LEGAL TERMINATION IN PREVENTIVE MEASURES

Nadia CANTEMIR-STOICA*

Abstract

This study will present the institution the legal termination of the preventive measures in light of the new code of criminal procedure, which on the one hand expanded the scope of preventive measures that can be taken against a defendant, and on the other hand has introduced new regulations which we will refer at.

We will analyze the situation of each one of the preventive measures by the time the measure will be legally terminated, with reference to the issues that were not covered by the legislature and not least showing contradictions encountered in judicial practice.

Keywords: *preventative measures, custody, reasonable time, preventive arrest, prosecution.*

1. Introduction

The realities of juridical law from the period of the 1969 Criminal procedure code have revealed a lack of promptitude while carrying out criminal trials, overloading of prosecuting offices and courts, an excessive periods of time required by the procedures, unjustified delays of trials, suspension of cases because of procedural reasons and significant social and human costs that have thus generated a lack of trust in the ranks of the trial participants regarding the efficiency of the criminal justice act.

Out of these, aspects regarding preventive arrest, the length of the procedures, the arrangement of responsibilities and evidence in criminal matters have been the subject of a number of trials at the European Court of Human Rights in which Romania has participated as a party. Taking all these into consideration, the need to eliminate the deficiencies that have caused Romania's numerous convictions by the European Court of Human Rights has become evident1.

As such, there was a need for an urgent legislative intervention that would confer efficiency to the objectives that were taken into account by the initiators of the new codes, more precisely the acceleration of the criminal procedures, simplifying them and the creation of a unitary jurisprudence in agreement with the jurisprudence of the European Court of Human Rights.

The present modification of the Criminal procedure code are in the spirit of the new trends in international criminal politics preparing the juridical-criminal conditions for a pan-European unification in terms of criminal legislation. We thus observe that the explicit reglementation of the principle of proportionality is being carried out to each preventive measure in terms of the seriousness of the accusation brought upon an individual, as well as the principle of the crucialness of such a measure in order to carry out the legitimate purpose intended through its elaboration.

On the matter of preventive arrest measure, its exceptional character is regulated as well as its subsidiary character in relation to other preventive measures that do not deprive liberty. As such, preventive arrest can be carried out only if the adoption of another preventive measure is not sufficient in pursuing the intended legitimate purpose. As an absolute novelty for the Romanian procedural criminal legislation, a new preventive procedure has been implemented, more precisely the house arrest procedure, adopted from the Italian Criminal procedure code, that aims, by introducing this new institution, to widen the posibilities for individualization of preventive measures according to the particularities of each criminal case and according to the person that represents the accused of a criminal trial.

This study wishes to analyze the institution of right termination of preventive measures from the perspective of the new reglementations, in agreement with the European Convention of Human Rights and in the light of the criticism brought by the Constitutional Court regarding the analyzed subject. We believe that this paper is of special importance as preventive measures seek the limitation or even the deprivation of rights given to citizens that, on the other hand, are in conflict with criminal law at a given time, a situation which triggers the criminal procedure mechanism that allows these preventive measures.

Although a year has passed since the new codes were put into effect, by analyzing the judicial doctrine and practice we observe that many law problems arise when we discuss the matter of the preventative measures instutitution.

person; no one shall be deprived of his liberty save in the following cases and in accordance with a procedure prescribed by law) and art. 6 from the Charter (everyone has the right to liberty and security of person) regulates the right to liberty and security of person for the purpose of preventing arbitrary deprivations of liberty by the authorities towards a person, as well as limiting the length of the liberty deprivation[2]. Although most of the legislations protect citizens' right to liberty, it was necessary to regulate in what situations preventative or liberty depriving measures can be taken against individuals that come into conflict with criminal law.

As such, the legislator has regulated preventive measures and other procedural measures as part of the 5th Section of the General part of the New Criminal procedure code. The procedural measures have been defined[3] as procedural criminal law institutions put at the disposal of criminal judiciary bodies and consisting of certain deprivations and constrainments, personal or real, determined by the conditions and circumstances in which the criminal trial is being carried out. In matters of functionality intended by the legislator, these measures work as legal methods for prevention or elimination of circumstances or situations that are capable of endangering the efficient carrying out of the criminal trial by the obstacles, difficulties and misleading factors they may produce.

By regulating these institutions, the legislator intended to protect the proper development of a criminal trial, thus contributing to attaining the immediate objective of the criminal trial, which is to promptly and completely asses the criminal acts so that any person that has committed a crime will be punished according to their culpability and that no innocent person will be held criminally responsible. At the same time, the ability to guarantee compensations for the individuals who take part in the criminal trial as a civil party was taken into account, in the event they were materially or morally harmed by the committing of a crime.

The criminal procedural code regulates the following measures belonging to this institution: preventive measures, medical safety measures, insurance measures, returning of objects and reestablishing the status quo prior to the realization of the crime.

As this paper wishes to address the institution of right termination on the subject of preventive measures, we have identified in the specialized doctrine an extensive and complete definition that meets all demands. As such, preventive measures are criminal procedural law institutions with a restrictive character, by which the suspect or the accused is prevented from engaging in certain activities that would negatively affect the carrying out of the criminal trial and the fulfillment of its purpose[4].

In article 202 of the C.p.c. the legislator has regulated the fact that preventive measures can be taken if they are necessary for assuring the proper development of the criminal trial, for preventing the circumvention of the suspect or the accused from prosecution and, last but not least, for preventing the committing of another crime. Gradually, preventive measures have went through numerous modifications regarding the category of judiciary bodies that are able to carry them out, (until 2003 there was the possibility that the preventive arrest measure could be carried out directly by the prosecutor) the terms in which they can be put into effect and afterwards prolonged or maintained, the unconstitutionality of certain legal texts. As such, in the present regulation the legislator gives judiciary bodies the option between five preventive measures that can assure, depending on case, the proper development of the criminal trial. More precisely, the measures that can be taken against a physical person are retention, judiciary control, judiciary control on bail, house arrest and preventive arrest; and the ones that can be taken against a legal person are: banning the initiation or, depending on the case, suspending the dissolution or abolition of the juridical person, banning the initiation or, depending on the case, suspending the merger, the division or the reduction of the juridical person's social capital, commenced prior to or during the prosecution, the banning of property transactions that are susceptible to provoke the minimization of the juridical person's assets or insolvency, banning the closure of certain juridical documents, established by the judicial body.

Although the legislator has specifically mentioned what the conditions of taking, prolonging or maintaining preventive measures are, jurisprudential needs have determined him or her to regulate institutions through which direct intervention upon them is possible, more specifically legal termination, dismissal and replacement.

As this paper's objective is to analyse the institution of right termination, we will examine each preventive measure, exposing in which situation the discussed solution intervenes.

Legal termination in preventive measures represents that obstacle against the prolonging or maintain of a measure that the legislator has foreseen. By analyzing the provisions of art. 241 of the C.p.c we can see that the instances in which the preventive measures terminate, the instances for all the five measures and instances that can be applied only to the preventive measure of preventive arrest and house arrest have been regulated.

[4] Gh. Theodoru, *Drept procesual penal român. Partea specială*, Al. I Cuza University, Faculty of Law, Iași, 1974, Vol. II, p. 194.

As such, the preventive measure of retention[5] can be carried out by the criminal investigation body or by the prosecutor in accordance to the provisions of art. 209 of the C.p.c. in conjunction with art. 202 of the C.p.c if there are evidence or valid indicators from which reasonable suspicion that a person has committed a crime can arise and if this measure is necessary for the proper development of the criminal trial, for preventing the circumvention from prosecution or considering the possibility or preventing another crime.

According to art. 209, paragraph 3 of the C.p.c. this measure can be carried out over a period that cannot exceed 24 hours, this interval not including the time needed to take the suspect or the accused to the headquarters of the judicial body. We can observe that the constituent legislator her/himself has felt the need to regulate in art. 23 paragraph 3 of the Constitution what is the maximum time limit in which this measure can be put into effect. By analyzing the legislations of other countries we can observe that the period of retention can be for 24 hours in Luxemburg, Greece, Canada, Columbia or Germany, in Portugal, Russia or Poland the period is for 48 hours and in Brazil 5 days.

At the same time, the legislator felt the need to make the following, absolutely essential specification, which is that in the event that the suspect or the accused has been brought in front of a prosecution body by means of a summons, the 24 hour time limit does not include the period in which the suspect or the accused has been under the summons. The judiciary organ that emitted the summons has the obligation to immediately hear the person that the summons is addressed to and the accused cannot be present at the prosecutor's office for more than 8 hours. As such, in event that a summons has been emitted and the suspect is required to appear in front of the prosecuting bodies from Sibiu to Bucharest, the period in which he or she will be led there will not be subtracted from the period of retention if this preventive measure will be carried out. Continuing with the same example, if at the headquarters of the prosecuting body there would be more than one accused, there is the possibility that the suspect will be heard after 8 hours at most, thus this period as well will not be deducted from the 24 hours of retention. By drawing a comparison with the old regulation[6] we observe that the legislator in the current regulation has deemed fit that the administrative measure of the police headquarters management will not be deducted from the length of the retention measure.

In the Creangă v. Romania case[7], the European Court of Human Rights has established that the length must be set in the exact moment when the interested person had been brought at the headquarters of the criminal prosecution body and had been subjected to interrogation procedures, when the prosecutor had had enough grounded suspicions to justify measures that deprive liberty for reasons of criminal prosecution, and not from the moment when a formal retainment order had been emitted, which took place a full 10 hours after the initial moment; the Court has thus deemed that the deprivation of liberty of the interested person on the date of July the 16th 2003 from 12 pm to 10 am had no legal basis in the internal law and represented a breach of art.5 parag.1 of the Convention.

As such, the first instance in which the preventive measure of retention will be legally terminated is when the term, as stated by the law, will expire, more precisely at the end of the 24 hours, when the suspect or the accused will be released provided he or she is not retained or arrested because of other reasons. Provided that the prosecution bodies deem it is required for the accused person to be under retention for a shorter period of time, nothing prevents them from declaring this period to be, say, 15 hours. Because of this, the legislator has regulated in art. 241 paragraph 1 second point of thesis of the C.p.c. that the preventive measures are legally terminated when the terms established by the judiciary bodies will expire.

As a guarantee of the disposal of this measure over a certain period of time, retention will be disposed by means of an ordinance by the criminal investigation body or by the prosecutor, by means of an ordinance where it is required to mention the reasons that have brought the adoption of the measure, the date and time when the retention commences as well as the date and time when the retention ends. The precise establishment of the initial moment of the 24-hour term is of the utmost importance, considering the extremely strict approach of the European Court towards illegal deprivation of liberty by continued detention after the maximum duration in which a person can be deprived of liberty has ended[8]. Another guarantee provided by the legislator consists in the obligative character of informing the prosecutor about the adoption of the measure by any means possible and as soon as the measure has been taken by the criminal investigation body.

A problem that we wish to bring into attention is the prescribed solution for when the arrested defendant is taken in front of the rights and liberties judge to propose taking the measure of preventive arrest and the

[5] A parallel can be made with the French Code of procedure where retainment is defined in art. 62-2 parag. 1 as a constraining measure decided by a judiciary police officer, under the control of the judiciary authority, by which a person upon whom there are one or more plausible grounds for suspicion that she or he has commited or is about to commit a crime or offense punishable with prison is kept at the disposal of the investigators.

[6] Art. 144 paragraph 1 second point of thesis of the c.p.c. From the length of the retention period the time in which the person had been deprived of liberty as a result of the administrative measures of the police heaquarter's management, as defined in art. 31 paragraph 1, lit. B from Law no. 218/2002 regarding the organization and functioning of the Romanian Police, will be deduced.

judge reaches the decision before the 24 hours of retention have expired of rejecting the proposal to adopt the measure of preventive arrest or of ordering that the measure of judiciary control be taken. As such, two approaches have appeared in judiciary practice, the first in which the rights and liberties judge does not reach a decision regarding the retention measure, and thus it ceases at the end of the 24 hours, and the second approach in which the rights and liberties judge orders the immediate release of the retained accused[9]. We believe that the second approach represents the legal one and we offer a text argument, more specifically the provisions of art. 227 paragraph 1 of the C.p.c. known as the rejection of preventive arrest proposal during prosecution when the legislator regulates that in the event the rights and liberties judge deems that the legal conditions for the preventive arrest of the accused are not met, she or he rejects by canceling the prosecutor's proposal and facilitating the release of the retained accused. Thus, although the rights and liberties judge is not invested to pronounce anything regarding the preventive measure of retainment, despite that the legislator has offered him or her the possibility to order the immediate release of the retained person, as such the measure will cease before the expiration of the period stated by the law or ordered by the judiciary bodies.

The preventive measure of judiciary control or judiciary control on bail, newly introduced in the criminal procedure code by name but sharing numerous similarities with the measure of being obliged to not leave the country or the town from the 1969 code can be taken by the prosecutor, the preliminary hearing judge, the rights and liberties judge or the court if this measure is deemed necessary in order to assure the proper development of the criminal trial, to prevent the circumvention from prosecution or trial and, last but not least, to prevent another crime.

This preventive measure can be ordered during the criminal prosecution phase by the prosecutor or the rights and liberties judge for a period of 60 days that can be successively prolonged, its maximum duration cannot exceed one year, if the sentence according to the law is a fine or prison up to five years, and two years if the sentence according to the law is life imprisonment or prison for more than five years. At the same time, the preliminary hearing judge can order the carrying out of this measure for a period that cannot exceed 60 days, and the court can order the measure for the same time length, with the mention that in the preliminary hearing phase the total duration of judiciary control or on bail cannot exceed a reasonable length and, in all these cases, it cannot exceed 5 years from the moment of arraignment.

The institution of the length of judiciary control is regulated inside art. 215 of the C.p.c[1] as it was introduced through art. I point 3 of O.U.G. (emergency ordinance) NO. 82/2014 following the declaration of the unconstitutionality of art. 211-217 of the C.p.c., as the judiciary bodies were offered the possibility to order the preventative measure of judiciary control and judiciary control on bail for unlimited periods of time. As such, the Constitutional Court has deemed in decision 712/2014[10] that the interference generated by the judiciary control institution affects fundamental rights, more exactly the right to individual liberty, the right to free circulation, the right to a private life, the freedom of assembly, labor, the social protection of labor and economic liberty, is regulated by the law, more precisely by art. 211-215 from the Criminal procedure code, has the legitimate purpose of carrying out criminal instruction, as it is a judiciary measure applicable in the process of criminal prosecution and trial, imposes itself, as it is adequate in abstracto to the legitimate pursued purpose, it is undiscriminating and necessary in a democratic society in order to protect the values of the state law. Still, the analyzed interference is not proportional to the cause that has determined it. In this respect, the Court has deemed that it does not assure a suitable balance between public and individual interest, as it can be ordered for an unlimited period of time. The principle of proportionality, as it is regulated in the specific situation found in art.53 of the Constitution, assumes the exceptional character of restricting fundamental rights and liberties, which necessarily also implies their temporary character. Since public authorities can resort, in lack of another solution, to the restriction of practicing rights, in order to safeguard the values of the democratic state, it is logical for these grave measures to desist the moment the cause has ended. The Court also states that art.241 paragraph (1) letter a) from the Criminal procedure code regulates that the first method of legally terminating preventive measures is the expiration of the terms as stated by law, followed by the expiration of the terms as established by the judiciary bodies. By the systematic interpretation of the previously mentioned norm, in the context of the provisions of art.241 from the Criminal procedure code in its entirety, the need arises for the existence inside criminal procedural law of the length for which each preventive measure can be ordered, regardless if its depriving or non-depriving of

[9] Closure 270/2014 of the Suceava Court ordered in the criminal file no. 7655/86/2014: Rejection of the proposal of the prosecution office near the Suceava Court to take the measure of preventive arrest for a period of 21 days of the accused VORNICU IONUȚ ANDREI, as unfounded. On the grounds of art. 227 paragraph 2 from the Criminal procedure code reported to art. 202 paragraph 4 letter b from the Criminal procedure code, orders taking the measure of judiciary control against the accused Vornicu Ionuț Andrei, prosecuted for the crime of perjury as stated in art. 273 paragraph 1 and 2 letter. d Criminal code, with aplication in art. 35 paragraph 1 Criminal code. Is ordered the immediate release of the retained accused Vornicu Ionuț Andrei provided he is not retained or arrested by other reasons. 2. Rejects the proposal of the Prosecuting office near the Suceava Court to take to measure of preventive arrest for a period of 21 days of the accused BALAN DENISIA, as unfounded. Is ordered the immediate release of the retained accused BALAN DENISIA provided she is not retained or arrested by other reasons.

[10] To be consulted https://www.ccr.ro/files/products/ Decizie_712_2014.pdf.

liberty character, for which the legislator has not specified in the case of the preventive measure of judiciary control and judiciary control on bail. If in the case of liberty depriving measures the legislator has specified both the lengths for which they can be ordered as well as the maximum period of time for which they can be ordered, in the case of the preventive measure of judiciary control, the provisions of art.211-215 and 241 from the Criminal procedure case do not specify neither the length for which it can be ordered nor its maximum period. As such, the right of judiciary bodies to order judiciary control as a preventive measure for unlimited periods of time appears as evident, such a right presupposing the temporally unlimited restriction of the fundamental rights and liberties that are addressed in the content of this measure. And, according to the previously shown standards for constitutionality, such a restriction is unconstitutional, as the principle of proportionality affects the normative content of the addressed fundamental rights, in other words their substance, as it does not limit itself to the restriction of exercising them.

In the same O.U.G. 82/2014 was it established that the preventive measure of judiciary control and that of judiciary control on bail, which were currently running when the decree was put into effect, are to be continued and maintained until the carrying out of the next control: for a term of maximum 60 days after the decree was put into effect, the prosecutor, in cases that were on the preliminary hearing stage, and the court, in the trial stage, verified by default if the grounds for which the preventive measure of judiciary control and judiciary control by bail were taken still stand, or if new grounds have appeared does justify one of these preventative measure, ordered, according to the situation, the prolonging or the dismissal of the preventive measure. Provided that the judicial bodies have not complied and have not verified the grounding of the preventive measure's claims in a period of 60 days since the discussed decree had been put into effect, the preventive measure of judiciary control or judiciary control on bail will be legally terminated.

The legislator's intervention on the issue of judiciary control length was absolutely necessary, taking into account that art. 241 parag. 1 letter a of the C.p.c was lacking applicability on this issue since the preventive measure could not be considered legally terminated on the expiration of the terms as stated by law or established by judiciary control because these could be ordered for an unlimited period of time due to the legislative void. In the present context, after the conforming of the procedural texts according to the considerations of the Constitutional Court's decisions, the preventive measure will be legally terminated at the moment of expiration of the terms as stated by law (60 days) if an extension or maintenance will not be placed into effect or if the maximum length has been reached, more specifically one, two or five years according to the procedural stage we are at. We thus observe that the prosecutor, the preliminary hearing judge and the court have the obligation to verify if the grounds that have been taken into consideration when deciding to adopt the preventive measure of judiciary control still stand, ordering accordingly either the extension or maintenance, if not, the preventive measure will be legally terminated.

At the same time, the preventive measure of judicial control will also be legally terminated if near the end of the criminal prosecution, the prosecutor will order the solution of halting or putting an end to the prosecution or in the event that the court will pronounce a decision of acquittal, of putting an end to the criminal trial, to not offer a sentence, to postpone putting the sentence into effect or to suspend the carrying out of the sentence under supervision, even if not permanently. The measure will also be legally terminated when the decision to sentence the accused has been declared as permanent. It is common-sense that the preventive measure is to be brought to an end when the criminal prosecution phase is over as the purpose of the measure is no longer available at that procedural moment.

As far as the preventive measures of house arrest and preventive arrest are concerned, the legislator has understood to regulate both the general and the particular cases of legal termination. These two preventive measures can be ordered by the rights and liberties judge, the preliminary hearing judge or by the court if the evidence lead to the reasonable suspicion that the accused has committed a crime and that one or some of the following situations are present:

- the accused has fled or has gone into hiding in order to circumvent him or herself from trial or has made any type of preparations to achieve these purposes;
- the accused has attempted to influence another participant in committing the crime, a witness or an expert, or to destroy, tamper with, hide or circumvent material evidence or to determine another person to carry out this behavior;
- the accused is putting pressure on the aggrieved party or is trying to reach a fraudulent agreement with them;
- there is a reasonable suspicion that, following the commencement of criminal actions against her or him, the accused has willfully committed a new crime or is preparing to commit a new crime;
- it can also be taken if from the evidence there arises the reasonable suspicion that he or she has committed a crime against life, by which the bodily harm or the death of a person has been provoked, a crime against national security etc., or any other crime for which the law states a prison sentence of five years or more and, on the basis of the seriousness of the act, the way and the means by which it was committed, the entourage and environment of the accused, the criminal history and other circumstances surrounding her or his person, it can be affirmed that deprivation of liberty is necessary in order to eliminate a state of danger that targets public order.

The preventive measure of house arrest as well as that of preventive arrest can be ordered with a maximum period of 30 days in the criminal prosecution phase and can be extended only in case of necessity, if the grounds on which the decision was taken are maintained or if new aspects have appeared, the maximum duration being that of 180 days. An absolutely vital aspect is that the duration of liberty deprivation ordered by the measure of house arrest is not taken into consideration in calculating the maximum duration of the preventive arrest measure of the accused in the prosecution phase. As such, a prosecuted accused can be arrested for 360 days, 180 days in house arrest and another 180 in preventive arrest.

In the trial phase, the legislator has understood to regulate in art. 239 C.p.c what the maximum duration of the preventive arrest of the accused is during the initial trials. As such, the total duration of the preventive arrest of the accused cannot exceed a reasonable length and cannot be longer than half of the special maximum as stated by law for the crime that the court has been notified of, but it cannot exceed 5 years. As such, provided that the accused is sent to trial for the crime of homicide which is to be punishable by 10-20 years in prison, although half of the special maximum would be 10 years, the maximum duration of preventive arrest will be 5 years. This term begins either when the court is notified, in the event that the accused is sent to trial while being under preventive arrest, or when the warrant is put into effect in the event the arrest was ordered in the preliminary hearing, the trial phase or of lack thereof.

We can observe that in the criminal procedure code the institution of the maximum duration of house arrest in the trial phase is not regulated, we believe that this is solely an omission from the part of the legislator and that the provisions of art. 239 of the C.p.c will apply *mutatis mutandis* for this preventive measure as well. In the specialized doctrine[11] it is affirmed that in the preliminary hearing phase and in the trial phase the preventive measure can be ordered for an indefinite duration, intervened by the obligation the preliminary hearing judge or the court has to periodically check its legality and groundedness. Such an interpretation lies in contradiction to the considerations of the Constitutional Court's decision that has pronounced itself regarding the unconstitutionality of judiciary control, in the sense that the legislator had not regulated the maximum duration for which this measure could be ordered.

The first situation when these two discussed preventive measures are legally terminated is on the expiration of the terms as stated by law or established by the judiciary bodies or on the expiration of the 30 day term, if the preliminary hearing judge or the rights and liberties judge has not acted towards the verification of the legality and groundedness of the house arrest in this time, respectively on the expiration of the 60 day term, if the court has not acted towards the verification of the legality and groundedness of the house arrest in this time.

In the event it has been ordered for the case to return to the prosecutor, the house arrest measure and the preventive arrest respectively of the defendant can be maintained even after the case has been returned to the prosecutor, for a period of maximum 30 days which cannot be greater than the difference between the maximum term of 180 days and the time the defendant spent under house arrest, respectively under preventive arrest in the same case, prior to the notification of the court by indictment; provided that throughout the duration of the prosecution the accused's house arrest was 180 days long, after ordering the return of the case to the prosecuting office the preliminary hearing judge cannot maintain the house arrest measure, because otherwise the maximum limit of house arrest during the prosecution, as states in the C.p.c. [12] would be exceeded.

Another situation in which the preventive measures of house arrest and preventive arrest are legally terminated find their applicability towards the end of prosecution when the prosecutor orders the solution of halting or giving up on the prosecution, the criminal trial being thus brought to an end in this this instance and thus a preventive measure cannot exist beyond these barriers. As such, through the ordinance by which the solution of halting or giving up on the prosecution is ordered, the prosecutor will also pronounce in regards to the legal termination of the preventive measure, even in the event that the measure was taken or extended by the rights and liberties judge.

The third situation when the institution of legal termination intervenes is when the court orders one of the following solutions: acquittal, putting an end to the criminal trial, postpone putting the sentence into effect or suspending the carrying out of the sentence under supervision, even if not permanently. The preventive measure will also be legally terminated in the appeal phase if the length of the measure has reached the length of the condemned sentence.

The fourth situation when the preventive measure will be deemed legally terminated refers to when a sentence decision is deemed permanent, as such the person that is deprived of liberty will remain incarcerated, but not because the preventive measure is being maintained, but because it has been converted to a sentence that is about to be carried out.

The legal termination of the preventive arrest measure is also put into effect if the court of appeal allows an appeal requested solely by the accused and sends the case to the first court in order for it to be rejudged, if the length of the sentence pronounced in the first court is equal to the measure of preventive

[11] N. Volonciu, ș.a. *Noul Cod de procedură penală comentat*, ed. Hamangiu, 2014. P. 533.
[12] M.Udroiu, *Procedura penala.Partea generală*, ed. C.H.Beck, Bucharest, 2014, p.528.

arrest; in this case, as a consequence of applying the *non reformation in peius* principal, the court will not be able to pronounce a sentence longer than the initially pronounced sentence. [13]

We observe that in art. 241 paragr. 1 letter d from the C.p.c. the legislator regulates that preventive measures legally terminated only in other cases as stated by law. By analyzing the provisions of the C.p.c., we believe that by other cases as stated by law we can also consider to be the following situations:

- when the court pronounces a decision to sentence to prison for a duration that is equal to that of the retention and the preventive arrest (art. 399 paragr. 3 letter a from the C.p.c.); we deem that the legislator out of error has not mentioned here the house arrest measure as well and for identity of reason I believe it is necessary for the law to be modified. In such an event, even if the sentence is not definitive, the house arrest or preventive arrest measure will be immediately put to an end as soon as the duration of retention and arrest become equal to the duration of the pronounced sentence.
- when the court pronounces a fine sentence that does not accompany the prison sentence or when it pronounces an educational measure (art. 399 paragr. 3 letters c and d of the C.p.c.);
- also, another case is the one included in the provisions of art. 43 paragr. 7 from Law 302/2004 regarding international judiciary cooperation on criminal matters, which shows that the measure of arrest for rendition is legally terminated if the rendered person is not taken by the competent authorities of the solicited state in a period of 30 days since the agreed upon date for rendition, with the exception of instances of *force majeure* that obstruct the rendition or the collection or the rendered person, an event in which the Romanian authorities and those of the soliciting state will agree upon a new date for rendition;[14]
- considering art. 493 of the C.p.c. legal termination of preventive measures also intervenes regarding measures taken against legal persons; preventive measures towards legal persons can be ordered for a period of maximum 60 days, with the possibility to extend it during prosecution and to maintain it during the preliminary hearing or trial phase if the grounds on which the measure was taken still stand, each extension cannot exceed 60 days.

The procedure through which a preventive measure is declared legally terminated

The ones entitled to pronounce a preventive measure as being legally terminated are the judiciary bodies that have ordered the measure, or the prosecutor, the rights and freedoms judge, the preliminary hearing judge or the court that has adopted the case. The judiciary bodies will pronounce themselves through an ordinance (the prosecutor) or through a closure/sentence/decision by default, upon request or at the demand of the administration of the detention place[15].

The judiciary organs will order the solution of legal termination of the preventive measure by ordering, in the case of the retained or preventively arrested, her or his immediate release, providing that he or she is not retained or arrested by other reasons. We thus observe another inconsistency of the legislator that does also mention the situation of the person under house arrest where for the same conditions there must be the same solution.

The rights and liberties judge, the preliminary hearing judge and, last but not least, the court will pronounce themselves by an argued closing statement made in the presence of the accused which will be mandatorily assisted by the prosecutor. It is possible for the judiciary bodies to pronounce while not being in the presence of the accused but it is necessary for him or her to be represented by a chosen or default attorney, no harm will be produced in such a situation but it aims for the prompt solving of the demand or appeal. The judiciary bodies hold the responsibility of immediately notifying[16] the person against which the preventive

[15] To be consulted decision 206/2015 of the ICCJ (High Court of Cassation and Justice) file nr. 1054/2/2014/a18: Accepts the appeal declared by the accused Chiriță Mihai Gustin against the closure from the date of February the 3rd 2015 pronounced by the Bucharest Court of Appeal, Second Criminal Division in file no. 1054/2/2014. It completely renders the attacked closure useless and, by rejudging: Accepts the ANP notification and deemes the measure of preventive arrest taken against the accused Chiriță Mihai Gusti as legally halted. Orders the release of the accused from the under the preventive arrest warrant no. 17/UP/25.11.2013, emitted by the Bucharest Court of Appeal, First Criminal Division. The judiciary expenses remain the responsibility of the state. The partial fee addressed to the defendant named by default until the chosen defendant had been prezented, namely 50 lei, will be suported from the funds of the Ministry of Justice. Permanent.

[16] To be consulted the Ogică v. Romania case (the decision from May 27th 2010): Friday, January the 31st 2003, immediately after the permanent decision that the pronounced sentence will expire at midnight had been pronounced (supra, point 8), the registry of the Bucharest Court of Appeal had written a letter to inform the Bucharest-Jilaba penitentiary about the conditions of the decision for the administration the take necesarry measures. A proceeding elaborated on the same day at 15:10 by the court of appeal registry had referenced the previously carried out procedures on the bases of the previously cited decision. In it it was mentioned that, on the phone, the commander of the Bucharest-Jilava Penitentiary had informed the registry that the secretariat was closed and nobody was there to receive the fax that pertained to the conditions of the decision. According to this proceeding, the commander had directed the call to the prison's on guard officer who had mentioned that a release of the claimant could not be carried out merely on the basis of a phone call, without any written document. After they had received by fax on Monday, February the 2nd 2003, at 07:52, the conditions of the decision from January the 31st 2003, the administration of the Bucharest-Jilava penitentiary had begun to partake in the necesarry procesures and, at 10:40, had released the claimant. In the case, the Court had observed that the definitive decision from January 31st 2003 had sentenced the claimant to a punishment that had the same length to that of the detention he had already executed until that date and that, immediately after pronouncing the decision, the register of the court of appeals had contacted

measure was taken as well as the institutions with the attributes to execute the measure a copy each of the ordinance or the closure/sentence/decision by which the legal termination of the preventive measure had been deemed.

An appeal can be made against the closure by the prosecutor or the accused for 48 hours after the pronouncement for those who were present, respectively from the notification for the prosecutor or accused who were not present at the pronouncement. The appeal made against the closure by which the legal termination of this measure is not suspended from enforcement, the closure being enforceable.

3. Conclusions

We believe that we have reached our main objectives stated at the beginning of the present study and we have analyzed in depth the institution of legal termination of preventive measures, praising the legislator when he or she succeeded in regulating the discussed legislation in better conditions compared to the old regulation, but also criticizing the encountered legal inconsistencies, making *lege ferenda* proposals for this purpose.

The institution of legal termination of preventive measures, through its crucial importance, we believe will constitute a subject that shall be tackled in the future by criminal procedural law experts and the judiciary practice, through the numerous encountered situations, will offer us new elements that will help draw attention to the signaled aspects.

the Bucharest-Jilava penitentiary to take the necesarry measures to foresee the release of the interested party; the Court mentiones that the recording of the failuire of these measure in the proceeding. The Court reminds that, upon the examination of the term for executing the decisions for releasing the claimants in cases in which the requested conditions for release were met at a time were the prison employee that was tasked with the neccesary operations was not present by reasons of work schedule, this did not exclude periods such as evening or night time. It cannot even moreso adopt another approach especially since, unlike the *Calmanovici* case, the registry of the court of appeal had contacter the Bucharest-Jilava penitentiary in the daytime in order to inform the definitive pronounced decision and the necessity to take the necesarry measures for the release of the claimant. The Court cannot accept that, because of the secretariat's work schedule, the administration of a prison did not take measures for receiving, on Friday, at early evening, a fax-sent document that was necessary that the release of a prisoner, being aware that the closing of the secretariat would lead to maintaing the interested party in confinement for a period of over forty-eight hours. In the opinion of the Court, such a delay cannot qualify as „a minimal inevitable delay" for the execution of a definitive decision that had the effect of releasing a person. As such, said detention is not grounded in one of the paragraphs of art. 5 from the Convention. As such, it concludes that art. 5 § 1 had been violated.

THE ENFORCEMENT OF EDUCATIONAL MEASURES WITHOUT DEPRIVATION OF LIBERTY. DIFFICULTIES ENCOUNTERED IN PRACTICE

Gabriela-Nicoleta CHIHAIA*

Abstract

Since it's entry into force in February 2014, the new criminal legislation has brought many new institutions in the field of criminal procedure. One of the most important changes is found in the matter of sanctioning of minors, which, as of this date, cannot receive imprisonment, but only educational measure, custodial or non-custodial.

This article focuses on the first category of educational measures applicable to minors that purpotrate a crime, the ones that do not require a deprivation of personal freedoms under Art. 115 para. 1 pt. 1 of the Criminal Code, namely: civic training course, supervision, home arrest on weekends and daily assistance and everything needed in enforcing them.

The study aims to highlight, on the one hand, how the procedural enforcement of non-custodial educational measures that are applied to minors is achieved, and on the other hand, the institutions involved in this activity, namely the judge and the Probation Service.

We present the method of execution, and the modification of obligations which minors must comply during non-custodial educational measures, mainly aimed at forming a spirit of responsibility and respect for the rights and freedoms of others to juvenile offenders .

In the last part, the study presents the difficulties that courts faced in the first year after the entry into force of these laws, in particular the situation in which the non-custodial educational measures could not be enforced by the court in cases in which the court was not liable. A special mention is given on the exact timing at which the execution of non-custodial educational measures commences, also presenting the disparities in legislation, which led to different solutions in the practice of courts. In light of these difficulties, the study tries to identify possible solutions, including the amendment of legislation, formulating proposals for new laws in this regard.

Keywords: *non-custodial educational measures, juvenile prosecution, enforcement, Judge, Probation Service.*

Introduction

This study aims to present in a comprehensive manner, without wishing to be exhaustive, the non-custodial educational measures, the penalties that can be applied to juveniles who commit crimes as governed by the New Code of Criminal Procedure, in accordance to the degree of limiting the rights and freedoms of the minor, namely: a civic training course, supervision, supervision on weekends and daily assistance. Moreover, after a presentation of these measures, the study focuses on how to enforce them, and the means of actual performance, presenting the institutions involved in this stage, based more on enforcement coordinator, the service probation before the Court within whose jurisdiction the minor resides.

In connection with the implementation of the non-custodial educational measures, the study seeks to bring to light certain issues that the courts, and bodies involved in this stage have experienced in the past year after the entry into force of these legal provisions. Since the time period starting from the educational measure imposed by the court and to the point of registration of minors by the probation service, certain legal provisions have raised questions among practitioners, which they had to respond to able to perform these steps.

The novelty of the four non-custodial educational measures in our legislation have created difficulties in their practical application, being showed only the main directions of legal regulation, the new Code of Criminal Procedure governing only their purpose and making a definition for each of the measures. Content and manner of execution is regulated for each of the non-custodial educational measures by Law no. 253 of 2013 on the enforcement of sentences, educational measures and other non-custodial measures ordered by the court during the trial1. Although therein laws should have a place to find the details of each and every of the four non-custodial educational measures, the legislature chose to present only within their overall activities without detail that which can be set for minors offenders. It is expected that there has to be a plan to determine the specific activities that convicted juveniles must follow during the execution of the non-custodial, and this plan is established by the educational adviser case worker within the probation service. In carrying out this plan, this counselor must consider the purpose of educational measures for the juvenile who committed the crimes and raise awareness of the consequences of his actions, and his or hers accountability for future behavior.

[1] Law no. 253 of 19 July 2013 published in the Official Gazette no. 513 of August 14, 2013.

The lack of clear rules, at least an example of activities that minors may carry out during the execution of non-custodial educational measures already created various problems in practice, creating differences in the mode of execution.

Also in connection with the execution of these measures, an important issue is the practice linked to the duration of execution of non-custodial educational measures, taking into account the disparities between the New Code of Criminal Procedure and the Law. 253 of 2013 on these issues, there is currently no even practice in the courts, and probation services.

The issues that this study has identified are not only dependent but are also determined by the lack of legal regulations presented, and the lack of doctrinal works on issues related to non-custodial educational measures, especially in terms of implementation and enforcement thereof. Except of the analysis in the Chapters regulating the institution of educational measures intended for the criminal liability of minors in thwork that presents new Criminal Code, there are no detailed analyses of these educational measures. And from this point of view, this study shows that a work that draws attention to the practical difficulties raised by the legal regulations in this field, with the desire to start a discussion doctrinal level to determine finally a unitary practice. And why not the complement of the legal provisions that best respond to the aspirations of the legislature when choosing the main sanctions applied to juveniles educational measures as a rule of the non-custodial, and, by way of exception, the deprivation of liberty.

1. General considerations regarding sanctions applied to minors

Preventing and combating juvenile delinquency has raised in criminal legislation, special problems, different from those on combating crime committed by adult individuals. For this reason, the legislature has established a special sanctioning for juvenile offenders, given on the one hand, that they did not have adequate time required to assimilate moral norms, civic and legal regulations, their behavior is in training, they can easily fall into error, and on the other hand, the fact that juvenile offenders can be easier retrained and set back in the family and society.

The doctrine has mentioned that specific crime among juveniles raises special problems to prevent and combat because its casuality interacts with a multitude of factors such as: lack of social life experience of the child, with the effect of misunderstanding to the full the dangerous social behavior and the social values, as well as the penalties they would receive, and the deficiencies in the educational process that took place in the family, school, exercised by some major negative influences that attracted minors on the path of crime etc[2].

The Criminal Code of 2009 (the current Criminal Code) has replaced the mixed sanction system, formed primarily out of educational measures, and the punishment, governed by the Criminal Code of 1969, with a system consisting only of educational measures. The explanatory memorandum to the new Criminal Code mention this as a major change, as a complete overhaul of penalties applicable to minors who are criminally responsible, for educational measures, showing that the model that inspired the current regulation is the Organic Law no. 5/2000 regulating the criminal liability of minors in Spain (as amended by Organic Law no. 8/2006), but there were considered the rules of French law (Order of February 2, 1945 as amended), German law (Law of juvenile courts since 1953 as amended) and Austrian law (Law on Juvenile Justice 1988).

The legislator had to consider the establishment of the sanctioning of minor offenders that satisfies their psychophysical features and to ensure their education and rehabilitation, not reiterate future criminal behavior, and to determine the most effective measures of social defense and meet these goals as educational measures.

Thus, art. 115 of the Criminal Code regulates the general legal framework of educational measures that can be taken against juveniles who commit crimes (noting that only criminally responsible minors aged between 14 and 18, according to Art. 114 para. 1 of the Criminal Code) providing educational measures that are non-custodial, in ascending order of their severity: civic training course, supervision, supervision on weekends and daily assistance and educational measures involving deprivation of liberty: internment in an educational center and internment in a detention center.

Educational measures can be applied to a defendant that committed a crime between minority and criminal responsibility (i.e. aged 14 to 18 years), even if at the moment of judgment he became an adult (aged 18 years).

According to the Criminal Code, rule, in case of juvenile offenders the implementation of non-custodial educational measures (Art. 116 para. 1), custodial measures are the exception and used for serious crimes or minors that committed multiple offenses (Art. 116 para. 2).

The interpretation of these laws, that non-custodial educational measures can be taken virtually against any minor that committed an offense. Instead, custodial educational measures may be taken only if the minor has committed a crime for which an educational measure has been executed or the execution of which began before committing the crime for which he or she is judged (similar to relapse) or when the punishment provided by law for the crime committed is 7 years or greater or life imprisonment. Even in these cases, the court is not required to take

[2] Mitrache Constantin, Mitrache Cristian, *Romanian Criminal Law. General part*, Universul Juridic Publishing House, Bucharest, 2014, p. 417.

the minor to an educational measure involving deprivation of liberty, as the legislature used the words "may", which means that the application of such measures is optional and not mandatory.

2. The non-custodial educational measures

The current Criminal Code regulates in art. 115 parag. 1 pt. 1, four non-custodial educational measures, in order of their severity, from easiest to hardest, namely: civic training course, supervision, supervision on weekends and daily assistance.

The doctrine shown, that the legislature should have maintained educational measures maintained in the Criminal Code of 1969, namely reprimand and supervised freedom, thus allowing it to diversify non-custodial educational measures that better fits the need for individualization thereof[3]. We agree with this point of view, as for example, the educational measure of reprimand, could be held to apply to minor offenses, in those instances where the Criminal Code of 1969 you had to acquit a defendant or give an administrative penalty, under art. 181, in reference to art. 91 and according to the current Criminal Code you are ordered to waive the penalty, under the provisions of art. 80 of Criminal Code, whenever the offence is not sever, given the nature and extent of the consequences produced, the means used, the manner and circumstances in which it was committed and purpose, according to the person of the criminal, previous conduct, efforts done by she or he to remove or mitigate the consequences of the offense and ones means of reformation.

The Institution of Cancellation penalty cannot be imposed to juvenile offenders since, as I mentioned, because they do not suffer penalties and it creates an unjustified distinction between the two categories of major and minor offenders. As long as in the case of minors we can waive penalty and implement a warning (previously mandatory 81 Criminal Code), which has the same role, warning of the defendant on his future conduct and the consequences if they will commit more crimes, as the old educational measure of reprimand, the impossibility of applying a measure to minor defendants will create a lower legal situation. This is because as we shall see, the non-custodial educational measures covered by the current Criminal Code require the execution of juvenile offenders obligations under the supervision of the Probation Service.

Not even the measure of supervised freedom was not mentioned from the old criminal code, the new measure of supervision being totally different, whereas in the old regulation, the supervision was done by parents or tutors, whilst in the new regulation, the supervision is done solely by the Probation Service functioning under the Tribunal in the area where the minor resides.

The easiest of the non-custodial educational measures in the Criminal Code, is regulated in art. 117, "civic training course" that requires the minor to participate in a program with a duration of 4 months. The program aims to help the minor to understand the legal and social consequences they expose themselves in the case of committing crimes and they can be held accountable for their future behavior. It is the only non-custodial educational measure that does not have a minimum and so the judge may sentence a period lasting between one day and four months.

The second non-custodial educational measure, regulated by art. 118 of the Criminal Code named "supervision", consists in controlling and guiding the minor in his daily program for a period of between two and six months, under the supervision of the probation service, so as to ensure the participation of minors to attend school or training, and at the same time preventing the carrying out of activities or in connection with certain individuals that may affect the education process.

"The supervision on weekend" is the third non-custodial educational measure, regulated by art. 119 of the Criminal Code, and requires minor not to leave the house on Saturday and Sunday, for a period ranging from four to twelve weeks, unless that, on these days, the minor is required to participate in certain programs or to carry out certain tasks imposed by the court. This measure aims to avoid contact with certain persons or other juveniles, or the ensure that he or she is not present in certain places that predispose to the manifestation of criminal behavior.

The last custodial educational measure, "daily assistance" is the worst of them being provided by art. 120 of the Criminal Code, and is the obligation to comply with a schedule set forth by the probation service for a period of three to six months. The program contains the schedule of activities and conditions set out to the minor and some prohibitions.

The individualization of educational deprivation measure that will take in account the defendant, the court will consider, according to art. 115 parag. 2 of the Criminal Code, the general criteria of individualization provided by art. 74 Penal Code, it will take into account the circumstances and manner of committing the offense and the means employed, the state that created danger to the protected value, the nature and seriousness of the result produced, the nature and frequency of offenses that constitute criminal history of the offender's conduct after committing the crime and the criminal trial, education level, age, health, family and social situation of the defendant. The Criminal Code gives the court, the power in determining the actual content of educational measures that do not restrict freedom, and the content of its execution in a concrete way by the possibility of establishing obligations for the minor they must follow during the action. And their establishment, the court

[3] Voicu Corina, Uzlău Andreea, Morosanu Raluca, Ghigheci Cristinel, *New Criminal Code. Application guide for practitioners*, Hamangiu Publishing, Bucharest, 2014, p. 196.

must relate to age, personality, health of the minor, and the family situation and its social consequences.

Mentioned legal provisions are similar to those contained in Recommendation No. 2008/11 regarding European Rules for juvenile criminals that in principle no. 5[4] provides for the imposition and implementation of a non-custodial sanctions or measures that must respect the interests of the minor, limited, on the one hand, by the severity of the crimes committed, and which is expressed by the principle of proportionality, and on the other hand, age, mental and physical health, development, abilities and personal circumstances, expressed by the principle of individualization, and, whenever necessary, reports psychiatric, psychological or social.

3. Execution of non-custodial educati-onal measures, bodies and institutions involved

Non-custodial educational measures run under the supervision of the probation service functioning under the tribunal in whose jurisdiction the convicted minor lives. In this way the minor liaise with the community of origin, the developmental relations with it and with his family. The minor is involved in a number of activities, age-specific, but his skills, developed under the guidance of specialists: social workers, teachers, priests, psychologists.

Art. 63 of Law no. 253/2013 on the execution of sentences, educational measures and other non-custodial measures ordered by the court in criminal proceedings provides that non-custodial measures educational runs during their execution ensuring minor maintenance and strengthening links with family and community, free development of the child's personality and involvement in their programs, in order to form its spirit of responsibility and respect for the rights and freedoms of others. Thus, the juvenile to perform a non-custodial educational measures shall, according to the principle of the best interests of the child, develop respect for the fundamental rights and freedoms under the Constitution, international treaties to which Romania is a party and special legislation, to the extent that their exercise is not incompatible with the nature and content of the measure.

Organization, supervision and execution of carrying out of non-custodial measures are done by institutions in the community, under the supervision of the probation service. Probation Service supervision may entrust the execution of non-custodial educational measures provided for in Law no. 286/2009, as amended and supplemented, to community institutions

Law no. 253/2013 defines community institutions and public authorities, NGOs and other legal entities participating in the execution of sentences and non-custodial measures in the local community through collaboration with the authorities directly responsible for ensuring the execution of such penalty or measure.

Both the Probation Service that performs specific activities to supervisory and other authorities responsible for the enforcement of educational measures and community institutions act under the direction and control of the execution judge of the court of enforcement.

Law no. 253/2013 stipulates in detail how to execute each of the four non-custodial educational measures.

Thus, if the educational measure "of training civic" provided that it is organized in the form of continuous or periodic sessions, conducted over a period of 4 months, and one or more modules include theoretical or applied, adapted to the age and personality of minors included in that stage and taking into account as far as possible, the nature of the offense committed. In the internship set by the court there will consider a number of 8 hours per month of civic training.

Choosing where classes will be held is up to the probation officer responsible for the case (case manager) who decide, based on the initial assessment of the juvenile, the institution in the community in which it is to take place, communicating this institution a copy of the judgment and decision. This should adapt the actual content of the internship, according to the framework program approved by order of the Minister of Justice and the Minister of Education in accordance with the minimum standards for institutions working in the community probation, depending on the particular juvenile counselor approval. Conducting civic training course is conducted by a representative of the institution in the community.

According to art. 66 para. 4 of Law no. 253/2013, including the minor in a civic training course is carried out within 60 days after the putting into execution of the judgment, according to art. 511 of Law no. 135/2010.

Observing the legal regulation we note that it does not detail the types of activities the minor must conduct during civic training that must help him understand the legal consequences, but also social, they are exposed to when committing crimes.

In literature[5], it was shown that these activities must be more than just civic education classes, purely theoretical, proposing practical activities to persuade a minor to realize the seriousness of his criminal behavior, such as visits to prisons, educational or detention centers, involvement in programs to assist persons, assisted institutional involvement in cultural programs etc.

In the second execution of non-custodial educational measures, "supervision", the legislature intended to involve parents of the convicted juvenile

[4] Cited by Udroiu Mihail, Criminal Law. *The general part. The new Criminal Code*, CH Beck, Bucharest, 2014, p. 334.

[5] Voicu Corina, Uzlău Andreea, Morosanu Raluca, Ghigheci Cristinel, *New Criminal Code. Application guide for practitioners*, Hamangiu Publishing, Bucharest, 2014, p. 118

stipulating that supervision and guidance of the minor shall be performed by his parents, who have adopted or legal guardian, and in the situation where they cannot provide satisfactory supervision, the court may order surveillance in the custody to someone that can be trusted, preferably a close relative of the minor upon request.

In this situation, the probation officer has a role to control the execution of the execution of educational supervision and perform the duties of the person exercising supervision.

In particular, this measure is achieved through daily supervision and guidance of the minor in its program or by checking how it meets its obligations arising from its family status, school or work (if attending school, no absences, falls on persons who might influence him negatively, minimizing his or hers criminal sphere not going to places or premises where drugs or other similar substances are consumed, etc.).

The role of the probation service, the implementation of the measure does not involve a direct intervention in the minors program or activities, but monitoring of how the minor respects the program or attends school, other educational, cultural or sporting activities.

Non-custodial educational measure of "supervisions on the weekends" starting at 00:00 hours on Saturday and until 2400 on Sunday (times on other days of rest if the minor belong to other religious denominations have legal rest days other than Saturday and Sunday). Typically, weekends are consecutive, unless the court or the execution judge or the proposed probation officer, orders otherwise. Supervision of compliance with the measures imposed by the court is a major responsibility of the person who lives with minor or other person designated by the court, under the control of the probation officer or, where applicable, the person designated by him in an institution of the community.

