

Academic and scientific researches, publications and lectures on sociotherapy have existed in USA and Europe since first half of 20th Century. There are outstanding researches we will mention below and application of sociotherapy continued uninterruptedly until today. The interest of writer of this paper to sociotherapy is beginning from early 2000s. This discussion on main concepts and perspectives of sociotherapy may be considered as a modest contribution to a subfield of sociology which has a more potential to provide in the future than it has already disclosed. Although, historically it has been defined as a part of sociology and as its therapeutic application, sociotherapy seems really compatible to other fields of social sciences as well, such as anthropology, management, political sciences, social work, Etc.

In the following pages of this article you are going to read on the possibility of a "usable" and "relevant" sociology, how to perform a therapeutic activity through a sociological perspective and the advantages sociotherapy in terms of providing solutions to socio-psychological problems of contemporary individuals. Of course, this is a field requires further discussions and you may consider this paper as your first step into sociotherapy, if you are not acquainted yet with this field.

2. Ontology of Sociotherapy

When sociology was "born" as an independent and "positivist" social science, it used to have a very practical approach and tools. In works of Comte, Spencer, Durkheim and other classics the existence of sociology had the least common with an abstract, philosophical and sophisticated discourse. Their concept of sociology was pretty practical and pragmatic. However, by the time, especially in 20th Century sociology somehow came closer to a more philosophical level. Even, it was not easy to decide if some names are sociologists or philosophers, for

* Department of Sociology, University of Bingol, Turkey (e-mail: **kubilayakman@gmail.com**).

instance Marcuse or Adorno. Sociotherapy can be considered as a return of sociology to its applicable technical and functional value again.

As L. Alex Swan states, "sociology must be real, relevant, useful, and applicable" (Swan, 2014: 153). Sociotherapy is one of the ways for a more useful and functional sociology. For this purpose, "we must change the way we train sociologists to produce scientists-practitioners whose role is to create the specific contextual knowledge and understanding for application and social intervention" (Swan, 2014: 327). Because, it is not easy to realize the required transformation toward a therapeutic sociology, with conventional approaches at sociology departments of our academies. We need to find new strategies for training of future's sociologists.

Individual is not a lonesome "person" disconnected from society for us, during sociotherapy sessions. We need to locate a client into his / her social contexts and "in sociotherapy the social personality of the person is involved. It is the public individual in interaction. The viewpoint taken by the director of the session directs his attention toward the group as structure. A general catharsis is intended" (Cornyetz, 1945: 463). This catharsis is a way of healing / treatment for socio-psychological problems of person.

During this Conference you will have the opportunity to follow a comprehensive presentation on Viktor Frankl's logotherapy system by another colleague. According to Frankl's "Logotherapy approach to interactional group therapy, the treatment dynamics of noticing, actualizing, and honoring are facilitated or triggered by six elements of group treatment (…): group balance, group task orientation, group cohesion, dynamic group reflection, existential group reflection, and experimental participation" (Lantz, 1998: 98). This is something more or less we expect from sociotherapy as well: a therapy process based on harmony and interaction in group.

The understanding which emphasizes that problems which have social backgrounds and causes require also social ways of solution is the main principle for the ontology of sociotherapy, flourishing in the realm of sociology. Based on this main principle, there is a lot common between sociotherapy and other varieties of group therapies in spite of all differences in technical and theoretical levels.

3. How Does It Work?

Socioterapy is a field in which interpersonality is a crucial requirement, although its approach to interpersonal socialities are pretty different than psychotherapy's approach. Because of this reason, "sociotherapeutic ideology point of view emphasizes the therapeutic value of the multiplicity of interpersonal and social situational encounters occurring in the patient's treatment setting" (Armor, 1968: 247). Sociotherapists are using and manipulating social milieu and environmental components for a kind of "milieu therapy," or with another naming "group therapy." In their understanding, "mental illness is caused by social and environmental factors, usually those occurring with the patient's recent life situation" (Armor, 1968: 247). So, they use this environment and situations as powerful therapeutic tools.

The practical approach of "sociotherapy helps people to regain self-respect, rebuild trust, feel safe again, overcome unjustified self-blame, re-establish a moral equilibrium, have hope, live without terror, forgive those who have harmed them, apologize to those whom they have wronged, and regain their rightful place in the community" (Richters, 2010: 105). With another expression, sociotherapy is a way for regaining the lost harmony together with people, with whom probably we have shared losing process of this harmony previously, via mutual mistakes.

Paul Wilkins, in his "person-centered sociotherapeutic model" provides us some important points to establish a balance between "we" and "me". According to Wilkins: "The We implies a connectedness, an inter-relatedness that goes beyond the organism." With this perspective, we are all belonging to "We" and harming "We" is something like you are harming yourself. Based on this consideration, "We is more than an immediate community, more than humanity, more than all living things. It is our planet in its totality" (Wilkins, 2012: 243). Regardless if you have a "person-centered" or "group-centered" sociotherapy concept, these points seem applicable anyway.

There are some essential differences between psychotherapy and sociotherapy. According to J. Stuart Witely, "psychotherapy is primarily a listening process, with understanding coming from the therapist's interpretation of the individual's communications and facilitating the development of a more stable emotional life. Sociotherapy is a more active process, with behavioral change coming from the experience of new and more satisfactory ways of coping with interpersonal interactions" (Whiteley, 1986: 721). As you can see, the therapeutic power of sociotherapy is more dynamic and necessitates interaction.

Clients need to change themselves and their behaviors in therapeutic process: "Sociotherapy is the relearning of social roles and interpersonal behavior through the experiencing of social interactions in a corrective environment" (Whiteley, 1986: 721). Rand L. Kannenberg calls it "Resocialization" process; as a therapeutic way which requires relearning established problematic values and behaviours; being liberated from previous learnings of social environment (family, school, friend groups, Etc.) and changing social roles with more effective and beneficial ones (Kannenberg, 2003: 90). Sociotherapists are effective participants and organizers of these resocialization activities.

L. Alex Swan has defined his strategies and system in sociotherapy as "Grounded-Encounter

Therapy" (GET) and according to Swan's theory GET "is a process of encounter, interpretation, and situation analysis which allows for the discovery of essential facts and explanations that are grounded in the social situation (context) of the clients. It provides for the devising of strategies, plans, and approaches for change, growth and development that are also grounded in the social context of the clients" (Swan, 1984: 62). GET's diagnostic and therapeutic techniques are shaped through "the personal encounter between the clients, and between the clients and the therapists. Through the dialogues and sharing of feelings and thoughts, clients can communicate to each other their concerns and describe their situation so that an authentic Picture emerges" (Swan, 1984: 63-64). Seeing this authentic picture may be understood also as seeing a picture of final solution for socio-psychological problems.

4. Towards a Successful Sociotherapy

Annemiek Richters and her colleagues have stated that: "The term sociotherapy may suggest a medicalizing approach to social problems. The point of sociotherapy, however, is that its therapeutic value comes from the active input of the group members as they participate, question, advice, influence and correct each other in their social contact" (Richters, 2010: 99). This social contact is the key for a high level of success in sociotherapy.

Modern society has some problems which are aged and they need to be approached with more effective techniques. Sociotherapy is a functional response for these aged problems. In confrontation of contemporary situations, "If we had enough social intelligence, we could solve the problem directly by scientific methods, but since we have not yet developed this method of attacking our social problems, we shall probably have to go through a long period of neurotic worry, anxiety, and confusion until we finally solve the problem by wasteful fumbling-passive adaptation-rather than by the rational, direct, and effective means of science-guided active adaptation" (Bain, 1944: 457). As sociologists, more than a half century we have been discussing for this kind of "science-guided" techniques for curing socio-psychological problems.

Richters and co-authors at her research report suggest us some principles for success, based on discussions conducted by Rapooport and Bierenbroodspot previously. These principles for an effective sociotherapy are:

"1) two-way-communication at all levels - this communication is a precondition to warrant that everyone is informed about what goes on in the group and can use that information in decision-making;

2) decision-making at all levels - this promotes, among other things, sympathy within the group as a whole and with individual members;

3) shared leadership - this actually means democracy, the sharing of power and responsibility;

4) consensus in decision-making – when the group cannot come to an agreement, no decision is forced, but the discussion continues until consensus is reached;

5) social learning by social interaction here-and-now - this learning will also benefit group participants in their social interaction in the wider society" (Richters, 2008: 101).

Of course, these principles may have some variations in different cases. However, they can be taken still as a foundation to keep the sociotherapy practice and applications focused in the main line. The methodological points analyzed before by Gerald W. Lawlor may be very effective in this main line. According to Lawlor these are followings: "1) Situations and roles assigned by the director; 2) Continuing scenes; 3) Free association; 4) Life problems" (Lawlor, 1946: 275). Sociotherapists should interpret these points in their particular case and practices; afterward, they need to find their own customized methods if necessary. Flexibility is crucial for a successful sociotherapy application.

Sociotherapy is like a strategy to take the potential which already exist in societies and upgrade it with some arrangements for particular needs. It is called as 'community-based' sociotherapy by Richters. The power of local communities is functionally adopted into sociotherapy process in this approach (Richters, 2010: 97). Actually, people in societies and local communities are already performing a kind of "unconscious" sociotherapy to themselves and to each other. What sociotherapists recommend may be considered as a systemized version of this existing therapeutic tendency for a more effective solution to socio-psychological problems challenging in any level.

5. Conclusion

Contemporary societies have a contradictory position which provides problems and possible solutions at the same time. Many economic, social, cultural and socio-psychological problems have their origins and deep roots in societal factors. Problems are produced and spread when and where people are socializing. The main conceptual epistemology of sociotherapy is based on this reality: the source of therapeutic knowledge and possible applications are the same with the origins of these problems. Therefore, socialization or "resocialization" appears as a productive therapeutic power source for all sociotherapists, despite their theoretical differences. Sociotherapists take an active role, redesign and direct social environments for therapeutic purposes. The early literature on sociotherapy is coming from last century. However, although it started as an academic sub-discipline of sociology comperatively a long time ago, it has not substantially spread as a therapeutic

system widely yet. The reasons of this situation are beyond the borders of this paper. As we have tried to discuss in the previous pages sociotherapy is a very functional and practical approach to modern socio-psychological problems which may be seen even as a return to 19th Century early sociology's practical and applicable beginning ideals. We have reasons to be optimistic or pessimistic regarding the future of sociotherapy. However, it is always better to be realistic. Sociotherapy has a potential to grow and spread as a useful therapeutic system, however it depends on conditions and preferences of today's social scientists. If there are more social scientists who are interested in sociotherapy then this sub-discipline of sociology may reach to the position it deserves since 20th Century and quite far away to arrive there yet.

THE LIMITS OF ESP TESTS

Norica-Felicia BUCUR[*]
Camelia NEAGU[**]

Abstract

Global market forces have determined not only higher education institutions all over the world to include ESP courses in their curriculum to enhance their students' future employability, but also public and private organisations to offer their employees the opportunity to attend ESP courses in order to meet the continuously growing ESP needs. From this perspective, ESP compentence could become a subcomponent of one of the key competences for lifelong learning, communication in foreign languages. Therefore assessing ESP competence seems to acquire paramount importance since stakeholders need accurate information about the ESP learners' abilities to cope with specific language tasks. This article offers a concise overview of the principles and practices of ESP assessment, a detailed description of the features of ESP tests, while focusing particularly on the limits of ESP tests in order to identify possible solutions to overcome them.

Keywords: *English for Specific Purposes, language assessment, ESP assessment, language test, ESP test, specific background knowledge, language proficiency, authenticity, specificity, tasks.*

1. Introduction

Nowadays, no formal learning can be envisaged without some form of assessment, because educational stakeholders are eager to be informed about students' progress. Moreover, the course objectives, content and methodology are also scrutinized in this process, so that suggestions for improvement could be made, if necessary.

English for Specific Purposes (ESP) is specialized English language teaching that aims to develop the specific skills of the learner in response to the needs identified or indicated by various stakeholders. This specificity includes equipping learners with 'not only knowledge of a specific part of the English knowledge, but also competency in the skills required to use this language' (Orr, 2002: 1). Furthermore, ESP learners comprise almost all adult age groups, as well as cultural, linguistic, professional and academic backgrounds.

In line with late 20th century trends characterising curriculum development in general and English as a Foreign Language curriculum development in particular, ESP practice has evolved into a spiraling protocol of standard procedures: needs analysis; syllabus design; selection and production of materials; methodology; assessment. Thus, ESP practitioners play multiple roles, being responsible for designing customized syllabi, preparing materials, carrying out research and evaluating specific language progress.

The field of ESP assessment has been seen as a separate and distinctive part of a more general movement of English language assessment, focusing on measuring specific uses of English language, among identified groups of people. Moreover, ESP assessment has been viewed in the broader context of the teaching and learning process. Thus, assessment does not stand alone, but occupies a prominent place in the ESP process, giving an ESP teacher a wealth of information on the effectiveness and quality of learning and teaching (Dudley-Evans and St. John, 1998: 121). On the other hand, tests enhance the learning process and act as a learning device, and, particularly, an ESP test is an aid to learning, encompassing benefits such as reinforcement, confidence building, involvement and building on strengths (Dudley-Evans and St. John, 1998: 210-212).

This article reviews the theoretical issues related to ESP assessment in general, trying to pinpoint to the characteristics of ESP tests. The limits of ESP tests, as evinced from research conducted in this field, are briefly described and possible solutions are indicated.

2. ESP Assessment: A Brief Outline

The process/product dichotomy helps us differentiate between the concepts of assessment and testing, in general: assessment is a process, which may offer answers not only to questions such as how much students have learned (this purpose is achieved by means of a test = product), but also to questions on how they learned and why certain results occurred. This information is obtained through techniques other than tests, including observations, surveys, interviews, performance tasks, and portfolios. Thus, assessment is a comprehensive concept, centering its endeavors on student learning, and serving the purpose of student improvement and development through a variety of ways.

[*] Assistant Lecturer, PhD, Faculty of Social and Administrative Sciences, "Nicolae Titulescu" University of Bucharest (e-mail: **feliciab@univnt.ro**).
[**] Lecturer, PhD, Faculty of Social and Administrative Sciences, "Nicolae Titulescu" University of Bucharest (e-mail: **camelia.neagu@univnt.ro**).

The guiding principle of assessment in ESP pedagogy is gathering evidence to understand the effectiveness of the course in terms of the skill enhancement of learners. The traditional needs analysis in ESP covers the purpose of the assessment, the personal, educational, and knowledge characteristics of the learners, and the context of specific purpose language use (Douglas, 2013: 367).

Therefore, assessment instruments employed in specific purpose programs are not, in fact, completely different from assessment instruments in general or from assessment tools used in language programs as such, because the ultimate purpose of assessment is to give learners an opportunity to show what they have learned and what they can do with what they have learned, by being given the same instructions and the same input under the same conditions.

Nevertheless, ESP assessment is distinguishable from assessment in general and language assessment in particular as it targets specific purpose language abilities. Thus, if we want to know how well individuals can use language in a specific context of use, the assessment needs to include both (1) their language knowledge and their background knowledge and (2) their use of strategic competence in relating the salient characteristics of the target language use situation to their specific purpose language abilities (Douglas, 2000: 282).

3. Main Characteristics of ESP Tests

From a more general perspective, tests are summative assessment tools and their goal is to evaluate student learning by comparing it against some standard or benchmark. In contrast with formative assessment instruments, which exihibit high degrees of flexibility, 'most tests are conducted under supervision and require candidates to answer questions in a given time limit, without reference to books or other people' (Dudley-Evans and St John, 1998: 211). What is more, tests can be labeled as low-stakes or high-stakes, depending on their function. In a low-stakes test, the results typically matter far more to an individual teacher or student than to anyone else and it is usually distributed, rated and graded by the teacher personally, whereas in a high-stakes test, test results are used to determine an important outcome, having major consequences or being the basis of a major decision.

Language tests play a powerful role in many people's lives, acting as gateways at important transitional moments in education, in employment, and in moving from one country to another (McNamara, 2000: 4). As compared to general English tests, ESP tests are developed within an ESP context, aiming to comply with the narrowly defined requirements of any specific area of language use.

What really matters in ESP testing is whether learners can communicate in a specific target language and use knowledge of the field in order to achieve their aims, in order to understand and be understood, in order to get their message across in English. The ESP approach in testing is based on the analysis of learners' target language use situations and specialist knowledge of using English for real communication. Thus, when envisaging an ESP test, the ESP underlying principles should pervade the whole process: (1) language use varies with context; (2) specific purpose language is precise; (3) there is an interaction between specific purpose language and specific purpose background knowledge (Douglas, 2013: 368).

ESP tests are not exclusively employed to measure proficiency, but they may also be given to place students or to check their progress. These functions may even overlap in certain situations (Hutchinson and Waters, 1987: 146), offering valuable information to all stakeholders. Therefore, a placement test could not only reveal the learner's needs, but also his/her potential for learning along the ESP course, and an achievement test could not only give the learner a glimpse on his/her progress, but it might also function as a motivator.

Moreover, ESP tests are criterion-referenced tests, being designed to represent the candidate's level of ability, hence his/her performance is interpreted with reference to the criterion judged to be essential for proficiency in a particular task (Hutchinson and Waters, 1987; Douglas, 2000). Thus, an ESP test calls for an interaction between the test taker's language ability and specific purpose content knowledge, on the one hand, and the test tasks on the other (Douglas, 2000: 19).

Another important aspect of ESP testing is the target group. ESP learners stand out as it is assumed that they have become aware of both their target needs (subdivided into necessities, lacks and wants) and their learning needs (Hutchinson and Waters, 1987: 54-61). Unlike general English tests, which are sometimes targeted for certain age groups (e.g. Cambridge YLE – young learners), ESP tests are more likely to be used with adults, either at a tertiary level institution or in a professional work situation.

Although the washback effect is not ESP specific, it is worth discussing this issue here, since it heavily weighs on test quality. At macro level, the higher the stakes, the more impact a test may have 'on learners and teachers, on educational systems in general, and on society at large' (Hughes, 2003: 53). At micro level, washback refers to the impact of testing on 'what is taught and how it is taught' (Dudley-Evans and St John, 1998: 214). At this level, washback may prove beneficial in certain situations, as it could show the teachers either what should be changed in the tests and, the opposite, if some parts of their teaching should be changed in order to focus more on what it is tested. Moreover, the changes operated in the tests by the teachers could help learners improve their language abilities.

When devising an ESP test, valid and consistent measures of language ability should be developed as

well. These measures are expected to be as reliable and authentic as possible, provide accurate descriptions about specific language abilities, have beneficial impacts, be practical and cost effective in terms of administration, time, money and personnel. Nevertheless, only authenticity, interactiveness and impact/practicality are quintessential for language tests in general (Bachman and Palmer, 1996), and the quality of any ESP test stands out especially to authenticity (Dudley-Evans and St. John, 1998, Douglas, 2000).

Considering the most important factor affecting the quality of an ESP test – the level of *authenticity*, ideally, an ESP test should engage the test takers in accomplishing various genuine tasks through which their general English knowledge (linguistic competence) could interact with their ESP content knowledge in a real life context. Such an interaction is deemed absolutely necessary throughout the entire ESP testing process, as authenticity of the tasks refers to the similarity of the task content to the specific and specialized target language situation. In addition to that, authenticity is important because of its potential effect on the test takers' perceptions of the test and, hence, their performance (Bachman and Palmer, 1996: 24).

In a perfect world, after attending an ESP course, learners' previous English skills would refine, helping them to successfully deal with domain specific situations. Hopefully, their background knowledge would increase and this would enable them to make appropriate inferences and thus boost their ESP skills. Tests taken by learners at the end of their ESP course should provide stakeholders with some evidence, by predicting how effective and confident the test-takers might be in a specific target situation.

4. The Difficulties of ESP Testing – Possible Solutions

Even if ESP is widely acknowledged as a well established field (see Hutchinson and Waters, 1987; Dudley-Evans and St John, 1998; Douglas, 2000; Basturkman, 2010), when it comes to understanding what is to be assessed in an ESP test, practitioners seem to be on less solid ground. Two theoretical issues need considering in Douglas's view (2000, 2013): (1) whether the construct of specific purpose language ability actually exists and (2) how the criteria for assessing specific purpose language performances should be derived.

On the one hand, it is argued that the only justification for developing specific purpose language tests is to achieve face validity, and test developers usually achieve this by exclusively focusing on the purely linguistic elements of specific purpose communication (Davies, 2001: 143). On the other hand, stemming from the absolute and variable characteristics of ESP (Strevens 1988 in Dudley-Evans and St John, 1998: 3), it is argued that a specific purpose language performance depends on non-linguistic knowledge (Jacoby and McNamara, 1999: 233). In reality, these two opposing views are brought together on a continuum, because ESP tests cannot acquire absolute values in terms of authenticity and specificity. Thus, ESP tests range from low authenticity/specificity to high authenticity/specificity, depending on specific context itself (Douglas, 2013: 371).

Authenticity does not lie in the mere simulation of real-life texts or tasks, but rather in the interaction between the characteristics of such texts and tasks and the language ability and content knowledge of the test takers (Douglas, 2000: 22). Therefore, the distinction between *the ability to do future tasks or jobs in the target language use situation* and *the ability to use language in specific future tasks or jobs* is crucial, as any relevant ESP test should find a way to successfully combine the assessment of these abilities.

The problem related to properly defining specific purpose language ability proves to be so complex that it is really difficult to come up with a solution that would comply with the demands of any ESP situation. Nevertheless, if further analyzing this issue helps identifying the elements that define specific purpose language ability: *context* and *tasks*. According to Douglas (2000: 41), in producing reliable ESP tests, 'we need an understanding, first, of the context and tasks in the specific field we are interested in, and second, of how to translate these features into test tasks'. The framework proposed by Douglas (2000) for analyzing target language use and test task characteristics is meant to provide a basis for test development, as well as for analyzing existing specific purpose language tests to determine their degree of specificity. The framework is made up (1) *rubric* – 'characteristics that specify how test takers are expected to proceed in taking the test' (Bachman, 1990, in Douglas, 2000: 50); (2) *input* – 'the specific purpose material in the target language use situation that language users process and respond to' (Douglas, 2000: 55); (3) *expected response* – 'refers to what the test developers intend that the test takers do in response to the ESP situation they have attempted to set up by means of the rubric and input' (Douglas, 2000: 62); (4) *interaction between input and response* – in terms of reactivity, scope and directness (Douglas, 2000: 63); (5) *assessment* – 'consists of a construct definition, a set of assessment criteria, to be called criteria for correctness, and a set of procedures for rating or scoring the performance' (Douglas, 2000: 67).

The degree to which the learners' level of language knowledge and their level of specific background knowledge affect their ESP test performance has been intensively investigated (Salmani Nodoushan, 2007; Krekeler, 2006; Clapham, 2000, 1996; Ridgway, 1997). Nevertheless, research findings have been unable to tip the balance in favour of any of these variables, as, in some cases a specific background knowledge effect is detectable and in

others it is not. For example, even if intermediate proficiency test takers seemed to have benefited from their background knowledge to obtain a higher score, for low and high proficiency candidates the value of this variable was irrelevant (Clapham, 1996, 2000).

This lack of conclusiveness related to the effect of specific background knowledge on ESP test performance has been attributed to four problems: (1) background knowledge is difficult to assess; (2) there is lack of criteria to identify qualities of specific language material, which makes it difficult to compare relevant studies; (3) there may be considerable task effects and the test tasks also vary to a great extent across studies; (4) there seem to be interaction effects between background knowledge and language proficiency (Thoma, 2011: 115).

5. Conclusions

The field of ESP language testing has a rich and dynamic future. The troublesome issues in ESP language testing have been briefly commented upon in this paper and partial solutions have been indicated. The problem of authenticity/ specificity, which could apparently be solved by selecting input data from genuine sources, is difficult to cope with in reality, as low and high levels of authenticity/ specificity could exist for ESP tests, depending on the situation. Moreover, so far research findings have not provided irrefutable evidence related to the importance of specific background knowledge when taking an ESP test (Thoma, 2011: 118).

Therefore, more research is badly needed to indicate practical solutions to the problems evinced by specialists investigating the field of ESP testing. Experts in ESP teaching should involve professionals from various domains in designing and conducting relevant research, so that ESP tests would become more fair, reliable, authentic, valid and practical.

THE STRUCTURE OF THE DRAMATIC DISCOURSE AND ITS RELATION TO MEMORY IN AMALIA TAKES A DEEP BREATH[1] BY ALINA NELEGA

Carmen Daniela CARAIMAN[*]

Abstract

The present paper aims at identifying the dramatic instruments which Alina Nelega used in her best known play – "Amalia Takes a Deep Breath" – in order to make her artistic message heard and discovered by the Romanian and foreign theatre audience[2].

We have approached Alina Nelega's play through a semiotic perspective, conceiving it as a set of signs and codes that may be identified both at literary level (the play seen as a dramatic text) and at the level of stage representation (the play seen as stage-acting), with the result that the reader and the theatre amateur are invited to interpret them in accordance with his/her horizon of expectation[3].

On a first level of interpretation, we have analysed the structure of the dramatic discourse: the succession of episodes that compose the play, the dramatic tension created within them, the use of rhetorical instruments and the theatrical dimension which the text reveals through its 'openness'[4] towards the audience.

On a secondary level, we appreciate that the play illustrates one of the main features of drama and theatre: its capacity 'to translate' individual memory by making it audible to the others (including to other generations and geographical areas) with the result that it becomes known and (re)interpreted and finally accepted as a collective experience about that community's own past. In our opinion, this is the most important message which Alina Nelega's play tries to express - respectively that Amalia's dramatic destiny (destroyed by the oppressive totalitarian factors of the communist regime) is an active remembering about the collective experience of our people who experienced totalitarism and a matter that comes to justify the identity issues with which the Romanian society is confronting today.

However, 'Amalia Takes a Deep Breath' is not a lesson about the past, it is not a text that is meant to teach, but rather an attempt to awaken the others' awareness as regards collective memory and an attempt to cure historical traumas through art.

Keywords: *post-communist Romanian feminine drama, the translation of memory through and into drama and theatre, stage-audience communication, monologue, author-reader communication.*

1. Introduction

1.1. An outline of the writer's activity

Alina Nelega is one of the most important Romanian playwrights that made her voice distinctively heard after 1989, at a time when the eclectic landscape of post-totalitarian literature had to re-invent itself by creating a new canon and, thus, a new set of aesthetic values.

The fame that the author currently enjoys is due to the prizes[5] she won and to the efforts she made for the development of drama in Romania.

Alina Nelega has been a very active presence in Romanian literature since 1992. She has published prose[6] and theatre[7] with the result that dramatic discourse has become her favourite form of expression

[*] Carmen Daniela Caraiman Lecturer, PhD, Faculty of Administrative and Social Studies, "Nicolae Titulescu" University of Bucharest (e-mail: **cdcaraiman@univnt.ro**).

[1] The play written by Alina Nelega was published by LiterNet Publishing House in 2005; it was represented on stage for the first time at *Teatrul Act*, in Bucharest, in 2007. The stage director was Mariana Cămărăşan and the actress who interpreted the role of Amalia at the time was Cristina Casian.

[2] In the present paper, by audience we mean both the readers of plays and theatre goers.

[3] See Hans Robert Jauss, *Experienţă estetică şi hermeneutică literară*, (Bucureşti: Editura Univers, 1983); Ormond Rush, *The Reception of Doctrine: An Appropriation of Hans Robert Jauss' Reception*, (Roma: Editrice Pontifica Universita Gregoriana, 1997) 39, who defines the *horizon of expectation* and its role as an attempt: "<<to examine the text in its original historical context – by examining the dynamic of its original production and reception (*the text within history*)>>, <</…/ to trace a history of the text – by examining the text's reception by communities of readers in different historical periods (*the text throughout history*)>> and <</…/ to examine the text in relation to general history – by examining the way a text, in its social function, not only arises out of, and is received from within a historical context, but can also have determining impact on that wider, general history (*the text and history*).>>"

[4] We use the term *openness* to refer to the use of monologue as a form of communication between the author and the main character, on the one hand, with the reader/audience, on the other hand.

[5] The play *www.nonstop.ro* received the UNITER prize for the best Romanian play of 2000, while the play *In traffic* obtained the UNITER prize for the best Romanian play of 2013.

[6] Alina Nelega published short stories and the novel: *thel@stwitch* [*ultim@vrăjitoare*].

[7] Apart from the plays mentioned in footnote 1, Alina Nelega published a volume of *Theatre and Short Stories* [*Teatru şi povestiri*], (Bucuresti: Unitext Publishing House, 2003), as well as the volume: *Kamikaze. Monologues and Monodramas* [*Kamikaze. Monoloage şi monodrame*], (Bucureşti: Cartea Românească, 2007).

and has made her internationally[8] famous; as the author noticed - the oscillation between prose and theatre was solved by itself in time for the writer understood later on that everything she would write "seemed to turn into theatre"[9].

In her attempt to attain originality and to discover her voice as a drama writer, Alina Nelega experienced different forms of dramatic discourse in a constant search for original and challenging dramatic topics, as well as for identifying the right tone in her style.

The passion for theatre made Alina Nelega support its development by organizing a drama writing contest (Dramafest) and by getting actively involved in the setting up of theatre journals (Postscenium and ultimaT).

1.2. Critical approach

In deciphering the significances and levels of significance of the present play, we adopted a semiotic[10] analytical perspective, in an attempt to identify the message of the play, which may be dealth with from a variety of points of view: from aesthetical to cultural, educational and political ones.

As regards the analysis of the dramatic discourse, the first thing that we have underlined in this paper is the simplicity of form – which is obvious in the reduction to the essential of stage participation in dramatic action and the minimum number of component elements that are included in the dramatic discourse: there are no details offered as regards the set; the vestimentary code is also oversimplified. In fact, the simplicity of form and its capacity to represent and signify is one of the basic characteristics of theatre. According to Keir Elam, simplified form is illustrative for the very nature of theatre: "It is an essential feature of the semiotic economy of the theatrical performance that it employs a limited repertory of sign-vehicles in order to generate a potentially unlimited range of cultural units, and this extremely powerful generative capacity on the part of the theatrical sign-vehicle is due in part to its connotative breadth."[11]

In our approach to the present play, we took as a starting point the largely shared perception that theatre is a collective art thanks to its reliance upon an ever-changing repetitive public representation and perception of the play, in which the individual is permanently linked to the others: "Theatre appears to be a privileged art of capital importance, because more than any other art, it shows how the individual psyche invests itself within a collective relationship. The spectator is never alone; as his or her eye takes in what is presented on the stage, it also takes in the other spectators, just as indeed they observe him or her."[12]

In order to analyse the component parts of the text, we paid particular attention to the succession of scences, the stage indications (the character's dressing code), the functions of monologue and the types of texts whereby Amalia's life story is revealed (the prayer, the letter and the poem).

2. Content

In post-communist Romania, choosing to write a literary text that deals with the 'decay' of the human being (from a mental and physical point of view) and the dissolution of one's values (moral and cultural ones) due to the suppression of the totalitarian society is a cultural act that anyone would expect to happen.

The play Amalia Takes a Deep Breath depicts the traumatic experience of living in the totalitarian and post-totalitarian Romanian society, which leaves few chances of survival to the weak and vulnerable ones.

In her confrontation with an oppressive society, Amalia's destiny is broken with the result that her mental and physical state gradually deteriorates until it is annihilated through suicide.

The text – written as a monologue – reiterates through the voice of the character the experiences of her past until she identifies herself with her present situation in the post-totalitarian society.

The use of the monologue in this play makes room for another form of dialogue, i.e. 'the dialogue with the public' (from here and everywhere). The main function of the monologue is its capacity to investigate and reveal personal past to the collectivity. Dialogue, which is more frequently used in theatre, modifies the dramatic perspective since it comprises the replies of the characters and it enlarges the distance between the first level of significance (the verbal and visual one) and the level of interpretation as an effect of the multiplicity of points of view that exist over the topic. In other words, with monologue the communication channel poses fewer obstacles to the sent message in comparison with dialogue:

"The monologue, which does not depend structurally on a reply from an interlocutor, establishes a direct relationship between the speaker and the it of the world of which he speaks. As a 'projection' of the exclamatory form (TODOROV, 1967, 277), the monologue communicates directly with all the members of the audience; in theatre, the whole stage becomes the monologuist's discursive partner. In fact, the monologue addresses the spectator directly as an accomplice and a watcher-hearer."[13]

---

[8] Her plays have been translated into English, German, French and Russian and are frequently interpreted both in Romania and abroad.

The use of the monologue is a complex discourse instrument for, as Glennis Byron noticed, it creates links between all the subjects and elements included within it: "speaker, audience, occasion, revelation of character, interplay between speaker and audience, dramatic action and action which takes place in the present."[14]

The use of monologue brings another advantage: it gives a sense of universality to the story presented on stage. We read/hear/watch the story of a single character; however, this story originates in the collective past of all those who lived during the first decade of the communist regime, which were extremely oppressive. Thus, the monologue becomes the channel wherein the audience gets connected to an individual perspective over past and is thus linked to the roots of its collective memory. Individual memory becomes, through theatre, the story of the entire collectivity.

The monologue comprises 8 episodes from different stages of the character's life: her childhood, adolescence, maturity and old age. The monologue mainly relies on:

- direct utterances in the form of prayer (which reveal information about the character's family and history);
- imaginary utterances addressed to the former family members (which reveal the tension between them caused by the harsh political context);
- direct utterances presented in the form of pathetic letters addressed to the authority representatives;
- the insertion of poetical fragments that depict a grey, gloomy-like atmosphere and reveal the character's loss of hope and alienation;
- the frequent use of exclamations and of the vocative.

The text starts abruptly and it places the reader/spectator right within the oppressive atmosphere characteristic of the so-called "obsessive decade" (the 1950's).

The first scene of the play, written as a 'prayer', records the first traumas that Amalia underwent in her childhood: poverty, famine, sexual abuse and her parents' and grandparents' political persecution. Everything is narrated with the words of a child who does not understand the complexity of the post-war context she was living in. Her prayer reveals the naïve perception over the experienced tragic family events: the death of her grandpa and mother, the episode of poverty and famine, as well as the first lessons her mother gave to be able to survive: to learn how to breathe in order to make life tolerable:

"And, after a while, we started to take breathing exercises with mum. And she taught me how I could also become an angel, like she did. You can do that if you know how to breathe deeply, deeply enough. Thus, you breathe deeper and deeper, you flicker your arms, just like this – and, after a while, you start ascending gently above the ground. Then, you breathe deeper and deeper and you find yourself floating even more smoothly, higher and higher until you are no longer seen in the distance – and you never come to touch the ground once more. This is actually what happened when mum found out about papa's passing away."[15] (my translation)

The second episode is a nostalgic intermezzo which functions as a meditation about the disappearance into nothingness of all things and beings; it is the first feeling of alienation that Amalia experiences:

"Where do all the things that no longer exist disappear? Where does the tea that we have drunk go, what about year 1960, the colourful spelling book, the song that I've just sung, Mișa, the teddy bear that I dropped in Moșu's grave and that nobody wanted to fetch, where's Moșu – where's Vitea, where's Paris that city about which maman and papa used to talk about, saying that we are going to go there and settle down there all of us...?"[16]

The third episode marks the beginning of Amalia's personal decay. The third episode presents in the form of a 'letter of complaint' the tragic separation of the 16-year old girl from her grandma (Babushka), her brothers (Lulu and Vitea) and her pet (a pig confiscated by the authorities in a period of poverty and famine). The letter is written in the hospital and it concludes with the words:

"And this is how I remained alone, Comrade Commander. For Vitea left, as you told me, to dance for the Beloved Commander, Lulu, as you know, is in the reform school because this tramp and rogue is no good at all. Babushka is with Moșu and with maman and papa. And Fani..."[17]

The third episode represents the beginning of Amalia's lonely fight for survival: her attempt to overcome previous abuses and to find happiness in a marriage which proves hopeless from its very beginning is followed by her moral decay. The sudden transformation of Amalia from the candide little girl

[14] Glennis Byron, *Dramatic Monologue* (Routledge, 2003), 8.

[15] Alina Nelega, *Amalia respiră adânc* (Bucuresti: Editura LiterNet, 2005), 5; *the original fragment*: „Și, după un timp, am început să facem exerciții de respirație cu maman. Și ea mă învață cum să ajung și eu înger, ca ea. Dacă știi să respiri adânc, destul de adânc. Respiri tot mai adânc, dai din mâini, uite-așa – și, după un timp, te înalți ușor, ușor de la pământ. Respiri tot mai adânc și te trezești că plutești lin, tot mai lin, tot mai sus, până când te pierzi în zare – și nu mai atingi pământul niciodată. Așa cum a făcut ea, când a aflat de papa.".

[16] Alina Nelega, *op.cit.*, p. 10; *the original fragment*: "Unde se duc toate lucrurile care nu mai sunt? Unde merge ceaiul pe care l-am băut, anul 1960, abecedarul cu poze colorate, cântecul pe care l-am cântat chiar acum, Mișa, ursulețul pe care l-am scăpat în groapa lui Moșu și n-a vrut nimeni să se ducă după el, Moșu unde-i – unde-i Vitea, unde-i Parisul, orașul ăla despre care tot vorbeau maman cu papa, că o să mergem acolo, că o să ne mutăm cu toții acolo...?"

[17] Alina Nelega, *op.cit.*, p. 17; *original text*: "Și așa am rămas singură, Tovarășe Comandant. Că Vitea a plecat, așa cum mi-ați spus, să danseze pentru Iubitul Conducător, Lulu, cum știți e la școala de corecție pentru minori că e vai de capul lui de vagabond și golan. Babushka e cu Moșu și cu mama și cu papa. Iar Fani..."

she used to be to the harldy recognizable immoral woman that she has become is a detail that shocks the audience. The unexpected process of moral decay that she gets entangled in is in fact illustrative of the moral decay that the oppressed population undergoes in any toatalitarian society that is deprived of rights and subjected to various forms of aggrievance and aggression. Psychologically, the victim (collectivity) comes to look for and desire self-destruction.

The accelerated decline that Amalia's life follows is described in scences 3-8 without pathetic hues, but rather with courage and a sort of candour that the character seems never to lose in spite of the hard times that she experiences.

The text is vivid and dynamic as the episodes which compose the main character's life follow each other quickly until they complete the full picture of the character's broken destiny.

The poetical insertions included in the text enhance the dramatic effect of the character's monologue through the images of despair and the mixed feelings of alienation and fear that they suggest. The fragment below is from a poem that is written in a half pathetical, half bitter style in order to recreate the atmosphere of terror that dominated the first decades of communism. The text shocks because of the contrast between the words of thanking that temporise the poetical discourse and the opposite state of facts (Amalia's dramatic life experience):

„Thank you./For the happy childhood – thank you./For the quiet sleep,/without dreams,/ untroubled by the subteran cries/of political prisoners,/thanks you./

Because you have brought electricity throughout the country/and have taught me how to read,/in the deafening light of the bulb,/deviding intor syllables/from/Steaua Roşie [The Red Star],/Scânteia [The Sparkle],/Steagul rosu [The Red Flag],/Communist ideas,/thank you."[18]

The fragment below is illustrative for the self-sacrifice that the human being chooses as a form of survival by spiritual and body self-mutilation:

"Once upon a time there was/a winter/when it was very cold and we had to choose: we ate or we died./I didn't like to eat my heart,/they had to force me to do it,/but I discovered,/after the first bite,/that it was tasty enough,/so, in the end,/it wasn't that hard to do it:/it was tender/and very warm."[19]

3. Conclusions

Memory[20] - understood as the right to remember and as an instrument for discovering one's collective identity, as well as for curing the destructive effect of past traumas - is an essential part of the message which Alina Nelega intended to create in her play.

The destiny of Amalia is illustrative not only for the Romanians on whom mental and physical torture was inflicted during communist times, but also for the destiny of any nation/person that is deprived of fundamental rights and freedoms.

The play is an invitation to collective remembering and meditation with the final goal of understanding what and why it happened during the previous political regime in Romania. Like in psycho drama, the one involved in the dramatic discourse and the ones invited to read/visualise it are able to discover, analyse and understand the conflictual experiences that their society members (parents, grandparents, etc.) confronted with.

The text neither tries to convince, nor does it try to prove or to teach anything. It flows naturally like memory which rebuilds with each line in the play a universe that we can never forget once we get into contact with it.

A NUTRITION OVERVIEW THROUGH CENTURIES. THE PRESENT-DAY NEED OF NUTRITIONAL EDUCATION IN SCHOOLS

Simona ILAŞ[*]

Abstract

The type of alimentation and the food quality of individuals has undergone remarkable changes along with the progress of the human species. This study contains an historical overview regarding human nutrition from the primitive forms until the paradoxes of contemporary alimentation. Nutritional education aims to inform and to train a person about food choices, dosage and cooking, how to identify authentic food and to understand the value of nutrition. Children need a balanced diet in order to grow and to become healthy adults. The importance of nutritional education in school is discussed taking into account the need of creating healthy eating habits which should be followed through the whole life, but also the lack of physical activity to children.

Keywords: *historical overview, eating habits, health, nutritional education, school.*

1. Introduction

This study focuses on the field of human nutrition. It aims to present an historical overview regarding human nutrition, emphasizing on the dietary revolutions. The evolution of the knowledge of food and diet is also discussed taking into account the contemporary alimentation which allows us to explain the need of nutrition education in schools. Its importance is explained by showing the need of creating healthy eating habits, children being in need of having a balanced diet in order to become healthy adults.

The human being has experienced three great dietary revolutions. Until about 10,000 years ago, man lived from the products of hunting and from fruit, his diet was predominantly meat-based. Important to note is that anthropologists have been unable to find signs of dietary insufficiency in paleontologic remnants. On the other hand, skeletons of humans from more advanced societies bore the marks of starvation or dietary insuffiency. About 10,000 years ago, man discovered agriculture as well as domestication of cattles. It began class differentiation, bringing as consequence the slaves and the poor's dietary insufficiency. In the 19th century, there were introduced refined and semirefined products, concentrates and industrial foods, sugar products and refined flour into the diet.

Civilized man had limited his diet to a small number of products. By doing so, he increased the possibility of the occurrence of some chronic shortages of essential nutritive elements. Overfeeding and the abuse of concentrated and refined foods, together with the sedentary and stressful nature of modern life have contributed to the occurrence of some serious diseases such as atherosclerosis, diabetes, obesity and dyslipidemia. Also, another aspect is undernutrition- a part of the world's population continues to starve. Food teachnology, a characteristic of modern civilization, favours the development of some diseases such as dental caries, as well as increased morbidity from coronary disease, ulcers, diabetes. Chronic poisoning due to the industrial food additives also affects health.

People's food choices are influenced

by many factors: (a) biologically determined behavioral predispositions include humans' liking at birth for sweet and dislike for bitter and sour, hunger/ satiety mechanisms, and sensory specific satiety. (b) Experience with food. Humans have the capacity to learn to like foods through associative conditioning, both physiological and social. (c) Personal factors. Intra-person factors such as beliefs, attitudes, knowledge and skills and social norms, and inter-personal factors such as families and social networks also influence our food choices. (d) Environmental factors powerfully influence people's food-related behaviors as well. Food availability and accessibility as well as the social environment and cultural practices, material resources, and food marketing practices either facilitate or hinder individuals being able to act on their beliefs, attitudes, and knowledge about healthful eating (Contento, 2008: 176).

Nutritional education aims to inform and to train a person about food choices, dosage and cooking, how

This paper is a result of a research made possible by the financial support of the Sectoral Operational Programme for Human Resources Development 2007-2013, co-financed by the European Social Fund, under the project POSDRU/159/1.5/S/132400 - "Young successful researchers – professional development in an international and interdisciplinary environment".

Această lucrare este rezultatul cercetării făcută posibilă prin sprijinul financiar oferit prin Programul Operaţional Sectorial Dezvoltarea Resurselor Umane 2007-2013, cofinanţat prin Fondul Social European, în cadrul proiectului POSDRU/159/1.5/S/132400, cu titlul "Tineri cercetători de succes – dezvoltare profesională în context interdisciplinar şi internaţional".

to identify authentic food and to understand the value of nutrition.

2. Human Nutrition – Short Historical Overview

Until about 10,000 years ago, man went through the so-called "pre-agrarian era", where food resources consisted of meat from hunting, and only on secondary plan by fruit picked from the trees. This predominantly carnivorous diet had provided the primitive man macro- and micronutrients, all insufficient quantities so that era was not marked by food deficiencies. In the following millennium, meat consumption (coming from various domestic animals) decreased because of the development of agriculture; food intake gradually came to be represented by vegetables. The period was called "agricultural era" and it was marked by the first appearance of food deficiencies. Ancient civilizations, progressively differing by social order, economic and religious identities, took diverse food styles.

Moving to the Middle Ages generated major changes in diet. By the eleventh century, the common nutritional characteristic was global insufficient alimentation; including the next two centuries, the usual protein intake still remained much deficitar. In addition, in an age of ignorance and religious limitations, severe fasting periods of the year had a considerable negative impact on the nutritional status of the population. The first attempts to improve the population's nutrition occurred at the beginning of the sixteenth century, which marked slowly the shift towards an age where food deprivation, although persistent, diminished in intensity.

Eighteenth and nineteenth centuries brought another series of habitual dietary changes, where the type of food gradually approached to the one of the modern man. There are introduced new products in nutrition, as results of the Industrial Revolution, such as sugar and sugar products, then food concentrates, pasta. Over time, the daily diet has begun to contain increasing amounts of refined products with nutrition and increased energy density and low quantitative residue.

A trend that can be noticed, if we look at the human diet in terms of time, is the reduced use of a number of plants and animals for daily food. Limiting his food sources, the modern man is more likely - if we compare him with the primitive man, for example, who used everything the wildlife gave him – to develop chronic shortages of nutrients, with all the paradoxical wealth of the few food varieties used. Another feature is the association of food quantity and quality excess with food deficits, often serious and with damaging consequences for the health of large segments of the world population.

Oldest concerns regarding daily diet, as a therapeutic tool used for treatment of diseases belong to Hippocrates of Cos; the hippocratic ideas marked medicine until the sixteenth century. Hippocratic School used the term "diaita" to define the overall study of human lifestyle, including diet (whose role was recognized as central) and other environmental influences on it. The word used in Latin "dieta" means all factors that affect one way or another our health: air, food, ambient temperature, exercise. In the first century AD, it appeared the restriction meaning of diet, under the influence of Egyptian medical school, which considered food as "the source of all evil". This concept had subsequently appeared in other Oriental medical schools, but was naturalized in Europe much later, through the school of Pythagoras.

Medical world of the Roman Empire meet Hippocratic conception through Galien (second century AD). Great personalities of ancient Rome - such as Ovid, Seneca, Cicero, Horace - resisedt food abundance and excess and instead prefered food abstinence, up to recommended diets similar to those called later vegetarian trends.

The development of anatomy, physiology and chemistry in the 17th and 18th centuries began to change the dietetic concepts of the era. Anatomy and physiology experienced the discovery of the blood circulation (W. Harvey, 1619) and of the lymphatic circulation through the chycle ducts (J. Pecquet, 1647, O. Rudbeck, 1652). The body was looked at as a kind of hydraulic machine or as a distilling apparatus (Jean Tremolieres). Until the end of the 18th century, none of the concepts on diet had a physiologic basis. The fact that food comprised a source of energy with which the body took care of vital needs was a truth that was subjected to discussion only at the end of the 18th century together with the discovery of oxygen and the understanding of the process of combustion (Mincu, 2001: 98).

The exceptional progress made in chemistry began in the 19th century bringing with it development in food chemistry. New classifications in food chemistry were made. The protein, carbohydrate, lipid, mineral and water compositions of the foods were determined and the transformations they had underwent in the human body were investigated. New concepts were developed such as specific heat, energy conversion, calories, protein metabolism. Justus von Liebig established that the caloric energy of the body resulted from the burning of the main nutrients furnished by food. M. Rubner in Germany and W. O. Atwater (1844-1907) in the USA determined the composition and the caloric value of the ingested products, the changes that they underwent in the body as well as the waste produced. Beginning with the 20th century, attention has been turned to noncalorigenic substances contained in food.

In 1926, H. M. Evans and G. O. Burr made a first observation on the symptoms of deficiency resulting from exclusion of lipids from the diet. In 1930, Burr discovered that this deficiency was due to certain polyunsaturated fatty acids. Hansen (1944) noted some pathologic derangements in children who had not been enough fed with essential fatty acids. Bronte-Stewart

(1960), Eales and Brock (1959) showed that vegetable fats in their natural state had decreased cholesterol levels and when they were hydrogenated, they increased them. The conclusions of A. Keys and Ed. Ahrens Jr.'s works were that animal fats increasde cholesterol levels and the risk of atherosclerosis while vegetable fats diminished cholesterol and prevented atherosclerosis. The value of fats in the food only came to light in recent decades.

3. The Need of Nutritional Education

It is used the phrase "paradoxes of modern food" (Olinescu, 2001) as reference to the following aspects: (a) Abundance of food is extremely uneven. In some areas such as Western Europe, North America, parts of Asia, there is an abundance of food accessible to everyone, while in other places undernourishment and malnutrition occurs. (b) Attitude towards food. In some countries, there is an average life level which remarkable increased; also, every developed country has newspapers, magazines containing nutritional headings. (c) The existence of food abundance causes an excessive consumption. The preference for certain food groups (carbohydrates, lipids), excessive consumption quantity unbalanced nutrition (caused by poverty, greed, old traditions) favor disease and low immunity. (d) Health. While developed countries increased the mean age, the proportion of degenerative diseases, cardiovascular diseases, diabetes, cancer is higher. Here it is necessary to inform the public about diet, nutrition education activities. Also, food and advertising campaigns have had an increased involvement leading to increased appetite, which focuses on the psychology of food (choice assortment of food, the way they eat, what liquids we drink); we mention as well the quality of packaging and the rich cooked assortment.

Nutrition education has been defined as any combination of educational strategies, accompanied by environmental supports, designed to facilitate voluntary adoption of food choices and other food and nutrition related behaviors conducive to health and well-being; nutrition education is delivered through multiple venues and involves activities at the individual, community, and policy levels (Contento, 2008: 177).

Changes in the socio-economic field reflect at the educational phenomenon level and they require the restructure of the assigned contents, as well as the intervention at young ages in terms of training and practicing behaviors that are included in nutritional education. Bad eating habits and lack of physical activity have an impact on children and many complications can arise. Taking into account the fact that two thirds of children with obesity remain obese in adulthood, it is required to create healthy eating habits and involvement in sports. Preschoolers need a balanced diet, which is essential for growth and for becoming healthy adults. Nutrition education principles should be followed through the whole life, thus ensuring a good health and a high level of comfort in life.

D. Benton (2001) found that low blood glucose was directly associated with decreased attention, memory low and aggressive behavior. Sugar turned out to be such an important cause for anxiety (M. Bruce, M. Lader, 1989; W. Wendel, W. Beebe, 1973), aggressive behavior (Yaryura-Tobias J., F. Neziroglu, 1975), Hyperactivity Attention Deficit (R. Prinz, D. Riddle, 1986), depression (L. Christensen, 1988), eating disorders (D. Fullerton, 1985), fatigue (L. Christensen, 1988) and difficulty in assimilating information (S. Schoenthaler, 1986). Studies also show that most hyperactive children eat more sugar than other children (RJ Prize, 1980) and that balancing blood sugar levels affect the IQ of the child (AG Schauss, 1983). Caffeine is another factor that has a destructive effect on the balance of blood sugar levels. It is also an appetite suppressant. Coke and energy drinks contain a caffeine amount approximately to the one found in a normal cup of filter coffee. These drinks have a higher content of sugar, so their stimulating effect can be considerable. Cocoa, the active ingredient in chocolate and chocolate beverages provide significant amounts of theobromine, which has an effect similar to caffeine. Regarding fats omega 3 and omega 6, called "essential fats", they affect the types of intelligence (IQ, EQ and PQ). Makrides M. (1995) and L. Stevens (1995) showed that children who show a deficiency in essential fats are more difficult to learn, while children who are breast-fed have a higher IQ at age 8 years compared to children who are bottle-fed, due to high levels of essential fats in milk.

Holford (2010) points out that diseases which are caused by an unhealthy lifestyle, such as type II diabetes and fatty liver disease (hepatic steatosis), previously only encountered in elderly overweight adults, now appear into an alarmingly high number in children.

Macavei (2001) considers that the objectives related to nutrition and food behavior aim at acquiring knowledge on nutrition functions, the need of proper nutrition, nutritional factors and nutritional value of foods, food errors, basic knowledge of culinary art, food habits, food hygiene, food preparation and storage.

Nutrition education can be considered as having three essential phases or components. 1. A motivational phase, where the goal is to increase awareness and enhance motivation of the intended audience. Here the focus is on why to make changes. 2. An action phase, where the goal is to facilitate the ability to take action. Here the focus is on how to make changes. 3. An environmental component where nutrition educators work with policymakers and others to promote environmental supports for action. Each component needs to be based on appropriate theory and research. Nutrition education is needed now more

than ever; programs that link research, theory, and practice are more likely to be effective.

4. Conclusions

The differences between the diet of our ancestors and the present day diet of the developed countries that have been touched by the industrial revolution, modern agriculture and modern manufacturing techniques as well as methods of preparing food appear to have a significant impact on health. A characteristic trait of nutritional diseases is that they are directly connected to the degree of civilization of the people affected. Physicians as well as nutritionists are increasingly convinced that dietary habits adopted in the last 100 years in Western Europe have contributed to the increase in the frequency of heart disease, hypertension and some forms of cancer. The influence of the diet on the state of health was felt at the beginning of the last century and was practically unheard of in peoples that lived in the wild having a diet resembling to that of the ancestors of the pre-agrarian period.

Currently, one of the characteristics of modern food is limiting to a few products, which increases the possibility of chronic shortages of essential nutrients. This deficit has emerged due to the misuse of concentrated and refined products. To this we add the human characteristics of present-day: stress, sedentary lifestyle, and the living in a polluted environment.

Nutrition education, as part of the "new educations" occupies a priority position in the contemporary world problems. In recent years, the prevalence of obesity and overweight in adults and children has increased steadily. Management of overweight in children is an issue increasingly more common for primary care physicians. The dramatic increase in the incidence of childhood obesity and its pediatric effects and tendency to persist in adulthood are a vast public health problem and justify the importance of introducing effective preventive and therapeutic strategies.

VIOLENCE AND AGGRESSIVENESS IN SPORTS. ETIOLOGY

Maria LULESCU[*]

Abstract

The present paper analyses the causes that lead to violent behaviour in sport (from the social, economic, biological and psychological factors to the violent patterns promoted by mass media) and it identifies the measures that could be adopted for preventing and fighting against this widespread phenomenon in today's society.

The phenomenon of violence in sport appeared subsequent to the "Sport Revolution", which occurred in the 19th century, when sport became a mass and democratic phenomenon. Today sport is accessible to all society members for whom it has acquired cultural and economic importance; however, it is generally agreed that sport events are more or less frequently accompanied by violent behaviour on the part of most or some of its supporters.

This scientific article enumerates the causes that trigger violent behaviour in society: from the inner ones (tension, fear, lack of success, incapacity) to the social, biological, psychological and economic ones (lack of education, illnesses, trauma and poverty). Similarly, the present article analyses the influence of mass media upon human behaviour while taking into consideration two paradigms: there is a former paradigm, according to which mass media strongly influence human behaviour, by inculcating upon people violent reactions; there is a latter paradigm, according to which the influence of mass media on human behaviour is relatively insignificant for it is the individual that controls this influence.

In this paper I have also analysed the risk factors that trigger violence and aggressiveness on stadiums, according to the inquiries made by the Ministry of Administration and Domestic Affairs.

As solutions for violence prevention and deterrence, I have suggested:

- the implementation of the objectives promoted by the Olympic Movement, which may contribute to the formation of a better and more peaceful world through the education of the youth in accordance with the principles and values of the Olympic spirit; the adoption of educative and social measures with a view to improving relationships between supporters and clubs by promoting dialogue with rival clubs, by using CCTVs, investing in infrastructure, consolidating the social role played by clubs, better organizing the ticket stalls, adopting a better legislation in the matter and by using well-organized police forces that are specialized in violence prevention on stadiums;

- the adoption of Mahatma Gandhi's non-violent behaviour code (by becoming a Satyagrahi, i.e. an adept of non-violence);

- promoting physical education in schools and clubs for developing an ethical attitude in life;

- cultivating a competition and fair-play spirit among the young people;

- reinforcing European cooperation between schools, universities and clubs;

- promoting an anti-doping attitude among the young people;

- discouraging violent behaviour through education;

- developing the team spirit through sport, including in corporations;

- getting the old people involved in sport activities for improving their living standard and health condition;

- consolidating the employers' associations' and labour union representatives' interest in sport and competition.

Violence in sport is a topic which remains open to interpretation and which will be further tackled by researchers and specialists in education and sociology. It remains a topic to be dealt with in mass-media while pointing out sensationalist and shocking pieces of news. It remains a topic of interest to authorities and civil society, which will try to prevent and fight against it. As a conclusion, this paper underlines the idea that the deterrence of violence is a sine qua non condition not only for sport events to be organized in a civilized manner, but also for the system of education to be successful.

Keywords: *violence in sport; aggressiveness in sport; etiology; prevention and deterrence of violence in sport; non-violent education.*

1. Violence and Aggressiveness - Etiological Approach Directions

The omnipresent, daily, conformist, repetitive and deviant human behavior, explained by motivational theories by biological model scientists, such as Konrard Lorenz[1] or Freud, the inborn traits and mechanisms lie at the basis of the activities of every individual. Freud believed that the information stored in our subconscious actually determines our behavior[2].

The images, frustrations, failures we gather up during our lifetime become an "archive" of the subconscious. Interpretation of dreams, Tiefenpsychologie[3], explanations of the unconscious, has created Freudian theories. The tensions and fears, the conflicts among our instinctive desires (life and death instinct) and our moral obligations[4] have

explained the individual behavior (tendency towards pleasure), the life and death instinct (destruction tendency), resulting in the antagonism between the two instincts. The hope for success and the fear of failure are two variables that are part of the risk taking theory. The attractiveness/interest of the individual and the performed action are closely linked variables. Supporters usually choose successful teams or teams of an upper/lower league. Failure and defeat make many individuals wish for the full success of a favorite team, out of their desire to show their superiority and supremacy. The differences between humans and animals[5] of subsequent studies have shown elements that are common to both species (dance, feathers, clothing, accessories), which gave rise to the desire to impress, to show one's superiority. Supporters of stadiums try to show their support for their favorite team by wearing distinctive sports clothing items and by cheering and shouting loudly from the bleachers.

The internal/biological factors and the external ones are: educational, cultural and society related. The development of the needs/necessities pyramid is based on physiological/primary needs, safety needs, the need for a sense of belonging, for esteem and self-fulfillment, which are the motivation of human behavior. Abraham Maslow also introduced[6] the self-transcendence stage which includes two categories of needs, self-achievement (intellectual-creative) and survival.

In this case, people of medium or higher classes explain the behavior of the supporters on stadiums as being justified by their needs. The explanation of the motivation of the needs is based on several requirements; Clayton Alderfer's model includes: a) existence needs; b) relatedness needs and c) development needs[7].

The natural hierarchy of the needs of every stage is considered by Maslow as directed upwards, but the failure to satisfy a need placed on a higher level does not lower the individual to another needs level. Once we satisfy a need/desire, we consider it meaningless (we take it for granted). Unhappy or even anxious, we tend to turn towards new ideals. For example, a child who has a favorite football team generally thinks that he deserves to be present in the bleachers on the stadium at first, then he wants to become the member of a gallery, and later on the leader of that gallery. Each of these needs has been satisfied.

Conflict, competition and the needs' interdependence can motivate one's actions. Perception, thinking and memory are fundamental elements of individuals, guiding and directing their behavior and needs. In our case, the supporter has his father as ultimate childhood model of masculinity (perception), of behavior at home and in the bleachers (memory), but his perception about the forms of violence and aggressiveness will guide him and will make him display his masculinity in other forms.

The three basic elements are at the forefront of the motivational cognitive theories. The idea of pleasure, analyzed on more than 3900 American teenagers, represents the motivation to practice a sport[8], pleasure being a) perceived; b) filtered and c) analyzed.

For some teenagers, pleasure is generated by their outer beauty and health, while for others pleasure consists in the fact that they are on the same team with their friends. Allport considers personality situations and traits as determined by one's individual behavior[9].

Stability and predictability are given by the personality traits[10]. The character traits of an individual, such as the optimism, define his or her behavior. A supporter is, by its behavior, optimistic, seeing only the positive side of the situation of his favorite team. As representative of the situationists, Mischel[11] believes that predictability and individual behavior can be explained as determinant based on the given situation. In some cases the experience and past history of an individual influence his/her individual behavior. The two determinants of behavior are characteristic situations and the interaction between the character traits, creating explanatory paradigms. The behavior of the supporters on stadiums can sometimes deviate or become delinquent. We will try to present a few explanations by using certain behavior patterns and learning paradigms perspectives. In our case, the interaction between individuals creates, for each individual, an environment that favors the learning and picking up of delinquent behaviors (from those people susceptible to become delinquents or deviants), also known as distinctive association.[12]. Individuals pick up both conformist as well as nonconformist behaviors, and the latter then become natural for them and unnatural for the society. Sutherland explains the deviant behavior in terms of delinquency as being taught, practiced, not as a genetic inheritance. The (verbal/non-verbal) communication, violation of the laws and social regulations and their learning become contact ideas for the individuals with the same type of behavior. On stadiums, deviant

supporters repeat and practice the concealing of white weapons and pyrotechnic materials etc., improve their conduct, becoming more "special" among the supporters[13].

From a cultural and social point of view, in what concerns deviant behavior, deviance is the product of economic inequality. The inability of the individual to succeed, through legal ways, is the main factor, according to Cloward and Ohlin[14]. Individuals that are present on stadiums adhere to a group of supporters, individuals born/raised in neighborhoods and who, by becoming nonconformists, try to gain prestige and respect. The explanations given by the labeling theories first consider the mentioned behavior as not being deviant. For example, a vulgar joke told by a supporter to his group can be regarded as an attempt to release tension, while the same joke told by a student in class to a teacher would be evidence of a deviant behavior. There are also situations when a behavior is automatically viewed as deviant due to the existing preconceptions. If a person is labeled (as thief, drug addict, alcoholic, coward) he/she will have to live with it and deal with the fact that the society will not accept him/her. Therefore, supporters will usually be catalogued and considered as hooligans, punks etc., labels that associate them with delinquent behaviors, a delinquent being "bad by definition".

According to the Durkheimian theory, the main characteristic of a crime or offense consists in the fact that it generates a clear reaction from the society, called punishment. The manner in which Durkheim views crime is not statistic, as we might believe if we took into account the criterion of the generality or frequency of a certain behavior, being used to distinguish between normal and pathological.

In order for an act to be considered a crime it must do more than deviate from the regular way of doing something, namely it must generate a certain reaction from the others, a reaction that occurs when the collective feelings affected by the crime are alive and strong. The definition of crime therefore includes two types of elements: a deed that affects the collective consciousness, on the one hand, and a special reaction in the form of a punishment or penalty, on the other hand[15].

Researchers have concluded that four primary emotions surface when individuals and groups with equal or different statuses and powers interact: fury (caused by the loss of status), fear (caused by the loss of power), sadness (caused by the irremediable loss of status) and pleasure (caused by the boost of status). Applying the power/status theory, Theodore D. Kempera analyzed the emotions generated by the extremely violent terrorist attack on the Twin Towers on September 11th, 2001[16]. On the other hand, Steven L. Gordon developed this approach, differentiating between the emotions according to their nature and classifying them into "biological emotions" (such as fury and fear) and "cultural emotions" (such as love, friendship and jealousy). The former are a combination of sensations and gestures, coming as a response to different stimuli, while the emotions of the second category are the product of the bodily sensations, gestures and cultural meanings learned within the groups we belong to[17].

The most important thing in the study of violence and aggressiveness is the explanation of the violent and deviant behavior, since deviance is no longer considered an objective act, with a strict rigid nature, but a matter of significance, subjective evaluation, depending on two points view:

a) The point of view of the public who perceives and defines a behavior as deviant;

b) The point of view of the social actor involved in the actual act of deviance.

Therefore, a first conclusion on the characteristic elements of those acts considered as deviant is that they are disapproved by a significant number of individuals. Therefore, a deviance is a behavior that violates an expectation, a habit or a social norm in force or a generally accepted social value. For this reason, we can assume that some deviant behaviors relate to the social rules, values and norms that govern social life and that deviant behaviors can be defined by reference to the regulatory order of a society.

As a form of deviance, delinquency is a complex phenomenon that defines all behaviors that are in conflict with the values protected by the society and the legal standards. The factors that generate delinquency or crime, as phenomenon specific and particular to a deviant behavior, can be divided into two big categories: a) internal, individual factors; and b) external social factors.

The first category includes the features and neuro-psychological structure of the individual characteristics of each individual's personality. The second includes the socio-cultural, economic and educational factors of micro and macro human groups which integrate an individual, starting with one's family (Rădulescu, Banciu, 1990, p. 59).

As noted by Rădulescu (2010, p. 233), American researcher Alfred M. Mirande outlined a model of social norms which involves both legal and illegal acts.

Table 2. Types of criminal and deviant conducts, according to Alfred M. Mirande (1975)

BEHAVIOR	FROM THE POINT OF VIEW OF THE CRIMINAL LAW	FROM A REGULATORY POINT OF VIEW
ILLEGAL	Criminal offence (deviance) (1)	"Normal" crime (2)
LEGAL	Non-criminal deviance (3)	Conduct complying with the law and regulations (non-deviant and non-criminal) (4)

(*Source:* **Rădulescu, 2010, p 233)**

The table also draws attention to the existence of criminal actions which are considered acceptable from a regulatory point of view, but not from the point of view of the non-criminal deviance, namely activities and interventions which fall outside this sphere of crime.

Following the review of the aspects presented in this chapter we can say that multiple variables influence human behavior, starting from the ones presented by the researchers who studied the internal/biological factors, up to the fundamental traits of an individual's personality. Furthermore, economic inequality represents another variable that must be taken into account concerning a deviant behavior. Whether innate or learned along one's life, aggressive behavior is sanctioned by various types of punishments when the bodily and mental integrity of other individuals are affected. The sociologists' contributions have brought into focus the importance of the cognitive elements in the formation of character traits, taking into account the contribution of the personal history and experiences.

2. Mass-Media versus Violence and Aggressiveness in Sports

From an institutional perspective, the mass media is represented by social institutions, both cultural as well as economic, which provide communication within the society.

The first such means of communication in historical order is the movable printing press, which was developed in the middle of the fifteenth century. It is believed, however, that we can speak of **mass-media** from the mid-nineteenth century, namely as of the time when is had a sufficiently large and heterogeneous audience. The newspapers and books published before this period were dedicated to the elites only. In the fourth decade of the last century, the development of the "penny press" (cheaper press) led to a spectacular increase of the audience, but especially to a change of its structure, becoming a mass audience. The cheapening of the press, including books, is the main cause of this phenomenon, but we must also take into account the change of the topics, the publications being addressed primarily to ordinary people from that moment on.

According to the Center for Media Studies[18], 11 TV channels were monitored between October 29 and November 1st, 204, in a 2 weeks sociologic study where a total number of 832 hours of broadcast programs were analyzed. According to the same study, 5,749 scenes of violence were registered between July and November 2004, representing approximately 46 scenes per day per channel or 9 scenes per hour per channel.

Regarding the Romania mass-media of the transition period, M. Petcu mentioned the following[19]: *„The transition of the Romanian society from a totalitarian socio-political system to a democratic one was accompanied and stimulated by a new, emancipated, pluralistic press which has provided the support required for the interaction between various social groups.(...) The demand for the transition of the Romanian society from communism to democracy can also be approached by means of the evolution of the media system as a whole or of one of the media components, which benefits from an individualized treatment, corresponding to the epistemological framework required by the objectives of the scientific approach.(...) The transition from the valet journalist to the objecting journalist was one of the realities that have marked the evolution of the Romanian post-communist press, especially in terms of quality.(...) The transition from the "persuasive- propagandistic" model - a transition within a transition – to the "communication-information" one occurred slowly and was due to the ethical and professional reflections of the journalists as well as especially to the public sanctions consisting in the refusal to consume such messages.(...) The Romanian press has become, since 1990, a means of support for the interactions between different social and political groups, stimulating the totalitarian institutions elimination process, the decommunization of the social communication and the development of the public sphere/civil society*."

The most significant development occurred, however, this century, by the emergence of the electronic mass-media. The first half of the century was marked by the advent of cinema and radio broadcasting, while the second was marked by the mass expansion of television (discovered in the third decade). What is really interesting is that no political party, social or cultural movement can win over large segments of the population without using the mass-media, just as the operation of the modern economies

[18] Sorin-Tudor Maxim ș.a., *Violența în sport*, Universitatea din Suceava Publishign House, 2006, p 215
[19] Marian Petcu, *Tipologia presei românești,* European Institute, Iași, 2000, pp 12, 15, 18, 36, 52, 274

can no longer be conceived without the guidance of the consumer through the media or just as the development and dissemination of culture in society in general can no longer be done independently from such cultural institutions. What is noteworthy is the fact that radio and television are the only means that can capture national attention.

Mass-media sociology is a sociology research area that seeks to analyze the manner in which mass-media works in society, as well as the social effects of the communication carried out by these means[20].

Several types of approaches, theories and issues regarding the **mass-media** have emerged and have been developed during the last few decades. Nevertheless, **two general paradigms** exist which are practically present in all researches. **The first** claims that generally **mass-media** has very strong negative effects, affecting the structures and mechanisms of social life, being active in relation to the individual or the society, while the social structures are relatively passive to its influences. **The second** paradigm claims that the influence of **mass-media** in society is relatively insignificant, that it is subordinated and not superordinated to the society, that it does not determine the choices and behaviors of the individuals, but is only guided by them, and that not only is its role not at all negative, but may even be therapeutic in certain circumstances[21].

A typical problem analyzed from the perspective of the two paradigms is the problem of **violence**. In the first case violence is considered promoted by the **mass-media**, which negatively affects the socialization of children, who can see up to 14,000 violent deaths on TV, in childhood alone, and, in general it can be claimed that this contributes to the increase of the number of deviant behaviors, in particular delinquency, in all its forms. The second perspective considers that **mass-media** does not manipulate the individual, who can actually use it as he/she thinks fit. Violence is actually requested, otherwise it would not be present in the TV programs, therefore it exists in the **mass-media** for the simple reason that it also exists in society. Those who watch such programs are prone to violence and do not become delinquents just because they watch TV (or go to cinema)[22].

Mass-media is a subsystem of the social system, viewed as a set of means of communication of the masses (radio, television, press etc.)

The manner in which mass-media operates in society and the manner in which it influences society has been studied more and more extensively during the latest decades:

"The role of mass-media is that of obtaining the information and making it move around. And since information can be found everywhere, the mass-media's role is to sort it, prioritize it and interpret it. The press (be it printed or broadcast) is the one that indicates what exactly is and is not important from the mass of events, processes, opinions and personalities. It is up to the mass-media whether to disseminate or not new ideas.(...)

Some press institutions educated the public, especially by the popularization of science. But, as a whole, mass-media tells the public what to think and what not to think, what to do and what not to do: the traditional norms of society – to which the rules that are currently being developed are added.(...) Mass-media's role in modern society is clearly important. However, press is falsely attributed immense powers in numerous fields.(...) To a great extent, mass-media is and does what those running the economy and politics want. To an equally greater extent, it is and does what the consumers and citizens, namely all the inhabitants of the country, want."[23]

Once with the "Sports Revolution", which started in the 19th century, sport has turned into a mass phenomenon. It was democratized, it became accessible to the members of the society, it has been awarded major cultural meanings, it has material economic implications.

Mass-media has played an important role in the transformations suffered by the sports phenomenon. First of all the written press, printed materials, cinemas, radio, TV and, more recently, the internet have managed to familiarize the increasingly larger public with the sports events has contributed to the explosive development of new sports, has attracted many sportsmen and also non-sportsmen, and viewers respectively. But in reality there is a true symbiosis between sports and mass-media. Sports has managed to develop mass-media, by the fact that sports is of great interest for the public by its events, as well as by the fact that sports activities have become am extensive financial business, involving mass-media organizations as well. In what concerns the types of influence on sports violence, Sorin-Maxim Tudor has provided a very well organized structure.

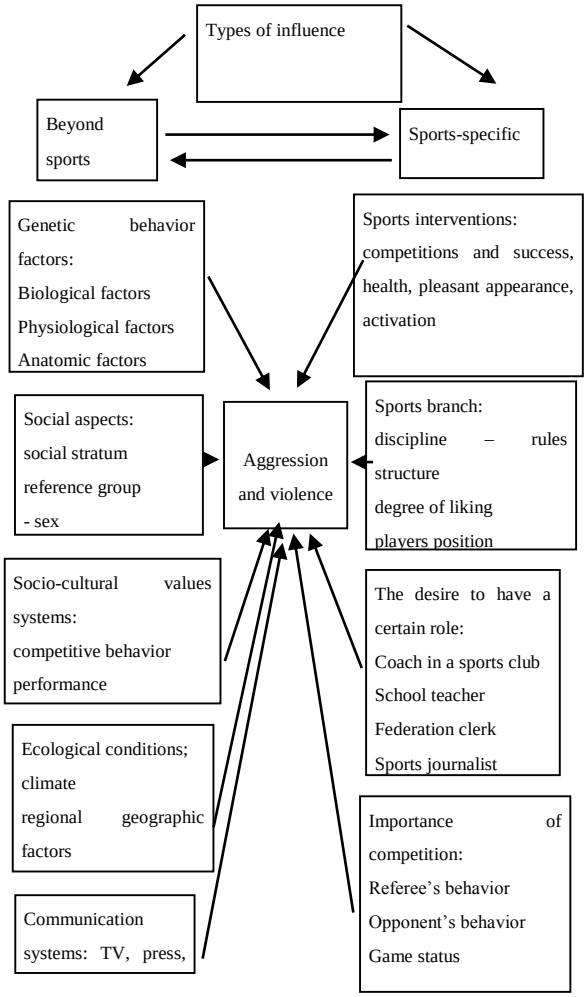
Fig. 2. Types of influence on sports violence



(Sourse: Sorin-Tudor Maxim, "Violenţa în sport", 2006, p 202)

Various specialists have pointed put that mass-media, especially television, can have both a beneficial role as well as a negative one in what concerns sports violence.

The roles of television are the following:[24]

Informative role – The continuous flow of information around the world helps people find out the latest news;

1. Socialization (educational) role – Television receives and broadcasts messages that double the specific action of the social institutions which operate in the fields of education, culture, religion;

2. Entertainment role – Television bests meets the individuals needs' for recreation;

3. Social bonding role – Ensures the social connections in the individualist mass society;

4. *Status granting role* – Television confers status, importance, legitimacy and acknowedlegement to certain ideas, persons, organizations, social movements etc.

TV Dysfunctions:[25]

- *Message transience* – while a printed message can be read again or can be analyzed more slowly, televised messages cannot be fixed, as they disappear;
- *Time consuming* – according to the latest research, more and more people spend their time by watching TV. Consumption depends on production, but, at the same time, consumption determines production. It was established that dedicating excessive time to watching TV results in the cultivation of commodity, anomia, social isolation etc.
- *Effects of excessive TV watching* – watching TV programs excessively induces a sort of passivity in the reception of any type of message;
- *Drop of the cultural level* – Television determines the degradation of the artistic taste of the public by promoting cultural models that are way below the average level
- *Creation of false celebrities and events* – the purpose being that of winning audience and popularity;
- *Manipulation phenomenon* – dramatized information;
- *High costs* – employees, machinery, equipment, trips, broadcasts and other very large expenses;
- *Narcotic dysfunction* – television induces the emotional and individual isolation of the receptors, thus giving them the feel of real experiences;
- *Lack of feedback* – television does not provide the opportunity to directly contact the producers of the presented shows, and therefore the viewers do not have the opportunity to determine changes.

TV news **consist of information presented with the help of kinetic images, which have a certain impact both at rational as well as at emotional level; they can influence greatly many audience segments, being a sort of show where images are supplemented by gnoseological content, without repetitions, by combining three dimensions that characterize TV news:** image, word and sound.

3. Risk factors generating violence and aggressiveness on stadiums, according to the surveys made by the Ministry of Administration and Domestic Affairs

The professional experience of the public order officers in charge with the order on stadiums has offered us answers concerning the violence and aggressiveness from the perspective of the behavior of the supporters, fans or members of different galleries.

The main factors that generate a big problem on stadiums are alcohol, the attitude and behavior of the supporters, which differ from one gallery to another. Acting immaturely is another characteristic of the supporters, resulting in a disorderly behavior of certain members of the galleries. Most supporters claim that if

[24] Corina Crişan, Lucian Danciu, *Manipularea opiniei publice prin televiziune*, Ed.Dacia, Cluj-Napoca, 2000, p 24- 31
[25] Idem, p31 – 43

there is no conflict between them and the public order officers things cannot be fun.

Other important factors that public order officers mention are: a) lack of education; b) challenges; c) insults of other fans; d) the favorite's team poor performance; and e) possible frauds of the referees; i.e. when the supporters think they are entitled to penalty shots, which are not granted. Public order officers will have to handle their dissatisfaction.

Therefore, the main risk factors, from the point of view of the public order officers, are:

1. high consumption of alcohol and other prohibited substances
2. the team's play;
3. the referees' decisions;
4. the instigations of the other spectators;
5. the lack of education and common sense;
6. the lack of drastic punishments or the inconsistent application of the already existing ones
7. the lack of professionalism or superficiality of the employees of the security companies can be clearly seen in the bleachers, individuals gathered in groups or isolated ones do not have the same force or daring;
8. emergence of supporters who incite to violence;
9. suspicions regarding the professionalism of the players;
10. the correct playing of the games;
11. insufficient cooperation between the public order officers and the organizers;
12. the involvement of the officials or players in the implementation of certain measures for certain illegal deeds;
13. the copying of the disorderly behavior by the supporters;
14. the escalation of rivalry into violence, between the supporters of rival teams.

Public order officers noticed the creativity of the fans, their inventiveness in what concerns the methods of bringing prohibited items on the stadium or build their banners after they take their seats in the bleachers. The violent incidents in the bleachers are due to a high degree of freedom, to the permissive laws, lack of education, entourage, frustration, rivalry between galleries, alcohol consumption, the chairmen of the clubs. And there are also certain members of the galleries who come to the stadium only for making a scandal.

Other risk factors with respect to the diversity and extent of aggressive and violent events on stadiums in particular are listed below:

- the use of substances that stimulate a person's hyperactivity;
- the lack of sufficiently strict bodily checks at the entry on the stadiums and the lack of means of warning the supporters concerning the consequences of any violent actions;
- the insufficient involvement of the personnel of the clubs/competition areas to ensure the performance of the competitions in the spirit of fair-play;
- the desire of some supporters/players/other persons to show their dissatisfaction concerning the results of a game and the performance of the favorite team;
- hostile attitudes towards the rival teams/players, presented on social networks or in shocking comments presented on the media channels.

4. Conclusions:

The Olympic Movement and the international documents regulating the role of the international bodies and national Olympics committees are important for the prevention and control of violence in sports. The purpose of the Olympic Movement is to contribute to a peaceful and better world, educating the youth by promoting the practice of sports according to the principles and values of the Olympic Games.

The three components of the Olympic Movement are the International Olympic Committee (IOC), the International Federations (IFs) and the National Olympic Committees (NOC). The mission of the IOC is to encourage and support the promotion of sport ethics, the education of the youth through sports and the commitment to the values of fair-play, to collaborate with the public organizations and authorities to put sport at the service of humanity and peace in the world. Moreover, the Olympic Movement aims to constantly encourage the promotion of women in sports at all levels and in all structures, for the purpose of implementing the principle of equal opportunities and gender equality.

There is a great diversity of prevention programs: educational and social measures, improvement of the relations between the club and the supporters, the promotion of dialogue with the rival clubs, control of the spectators with the help of cameras, police interventions, infrastructure investments, reinforcement of the social role of the clubs, the organization of the ticket offices, appropriate legislation and many others. When a city hosts a sports event, everything must be based on a genuine hospitality policy: specialized structures for the access and accompanying of the supporters, ensuring the transport, meals and accommodations of the guest supporters, taking the required measures to make sure that the future competition does not make the members of disadvantaged neighborhoods or people who experience problems feel excluded (which are not accepted or do not find cheep game tickets). A few days or hours before the game a pleasant atmosphere must be crated in the district where the sports field is located, messages that ask people to keep calm and show fair play. It is also advisable to involved highly appreciated celebrities in events of this type. In Appendix 7 you will find the 11 principles of fair-play which supporters are encouraged to take into account for every football game or other sports event.

Please find bellow a few of the most important measures meant to control the sports violence

phenomenon that mass-media has noticed in our country.

Another type of measures that can contribute to the prevention of sports violence are based on the non-violence concept of great politician Mahatma Gandhi[26]. Please find below a short fragment of the work and manner of thinking of Gandhi:

"I coined the term Satyagraha in South Africa in order to give a name to the power with which the Indians there fought for a full 8 years (1906 - 1914). I spoke of Satyagraha in order to distinguish it from the movement then going on in *the United Kingdom and South Africa as Passive Resistance. Satyagraha is as far away from passive resistance as the North Pole is from the South Pole. Passive resistance is the weapon of the weak and, therefore, the use of physical pressure or violence are not ruled out in the efforts to reach its aims. In contrast, Satyagraha is the weapon of the strongest and it rules out the use of violence in any shape or form. (...) This law of love is nothing other than the love of truth. Without truth there is no love. (...) Satyagraha is also referred to as the power of the soul, because the certainty of an inherent soul is necessary, if the Satyagraha is to believe that death does not mean the end but the climax of the fight. (...) And believing that the soul outlives the body, man will no longer wait impatiently to experience the victory of truth within his present body. (...) And despite this, it has been said that the Satyagraha - as we understand it - could only be practiced by a chosen minority. In my experience, the opposite is true. When its basic principles are understood - hold on to the truth and stand up for it through one's own suffering - then everyone can practice Satyagraha. (...) At a political level, however, battle in the name of the people is primarily aimed at taking action against unjust laws. When petitions and all other attempts at persuading a legislator to recognize the injustice of a law have failed, then the only means left open to those protesters, not prepared to obey the law, is to force the legislator to abolish the law. This is done by breaking the law and bringing punishment and suffering upon oneself. Therefore, Satyagraha still appears to the public as civil disobedience or civil resistance. "Civil" should be taken as non-criminal action…"*

In order to respond to the requirements of prevention of the phenomenon of violence in sports, the concept initiated by Mahatma Gandhi can be followed by respecting the order of the ideas presented below:

- We reject the idea of violence, because the good obtained by means of it is not long-lasting; instead, the damage caused by violence lasts a long time.
- Violence is the weapon of the weak; non-violence is the weapon of the strong.
- The principle of non-violence is subject to a test when confronted with violence.
- Non-violence, in its dynamic form, means conscious suffering. This does not involve bowing our head before those who oppress us, but standing up, with our entire being, to the tyrant's will.
- A Satyagrahi (advocate of non-violence) is someone who has relinquished fear. He dares trust his enemy. Even if the enemy disappoints him twenty times in a row, Satyagrahi is ready to trust him for the twenty first time.
- My faith in the non-violence principle makes me very determined. There is no more room for cowardice or weakness.
- For those who make use of violence, there is still

[26] http://www.dadalos.org/rom/Vorbilder/gandhi/zitate.htm, accessed on Nov 10, 2013

hope that they will one day find their way to non-violence, which is not true for cowards.

- Perseverance consists in imposing ourselves voluntarily in order to make other people willingly accept our vision.

In addition to the moral and ethical role of the behavior of the individuals and subjects necessary in our contemporary society, what is also important is to enforce new legislative measures, such as resorting to the probation service. Year 2000 has marked the issuance of the first regulatory documents concerning the organization and operation of the services of social reintegration of criminals and of supervision of punishment execution in non-custodial conditions under Government Ordinance no. 92/2000, and then the passing of Law no. 211/2004 on certain measures for ensuring the protection of the victims of crimes, Law no. 123 and Law no. 356/2006 and other regulations in 2008 and 2009. The following key principles, presented by Gabriel Oancea, bear a special importance in the provisions of the legislation passed these last few years:

a) The waiver to the enforcement of a penalty or the delay of its enforcement subject to the fulfillment of a series of conditions

b) Control and social reintegration activities

c) Execution of the punishments, when they consist in administrative sanctions, by the performance of community service activities

d) Periodical assessment of the efficiency of the probation service[27].

A fourth set of preventive measures refers to the measures of protection and prevention of violent actions and security on stadiums, where the enforcement of the latest laws is vital for the control and reduction of hooliganism. To this end, we list some principles that are required and must be followed for all sports premises under construction or renovation:

- Elimination of the sources of flammable and hazardous substances located near the competition premises
- Protection of the administrative or recreational areas against fires or explosions, as well as the check of the fire extinguishers and the enforcement of firs risk mitigation measures
- Presence of well trained security personnel
- Ensuring a maximum seating capacity for the spectators, ensuring a smooth and quick circuit of the supporters for the top competitions, providing the ways and means for a rapid evacuation, as well as access to first aid means and medical services if needed
- A good coordination and communication between all involved services in order to act efficiently in risk or emergency situations, the preparation and periodic check of the emergency plans for exceptional situations (earthquakes, fires, explosions)
- Immediate enforcement of drastic measures against the supporters and athletes involved in acts of violence, doping or discrimination against other citizens

Furthermore, all educational bodies must continue their activity of educating the subjects, potential supporters or athletes, with respect to the principles of fair-play and of a balanced and fair competitive attitude:

- Physical and sports education in schools and clubs should include, at all levels, a strong component of ethical values linked to harmony of the human personality and the development of one's physical and mental qualities
- Encouraging students who are less gifted at sports to participate in recreational sports activities and encourage and supports their colleagues full heartedly and honestly
- Supporting the bilateral and multilateral programs and European cooperation programs by means of school partnerships and adult training programs
- Intensifying the anti-discrimination programs and activities and the active and preventive doping and violence control measures
- Encouraging the collaboration between the educational and sports institutions and sports tourism; the role of the media in the appreciation of the positive and correct attitudes shown by the supporters of different countries
- inclusion of light sports activities in the routine of private companies, encouraging employees to practice a sport regularly, stimulating communication and team work through sports
- Educational activities dedicated to supporting the elderly in practicing sports activities or in attending sports events as public and supporters, together with their family members
- A more active involvement of the employers' organizations and unions in the education and training of the local communities and the development of a civic attitude appropriate for the contemporary European area.

Given all the above, we can conclude that the phenomenon of violence in sports remains an area upon which researchers and specialists will focus their attention the years to come as well, regarding which the media channels will continue to publish news and articles, showing especially sensational and shocking aspects, and with respect to which the authorities and the civil society will try to act in order to control and prevent aggressive activities; we hope, at the same time, that Romanian supporters will start, and in time will succeed, in having a more controlled, moderate behavior, coming closer to the European standards in force. That is why it is very important for the team spirit to be supported actively by the educators, trainers and coaches of clubs across the country. Given the above, it is only fair to say that education is essential for controlling violence and that curricular

[27] Gabriel Oancea, *Probaţiunea în România. Evaluări normative şi sociologice*, C.H.Beck Publishing House, Bucharest, 2012, pp 115-169

and extracurricular educational programs have a basic role in the modeling of the future supporters interested in participating in and acting as civilized fans, regardless of the type of sports competition they attend.

ROMANIAN YOUNG PEOPLE'S PERCEPTION REGARDING THE DYNAMICS AND EFFECTS OF INTERNATIONAL MIGRATION IN THE GLOBALIZATION ERA

Doina Elena NEDELCU*

Abstract

In contemporary society, the extent to which migration occurs, the multiple and diverse consequences that it generates have determined a deeper and interdisciplinary concern of researchers for the study of this phenomenon. However, some of the social, political and cultural values that migration implies have not been studied enough.

The present paper aims to analyse the young people's level of knowledge as regards the evolution and causes which trigger the migration phenomenon in contemporary society, as well as the social, political and cultural effects that it generates in the origin and host countries. In the present paper we also intend to reveal the Romanian young people's perception as regards the way immigrants are treated in the host country by answering questions like: are they discriminated?; if yes, are there categories that are more discriminated in comparison with the others?

Last but not least, the present research is meant to identify the degree of tolerance that Romanian young people have in relation to different emigrant categories.

Keywords: *migration, Romanian young people, perception, discrimination, tolerance.*

1. Introduction

Nowadays globalization is the framework within which the international migration process occurs and it triggers major effects on the patterns of our contemporary society. Globalization is the cause and the effect of international migration; it is a process which more and more defines the world we are living in through its dynamics and complexity. The statistical data that we are going to refer to illustrate the amplitude of international migration at present: in 2010, about 3.1 millions of people migrated into one of the EU member states. In 2010 the UK reported to have the highest number of immigrants (591, 000), followed by Spain (465, 200), Italy (458, 000) and Germany (404, 100); these four member states together comprised 61.9 % of all the immigrants settled in the EU member states[1].