To verify the compliance of the measure recording the weekends, the minor who lives alone or person exercising supervision, shall give the person designated the control of execution and supervision of the execution of scheduled or unscheduled visits to the home of the minor, in the days when the child must be in that space according to the court ruling. Failure to respect by the minors can extend the maximum duration of such measures or replacement with another worse measure. If the fault is with the person appointed to supervise minors, the court will fine them.

This measure aims at facilitating the contribution of parents or other adults with whom the child lives, improving their behavior, the involvement in housework, exercise by adults to a selection of people in contact with the minor, as they are forced to come "visit"[6].

Execution of non - custodial educational measure of "assisting daily" is achieved by setting a daily schedule for the minor with which he must comply and the activities that he or she has to do jointly decided by the probation counselor and parents, guardian or other person in whose care the minor is,. If they do not reach an agreement, the program is determined by the execution judge, by means of a motivated decision, after hearing those interested.

In establishing the program, art. 69 para. 3 of Law no. 253/2013 provides that there have to be taken into account the identified needs of the minor, the social situation and, where appropriate, professional and its obligations and prohibitions imposed in the execution. It should be pursued harmonious development of the child's personality through its involvement in activities involving social networking, organizing leisure mode and its capitalization skills.

In this last non-custodial measure, the role of the probation service is the most prominent, he determines the daily schedule, the program and activities he or she must carry out, certain prohibitions to what the minor must comply. Undoubtedly the service should work with parents or other persons to whom the minor is entrusted to, to integrate these activities into the program desired by the minor.

In all four non-custodial educational measures, if the court orders the juvenile to participate in a school or training course, and the minor is enrolled in such a form of education, the probation officer decides on the evaluation minor initial course to be followed and the institution of the community to take place, communicating to this institution a copy of the judgment and decision.

Law no. 253/2013 provides that the child should begin no later than 6 months from the date of the first meeting with the probation officer, and if they follow a school preparation, it will be within the next school year.

From the analysis of the performance of non-custodial educational measures, that supervision is realized by the probation service, but collaborating with both public institutions and NGOs, as if the measure of training civic and national police or local police, as if the measure of supervision.

4. The enforcement of non-custodial educational measures

The new Code of Criminal Procedure provides in Chapter III entitled "Procedure in cases involving juvenile offenders" from Title IV - Special Procedures, in a marginal one paragraph article titled "The enforcement of non-custodial educational measures" (art. 511), the rules on which when against a minor there is to be take such action, after the judgment becomes final, setting a deadline for bringing the minor when ordered, calling his legal representative, a representative of the probation service in order to enforce the measure taken and the persons designated for supervision.

[6] Voicu Corina, Uzlău Andreea, Morosanu Raluca, Ghigheci Cristinel, *New Criminal Code. Application guide for practitioners*, Hamangiu Publishing, Bucharest, 2014, p. 119

The provisions of art. 511 of the Criminal Procedure Code is supported by Art. 65 of Law no. 253/2013 according to which, after a final decision has been taken against a minor to execute a non-custodial educational measure, the court hearing the execution of the procedure provided for in art. 511 of Law no. 135/2010, has to set a deadline, having brought the minor and legally subpoenaed the representative, a representative of the probation service for the enforcement of the measure and the persons designated for supervision. Together with the summons, they shall notify the probation service with a copy of the court's decision. During the meeting, the probation officer will set a date for the child and the parent, guardian or person designated by the juvenile court for supervision or an enforcement judge, as appropriate, and to report to the probation service.

We believe that the doctrine rightly appreciated that although the legal text refers to "bringing minor", the judge shall summon him and his parents, guardian or person in whose care he is, for the deadline, and may issue even a mandatory bringing summons, according to art. 265 Criminal Procedure Code[7].

At this meeting, the judge shall provide the person designated to the juvenile and supervision of the purpose and content of the penalty and consequences of failure or improper observance of it. All these issues are recorded in a document will be registered in the enforcement of criminal judgments by the judge. This act shall be in duplicate (one to be attached to the case file, and the second attached to the register of enforcement of criminal judgments – jurisprudence, a folder set up for this purpose) and will be signed by the judge, delegated to the office of the clerk of criminal enforcement, the minor, the legal representative and the probation service.

The first issue raised in practice if the participation of the representative of the probation service is mandatory or not. Some courts holding that it is not mandatory, as long as there is a notice thereof. We appreciate that participation is mandatory, the more that the signing of the document of enforcement of non-custodial educational measures. On this occasion, the counselor on juvenile probation may communicate in writing, the date on which the juvenile must be present at the probation service to start surveillance activities.

Also, according to Law no. 253/2013, in carrying out the guidance and control of non-custodial educational measures, the judge ensures the enforcement execution by communicating, to the probation service and other institutions provided for by law, subject to the execution of non-custodial measures, the copies of the judgment or, as appropriate, its device by which these measures were ordered.

Thus, art. 15 para. 1 letter b) of Law no. 253/2013 provides that the judge ensures the enforcement of non-custodial educational measures, exercising jurisdiction under this law.

In practice, the question that must enforce the non-custodial educational measures exactly has given birth to two views. In a first opinion it is appreciated that the judge who must carry out the execution is the judge in criminal enforcement office (a single arbitrator appointed by Order no. 1 of the President of the court, at the beginning of each year or if there more judges appointed, to one which is on duty on the final decision). In the second opinion[8], the competent judge is the one who delivered the judgment to be enforced. The doctrine has considered that there is a difference between criminal enforcement of judgments judge and the court which delivered the judgment, the first being the one to enforce the measure applied.

We consider that the second opinion may be allowed only if the court judges are all tied to criminal enforcement office, making sense in the term of Judge mentioned in the Criminal Procedure Code. We believe, however, that the best thing would be for the judge who delivered the judgment to be the one who puts it into execution, which is best able to explain to the convicted minor the obligations that have been set, and the consequences to which him or her is exposed by their infringement.

Law no. 253/2013 provides the maximum period we should start exercising each of the four non-custodial preventive measures, by reference to the time of enforcement provided by art. 511 Criminal Procedure Code. The inclusion of the minor in a civic training course must be done within 60 days, supervision must begin within 30 days, weekends supervision within 15 days, and setting daily program must be implemented within not more than 30 days, all these terms are calculated at the time of the minor and the person designated by the judge supervising the execution, as provided by art. 511 of Law no. 135/2010. When daily assist measure changes another educational measure involving deprivation of liberty, establishing daily schedule must be made within 15 days of the release of the minor.

In connection with the date on which it calculates the non-custodial educational measure in practice, met different solutions. Thus, some courts have held that the measure begins to run from the date the judgment becomes final, while others felt that the start date is the date of execution of non-custodial educational measures, according to art. 511 Criminal Procedure Code.

We consider that the second opinion expressed is closest to the current legal texts, and forms the time of execution and the time at which to calculate the term educational measure.

Also regarding this aspect, the doctrine held that, where the judgment is not the date from which execution of non-custodial educational measure commences, the judge must determine such term or starting with the day of presentation to enforce the

[7] Volonciu Nicholas coordinator., *The new Code of Criminal Procedure commented*, Hamangiu, Bucharest, 2014, p. 1255.
[8] Volonciu Nicholas coordinator., *The new Code of Criminal Procedure commented*, Hamangiu, Bucharest, 2014, p. 1255.

measure, or a later date to be recorded in the court document.

We believe that the execution of non-custodial educational measures can even start on the date in which the putting into execution of the measure in the presence of the minor, accompanied by his legal representative, the judge delegate, and in the presence of the probation service without the need to establish another data from which to begin the flow of execution.

Another issue raised in practice, also related to the enforcement of non-custodial educational measure refers to the situation where the child is not present at the deadline set by the judge, according to art. 511 Criminal Procedure Code. Neither the Criminal Procedure Code and Law no. 253/2013 on the execution of penalties, educational measures and other non-custodial measures does not cover such a situation. The only reference to the situation where the child is not present at the convocation of the probation counselor and case manager as is required by Law. 252/2013 on the organization and operation of probation[9]. This law provides that if the child is absent from the conference, the probation officer will reiterate convening and can call the police for help in identifying and contacting minors and persons in whose care he is. If the person is found or resides in another state and an assessment meeting cannot be achieved, the probation officer is obliged to inform the enforcement court about the impossibility of enforcing the judgment. No mention, however, about the measures an execution judge can order.

We consider that this lack of legal provisions is a gap in the law to be covered with the utmost emergency. In practice, the judge has brought the minor and his legal representative for a new term, making efforts to identify the calling in this regard the police or gendarme (issuing a summons for the actual execution). If there were no minor at the second summons, the judge can not only find the impossibility of enforcing the non-custodial educational measures. You cannot have any increase of the extent to which it was ordered to be executed or replace it with another measure hardest, since we are not in the situation provided by art. 123 of the Criminal Code, when the child does not comply or with the bad faith performance conditions or obligations imposed as educational measure, whereas the non-custodial educational measure has not been enforced. These issues lead in fact to a lack of legal effects of the judgment.

Another impediment related to enforcement, this time to the measure of civic education training sessions, which were are confronted in the probation services, with the absence of this type of program in the community or in institutions.

It was estimated at the Department of Probation, that until the adoption of minimum standards in probation work and empowerment of community institutions will be concerned as to develop a specific program within the probation service, civic traineeships can be carried out by the probation service by probation counselors specializing in teaching or pedagogy or those with experience in this field[10]. Another way to achieve this has been identified in collaboration with school inspectorates through civic education classes, or the Palace of children or other community institutions, such as churches.

Conclusions

This study aimed to present first non-custodial educational measures, and on the other hand, their enforcement and practical difficulties in this regard.

Educational measures are the main non-custodial penalties that can be applied from the 1st of February 2014, minors who commit crimes, as per the current Penal Code that expressed states that these minors can not suffer penalties, only educational measures and the rule being the non-custodial: civic training course, supervision, recording on weekends and daily assistance, exceptional and educational measures to be imposed with deprivation of liberty: confinement in an educational center and internment in a detention center.

The novelty of this legislation has created an uneven practice in the courts, determined by the absence of a comprehensive legislative framework, the current practice not covering all the situations that may occur during the execution and enforcement of custodial educational measures.

The work presented was intended to bring to the attention of practitioners and theorists, some of the problems already identified regarding these issues, and in the future, after detailed consideration of the non-custodial institution educational measures to stabilize a unitary practice in the courts. We are also convinced that the work can open a wide range of debates, points achieved in this study, is only part of the problems that may arise so that they can certainly be extended to other aspects of non-custodial educational measures freedom and their execution.

IMPACT OF ENACTMENT OF THE NEW PENAL CODE ON THE OFFENCE OF INTERNATIONAL HIGH RISK DRUG TRAFFICKING

Traian DIMA[*]
Adrian HĂRĂTĂU[**]

Abstract

The entry into force of the new Penal code has brought some changes on the offence of international high-risk drug trafficking. This study aims to analyze the impact of the new Penal Code, by changing the limits of punishment in the case of the international high-risk drug trafficking, had on this offence, in relation to other existing criminal provisions reffering to the high-risk drugs or very hihg-risk drugs.

Keywords: *drugs, high-risk drugs, very high risk drugs, smuggling, drugs for personal consumption.*

1. Romania's Constitutional Court declared[1] that the new Penal Code is the law more favorable compared to the previous Penal Code, repealed in February 2014. The main reason cited was the fact that the lawmaker of the new Penal Code decreased the punishment limits for the offences set out in the Penal Code and for the offences under some special non-criminal laws.

The rationale for which the lawmaker of the new Penal Code decreased the punishment limits of different offences was to impose a future easier punitive treatment for defendants who are at their first violation of the criminal law and, irrespective of guilt, commit a single offence and not a plurality of offences. For defendants persisting in their antisocial behavior by committing more offences, the lawmaker sought to introduce a harsher punitive treatment; its preventive role is to dissuade those tempted to break repeatedly the social values protected by criminal law.[2]

On the same line of thought is Law No.187/2012 implementing the new Penal Code[3], which reduced the punishment limits for the international drug trafficking offences provided by Article 3 of Law No. 143/2000 for the preventing and combating illicit drug trafficking and consumption.[4]

2. Law No.143/2000 republished[5], includes a number of nine offences concerning the regime of drugs subject to national and international control. The material object of eight offences of nine consists of high-risk and very high risk drugs. The impact mentioned in the title of this scientific paper relates to Article 3 of Law No.143/2000, republished.

Article 3 has the following legal content:

(1) Bringing into or removing from the country, and import or export of high-risk drugs by breaking the law is punishable with imprisonment from 3 to 10 years and removal of rights;

(2) If the deeds provided in paragraph (1) concern very high risk drugs, the punishment is imprisonment from 7 to 15 years and deprivation of certain rights.

Please note that before the amendment of Law No.143/2000 by Law No.187/2012, the punishment provided for in Article 3 para. (1) was imprisonment from 10 to 20 years and deprivation of certain rights, and for the deeds provided in para. (2), the punishment was imprisonment from 15 to 25 years and removal of rights.

Changing of the punishment in case of international high-risk drug trafficking provided by Article 3 paragraph (1) of Law No. 143/2000, republished, makes debatable the correlation of this law text with the existing incriminations in other pieces of legislation covering high-risk or very high risk drugs.

In this regard, Article 271 of Law No. 86/2006[6] concerning the customs regime criminalizes the act of aggravated smuggling. According to this text, "bringing into or removal from the country, by breaking the law, of weapons, ammunition, explosives, drugs, precursors, nuclear or other radioactive substances, toxic substances, waste, hazardous chemical residues or materials constitutes the offence of aggravated smuggling and is punishable by imprisonment from 3 to 12 years and removal of rights, unless criminal law provides for a more severe punishment."

[3] Law no.187/2012 establishing Law nr.286/2009, regarding New Penal Code, published in Of.Journal of Romania nr.757/12 November 2012;

[4] This law has been published for the first time in the Official Journal of Romania, 1st Part, nr. 362/3 of August 2000, being modified several times until entering into force the Law no. 187/2012, that decreased the punishments for some acts so, Law no.143/2000 has been republished.

[5] Law no.143/2000 on combating illicit drug trafficking and published in the Official Journal, Part I no. 362/03.08.2000;

[6] This law has been published in the Official Journal of Romania, 1st Part, no. 350/19.04.2006

From the regulation of Article 271 of Law No. 86/2006, in the matter of our concern, we see two aspects:

a) That the law text makes no distinction between aggravated smuggling of "high-risk drugs" and aggravated smuggling of "very high-risk drugs" using only the terms "drugs" and "precursors". Therefore, in the concept of Law No. 86/2006, which is consequent to Law No.143/2000 which distinguishes between "high-risk drugs" and "very high-risk drugs", crossing of such drug categories across borders without authorization is considered aggravated smuggling and is punishable by imprisonment from 3 months to 12 years;[7]

b) That aggravated smuggling is subsidiary to the existence of any other piece of criminal legislation, which disciplines the same social defense relationships concerning narcotic and psychotropic substances, but provides sanctions of more than 12 years of imprisonment. In terms of subsidiarity of smuggling, amendment of the old sanctions provided for in Article 3 of Law No. 143/2000, by Law No.187/2012, calls into question the proper legal classification of the act of bringing into or removal from the country, by breaking the law, of high-risk or very high-risk drugs.

Thus, in terms of the facts of bringing into or removal from the country, by breaking the law, of very high-risk drugs for which Article 3 para. (2) of Law No. 143/2000, republished, stipulates the sanction of imprisonment from 7 to 15 years, the aggravated smuggling crime is subsidiary, since it provides for a punishment of 3 months to 12 years in prison (which is lower than that prescribed in Article 3 para. 2). Specifically, it means that always bringing into or removal from the country, by breaking the law, of very high-risk drugs will constitute international illicit drug trafficking provided by Article 3 para. (2) of Law No. 143/2000, republished, and will not be considered aggravated smuggling.

On the contrary, always, bringing into or removal from the country, by breaking the law, of high-risk drugs, following the amendment of old sanctions stated in Article 3 of Law No. 143/2000 republished by Law No. 187/2012, will constitute aggravated smuggling and not international illicit drug trafficking provided by Article 3 para. (1) of Law No. 143/2000, republished, as the punishment provided by the lawmaker for the offence of smuggling, specifically imprisonment from 3 months to 12 years is greater than the punishment provided by Article 3 para. (1) of Law No. 143/2000, republished, specifically imprisonment from 3 to 10 years.

By modifying the sanctions provided for in Article 3 para. (1) and (2) of Law No. 143/2000 by Law No. 187/2012, Article 3 para. (1) of this law will no longer find applicability to the illicit international trafficking of high-risk drugs. Changing of the punishment and inapplicability of Article 3 para. (1) of Law No.143/2000, republished, cannot lead to the conclusion that it would be repealed by the effect of Law No. 187/2012, because this paragraph provides the objective side of the offence of international illicit trafficking of very high-risk drugs, provided in para. (2) thereof.

3. The decreased punishment for the offence of illicit international trafficking with high-risk drugs, attracts notable consequences for the current judicial practice compared to that existing in the past.

The first consequence would be that currently we can no longer talk of international illicit trafficking of high-risk drugs [Article 3 para. (1) of Law No. 143/2000 republished] but of aggravated high-risk drug smuggling. Thus, if a person brings into Romania, by breaking the law, high-risk drugs and very high-risk drugs at the same time (on the same occasion), we will have a formal concurrence between the offence of illicit high-risk drug trafficking, provided by Article 3 of Law No. 143/2000, republished, and the offence of aggravated high-risk drug smuggling, provided by Article 271 of Law No. 86/2006. No one could argue that the legal classification of the offence, as described above, would be only in accordance with Article 3 para. (2) of Law No. 143/2000, republished – the more severe offence - which would absorb the least severe one (aggravated high-risk drug smuggling) and therefore would not constitute multiple offences.

The solution of multiple offences is required, on the one hand, because the text of Article 271 of Law No. 86/2006 sends for punishment to a more severe incriminating regulation, so that the act of bringing very high-risk drugs into the country, with its dangerous consequences for public health is provided for in Article 3 para. (2) of Law No.143/2000, republished, with a heavier punishment, while the same act of introducing high-risk drugs into the country with its consequences and another special legal object is deemed aggravated smuggling as provided by Article 271 of Law No. 86/2006, because it provides a harsher punishment than that prescribed by Article 3 para. (1) of Law No.143/2000, republished. Please note also that by criminalizing the act of smuggling in general, the lawmaker sought to protect mainly the social relationships settled by the State concerning customs duties and the procedure for bringing into or removal from the country of goods.

Moreover, because the action of bringing into or removal from the country of "high-risk drugs" or "very high-risk drugs", by breaking the law, takes place at borders, results that such actions violate not only the drug regime, but also the customs procedures of Romania.

[7] In our opinion, there is an omission of the legislator regarding that the Law no.86/2006 subsequently emerged Law no.143/2000 distinguishes between drug risk and high-risk drugs, didn't make this classification within qualified contraband.

Listing in Article 271 of Law No. 86/2006 of certain categories of dangerous goods, which require special authorization to be carried across border, the lawmaker has changed the simple smuggling into aggravated smuggling in the event that such goods would be removed from or brought into the country without such authorization and provided a harsher punishment.

As the legal object of the offence of smuggling consists in the social relations settled on the customs regime, removing from or bringing into the country of high-risk drugs without authorization, does not change this legal object, even if subsidiary they are put into risk the relations regarding the public health.

This specification enables us to say that by in removing from or bringing into the country of high-risk or very high-risk drugs, by breaking the law, the perpetrator violates two distinct categories of social relationships primarily protected by the lawmaker, specifically the social relations concerning public health, in case of high-risk drugs, which is why they must be liable for both international illicit trafficking provided by Article 3 para. (2) of Law No. 143/2000 and for the offence of aggravated high-risk drug smuggling, provided by Article 271 of Law No. 86/2006 (multiple offences).

It is true that removing from or bringing into the country, by breaking the law, of high-risk drugs endangers the public health, but following the amendment brought by Law No. 187/2012, the lawmaker has protected mainly the customs regime and in the alternative the public health.

Because of this new situation created by Law No. 187/2012, the act of bringing or removing high-risk drugs by breaking the law remains within the aggravated smuggling with the adequate legal object, being removed from the scope of offences against public health.

Another example of judicial practice could be that a person consumer of cannabis (high-risk drug) goes to Turkey and acquires 200 grams of cannabis for personal consumption.

After crossing the border, it is found with those 200 grams of cannabis. In connection with this drug, the person in question says it brought it into the country for own consumption, being actually a consumer.

And in this case, we can question the fact whether the person concerned is liable for only one offence, specifically possession of high-risk drugs for personal consumption provided by Article 4 of Law No. 143/2000, republished, the crime of aggravated high-risk drug smuggling provided by Article 271 of Law No. 86/2006, being absorbed by it, or multiple offences between aggravated high-risk drug smuggling and possession of high-risk drugs for own consumption.

In judicial practice, it was considered that in case of crossing drugs across border exclusively for own consumption and not for illicit drug trafficking, the act falls within the offences provided by Article 4 para. (1) of Law No. 143/2000, absorbing in its content the deed of crossing drugs across border.[8]

The solution is objectionable because, in case of aggravated smuggling, this offence subsists even if the drug passed across border without authorization is used for own consumption.

The solution of the multiple offences is correct because the same action includes the content of two separate offences, specifically that provided by Article 271 of Law No. 86/2006 and that provided by Article 4 of Law No. 143/2000, republished.

Thus, the offence of aggravated smuggling occurs instantaneously when crossing the border of high-risk drugs without authorization. After this moment of the first offence, occurs the second offence that is continued possession by breaking the law of the 200 grams of cannabis for personal consumption.

If a person holds at home for illicit trafficking both high-risk drugs and very high-risk drugs, we have a single offence of possession of very high-risk drugs and legal classification is only according to Article 2 of Law No.143/2000, republished.

In conclusion, along with decreased sanctions for the offence of illicit high-risk drug trafficking provided by Article 3 para. (1) of Law No.143/2000, republished, the main impact will be changing the legal classification of Article 3 para. (1) in Article 271 of Law No. 86/2006, which criminalizes the act of aggravated smuggling.

Of course, we expect the future judicial practice to reveal other situations where decreased punishments for the offence provided by Article 3 of Law No. 143/2000, republished, give rise to controversial solutions.

EXTENDED CONFISCATION – SAFETY MEASURE REGULATED IN THE NEW CRIMINAL CODE

Mihai Adrian HOTCA*

Abstract

Extended confiscation is a safety measure introduced in Romanian criminal law in 2012. Romania's Constitutional Court has ruled several decisions in which a question has been raised of whether the legal provisions on extended confiscation are constitutional or not. In the present paper we analyze the extended confiscation in relation to the decisions of the Constitutional Court.

Keywords: *safety measure, criminal sanction, constitutionality, retroactivity, no retroactivity.*

1. Introduction

By means of Law no. 63/2012, art. 112^1 which regulates the safety measure of the extended confiscation[1] was introduced in the Criminal Code of 2014. According to art. 112^1 of the Criminal Code in force:

„(1) Other assets than those referred to in art. 112^2 are also subject to confiscation if the person is convicted for committing any of the following offenses, if the offense is likely to grant the respective person any material benefit and the penalty provided by the law is the imprisonment for 4 years or more:

a) offenses of drugs and drug precursors trafficking;

b) offenses on trafficking and exploitation of vulnerable persons;

c) offenses on the state border of Romania;

d) the offense of money laundering;

e) offenses of the legislation on preventing and fighting pornography;

f) offenses of the legislation on fighting terrorism;

g) the establishing of an organized crime group;

h) offenses against the patrimony;

i) the failure to comply with the regime of arms, ammunition, nuclear and explosive materials;

j) the counterfeit of coins, stamps or other values;

k) the disclosure of the economic secret, unfair competition, the failure to comply with the provisions on the import or export operations, embezzlement, offenses on the import and export regime, and on the waste insertion in and removal from the country;

l) offences on the games of chance;

m) corruption offenses and assimilated offenses, as well as offenses on the financial interests of the European Union;

n) offenses of tax evasion;

o) offenses related to customs regime;

p) offenses of fraud committed by means of computer systems and electronic payment means;

q) organs, tissues or human cells trafficking.

(2) The extended confiscation shall be ordered if the following conditions are met in the same time:

a) the value of the assets acquired by the convicted person 5 years in advance, and as the case may be, following the moment of the offense, until the date of issue of the document which initiates the proceedings, clearly exceeds the lawful income;

b) the court ascertains that the respective assets were gained from criminal activities of the kind of those referred to in par. (1).

(3) In order for the provisions of par. (2) to be applicable, the value of the assets transferred by the convicted person or by a third party to a member of the family or to a legal entity the convicted person controls, shall be taken into account.

(4) According to this article, *assets*, shall also mean amounts of money.

(5) When establishing the balance between the legal income and the value of the acquired assets, the value of the assets on the date of their acquiring and the expenses borne by the convicted person and by the family members, shall be taken into account.

(6) If the assets subject to confiscation are not found, other assets and money shall be confiscated up to the value thereof.

(7) The assets and money obtained from the operation or use of the assets subject to confiscation, as well as the goods produced by them, shall also be confiscated.

(8) The value of the confiscated assets shall not exceed the value of the assets acquired throughout the term provided for by par. (2), which exceeds the lawful income of the convicted person".

Please note that the provisions of art. 112^1 of the new Criminal Code have a content which is similar to

* Professor, PhD, Faculty of Administrative and Social Sciences, "Nicolae Titulescu" University of Bucharest (e-mail: **mihaihotca@gmail.com**).

[1] Published in Official Journal no. 258 of April 19th, 2012.

[2] Art. 112 of the Criminal Code regulates special confiscation.

that of the provisions of art. 118^2 of the previous Criminal Code (1969), therefore, the application and construction of the new provisions in the field of the extended confiscation, shall be similarly construed and applied.

Following the enforcement of the provisions on the extended confiscation, the judicial practice had to solve several law issues on the enforcement on due time of the new regulations in the field of the extended confiscation.

One of the law issues which emerged in practice, concerns the possibility of applying the measure of the extended confiscation in what concerns the offenses committed prior to the enforcement of Law no. 63/2012.

The settlement of several unconstitutionality exceptions were referred to the Constitutional Court, and the constitutional court pronounced several decisions, 3 of them being more important, respectively Decision no. 78/2014[3], Decision no. 356/2014[4] and Decision no. 11/2015[5].

By means of Decision no. 1.470 of November 8th, 2011[6], the Constitutional Court, by reference to the criteria for the distinction between the criminal law regulations and the criminal procedure regulations, showed that the subject, the scope and the result of the regulation in question, are those which prevail in establishing this difference and not the placement of these regulations in the Criminal Code or in the Code of Criminal procedure, placement which does not represent a criteria for their distinction.

2. The provisions on the extended confiscation shall not be applied to the offenses committed prior to the enforcement of Law no. 63/2012

By means of Decision no. 78/2014, the Constitutional Court ruled on the question whether the provisions of Law no. 63/2012 apply to the offenses committed prior to the enforcement of this law.

According to the provisions of Decision no. 78/2014: „the provisions of art. 118^1 par. 2 letter a) of the Criminal Code of 1969 shall be constitutional if they allow a more favorable criminal law".

In what concerns this decision, the Constitutional Court noted the following: „*the review of the Constitutional Court shall take as its starting point the claims of the authors of the exception according to whom the provisions of art. 1182 par. 2 letter a) of the Criminal Code of 1969 affects the principle of application of a more favorable criminal law and the equality of the citizens before the law by being retroactive, namely they are applicable in a discriminatory way to the offenses committed under the old law.*

Therefore, the Court notes that the extended confiscation, by means of its effects, as shown above, although it is not conditioned by the criminal liability, involves an indissoluble connection with the offense. Therefore, it appears as a reason of removing the state of danger and preventing the committing of another criminal offense.

By reviewing the content of the entire regulation on the extended confiscation of the Criminal Code, the Court notes that the principle of a more favorable criminal law is applicable to this institution.

In what concerns the principle of equality of citizens before the law, the Court notes that it is possible that a co perpetrator to be judged under the rule of the old law and consequently, the safety measure of the extended confiscation not to be ruled, while such a measure is ruled for the other co perpetrator who is still under the court proceedings. Therefore, if the more favorable criminal law were not enforceable, the latter, compared to the first, would be discriminated under the legal treatment without any objection and reasonable justification.

In other words, the provisions on the extended confiscation are constitutional if they are applied only to the offenses committed under the influence of the new legislative solution which occurred on the enforcement of Law no. 63/2012, respectively, April 22nd, 2012".

Under the grounds of this resolution of the Constitutional Court, it may be concluded that the provisions on the extended confiscation cannot be enforced against the persons who committed offenses prior to the enforcement of Law no. 63/2012.

In other words, the measure of the extended confiscation shall be applicable if the offense leads to conviction, and if the previous actions which resulted in the obtaining of the assets contemplated by the extended confiscation were committed following the enforcement of Law no. 63/2012.

Indeed, if the contrary had been admitted, the provisions of art. 15 of the Constitution would have been seriously disregarded, due to the fact that the rules governing the extended confiscation are subject to the substantive criminal law.

According to the provisions of Decision no. 356/2014: „*It is absurd to claim a subject of law to be held liable for a conduct that it had prior to the enforcement of a law regulating such a conduct. The subject of law could not foresee what the legislator would regulate, and its behavior is normal and natural if conducted within the legal order in force*".

[4] Published in Official Journal no. 691 of September 22nd, 2014.
[5] Published in Official Journal no. 102 of February 9th, 2015.
[6] Published in Official Journal no. 853 of December 2nd, 2011

1. The provisions on the extended confiscation shall not apply to the assets acquired prior to the enforcement of Law no. 63/2012

Another question of law which the Constitutional Court was invested to rule on was whether the measure of the extended confiscation may be applied on the assets acquired prior to the enforcement of Law. 63/2012.

Therefore, by means of Decision no. 356/2014, the Constitutional Court ruled the following: „*the provisions of art. 118[2] par. 2 letter a) of the Criminal Code of 1969 shall be constitutional unless the extended confiscation applies to the assets acquired prior to the enforcement of Law no. 63/2012, for the amendment and supplementation of the Criminal Code of Romania and of Law no . 286/2009 on the Criminal Code*".

Furthermore, by means of Decision no. 11/2015, the Constitutional Court ruled the following: „*the provisions of art. 112[2] par (2) letter a) of the Criminal Code shall be constitutional unless the extended confiscation applies to the assets acquired prior to the enforcement of Law no. 63/2012, for the amendment and supplementation of the Criminal Code of Romania and of Law no . 286/2009 on the Criminal Code*".

By means of the aforementioned decisions, the Constitutional Court provided a fair application of the provisions of the fundamental law, ruling that the rules on the extended confiscation cannot be retroactive in what concerns the assets acquired prior to their enforcement, even if the offenses for which the conviction is pronounced are committed following the respective date.

If the law provided otherwise, the principle of the non-retroactive law referred to in art. 15 par. (2) of the Constitution would be disregarded.

Conclusions

By reviewing the content of art. 112[1] of the Criminal Code, the legal nature of the extended confiscation may be established[7]. These legal provisions and the provisions of art. 107 of the Criminal Code lead to the conclusion that the assessed safety measure is deemed by the legislator as a criminal law penalty, which also contemplates educational penalties and measures.

The regulations which establish this criminal legal institution, by means of belonging to the category of the criminal law penalties, also belong to the material (substantive) criminal law branch, the implementation of which is governed by the *tempus regit actum* principle.

The substantive criminal law consists of the total legal rules which establish the actions representing offenses, the penalties to be applied or taken in case of committing an offense, the conditions based on which the state can hold criminally liable the offenders, as well as the conditions under which the penalties are to be fulfilled and the measures are to be taken in case of committing criminal offenses. Criminal law means a substantive (material) rule of law with an actual legal content, namely a regulation establishing conducts or deeds (actions or non-actions) of the subject within a legal relation, while the criminal proceedings law or the procedural law includes the category of legal regulations of which content consists of procedures, ways or means by which the regulations of the substantive law are applied.

Under the principle of the non-retroactive criminal law, it is concluded that the regulations on the extended confiscation cannot be retroactive in what concerns the offenses committed and the assets acquired prior to their enforcement. In this case, the aforementioned criminal provisions shall not be applicable even if the offenses for which the conviction is ruled are committed following the respective date.

OPINIONS ON THE UNCONSTITUTIONALITY ASPECTS RELATED TO THE CYBERSECURITY LAW

Maxim DOBRINOIU[*]

Abstract

Nowadays, on a rise of Cybersecurity incidents, with even more ferocious and sophisticated methods and tools of performing online attacks, the governments should struggle to create effective counter-measures, both in terms of technical endeavours and strong legal provisions. Following a successful Cybersecurity Strategy, the Romanian government's Cybersecurity Law proposal was expected to bring the much needed safety measures in the national component of the cyberspace, but was dropped for unconstitutional reasons, reopening the debate on national security versus the protection of citizens' constitutional rights to privacy.

Keywords: *Cybersecurity, cyber-attacks, cyber-infrastructures, national security, privacy, personal data, constitutional rights.*

1. Introduction

In a very complex virtual environment, Romania is one of the few European countries that drafted and put in place a good and comprehensive Cybersecurity Strategy[1], assumed and endorsed, at the time of its creation, by state authorities, private IT&C companies and various non-governmental organizations. All of them agreed on the necessity of the existence of such a strategy, as a first legal commitment towards assuring the security of the national component of the cyberspace (Internet) and the protection of networks and information (critical) infrastructures against the high level threats posed by cyber-offenders, criminal organized groups, cyber-terrorists, and even state(sponsored)-entities.

2. The Cybersecurity Law - CSL

In pursuing the guidelines and main ideas of the Strategy, the Romanian government issued, by the end of year 2014, a draft Cybersecurity Law that was adopted by the Parliament as the first legislative bill of its kind.[2]

But, the Cybersecurity Law did not have the chance to come into force, due to a broad wave of criticism from various NGOs, social media and citizens, being even disproved by 69 members of Parliament in a legal appeal to the Constitutional Court based on assumptions of unconstitutionality of the provisions, interference with the constitutional rights of people and lack of realistic safeguards to protect personal data and privacy against the security-based operations run by the competent state authorities.

The Cybersecurity Law was created with the aim to establish the general framework for regulation in the Cybersecurity area, with the obligations for the legal persons, with both public and private liability, to protect the cyber-infrastructures they own, hold, operate or use. CSL also provided the concept of "Cybersecurity" as a component of national security that can be, basically, realized through acknowledgement, prevention and countering the threats and attacks in cyberspace, as well as through reducing the vulnerabilities of the cyber-infrastructures, in order to mitigate the risks to their security.

3. The Criticism formulated by the Constitutional Court

One of the first accusations brought to CSL was the lack of harmonization with the well-known and much-discussed European Directive concerning measures to ensure a high common level of network and information security across the Union (known as the Network and Information Security Directive or NIS Directive)[3].

But this bill has not yet been adopted and has no effect on the Member States national legislations, with serious doubts regarding its final form.

For this, we appreciate as questionable the manner in which the Constitutional Court of Romania – CCR was quick to highlight, within its decision upon the unconstitutionality of the CSL, that the "competent authorities" and the single contact points in the area of Cybersecurity should only be "civilian bodies",

[1] Approved by Government Decision no.271/2013, published in the Official Gazette no.296/23.05.2013

[2] The Cybersecurity Law bill was adopted by the Romanian Senate, as decisional chamber, on 19.12.2014, and was further sent to promulgation to the President of Romania. Meantime, the bill was contested to the Constitutional Court of Romania by 69 deputies and various NGOs.

[3] Legislative initiative of the European Commission, unfinished and currently still on debate (in the first reading) in the European Parliament, where has been adopted with modifications on 13.03.2014. On this form, the CE only expressed a partial approval

"subject of full democratic oversight", that "should not fulfil any intelligence, public safety or defence-led activities", and, moreover, that "should not be linked in any organizational way with any institutions of this kind" – as provided by Article 6 of the proposed NIS Directive.

In this way, CCR threw a doubt shadow on the defence, public safety and national security institutions, including in terms of the democratic control of their activity, issue that was not quite appropriate to be analyzed in that Decision.

Another problem of the CSL was the scope of the bill. In the section named "definitions", the CSL provided the explanations for two expressions, namely "cyber-infrastructure" and "cyber-infrastructure of national interest" – CINI, that were, then, balanced among different provisions (articles), with a high contribution towards the creation of a feeling of unpredictability and lack of clarity to those legal persons CSL should have applied to.

In this context, we consider that CSL should have been more accurate, more explicit, and should have restricted its scope only to those infrastructures that are essential for maintaining the vital economic and societal activities in the field of energy, transports, financial services, telecommunications and information society, food and health supply chains, and also in defence, public order and national security, whose disruption and destruction of might have a significant impact within a EU Member State (as also provided by Article 3 of the proposed NIS Directive). With other words, a new CSL should address just the protection of cyber-infrastructures of national interest, because only this activity could be comprised into the general concept of *national security*.[4]

The CCR support for the idea of a "civil body" as a national authority in Cybersecurity seems to have the origins only in the NIS Directive project, and less in the realities of the cyberspace, where, daily, show up new forms of menace against citizens (users), businesses and even states, and the protection of essential cyber-infrastructures has become a real component of national security.

Also surprisingly, the Constitutional Court placed in a certain doubt the principles of legality based on which the defence, public order and national security institutions guide their activities (principles that are comprised in their specific law of organization and functioning), assigning them the unreal intention to use CSL to collect intelligence through infringement of constitutional rights to personal, family and private life and the confidentiality of correspondence, even if CSL was only meant to legal persons with both private or public liability[5].

In the same logical stream, the CCR could even deny the legality of the electronic communications' interceptions performed by the National Technical Centre – a military structure within the Romanian Intelligence Service, nowadays the only legal authority in the area of electronic eavesdropping, on the same grounds of "not being reliable" or "being a threat to the constitutional rights to personal, family and private life, or the confidentiality of communications.

So, it is not very clear if CCR objected against the "military structure" of the competent authorities mentioned by the CSL or just acknowledged their lack of generic legal powers or the absence of the necessary safeguards for the protection of constitutional rights to privacy and confidentiality of communications. CCR's idea may very well be appreciated as a dangerous turning point for the legal base of those authorities, with possible repercussions on their further operations in cyberspace.

Far from other aspects, one of the most controversial issues identified by the CCR on CSL was "the access to the data held by the holders of cyber-infrastructures", while the constitutional court suggested a double-analysis: one from the perspective of the *type of data* to which the access is granted, and the second one from the perspective of *the way the access is fulfilled*.

In the first hypothesis, CCR considered that, although CSL bill has not provided for, the access to the data held by the persons subject to the law does not exclude the access to, the processing or the usage of personal data.[6] This opinion is relevant and fair, and we fully agree with it. Yes, technically, it is possible that among all the data stored about security incidents or cyber-attacks to also be found information related to a natural person. But, CCR forced the interpretation of CSL, pointing-out that "it is obvious that the type of data contained in these systems and networks include data relating to private life of the users", and that "the authorities designated by the law must be allowed an access to any data stored on these cyber-infrastructures", thus "a discretionary access also to data related to private life of the users".

This CCR observation is also correct. The new CSL bill should adopt a much clearer provision on the data on security incidents or cyber-attacks that the cyber-infrastructure holders need to retain/record, and what is the data they may disseminate/communicate to the competent authorities. Content of messages or other data related to a person's private communication should not be processed whatsoever.

From another point of view, based on the logic of the CCR's opinion, one could very well interpret that the persons subject to CSL usually store or hold personal data on their systems. This means that either those persons are *personal data operators* and comply

[4] Currently, in what regards the protection of the critical information infrastructures, there is in force the Government Emergency Ordinance no.98/2010, published in the Official Gazette no.757, part I, of 12.11.2010, and approved by Law no.18/2011

[5] Paragraph 51 of the Decision no.17/2015 of the Romanian Constitutional Court

[6] Paragraph 59 of the Decision no.17/2015 of the Romanian Constitutional Court

with the legal provisions of Law no.677/2001[7], or they are providers of electronic commerce services and comply with the provisions of Law no.365/2002[8]. But, in both situations, whatever motivation the competent authorities may invoke for their data requests, any eventual personal data could be easily refused by the holders of cyber-infrastructures for the reason of no consent from the natural person who actually owns that data.

In Paragraph 62 of its Decision, CCR put the sign equal between the terms "access to data concerning a cyber-infrastructure" (in CSL) and "access to a computer system" – as provided for by Article 138 Para 1 point b) and Para 3 of the Criminal Procedure Code. The latter is defined by the Code as "entering a computer system or a computer data storage medium, either directly or remotely through specialized software or through a network, in order to identify evidence". According to the Criminal Procedure Code, this legal measure could only be ordered by a judge (under Article 140) or a prosecutor, for 48 hours (under Article 141).

This idea of "equality" between the two terms is at least questionable; it seems that CCR did not take into consideration the technical aspects comprised in the phrase "entering a computer system or a computer data storage medium", as intrusive acts which do not have anything in common with making available or communicating data – as activities fulfilled by the holder of cyber-infrastructures following the requests from the competent authorities (see CSL).

The second aspect related to "data access", criticized by CCR, refers to the lack of a regulation on the ways the competent authorities effectively realize the access to the data stored by the holder of cyber-infrastructures, and also refers to the lack of any objective criteria to restrict/limit to the minimum the number of employees that may have access to or could further use that data, and especially refers to the absence of a prior control from a court of justice. All these aspects were seen by CCR as "an interference with the fundamental rights to personal, family and private life, and the confidentiality of correspondence".[9]

We consider this CCR opinion as insufficiently substantiated, because, again, it does not reflect at all the technical realities of the cyberspace, not the judicial practice. The IT specialists know that not just any security incident or any cyber-attack (as they have been defined by CSL) is automatically an offence for which a criminal prosecution may begin, *in rem* or *in personam*.

Usually, for the investigation of the causes that determined such events related to a cyber-infrastructure, gathering relevant information may not be subject of a judicial control or of a formal approval from a prosecutor or a judge. In the majority of such cases, administrative measures are sufficient. But this should apply strictly for technical data necessary in a Cybersecurity investigation of the reported event.

In all security incidents or cyber-attacks cases, the most important for the investigation is the information generated by the event, computer data that may lead to relevant conclusions on the source of the incident, means of exploiting vulnerabilities, possible real targets and future developments. The bad feature of this kind of data is its volatility – data could be easily lost, altered, modified or deleted, accidentally or on purpose, automatically or due to human intervention/error.

A possible legal solution able to meet both CCR requirements and the technical needs for reliable computer data (for investigation), would be a specific and clear provision in the new CSL, that may offer the competent authorities the power to order (by an administrative act/request) the holder of a cyber-infrastructure to expeditiously preserve stored computer data in connection with a security incident or a cyber-attack, following the model of Article 154 of the Criminal Procedure Code. And only then, based on an authorization issued by a judge of freedoms and liberties, would further be possible the access to the respective data. In such way, the authorities could be able to obtain unaltered data relevant in the context of their investigations, in conditions of full safeguarding the protection of constitutional rights of individuals.

In what regards CCR observations on the subject of "cyber-infrastructures of national interest", we fully agree with the ideas comprised in Paragraphs 71 and 73 of the Decision.

Another controversial issue, insufficiently approached, neither in doctrine, nor in judicial practice, is CCR joining the opinion that "IP addresses are personal data", meaning that are data by which a natural person is identified or identifiable (as specified by Law no.677/2001).[10]

Similar ideas have been circulated in the EU[11], and among local non-governmental organizations active in the area of privacy in IT&C, and are in compliance with certain points of view expressed by the European Court of Justice on specific cases[12].

We consider such conclusion as an error of interpretation, at least from the following considerations:

a) An IP address is just a simple technical information, based on which the relevant protocol[13] routes data packets in a network (internet);

[7] Law on the protection of persons regarding the processing of their personal data and for the free circulation of such data
[8] Law on electronic commerce
[9] Paragraph 63 of the Decision no.17/2015 of the Romanian Constitutional Court
[10] Paragraph 75 of Decision no.17 of 2015 of the Romanian Constitutional Court
[11] https://www.huntonprivacyblog.com/2014/11/articles/german-court-asks-european-court-justice-ip-addresses-personal-data/
[12] See European Court of Justice Decision in case no. C-70/10 Scarlet Extended vs. SABAM
[13] Transmission Control Protocol

b) In the absence of other relevant information, an IP address is not able to effectively identify a natural person;

c) An IP address only points to connected electronic devices or equipment, active or passive network elements, internet resources, but not the users;

d) An IP address is similar to a cellular number provided by a Prepay SIM card: it cannot offer significant elements based on which a natural person to be identified (could be, somehow, possible but only in connection with other data). Therefore, neither a cellular number provided by a Prepay SIM card may be regarded as "personal data";

e) An IP address is similar to a vehicle registration number, when the vehicle belongs to a legal person (institution, organization, company etc.) and is registered on its name. Therefore, neither a vehicle registration number may be automatically considered as "personal data".

In logic theory, if a given situation (p) implies another situation (q), then the second situation denied (non q) implies the first situation denied (non p). Applying this theory formula to the definition of "personal data" as it is in the specific law, we come to the conclusion that:

if ("the information is personal data") -> ("the information is able to identify a natural person"), then ("the information is not able to identify a natural person") -> ("the information is not personal data"). In other words, if an IP address is not able, by itself, to identify a natural person, then that IP address is not a personal data.

Last but not least, in Paragraph 89, CCR raised up critics on a certain provision of CSL concerning the right of the representatives of the competent authorities "to request statements or any document needed in order to carry out the control, to conduct inspections, even unannounced inspections, at any facilities, premises or infrastructures intended for national interest".

In CCR's opinion, the permission to conduct inspection granted to the representatives of the competent authorities requires access to a specific location, with respect to certain objects, computer systems for data storage, processing and transmission of data, including personal data, access that call into question the protection of the users' constitutional rights, with no safeguards provided by CSL against the risks of abuse.

Moreover, surprisingly, CCR regards the term "facility" (mentioned in Article 27 Para 2 point b.) as "a computer system or a network or an electronic communications service, while "the access to them would not be permitted without an authorization from a judge". In such case, especially when dealing with *premises*, CCR considered that would be applicable the provisions of Articles 157-167 of the Criminal Procedure Code related to *home search and seizure* activity, measure ordered only by a judge.

CCR observations seem to be correct, but, once again, they simply ignore specific realities: no one can eliminate *a priori* the possibility for an authority to conduct a control in the field of a certain activity. In other words, any of the competent authorities mentioned by CSL may perform the controls provided by the law, but only in what regards the security (physical, logical, procedural) of the objectives, facilities or infrastructure-based elements.

CCR wrongfully considers that by "facility" one may understand a "computer system or network". CSL only defines the "cyber-infrastructure", in the details of which could be found the term "computer system". In the view of CSL, the facility refers to a building element, which acts as a shelter (location) for the respective cyber-infrastructures, and this kind of element may be very well be inspected, controlled from its security perspective, even without prior announcement.

In what regards the "premises" CCR refers to in its Decision, the constitutional court missed the fact that, currently, in real life there are numerous situations when various state authorities (both central or local) are empowered by different laws to conduct controls (announced or not) in premises, without any authorization issued by a judge and even without to consider these activities as "home search and seizure" operations. For example, the controls and inquiries performed by the public health authorities in restaurants, the controls of the National Authority for Consumer Protection in commercial places or businesses, the controls of the State Inspection for Constructions in the premises where there are suspicions related to building activities with no clearance or approval or the controls of the emergency situations inspectorates on fire prevention in all the places where this kind of events may occur.

4. Final remarks

The conclusions and opinions formulated by the Romanian Constitutional Court in the case of Cybersecurity Law, by Decision no.17/2015, constitute a strong incentive for the creation of a better legislation in the field of protecting the national component of cyberspace and the critical information infrastructures against the threats posed by bad individuals or other interested state or private entities, local or foreign.

The present study only brings some technical and legal observations on the analyzed subject, with the aim to contribute to a good understanding of the mixture between legislation and the technical realities of the cyberspace, and to the creation and adoption of a strong new Cybersecurity Law, as a perfect guide for public and private organizations to contribute to the general safety of our nation's cyber-infrastructures.

RELEASE OF MINORS

Edgar Laurenţiu DUMBRAVĂ*

Abstract

The sanctioning of minors provided in a whole new Criminal Code is kinder to those applying to one category of criminal penalties, namely educational measures. This change occurred after finding the need to recover and straightening of juvenile offenders with their age-specific means and without coming into contact with major people that could adversely affect behavior.

Keywords: *minor, release, parole, jail, prison.*

1. Introduction

The sanctioning regime applicable to minors, provided by The New Criminal Code, is overall milder than the previous one[1], because to them there will be applied only one category of criminal law sanctions, namely the seducational measures. This change occurred after finding the need to recover and redress the juvenile offenders by specific means for their age, without coming into contact with adults, that could affect their behavior in a negative way.

Custodial educational measures can be taken against a minor in the two cases provided by art. 114 para. (2) of The Criminal Code:

a) if he has committed a crime for which it was taken an educational measure that has been executed or he began executing an educational measure before committing the offense for which he is judged;

b) when the punishment provided for the offense is imprisonment for 7 years or more or life imprisonment.

Also, custodial educational measures will be applied to the minor in the following cases:

- If the minor does not comply, in bad faith, the execution conditions of the educational measure or the obligations imposed, the court decides to replace the measure with internment in an educational center, where, initially, it was taken the most severe non-custodial educational measure, for it's maximum duration provided by the law (situation provided by art. 123 para. (1) c) of The Criminal Code);
- If the minor does not comply with bad faith performance conditions or obligations imposed educational measure, even after it has been done in accordance with paragraph 123. (1) a) and b), the court has to replace the measure with internment in an educational center (situation provided by art. 123 para. (2) Criminal Code.);
- If the minor serving a non-custodial educational measure commits a new crime or he is beeing triled for a concurrent crime previously committed, the court decides to replace the initial measure with a custodial educational measure (situation provided by art. 123 para. (3) c) of The Criminal Code.).

The two custodial educational measures that can be applied to the minor are:

- Internment in an educational center for a period of 1 to 3 years;
- Internment in a detention center for a period of 2 to 5 years, and if the punishment provided by the law for the offense committed by the minor is 20 years imprisonment or more or life imprisonment, for a peroiud of 5 to 15 years.

Minors are not sentenced to imprisonment, therefore the institution of release on licence does not apply to them, not even if at the age of 18 years it is required a change of the enforcement regime, according to art. 126 of The Criminal Code, and the court decides for them to continue the execution of the educational measure in a prison.

The release on licence institution becomes applicable only if a person has committed two crimes, one during the minority and the other after turning 18 years, and, according to art. 129 para. (2) b) of The Criminal Code, he was sentenced with imprisonment, but in this case, it applies to the adult.

However, given that they are subject to a deprivation of liberty as a result of their internment into an educational center or a detention center, minors also have the opportunity to be set free before executing the whole period of the educational measure, if they have provided proves that the educational measure has achieved its purpose and the offender can reintegrate into the society.

In the previous Penal Code there were two types of custodial educational measures: the internment in a rehabilitation center and the internment in a medical-educational institute, which were being taken for an indefinite period of time, but only until the aperson turned 18 years old and could be extended for up to two years if it was necessary to accomplish the purpose

* PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **edgards58@yahoo.co.uk**).

[1] Exceptiong the situation provided by the previous criminal code, when the minor was sentenced to a term of imprisonment with conditional suspension on supervision or control, which in terms of maintaining the minor in liberty was more favorable than an educational measure involving deprivation of liberty under the new code.

of the internment[2]. After passing at least one year from the date of the internment, the minor could have been released if he had given strong evidence of improvement, of diligently into his education and of the acquisition of a professional training[3].

Unlike in the previous code's rules, currently the release from executing a custodial educational measure is ordered for the person who has reached the age of 18, so to the adult. The release posibility is no longer apreciated after a fixed period of one year, but after a fraction of at least half (1/2) of the internement duration.

Also, unlike the previous legislation, The New Criminal Code requires compliance of some obligations until the expiration of the internement's time.

2. Content

In order to obtain release, both the person interned in an educational center and the person interned in a detention center, must accomplish the following conditions:

1. They have reached the age of 18 years;

2. By the age of 18 they have executed at least half (1/2) of the length of the internment measure.

The person interned in an educational center can be released after serving a minimum period of between 6 months and 1 year and 6 months and the person interned in a detention center can be released after serving a minimum period of 1 year to 2 years and 6 months, if the punishment provided for the offense is imprisonment up to 20 years, and of 2 years and 6 months to 7 years and 6 months, if the punishment provided for the offence is imprisonment for 20 years or more or life imprisonment.

According to art. 127 of The Criminal Code, for the custodial educational measures, the provisions of art. 71-73 shall apply accordingly. Therefore, the duration of the educational measure of internment shall start from the day the final decision of the court was enforced. If during the criminal trial, against the minor was taken a custodial preventive measure, the duration for which the minor was deprived of liberty shall be deducted from the period of the internement, considering that he has already served a part of the internment measure.

3. During the internement, the minor has shown constant interest in acquiring academic and professional knowledge.

According to art. 90 para. (1) of The Law no. 254/2013[4], "in the prison system there are organized educational courses for general compulsory education and there can be organized courses for other forms of education provided by the law of education". These courses are organized and conducted under the conditions set by the Ministry of National Education and the Ministry of Justice, with teaching staff insured and paid by the school inspectorate[5], and the expenses of educational attainment are supported by the Ministry of National Education and the National Administration of Penitentiaries[6].

Art. 92 of The Law no. 254/2013 shows that the professional training is provided according to the options and abilities of the interned persons, through initiating, qualification, training and specialization programs established by the prison administration, in collaboration with specialized personnel from employment agencies, and with other accredited training providers[7]. The courses are organized in spaces specifically designed in the educational or detention centers or of the accredited training providers, under the conditions set by the agreements between the prison administration and each supplier.

Expenses related to professional training are supported by the Ministry of Education, by The Ministry of Labor, Family, and Social Protection, by The National Penitentiary Administration or by other persons or institutions[8].

The interned persons that serve the measure in an open regime can participate outside the educational or detention center, on request and with the approval of the center's director, at other types of professional training than those provided in par. (1), and the expenses related thereto shall be incurred by the interned person or by other persons or instituions[9].

As we see, the executional law provides all guarantees of providing a favorable climate for the assimilations of the academic and professional knowledge by the minor, him having just the task to show interest in participation in these and in obtaining positive results.

4. The minor made obvious progress in his social reintegration.

After finisshing the quarantine period referred to in art. 44 para. (1) of Law no. 254/2013, for the minor admitted in an educational center or a detention center, the executing regime of the educational measure will be established according to art. 152 of Law no. 254/2013. Among with this it is developed The

[3] See art. 107 of The Criminal Code 1968.

[4] Art. 166 para. (1) of Law no. 254/2013 disposes that the provisions of art. 90-92 of the same Act shall apply accordingly to minors interned in an educational center or in a detention center.

[5] See art. 90 para. (2) of The Law no. 254/2013.

[6] See art. 90 para. (3) of Law no. 254/2013. Art. 141 para. (4) of Law no. 254/2013 provides that "the Ministry of National Education, through the county school inspectorates, provides qualified personnel for training activities in schools, in detention centers and in educational centers."

[7] See also art. 141 para. (5) of The Law no. 254/2013.

[8] See art. 92 para. (4) of The Law no. 254/2013.

[9] See art. 92 para. (5) and (6) of The Law no. 254/2013.

intervention plan, based on a multidisciplinary evaluation from an educational, psychological and social perspective[10].

Art. 169 para. (3) of Law no. 254/2013 provides that "The intervention plan establishes, based on the development needs of the interned person, the duration and mode of execution of the custodial educational measures, activities and programs for education and professional training, cultural, moral-religious, psychological and social assistance in which the interned person is included, with its consultation". The educational, psychological and social assistance has the following components: school education, vocational guidance and professional training, educational activities, psychological and social assistance, individual or group moral-religious activity, and activities for maintaining an active life, with the main purpose of social reintegration and responsabilisation of the interned persons[11].

Also the interned persons may perform work, under the conditions of the employment laws, according to their physical development, skills and knowledge, unless they endanger their health, development, their educational and professional training[12]. Work is organized by taking into account only the interest of social reintegration of the interned persons, as the article 163 para. (3) of Law no. 254/2013 states.

Progress made in the interest of social reintegration may reflect from the educational process and from the participation at the activities organized in the center, from the fact that the minor had an appropriate behavior towards other interned persons and the staff of the Centre, from situations where the minor can receive rewards[13], because he did not commit misconduct[14] or crimes during internment.

Even if to the minor it is applied certain regimes for the execution of the educational measure (closed and open regime regime)[15], unlike the release on licence, in the case of release from the educational center or from the detention center, the Criminal Code does not require that the minor had been placed in a certain regime at the age of 18, when granting the release from the center can be taken in consideration.

Although the minor who may be criminally responsible may also be obliged to repair the damages by civil law, art. 1366 par. (2) of The Civil Code provides that "a minor under the age of 14 is responsible for the damage, unless he proves that he was deprived of discernment at the time of the deed", the Criminal Code does not require the complete fulfillment of civil obligations established by the decision that imposes the educative measure for the minor[16].

As in the case of release on licence, there are two stages of the procedure of release from a detention or educational center: the administrative stage and the judicial stage.

Most provisions relating to the procedure for granting release can be found in The Law no. 254/2013, The Code of Criminal Procedure coming to specify only the court that will review if the conditions are accomplished.

In the administrative stage, in accordance with art. 180 para. (2) of The Law no. 254/2013, The Educational Board[17] or The Commission for establishing, individualization and change of the enforcement regime of internment measure[18], with the participation of the judge charged with the surveillance of the deprivation of liberty, as president, and a probation officer from the probation service responsible under the law, from the center's surrounding district, analyzes the situation of the interned person, in its presence.

Similar to the procedure that takes place in prison for release on licence, in the case of the release of the interned persons, The Educational Council or The Committee, meets weekly[19]. Art. 314 para. (3) of The Project of Regulation Implementing The Law no. 254/2013 shows that by care of The Service of inmates accounts, it is written the pre-constituted part of the minutes to be submitted to the court[20].

---

[10] See art. 169 para. (1) and (2) of The Law no. 254/2013.

[11] See art. 165 para. (1) and (3) of The Law no. 254/2013.

[12] See art. 163 para. (1) of The Law no. 254/2013.

[13] See art. 170 of The Law no. 254/2013.

[14] See art. 173 and art. 100 of The Law no. 254/2013.

[15] About the enforcement regimes of custodial educational measures, see art. 149 and art. 150 of The Law no. 254/2013.

[16] However, in the case of persons interned in an educational or detention center, where they were obliged to pay civil damages, which were not paid until the begining date of internement in the center, a 50% share from the percentage of 50% of the income realised by the interned person, will be used for the compensation given to the civil party for damages, as has art. 163 para. (8) of The Law no. 254/2013 provides.

[17] According to art. 145 para. (2) of The Law no. 254/2013, "The Education Council is composed of the center's director, who is also chairman of the board, the deputy director for education and the psychosocial educator in charge of the case, the teacher or head teacher, a psychologist, a social worker and the chief of supervision, registration and granting rights to interned persons ".

[18] According to art. 146 para. (1) of The Law no. 254/2013, The Commission for establishing, individualization and change of the enforcement regime of internment measure consists of the center's director, who is also chairman of the committee, the deputy director for education and psychosocial assistance, the deputy director for safety possession, the chief doctor, the teacher responsible for case, a psychologist and a social worker.

[19] See art. 314 para. (1) of The Project of Regulation Implementing The Law no. 254/2013.

[20] The pre-constituted of the minute shall contain the following mentions about the inmate:

a) civil status data;

b) conviction and crime;

c) brief description of the offense;

e) criminal records;

f) the existence of any arrest warrant or court of first instance.

According to art. 110 of The Law no. 252/2013, inside of The Board organized at the educational center's level, respectively The Commission of the detention center, at the works regarding the proposal for the release of a minor who has reached 18 years, from the educational or detention center, attends a probation officer appointed of the probation service responsible in whose territorial jurisdiction the center is situated. He presents the assessment report containing proposals concerning the obligations provided by art. 121 para. (1) of The Criminal Code, that the court may impose on the individual case. In compiling this report, the educational center or the detention center is obliged to inform the probation service at least 14 days before the date on which the person's situation will be reviewed by The Educational Board or The Commission from the detention center[21]. The probation officer has access to the documents of the minor's file from the educational center or detention center and at the request of counsel, the center has to forward copies of the documents contained in the individual file within 5 days of their request[22].

The Education Council or The Commission shall determine whether the person has shown constant interest in acquiring school and professional knowledge, has made progress in social reintegration, taking into account the previous periods of internement. Also, the prison authorities may consider the person's involvement in work, given that the work is not mandatory and it is not required by law to fulfill any requirements relating to work performed for granting release[23].

If it is established that the person serving the educational measure fulfills the requirements of art. 124 para. (4) or art. 125 para. (4) of The Criminal Code, the council or the commission proposes the release from detention center or education, which is contained in a motivated minute, that includes the opinion of the members of the council or commission regarding the opportunity of the release, along with documents proving the dates recorded in the minute[24]. The release proposal is submitted to the competent court according to art. 516 para. (2) and 517 para. (2) of The Criminal Procedure Code[25], namely the court in whose territorial jurisdiction it is placed the educational center or the detention center, with the same rank as the enforcement court. At the minute of the educative counsil or of the commission it is also attached the assessment report prepared by the probation officer[26].

If it is found that the interned person does not meet the legal requirements, the educational councilton or the commission establish a term for reviewing it's situation, which may not be longer than 6 months, according to art. 180 para. (5) of The Law no. 254/2013. The minute stating that the interned person does not qualify for release is communicated immediately to her, and it is being signed by her. The person serving the educational measure has the option, within 30 days from recieving the minute under signature, to address the request for release directly to the court in whose jurisdiction the detention center is located[27].

Art. 180 para. (5) of The Law no. 254/2013 indicates that the provisions of art. 97 para. (4) - (8) and (10) - (13) of the same Act, relating to release on licence, shall apply accordingly.

In the jurisdictional stage, the court may be seised with the request of the educative council or the commission.

The jurisdiction belongs, according to art. 516 para. (2) and 517 para. (2) of The Criminal Procedure Code, to the court in whose territorial jurisdiction is located the educational center or detention, of the same degree as the court of enforcement proceedings[28]. According to the executional legislation, the proposal will be submitted to the court[29] in whose territorial jurisdiction is located the educational or detention center.

The court may admit the proposal or the request and decide to release the person who has turned 18 years from the center, and with it the court may impose one or more of the obligations referred to in art. 121 of The Criminal Code[30], or it may overrule it, setting a time after which the proposal or request may be renewed[31]. The term shall not be less than 6 months and runs from the final decision of overrule.

According to art. 181 para. (3) of Law no. 254/2013, the decision of the can be challenged by appeal to the court within whose territorial circumscription is located the center, corresponding in rank with the court that would have jurisdiction to hear the appeal against the decision imposing the educational measure, within 3 days from the communication, and the appeal made by the prosecutor

[21] See art. 110 para. (4) of The Law no. 252/2013.
[22] See art. 110 para. (5) of The Law no. 252/2013.
[23] See art. 180 para. (3) of The Law no. 254/2013.
[24] See art. 180 para. (2) - (4) of The Law no. 254/2013 and art. 314 para. (4) and (5) of The Project of Regulation implementing The Law no. 254/2013.
[25] See art. 180 para. (4) of The Law no. 254/2013.
[26] See art. 110 para. (3) of The Law no. 252/2013.
[27] See art. 97 para. (11) reported to art. 180 para. (5) of The Law no. 254/2013 and art. 314 para. (6) of Project of Regulation Implementing The Law no. 254/2013.
[28] Art. 181 para. (1) of The Law no. 254/2013 incorrectly uses the phrase "court of territorial jurisdiction in which the center is located" because the center is in the territorial jurisdiction of a court, and not both institutions in the jurisdiction of a third institution.
[29] See art. 97 para. (10) reported to art. 180 para. (5) of The Law no. 254/2013.
[30] See art. 124 para. (5) of The Criminal Code.
[31] See art. 181 para. (2) of The Law no. 254/2013.

shall suspend the execution, so the interned person is not liberated until the appeal is judged.

With the release of the educational center or the detention center the court imposes one or more of the obligations referred to in art. 121 of The Criminal Code for minors who serve the non-custodial educational measures, until the final moment of the internment measure, regardless of its size.

In the case of this release, the Criminal Code did not mention that the remainder of the term would be a surveillance period, as in the case of release on licence.

These obligations are:

a) to follow a course of educational or professional training;

b) not to exceed, without the probation service, the territorial limit determined by the court;

c) not to be in certain places or at certain sports events, cultural or other public gatherings, determined by the court;

d) not to approach and not to communicate with the victim or members of it's family, the participants in the crime or other persons determined by the court;

e) to report to the probation service at the term fixed by it;

f) to accept examination, treatment or medical care measures.

The obligations provided by art. 121 para. (1) a), c) and d) have an identical content to the obligations provided by art. 101 para. (2) a), d) and e) of The Criminal Code, where the remainder of the sentence to serve from the release on licence to the end of the sentence is of 2 years or more. The obligation from art. 121 para. (1) e) has the same content as the supervision measure provided by art. 101 para. (1) a) of The Criminal Code for release on licence.

Considering the provisions of art. 71 para. (1) reported to art. 70 para. (5) of Law no. 253/2013, the enforcement of the obligations referred to in the subparagraphs b) -d) begins on the date of the final decision in which they have been established and for those provided by letters a), e) and f) begins on the date at which the minor has been informed of their content by the probation counselor.

According to art. 99 para. (1) of The Law no. 252/2013, the liberated person for which the court imposed one or more of the obligations referred to in art. 121 of The Criminal Code, is obliged to report to the probation service within 10 days from the time of release.

Although the code does not specify, observing the provisions of art. 99 of The Law no. 252/2013, which refer to the supervision of the liberated person by the probation service on and the competence of the surveillance councelor in these cases, we consider that the rules referring to supervising the execution of obligations provided in the other paragraphs of art. 121 of The Criminal Code are applicable. Alin. (3) art. 121 of The Criminal Code provides that "the monitoring the obligations imposed by the court is coordinated by the probation service."

According to art. 71 of The Law no. 253/2013, to the liberated person from serving the custodial educational measures at the age of 18 years, are applicable, in relation to the obligations established by the court, the provisions of art. 70 of the same law. Thus, if the court has imposed for released person to follow a course of educational or professional training, provided by the art. 121 para. (1) a) of The Criminal Code, the probation officer from the probation service in whose jurisdiction the person resides, receiving a copy of the judgment, decides, based on the initial assessment of the person, the course to be followed and the institution of community where it will take place. The councillor communicates its decision to this institution, together with a copy of the judgment. The supervision and enforcement of the obligations set out in art. 121 para. (1) a) of The Criminal Code, both regarding the surveilled person as well as the institution established by the probation service is performed by the competent probation service[32]. The community institution established ensures the effective follow of the course and its finalisation until the date of the internment measure, and at the end of the course, it will issue a document certifying its completion. This document is attached, in copy, to probation file[33].

If the liberated person is required not to exceed, without the probation service's permission, the territorial limits set by the court (art. 121 para. (1) b) of TheCriminal Code), the judge shall send a copy of the execution part of the decision to the County Police Inspectorate in whose jurisdiction the person lives[34].

According to art. 121 para. (2) of The Criminal Code, "when determining the obligation in para. (1) d), the court establishes, in particular, the content of this obligation, given the circumstances of the case".

When imposing the obligations provided by art. 121 para. (1) letters c) or d) of The Criminal Code (not to be in certain places or at certain sports events, cultural or other public gatherings, not to approach and not to communicate with the victim or members of it's family, the participants in the crime or other persons determined by court), the judge shall send a copy of the execution part of the decision, if appropriate, also to the persons or institutions referred to in art. 29 para. (1) letters m) and n)[35] of The Law no. 253/2013,

[32] See art. 50 para. (1) and (2) of The Law no. 253/2013, referred to in art. 70 para. (1), and art. 99 para. (2) in relation to art. 94 para. (1) and (4) of The Law no. 252/2013.

[33] See art. 99 para. (2) in relation to art. 94 para. (3) and (5) of The Law no. 252/2013.

[34] See art. 70 para. (2) the second sentence of The Law. 253/2013.

[35] Art. 29 lit. m) for the prohibition of the right to be in certain places or at certain sports events, cultural or other public gatherings, established by the court, the communication is beaing made to the county police inspectorate in whose jurisdiction he resides or to the one from the place of the sentenced person lives, in cases where the ban was ordered for places, events or gatherings outside this constituency, to The General Inspectorate of Romanian Police;

competent to supervise the fulfillment of these obligations[36].

According to art. 99 related to art. 97 of The Law no. 252/2013, where the court has imposed the inforcement of the obligation provided by art. 121 para. (1) e) of The Criminal Code, the probation counselor manager of the case determines the dates on which liberated person is required to report to the probation service.

According to art. 99 para. (1) in relation to art. 98 and art. 63 of The Law no. 252/2013, in order to enforce the obligation provided by art. 121 para. (1) letter f) of The Criminal Code, to submit to the examination, treatment or medical care measures, the case manager probation counselor shall proceed as follows:

a) if the court has determined, in the decision, the institution of examination, treatment or medical care, the counselor verifies if the liberated person is taken into the accounts of the established institution, the enforcement of the obligation by the liberated person and monitors the implementation of the examination, treatment or medical care activity[37];

b) if the court has determined, in the decision, the institution of examination, treatment or medical care, the counselor, depending on the particular case, established the institution and will communicated to it the copy of the court decision and his decision, proceeding in accordance with the provisions of letter a). The decision shall be communicated to the supervised person[38].

According to par. (4) art. 70 of Law no. 253/2013, the cost of the examination, treatment or medical care covered by the state budget.

The person released from detention center or education at the age of 18 years may be granted permissions in the execution of the obligation by the probation counselor[39]. Art. 72 para. (1) of The Law no. 253/2013 states that at the request of the liberated person, if justified, the probation councelor may, by decision, grant permissions in the execution of the obligations stipulated in art. 121 para. (1) letters c) and d) of The Criminal Code. In this case, permissions may not be granted for a period longer than 5 days, and its duration is included in the term of supervision.

According to para. (3) art. 72 of The Law no. 253/2013, where the court imposed on the liberated person the execution of the obligation provided by art. 121 para. (1) letter b) of The Criminal Code, at his request, for objective reasons, the probation counselor may grant, by decision, permission to exceed the territorial limit set by the court. If the request concerns leaving the territory of the country, the duration of the permission may not exceed 30 days in an year.

About granting permissions, the probation counselor shall inform, as appropriate, the persons or institutions listed in art. 29 lit. m) and n) of The Law no. 253/2013 and judge delegated with enforcement[40].

Although the Criminal Code does not refer to art. 121 para. (4), we believe that this text is applicable, as part of activities related to supervision held by the probation service. The latter is obliged to notify the court if:

a) there have intervened motifs for modifying the obligations imposed by the court or the ending of some of them;

b) the person does not comply with the educational measure's enforcement conditions or does not execute, in the established conditions, its obligations.

Art. 71 para. (2) of Law no. 253/2013 states that the execution of all obligations imposed stops by law at the final date of the period of the interment measure.

According to art. 124 para. (6) and art. 125 para. (6) of The Criminal Code, if the released person does not comply, in bad faith, the obligations imposed, the court reviews the release and orders the enforcement of the remaining of the custodial educational measure duration.

The legislature used the term "reviews the release", not interfering the revocation institution, as for the release on licence.

According to art. 516 para. (2) of The Criminal Procedure Code, the review of the release of the educational center is being made ex officio or after the notification from the probation service, by the court which heard the case at first instance. In the case of the release from the detention center, art. 517 para. (2) of The Criminal Procedure Code also shows that ex officio or after the notification from the Probation Service, it will be competent the court of first instance which judged the minor. In fact, the two texts indicate the same category of courts using different terminology.

---

lit. n) for the prohibition of the right to communicate with the victim or with members of it's family, the people who committed the crime or others, determined by the court, or to approach them, the communication is being made to the persons with who the sentenced person does not have the right to connect or is not entitled to approach, to the county police inspectorate in whose jurisdiction he resides and, if applicable, is the place where the convict lives and, for cases where the victim or persons determined by the court do not live in the same district, to county police inspectorates from their homes.

[36] See art. 70 para. (2) sentence I of the The Law no. 253/2013.

[37] See also art. 70 para. (3) sentence I of The Law no. 253/2013, which states that "if the disposition of the obligation referred to in art. 121 para. (1) f) of Law no. 286/2009, as amended and supplemented (The Criminal Code), a copy of the judgment shall be communicated by the probation counselor to the institution in which it will be held the examination, treatment or medical care referred to in the judgment. "

[38] See also art. 70 para. (3) second sentence of The Law. 253/2013, which provides: "If the institution is not mentioned in the judgment, the probation officer shall establish, by decision, the institution in which will be held the examination, treatment or medical care and communicate the copy of the judgment and the decision to it ".

[39] See art. 99 related to art. 96 para. (1) of The Law no. 252/2013.

[40] Art. 99 in relation to art. 96 para. (2) of The Law no. 252/2013 provides that "permission is granted by decision of the case manager probation counselor, communicated to the competent territorial police".

The law does not stipulate that commiting a crime until the ending of the internment perioud would determine the revocation of the release, but we note that the provisions of art. 129 para. (2) of The Criminal Code are applicable. Thus, if the sentence established for the new offense committed is imprisonment or life imprisonment, the latter shall apply in accordance with letters b) and c), and if the penalty is a fine, it will countinue to be enforced only the educational measure of which the offender was released, but it's duration shall be increased by up to 6 months without exceeding the statutory maximum for that measure.

The Criminal Code does not provide the cancellation of the release from the educational center or from detention center if it is discovered that the liberated person has commited an offense before being granted release at the age of 18 years.

3. Conclusions

With the coming into force of The New Criminal Code, the enforcement regime applicable to minors became more gentle, because for them the law does not provide punishments anymore, but only educational measures, whose role is to reeducate and reintegrate the minor into the society without suffering the harms of the sanctions served by the adults.

THE RIGHT TO VOTE AND BREACH OF VOTING SECRECY

Radu-Florin GEAMĂNU[*]

Abstract

The article is meant to be a brief overview of the legal provisions concerning the right to vote, encompassing both the national provisions and the international standards.

The scientific approach also includes the fixation of the standards in the field of the right to vote, as defined in the European Court of Human Rights case-law.

Due attention will be granted to the provisions on the breach of voting secrecy, provided for in the current Criminal Code, which entered into force on the 1st of February 2014, as this piece of legislation regulates in a unified way the offence, applicable for any type of elections performed in Romania.

The paper will focus, also, on the legislation of some European states, in order to assess the compatibility of the offence of breach of voting secrecy with similar offences in the legislation of other countries.

To close with, the study will give some conclusions regarding the importance of the criminal punishment of the offence of breach of voting secrecy, as well as the conformity of this particular offence with the internationals standards.

Keywords: *elections, right to vote, breach of voting secrecy, Criminal Code, (First) Protocol to the Convention for the Protection of Human Rights and Fundamental Freedoms*.

1. Introduction

The principles underlying Europe's electoral heritage set down in The Code of Good Practice in Electoral Matters (universal, equal, free, secret and direct suffrage) require the necessity of a scientific approach to assess the national framework in the field of the right to vote by comparison with these fundamental European principles.

The development of the European standards for the protection of the right to vote in the case-law of the European Court of Human Rights requires the distinct approach of the evolution of the contents of the right to free elections, provided for in Article 3 from The (First) Protocol to the Convention for the Protection of Human Rights and Fundamental Freedoms.

We think that the analysis of the offence of breach of voting secrecy is especially important, taking into consideration the fact that electoral offences were grouped in a distinct title in the current Criminal Code, which entered into force on the 1st of February 2014, in order to ensure a higher stability of these texts, but also in order to eliminate the parallel incriminations which existed in the previous legal framework.

Such an endeavour is even more necessary taking into consideration that ensuring the voting secrecy is an important leverage for securing the possibility of the citizens to freely and unrestrictedly express their will concerning the exercise of the right to vote.

The brief overview of the legislation of some European countries in the field of the offence of the breach of voting secrecy is indicative of the fact that the national legislation is consistent with the European standards, having regard to the fact that the incrimination of such a behaviour is a truly European standard of protection of the freedom of the exercise of the right to vote.

The importance of the study also resides in the fact that this topic has been timidly approached in specialized literature despite the fact that the importance of ensuring a coherent and complete framework in the field of electoral law, including the matters of electoral offences, is likely to ensure a stability and trust of the society in the legality and fairness of the electoral process. From this perspective an in-depth examination by the specialized literature can bring an added value to the legal framework and can recommend some directions of action for the evolution of the electoral system as a whole.

2. Content

2.1. Introductory remarks concerning the right to vote

The regulation of elective rights and their exercise as such are instruments which allow the people to participate in leading a country by electing its representatives.

As specialized literature[1] has put it, the fundamental rules concerning the exercise of the elective rights are non-discrimination, access to vote and the right to vote, equal and universal ballot, *secret ballot* and the guarantee that the results of the ballot will reflect the free will of the citizens.

At international level, provisions and standards regarding the organisation of the electoral process and

[1] G. S. Goodwin-Gill, *Elections libres et régulières*. Nouvelle edition, Union Interparlamentaire, Geneva, 2006, p. 171.

the right to vote can be found in: Article 21 from *The Universal Declaration of Human Rights*[2], Article 25 from *The International Covenant on Civil and Political Rights*[3], Article 3 from *The (First) Protocol to the Convention for the Protection of Human Rights and Fundamental Freedoms*[4] and in *The Code of Good Practice in Electoral Matters*[5], a landmark document in the field of electoral law, representing the core of a code of good practice in electoral matters, which enumerates the five principles underlying Europe's electoral heritage: universal, equal, free, secret and direct suffrage; of course, elections must be held at regular intervals.

Unfortunately, not all the European States follow those basic principles when organizing elections. For example, The European Network of Election Monitoring Organizations (ENEMO) international observation mission to the early Parliamentary elections in the Republic of Moldova in 2009 refused to monitor the elections as the conditions that were set by the authorities of the country made it impossible to perform a comprehensive monitoring effort. In addition to overt interference from the authorities, the observers from ENEMO were threatened by unknown persons of a criminal appearance. Thus, ENEMO concluded that entities at the highest levels of Moldovan authority (the Ministry of Interior, the Central Election Commission, the immigration police) exceeded their authority and violated national legislation, as well as international norms and standards for democratic elections. Also, the authorities of the Republic of Moldova purposefully created conditions to discredit the electoral process and undermine public confidence in the voting results.[6]

At national level, according to the provisions of Article 2 from the Constitution of Romania[7] the national sovereignty shall reside within the Romanian people, that shall exercise it by means of their representative bodies, resulting from free, periodical and fair elections, as well as by referendum. No group or person may exercise sovereignty in one's own name.

In other words, the electorate is the only original power on which the state power and authority is justified and grounded[8], whereas the elections are the democratic traditional way in which the people, holder of the national sovereignty, designates its representative authorities. In this way of exercising power, the state authorities are designated by elections, gaining directly from the people offices of utmost importance.[9]

The general principles contained in Articles 1 and 2 of the Romanian Constitution provided for the prevalence of the rule of law and democracy, but also the fact that the people is the only one entitled to exercise national sovereignty by its representative bodies emerged through free, regular and fair elections, as well as through referendum.

As a natural consequence of the general principles enshrined, Chapter II – Fundamental rights and freedoms within Title II, provide in Articles 36 and 38 the right to vote and the right to vote for the European Parliament, taken over and developed by a series of special organic acts.[10]

2.2. The right to vote

In a state based on the principles of the rule of law and democracy the people has to have the last word and this becomes reality by the exercise of elective rights by its citizens. The exclusively political nature[11] of the right to vote and the right to be elected has several legal consequences: on the one side, they are used only for the participation to the government, that is for the exercise of power directly by the people and, on the other side, they usually only belong to the citizens, not to other categories of persons as well.[12]

According with the provisions of Article 36 of the Fundamental Law, every citizen having turned eighteen up to or on the election day shall have the *right to vote*. The mentally deficient or alienated persons, laid under interdiction, as well as the persons disenfranchised by a final decision of the court cannot vote.

In order for a person to be allowed to cast a vote it has to meet the following *conditions* cummulatively:

a) To be a Romanian citizen. According with the applicable legal provisions, the Romanian citizenship is the connection and affiliation of a natural person to the Romanian state and it can be aquired by birth, adoption or it can be granted on request. The Romanian citizenship can be lost: by withdrawal of the citizenship, approval of renouncing the citizenship or other cases provided for by law[13].

Concerning the existence of a citizenship related condition in the context of *local elections* it was stated that, although the national law which makes the right to vote and to stand for election (*in local elections*) subject to the requirements of citizenship and residence is not in violation of any imperative rule of international or European law concerning universal suffrage, however, a tendency is emerging to grant local political rights to long-standing foreign residents, in accordance with the Council of Europe Convention on the Participation of Foreigners in Public Life at Local Level. Furthermore, the Venice Commission recommends, in its Code of Good Practice in Electoral Matters, that the right to vote in local elections be granted also to noncitizens, after a certain period of residence.[14]

b) To be at least 18 years of age on the date of the elections, that is to have reached the *political maturity*;

c) To not be mentally deficient or alienated persons, laid under interdiction. According with the provisions of Article 164 of Law No. 287/2009 concerning the Civil Code, the person who lacks the necessary power of judgment in order to take care of its own interests, following its mental alienation or disturbance, shall be placed under interdiction. Also underaged persons who have diminished power of judgment can be placed under interdiction.

d) To not have lost its right to vote by having been sentenced to loss of elective rights based on a final court decision. The moral capacity, also called *electoral dignity*, is meant to show the elector's minimum attachment to the state; lacking it will cause the impossibility to vote and is ascertained by sentencing the citizen for perpetration of certain offences.[15]

As regards its *characteristics*, the vote has to be *universal, equal, secret and freely expressed*[16], its exercise being optional so that each citizen who has the right to vote has the freedom to go or to not go to the polls in order to express an electoral option.[17]

the elections to the European Parliament; Law No. 35/2008 on the election of the Chamber of Deputies and of the Senate and for amendment and supplementing of Law No. 67/2004 on the election of the authorities of the local public administration, of the Law No. 215/2001 on the local public administration and of the Law No. 393/2004 on the Status of locally elected representatives.

[11] Concerning the right to vote and the right to be elected the *French literature* considered that these rights are civil rights, alongside all rights whose interdiction can be ordered by the court based on the provisions of Article 34 of the French Criminal Code (which provides for the sanction of civil degradation by the interdiction of the exercise of some rights and aptitudes attached to the quality of a citizen). [17] However, there are also states in which the exercise of the right to vote is mandatory.The majority of countries in Western Europe which still use compulsory voting in some form have done so for between 50 and 100 years: *Belgium* [Fines for not voting are up to 50 euros for a first offence and 125 euros for a second offence], *Luxembourg* [According to electoral legislation sanctions include fines and imprisonment but none have ever been enforced], *Liechtenstein* [Non-voters may be fined if they do not give an approved reason for not voting.], *Switzerland* [more specifically, the Swiss canton of Schaffhausen - a small fine is payable by non-voters to the police who come to re-collect each citizen's voter legitimation card. Sanctions are enforced against everyone who has not voted, unless they are exempt], *Cyprus* [The punitive sanctions are fines of up to £200 and/or a prison sentence of up to six months for failing to vote or register. There have been very few prosecutions and none since the 2001 general election.] and Greece [There are no specified sanctions enforcing the compulsory system – the relevant passage was omitted from the 2001 revision of the constitution.]. See The Electoral Commission UK, *Compulsory voting around the world. Research report*, June 2006, p. 7-8, 13, available at: **http://www.electoralcommission.org.uk/__data/assets/electoral_commission_pdf_file/0020/16157/ECCompVotingfinal_22225-16484__E__N__S__W__.pdf**, accessed on 15.01.2015.

Some European countries once had compulsory voting before abolishing it. Austria had compulsory voting in all regions from 1949–1982 and the Netherlands used it from 1917–1967. [See *Voter turnout in Western Europe*, International Institute for Democracy and Electoral

a) the freely expressed character of the vote indicates the fact that the participation to the suffrage is not mandatory though it represents one of the highest and civil responsibilities in terms of maniphestation of the citizenship connection between an individual and a state.[18] In other words, the law does not forces the voter to vote and does not sanction its electoral passivity.[19]

In any case the participation to the elections only assumes the presence in the polling station and does not also mean the provision of an obligation concerning what the vote should contain. Even in case of the mandatory vote citizens continue to have the possibility to cast a vote in blank or a null vote, according with their own consciousness.[20]

b) As regards the *universal character of the vote* – the right to participate in an election as a voter (the "active" electoral right) and the right to stand as a candidate for election (the "passive" electoral right) – it has been asserted that this characteristic is a core element of modern democracy. It is of utmost importance that these fundamental rights are neither formally nor practically restricted without sufficient justification.[21]

Exclusion of some citizens from among the citizens who can exercise their right to vote is not decided based on discretionary or discriminating conditions, but rather having regard to practical issues which have to do with the voters' maturity of thinking, as well as with possible psychological or moral incapacities.[22]

c) Equality of vote is the expression of the principle of equality of rights of the citizens, provided for at a general level in Articles 4 and 16 of the Constitution. The equality of vote is reflected both in the number of votes a citizens is entitled to and in the weight of each vote in the designation of the nation's representatives. Legally, each citizen has the right to one single vote and this vote has the same weight as all other votes in designation of the same state authority, no matter the person who exercised the right to vote.[23]

d) The *voting secrecy* guarantees the possibility of the citizens to maniphest freely and unrestrained the will concerning the designation of one person or the other in elective public functions and offices.[24]

The voting secrecy is that guarantee of the free expression of the vote based on which the voter's opinion is expressed as individual option - personal, anonymous, in an autonomous, independent manner, not subject to any constraint and pressure. The secrecy thus assumes that the voter cannot be forced or put under pressure in order to reveal its option, neither at the moment of exercising its right to vote, nor subsequently.[25]

For the protection of the voting secrecy the national lawmaker introduced the offence of breach of voting secrecy performed by any means and sanctioned according with the provisions of Article 389 of the Criminal Code.

At the level of the European Union, the elections are provided for in the Act of 20 September 1976[26], which lays down principles common to all Member States (e.g. members of the European Parliament shall be elected on the basis of proportional representation, using the list system or the single transferable vote; elections must be held on a date falling within the same period starting on a Thursday morning and ending on the following Sunday).

The regulation of the *right to vote for the European Parliament* is effected by the Council Directive 93/109/EC of 6 December 1993[27] laying down detailed arrangements for the exercise of the right to vote and stand as a candidate in elections to the European Parliament for citizens of the Union residing in a Member State of which they are not nationals.

Since "one person one vote" is a hallmark of a democratic system, why would we encounter any variation here? The reason is simple: giving people more than one vote does not violate democratic principles provided everyone still has the same number of votes. Having just one vote is very much the norm, but in most cases within the family term "mixed" systems everyone has two votes. For example, when voters in Germany or New Zealand go to the polling station on the election day they are confronted with a ballot paper that invites them to cast one vote for a candidate to represent their local single-member constituency, and another vote for a party in contest for seats awarded at the national level. [26] Act of 20 September 1976, annexed to Decision 76/787/ECSC, EEC, Euratom, concerning the election of the representatives of the European Parliament by direct universal suffrage, amended by the Council Decision of 25 June 2002 and 23 September 2002.

[27] Amended by the Council Directive 2013/1/EU of 20 December 2012 as regards certain detailed arrangements for the exercise of the right to stand as a candidate in elections to the European Parliament for citizens of the Union residing in a Member State of which they are not nationals.

At national level, the Law No. 429/2003 on the revision of the Constitution of Romania[28] introduced in the Constitution Article 38 which provides for the right to be elected to the European Parliament: after Romania's accession to the European Union (1 January 2007), Romanian citizens have *the right to elect* and *be elected to the European Parliament*.

2.3. European Court of Human Rights case-law regarding Article 3 from the Protocol to the Convention for the Protection of Human Rights and Fundamental Freedoms

According to Article 3 (right to free elections) from the (First) Protocol to the Convention for the Protection of Human Rights and Fundamental Freedoms, *the High Contracting Parties undertake to hold free elections at reasonable intervals by secret ballot, under conditions which will ensure the free expression of the opinion of the people in the choice of the legislature.*

Analysing the content of Article 3 (right to free elections) from the (First) Protocol to the Convention for the Protection of Human Rights and Fundamental Freedoms a difference of wording from the other substantive clauses in the Convention and in the First Protocol can be observed. Article 3 does not state that "everyone has the right" or "no one can refuse the right to free elections", but rather it states that the "The High Contracting Parties undertake to hold free elections at reasonable intervals by secret ballot".[29]

The European Court of Human Rights [ECtHR], in the case of *Mathieu-Mohin and Clerfayt v. Belgium*[30], ruled that the "right to vote" and the "right to stand for election to the legislature" are not absolute. Since Article 3 recognises them without setting them forth in express terms, let alone defining them, there is room for implied limitations. In their internal legal orders the Contracting States make the rights to vote and to stand for election subject to conditions which are not in principle precluded under Article 3. They have a wide margin of appreciation in this sphere, but it is for the Court to determine in the last resort whether the requirements of Protocol No. 1 have been complied with; it has to satisfy itself that the conditions do not curtail the rights in question to such an extent as to impair their very essence and deprive them of their effectiveness; that they are imposed in pursuit of a legitimate aim; and that the means employed are not disproportionate. In particular, such conditions must not thwart "the free expression of the opinion of the people in the choice of the legislature".

The real test which is employed by the Court in recent cases[31] dealing with the alleged violations of Article 3 of Protocol No. 1 is, first, whether, there is legitimate aim for disenfranchisement or another restriction of the electoral rights in question, and, second, whether this restrictions would be proportionate in the case at hand.[32]

Regarding the aplicability of Article 3, both the Commission and, later, the Court, in its case law, defined the notion of "legislature" („*corps législatif*") used in the text.

In *Mathieu-Mohin and Clerfayt* Case[33] the Court took the position that the word "legislature" does not necessarily mean the national parliament only. According to the Court its meaning has to be interpreted in the light of the constitutional structure of the State in question. On that basis the Court held that, further to the 1980 constitutional reform, the Flemish Council in Belgium was vested with competences and powers wide enough to make it, alongside the French Community Council and the Wallon Regional Council, a constituent part of the Belgian "legislature" in addition to the House of Representatives and the Senate.[34]

Since *Mathieu-Mohin and Clerfayt v. Belgium*, the Strasbourg Court has consistently held that Article 3 of protocol No. 1 not only imposes obligations on the Convention States, but also grants rights to individuals, namely, the right to vote and the right to stand for elections.[35]

ECtHR, in the case of *Ahmed v. The United Kingdom*[36], did not rule on the application of the provisions of Article 3 of Protocol No. 1 in the

[28] The Law No. 429/2003 on the revision of the Constitution of Romania was approved by the national referendum of 18-19 October 2003, and came into force on the date of the publication in the Official Gazette of Romania: No. 758 of 29 October 2003.

Kempees (editors), *Cohérence et impact de la jurisprudence de la Cour européenne des droits de l'homme, Liber amicorum Vincent Berger*, Wolf Legal Publishers (WLP), Oisterwijk, p. 269-270.

[36] ECtHR, case of *Ahmed and others v. The United Kingdom*, Application No. 65/1997/849/1056, Judgment from 2 September 1998. In the words of the Court, without taking a stand on whether local authority elections or elections to the European Parliament are covered by Article 3 of Protocol No. 1, as was also disputed by the Government, the Court concludes that there has been no breach of that provision in this case *(para. 76).*

elections organized for local councils, although it was said[37] that this was regrettable as those local authorities which exercise significant governmental powers (including the enacting of bylaws) ought, as a matter of principle, to have their elections subject to the requirements of this Article. Such a development of the jurisprudence would be in conformity with the above judgement in *Mathieu-Mohin* case[38].

The right to free elections enshrined in Article 3 *is not an absolute right*, so that the Court allowed to the states the possibility to regulate some limitations of the right to vote or to be elected, their margin of appreciation being very generous. Obviously, any restrictions imposed should not affect the very substance of the right, they have to have a legitimate scope and to be proportional with this scope.

In this sense, the deprivation of certain persons of the right to vote in their own country is not *per se* contrary to the *Convention*, on condition that it is not performed arbitrarily or as a form of discrimination.

In the case of *Aziz v. Cyprus*[39], the applicant complained that he was deprived of the right to vote because of his Turkish-Cypriot ethnicity. Cypriot law as it stood allowed Turkish-Cypriots and Greek-Cypriots only to vote for candidates from their own ethnic communities in the parliamentary elections. However, since the Turkish occupation of Northern Cyprus, the vast majority of the Turkish community had left the territory and their participation in parliament was suspended. Consequently, there was no longer any list of candidates for whom the complainant could vote. While the government argued that the inability to vote was due to the fact that there were no candidates available for whom the complainant could vote, the ECtHR was of the view that the close link between the election rules and membership of the Turkish-Cypriot community, together with the government's failure to adjust the electoral rules in light of the situation, meant this amounted to direct discrimination on the basis of ethnicity.[40]

In the case of *Hirst v. The United Kingdom* (No. 2)[41], the Court observed that the applicant, sentenced to life imprisonment for manslaughter, was disenfranchised during his period of detention by section 3 of the 1983 Act which applied to persons convicted and serving a custodial sentence.

While the Court reiterated that the margin of appreciation is wide, it is not all-embracing. Further, although the situation was somewhat improved by the 2000 Act which for the first time granted the vote to persons detained on remand, section 3 of the 1983 Act remains a blunt instrument. It strips of their Convention right to vote a significant category of persons and it does so in a way which is indiscriminate. The provision imposes a blanket restriction on all convicted prisoners in prison. It applies automatically to such prisoners, irrespective of the length of their sentence and irrespective of the nature or gravity of their offence and their individual circumstances. Such a general, automatic and indiscriminate restriction on a vitally important Convention right must be seen as falling outside any acceptable margin of appreciation, however wide that margin might be, and as being incompatible with Article 3 of Protocol No. 1.[42]

The Court concluded that there has been a breach of Article 3 of Protocol No. 1 in the case of *Frodl v. Austria*[43]. Under the *Hirst test*, besides ruling out automatic and blanket restrictions it is an essential element that the decision on disenfranchisement should be taken by a judge, taking into account the particular circumstances, and that there must be a link between the offence committed and issues relating to elections and democratic institutions.

The essential purpose of these criteria (provided by the *Hirst* case) is to establish disenfranchisement as an exception even in the case of convicted prisoners, ensuring that such a measure is accompanied by specific reasoning given in an individual decision explaining why in the circumstances of the specific case disenfranchisement was necessary, taking the above elements into account. The principle of proportionality requires a discernible and sufficient link between the sanction and the conduct and circumstances of the individual concerned; no such link existed under the provisions of law which led to the applicant's disenfranchisement.

[41] ECtHR, Grand Chamber, case of *Hirst v. The United Kingdom* (No. 2), Application No. 74025/01, Judgment from 6 October 2005, para. 12, 13, 72, 82-85.

[42] In the case of *Greens and M.T. v. the United Kingdom*, the Court held that there had been a violation of Article 3 of Protocol No. 1 to the Convention. It found that the violation was due to the United Kingdom's failure to implement the Court's Grand Chamber judgment in the case of *Hirst (No. 2) v. the United Kingdom*. Given in particular the significant number of repetitive applications it had received shortly before the May 2010 general election and in the six following months, the Court further decided to apply its pilot judgment procedure to the case. Under Article 46 (binding force and execution of judgments) of the Convention, the United Kingdom was required to introduce legislative proposals to amend the legislation concerned. See, ECtHR, *Factsheet - Prisoners' right to vote*, February 2015, available at: **http://www.echr.coe.int/Documents/FS_Prisoners_vote_ENG.pdf**, accessed in February 4, 2015.

Because the United Kingdom failure to bring its legislation up-to-date, The Coust, subsequently, found violation of the right to vote in ten follow-up prisoner voting cases, but awarded no compensation or legal costs. In the Chamber judgment from the 12 August 2014, in the case of *Firth and Others v. the United Kingdom*, Application No. 47784/09 and nine others, ECtHR held that there had been a violation of Article 3 of Protocol No. 1.

[43] ECtHR, case of *Frodl v. Austria*, Application No. 20201/04, Judgment from 8 April 2010, para. 34-36.

In *Calmanovici v. Romania*[44] case and, subsequently, in *Cucu v. Romania*[45], the Strasbourg Court concluded that there has been a violation of Article 3 of Protocol No. 1 to the Convention, as the national legislation, at that stage, provided for the automatic withdrawal of his voting rights as a secondary penalty to a prison sentence and of the lack of competence of the courts to proceed with a proportionality test on that measure[46]. In ruling in favour of the applicants, the Court recalled that the rights guaranteed by Article 3 of Protocol No. 1 to the Convention are crucial to establishing and maintaining the foundations of an effective and meaningful democracy governed by the rule of law; a general, automatic and indiscriminate restriction on the right to vote applied to all convicted prisoners serving sentences is incompatible with that Article.

Of course, the present Criminal Code of Romania layed down new rules regarding the automatic withdrawal of the voting rights as a secondary penalty to a prison sentence, observing the findings of the Strasbourg Court.

Consequently, the provisions of Article 66 from the Criminal Code, dealing with the complementary penalties[47], introduced a difference between the right to be elected to the ranks of public authorities or any other public office [provided by para. 1 lett. a)] and the right to vote [provided by para. 1 lett.d)], which was not regulated in the former Criminal Code (from 1968).

Also, according to Article 67 para. 1 and 2 from the Criminal Code, the complementary penalty of a ban on the exercise of certain rights can be enforced if the main penalty is imprisonment or a fine and the Court finds that, considering the nature and seriousness of the offense, the circumstances of the case and the person of the offender, such penalty is necessary. Enforcing the complementary penalty of a ban on the exercise of certain rights is mandatory when the law stipulates such penalty for an offense.

The contents of Article 3 from the First Protocol which guarantees the right to free elections, as well as the large margin of appreciation allowed by the Court to the member state for the regulation of the electoral system generated the existence of some cases in which it was considered that the provisions of Article 3 were not violated. Hence, in *Scoppola (No. 3) v. Italy*[48], the Court held that in Italy there is no disenfranchisement in connection with minor offences or those which, although more serious in principle, do not attract sentences of three years' imprisonment or more, regard being had to the circumstances in which they were committed and to the offender's personal situation.

Concluding, the Court found that, in the circumstances of the case (the applicant was convicted of murder, attempted murder, ill-treatment of his family and unauthorised possession of a firearm), the restrictions imposed on the applicant's right to vote did not "thwart the free expression of the people in the choice of the legislature", and maintained "the integrity and effectiveness of an electoral procedure aimed at identifying the will of the people through universal suffrage" [see *Hirst (No. 2)*]. The margin of appreciation afforded to the respondent Government in this sphere has therefore not been overstepped. Accordingly, there has been no violation of Article 3 of Protocol No. 1.

2.4. Breach of voting secrecy

a.) Sedes materiae. If voting were not secret, any person who has the right to vote could be reluctant in expressing its electoral will for fear of possible consequences which its choice could generate, if known by the others. This is also why the breach of voting secrecy is sanctioned by the criminal law.[49]

The offence of breach of voting secrecy, provided for currently in Article 389 of the Criminal Code brought together, basically, all offences which related to voting secrecy, previously regulated in special laws in electoral matters[50].