The multiple and controversial effects induced by international migration over all the involved actors – source countries, destination countries and the immigrants themselves – have drawn the attention of a large and various number of researchers: sociologists, psychologists, economists, political analysts, etc. Migration and its effects sale are subjective concepts – according to Nazli Choucri – and their perception depends both on the subject that defines the terms and on the ones that benefit from the definition of these terms in a certain manner[2].

On the other hand, the way in which these concepts are conceived lays a mark on the present and future reality. In other words, even if international migration is rooted in the structural realities of the international economic system, the way in which migration is perceived influences its effects and evolution. Under these circumstances, it is fully justifiable to undertake a deeper and more complex research into this phenomenon and its effects. A part of the research which has been made so far points out that 76% of the Europeans consider that, for their countries, the increase of the immigrants' number is an important and highly important threat. This perception is reinforced by the feelings of uncertainty and anxiety which they have as regards their future and which may be identified throughout Europe - being mistakenly associated with immigration[3].

The present research attempts to analyse the Romanian young (aged 15-19) people's knowledge and perception over the phenomenon of international migration and its effects. We consider that such an analysis is fully justifiable since Romanians represent a more and more significant percentage of the total number of immigrants located in Europe. According to the data offered by Eurostat 2011, the group of foreign citizens that live in the EU and whose number increased the most during 2001-2011 was the one of the Romanians; thus, their number was eight times higher in ten years: from 0.3 million in 2001 to 2.3 million in 2011. The young people who are aged 15 -

24 form the most numerous group of Romanian immigrants. In 2012 the Romanian immigrants who were aged 15-24 amounted at 86, 020 men and 68, 741 women[4]. According to statistical data, about 4, 000 young people annually leave the country to further their studies abroad. 51% of the Romanian young people who are aged 18 - 30 have a job and 10% of them work abroad[5].

2. Content

The sociological research we have made in this paper is part of the project entitled: *"Let us talk globally about education for global development, migration and citizenship"* (Project: DCI NSA-ED/2012/280-770).

The purpose of the research is to analyse Romanian young (high-school students) people's perception as regards the features, causes and effects of the migration phenomenon in contemporary society.

The main objectives of the research are: identifying the degree to which high-school students are informed as to the characteristics and evolution of contemporary migration; young people's perception as to the degree of tolerance/intolerance that the host country manifest in relation to the different categories of emigrants; identifying the degrees of tolerance and acceptance that high-school students have in relation to emigrants; identifying the degree of involvement of the different socialization agencies in informing students as to the contemporary migration phenomenon.

The research **method** we have used in the present paper is the social inquiry and the instrument that we have used is the survey.

The investigated **population** includes high-school students from Romania, aged 15 – 18.

The high-school students selected to take part in the project are teenagers that were involved in the project: "Parlez-vous global..." and that come from the following areas of Romania: Bucharest area, Prahova are, Constanta area, Buzau area. The number of the surveyed students per affiliation institution comprises: 886 students from the "Mihai Viteazul" National College of Bucuresti, "Ovidius" High-School and Fine Arts High-School of Constanta, "Nichita Stanescu" and "I.L. Caragiale" High-Schools of Ploiesti, as well as the Fine Arts High-School of Buzau.

For accomplishing this study we have considered the following **hypotheses:** a) there is a positive correlation between the volume of information on the migration phenomenon and the tolerance level manifested towards emigrants. We have found that younger people who are better informed tend to be more tolerant in relation to emigrants in comparison with the young people who are poorly informed; b) the level of information is correlated with the residence environment: young people living in the urban area tend to be better informed as to the migration phenomenon in comparison with the ones coming from the rural area; c) young people tend to manifest different degrees of tolerance in relation to the different categories of emigrants; we suppose that tolerance is lower for the Roma emigrants; d) in our analysis we also appreciated that tolerance in relation to emigrants is different depending on gender (male-female). Girls – in comparison with boys - tend to be more tolerant in relation to all categories of emigrants.

The statistical processing of the data collected on the spot – and presented below – reflects the level of knowledge, feelings and attitudes which Romanian high-school students have in relation to the international migration phenomenon under the present conditions imposed by the ever increasing globalization of the world.

For the beginning, we would like to bring into evidence the fact that high-school students have a sufficiently realistic perspective over the most important characteristics of globalization. Thus, according to the interrogated high-school students, the first 5 main characteristics regarding globalization, which are worth being debated upon, are (see Chart no. 1): the observance of human rights - mechanisms and institutions (53.3% options); tolerance and intolerance (51.1% options); progress in the area of information (44.4% options); peace versus war (33.3% options), global warming and environmental protection (31.1% options). The subjects gave a lower but sufficiently enough high score to the globalization of exchanges, of markets and of economic inter-connections (28.8% options), as well as to the citizens' participation in political and social life (26.6% options), the migration phenomenon (24.4% options) and the development of the international community, as well as of the world consciousness (24.4% options).

1. THE MOST RELEVANT TOPICS REGARINDG GLOBALIZATION – ACCORDING TO HIGH-SCHOOL STUDENTS

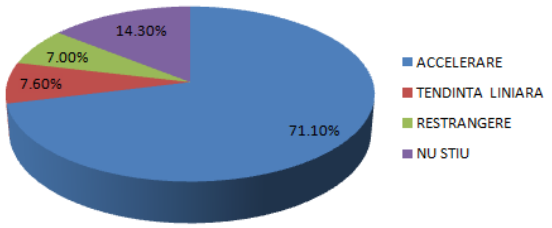
	TOTAL NUMBER OF ANSWERS %
Human rights	53.3%
Tolerance and intolerance	51.1%
Progress in information area	44.4%
Peace versus conflicts	33.3%
Global warming and environmental protection	31.1%
Globalization of exchanges	28.8%
Citizen participation	26.6%
Migration	24.4%
International community	24.4%
Development and under-development	17.7%
Demographic growth	17.7%
Intercultural dialogue	13.3%
International organizations	13.3%
Multinational corporations	11.1%
Consumption society	8.8%
Regional, national, European identity	8.8%

Most of the interviewed students (71.1%) consider that today, given the globalization of the world, the migration phenomenon manifests an accelerated growing tendency; only 7.6% of those interviewed consider that this phenomenon will remain within the same limits, while 7% appreciate that this phenomenon will come to a decline; the remaining percentage represents non-answers (see Chart no. 2).

In contrast, the provisions of the International Organization for Migration reveal that ever since 2010 migration will significantly decrease at global level.

2. OPINIONS REGARDING THE TENDENCIES MANIFESTED IN THE MIGRATION EVOLUTION

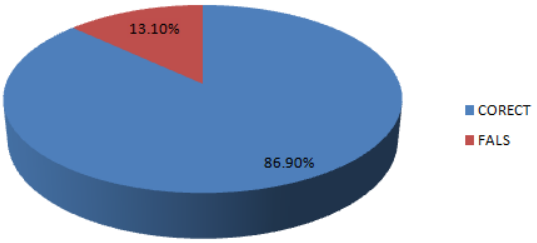
	TOTAL NUMBER OF ANSWERS %
ACCELERATED GROWTH	71.10%
LINIAR TENDENCY	7.60%
DECLINE	7.00%
I DO NOT KNOW	14.30%



Most of the high-school students (86.9%) know the meaning of the terms emigrant and immigrant. Only a small percentage, 13.1%, mistake the two terms for each other (Chart no. 3).

3. THE DISTINCTION BETWEEN EMIGRANT AND IMMIGRANT

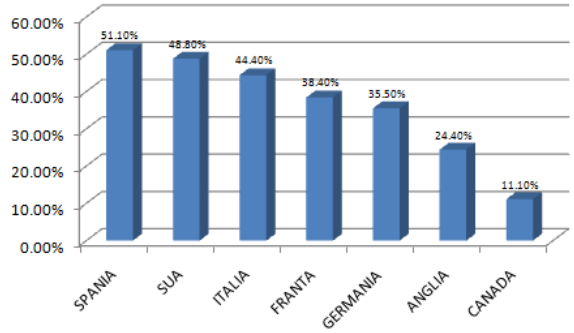
ANSWER	TOTAL NUMBER OF ANSWERS %
CORRECT	86.9%
FALSE	13.1%



Most of the interviewed subjects include the following countries in the category of states with the highest number of immigrants: Spain (51.1%), USA (48.8%), Italy (44.4%), France (38.4%), Germany (35.5%), Great Britain (24.4%) and Canada (11.1%) - according to Chart no. 4. Data recently published by the United Nations, according to Huffington Post, show that the first 8 countries with the highest number of immigrants are: USA (45.8 million), Russia (11 million), Germany (9.8 million), Saudi Arabia (9.1 million), the United Arabic Emirates (7.8 million), Great Britain (7.8milioane), France (7.4 million) and Canada (7.3 million). One can notice that there are certain inconsistencies between the opinions shared by high-school students and the real situation existing in the countries with the highest number of immigrants.

4. COUNTRIES WITH THE HIGHEST PERCENTAGE OF IMMIGRANTS (OPINIONS)

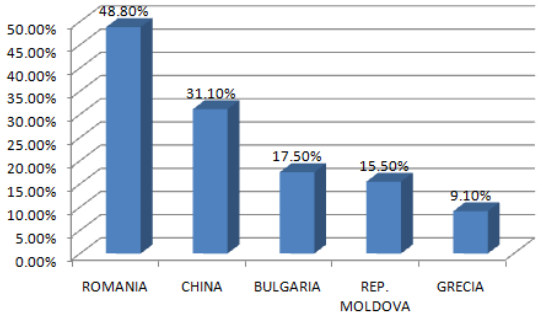
COUNTRY	TOTAL NUMBER OF ANSWERS %
SPAIN	51.10%
USA	48.80%
ITALY	44.40%
FRANCE	38.40%
GERMANY	35.50%
ENGLAND	24.40%
CANADA	11.10%



Most of the interviewed subjects (48.8%) consider that Romania is among the countries with the highest percentage of emigrants, being followed by China, Bulgaria, Republic of Moldova (see Chart no. 5).

5. COUNTRIES WITH THE HIGHEST NUMBER OF EMIGRANTS (OPINIONS)

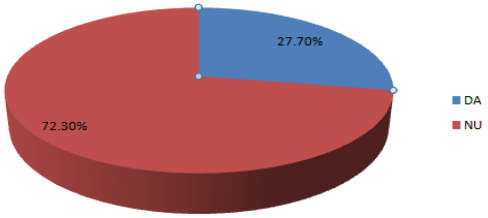
COUNTRY	TOTAL NUMBER OF ANSWERS %
ROMANIA	48.80%
CHINA	31.10%
BULGARIA	17.50%
REP. MOLDOVA	15.50%
GREECE	9.10%



High-school students have a low level of subjective knowledge as regards the situation of immigrants that exist in Romania. Most of the interviewed subjects (72.3%) declare that they do not have information on the situation of immigrants living in Romania; only 27.7% of them declared that they have such information. (See Chart no. 6)

6. DO YOU KNOW ANYTHING ABOUT IMMIGRANTS LIVING IN ROMANIA?

	TOTAL NUMBER OF ANSWERS %
YES	27.7%
NO	72.3%

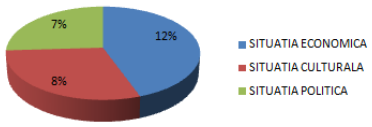


Of those who declared to have information on the immigrants living in Romania, over a half (i.e. 52%) stated to have much and very much information as to their economic situation. Less than a half of those who assess themselves as being informed have much or very much information about the immigrants' cultural characteristics (45%) and about their political situation

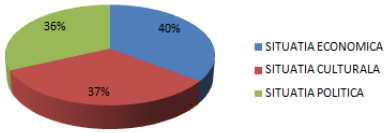
(43%); the other ones declared to know a little about this topic (Chart no. 7).

7. SELF-ASSESSMENT OF KNOWLEDGE AS TO THE IMMIGRANTS' SITUATION:

FOARTE MARE



MARE



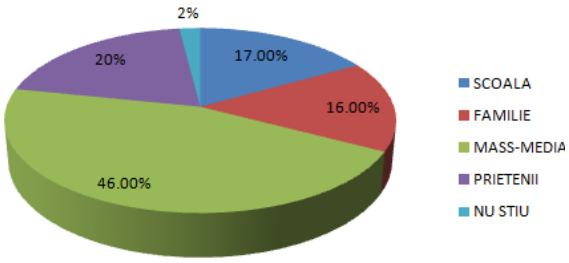
MICA

	VERY MUCH	MUCH	A LITTLE
1. ECONOMIC SITUATION	12%	40%	48%
2. CULTURAL SITUATION	8%	37%	55%
3. POLITICAL SITUATION	7%	36%	57%

According to Chart no.8, subjects who declared to have information on Romanian immigrants have mentioned the following sources as the main socialization agents that provided them such information: mass-media (46.0%), friends (20%), school (17%) and family (16%). The conclusion is that school should be more involved in the debate of these topics.

8. THE SOURCES OF INFORMATION ON THE SITUATION OF IMMIGRANTS

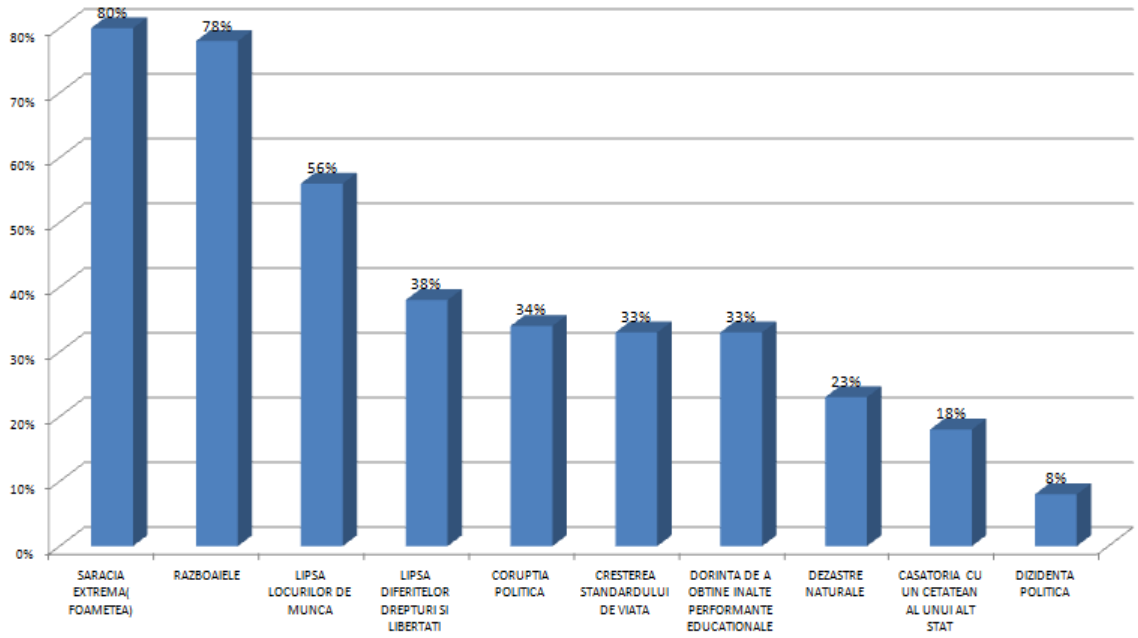
	TOTAL NUMBER OF ANSWERS %
SCHOOL	17.0%
FAMILY	16.0%
MASS-MEDIA	46.0%
FRIENDS	20%
I DO NOT KNOW	2%



According to Chart no. 9, most of the high-school students believe that the main 5 reasons (causes) that could determine a person to emigrate are: extreme poverty (80%), wars (78%), as well as: lack of workplaces (56%), lack of rights and freedoms (38%) and political corruption (34%).

9. THE MOST FREQUENT CAUSES OF EMIGRATION (OPINIONS)

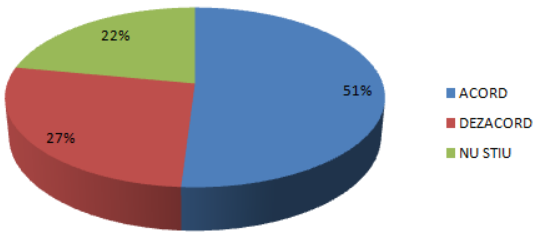
	TOTAL NUMBER OF ANSWERS %
EXTREME POVERTY (FAMINE)	80%
WARS	78%
LACK OF WORKPLACES	56%
LACK OF RIGHTS AND FREEDOMS	38%
POLITICAL CORRUPTION	34%
INCREASE OF THE LIVING STANDARD	33%
THE WISH TO OBTAIN HIGH PERFORMANCE IN EDUCATION	33%
NATURAL DISASTERS	23%
MARRIAGE WITH THE CITIZEN OF ANOTHER STATE	18%
POLITICAL DISIDENCE	8%



Over a half of the interviewed young people (i.e. 51%) appreciate that emigrants are discriminated in the EU; only 27% reject the existence of this phenomenon (Chart 10). The percentage of recorded non-answers is quite high for this question: 22%.

10. ARE EMIGRANTS DISCRIMINATED IN THE EU?

	TOTAL NUMBER OF ANSWERS %
AGREE	51%
DISAGREE	27%
I DO NOT KNOW	22%



High-school students appreciate that the degree of discrimination to which emigrants are subjected in the host EU countries largely depends on the social and ethnical groups they belong to; this opinion is illustrated in Chart no.11. These students appreciate that the most discriminated category is the one of the Roma population. The subjects – who are 87% - consider that the Roma people are discriminated to a high or very high degree by the host population. They are followed by Afrikaans and Romanians who are also discriminated to a high or very high degree - according to 61% and 57% of those interviewed.

11. IMMIGRANTS ARE DISCRIMNATED (survey)

	VERY MUCH	MUCH	TO A MEDIUM EXTENT	A LITTLE	LITTLE

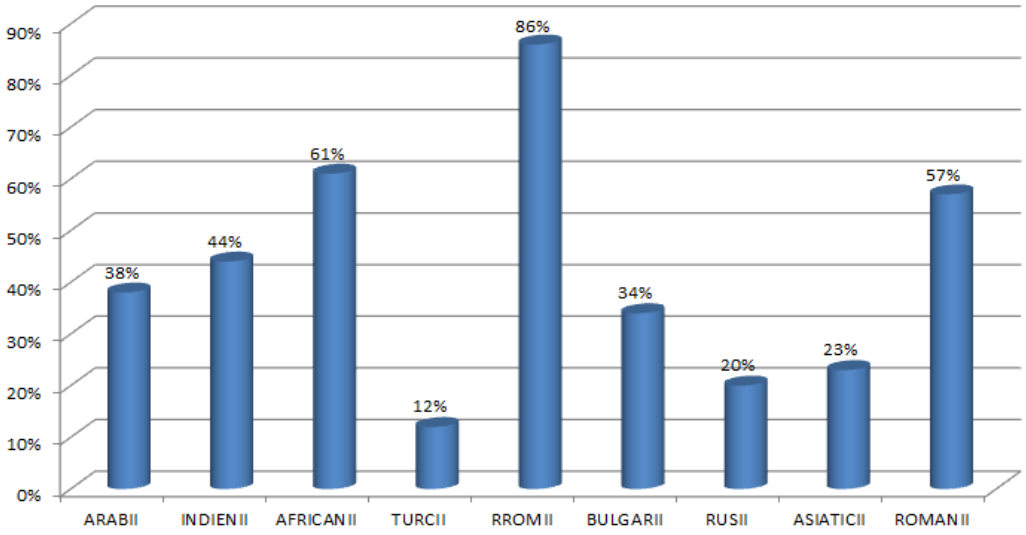
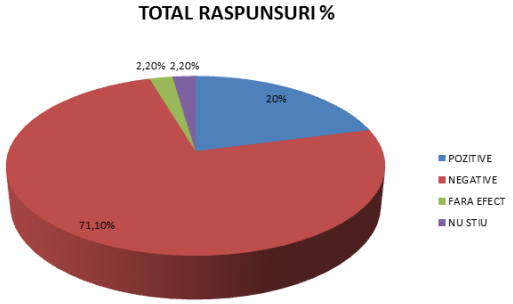
IMMIGRANTS ARE DISCRIMINATED TO A HIGH AND VERY HIGH DEGREE (OPINIONS)



The effects of the parents' emigration over the children who remained at home – according to most of those interviewed, i.e. 71.1%, - are negative (affective problems, educational failure, etc.); a small number, i.e. 20% of the high-school students (Chart no.12) consider that the emigration phenomenon generates positive effects (increased living standard, the possibility to study abroad, etc.).



12. THE EFFECTS OF THE PARENTS' EMIGRATION OVER CHILDREN

	TOTAL NUMBER OF ANSWERS %
POSITIVE	20%
NEGATIVE	71.1%
WITHOUT EFECT	2.2%
I DO NOT KNOW	2.2%

The data reflecting the high-school students' tendency to discriminate or tolerate immigrants are included in Charts no.13, 14 and 15. According to these charts, most of those interviewed declared that they would not be disturbed if their neighbour were immigrants, no matter their ethnical origin. There is an exception: the Roma population; being a neighbour with them is not accepted by an important percentage of those interviewed, i.e. by at least 37. 6% of those interviewed; only 12.8% declared to have nothing against being neighbours of a Roma emigrants' family (Chart no.13).

13. THE DEGREE TO WHICH YOUNG PEOPLE REFUSE TO HAVE AN IMMIGRANT FAMILY AS NEIGHBOURS

Origin of the neighbours	TO A SERIOUS EXTENT	MUCH	TO A MEDIUM EXTENT	A LITTLE	LITTLE	NOT AT ALL
ARABIANS	2.20%	8.80%	10%	14%	25%	40%

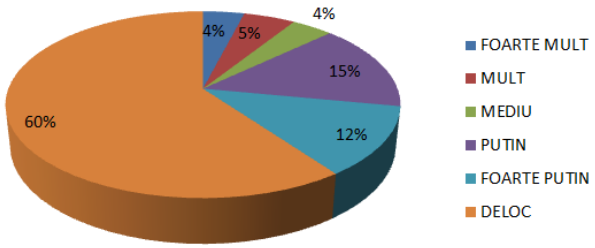
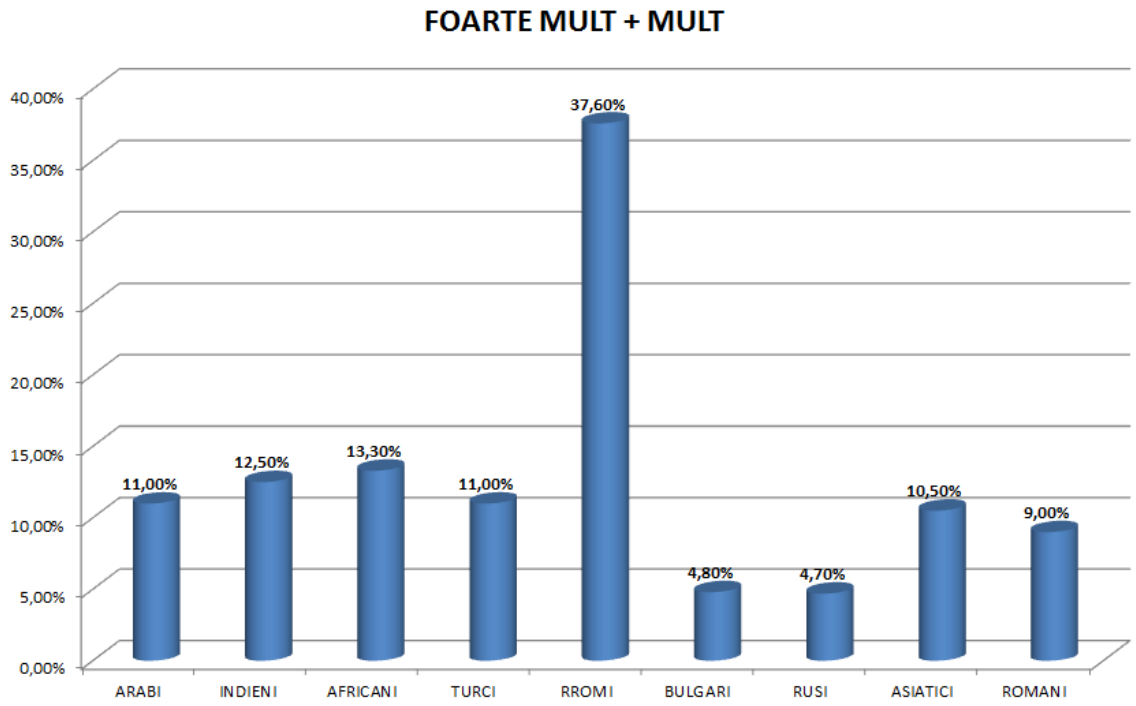
ROMANI



YOUNG PEOPLE DO NOT ACCEPT BEING NEIGHBOURS WITH AN IMMIGRANT FAMILY



According to Chart no.14, a reserved attitude towards the Roma immigrants is less frequent than the reserved attitude manifested towards those neighbouring Roma emigrants. We can notice a higher degree of tolerance towards the Roma colleagues than to the Roma neighbours. We can notice that 18% of those who answered the questionnaire manifest a reserved or very reserved attitude towards the Roma colleagues in comparison with a percentage of 37. 6% subjects that manifest a reserved attitude towards the Roma neighbours. However, the Roma population is not preferred as a group of colleagues in comparison with other emigrant ethnical groups, on the contrary.

14. THE EXTENT TO WHICH A RESERVED ATTITUDE IS MANIFESTED TOWARDS IMMIGRANT COLLEAGUES

	VERY HIGH	HIGH	MEDIUM	A LITTLE	QUITE A LITTLE	NOT AT ALL
ARABIANS	2.40%	2.20%	13.30%	8.60%	23.30%	50.20%
INDIANS	4.40%	2.20%	15.50%	6.60%	23.30%	48%
AFRIKAANS	4.40%	6.60%	11.10%	8.80%	21.10%	48%
TURKISH	1%	6.60%	8.80%	10.10%	19%	54.50%

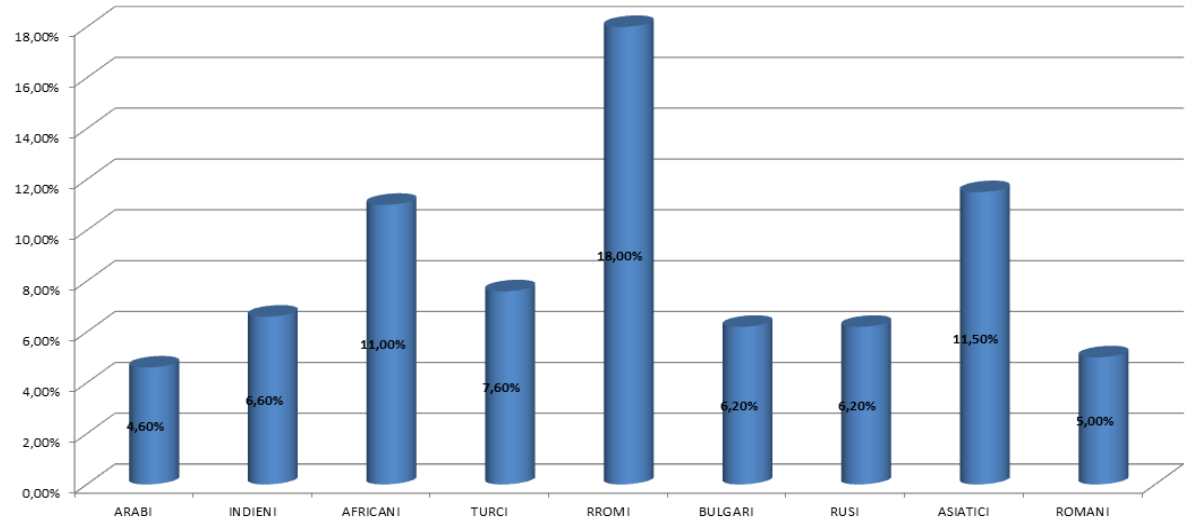
RUSSIANS	2.20%	4%	4%	11.10%	17.70%	61%
ASIAN PEOPLE	2.50%	9%	14.30%	15.50%	24.40%	34.30%
ROMANIANS	2%	3%	4%	10%	14%	67%

THE TENDENCY TO MANIFEST A RESERVED ATTITUDE TOWARDS THE IMMIGRANT COLLEAGUES IS GREAT AND VERY GREAT

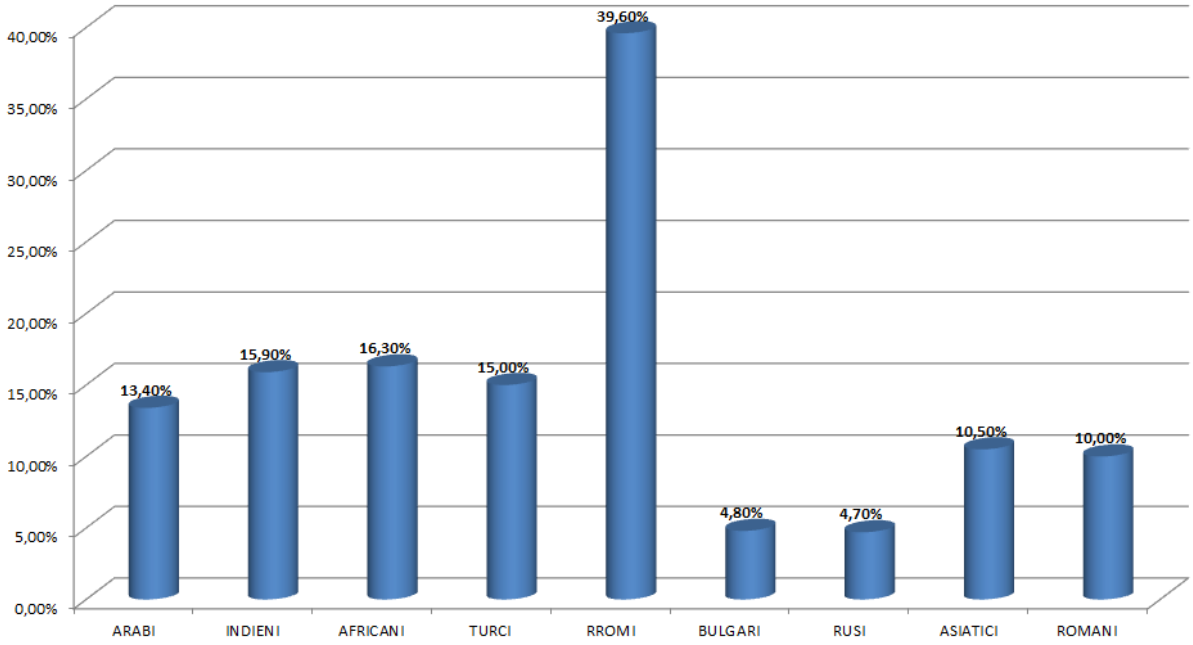


According to Chart no. 15, the data illustrating the rejection of establishing friendly relationships with the Roma immigrants are even higher than in the previous cases. The rejection of the Roma friends is manifested to a high and very high extent by 39.6% of the interrogated ones. An illustrative situation as regards the Romanians' level of solidarity is represented by the fact that a significant percentage of them, i.e. 10%, have declared that they manifest a reserved attitude towards establishing a friendly relationship with Romanian emigrants.

15. THE EXTENT TO WHICH ESTABLISHING A FRIENDLY RELATIONSHIP WITH IMMIGRANTS IS REJECTED

	VERY HIGH	HIGH	MEDIUM	A LITTLE	LITTLE	NOT AT ALL
ARABIANS	4.40%	9%	15%	20%	36.10%	15.50%
INDIANS	6.60%	9.30%	15.40%	17.70%	25%	26%
AFRIKAANS	11.10%	5.20%	15.50%	18.90%	29.30%	20%
TURKISH	8.60%	6.40%	16.30%	19.00%	25%	24.70%
ROMA	28.80%	10.80%	18.30%	16.80%	14.50%	10.80%
BULGARIANS	2.40%	2.40%	10%	10.80%	26%	48.40%
RUSSIANS	2.30%	2.40%	12.30%	13.40%	21%	48.60%
ASIAN PEOPLE	2.50%	8%	14.30%	15.50%	24.40%	35.30%
ROMANIANS	4.50%	5.50%	4%	15%	12%	59%

REJECTION TO ESTABLISH RELATIONSHIPS WITH IMMIGRANTS IS HIGH AND VERY HIGH

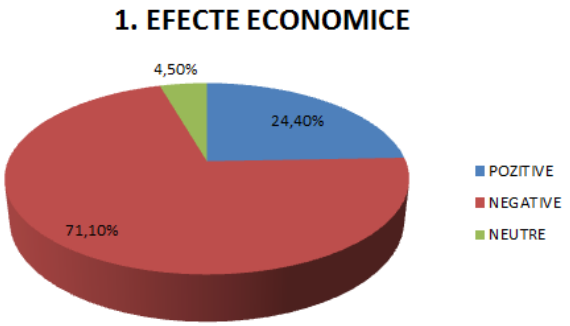


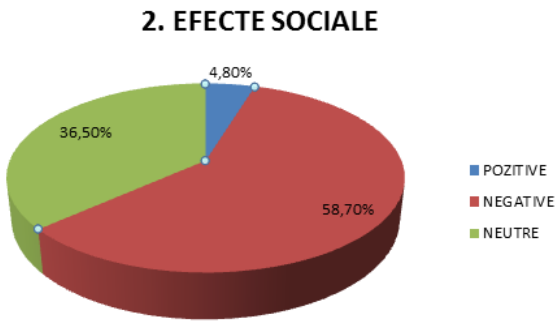
Most of the high-school students, 71.1%, perceive the effects of emigration over their country of origin in a

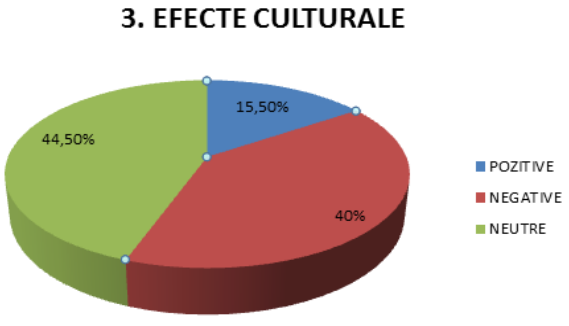
negative way. Massive emigration has even negative side effects on the country of origin, according to 58.8% of those interrogated. Most of the interrogated ones (62.1%) appreciate that political effects of emigration over the country of origin are neutral (see Chart no.16).

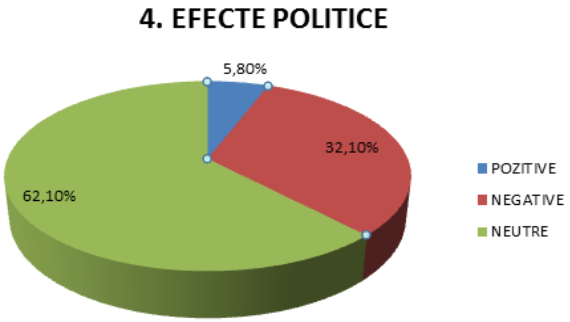
16. THE EFFECTS OF MIGRATION ACCELERATION OVER THE COUNTRY OF ORIGIN

	POSITIVE	NEGATIVE	NEUTRAL
1. ECONOMIC EFFECTS	24.40%	71.10%	4.50%
2. SOCIAL EFFECTS	4.80%	58.70%	36.50%
3. CULTURAL EFFECTS	15.50%	40%	44.50%
4. POLITICAL EFFECTS	5.80%	32.10%	62.10%





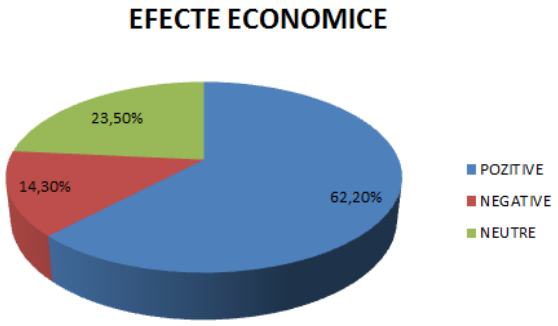


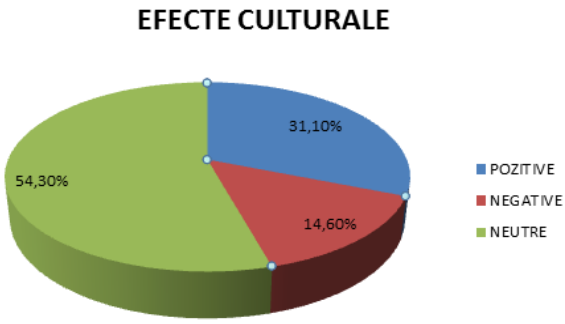


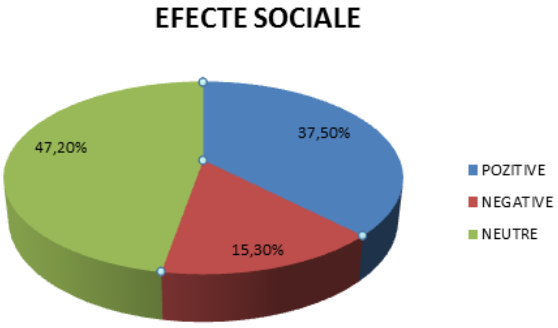
The effects of accelerated migration over the country of origin are negatively perceived, while this phenomenon is perceived in a positive way by the host country. Most of high-school students (62.2%) consider that the intensification of migration brings economic benefits to the host country. Most of the interrogated ones appreciate that migration generates neutral effects on social life (47.2%), as well as cultural (54.3%) and political life (59.7%) of the host country (Chart no.17).

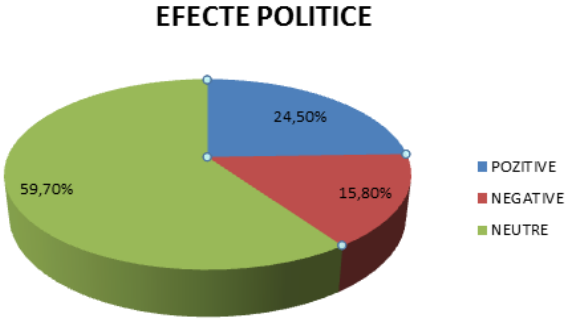
17. THE EFFECTS OF MIGRATION ACCELERATION OVER THE HOST COUNTRY

	POSITIVE	NEGATIVE	NEUTRAL
1. ECONOMIC EFFECTS	62.20%	14.30%	23.50%
2. SOCIAL EFFECTS	37.50%	15.30%	47.20%
3. CULTURAL EFFECTS	31.10%	14.60%	54.30%
4. POLITICAL EFFECTS	24.50%	15.80%	59.70%





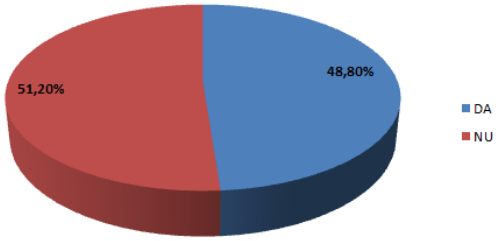




According to Chart no.18, more than a half of the interrogated high-school students (51.2%) declared that they do not have any contact with Romanian immigrants; in consequence, they do not know the situation of these immigrants directly.

18. THE PERCENTAGE OF THOSE WHO HAVE CONTACTS WITH IMMIGRANTS

	TOTAL NUMBER OF ANSWERS %
YES	48.80%
NO	51.20%



According to Chart no.19, high-school students who declared that they have contacts with immigrants mentioned that they established these relations through their friends (51%), through the school environment (27%) or mass-media (22%). In most cases, one can notice that friends represent the most important factor that made it possible for establishing a relationship between high-school students and immigrants.

19. AGENTS THAT FACILITATED CONTACT WITH THE POPULATION OF IMMIGRANTS

	TOTAL NUMBER OF ANSWERS %
SCHOOL	27%
FRIENDS	51%
MASS-MEDIA	22%

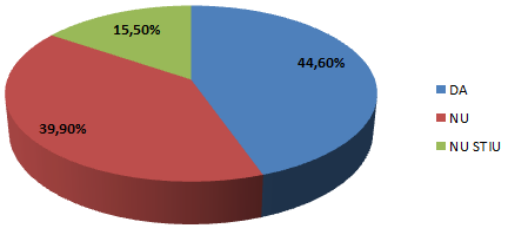
21. CITIZENSHIP SHOULD BE GRANTED TO IMMIGRANTS

	TOTAL NUMBER OF ANSWERS %
TEMPORARILY SUSPENDED	7.60%
LIMITED	60%
UNLIMITED	32.40%

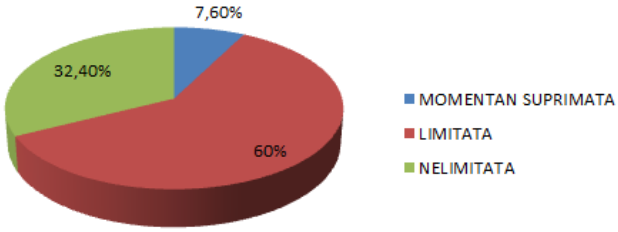
Chart no.20 illustrates the fact that in the opinion of most of those interrogated (i.e. 44.6%), the massive increase of the immigrants number leads to an increase of the criminality rate in the host country. One can notice the existence of significant percentage differences between those who appreciate that immigration generates negative social effects (15.3%) and those who consider that immigration leads to the increase of the criminality rate (44.6%). Somehow it is paradoxical the fact that not all 44.6% of those who consider that immigration increases criminality rate also appreciate that there are negative social effects in the host countries due to the intensification of migration.

20. MASSIVE INCRESASE OF IMMIGRATION FAVOURS THE INCREASE OF CRIMINALITY RATE

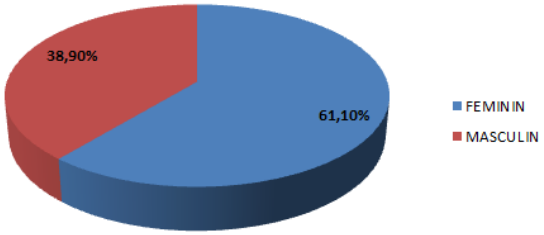
	TOTAL NUMBER OF ANSWERS %
YES	44.60%
NO	39.90%
I DO NOT KNOW	15.50%



Most of those interrogated (60%) appreciate that, due to the massive intensification of migration, host states should grant citizenship to immigrants within certain limits. On the other hand, according to 32.4% of those interrogated, citizenship should be granted to immigrants in an unlimited/unconditional way. A much lower number of interrogated subjects declared that granting citizenship to immigrants should be temporarily suspended (Chart no. 21).

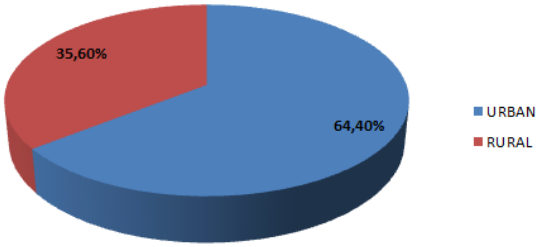


22. SEX



23. THE RESIDENTIAL ENVIRONMENT

	TOTAL NUMBER OF ANSWERS %
URBAN	64.4%
RURAL	35.6%



3. Conclusions

a) The level of knowledge that Romanian high-school students have as regards the process of migration during the globalization era

Firstly, I would like to mention that high-school students have a realist perspective as to the *main characteristics that define the globalization process*. In their opinion, the first 5 fundamental characteristics of this phenomenon – which should be debated upon by all socialization agents – are: observance of human rights - mechanisms and institutions (53.3%); tolerance and intolerance (51.1%); progress in the information area (44.4%); peace versus war (33.3%), global warming and environmental protection (31.1%). High-school students answered in high percentage in favour of other characteristics that define globalization, i.e.: globalization of exchanges, markets and economic exchanges (28.8%), citizen participation in social and political life (26.6%), migration phenomenon (24.4%) and development of the international community and of global consciousness (24.4%).

Most of the high-school students (86.9%) know the *meanings of the terms: emigrant and immigrant*. A small percentage (13.1%) does not make a difference between these two terms.

When asked about the immigrants' countries of origin and the host countries that they prefer, most of the Romanian high-school students enumerated the following countries as being *the countries with the highest number of immigrants*: Spain (51.1%), USA (48.8%), Italy (44.4%), France (38,4%), Germany (35.5%), Great Britain (24.4%), Canada (11.1%). The data recently published by the United Nations, according to Huffington Post, show that the first 8 countries with the highest number of immigrants are: USA (45.8 million), Russia (11 million), Germany (9.8 million), Saudi Arabia (9.1 million), the United Emirates of Arabia (7.8 million), Great Britain (7.8 million), France (7.4 million) and Canada (7.3 million). One can notice that there are certain inconsistencies between the opinions shared by high-school students and the reality existing in the countries which have the largest number of immigrants. Most of the interrogated subjects may have nominated some countries as having the highest number of immigrants because they thought of Romanian immigrants in particular and the countries which the latter prefer. This may be the reason why the interrogated subjects included in this category countries like: Russia, Saudi Arabia and the United Arabic Emirates.