"Art. 389. Violation of voting secrecy

(1) The violation, by any means, of the voting secrecy shall be punished by a fine.

(2) If the act was perpetrated by a member of the electoral bureau of the polling section, it shall be punishable by no less than 6 months and no more than 3 years of imprisonment and a ban on the exercise of certain rights."

[44] ECtHR, case of *Calmanovici v. Romania,* Application No. 42250/02, Judgment from 1 July 2008, para. 146-154.

[45] ECtHR, case of *Cucu v. Romania,* Application No. 22362/06, Judgment from 13 November 2012, para. 105-112.

[46] Although acknowledging the decision of 5 November 2007 of the High Court of Cassation and Justice, following an appeal in the interests of the law, the Strasbourg Court observed that this decision became mandatory for courts only in July 2008, after the applicant's conviction and sentencing.

[47] According to Article 65 para. 1 and 2 from the Criminal Code, an ancillary penalty consists of a ban on exercising the rights stipulated at Article 66 para. 1 lett. a), b) and d) - o), whose exercise was banned by a court of law as a complementary penalty. In the case of life imprisonment the ancillary penalty consists of the court banning the exercise of the rights stipulated in Article 66 para. 1 lett. a) - o) or a number of those.

[48] ECtHR, case of *Scoppola (No. 3) v. Italy,* Application No. *126/05*, Judgment from 22 May 2012, para. 107-110.

[49] S. Bogdan (coordinator), D. Al. Șerban, G. Zlati, *Noul Cod penal. Partea specială. Analize, explicații, comentarii. Perspectiva clujeană [The New Criminal Code. Special Part. Analyses, explanations, comments. The Cluj Perspective]*, Universul Juridic Publishing House, Bucharest, 2014, p. 777.

[50] What we mean is: Article 108 of Law No. 67/2004 on the election of the authorities of the local public administration; Article 60 of Law No. 370/2004, republished, on the election of Romania's President; Article 57 of Law No. 33/2007 on the organization and performance of the elections to the European Parliament; Article 54 of Law No. 35/2008 on the election of the Chamber of Deputies and of the Senate and on amending and supplementing Law No. 67/2004 on the election of the authorities of the local public administration, Law No. 215/2001 on the local public administration and Law No. 393/2004 on the Status of locally elected representatives; Article 53 of Law No. 3/2000 on the organization and performance of the referendum.

b.) Preexisting conditions. *Legal object of the crime. The special legal object* resides in the social relations concerning the proper performance of the elections; these relations involve the person's right to vote under conditions of secrecy, according with the applicable legal provisions, which is incompatible with the breach of voting secrecy.

Subjects of the crime. The active subject is not enlarged upon in the *standard variant* of the crime, provided for in para. 1, as it can be any person who meets the general conditions for criminal liability.

In case of the *aggravated variant*, provided for in para. 2, *the active subject is qualified* – a member of the electoral bureau of the polling section.

Looking at the wording, we can say that any other persons, even the members of the higher electoral bureaus, are excluded from the perpetration, as offenders, of the aggravated variant of the crime. Furthermore, for the perpetration of the crime, the offender has to act based on the functions it has within the electoral bureau. The aggravated variant shall not be applied if, for example, a member of a polling station renounces his functions, goes to another polling station and violates here the secrecy of a voter's option.[51]

The criminal participation is possible under all its forms (co-responsibility, incitement or complicity).

The main passive subject is the state, guarantor of the respect of voting secrecy and, overall, of the fairness of the electoral process.

The crime also has an *additional passive subject*, namely the natural person who has the right to vote, whose voting secrecy was violated.

Condition precedent. The perpetration of the crime requires the existence of a condition precedent – the performance of some election in Romania, no matter if local, presidential, Euro-parliamentary or parliamentary elections.

c.) The objective side. *The material element.* The material element of the objective side is the act of breach, by any means, of the voting secrecy by the members of the electoral bureau of the polling station, in case of the *aggravated variant*, or by other persons, in case of the *sandard variant of the crime*.

The breach of the voting secrecy involves finding out about the electoral option of a person, of the way in which the person expressed its electoral option.[52]

The breach of the voting secrecy in the sense attached to it by the incriminating norm has the meaning to disregard, to not obey the secrecy of the vote expressed by a person.[53] Hence, the elements of the crime provided for in Article 389 of the Criminal Code shall be met, for example if a person opens the ballot of another voter or enters the voting booth in order to find out how the respective person votes. The breach of the voting secrecy exists no matter how many persons found out, illegally, about a voter's electoral option.

It does not matter how a persons votes, for which candidate or political party, if the vote was a blank vote or if the person annuled its ballot, it is enough that the secrecy of that electoral option was violated.

For the existence of the crime the means by which the voting secrecy was violated are not relevant (taping, phtography[54], opening of the stamped ballot before introducing it in the ballot-box etc.). Obviously, if the means employed are by themselves a distinct offence, the rules of the concurrence of offences shall be applied.

One question which was asked in the specialized literature is if the legal text sanctions only revealing the vote to a person or also having the information about the content of the vote. Having regard to the fact that what is protected finally is the voting freedom, based on its secret character, we think that it can also be affected by the mere revealing of the choice. The information obtained can be used directly by the person who has it, for the purpose, for example, of altering the electoral process or for later revenge.[55]

It shall not be considered that voting secrecy was violated where the voter makes its electoral option known or where he/she allows or makes it easy for a third party to enter the voting booth and allows the third party to see how he/she exercises his/her right to vote.

The procedure concerning the exercise of the right to vote pertains to public law and is performed, formally, under the coordination of the electoral bureau of the polling station and first of its president, which shall guarantee, from a material point of view,

Beck Publishing House, Bucharest, 2014, p. 818. See also, in the same context, M. C. Sinescu in V. Dobrinoiu, I. Pascu, M. Hotca, I. Chiș, M. Gorunescu, C. Păun, M. Dobrinoiu, N. Neagu, M. C. Sinescu, *Codul penal comentat. Vol. II. Partea specială [The Criminal Code commented. Vol. II. Special Part]*, 1st edition, Universul Juridic Publishing House, Bucharest, 2012, p. 1016.

[52] The specialized literature stated that the wording "breach of voting secrecy" is extremely large and inaccurate in terms of the requirement of predictability of an incrimination text. See S. Bogdan (coordinator), *op. cit.*, p. 777.

[53] P. Dungan in P. Dungan, T. Medeanu, V. Pașca, *Drept penal. Partea specială. Prezentare comparativă a noului Cod penal şi a Codului penal din 1968 [Criminal Law. Special Part. Comparative presentation of the new Criminal code and of the Criminal code of 1968]*, Vol. II, Universul Juridic Publishing House, Bucharest, 2013, p. 407.

[54] By the *Decision of the Central Electoral Bureau No. 41/2008*, available at **http://www.beclocale2008.ro/documm/hot41.pdf**, accessed on 11.02.2015, in order to ensure the secret and freely expressed character of the vote according with Article 1 para. 2 of Law No. 67/2004 on the election of the authorities of the local public administration, in order to avoid any possible attempts at controlling the voting, it forbid the access into the voting booths with any recording or video taping devices. In this way they tried to limit the possibilities for electoral fraud, following offering of money or goods to persons who prove they voted for a certain candidate.

[55] T. Manea in G. Bodoroncea et al., p. 819.

the voter's full freedom to freely express its intimate belief. This procedure is one of the most important guarantees for the voting equality and secrecy, being at the same time a safeguard of its free character.[56]

As regards the *voting procedure*, it is provided for in relation with each type of elections in part: in Articles 82 and 86 of the Law No. 67/2004 on the election of the authorities of the local public administration; Article 44 of Law No. 370/2004 on the election of Romania's President; Article 46 para. 7-9 of Law No. 33/2007 on the organization and performance of the elections to the European Parliament; Article 42 of Law No. 35/2008 on the election of the Chamber of Deputies and of the Senate and on amending and supplementing Law No. 67/2004 on the election of the authorities of the local public administration, Law No. 215/2001 on the local public administration and Law No. 393/2004 on the Status of locally elected representatives.

We can say that the above mentioned legal provisions *are likely to ensure the respect of voting secrecy*, whereas the members of the electoral bureau of the polling station have the obligation to obey these legal provisions, including the obligation to not breach the voting secrecy.

The voters cast their votes separately, in closed booths, putting the stamp with the text "*Voted*" in the square which contains the list of the candidates or the name of the candidate they vote for. After having voted, the voters fold the ballots, so that the white page bearing the controll stamp stays outside and then introduce them into the ballot-box, taking care not to open them.

The presence of any other person in the voting booth, except the person who is voting, is forbidden. In exceptional cases, where the voter, based on justified reasons ascertained by the president of the electoral bureau of the polling station, cannot vote alone has the right to invite a companion of his choice to enter the voting booth to help.

Despite the fact that Law No. 67/2004 on the election of the authorities of local public administration very strictly provides for the rule of separate vote, in closed booths (the exception provided for in Article 86 being of strict interpretation), the breach of voting secrecy being sanctioned by the criminal law, on occasion of the monitoring of the local elections from 2008, a new way by which electoral fraud is attempted at was observed, namely the voter pretends to be incapable to focus on the vote and requires the assistance of another person, who is within the polling station and has a new electoral occupation, that is *„professional companion"*. In the county of Vrancea, the mayor of a town, who was sitting for a new mandate for a mayor, accompanied into the voting booth several persons who pretended to not be able to vote alone and in the county of Tulcea, some voters came to a polling station, pretended to be blind, without presenting a medical report to this effect, and entered the voting booth in the company of the candidates.[57]

With a view to the protection of the voting secrecy, but also in order to prevent voters' corruption we think that the introduction of an *interdiction concerning taking photographs or video-taping the ballots within the voting booth* is necessary, this being a method by which the voters are checked if and for whom they voted justified by amounts of money, goods or other advantages offered or given to them.

The immediate consequence is the creation of a danger for the social relations protected by the incrimination norm, created by the breach of the voting secrecy.

Causation results from the very materiality of the act, *ex re*.

d.) The subjective side. The offence is committed with direct or indirect intent, which implies that the offender knows that his act of breaching the voting will affect the social relations which protect the secret character of the vote within the elections.

The purpose or the reason based on which the offender acts are not relevant, but can be taken into consideration when establishing the sanctions.

e.) Forms of the offence. The acts of preparation, though possible, are not sanctioned. However, the attempt is sanctioned according with the provisions of Article 393 of the Criminal Code.

The offence is consummed in the moment when the breach of the voting secrecy is produced by any means.

f.) The sanctioning regime. Process related aspects. The breach of the voting secrecy in its standard variant provided for in para. 1 shall be sanctioned by fine and in case of the aggravated variant provided for in para. 2 shall be sanctioned by imprisonment from 6 months to 3 years and interdiction of the exercise of some rights.

In accordance with the provisions of Article 33 of the Criminal Code, the attempt shall be sanctioned with the punishment provided for by law for the offence consumed, its limits being reduced to the half.

The criminal proceedings are initiated *ex officio*[58].

The situation was similar also in case of the presidential elections of 2009 or parliamentary elections from 2008. See, Asociaţia Pro Democraţia, Prezidenţiale 2009. *Raport de observare a alegerilor pentru Preşedintele României din 2010*, Bucureşti, mai 2010, p. 50, 59; Asociaţia Pro Democraţia, Parlamentare 2008. *Raport de observare a alegerilor parlamentare din 30 noiembrie 2008*, Bucureşti, 2008, p. 27-28.

[58] According with 3 para. 2 of Law No. 135/2010 on the Code of criminal procedure, *judicial functions are exercised ex officio, except in cases provided for by law*.

2.5. Short considerations on the legislation of some member states of European Union

a.) The crime provided for in Article 389 from the Romanian Criminal Code is consistent with the Code of Good Practice in Electoral Matters[59], which stipulates that the violation of secret suffrage should be sanctioned.

Secrecy of the ballot is one aspect of voter freedom, its purpose being to shield voters from pressures they might face if others learned how they had voted. Secrecy must apply to the entire procedure – and particularly the casting and counting of votes. Voters are entitled to it, but must also respect it themselves, and non-compliance must be punished by disqualifying any ballot paper whose content has been disclosed. Violation of the secrecy of the ballot must be punished, just like violations of other aspects of voter freedom. In this sense, the signing and stamping of ballot papers should not take place at the point when the paper is presented to the voter, because the signatory or the person affixing the stamp might mark the paper so that the voter could be identified when it came to counting the votes, which would violate the secrecy of the ballot. The voter should collect his/her ballot paper and no one else should touch it from that point on.[60]

In order to secure the voter's secrecy, the voter should generally be alone in the voting booth. Only in special cases, for example, blind voters, are exceptions to be allowed. The conditions for giving assistance to voters should, if necessary, be formalised in the electoral law or electoral commission instructions. In any case, it is unacceptable that "interpreters" accompany voters to the voting booth and indicate the name of the candidate for whom the voter wants to vote. This is what happened, for example, with illiterate Roma voters during the rigged mayoral election held in the town of Mukachevo (Ukraine) in 2004.[61]

Obviously, family and group voting is by no means acceptable. It tends to deprive women, and sometimes young people, of their individual voting rights and as such amounts to a form of electoral fraud. The Congress Recommendation 111 (2002)[62] emphasised the paramount importance of women's right to an individual, free, and secret vote and underlined that the problem of family voting is unacceptable from the standpoint of women's fundamental rights.[63]

b.) Regulation of electoral crimes is not a specificity of the Romanian legal system, the existence of such crimes being found in other European countries.

The examination of electoral regulations in comparative law reveals that the crime of breach of confidentiality of the vote provided for in the national law is also found, with a similar content, in the legislation of other European countries:

✓ Criminal Code of Estonia[64]

Article 166 (Violation of confidentiality of voting) - Violation of the procedure for voting by secret ballot at an election or referendum is punishable by a fine of up to 100 fine units or by detention.

Article 153 (Violation of Free Determination) - Whoever at an election or ballot compels a voter to answer for his vote, or asks him how he has voted, or why he has not voted shall be punished by a fine or sentenced to imprisonment for not more than one year.

✓ Criminal Code of Slovenia[65]

Article 156 (Obstruction of Secrecy of Ballot) - Whoever violates the secrecy of the election or ballot shall be punished by a fine or sentenced to imprisonment for not more than six months.

If the offence under the preceding paragraph is committed by an official through the abuse of his function relating to the election or ballot, such an official shall be sentenced to imprisonment for not more than two years.

✓ French Electoral Code[66]

Article L113 - Apart from the cases specially provided for by the provisions of laws and decrees, anyone who, either in the frame work of an administrative or municipal commission, either in a polling station or in offices in town halls, prefectures and sub-prefectures, before, during or after ballot, will, by voluntary disregard for the law or orders of the prefect, or by any other fraud, violates or attempts to violate the secrecy of the vote, violates or attempts to harm the honesty of the vote[67], prevents or attempts to prevent voting operations or changes or attempts to

[67] Regarding the notion of "honesty" in electoral matters, see R. Ghevontian, *La notion de sincérité du scrutin*, *Cahiers du Conseil constitutionnel No. 13 (Dossier: La sincérité du scrutin)*, Janvier 2003, available at: **http://www.conseil-constitutionnel.fr/conseil-constitutionnel/francais/cahiers-du-conseil/cahier-n-13/la-notion-de-sincerite-du-scrutin.52035.html,** accessed on 15.01.2015.

change the outcome of the elections, shall be liable to a fine of 15 000 euro and imprisonment of one year or one of these penalties.

Article L116–(1) Those who, by any fraudulent means, performed even outside the premises or commissions referred to in article L. 113, have violated or attempted to undermine the honesty of the vote, violated or attempted to violate the secrecy of the vote, prevented or attempted to prevent voting actions, or by the same maneuvers, changed or attempted to change the results of the vote, shall be punished with sentences provided for in those articles.

✓ German Criminal Code[68]

Section 107c (Violation of secrecy of elections) - Whosoever contravenes a provision which serves to protect the secrecy of elections with the intention of obtaining for himself or another knowledge as to how a person voted, shall be liable to imprisonment not exceeding two years or a fine.

According to Section 108d (Jurisdiction), Sections 107 to 108c shall apply to elections to the parliaments, election of members of the European Parliament, other popular elections and ballots in the Federation, the member states, municipalities and municipal associations, as well as direct elections in the social security system. The signing of nomination papers or the signing of a popular referendum shall be equivalent to an election or ballot.

✓ Swiss Criminal Code[69]

Article 283 (Breach of voting secrecy) - Any person who obtains knowledge by unlawful means of how individuals have voted is liable to a custodial sentence not exceeding three years or to a monetary penalty.

3. Conclusions

Almost two decades after having returned to democracy, the law maker considered it necessary to include in the New Criminal Code, based on the trend of modernization of the codification of the incrimination of criminal acts, Title IX which contains the electoral offences (Articles 385 – 393)[70], whereas the texts bring a better systematization of incriminations in this matter considering their legal object.[71]

From this perspective we would like to mention the introduction of an offence to sanction *the breach of the voting secrecy*, which is likely to ensure a higher stability of the incrimination, on the one handside, and to eliminate the existing parallel incriminations which existed in the previous framework, on the other handside.

The possibility of any citizen to freely and unrestrictedly express their will when exercising their right to vote is exactly that guarantee of free expression based on which the voter elects freely and independently, without being subject to any constraint. From this perspective it is important to mention that the law maker has the obligation to create a coherent and stable legal framework in electoral matters which is likely to ensure, *inter alia*, the respect of the voting secrecy, as well.

We consider that the legal provisions as a whole create sufficient instruments, both in relation with the actual way of ensuring the voting secrecy, given that, as mentioned, all normative acts in electoral matters provide for the right of the voters to vote separately, in closed booths, whereas the presence of any person in the voting booth, except the person casting her vote, is forbidden, but also in relation with the regulation of a criminal sanction (Article 389 of the Criminal Code), incident when the members of the electoral bureau of the polling station or any other persons do not respect the legal provisions and violate the voting secrecy.

To close with, we would like to mention that the offence in Article 389 of the Criminal Code is in accordance with the provisions of the Code of Good Practice in Electoral Matters which states that the breach of voting secrecy has to be sanctioned, the same as cases of violation of other aspects of the freedom to vote. Voting secrecy is an aspect of the freedom of vote whose purpose is the protection of voters against any form of pressure they can be confronted with in case other persons find out about which candidates they voted for. The principle of secrecy has to be applied to the entire procedure and especially to the phase of voting and counting of votes. Voting secrecy is not only a right of the voter, but also an obligation to respect the right of the other.

THE CRIME OF UNJUSTIFIED ABSENCE IN THE ROMANIAN CRIMINAL CODE

Mirela GORUNESCU[*]

Abstract

The new Criminal Code of Romania regulates in Title XI of its Special Part the crimes against the combat capability of the military forces. Under this title, Chapter I is dedicated to the crimes committed by the military and defines the crime of unjustified absence. In this study, the author analysed the specific elements of this crime, including: the specific legal object - military discipline, the field of the active subject and the essential requirements imposed by its objective side.

Keywords: *criminal law, new Romanian Criminal Code, unjustified absence, crimes against the combat capability.*

1. Introduction

The new Romanian Criminal Code (which came into force on February 1, 2014), under Title XI of its Special Part, regulates the crimes against the combat capability of the military forces. In this way, they maintained the solution adopted by the previous Criminal Code by which was expressly repealed the Military Justice Code which has been active since 1937 being preferred the creation of a unitary regulation framework. In this way, with some isolated exceptions, all the incrimination norms which regard deeds committed by the military are kept in the Criminal Code, being avoided the instances of incoherence and inconsistencies found in relation to the previous regulation. As compared to the regulation from the previous Criminal Code, the simplification and modernization of the regulations from this category is remarked, so that such regulations should comply with the requirements to which the field is subject, particularly with reference to the double status held by Romania, of a Member State of the European Union (involved in the implementation of the common security policy), respectively of Member State of NATO (involved in the peace maintenance actions managed by this organization). The crimes from Title IX of the Special Part of the Criminal Code are grouped in two chapters, according to the criterion of the qualification of the active subject: crimes committed by the military, respectively crimes committed by the military or by the civilians.

All the crimes from this title impair the social relationships whose existence and development would not be possible without the maintenance of the combat capability of the military forces. The speciality doctrine indicates that the combat power represents the capacity, the possibility of a force at any time to obtain results in the development of a specific mission against a certain enemy, in a specific combat environment[1]. In the same opinion, it is observed that "the maximum combat power of operative land forces is realized by means of the integration of all the types of composing forces, into a unitary whole, within inter-arms, inter-categories. force or multinational groups. The forces envisaged are: a) *combat forces*, of which the following are part: armoured divisions (mechanized, tanks, army rangers); divisions without armoured vehicles (infantry, army rangers, paratroopers (airborne) and special forces; b) *support combat forces* (artillery units; artillery and anti-tank missile units; artillery and anti-aircraft missile units; corps of engineers; electronic war units; nuclear, biological and chemical defence units – NBC; research units; communications and information units; military police units). c) *logistic support forces* (supply and transport units, maintenance units, medical units, sanitary-veterinarian units, traffic control and guidance units, campaign banking units)".

2. The analysis of the crime

The crimes which can be perpetrated only by the military, as provided in Art. 413 of the Criminal Code, include also the crime of unjustified absence. According to the incrimination wording, "the unjustified absence of any military from his unit or from his service, which exceeded 4 hours, but not more than 24 hours, in time of war, during the state of siege or the state of emergency, shall be punished by imprisonment from one to 3 years or by a fine".

The unjustified absence is incriminated in a wording that is noticeably different in the new Criminal Code as compared to the former regulation. Thus, the deed is construed as a crime if perpetrated by any military, but only in time of war, during the state of siege or the state of emergency, not in time of peace, as in the previous Criminal Code.

The special *legal object* in case of the crime of unjustified absence, as it is regulated under Art. 413 of the Criminal Code in force, consists in the social relationships regarding the observance of military order and discipline. On the strength of Art. 2, para. (1) of the Regulation of Military Discipline[2], military discipline consists in the observance by the military of the legal provisions, of the norms of order and conduct, which are mandatory for the maintenance of a functional state, fulfilment of specific missions and proper performance of the military activities. At the same time, fulfilment of the military service requires the strict observance of the military discipline rules specific to the Romanian Army because it represents one of the decisive factors of the ***operational capacity of the army*** and is based both on the conscious acceptance of the established norms of conduct, and on the granting of rewards and application of disciplinary sanctions.

The operational capability to which the military regulation refers is the very combat capability of the military forces, so that a very clear connection is established between the imperative of observing the military discipline, and the capability to fight back or to defend of the military forces of which the respective military man is part.

The active subject of the crime is qualified, the crime of unjustified absence being a crime on its own. The qualification of the active subject implies that, beyond the general conditions which should be ascertained in case of this subject, for the particular situation of unjustified absence, the fulfilment of an additional condition is mandatory – that the author should be ***any*** military.

The scope of the direct active subject of the crime of unjustified absence results from the very Art. 1 para. (2) of the Regulation of Military Discipline, which expressly indicates the fact that its provisions apply to active military men, professional soldiers and officers, reservists during concentration or mobilization, pupils and students of military education and training institutes for active military men.

Criminal participation is not possible in the form of co-authorship. This is because the crime is one that is committed *in propria persona*, since each military man has the individual obligation to observe the norms of military discipline. Even in the assumption that several military men would agree to have unjustified absences from their service during a period relevant for the existence of the crime of unjustified absence, there shall be no co-authorship in the crime of unjustified absence, but each military man shall be charged with a distinct crime.

There can be participation in the form of *instigation or complicity*. Both the instigator and its accomplice may be any person meeting the general conditions of the criminal liability.

The primary passive subject in case of this crime is always the State, because the State is the one that is vulnerable because of the endangerment of the combat capability of its military forces. The secondary passive subject is always the unit of which the military man responsible for breaching the norms of military discipline is part.

The material element of the crime consists in the *unjustified absence* of the military man from his unit or service for a term ranging from 4 to 24 hours. It is not relevant for the existence of the crime whether he left the unit with or without the approval of his commanding officers, nor is it relevant whether he returned willingly or he was captured and delivered by the authorities. Undoubtedly, however, these elements will be important in the process of individualizing the punishment to be applied.

Unit shall mean any military formation, regardless of the number of military men composing it and regardless of its permanent or temporary nature. *Service* shall mean the place where the military man is effectively carrying out a certain activity. For the crime to exist, it is mandatory that the military man should have actually left the premises where he was supposed to carry out his activity, his mere absence from the call being unable to realize the contents of the crime[3].

For the existence of the material element of the crime, it is necessary that ***three essential requirements*** are met.

A first requirement is that the absence from the unit or service should be *unjustified*, as expressly required by the incrimination wording. The term should be understood, however, as "unmotivated", as there is otherwise the risk to generate the confusion borne by the reference only to the justifying causes provided by Arts. 18-22 of the Criminal Code. The marginal name and, implicitly, *verbum regens* in case of this crime were maintained with the names provided in the previous Criminal Code, without consideration to the fact that the new Criminal Code defines justifying causes, as well as the causes for non-imputability. Under these conditions, the unmotivated absence from the unit or service of the military man should be both unjustified, and non-imputable (imputability being, otherwise, one of the essential features of any crime)[4]. In other words, if, for instance, the military man happens to be immobilized by a person and confined to a room, which prevents him from returning from a leave in time, his deed shall not constitute the crime of unjustified absence, as it is not

[2] Approved by Order No. 64/2013 issued by the Minister of National Defence, published in The Official Gazette of Romania, Part I, No. 399 bis of July 3, 2013

[3] The Bucharest Military Tribunal, Criminal Decision No. 366/1972, quoted in V. Dobrinoiu, I. Pascu, M.A. Hotca, I. Chiş, M. Gorunescu, C. Păun, M. Dobrinoiu, N. Neagu, M.C. Sinescu, Noul Cod penal comentat, 2nd Edition, Universul Juridic Publishing House, Bucharest, 2014, p. 1036.

[4] M. Gorunescu, I.A. Barbu, M. Rotaru, Drept penal, partea generală, Universul Juridic Publishing House, Bucharest, 2014, p. 71.

imputable to him. The cause for non-imputability is that defined by Art. 24 of the Criminal Code – the physical constraint and, although the absence from service is not unjustified, but only non-imputable, the contents of the deed provided by Art. 413 of the Criminal Code are not realized.

A second requirement takes into account the fact that the unmotivated absence should last for more than 4 hours, but should not exceed 24 hours.

If the unjustified absence from the unit or service lasts less than 4 hours, the deed shall not constitute a crime, but the disciplinary deviation regulated by Art. 49 letter c) of the Regulation of Military Discipline. When the duration exceeds the interval of 24 hours, the crime that is committed is not the unjustified absence, but that of desertion, as defined by Art. 414 of the Criminal Code.

The third essential requirement refers to the condition of time for the deed to be committed in time of war, during the state of siege or the state of emergency[5].

In the legal definition, Art. 185 of the Criminal Code states that *time of war* means the duration of the state of mobilization of the military forces or the duration of the state of war.

The state of mobilization represents the entirety of the extraordinary measures that can be instituted, primarily, in the political, economic, social, administrative, diplomatic, legal and military fields, planned and prepared in time of peace, as well as of the actions performed for their application, according to law, upon the appearance or imminence of a severe threat that may affect the sovereignty, independence and unity of the State, the territorial integrity of the country and the constitutional democracy.

The state of war represents the entirety of the extraordinary measures that may be instituted, primarily, in the political, economic, social, administrative, diplomatic, legal and military fields, in view of exercising the inherent right of the State to individual or collective self-defence[6].

The state of siege and the state of emergency are defined in Emergency Government Ordinance No. 1/1999 regarding the regime of the state of siege and of the state of emergency[7].

The state of siege represents the ensemble of exceptional measures of political, military, economic, social and other nature, applicable on the entire territory of the country or in certain territorial-administrative units, instituted for the adaptation of the country's capability of defence against current or imminent grave dangers, threatening the sovereignty, independence, unity or territorial integrity of the State. In case the state of siege is instituted, exceptional measures can be taken, which are applicable throughout the entire territory of the country or in certain administrative-territorial units.

The state of emergency represents the ensemble of exceptional measures of political, economic, and public order nature, applicable on the entire territory of the country or in certain territorial-administrative units which are instituted in the following situations: a) the existence of current or imminent grave dangers regarding the national security or the functioning of the constitutional democracy; b) the imminence of the occurrence or the production of calamities which render necessary the prevention, limitation or removal, as applicable, of the consequences of certain disasters.

For the unjustified absence from the unit or service to have the criminal significance given by Art. 413 of the Criminal Code, it is mandatory that all these requirements should be met.

The immediate consequence consists in the creation of a state of danger for the combat capability of the military forces, deriving from the ignorance of the military order and discipline in a military unit or service, and the causality relation results from the mere perpetration of the material element, the crime being one of danger.

The subjective element in case of the crime of unjustified absence is the intention in the methods of direct or indirect intention[8]. The mobile and purpose in case of this crime do not have any relevance for the existence *per se* of the crime, they only influence the individualization process of the punishment.

Essential requirements. The subjective element in the crime of unjustified absence necessarily implies that the active subject, having the capacity of a military man, knows precisely the unmotivated character of his absence from the unit or from service. If, for instance, out of an error of the records department, in the service or travel order of the military man there appears an erroneous date of returning to the unit, one day beyond the real interval of travel, and the military observes such date, he shall not be liable for an unjustified absence, being in error with regard to the date of appearance. The error represents, otherwise, a cause for non-imputability, as provided by Art. 30, para. (1) of the Criminal Code.

The preparatory acts for the crime of unjustified absence are not incriminated by the lawmaker, and the attempt is not possible.

The consummation of the crime occurs immediately after the lapse of the 4 hours since the military man has been absent without any justification from his unit or service. Furthermore, the crime of unjustified absence is liable to extend in time. When the absence continues after the lapse of the 4 hour-

[5] The state of war, the state of mobilization, the state of siege and the state of emergency are mentioned in the Constitution, as well, under Arts. 63, 65, 89, 92, 93 or 152.

[6] These two notions are regulated by Law No. 355/2009 published in Official Gazette No. 805 of November 25, 2009.

[7] EGO No. 1/1999 regarding the regime of the state of siege and the regime of the state of emergency, published in Official Gazette No. 22 of January 21, 1999, approved by Law No. 453/2004, published in Official Gazette No. 1052 of November 12, 2004.

[8] T. Vasiliu, D. Pavel ş.a., *op. cit.*, vol. II, p. 487; D. Cojocaru, *Infracţiunile contra capacităţii de apărare a României* Ştiinţifică şi Enciclopedică Publishing House, Bucharest, 1975, p. 46.

term, the crime becomes continuous. Termination occurs in this hypothesis when the military man returns to his unit or service, but only if this event occurs within the 24-hour interval referred to in Art. 413 of the Criminal Code. As soon as the 24-hour interval is exceeded, the typical nature of the crime of unjustified absence is no longer met; it becomes the crime of desertion, provided in Art. 414, para. (1) of the Criminal Code.

It does not exist in case of the crime of unjustified absence, because the excess of the 24-hour interval referred to in the incrimination norm transforms unjustified absence into desertion, even under the conditions of the aggravated version from Art. 414, para. (3) of the Criminal Code, as it occurs in time of war, during the state of siege or emergency.

Unjustified absence is punished by imprisonment from one to 3 years or by a fine. According to the provisions of Art. 67, para. (1) of the Criminal Code, should the Court deem it necessary, the complementary punishment of the prohibition of exerting certain rights can also be applied to the perpetrator.

Between the crime of unjustified absence and other crimes, there are certain elements of closeness. Most such elements exist between the crime of unjustified absence and the crime of desertion (Art. 414 of the Criminal Code). This is because the material element of the two crimes is common (the unjustified absence), being in certain normative methods even a continuous conduct that only the premise-situation causes it to be differently classified. Thus, if the unjustified absence from the unit or service of the military man occurs in time of war, during the term for which the state of siege or the state of emergency is declared, up to a duration of 4 hours, the deed represents a disciplinary misconduct, more than 4 hours, but no more than 24 hours represent unjustified absence, and a period exceeding 24 hours is already realizing the contents of the crime of desertion, even in it's aggravated version [Art. 414 para. 3) of the Criminal Code].

If, from the point of view of the fulfilment of the premise-situation for declaring either of the exceptional states indicated by Art. 413 of the Criminal Code, the fulfilment of the requirement is not ascertained, the deed shall have a criminal significance only after the lapse of 3 days of unjustified absence. This is because the state opposite to those previously indicated is the state of peace, of normality, and the unjustified absence of the military man from service in this context becomes desertion only after it exceed three days.

By reporting to the qualification of the active subject of the crime, if the requirement regarding the quality of *any military man* is not met (for instance, the person is a policeman) to which the incrimination norm refers, such a deed may constitute eventually an abuse in service, if all the conditions for the existence of such crime exist.

Also in terms of the trial the unjustified absence presents certain specific aspects. In this way, the criminal action is initiated only when the commanding officer is notified (Art. 431 of the Criminal Code). The competence of judgment on the merits belongs to the military tribunal, if the military who is absent without justification has the rank of colonel, inclusively. When the unjustified absence is committed by a general, the competence of trial in the first instance belongs to the military court of appeal. The same court is competent also if the military man is a judge from the military tribunal or a military prosecutor from the military prosecutor's offices attached to these courts. The competence belongs to the ordinary courts of appeal if the military man who perpetrates the deed is a judge with the Military Court of Appeal or a prosecutor with the prosecutor's office attached to it.

3. Conclusions

The crime of unjustified absence is a low-key version of the crime of desertion, both being crimes directed particularly against the norms of military order and discipline. As the other crimes from this category, the crimes against the combat capability of the military forces were changed and adapted to the specific nature of the social realities which should be covered by the new regulation in the criminal field. In this study, we chose to analyze the constitutive elements of the crime of unjustified absence, because only by means of a proper understanding of such elements can the incrimination wording benefit from a thorough and correct application.

SELF-DEFENCE IN SPECIAL SITUATIONS (I)

Lamya-Diana HĂRĂTĂU*

Abstract

In the reality of practical cases and in certain special situations, self-defence may present some complex forms consisting either in accidental amplification of the issue in fact when self-defence is claimed, or in the correlation in fact of self-defence to other cases which remove the criminal nature of act[1]. For these reasons, we decided to analyse few of such special situations.

Keywords: *self-defense, criminal nature, state authority, acts committed on fault, deviated counter.*

1. Issue of existence or inexistence of self-defence if the attack comes from the representative of a state authority.

In time[2], other specialised works approached the issue of existence or inexistence of self-defence if the attack comes as well from the representative of a state authority.

Although this issue no longer represents a problem currently, we have considered presenting few theories lying on the base of its settlement.

- Abolition theory.

According to this theory, the citizen had the obligation to submit unconditionally to the orders and acts of the representative of authority, enjoying the absolute presumption of legality.

- Liberal theory.

According to this theory, it is deemed that the citizen was entitled to reject the illegal act of authority. As stated in the doctrine, this theory was sustained in France by Armand Carrel[3] in the magazine "National" dated 24 January 1832, as well as in front of the jury of Sena on 13 March 1832 by the lawyer Odillon Barrat. Their assertions relied on the disposals of art. 11 of the Declaration of human and citizen rights[4] stating that *any act exercised by a representative of the state and without the acts claimed by law, is arbitrary and tyrannical.*

- Intermediary theory.

This theory divided however the right to turn to defence depending on the aggressors, more exactly depending on the authority of aggressing agents. Thus, submission is deemed obligatory according to this theory only towards the agents holding orders, titles, even irregular, since the existence of order and title created a presumption of legality, and the title was owed faith. On the other hand, it was allowed the counter if illegality was *manifested*, for instance if the agent was obviously incompetent[5].

Currently, according to the disposals of the new Code of criminal proceedings (art. 310), in case of flagrant crime, any individual may hinder the criminal and hand it over to the authority. In such a situation, we no longer deal with the unfair nature of aggression which would justify a self-defence counter.

However, as exemplified as well in the recent doctrine[6], if the individual depriving of freedom the criminal "does not take him in front of judicial authorities and does not announce its capture, turning the detention in a private detention, the deprivation of freedom becomes unfair justifying a self-defence of the prisoner."

Another case mentioned in the specialised literature[7] considers the detention of a representative of authority with the breach of the limits stipulated by law. Thus, it is provided as example the situation when an individual with arrest warrant opposes to its enforcement, and the police bodies are using force to immobilise the criminal. If violence exercised in this case is obviously disproportionate and useless, states the author, we shall deal with an unfair aggression, which may determine the occurrence of self-defence. The doctrine stipulates as well[8] that an act of authority may represent an aggression when it is obviously illegal and arbitrary[9].

Currently, the issue of aggression coming from authority no longer generates controversy because, as

long as the aggression is unfair, the counter is allowed in terms of law, although it comes from an authority.

2. Issue of solving self-defence by running.

Another issue approached by the specialised doctrine related to self-defence, is the answer to aggression by running.

It is discussed if it is still incident self-defence if under the conditions of such issue in fact, the victim of aggression, having the possibility to run to avoid the aggression, he didn't, on the contrary, he responded.

In time, there were distinct opinions related either to the possibility or to the obligation of running from the aggressor. On this decision depends the consideration of self-defence as justificatory cause.

More ancient specialists of criminal law[10] analysed the manner how the victim was forced or not to run, if he had this possibility, and if he doesn't, to what extent may self-defence be claimed.

The author analyses this situation historically, bringing into discussion different opinions of some criminalists dealing with this issue. We shall present further on as well such points of view.

Thus, some authors stated that, although the victim could avoid the risk by running, however he could have killed the aggressor without being punished[11]. Other authors stated that it was necessary to avoid counter by prays, screams, run, and if the possibility of running imposes its need, no self-defence can exist[12].

In another opinion[13], besides the situation when someone has a position to guard, in general one cannot put in legal precept cowardice, however running is obligatory when the aggressor is a madman, a child or an agent of public force.

Also, it was considered as well that everything was an issue in fact on the discretion of the judge who may enforce an easier punishment or declare innocent the victim who did not run although he had this possibility[14].

Another point of view shows that running, that is the escape of the victim in this manner, does not represent a legal obligation, but only an issue of consciousness[15].

More ancient French doctrine[16] appreciated that the obligation of running depended on the social class of the victim. Thus, there was no obligation of running for the aristocrat, gentleman, soldier, since running for them was shameful. However, "the runt" was even obligated to run if being in such situation.

This idea was rebutted because "never, as we know, in our books of law, this privilege was awarded to noble individuals or militaries". It is asserted that, if the victim may run without being in danger, he cannot claim self-defence[17].

In our opinion, obviously running may be much better than counter in such situations, but we cannot disagree that deciding for counter instead of running as self-defence could lead in fact to not considering this justificatory case.

In our specialised doctrine was decided as well that there is self-defence when the victim may escape by running[18]

The alternative of running is not possible in all situations, and this decision depends from one individual to another, but also on the real circumstances of the issue in fact.

[18] V. Ionescu, Self-defence and state of need, ed. Ştiinţifică, Bucharest, 1972, p.37-49; In the same respect, C. Mitrache, Romanian criminal law, general part, 3rd edition reviewed and added, publishing house and press ŞANSA, Bucharest, 1997, p.108; during the year 2002, p.125; In judicial practice, it was decided that one cannot claim to the victim of an aggression to run from agression; see, T.S.col.pen., dec.no.394/1961, p. 424 and dec.no.925/1965 in CD/1965, p. 321. On the contrary, I. Dobrinescu, in J.N. no. 4/1957, p. 641; I. Pascu, Criminal law general part, 2nd edition, Hamangiu, 2009, p. 289 states: "it is discussable in the doctrine if there is self-defence when the victim has the possibility to run from the aggressor. Quoting Antoniu (Criminal guilt, p. 272) states that " modern doctrine accepts that running, in this case, is not a proof of cowardice, but of wisdom, a proof of cooperation for the extinction of conflict".; V. Dongoroz, Criminal law, Bucharest, 1926, p.181: "If the victim under the condition of self-defence had the possibility to escape from aggression by running, is he in self-defence if he decides not to run and to attack the aggressor? Controversy. We believe that it is, since no text of law, no principle of law or moral proclaims as rule of conduct running in front of danger, cowardice. On the contrary, the one who faces a material, actual and unfair aggression against himself or another deserves not only our admiration for his courage but the gratitude of a society to which it has done a veritable favour. If the aggressor runs without attacking we do no longer deal with self defence, but with revenge from the victim". Attention" in the same work, p.187-188, V. Dongoroz wonders if "Challenge excludes self-defence?" and gives the following example: A slaps or curses B; B being thus challenged to take out the weapon. A the challenger is in self-defence, if, for avoiding the bullet of B kills B. If B had taken out the weapon without a previous challenge, obviously A would have been in self-defence, but the fact that A challenges B excludes for A self-defence."

4. May self-defence be incident for the acts committed on fault?

Considering the act of defence committed on fault, French practice stipulated that self-defence cannot be incident but for the actions with intent but not for the acts committed on fault in self-defence[19]. Authors of specialised literature[20] rejected such direction, in the judicial practice, the victims of an aggression even stating that they rebutted with intent and not on fault in order to enjoy the effects of self-defence.

The supporters of the possibility that defence is done as well on fault appreciate that the presence of subjective element in case of defence has nothing incompatible with the possibility of committing an act on fault, the victim being aware of the existence of aggression and commits an action meant to remove it. The result appeared in such situation is not the one anticipated.

It is provided as example to these arguments the situation when the accused followed with the axe by the victim sees a vehicle parked in the neighbourhood and tries to get rid of the aggressor leaving with that car. The accused handles however mistakenly the gearshift therefore, instead of driving ahead, the vehicle drives backwards and hits thus the aggressor who is heading towards the car, causing him a seriously body injury or death.

In the opinion of the author[21] of example, there is no reason to refuse the justificatory effect of self-defence under the conditions that the same act would be justified in case of act with intent.

We support as well this point of view and the idea according to which as long as the justification is allowed and indeed considers in principle a defence and a result with intent, this however does not remove the same justification in case of a guilty result as well.

Indeed, we consider as well that the contents of art. 19 par. (2) of the new criminal code is controversial since the expression of the legislator ”act to remove an aggression” tends to lead to the interpretation that the act committed in defence must be with intent. However, as other authors showed as well, an extensive interpretation of this formulation is not opportune, as it must be understood in strict sense, namely that of the action committed to remove an aggression, and not of fact overall[22]. Even a judgement of the former Supreme Court admitted self-defence even in case of praeterintentionate defence [23].

We appreciate that the proposal of de lege ferenda in terms of amending the legal text in the version ”act to remove an aggression committed with intent or on fault” is opportune for the legislator to uniform such different points of view related to this interpretation.

5. Deviated counter (error in personam / aberatio ictus)

In time, the doctrinaires analysed the situation when defence was directed towards an innocent third party, as a consequence either of the error of the victim over the aggressor, or of the deviation of hit. The solutions may be obviously different. It may be stated that there is no self-defence but a state of need of the victim, or an irremovable error which determines the absence of liability.[24]

The specialists[25] decided for the variant when the defence committed under such conditions entails a state of need.

If the victim hits mistakenly another individual than the aggressor, it should be examined if a fault may be incumbent upon the one who rebuts or if the deviation of defence is accidental. In the first situation, since it is determined that the victim acted with obvious fault towards the third party (s.n.), it will be enforced the punishment for manslaughter for a manslaughter on fault or bodily injury on fault and in the second situation, the hit of the third party must be deemed as caused in state of need.

A supported opinion must be analysed if the victim hits a third party obviously imprudently or has taken advantage of the fact of being aggressed using afterwards self-defence.

If the victim is forced by the conditions of defence to react in such a manner as endangering a third party, his act will be deemed committed in a state of need[26].

In another opinion, it is considered that self-defence represents only a particular enforcement of the general theory of need, the murder or assault committed in case of deviation of the hit or error over the individual must be considered as self-defence[27].

The former Supreme Court decided that an individual facing a material, direct, immediate, unfair attack, while defending himself, instead of hitting the aggressor, hits mistakenly a third party, and this error is not incumbent upon him under any circumstance, the act must be considered committed in self defence[28].

It was omitted the opinion according to which self-defence cannot be claimed in such situations since

[28] T.S.Col.pen.decision no. 888 dated 26 June 1962 in J.N. no. 1/1963, p.173;

firstly considering the drafting of the legal text defence must be always directed only against the aggressor.

Also, the same opinion shows that one cannot support either the state of need, because in such situation the imminent risk faced by the individual who rebuts must be avoided only by such counter.[29]

Analysing as well the disposals related to the error of fact, these cannot be enforced either. The hitting of third party on the occasion of counter, due to causes not incumbent upon, states the same author, cannot lead to the conclusion that the one who rebuts is in one of the situations ruled by the criminal code. Also, the deviation of assault cannot represent either an error of fact.

We do not agree with the arguments of the said opinion.

Thus, one of the essential traits of the crime is that the act is committed on fault.

Or, if it is determined that the act of the victim and with consequences on a third party lacks a subjective element, then the act is not a crime.

In our opinion, if the one who defends himself commits the act, although he could have anticipated, but he ignored without reason a potential result, although he didn't anticipated although he should have and could anticipate such result, he may be held criminally liable for a crime committed on fault. The form of guilt of intent is no longer debated since it would remove from the beginning the argument of error or deviation of assault.

It isn't discussable the fact that self- defence may be corroborated with the error of fact and also that the victim assaults mistakenly another individual than the aggressor or appreciates erroneously the gravity of assault committing mistakenly an excess of defence.

THE EXCLUSION OF ILEGALLY ADMINISTERED EVIDENCE

Eliza Emanuela IONIŢĂ*

Abstract

Both judicial practice and specialized texts have brought up the problem of what the punishment for breaking the legal provisions in the activity of evidence administration is, if a matter of fact had been presented by means that are not legally specified or if a piece of evidence was administered by means that are legally specified, but with the violation of legal provisions.

Romania has adhered to the most important international juridical instruments adopted in the sphere of human rights by the adoption, modification or completion of internal legislation.

As such, for the first time in Romanian criminal procedural legislation, a sanction for the exclusion of evidence has been introduced, as a corollary for the principle of legality and of loyalty in administering evidence.

The New Criminal Procedure Code provides the sanction of exclusion as well, but this time the legislator didn't resume his or herself to a mere conceptual regulation of the sanction, providing both a specific invalidation procedure as well as procedural solutions. In the New Criminal Procedure Code it is shown that in the sphere of evidence-showing a set of rules has been introduced that establishes the principle of loyalty in the obtainment of evidence. These rules, that provide the sanction of excluding evidence obtained through illegal or unloyal means, will determined the growth of professionalism in the ranks of the judiciary bodies on the subject of obtaining evidence and, on the other hand, will guarantee the firm upholding of the parties rights to a fair trial.

"Truth, like all other good things, may be loved unwisely – may be pursued too keenly – may cost too much…" Lord Justice Sir James Lewis Knight-Bruce

"It is a deeply ingrained value in our democratic system that the ends do not justify the means. In particular, evidence or convictions may, at times, be obtained at too high a price". – Antonio Lamer Former Chief Justice of the Supreme Court of Canada.

Keywords: *illegally administered evidence, the principle of loyalty, derivative evidence, torture, inhuman treatement.*

1. Introduction

Exclusion is a specific procedural sanction, applicable for evidence that had been administered with the violation of the principle of legality or loyalty. This sanction has a particular domain in which it is applied, thus setting itself apart from the sanction of nullification that is only applied to procedural papers.

The exclusion of evidence can be provided in the event a substantial and significant violation of a legal provision regarding the administration of the evidence which, in the specific circumstances of the case, determine the maintaining of the piece of evidence that had been thus administered to harm the equitable character of the criminal trial.

Art. 100 paragr. 3 of the New Criminal Procedure Code explicitly provides that evidence obtained by torture and inhuman or degrading treatement cannot be used in the criminal trial.

Through this, it is to be assumed on an absolute level that the equitable character of the criminal trial will always be harmed if the evidence is obtained by torture and inhuman or degrading tratement.

As such, in the situation provided in paragr. 3 of art. 100 of the New Criminal Procedure Code, the sanction of exclusion will be applied *de jure.*

Applying the institution of the exclusion of derivative evidence requires analyzing the possibility of excluding evidence that is legally administered, but that is derivative (closely connected) from illegally obtained evidence. As such, if the derivative, legally administered evidence is directly and necessarily obtained through the use of torture, inhuman or degrading treatment, the sanction of the exclusion of derivative evidence will be operated, as stated in art. 100 paragr. 4 from the New Criminal Procedure Code.

Similarly, the exception provided in paragr. 5 of art. 100 from the new criminal procedure Code project is not applicable since, as previously shown, the situation stated in paragr. 2 of the same article is not applicable to evidence obtained through torture, inhuman or degrading tratement.

2. Content

In the development of the criminal trial, transgressions from the instituted procedural setting are possible and in such situations certain procedural sanctions are available to interfere. In addition to inadmissibility, deterioration and nullification, the legislator has explicitly provided the exclusion of illegally obtained evidence as a distinct procedural sanction[1].

As a completion to the basic rule of respect towards human dignity as specified in art. 11 paragr. (1), the sanction of exclusion of evidence obtained

* PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **ionita333@yahoo.com**).

[1] Ion Neagu -Tratat de procedura penala. Partea generala. In lumina noului Cod de procedura penala, Universul Juridic, Bucharest, 2014, pg .105.

through torture, as well as derivative evidence, has been regulated through art. 102.