As to the classification of countries which have the highest number of emigrants, most of the interviewed subjects (48.8%) consider that Romania is in the top, being followed by China, Bulgaria and the Republic of Moldova. Studies indicate that "we are not the nation which exports the highest number of emigrants, though we occupy a top position globally. However, we occupy an unhappy top position for the largest number of emigrants who have higher education studies, i.e. 18.5% of the total number of emigrants, in comparison with the European average of only 5%. Considering that Romania has the lowest number of university graduates, a fifth of them prefer to work for other economies."[6]

When asked if they know anything about the situation of immigrants living in Romania, the present study indicates the existence of a significant deficit. Most of the asked subjects (72.3%) declare that they do not have *information on the situation of the immigrants living* in Romania; only 27.7% declared the contrary.

Of the 27.7% who declared to have information on the immigrants living in Romania, more than a half answered that they had a lot or much knowledge of their economic situation. Less than a half of them perceive themselves as being informed to a high or very high extent as to the cultural characteristics of immigrants and their political situation (43%); the rest

[6] http://www.amosnews.ro/suntem-tara-care-export-cei-mai-multi-emigranti-cu-studii-superioare-2013-12-30#sthash.AYLqEbh8.dpuf

appreciated that they have little knowledge about this aspect.

In fact, more than a half of the questioned high-school students (51.2%) declared that they do not have any contact with Romanian immigrants; thus, they do not directly know the situation in which these immigrants find themselves.

High-school students who declared that they have contact with the immigrants in our country stated that they established these relationships through their friends (51%), school (27%) or mass-media (22%). One can notice that, for most cases, the group of friends played the most important role in the creation of such relationships.

The present research points out that the main agents of socialization who provided pupils information on the immigrants in Romania are: mass-media (46.0%), friends (20%), school (17%) and family (16%). It results that school should be more involved in debating these problems as to migration and immigrants.

We can conclude that the level of knowledge that high-school students had as to the actors and complexity of the migration process requires corrections and that it is necessary to get involved all socialization agents (from school to NGOs and mass-media) in accomplishing this objective.

b) Opinions, attitudes, feelings toward migration, immigration, emigrants

Most of the interrogated high-school students (71.1%) consider that under the intensification of the globalization process, migration will increase. Students appreciate that *the main 5 reasons* (causes) that could determine a person emigrate are: extreme poverty (80%), wars (78%), lack of workplaces (56%), lack of rights and freedoms (38%), as well as political corruption (34%).

A large number of students consider that the effects of emigration over the country of origin are negative from an economic point of view. According to the interrogated subjects, the effects of emigration on children and their parents are also negative.

Thus, the effects of emigration on the children who remain in their country of origin (according to 71.1% of those interrogated) are negative (causing affective problems, educational failures etc.). Only 20% of the high-school students consider that this phenomenon produces positive effects (the increase of the living standard, the possibility to study abroad, etc.).

Most of the high-school students appreciate that massive emigration, besides the negative economic effects which it produces, also has social negative effects over the country of origin (population ageing, lack of balance as regards gender, brain and talent migration, etc.).

Young people's opinions confirm the latest research in the area, which shows that "migration flows may more easily affect states that are already vulnerable (due to their non-performant economy, weak social cohesion, non-performant public institutions or an immature political system) in comparison with the ones that have a solid administration".[7]

The effects of accelerated migration over the country of origin are negatively perceived, while the effects of this process over the host country are regarded as generating positive effects. Most of the high-school students (62.2%) consider that the intensification of migration brings economic benefits to the host country. As to the other dimensions of the social system (the social, cultural and political consequences) most of the interrogated high-school students appreciated that migration generates neutral effects in the host country.

Young people's opinions as to the effects of migration over economy are realistic. Recent studies have revealed the fact that host countries are those that mainly benefit from migration. Migration does not have side effects on the economies of these countries, on the contrary: the value of the paid taxes is higher that the value of social services that immigrants receive from the host country.

Joakim Ruist, researcher at Goteborg University, has calculated the income-cost rate generated by immigrants for the Swedish economy (Bulgarians and Romanians have worked in this country since 2007), as well as for other 14 EU member states before the enlargement towards the former Eastern Bloc. "My conclusions – he states – clearly show that fears which currently manifest in other European countries as to the heavy burden that the welfare state would be obliged to carry due to the unlimited restriction of immigrants coming from Romania and Bulgaria are not grounded."[8]

The present study shows that a large number of young people (44.6%) consider that a massive increase in the number of immigrants would favour the increase of the criminality rate in the host country due to the intensification of the migration process.

As to the host states policies regarding the granting of citizenship to immigrants as a consequence of the massive increase in the migration process, young people have a reserved attitude. Most of the interrogated ones (60%) consider that host states should grant immigrants the citizenship of their state only under strict conditions.

High-school students positively correlated the intensification of migration both with the criminality rate and the frequent discriminatory behaviour in the host country.

Over a half of those interrogated students (51%) *appreciate that the immigrants' discrimination* is a

[7] Ionel Stoica, Migratia internationala si securitatea-noi provocari, **INFOSFERA,AnulI, Nr.1, 2009**.

[8] Imigratia din Romania si Bulgaria sunt contributori neti si nu reprezinta un cost pentru Occident - studiu suedez, 14 Ianuarie 2014, www.hotnews.ro/stiri-diaspora-16407492-imigratia-din-romania-bulgari.

reality in the EU countries; only 27% of them reject the idea that such a phenomenon exists.

Most of them consider that immigrants are discriminated to a different degree in the EU host countries, depending on their ethnical and national origin: the most discriminated ones are the Roma population. Subjects - 87% of them – appreciate that the Roma population is discriminated to a high or very high extent by the host country. This ethnical group is followed by Afrikaans and Romanians who, according to 61% and 57% of the interrogated subjects, are also discriminated to a high or very high extent.

Young people repeatedly include Romanians in the top of the most discriminated immigrants, after the Roma population and the Afrikaans.

c) Tolerance vs. discrimination in relation to immigrants

In the present study we have tried to identify the tolerance and intolerance degrees manifested by high-school students towards immigrants, while measuring the social distant attitude which the former manifest towards the latter. This research has revealed the extent to which young people manifest a reserved attitude towards their immigrant neighbours, colleagues and friends, who come from different ethnical groups or who have different nationalities. The present research illustrates a relatively low level of intolerance that young people manifest in relation to immigrants no matter the latter's origin. Thus, we can notice that most of those who answered the questionnaire declared that they would not mind having neighbours who are immigrants, no matter the ethnical group to which latter belong. However, there is an exception: the Roma population; the degree to which the idea of having members of the Roma population as neighbours is rejected to a high or very high degree, i.e. by 37. 6% of those who answered the questionnaire; only 12.8% declared that they do not mind having Roma emigrants as neighbours.

All in all, young people adopt a socially distant attitude towards their immigrant colleagues. High quotas of tolerance are recorded for most of the social and ethnical groups of immigrant colleagues. As regards the Roma immigrant colleagues, one can notice that there is a higher level of acceptance in comparison with the previous data referring to the situation of having them as neighbours. The present study illustrates that only 18% of those who answered the questionnaire manifest a high or very high degree of intolerance towards their Roma colleagues in comparison with 37. 6% of the subjects who would not tolerate to have them neighbours. The Roma population occupies a top position as to the non-preferred ethnical groups: either as a colleague or as a neighbour. Ethnical groups that are accepted (tolerated) as colleagues or neighbours are the Bulgarians, the Russians and the Turkish.

As regards the level of tolerance manifested towards immigrant friends, Romanians, Bulgarians, Russians and Asian people occupy top positions. The non-acceptance degree of a friendship relationship with the Roma immigrants is even higher in comparison with accepting them as colleagues or neighbours. Roma friends are rejected to a very high or high extent by 39.6% of those who answered the questionnaire. It seems that Romanians who live abroad tolerate the Roma population to a less extent in comparison with the Romanians who did not leave their country of origin. This situation may be related to a complex which has been induced by the public image that Romanian immigrants have acquired and by the way in which they are perceived by an important share of the host country population.

The present research has shown that 76% of the Europeans consider that a certain number of immigrants that arrive in their country represent a potential or important threat for their states.[9]

The famous publication *La Liberation*, in an article which it tries to present the most common prejudices related to the Roma population, mentions that - according to a survey that has been made this year by the National Human Rights Commission – two thirds of the French appreciate that the Roma population constitutes "a particular group".[5] I would like to conclude the present paper with another observation that is revealed by my research, i.e. the existence of a significant number of Romanian high-school students (10%) that prefer to adopt a reserved or very reserved attitude to the idea of having friends from among the Romanian immigrants; this fact seems illustrative for the Romanian community and their national pride, respectively for their self-esteem.

LOGOTHERAPY IN EDUCATIONAL SYSTEMS

Andreas SCHREIBER*

Abstract:

In modern knowledge societies knowledge and education have fallen apart. The educational systems are designed for efficiency in order to spill out very knowledgeable and efficient "working bees" for the highly sophisticated job market. In order to survive and succeed people have to learn more and more – especially useful, i.e., practical stuff. The result: a tremendous pressure on parents, teachers, educators, and those who suffer most: youths. Meanwhile, the education of personality and personal growth fell by the wayside. The consequences: an increase of desperation, frustration, and aggression among adolescents which may trigger social unrests. How to guide and develop juveniles in their personal growing for the sake of a healthy, peaceful, and fulfilling future society?

The answer lies in Viktor Frankl's Logotherapy and Existential Analysis. Its principles are simple, but the impact is huge. With its basic anthropological premises freedom of will, will to meaning, and meaning in life it enhances the person's ability to apply self-distancing in order to experience the "defiant power of the mind", and self-transcendence in order to strive for a higher meaning or task. Supported by this juveniles learn to make personal, free and meaningful, but highly (also social) responsible choices. If Logotherapy is learned and applied especially by teachers and educators, or if it would be implemented in the educational body and social care system, it will help transforming the actual knowledge system into an educational, hence a real humane society.

Keywords: *Logotherapy, knowledge society, educational system, freedom and responsibility, will to meaning.*

1. Introduction: Nowadays' education for the "rat race"

In modern knowledge-based societies knowledge and education seem to have fallen apart. The evolution, or rather revolution, of information and computer technology has fundamentally changed our social awareness and valuation of information based knowledge. In times of easiest accessibility of knowledge data, stored in the World Wide Web and steadily growing as well as, regarding its factual correctness, becoming more and more detailed by a more or less democratic process of self-regulating control and improvement, the reliability of and trust in such kind of knowledge has deeply changed in a way that nowadays it seems to be impossible to appear someway educated without having a tremendous stock of quantitative knowledge in mind or, at least, ready at hand. Thereby it's not meant that only encyclopedists are considered as educated, rather that especially these persons are very much acknowledged as educated who are highly crafty in the smart technology in order to always and everywhere immediately be able to present a vast amount of data which allows to have a more than comprising glance at so called facts in order to verify any kind of statement somehow spilled out by somebody. And this cloudily stored data knowledge is assumed nowadays as the basis of any education; hence it is considered as educated whoever is able to juggle with such kind of knowledge virtuosically.

It's not the intention here to claim that these days it's only knowledge or information by itself by which one is recognized as educated. For this would be only an inversion of the absurd idea, which nevertheless is rather common today, that alone the mere availability of knowledge is already the sole basic condition for education in general. In my opinion, both of these assertions are insufficient, as education is rather a balanced mixture of information gathering and a creative and rational handling of these information by inferring, deducing, drawing consequences, and prognosticating future situations in order to improve interpersonal relationships, hence social coexistence or communal life. But it seems that nowadays the concepts of knowledge and education have fallen apart exactly in the mentioned way of availability of information considered as sole basis for education and that education is interpreted in a very reductionistic quantitative perspective.

Yet, this quantification of education is under consideration of postmodern, especially liberal economical, democratic societies an inescapable consequence of the capitalist system. First, the steady developing progress of labor division, production, and productivity is based on this form of knowledge. Second, exactly this quantification is necessary in order to make productivity measurable and hence economically exploitable, i. e., transformable into capital. The consequences are fatal and already to a wide extent observable: This pervasive quantification, which reduced the appreciation of education to mere knowledge, has already also struck us humans who are living in such societies, mainly the growing up kids and juveniles.

This systemic primacy of applicability by quantification requires from youths a certain approach to education, learning, and even personal development which in the future ensures the best and most efficient exploitation of the learned, as well as of themselves as

* PhD Cura Vitae - Philosophical Counselling (e-mail: **mail@curavitae.de**).

individuals, in order to survive as long as possible in a system of absolute competition without dropping out too early. In short, the educational system of capitalistic Western societies is conceptualized by highest possible efficiency in order to supply a job market which is highly know-how oriented with knowledgeable, highly efficient "worker bees".

In order to survive and succeed in such described circumstances people have to learn more and more – especially useful, i.e., practical stuff. They need to get specialists, so called nerds, with highly developed special skills, and they need to continue to actualize their knowledge in the given pace of renewal. This demand is called "life-long learning", which is not bad in general and is already done by most of the people naturally, though in different subjects, profoundness, and pace. But in contemporary work-life the content of additional, life-long learning is more restricted to practical, applicable stuff, and the pace is fairly high, because our world-wide knowledge doubles almost every 15 years, as de Solla Price once claimed.[1] Even when de Solla Price is not right in his assumptions and information knowledge grows much slower than predicted, it is still increasing fast and in such a quantity that keeps people extremely busy to catch-up, especially those who work in technical and natural science fields. And in my opinion the demand for life-long learning under these harsh and speedy conditions is not only a by-product of the evolution of modernity and postmodernism, but has an intention, inherent to the system, that holds the ordinary living people in their situation of "worker bees", or in other, harsher words, of capitalistic slavery.

The result of such societal situations is easy to determine: There lies a tremendous pressure on lots of people, especially on parents, teachers, educators, and those who suffer most: youths. Parents, teachers and educators have to provide a steadily increasing, already vast amount of information and knowledge in order to properly prepare the young generation for their tasks as good, hard workers for the capitalistic system. They need to get fed with appropriate applicable stuff in order to have best chances for their start of the "rat race" in the treadmill of regular employment. While the education system makes available such applicable knowledge, the education of personality and personal growth falls by the wayside. In order to catch-up with the pace of knowledge increase the youth hasn't got much time for muse, for exploring different ways of interests and learning, or for experimenting with different working biographies resp. careers. But such freedom for experiments would build a kind of educated, matured personality with lots of experiences, a proper sense of judgment, and responsibility. And as a consequence of not being able to experiment with one's own way of life due to entering and competing the rat-race people may develop some more or less crucial frustrations, a kind of existential emptiness and vacuum, which may lead through dissatisfaction over boredom, maybe also desperation to a certain kind of aggression. This aggression could be directed against oneself or against others. If such aggression among adolescents will conspire together it potentially can trigger and lead to social unrests, at last. And this would be a result which is unwanted by society as well as by juveniles themselves, and will be very difficult to get under control again once it started to get a social movement.

The question may arise, how to guide and develop juveniles in their personal growing for the sake of a healthy, peaceful, and fulfilling future society – without being ethically dogmatic or restrictive?

In my opinion, the answer lies in Viktor Frankl's *Logotherapy and Existential Analysis*.

Its principles are simple, but the impact is huge. With its basic anthropological premises *freedom to will, will to meaning, and meaning in life* Logotherapy enhances the person's ability to apply self-distancing in order to experience the "defiant power of the mind", and self-transcendence in order to strive for a higher meaning or task. Supported by this, juveniles would learn to make personal, free and meaningful, but highly responsible choices (individual as well as social). They wouldn't just run after a promised career and jump voluntarily, but headless into the treadmill of an only consume oriented working life. Rather they would consider actualizing some more meaningful goals which are more beneficial to the whole of society.

But before dreaming too much of such an idealistic scenario, we have a closer look at what is meant by this logotherapeutic approach to the youth's education, hence to change, or better enhance our current educational system.

2. Principles of Logotherapy and Existential Analysis

"Logotherapy and Existential Analysis"[2] is founded by Viktor Frankl, a Viennese neurologist, psychiatrist, and psychotherapist who lived from 1905 till 1997. Logotherapy is Frankl's answer to reductionism and nihilism in human and medical sciences of his days and was meant as bringing back humanism into the field of psychotherapy.[3] In the context of European history of psychotherapy

[1] Extracts of Derek J. de Solla-Price, *Little Science, Big Science* (Frankfurt: Suhrkamp, 1974), accessed March, 9, 2015, **http://www.ib.hu-berlin.de/~wumsta/infopub/price/price14.html**.

[2] In the following this extended term is mostly used either in its short-term: Logotherapy, or with the abbreviation: LthEA.

For a concise understanding of these two terms we may briefly summarize: *Logoherapy* is a certain method of psychotherapy which focuses on the noetic human dimension in order to elicit the meaning in life; *Existential Analysis* is the anthropological theory of the former which focuses on the human way of existence.

[3] See Viktor Frankl, *Der Mensch auf der Suche nach Sinn: Zur Rehumanisierung der Psychotherapie* (Freiburg: Herder, 1976).

Logotherapy often is recommended as "Third Viennese School of Psychotherapy", succeeding Sigmund Freud's Psychoanalysis and Alfred Adler's Individual Psychology. In the American context it can be placed between humanistic & existential psychology and transpersonal psychology.[4] Frankl's Logotherapy attempts helping people in their existential and essential search for meaning in life in order to overcome nowadays existential sufferings like frustration, boredom, and emptiness. The therapeutic approach (i.e., Logotherapy) is based on a particular philosophical theory (i. e., Existential Analysis) with a set of assumptions and a stringent anthropology.

As mentioned above there are three core assumptions in LthEA which will be explained below.

The main assumption is that man has freedom which allows him to exert his will. Logotherapy doesn't follow Sartre in his statement that we are even condemned to freedom. Rather, we are free but simultaneously also restricted and determined by other forces like our physiology, health, familial and social situation, historical and contemporary political circumstances etc. Frankl called these restrictions our "facticity". Nevertheless he highly valued freedom as the key prerequisite of being human, while not denying the determinants and limitations of phenomenal life. That's why Frankl always emphasized the *positive freedom* in contrast to the negative one. The latter means "being free *of* s.th.", whereas the former signifies the "freedom *to* s.th."

The usual and daily understanding is rather bound to the negative freedom whereby people try to get rid of, e.g., burdens, sufferings and socio-political restrictions. But first, we cannot be absolutely free, i.e., we always will have limitations and determinations. Second, after achieving such a wished state of being, so that no restrictions exist anymore, man needs to have an idea of where to go to resp. he needs to aim at a goal. And this goal, according to Logotherapy, should be meaningful. Such an aim or purpose is envisaged by our faculty of willing, because will always has to address oneself towards something. Hence, the character of will is to be intentional. And as long as we do have a will we cannot not willing.[5] So the question arises what will essentially intends. The answer lies in the second principle of Logotherapy and Existential Analysis:

Man is driven by the *will to meaning*. This assumption may puzzle, because normally people do have different wishes where their willing is going to, for example more health or wealth, this or that object (like cars, jewelries) etc., especially more power and/or acknowledgement. But at the very end what only counts is the fact that all these purposes need to make any sense, need to be meaningful, or have any significance for the person. Conceded all the other will objectives, but on the highest level of abstraction or the deepest level of psychological yearning willing aims at a reasonable and comprehensible meaning for all the person's dimensions of being-in-the-world. To illustrate this point of view Frankl often cites Nietzsche, that if man has a "why" for his living he is capable of bearing almost every "how".[6] Hence, from a logotherapeutic point of view man has quite good chances living a satisfying and successful life, as long he is able to recognize or detect in principle the possibility of a reason for ones sufferings, or a "whereto" resp. a purpose for ones actions. And it is exactly this, so this second assumption, what man only and ultimately wants to achieve with his whole power of striving. As Frankl asserts, the *will to pleasure* (Freud) and the *will to power* (Nietzsche, Adler)[7] are only derivative will powers which gain their superiority only and foremost once the *will to meaning* is frustrated and not being fulfilled for a longer time.[8]

The third logotherapeutic principle answers to the now arising question, whether it is generally and in concrete possible to find meaning in spite of often experienced situations which seem rather meaningless and far away of any possibility for meaning.

Although it is often mentioned as the assumption of "meaning in life", we can formulate this third logotherapeutic principle as follows:

Life itself, always and ever, has meaning, however bad the circumstances may be.

And this is the touchstone of all Logotherapy, and can be considered as its most fundamental dogma. For Frankl there was no doubt about the residence of meaning in life, and he stated that even in the worst and most adverse situations man is still able to *find* some meaning, because life itself is meaningful. This assumption is considered as the main one of LthEA, as the whole therapeutic way wouldn't function as Logotherapy, if it is not believed in this dogmatic assertion.

To summarize, Frankl stated that for human beings it is totally essential and natural to ask for meaning, that even man's will ultimately longs for meaning, and that there is meaning in life. But, it is to

---

[4] See Ann V. Graber, *Viktor Frankl's Logotherapy: Method of Choice in Ecumenical Pastoral Psychology* (Lima (Ohio): Windham Hall Press, 2004), pp. 171 – 177, esp. figure 8, p. 176.

[5] This description may function for an attempted explanation of the phenomenon that human nearly cannot cease his willing, unless with hard disciplinary and meditative work on renouncing the world and human's rationality. But this may be also an illusion, if Nietzsche's saying is true: Man rather wants to will nothingness than *not* to will. ("…und eher will er noch *das Nichts* wollen, als *nicht* wollen."; Friedrich Nietzsche, „Zur Genealogie der Moral." In *Jenseits von Gut und Böse. Zur Genealogie der Moral*; KSA 5, ed. Colli, Giorgio & Montinari, Mazzino (Berlin: De Gruyter, 1999), pp. 245 – 413, here p. 339; italics in original)

[6] Viktor Frankl, *Die Psychotherapie in der Praxis* (Wien: Deuticke, 1975), p. 51.

[7] With these slogans Frankl characterizes the fundamental differences between his theory and the other powerful psychotherapies of his days which simultaneously have been his psychotherapeutic parentage. That Freud's Psychoanalysis as well as Adler's Individual Psychology has been more complicated as expressed in these slogans was well known to Frankl.

[8] Viktor Frankl, *Der unbewusste Gott: Psychotherapie und Religion* (München: dtv, 2006), p. 72.

ask, what is this meaning, what makes our being meaningful, and how can we discover and fulfill it?

Meaning is an idea of something that gives our lives some good reason to be lived, that gives us orientation for living in order to make good choices in the realm freedom with its multitude of possibilities, and hence not to lose track and waste our precious life-time. As such meaning is associated with the idea of a purpose or goal in each one's life which makes it worth living for. However, as everybody will know by own experiences, it's not always easy to recognize one's own, great and maybe single life task. Then we keep on searching right and left, experiment with this or that offer of life's possibilities, but possibly still cannot find it. Meanwhile we commit with some societal goals like getting rich, making a great career, staying healthy or whatever, but feeling still empty and frustrated because we haven't found our single and own purpose. Or given that we've found it and now want to achieve it, but far too often we nevertheless deviate from chasing after it due to the many other attractions which hit us on the way and distract us, or even due to some strokes of fate which renders us incapable to follow our purposes. How to deal with such daily situations, especially in our current capitalistic society, logotherapeutically?

The answer of Logotherapy is rather simple, though it knows that its actualization is quite complicate. Logotherapy starts from the experience of ordinary people. Asked what makes their life meaningful the average and natural answer is that being engaged in more or less creative activities, experiencing some wonderful natural or interpersonal moments or great art like music or paintings, or overcoming personal adversities like strokes of fate, illness, personal losses etc. by changing the inner perspective or attitude makes life meaningful. We also will get answers like "being yourself", "staying up-right", "being honest, faithful, and authentic". These answers reflect the logotherapeutic assumption that meaning is fulfilled by actualizing one's own values and – with respect to the multitude of possible values – by the three mentioned ways of actualization: creativity, experience, and change of attitudes.[9] This so called meaning-triad also has its inner order and logic of prioritization. The most important value to actualize is that of creativity. It's not meant by this that one has to be creative in a strict, artistic sense. Rather creativity means to act into the world. As long as man is able to and the situation is suitable for, one should act upon one's own inner value system and at least try to contribute to the world with his or her engaged action. The value of creativity asks for what one has given to the world and to others. Of course, there are times to relax and refrain from doing by your own, but rather to enjoy and receive the contributions of others or of the world, so as to listen to other people or other people's work, experiencing nature's gifts like a wonderful sunset or a soft breeze in spring time. The value of experience hence asks for what one has received and still can receive from others or the world. And the third value of changing attitude, which comes last in the hierarchy of actualization, but first in respect of dignity, asks for the manner of dealing with situations where it's absolutely impossible either to act upon or experience something positive from. In situations where nothing else can be done any more, where there's no beauty to be recognized and experienced it is asked for the highest faculty man is capable for, namely to take a stance on it by rather heroically bear the situation and try not to lose dignity. To change one's own attitude to be able to endure adverse strokes of fate is one of the most difficult, yet most dignified tasks one can master in his life. Logotherapeutically spoken, suicide is no solution.

Regarding the power of such an attitudinal change it is often referred to a saying of Jerry Long who only later, quite a while after his accident, came across with Logotherapy, and eventually lectured with Viktor Frankl and got a psychotherapist himself. When Long was a young guy just finishing high school he suffered an swimming accident by jumping vigorously into shallow water and got a quadriplegic for the rest of his life. But his attitude towards life was so strong that he partly recovered and coined an impressive and illustrative saying: "I broke my neck, but it didn't break me!"[10] – This is a highly demonstrative story of what is meant by the value of changing one's attitude towards unchangeable fateful situations and supports in concrete to explain the logotherapeutic assumption of the "defiant power of mind".

Before explaining this, let's get back to the meaning-triad. It should be clear now that the change of attitude is one of the hardest, but dignified tasks man can ever fulfill, and this is reserved for really unchangeable situations. All other situations – which actually are the majority of our lives – are to be handled by either creative or experiential values, dependent on the situation itself. We mentioned already that there are times for creation, and times for recreation. But how can we figure out what's the actual demand of this or that situation? This question brings us back to the above quest of how to recognize meaning. Frankl is focusing on the so called "meaning of the moment". As every situation and every individual person is singular and unique, and regarding the whole of history also important and irretrievable, we need to listen to every moment's situation in order to recognize what ought to be done in especially this or that single case. It may sound difficult and exhausting to listen every single moment closely to what is to be done in order to fulfill meaning and probably weave on the fulfillment of the meaning of all man's history. This requires a rather unbearable

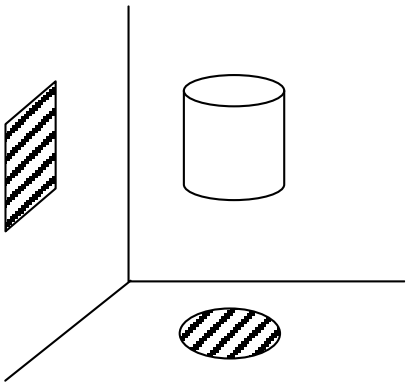
[9] Viktor Frankl, Ärztliche Seelsorge: *Grundlagen der Logotherapie und Existenzanalyse* (Wien: Deuticke, 2005), pp. 91 – 95.

[10] See the impressive interview of Viktor Frankl and Jerry Long: "Frankl – I broke my neck, but it didn't breake me", accessed March 9, 2015, https://www.youtube.com/watch?v=1_lmMl4P7cQ

responsibility, one may argue. First, it is not that complicate to listen to the demand of the momentary situation as we do have our inner voice, our conscience which is the integral of our personal value system and which tells us – in a very peculiar way – what ought to be done. Second, yes, it requires a huge amount of responsibility, but this is not unbearable, rather it is a kind of uncomfortable in usual common life. Responsibility is the faculty of response-ability, i. e., we do have the ability to respond to circumstances. Additionally we do not only have the ability for that, but rather the duty as responsibility is the rear side of freedom. As we have the freedom to will, which means to have choices, we also do have the duty to make responsible, hence meaningful choices.

To summarize, we explore and experience meaningfulness by actualizing values. Abstractly there are three ways of actualization which are called in Logotherapy the creative values, experiential values, and the value of change of attitudes. All these values are highly situational and require recognizing the meaning of the moment, which means to cognize that what ought to be done in this special and singular moment. This is possible by listening to the voice of conscience which integrates all experienced and adopted personal values and shows by exclusion what would be (or at least: would have been) the right and responsible decision. The response-ability is a faculty of human being which is closely interwoven with the presupposition of freedom and the core feature of willing.

With the latter we now come to the explanation of the above mentioned "defiant power of mind" and the presentation of the LthEA underlying anthropology. With the topic of meaning we could already recognize the emphasis on the situation and its uniqueness. Likewise man is considered as an individual and unique person. Moreover, Frankl interprets each individual not only as *undividable*[11], but also as *whole* and *complete*. This is explained by Frankl figuratively in the so called *dimensional ontology* where he emphasizes the wholeness and completeness of man.[12] Like a three-dimensional object, which cannot be fully captured by addition of its projections into lower dimensions, man must be taken always and ever in his three-dimensional totality. In the figure below we see a cylinder which is projected from the side and from above. One projection shows a rectangle or a square, the other a circle. If we want to understand the cylinder out of the combination of the two two-dimensional figures we will greatly fail.



Source: Graber, 2004, p. 69

Frankl hence applies this example as analogy for understanding man. We do recognize three phenomenal dimensions of man which are: the body (*physis*), the *psyche*, and the mind/spirit (*nous*). There are still virulent difficulties in sciences, namely in philosophy, to fully explain their interrelation, especially that between body and mind. Commonly the era of dualistic theories, commencing with Rene Descartes' dualism of *res extensa* and *res cogitans*, is over, but still there lacks a sufficient and satisfying explanation even in monistic-materialistic theories of how the immaterial mind interacts with the body, specifically with the brain.

Letting these highly sophisticated debates aside, Frankl's solution is quite practical and for a certain extension convincing. The interpretation of these three phenomena as dimensions gives way to focus on each separately – like physicians mostly treat the bodily dimension, whereas psychotherapist intervene in the psychic one and for example philosophers address mainly the noetic one – by keeping in mind that only all together constitute man. Only as such the wholeness is guaranteed and perceivable. The idea of Frankl's *dimensional ontology* is the essential inseparability of these dimensions; they cannot be abstracted from each other, i. e., being isolated or extracted one from the other. If an object is three-dimensional, then there is nothing to add on or subtracted from. Another advantage of the dimensional perspective is its attributive character, which means that we do not necessarily need to take the mentioned issues as objects or substantially, but rather as attributive descriptions, like "bodily, psychic, and noetic".

Coming back to human beings, we now can state that exactly this exceeding third noetic dimension discerns man from animal. Sure, man also inhabits the physical and psychic dimensions which both are mutually interdependent, influencing and determining,

[11] Cf. the Latin origin: in-dividere = not (to) devide.

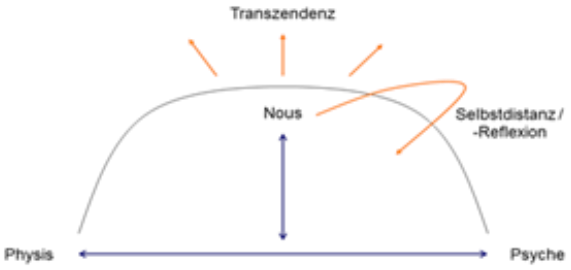
[12] Regarding the wholeness Frankl doesn't consider it as a completed perfection, but rather it develops into such only with the end of life resp. in the death. But Frankl assumes man already and in every second of his life as complete and whole, so that he stresses that the essential feature of "existence" never could be literally analyzed, i.e., dissected, but rather be illuminated as a unitary phenomenon. Whenever we dissect the spheres or dimensions of man, then we do this only for methodological reasons in order to make it descriptive and for being able to communicate about it. (See: Viktor Frankl, „Grundriß der Existenzanalyse und Logotherapie [1959]." In *Logotherapie und Existenzanalyse: Texte aus sechs Jahrzehnten*, by Viktor Frankl (München: Piper, 1987), pp. 57 – 185, here pp. 63 – 73).

but the specific feature of humanness lies in the dimensionally different faculty of the noetic, i.e., the freedom of will to meaning wherein such phenomena like freedom, responsibility, love, willing, thinking, reasoning, consciousness etc. are dwelling. Frankl describes this difference as the *psycho-physical parallelism* on one hand, and the *psycho-noetic antagonism* on the other.[13] Especially the latter provides two types of freedom according to two human core features which constitute the essence of man.

The first is called *self-distancing*. Man noetically has the freedom to behave either along his physical and psychic (pre-) conditions, or against them. He can take a stance on them, he can decide whether he wants to react on their signals instantly and as usual, or first reflect about it and make a mindful decision how to react upon it. As man is free, he is not bound to repeat always his reactions, but can say "No" and act different. This power was already mentioned above as "defiant power of mind". Once Frankl demonstrated this faculty in one of his many tv-interviews, which I cannot exactly recall which one, when he was asked on top of his favorite mountain Rax, near Vienna, how he became such a passionate rock climber, although he suffers vertigo. His answer was stunningly simple: "I don't need to take any nonsense from myself."[14] What he means is that although there is the real and tremendous anxiety of height he still can attempt to willingly overcome it by trying his best in climbing, especially as he loved to be in the mountains and hanging off a rock. For usual daily life this example will show us that we don't need to react upon any situation as one usually is supposed to do, but take a how small ever hiatus between stimulus and response in order to consciously decide how to respond to this or that situation.

The second core feature of man is called *self-transcending*. Besides the ability of taking a stance on the situation man is situated into, he also is able to totally abstain from himself in order to address something that lies completely outside of his own mental and physical vicinity – for example another person, another living being, another item or task which transcends totally the own self-centered wishes, goals or aims. With this faculty man is able to fully transcend oneself, go out and beyond his own interests – which literally means "to exist".[15]

And it is especially in this possibility of *self-transcending* where Frankl positions the quest for meaning. Man will find a real meaning, a significance which justifies the whole of the individual's wholeness, only if he transcends, if he steps out of himself in the direction towards others, if he forgets or loses one's self by serving other persons, a beloved one, or a higher purpose.



Source: Andreas Schreiber

To summarize, in Frankl's logotheory man is considered as singular, unique, indivisible, and hence phenomenally appearing as wholeness, whose structural elements are *self-transcendence and self-distance*. These basic features lie in the noetic dimension which discerns man from animal and which, though not only surpasses the dimensions of the physis and psyche, but also pervades them as it were as their inner pivot. The constitutive moments of the nous are particularly the basic conditions of freedom and the will to meaning, which pervades humankind as its motivational force. And as stated above, the power of will always is directed towards meaning that dwells in every situation as well as in the totality of the individual life.

3. Conclusion: Benefits of Logotherapy for educational systems

For now it should be made clear what the principles of LthEA are. It emphasizes the individual freedom which lies in the noetic dimension in order to transcend one's self towards something meaningful and take a stance on one's own reactions in order to not only follow them mechanically and half-conscious, but with full awareness of one's own "defiant power of mind" to make meaningful and responsible choices. The aim of Logotherapy is helping people in self-development in a way that these persons are no longer blaming others or circumstances for their own situations or even failures. Rather it's aimed at strong, conscious and self-responsible persons who make their decisions based on their own and inner value system according to the objectively demand of what ought to be done resonating with their conscience.

Applying LthEA in educational systems would help juveniles to grow up with more self-respect and respect of others, with a higher awareness not only of their personal freedom of acting out their individuality, but also of their responsibility for their choices and deeds, and for their self-education. The latter means that each person is responsible by himself for developing his own character and personality by self-reflection and self-awareness. The attitude of hanging

[15] Cf. the original meaning of Latin: ex-sistere = stand forth, "Online Etymology Dictionary", accessed March 9, 2015, http://etymonline .com/?term=existence.

loose and/or only following the mass opinion is not supported or tolerated in LthEA.

If it could be implemented in contemporary educational systems, hence into the whole educational body and even social care systems, it will help transforming the actual knowledge-based society into an educated, real human one. For this it might be necessary to first teach the teacher and educators, so that they can act and react therapeutically whenever the situation requires it. Second, it might be also necessary and helpful on the long run to instruct also the juveniles in Logotherapy's body of thought. It is not that all should become therapists by that. Rather people who get in touch and even involved with LthEA experience already a change of attitudes towards the logotherapeutic core assumptions and anthropology, and gain a different, more self-reflected and responsible perspective on fellow humans and the world in general.

On the long run of implementation of LthEA in the educational body it is to expect that more and more people will reject to enter the capitalistic "rat race" and follow more their inner of conscience in order to actualize meaning.

THE PSYCHOSOCIOLOGY OF THE DELINQUENT WOMEN IN ROMANIA

Mirela Cristiana NILĂ STRATONE*

Abstract

As a general definition, the personality is all psychological traits of the person, an assembly of the integrity, correlated with the unity of social roles of the individual who accompanying them the course of life.

The personality is both object and subject of individual development.

It is primarily a concept related to epoch, country, group, organization which it belongs the individual throughout his life.

Also, one can state that the personality is formed and evolves once with the action of external factors of environment, she does not exist aprioric thereof,and they are not strangers to the determinations of personality: this puts its mark on the environment, both categories coexisting.

This analysis represents an important segment of the study on the women offender profile in Romania. Social need of the knowledge of such a is clear profile accented of the dangerous character wich it represents the woman offender in the Romanian society.

The aim of the present study consists in researching about the social and psychological profile of criminal women.

Keywords: *personality traits, bio-psycho-socio-cultural system, biopsychological components, social components, relapse.*

1. Introduction

The personality is, to the integral human level, a bio-psycho-socio-cultural system, which is fundamental under the conditions of the existence and activity in the early stages of individual development in society."[1]

The human personality contains specific traits. These traits distinguish him from the behavioral point of view, of other individuals.

"In the defining of the personality, is frequently resorts to the formula: *the personality is unique and unrepeatable.* And the attribute of individuality attached of the personality, emphasizes this signification; the essence of the personality resulting from its particular features and their original articulation. And is manifested in the behavior of the individual, in his actions and interactions."[2]

The personality, along with the temperament, the skills, the character and the creativity, make up the system of the personality.

„The majority of the personality researchers have put _ into focus the relationship between structure and her conversion in behavior, emphasizing certain properties, traits, internal dynamics or characteristic factors which determines the individual behaviors. The trait itself may not to be directly measured, was resorting to the assessment of the behavior, reaching to identify the personality with the pattern of behavior."[3]

For the study of criminogenesis, it was concluded that is needed a research of synergistic type.

Considering the fact that in terms of the basic characteristics of the personality of the delinquent there is no fundamental differences between sexes, the synergic perspective from which it is studied the personality of the delinquent involves[4]:

a) the clinical research for the reconstruction of the personal and patological antecedents of the subject;

b) the paraclinically examinations having as main role the proof and the objectification of the clinical diagnosis, as well as the deepening of the etiopathogenesis some disturbances;

c) the biogenetic investigations having as premise the role of hereditary factors in the structuring of personality, and as aim the identifying concretely of the factors of heredity;

d) the neurofiziopathologycal interpretation for the explaining the causality of aggresive behavior manifestations with social resounding, related biopsychological conditions that exacerbate or trigger them;

e) the sociological research, which has two objectives: primarily, for the reconstitution of the delinquent structure personality and of the way in which was framed in the social environment, of the conflictual incidents and how they were solved and

secondly, for the orientation of the possibilities to rebalancing and social reinsertion;

f) the medical-legal resolving, namely the providing of the medical-legal objective data, on whitch basis is concluded on the state of imputabilitate (awareness, discernment).

Such a transdisciplinary approach of deviant behaviors plays a crucial role in the avoidance of the judiciary errors and contributes to the penitentiary treatment also past-executional, so at re-socialization and reintegration.

The personality components and the personality types make up two basic perspectives in personality analysis.

2. Content

Biopsychological components

In the book *„Psihologie judiciară* " (op. Cit.1992) N.Mitrofan, T. Butoi and V. Zdrenghea, they considered the qualities and deficiencies of a person as being determinants in the constitution of personality. Thus, we can talk about positive or negative issues concerning to the person's health and his physical appearance. The physical appearance matter very much to women, the basic condition is to be a proper health. A deficiency in this sense creates frustrations, which could lead in many cases to deviant behaviors. There are known cases of murder or causative of death blows, with author women who use such acts out of jealousy or envy. Frequently, the inferiority concerning health or physical appearance appears compensated in activity. This one takes shape as a "revenge" and falls within the criminality sphere. This one does not mean that men do not support inferiority complexes in case the major deficiencies of the body prevents them to be happy.

In terms of the temperament of the women who arrive in the situation to execute a custodial punishment, it should be noted that in most cases studied, this present lability. The psychic life of the prisoner women suffers multiple and brutal transformations, starting with the placement into prison and continuing up to the end of its life. She will support rapid changes from a peaceful inner state at a agitated state, and each of these statuses can operate sometimes more, sometimes less. Everything is as a disorder, which can lead to the abnormal statuses which enter frequently in the pathological area.

The relation attitudes-aptitudes is conditioned by the aptitudinal endowment of the personality. In the case of the delinquents we find talented, skillful, intelligent womens, who decided that the area of their activity is prohibited, thus manifesting itself socially negative. We encounter womens as economist or accountant, lawyer or doctor by profession etc. in whose case, the talent in the profession practiced was the nucleus on which to build a criminal career: embezzlements, frauds of public documents or private, funds embezzlement, biased decisions and sometimes the refusal to exercise the profession without receiving in advance illegal benefits. In any situation, the talent, intelligence, skill, are dependent on individualy attitude who can orient their efforts on a positive or negative track of social point of view. The result is weighed until at a certain moment, on a case by case in illicit gainings and freedom.

Social components

The essential features that are retrieved permanently in the work of the individual and not support significant changes, make up the character, a personality's structure that emerges as an effect of the social environment action, the education, with a decisive role in shaping the behavior.

The behavior models imposed by society forces the person to choose some attitudes both towards self and towards others, work, life, etc.

It can be said that the attitude as the foundation of the character, contribute to the formation of the personality, balanced or deviant, as is oriented the activity: in a positively or negatively sense.

Personality traits

In the book *„Psihologia comportamentului deviant"* (op. cit., 1994), the psychologist Ruxandra Rascanu starts from the idea according to which the personality traits are variable, they evolve lifelong of the individual, due to the influences which it receives from the environmental area, with which are in constant contact.

In this process, the personality suffer emphasis of the existing traits or impairments and their improvements, and the acquiring of new traits.

Regarding the characteristic traits of the individual's personality, they appear as trends of reaction, relatively permanent.

The traits can be cause but also effect of individual behavior. A mother who abandons her child (behavior) is immoral (trait). The cause of her behavior is located in immorality, but also this trait is it accentuated due to the act committed.

An individual has a lot of traits, positive or negative, but his personality is formed depending on some features. These acquired supremacy over the others, becoming dominants and giving specificity his personality.

Personality types

The superior organization of personality we encounter it in form of type or style.

The first to have separated the personality types was Hippocrates (sec.V î.e.n.). He „chose as a criterion of its typology, the predominance of one wich the four humors of the human body (blood, black bile, yellow bile, phlegm), stipulating therefore, the existence of

four fundamental temperamental types: sanguine, melancholic, choleric, phlegmatic."[5]

Another typology of reference in history is determined by C.G. Jung, who starting from purely psychological premises, finds two personality types namely: extroverts and introverts. Both attitudes are found to every individual, but depending on case, only one orientation is dominant and conscious, subordinating it the other. These types are found to extreme one of each other. Jung tries to explain the existence of a third type, ambivert, that it lies between the two extremes, but he characterized so rigid each of the two types, extroverted and introverted, so that creates the sensation of template, of pure type that does not finds its correspondent in reality.

Another idea that emerges from Jung's typology is that the extroverted person is generally a person with negative traits, willing at social deviance, while the introverted is present to the opposite pole.

H. J. Eysenck is trying a similar typology with Jung's style. He explains which are the characteristics of each of the two categories, the extraverts and the introverts, separating them, placing them in completely separate groups, but still recognizing that geographical space offers surprises, in the sense that the delinquents have different characteristics depending, among others, of area.

Most interestingly, the most widespread, and most difficult to studied remains the intermediate type of personality (ambivert).

Of metaphysically point of view, the personality typologies helps us to study deeply the criminal behavior, but remains essential the reference to individualization, as in case for punishment granted for offense.

The psychology of women offender

The psychology of the detained person, as a result of collective social action; In contrast, the deviance that doesn't come in the form of the individual personality, but at the level of groups, through the social behaviors unsupported by the community, presents itself as a group phenomenon.

First, the expression of a mental illness on an individual level has its origin in the manifestation and the influence of a community.

Secondly, the deviance refers to the person as a social actor, the study being realized customized. The prisoner who will have some degree of mental illness is not considered deviant by the origin of her disorder, but through their membership (solidarity, socialize, sodalite) considered deviant to the group. The manifestations to such a group should not always reach criminal situations, staying in the uncriminal deviance area.

Therefore it can be stated that the group effect exist and it manifests previously the individual mental debility, largely resulting the action, sitting right at its origin.

Mostly, the prisoners located in the Romanian prisons, motivate their act as a result of the discrepancy between their goals (for which, in Romania, increasingly concerns to a decent living standard or even below) and the resources that society gives to achieve those goals.

In *„Psihologie penitenciară"(*op. cit.2001), Gh. Florian presents the deviance among others, as a result of the crisis of inadequacy, calling the Merton's theory: „the deviance results from the dissociation between social structure and the methods to which the person can call to achieve goals".

The entry into the prison, for a woman means deep estrangement who was not prepared for ever. It is as if that would enter through a black hole into another dimension, but instead of meeting the fascination, the unknown suspect just from the reading fiction, she meets all that is grotesque for a woman: the lack of privacy, new rules for hygiene (a certain hygienie, that she needs to learn and accept), the slang in the most trivial forms.

The personality of the newly detained will suddenly become strong vulnerable amid the disharmony in front of an explosion of the frustrations coming from behind. placed face to face with lack of defense vis-à-vis the new rules imposed of the quarantine, which will be decisive in the new social networking.

The shock manifests at all levels of personality, the lack of affection generating bitterness, the lack of esteem leading to the undue need for esteem, all on the background of prison overcrowding, a phenomenon that underlies the feelings of anger, hatred, contempt, revenge, etc. It is necessary to specify that the overcrowding arises at the time of the exceeding the possibilities for accommodation in penitentiary institution.

But the phenomenon is present even in the cells where are unoccupied beds: the lack of the intimate space from home, the lack of hygiene, comfort and nourishment of which the individual has benefited before submitting in the detention space, the presence of strangers, and special conditions not yet accepted (for some people the conditions offered by the prison can not be accepted in full never by the end of the sentence), the presence of foreign and unpleasant smell, does not differ much from situations where all the seats in ceell were occupied.

All this will be added to an inevitable psychological collapse that will generate more aggressive causing emotional intolerance towards the detention environment.

However, on the psychic prisoners will act "the walls complex": the owned will become more withdrawn, supporting a strong process of restraint, and if she won't have enough resources to remain in

[5] *Ibidem*, p. 53.

this state, she will exteriorize, adhering to the condition of prisoners, finally socializing at the prison culture.

Along it's the prison includes:

- the adaptation phase, when the perso lodged in prison feels fear and the need to obey, amid the feelings of loneliness, abandonment from those left out, helplessness;
- the adaptation stage is the stage in which the prisoner passes through the process of socialize in the prison subculture, internalizing both desirable rules of prison custody, that will try to exploit them in the interest, by blackmailing, streams, spreading rumors, lies, etc. as well as the norms and values promoted by the group of detention in part, aiming also personal interests;
- the participation stage, where the prisoner feels no longer alone, but much more self-confident; there is already a network of interpersonal relations between her and the rest of prisoners on the one hand and between her and prison staff on the other;
- the integration stage, when the owned strongly feels the need of membership of the group to which it belongs, adhere to common goals and has a particular status within the group (social integration); psychosocial, the prisoner support easier the stress, tensions will annihilate largely (psychosocial integration); as representative of the group detained in which is part of, it will be the bearer of basic personality characteristics, will represent a "sociotip" bearer of valence group (subcultural integration); from this step it starts to the reintegration, or vice versa, to the repetition: some women realize their benefits if they make efforts to re-socialization - work, participation in rehabilitation activities, participation in training courses - and are preparing for release, because they want and favors them and other realize that is more comfortable to live in prison and they integrate to way of life so well, that after serving their sentences will return knowingly in the prison environment where the shock of the submission in the quarantine won't exist, they being already "hardened" for what they expect.

The psychological changes and the disharmonic manifestations of the prisoners personality, we encounter throughout the prison process, whose steps will be detailed in terms of prison treatment in the last chapter of the book.

The psychosociology of the relapse in Romania

I have shown above what the shock effects of the submission in the prison are, particularly for a woman serving a prison sentence. However, some of them relapse, so occurs the relapse.

The relapse exists and gives major problems due to the failure treatment of the prison, more exactly it is a symbol of the impotence of resocialization work in the prison.

For perfecting the prison treatment methods, many experts have classified the recidivists in: casual and marginal, pseudo-offenders, ordinary offenders, offenders of habit.

There are two types of theories among the criminal: retributiviste theories aiming a proportional relation between punishment and unlawful act for which it will be applied also the utilitarian theories, oriented to the results and long-term effects of punishment.

Regarding the application of the punishment, this is part of some models of penalty: occasional female offenders to whom it aplies usual treatment of intimidation, those considered suitable for straightening, that receive a reeducational sentence, dangerous delinquents that requires a large penalty which include neutralization.

One aspect that is worth taking into account is the one of explaining the situations of prison failure treatment, which mostly lead to relapse, but especially the investigation of the contemporary causes from the Romanian criminal area.

Thus, the social factors have acquired a special scale in the today Romania regarding to the criminal causation and the relapse versus with psychological factors, on which has been focused so far, as those on which action must be taken.

The prison treatment focuses primarily on psychological counseling, rehabilitation programs are limited to spatial temporality prison, reintegration being only a theoretical aspect shy introduced in records and without the ability to be used, on the one hand because of the shortcomings of the existing legal framework and on the other hand because pf the social workers – the sociologists, social workers - who are undervalued at the prison and not only, for psychologists, seen as a "do-totum", asking them to resolve all the problems, and finally they support the the criticisms of the failures on psycho-socio-cultural plan.

The social factors are the ones that lead some women to achieve immediate goals through illicit means, Romanian company offering quite difficult living conditions for women, mainly due to the difficult economic situation.

There are certainly women who relapse of mental causes, but their number is illustrative for us to focus for the most part on psychiatric or psychological researches.

Of course, it is necessary the departure from the psychological analysis of recidivism, but it is imperative the sociological analysis, so a further research by highlighting all the social factors that contribute to the etiology of the crime by setting concrete goals and aspirations of former prisoners under today Romania's concrete conditions and through the revaluation of the methods and the the possibilities of achieving these goals.

Obviously, it will lead to the precarious economic situation, the social protection system and legislative deficiencies, too.

Last but not the least, it appears the need to focus in the context described above, on a reconsideration of the concept of reinsertion, as well as a review of the current dimensions of reintegration of the persons released from prison, but particularly women, major or minor, being repeat offenders in smaller numbers than men and minors back in the detention.

At the same time, it requires a forecast regarding to the reintegration, through it offering to the prisoners, among others, during treatment resocialization, some clarity on the future, which will inevitably lead to trust and hope, problem elements within the group of detention, as already has been pointed out in this paper.

3. Conclusions

Following studies conducted by researchers who initiated this area, which I would call without mistakes, founders, and the study carried out by me personally in Romania, we can conclude:

- the components of the personality of women offender are in interdependent relationship;
- the society provides the appropriate framework for the commission of offenses;
- the society is the product of human awareness, of the human individual character, it is the result of our development throughout history.

„Regardless of the type of society we have absolute relationships, fixed, in terms of the human personality. This does not mean that everything is absolutely, constant. Of course, we have variable elements, but they refer in particular to the types of expression of delinquent behavior, attitudes and interpersonal relationships.

Scholars who reject any biological explanation and explain the numerical sex differential purely in terms of social conditions are more numerous. Still other researchers have concentrated on the study of certain characteristics of female offenders such as health, intelligence, exposure to economic pressure, and an unfavorable home environment.

We concludes that the amount of female crime has been greatly underestimated by traditional opinion and that the criminality of women reflects their biological nature in a given cultural setting."[6]

THE INFLUENCE OF PARENTING STYLE ON PSYCHOLOGICAL DEVELOPMENT OF PRESCHOOL CHILDREN

Cristina ȚÎMPĂU*

Abstract

Basics of mental development of the child are placed in the family. Social environment influences the child first begins to develop proved to be crucial for the further development of which is the subject of education. Studies in this area have shown the importance of family environment for the development of the child's personality, you can print a family atmosphere becoming child, depending on its quality.

Interaction fundamental factors determining a certain level of mental development there of in the day care with which different but as soon as the warm family environment kindergarten.

The work done by children, teacher age and individual peculiarities respect thereof. As we developed the preschool stage reveals individual differences existing intellectual and socio-emotional. Of course, these differences are visible in previous substages, supported by the fact that, yes, every human being is unique and original, but every parent building by means of a specific personal relation to their child in education exercised on it, makes these differences even more visible.

Parenting style adopted child's education has an impact on the development of its mental, behavioral main areas that define the cognitive and social-emotional one. It is true that talking about parent-child interaction are taken into account the influences of parents on children and the children's parents. The influence exerted by both sides can take the form of a "spiral" relational continuity which depend upon the effectiveness of parenting style. It is one of the factors that influence the quality of parent-child interaction.

One aim of the present work is strictly theoretical guidance for parents and future parents. It is believed that the practice of educational style, balanced or less balanced prints parent-child relationship a specific character, positive or negative. Therefore, it seeks ways of structuring information to guide their parents to adopt appropriate educational strategy, adequate own child.

Keywords: *environment kindergarten, social environment, parenting style.*

1. Introduction

This paper aims to:

- study the relationship between parental education and preschool sociability peculiarities;
- study the influence of consensus (parent-teacher) education on preschool sociability;
- designing activities that involve children and parental involvement in order to improve parent-child interaction.

Knowing and demonstrating the consequences of adopting a particular parenting style can occur to form and even educating parents. This optimization parent-child relationship, promoting the idea of an appropriate parenting style and the improving effects of practicing inappropriate parenting.

Early intervention in parent-child relationship, the more efficiently it can prevent the occurrence of mental development problems, to adapt to the social environment in relationships with others who can hardly or not at all can be solved with time.

However unlikely it may seem to some, parent education children greatly influence their lives as teenagers, young adults. And not so much the content of education, and especially the manner of achieving it.

The theme of the work has implications both theoretical and practical. The latter occur strictly educational plan, targeting both the family education and formal education. More specifically, it is about increasing the effectiveness of these forms of education for social integration of children, in short, to meet the educational ideal.

Interdependence informal formal education is more than obvious, both forms being one for the other as a basis for education and content.

Family atmosphere varies greatly from one family to another. The manner in which it affects the child's personality is undeniable. It is considered that a broader in scope than a family atmosphere has family climate. Family climate is defined as "very complex formation psychiatric disorders, involving all the moods, interpersonal relationships ways, attitudes, level of satisfaction which characterizes the family group for a longer period of time" (Mitrofan, 1991, p. 72). It acts as a filter between educational influences exerted by parents on children and their personality. It has a complex structure, with common features that parents should take into account in their educational activities.

Family climate determines the behavior of the child, starts its mental development. You can not talk about a positive family environment than in terms of understanding the child as a person that needs

* PhD Candidate at the Faculty of Psychology and Educational Sciences, University of Bucharest (e-mail: **cristinatimpau89@gmail.com**, **cristina.timpau@drd.unibuc.ro**).

consideration and recognition, love, guidance, support and respect. Emotional security, harmony, play roles in the family, the level of integration of the family in society are factors that contribute to ensuring high quality uniui family environment.

Type of family interaction and behavior of each of the members is more important than the presence or absence of one of the parents or brothers and flexibility play an important role with the family.

Emotional climate is a condition of fulfillment of educational success exerted by parents.

The most commonly used size analysis and characterization of climate conditions are: • acceptance-rejection;

- permissiveness-restrictiveness;
- Heat-affective indifference.

However, these criteria are taken into account in determining parenting styles.

Osterrieth (1973) states that "a child means accepting embraces burning desire to explore and make attempts with his hands, to accept the effort of discovery and invention which starts right from the cradle and never ends" (Osterrieth, 1973, p. 69).

Accepting children by parents benefit the social behavior of the former. Facilitating positive interactions, self-confidence, easy communication, integration much easier in groups, appropriate social behaviors manifest in all circumstances.

Unlike accept children of parents who feel their rejection is characterized by emotional instability, irritability, lack of interest in school, social antagonism, charging authority as harsh and hostile. Moreover, these children often exhibit aggressive behavior, rebellion, hostility, propensity to vagrancy and theft (Symonds cit. In Dumitriu, 1973, p. 48).

The second scale - permissiveness-effects restrictivitate- particularly is important in shaping attitudes and behavior of children since the early ages.

Permissiveness refers to the possibility given to the child to act without constant fear of punishment from parents to living varied experiences. Permissiveness effects are to develop initiative, courage, independence, self-confidence.

Restrictiveness limits the child's interaction with the environment by imposing restrictions, the world outside the family is considered to have negative influences in child education.

Protection of the little exaggerated distrust will facilitate the development itself, building a false image of society. In terms of social behavior, children are withdrawn from the field of social relations, are passive, dependent on another.

Important consequences in terms of mental development of the child has emotional heat-size indifference. Suggestive in this regard are the words of Osterrieth (1963) emphasizing the importance of manifestation and expression of love. He believes that it must speak with a clear language but not a language that consist only of words.

The different ways of expressing the emotional heat (quality of care, tenderness daily contacts pleasure playing with baby, goodwill, interest they show father to his works, which enshrines the daily play, communication and joint actions with the child) provide security emotional and psychological development of the child's favor. Ross Campbell (2001) states that "a proper fulfillment of emotional needs" is the cornerstone of effective education (p. 16).

By dwelling less on "adequate fulfillment," it points out that each parent must show concern for the child, directing the activities and conduct. The question supratutelării child and the effects of its development plan. These are often opposed a practice that parents' expectations.It should be known and respected by any parent that "any aid given to the child is unnecessary obstacle to its development" (Montessori, 1991, p. 29)

Family is the first environment in which the child is loved and thus learn to love others, to give love. Therefore, the family is a real "school of feelings; In this way, the family shapes its basic personality dimensions "(Osterrieth, 1973, p. 51).

Since the early days, child development is dependent on the quality of the relationships established between it and the parents. The child will be able later to answer the questions "Who am I?" (In order to discover self-identity), "What am I doing?" "With whom?" "With which tools?"

No matter what causes it, indifference of parents towards children has multiple results, negative: disorientation, uncertainty in the manifestation of behavior, lack of self-confidence in people due to lack of parts, tend to make emotional attachments to persons outside the family but on the basis of lack of discernment.

Family environment is viewed as a "democracy at the smallest scale" (International Year of the Family, UN, 1994) you need to really work on recognition and mutual respect.

Two opposing theses have been written on the exercise of family education in contemporary societies developed. The first expresses the idea that there is education conducted in the family. This for two reasons: either dispossession family privilege to educate in a court outside profit or "demisonarea" the family responsibilities.

The second sentence emphasizes the importance of family education, exerted especially before birth and during the first years of the child's birth. Its role is overwhelming that creates a kind of determinism future trajectory.

However, the role of education in becoming members of his family, is not only one, but none minimum, a simple belt lacks initiative. Family environment is not simply a refuge, but by nature and diversified private emotional bond that unites members, it can play a necessary maturation secure children.

The key question,developed in the last decades, of the degree of responsibility of parents in the psychosocial development of their children or, conversely, (self) exclusion from it, thanks expansiuniii school education, was a pretext for the development of various conceptions of the role of family in education.

In Volume I of the paper "Sociology of Family Education" Stănciulescu (1997) have developed mezosistemul Montandon Jean Kellerhals and Cleopatra in 1991. This mezosistem is defined by setting the various interactions between microsystems. At its center lies the family, and depending on the specific competenţelor- axes or difuze- and of how family involvement in children's activities are established its four operating models:

- The opposition - in this model, the family court does not recognize other than very specific skills and does not consider it necessary to intervene in the action that they exert on the child.
- The delegation - according to him, the family recognize other servants diffuse skills, competence similar to that exerted itself. Parents do not consider appropriate action towards correlating actions.
- The mediation - specific powers of courts to recognize educational and parents involved in the child's relationships with other educational factors.
- The cooperation - in this model are recognized by family, educational comprehensive powers of all courts and need to coordinate their actions.

The family is the "core fundamental tool of larger social structure, meaning that all other institutions depend on its influences" (Stănoiu & Voinea, 1983, cit. In Stănciulescu 1997, p. 11).

Educational styles adopted by parents in the education of children contributes to creating a family atmosphere more or less beneficial to the child's personality development.

Therefore, family atmosphere will lead to the choice of parental attitudes (often unconsciously) in different moments of raising a child. How parents react to events strongly differentiates child development child in the family. To support this claim, Kaye (1984, cited in Birch, 2000, p. 39) made a number of recommendations to parents:

- the need to meet at birth physical and emotional needs of children to prepare them for communication and networking with peers;
- providing protection;
- guiding the process of acquisition of new behaviors;
- strengthening and confirming proper behavior and manifested learned by children;
- providing models for action, affective relationships and communication;
- Encourage children to establish relationships with people outside the family.

These recommendations may be considered parental functions according to their achievement settling positive or negative nature of the emotional climate.

In the above plus the set of Kari Killen (1998):

- Ability to perceive the child in a realistic manner;
- Ability to accept that it is solely the responsibility of adults to meet the needs of the child and not vice versa;
- Ability collaboration realistic expectations of the child;
- Ability to positively engage in interaction with the child;
- The ability to have an empathic relationship with the child;
- Ability to prioritize basic needs of the child;
- The ability of the parent to master their pain and frustration without it reflects on the child.

The characteristics of these functions relate to their dynamics, can be strengthened or weakened by various social or psychological situations. On the other hand, they aim basic needs of the child and the emotional side of the parent-child relationship.

The family can be both a positive factor and a negative factor / child education. Ideally, the family should be the aim of enhancing the positive influences and reduce negative influences. This is because the family, as no other special institution can not bring so much harm in children's education. Purchases Childhood retain throughout life, in her child's personality placing the bases. Family is the first factor that contributes to structure the basic components of the child's personality. This is due to the richness and diversity of interpersonal relationships and behavioral patterns that you furnizeză.

Trying to explain the mechanism by which this occurs parental influence on children's mental dezoltării finds that the facts of daily life, adult interactions are perceived and learned by children. On the other hand, the manner in which parents respond to the needs of the child, is another factor.

Relevant is the point of view of Birch (2000), which emphasizes the importance of securing emotional child by the mother, establishing a strong emotional ties between the two. Thus the foundations of social behavior later, the child taking easy, gestures, movements, facial expressions, verbal structures, attitudes and social behaviors. The author states that "from a very early age, children orient their attention, especially the physiognomy and human voices" (Birch, 2000, p 38).

We must not lose sight of the meaning of parent-child interaction. If long been targeted educational influence unidirectional manner from parents toward children, with time to recognize the influence of the parent child. The notion of "interaction" indicates reciprocal influence between parents and children. A defining characteristic of this type of relationship is that the intensity of the relationship between parent and child both age ranges. Maintaining desirable relationship involves providing continued parental attitudes and practices in the mental development of the child reached. It is the need for a permanent

adaptation of parenting style to the specific age of the child. Of course, this adaptation is desirable to develop within certain limits so as to not become inconsistent or uncertain educational actions that might confuse the child and, more influential in the negative.

It is well known the importance of the environment to meet basic needs and fundamental assembly. Deficiencies emotional, social, cognitive and ethical expression is almost always a difficult past, the primary narcissistic wound caused by a poor relationship. Pourtois (2000) considers that Deficiency Syndrome is facing serious and difficult.

One example given by the same author illustrates well the vital need for acceptance of the child and the attachment to parents. "My parents love me because I come to say goodbye when you are in bed." This is just one of the multitude and variety of behaviors that parents can manifest to express affection. If for some adults, it may seem trivial to the child, his mental development, has a beneficial effect with multiple resonances in cognitive and social-emotional scope thereof.

For some adults, evidence of care and affection can be a way of wasting time, considering the professional interests as being on the forefront. Interestingly, what is useless for some parents, the child would be a great asset in its development plan.

Parental investment appears as a founding element of feeling positive existence. It also constitutes a central element in the child's identity formation.

Parent-child relations participating in the game closely overlapped part of socialization and customization. Millet (1987) AFIM that parents and grandparents are "carriers purposes". Goals, intentions, children meet for a function pushers representations to the future, currently supporting and buoying of the possible. In other words, these underlying psychological development of the child's behavior is influenced by parental intentions.

Child's mental and social identity is constructed according to its relationship with the parent, thus making a connection in which "collide" and experience needs (re) cognition and personal sense of unity.

Pourtois (2000) summarizes in a quality plastic expression importance of parent-child relations, considering them a "melting pot within which operates a profound alchemy" (Pourtois, 2000, p. 3).

Strengthen or weaken the emotional needs of cognitive and social needs. The author stresses such wealth transformations occurring in child development, qualitative aspect of which is dependent on the quality of interaction with the parent.

The family remains the basic court society, in which are experienced and organized individual growth process. The family crucible formed psychological and cultural identity of the individual.

A paradoxical function of the family is to allow the child to take both, both the presence and absence of the other. The family becomes a melting pot of symbolization. Function enables the production of meaning and facilitate the child's adolescence crisis will increase. We emphasize practical needs affection and autonomy of the child to be met both in relationships with parents, significant others.

Another function of family education aimed at developing the capacity for autonomy of the child to freely define their own guidelines to decide according to his own ideas and a hierarchical value system. In other words, the education received in the family contributes to the socialization of children, but also helps to build their own identity, to define and strengthen their feelings, beliefs and own ways of action.

Block (1971, 1980) proposed a typology based on the existence of groups of parents whose educational strategies were reviewed, and those of their own parents.

The first group corresponds lax individuals who do not exercise control. Most of them were careless and indifferent parents who have invested in parenting are in disagreement with them. The second group consists of individuals rigid hiperverificatori. The environment in which they grew was authoritarian, less cheerful and binding. The parents of this group are conservative and inhibitors. Penalties imposed child to complete a task are numerous and regular. One can say that it is a "override" exercised at early ages. The third group is the self-confident individuals. I am loving mothers from families, patient, encouraging change, both parents share the same values education.

The study demonstrates the existence of a process of reproduction practical styles to a child who has a parent in turn. On the other hand, some authors contradict this hypothesis, stating that a sentence accompanied by a rational explanation allows suppression effects and future imitation authoritarian behavior.

Some authors have highlighted the limits of authority love parenting styles. They believe that the adoption of a style or another, depends on many other variables, such as: the effect of social origin of these strategies, the child's sex.

In other words, every family system is practiced specific ways of communication between the child and parents. Each family member is actor socialization and educational strategies involving different.

Research on social interaction outside the family tend to show that patterns of family interaction affects interactions in other situations. Depending on the context of education, adolescent development will be modified outside the family, influencing interactions with unfamiliar people and those of her age.

Depending on parenting practices, developing autonomy will be different from teenager. Authors like Cicognani and Zani (cit. In Pourtois, 2000, p. 103) studied parenting styles and adolescent autonomy. I believe that gaining independence is not achieved without conflict. Posting ability to make their own

decisions, to be real and live alone, tend to reactivate bases family or even to put into question.

Harter (1983, 1985, 1993, 1997 cit in Pourtois, 2000, p. 96) in his studies on self-esteem building, analyzed the influence of parental educational strategies on child and adolescent development. He evokes diverse research that emphasizes self-directed attitudes and behaviors that are formed by autonomous interaction with others. The first children are interacting with parents; by their behavior, they develop attitudes that children according to Winnicott (1958), they will use later. A parent is considered to be adequate if their support, help and encourage the child.

Macoby and Martin (1983) states that the family is a system whose elements are mutually dependent and whose interactions cannot be confused with the characteristics of its parts.

In a study on the impact of divorce on preschool attachment, the authors found that secure attachment relationship is mediated divorce, parental style. Mothers of complete families tend to adopt more authorized style / democratic than divorced mothers. Another conclusion reached by the authors of this study, Hira Nair and Ann D. Murray, was that that style directly influences parental attachment security.

Marital dissolution is associated with maternal mental health, the latter affecting the quality of parenting style and thus providing the security of attachment. The theoretical contribution of this study is to develop a conceptual model that the parenting style was adopted according to a number of variables. It's about demographic variables (marital status, maternal age, education), which influence the mental health of the mother and child- variables related to gender and its temperament.

The results of this study are consistent with observations that the style of Baumrind authorized achieves positive outcomes for children. These results suggest that described by Baumrind democratic style was associated with secure attachment in children. The author describes mothers of preschoolers democratic accountable as emotional, loving, supportive and creative environment for children in the building.

They were shown a series of effects democratic style, considered to be the most beneficial compared to other educational practices. As an example, the authors concluded offers DESLANDES & Royer (1994) in their study that teenagers in schools, states that democratic style seems to be the most favorable adolescent development and that, in several aspects: self-esteem, independence and social and academic competence. Steinberg, Lamborn and Darling (1992) share democratic style three factors that compose socialization: parental engagement, parental supervision and encouragement of autonomy.

Students from families permissive show the weakest results (Dornbusch et al. 1991). Doucet's studies (1993) and his DESLANDES & Royer (1994) show that parenting styles authoritarian or permissive are both associated learning difficulties experienced by students in middle school. On the contrary, the democratic parenting style is associated with academic success and positive commitment to young school.

Recent Canadian studies based on longitudinal survey data on children and youth, stresses the importance of parenting style as a determinant of child health.

The authors research "in the family: the simultaneous parenting style and child behavior" Burton, Phipps and Curtis, takes a slightly different approach from that of other studies. The latter assumed that the direction of causality is parent-child- parenting styles "good" child- good results in one of the strategic consequences that may improve outcomes in education and health of children, improving parenting practices.

The research objectives were formulated in agreement with literature data, personal interest related to children and their social development.

They were concerned that:

- study the relationship between parental education and preschool sociability;
- designing activities to involve, on the one hand the participation of parents, on the other hand, their interaction with their children, in order to improve their relationship;
- knowledge level of children in group social research;
- identify issues of integration of preschool children according to kindergarten;
- highlighting the degree of socialization in the context of relationships with colleagues.

Research hypotheses are:

I. social level assessed by teachers, significantly correlates positively with the social rated by parents;

II. Education level assessed by teachers, significantly positively correlated with the degree of sociability in preschool;

III. Education level assessed by teachers, significantly positively correlated with the degree of sociability rated by parents of preschoolers.

Variables are in a mutual dependence in Pearson correlation, which we used to obtain the results.

In order to fulfill the objectives were set variables involved in the present research work as follows: sociability preschoolers, defined as adaptation to the social environment, the surrounding world, group, collective, cultural and ethnic patterns;

Target indicators for social-affective behavior of preschool are:

- Autonomy and initiative in dealing with their peers in the game and other activities (training and educational and recreational);
- Liaising with the teacher and other adults in the immediate environment;
- Adequate manifestation of the child's emotional-expressive behaviors depending on the specific activities involving (view shows theater / circus games-dramatisations, recitations, stories, song interpretation);

– Personal sense of order in the arrangement of things.

2. Data analysis research

Following data collection and obtaining results through statistical processing, confirming the hypothesis cercetarii.Încă methodological approach described at the beginning of the research was launched research hypotheses:

Î.I. Rated social level of education, significant correlates positively with the social rated by parents;

I.II. Education level assessed by teachers, significantly positively correlated with the degree of sociability in preschool;

I.III. Education level assessed by teachers, significantly positively correlated with the degree of sociability rated by parents of preschoolers.

This was confirmed with the results obtained by calculating the Pearson linear correlation coefficient, resulting in a positive correlation.

The main condition for calculating the Pearson correlation coefficient is that the variables involved are measured on the scale of interval / ratio (along with the existence of a form of distribution not severely deviates from the normal curve).

A test score is an interval scale, so from this point of view fits Pearson correlation. To test I did as distribution chart Scatterplot showing that indeed form distribution does not deviate from the normal curve.

The first hypothesis, Pearson coefficient $r = 0.79$, $p < 0.01$, which means a positive correlation. (Annex 4) As r is close to 1 even approaching a perfect correlation. This result shows that sociability is equally appreciated by both teachers and parents.

As mentioned, all the children attending kindergarten involved in research for at least two years. The results of the beneficial influence of the environment is valued kindergarten teachers valuing the activities with the children, their cognitive potential, developing skills and abilities specific form of preschool age. It has been shown that even children attending community positively influences sociability in the sense that it is better and more harmonious.

Beyond the fundamentals are other factors whose knowledge allow a proper understanding of individual sociability. It is the general cultural level and health of the family and kindergarten. Kindergarten was present research, the main factor in the relationship between parental education preschool and sociability, the more so since the condition that consensus-kindergarten educational family.

After statistical processing of the results of the second hypothesis appears Pearson coefficient $r = 0.86$, $p < 0.01$, again a positive correlation, almost perfect. So we have confirmation of the second hypothesis, and as you can see from the chart, the shape distribution curve does not deviate from normal. Education teacher assessed correlates with the degree of sociability that you have preschoolers research participants.

The influence exerted in the kindergarten education can be positive, as long as there is between them and the family unit in terms of the requirements that are placed in front of the child. With the entry into kindergarten exceeded the restricted family, child new environment before putting new applications, different from the family, which is little better respond to them.

There is a tendency to exploit the role of the teacher in kindergarten, which can be joyful or raise questions. First, it appears that the activity of the teacher is not only to work with children and working with their parents. These are just some of the wishes pursued, but now, the teacher plays a role in increasingly complex. It takes her to explain to parents that communicate the role that plays in the preschool institution and to convince them that together have a common goal: the good of the child. Hence, the need for relationships with the family is not unequal duration and consistency different from the kindergarten environment.

The child spends less time than domestic kindergarten, which is a more stable environment. The question is though, how stable? The fact that preschool is more at home than in kindergarten, can sometimes be a disadvantage for it, in terms of loss of earnings acquired in kindergarten. Family climate, parent education, por be disruptive role factors whose effect is confusing the child.

At preschool large, it is estimated that the education gained from kindergarten increase in intensity until it becomes dominant. Conversations with the teachers in the group which included children assessed, supported and strengthened while the results confirm the second hypothesis of the research. On the one hand, this is, indeed, the awareness of the importance of kindergarten parents psychological and socio-affective development of the child; on the other hand, it is total trust of adults in this environment, the teacher's work, especially because they travel professional overload them as adults. Parents do not have sufficient time to devote to their child, accept and follow the advice of the teacher, often acting as directed. It is the parents who have children in kindergarten for at least two years.

Confirmation of the third hypothesis is given to us by Pearson coefficient $r = 0.74$, $p < 0.01$, resulting in positive correlation that we can see from the chart Scatterplot,. And this time we have confirmation that there is a significant link between parental education teacher assessed the degree of socialization of preschoolers.

Considering the data obtained, it can be said that parental education determine differences in the social-emotional behavior of preschool children. In other words, the manner in which the father of her child is related to the education afforded to it, has an impact on how the child integrates relate to them, follow the rules of game in which they participate, has initiative,

organizational skills, is active in communicating with peers and teacher, mainifestă organizational skills. Moreover, remains appropriate emotional experiences according to the situations that take part. A child looks at recreational programs and not laugh or enjoy disliking another, which is bored in the activities of modeling, mosaic, household activities, considering them a burden and lack of interest, raises questions of terms of its social-emotional behavior.

In this regard was made in the table that had been scoring results of the questionnaires responses of parents and the teacher, which shows deep connection between parental education as assessed by teachers and parents and the degree of socialization of preschoolers lowest score = 54, the highest score = 94.

It is assumed that childhood is a cheerful, "gold". Children live intensely every moment and enjoy it. Parents have a fundamental role in teaching children how to enjoy moments of childhood memories that will be rich in adulthood.

In the family, the child grows and develops under the influence of family environment modeling. In it, the child get acquainted with the first models to relate the pattern of relations will be later. He relates to adults, relate to him. Whose interaction is positive or negative meanings are given and parental education.

Unlike girls who were described by teachers as shy, distrustful, lacking courage, boys were rated as lack of interest in educational activities, games preferring aggressive, often entering into conflict with colleagues, taking their toys without asking for permission. Regarding emotional experiences often enjoy unpleasant events experienced by colleagues.

It should be emphasized that, in terms of differences between boys and girls, they are based on a purely qualitative criteria. It consists of the teacher's comments. There has been no statistical approach in this regard. Considering the differences between children, grouped by gender, may be certainly one of the future directions of research this topic.

Returning, we found that preschool children whose parents are permissive, exhibit selfish behavior, provide toys other colleagues are not interested in educational activities, are intended to be informal leaders are lazy when it comes to achieving self-service skills, often not comply with the rules of the games, want to impose their own "laws". In the case of non-acceptance by others retire, but not for long because his insistence resume, getting a low score evaluation.

Social-affective behavior depends to a great extent on the establishment of fair relations between family members. The way in which each parent to their child reports to be afforded to education is influenced by upbringing in turn as an adult, education level, values, attitudes and worldview and its life. As noted in the first part, the parents begin to wonder about the effectiveness of educational methods adopted when encountering problems with children.

It would be absurd to deny parental love. Every parent strives to do more for the child, to show him the love he shows to him. It sometimes happens that some parents love to show excessive, suffocating, saving your child any effort. I am satisfied every whim, not imposed rules, receives everything as he wants without being asked anything in return. Experience shows that where children are exempt from any responsibilities and efforts specific to their age level, they become selfish, not even offer help reaching their parents. In addition, not being accustomed to respect certain rules, could not join the groups, with the claim that all take place as they want. Since reality is different, if you are not willing to change, hardly could integrate into social groups, have difficulty adapting. In keeping with the theme present neintegrându into the group of children, adapting to the school environment would be difficult, the child was forced to make further efforts to meet the demands of school.

The relational model provided by the family can be an inhibiting factor for the development of social-affective behavior of the child when it is authoritative.

Accepting the hypothesis is an additional argument to reflect on the impact that parental education has on social-affective behavior of the child. Start of harmonious development, social integration is given by parents, preschool further development is influenced by family foundations made. Hence the need for foundations to be made with love and control, father striving to fulfill an important goal for his child's life: balancing the two dimensions involved Love and Control.

One of the aspects that should characterize relations between parents and children relate to consistency and unity demands that we make parents to children. The literature reveals that educational nonsense can manifest itself in two forms: the first refers to the fact that parents adopt complementary educational styles (permissive-democratic, authoritarian-democratic), and the second relates to the fact that parents adopt styles Educational opposite (authoritarian-permissive).

Ideally what it claims to be the father of the child held by the parent and vice versa. The differences highlight the fact that nothing can be more damaging to a child's mental development than the differences between the requirements placed upon the child's parents. The lack of consensus on child education confuses you do not know what to think of all that is communicated; he tries to please both parents try to respect those issues that agree or parent to respond to the more imposing.

However, in total freedom offered by a parent and rigorous control are huge differences that are reflected in the social-emotional development of the child, derutându it due to lack of landmarks that a parent should provide. The child needs to be focused, directed, encouraged, especially since the first impressions about the world and life, the family environment are received.

The absence of family education unit, prevents the development of activities that stimulate children's language, explaining the meaning of its causal relationship, stories that allow acquisition of knowledge, training representations, language development and thus the child's cognitive development.

The parents of the child is observed and imitated, which recognizes both parents democratic authority and manifestations of affection and tenderness they express towards him. Balance educational requirements are reflected in the socio-emotional development of preschool, kindergarten, he had to face the demands of the environment, respecting the rules of the games involving, knowing how to lose, to have initiative. He has confidence, actively participate in educational, show their emotional experiences according to specific situations involving, is expressive and emphatic. Lack of support points with guiding role of social-emotional behavior, a parental model has an impact on the development of preschool sociability with great difficulty or not at all meet the requirements of adaptation to the kindergarten environment, with all that it implies.

It is important that each parent to meet the educational role of the other to achieve a complete education that side of the child's personality to develop in harmony. In essence, each designed to comply with the other parent and his own purpose. Added to this is the need to fulfill its educational role at any price. In addition, as the following wording would seem fine, it highlights a fundamental aspect: the child shall be deprived of love, which is necessary as food and water. When not understand this elementary education will fail, no doubt. Ideally, to secure the love, support, guide the child, not to seize.

The need for socialization derives not only for social reasons but also individual reasons. It is one of the important conditions for the formation of man as a member of society. Basics of social behavior are made in early childhood, quality adaptation and social integration of future adult depending on the manner in which these bases are made by parents and others.

According to experts, the child's social sense or instinct is innate but further research contradicts this view unilateral and trenchant. Socialization is a process that relies solely on outside influences, but there are some internal springs that mediate and requests.

Education is not imposed from outside, with violence (or at least it should), but rather there is a deliberate social adaptation. This explains the fact that the entourage adult child feels well, waiting and wishing their presence, and hence the rules imposed by adults.

Housed in an obvious parental addiction, child needs a process of education and socialization to be done deliberately and toward the gradual assimilation of socio-cultural patterns accredited by the social group to which it belongs. In the absence of adults, this process is not performed as it should, taking the wrong direction.

Even relatively well integrated children and apparently balanced, emotionally speaking, there is an impoverished developing essential feelings and difficulties in establishing social contacts.

3. Conclusions and recommendations

The topic is a hot topic no matter what time it is questioned. There will always be children, parents and adults there will always be preoccupied with the efficient education of their children.

The objectives of the work based on the study of literature, were subsumed purpose of showing that between parental education and preschool sociability, there is a profound relationship according to its specificity.

Following statistical processing performed by applying the tools of investigation, relevant results were obtained considering, finally, that the objectives of the work were satisfied:.

It thus draws attention to the need for close cooperation family-kindergarten, both areas having decisive influence on sociability and psychological development of preschool children. We must not lose sight of the fact that kindergarten is the first step in the education system. Most of coordinates teaching can be influenced by a good start in relations at this level.

In what follows it will be discussed issues kindergarten-family partnership, the need for unity educational requirements of the two environments, and finally be exemplified types of activities in which parents can be involved in order to improve their interaction with children endorsed the style adopted for adult education in educating the children.

One of the objectives was Popu and designing activities and suggestions for improving the relationship between kindergarten and parents. Involving parents in kindergarten issues relates to building positive relationships between family and kindergarten and a unified system of values and requirements relative to the child. This can have a positive effect on children when they see the teachers are working and advising parents and involve defusing problems before they become uncontrollable (Vrasmas, 1999).

On the basis of collaboration and effective cooperation between kindergarten and family is communication between the two educational agents. Parents are constantly involved in kindergarten activities, not just when problems arise.

Teacher-parent communication can take place in meetings, daily meetings be scheduled periodically or permanently. To these may be added a voluntary system which can involve parents or grandparents in direct support of activity in kindergarten. Also, through these meetings, the teacher knows more about the specifics of child and parent interaction with it that

often, the teacher communicate, how they relate to their own education afforded to it.

The teacher often can identify based on conversations held with parents, their communication with children in her presence, the observations made on the small practice some parenting. Negative or beneficial effects appear very soon, so that the teacher can intervene with explanations, arguments in conversations with parents. Of course, this in an elegant manner, with tact and care so that some parents do not feel offended. Also, everything will undertake teacher will consider the harmonious development of the child, taking into account the particularities of individual age and coplilului. The latter are required not only hereditary endowment of the child, but also educational activities exerted influence on his parents and, especially, of how adults educate their children.

In order to inform parents about the effects of a more than adequate and efficient education of their child interaction with children, Vrasmas E. (2000) propose several types of activities needed with parents, the most important categories are:

- ice-breaking activities are primarily meetings with parents to achieve a lasting and effective communication;
- informing parents about: educational program activities conducted in kindergarten and in the group; their child; other topics (child nutrition, education, health);
- pedagogical counseling in problem solving situations with their children, and preventive activities and removing any risk situations.
- orientation fathers to regular or permanent support services;
- discussion and exchange of ideas and experiences between parents.

Of course the above activities involving teacher-parent relationship, but much more in line with the theme of the present work, we can question the activities that involve both parental involvement and their children, the teacher acting as coordinator and mediator. These in order to improve parent-child relationship.

It often happens that parents because of the extremely busy time, do not know what you know and what you do not know their child. It is possible that the parent about the child image may not correspond to the real meaning either underestimation or for the purposes of overvaluation. To avoid such a phenomenon that could lead to the adoption of an inappropriate educational style, the teacher can organize activities involving both parents and children.

For example is given:

- assisting parents of educational activities carried out daily in kindergarten;
- undertake activities with children and parents, the latter being organized in groups that involve both competition and cooperation parent-child;
- participation of parents with children in extracurricular activities.

A comprehensive program based on partnership relations with family consists of CRP- Parents Resource Centers, defined as structures built in the kindergarten consisting of engagement activities, information, education, counseling, guidance and volunteer parents. CRP is actually synthetic expression of the activities listed above.

CRP requiring a space specifically trained to provide the best environment and positive optimal communication between teachers and parents. The informative activities can call into question various topics such as "Family Education", "effects on child development parenting style." Informing parents can cause early adoption of appropriate educational style peculiarities child education avoiding mistakes that could have consequences difficult to repair the child's personality development.

Hence the need for agreement between the parents regarding educational strategies practiced, educational requirements made by the family unit and nursery, any imbalance in education, either in the family or family-kindergarten level collaboration is taking a toll on children's psychological development plan.

Bowlby show, referring to institutions that succeed maternal figures that if this type of caregiver provides sufficient interaction between adult and child social sensitivity of the latter can develop.

Of course, the present paper presents some limitations. Some of them are:

lim- subjective assessment of the teacher;

In conclusion, parental education affects child sociability positively or negatively, depending on its specifics. It is one of the determinants of child personality development, requiring a certain level of socio-affective thereof.

This paper can be both a continuation of studies that focused parenting practices, but also a beginning, meaning substantiation of future research. You can study the influence of strict parenting styles on personality traits, in training of preschool children and differences between girls and boys imposed parenting styles, within certain parts of their personality. Given the complexity of human nature, the importance of family in shaping child's behavior can be identified various investigative branches from the topic of this paper. This is particularly so since the completion of any research is not an end but a beginning clearly to conduct other studies.

Given those presented in previous pages, it can be seen that information and solutions to optimize parent-child relationship exists. It needs the goodwill of parental responsiveness and awareness of the model provided and education influence exerted enormous further development of the child, contributing to its success in life as a man.

INVOLVEMENT OF LANGUAGE IN THE DEVELOPMENT OF NUMERICAL REPRESENTIATION AR PRESCHOOL CHILDREN

Cristina ȚÎMPĂU[*]

Abstract

In recent years, one of the questions that developmental psychology has tried to answer is related to the origin and how our cognitive system development. A significant impact on trying to find an answer to this question have been research conducted on numerical skills of children, and as a consequence of this interest, the development of phylogenetic and ontogenetic perspective numeracy skills, has become studied one of research topics most intensively.

Based on the failure of the model approach in the context of "object files" at the preschoolers numerical skills, motivation of this paper refers to the attempt to provide a numerical approach to basic skills correspondence, ordering or numeracy in the context of transition from numerical representations to verbal and preverbal role that language plays in supporting performance, while taking account of how children numerical concepts and changes implemented strategies they use at different ages. If until now it is clear that language development is a mediating factor in the reorganization of numerical knowledge is needed in-depth approach of how procedural skills affect solving numerical tasks and the extent to which models originally developed to describe numerical skills of children under one year of preschool children can be applied in the context of language development.

Keywords: *numerical skills,numerical representations, numerical concepts and changes, language development.*

1. Introduction

In recent years, one of the questions that developmental psychology has tried to answer is related to the origin and how our cognitive system development. A significant impact on trying to find an answer to this question have been research conducted on numerical skills of children, and as a consequence of this interest, the development of phylogenetic and ontogenetic perspective numeracy skills, has become one of research topics most extensively studied (for summaries, see Carey, 1998; Wynn, 1998; Gallistel & Gelman, 2000; Geary, 2000; Feigenson, Dehaene & Spelke, 2004).

Recently, the development of experimental models such expectations violation (violation of expectation) revealed the existence of numerical skills even in children under 1 year (Wynn, 1992; Simon, Hesp & Rochat, 1995; Uller et al., 1999; Feigenson, Carey & Spelke, 2002). Although innate or acquired origin is still debated numerical representations (Simon, 1997; Carey, 1998; Gallistel & Gelman, 2000), the literature is remarkable consensus phylogenetic continuity in the development of numerical skills. The methods of cognitive neuroscience have revealed the behavior in a number of primate species (Brannon & Terrace, 2000; Sulkowski & Hauser, 2001; Nieder & Miller, 2004), birds (Emmerton, Lohmann & Niemann, 1997; Emmerton 1998 ; Xia et al., 2001) or rodents (Dalrymple-Alford & Breukelaar, 1998; Leon & Gallistel, 1998), which are considered antecedents of nonverbal numeracy skills.