As far as the principle of respect towards human dignity is concerned, we signal Romania's adherence to the Convention against torture and other cruel, inhuman and degrading punishments and treatments[2], an initiative that has left its mark on criminal and criminal procedural legislation. As such, through Law 20/1990[3], the crime of torture was introduced in the criminal Code adopted in 1968 (art 282 New criminal code[4]).

On the subject of commiting to the right of freedom, we also find it necessary to bring into discussion the content of art. 1 of the European Union Charter of Fundamental Rights, which states that "Human dignity is inviolable. It must be respected and protected". In the same lines, art. 4 states that "No one shall be subjected to torture or to inhuman or degrading treatment or punishment".

The current Constitution has established this principle in "Fundamental rights and liberties", stating in art. 22 paragr. (2) that "No one shall be subjected to torture or to inhuman or degrading treatment or punishment". This fundamental principle establishes the legal setting regarding the tratement that must be applied to the suspect or accused throughout the entire legal trial.

Similar provisions are to be found in the legislation of other states, as such in art. 191 of the Italian Criminal procedure code it is stated that evidence obtained by the violation of the legally established provisions cannot be utilized[5]. Similarly, in the German criminal procedure system[6], the freedom of an accused to decide and the freely express his or her will cannot be restricted through harmful treatement, through torture, deceit and hypnosis. Force can be used only within the limits of the law. Threatening the accused with unallowed measures or promising an advantage that is not stated in the law is forbidden. Measures that can affect the memory of the accused or her or his capacity to reason are forbidden. These interdictions stated in the German criminal procedure law are to be applied regardless of the existence of a possible consent on the part of the accused. Declarations that are obtained from the violation of these rules cannot be used even if the accused may agree upon it.

The Spanish criminal procedure legislation offers as well examples of juridical norms that serve the purpose of protecting the dignity of the accused from crimes that can be carried out during a criminal trial. As such, the questions that will be addressed to the accused will be direct so that under no circumstances can they be formulated in a suggestive or insidious manner. The accused cannot be subjected to any sort of constraint or threat[7]. Exclusion, through the perspective of comparative law, comes under a variety of shapes, all of them requiring the balancing of interests, first and foremost the establishing of truth in a criminal case determined according to the rights of the accused and, indirectly, of the entire population, rights that are considered so important by the legal order that they are provided in either conventions that regulate human rights, either in national constitutions[8].

During the development of a criminal trial, transgressions from the instituted procedural setting are possible and in such situations certain procedural sanctions are available to interfere. Inadmissibility, deterioration and nullification have been stated in the current Criminal procedure code. In addition, the legislator has provided the exclusion of illegally obtained evidence as a distinct procedural sanction. This distinct sanction intervenes in the area of evidence, in the event the principles of legality and loyalty in the administration of evidence are violated.

The exclusion of illegally obtained evidence is a new institution in our procedural system, as it was included in the doctrine along with the text of art. 64 paragr. (2) C.p.c. 1968, which states that "illegally obtained evidence cannot be used in the criminal trial". *The return of the sanction of nullification in the area of evidence handling is thus explained*, by the modification brought to the text of art. 102 of the New Criminal procedure code through the Law of application. As such, according to the current

[2] This convention has been adopted in New York, on the 10st of December 1980. Romania had adhered to this Convention through Law 19.1990, published in the Off.M.no.113 FROM THE 10TH OF OCTOBER 1990.

[3] Law nr 20/1990 for the modification and completion of a number of provisions from the Criminal code and the Criminal procedure code was published in the Off.M. no.112 from the 10th of October 1990.

[4] The legal content of the crime is as follows: (1)The act of a public worker that fulfills a function that involves exercising state authority or of another person that acts towards instigation or with the expressed or tacit consent of this person to provoke strong physical or psychological suffering to an individual: a) for the purpose of obtaining information or declarations from the person or from a third party; b) for the purpose of punishment for an act that the person or a third party has commited or is suspected to have commited; c) for the purpose of intimidating or pressuring her or him or of intimidating or pressuring a third party; d) by reasons of any form of discrimination, it is punishable by 2 to 7 years in prison and the removal of a number of rights. (2) If the act stated in paragr. (1) resulted in bodily harm, the punishment is from 3 to 10 years in prison and the removal of a number of rights. (3) Torture that resulted in the death of the victim is punishable by 15 to 25 years in prison and the removal of a number of rights. (4) Attempting the crime as stated in paragr. (1) is punishable. (5) No exceptional circumstances, regardless of what they are, whether it is related to war or threat of war, to internal political instability or any other exceptional state cannot be invoked to justify torture. Similarly, acting on the order of a superior or of a public authority cannot be invoked. (6) It does not constitute as torture the pain and suffering that result exclusively from legal sanctions and are inherent to or provoked by these sanctions.

[8] Stephen C. Thaman, The Exclusionary Rule, General reports of the XVIIIth Congress of the International Academy of Comparative Law / Karen B. Brown, David V. Snyder eds , pages 657-704, year 2012, p. 662.

formulation of the text of art. 102 paragr. (3), the evidence can be excluded if the act by which the evidence has been set or authorized or by which it had been administered is affected by absolute or relative nullification, although in the latter case an infliction that cannot be otherwise removed must have been caused. As such, a contradiction of sorts has remained between the principle stated in art. 102 paragr. (2) of the New Criminal procedure code, which sets the rule that illegally obtained evidence cannot be used in the criminal trial, and the rule from paragr. (3) of the same article, which regulates the way in which the principle states in paragr. (2) will actually operate, which is only by means of the nullification sanction, absolute and relative. As such, in art. 101 of the NCPC the principle of loyalty in evidence administration is specified. The previous article states that: *1) It is forbidden to use violence, threats or any other constraining methods, such as promises or orders, for the purpose of obtaining evidence. (2) Interrogation methods or techniques that affect the person's capacity to consciously and voluntarily recall and relate the events that constitute as evidence cannot be used, this interdiction applies even if the interrogated person gives their consent for such methods or techniques to be utilized. (3) It is forbidden for criminal judiciary bodies or other persons that act on their behalf to provoke a person to commit or to continue the committing of criminal acts for the purposes of obtaining evidence.*

Art. 102 of the NCPC also provides the sanction for not respecting the principle of legality and loyalty in administering evidence, more specifically the exclusion of illegally obtained evidence. The article states that *(1) Evidence obtained through torture, as well as derivative evidence cannot be used in the criminal trial. (2) Illegally obtained evidence cannot be used in the criminal trial. (3) The nullity of the act by which the administration of evidence had been set or authorized or by which it had been administered determines the exclusion of the evidence. (4) Derivative evidence is excluded if it has been directly obtained through the illegally obtained evidence and could have not been obtained through any other way.*

The moment a piece of evidence has been obtained through the violation of legal provisions, two interests come into conflict: society's interest for the person which has committed a crime to be identified, judged, punished and for her or his sentence to be carried out and the individual interest of people that none of their rights is to be violated by the abusive behavior of the ones who are tasked with the criminal investigation. In many legal systems, the sanction of the exclusion of evidence has been found to be the most efficient way of "reconcile" these interests. The sanction of the exclusion of evidence has seen, especially in the common-law system, a long development, as it was not applied in the same manner throughout its existence, being constantly subjected to criticisms related to doctrine, regarding both the manner of use as well as the utility of its own existence.

The principle in common-law legal systems is that every piece of relevant evidence is admitted, except in the cases where a legal disposition excludes the piece of evidence or if the piece of evidence is excluded by the judge as a consequence of exercising the liberty to exclude certain evidence. If the evidence is part of a category whose exclusion is expressively stated by the law then it is excluded regardless of other criteria that may be in the favor of using the respective piece of evidence (such as the public interest to obtain the sentencing of the person that is incriminated by the evidence), with the exception of the existence of exceptions from the exclusion of evidence.

Recently, common-law jurisdictions have elaborated discrete norms regarding the acceptance and the exclusion of illegal or unloyal evidence, provisions regarding human rights becoming the main set of reference for establishing admissibility[9].

As far as the motives that are behind evidence exclusion are concerned, common-law legal systems and the doctrine have identified more than one of these motives: discouraging the investigation bodies to commit illegal acts, protecting citizens' rights, protecting the integrity and the prestige of courts, respecting the state law. The idea of discouraging investigation bodies from committing illegal acts is that it will be realized if the evidence that is obtained through illegal or unloyal methods will lead to the impossibility of obtaining a sentence. Protecting individual rights is mainly focused on human rights, either by their substantial aspect or by their procedural aspect, as the sanction of exclusion protects the fundamental nature of these rights. Naturally, both the motive of discouraging investigation bodies in regards to potential abuses and the motive of protecting human rights are tightly connected, as the reason for which the violations of legal norms by the investigation bodies are sanctioned exactly because these norms protect individual rights. Motives related to the integrity of judiciary systems have their base exactly in the fact that courts are not supposed to tolerate illegal acts because, by having such behaviors, they could be able to affect public perception regarding the act of justice and the trust in the judiciary system. Otherwise, trials will be "tainted" by the admission of illegal evidence, and the role of courts is that of "supporting" the law and not of approving violations in law by supporting, even indirectly, illegal investigation activities that will lead to obtaining sentences (see footnote 9). In the legal systems where the judge has the liberty of

[9] William van Caenegem, New trends in illegal evidence in criminal procedure: general report – common law This Report was prepared for the World Congress of the International Association of Procedural Law, Salvador, Brazil, 2007., Bond University, Queensland, Australia, pg. 96, http://epublications.bond.edu.au/law_pubs/223.

excluding evidence, even if the main motive for excluding evidence is one of the previously shown ones, the judge can also refer to other motives for which the sanction will be applied, according to concrete circumstances.

In the Explanatory Memorandum of the NCPC it is shown that the Project explicitly regulates for the first time the principle of procedure loyalty in the administration of evidence, for the purpose of avoiding the use of any means that may be made with the purpose the wrongful administration of a piece of evidence or that might have the effect of provoking the carrying out of a crime, for the purpose of protecting the person's dignity, as well as his or her right to a fair trial and a private life. The institution of exclusion of illegally or unloyally administered pieces of evidence knows a detailed regulation, as the theory of legitimacy is utilized, which places the debate in a larger context that considers the functions of the criminal trial and of the juridical decisions with which these are ended in. Considering the nature of this institution (adopted in the continental legal system from common-law tradition) as well as the jurisprudence of the European Court of Human Rights, the evidence that is administered with the violation of legal provisions can be exceptionally used if they do not bring harm to the equitable character of the criminal trial as a whole. On the level of principles, even if the Explanatory Memorandum has no obligatory force, it can constitute an important element in interpreting the provisions of a normative act, since from this source important information regarding the object and the purpose of a normative act norm can be deduced.

The Explanatory Memorandum becomes even more important as we are getting close to the moment the normative act will be put into effect, and the ulterior interpretation of a normative act, as we get further away from its adoption, can be an evolutional one, capable of starting a discussion about the initial jurisprudence and even about the intent of the authors of the act, an intention that with the passing of time tends to become obscure, controversed and inaccessible to the larger audience.

From the Explanatory Memorandum we can observe that the legislator has understood to offer special attention to the way in which criminal trial evidence are obtained, as well as the way in which they are administered. As such the principle of loyalty in evidence administration is referred to, a principle expressly regulated in art. 10 of the NCPC and by the good faith that must govern the activity of evidence handling in the criminal trial. More so, it is expressly shown that the purpose of this principle is to protect human dignity as well as to protect a person's right to a fair trial and to a private life.

As a rule, the sanction of exclusion intervenes following the violation of the legality and loyalty principles in evidence handling, in the moment the evidence was obtained or administered. On the other hand, the principle of free assessment of the evidence appears during the criminal trial and after the evidence has been administered and after the loyalty and legality of their obtainment and subsequent administration had been verified. On the subject of evidence that is tainted as far as its credibility is concerned, during the criminal trial either the sanctioning of the respective piece of evidence can intervene, either the court can apply the principle of free assessment of the product and to declare that, in relation to the evidence ensemble, priority must be given to other evidence, but the reasonings are different. As such, if the sanction of exclusion will be used, it must be applied exclusively on considerations related to the way in which the evidence was obtained or administered (for example, a confession in which a certain person is identified as the culprit that was obtained through violence on the part of the investigation bodies must be first and foremost excluded because it is not credible evidence). If the evidence was legally obtained and administered, but the criminal prosecution body or the court deems that they cannot base their decision on the evidence as it is lacking credibility, they must not exclude the evidence, but apply the principle of free assessment on the evidence (for example, a confession by which a person is identified as the culprit, legally obtained and administered, but that contradicts other declarations from the file, which place the culprit in another location at the time of the committing of the crime).

In the literature, it has been shown that the illegal character of the evidence can result by the mere means the evidence was obtained (confession under torture) or by the circumstances in which the evidence was obtained and administered (listening to telephone conversations in circumstances not allowed by the law or if the evidence had not been subjected to contradictory debate)[10].

As part of the category of evidence that are inadmissible by their nature, the doctrine offers the examples of: confessions obtained through the use of violence, especially through torture, inhuman or degrading treatment, confessions obtained through the use of threats or other constraining methods (psychological violence), promises, orders, evidence obtained through the violation of the right to remain silent, the use of narco-analysis, hypnosis or resorting to a polygraf[11].

As part of the category of evidence that are inadmissible in connection to the circumstances in which they have been obtained, we offer as examples evidence obtained through police provocation, evidence obtained by the violation of professional

Kuty, L'exigence de loyaute dans la recherché de prevue legale, note sous Cour mil. 18th of December 1997, Revue du droit penale et de criminologie, 1999, p.254-268, apud Gheorghiță Mateuț, op.cit., p. 85.

[11] Gh. Mateuț, op.cit. Tratat de procedura penala. Partea generala. Vol.I p. 85.

secrecy, those obtained by listening or intercepting private conversation and telephone conversation carried out with the violation of legal provisions, illegal searching ordered and executed with the violation of the house[12].

As part of the category of evidence that are inadmissible because of the circumstances of their administration, anonymous witness declarations have been given as examples, taking into account the fact that a witness's anonymity cannot be allowed unless he or she can offer pertinent and sufficient reasons (see footnote 12: Mateuț, *op.cit.*, p. 90-91). For anonymous testimonies to be utilized in a criminal trial, three conditions that results from the jurisprudence of the European Court of Human Rights must be met: it is necessary for the witness to be able to make use of pertinent and sufficient reasons while explaining her or his refusal, it is necessary for the defense to have had sufficient and adequate occasions to contest the anonymous testimony of the accusing, taking into account art. 6 paragr. 3 of the Convention, by which the accused can interrogate the witnesses of the accusing, in the spirit of the principle of contradictionality, it is necessary for the piece of evidence to not be the only one and not to be the one to determine culpability.

As far as the conditions that must be met in order for the exclusion to be functional are concerned, they are mainly three. The first condition is given by the existence of a violation in the rights and liberties of the accused, rights and liberties than can be of a procedural as well as a substantial nature. The 2nd condition is tied with the existence of a violation of legal provisions in the activity of obtaining or administering the evidence that is able to harm the principle of legality and loyalty in the activity of evidence handling. The 3rd condition is for a connection between the violation of legal provisions and the harm to exist. The first two conditions demand a clarifying analysis, but the 3rd condition is one that in jurisprudence and in foreign literature has generated controversy regarding the concrete manner in which it can be established.

As far as the connection between the harm brought to the accused and the violation of legal provisions is concerned, in foreign jurisprudence there have been some diverging opinions in attempts to establish if this connection must or must not be one of causality. As such, in some situation, in Canadian jurisprudence it has been established that there must be a causality between the violation of legal provisions and the produced harm[13].

In other situations it was considered that the connection needn't be one of causality, a temporal connection being sufficient, in the sense that the violation of legal provisions had taken place before or during the obtainment of evidence[14]. In the support of this point of view it has been shown that the existence of the causality relation is a condition that is too narrow and difficult to apply, which is why the entire event chain in which a violation of legal provisions has occurred must be analyzed. More so, it has been shown that in practice the situation in which a temporal connection between the illegal act and the harm is searched can, as well, generate difficulties as it can be very distant, which is why a connection between the illegal act and the harm must be established according to the particular case. In Dutch literature it has been considered that a temporal connection is not necessarily a causal connection, and the connection must necessarily be one of causality. This point of view has also been shared by the jurisprudence of this country's supreme court[15].

In relation to this last condition it is extremely difficult to establish, on a theoretical level, what are the minimum criteria that must be met in order to establish that there has been a connection between the violation of the legal provisions and the harm, also priority cannot be given neither to the interpretation according to which the connection must necessarily be one of causality nor to the interpretation that deems a temporal connection as sufficient, as such, the interpretation should be made according to the particular case, excluding neither of the two interpretations. Evidently, this interpretation can harm to a certain degree the predictability.

If the evidence is obtained by torture only one condition must be met, and that is that it will be established that the evidence had been obtained in this matter and for it to be automatically excluded. The solution is identical in both the case of the initial evidence as well as the derivative evidence.

As far as the persons that can solicit exclusions are concerned, the previously mentioned legal provisions state that it can be any person whose legitimate interest have been harmed. As such, the exclusion can be invoked by the main procedural subject, more precisely the suspect and the harmed person, as well as those who have been deemed as part of the trial, more precisely the defendant, the civil part and the civilly responsible part. But all these persons must justify an interest, an interest that can be harmed if the exclusion of illegally obtained evidence will not be carried out. More so, the exclusion can also be invoked by default by the prosecutor, in this case the

interest is presumed, as it is acting for the purpose of defending society's general interests. As the interest belongs first and foremost to the accused, the suspect or the defendant, she or he will be the one that will formulate the request for the exclusion of the evidence, other cases existing more or less in theory.

After the court has been notified, the legality of the evidence is verified by the preliminary hearing judge, and he or she has the ability to check the legality of the administration of evidence and of the elaboration of the procedural papers towards the criminal prosecution bodies, as well as the legality of the arraignment made by the prosecutor.

As such, the object of the procedure in the initial hearing is carried out, by verifying, after the arraignment has been made, of the competence and the legality of the initial court notification, as well as verifying the legality of the administration of evidence and the carrying out of the papers by the criminal prosecution bodies. Verifying the legality of the arraignment or lack thereof comes as a distinct judiciary function, the principle of separation of judiciary functions finding their legally expressed mention in art. 3 of the NCPC. In the doctrine it has been shown that this judiciary function comes as a *sui generis* institution, an independent institution that is not a part of either the prosecution phase or the trial phase, this being a result of the systematization of the subject, as the preliminary hearing judge does not elaborate prosecution papers but also does not carry out the judgment [194]. By carrying out this procedural function, the preliminary hearing judge does not have the power of initiative in matters of evidence, but is the guarantor of rights for the phase which precedes the criminal trial, as his or her attributes are expressly and exhaustively stated in the law. Despite all this, through Law no. 255/2013, art. 3 of the new has been modified since, although the rule remains that carrying out a judicial function is incompatible with carrying out another judicial function, by exception, the function of verifying the legality of the arraignment or lack thereof is compatible with the function of carrying out judgment. The legislator went even further and has modified art. 346, paragr. 7 so that there is no possibility for the judge that verifies the legal court notification and commences the judgment to also proceed to judge the case, more specifically the preliminary hearing judge that commences the judgment also carries out the function of judging the case, so that on a practical level, when the judgment is commenced, the two judiciary functions are reunited. From the point of view of the impact these modifications have over the administration and evaluation of evidence in the judgment phase, the modification is to be criticized[16].

According to the jurisprudence of the European Court, in theory it is not forbidden to use in a criminal trial a piece of evidence that has been illegally obtained, if the procedure as a whole is equitable and the defendant has had the possibility of contesting it. In such cases it is considered sufficient to remedy the violation of the rights of the accused by declaring the violation in the internal law and the offering of compensations, without it being necessary to exclude the obtained evidence. From this perspective, introducing in the internal law the procedural sanction of excluding illegally obtained evidence regardless of the reason of illegality might appear as excessive in front of the European Court jurisprudence. In the jurisprudence of the Court a more just meeting is made between the general interest of society, to find the truth so that the ones who have committed crimes will be punished, and the personal interest of the accused persons, which demands the respecting of all their material and procedural rights.

It is a different situation when the obtainment of evidence is realized *with the violation of the person's right to not be subjected to torture or to inhuman or degrading treatment.* In this case, not only *the principle of legality of the criminal trial* is being violated, but also *the respect for human dignity* and, because of this, the approach must be different. If the use of evidence obtained by violating this right would be used in court, it would also affect *the finding of the truth*, as the reliability of the procedure would be placed in discussion. More so, by using this evidence, the moral justification of the calling to account of persons who have committed crimes would be lost. In these conditions, the European Court has drawn some principles regarding the use in trial of evidence obtained through torture, inhuman and degrading treatment, through a famous decision which has gone through intense debate in the literature, pronounced in the Grand Chamber on the 1st of June 2010 in the Gäfgen vs. Germany case.

As a principle, *direct evidence* obtained through these means must be excluded.

In the internal practice it has been stated that the use of violence in order to obtain a declaration in the criminal trial by the prosecution bodies has consequences not only upon the declaration, which cannot be used in trial, as it is a illegally obtained evidence, but also anticipates the existence of elements that constitute the crime of abusive investigation[17].

As far as the *evidence* that are *derivative* from the direct evidence obtained by the violation of art. 3 from the European Convention is concerned, the Court has adopted the rule according to which, it must mainly be excluded if there is a connection of causality between the evidence which was obtained through harmful treatment and the derivative evidence (the "fruit of the

[16] Noul Cod de procedura penala-Nicolae Volonciu,Andreea Simona Uzlau,Corina Voicu,.. Bucharest, Editura Hamangiu, 2014, p.242.

[17] HCCJI crim. s. Dec no. 6218 from the 26th of October 2006, in I. Ciocla, Probele in procesul penal.Practica judiciara, Editura Hamangiu, Bucharest. 2006, p.294-296.

poisonous tree" theory)[18].

As far as the evidence which is derivative from evidence administered by torture is concerned, these will always be excluded, regardless if they were obtained directly or indirectly from the evidence administered by torture. More so, it does not matter if this derivative evidence could have been obtained through other means. These conclusions are to be imposed taking into account the formulation of art. 102 paragr. (4), where the necessary conditions are stated only as far the exclusion of evidence derived from illegal evidence is concerned.

3. Conclusions

In conclusion, in light of these principles resulted from the ECHR, the text of art. 102 from the New Criminal procedure code must be interpreted, more precisely the article which regulates in paragr. (1) the conditions of evidence directly obtained through torture and derivative evidence, and that in paragr. (4) talks about evidence that derives from the ones which had been illegally obtained and that couldn't have been obtained through any other way. But the jurisprudence of the Court refers to evidence obtained through inhuman or degrading treatment and its derivative evidence, while the text of the internal law talk about illegal evidence, regardless of the cause of illegality. In the case of other illegalities, such as the ones in art. 8 of the Convention, the Court applies other rules, allowing their use in court, under certain conditions. For this reason it is necessary to ultimately turn to the rules of the sanction of relative nullity, meaning the exclusion of evidence only if it has produced a harm that cannot be removed in any other way. This harm would be judged by the judiciary bodies according to rules elaborated in the jurisprudence of the European Court, thus reconciling in an equitable manner both the individual interest of the defendant as well as society's general interest. In the case of evidence obtained through torture or inhuman or degrading treatment the sanction of nullity cannot be applied, as we have shown before that that their rules are much stricter.

The way in which exclusion is regulated in the Criminal procedure code offers the judge relatively large space for appreciation when a piece of evidence demands analysis in relation to a concrete situation. The situation is no different in other juridical systems. And that is why the role of the judge is even bigger in the carrying out of this right.

If before the NCPC was placed into effect the jurisprudence was able to avoid the sanction of exclusion, since the old CPC only mentioned it expressly once, after it was put into effect it cannot be considered a sui-generis sanction anymore. What remains to be seen is how it will be applied in the jurisprudence, more precisely the reasons stated by the courts for which it shall be applied and how will judges manage to find a balance between these rights and liberties and the need for criminal punishment. Using the vision of the English philosopher Betrand Russell about the way in which other philosophies must be perceived, we could say that the analysis of methods of regulation or interpretation of legal provisions in various legal systems cannot but made with either an attitude of veneration nor with one of desconsideration. For starters we must try to understand why those legal systems have achieved a certain regulation or why have they ended up expressing their opinions in a certain direction. Afterwards it is required of us to see these regulations and interpretations with a critical eye, and if some of the aspect may seem absurd we should try to see if this sensation is or isn't a result of our prejudice, as we use as reference the legal system that we are "used to" and in the case they are truly absurd, how could they have seemed for someone else, in another era, as being fair. Desconsideration is an obstacle in trying to relate to another legal system, veneration prevents us in perceiving it with a critical eye.

[18] In the English language doctrine we often encounter this problematic under the name of "fruits of the poisonous tree". This theory was generated by the Silverthorneb Lumber v. The United States of America case. In this case, in the year 1920, the Supreme Court of the United States of America had states that federal agents, by the use of illegally confiscated financial documents, have accused a person of committing crimes towards the tax regime, in the end the derivative evidence from these illegally obtained documents were excluded from the case.

THE POSTPONEMENT OF EXECUTION OF THE PUNISHMENT AND THE SUSPENSION OF SENTENCE UNDER SUPERVISION FOR THE CRIMES OF FAMILY ABANDONMENT AND THE PREVENTION OF THE ACCESS TO GENERAL COMPULSORY EDUCATION

Andrei-Viorel IUGAN[*]

Abstract

In addition to the general conditions in which the court may order a judicial individualization measure without depriving a person of its freedom, the legislator created for certain criminal offenses, some regulations derogating from this regime. For these crimes, for reasons related to the protection of family life, if the defendant is aware of his crime, by fulfilling his obligations, the legislator presumed in an Absolut way that there is no requirement to effectively enforce the sentence and execute the punishment, in such cases the court being obliged to postpone the execution of the punishment or to order the suspension of sentence under supervision.

Keywords: *the postponing of the execution of the punishment, suspension under supervision of the sentence, abandonment of family, the prevention of the access to general compulsory education.*

1. Introduction

The imposition of a punishment and its effective enforcement are not likely to ensure that these measures will achieve the purpose of the punishment and the social reintegration of the person who has committed an offense in each case. Often the detention environment transforms the persons subject to such manner of punishment in more dangerous criminals, and in many cases imprisonment doesn't contribute to the social reintegration of offenders, but on the contrary, to their social isolation. Also in economic terms, imprisonment is expensive, involving significant financial costs for the state. In some specific cases, reported to the gravity of the crime and to the person of the offender, enforcing a punishment is not justified.

In these circumstances, the legislator has created some mechanisms of judicial individualization of the punishment that allow this, if certain conditions set by law in a limitative manner, are met: the postponing of the execution of the punishment and the suspension of the execution of the punishment. In the event of committing certain offenses, the legislator went further on, practically imposing on the court to rule in the sense of applying an execution measure without depriving a person of its freedom, in the cases where the conditions provided for by law are met[1].

2. Content

2.1. The legal provisions

According to Art. 378 of the Criminal Code, it constitutes the offense/crime of family abandonment the following actions: when the person who has the legal obligation of providing support to the person entitled to the support, commits one of the following actions:

a) the departure, the banishment or letting unaided, and by these actions exposing him to physical or moral suffering;

b) failure to fulfill the obligation of support as provided by law, with bad faith;

c) failure to pay, for 3 months, the alimony established by a judicial way, with bad faith;

shall be punished with imprisonment from 6 months to 3 years or a fine.

With the same punishment is sanctioned the failure to execute, acting in bad faith, by the convicted person, the periodic obligations established through a court judgment, in favor of the persons entitled to receive support from the victim of the offense.

Criminal proceedings shall be initiated upon prior complaint of the injured party.

If, until the decision of conviction becomes definitive, the defendant fulfills its obligations, the court may rule, if appropriate, case by case, the postponing of the execution of the punishment or the suspension under supervision of the sentence, even if the conditions stipulated by law for this are not met.

Regarding the crime of preventing access to compulsory education, it is incriminated in Art. 380 of the Criminal Code as follows: the parent or person entrusted by law with the custody of a minor, that unduly withdraws or prevents by any means a minor to attend compulsory education, shall be punished with imprisonment from 3 months to one year or a fine .

If, until the decision of conviction becomes definitive, the defendant ensures the resumption of class attendance by the minor, the court may rule, if appropriate, case by case, the postponing of the execution of the punishment or the suspension of the

[*] PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **andyiugan@yahoo.com**).

execution of the punishment, even if the conditions stipulated by law for this are not met.

The old legal regulation/legal provisions also stipulated the obligation of the court to order the conditional suspension of execution of the punishment for the crime of family abandonment (the crime of preventing access to compulsory education having no counterpart in the old Code). Thus according to Art. 305 para. (4) - (5) of the old Criminal Code (1969), if the parties haven't reconciled, but during the trial the defendant fulfills its obligations, the court, when determining the guilt of the defendant, rules in the sense of a suspended conditional sentence, even if the conditions laid down in Art. 81 are not met. The revocation of the conditional suspension occurs only if, during the probation period, the convicted person commits the crime of abandonment of the new family again.

2.2 Conditions

In case the conditions laid down in Art. 378 para. (5) and Art. 380 para. (3) of the Criminal Code are met, the court is obliged to rule in the sense of postponing of the execution of the punishment or suspension under supervision of the sentence. Unlike the general background of these measures, the legal texts mentioned above do not establish a facultative choice for the court, but an obligation. The court nevertheless retains the possibility to determine which of the two institutions best fits the crime and the defendant's degree of dangerousness. Although the legal text does not provide for, we consider that nothing prohibits the court to rule in the sense of waiving the application of a punishment if it considers that it wouldn't be appropriate to set such a penalty and the other conditions laid down in Art. 80 of the Criminal Code are met.

Therefore, in order to rule in the sense of the postponing of the execution of the punishment or the suspension under supervision of the sentence for the two types of criminal offences, the following conditions have to be met:

- to have committed in the consumed form a crime of abandonment of family or the crime to prevent access to general compulsory education.

The offense must be typical, attributable and unjustified. For example if the person liable for providing the legal support is acting in good faith and doesn't have the objective possibility to actually pay the support alimony, the solution required is acquittal. Likewise, a parent cannot be convicted for the crime of preventing the child to attend school, if that parent is abroad and the actual care and support of that child is performed entirely by the other parent.

Also, for the offense/crime of family abandonment, the court cannot rule in the sense of postponing of the execution of the punishment or the suspension under supervision of the sentence, if the person entitled to support/alimony support withdraws his/her complaint. In this case the court shall rule cessation of the criminal trial.

The legal provisions regarding the postponement of the execution of the punishment and the suspension of sentence under supervision are applicable only when the crime/offense is in a consumed form, the only attempt for any of the two offenses not being incriminated by law.

- the defendant has to have fulfilled its legal obligations, in the crime of family abandonment, and for the crime of preventing access to compulsory education – to have provided that the minor had resumed attendance of classes, between the time calculated from the preparation of the indictment, until the judgment becomes final.

If the defendant meets its obligations, or ensures the resumption of school attendance during the criminal investigation, before the preparation of the indictment, the prosecutor will proceed to the dismissal of the case, the defendant's conduct having the value of a non-punishment clause. In the old regulation there was no provision of such a cause for non-punishment. Therefore, if the defendant performed his duties during the criminal investigation, the prosecutor should have notified the court, which will have ruled in the sense of conditional suspension (of course if the court didn't assessed that the offense doesn't have the concrete degree of social danger of an offense, in which case it would dropped the charges against that person).

Also we consider that if the defendant meets its obligations, or ensures the resumption of school attendance during the investigation, but the prosecutor still pursues a criminal trial, the court will be obliged to pronounce the termination of criminal proceedings under Art. 16 lit. h of the Criminal Procedure Code. The court is obliged to ascertain the incidence of a cause that removes the functional ability of the criminal action (the existence of a cause of non-punishment in this case), even if this cause wasn't found by the prosecutor, in these conditions the court not being able to rule in the sense of postponing the execution of the punishment or the suspension of sentence under supervision.

-the defendant is of full age.

According to Art. 114 of the Criminal Code, towards the minor who, at the time of the offense, is aged between 14 and 18, and non-custodial or custodial educational measure shall be taken. Since the legislator has ruled against the possibility of juvenile sentencing, the court obviously could not postpone or suspend the execution of punishment under supervision.

Regarding the two offenses covered by this study, we consider excluded the possibility that a minor would commit the crime of preventing access to compulsory education. But we do not exclude the possibility that a minor is liable to pay alimony support to his minor child, thus committing the crime of family abandonment if he does not pay acting in bad faith.

If the above conditions are satisfied the court will be obliged to rule in the sense of postponing the execution of the punishment or the suspension of sentence under supervision (as shown above court may also rule in the sense of waiver of penalty) even if the conditions provided for in Art. 83 or Art. 91 of the Criminal Code are not met.

Therefore nothing will prevent the court to postpone the application of the punishment if it establishes for the crime of family abandon a sentence of 3 years, even if according to Art. 83 para. (1) of the Criminal Code, the fixed penalty ought to be of 2 years at most. Also the postponement or suspension under supervision is mandatory, even if the defendant was previously convicted, regardless of the nature of the offense committed, the form of guilt or the penalty sentence imposed.

Being a compulsory measure, the court shall order the postponement or suspension, even if reported to the person of the defendant, his previous conduct before committing this crime, his efforts to eliminate or mitigate the consequences of his offense/crime and his means of correcting, the court would appreciate it necessary to enforce the sentence.

At the same time the court will choose a non-custodial way of judicial individualization, even if the defendant has evaded prosecution or trial, or tried thwarting finding the truth or the identification and criminal accountability of the author or participants.

Regarding the condition on the agreement to perform unpaid community work we consider that we must make a distinction between the methods of individualization that the court will take.

If the court decides upon the postponement of execution of the punishment, the legislator leaves it to the judge of the case the choice of imposing the obligation on community work. If the court considers that the reintegration of the accused can be made only by applying this obligation, his consent is necessary. Otherwise, we believe that the court shall decide upon postponement, with or without the consent of the defendant in this respect, because Art. 378 para. (5) and Art. 380 para. (3) of the Criminal Code have priority towards Art. 83 par. (1) c [2].

If the court considers it necessary to decide suspension of sentence under supervision, then it is compulsory to oblige the defendant to perform community work for a period between 60 and 120 days. In this case, the condition of the agreement to provide unpaid community work must be fulfilled, because otherwise there would be a violation of the Constitution and the European Convention on Human Rights[3].

As emphasized in the legal literature, ignoring the conditions laid down in the general part of the Criminal Code shall not cause the creation of new institutions. Therefore if in the case of a penalty fine the only solution is postponement of application of punishment, because suspension under supervision for a fine would be a hybrid institution that borrows the subject from postponement institution and the procedure from the suspension institution[4].

However, if the defendant fails to fulfill his legal obligations required for the offense of family abandonment, or doesn't provide for the resumption of school attendance, for the offense of preventing access to compulsory education, until the final judgment, the court will be able to rule in the sense of postponement of application of the punishment or suspension of sentence under supervision, but only if the conditions laid down in the general part of the Criminal Code are met. The provisions of Art. 378 par. (5) and Art. 380 par. (2) of the Criminal Code are derogatory in favor of the defendant, and do not allow to reach the conclusion that, if the obligations are not fulfilled the defendant could not benefit of a non-custodial modality of judicial individualization[5].

Problems may arise if besides the crime of family abandonment or preventing access to general compulsory education, the defendant has committed other competing crimes.

In this regard we consider that the distinctions made under the old legislation should remain valid. The court shall order, as a mandatory rule, postponement of application of the punishment or suspension under supervision of the sentence if the conditions prescribed by the Art. 378 par. (5) or Art. 380 par. (3) of the Criminal Code are met. With regards to the competing offense/crime the court may order postponement of application of the punishment or suspension under supervision of the sentence if the conditions of the general part of the Criminal Code, namely Art. 83 and 91 of the Criminal Code are met. The court cannot rule on postponement or suspension with regards to all offenses/crimes under Art. 378 par. (5) or Art. 380 par. (3) of the Criminal Code, because the exceptional conditions laid down in these legal texts with regards to all offenses/crimes are not met. Therefore for each offense/crime, the court will rule by a separate non-custodial modality of judicial individualization, and the probation periods will run in parallel. Merging of the punishments and the imposition of an increase of penalty will be made only if the two measures will be revoked.

If for the second offense/crime the court considers that the conditions with regards the

[4] A. Rîșniță, I.Curt, *read*, p.168.

[5] To the same effect, according to the old legislation, solution which is maintained in present times as well, the Court of Appeal decision 512/1998, in I.C.Morar, *Suspendarea condiționată a executării pedepsei. Culegere de practică judiciară*, Bucharest, Ed. CH Beck, 2007, p.176-177.

postponement of application of the punishment or suspension of sentence under supervision are not met, the court shall order its effective execution, without this influencing in any way on the solution given with regards the crime of family abandonment or preventing access to general compulsory education. In this regard, the application of the punishment will be postponed, or execution of sentence will be suspended. Of course the requirements and the supervision measures will remain without object and cannot be executed. Merging these punishments and applying an increase of penalty can be achieved only in the event of revocation of the postponement or suspension of the execution[6].

2.3. The term of surveillance

According to art. 2 of Law no. 253/2013, the term of surveillance or the supervision period designates the time frame in which the person towards which one of the following measures has been taken: the postponement of application of the punishment, the suspension of sentence under supervision, the release on parole or a non-custodial educational measure (in the case of minors), must comply with the obligations or surveillance measures ordered by the court in its task.

In case of postponement the surveillance term is 2 years, while in the case of suspension under supervision the surveillance period is between 2 to 4 years without being shorter than the length of sentence given.

The surveillance term begins to run from the date of the final judgment of the court, and being a substantial term, the period shall be calculated on full days.

Regarding the crimes of family abandonment or preventing access to general compulsory education there are no derogations with regards the term of supervision.

2.4. Surveillance measures and obligations

Art. 85 of the Criminal Code states that during the term of supervision, the person towards which the postponement of execution was ordered, must meet the following supervisory measures:

a) to report to the probation service, at the dates set by it;

b) to receive visits from the probation officer assigned with his supervision;

c) to notify in advance, when moving to another address and any travel periods of over 5 days;

d) to communicate when changing jobs;

e) to communicate any information and documents, in order to enable control of his sources of livelihood.

The court may require that the person towards which the postponement of execution was ordered to carry out one or more of the following obligations:

a) to attend a school/training course or vocational training;

b) to perform unpaid community work for a period between 30 and 60 days under the conditions set by the court, unless that, due to health reasons, the person cannot perform the work;

c) to attend one or more social reintegration programs run by the probation service or organized in collaboration with institutions from the community;

d) to accept control measures, treatment or medical care;

e) not to communicate with the victim or members of his/her family, with the people with who he/she committed the crime or with other persons, determined by the court not to be approached;

f) not to be in certain places or at certain sports events, cultural or other public gatherings, determined by the court;

g) not to drive certain vehicles determined by the court;

h) not to hold, to use and to carry any type of weapons;

i) not to leave Romania without the court's consent;

j) not to occupy or to perform public functions, his/her profession or the activity that has been used for committing the offense.

Regarding the suspension of sentence under supervision, according to Art. 93 of the Criminal Code, during the surveillance period, the convicted person must respect the following supervisory measures:

a) to report to the probation service, at the dates set by it;

b) to receive visits from the probation officer assigned with his supervision;

c) to notify in advance, when moving to another address and any travel periods of over 5 days;

d) to communicate when changing jobs;

e) to communicate any information and documents, in order to enable control of his sources of livelihood.

The court imposes that the convicted person has to execute one or more of the following obligations:

a) to attend a school/training course or vocational training;

b) to attend one or more social reintegration programs run by the probation service or organized in collaboration with institutions in the community;

c) to obey the control measures, treatment or medical care;

d) not to leave Romania without the court's consent.

During the surveillance period, the convict will perform unpaid community work for a period between 60 and 120 days, under the conditions set by the court, unless because of health reasons, he/she cannot perform the work.

[6] G. Antoniu, in G. Antoniu and C. Bulai (coordinators), *Practica judiciară penală*, vol. II, Bucharest, Ed. Academiei Române, 1990, p.76.

The new Criminal Code has regulated the possibility to modify or terminate the obligations and supervisory measures if during the period of supervision, some changes that require such measures occur.

2.5. The revocation of the postponement of execution and of the suspension under supervision of the sentence, for the crimes of family abandonment or preventing access to general compulsory education

According to Art. 88 of the Criminal Code (and Art. 96 Criminal Code) the postponement of execution and of the suspension under supervision of the sentence is revoked in the following three cases:

a) If during the supervision term the supervised individual, acting in bad faith, does not comply with or does not perform the supervisory measures or obligations established by law.

b) If until the expiration of the supervision term the supervised person does not fully meet the civil obligations established by the court's decision.

c) If during the supervision term the supervised person has committed a new offense/crime, intentionally or with exceeded intention, discovered within the period of supervision, for which a conviction was ordered even after this period (if the court ruled on suspension under supervision of the sentence, the revocation will only intervene if in the case of the new offense/crime the court sentenced imprisonment, while in the case of postponement the revocation will occur even if the penalty applied is a criminal fine). If the subsequent offense is committed by negligence, the court may revoke or maintain the postponement of execution, or the suspension under supervision of the sentence.

In the case of suspension of sentence under supervision, the legislator provided in Art. 96 par. (3) a particular cause for revocation, namely if the penalty fine that accompanied the imprisonment penalty under Art. 62 was not enforced and was replaced by imprisonment under Art. 63 par. (2) or art. 64 par. (5) and par. (6), the court shall revoke the suspension and enforce the sentence, to which it will add the imprisonment penalty with which the criminal fine was replaced.

Regarding the two offenses covered by this study, it should be noted that there is a legal provision such as that provided by Art. 305 par. 5, which stated that revocation of conditional suspension, occurs only if, during the probation period, the convicted person commits again the crime of family abandonment. Therefore, now if the court rules on suspension under supervision for any of the two offenses/crimes mentioned above, this suspension will necessarily be revoked if the convicted person intentionally or with mixed guilt (both intentionally and by negligence) commits a crime (in the case of a crime of negligence a suspension of the sentence can be imposed under Art. 96 par. 6) during the period of supervision, regardless of the nature of the offense/crime.

However, according to the majority opinion prevailing in the legal doctrine and in legal practice, we consider that the revocation will not operate if the new offense/crime is still a crime of family abandonment, or of preventing access to compulsory education and the court deferred or suspended under supervision the sentence for this new crime. Therefore, as shown in the legal doctrine, otherwise this would dispossess of content the measure of suspension imposed for the second penalty, despite the fact that the defendant has fulfilled its legal obligations and would have deserved to benefit from an actual suspension of execution of the sentence. The intention of the legislator was to exert some pressure on the defendant to determine him/her to fulfill his/her legal obligations, and once this goal achieved, the interest and justification of the penalty imposed disappears; whether this method to compel the defendant has been used once or several times, granting him/her actual freedom becomes even necessary in order for him/her to be able to fulfill its duty/legal obligations towards his/her family[7].

An argument in this regard is the fact that in the project for the new Criminal Code adopted by Law no. 301/2004, which however never came into force, it is expressly stated that special conditional suspension for the offense/crime of family abandonment shall be applicable only for the first conviction of the offender for this kind of offense/crime (Art. 228 par 5 of the Criminal Code). If the legislator wanted this provision to take effect, it would have been included in the new Criminal Code, applicable at this time.

Maintaining the postponement of execution or the suspension of sentence under supervision will be ordered regardless whether the offense/crime committed during the term of surveillance is different from the one for which the postponement or suspension was ordered (originally the defendant committed a family abandonment and afterwards he/she commits a crime in order to prevent access to compulsory education or vice versa) and regardless whether for the new offense the court rules on postponing the execution of punishment or suspension under surveillance.

The revocation of the suspension under supervision may be ordered in case of failure to execute, acting in bad faith, the penalty fine accompanying the imprisonment penalty. Exceptionally, one might imagine some situations when the defendant through the crime committed pursues a material benefit, for example a parent that withdraws his child from school in order for both of them to work (paid work) at building a house. In these cases the court could sentence the convicted person to pay a criminal fine and in case of failure, acting in bad

[7] G. Antoniu, note II to criminal decision no. 896/1971 of the Gorj County Court in the Romanian Journal of Law (decizia penală nr. 896/1971 a Tribunalului Județean Gorj în Revista Română de Drept), nr.2/1974, p.145-147.

faith, this measure could be replaced with imprisonment.

Failure to respect, acting in bad faith, the measures or obligations imposed by the court (including the ones regarding community work), require the revocation of the postponement or of the suspension under supervision of the sentence, for these crimes, as well.

Regarding the revocation of postponement or of the suspension of sentence under supervision given due to failure to execute the civil obligations established by the court, there are some remarks to be made. As emphasized in the legal literature, this case of revocation is inapplicable for the offense of family abandonment in the version of unpaid alimony, because the civil action in this case is devoid of purpose given that the injured party is already in possession of an enforceable title[8]. Whereas for the other normative ways of committing the offense of family abandonment, the injured party may still pursue civil action, in case there are moral damages suffered. By fulfilling the obligations imposed for the offense of family abandonment done by leaving, it is considered that the person that is required to provide the support has fulfilled the obligations if he/she resumes providing support and care, and not if it pays any potential moral damages, because these can be determined only by court order, until then not being certain nor legally demandable. While it would be hard to imagine a practical example, at least theoretically a civil action covering moral damages, could be initiated also when the offense was done by failure to pay alimony.

We consider that for the offense/crime of prevention of access to compulsory education, civil action is always admissible, this kind of offense being likely to cause material or moral damages. In all these cases, if the court ordered the postponement of application of punishment or the suspension of sentence under supervision, and admitted the civil action, failure to execute the civil obligations will attract revocation of the suspension[9].

2.6. The cancellation of the postponement of application of the punishment and of the suspension of sentence under supervision for the crimes of family abandonment or preventing access to general compulsory education.

The cancellation of the postponement of application of the punishment and of the suspension of sentence under supervision consists in abolishing the court's order of imposing a non-custodial individualization modality, when this modality was struck from the beginning by a critical irregularity, because at the time of delivery of the final solution the court had no knowledge, due to circumstances that are not attributable to it, of the existence of a criminal record of the defendant, information that, if it had been known, it would have excluded the incidence of this modality of judicial individualization.

Seeing that the postponement of application of the punishment and of the suspension of sentence under supervision for the crimes of family abandonment or preventing access to general compulsory education enjoy a derogation, being disposed independently of the criminal record of the defendant, we consider that the institution of cancellation is not incidental for these two offenses.

By exception, if the court ordered the postponement of application of the punishment or the suspension of sentence under supervision, without the conditions laid down in Art. 378 par. (5) or Art. 380 par. (3) of the Criminal Code being met, it does it under the legal provisions of the general part of the Criminal Code (Art. 83 and 91 of the Criminal Code).

2.7. The effects of the postponement of application of the punishment and of the suspension of sentence under supervision for the crimes of family abandonment or preventing access to general compulsory education.

There are no derogating provisions with regards the effects of postponement of application of the punishment and of the suspension of sentence under supervision for the two offenses covered by this study.

Regarding the postponement of application of the punishment, Art. 90 of the Criminal Code determines that for the person against whom a postponement of the punishment has been ordered, the actual punishment will no longer be enforced, and that person will not subject to any revocation of rights, prohibitions or incapacities that could result from the offense, if until the end of the surveillance period, that person has not committed a new offense, and the postponement was not revoked.

If for any of the two offenses, the court ordered the suspension of sentence under supervision, the punishment is considered as executed if the convicted person has not committed a new crime discovered by the end of the supervision period and revocation of suspended sentence under supervision was not ordered. From the end of surveillance period starts to run the terms prescribed by law for the rehabilitation of the convicted person.

3. Conclusions

We consider objectionable the option of the legislator to incorporate in the new Criminal Code the mandatory application of non-custodial individualization modalities for the offense of family abandonment, and to extend it to another offense. This legal provision can lead to paradoxical situations in practice, situations in which a person who committed more crimes to serve the sentence for some, and for

others to benefit from postponement of application of punishment or suspension under surveillance. Also, it made possible the existence of supervisory terms that run in parallel for concurrent offenses. Another criticism is the possibility for a person to commit how many crimes of family abandonment or of preventing access to general education compulsory he wants, because if during the trial he fulfill its legal obligations or assures the resumption of class attendance, he will not actually execute the punishment.

THE ESTABLISHMENT, INDIVIDUALISATION AND CHANGE OF THE REGIME REGARDING THE IMPRISONMENT PENALTY

Dantes MARCOVICI[*]
Călin MOCANU[**]

Abstract

In this study our aim is to analyze the way of establishment, individualize and change of the arrangements for the execution of the punishment in relation to changes brought about by the Law no. 254/2013, on the implementation of the measures and penalties of imprisonment arranged by legal bodies during trial, published in the Official Gazette no. 514 of August 14 2013.

Also, we will examine the role of the Commission for the establishment, individualization and changing arrangements for executing the sentences of imprisonment, including through the atributions in provisional determination of the arrangements for implementation, the role of the judge appointed for the supervision of imprisonment and the court ruling in the case of application of these schemes.

Keywords: *Establishment, change, individualization, imprisonment, sentencing regime.*

Preamble.

The domain of the study thematic is represented by the execution of the punishment regimes with an emphasis on how to laying down, individualize and change of such schemes, in relation to changes brought about by Law No 254/2013, on the implementation of the measures and penalties of imprisonment arranged by legal bodies during trial.

The importance of the proposed study lies in the fact that arrangements for the execution of penalties is applied in one form or another to all imprisoned persons, both to the ones which are under the enforcement of a punishment, implemented by a final judgment and to the persons for whom they decided that preventive arrest measure, constituting that set of rules applicable to the entire period of arrest, even if some of them are not to be found in the same form in different regimes of arrest.