These studies in humans and infrahuman have led to two models. First, the object model files, which holds that each element of a set of distinct representations are created, stored independently in working memory (WM) (Trick & Pylyshyn, 1994; Simon, 1997; Leslie et al., 1998; Uller et al., 1999). On the other hand, the model battery (accumulator model) proposes a mechanism that allows the representation of an amount in proportion to the number of elements quantified (Xu & Spelke, 2000; Chiang & Wynn, 2000; Xu, Spelke & Goddard, 2005). Conclusion The studies validating these models was that these models suggest descriptions of similar phenomena, but rather distinct. The object files requires a precise numerical representation, which however is limited to 3-4 elements (in tasks such as "1 + 1" or "2 vs. 3"), while the battery model produces inaccurate representations but claim discrimination larger sets of objects (in tasks such as "8 vs. 16"). Furthermore, studies of cultural anthropology (Gelman & Gallistel, 2004; Gordon, 2004; Pica et al, 2004) and the bilingual subjects (Spelke & Tsvirkin, 2001), suggests that at least accurate mathematical calculations are dependent on acquiring mathematical symbols and their verbal referents, while inaccurate calculations are independent of language. A possible interpretation of these results is that the language support numeracy skills, but once they are acquired, the language no longer has a central role in the activation of knowledge. The theoretical perspective that supports this idea is known as the weak hypothesis of language (language weak hypothesis), but which was insufficiently tested by experimental studies on preschool children. Except Houde (1997), who adapted for children 2-3 years of experimental model

[*] PhD Candidate at the Faculty of Psychology and Educational Sciences, University of Bucharest (e-mail: **cristinatimpau89@gmail.com**; **cristina.timpau@drd.unibuc.ro**).

Wynn (1992), no other research in this age group didn't seek validation of the model object files in these tasks, the more since the claims that its content is accurate numerical representations, with language acquisition, partially dependent on it (Simon, 1997; Gallistel & Gelman, 2000).

A second aspect related object model files found in studies in humans and infrahuman was sensitivity to continue properties (continuous properties) such as density, size or length that seem to interfere with the numerical size (Scholl & Pylyshyn, 1999; Uller et al., 1999; Feigenson, Carey & Spelke, 2002). Numerical representations to the interference susceptibility was explained by the absence of sufficiently developed capacities inhibition in children under 7 years (Temple & Posner, 1998) and were found both in correspondence tasks (Houde, 1997) and in the ordering (Mix & Clearfield, 1999; Brannon & Van de Walle, 2001). The main limitation of these studies is that the use of methodologically designs pretest-posttest type that can highlight the learning rather than actual skills of preschoolers. A positive aspect, however, is conferred by trying to establish a link between numeracy and performance in the two types of tasks. The results so far support the hypothesis poor language and numeracy development suggests that support performance, but between the two variables cannot establish a causal relationship. Continuing the relationship numeracy-language approach to a deeper level of analysis, particular attention was paid gestures function in implementing the concept of cardinal value (Alibi & DiRusso, 1999; Graham, 1999), but so far the model proposed by Alibi & DiRusso (1999) has not yet replied.

If until now it is clear that language development is a mediating factor in the reorganization of numerical knowledge is needed in-depth approach of how procedural skills affect solving numerical tasks and the extent to which models originally developed to describe numerical skills of children under one year of preschool children can be applied in the context of language development.

Based on the failure of the model approach in the context of object files preschoolers numerical skills, motivation of this paper refers to the attempt to provide a numerical approach to basic skills correspondence, ordering or numeracy in the context of transition from numerical representations to verbal and preverbal role that language plays in supporting performance, while taking account of how children numerical concepts and changes implemented strategies they use at different ages.

The purpose of this paper is to highlight how language mediates access to accurate numerical representations, especially given that this relationship was poorly investigated. First, from the model object files propose adaptation based on the experimental model of expectations violations carried out by Houde (1997), testing assumptions related to the successive transformations of this model is subjected to a sequence in which the multiple objects.

Further, it will investigate the second assumption of the model object files interference exerted on continuous variables on performance in tasks of correspondence and ordering. Also, it will track the extent to which these skills are supported by numerical numeracy capabilities. Finally, we intend to test the proposed model assumptions & DiRusso Alibi (1999) on the role of gestures in numeracy and replication procedure proposed by the two authors.

The overall objective of the three experiments suggested further relates to the implications of object files and the models proposed by Alibi & DiRusso (1999) on numerical representations in children preschool or the impact that has on the acquisition Limaj numerical representations. Next, we detail the reasoning underlying the three proposed experiments

2. The role of language in the number representation systems

A number of surveys conducted by Amazonian tribes whose language lacks words to denote numbers, have brought the issue of the role of language in the development of numerical concepts (Gelman & Gallistel, 2004; Gordon, 2004; Pica et al., 2004). The question this study sought to answer is whether the use of certain mathematical concepts is impossible due to lack of lexical reviewers. These studies have considered three types of hypotheses about the relationship language - numerical skills. The first is "strong hypothesis of language '(strong language hypothesis) proposed by Benjamin Lee Whorf, that language determines the nature and content of cognition. The main criticism of this relation deterministic concerns on the one hand that eliminates the possibility of any kind of reasoning, and hence the numerical animals or children whose language is not sufficiently developed, and on the other hand offers no explanation on how exposure to a particular language could generate concepts and representations that support it. The second hypothesis considers irrelevant language (language irrelevant hypothesis) to develop mathematical concepts as people, animals also possess innate nonverbal numerical skills, selected along evolution and allow processing without symbols numbers (Dehaene, 2001; Feigenson, Carey & Spelke, 2002). A third category of theories based on the assumption poor language, nonverbal numerical representations acknowledging irrelevance hypothesis postulates language, but believes that the development of numeracy skills undergo a profound transformation once children acquire language for the numerical symbols (Simon, 1997; Carey, 1998; Dehaene et al., 1999).

Analyzing the three theoretical orientations in terms of empirical studies of cultural anthropology offered by comparing the performance of Amazonian tribes with those of Europeans, were derived two

conclusions: 1) approximate numerical representations are identical to those of the Amazonian tribesmen people from cultures possessing a number system, which provides evidence of the assumption that this power is acquired independently of language (language irrelevance hypothesis); 2) Unlike approximation, exact numerical representations are affected by lack numerals, which supports the hypothesis that language plays an important role in the emergence of representations accurate population (weak hypothesis language). Otherwise we said, we can distinguish two basic systems for representing numbers: one for the accurate representation and one for repezentări approximate whose main features have been detailed above (for summaries, see Carey, 1998; Wynn, 1998; Gallistel & Gelman, 2000; Feigenson, Dehaene & Spelke, 2004). As shown the two systems are activated by different stimuli in different experimental tasks ("2 <3" accurate depictions and "8 <16" for accurate representations), plus operate independently and are limited to representing numbers natural (Gallistel & Gelman, 2000; Feigenson, Dehaene & Spelke, 2004; Fias & Verguts, 2004).

Recently, a number of neuroimaging and neuropsychological studies have revealed the cerebral substrate of the two numerical systems. Approximate representation system is best characterized and is associated with activation of the inferior parietal cortex (ICC) intraparietal sulcus and (SIP) (Dehaene, 2001; Dehaene et al., 1999; Feigenson, Dehaene & Spelke, 2004). These studies are confirmed by neuroimaging studies in subjects with lesions of cortical areas involved in language, which still retains relatively intact numerical representations (Varley et al., 2005). This would suggest that the degree of specialization of these cortical areas is quite pronounced at least in adults, and thus determine their relative independence of other neural circuits (Dehaene, 2001).

In addition to studies of fMRI (functional magnetic resonance imaging) and injuries (Varley et al., 2005), electrophysiology studies conducted on monkeys showed preferential activation of the emergence of numerical stimuli of neurons in the prefrontal cortex, the ICC and SIP (Nieder & Miller, 2004). Unlike the system of representation, the exact representation is ill-defined. Except for a few neuroimaging studies that have shown the involvement of extrastriate cortex, the data are still inconclusive due turn, prevents the representation of objects is essential to the process of perception and prevents the development of control tasks required in fMRI, the target system must be inactive.

For the two systems of representation of the number two explanatory models were formulated: the battery for the system object model representations approximate and exact representations model files. Next we intend to present experimental evidence adduced in support of the two approaches, from studies in humans or infrahuman.

3. The research and results

In the experiment, investigate numerical skills development focused on highlighting the resilience to interference in verbal output tasks for sets of small objects. The specific objectives were:

1) to test model predictions object files that the number is not relevant stimuli when non-numeric variables interfere in its acquisition of explicit knowledge about verbal numeral system; Unlike previous studies performed on infants will assess verbal output in numerical tasks skillful correspondence and ordering;

2) construction of correspondence and ordering tasks, the application of the two concepts to be evaluated in terms of interference number / length

3) highlighting changes with age in the strategies and how they allow resistance to interference number / length;

4) highlighting the relationship between performance on tasks of correspondence or ordering, and the ability to provide answers cardinal.

The experiment was designed to highlight the extent to which the relevant number is a dimension pre-school children conditions that interfere with the perceptual dimensions such as the length of the row of objects. To test this prediction model was chosen task object files of correspondence and ordering two sets of objects. Based on data demonstrating the failure of children 3 years of correspondence tasks (Houde, 1997) and the success of the same age group in tasks ordinal (Brannon & Van de Walle, 2001), it was inferred that probably reduce interference number / length tasks correlation occurs at a higher age. Thus, interference number / length will affect greater performance than children 3 years of the 5 years due to reduced ability to inhibit irrelevant perceptual schemas, and will affect a greater burden than the correlation of ordering.

The experiment aims to test the following hypotheses:

1) the number of correct choices of subjects for 5 years is influenced by age and type of task;

2) the number of correct choices for ordinal skills is significantly higher than for the mapping;

3) the number of correct choices is significantly higher than the age of 5 years to 3 years.

Also for pregnancy How many? a task assessing numeracy ability to respond cardinal, following predictions were made in order correlations:

1) ability to provide answers cardinal is a predictor for success in the task of ordering;

2) the ability to provide answers cardinal is a predictor of performance in the task of mapping.

Investigation revealed indices of central tendency obtaining differences both between the ages of 3 and 5 and between the two tasks, correspondence and ordering. Thus, the burden of ordering 3 years M = 2.68 (SD = 99) is greater than the correlation of the load F = 2.36 (SD = 1.22), while at the age of 5 years is distinguished same pattern of results, the

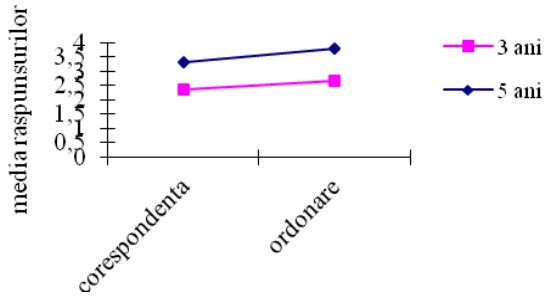
performance of the task of ordering M = 3.80 (SD = 40) are superior to task correspondence M = 3.32 (SD = 74).

Distributions of the age of 3 are symmetrical, but its proximity distributions environments maximum 4 to 5 years old za share index was calculated skew (each distribution is under 30 subjects). For ordering load distribution z = 1.32, where z <2.68 ns, while the task of correspondence z = 3.45, where z> 2.68, which means a negative asymmetric distribution.

In order to establish the relationship between the type of task and verbal numerical skills measured by How many numeracy task, the Pearson correlation coefficient was calculated to yield significant correlations between correlation and numeracy average r = 0.42, p <.01, respectively between ordering and numeracy, r = 0.47, p <.01. Removal of subjects who failed to provide even a correct answer in numeracy task (sample 8 children 5 years), amended such correlation coefficients, r = 0.47, p <.05 for correspondence relationship, numeracy and r = 0.31, p <.05 for relationship-numeracy ordering.

To verify the hypothesis, we chose repeated measures ANOVA because they fulfilled all criteria stated in the previous experiment, including the value Mauchly's W test, statistically insignificant. We have shown the following results: for the interaction effect F (1, 24) = 28, p> .10, ns, a significant effect of age variable F (1, 24) = 26.60, p <.001, and and a significant effect of task type variable F (1, 24) = 6.90, p <.01 (Fig. 4), which confirms the assumptions made for the main effects of age variable.

Fig.1 Media correct answers are higher than age 5 to 3 years, but significantly higher than in the task of sorting mail



Based on the significant effects of the two variables, comparisons were performed Bonferroni post-hoc type. Results showed a significant effect of age, children 5 years with 3 years of superior performance, Bonferroni t = 5.14, p <.001, while ordering task performance are significantly better than those in the correspondence Boferroni t = 2.63, p <.01.

Statistical analyzes also revealed in terms of age, that between the ages of 3 to 4 years, no significant differences between the means of the two groups in charge of correspondence t (24) = 1.24, p> .10, ns (M = 2.68, SD = 1,18 to 4 years), but significant differences in pregnancy ordering t (24) = 3.46, p <.001 (M = 3.36, SD = 0.63 4 years).

4. Conclusion

In a first analysis of data necessary following conclusions: 1) for both types of tasks is highlighted standard deviations higher in group 3 years, this high variability in performance indicating heterogeneity of responses at this age, and 2) reducing this variability in 5 years old, it becomes apparent convergence towards systematic response patterns. In addition, the strong negative asymmetry in pregnancy ordering supports the assumption that with numerical skills development, access to knowledge facilitates performance even in tasks where there is perceptual interference.

These conclusions are reinforced by inferential statistics, confirming on the one hand improve the ability to cope with non-numeric interference with age, and on the other hand maintaining a dichotomy between the performance of the task of ordering, which are superior to task correlation.

For the first observation, a possible explanation is offered even object model files, which claims that the number is not an obvious characteristic especially when there are perceptual correlate of type string length interfering with the latter, and the experimental data confirms the results of Huntley -Fenner & Cannon (2000) and Van de Walle & Brannon (2002) and the Clearfield & Mix (1999), Feigenson, Carey & Spelke (2002) on children under one year. Unlike the results of Huntley-Fenner & Cannon (2000) and Van de Walle & Brannon (2002), correlations between ordering and numeracy remain significant even after excluding cases of children who have not even given a correct answer, but the average value of the correlation coefficient, might suggest that susceptibility to interference under ordinal relations number / length is only partially dependent on the ability to deliver a cardinal. By contrast, if the load correlation, the correlation coefficient while remaining average is higher under exclusion of subjects who did not meet the minimum criteria of at least one correct answer in numeracy task. This would indicate, at least for this task relevance numeracy skills for performance.

These data are the first source of explanation of the differences in performance between the two tasks. A second source is the type of strategies that children use to solve the task, ie the extent to which they rely on a numerical strategy. Unlike previous studies that only have inferred the possibility of using different strategies (Sophianos, 1997; Brannon & Van de Walle, 2001), in the present study were followed children's answers on how they solved the task or prosecution gestures and mimic accompanying their answers.

Their responses were classified into two categories: 1) answers that reflect the use of digital strategies, and 2) answers that reflect the use of a non-numerical strategies. The first category of answers that

were part of the child demonstrate the ability to use explanations like "3 is greater than 2" or more index string with Mickey, saying "there are more" (for the task of ordering) or "are all 3" and "are as many Mickey" (for load correlation). Also, children who were unable to provide metacognition observed nonverbal behavior, gestures or vocalizations or delivery in a low voice of numerals. This category of respondents were part especially children 5 years in some cases even recorded spontaneous reactions to explain the answer.

In the second category of responses were included explanations like "here are the pairs Mickey" (task correlation) or "here is a matchless Mickey", which reflect the use of the strategy set by the experimenter. In addition, children were considered pointing gestures using a strategy similar to that presented by the experimenter. The inclusion of responses in one of two categories based strategy type detected by comparing with the ability to respond correctly in numeracy task. We assumed that children who have not given an explanation for their answer nor proved numeracy skills, perhaps never implemented such a strategy. Accordingly, strategies have been quantified at least one REPLIES correctly. With the exception of three children of 3 years which gave wrong answers to all tests, both in charge of ordering and in the correspondence, all children have managed at least one correct answer.

If most answers correct to 3 years non-numerical strategy reflects a 82% (36 of 44 responses) at age 4 strategies numerical percentage increase from 18% to 46% at 4 years of age (23 responses from 50) and at 78% at 5 years (39 of 50) (Fig. 2). In addition, constant numerical strategies are adopted more frequently than the tasks of mail ordering, 14% vs. 23% (3 and 5 Responses) of 3 years (Fig. 3), 48% vs. 60% (12 and 15 replies) to 4 years (Fig. 4) and 64% vs. 92% (16 and 23 response) at 5 years.

Fig 2. Percentage of numerical and non-numerical strategies used compared to the three ages.

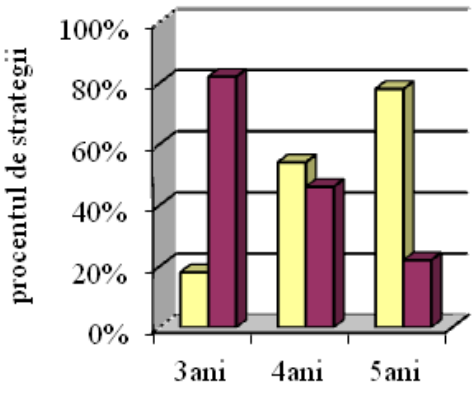


Fig.3. Percentage of non-numerical strategy is superior to 3 years of numerical correlation in both tasks and ordering.

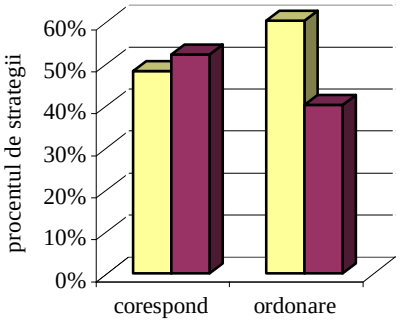

Fig.4. The percentage of non-numerical strategy is prevalent in charge of correspondence, but the numbers are prevalent in charge of ordering the age of 4 years.

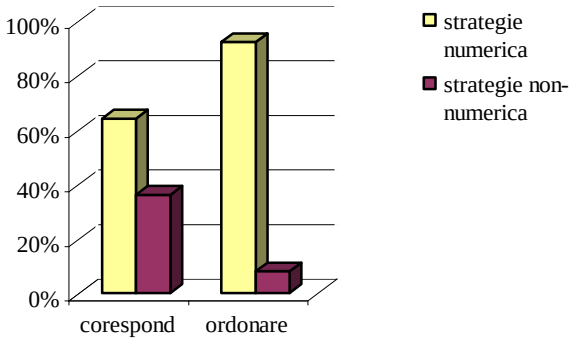

Together these results lead to the conclusion that performance in these tasks is the first result numeracy skills, but the most relevant aspect is given the ability to implement this knowledge as a strategy for solving the tasks of correspondence and ordering (Sophianos, 1997 Brannon & Van de Walle, 2001). Once the numerical strategies are applied by default and the ability to solve tasks of interference increases. It is therefore obvious that the age of 4 years knowledge of numeracy begin to be implemented as a strategy and consequently improves performance in these tasks. Unlike children 4 years, 3 years that the knowledge about verbal numeral system, fail to transfer in solving non-numerical worded, these results are strengthened by previous research (Houde, 1997; Huntley- Fenner & Cannon, 2000), but not by Brannon & Van de Walle (2001). Possible differences between the data presented above and those obtained by the two authors, could be even opted for the method in this experiment. Thus, unlike the study by Van de Walle & Brannon (2001), who investigated the interference resistance to surface / number of children 2-3 years in terms of a learning phase, this experiment aimed to evaluate the knowledge that children have already and how they are able to use them in practical situations.

In conclusion, with language development, children are able to transfer this knowledge to the tasks of correspondence and ordering while the number is not an obvious stimulus. The numerical

implementation of a strategy to support resilience inteferenţa number / length, which thus can be countered. Based on the importance of knowledge for verbal numeration system performance tasks and interference due to obvious changes seem to occur around the age of 4 years in terms of implementing this knowledge, we aimed to investigate the model proposed by Alibi & DiRusso (1999) strategies that children of this age they use numeracy.

The purpose of this research was to investigate how numerical representation in the context of language acquisition in preschool children, and the relationship between the number and type of the strategic skills implemented.

The experiment indicated that children's performances are influenced by changes continue properties, namely the interference number / length. These results confirms the predictions of the model object files, as well as previous research (Houde, 1997; Huntley-Fenner & Cannon, 2000; Brannon & Van de Walle, 2001). Furthermore, the performance is influenced by the type of load. Ordering seems to be easier for children than correspondence, probably for two reasons: first, the wording of ordering task in terms of "gain" is working scheme that facilitates identification of the correct answer even in interference (Sophianos, 1997), and Second, the task of the correlation, which requires the identification of equivalence relations is more difficult to apply. The latter involved a comparison interitemi strategies that would require more sophisticated numerical knowledge, but is not yet sufficiently clear whether such a strategy could be applied to tasks of ordering. Another aspect is given by the relationship between the two tasks and numeracy skills, although not fully confirms previous results (Brannon & Van de Walle, 2001), they suggest a correlation between the average performance experiments and numeracy tasks, indicating that between numerical knowledge and skills children there is a deterministic relationship.

However, the relevance of knowledge about numeracy strategies is evident that children utlizează. With 5 years of age, subjects explanations focuses mainly on numerical relationships (eg "there are more, because 4 is greater than 3" for ordering, "here are 3 and here are all" for correspondence) and less than those that involve the application load in the way that was done by the experimenter.

THE EUROPEANIZATION OF THE NATIONAL POLITICAL PARTIES THROUGH THE GENDER COMPONENT. CASE-STUDY: THE DEMOCRATIC LIBERAL PARTY IN ROMANIA'S 2014 EUROPEAN ELECTIONS

Ioana Antoaneta DODI[*]

Abstract

The aim of this paper is to analyse if the national political parties experience an Europeanization process through the harmonization of their principles and practice with the ones of the European political groups they are part of. In this regard, I shall use the gender dimension as an Europeanization factor. I choose the Democratic Liberal Party as a case study because it is the biggest right party in Romania, because it is affiliated to the Group of the European People's Party (the biggest political group in the European Parliament) and because of the ideological premises that a right party would be reluctant to change and to the increase of women's political participation. An interesting aspect is also the merge of the DLP with the National Liberal Party just after the closing of the 2014 European elections. The analytical approach will be focused on if and how the Democratic Liberal Party's political behaviour regarding women's access to political participation changes when it interacts with the Group of the European People's Party. More precisely, I shall correlate the ideological position of the Democratic Liberal Party, its political behaviour when it comes to elections at the national level, on one hand, and European elections, on the other hand. The main elements of the case study will be the gender dimension of the selection process for the party's candidates for the elections and of the professionalization of the proposed candidates. The theoretical framework of the paper is represented by political representation theories and the ones regarding the Europeanization of political parties.

Keywords: *Europeanization, political parties, gender equality, political representation, women's political participation, elections*

1. Introduction

The research area of the proposed study is the political science one, so this will be the lens through which I will analyse the Europeanization level in political parties' electoral behaviour with respect to women's nomination as candidates for electoral processes.

The importance of the proposed study resides in the fact that it creates the possibility of measuring the Europeanization phenomenon upon Romanian political parties. This can only be made throughout the comparison of the results of the two analysis of the changes that the European political family induces in the electoral practice of the national political parties, especially since "the impact of Europeanization is typically incremental, irregular and uneven over time and between locations, national and subnational" and since there is no study that regards the DLP-EPP interaction, this paper comes to fill in the void of the analysis of the biggest Christian Democratic Party in Romania, making it possible to make a parallel to the analysis of the biggest Social-Democratic Party[1].

The objectives of this paper are to observe if the European political family of the Democratic-Liberal Party (DLP), the European People's Party (EPP), produces effects upon its national component in terms of promoting gender equality.

The methodology I shall use in this purpose is based on comparing the political behaviour of the DLP in national and European elections, in order to see if the supranational influence is visible only in the supranational context or it becomes internalized even in the absence of supranational elements. I shall use the analysis structure in *The Europeanization of the national political parties through the gender component. Case-study: The Social Democratic Party in Romania's 2014 European elections* article because it is important to have the same parts in order to better highlight resemblances and differences between the Europeanization degree upon the highest scored left and right parties in Romania.

The theoretical framework I use in this paper is a mixture of studies in the fields of Europeanization, women's political representation and political science.

This analysis will be a novelty for the domain because on one side, the scientific literature deals with the topic of Europeanization of political parties leaving aside the gender perspective and on the other, because it takes into consideration mainly the situation from parties belonging to Western member states.

2. Europeanization of national political parties. Case-study: DLP in Romania

Harmsen and Wilson give a wide set of definitions of Europeanization, outlining it as: 1) "the emergence of new forms of European governance", 2) "adaptation of national institutional structures and policymaking processes in response to the development of European integration", 3) "policy isomorphism (…) concerned with the degree of convergence in substantive policy areas", 4) "problem and opportunity for domestic political management", 5) "modernization, taken to imply a series of structural transformations intended to bring these countries back into the European mainstream, defined with reference to the economic and political models which prevail in the more prosperous and influential 'core' countries", 6) "joining Europe (…) in the context of EU enlargement", 7) "reconstruction of identities (…) in a manner which relativizes -without necessarily supplanting- national identities" and 8) "transnationalism and cultural integration" between citizens in everyday life[2]. In this paper I shall operationalize the Europeanization concept through some of the mentioned perspectives, more accurately, the first, the second, the fourth, the fifth and the seventh, given that the process that is subject of this analysis is the compliance of the political parties to the European inputs that they receive in terms of gender balanced participation.

Europeanization is seen as "a conceptual tool and of gauging patterns of domestic change"[3], as "a process of structural changes, variously affecting actors and institutions, ideas and interests"[4]. These dimensions of Europeanization set the framework for comparing the DLP's political behaviour in national and European elections, thus distinguishing any change between the two contexts.

Europeanization is conceptualized "as a basis of separation for social, cultural and religious identities and interests within the broad geographical area"[5], so the evolution of the gender component on the European party scene might lead to a shift of interests and identities from the national level to the European one, thus applying a pressure upon national parties to comply to the European practice in order to continue to attract the citizens' votes.

Given the fact that "the term Europeanization has been employed to describe new patterns of behaviour and decision making among political actors and institutions resulting from the impact of European integration"[6] and "the adjustment evident in the institutional setting - incorporating the norms, rules, identities and interests of actors within a structured set of relationships - at the level of member states, consequent on EU obligations"[7], we can measure the grade of Europeanization regarding the political parties' institution in Romania by analysing a) the way that the national political parties apply the same type of rules as their European political families in European level, but ignore them at the national level and b) if they act in accordance with their political ideology in the particular case of assuring an equitable gender representation among their candidates.

The European People's Party is the biggest group in the European Parliament, having 221 members of the European Parliament (MEPs), representing 29,43% of the seats. It is positioned on the right side of the classical ideological axis. This also influences the party's choice when nominating its candidates: Christian-democracy has a "limited emancipatory potential for women, due to strong preference for community values, patriarchal and traditional"[8].

When searching for elements that refer to the gender component in the EPP manifesto, the results are as expected from the previous paragraph: women are by no means mentioned[9]. There is no reference to any element referring neither to enhancing women's political participation nor to fighting physical, social and economic forms of violence against them.

In the EPP's Action Programme, equality between women and men is mentioned among the general principles such as "the separation of powers, democracy and the rule of law" and traditional terms as "family"[10]. Other references are made mainly in economical contexts of unused labour resource: "We aim to increase the employment of women, not only to give practical expression to the value we place on promoting equality between women and men, but also to contribute to general economic and social development", "we encourage the implementation of proactive measures that specifically target the full inclusion of young women into the labour market"[11].

Women's political participation remains a problem with no answers or instruments ment to solve it ("another important question that needs to be asked is how best to increase the number of women participating in the labour force and in decision-making positions") and gender violence is hardly present (in matters of human trafficking).

The EPP's internal organization includes EPP Women's official association that is dedicated to the "promotion of important women-related issues such as gender equality in the labour market and female entrepreneurship"[12]. As we can see, the economic stimulus for seeking gender equality is still present. What is new is the assumption that women can be engaged in externalizing policies outside the European space ("our focus also goes to the role of women in promoting liberty, justice, human rights and democracy not only in Europe, but also in regions experiencing tremendous change, such as the Middle East and North Africa"), a problematic though non surprizing element taking into consideration that right and centre-right parties have the tendency of expanding their experience and practice towards what they consider as in need for them.

On the other hand, the EPP involves in the EU's policy making and the gender component is present, given the fact that the 4 priorities that the EPP group follows are "women as a motor of an inclusive European economy", "equal representation of women and men", "ending all violence against women" and "defending gender equality in the world"[13].

The European elections in 2014 were a good moment for the parties to democratize their candidate selection process, given the fact that, for the first time in its history, the results of the European Parliament scrutiny would also influence the formation of the European Commission. The Lisbon Treaty provides that the European Parliament group that would win the European elections would also nominate the candidate for the presidency of the European Commission[14]. A very important aspect of this procedure is that the groups could announce their candidate for the Commission before the elections, thus using this element in their campaign. Hence, the candidates that each party would propose had to reflect as much as possible the party's vision and values in order to attract as many votes as possible, votes that indirectly would also back up the proposed President of the European Commission.

Thus, the DLP's candidate selection is very important for the analysis of the level of Europeanization of the political party practice. Hence, I shall compare it in the two defining situations: the national and the European elections. This way, we can observe if there is any change in the last one, when there is a pressure of the European group the DLP belongs to, the EPP or if the DLP has internalised gender balance aspects from the European level.

Romania's electoral law for the European Parliament is a list based model[15], so it is also important the positions of the candidate on the party's proposal because even if it might comprise a balanced number of women and men, their hierarchy may favour or not a certain part for being elected given the fact that only the first part of the list will obtain seats after the percentage calculations.

In this respect, the DLP's approximate threshold can be obtained by analysing the data from the National Institute of Statistics and the Romanian Central Electoral Office concerning the DLP's scores in the last 4 elections:

Thereby, the DLP's scores are: 7,50% in 2000: 7,03% for the Chamber of Deputies and 7,57% for the Senate), 31,50% in 2004 (in the Justice and Truth Alliance, together with the National Liberal Party): 31,32% for the Chamber of Deputies and 31,77% for the Senate, 32,96% in 2008: 32,36% for the Chamber of Deputies and 33,57% for the Senate and 16,6% in 2012 (in The Just Romania Alliance, together with the National Peasant Christian-Democratic Party and the Civic Force): 16,50% for the Chamber of Deputies and 16,70% for the Senate. The average is thus 22,14%, allowing a significant part of its candidates to qualify for the membership.

The comparative analysis takes into consideration the European elections that have been organised in Romania since its accession to the European Union[16] and the national elections[17] respectively.

At the 2004 national elections, the DLP proposed 50 candidates, from whom 11 were women (22%) and 39 men (78%). The differences between the Chamber of Deputies[18] (9 women and 26 men of a total of 35) and the Senate[19] list (2 women and 10 men of a total of 15) were significant, but both low: 26% women in the first and 13% in the second.

In the same way, at the 2007 European elections[20], the DLP proposed 44 candidates, from whom 11 were women (25%) and 33 men (75%). As

[16] European elections held in 2007, 2009, 2014.
[17] National elections held in 2004, 2008, 2012.
[18] Candidate list of the DLP for the 2004 parliamentary elections for the Chamber of Deputies of Romania, http://www4.pmb.ro/wwwt/wwwcs/electorale/DEPUTATI.htm
[19] Candidate list of the DLP for the 2004 parliamentary elections for the Senate of Romania, http://www4.pmb.ro/ wwwt/wwwcs/electorale/SENAT.htm
[20] Candidates list for the European Elections, 2007, http://www.alegeri.tv/europarlamentare-2007/partidul-democrat-pd

said before, the configuration on the list is also important, resulting in favouring women in the national elections with 35% over the eligible threshold and also in the European elections with 40% women in 4 out of the 10 eligible positions. Therefore, the list is closer to a gender balanced one in the European context, but also in the national one.

At the 2008 national elections[21], the DLP proposed 452 candidates, from whom 58 were women (13%) and 394 men (87%). The differences between the Chamber of Deputies (49 women and 266 men of a total of 315) and the Senate (9 women and 128 men of a total of 137) were not significant, given the fact that they were both very low: 16% women in the first and 7% in the second.

By contrast, at the 2009 European elections[22], the DLP proposed 43 candidates, from whom 10 were women (23%) and 33 men (77%). As said before, the configuration on the list or in eligible constituencies is also important, favouring them in the European elections with 20% in the eligible positions. The gender balance is higher in the European elections, with a difference of about 5%, but low percentage for both situations.

At the 2012 national elections[23], the DLP proposed 452 candidates, from whom 47 were women (10%) and 405 men (90%). The differences between the Chamber of Deputies (42 women and 273 men of a total of 315) and the Senate (5 women and 132 men of a total of 137) were not significant: 13% women in the first and 4% in the second, both being situated extremely low.

By contrast, at the 2014 European elections[24], the DLP proposed 42 candidates, from whom 10 were women (23%) and 32 men (76%). As said before, the configuration on the list or in eligible constituencies is also important, not favouring them in the European elections with only one woman, so 0,11% in the 9 eligible positions.

Thereby, the closest the DLP got to a gender balanced candidate proposal was in the 2004 and 2007 national and European elections, with a 35% to 40% eligible candidates. The next elections show a decrease instead of a consolidation of this practice, but this may actually be the non-contested tradition, the 2004/2007 situation being in fact an exception determined by the fact that Romania was in the pre-accession period and the party had to construct a certain image for the European political family on one hand and for the voters that were enthusiastic with the idea of participating at the first elections after the accession. The 2014 European elections candidate selection process ranks as the worst for women, while confirming though the practice observed at the 2012 national process.

Moreover, the DLP's affiliation is a Christian-Democratic one that is more reluctant to implementing affirmative measures which favourite women in the electoral process, so this element also works in that direction.

An important element for this analysis is the DLP's co-optation of the National Liberal Party (NLP) in the European People's Party immediately after the May 2014 elections. Afterwards, the DLP merged with the NLP, but it still brings together a core group of politicians that will probably exercise their influence within the leadership of the new NLP, thus continuing the political practice of the gone DLP.

3. Conclusions

This article meant to offer a new approach, blending electoral studies with ones regarding the Europeanization process and gender mainstreaming.

The results have shown that the influence of the European political family does not produce effects on the national party. Although Winn and Harris affirm that "changing policy choices, path-dependence, policy behaviours and national discourses have changed considerably with increased 'Europeanisation' since 1990"[25], this does not uniformly apply to all components, given the fact that there are other factors that maintain the resistance, as the ideology or the magnitude of the differences between the status quo and the ideal aim.

In conclusion, the DLP tended to comply with the European norm during the pre-accession period and at the European elections in the first year of membership. They still hold eligible women candidates under the threshold of 30% that women's political representation theories mark as necessary for coagulating a group that can overcome the patriarchal power relations in the legislative. Therefore, the gender component does not represent a benchmark of Europeanization for the Democratic-Liberal Party in Romania, all though it remains in a shared gap with the European People's Party and other political organizations that share the Christian-Democratic ideology.

The study's results can have an impact on the members of the political parties in Romania, which can take a decision regarding their future electoral strategies taking into consideration or not the European more or less targeted recommendations regarding women's participation in political activities.

Future research can either relate to other elements of Europeanization or continue to focus on the gender perspective of parties' way of doing politics at both national and European levels.

THE EUROPEANIZATION OF THE NATIONAL POLITICAL PARTIES THROUGH THE GENDER COMPONENT. CASE-STUDY: THE SOCIAL DEMOCRATIC PARTY IN ROMANIA'S 2014 EUROPEAN ELECTIONS

Ioana Antoaneta DODI[*]

Abstract

The aim of this paper is to analyse if the national political parties experience an Europeanization process through the harmonization of their principles and practice with the ones of the European political groups they are part of. In this regard, I shall use the gender dimension as an Europeanization factor. I choose the Social Democratic Party as a case study because it is the biggest left party in Romania, because it is affiliated to the Group of the Progressive Alliance of Socialists & Democrats (the second biggest political group in the European Parliament) Parliament and because of the ideological premises that a left party would encourage the increase of women's political participation. The analytical approach will be focused on if and how the Social-Democratic Party's political behaviour regarding women's access to political participation changes when it interacts with the Group of the Progressive Alliance of Socialists & Democrats. More precisely, I shall correlate the ideological position of the Social-Democratic Party, its political behaviour when it comes to elections at the national level, on one hand, and European elections, on the other hand. The main elements of the case study will be the gender dimension of the selection process for the party's candidates for the elections and of the professionalization of the proposed candidates. The theoretical framework of the paper is represented by political representation theories and the ones regarding the Europeanization of political parties.

Keywords: *Europeanization, political parties, gender equality, political representation, women's political participation, elections.*

1. Introduction

The present paper covers a research area of political science, proposing an interdisciplinary analysis based on gender studies, electoral studies and the ones regarding Europeanization.

This study is important because it brings into the spotlight the political behaviour of the main political party in Romania, the Social Democratic Party, correlating it with the party's ideological benchmarks and the influence received by part of its European political family, the Party of European Socialists.

The hypothesis of this paper is that the gender component of the European political families' ideology contributes to the Europeanization of the national political parties in the member states of the European Union.

The methodology consists in document and data analysis. In order to test the hypothesis, I shall examine the relation between: a) the party's ideological attitude towards the gender dimension (that officially should be that of the social democracy), b) the party's affiliation to the European party family (the Group of the Progressive Alliance of Socialists & Democrats in the European Parliament).

This paper is divided into two main parts, a theoretical one, where I explain the concepts that I use in the paper, and a practical one, the case-study of the SDP-S&D. The latter is a gender comparative analysis of the S&D and SDP attitudes regarding the European elections and is also made up of two sections: the first one is based on the positions of the European political platform, the S&D, while the second one focuses on the practice of the national political platform, the SDP, consisting of a comparative analysis of the party's political behaviour regarding the correlation of the gender criteria with the eligible seats of the party list in two kinds of situations: a) when there has not been any external pressure (the national elections) and b) when there has been an external pressure (the European elections).

The theoretical framework of the paper is represented by the theories of Europeanization and of women's political representation. I shall also use elements of the social-democracy ideology in order to establish its role in promoting the equal representation of women in politics among the political parties.

This is an interdisciplinary approach between Europeanization studies and gender studies and also a new model of analysis for countries in Eastern Europe, since there is no other, especially regarding one the EU's most recent participants to the European elections: Romania (at its third European poll).

[*] Ioana Antoaneta Dodi, PhD Candidate at the National University of Political Studies and Public Administration (e-mail: **ioana.dodi3@gmail.com**).

This paper was possible with the financial support of the Sectoral Operational Programme for Human Resources Development 2007-2013, co-financed by the European Social Fund, under the project number POSDRU/159/1.5/S/134650 with the title "Doctoral and Postdoctoral Fellowships for young researchers in the fields of Political, Administrative and Communication Sciences and Sociology"

2. Europeanization of national political parties. Case-study: SDP in Romania

Europeanization "cuts across the domestic and EU levels of politics, though its usage is intended to stress the interdependence of forces between the two"[1], marking a two-way relationship between the national and supranational level, that can result in top-down or bottom-up influence or even in a *sui generis* situation.

On the other hand, according to Töller, "changes in national policies due to specific, positive Community policies, mostly in form of a directive or a regulation, seem to be the most frequent cases of Europeanization"[2], while not the only one, since there is also the learning instrument, "which is not triggered by any policy measure that has been passed and that produces any duty to comply and adapt. Rather we can see that perceptions and persuasions were incrementally changed by way of learning, due to a policy discourse, in which the European Commission played a major role."[3] Featherstone and Kazamias also agree that "Europeanization via the structures of the EU entails more than a passive response to external pressures: the domestic and EU institutional settings are intermeshed, with actors engaged in both vertical and horizontal networks and institutional linkages"[4]. I support the two last perspectives, of a step by step change that can be caused by a non-coercive stimulus resulting from the interaction between the two levels and it will be used in this paper.

The Europeanization of political parties is important within the framework of the representative democracy discourse because it is presumed to reflect attitudes and practices not only of some institutional organizations, but of the citizens involved in the electoral process that the political parties organize.

While it may seem that "a certain level of Europeanization is inevitable given the need to compete in European Parliament (EP) elections"[5], this paper's aim is to discover to what degree this Europeanization affects the political practices outside contexts that are not supranational, such as the national parliamentary elections.

Given the fact that "the term Europeanization has been employed to describe new patterns of behaviour and decision making among political actors and institutions resulting from the impact of European integration"[6], we can measure the grade of Europeanization regarding the political parties' institutionalization of the gender dimension in Romania by analysing a) the way that the national political parties apply the same type of rules as their European political families at European level, but ignore them at the national level and b) if they act in accordance with their political ideology in the particular case of assuring an equitable gender representation among their candidates.

The SDP's candidate selection is very significant for the analysis of the level of Europeanization of the political party practice because it may highlight practice differences between the national parties and the European established norm. The later can be generated by the political group and other European bodies[7] and it can be both formal and informal, because even if there is no adopted quota regarding women's participation in the European Parliament, there are official documents that include this aspect and point out the necessity of equal participation. An example would be the proposal of a threshold of 40% for women members of the European Parliament in the Duff Report[8] or the recommendations of the European Institute for Gender Equality[9]. Moreover, in its Strategy for equality between women and men, the European Commission assumes responsibility for "supporting efforts to promote greater participation by women in European Parliament elections including as candidates"[10].

The Group of the Progressive Alliance of Socialists & Democrats in the European Parliament (S&D) is the second biggest political family of the European Parliament, with 191 members of the European Parliament (MEPs), that make up 25,43% of the 751 seats.

It represents the Party of European Socialists (PES) and is positioned on the left side of the classical ideological axis, both SDP and PES sharing a Social

democratic ideology. This should produce effects on both the European group and the national party in terms of promoting gender equality, given the fact that a characteristic of Social democracy is the preoccupation for promoting equality between women and men and the focus on combating social inequalities seen as an interconnection of inequalities regarding economic aspects, power, status or freedoms[11].

As the EPP does not participate directly to the elections, I cannot take into consideration its electoral behaviour, but I shall use its discourse and actions in the domain of gender equality.

The gender dimension is an element of the S&D manifesto through its chapter: *A Union of equality and women's rights,* which tackles issues as the gender pay and pension gap, violence against women, reconciling professional and family life and promoting women's free choice and access to sexual and reproductive rights[12]. Also, the manifesto's introduction contains a call towards its citizens and it is illustrated by four women of different backgrounds, suggesting the need for encouraging women's participation to public life. Moreover, the PES's declaration of principles refers to promoting gender equality, "building on the achievements of the feminist movement"[13]. This is further translated into the PES Strategy for 2010-2014, as it stipulates that "gender inequalities are incompatible with our vision of a fair society" and that "our concrete objectives are to fight for a European Women's Rights Charter, the improvement of parental leave rights and child care, the promotion of women's reproductive rights and the eradication of human trafficking"[14].

Moreover, Martin Schulz's acceptance discourse at his nominating as candidate of the PES for the presidency of the European Commission before the 2014 European elections recognizes the gender bias in the European societies through remarks such as "women are hit hardest by the crisis", "we are closing the gender pay gap and more women are holding top jobs; because I want my daughter to have the same opportunities my son has" or "inequality between men and women is a scandal in Europe in the 21st century"[15].

Furthermore, after the 2014 elections, S&D launched its call for the future European Commission and one of the points of interest of the new commissioners was "strengthening efforts to combat discrimination on the grounds of gender, racial or ethnic origin, religion or belief, disability, age, sexual orientation, or identity", "closing the gender employment and pay gaps and combating all forms of violence against women"[16].

Likewise, S&D has contributions to a set of policies that comprise the gender component, such as backing the Maternity leave Directive, the Directive on Violence Against Women or supporting Spanish women in their protests for reproductive rights.

Furthermore, the PES develops three European campaigns: *Your future is my future - a European Youth Guarantee now![17]*, *Equal Pay, it's about Time![18], A Charter for European Women's rights[19]*, *Women and Pensions[20]*, *My Body, My Rights[21]* and *Financial Transaction Tax[22]*. The first one is gender mainstreamed through its component of *Gender dimension of youth unemployment[23]*, while the next four are entirely gender-focused, highlighting the activity of the PES Women organization within the party.