These rules shall determine ratios of life in prison, natural ratios in an institution that apply strict rules of supervision, security, escort, safety. In the normal circumstances of the enforcement of the rules, daily life in the penitentiary shall be conducted in such a way that the re-socialization programs, work, training and recreational activities are to be carried out and from them should be able to benefit all sentenced people regardless of the arrangements for the enforcement of punishment in which they are situated.

The object of study is the presentation of the establishment and individualization way of the schemes and changes intervened during the execution of punishment, as the preparation of the detainee for his release must be carried out in the very first day of arrest, this constituting the purpose of all steps taken, for a fundamental objective respectively the increase of the condemned person's capacity of social reinsertion to facilitate, as far as possible, the detainee rehabilitation for a life of freedom, to an attitude of compliance with respect to the values of society, so the gradual change during the period of detention of the regime for the execution of punishment in one less severe is of crucial import to achieve this goal.

In the first section of the study we will present a brief history of the systems and procedures for the enforcement of penalties and after that in the second section will be an overview of European principles and provisions as regards the arrangements for the application of penalties of imprisonment, including the relevant Romanian legislation.

The study is to be formed in the third section of presentation, arrangements for the enforcement of prison sentence with an emphasis on how to laying down, individualize and changing of these schemes, in relation to changes brought about by the Law no. 254/2013, on the implementation of the measures and penalties of imprisonment arranged by legal bodies in the trial.

1. Short history of the systems for the execution of the punishment.

In the existence of punishment institution, prison was one of main punishments, being used from the most ancient times as being fully customizable to the needs of penalty promised to commission of the crimes.

In the whole ancient world and Middle Ages prison was considered the anteroom of death, a respite before tantalizations and the capital execution.

** Research assistant, PhD, Faculty of Law, "NicolaeTitulescu" University, Bucharest (e-mail: **mocanucalin@yahoo.com**).

It was not until the 18th - century, when the situation of prison sentence shall be assessed by the progressive leaders, for the detaining of those who could be redeemed or could by themselves pay for the guilt. Appear as variants of detaining: imprisonment in common, the American Pennsiylvanian system, the Auburnian and Progressive joint regime, the open regimes[1].

In the 19th century have been tried several types of penitentiary systems. The imprisonment in common system lies in the fact that both during the day, and at night-time, the sentenced people work and are imprisoned in common. The Cellular System (Pennsylvanian or Philadelphian) has occurred in the year 1790 in the region Pennsylvania, U.S.A. , by knowing two forms of detention: the absolute (lonely) cellular system and the separation cellular system. The Auburnian system (system of silence) is a joint system, characterized by the fact that during the day the imprisoned worked and ate in common, with the obligation to keep quiet, at night-time being isolated in rooms, and has been applied for the first time in the year 1920, at the jail from Auburn - the State of New York, U.S.A.

This latter system has been the basis of the progressive system, which, along with the reformator of an American origin are the first two forms of the sentence of imprisonment which provide the possibility of licence supervision.

The progressive system is of English origin, being proposed by Lord Crofton[2] , and devotes this opinion saying that in order to integrate into society, the convicted had to get gradually from the cellular regime to freedom. This system had 3 stages:

First stage have a fixed duration of 9 months, during which the sentenced people were isolated both in time of day, as well as at night, in the second stage the sentenced men were isolated only at night, during the day they did work in common and on the basis of their behaviour and thoroughness in their job, they could obtain some advantages and advance in a higher class or could be kept in the cell and during the day.

Finally the third stage was represented by provisory licence supervision, innovative element and kept up nowadays by the laws of most of the States. The sentenced was released under the control and supervision of the authorities of the state[3] .

A similar version of the progressive system for the execution of the punishment is the Irish system, it involves elements of the Auburnian system and the Pennsylvanian system. Irish gradually system involves 4 stages, the first and the second being similar to those in English system, adding the period of execution of the sentence in intermediate institutes and being finalised with the licence supervision. The passing of the sentenced from one stage to the next was conditional on good behavior, put to the test for the duration of the execution.[4]

The system of credits (marks) is an auxiliary technical means often used by the gradually system and shall consist of the measurement and duration of punishment on the basis of the number of points which accounted for quantifying labor and of the proper manners of the sentenced. The convict stood up in class, achieving improvement of the regime and benefits in proportion to the number of points obtained[5].

The progressive system regarding the schemes of the execution of the punishment was applied in Romania during the period from 1929 - 1945, when the law of enforcement of punishments of the year 1929, was extremely drawn up in relation to a description of the systems of regime in the sense that there were several schemes for the enforcement of penalties and with a wide range of penitentiaries with a profile on beggary, stray, criminals usually, thieves and violent criminals, criminals, minors, women, as well as other categories.

At present in the whole of the community of European countries the progressive system is used in one form or another and is improved by adapting criminal penalties without deprivation of freedom or by replacing imprisonment with punishment restrictive of rights. The current European penitentiary system tends towards the possession in common, the emphasis being on the conduct in common of occupational activities, labor, sports, training and education, combined with the permission of exit of the penitentiary the half opened or opened arrangements.

2. European provisions and principles as regards the arrangements for the application of penalties of imprisonment and relevant Romanian legislation on the matter.

The Council of Ministers of the Council of Europe on 12 February 1987 adopted Recommendation no. R (87), with regard to European rules on prisons, which consists of a European version of the Assembly of minimum rules for treatment of prisoners. This includes 100 provisions referring among others to: basic principles; the administrations of penitentiaries institutions; staff; the detention regime; rules applicable to different categories of sentenced.

A number of principles which tend toward speeding punishment progressiveness of responsibilities and reduce effects of repressive times of stress have been regulated in the the content of

Recommendation No R(89) 12 of the Committee of Ministers of the Council of Europe, adopted on 13 October 1989 and were thus laid the foundation of the efforts of the penitentiary administrations of the West Europe for transformation of the penitentiaries in institutions of re-socialization.

Recommendation of The Committee of Ministers of the Member States relating to European Penitentiary rules REC(2006)2 (adopted by the Committee of Ministers, on the date of January 11 2006,) shows that all imprisoned persons will be treated according to the respecting of the human rights, and point 1 provides that imprisoned persons shall keep all the rights which have not been withdrawn by law, after the decision of the court to sentence them to imprisonment or preventive arrest.

European penitentiary rules also show that the restrictions imposed on imprisoned persons must be reduced to the simple bare necessities and shall be proportional to legitimate objectives for which they were imposed, life in prison should be as close as possible to the positive aspects of life from outside prison, and each period of detention should be managed in such a way as to facilitate reintegration of the imprisoned persons in the free society.

In accordance with the provisions of the Constitution of Romania and in our country have been adopted a series of laws and decrees, which form national law and is an important factor of normative regulations and social integration, which shall establish measures by which it shall apply the provisions in respect of progressiveness punishment with imprisonment for life and prison sentence and arrangements of enforcement.

The new penal code adopted by Law No 286/2009, published in the Official Gazette no. 510 of 24 July 2009 and entered into force on 01.02.2014 lays down a progressive system of criminal punishment, showing from the begining the features of infringement and guilt (Article 15 and 16 of Penal Code).

These legal provisions come to foreshadow the progressive individualization of penalty, the judicial individualization being possible by choosing a nature of punishment and its size of the maximum limits and minimum set for each offense in the penal code, or if crime is carried out in full or only as attempt.

By Law No 275/2006, on parole and measures arranged by legal bodies during trial, published in the Official Gazette no. 627 of 20.7.2006 (now repealed) were introduced the 4 arrangements for the execution of the punishment, being consacrated the principle of progressive and regressive type of their implementation, has been introduced the function of the judge delegated to carry out, which supervises, controls and shall exercise the authority over the activity of penitentiaries.

By Law No 254/2013, on the implementation of the measures and their sentences of imprisonment arranged by legal bodies in the trial, had been consolidated these institutions inclusively the institution of the judge being appointed for the surveillance of imprisonment, which ensures by direct control the legality of imprisonment.

In Article 8 of the regulation it is showed that the president of the Court of Appeal in whose territory is a penitentiary, a center of detention and preventive arrest, a center for preventive arrest, an educational center or a center of detention, shall designate annually one or more judges for the surveillance of the imprisonment, from the courts near the court of appeal.

The law also changed the criteria for determining the arrangements for the execution of the penalty, by modifying the establishing and changing criteria, in particular in reference to the amount of penalties which make it possible to framing of the sentenced person in a given regime, but also the time period in which it is taken into account the change of the regime.

3. Establishment, individualization and change for the penalty execution regime in relation to changes brought by Law No 254/2013

The arrangements for the enforcement of sentences of imprisonment are based on progressive and regressive type systems, the sentenced persons passing from one scheme to another, ensure compliance with and the protection of privacy, health and dignity of sentenced persons, of their rights and freedoms, without causing physical suffering and without humiliating the sentenced person.

In Article 30 of Law No 254/2013, on the implementation of the measures and penalties of imprisonment arranged by legal bodies in the course of criminal law, it is stated that arrangements for the enforcement of penalties shall include all the rules underlying enforcement of sentences of imprisonment.

In Chapter III, "arrangements for executing the sentences of imprisonment" of Law No 254/2013 are prescribed the same four schemes for execution, established under this form in the Romanian legislation by the Law no. 275/2006, starting from the most severe regime, which lays down freedom of movement, how to carry out the daily tasks and the conditions of detention to gain access to the least restrictive ones.

The law establishes that the arrangements for the enforcement of penalties are based on progressive and regressive type systems, and the convicted person in the course of execution of the sentence can cross the schemes in one direction or the other, in relation to the conduct and the fulfilment of the conditions laid down by law.

In accordance with the provisions of Article 31 of the law 254/2013 these schemes are: for maximum security, closed, arcade, and open.

The maximum precautionary arrangements shall apply initially to the persons sentenced to life

imprisonment or to the imprisonment for more than 13 years.

In accordance with Article 34 (6) Article 4 of the law regarding the enforcement of punishments, the persons who are running in the maximum security penitentiary "are subject to strict measures to guard, surveillance and escort, are accommodated, as a general rule, individually, carrying out work and carry out their activities educational, cultural, therapeutic, psychological counselling and social assistance, moral religious, school education and vocational training, in small groups, in spaces which are laid down in the penitentiary, under continuous surveillance."

The arrangements for maximum security does not apply to the sentenced persons who have reached the age of 65 years of age; pregnant women or women who have in care a child aged up to one year; persons in first degree of invalidity, as well as those with serious locomotive ailments.

Concurrently, the persons convicted to life sentence or with a sentence of imprisonment of more than 13 years who have reached the age of 65 years would execute penalty involving deprivation of liberty in a closed scheme, and the other categories of persons who cannot apply to the scheme for maximum security shall carry out penalty involving deprivation of liberty in a closed scheme, during the period of the cause which imposed the non-exertion of the maximum safety scheme.

The closed penitentiary scheme is the common scheme in prison, less severe than the maximum-security one, which involves execution of sentence in common, they work outside, with continous surveillance and armed security.

This system shall be applied to punishment greater than 3 years but not exceeding 13 years, in accordance with Article 36 of the Law 254/2013. Closed penitentiary regime is typically to all penitentiaries, but also to special prisons where they have categories such as the young people, women, recidivists, dangerous, the ill or elderly persons, in matters of common rules, those specific adding in relation to what is needed for the categories concerned.

The arcade will be applied to those who have imprisonment punishments greater than one year but less than three years, in accordance with the provisions of Article 37 of the framework law for execution of punishments.

This scheme is easier than those set out above, people sentenced have the ability to be accommodated in common, can be moved in the building unaccompanied, namely in the areas defined in the penitentiary " can perform work and conduct educational, cultural, therapeutic , Etc, outside prison without being guarded with armament, may participate in socio-educational activities in larger groups, and the imprisonment rooms of the Divisions may remain opened during the day.

The least restrictive regime is the opened one, in accordance with Article 38 of the law of enforcement of punishments. To this type of scheme are submitted those who are sentenced to imprisonment for up to one year.

It is considered that these persons have furnished proof of good conduct during the time that they were carrying out punishment in under more severe scheme and represent minimum danger for society, but they can't be released, it is practiced a system of minimum surveillance, most of the times pursuing activities without supervision, but with a periodically check or at different times of the day. Rooms in which they are accommodated are separated from the rest of the condemned men.

Concurrently, the sentenced persons who carry out punishment in open regime are accommodated in common, can be moved in areas unaccompanied inside penitentiary, may perform work and can conduct educational, cultural, therapeutic, psychological counselling and social assistance, moral, religious, training educational and vocational training, outside prison, without supervision, under the conditions laid down in the implementing regulation of this law.

Execution of sentence in the different schemes sets out the question of the methodology of establishment and the transition from a system to another or return from an easier scheme to one more restrictive, in the course of their work to individualize of the arrangements for the enforcement of penalties.

So, in accordance with Article 32 of the law 253/2014 in each penitentiary works a commission for the establishment, individualization and change of the schemes for the execution of imprisonment penalties and consists of: the director of the penitentiary, who is also the president of the Commission, The head of service or office for the implementation schemes and the head of service or education office or head of service or office of psycho-social support.

The arrangements for the execution of the punishment of imprisonment shall be established by the Commission at the first meeting, after the end of the quarantine period and observation or after provisional application of the regime.

In the arrangements for the execution of the penalty, the Commission will take into account the following aspects: the duration of the punishment of imprisonment; the risk of the person convicted; criminal history; age and health of the person convicted; conduct of person convicted, positive or negative, including in the periods of prior detention; identified needs and skills of person convicted, necessary inclusion in educational programs, as well as psychological and social assistance; the availability of person condemned to perform work and to participate in education, cultural, therapeutic, psychological counselling and social assistance, moral, religious, school training and vocational training.

With regard to the degree of risk of the person convicted shall be analyzed several criteria such as : committing an offense by the use of firearms or

cruelty; breakout times leaving the workplace in this punishment or in previous punishments; attempt to escape, forcing of the safety devices or destruction of safety systems; the not justified default of the detainee from the date and hour of output permission in the penitentiary; the introduction, possession or trafficking of guns, explosive materials, drugs, toxic substances or other objects and substances which endanger the safety of the penitentiary, of the official missions or of persons; abetting, influencing or participation in any way in the production of revolt or hostage situations[6].

An important element of novelty brought by Law No 254/2013 is that of provisional application of a type of regime, for a short period of time, after the end of the quarantine period and only if during this period it has not been established the regime of enforcement. The regime of performance actually is to be established by the Commission for the establishment, individualization and changing arrangements for executing the sentences of imprisonment.

According to Article 33 (2). 1 of the law enforcement of punishments, after the end of the quarantine and observation period, to the convicted person, to which hasn't been established the enforcement arrangements it shall be applied on a provisional basis the regime of performance corresponding to the amount of penalty that executes.

So are listed situations in which it is appropriate to apply the provisional arrangements for implementation, namely:

(a) of the date of expiry of the period of quarantine and observation, for detainees which were received in the penitentiary on the basis of their mandate for the execution of the punishment of imprisonment and for detainees whom they have issued the warrant for the execution of the punishment of imprisonment within this time interval;

(b) of the date of termination of his measure of preventive arrest as a result of the definitive judgment and the final conviction in that case;

(c) of the date of substitution, termination of right or revocation measure of preventive arrest for detainees arrested in another question, if they have not been established a system of enforcement.

As regards the followed procedure has to be said that the decision on the arrangements for the enforcement of sentences of imprisonment shall be communicated to the convicted person, and against the laying down way this one may make a complaint to the judge for the surveillance of depriving of freedom, within 3 days of the date on which the sentenced was notified about the decision.

As regards the magistrate invested with the settlement of the complaint we will make a brief parenthesis and we will display the fact that the law 254/2013 proposes a new appointment - the judge of surveillance of depriving of freedom, which replaced the judge delegate, an appointment, more concise for the judge who has the main surveillance missions and for the review of the legality of the parole and measures of imprisonment, including the possibility of listening to sentenced person in the place of arrest.

According to the article 39 paragraph 6 of Law No 254/2013, the judge of surveillance of imprisonment is obliged to resolve the complaint within 10 days from the date of its receipt, and by pronounced concluding will be to rule one of the following solutions:

a) accepts the complaint and rules the alteration of the enforcement regime set by the Commission provided for in Article 32;

b) rejects the complaint, if it is unfounded, belated or inadmissible;

c) takes note of withdrawal of the complaint.

Article 39 lists practically such powers as the judge of surveillance has in the matter of establishing arrangements for the execution of the punishment bounding clearly his administrative activity of the administrative –jurisdictional one, and this distinction is useful, and is aimed at putting an end to the controversies arising after the date of entry into force of law no. 275/2006 regarding the legal nature of the activity of the judge supervising the imprisonment.

From the formal point of view the conclusion of the judge for the surveillance of imprisonment shall be communicated to the person convicted and penitentiary administration, within 3 days of the date of its delivery, and against the conclusion of the judge the person convicted and penitentiary administration may appeal against the court in whose constituency is the penitentiary, within 3 days of the day on which they were notified.

Legislator has provided for this path of attack for the purpose of complying with the constitutional principle of free access to justice, as the mode of establishment and by default the framing of the sentenced person in a more severe or more gentle for the execution, is of crucial importance for the imprisoned, and the censoring by a court of an admnistrative decision, like the one of the commission for the establishment of a system of performance, constitutes a guarantee in addition for the sentenced person.

An appeal shall not suspend the execution of conclusion and it is judged in open court, with citing of the convicted person and of penitentiary administration, and the sentenced person shall be brought to court only when requested by court, in this case being heard. Legal aid is not mandatory, and in the case in which the prosecutor and the representative of the penitentiary administration participate in the

[6] Article 27 of the project of Decision of the Government for the approval of the Regulation for the implementation of the Law no. 254/2013, on the execution of penalties and of the measures of imprisonment arranged by legal bodies in the course on trial displayed on the site of Ministry of Justice (www.just.ro).

judgment, they shall bring into force conclusions and the court pronounces by final court ruling.

Changing arrangements for executing the sentences of imprisonment is also provided by the Commission for the establishment, individualization and changing arrangements for executing the sentences of imprisonment.

According to Article 40 of Law No 254/2013 the Commission is under an obligation that after the execution of 6 years and 6 months, in the event of detention with punishments for life, and one fifth of the time prison punishment, to analyze the behaviour of the sentenced person and the efforts of social reintegration, endorsing a report which shall be notified to the convicted person, under signature.

In its work, the Commission shall take into account the results of the implementation of instruments-standard evaluation of the activities carried out by prisoners, approved by Decision of the general director of national administration of penitentiaries.

The framework law for the enforcement of punishments shows that the regime for the execution of sentences of imprisonment has changed in respect of the imprisonment penalties in immediately inferior regime as severity may be disposed, taking account of the nature and mode of commitment of the offense, if the sentenced person:

(a) had a good conduct, established by reference to the granted rewards and the applied penalties and did not resort to actions that indicate a negative constant behavior; and

(b) kept up the work or was actively involved in the activities set out in the individualized plan of assessment and educational and therapeutic intervention.

Changing arrangements for executing the sentences of imprisonment in a more severe one may be disposed of at any time of the execution of the sentence, if the convicted person has committed an offense or disciplinary action or has been punished for a very serious misconduct or for more serious disciplinary offenses.

The Framework law further provides that if the person convicted has been included in the category of those with degree of risk for the safety of the penitentiary, it will be provided the change of the regime for the execution of imprisonment sentences in respect of the arrangements for maximum security.

From the procedural point of view, the decision of the Comission through which is provided the maintenance or the change of the arrangements for the execution of the penalty, includes also the term of second thought that may not be for more than one year, but he has an obligation to consider, at regular intervals, the situation of the convicted person, at the expiration of the established term.

The decision to change the arrangements for executing the sentences of imprisonment shall be communicated to the convicted person, and sentenced person may make complaint to the judge of surveillance of depriving of freedom, within 3 days of the date on which it was communicated.

In the case of Article 40 (13) of Law No 254/2013 the judge for the surveillance of depriving of freedom shall settle the complaint within 10 days from the date of its receipt and decide, by reasoned conclusion, one of the following solutions:

a) Accepts the complaint, featuring on amendment of the execution arrangements laid down by the Commission;

b) rejects the complaint, if it is unfounded, belated or inadmissible;

takes note of withdrawal of the complaint.

c) For advice on how to appeal to the court of judge's resolution and the procedure of the court, they are similar to those shown above to establish arrangements for the execution of the punishment. The Individualization of the regime regarding the imprisonment penalties it is also ruled by the Commission for the establishing, individualization and change of the regime concerning the execution of the imprisonment penalties.

In accordance with Article 41 of the Law no. 254/2013, arrangements apart of executing the sentences of imprisonment is to be established by the Commission in relation to the duration of conviction, behavioral, personality, the degree of risk, age, health status, identified needs and the possibilities of social reintegration of the sentenced person.

So, the convicted person is introduced in educational, cultural, therapeutic, psychological guidance and social assistance, moral-religious activities, training and vocational training school, which are realized by the staff of the education and psycho-social support departments from the penitentiaries, with the participation, as the case may be, of the probation advisers, volunteers, associations and foundations, as well as of other representatives of the civil society.

An important aspect in the process of individualization it is that for each sentenced person, the specialists of the service of education and psycho-social support will draw up a plan for the evaluation and individualized educational and therapeutic intervention, showing recommended activities and programs, in the light of the risks and identified needs.

Framework law puts a particular emphasis in the case of young people, who are included, for the duration of execution of the sentence, in special programs educational, as well as psychological and social assistance, on the basis of the age and personality of each, being considered young people within the meaning of law, persons who have not reached the age of 21 years old.

Progressiveness of execution of the sentence to prison at the present stage is based on attracting the convicted towards committing to personal responsibilities, that will support him in the decision to

re-integrate into the society that gives him plenty of opportunities.

CONCLUSIONS:

The knowledge and compliance of the imprisoned persons from prohibitions and obligations give rise to application of the procedures for change of the schemes with no freedom of movement and without taking responsibilities, towards easier arrangements, through the provision of facilities and by supplementing the rights via a system of legal reward, which may go as far as permitting output in the penitentiary by permissions or even holidays.

The convicted persons may pass from a scheme of performance to the other in accordance with the conditions laid down by the law of executing the sentences, the rule to be applied is that the penalty begins with a more severe system and that, in the course of execution and the passing of a mandatory period, the regime becomes closer to the social rules, and towards the end of the period of performance of the punishment and proximity of the licence supervision or within the time limits, are granted facilities such as to lead to a greater re-socialization.

However although new legislative provisions are generous as regards of the arrangements for the execution of punishments, in close correlation with the rights and obligations of persons private freedom, Romanian penitentiary system is suffering from the crisis of the over-agglomerated places of imprisonment and low-financing and application of the new provisions is an undertaking costly problems transferring crime problems only towards penitentiaries. Gradually System arrangements for the enforcement of penalties involves much more human resources, materials, financial and the construction of more modern penitentiaries has been blocked by chronic shortage of financing.

As regards to the forthcoming period, it is necessary to adopt an emergency Regulation for the application of Law no. 254/2013, for detailed overview of some aspects which are not sufficiently detailed in the framework law, at the present time the draft decision by the government for the adoption of the regulation being displayed on the site dedicated to the Ministry of Justice (www.just.ro) to public debate.

The need of approval as urgent as possible of the regulation resides also from the fact that in present, the workers in penitentiaries apply the new law on execution of sentences, by calling to transitional provisions drawn and assumed by the National Administration of Penitentiaries, following changes in the Penal Code, entered into force on February 01 2014.

THE REASONABLE DOUBT IN THE ROMANIAN CRIMINAL TRIAL

Bogdan MICU[*]

Abstract

This work represents a doctrinary approach with certain judiciary practice highlights of the manner in which the standard regarding the evidence "beyond any reasonable doubt" can be found in the new Criminal Procedure Code. The research made led to the ascertainment that the acknowledgment of this standard of evidence consecrated at the European level and its assimilation into the Romanian juridical regulations ensured a guaranteeing of human rights within the criminal trial.

Keywords: *reasonable doubt, criminal trial, human rights protection, criminal law.*

1. Introduction

The Romanian criminal trial has been in a continuous transition in the last 25 years under the influence of the various factors that modify, condition and modernize it at the same time. As early as the 1990s, after adopting a new social and political organization system, consistent and important changes occurred, the objective of which was to align the criminal trial to the standards specific to a democratic state. The most important factor for the regularization of the national criminal trial is the standard for the protection of human rights imposed by means of the jurisprudence of the European Court of Human Rights. Through the ratification of the European Convention of the human rights by means of Law No. 30/1994[1] and through the acceptance of the jurisdiction of the European court, Romania took on the assimilation in its internal legislation of the guarantees and protection mechanisms for human rights imposed at the European level.

One of the most important and delicate aspects from the economy of the entire criminal trial, regardless even of the system in which such trial takes place, is represented by evidence. In the legal definition, evidence means any *de facto* element which serves at ascertaining the existence or inexistence of a crime, at identifying a person who perpetrated it and at knowing the circumstances necessary for the just solving of the cause. The doctrine observes, with regard to the notion of "evidence" that evidence shall be construed any *de facto* circumstance which has an informative relevance in the cause and which may be physically verified[2].

2. The evidence in criminal trial

The importance of evidence is beyond any question mark, as there are opinions in accordance with which from the very moment when the criminal trial as initiated and until its final solving, all the merits issues of the cause are solved by means of the evidence, so that the very *perpetration of criminal justice depends primarily upon the system of evidence*[3].

From the lawmaker's perspective, the aspects that should be clarified by means of evidence are circumscribed to the object of the evidence detailed by Art. 98 of the Criminal Procedure Code. On the strength of this legal text, the following form the object of producing evidence: a) the existence of the crime and its perpetration by the defendant; b) the facts regarding civil liability, when there is a civil party; c) the facts and the *de facto* circumstances on which law enforcement depends; d) any circumstance necessary for the just solving of the cause. The manner in which the quoted legal text is worded indicates that the norm has an exemplary nature in its essence because letter d) of Art. 98 of the Criminal Procedure Code allows the extension of the object of evidence also to any other circumstance necessary for the just solving of the cause. The doctrine shows that the object of evidence means the ensemble of the facts or of the *de facto* circumstances which require being evidenced in a criminal cause for the purpose of solving it[4].

In any case, the object of evidence is formed only of the facts and of the *de facto* circumstances[5]. National juridical norms, presumed facts, obvious facts, notorious facts, unchallenged facts and facts established by means of a Court order should not be

evidenced[6]. The following evidence is not admissible, representing an exception from the principle of freedom of evidence: the evidence forbidden by the law, the evidence contradicting the moral or scientific convictions about the world, as well as the evidence regarding undetermined negative facts[7].

The requirements to be met by evidence are: admissibility, pertinence (it should be connected with the solving of the cause), conclusiveness (decisive role in the solving of the cause), its production should be possible, utility (its production should be necessary). The production of evidence is the exclusive attribute of the judiciary body.

As far as the appreciation of evidence is concerned, the doctrine is unanimous in showing that *the principle of the freedom of appreciating over the evidence* is traditionally working in the Romanian criminal trial. This principle assumes that judiciary bodies may appreciate the evidence in a file freely, without any legal constraints, its contents being listed also by Art. 103 para. (1) of the Criminal Procedure Code: "the evidence has no value pre-established by law and is subject to the free appreciation of judiciary bodies further to the evaluation of all the evidence produced in the cause".

A special meaning is held by the legal provisions included in Art. 103, para. (2) of the Criminal Procedure Code by means of which the internal regulation takes over a classic standard in the field of evidence reflected in the jurisprudence of the European Court of Human Rights. According to the internal norm: "in making the decision regarding the existence of the crime and of the guilt of the defendant, the court will decide in a motivated manner with reference to all the evaluated evidence. Sentencing shall be ordered only when the court is convinced that the accusation was proven beyond any *reasonable doubt*" (our underlining – B.M.).

3. Reasonable doubt as standard

Generally, the standards for appreciating the evidence from the two major trial systems present significant differences[8]. In the continental system, were traditionally adopted, with regard to evidence, the *principle of the free appreciation of evidence* and the *principle of the free or intimate conviction of the judge*. Adversarial systems, however, have limited in time this freedom of the judge, imposing *various standards for the appreciation of evidence*. Such standards include the standard of the *preponderance of evidence*, consisting in the adoption of the solution that is supported by preponderant evidence; this standard is regularly used in civil trials. In the criminal field, the *standard of the proof beyond a reasonable doubt* particularly imposed. It is obviously a standard that is higher than the first one, because the condemnation requires that the proof supporting the guilt should create the conviction of the judge. This conviction can be affected by the existence of a doubt, but the doubt must be maintained within reasonable limits. When doubt exceeds reasonable limits, there cannot be ordered a solution of condemning the defendant. The lawmaker expresses its opinion in the same respect in Art. 4 of the Criminal Procedure Code with regard to the presumption of innocence: "(1) Any person is considered innocent until his/her guilt is established under a final Court decision. (2) After the production of all the evidence, *any doubt in forming the conviction of judiciary bodies shall be interpreted in favour of the suspect or of the defendant.*" (our underlining B.M.). The doctrine observes that the reasonable doubt may originate either in the insufficiency of the evidence brought by prosecution in support of the charges, or in the exclusion of the evidence which was unlawfully obtained[9]. We believe that the evidence produced with breaching the principle of loyalty is in the same situation[10]. The principle finds its express regulation in Art. 101 of the Criminal Procedure Code, based on which: "it is forbidden to use violence, threats or other means of constraint, as well as promises or guidance for the purpose of obtaining proof". The principle has two more components regarding: the prohibition of the use of hearing methods or techniques which affect a person's capacity to remember and report consciously and voluntarily the facts that constitute the object of proof (even in the assumption in which the person consents to it), namely the interdiction of challenging a person to perpetrate or continue the perpetration of a criminal deed, in order to obtain a proof. In an ideal manner, even the proofs that were obtained in breach of these interdictions should be subject to the sanction by exclusion. The doctrine shows that the exclusion of the proofs unlawfully or unfairly produced is the very trial-related sanction which applies to the proofs which are not appropriate from the perspective of the two principles invoked, even in case in which rights and liberties guaranteed by the European Convention of the Human Rights were breached (*e.g.* in the assumption that torture was used)[11]. The sanction regards also the proofs which were impaired by the flaw which determined exclusion, as well as all the proofs deriving therefrom, being applied in this field the doctrine of *the remote effect* or *the fruits of the poisonous tree*[12]. Nonetheless, there is also the opinion according to which, by reporting to the provisions of

[12] I. Neagu, M. Damaschin, op. cit, p. 433.

Art. 102, para. (3) of the Criminal Procedure Code, exclusion is not an autonomous trial-related sanction, as it is subsumed to the sanction by nullity, in the sense that it occurs only in case of ascertainment of the nullity of the act by means of which the production of a proof was ordered or authorized or by which such proof was produced[13].

In other hypotheses, the reasonable doubt may occur also when all the proofs produced are maintained, not being subject to the sanction by exclusion in the stage of filtering the evidence in the preliminary room, the court considering that such proofs were lawfully and fairly produced. This effect may appear also due to the fact that some of these proofs cannot be vested with full evidentiary value, as they are affected by certain limitations. It is, for example, the case of the statements made by the undercover investigators included by the European Court of Human Rights in the category of "anonymous witnesses"[14]. With respect to the statements made by these anonymous witnesses, the European court deemed that their use to order the sentencing of a person is not, *per se*, incompatible with the provisions of the European Convention of Human Rights, but the European court underlines that, should its anonymity be maintained throughout the entire criminal trial, the defence shall face particular special difficulties. The court has constantly appreciated that, if this solution of preserving anonymity is chosen, the disadvantage faced by the defence shall have to be counterbalanced in a sufficient manner by means of the procedure followed by the judiciary authorities. In the assumptions that the balance between weapons cannot be ensured, the proofs obtained from witnesses should be extremely carefully inspected, and the sentencing of a person cannot rely exclusively or decisively on the anonymous testimony[15]. In this respect, in the case Saidi versus France, the European Court of Human Rights ascertained the breach of the provisions of Art. 6, paras. 1 and 3, letter d) of the European Convention, since anonymous testimonies represented the only basis for the sentencing, after having previously been the only basis for suing[16]. In the same category of anonymous witnesses, the European court includes also the civil party heard as a witness, the injured party, as well as the witnesses who no longer want to make any statements.

In case the produced proofs include exclusively or decisively proofs affected in their probative component, although at a summary appreciation, they might form the basis for sentencing a person, being liable to contribute to the removal of the presumption of innocence beyond any reasonable doubt, this effect should not be obtained. The reason for which this doubt might appear is not rooted in the sanction by the exclusion of any of the respective proofs, but the fact that, in fact, their probating force is diminished.

In no case can be issued a solution of sentencing a person when there is a reasonable doubt regarding the existence of the deed, the criminal nature of such deed, and assigning the respective deed to the defendant, in fact regarding the object of probation. Otherwise, symmetrically, by reporting to the provisions of Art. 103, para. (2) of the Criminal Procedure Code, Art. 396 of the Criminal Procedure Code, which regulates the solving of the criminal action provides that: "the court decides with respect to the charges made to the defendant, ruling, as applicable, on the sentencing, waiver of the application of punishment, postponement of the application of punishment, acquittal or termination of the criminal trial". Either of these solutions is issued, however, only if it is ascertained ***beyond any reasonable doubt*** that the deed exists, is construed as a crime and was perpetrated by the defendant" (our underlining – B.M.).

Also in the internal judiciary practice we can note the wider and wider acceptance of the standard of proof "beyond any reasonable doubt", even if it is not referred to as such, being most frequently related to its component of complementarity to the presumption of innocence. Thus, in a decision related issued in a case, the High Court of Cassation and Justice indicates[17]: "therefore, with respect to the crimes of taking bribe, in case of informers M.C.D. and I.G.A., the Court found that, in the case, the presumption of innocence of which the defendant benefits on the strength of the provisions of Art. 66, para. (1) of the Civil Procedure Code[18] was not dropped and, according to the *in dubio pro reo* rule, any doubt operates in favour of the defendant, the Court found that the first Court correctly ordered … the acquittal of defendant T.L. for the perpetration of the crime of taking bribe (in the version of claiming)". The same decision also underlined that in the respective case "the Court took into account the fact that the defendant's guilt is established on the basis of secure and certain proofs and, since the proofs produced in the case leave room for an uncertainty with respect to the defendant's guilt, it is required to give efficiency to the rule according to which *any doubt is in favour of the defendant* (*in dubio pro reo*)". On the same occasion, the Court deemed that the *in dubio pro reo* rule constitutes a complement of the presumption of innocence, an institutional principle reflecting the manner in which the principle of finding the truth, consecrated in Art. 3 of the Civil Procedure Code is found in the field of probation. And by reference to the European conventional norms, the

[18] The quote from the decision refers to the 1969 Criminal Code.

High Court stated that "the same idea is included in the provisions of para. 2 of Art. 6 of the European Convention of Human Rights, providing that *any person accused of a crime is presumed to be innocent until his/her guilt shall be legally established*, thus imposing that the Court should not start from the idea that the defendant perpetrated the deed for which s/he was referred to judgment, the task of producing the proof being incumbent on the prosecution, while the defendant benefits from the doubtful situation". By reporting to all these legislative and principle issues invoked in the case which is subject to analysis, the supreme court indicated that "as it has been shown, the entire probative material produced in the case does not reveal the existence of *decisive, complete and secure proofs liable to lead to the conclusion that defendant T.L. would have perpetrated the crimes of* taking bribe, in case of informants M.C.D. and I.G.A". (our underlining – B.M.)

Similarly, in another decision, the High Court indicated that "it is, however, ascertained that the probating material produced in the case indicated without a doubt the fact that this defendant perpetrated this crime, all the legal conditions for engaging the defendant's criminal liability being met…"[19]. The High Court underlined also in another situation: "The proofs produced suggest, *beyond any reasonable doubt*, that the defendant would have used the very office held by him in order to directly finance the trading activity of certain business companies which were used for the perpetration of tax evasion crimes, with high prejudices, as well as to ensure the protection of the persons involved in this criminal activity ….". (our underlining – B.M.)

4. Conclusions

Effective February 1, 2014, Romania has a new legislation in the criminal field. Although this legislation is not beyond any criticism, both the doctrine and the jurisprudence already remarking certain difficulties generated by the provisions included in the two codes or in the legislation for putting these codes into application, it is already active, being more important at this time for it to be understood and applied in a reasonable manner rather than criticized at all costs. Many of the matters traditionally regulated in the criminal procedure field were maintained by making efforts for the modernization and connection to the European standards regarding the protection of human rights. One of the matters with respect to which a considerable modernization was desired is that referring to proofs, as they are consistently contiguous to the standard of proof which is transparent from the jurisprudence of the European Court of Human Rights. In this field, although the principle of the free appreciation of proofs was maintained, it was expressly imposed by the lawmaker's will and by the standard of appreciation "beyond any reasonable doubt" often imposed also by the European Court.

THE COMPLEMENTARY PENALTY OF PUBLISHING THE CONVICTION DECISION IN TERMS OF THE NEW CRIMINAL CODE

Cristina Daniela MUNTEANU*

Abstract

We think that the approach of such subject presents without a doubt a scientific interest, in the context of the legal amendments brought by the new criminal law. In the form of a monographic study, the article is dedicated to analysing the complementary penalty of publishing the final conviction decision, in case of the natural person as well as of the legal one, by reference to the provisions of the Criminal Code, but also to the incidental laws. As we are talking about the introduction of new complementary punishments, which haven't been previously mentioned in the criminal doctrine, but also about amendments in relation to the content, the application and performance of the complementary punishments, we tried to overcome this void by presenting some personal idea in relation to the new regulations.

Keywords: *complementary penalty, penalty, decision of conviction, the new criminal code.*

1. The complementary penalty of publishing the decision of conviction in case of natural persons

For the first time in our criminal law there is the possibility to publish the final decision of conviction in case of natural persons, without having a correspondent in any of the previous regulations. This complementary penalty, in the previous Criminal Code was provided in a specific form, only in case of natural persons.

According to the provisions of art. 70 Criminal Code the publication of the final decision of conviction can be decided when considering the nature and seriousness of the crime, the circumstances of the trial and the person of the convict, the court thinks that the publication shall contribute to preventing the performance of other such crimes. The publication of the decision of conviction is published in excerpt, in the form established by the court, in a local or national newspaper, only one time. The publication of the final decision of conviction is made upon expense of the convicted person, without revealing the identity of other people.

A similar regulation is subject to art. 36 of the Italian Criminal Code and art. 131-35 of the French Criminal Code.

The criminal code in 1936[1] provided similar provisions in Section II - Complementary penalties, art. 25 paragraph 4 „publishing and displaying the conviction decisions, according to the law", and in Chapter VI - Publishing and displaying the decision, art. 61 regulated the following: „The final decisions issuing any of the criminal penalties provided by art. 22 are published by care of the Prosecutor's Office, in excerpt, in the Official Gazette and is displayed for at least one month on the door of the convict, at the city hall of the commune where the crime was committed and at the one where the victim has his/her residence. In correctional terms, the court can order publishing the decision of conviction, only upon request of the harmed party and only when the publication would be a manner of moral repair. This provision is applied to simple imprisonment".

The aim of establishing this complementary penalty was to increase the efficiency of the message in the justice action, but also ensuring a moral repair for the harmed person[2]. By publishing the content of the decision of conviction, even the court of law contributes, by its authority, to repairing the harm produced to the victim.

Also, the Criminal Code wants to ensure to the judge a wide range of measures which, through flexibility and diversity, allow a good judicial individualization. In relation to this, the incidence range of the complementary penalties, of the number of rights included in the complementary penalty of prohibiting certain rights has been significantly extended and this new type of applicable complementary penalty was introduced - publishing the final decision of conviction [3].

The publishing of the decision is a complementary penalty with a special moral character, with a strong intimidating effect if the offender is notorious in that locality, the criminal offences have produced a major impact in terms of interest of the public opinion, or in case the nature and seriousness of the crime have aroused a vivid interest for the community. In such situations, the publication of the decision has an increased effect in relation to the convict, but also by power of the example of the case,

which can contribute to the prevention of other such offences[4]. For this, the duration of the impact for publishing the decision is relative, lasting in time in relation to the interest of the public opinion towards the crime produced, its consequences or the offender. On the other side, the negative publication of the offences committed by the offender, on his/her expense, warns the public in order to prevent committing similar types of crimes[5].

The new Criminal Code provides this new complementary penalty so that the prevention of the offences can be achieved also through knowledge by publishing, with the power of the mass-media means to penetrate in the conscience of citizens.

Another reason would be the moral repair which can be granted to the harmed person, which can obtain full satisfaction, especially if the offence was performed using also the means provided by the mass-media. In case the advertising of the case affects the victim of the offence, the publication of the decision is achieved with the necessary anonymity for the victim not to be identified. The same thing is achieved also in case of the legal person[6].

The complementary penalty of publishing the conviction decision is a disreputable penalty, which submits the convicted person to public odium. Such sanction can have a strong deterrent effect, being a true defamation performed on own expense, meant to warn the public opinion about the offence of the convict.

In relation to this, the complementary penalty of publishing the decision of conviction is a penalty with positive effects in terms of penalty purpose, affecting the image of the convicted person, as it can have patrimonial consequences in case the convict losses his/her credibility for performing certain positions or services. It is a penalty performed and a string general prevention, considering it prevents committing new such offences.

As the law does not provide any condition related to the main penalty next to which the complementary penalty of final publication of the conviction decision can be applied, it results that this complementary penalty can be applied independently of the type and seriousness of the penalty issued. So, the publication of the final decision of conviction can be decided in case of conviction to life imprisonment, in case of conviction to imprisonment or in case of fines. Also, in the absence of a contrary provision, this complementary penalty can be applied also in case the execution under supervision was decided in relation to the main penalty [7].

Not being conditioned by the application of a certain main penalty or by its duration, in principle the publication of the final decision of conviction can be decided provided there is a conviction, which distinguishes it from the complementary penalty of displaying or publishing the conviction decision, specific for legal persons, whose application is conditioned by applying the main penalty of the fine[8].

The complementary penalty of publishing the decision of conviction is applicable for both intentional offences and offences by fault and is related to all natural persons which are criminally liable, and there are no categories subject to exceptions. The sanction is optional for the court, and according to the case it shall be assessed if it is necessary to apply it, according to the nature, seriousness of the offence, the circumstances in which it was committed and the impact of the negative publicity performed in this manner[9]. So it results that unlike the other two complementary penalties whose application is optional as well as compulsory, the application of the complementary penalty consisting in the final publication of the decision of conviction is only optional[10].

The court of law can decide the publication in excerpt, in a form in which the content is explicit and understandable to the public opinion, in the exposure and impact form as visible as possible on the first page, with a certain printing format, with a certain size of the letter or of the border, on the pages of a local or national newspaper. In relation to the form of display, it is obvious that the lawmaker refers to the manner in which the natural person has the obligation to ensure the display of the decision's operative part, respectively to the format of the ad, the sizes must be so that they allow the people which read the local or national newspaper to observe and read the ad. In order to reach the purpose of sanctioning, the publication must also include a short presentation of the de facto situation, as noted by the court of law, as well as the elements of the decision's operative part.

In relation to the form of display, it is obvious that the lawmaker refers to the manner in which the natural person has the obligation to ensure the display of the decision's operative part, respectively to the format of the ad, the sizes must be so that they allow the people which read the local or national newspaper to observe and read the ad. In order to reach the purpose of sanctioning, the publication must also include a short presentation of the de facto situation, as noted by the court of law, as well as the elements of the decision's operative part.

Unlike the complementary penalty of displaying or publishing the decision of conviction in case of legal persons, which is performed for a period between one month and 3 months, in case of the natural person it shall be published only once. In this manner, the

lawmaker describes this complementary penalty as an absolutely determined penalty, although apparently it could seam an undetermined penalty.

The publication of the final decision of conviction is performed on the expense of the convict, with only one appearance in a local or national newspaper. In this manner, the lawmaker describes this complementary penalty as an absolutely determined penalty, although apparently it could seam an undetermined penalty.

Although it has a temporary determined nature (publishing it only one time), its effect in time is relative, being determined by a series of factors such as the spreading area and the circulation of the publication, the interest of the public opinion towards the cause, factors which the court should consider when it decides such a penalty, in order for its effect to be according to the seriousness of the offence[11].

The law does not provide any term for the application of the complementary penalty of publishing the final decision of conviction, which means that its performance can be performed immediately after the decision of conviction remains final.

The publication of the decision of conviction must not affect the subjective rights of the victim, reason for which with the publication of the decision the identity of the victim or of other people in the file, as well as the names of the judges in the panel, of the lawyers, of the witnesses etc. cannot be revealed (in order to avoid possible revenges). The law also regulated the case according to which in the circumstances of the trial there are more people, which are also protected in relation to their right to a private life, their identity not being revealed. The complementary penalty must target exclusively the person in relation to which this penalty was decided, the identity of the victim or of other participants cannot be revealed, if in relation to this it was not decided to apply the complementary penalty of publishing the final decision of conviction.

As this complementary penalty for the natural persons is recently introduced, the practice of the courts of law shall develop the situations in which it can be applied. The efficiency of such complementary penalties for legal persons, represented by natural persons, lead to the conclusion of applying the measure directly in relation to natural persons[12].

Considering that the provisions of the Criminal Code provide the possibility to apply the complementary penalties in case the main punishment is imprisonment, as well as in case the main penalty is the fine, **de lege ferenda ("with a view to future law") we propose introducing the regulations regarding the interdiction of exceeding, through the publication expenses, the amount of the fine applied to the natural person through the offence committed (the inspiration source might be the provisions of art. 131-35 French Criminal Code).**

In relation to the enforcement of the complementary punishment of publishing the decision of conviction, art. 565 Criminal Procedure Code provides that it is enforced by sending the excerpt, in the form established by the court, to a local newspaper which appears in the jurisdiction of the court which issued the conviction or of a national newspaper, for the publication upon expense of the convicted person.

Still, we consider that the moment for beginning the execution of a complementary penalty coincides with the moment of sending the excerpt from the final decision of conviction to the local newspaper which appears in the jurisdiction of the court which issued the decision of conviction or of a national newspaper, and the actual execution takes place the moment it is published.

Art. 33 of Law no. 253/2013 regarding the execution of the punishments, of the educational measures and of other measures without imprisonment decided by the legal bodies during the criminal trial provides that, in order to enforce the punishment of publishing the decision of conviction, the judge appointed with the enforcement sends the excerpt, in the form established by the court, to the local or national newspaper assigned by it, requesting the communication of the rate for publication.

Within 10 days from receiving the answer from the management of the assigned newspaper, the judge appointed with the enforcement communicates to the convicted person the cost of the publication and its obligation to make the payment within 30 days.

The news paper assigned shall publish the excerpt of the decision of conviction within 5 days from the date of payment and shall notify the judge appointed with the enforcement about the publication, communicating a copy of the published text.

If within 45 days from the communication made to the convicted person according to paragraph (2), the judge appointed with the enforcement does not receive the notification regarding the performance of the publication, shall proceed to checking the reasons which lead to its non-performance.

In case the management of the assigned newspaper does not supply the information provided in paragraph (2) or when it doesn't take the necessary measures in order to ensure the publication, the judge appointed with the enforcement can grant a new term for performing these obligations, which cannot exceed 15 days, or assigns another newspaper in the same category for publication.

If it is established that the non-performance of the publication was due to the fault of the convicted person, the judge appointed with the enforcement can grant a new term for publication, which cannot exceed 15 days.

[11]V. Pașca, *Curs de drept penal. Part generală*, ed. a II-a, Ed. Universul Juridic, Bucharest, 2012, p. 441 - 442.
[12] I. Chiș comment in I. Pascu și colab., *Noul Cod Penal comentat*, Part generală, vol. I, Ed. Universul Juridic, Bucharest, 2012, p. 456.

If the convicted person did not make the payment for publication in the term provided by paragraph (2) or, according to the case, at paragraph (6), the judge appointed with the enforcement shall notify the competent criminal prosecution office, in relation to performing the offence of failure to comply with the criminal sanctions, provided by art. 288 paragraph (1) of Law no. 286/2009, amended and supplemented.

If upon enforcement of the decision or during the execution any query or prevention of the execution appears, the judge appointed with the enforcement can notify the execution court, which shall proceed according to the provisions of art. 595 and 596 Criminal procedure code.

Considering that the complementary penalty of publishing the decision of conviction is a newly introduced provision, we think it is not applicable in the case of the offences committed before its entry in force.

2. The complementary penalty of publishing the decision of conviction in case of the legal person

According to the provisions of art. 145[13]Criminal Code, the display of the final decision of conviction or its publication is performed upon expense of the convicted legal person. By displaying or publishing the decision of conviction, the identity of other people cannot be revealed. The display of the decision of conviction is performed in excerpt, in the form and place established by the court, for a period between one month and 3 months. The publication of the decision of conviction is performed in excerpt and in the form established by the court, through the written or audiovisual media or through other audiovisual communication means, assigned by the court. If the publication is performed by written or audiovisual, the court establishes the number of the appearances, which cannot exceed 10, and in case of publication through audiovisual means, its duration cannot exceed 3 months.

In the legislation of our country we find similar provisions in the Criminal code of 1936 which, in Section II - Complementary penalties, art. 25 paragraph 4 „publication and display of the decisions of convictions, in the conditions established by the law", and in Chapter VI- Publication and display of the decisions, art. 61, shows that: „The final decisions which issue any of the criminal penalties provided by art. 22 is published by care of the prosecutor's office, in excerpt, in the Official Gazette and is displayed for at least one month on the door of the convict's residence, at the city hall of the commune where the offence was committed and to the one where the victim has its residence. In correctional terms, the court can order the publication of the decision of conviction, only after the request of the harmed party and only when the publication constitutes a way of moral repair. This provision is applied to simple imprisonment".

Regulation of the complementary penalty of displaying the final decision of conviction as regulated by the new Criminal Code is similar to the one of the Criminal Code of 1968.

A first amendment of the lawmaker of the new Criminal Code is given by the replacement of the term "distribution" with the one of "publication of the final decision of conviction.

Another amendment consists in the explicit introduction of the provision according to which by displaying or publishing the decision of conviction the identity of other persons cannot be revealed {art. 145 paragraph (2) Criminal Code}, excluding in this manner the possibility to display or publish the decision in case there is the approval of the harmed party or of its legal guardian, as was the phrasing of art. 71[7]paragraph (2) of the old Criminal Code. Considering these arguments, the complementary as regulated by art. 145 Criminal Code is more restrictive, allowing only to reveal the identity of the legal person, choosing in this manner a better protection for the damaged party.

In terms of its content, the complementary penalty of displaying or publishing the decision of conviction consists in notifying to the public the decision of conviction of a legal person which committed an offence provided by the criminal law[14].

[13] Art. 71[7]Codul penal of 1968 – „The display of the final decision of conviction or its distribution is performed on the expense of the convicted legal person. By display or distribution of the decision of conviction the identity of the victim cannot be revealed, except there is his/her approval or the approval of his/her legal representative. The display of the decision of conviction is performed in excerpt, in the form and place established by the court, for a period between one and 3 months. The distribution of the decision of conviction is performed in excerpt and in the form established by the court, through the written or audiovisual media or through other audiovisual communication means established by the court. If the distribution is made through the written or audiovisual media, the court establishes the number of appearances. which cannot exceed 10, and in case of distribution through other audiovisual means, its duration cannot exceed 3 months".

[14] C. Marinescu, *Răspunderea penală a persoanei juridice. De la teorie la practică*, Ed. Universul Juridic, Bucharest, 2011, p. 235; With the criminal sentence no. 599/2013 of 09.07.2013 Court of Law of district 6 in the file no. 25294/303/2010 convicts the defendant Clinical Hospital „Prof. Dr. P. S.", represented by its manager for committing the following offences: - manslaughter, provided by art. 178 paragraph (2) și paragraph (5) Criminal Code reported to art. 71[1] paragraph (2) Criminal Code, to the penalty of criminal fine in the amount of 400.000 lei (four hundred thousand lei); - accidental bodily injury, provided by art.184 paragraph (2) și paragraph (4) Criminal Code related to art. 71[1] paragraph (2) Criminal Code, to the penalty of criminal fine in the amount of 80.000 lei (harmed party C. M. D.); - accidental bodily injury, provided by art.184 paragraph (2) și paragraph (4) Criminal Code related to art. 71[1] paragraph (2) Criminal Code, to the penalty of criminal fine in the amount of 80.000 lei (harmed party C. A.). - accidental bodily injury, provided by art. 184 paragraph (2) și paragraph (4) Criminal Code related to art. 71[1] paragraph (2) Criminal Code, to the penalty of criminal fine in the amount of 80.000 lei (harmed party C. Ș.). - accidental bodily injury, provided by art. 184 paragraph (2) și paragraph (4) Criminal Code related to art.71[1] paragraph (2) Criminal Code, to the penalty of criminal fine in the amount of 80.000 lei (harmed party S. R. M.). - accidental bodily injury, provided by art. 184 paragraph (2) și paragraph (4) Criminal Code related to art. 71[1] paragraph (2) Criminal Code, to the penalty of criminal fine in the amount of 80.000 lei (harmed party S. Ș. M.). În baza art. 53[1] paragraph 3 letter e) Criminal Code related to art. 71[7] Criminal Code, beside each main penalty, applies to the defendant

It was assessed in the doctrine[15] that the conviction of legal persons for committing offences is more efficient, as it can produce a very strong social impact if the decision of conviction is brought to the public knowledge, for the ones which might enter in relations with the legal persons in conflict with the criminal law without being warned by this circumstance. In this manner, the display or distribution of the decision of conviction is a penalty with positive effect in terms of the penalty's purpose, as it affects the market image of the legal person.

On the other hand it is considered that the display or publication of the decision of conviction is a complementary penalty with a considerable intimidating effect on the legal persons, affecting the image of the brand, the commercial reputation, the position of the legal person, and it can have as result the loss of the customers, the decrease of the credibility, and in certain situations might even have fatal consequences for the survival of the enterprise[16].

The general preventive effect of this sanction is argued by the authors with the fact that, by threat of losing his prestige and image, the trader "of the consumerist era!, which sees his volume of sales endangered and his possibility to find new partners limited, shall take organizational measures in order to avoid it[17].

The publication of the decisions is a special moral punishment, with a strong intimidating effect in case the legal person has notoriety in that locality, as well as in the cases in which the legal person does not benefit from notoriety, but the offences have produced a major impact in terms of interest of the public opinion, or in case the nature and seriousness of the crime raised a vivid interest for the community, as notifying to the public the offence committed by the convicted legal person certainly affects the present and future business relations. Bu we consider that in a certain measure a significant effect of the negative publicity is directly proportional with a more obvious moral connotation for the public and with the notoriety of the convicted legal person. In relation to this, we consider that the impact on the public is much higher when a legal person the consumers trusted is convicted than in the case of a less known legal person. Also, the impact is stronger if that product is known to the consumers and the offence for which the legal person was convicted is strictly related to it. In such situations, the publication of the decision has an increased effect in relation to the convicted person, and by power of example, the case can contribute to the prevention of such offences.

The Criminal Code provides this complementary penalty for the prevention of the offences to be achieved also through publication, with the power of penetration of the mass-media means (written or audiovisual media) in the conscience of the citizens, but also in relation to the moral restoration which can be granted to the harmed person, which can obtain full satisfaction, especially if the offence has been performed using also the means provided by the mass-media.

Special legal provisions, established as non patrimonial measures for repairing moral damages, but with a similar content to the one of the complementary penalty established by the Criminal Code of 1968 are found also in other special laws[18], such as Law no. 8/1996 regarding copyrights and related rights[19] which provides in art. 139 paragraph (10) letter d) that „the owners of the violated rights can request to the court of law to decide the distribution of the information regarding the decision of the court of law, including the display of the decision, as well as its complete or partial publication in the mass communication means, on the expense of the offender; in the same conditions the courts can decide additional publicity measures adapted to the particular circumstances of the case, including a large publicity".

The display or publication of the decision of conviction is established by the court of law considering the nature and seriousness of the crime, the circumstances and the person of the convict, in relation to its efficiency, for preventing the performance of such other offences.

We consider that this penalty must be applied for particularly serious offences, which bring public odium, without using the implementation attached to offences that are less serious. In case of particularly serious offences, especially when the penalty of dissolution or suspension of the activity is applied, the general interest of notifying third parties exceeds the private ones, belonging to the legal person which is criminally liable[20]. The main argument of this reasoning consists in the fact that the application of this penalty, including for the offences which are less serious has as consequence a much more difficult integration of the legal person into society, despite the positive nature of the effects had in terms of penalty purpose. We can mention in relation to this a decision issued by a French court of law, which considered that one cannot impose the sanction of displaying or

publishing the decision given that, in the case, it might have fatal consequences for the existence of the enterprise[21].

In relation to this, the complementary penalty of displaying or publishing the decision of conviction is a penalty with positive effects in terms of the penalty's purpose, affecting the image of the convicted legal person. It is a penalty which also achieves a strong general prevention, considering the prevention for committing new such offences.

The punishment is applicable for both intentional offences and offences by fault and it concerns all legal persons, as there are no categories of persons subject to exceptions. The sanction is optional for the court, and according to the case it shall be assessed if it is necessary to apply it, according to the nature, seriousness of the offence, the circumstances in which it was committed and the impact of the negative publicity performed in this manner.

The court of law can decide the publication in excerpt, in a form in which the content is explicit and understandable to the public opinion, in the exposure and impact form as visible as possible (on the first page, with a certain printing format, with a certain size of the letter or of the border) on the pages of a local or national newspaper. In relation to the form of display, it is obvious that the lawmaker refers to the manner in which the legal person has the obligation to ensure the display of the decision's operative part, respectively to the format of the ad, the sizes must be so that they allow the people which read the local or national newspaper to observe and read the ad. In order to reach the purpose of sanctioning, the publication must also include a short presentation of the de facto situation, as noted by the court of law, as well as the elements of the decision's operative part. From this reason, in the doctrine[22] it was argued that the best it would be to be made in the form of a press release or a press conference[23], complying with the substance and form conditions for editing a press release. The communication is usually sent electronically to the press agencies from the written or audiovisual communication means which can take over the information that they shall use or not, according to their publishing policy, to the interest they think it shall have among the targeted public[24]. We think that in case these institutions refuse the publication of the excerpt from the decision of conviction, it is enough for the legal person to prove she steps for publication, which doesn't follow the conditions of failure to comply with the criminal sanctions and consequently does not lead to the application of a harsher penalty.

The complementary penalty of displaying or publishing the decision of conviction is performed for a period between one month and 3 months, the lawmaker describing this complementary penalty as an undetermined penalty.

But in order to be enough, between committing the offence and the application of this sanction there must not be a too long time frame. Of course, this is a condition from which depends the efficiency of any sanction, but we would be inclined to believe that in case of the analyzed penalty the passage of time has an effect which is more reduced than in the case of another sanction[25].

The publication of the final decision of conviction is performed upon expense of the legal person, without these expenses exceeding the amount applied as criminal sanction.

When the publication is made by appearance in the written media (in a local or national newspaper) or audiovisual, or by other audiovisual communication means assigned by the court, it must establish the number of appearances, which cannot exceed 10, and in case of display, its duration cannot exceed 3 months.

The display or publication of the decision of conviction must not affect the subjective rights of the victim, reason for which the identity of the victim or of other people in the file cannot be revealed. The law regulated also the case in which in the circumstances of the case there are more people, which are also protected in relation to their right to private life, and their identity cannot be revealed.

Also this penalty can be applied together with the other complementary penalties, except the dissolution.

According to art. 502 paragraph (1) Criminal Procedure Code, the penalty of publishing the decision of conviction is enforced by communicating an excerpt of the decision of conviction which regards the application of the complementary penalty, the date it remains final, to the convicted legal person, to display it in the form, place and for the period established by the court of law.

An excerpt of the decision of conviction regarding the application of the complementary penalty is communicated, the date it remains final, to the convicted legal person, to be published in the form established by the court, on her own expense, through the written or audiovisual media or through other audiovisual communication means, established by the court.

From what we can see, the lawmaker talks about to means of notifying to the public the final decision of conviction of the legal person: by displaying the decision of conviction in excerpt and by publishing the

decision of conviction in excerpt. We think it is convenient to replace the term "distribution of the decision" in the old art. 71^7Criminal Code with „publication", as regulated by the new art. 145 Criminal Code, as it is more explanatory and more exact as content.

The display, as defined by the Romanian Explanatory Dictionary means "to expose, glue a flyer, make known through a flyer, manifest ostentatiously, publicly, put in a visible place". In this respect, we understand that the court of law shall hand over to the legal person the excerpt of the decision, which must be displayed, exposed in certain places explicitly provided by the court, so that the purpose of the penalty is better achieved. The display is performed upon expense of the legal person, in the time frame established by the court.

We think that the place where the display shall be performed is very important, as one must keep into account the recipient of the publicity. It was considered in the doctrine[26], opinion we also agree with, that in case the conviction is the consequence of an offence regarding labour protection, the head office or production facility of the legal person can be chosen for display, and when the conviction is a consequence of an offence regarding consumer's protection, the selling place of the products can be chosen, for corruption offences eventually head offices of the public institutions or professional associations.

In relation to this we think that the place where the excerpt of the decision of conviction is displayed is very important, as it is necessary for it to be frequented by the possible victims, but it must be related to the offence committed by the legal person.

Also, it is considered that the display of the decision of conviction shall be preferred in case the recipient public is in a small number and is related to a certain location (for example, the employees of an enterprise convicted for a labour protection crime shall be notified about its conviction if the decision is displayed at the head office and at every lucrative facility of the enterprise)[27].

Also, the excerpt of the decision of conviction is also communicated to the police office of the jurisdiction where the display place is, in order to check that the obligation has been complied with.

According to art. 40 din Law no. 253/2013 in case that after the display but before the term established by the court, the flyer is stolen, destroyed or deteriorated, the police authority requires the convicted person to display it again, which must be performed within 24 hours.

In case of failure to comply with the display obligation or with the obligation to replace the flyer according to paragraph (2), the police authority shall inform the judge appointed with the enforcement, in order to notify the court for the application of the provisions in art. 140 paragraph (2) Criminal Code.

The publication means, according to the Romanian Explanatory Dictionary, „notifying something to everybody through printing, displaying etc.; publishing, printing books, articles, information etc., notifying a large range of people through the printer, notifying publicly, spreading, revealing". In order to execute the penalty of publishing the decision, the court shall give to the legal person am excerpt of the decision, so that it can publish it in the form established by the court, on its own expense, through written or audiovisual media or through other audiovisual communication means, assigned by the court. Also, the publication of the decision of conviction can be performed by publication in the Romanian Official Gazette, Part IV or in one or more newspapers or in one or more audiovisual communication services, established by the court.

We can't help but wonder if the two means of informing the public can be combined by the judge. We think that as long as the law does not forbid it, they can be applied and executed in a cumulative manner, ensuring the purpose of the penalty more. Also, art. 138 Criminal Code provides the possibility to apply one or more complementary penalties considering the nature and seriousness of the offence, the circumstances of the case, and also if they are necessary.

It was also considered in the doctrine[28] that the publication in a gossip newspaper of an ad edited in an official language in relation to false accounting documents might not have any impact on the image of the convicted legal person as well as the distribution in an elitist publication, to which a reduced segment of the population has access, of the operative part of the decision of conviction for an offence regarding labour protection might be useless.

Also, the foreign legal doctrine[29] considers that the simple publication of the decision in excerpt, in a technical and official language, hard to understand for the regular citizen, cannot achieve the purpose of this sanction. This is the argument for which it was considered that the ad must be as explicit as possible, easy to understand by the public, because it is addressed to the general public and not to specialized person, with as few as possible technical data and with warnings for the possible victims, such as: "the legal person X was criminally convicted by the court Y for the offence Z. Pay attention to its products/services!".

We think that the excerpt must not be too long, so it can be read easily by the targeted persons and must present the situation in a synthetic manner.

The convicted legal person presents to the enforcement court the proof of starting the enforcement of the publication for the decision of

[26]D. M. Costin, *Răspunderea persoanei juridice în dreptul penal român*, Ed. Universul Juridic, Bucharest, 2010, p. 444.

[29] J. Coffe, *No SoulToDamn: No body toKick*, quoted in D. M. Costin, *op. cit.*, p. 445.

conviction, within 30 days from the communication of the decision.

Art. 41 paragraph (3) of Law no. 253/2013 provides that in case it was decided to perform the publication by displaying it on an interned page, the excerpt must be published in the term provided by paragraph (2), and the convicted person shall communicate to the appointed judge, within 5 days from the start of the publication, the proof of enforcement of the decision. The periods in which, for technical reasons, the published excerpt was not accessible are not calculated in the publication period established by the court.

The judge appointed with the enforcement periodically checks the compliance with publishing obligation according to paragraph (1), until the term established by the court.

In case it is established that the publication obligation was not complied with, the judge appointed with the enforcement shall notify the court.

The violation in bad faith of the complementary penalty of displaying or publishing the decision of conviction has as consequences:

a) the temporary application, for maximum 3 months, of the complementary penalty of suspending the activity or one of the activities of the legal person;

b) the application of the complementary penalty of dissolution of the legal person, according to the provisions of art. 139 paragraph (2) Criminal Code, if it is established, after the maximum term of 3 months, that the legal person continued to oversee its obligation of distributing or displaying the decision.

We think that the harmed party whose interests have been affected by the illicit activity of the legal person can notify the enforcement court in relation to the failure to comply with the provisions in the final decision of conviction.

The legal person is summoned, and the participation of the prosecutor is compulsory. After the conclusions of the prosecutor and of the convicted legal person, the court judges through the sentence.

Considering that in the case of publication the approval of the mass-media institution is necessary, which can be given only in case it is considered this can be interesting for the targeted audience, we think that in case of refusal, the enforcement court must not apply a harsher punishment such as the suspension of the activity or the dissolution, as it is enough for the legal person to prove the attempt to publish the excerpt and respectively the attempt to begin the execution of the decision of conviction.

3. CONCLUSIONS:

Increasing the number of the prohibitions which can be applied by the court of law and implicitly of their application field, but also the introduction of new complementary penalties, also of the complementary penalty of the publication of the final decision of conviction, proves the orientation of the criminal policy to a highlighted individualization of the penalties, by enclosing to the main penalties proper complementary penalties in relation to the nature of the penalty, the seriousness of the offence committed, the actual circumstances in which the offence was performed, but also the person of the offender with its level of responsibility, understanding, education and training, previous criminal experience or belonging to another legal culture of a different country.

In this manner we think a better suitability of the sanction is achieved in relation to the actual circumstances of the case, increasing its efficiency significantly.

THE OBJECT OF THE ADMISSION OF GUILT

Constantin NEDELCU[*]

Abstract

This paper aims at studying how elements of negotiated justice specific to common law systems entered into the Romanian criminal procedural law system. It particularly deals with the admission of guilt and about one of its most controversial aspects – the object of recognition. The research concludes that what is recognized within this simplified procedure it is the deed and not its legal classification given by the criminal prosecution bodies.

Keywords: *criminal trial, admission of guilt, legal qualification, negotiated justice.*

1. Introduction

A prestigious scientific work shows that the specialists of law in the common law systems are often very surprised when they find out that there is no institution similar to that of the admission of guilt (pleading guilty)[1] in the (inquisitorial) law systems on the continent. The reason for which this reaction appears is that accusatorial systems developed a tradition in the sense of simplifying judicial procedures in the criminal field in the assumptions in which the defendant chooses to plead "guilty", taking on the charges brought to him. In these cases, a too brisk rejoinder from the State authorities is no longer necessary because the defendant's position is no longer a position of denying the charges.

However, at present, it is no longer possible, as noted in the specialty literature[2], to classify a criminal justice system as entirely accusatorial or entirely inquisitorial, so that *the mixed criminal trial* appeared. This trial preserves inquisitorial features in the phase preliminary to judgment, while judgment has characteristics of the adversarial form. The victim's role is a subsidiary role in relation to the prosecutor, who is regularly initiating the prosecution and exercising the criminal action, while the victim may elect to participate in the criminal trial as an injured party and/or as a civil party. In certain hypotheses strictly indicated under the law, the victim is allowed to takeover the prerogative of pressing charges, which is normally reserved for the public accuser. This phenomenon to assimilate the elements of negotiated justice in the inquisitorial systems of traditional law is primarily generated by the influence exerted on national laws by the European Court of Human Rights. Through the jurisprudence developed by this court in connection with the applicability of Art. 6 of the European Convention of Human Rights with reference to the right to a fair trial, many elements specific to accusatorial systems irradiated to inquisitorial systems, stabilizing the balance between the protection of the common interest and the protection of the individual interest.

2. Admission of guilt in Romanian Trial

Romania, as a State that ratified the European Convention of Human Rights and accepted also the jurisdiction of the Strasbourg Court, could not remain outside this trend of modernizing criminal procedural rules. Thus, once the new Criminal Procedure Code (Law No. 135/2010) is enacted, a whole series of elements specific to accusatorial systems and even some timid aspects of negotiated justice are recorded in the Romanian criminal trial. Some f these institutions could also be found in the previous Criminal Procedure Code (as is the case of the Procedure for the Admission of Guilt), while others are marked by novelty (such as the *agreement for the admission of guilt*). About such latter agreement, we shall say that it can be found in the category of the special procedures defined under Title IV of the Special Part of the Criminal Procedure Code, Arts. 478-488.

The object of the agreement for the admission of guilt consists in "the recognition of the perpetration of the deed and the acceptance of the juridical classification for which the criminal action was initiated and also regards the type and quantum of the punishment, as well as its form of execution" (Art. 479 of the Criminal Procedure Code). According to the norms included in Chapter I of Title IV under the Special Part of the Criminal Procedure Code, during the criminal prosecution, after the initiation of the criminal action, *the defendant and the prosecutor may conclude an agreement*, as a result of the admission of guilt by the defendant. The effects of the agreement for the admission of guilt are subject to endorsement by the hierarchically higher prosecutor who is also setting the limits for the conclusion of the agreement. The agreement may be initiated by both the defendant, and

[2] C. Dănileț, Victima infracțiunii, acuzator în procesul penal, published online *www.cristidanilet.ro*

by the prosecutor and produces effects *in personam.* However, in no case may underage defendants conclude agreements for the admission of guilt.

The conditions for the conclusion of the agreements for the admission of guilt are established under Art. 480 of the Criminal Procedure Code, providing that: it may be concluded only with regard to those crimes for which the law provides the punishment by a fine or by imprisonment by at most 7 years and only when the evidence produced revealed sufficient data concerning the existence of the deed for which the criminal action was initiated and concerning the guilt of the defendant.

The contents that the agreement should have revealed that this is not a typical element of negotiated justice, as encountered in the systems of de common law, because there is no possibility that negotiation might result in a solution of "closed case", determined by this very aspect of the conclusion of the agreement. Otherwise, Art. 482 provides that the contents of the agreement should include, *inter alia*: „d) the description of the deed forming the object of the agreement; e) the juridical classification of the deed and the punishment provided under the law;… g) the defendant's express statement whereby such defendant admits to having perpetrated the deed and accepts the juridical classification for which the criminal action was initiated; h) the type and quantum, as well as the execution form of the punishment or the solution of waiving the application of punishment or of postponing the application of punishment with regard to which the prosecutor and the defendant reached an agreement...".

After the conclusion of the agreement, it will be subject to censorship by the court which would be competent to judge the case on the merits. If the agreement for the admission of guilt lacks any of the mandatory mentions or if some of the conditions provided under the law were not observed, the court will order that the omissions should be rectified within 5 days at most and will notify in this respect the head of the prosecutor's office who issued the agreement. After remedying these deficiencies, analyzing the agreement, the court will issue one of the following solutions: to admit the agreement in full, to reject the agreement or to admit the agreement only in part (Art. 485 of the Criminal Procedure Code). The prosecutor and the defendant may file an appeal against the issued sentence within 10 days from its service.

Together with this element of novelty regulated by the Criminal Procedure Code, another one can be found, which has a correspondent in the previous Criminal Procedure Code. This is the "Procedure in Case of the Admission of Guilt" regulated by Art. 375 of the Criminal Procedure Code in force; the doctrine states about this element that it is an adaptation of the institution introduced by Law No. 202/2010 regarding certain measures for the acceleration of the settlement of lawsuits in Art. 320[1] of the Criminal Procedure Code, previously referred to as the *judgment in case of the admission of guilt*[3].

Although the legal text invoked raised numerous controversies and sometimes generated a non-uniform practice, it was appreciated that it should be maintained by equivalent in the new regulation, because it also determined positive effects on the activity of the courts of law.

Obviously, by instituting a simplified procedure in case the accused person "admits the guilt", certain causes were solved with significant celerity and, implicitly, the activity of the courts before which such a procedure was performed was relieved.

Unlike the previous regulation, the institution can no longer be found in a single text in the new Criminal Procedure Code, the elements forming the special regime being divided among several legal texts. Thus, on the strength of Art. 374, para. (4) of the Criminal Procedure Code, in the cases in which the criminal action does not target a crime which is punished by life imprisonment, the chairman will draw to the defendant's attention that such defendant may request that the judgment should take place only based on the evidence produced during the criminal prosecution and based on the writs submitted by parties, if the defendant fully admits the deeds with which he is charged, informing him of the provisions of Art. 396 para. (10) of the same code. The text to which reference is made provides that, in case the judgment was carried out according to a simplified procedure, the punishment limits provided under the law in case of the punishment by imprisonment will be reduced by one third, and –in case of the punishment by a fine- by one quarter.

Furthermore, it is also specified that even when the defendant's request that judgment should take place according to a simplified procedure was rejected or when the judicial inquiry took place according to the usual procedure, *and the court retained the same factual situation* as that described in the writ of summons and acknowledged by the defendant, the effect of punishment reduction will be maintained. The hypothesis envisaged the provision of Art. 375 of the Criminal Procedure Code in accordance with which the admission of the request for judgment according to a simplified procedure is not mandatory, the court ruling on it after hearing the defendant, the prosecutor and the other parties.

What we would like to highlight further on in our study, particularly in this context of the facultative nature for the court of the request for judgment according to a simplified procedure, is composed of the conditions which should be met for such request to be admitted. The doctrine underlines that, for the request to follow a simplified procedure to be admitted, it is required that the court should verify: a) whether the deed retained in the indictment is not

[3] A. Zarafiu, Procedură penală, Beck Publishing House, Bucharest, 2014, p. 385.

punished by life imprisonment. When verifying the fulfillment of this condition, the court will not consider also the provisions of Art. 39 para. (2) of the Criminal Code in accordance with which, in case of concurrence of crimes, when several punishments by imprisonment were established, if, by adding to the higher punishment the increase of one third from the total of the other established punishments by imprisonment, the general maximum of the punishment by imprisonment were exceeded by 10 years or more, and for at least one of the concurring crimes the punishment provided under the law is the imprisonment for 20 years or more, the punishment by life imprisonment can be applied. The punishment which will be taken into account is the punishment provided under the law for each and every crime; b) if the request is complete, in the sense that it includes the two expressions of will referred to in Art. 374, para. (4) of the Criminal Procedure Code, with regard to the full admission of the deeds with which the defendant is charged, respectively to the acceptance of the circumstance that judgment is carried out only based of the evidence produced in the stage of criminal prosecution and, eventually, based on the writs produced by the parties; c) the request was made in person before the court, the doctrine[4] stating that such expression o wills cannot be made even by means of the lawyer that has a special mandate in this respect; d) if the request was made within the term provided under the law, namely until the initiation of the judicial inquiry; e) if the evidence produced within the criminal prosecution is sufficient to find out the facts and the fair settlement of the cause.

From the conditions indicated previously, the one requiring certain clarifications is that referring to the full admission of the deeds with which the defendant is charged. This requirement envisages the factual context, as it is retained through the arraignment. It is, thus, mandatory that the defendant should assume the perpetration of the deed, but not the legal classification proposed by the prosecutor's office. The conclusion is very clearly revealed also from the provisions of Art. 377 para. (4) of the Criminal Procedure Code ordering that, if the court finds, *ex officio*, upon the request of the prosecutor or of the parties, that *the legal classification given to the deed through the writ of summons should be changed*, the court os bound to raise the new classification for discussion and to draw to the defendant's attentions that the defendant is entitled to request the postponement of the cause. In this case, the defendant's possibility to benefit from the punishment reduction generated by the benefit of a simplified procedure is not compromised if the new legal classification of the deed as established by the court is different than the one from the indictment, which had been initially accepted by the defendant. The reason for adopting this solution is exactly that by the acceptance of the guilt, the deed is what is admitted, and not the legal classification of the deed. The solution is the same even if the one challenging the legal classification is the defendant himself. In case that the change of the legal classification leads to the establishment of a legal classification envisaging a crime that requires the prior complaint of the injured party, the court of law calls the injured party and asks such party if it intends to file a prior complaint. Should the injured party file a prior complaint, the court continues the judicial inquiry, or it may otherwise order the cessation of the criminal trial.

The same solution of accepting the fact that, under the conditions of Art. 374 para. (4) of the Criminal Procedure Code, what should be admitted is the deed and not its legal classification is also indicated by the comparison between the institution of the admission of guilt and the institution of the agreement for the admission of guilt. As previously underlined, in case of the agreement, the legal classification proposed by the Prosecutor's office and even a punishment should be admitted, including in terms of the method of its execution. In this respect, with regard to the agreement for the admission of guilt, Art. 479 of the Criminal Procedure Code expressly indicates that the object of the agreement is formed of "the admission of the perpetration of the deed and the acceptance of the legal classification for which the criminal action was filed and regards the type and quantum of punishment, as well as the form of its execution". Differently, Art. 374 para. (4) of the Criminal Procedure Code, regarding the procedure of the admission of guilt provides that: "…the chairman draws to the defendant's attention that the defendant may request that judgment takes place only based on the evidence produced during the criminal prosecution and based on the writs submitted by the parties, if the defendant fully admits the deeds with which the defendant is charged …". Even the interpretation of the names of the two institutions: the agreement for admission of *guilt*, respectively the procedure in case of the admission of the *accusation* comes to support the same conclusion.

When, for establishing the legal classification or when, after changing the legal classification, it is necessary to produce other evidence, the court, taking the conclusions of the prosecutor and of the parties, orders the performance of a judicial inquiry according to the usual procedure, without affecting the occurrence of the effect of punishment reduction referred to in Art. 396, para. (10) of the Criminal Procedure Code .

Another issue deriving from the object of the admission of guilt is that regarding the possibility to adopt solutions of non-conviction further to the performance of a simplified procedure. Given the application of the previous Criminal Procedure Code, jurisprudence indicated that "The provisions of Art. 320^1 para. (7) of the Criminal Procedure Code

[4] A. Zarafiu, op.cit., p. 387.

referring to the issue of decision to convict in case the simplified procedure is followed, shall not exclude the application of the provisions of Art. 18[1], because a decision to convict may only be issued if the deed admitted by the defendant presents the social hazard degree of a crime; otherwise, we are in the presence of a deed provided by the criminal law and not in the presence of a crime." On the other hand, in the same decision, the High Court of Cassation and Justice indicated the fact that: "The only grounds for acquittal which is compatible with the simplified procedure are those provided in Art. 11, item 2 letter a) related to Art. 10 letter b[1]) of the Criminal Procedure Code, all the other grounds for acquittal provided in Art. 10 of the Criminal Procedure Code imposing the performance of the judicial inquiry which should establish the existence of the deed, whether the deed is a crime and whether it was perpetrated by the defendant"[5]. In other words, if the texts from the previous legislation were applied, an acquittal solution, for instance, could not be issued, because it was considered as incompatible with the specific nature of the simplified procedure for the admission of guilt.

When the new Criminal Procedure Code is applied, exactly because the deed, and not the guilt or the provisional legal classification proposed by the Prosecutor's office in the writ of summons addressed to the court, forms the object of the admission of guilt, solutions may be very different. Thus, on the strength of Art. 396, para. (10) of the Criminal Procedure Code, when the judgment was carried out under the conditions of a simplified procedure, and the court retains the same *de facto* situation as that described in the writ of summons and admitted by the defendant, the solution of *conviction* or of *postponing the application of punishment* (which is a non-conviction solution) may be issued. We also believe that, after performing this procedure, the court may also order the solution of ceasing the criminal trial (for instance, in the assumption in which the intervention of a special cause for non-punishment is ascertained). This can happen, for instance, in the assumption of the special cause for non-punishment applicable in case the perjury is withdrawn. In the respective case, the author admits the perpetration of the deed and withdraws the perjury made, for which reason the only possible solution in the criminal side of the cause is the cessation of the criminal trial, on the strength of Art. 396 para. 6 of the Criminal Procedure Code related to the provisions of Art. 16 letter h) of the same code. To an equal extent, we believe that it is possible to resort to the acquittal solution, which is no longer considered by jurisprudence as incompatible with the procedure of the admission of guilt (Art. 375 of the Criminal Procedure Code)[6]. This because, as the court indicates, "unlike the provisions of Art. 320[1] para. (8) of the Criminal Procedure Code of 1968 providing that the court shall reject the request when the evidence produced during the criminal prosecution is not sufficient to establish the existence of the deed, is a crime and was perpetrated by the defendant, from the provisions of Art. 349 para. (2) of the Criminal Procedure Code related to Art. 374 para. (4) of the New Criminal Procedure Code the court retains that the request to apply the abbreviated procedure is admissible from these points of view if the produced evidence is sufficient to find out the facts and to fairly settle the cause. Such rewording corroborated with the phrase used by the lawmaker in Art. 396 para. (10) NCPP, respectively *in case of conviction* forms the court's belief that, within the procedure provided by Art. 375 of the New Criminal Procedure Code any of the solutions provided by Art. 396 of the New Criminal Procedure Code, including acquittal, is possible."

Elements of admission appear in the Romanian criminal trial also in connection with the civil side of the cause. Thus, according to Art. 23 of the Criminal Procedure Code, during the criminal trial, with respect to civil claims, the defendant, the civil party and the party whose civil liability is entailed may conclude a settlement agreement or a mediation agreement, according to law. The defendant, with the consent of the party whose civil liability is entailed, may admit, in full or in part, the claims made by the civil party. In such cases, the court shall bind [*the defendant*] to pay damages only to the extent of admission.

3. Conclusions

We have set out hereinabove the most important issues related to the object of the admission of the criminal charge. The attack launched by the elements of accusatorial law versus the performance rules of the Romanian criminal trial is obvious, especially in relation to the provisions of the new Criminal Procedure Code, and the most important mechanism through which this is made is the jurisprudence of the European Court of Human Rights. The one which was particularly subjected to analysis was the procedure in case of the admission of guilt, especially in terms of its object. The fact that this procedure generated a series of positive effects is beyond any doubt. Firstly, it allows the criminal trial to be carried out with a significant celerity, which has a positive influence on the level of compliance with the principle of guaranteeing the right to a fair trial in terms of the reasonable duration of judicial proceedings. This effect has a particular importance, especially in terms of the fact that our country is subject to the justice monitoring procedure, and it is doubled by another beneficial effect, which is not at all to be ignored in the context of the financial recession – the decrease in the

costs occasioned by judicial proceedings. Even under these circumstances, it is ascertained that the guarantees of observing all the fundamental rights of a person who is subject to the procedure, including in the performance of the simplified procedure, are maintained active.

WITHDRAWAL OF PREVIOUS COMPLAINT. A COMPARISON OF THE OLD AND THE NEW CRIMINAL CODE. PROBLEMS OF COMPARATIVE LAW

Alin Sorin NICOLESCU*

Abstract:

In criminal law previous complaint has a double legal valence, material and procedural in nature, constituting a condition for criminal liability, but also a functional condition in cases expressly and limitatively provided by law, a consequence of criminal sanction condition. For certain offenses criminal law determines the initiation of the criminal complaint by the introduction of previous complaint by the injured party, without its absence being a question of removing criminal liability. From the perspective of criminal material law conditioning of the existence of previous complaint ,its lack and withdrawal, are regulated by art. 157 and 158 of the New Penal Code, with significant changes in relation to the old regulation of the institution . In terms of procedural aspect , previous complaint is regulated in art. 295-298 of the New Code of Criminal Procedure. Regarding the withdrawal of the previuos complaint, in the case of offenses for which the initiation of criminal proceedings is subject to the existence of such a complaint, we note that in the current Criminal Code this legal institution is regulated separately, representing both a cause for removal of criminal liability and a cause that preclude criminal action. This unilateral act of the will of the injured party - the withdrawal of the previous complaint, may be exercised only under certain conditions, namely: it can only be promoted in the case of the offenses for which the initiation of criminal proceedings is subject to the introduction of a previous complaint; it is made exclusively by the rightholder, by legal representatives or with the consent of the persons required by law for persons lacking legal capacity or having limited legal capacity;it must intervene until giving final judgment and it must represent an express and explicit manifestation. A novelty isrepresented by the possibility of withdrawing previous complaint if the prosecution was driven ex officio, although for that offense the law requires a previous complaint in the sense that the withdrawal takes effect only if it is appropriated by the prosecutor.

Keywords: *crime, previous complaint, criminal action, withdrawal of previous complaint.*

1. Introduction. Previous complaint. General considerations.

Legal order and civic discipline in a state of law are established and maintained by means of rules of law. These rules prescribe rules of conduct, which must be obeyed by the community members as well as sanctions to be applied in case of their violation.

The rules of conduct – most of them - are expressed in a particular form: the law[1] in a wider sense (including any normative act).

The great philosopher, lawyer and orator Cicero (106 BC-43 BC) said more than two millennia before that "we are slaves to law in order to be free".

The establishment by law of the facts constituting crime, as well as of the criminal sanctions framework, has a dual role: first to show the members of society which are the deeds prohibited by criminal law and also to warn them about the consequences of committing such deeds , thus fulfilling the function of general prevention and secondly to ensure the correct framing of the facts that infringed the penal law, and a fair sanction for those who committed such acts, with a special preventive function.

In Article 1 of the Criminal Code, the law provides the acts constituting offense, the penalties that are applied to offenders and the measures that can be taken when committing such acts.

Commiting an offense, even when it is discovered and proved by the administration of evidence, adduced against infringers, does not require the automatic application of punishment. In order to reach punishing the offender criminal justice is required, meaning his conviction by the competent court on a trial.

The necessity of restoring the rule of law infringed by committing crimes led to the establishment of the rule that initiation and development of criminal proceedings are made ex officio (principle of officialdom of criminal trial). In the case of minor offenses or those involving relationships between people or their personal life, the Criminal Code and other laws with criminal provisions stipulate that criminal action can be initiated or exercised only if the injured person expressed his/her will of prosecuting the perpetrator by introducing a previous complaint to the courts.

Previous complaint is a criminal institution, its absence representing a cause of removing criminal liability (art. 157 New Criminal Code).

The institution has a procedural aspect which has a direct impact on the possibility of exercising criminal action and implicitly on criminal responsibility.

[1] I. Gorgăneanu - Criminal proceedings, Scientific and Encyclopedic Publishing House Bucharest, 1977, p. 13.

From the point of view of criminal law ,previous complaint is a condition of punishability and in terms of procedural criminal law a condition of procedurability[2].

As outlined, in the case of the offenses for which the law provides the necessity of previous complaint of the injured person , criminal action can not be exercised in the absence of such complaints, art. 295 Code of Criminal Procedure.

Criminal law determines the cases when for the exercise of criminal action, previous complaint is required, starting from the circumstance that these offenses are among those which by their nature concern social relations limited especially to the personal interests of the parties.

In such cases, it is considered that the injured are able to determine whether to start a criminal trial, criminal action being conditioned by the manifestation of an exclusive right of the injured person[3]. Against the will of the injured criminal trial it can not take place.

Justification of the exception consisted either in a lower degree of abstract social danger of these facts or in the circumstance that their bringing to court, with the advertising involved by the trial, could be a source of discomfort or distress to the injured person or would give rise to various conflicts between people belonging to the same family or to the same social environment[4].

Since its legal support - criminal proceedings - in this case is characterized by availability, judicial authorities cannot exercise their duties ex officio.

Conditions of form and substance that must be fulfilled by previous complaint to produce its effect refers, inter alia, to the proprietor of the previous complaint, so, who can introduce previous complaint, the term in which it is introduced, what items previous complaint should include, these being provided by art. 295 para. 3 Code of Criminal Procedure in relation to art. 289 Criminal Procedure Code.

In terms of procedural aspect the institution of previous complaint is to be found in the Special Part of the New Criminal Procedure Code in Title I - Prosecution - Chapter II. art. 295-298, and in terms of substantive law in the general part of the New Criminal Code under Title VII - causes removing criminal liability - art. 157-158.

Therefore, previous complaint can be defined as a manifestation of the will of the injured person embodied in a revocable procedural act requiring criminal liability of the person who committed an offense against him/her for whom the commissioning of criminal action can only be achieved in this way.

Previous complaint, as a notification, is unlike any other ordinary acts referral[5] of the prosecution (denunciation, complaint,ex officio notification) its character necessary and indispensable as a condition for criminal proceedings, as well as through its exclusive character, previous complaint being the only way of valid notification referral[6] for criminal proceedings for certain offenses, which can not take place if there was a common complaint.

The previous complaint must be made by the injured person under the provisions of art. 157 New Criminal Code. It follows therefore that the injured person is the holder of the right to cause the initiation of criminal proceedings by introducing previous complaint.

According to the provisions of art. 158 New Criminal Code, the withdrawal of the previous complaint is , as well as the lack of previous complaint, a cause of the removal of criminal liability. Withdrawal of previous complaint is a unilateral act of will, manifested by the injured person who makes a prior complaint and then returns by withdrawing the complaint he made, and which must be real[7] and indeterminate by fraud or violence[8].

In judicial practice it is questionable which is the procedural remedy where previous complaint was withdrawn due to an error of consent, since the Criminal Procedure Code and the Criminal Code have express provisions on this.

We appreciate that in such a situation the procedural solution must be varied depending on when the withdrawal of prior complaint occurs due to an error of consent.

If viciated withdrawal of previous complaint occurs during the investigation or during the trial in first instance the injured party has the opportunity to inform the appropriate judicial authorities about this issue, promotion or filing a complaint against the solution of classification or ,respectively against promoting ordinary means of attack .

The problem which finds no firm and explicit solution is when the viciated withdrawal of prior complaint occurs before the final court as a jurisdiction degree pronouncing a final decision without the injured party being aware of the existence of the defect at the time of consent (dol) or was objectively unable to proceed otherwise due to the violence exerted on him.

We believe that by ferenda law this situation should be regulated as to provide procedural remedy in the circumstance when the withdrawal of prior complaint was determined by fraud or violence, and in the meantime a final decision was pronounced.

Withdrawal of previous complaint must be total and unconditional, namely to concern both the criminal and the civil part of the trial.

In other words, the injured person can not renounce criminal proceedings and can not condition the withdrawal of previous complaint by granting civil damages.

As I specified, the withdrawal of the previous complaint must be made within a certain period of time which is situated between its submission and the intervention of the final decision of the court. According to the provisions of the Criminal Code, the withdrawal of the previous complaint has as a legal effect the removing of criminal liability.

Injured person's right to make a prior complaint is a personal right, indivisible and non-transferable in principle.

The exercise of this right may be made, however, by an authorized agent. In this case the mandate should be special and the procuration should be attached to the complaint.

In judicial practice it was established that lack of procedural capacity of the person lodging the prior complaint to the competent body for the injured person is not covered by a mandate given after overcoming these phases of the process, its lack causing the termination of criminal proceedings under Art. 17 Code of Criminal Procedure in relation to art. 396 para. 6 combined with art. 16 para. 1 letter e Code of Criminal Procedure.

Regarding subjects that can introduce previous complaint to the competent bodies we are to see that the legislator has provided the possibility that anyone other than its holder can file a complaint[9], respectively the legal representatives (parents, guardian or curator) when the injured person is a minor or under a disability.

According to art. 157 paragraph 4 of the Criminal Code, if the injured is a person lacking legal capacity or with limited exercise capacity, criminal proceedings are initiated ex officio. Therefore, in the case provided by art. 157 para. 4 Criminal Code functions both the principle of availability on criminal action and the principle of officialdom. In this regard, we consider that initiating criminal action is made ex officio only in the subsidiary, namely only in the event that those entitled by law have not introduced previous complaint to the competent bodies.

According to the New Criminal Code previous complaint can also be introduced or withdrawn by the legal person where he is the victim of a crime for which criminal action implementation is made only in such a way, for example, the crime of destruction provided and punished by art. 253 para. 1 and 2 of the Criminal Code.

For the legal person previous complaint will be stated and implicitly withdrawn in its name and interest through the legal representative, because as long as there are duties and responsibilities , correlatively there are rights.

A special situation can arise when the legal person, victim of a crime where the criminal proceedings shall be initiated upon previous complaint, is in dissolution or liquidation procedure when we consider that this approach will be achieved by the legal representatives of the company of insolvency . To reason logically and legally otherwise in the sense of a restrictive interpretation of the term " injured person –legal representative " would reach infringement of free access to justice, a right belonging to the legal person too and which is guaranteed by Art. 21 of the Romanian Constitution and art. 6 § 1 Thesis I of the European Convention for defending human rights and fundamental freedoms.

2.1. Comparison between the Old and the New Criminal Code

In the light of new legislation are outlined some new conditions in which withdrawal of the previous complaint removes criminal liability, marking significant differences to the concept promoted by the Criminal Code of 1969, as well as some conditions required under the previous regulation remain valid (some of which being currently established by law, others only reported in the doctrine). Conditions of withdrawal of previous complaint are: intervening in case of offenses for which the initiation of criminal proceedings is subject to the introduction of a previous complaint - art. 158 para. (1) NCP [but, when the prosecution was initiated ex officio, under the law, the withdrawal of the previous complaint must be appropriated by the prosecutor - art. 158 para. (4) NCP]; being made by the rightholder [injured party / other person who has the necessary capacity -art. 158 para. (3) NPC reported to art. 289 para. (2) NCPP]; constituting an express and explicit manifestation of renounciating previous complaint lodged (special mandate, authentic documents); intervening until giving a final judgment [art. 158 para. (1) NCP].

Offences pursued in previous complaint are in the New Criminal Code largely the same from the Old Criminal Code , respectively offenses which generally concern patrimonial or or non-property rights of the person as well as some offenses against the person (193, art. 206, art. 208, Art. 218 para. 1 and 2 Art. 219 para 1 etc ..) crimes against property (Art. 238, Art. 239, Art. 240, Art. 241, etc.), offenses against family (art.378 art. 379, etc.) , thereby without being exhausted procedural valences of this institution whose extension is recommended by the Council of Europe, as a way to retributive - restitutive justice

In the introduction to these considerations we defined previous complaint as a unilateral manifestation of the will of the victim embodied in a revocable procedural act requiring criminal liability of the person who committed an offense against it for whom initiating criminal action can only be achieved in this way.

[9] I. Neagu, work cited., p.571.

As it is revocable procedural act ,the previous complaint formulation does not remove the injured person's right of having in the future the fate of the criminal proceedings. as provided by law,

The main way to revoke the previous complaint is its withdrawal. It can be said that in this area usually the rule of symmetry works, according to which previous complaint may be withdrawn in offenses for which it is required, but only in the case of these crimes. Exceptions are cases where the law also allows promoting criminal action ex officio, and judicial bodies were self-informed.

We believe that the withdrawal of the complaint can be made by authentic statement (or even certified by lawyer), which is submitted to the case file. If the declaration of withdrawal has reached the court registry on the day of trial , but by an error of officials it did not join the file, because being in the appeal, the only solution is to promote an abatement legal dispute (extraordinary means of attack) .

Therefore, we can define previous complaint withdrawal as a unilateral manifestation of will, express, explicit, total , irrevocable and unconditional of the injured person embodied in a procedural act which in relation to criminal offenses for which initiation of criminal action is made to previous complaint requesting the removal of criminal liability on the person who committed such acts ,in any stage of the criminal process, but before the final verdict is pronounced .

Under art. 284 former Code of Criminal Procedure previous complaint had to be lodged within two months from the day the injured party knew the perpetrator, and according to art. 296 New Code of Criminal Procedure previous complaint must be lodged within three months from the day the injured party learned of the offense committed. Legislative amendment aimes at both increasing the term of formulation of previous complaint and the time when the term starts running, the new regulation "on the day injured person learned about committing the crime " being apt to induce removal of the subjective element in assessing the institution. This moment is easily determined on the basis of objective elements , outside the will of the person injured.

The former regulation leaves the possibility of runing a relatively undetermined period in which the injured party is not obliged to resort to the competent authorities to identify the perpetrator, after a long period he could say he learned who the perpetrator was and introduce previous complaint.

Unlike the time he learned who the perpetrator was, as provided by previous legislation; according to par. (3) art. 296 NCPP, if the offender is the legal representative of the injured party, the period runs from the date of appointment of a new legal representative. In long term offenses (continuous, continued, progressive) the term of three months will run from the time of consuming or the date on which the holder of the right knew about it and if the two moments do not coincide, and not from the date of its exhaustion.

Under the old rules and the new rules if the injured person is unable (without legal capacity or with limited legal capacity) previous complaint is made by her legal representatives (parent, guardian, curator), respectively, with the consent of the persons referred by civil law; In these cases, criminal proceedings may be initiated ex officio.

Specifying as a novelty in agreement with the High Court of Cassation and Justice - Criminal Division (for example: Decision no. 464/2009) the provisions of art. 157 para. (5) NCP provide that, if the injured person died (regardless of cause of death) or legal person was liquidated before the expiry of the term provided by law for the introduction of previous complaint, criminal proceedings may be instituted ex officio; the initiation of criminal proceedings ex officio may be made, in this case, both before and after the expiry term of previous complaint formulation; in this case the prosecuting authority is not bound by the term of previous complaint formulation for disposing beginning of criminal action .

We believe that the criminal proceedings shall be initiated ex officio also if, throughout the period of formulating previous complaint, the injured party was in an objective impossibility of formulating previous complaint, which is directly related to the offense, dying as a result of the offense after the expiration of the previous complaint term (for example, if the offenses are inextricably connected and consistential at a time after the commission of an offense prior to the complaint, the perpetrator tried to kill the victim, leaving her in a coma ; if the comatose state extends throughout the term of formulating preliminary complaint, the victim dying after this period, criminal proceedings may be instituted ex officio).

If the death or liquidation occur immediately after the expiration of the previous complaint formulation, and the victim was not in an objective impossibility to file a previous complaint , criminal proceedings can not be initiated ex officio.

In applying the provisions of the Criminal Code of 1968 it was stated that in case of death of the injured person in which previous complaint had to be made and it wasn't , this right is not transmitted to heirs and exercise of criminal proceedings can not be disposed ex officio[10]. Also in applying the provisions of the Criminal Code of 1968 it was stated that if the victim died after the previous complaint was lodged the criminal trial continues to be called into question heirs, but only to be a civil part[11] , the criminal proceedings being exercised ex officio[12].

[10] E. Ionăseanu, Prosecution procedure, Military Publishing House, p.122-123.
[11] Supreme Court of Justice., criminal judgment. no.3067/1995.
[12] L. C. Lascu, Prior complaint procedure. The death of the victim. Continuing Criminal, Pro Law Publishing House no. 2/1992, p. 191.