The S&D group is involved in organizing events that cover gendered issues as women's empowerment, sexual and reproductive rights or access to decision-making positions (*Women for Change, Change for Women[24]*, *All of us! Mobilizing for abortion rights[25]*, *Toward an EU directive on Violence against Women[26]*, *S&D Convention of Violence against Women[27]*,

Prevention of Crime and Violence Against Women - Right to Life and Dignity[28], *Women on Boards*[29] etc).

Another important aspect is that the S&D is composed by 28 national delegations, led by a head of delegation, which are women in 15 cases, representing 53% of the total. Europeanization "is a process of power generation (…) among European institutions, the state and civil society"[30], but it can also be manifested within these structures, on their different levels, part of the multilevel governance functioning of the European Union.

The 2014 elections were a major opportunity for the political groups to shift their internal functioning towards an environment that resembled more and more one of a political party. These elections are the first to be held after the entry into force of the Lisbon Treaty that stipulates that the political group that wins the most seats in the European Parliament would also nominate the candidate for the European Commission[31]. Hence the importance of observing if the national component acts in accordance to its European family actions and directions.

In Romania, the scrutiny for the election of the members of the European Parliament is a list scrutiny, according to the principle of proportional representation, while persons who are not affiliated to political parties can run independently[32]. The national elections are organized in a single vote scrutiny since 2008[33]. Thus, for the comparison of eligible positioning I shall use the party threshold for all European elections and the 2004 national elections and the party eligible constituencies for the 2008 and 2012 national elections.

So, first of all, I need to set the eligibility threshold for the SDP's candidates on the electoral list proposed by the party. I shall take into consideration the data offered by the National Institute of Statistics and the Romanian Central Electoral Office.

It can be observed that the SDP's electoral scores have been: for the 2000 elections: the Chamber of Deputies – 155 seats, Senate – 65 seats; for the 2004 elections (in the National Alliance, together with the Romanian Humanist Party): the Chamber of Deputies – 132 seats, Senate – 57 seats ; for the 2008 elections (together with the Conservative Party): The Chamber of Deputies – 114 seats, Senate – 49 seats, for the 2012 elections (in the Social-Liberal Union, together with the National-Liberal Party and the Conservative Party): the Chamber of Deputies – 273 seats, Senate – 65 seats.

If we corroborate the number of seats obtained by the SDP and the total number of members of the Chamber of Deputies and the Senate, we see that the SDP's electoral score ranged around 47% in 2000: 47,40 % for the Chamber of Deputies and 46,42% for the Senate), 42% in 2004 (together with the Romanian Humanist Party): 42,03% for the Chamber of Deputies and 41,60% for the Senate, 35% in 2008 (together with the Conservative Party): 34,13% for the Chamber of Deputies and 35,76% for the Senate and 68% in 2012 (in the Social-Liberal Union, together with the National-Liberal Party and the Conservative Party): 66,26% for the Chamber of Deputies and 69,31% for the Senate.

Thus, the SDP had quite a high electoral score in 2014, around 48%, so the score obtained in the European elections would have allowed the elections of a satisfactory number of the candidates on the list for a position of social-democrat members of the European Parliament. Nonetheless, the SDP's electoral score has decreased from 2000 to 2008 and the 2012 result would have probably been around these same figures if the SDP wouldn't have made an alliance with the National-Liberal Party (NLP) and the Conservative Party (CP), forming the Social-Liberal Union. This is relevant especially since at the European elections, the SDP ran only besides the CP, separately from the NLP, expecting thus a slightly lower score.

The following comparative analysis will be based on the data of the last 3 national[34] and European[35] parliamentary elections in Romania.

At the 2004 national elections, the SDP proposed 50 candidates, from whom 20 were women (40%) and 30 men (60%). The differences between the Chamber of Deputies[36] (15 women and 20 men of a total of 35) and the Senate[37] list (5 women and 10 men of a total of 15) were significant: 43% women in the first and 33% in the second.

[34] National elections held in 2004, 2008, 2012

[35] European elections held in 2007, 2009, 2014

[36] Candidate list of the SDP for the 2004 parliamentary elections for the Chamber of Deputies of Romania, http://www4.pmb.ro/wwwt/wwwcs/electorale/DEPUTATI.htm

[37] Candidate list of the SDP for the 2004 parliamentary elections for the Senate of Romania, http://www4.pmb.ro/wwwt/wwwcs/electorale/SENAT.htm

In the same way, at the 2007 European elections[38], the SDP proposed 45 candidates, from whom 16 were women (35%) and 29 men (65%). As said before, the configuration on the list is also important, resulting in favouring women in the national elections with 55% over the eligible threshold and also in the European elections with 38% women in eligible positions.

Therefore, there is no significant difference between the 2004 national elections and the 2007 European ones. This can be seen as an expected result, given the fact that 2004-2007 was a pre-accession period in which the SDP wanted to construct a European image both within Romania and the European Union.

At the 2008 national elections[39], the SDP proposed 452 candidates, from whom 58 were women (13%) and 394 men (87%). The differences between the Chamber of Deputies (49 women and 266 men of a total of 315) and the Senate (9 women and 128 men of a total of 137) were not significant, given the fact that they were both very low: 16% women in the first and 7% in the second.

By contrast, at the 2009 European elections[40], the SDP proposed 43 candidates, from whom 16 were women (37%) and 27 men (63%). As said before, the configuration on the list or in eligible constituencies is also important, favouring them in the European elections with 33% in the eligible positions.

Thus, this set of elections mark a bigger difference in terms of promoting a gender balanced candidate proposal.

At the 2012 national elections[41], the SDP proposed 452 candidates, from whom 47 were women (10%) and 405 men (90%). The differences between the Chamber of Deputies (37 women and 278 men of a total of 315) and the Senate (10 women and 127 men of a total of 137) were/not significant: 12% women in the first and 7% in the second.

By contrast, at the 2014 European elections[42], the SDP proposed 42 candidates, from whom 16 were women (38%) and 26 men (62%). As said before, the configuration on the list or in eligible constituencies is also important, favouring them in the European elections with 38% in the eligible positions.

Thereby, the SDP's electoral strategy was similar in both national and European elections in a Euro-optimistic period between 2004 and 2007. The differences were visible afterwards, since the SDP was preoccupied with building a gender balanced candidate proposal only in European elections, revealing a low degree of Europeanization for national contexts.

In conclusion, there is a significant difference between the behaviour of the SDP in the European contexts, when it complies to the European influence and in national elections, when there is a slightly lower degree of balancing the candidates in terms of gender equality.

3. Conclusions

I compared the political party's electoral behaviour in the two defining situations: the national and the European elections. The purpose was to observe if there is any change in the last one, when there is a pressure of the European group the SDP belongs to, the S&D. The results were clarifying with respect to the fact that the SDP has a moderate gender balanced candidate proposal for both national and European elections, but in the same time, the percentage grows when referring to the European contexts.

I think this analysis is needed in order to confront the political discourse and practice of the European political families with the ones of their national components for a better understanding of the level of Europeanization and implicitly, of the steps that further need to be taken in that respect.

Future research can focus on adding more variables to this model of analysis and identifying other factors that may influence the political conduct of national and supranational political entities.

UNDERGRADUATE STUDENTS' ATTITUDES TOWARD FACEBOOK USE

Ali ACILAR[*]
Sevinç MERSIN[**]

Abstract

Together the Internet and the Web have profoundly affected our life for the past decades. Today, we can use the Web for communication, education, business, entertainment and searching information. In recent years, the use of Facebook has become widespread worldwide, especially among young generations. The main aim of this paper is to investigate the attitudes of undergraduate students toward Facebook use. Research data were obtained by surveying the undergraduate students of the Department of Business Administration and the Department of Economics at a public university in Turkey. According to results of the study; the attitudes of those who don't use Facebook toward Facebook use are more negative than Facebook users. Some attitudes of female Facebook users toward Facebook use are more negative compared to male Facebook users.

Keywords: *Facebook, undergraduate students, attitudes.*

1. Introduction

Social networking sites (SNSs) play an important role in the communication and socialization of people in the Internet (Moore & McElroy, 2012). Web 1.0-based websites are the very first steps of the Internet with traditional features of the media allow its users to have unilateral communication. On the other hand, today's websites allow their users to share information and pictures, collaborate with each other, and create new services and applications, besides their static features (Laudon & Laudon, 2011: 272). According to Laudon and Laudon (2012: 272-273), Web 2.0 can be defined with four distinctive features as follows: Social participation, user-generated content, interaction with each other and real-time user control. Today, social media is one of the most popular applications of Web 2.0.

Today, there are many social networking sites like Facebook, Twitter and LinkedIn, which are used by millions of people to communicate with friends, family, and colleagues (Qi & Edgar-Nevill, 2011). Facebook is one of the most popular SNSs among all these sites with a user profile ranging from teenagers in their early ages to the elders (Taneja, Vitrano & Gengo, 2014). Facebook enables its users to create their own profiles, add some friends, post something either on their own profile pages or friends' pages, share pictures and files and expand their social circles in addition to giving them the opportunity of establishing virtual relationships in ways similar to the relationships established in the real world. These virtual relationships become part of virtual communities, which are created among Facebook users who share similar interests (Taneja, Vitrano & Gengo, 2014).

Facebook has become the most popular social networking site especially among college students (Cheung, Chiu & Lee, 2011). In the studies conducted, it has been determined that university students spend lots of time on Facebook (Ellison, Steinfield & Lampe, 2007, Milosevic-Dordevic & Zezelj, 2014; Pempek, Yermolayeva & Calvert, 2009).

Facebook use and the effects of Facebook on its users have been investigated in the previous studies. In these studies; Facebook and loneliness (Jin, 2013; Kross et al, 2013; Skues et al, 2012), Facebook and privacy (Bechmann, 2014; Dinev, Xu & Smith, 2009; Raynes-Goldie, 2010; Saeri et al, 2014; Stieger et al, 2012), the use of Facebook and personal characteristics of the users (Ljepava et al. 2013; Mehdizadeh, 2010; Moore & McElroy, 2012), Facebook and self-disclosure (Chen & Marcus, 2012; Kisekka, Bagchi-Sen & Rao, 2013), Facebook and addiction (Stieger et al., 2012; Hong et al., 2014) have been investigated.

According to the results of study conducted by Moody (2001), high levels of Internet use are associated with high levels of emotional loneliness and low levels of social loneliness (Moody, 2001). A similar situation applies to the use of SNSs as well. In this regard, although the use of Facebook drops peer-related loneliness down by making new friends in the short run, it results in increased peer-related loneliness over time (Teppers et al., 2014).

According to Morahan-Martina and Schumacher (2003) loneliness has been associated with increased Internet use. Lonely people may be drawn online because of the changed social interaction patterns online, the increased potential for companionship and as a way to modulate negative moods associated with loneliness (Morahan-Martina & Schumacher, 2003).

[*] Associate Professor, PhD, Faculty of Economics and Administrative Sciences, Bilecik Seyh Edebali University, Bilecik, Turkey (e-mail: **Ali.acilar@bilecik.edu.tr**)
[**] Assistant Professor, PhD, Health Faculty, Bilecik Seyh Edebali University, Bilecik, Turkey (e-mail: **Sevinc.mersin@bilecik.edu.tr**)

Social networking sites may lead their users to be addicted. One of the most important psychological characteristics that increase the addiction is low self-esteem (Milosevic-Dordevic & Zezelj, 2014). According to Tazgnihi and Siedlecki (2013), there is a negative relationship between self-esteem and engagement with negative activities along with getting connected with others through Facebook (Tazghini and Siedlecki, 2013).

Along with benefits of social networking sites for their users, there are also some privacy problems caused by these online social technologies. Social networking sites are targeted by many groups since they store private information of hundreds of millions of people using these sites, therefore, these social sites work to make their privacy settings more powerful and strengthen their security tools (Qi & Edgar-Nevill, 2011). In this regard, social networking sites such as Facebook, Twitter and LinkedIn etc. limit privacy as part of their default settings and the users of these websites are able to edit their privacy options by going into settings (Qi & Edgar-Nevill, 2011). Facebook allows its users to hide some private information such as email address, phone number, marriage status, employment and birthdate from others (Qi & Edgar-Nevill, 2011).

Although social networking sites are spending many efforts to strengthen their privacy settings, there are some concerns arising associated with privacy of the information given by their users. These concerns form the basis of this study, in which the attitudes of university students toward Facebook use were investigated.

2. Methodology

In this study, convenience sampling method, one of the non-random sampling methods, was used. A questionnaire was applied on the students attended courses in the Department of Business Administration and the Department of Economics in the spring term of 2013-2014 academic years at Bilecik Şeyh Edebali University. The participation was voluntary and confidentiality was ensured. 789 of the responses have been evaluated. In the questionnaire form, students were asked to answer 21 questions, prepared by Kokoç and Çiçek (2011), about their attitudes toward Facebook use.

2.1. Analysis of Data

2.1.1. Demographic Characteristics

Demographic characteristics of the participants in the study are presented in Table 1. 69.58% of the students participated in the study were females, while 30.42% of them were males. 75% of the participants were in the range of 20-23 years old. 52.6% of the participants were juniors and seniors.

Table 1. Demographic Characteristics of the Participants Included in the Study

	n	%
Gender		
Female	549	69.58
Male	240	30.42
Age		
18	18	2.28
19	72	9.13
20	122	15.46
21	170	21.55
22	178	22.56
23	122	15.46
24-30	55	6.97
N/A	52	6.59
Year in School		
1th year (Freshman)	170	21.55
2nd year (Sophomore)	203	25.73
3rd year (Junior)	198	25.10
4th year (Senior)	217	27.50
N/A	1	0.13

2.1.2. Facebook Use of the Participants

Facebook membership status of the participants was asked and responses are given in Table 2.

Table 2. FacebookMembership Status of the Participants

	n	%
Facebook membership status		
I have an account (Active User)	696	88.21
I freeze my membership	64	8.11
I have not been a member before	16	2.03
I have no idea about Facebook	1	0.13
N/A	12	1.52

According to the results, 88.21% of the students are still active users of Facebook, whereas 16 students stated that they never become a member. 12 participants didn't answer this question.

Table 3. Facebook Use Characteristics of Participants

	n	%
Duration of membership of Facebook	29	4.17
Less than 1 year	91	13.07
1-3 year(s)	255	36.64
3-5 years	292	41.95
5 years or more	29	4.17
N/A		
How often do you use Facebook?	266	38.22
When I find the chance	139	19.97
4 times or more in a day	99	14.22

3 times in a day	110	15.80
Once in a day	49	7.04
Few times in a week	22	3.16
Once in a week	4	0.57
Few times in a month	5	0.72
Once in a month	1	0.14
Few times in a year	1	0.14
N/A		
How much time do you spend on Facebook per day?	189	27.16
Less than 30 minutes	238	34.20
30 Minutes - 1 hour	122	17.53
1-2 hour(s)	63	9.05
2-3 hours	83	11.93
3 hours or more	1	0.14
N/A		
How many friends do you have on your Facebook profile?	27	3.88
Less than 50 people	45	6.47
50-99 people	152	21.84
100-199 people	197	28.30
200-299 people	242	34.77
300 or more	33	4.74
N/A		

Those who are still active users were asked some questions regarding the use of Facebook. Their responses to these questions are presented in Table 3. It has been determined that most of the Facebook users (547 people, 78.6% of Facebook users) are a member to Facebook for at least 3 years. 266 people (38.22% of Facebook users) stated that they login to Facebook whenever they find a chance, whereas 139 people (19.97% of Facebook users) stated that they login to Facebook at least 4 times in a day. The majority of Facebook users (427 people) spend up to one hour per day on Facebook, while 83 people stated that they spend at least 3 hours on Facebook. The majority of Facebook users (439 people, 63.07% of Facebook users), who are still active users, stated that they have at least 200 friends on Facebook.

The mean and standard deviations for each answer given by participants to a five point Likert-type scale (1 = strongly disagree, ..., 5 = strongly agree) with 21 items are presented in Table 4. When items were put in an order based on their mean values, the items with the top three highest mean score are as follows: “I do not want to deal people that I do not know”, “I think Facebook causes addiction” and “Virus can be transmitted to my computer through applications on Facebook”. The last three items with the lowest mean values are determined as follows: “I think I can be misguided on Facebook without my will”, “I think my Facebook membership could negatively affect future business opportunities” and “I do not like technology-based communication”.

Table 4. Attitude toward Facebook Use

	Mean	St. Dev.
1) I think Facebook is a waste of time.	3.313	1.168
2) I have concerns about the security of my personal information on Facebook.	3.400	1.144
3) I do not like technology-based communication.	2.418	1.106
4) I think Facebook causes addiction.	3.718	1.238
5) I think Facebook damages the social skills.	3.441	1.250
6) I think using Facebook is unnecessary.	2.862	1.186
7) Virus can be transmitted to my computer through applications on Facebook.	3.698	1.116
8) I think Facebook negatively affect the academic achievement.	3.056	1.166
9) I think Facebook eliminates the privacy (security) of personal information.	3.351	1.148
10) I am uncomfortable with my private life brought out.	3.175	1.225
11) I am influenced by the negative news about Facebook.	2.876	1.204
12) There is no reason for me to use Facebook.	2.804	1.230
13) I do not want to deal people that I do not know.	3.778	1.158
14) I think my Facebook membership could negatively affect future business opportunities.	2.540	1.150
15) I do not want other people to see my private information.	3.661	1.119
16) I believe that Facebook is not a good channel to make a new friend.	3.231	1.261
17) I think I can be misguided on Facebook against my will.	2.803	1.199
18) I think Facebook weakens the relationships that I have established with my friends in the real life.	3.017	1.285
19) I do not find relationships realistic on Facebook.	3.631	1.176
20) I do not find Facebook useful.	3.129	1.134
21) I do not want to interact with too many people.	3.090	1.192

T-test was performed in order to determine whether there is a statistically significant difference between attitudes of Facebook users and Non Facebook users toward Facebook use. T-test results are presented in Table 5. Based on the results, Facebook users have more positive attitudes toward Facebook use compared to those who don't use Facebook, as expected.

Table 5. Attitudes of Facebook Users and Non Facebook Users toward Facebook Use

T-test was performed in order to determine whether there is a statistically significant difference between attitudes of male and female students toward Facebook use. T-test results are presented in Table 6. Although there is no significant difference found between male and female students' attitudes in general, we have determined statistically significant differences in four items ("I think Facebook causes addiction", "I am influenced by the negative news about Facebook", "I do not want to deal people that I do not know" and "I do not want other people to see my private information"). For these four items, the attitudes of female students toward Facebook use are more negative than the attitudes of male students toward Facebook use.

3. Conclusions

This study was conducted with students in the Department of Business Administration and the Department of Economics at Bilecik Şeyh Edebali University. It has been determined that the majority of the students who participated in the study were active Facebook users, using Facebook intensively.

A statistically significant difference was found between attitudes of Facebook users and nonusers toward Facebook use. The students using Facebook have more positive attitudes toward Facebook use compared to those who don't use Facebook. There were four items, in which statistically significant difference was determined between male and female student, as follows: "I think Facebook causes addiction", "I am influenced by the negative news about Facebook", "I do not want to deal people that I do not know" and "I do not want other people to see my private information". Female students agree more on these items compared to male students.

Facebook is a social networking site, which becomes increasingly prevalent and widely used among young people, offering many advantages. However, the use of Facebook also brings some risks. This has been noticed by some young people and they have taken various precautions. Some of these precautions are reducing the time spent on Facebook or sometimes even deleting the account. Young people should be aware of the situations that may lead to ethical, social or legal consequences in the Internet, especially in the social networking sites. For this purpose, it would be quite useful to inform university students about using Facebook, consciously.

There are some limitations of our study. In this study, using the convenience sampling method is one of our limitations. Another limitation is conducting the study with students in the Department of Business Administration and the Department of Economics at Bilecik Şeyh Edebali University only. Therefore, the results obtained from this study cannot be generalized. In this study, the attitudes of university students toward Facebook use have been investigated. The future studies can be conducted with students of different universities and they can also investigate the effects of attitudes of students on their behaviors in addition to investigating the attitudes of Facebook users toward the use of Facebook.

BUSINESS INITIATIVE FOR CREATING COMPETITIVE ADVANTAGE THROUGH INFORMATION TECHNOLOGY

Afërdita BERISHA-SHAQIRI*

Abstract

To achieve economic and social development, as well as high standards of living should be paid special attention to the development of information society and spreading the use of information technology.

Countries around the world are moving from industrial economy to knowledge economy in which economic growth of a country is dependent on the ability to create, accumulate and disseminate knowledge. Computer and Internet are the catalyst for economic growth of knowledge by enabling people to codify knowledge in a digital form easily transmitted anywhere in the world.

Increasing the pressure of competition forces businesses to fight for new research, new products and new markets, these businesses can only afford having support from a quality information system. This support should enable higher quality solution for the governance of resources that businesses possess.

Contemporary Management is increasingly dependent on information technology, because without a perfect technology and available data, the software may not have adequate information to be managers in making decisions.

Keywords: *competitive advantage, management information system, business, database, competitive surroundings, decisions etc.*

1. Introduction

Information system is a dynamic field monitors changes, perhaps the most important driving force that is driven by the development of computers, is a system that works and has to do with the information,by Mustafa Muhamet (1995).

Through better organization of the MIS come by qualitative decision making at all levels of management from the high level to the lowest. As computer technology over the organization better and optimal database offers great opportunities to be able to serve for a quick and qualitative manipulation to raise the quality of preparation of decisions. So rapid development of information technology coupled with the development of telecommunications technology has streamline every area of life and human activity.

Current processes of business development in global scale clearly show that sustainable economic development in the time in which we live is derived from their ability to be innovative in business processes to gain competitive edge, to be involved in the management and Conditions success and prosperity in a much longer period of time. Computers are being used in all areas, it is especially expressed mostly in business. Those who learn to use this powerful tool to gain competitive advantage and provide information that you needed them for careers, successful business, regardless of the profit which field are oriented in finance, marketing, management or in any other field business, and for those who do not absorb this powerful tool will be far from the future.

The business itself changes all the time and with his growth and development of information needs to ask businesses will vary. At the same time computing systems have a need for support, growth, change and development.

BUSINESS INITIATIVE FOR CREATING COMPETITIVE ADVANTAGE THROUGH INFORMATION TECHNOLOGY

Many businesses began to realize that the information system is a tool with which to create advantage against competition. They used the information system to support management for planning and control to make operations more effective and efficient. However expression system using information as a competitive advantage is new, so the rapid development of information are managers creates opportunities to support their business decisions on a rational action that ensures business. This development has made the need to align business activities in relation to internal competition and external. The rapid development and competitive pressure compels businesses to fight for new markets, new products and new channels of distribution.

New technologies and their use allows to overcome borders between countries by promoting business cooperation between companies in different countries, because computer networks provide a 24 hour service by accepting and transferring customer requirements from one place to another with a very high speed. These nets at the same time enable enterprises to cooperate to achieve economy of volume. Many authors, especially in managerial literature agree that knowledge and technology are the main business resource and the basis for achieving

* Assistant Professor, PhD, Department of Management & Informatics, Faculty of Economics, University of Prishtina "Hasan Prishtina", Kosova. St. Agim Ramadani, no number, 10000 Prishtina, Kosova. competitive advantage for an enterprise (Dierkes et all, (2001); wedge, 2002, Strict, 2004). In the developed world companies that have the knowledge base are leaders in the industry.

It would not be exaggeration to say that the importance and role of ICT in economic growth and productivity growth trend in the first decade of the 21st century, they observed may suggest that ICT will be the navigator of economic growth in the the near future.

Economic growth means increasing the ability of goods, products and services of a country (Miles, 2001). The use of ICT also facilitates the production of goods in a short time with the help of computerized information systems, and services are fast and effective according to Miles (2001).

Today, the new model of the enterprise requires a new shape and form of business organization which made the economic value created in the business not only by the use of new technology but also of teamwork, where most of the value created stems immaterial factors: information and knowledge.

Computerization of the economy expressed by the level of use of computers in business activities and financial processes banking, marketing, etc., through the use of internet, web-pages possession, etc. Increased productivity and reduced costs in developed countries rely on computer manufacturing leadership in production robotization and computerization of administrative work (Muhamet Mustafa, 1995).

Therefore, with the right research and various scientists put out that ICT will become the assistant principal business activities in the modern world (Tapscoot we Casto, 1993; Mandel, 1994; Gill, 1996).

Information Technology is used as a strategic tool for companies to enhance their competitive advantages in a time when insecurity is growing (WR King, V. Grove, and EH Hufnagel, 1989). The idea that information technology can contribute to the optimization of enterprise resources, strengthen, enable and enhance business performance, is accepted and supported by many empirical studies (V. Seth and W.R. King, 1994),(Chan, S.L. Huff, D.W. Barclay, 1997), (A.M. Croteau and F. Bergeron,2001).

Advances in information technology are vital components of an honor for business success. ICT constantly being studied and used for more business is helping to expand and compete with competitors. Businesses are using ICT to improve the efficiency and effectiveness of business processes and decision support for group collaboration. A successful cases of companies that are using this technology are: American Airlines and Baxter Company that created an entirely new business and competitive advantage precisely because the use of this technology.

Authors Leonard-Barton, 1988 consider that the implementation of new technology is a kind of innovation, and this implementation should be seen as a mutual adaptation of technology in the enterprise's internal organization, and the adaptation of new technology enterprise.

Today, many companies have realized the great effects that brings the application of new technology and how it can create the basis for sustainable growth and competitive advantage (Michael E. Porter and Victor E. Millar).

Since the business environment is constantly changing and evolving, the business itself changes all the time and with his growth and development of information needs to ask businesses will vary. At the same time computing system needs to support growing, changing and developing. (Vakola and Wilson 2004).

The findings of the authors mentioned above clearly indicate that businesses invest in computing technology, because they believe this technology will enable them to be more competitive (Ross A. Malaga, 2001).

Businesses usually have a need for the application of information technology to help the business to work with computerized processes that case comes to spending cuts, increased productivity and in this case also comes to higher sales and profit growth. Also, information technology helps companies enter a new market or spend the new branch. To create competitive difference condition seen by the authors (Robert Urwiler and Mark N. Frolick, 2008) are innovations in information technology because information technology is an integral part of organizational strategy and planning processes and not just opportunities.

Application of information technology should be based strategy (Moon-Koo Kim and Kyoung-yong Jee, 2007), which enables the company repositions the configuration of competition within the market, or to overcome the unfavorable competitive situations (Seth V. and WR King, 2004). Using information technology companies have the opportunity to improve the efficiency of their operations and performance in insurance and asset management, and enable them to enhance competitive advantages in certain areas, making competitive moves and consolidating resources and opportunities (V. Sethi and WR King, Chan, SL Huff, DW Barclay, and DC Copeland, 1994).

MANAGEMENT INFORMATION SYSTEM AND COMPETITIVE ADVANTAGE

By the mid 80's many companies began to use information technology as a tool to gain competitive advantage, to support management in planning and control, to make business operations more effective and efficient, and to change the structure of business activities.

Although the use of informatization expression to create new competitive advantage is, most enterprises have created a significant competitive advantage precisely through the use of information technology in order to increase competitiveness. Such

are eg American Airlines, United Airlines SABRE system, the Apollo system etc, by Hicks, Jr, O.James (2003). Information system is entirely related elements among themselves which operate together to the purpose of collecting, processing and distribution of information.

Author James O.Hicks (2003) defines information system as formalized system that collects, stores, processes and reports data from various sources to provide information needed to manage the process of making decisions. J.W.Wilkinson (1997) talking about computer operating systems mentioned five tasks or activities:

1. Data collection;
2. The processing of data;
3. Data Management;
4. Control and obtaining data and
5 Generation of information.

Through these activities by J.W.Wilkinson (1997) the data from various sources through a process called data processing is converted into information necessary for the user. While management information systems comprise components of his own physical hardware, software, databases, procedures and personnel.

An information system is formalized system where collected and sorted out by several processes, reports, data from various sources to provide information necessary and important to obtain important management decisions Although it is difficult to understand the strategic importance of information technology, can to say that this technology has transformed the nature of the products, business processes, companies, industry and competition. While most recent information technology managers have treated as a support service, each company has today understand the effects of things application of new technology and sustainable competitive advantages.

Authors Rackoff, Wiseman, and Ullrich have identified several factors that ensure computerization of competitive advantage for enterprises. They are:

- Modification, differentiation or changes that make the company stand out with its products and services or weaken competition and reduce the competitive advantages;
- Adapting and adjusting supply cutting costs, reducing consumer spending and increasing competition expenses;
- Company being introduced innovative products or services that result in changes in the way business is passed then in the industry;
- Improving growth and development by increasing volume, expanding geographically and being harmonized with suppliers and customers;
- Forms of mergers and alliances through various agreements in marketing etc.

Some other authors (Urwiller and Florick) noted that to create competitive difference as a result of computerization first condition are innovations in information technology, which today have become an integral part of organizational strategy and planning processes. Information Technology is not only possible, but is streamlined entity and the way to create competitive edge. To achieve competitive difference information technology and its use in business processes results in a new way of doing business (e-business) as well as providing products and services electronically.

One such service 24 hours / 7 days a week and enable computer networks by transferring customer requirements from time zone to another. These networks create preconditions that small firms collaborate without limitations of time and space. Therefore, it is not surprising that today the whole world is connected to the Internet and the Internet is the most powerful medium of modern communication.

INFORMATION TECHNOLOGY AND REENGINEERING OF BUSINESS PROCESSES

Using information and communication technology (ICT) contributes significantly to the growth and development, because it raises productivity and work efficiency by enabling creativity and stimulate innovation, and most importantly helps the penetration and the existence in global markets. ICT enables the participation of all stakeholders in the programs and projects regardless of their location and physical distance, if available and have access to the network infrastructure of ICT.

Enterprises are often motivated to apply IT in business processes, if it is necessary in internal business processes for better quality information or even the impact on competition. Business processes are a series of activities that transform inputs into outputs, goods, and services.

Enterprises are required to improve business processes to stay competitive in today's market. During the last 10-15 years, companies have been forced to improve their business processes, because we, as clients are demanding products and services better. And if we do not get what we want from a supplier, we have many to choose from other business competitors. Therefore, many companies begin the process of improving business performance with a continuous improvement model. This model made efforts to understand and measure the actual business process and its performance accordingly. This method for improving business processes is effective. However, during the last 10 years, several factors have accelerated the need to improve business processes with the most appropriate method. Internet technology and its use of which has rapidly increased competition, the opening of global markets and creating opportunities for free trade has extended enterprises make changes in performance and speed of introduction in the market with products and services.

Because the rate of change has reached everyone, few businesses can afford a slow process of change. An approach to rapid change and dramatic

improvement in business is definitely reengineering process of business process (Business Process Reengineering (BPR)),by (www.isixsigma.com, www.prosci.com). That is to say that in terms of the new economy to compete in global markets and in step with the achievements in IT, enterprises are forced to make reengineering of their business processes, aiming at improvements in business processes by increasing efficiency and effectiveness of the process business.

Rreengineering of business processes (BPR) is the process of redesigning the business process which means the business transformation or change management process, by (wikipedia.org/wiki/Business_process_ reengineering). Rreengineering is a radical reconstruction of business processes to achieve improvements in cost, quality, speed, and services. BPR combines a strategy for business innovation with a strategy to make major improvements in business processes so that a company is very strong competitive and successful in the market (Jimmy, W.2010).

CONCLUSION

Information Technology is used in business processes due to the pressure of competition and the need for companies to be more effective and efiqiente and building their competitive position. Great importance has also inter alia reaction time, decision to become more effective and profitable business. Information Technology is considered one of the assets which build prosperity and survival in the global economy because the value of information is too large.

Countries in the world are moving from the industrial economy to knowledge economy, and the growth of a country is dependent on the ability to create, accumulate and disseminate knowledge. Computer and internet are a catalyst for economic growth of knowledge by enabling people to codify knowledge in a digital form easily, and transmitted throughout the world.

Advancements in information technology are a vital component of success among business. ICT has been constantly studied and used because it helps many businesses to expand and compete with competitors. Using ICT to enhance the impact and effectiveness processes to support business decisions and cooperation in the group. A successful case is that companies use this technology are creating entirely new business and advantage.

So, competition is what pushes businesses to apply information technology in their business processes. Typically they create their business processes with an emphasis on internal and local efficiency. The problem becomes more acute when they decide to work with external partners. In this case, data systems and incompatible information technology make it difficult to harmonize all activities of production and distribution. Another area of concern is the lack of detailed documentation. Therefore to be competitive in the domestic and foreign businesses must meet the following basic conditions:

- To achieve the highest quality of products and services offered;
- Use modern technology and efficient;
- Introduce scheme more effective management and network working;
- The individual earned good skills and managerial staff;
- To have access, and easy access to comprehensive information involvement in the economic systems of new products and services etc.

COLLABORATIVE E-PLATFORM FOR SUSTAINABLE ENTERPRISE INTEROPERABILITY

Adina-Georgeta CREȚAN*

Abstract

The pursuit for better competitiveness has driven companies to develop dedicated business areas to handle the seeking for new partnerships, with its inherent need for interoperation. Current Enterprise Interoperability is sensible to the entropy associated to external factors, making it easy to break loose. In order to accommodate the changes that are needed, constant periodic adaptations must be performed. If this adaption imposes new concepts that conflict with the existing ones, this may implicate loss of interoperability with other partners or a massive change on all partners. This paper proposes a collaborative platform to support negotiations of the interoperability entities towards interoperability of organisations acting in the same industrial market, using a model-driven, cloud-based infrastructure and services.

Keywords: *ePlatform, Sustainable Enterprise Interoperability, Negotiation, Services, Network Enterprises, SME, Virtual Enterprise.*

1. Introduction

Enterprises are developing business areas dedicated to the purpose of finding and complying with the best set of partners and suppliers for solutions that are aligned with the enterprise's strategy. In a world where new solutions, platforms, trends, standards and regulations keep evolving, this task needs to be continuous, together with constant update of each enterprise's solutions, interfaces, methods and quality.

To be able to perform, enterprises need to exchange information, whether this exchange is internal (among departments of the enterprise), external (between the enterprise or part of it and an external party), or both. Enterprise Interoperability (EI) is thus defined as the ability of an enterprise to seamlessly exchange information in all the above cases, ensuring the understanding of the exchanged information in the same way by all the involved parties[1]. Large enterprises accomplish this by setting market standards and leading their supply chain to comply with these standards. Small and Medium Enterprises (SMEs) usually don't have the empowerment to do so, and are therefore more sensible to the oscillations of the environment that involves them, which leads them to the need to constantly change to interoperate with their surrounding ecosystem. Sustainable EI (SEI) is thus defined as the ability of maintaining and enduring interoperability along the enterprise systems and applications' life cycle. Achieving a SEI in this context requires a continuous maintenance and iterative effort to adapt to new conditions and partners, and a constant check of the status and maintaining existing interoperability[2].

Recent advances in the information technology have made possible the development of a new type of organization, the virtual organization. The concept of "Virtual Enterprise (VE)" or "Network of Enterprises" has emerged to identify the situation when several independent companies decided to collaborate and establish a virtual organization with the goal of increasing their profits. Camarinha-Matos[3] defines the concept of VE as follows: "A *Virtual Enterprise (VE)* is a temporary alliance of enterprises that come together to share skills and resources in order to better respond to business opportunities and whose cooperation is supported by computer networks".

Given this general context, the objective of the present paper is to develop a conceptual framework and the associated informational infrastructure that are necessary to facilitate the collaboration activities and, in particular, the negotiations among independent organizations that participate in a Network Enterprises.

The negotiation process was exemplified by scenarios tight together by a virtual alliance of the autonomous gas stations. Typically, these are competing companies. However, to satisfy the demands that go beyond the vicinity of a single gas station and to better accommodate the market requirements, they must enter in an alliance and must cooperate to achieve common tasks. The manager of a gas station wants to have a complete decision-making power over the administration of his contracts, resources, budget and clients. At the same time, the manager attempts to cooperate with other gas stations to accomplish the global task at hand only through a

* Associate Professor, "Nicolae Titulescu" University, Computer Science Department (e-mail: **adinacretan@univnt.ro**)

[1] M.-S. Li, R. Cabral, G. Doumeingts, and K. Popplewell, "Enterprise Interoperability Research Roadmap," no. July. European Commision - CORDIS, p. 45, 2006.

[2] R. Jardim-Goncalves, A. Grilo, C. Agostinho, F. Lampathaki, and Y. Charalabidis, "Systematisation of Interoperability Body of Knowledge: the foundation for Enterprise Interoperability as a science," Enterprise Information Systems, vol. 6, no. 3, pp. 1-26, 2012.

[3] Camarinha-Matos L.M. and Afsarmanesh H.,(2004), *Collaborative Networked Organizations,* Kluwer Academic Publisher Boston

minimal exchange of information. This exchange is minimal in the sense that the manager is in charge and has the ability to select the information exchanged.

When a purchasing request reaches a gas station, the manager analyses it to understand if it can be accepted, taking into account job schedules and resources availability. If the manager accepts the purchasing request, he may decide to perform the job locally or to partially subcontract it, given the gas station resource availability and technical capabilities. If the manager decides to subcontract a job, he starts a negotiation within the collaborative infrastructure with selected participants. ***In case*** that the negotiation results in an agreement, a contract is settled between the subcontractor and the contractor gas station, which defines the business process ***outsourcing*** jobs and a set of obligation relations among participants[4].

The gas station alliance scenario shows a typical example of the SME virtual alliances where partner organizations may be in competition with each other, but may want to cooperate in order to be globally more responsive to market demand.

The collaborative infrastructure, that we describe, should flexibly support negotiation processes respecting the autonomy of the partners.

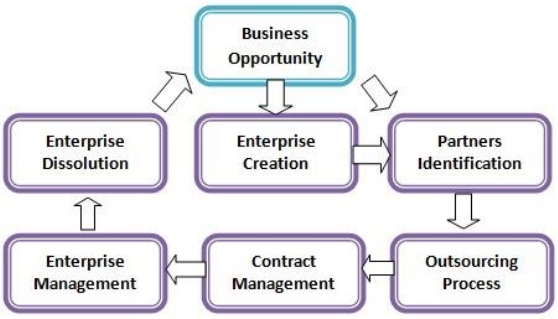
We are starting with a presentation in Section 2 of a VE life cycle model. In Section 3 we emphasize the importance of the Service-Oriented Architectures (SOA). Then, we are briefly describing in Section 4 the architecture of the collaboration system in which the interactions take place[5].

The main objective of this paper is to propose a collaboration framework in a dynamical system with autonomous organizations. In Section 5 we define the Coordination Components that manage different negotiations which may take place simultaneously. In Sections 6 and 7 we present the model of the negotiation process that can be used by describing a particular case of negotiation, and the negotiation algorithm. Section 8 describes the Infrastructure for Sustainable Interoperability and, finally, Section 9 concludes this paper.

2. The main steps of the Virtual Enterprise life cycle

The life cycle of virtual enterprise is classified into six phases. The relevance in different phases is shown in Figure 1 and the statement for each phase is given as follows:

Figure 1. Life-cycle of a virtual enterprise



a) VE creation

When a business opportunity is detected, there is a need to plan and create the VE, identify partners, establish the contract or cooperation agreement among partners, in order to manage the processes of the VE.

b) Partners search and selection

The selection of business partners is a very important and critical activity in the operation of a company. Partners search can be based on a number of different information sources, being private, public, or independent. The enterprise's private suppliers' list is a data repository that contains information about the companies that have had commercial relationships with this enterprise. This information composes an *Internal Suppliers Directory (ISD)*. External sources include directories maintained by industrial associations, commerce chambers, or Internet services. This information composes the *External Suppliers Directory (ESD)*. Another emerging solution is the creation of clusters of enterprises that agreed to cooperate and whose skills and available resources are registered in a common *SME Cluster Directory* (CD).

c) Outsourcing of tasks within a VE

In this stage of a VE life cycle, we can assume that a gas station company receives a customer demand. In this respect, the Manager of this company may negotiate the outsourcing of a schedule tasks that cannot perform locally with multiple partners of selected gas station companies, geographically distributed. The Manager can select the partners of the negotiation among the database possible partners according to their declared resources and the knowledge he has about them.

The outcome of a negotiation can be "success" (the task was fully outsourced), "failure" (no outsourcing agreement could be reached) or "partial" (only part of the task could be outsourced).

d) Contract management in the VE

In case the negotiation process ends in a successful, a contract is established between the outsourcing company and the insourcing ones. The contract is a complex object, which is based of trust in this coordination mechanism. Moreover, it contains a

set of specific rules, such as penalties, expressing obligation relations between the participants.

In case of failure of a partner, the Manager will have to supervise if the obligations are honored (for example to oblige the partner to finish his work or to set penalties) and to modify the business process renegotiating parts of the work that have not been realized.

e) Management of the VE

A VE is a dynamic entity in which a new company may join or leave it. Members may need to leave for many reasons, when they change their activity or when they don't want any more to collaborate with the partners of the VE. In case of departure from the VE, the leaving partner may either notify all the partners. It also may leave without giving any information. The departure of a partner from the VE will have an important impact on ongoing contracts especially when this partner is an insourcer of an important amount of task.

f) VE dissolution - after stopping the execution of the business processes.

3. Services over Cloud-based Systems

In the last decade, Service-Oriented Architectures have contributed to an extraordinary improvement towards interoperability. Web Services have reshaped the existing concepts of solution deployment and provisioning, and paved the way for other important concepts using the same paradigm, like functional discovery and subscription in common repositories, orchestration and composition of services into more complex ones (Papazoglou et al, 2008).

More recently, another important concept is rocking the standards and reshaping the face of the digital world. Cloud-based solutions or Cloud Computing is not actually a new concept or major breakthrough in terms of technology but rather a business concept towards the idea of distributed computing existing for ages. Cloud-based solutions may be roughly split into the concepts of on-demand storage and server availability (Infrastructure as a Service or IaaS), on-demand platform integration (Platform as a Service or PaaS) and on-demand processing availability (Service as a Service or SaaS) (Bui et al, 2003); this concept also boosted interoperability, with a special favouring for SMEs (Jeffery et al, 2010). Solutions can now be developed in small, inexpensive proof-of-concepts, and if proven correct, rapidly be scaled into large solutions, reducing dramatically time-to-market and allowing companies to be able to plan peak workloads without the burden of keeping infrastructures on lower workloads thus enhancing agility and flexibility for businesses. Interoperability using services in a cloud-based environment ensures flexibility towards changes due to e.g. new requirements, semantic heterogeneity, thus contributes to sustainable interoperability.

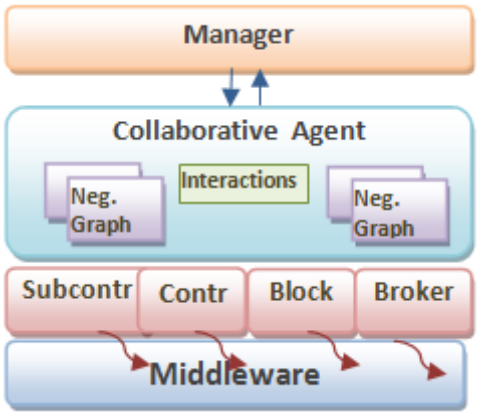
4. The Collaborative Infrastructure

The main objective of this software infrastructure is to support collaborating activities in virtual enterprises. In VE partners are autonomous companies with the same object of activity, geographically distributed.

Taking into consideration, the constraints imposed by the autonomy of participants within VE, the only way to share information and resources is the negotiation process.

Figure 2 shows the architecture of the collaborative system:

Figure 2. The architecture of the collaborative system



This infrastructure is structured in ***four*** main ***layers***: Manager, Collaborative Agent, Coordination Components and Middleware. A first layer is dedicated to the Manager of each organization of the alliance. A second layer is dedicated to the Collaborative Agent who assists its gas station manager at a global level (negotiations with different participants on different jobs) and at a specific level (negotiation on the same job with different participants) by coordinating itself with the Collaborative Agents of the other partners through the fourth layer, Middleware[6]. The third layer, Coordination Components, manages the coordination constraints among different negotiations which take place ***simultaneously***.

A Collaborative Agent aims at managing the negotiations in which its own gas station is involved (e.g. as initiator or participant) with different partners of the alliance.

Each negotiation is organized in three main steps: initialization; refinement of the job under negotiation and closing[7]. The initialization step allows

[6] Bamford J.D., Gomes-Casseres B., and Robinson M.S., *Mastering Alliance Strategy: A Comprehensive Guide to Design, Management and Organization*. San Francisco: Jossey-Bass, 2003

[7] Sycara K., *Problem restructuring in negotiation*, in Management Science, 37(10), 1991

to define what has to be negotiated (Negotiation Object) and how (Negotiation Framework)[8]. A selection of negotiation participants can be made using history on passed negotiation, available locally or provided by the negotiation infrastructure (Zhang and Lesser, 2002). In the refinement step, participants exchange proposals on the negotiation object trying to satisfy their constraints (Barbuceanu and Wai-Kau, 2003). The manager may participate in the definition and evolution of negotiation frameworks and objects (Keeny and Raiffa, 1976). Decisions are taken by the manager, assisted by his Collaborative Agent (Bui and Kowalczyk, 2003). For each negotiation, a Collaborative Agent manages one or more negotiation objects, one framework and the negotiation status. A manager can specify some global parameters: duration; maximum number of messages to be exchanged; maximum number of candidates to be considered in the negotiation and involved in the contract; tactics; protocols for the Collaborative Agent interactions with the manager and with the other Collaborative Agents (Faratin, 2000).

5. Coordination Components

In order to handle the complex types of negotiation scenarios, we propose different components[9]:

- *Subcontracting* (resp. *Contracting*) for subcontracting jobs by exchanging proposals among participants known from the beginning;
- *Block* component for assuring that a task is entirely subcontracted by the single partner;
- *Broker*: a component automating the process of selection of possible partners to start the negotiation;

These components are able to evaluate the received proposals and, further, if these are valid, the components will be able to reply with new proposals constructed based on their particular coordination constraints[10].

From our point of view the coordination problems managing the constraints between several negotiations can be divided into two distinct classes of components:

- Coordination components in closed environment**:** components that build their images on the negotiation in progress and manage the coordination constraints according to information extracted only from their current negotiation graph (*Subcontracting, Contracting, Block)*;

- Coordination components in opened environment: components that also build their images on the negotiation in progress but they manage the coordination constraints according to available information in data structures representing certain characteristics of other negotiations currently ongoing into the system (*Broker)*.

Following the descriptions of these components we can state that unlike the components in closed environment (*Subcontracting, Contracting, Block)* that manage the coordination constraints of a single negotiation at a time, the components in opened environment (*Broker)* allow the coordination of constraints among several different negotiations in parallel[11].

The novelty degree of this software architecture resides in the fact that it is structured on four levels, each level approaching a particular aspect of the negotiation process. Thus, as opposed to classical architectures which achieve only a limited coordination of proposal exchanges which take place during the same negotiation, the proposed architecture allows approaching complex cases of negotiation coordination. This aspect has been accomplished through the introduction of coordination components level, which allows administrating all simultaneous negotiations in which an alliance partner can be involved.

The coordination components have two main functions such as: i) they mediate the transition between the negotiation image at the Collaboration Agent level and the image at the Middleware level; ii) they allow implementing various types of appropriate behavior in particular cases of negotiation. Thus we can say that each component corresponding to a particular negotiation type.

Following the descriptions of this infrastructure we can state that we developed a framework to describe a negotiation among the participants to a virtual enterprise. To achieve a generic coordination framework, nonselective and flexible, we found necessary to first develop the structure of the negotiation process that helps us to describe the negotiation in order to establish the general environment where the participants may negotiate. To develop this structure, we proposed a succession of phases that are specific to different stages of negotiation (initialization, negotiation, contract adoption) that provided a formal description of the negotiation process.

The advantage of this structure of the negotiation process consists on the fact that it allows a proper identification of the elements that constitute the object of coordination, of the dependencies that are possible among the existing negotiations within the VE, as well as the modality to manage these negotiations at the level of the coordination components.

6. The Negotiation Coordination Model

This section proposes a formal model to settle and manage the coordination rules of one or more negotiations which can take place in parallel, by describing the basic concepts underlying the model, and the negotiation model using the metaphor of Interaction Abstract Machines (IAMs). The Program Formula is described to define the methods used to manage the parallel evolution of multiple negotiations.

Basic concepts

In this setup, at a local level, the model requires a formal description of the rules of coordination that manage the behavior of the agent in a negotiation; at a global level, the model must provide a global coordination of all negotiations of an agent.

The fundamentals of the negotiation model are given by the following basic concepts:

A *Negotiation Model* is defined as a quintuple M = <T, P, N, R, O> where:

- T denotes the *time of the system*, assumed to be discrete, linear, and uniform[12];
- P denotes the *set of participants* in the negotiation framework. The participants may be involved in one or many negotiations;
- N denotes the *set of negotiations* that take place within the negotiation framework;
- R denotes the *set of policies of coordination* of the negotiations that take place within the negotiation framework;
- O denotes the *common ontology* that consists of the set of definitions of the attributes that are used in a negotiation.

A *negotiation* is described at a time instance through a set of negotiation sequences.

Let Sq = {si | i $\in \mathbb{N}$} denote the set of *negotiation sequences*, such that $\forall$si ,sj $\in$ Sq, i $\neq$ j implies si $\neq$ sj. A *negotiation sequence* si $\in$ Sq such that si $\in$ N(t) is a succession of negotiation graphs that describe the negotiation N from the moment of its initiation and up to the time instance *t*. The negotiation graph created at a given time instance is an oriented graph in which the nodes describe the negotiation phases that are present at that time instance (i.e., the negotiation proposals sent up to that moment in terms of status and of attributes negotiated) and the edges express the precedence relationship between the negotiation phases.

The *negotiation phase* (*ph*) indicates a particular stage of the negotiation under consideration.

The *Status* is the possible state of a negotiation. This state takes one of the following values (*Status* $\in${*initiated, undefined, success, failure*}):

- initiated – the negotiation, described in a sequence, has just been initiated;
- undefined – the negotiation process for the sequence under consideration is ongoing;
- success – in the negotiation process, modeled through the sequence under consideration, an agreement has been reached;
- failure – the negotiation process, modeled through the sequence under consideration, resulted in a denial.

Issues is the set of attributes with associated values that describe the proposals made in a negotiation phase.

Snapshot is the set of combinations between a negotiation aspect (*Status*) and the information that is negotiated (*Issues*).

The functions *status* and *issues* return, respectively, the state (status) of a negotiation instance and the set of the attributes negotiated (issues) within a negotiation instance.

7. Negotiation Algorithm

In the proposed scenario, a conflict occurs in a network of enterprises, threatening to jeopardize the interoperability of the entire system. The first step consists in identifying the Enterprise Interoperability issue. The following steps refer to analyse the problem, evaluate possible solutions and select the optimal solution. The proposed solution for conflict resolution is reaching a mutual agreement through negotiation. The benefit of this approach is the possibility to reach a much more stable solution, unanimously accepted, in a shorter period of time.

The design and coordination of the negotiation process must take into consideration:

- Timing (the time for the negotiation process will be pre-set);
- The set of participants to the negotiation process (which can be involved simultaneous in one or more bilateral negotiations);
- The set of simultaneous negotiations on the same negotiation object, which must follow a set of coordination policies/ rules;
- The set of coordination policies established by a certain participant and focused on a series of bilateral negotiations[13];
- Strategy/decision algorithm responsible for proposals creation;
- The common ontology, consisting of a set of definitions of the attributes used in negotiation.

The negotiation process begins when one of the enterprises initiate a negotiation proposal towards another enterprise, on a chosen negotiation object. We name this enterprise the Initiating Enterprise (E1). This enterprise also selects the negotiation partners and sets the negotiation conditions (for example sets the timing for the negotiation) (Schumacher, 2001).

[12] Hurwitz, S.M., *Interoperable Infrastructures for Distributed Electronic Commerce.* 1998, http://www.atp.nist.gov/atp/98wpecc.htm

[13] Ossowski S., *Coordination in Artificial Agent Societies*. Social Structure and its Implications for Autonomus Problem-Solving Agents, No. 1202, LNAI, Springer Verlag, 1999.

The negotiation partners are represented by all enterprises on which the proposed change has an impact. We assume this information is available to E1 (if not, the first step would consist in a simple negotiation in which all enterprises are invited to participate at the negotiation of the identified solution. The enterprises which are impacted will accept the negotiation) (Kraus, 2001).

After the selection of invited enterprises (E2 … En), E1 starts bilateral negotiations with each guest enterprise by sending of a first proposal. For all these bilateral negotiations, E1 sets a series of coordination policies/rules (setting the conditions for the mechanism of creation and acceptance of proposals) and a negotiation object/framework (NO/NF), setting the limits of solutions acceptable for E1. Similarly, invited enterprises set their own series of coordination policies and a negotiation object/framework for the ongoing negotiation.

After the first offer sent by E1, each invited enterprise has the possibility to accept, reject or send a counter offer. On each offer sent, participating enterprises, from E1 to E2 ... En follow the same algorithm:

Algorithm: Pseudocode representation of the negotiation process

Inputs: Enterprises *E1...En; NO(Negotiation Object); NF(Negotiation Framework)*

Outputs: The possible state of a negotiation: *success, failure*

```
BEGIN
on receive start from E1{
    send initial offer to partner;
}
on receive offer from partner{
    evaluate offer;
    if(conditions set by the NO/NF are not met){
        offer is rejected;
        if(time allows it){
            send new offer to partner;
        }else{
            failure;
        }end if;
    }else{
        send offer to another partner;
    }end if;
    if(receive an accepted offer){
        if(offer is accepted in all bilateral negotiations){
            success;
        }else{
            if(time allows it){
                send new offer to partner;
            }else{
                failure;
            }end if;
        }end if;
    if(receive a rejected offer){
        if(offer is active in other bilateral negotiations){
            failure in all negotiations;
        }end if;
    }end if;
}
END
```

8. Infrastructure for Sustainable Interoperability

The framework that implements the underlying negotiation model shall rely on principles that allow interoperability to become reinforced, such as knowing as detailed as possible the interoperability model.

The first step is to model the basic foundations (services and infrastructure) of the framework in a MDA CIM which shall define the negotiation concepts (e.g. the IAM states), then transform it to a PIM (Grilo et al, 2006) to achieve a higher independence of external factors and to have a clear model of the negotiation partners' model; this PIM may afterwards be transformed for each negotiation partner into its platform-specific PSM set of services.

Another problem which is one of the most importantly blamed for loss of interoperability is about differences in other aspects e.g. business models, semantics, concepts, meanings and behavior. By using Model-Driven Interoperability (MDI), a CIM model shall be created consisting on shared understanding regarding concepts, business models, semantic reasoning, and related aspects of the negotiating parties (e.g. agreed term meanings, negotiation behaviours), which then is transformed into a corresponding PIM where semantic ontologies (Sarraipa et al, 2010) are defined, and furthermore, to each negotiation partner's specific PSM databases and services. This way, any interoperability change should be reflected in the corresponding model and thus be able to be assimilated by the other parties.

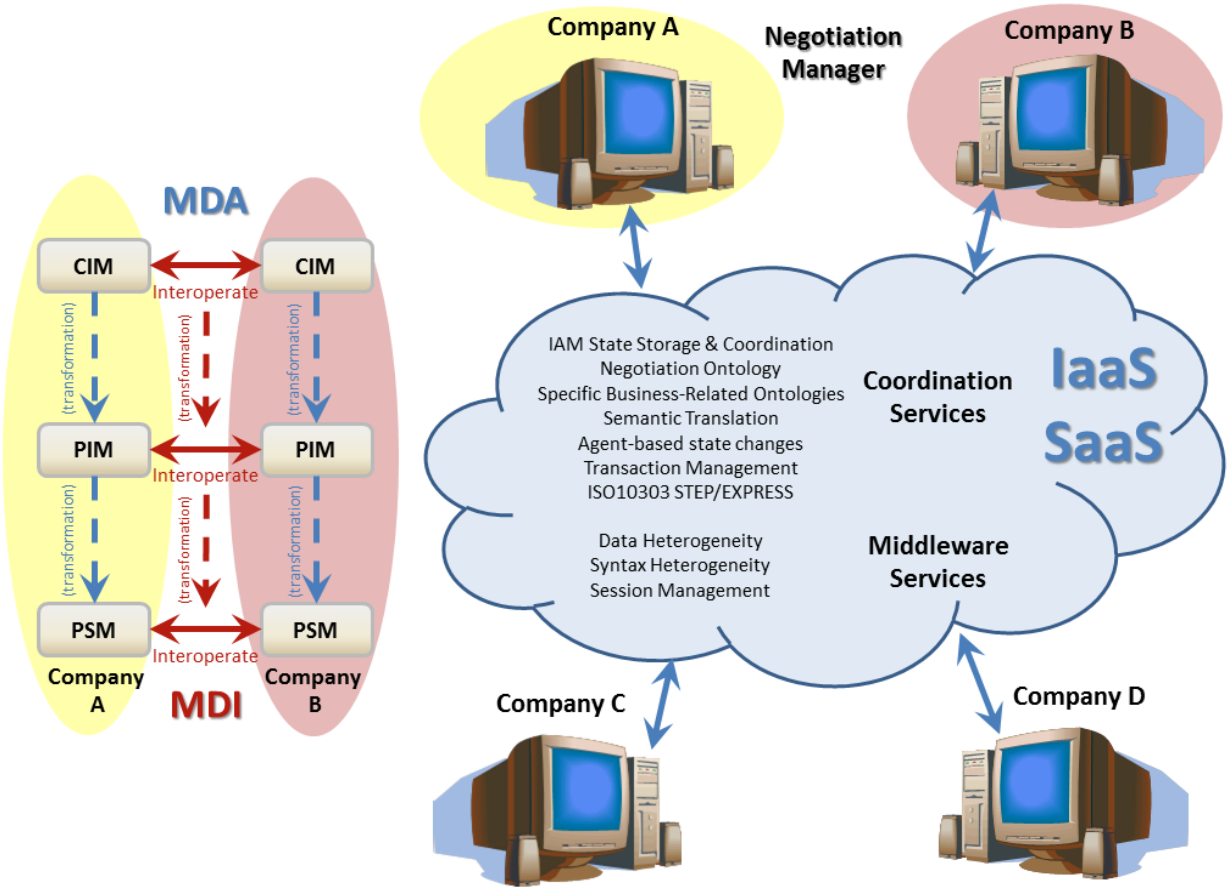
Regarding the information exchange, behaviour and other aspects of the interoperability itself, the negotiation framework shall be built using the popular, simple, flexible and robust Services and SOA (Papazoglou et al, 2008). In order to manage the issues regarding size and scalability, the SOA platform for the framework shall be implemented on top of a Cloud-based system (Jardim-Goncalves et al, 2010). The resulting infrastructure shall then be hosted by a SaaS business paradigm (Bui et al, 2003), ensuring the handling of all heterogeneity issues (e.g. communications, syntax, session, data) of the basic Middleware layer of the framework, on top of which a richer set of services (Coordination Services layer) shall be built. These services shall perform more complex activities like Transaction Management, the definition and management of the negotiation data model, storage and management of the negotiation data and business states which will implement the model rules.

The negotiation IAM states change accordingly to the defined logic; to implement this logic, the authors propose an agent-based environment where agents are programmed to be responsible in the monitoring and management of all changes in the environment that may lead to a state change.

Actually, data access, its models and data exchange can also be a problem for interoperability.

Negotiation parameters, Ontologies and other entities rely on data modeling, specification and consistency and therefore the best way to define the data models and the data exchange is to use a standard (Ciucu et al, 2013). In this case the selected solution is to model the data for databases and data access using the ISO10303 STEP (Jardim-Goncalves et al, 2006) and EXPRESS language specification. The database infrastructure itself, as well as the whole model-driven framework infrastructure shall also be implemented over Cloud, using an IaaS platform (Jeffery et al, 2010). Figure 3 shows the architecture of the Framework for Sustainable Interoperability.

Figure 3.The architecture of the Framework for Sustainable Interoperability



9. Conclusions

This paper proposes a collaborative e-platform for sustainable interoperability by modeling and managing of parallel and concurrent negotiations, which aims to open the market to broader discovery of opportunities and partnerships, to allow formalization and negotiation knowledge to be passed to future negotiations and to properly document negotiation decisions and responsibilities. The negotiation activities typically fail because they are often based on tacit knowledge and these activities are poorly described and modeled. Also as negotiations occur in a closed environment, many external potential interested parties are not aware of them and do not subscribe them. This makes negotiations reach poorer results or fail by disagreement or exhaustion. The integration of formal procedures for modeling, storing and documenting the negotiation activities allows an optimized analysis of the alternative solutions and by adding the analysis of lessons-learned on past activities leads to maximized negotiation results, stronger negotiation capabilities and relationships.

Currently, interoperability among the involved parties in a negotiation is often not reached or maintained due to failure in adapting to new requirements, parties or conditions. The use of an adaptive platform as proposed will result in a seamless, sustainable interoperability which favours its maintenance across time; the ability to reach and interoperate with more parties leads to more business opportunities and to stronger and healthier interactions.

The sequence of this research will comprise the completion of this negotiation framework with the contract management process and a possible renegotiation mechanism.

With respect to the framework middleware, future research shall include handling issues regarding the security and resilience of the stored negotiation data in the cloud, and managing privacy aspects as the negotiating parties should be able to seamlessly interoperate but still to maintain their data free from

prying eyes; also several issues need to be solved from non-disclosure of participating parties to secure access to the negotiation process.

SOFTWARE SOLUTIONS FOR ARDL MODELS

Nicolae-Marius JULA*

Abstract

VAR type models can be used only for stationary time series. Causality analyses through econometric models need that series to have the same integrated order. Usually, when constraining the series to comply these restrictions (e.g. by differentiating), economic interpretation of the outcomes may become difficult.

Recent solution for mitigating these problems is the use of ARDL (autoregressive distributed lag) models. We present implementation in E-Views of these models and we test the impact of exchange rate on consumer price index.

Keywords: *ARDL models, Autoregressive distributed lag model, Cointegration, E-Views, software econometrics, economic policies, CPI.*

1. Introduction

ARDL is the achronim for "Autoregressive-Distributed Lag". Econometric analysis of long-run relations has been the effort of much theoretical and empirical research in different economic subjects. In the case where the variables of interest are trend stationary, the general run-through has been to extract the trend of the series and to model the de-trended series as stationary distributed lag or autoregressive distributed lag (ARDL) models.

The use of ARDL models has a long history, starting with distributed lag models form early '60 (Koyck, 1954), being adapted and constantly improved by economists (Almon, 1965; van Oest, 2004).

In today analyses, the use of computer software ease the simulation of different scenarious and the best solution can be found. The increasing datasets are analysed extensively using econometric software like E-Views.

We explain the use of E-Views for analyzing the relation between exchange rate EUR/RON and the CPI, expecting to find that the exchange rate influence the CPI.

2. Content (Times New Roman, Bold, 10, justify)

A standard ARDL regression model is:

$y_t = \beta_0 + \beta_1 y_{t-1} + ... + \beta_p y + \alpha_0 x_t + \alpha_1 x_{t-1} + \alpha_2 x_{t-2} + ... + \alpha_q x_{t-q} + \varepsilon_t$

Autoregression derives from the fact that explanatory variable is explained, partly, by lagged values of itself. The "distributed lag" component is because of the successive "lags" of the explanatory X variable. The standard notation for the above-mentioned model is ARDL(p,q).

The regular approach of this equations exclude the use of OLS (ordinary least squares) because the presence of lagged values suggest that the results would include biased estimators. Also, usually the autocorrelation in the disturbance term (ε_t) would result in inconsistent estimators, thus difficult to use the results.

When this model should be used? Is we suppose that we have a set of time-series variables and we need to represent the relationship between them, not ignoring the unit root and the cointegration.

If the series are I(0) – stationary, we can use basig OLS for estimation. If we know the order of integration for the series, and it is the same for all, but they are not cointegrated, we estimate each series independently. If the series are integrated of the same order and are cointegrated, the theory suggest that we estimate, according to Dave Giles "(i) An OLS regression model using the levels of the data. This will provide the long-run equilibrating relationship between the variables. (ii) An error-correction model (ECM), estimated by OLS. This model will represent the short-run dynamics of the relationship between the variables."

The problem is when just some of the variables may be stationary, some may be I(1) and there is a possibility of cointegration among the I(1) variables.

The stepts to analyse a model like this is presented by Dave Giles in "ARDL Bound test"

(http://davegiles.blogspot.ca/2013/03/ardl-models-part-i.html)

We want to observe if the exchange rate EUR/RON has an effect on CPI. From the theory, we expect that the CPI is influenced by the exchange rate. The analyzed data series present exactly the aspects we mentioned before, we do not know the exact cointegration between the 2.

We use the data from www.insse.ro and www.bnr.ro for CPI and average exghange rate. The series have 195 entries (from Jan.1999 to Jan. 2015).

First step is to test if the series are I(2). We use ADF and the results are that there are not I(2):

Durbin-Watson stat	2.647966		

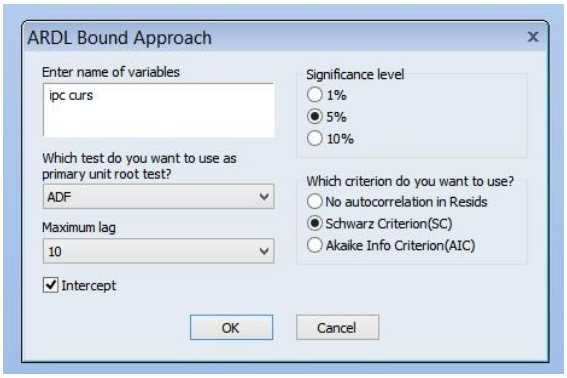
Eviews output, author's calculations

Both tests are passed, no I(2) integration rank for both series and both series are stationary.

Next step is to create a Error Correcting Model (ECM), like:

$$\Delta CPI_t = \beta_0 + \Sigma\beta_i \Delta CPI_{t-i} + \Sigma\gamma_j \Delta CURS_{t-j} + \theta_0 CPI_{t-1} + \theta_1 CURS_{t-1} + e_t$$

We use the ARDLbound add-in for EViews to estimate the ECM:



We select the dependant variable (IPC) and the explanatory variable (CURS), we select ADF for unit root test, we allow 10 maximum lags to be performed, at a 5% level of significance and Schwartz Criterion.

Prob(F-statistic)	0.000000		

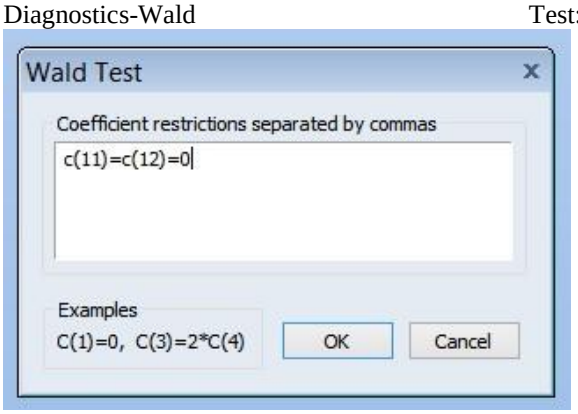
Eviews output, author's calculations

Next step implies to check if the errors are serially independent. We use from the Menu, View, Residual Diagnostics, Serial Correlation Lm Test:

For 1 lag included - probability: 0.43
For 2 lags included - probability: 0.73
For 3 lags included - probability: 0.18
For 4 lags included - probability: 0.25
For 5 lags included - probability: 0.37
For 6 lags included - probability: 0.11
For 7 lags included - probability: 0.17
For 8 lags included - probability: 0.21
For 9 lags included - probability: 0.28
So, there is no serial correlation.

Next, we test the bound itself. The test implies that coefficients for both variables to be not null.

The Wald test can be called: View-Coefficient Diagnostics-Wald Test:



And the output is:

Wald Test:
Equation: EQ02

Test Statistic	Value	df	Probability
F-statistic	7.155299	(2, 170)	0.0010
Chi-square	14.31060	2	0.0008

Null Hypothesis: C(11)=C(12)=0
Null Hypothesis Summary:

Normalized Restriction (= 0)	Value	Std. Err.
C(11)	1.284576	0.648895
C(12)	-0.349305	0.098460

Restrictions are linear in coefficients.
Eviews output, author's calculations

The values of D-statistics is 7.155, in the model there are (k+1)=2 variables and we search in the Bound Test tables of critical values, for k=1.

For interpretation, we use Giles suggestions, to use Table CI (iii) on p.300 of Pesaran et al. (2001). The model does not constrain the intercept, and there is no linear trend term included in the ECM.

The lower and upper limits for the F-test statistic at the 10%, 5%, and 1% significance levels are [4.04, 4.78], [4.94, 5.73], and [6.84, 7.84] respectively.

As the value of our F-statistic exceeds the upper bound at the 1% significance level, we can conclude that there is evidence of a long-run relationship between the two time-series (at this level of significance or greater).

In addition, the t-statistic on IPC(-1) is -3.5476. Using the Table CII (iii) on p.303 of Pesaran et al. (2001), we find that the I(0) and I(1) limits for the t-statistic at the 10%, 5%, and 1% significance levels are [-2.57, -2.91], [-2.86, -3.22], and [-3.43, -3.82] respectively. So, with a confidence exceeding 99%, this result reinforces our conclusion that there is a long-run relationship between CPI and exchange rate.

Using these results, we can conclude that the long-run relationship between EUR/RON exchange rate and the Consumer Price Index is 0.24985/0.349305=0.6956. So, on the long run, an increase with 1% in the exchange rate should lead to an increase of aprox. 0.7% in the CPI rate.

3. Conclusions

When analyzing the relationship between time-series variables, the researcher usually has to deal with situations like some of the variables are stationary, some may be I(1) and there is a possibility of cointegration among the I(1) variables. The solution is to use this ARDL approach, to find the bound between the variables and to identify the econometrically correct relationship.

In this particular situation, we found that the relation between exchange rate Eur/Ron and the CPI is: an increase with 1% in the exchange rate should lead to an increase of aprox. 0.7% in the CPI rate.

Further development of this research should include other explanatory variables and an interesting approach should be to test this correlation during electoral moments. If the estimators show a change during the pre-election periods, we may suspect a political intervention on macroeconomic variables.

LINEAR REGRESSION WITH R AND HADOOP

Bogdan OANCEA*

Abstract

In this paper we present a way to solve the linear regression model with R and Hadoop using the Rhadoop library. We show how the linear regression model can be solved even for very large models that require special technologies. For storing the data we used Hadoop and for computation we used R. The interface between R and Hadoop is the open source library RHadoop. We present the main features of the Hadoop and R software systems and the way of interconnecting them. We then show how the least squares solution for the linear regression problem could be expressed in terms of map-reduce programming paradigm and how could be implemented using the Rhadoop library.

Keywords: *R, Hadoop, Rhadoop, big data, linear regression.*

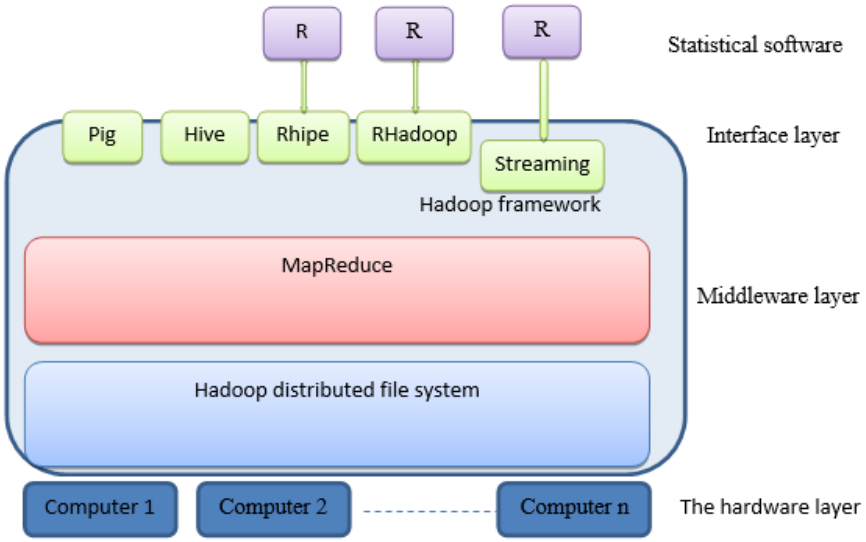
1. Introduction

Hadoop is an open source software whose main purpose is distributed processing of large data sets using computer clusters (White, 2012). Hadoop is developed in Java programming language and is a middleware platform that runs on a cluster of workstations. Applications using Hadoop platform can be developed in Java and in other languages such as R, Ruby or Python. Hadoop can be downloaded from http://hadoop.apache.org. The Hadoop platform users include companies like Yahoo! (Network 2014) or Facebook (Vagata and Wilfong, 2014). Hadoop system consists essentially of:

- Hadoop Distributed File System (HDFS) - a high performance distributed file system;
- Hadoop YARN - a subsystem whose role is scheduling jobs and computer cluster resource management;
- Hadoop Map-Reduce - a system of parallel processing for very large data sets that implements the distributed Map Reduce programming model (Dean, 2004).

Briefly described, Hadoop is a software system that provides its users with a highly reliable distributed file system and a system of analysis and data processing. Hadoop can be installed and run on both clusters with several computers or on clusters with thousands of computers, with a high fault tolerance degree. Currently, Hadoop is a de-facto standard in storing and processing large volumes of data and is used by all major actors in software industry. Hadoop system structure can be observed in Figure 1.

Figure 1. Hadoop and data analysis tools



HDFS file system is based on a client-server architecture. It is a file system with high tolerance to errors and is designed to be run on computers with limited resources. HDFS provides high speed data access, making it ideal for applications that work with large volumes of data, hundreds of GB or TB. HDFS

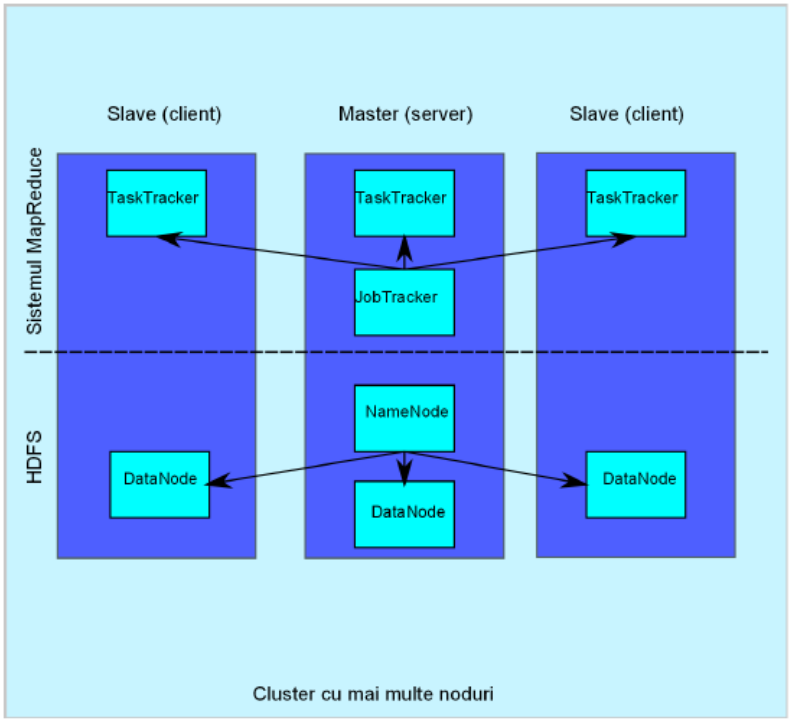
* Professor, PhD, Faculty of Economics, "Nicolae Titulescu" University of Bucharest (e-mail: **bogdanoancea@univnt.ro**).

file system is a "append only" system i.e. a file that was created, populated with data and then closed cannot be changed afterwards. This feature simplifies the way to ensure consistency of data files. HDFS provides facilities for bringing processing applications where data is stored as it is more effective to migrate data processing instructions than data. This reduces the data traffic through the computer network interconnection applications thus increasing efficiency

HDFS has a node acting as a server, called NameNode that is run on a master server and one or more DataNode type nodes (acting as clients) managing data storage drives attached to these nodes (computers) from the network (Ryan, 2012). The NameNode aims to manage namespace of the HDFS file system and perform operations of opening, closing or rename files. Files that are saved by HDFS are divided into several blocks of data that are stored by one or more DataNode, responsible for carrying out effective operations of read / write data. Mapping data blocks on nodes is achieved by NameNode. Both NameNode and DataNode application are written in Java and can run on virtually any computer that supports Java.

Hardware fault tolerance is achieved by replicating data blocks on multiple computers. All files are divided into equal-sized data blocks that are then distributed to DataNode. A data block is copied to multiple nodes, so if a node can not operate because of a hardware failure, copies of data are available for other nodes in the network. Over the HDFS distributed file system runs a kernel that that implements the Map Reduce programming model. It consists in a process called JobTracker receiving from clients Map Reduce jobs and schedule them for execution. The JobTracker send processing (jobs) to processes running on the TaskTracker nodes in the computer cluster, trying to keep as close to the data processing that must be processed. If a TaskTracker process does not respond within a certain predetermined time or end with error JobTracker will reschedule the respective processing. Each TaskTracker process starts a Java virtual machine for each job in part to avoid the TaskTracker himself to finish its execution if the job to be executed will lead to termination of the Java virtual machine in case of error. JobTracker and TaskTracker communicate periodically for system status update. Hadoop system structure can be seen in Figure 2.

Figure 2. Software structure of the Hadoop system



R is a free software package for statistics and data visualization (R Core Team, 2013). It is available for several operating systems like UNIX, Windows and MacOS platforms and is the result of the work of many programmers from around the world. R contains facilities for data handling, provides high performance procedures for matrix computations, a large collection of tools for data analysis, graphical functions for data visualization and a straightforward programming language. R comes with about 25 standard packages and many more packages available for download through the CRAN family of Internet sites (http://CRAN.R-project.org). R is used as a computational platform for regular statistics production in many official statistics agencies (Todorov, 2010), (Todorov, 2012). Besides official statistics, it is used in many other sectors like finance, retail, manufacturing, academic research etc., making it a popular tool among statisticians and researchers.

2. Integration between R and Hadoop to process large volumes of data

There is now a large number of R packages or scripts for processing and data analysis. Their use with Hadoop normally would require rewriting them in Java, the natural language for Hadoop, but rewriting activity can lead to many errors. Therefore it is more effective to interface Hadoop ssytem with R so that we they can work with scripts written in R and stored data with Hadoop (Holmes, 2012). Another reason to build an interface between R and Hadoop is that R loads data into memory for processing which can be a serious limitation in terms of the volume of the data.

There are several approaches to integrate R and Hadoop: R and Streaming, Rhipe and RHadoop but in this paper we will present only RHadoop.

RHadoop is an open source project developed by Revolution Analytics (http://www.revolutionanalytics.com/) that provides a client-side integration between R and Hadoop. This allows running Map Reduce jobs within R and consists of a collection of several packages:

- plyrmr - provides plyr like processing functions for structured data type, having capabilities of handling large data sets stored with Hadoop;
- rmr - contains a collection of functions that provide Map Reduce model implementation in R;
- rdfs - is an interface between R and HDFS, providing file management operations in R for data stored in HDFS;
- rhbase - is an interface between R and Hbase, and provides management functions in R for Hbase databases;

RHadoop Installation is very simple, although it depends on other packages. In order to work with R and RHadoop one have to install all depending packages on each DataNode of the Hadoop cluster:

```
> install.packages("RJSONIO")
> install.packages("itertools")
> install.packages("digest")
> install.packages("rJava")
> install.packages("Rcpp")
> install.packages("functional")
> install.packages("reshape2")
> install.packages("plyr")
> install.packages("caTools")
```

rmr package has to be installed from the the archive that contains the source code:

```
>
install.packages("rmr2_3.1.1.tar.gz",repo=NULL,type
="source")
```

The other packages that make up RHadoop rdfs, plyrmr, rhbase, are installed in a similar way.

3. Solving a linear regression using RHadoop

We will illustrate a method of using R with Hadoop to estimate a linear regression model using ordinary least squares method. There are other ways to estimate linear regression models with R and Hadoop, it all depends on the problem to be solved and imagination of the analyst who solve the problem in terms of translating to Map Reduce paradigm which is typical Hadoop (Prajapati, 2013).

A linear regression model takes the following form:

$$y_i = \beta_1 x_{i1} + \cdots + \beta_p x_{ip} + \varepsilon_i = \mathbf{x}_i^{\mathrm{T}}\boldsymbol{\beta} + \varepsilon_i, \qquad i = 1, \ldots, n,$$

where y_i is the dependent variable and x_i a vector (of dimension p) of regressors that are taken into account (the explanatory variables are independent), and ranges from 1 to n. The n equations can be put in a matrix form:

$$\mathbf{y} = \begin{pmatrix} y_1 \\ y_2 \\ \vdots \\ y_n \end{pmatrix}, \quad \mathbf{X} = \begin{pmatrix} \mathbf{x}_1^{\mathrm{T}} \\ \mathbf{x}_2^{\mathrm{T}} \\ \vdots \\ \mathbf{x}_n^{\mathrm{T}} \end{pmatrix} = \begin{pmatrix} x_{11} & \cdots & x_{1p} \\ x_{21} & \cdots & x_{2p} \\ \vdots & \ddots & \vdots \\ x_{n1} & \cdots & x_{np} \end{pmatrix}, \quad \boldsymbol{\beta} = \begin{pmatrix} \beta_1 \\ \beta_2 \\ \vdots \\ \beta_p \end{pmatrix}, \quad \boldsymbol{\varepsilon} = \begin{pmatrix} \varepsilon_1 \\ \varepsilon_2 \\ \vdots \\ \varepsilon_n \end{pmatrix}.$$

Or, more simple, like that:

$\mathbf{y} = \mathbf{X}\boldsymbol{\beta} + \boldsymbol{\varepsilon}$,

where β vector is the vector of parameters to be estimated.

The ordinary least squares minimizes the sum of squared residues. The calculation formula for estimating vector β is Gujarati (1995) :

$$\hat{\boldsymbol{\beta}} = (\mathbf{X}^{\mathrm{T}}\mathbf{X})^{-1}\mathbf{X}^{\mathrm{T}}\mathbf{y} = \left(\tfrac{1}{n}\textstyle\sum \mathbf{x}_i\mathbf{x}_i^{\mathrm{T}}\right)^{-1}\left(\tfrac{1}{n}\textstyle\sum \mathbf{x}_i y_i\right).$$

We have to compute a matrix matrix product $X^T X$, than to compute the inverse of the result, $(X^T X)^{-1}$. Next we compute the matrix vector product $X^T y$ and this is multiplied by the intermediate result $(X^T X)^{-1}$. These computations are equivalent with solving a linear system of equations:

$X^T X \beta = X^T y$

where $X^T X$ is the matrix of the linear system, $X^T y$ is the free term and β is the unknown variable. Solving this system is equivalent to the following matrix operation:

$\beta = (X^T X)^{-1} X^T y$

In R there is a predefined function for such problems (solving linear systems):

solve(a, b, ...).

This function takes two parameters: the matrix of the system and free term. In our case we call this function like this:

solve($X^T X$, $X^T y$)

All you have to do is to calculate the transposed matrix X and multiply it by X, then y.

Imagine that we solve the a problem with 20,000 observations (n = 20000) and 15 independent variables

(x_i). In this case the matrix X will have dimensions (20000, 15) and y is the vector of size 20000. Assume that a matrix A (20000, 15) can not be stored in the memory of a single computer and the calculation of transposition and multiplication can't also be performed by a single computer. Instead, the call of :

solve(X^TX, X^Ty)

can be executed easily by one computer. Why? If we try to calculate the dimension of the matrix X^TX we see that we have made a product between two matrices of the following dimensions: (15, 20000) x (20000, 15) = (15, 15). That result is a matrix of size (15,15) and is perfectly feasible that this result will be stored and processed on a single computer. The size of the mltiplication X^Ty is (15, 20000) x (20000, 1) = (15,1). So, and it can be easily stored and processed on a single computer.

What we propose is to use Hadoop to store input data and to perform the two multiplications. The final call solve (X^TX, X^Ty) will be performed classically, on a single computer.

We define the matrix X with random values (following the normal distribution). The number of elements of the matrix is 20000 x 15 = 300,000

```
X <- matrix( rnorm(300000), ncol=15 )
```

We add a new column to the matrix X which will contain the values 1, 2, 3 ... 20000 (number of rows of the matrix X). We will see why we need this new column.

```
X1 <- cbind(1:nrow(X), X)
```

Cbind function performs a column concatenation of the two arguments. The result will be a matrix of size (20000, 16) where the first column contains the values 1, 2, 3, ... nrow (X).

We write the result in the HDFS distributed file system :

```
X1 <- to.dfs(X1)
```

We define now the vector y (the elements of y are all normally distributed random numbers):

```
y <- as.matrix( rnorm( 20000 ))
```

So far we have defined the input data. In a real application they come from files already stored in HDFS.

We define the first map-reduce job in order to calculate X^TX product. First we write first the function map:

```
mapper = function (., Xr) {
Xr = Xr[,-1]
#print(dim(Xr))
keyval(1, list(t(Xr) %*% Xr))
}
```

Here Xr [-1] means all rows and columns of the matrix Xr less column 1. If you remember, column 1 contains the values 1, 2, 3, ... nrow (X).

The map function receives as input data blocks consisting of whole rows of the matrix X. We note such blocks with Xr. If during execution one wants to see the Xr matrix dimmnesions uncomment the line

```
#print (dim (Xr)).
```

On the computer where we tested the script, mapper is called 3 times with the first 7810 rows of the matrix X1, then the next 7811 rows and finally the last 4379 lines.

In this case we are not interested in the key that the mapper receives. The operator %*% achieved multiplication of two matrices. This function will perform smaller submatrix products and will pass the results to the reduce function that will add them up. The function t(X) calculates the transposed of the matrix X. If you analyze the classical algorithm for multiplication of two matrices to calculate X^TX you will find tha onet can form smaller matrix (m rows of the original matrix, with m <n, where n is the total number rows) that you multiply and then assemble the partial results. Therefore, the reducer function will be responsible to collect the partial results issued by the mapper:

```
reducer = function(., Y) {
    keyval(1, list(Reduce('+', Y))
}
```

For details on the function *Reduce* typie help (Reduce) in an R console. This function is similar wtih its counterparts from the LISP language.

So we will have:

```
XtX <- values(
            from.dfs(
mapreduce(
input = X1,
map = mapper,
reduce = reducer,
combine = T
)
)
)[[1]]
```

The *mapreduce* function will write the result as a pair (key, value) in HDFS where it is accessed via from.dfs (...). Function values (...) extracts only the values of pairs (key, value).

We will compute X^Ty in a similar manner:

```
mapper2 = function (., Xr) {
    yr = y[Xr[,1],]
Xr = Xr[,-1]
keyval(1, list(t(Xr) %*% yr))
}
```

yr = y[Xr[,1],] retains from the vector y only the corresponding elements of the lines of matrix Xr. Hadoop will call the mapper with blocks of rows of the original matrix X and we need to select the same rows from y. For this we have introduced new column in X (see instructions X1 <- cbind (1: nrow (X), X)).

```
Xty <- values(
            from.dfs(
```

```
mapreduce(
input = X1,
map = mapper2,
reduce = reducer,
combine = T
)
)
)[[1]]
```

We used the parameter combine = T to combine all pairs (key, value) because mapper emits a single key (1).

Finally we call solve:

```
solve(XtX, Xty)
```

The whole R script tha solves the linear regression problem is given in figure 3.

Figure 3. An R script that solves the linear regresion model using Rhadoop

```
#!/usr/bin/Rscript
library(rmr2)
X <- matrix(rnorm(300000), ncol=15)
X1 <- cbind(1:nrow(X), X)
X1 <- to.dfs(X1)
y <- as.matrix(rnorm(20000))

mapper = function (., Xr) {
   Xr <- Xr[,-1]
   #print(dim(Xr))
   keyval(1, list(t(Xr) %*% Xr))
}

reducer = function(., A) {
   keyval(1, list(Reduce('+', A)))
}

mapper2 = function (., Xr) {
   yr <- y[Xr[,1],]
   Xr <- Xr[,-1]
   keyval(1, list(t(Xr) %*% yr))
}

XtX <- values(
   from.dfs(
    mapreduce(
       input = X1,
       map = mapper,
       reduce = reducer,
       combine = T
    )
   )
)[[1]]

Xty <- values(
   from.dfs(
    mapreduce(
       input = X1,
       map = mapper2,
       reduce = reducer,
       combine = T
    )
   )
)[[1]]

beta <- solve(XtX, Xty)
beta
```

4. Conclusions

One of the software tools successfully used for storage and processing of big data sets on clusters of commodity hardware is Hadoop that have become a de-facto standard in big data storage. On the other hand, R is currently used on a large scale for data processing. Interfacing Hadoop and R seems to be the future of big data processing. In this paper we showed how we can solve a linear regression probem using Hadoop and R for very large problems. The algorithm for solving the problem of linear regression has been transformed so that it can use the map-reduce programming model which is psecific to Hadoop.