If non-transferability to heirs of the right to make previous complaint is maintained under the new Criminal Code, in the event that the injured person has died or the legal person was liquidated before the expiry of the period prescribed by law for the introduction of the complaint, the New Criminal Code provides that criminal proceedings may be instituted ex officio (157 para 5).

The aforementioned provision is not likely to clarify the exercise of criminal action in case of death of the injured party , on the contrary it can lead to further confusion.

The fact that criminal proceedings may be instituted ex officio means that there is an obligation for the Public Ministry to pursue prosecution. Justification of ex officio exercise of criminal action could be explained only by the existence of a public interest (pas d'interest, pas d'action) and not by the applications of the heirs whose interests would have been better defended by themselves, if the legislator had granted them this right.

Similarly is regulated the institution of active and passive indivisibility of criminal liability for the application of previous complaint.

Rule of active indivisibility applies where by committing the offense there are several people injured, meaning that the right to enter previous complaint belongs to any of these and the criminal liability of the offender will be drawn even if the previous complaint is made by only one injured party (Art. 157 para. 2 new Criminal Code, Art. 131 para. 3 old Criminal Code).

Rule of passive indivisibility applies where the offense was committed by several natural or legal persons (authors, instigators, accomplices), meaning that they will be held criminally liable even if the previous complaint was made only for one of the participants (Art. 157 para. 3 new Criminal Code, Art. 131 para. 4 old Criminal Code).

Under the old Penal Code withdrawal of previous complaint can only be effective if it was withdrawn on all offenders (opera in rem)

The new Criminal Code renounced this rule with reference to the principle of passive indivisibility in case of withdrawal of previous complaint; this solution being justified by the fact that the institution of reconciliation, which takes effect in personam, has been redesigned and is incidental only for crimes that criminal proceedings shall be initiated ex officio in which the law provides such a possibility of extinguishing criminal conflict and not under the assumption of offences for which criminal proceedings are initiated on the injured person's previous complaint.

Thus, according to art. 157 para. (2) The new Criminal Code, withdrawal of previous complaint removes criminal liability of the person on which the complaint was withdrawn. It is therefore possible to withdraw previous complaint only on one or some of the participants to committing the crime (produces effects in personam, not in rem), the criminal trial being to continue on suspects or defendants regarding to whom the complaint has not been withdrawn.

If the withdrawal of previous complaint occurs during prosecution, the prosecutor disposes classification, and if this occurs during the trial, the court orders the suspension of criminal proceedings.

Other changes with reference to the institution of withdrawal of previous complaint can be found in the mediation law (no. 192/2006):

Thus, according to art. 67 para. (2) of this act "in the criminal process, provisions on mediation shall apply only in cases of offenses for which, by law, the withdrawal of previous complaint or reconciliation remove criminal liability."

It is noted that the mediation agreement establishes a reconciliation between the offender and the injured party as a distinct means of mitigating the conflict between them in relation to criminal-law institutions represented by withdrawal of prior complaint, respectively of reconciliation [according to art. 16 para. (1)letter g) NCPP], without representing a new cause of removal of criminal liability.

Another procedural provision is required by art. 69 para. (2) of the same law, namely that the period prescribed by law for the introduction of previous complaint shall be suspended during the course of mediation. If the warring parties have not reached an agreement, the injured party may introduce previous complaint within the same period, which will resume its course since the date of the writing of the minutes closing the mediation procedure, also considering the time elapsed before the suspension.

In case of withdrawal of the previous complaint, the suspect or the accused may request further criminal proceedings under Art. 18 NCPP with a correspondent in the old Criminal Procedure Code Art. 13 Code of Criminal Procedure in order to be able to prove his innocence, for the purposes of acquiting, and if this is not achieved, it is preserved the benefit of withdrawal of previous complaint, respectively ceasing the proceedings.

According to both provisions the withdrawal of previous complaint removes both criminal liability and civil liability, even if it is made by the legal person through his legal or conventional representatives and it is possible as long as there is a pending criminal trial or preliminary acts are performed. After issuing a final solution the withdrawal of previous complaint can not be done any more because of the lack of prosecution.

Also unchanged are the provisions under which the injured persons lacking capacity, the withdrawal of previous complaint is made only by their legal representatives. In the case of an injured person with limited legal capacity, the withdrawal is made with the approval of persons prescribed by law; in such cases, the withdrawal of previous complaint may be void as criminal proceedings can also be instituted ex officio.

The new Criminal Code has introduced an additional condition for the offenses for which the initiation of criminal proceedings is subject to the introduction of a previous complaint, but prosecution was driven instituted ex officio in accordance with the law (in cases where the injured person is: a natural person lacking capacity, an individual with limited legal capacity or a legal person represented by the perpetrator); in these cases the withdrawal of complaint produces effect only if the complaint is appropriated by the prosecutor, thus limiting the right of disposal of the injured person just to ensure a more effective protection of those persons who are in a vulnerable position; in these situations, if the injured person withdraws his complaint , but prosecutor does not appropriate this manifestation of will (for example, if there is reasonable suspicion to believe that the withdrawal of previous complaint is nullified by an error of consent), criminal proceedings will continue under the principle of officialdom. (Art. 158 para. 4 new Criminal Code).

It is noted that the provision laid down in art. 158 para. 4 new Criminal Code establishes the situation when criminal proceedings was initiated ex officio, under the law [ie, art. 158 para. (3) or art. 199 para. (2) The New Penal Code], an optional attribution of the prosecutor who can refuse to accept the withdrawal of the previous complaint and the criminal trial to continue.

A legislative inconsistency problem is noted on the crime of domestic violence. Thus, according to art. 199 para. (2) The New Criminal Code offenses referred to in art. 193 New Criminal Code (beating or other violence) and art. 196 New Criminal Code (culpable bodily accident) committed against a family member, criminal proceedings may be instituted ex officio and reconciliation removes criminal liability. This text is contrary to the provisions of art. 158 para. (4) that the New Criminal Code according to which offenses for which the initiation of criminal proceedings is subject to the introduction of a previous complaint, but prosecution was instituted ex officio in accordance with the law, the withdrawal of complaint shall take effect only if the complaint is appropriated by prosecutor. Corroborated interpretation of art. 199 para. (2) The New Penal Code and art. 158 para. (4) The New Criminal Code seems to hint that in those cases of domestic violence should be possible both the reconciliation and the withdrawal of previous complaint (if it is appropriated by the prosecutor).

However given the distinct nature of the two institutions, as well as the fact that reconciliation is stipulated by the provisions of the special part of the New Criminal Code, we believe that the only institution that can operate in such a case is that of reconciliation.

If we have detailed above the main differences and similarities between the two regulations we also appreciate that are necessary the following comments in regard to the withdrawal of prior complaint.

These specifications cover issues that are the creation of jurisprudence which shall remain valid and other legislative provisions of the old regulation unchanged by principle.

When the injured person is deaf and dumb, the withdrawal of previous complaint lodged with a statement recorded in conclusion is not valid, if it was not done through an interpreter or a filed document (Supreme Court, Criminal Division, Decision no. 1397/1992, in Problems law ... 1990-1992, p. 436).

Holder of prior complaint is the person - natural or legal - injured by the offense that requires criminal liability.

Previous complaint must meet certain requirements of substance and form, whose not meeting attracts lack or invalid complaint.

Submitting a complaint to an incompetent judicial body does not affect its validity because the incompetent body must send the petition to the organ that has by law, empowerment to address.

Although the law doesn't specifically provide this, previous complaint brought before judicial bodies should be based on fact, namely the one who submits it should rely on facts occurring in the objective world.

We believe that if the previous complaint is made in bad faith, the applicant may be held criminally liable for the offense of misleading the judicial bodies provided and punished by art. 268 new Criminal Code or slanderous denunciation provided and punished by art. 259 Old Criminal Code. With regard to this observation judicial practice and doctrine were not and are not consistent and there is also the substantiated opinion that the crime of slanderous denunciation of the Old Criminal Code with a correspondent in the new Criminal Code offense of misleading the judicial authorities does not concern crimes for which initiation of criminal action is made at prior complaint since the legal text refers only to "the notification made by denunciation or complaint" the prior complaint without being mentioned.

Filing a previous complaint by a general representative does not meet the legal requirement so that the complaint is considered non-existent. For the validity of the complaint, the mandate must be special (ad litem) and the procuration is attached to the complaint. Previous complaint may be drawn up and signed by the attorney if the injured party gave him a special mandate reflected in the content of lawyer's empowerment.

If the injured party is a person without legal capacity or who has limited legal capacity, the previous complaint is not actually necessary because the judiciary organs can notify.

Restoring the term operates if during the criminal proceedings the legal classification is changed for an offense involving the formulation of the previous complaint, when the injured party is called and asked if he wishes to lodge a criminal complaint. From the date when the judicial body announced injured party, it has a period of 3 months.

A special situation exists in the case of flagrant offenses punishable upon previous complaint of the injured party, in which case the criminal investigation body is obliged to establish its commitment even without previous complaint. After establishing flagrant crime, the criminal prosecution body calls the injured party and if he declares that he lodges a prior criminal prosecution continues. Otherwise, the criminal investigation body forwards the concluded documents and the dismissal proposal to the prosecutor.

If within the period of introducing a previous complaint, but before formulating it, there is a law that gives amnesty to the offense provided by the criminal law, the judicial shall order the enforcement of clemency act. The solution will be maintained even if later, within the period prescribed by law, the injured party lodges complaint, because it was consumed a cause that doesn't leave prosecution without a purpose. The possibility of an equality between amnesty and lack of previous complaint is excluded because, if the complaint was not filed within the prescribed term it is missing, and if submitted within the term the above solution is applied.

Contesting the attack by a parent of the withdrawal of the complaint made by the other can not take place because both parents exercise parental rights.

According to art. 25 para. (5) NCPP with a correspondent in the old regulation in art. 346 para. 4 Code of Criminal Procedure, in the case of the withdrawal of the previous complaint the criminal court leaves civil action unresolved.

2.2. Problems of comparative law

In all legal systems there is the question of knowing if when committing an offense under the criminal law, this act constitutes a crime or not, who is the author and the punishment that is to be applied to the latter in case the person is guilty of committing that crime. To solve these problems it is necessary first to conduct prosecution on that act.

As for the author of the prosecution, some authors of comparative law[13] show that four systems are possible: action emanating from the victim or his heirs (private prosecution); action emanating from all citizens, acting on behalf of the society (popular charge); action that emanates from the very judges (criminal action ex officio); Finally, action emanating from specialized officers such as magistrates from the Public Ministry (public prosecution) or the officials from certain public institutions.

Let's see, then, how these systems are reflected in the different legislations of the countries of the world.

1. Anglo - Saxon (American) Law.

The English system is quite complex, the basic text being Prosecution offences. Act 19852, which refers to the prosecution of offenses.

In principle, all citizens can express their will for criminal investigation in connection with a crime, but in fact, most often, the judiciary police bodies initiate public action .

From this point of view it was brought an attenuation consisting of a specialized service in judicial action: in 1879, was created the Director of Public Prosecution (DPP), ie Department of public and judicial action and in 1985, the CPS, meaning the Crown prosecution service, the first of these two institutions holding the lead. This service has the essential mission to continue or to terminate prosecution initiated by judicial police authorities[14].

Specifically, the Crown Prosecution Service checks the record of the police , if they decided prosecute and decide whether the evidence is sufficient to order continuation of prosecution their insufficiency resulting in the case dismissal. But if the police decided not to pursue ,if they just addressed the defendant a warning, they will not send any file to the Crown Prosecution Service and the latter will not be able to exercise prosecution.

The secondary mission of CPS (Crown proecution service) is to decide on prosecutions launched by individuals: in effect, such a criminal action may be contrary to the public interest.

In a word, CPS can only finish prosecution already started by the police or by an individual.

Finally, in principle, CPS shows which are the exceptions to the rule mentioned above. Thus, there are situations in which the criminal proceedings are not initiated ex officio or on prior complaint of the victim, but require notification or authorization of public institutions. So things are with taxes, customs (for illegal importing of drugs). Health services are competent in terms of fraud benefit offenses in these areas.

Following the investigation, the findings thus made and cumulated in a report made by the criminal investigation bodies, can allow launching of criminal trial.

The American system is very different from the English one and much easier. Originary from the USA, it is separated from the traditional English which is still founded on the idea of ex officio prosecution and previous complaint of the injured person. Also in the USA there is a public service, a veritable Public Ministry possessing monopoly of prosecution: prosecutors of the United States for federal offenses, regional prosecutors and municipal prosecutors for state offenses.

2. German law.

The German law covers, with some differences, the same stages as the Roman criminal proceedings: a preliminary phase of criminal action, followed by the

[13] Jean Pradel, taken by Pierre Legrand- Comparative Law, Lumina Lex Publishing House, Bucharest, 2001.
[14] CPS can also give advice to the police;

trial phase and ends with the execution of criminal decision.

Prosecution may begin at a notification ex officio, by complaint or by denunciation.

Like the Roman law system for certain offenses such as mild violence, the victim has a specific action: he can act with the same title as the Public Ministry, which is an injury to the monopoly of the latter.

This specific action is the previous complaint, regulated in Book V (art. 374-406h)[15] of German Code of Criminal Procedure, dedicated to the injured person's participation in court.

Previous complaint (Privatklage art. 374-94 Criminal Procedure Code. German) may be exercised for the following offenses: breaking into residence, violating the secrecy of correspondence, personal injury, threat, giving or taking bribes in commercial circuit, destruction and crimes related to intellectual property (Art. 374 para. 1 Criminal Procedure Code. German).

Besides the injured person, holders of previous complaint may be all the people who may lodge a criminal complaint: the family, the legal representative in case of incapacity in civil and superior procedural sense.

If more people were injured by an offense that can lead them to previous complaint, they can act independently of each other. However, if one of the persons injured formulated previous complaint, the others are forced to join the process started, without having to exercise a previous complaint by each. In any case, the effects of a decision favorable for the accused are also opposable to the injured persons who have not participated in the proceedings (art. 375 German Criminal Procedure Code.).

Contents of the previous complaint is the same as the criminal complaint. Preliminary complaint holder is obliged to pay a bail under civil procedural law (art. 379 German Criminal Procedure Code). Making a complaint is not subject to any term.

In relation to the proceedings, previous complaint is not exclusive, so if public interests require, the prosecutor may pursue criminal action. Also, the criminal complaint is not a subsidiary of criminal action (Art. 376-377 German Criminal Procedure Code).

Judgment presents some particularities. Before the judgment itself, it is mandatory for some deeds[16] to attempt to reconcile the parties by an appointed mediator (Suhneversuch: art. 380). If the parties are not reconciled, the injured person formulates, in writing or orally before the court a previous complaint, accompanied by evidence showing that preliminary procedure of reconciliation was achieved.

If the complaint meets the legal requirements, the court orders its communication by the accused, who is required to formulate explanations within a given term(art. 382 German Criminal Procedure Code).

The court decides on the opening of the trial, by a conclusion. If the degree of guilt of the perpetrator is low, the court shall order the termination of the trial (art. 383 German Criminal Procedure Code).

Notification act (concluding opening of judgment) is read by the judge (art. 384 German Criminal Procedure Code). The holder of prior complaint can not study the documents in the file other than through a counsel. Otherwise, the law gives the injured person a procedural position equivalent to the prosecutor's (art. 385 German Criminal Procedure Code). Also, this procedure can not be ordered safety or educational measures.

By the time of closing the judicial investigation, the accused in turn may make complaint against the injured person, who will be judged together with the original complaint[17].

Previous complaint may be withdrawn after hearing the accused only with his consent (art. 391 German Criminal Procedure Code). In any case, once withdrawn ,previous complaint can not be reformulated. In case of death of the victim, it can be continued (art. 392 German Criminal Procedure Code).

Along with the prosecutor, in the court may participate in some cases the injured person, to protect its interests or for the supervision of the prosecutor's activity. The way the injured person can participate is called Nebenklage (complaint below)[18].

This complaint may be exercised, in addition to cases in which previous complaint may be formulated , and attempted murder victim or the person who had recovery of judjement in the complaint against the solution to end the prosecution (art. 395 par. 2 pt. 2 and 5 German Criminal Procedure Code).

Its procedural position is different from that of the holder of previous complaint by the following features: it can be represented or heard as a witness (art. 397 German Criminal Procedure Code) and may exercise remedies independently from the prosecutor (art. 401) German Criminal Procedure Code), and during the prosecution may file a complaint against the solution of not suing at law (art. 400 German Criminal Procedure Code).

Intention of participation can be expressed at any time[19] during the trial through an application before the court or the prosecutor, in writing or orally. The application runs without effect on initiating criminal action. Upon request the court will decide, after

[15] Book V - Participation injured person judgment, is divided as follows: Section I. - prior complaint; Section II - Complaint accessory; Section III. - Compensation for the injured person; Section IV. - Other rights of the injured person.

[16] Breaking and entering, violating the secrecy of correspondence, personal injury, threat and destruction.

[17] Withdrawal initial complaint by the holder thereof has no effect on the complaint made by the accused (Art. 388 para. 4).

[18] Settlement is to be found in art. 395-402.

[19] The holder of the complaint will state the procedure is (art. 392);

hearing the prosecutor and the accused (art. 396 German Criminal Procedure Code).

In case of death of the holder of the complaint, it remains without effect. (Art. 402 German Criminal Procedure Code).

Repair of damage caused to the injured person by offence is in kind or by worth. To this end, the injured person or his heirs make a request before the court by closing of criminal investigation. The application may be withdrawn until the judgment is pronounced(art. 403 and art. 404 German Criminal Procedure Code).

The court will resolve the application for compensation in the following ways: either not to pay compensation if the application is inadmissible or leads to the extension of the trial of the criminal case; this solution can be imposed at any time during the process (art. 405 of the German Criminal Procedure Code Thesis II.); either to grant the application in whole or in part (art. 406 German Criminal Procedure Code) or not to pay damages when the defendant has not committed the act or the application is unfounded (art. 405 Thesis I German Criminal Procedure Code.); These solutions can be pronounced after the debates. In this case, the court may approve the temporary execution, possibly giving a bail.

If the application is not accepted, the injured person can resort to civil action in court.

Against the decision on the application for compensation only the accused can resort to appeal (art. 406A and art. 406c Criminal Procedure Code. German).

Compelled execution follows according to the provisions of civil proceedings (Art. 406h Criminal Procedure Code. German).

Other rights granted to the injured person are provided in art. 406d-h German Criminal Procedure Code).

Thus the injured person is entitled, on request, to be communicated the development of the trial after the decision becomes irrevocable (art. 406d German Criminal Procedure Code).

It also has the right to study, through counsel, the documents in the file, if there are no conflicting interests of the accused with other persons (art. 406e German Criminal Procedure Code.) and the right to be assisted by a defender (art. 406f German German Criminal Procedure Code). The holder of the attached complaint also benefits from this right (art. 406g Criminal Procedure Code).

A right of the heirs is acknowledged by the German Criminal Code Article 77 para. 2 which states that "If the injured person dies, the right to bring a complaint in cases provided by law, passes to the husband / wife and children. If the injured party had no husband / wife, or children, or they die before the deadline for submission of the complaint, the complaint goes right input on parents; and in case they die before the deadline for submission of the complaint, the right of introducing complaint passes to brothers / sisters or grandchildren of son / daughter. If a family member participates in the offense or his relationship with the injured party relationship ceases, he is excluded from taking over the right to lodge a complaint. This right may not be taken by anyone, whether prosecution is contrary to the desire of an injured person".

3. Latin law.

In the Spanish system, criminal action can of course be initiated by the Public Ministry. But what is original, is that all individuals can set initiate it equally. Under Article 101 LECRIM (Royal Decree for approving the Code of Criminal Procedure) criminal proceedings are public. All Spanish citizens will be able to exercise it in accordance with the provisions of law; Article 102 LECRIM excludes the incapables, those who have already been convicted twice for false allegations and judges. Article 101 is reinforced by Article 270 of the same Code, according to which "all Spanish citizens, who were victims of a crime or not, may lodge a complain exerting public action referred to in Article 101 LECRIM".

Also, foreigners may file a complaint for offenses relating to their person or their loved ones.

This general consecration of public action has besides foreigners, a constitutional basis because, under Article 25 of the Constitution, "citizens will be able to exercise public action".

In some cases however, there is a private prosecution system. Thus, in the case of offenses punishable only upon previous complaint of the victim,only it can act (art. 104 par. 2 LECRIM). But the importance of this system is reduced, because this rule applies only to a limited number of offenses which show a lower degree of social danger (such as insult and libel offenses against individuals); finally, through the obligation of the victim to attempt a reconciliation before submitting the complaint (Art. 278 LECRIM).

The Italian system is relatively distant from that of Spain. For ordinary crimes only Public Ministry may act. For minor offenses which are also called private offenses, prosecution can take place only upon previous complaint of the victim (eg for violence that do not cause distress, inability for more than 20 days).

In the Portuguese system, can act both the Public Ministry and the injured person. In Portuguese law, the concept of victim is original: it includes ,on the one hand, the injured person who has suffered damage and who holds civil action (art. 74 Portuguese Criminal Procedure Code), on the other hand, a character who can quote, call offend, insult and who holds the rights protected by law and violated by the offense and that can be an injured party (art. 68 par. 3 Portuguese Criminal Procedure Code). Those harmed may constitute an injured party, but only in the case of crimes traceable at the previous complaint. For these offenses, the victim may initiate prosecution. For other offenses, they are confined for the Public Ministry. Compulsorily, the injured party must be represented by a lawyer and may also require legal assistance.

In the French system, the rule is that the criminal proceedings are initiated ex officio. This can be triggered indirectly by the person injured, but the exercise of this action is essentially entrusted to the Public Ministry, which plays the role of a party in criminal proceedings. He is not an investigating judge (though, in training, he may have a more important role than the defendant or civil part).

But there are a number of offenses that pose a low degree of social danger (eg., In case of insult or defamation art. 48 of Law 29/1881, injury to privacy Art. 226-6 new French Penal Code) in which the criminal proceedings are initiated upon prior complaint of the victim. Lack of this previous complaint constitute a cause for removal of criminal responsibility and also an obstacle in the trial.

Unlike German law, as long as the complaint was not filed, the Public Ministry can not proceed with the investigation. But this preliminary complaint is not a sufficient condition, because even in its presence, the Public Ministry is not required to initiate criminal action (unless the complaint is accompanied by the application of constituting as civil party)[20].

We also mention that in all cases where prior complaint is a prerequisite of prosecution its withdrawal is a cause of extinction of criminal action.

Apart from these cases that remove criminal liability (lack and withdrawal of prior complaint), criminal action can be also extinguished by the repeal of the criminal law (the new law being far more , indulgent is applied immediately), through the death of the defendant (eg police, criminal action is extinguished only regarding the offender, not in terms of the co-authors and accomplices) by amnesty by res judicata and the prescription of criminal liability.

Like the Romanian legal system, French legislation regulates the special procedure for the settlement of flagrant crimes, in which case it is no longer required a previous complaint of the victim, the criminal investigation bodies only find their perpetration.

As for flagrant offenses in the French legal system, they can have two types of consequences: they cause to rise among people evidence of committing crimes , desire for revenge, and limit the risk of error for justice. These consequences imprint their mark on the procedure for the resolution of cases of flagrant offenses.

Criminal investigation bodies, which have previously notified the prosecutor in charge of the supervision of prosecution, start investigation . Prosecution authorities may prohibit any person to be removed from the scene until the end of operations (to verify their identity). They also can perform certain acts, namely: searching and seizing, especially in the presence of the suspect. For urgent findings, criminal investigation bodies may resort to any qualified person (usually an expert in the field of medicine)., may proceed with the examination of witnesses, may decide on the measure of preventive arrest of the accused.

Apart from detention on suspicion, police can detain the flagrant offender and lead him to the prosecutor. In these cases of flagrant offense, any person can catch the offender and lead him to the nearest headquarters of the criminal prosecution. The prosecutor himself may carry out criminal prosecution and order law enforcement agencies to continue the investigations (as often happens). He has broader responsibilities than criminal investigation bodies.

Thus, in case of a flagrant offense, if the court has not yet been notified, the prosecutor may issue a summons and interrogate the person brought before him. If this person is naturally presented in front of him as a defender , he can be heard only in his presence.

In case of flagrant offense (punishable with imprisonment), if the court was the prosecutor, if he considers that a piece of information is not needed , he may resort to immediate appearance in court.

Also, the court may carry out acts of criminal investigation so that prosecution authorities should require them to continue investigation); if so, the court will extend detention on suspension.

Following the investigation, the findings thus gathered and made into a report by the criminal investigation bodies, can enable initiation of criminal trial.

We note, therefore, that not only in our legal system, but also in the legislations of other states is provided the right of the injured person by an offense that shows a lower degree of social danger, to introduce a previous complaint to the prosecution authorities in order to establish the offense committed, bringing to criminal liability of the perpetrator and repairing the damage. The lack of such complaints is a cause for removal of criminal liability, the victim understanding not to manifest his will towards punishment for the offense committed , under criminal law.

The injured person's right to file the preliminary complaint, in the case of the offenses for which initiation of criminal action is subject to its introduction, and also means a guarantee of protection of fundamental rights and interests of any individual.

Moreover, in the last decade, under the influences deriving from some trends generated by the Council of Europe recommendations and theories which , starting from different bases, predict a repeated dejuridicization of criminal liability on account of promoting solutions that facilitate the reconciliation between the victim - offender, most modern laws are extending cases and situations limiting public action officialdom.

[20] Jean Larguier, taken by Victor Dan Zlatescu - Private Law comparative Oscar Print Publishing House, Bucharest, 1997, p. 104.

3. Conclusions

In conclusion, the withdrawal of the previous complaint appears as an institution that give legal expression to social-political interests regarding the initiation and the extinction of criminal trial. It is an institution that is considered an exception to the principle of formality and consists in the possibility offered by law to the injured person to decide whether or not further he should impose criminal liability of the perpetrator of a crime that is investigable on prior complaint by the competent authorities.

This exception was allowed by the legislator because, following factual and legal analysis of the situation and also the low level of social danger of certain offenses he can only decide his attitude to criminal liability.

There is an essential difference between the complaint as a way of notification by criminal prosecution bodies, which may be substituted by an ex officio notification or denunciation, and previous complaint, which is the only document required by law for some crimes, without the one who has committed such crimes will not be held responsible and which is, at the same time, a condition of punishability and procedurability.

As a proposal for improvement of the previous complaint procedure, regarding the term of filing previous complaint it should be noted above all the legal nature of this term .

At first glance, as otherwise considered in the specialized literature, it is a decline term.

Thus, if the injured person has not brought the previous complaint within the period provided by law and can not plead interruption of this procedural term, by claiming circumstances beyond his will, which prevented to introduce it , then he can not promote previous complaint and obtain criminal liability of the offender.

If we consider the effects of non-introduction of previous complaint within the period provided by law, we conclude that the time limit for the previous complaint is actually a special term prescription of criminal liability to be subject to the rules of this institution and not only a decline term . Also,we do not see what effect would have the exercise of criminal action ex officio in the case of a liquidated legal person. Who would benefit from such an action?

If all authors of codes were inspired by many European codes (French, German, Italian, Spanish, etc.),they could have chosen a better solution than the one found in the provisions of paragraph 5 157, which refers only to the situation in which the injured party died or the legal person was liquidated before the expiry of the period prescribed by law for the introduction of the complaint, but does not refer to a situation where the injured person has died or the legal person was liquidated during the criminal trial . Does anyone else have the possibility of withdrawing the prior complaint?

As we appreciate in the introduction to this material previous complaint if the legal person is in liquidation proceedings will be formulated and implicitly withdraw from the legal representative of the firm's insolvency, but in this way it does not answer the question above, namely what happens if the legal person was removed from the Trade Register?

Can criminal action ex officio still be exercised automatically in this situation? An affirmative answer would mean an interpretation of the law by analogy, but analogy in mala partem (the solution being obviously against the defendant) is not allowed

What solution will the prosecutor dispose during prosecution or the court during the trial?

For all these reasons we believe that the text of article 157 paragraph should be reworded in an unequivocal sense either assigning heirs exercise of criminal action in view of their economic interests, or providing that criminal proceedings shall be extinguished upon the death or deletion of the injured person (natural or legal person).

The new Criminal Code differs from the Criminal Code of 1968 and the solution proposed by the 2004 Criminal Code not only by regulating in a separate article of withdrawal of previous complaint but also through the effects that this manifestation of the will of the injured person has.

It was desirable, in the code authors's view , to renounce the parallelism between the causes of removing criminal liability determined today by the existence of the withdrawal of previous complaint, that is the reconciliation of the parties, opting for one of the two, respectively by the institution of withdrawal of the complaint, but the final version was also reintroduced reconciliation, but with different effects from those acknowledged by the old Criminal Code.

We consider that this new regulation managed to upset a legal institution well stabilized in legal practice, with certain restorative values, equally banning the right of the injured party, without any justification of criminal policy, invoking an alleged parallelism , inexisting otherwise, between the withdrawal of previous complaint and reconciliation between the parties, so that finally it should maintain both, distorting their effects.

There is no justification, neither logical, nor of criminal policy, so that the withdrawal of the previous complaint, which is a manifestation of will against the complaint (contrarius actus) should have symmetrical effects, under the symmetry principle of legal documents.

Moreover, we consider that it is inconceivable that the withdrawal of the previous complaint can be carried out prior to a final judgment (Art. 158 para. 1 new Criminal Code), and the reconciliation of the parties can be accomplished only by the reading of notification act(Art. 159 para. 3 new Criminal Code). The law ferenda is necessary, correlating the two institutions and in this respect, or rather the modification of the procedural time of the possibility

of operating reconciliation between the parties so as to provide that this can be achieved until the decision remains final.

Finally, what we have expounded will certainly not clarify controversial issues arising from the withdrawal of the previous complaint being merely an attempt to address this institution, but we believe that it can help the legal practitioners in some way to clarifying novel situations encountered, which will certainly not be few , determined by the new criminal legislation .

LEGAL FRAMEWORK OF EDUCATIONAL MEASURES INVOLVING NON-DEPRIVATION OF LIBERTY IN ROMANIAN CRIMINAL LAW

Andrei-Lucian PUȘCAȘU*

Abstract

In case of minors with age between 14 and 18 year old, who have committed a criminal offense and are liable from the criminal point of view, Romanian Criminal Code establishes a specific system of criminal penalties entitled educational measures.

The following study aims to analyze the educational measures involving non-custodial of liberty.

Keywords: *educational measure; minors; Romanian Criminal Code; sanctions.*

1. Introduction

Due to the physical and intellectual stage development in which they find themselves, the juvenile offenders are not able to realize the seriousness of the crimes committed, as well as their socially dangerous consequences, thereof the adjustment of a differentiated sanctioning regime imposed itself, a regime which should guarantee children rights and support.

The current criminal provisions represent a real progress resulted from a long historical legislative process and their main goal is to prevent and combat the manifestations of minors who, through their actions or lack of them affect the social values protected by the criminal law.

The justification of the scientific approach has as a reason the idea that with the entry into force of the new Criminal Code on February 1, 2014, the provisions that regulated the juvenile criminal liability regime has undergone many changes which may raise serious difficulties in judicial practice.

Therefore, we consider that the present interest of the topic is obvious since the aim of the paper is the examination in a manner as detailed as the new criminal provisions in relation to the comparative criminal law.

2. General Considerations

With the in force entry of the current Penal Code, the Romanian legislature has given up the mixed enforcement regime which consisted of punishment and educational measures provided by the old penal settlement, in favor of a sanctioning regime exclusively consisting of educational measures.

Unlike penalties, educational measures are punitive sanctions which apply only to minor offenders which have the ability to lead to their education and rehabilitation.

Besides this, educational measures are characterized by the fact that their application cannot attract disqualification, prohibition or incapacity which could affect the minor reintegration into society.

In order to sanction juvenile offenders, it is necessary to know whether, at the moment of the criminal offense completion or depletion, these ones had or not criminal capacity. Thus, the minor:

a) Under 14 years old benefits from presumption *iuris et de iure* as he presumably has no judgment capacity and therefore cannot be committed to criminal liability;

b) Aged 14 to 16 benefits from relative presumption of lack of criminal capacity , which means that he can be held criminally liable only if, based on a forensic psychiatric expert valuation, it has been proved that he was responsible for his actions;

c) Who is 16, can be held criminally responsible.

Consequently, it can be argued with full justification that, in order to hold a juvenile offender criminally responsible and implicitly, in order to apply an educational measure, it is necessary to meet the criteria regarding age and discernment. Therefore, the minor under 14, even if he has discernment, is not criminally responsible, those aged between 14 to 16 must meet the condition referring to the existence of discernment, and those who are already 16 are criminally responsible.

In addition to this, the minors who are not criminal responsible, benefit from the provisions of the art. 27 of the Penal Code, which settles minority as the cause of non- imputation.

From the perspective of criminal law, discernment has no legal definition but it appears to be the minor's capacity to realize the dangerous social character of his actions and to consciously manifest his will as referred to a real fact.[1]

* PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **lucian.puscasu87@gmail.com**; **lucian_puscasu2@yahoo.com**).

[1] George Antoniu et. al., *Preliminary explanations of the New Penal Code*, (Ed. Universul Juridic, Bucharest, 2011), 332.

Art. 114. Para (1) of the Penal Code establishes the rule that non-custodial educational measures apply to minor offenders aged between 14 to 18.

The field of action of the above foresights is limited by the provisions of par (2) which adjusts the situations when custodial educational measures can be taken, namely:

a) If he has committed a crime for which an educational measure has been applied, this one being executed or whose execution began before the offense for which he is judged;

b) When the punishment provided for the offense is imprisonment for 7 years or more or life imprisonment

With regard to point a), we consider that the purpose of the provisions is to punish persistent juvenile offenders in criminal activity or those to whom the custodial or non- custodial educational measures had no effect.

Consequently, if a minor commits two or more crimes before a judgment of conviction for any of them, and, if the penalty prescribed by law does not exceed 7 years, the court is bound to apply a non-custodial educational measure.

For hypothesis from b), we would like to emphasize that through the punishment prescribed by law we mean special maximum established by the legislature which indicts the act committed in consumed form, without taking into account the causes of reduction or increase of penalty.

The doctrine[2] includes some opinions which claim that in the case of an attempt committed by a minor, in order to take a custodial educational measure, we must take into account the punishment resulted from reducing to half the punishment of the consumed crime.

We assert that the attempt, as well as the mitigating or aggravating circumstances are causes of the reduction or increase of the punishment and, as a result,, according to art. 187 of the Penal Code, they don't produce effects on the special maximum foreseen by the norm of criminalizing an offense.

However, the above mentioned causes are taken into consideration in order to identify a proper educational measure and have no effect on the limits prescribed law for every educational measure in part[3].

On the contrary[4], some authors argue that in the case of mitigating or aggravating circumstances, the limits of the educational measures modify, more precisely, they are reduced by one third or, the duration of the measures established by the court can be increased up to the special maximum.

We have some reservations on this opinion because in the case of mitigating circumstances, according to art. 76 of the Penal Code, their effect is produced on the limits of the punishment and, in the case of aggravating circumstances, art. 78 of the Penal Code establishes the possibility of applying the special maximum provided and, if this is insufficient, a bonus of up to 2 years can be applied.

Therefore, we affirm that, in the case of mitigating or aggravating circumstances, a reduction or an increase of the duration of the educational measures will be operated, within the limits established by the legislature.

Thus, for example, if the court establishes the educational measure consisting of daily assistance for a period of three months and finds the incidence of mitigating circumstances, the extension of the measure will consist of 3 months instead of 1. However, in the case of the given example, if the court finds only the existence of aggravating circumstances, we appreciate that the measure of assistance can be imposed to the minor for its maximum period prescribed by law, more precisely, for 6 months.

We also want to emphasize the fact that, if the juvenile offender is in any of the cases provided for in subparagraph a) and b) of paragraph (1) of art. 114 of the penal Code, the court may establish a non-custodial educational measure to the detriment of a custodial measure if it considers that the former one has the ability to lead to the education and social reintegration of the minor.

The provisions of article 115 of the Penal Code include the two types of educational measures which can be applied to infantile offenders who commit offenses, including the non-custodial ones (civic training, supervision, recording on week-ends and daily assistance) as well as the custodial measures (hospitalization in an educational center, internment in a detention center).

Non–custodial educational measures can be considered as genuine community measures, as they meet all three requirements set by the European definition provided by The Glossary Recommendation R 16/1992 of the European Commission, namely: the sentence must be served in society, it can be associated with a judicial control consisting of the obligations under art.121 paragraph (1) of the Penal Code and it is under the supervision and coordination of the Probation Service[5].

To choose one of the educational measures, the court, in compliance with Art. 114 of the Penal Code, will consider art.74 of the Penal Code under which the establishment and duration of a sanction is commensurate with the gravity of the crime committed and the offender's dangerousness which is to be assessed on the following criteria:

- The circumstances and the way in which the crime was committed and the means used;
- The state of peril created for the protected value;
- The nature and severity of the result produced or

other consequences of the offense;

- The reason of the offense as well as the purpose;
- The nature and frequency of offenses that constitute criminal history of the offender;
- The conduct after committing the crime and during the criminal trial;

The Level of education, age, health, family and social situation. Besides, in accordance with Article 116 of the Penal Code, with a view to assess the minor , according to the criteria laid down in art.74, the court will ask the probation service to compile a report which will include reasons of the proposals regarding the nature and the duration of the social inclusion programs that minors should follow, as well as other obligations that may be imposed on him by the court.

The assessment report is designed to provide to the judicial body data on the minor from the psycho-behavioral perspective and may contain reasoned proposals on the educational measures which may be ordered.

3. The non-custodial educational measures regime

The place of the material regarding the non-custodial educational measures is represented by chapter II of Title IV of the Criminal Code, governing them in ascending order in relation to their gravity.

3.1. The civic training stage

The civic training stage, taken from French Criminal Law, has no counterpart in the previous Criminal Code and may be considered as being a measure whose purpose is to remove some small gaps in educating juvenile offenders.

The causes of behavioral deviance are the most varied, starting from disorganized family environment and ending with dubious social relationships with other people who have committed crimes.

By civic training we understand a complementary process of the education of the juvenile delinquent which passed on his intellectual and volitional plan, by transmitting information and preparing civic projects in order to gain amplified ability to identify his position as a member of the society.

The provisions of Art. 117 of the Penal Code establish that, by applying the measure of civic training stage, the minor is required to participate in a program with a program of 4 months at the most, in order to help him realize the social consequences to which he exposes in the case of committing a criminal offense and to make him responsible regarding his behavior in the future.

We believe that the court may apply the measure under consideration, only for crimes whose immediate consequence is to produce a result or create a state of danger which affects in a minimal way the legal object.

In this regard[6], judicial practice considered sufficient to impose the measure of civic training on a maximum period for the juvenile defendant who committed two offenses of battery or other violence that caused injuries which required medical care for up to 20 days. Also, in another case[7], the measure provided for in art. 117 of the Penal Code was applied for a period of one month for a criminal offense of theft.

The legislator has provided only the upper limit of the educational measure, namely, 4 months at the most leaving to the courts the freedom to assess the minimum period of application according to each situation.

The doctrine[8] stated that, although the law doesn't provide a minimum of the training civic stage, this one may not be less than 15 days since, otherwise, it would violate the provisions referring to minimum penalties.

We appreciate as unfounded the opinion above as the lower threshold of 15 days is specific only to imprisonment, according to art. 60 of the Penal Code, and it cannot be extended to the educational measure of the civil training stage as it would be an *malam partem* analogy.

Therefore, we hold that the court may hypothetically order the measure even for one day if, after reviewing the assessment report, it believes that this will produce significant positive changes in the behavior of the minor.

The organization, the ensuring of the participation and the supervision of the juvenile delinquent during the civic training stage are made under the supervision of the probation service without affecting the minor's school or vocational program. During the internship set by the court a number of 8 hours per month of civic training are to be taken into consideration.

We manifest some reservations regarding the effectiveness of the measure foreseen by article 117 of the Penal Code, as we consider that 8 hours of training per month may prove insufficient to change into better a juvenile delinquent behavior that tends to oscillate between conformism and deviant manifestations.

We consider as being fully justified the legislature option to protect the educational and professional curricula which are ongoing because their role is to develop skills and competences which promote the education and rehabilitation of the infant offender and implicitly this leads to his reintegration into the community.

Within 60 days at the most after the execution of the judgment, the minor must be included in a civic

---

training stage, the probation officer or, where applicable, the designated person from the institution in the community having the obligation to organize, ensure the participation as well as the supervision of the beneficiary during the civic training stage.

The educational measure of civic education is systematized in the form of continuous or periodic sessions and materializes into programs which contain elements of moral, civic and legal education as well as into community service projects.

Its content must be adapted on a case by case basis for each juvenile offender according to its specific peculiarities depending on the age and their degree of intellectual and affective development as well as in relation to the offense committed.

The synapses of the civic training educational measure created at the community level by interlocking the program adapted to the minor's needs and the criminal act committed, come to help the individual and allow a better rehabilitation by creating a network of support which acts on the assumption that the foundation of change of the juvenile delinquent involves a corrective action consisting of several plans such as: the beneficiary's internal moral principles, his relationship with the society, and his involvement in support programs.

Along with other authors[9], we consider as unfortunate the legislature failure to establish the fact that the probation officer has the responsibility to assess the juvenile convict during and at the end of the educational activities in order to analyze the functionality of the educational programs and to optimize the results.

The preamble of the new Penal Code states that the adjustment of the measure provided by Article 117 of the Penal Code is inspired by the Ordinance no. 45-174 of 2 February 1945 on juvenile delinquency[10] in French law.

According to the above mentioned law, the criminally liable minors are subject to a mixed sanction regime consisting of educational measures, educational sanctions and punishments.

Unlike the Romanian Penal Code which states that the civic training course is an educational measure, the French provisions settles the civic training course as being an educational penalty.

Educational penalties[11] are an intermediate category between punishment and educational measures and are considered as tools to combat juvenile delinquency which distinguishes itself by educational and coercive character. Thus, they become incidents if the court, at the time of deliberation, considers that an educational measure is insufficient to the minor's correction, whereas imposing a penalty would be too severe a sanction.

According to art. 15-1 of the Ordinance, to a minor aged between 10 to 18, the court may, by reasoned decision, apply the civic training stage as a single sanction or with other educational sanctions, with a view to reintegrate him into society.

By art. 1 of Decree no. 2004-31 of January 2004[12], the civic training stage is defined as the training activity which helps the juvenile offenders become aware of both criminal and civil liability effects and their duties towards the society.

The duration of the civic education course cannot exceed one month and both the Juvenile Court or The Juvenile Assize Court must take into account the academic obligations of the minor and the social situation of his family.

Also, the French legislature establishes that judicial protection services of the young organizes continual or periodic internship sessions of collective work of no more than 6 hours per day, consisting of training modules that are tailored according to the age and personality of the juvenile delinquent.

Thus, for example, the court may impose to the minor offender to attend civic training courses for a period of 30 days, and the youth protection services can create a program of work of 6 hours per day, unless this affects his academic obligations or the social situation of his family.

Therefore, we hold that the social impact of the civic training courses on deviant behavior of the juvenile delinquents, provided by the French Law, may produce visible results in terms its intellectual and moral plan.

The service of judicial protection of the youth is under an obligation to inform the minor and his parents or, where applicable, the tutor or the head of the institution having the custody of the minor, about the objectives of the civic training course before its enforcement.

Also, they are reminded that, in case of non-compliance to the enforcement conditions, the juvenile delinquent may be applied the educational measure required by art 15 of the Ordinance, i.e. the placement into an empowered institution of education and professional training, be it public or private.

We consider that the provisions relating to the civic training stage of the French Law provides sufficient similarities with the Romanian Law, but they are better structured and have a higher ability to remove any impulses of juvenile criminal behavior.

3.2. Supervision

Supervision represents a new measure introduced by The Romanian criminal law with an educational – preventive effect which can be taken against juveniles who have committed criminal acts with a view to improve their behavior and inclusion in society.

Although at first glance, the supervision measure has as a correspondent in the previous Penal Code the educational measure of supervised freedom, provided by art. 103, the two regulations have some fundamental differences. Thus, for example, the new provisions establish that the duration of the measure is shorter, the obligations which may be imposed to the minor are different and the responsibility to coordinate the educational measure lies with the Probation Service.

According to art 118 of the Penal Code, the surveillance activity results in a control and guidance activity of the juvenile delinquent in his daily program lasting between two and six months.

The control and guidance of the infantile offender in the execution of the educational measure is fulfilled by the parents, tutor[13] or the one who adopted him, and if these ones cannot provide satisfactory supervision the court will order the child custody to be taken by a trustworthy person, preferably a close relative[14].

It is noteworthy that by the above provisions, the legislature has complied with the Council of Europe Recommendation no. 2008/11[15] which requires the involvement of parents and legal guardians in the enforcement of sanctions and measures imposed, except the case in which this is not in the minor's advantage.

According to art. 79 of law no. 252/2013[16] the person who is responsible with the minor's supervision is required to submit to the probation officer a plan of the daily program of the juvenile offender for approval or revision where appropriate.

The achievement of acceptable conditions of insuring supervision can be verified by the court upon the receiving of the assessment report of the juvenile delinquent as this one must contain data on family and social environment of the child.

Thus, if the probation officer's assessment report emphasizes that the family environment is disorganized or discovers that there is lack of parental authority, we consider that the court may not grant the supervision of parents or guardian of the juvenile delinquent.

Besides, if the minor at the time of committing the offense which led to taking the measure provided by Article 118 of the Penal Code was or should have been under the supervision of the parents, of the tutor or the adopter, we consider that the court should dispose that the supervision of the infant offender be made by another trustworthy person.

If the above mentioned persons say they cannot provide the supervision of the minor, although the court finds that the conditions are satisfactory, we believe that they will dispose to have the minor supervised by another person.

During the execution of the educational measure of supervision, the probation officer has control on the supervising process both on the minor's performance measure as well as on the performance of duties of the person exercising supervision.

By taking non – custodial supervising educational measures, the aim is to ensure participation of the juvenile delinquent at school or vocational training courses and to prevent carrying out activities or getting in touch with certain individuals that might affect the correction procedure.

We consider that the effective supervision of the minor can be extended to various professional activities carried out routinely, with or without remuneration. In these circumstances, I propose *de lege ferenda* to reformulate and extend the provisions of article 118 of The Penal Code in the following way. "The educational measure of supervision consists in controlling and guiding the minor during his daily program for a period between 2 to 6 months, under the supervision of the probation officer, to ensure participation in school courses, training or *professional activities* and preventing the carrying out of activities or the contact with certain persons that could affect the correction process."

If the juvenile offender is not enrolled in school or training activities we consider that the court must impose him to follow one of these activities under article 121 paragraph (1) letter a). The probation officer, based on the assessment report and after consulting the minor will decide the course to be followed and the institution in which it is to take place.

Also, we argue that for the effective prevention of conduct of illicit activities by the juvenile and to prevent its contact with persons that could affect its correction procedure, it is necessary during the execution of the educational measure, that the court may order enforcement of obligations provided by Article 121 paragraph (1) b) –d).

---

[13] According to article 110 of The Civil Law „Guardianship of minors is set when both parents are, where appropriate, deceased, unknown or deprived of the exercise of parental rights, or criminal penalty of nanning parental rights was imposed, placed under judicial interdiction, legally declared dead or missing and if at the end of the adoption the court decides that it is in the minor's interest to be provided with guardianship."

[14] Art. 67 para. (2) of Law no. 253/2013 on the execution of sentences, educational measures and other non-custodial measures ordered by the court in criminal proceedings published in the Gazette no. 513 of August14, 2013.

[15] http://anp.gov.ro/documents/12412/136658/REC%282008%2911.pdf/e2bc76f6-9e39-4ffa-85ff-3178c61f8217.

[16] Law no. 252/2013 on the organization and operation of probation, published in the official Gazette, Part 1, no.512 of 14 August 2013.

Unlike the civic training course, the educational measure of supervision may be imposed if the crime severity increases. Thus, judicial practice[17] found to be sufficient for the education of the infantile delinquent and taking into consideration the seriousness of the offense, the application of the six-month period measure covered by article 118 of the Penal Code, against juvenile defendants who committed the offence of aggravated robbery under Article 234, paragraph (1) c) " a masqued, disguised or transvestite person."

The preamble of the Criminal Code states that non-custodial educational measure governed by article 118 is inspired by the Spanish Organic[17] Law no. 5 of 12 January 2000 on the criminal liability of minors.

The Spanish legislator, unlike the Romanian one, considered necessary to regulate the criminal liability of minors in a distinct *corpus iuris* containing rules of material and procedural criminal law derogating from the common law.

In this respect, the provisions of article 19 of the Spanish[18] Penal Code emphasize that criminal liability of offenders under the age of 18 is subject to regulatory Organic Law.

Also, the scope of the instruments mentioned above can be extended to persons aged between 18 and 21 years old who committed offenses under article 69 of the Spanish Penal Code[19].

Just like the Romanian penal settlement, the system of penalties applicable to juvenile delinquents is unique, consisting of custodial and non- custodial educational measures.

To choose an educational measure, the juvenile judge will consider the personal circumstances and the maturity of the offender as well as the nature and severity of the minor's actions. In exceptional cases the court may require the execution of two educational measures.

As opposed to Romanian provisions, the Spanish Organic Law establishes that the juvenile offender is assisted throughout the criminal trial by a technical team which consists of a social worker, a psychologist and an educator.

According to Article 7, paragraph (1) of the Organic Law, by requiring the release under supervision of the juvenile delinquents, the activity of the minor offender is monitored, as well as his participation in school, training center or workplace, as appropriate, in order to help him overcome the factors that led to the offense.

However, the minor must follow the socio-educational models established by the responsible public entity or by the designated professional regarding the juvenile delinquent's development and approved by the judge. The person subject to this measure will also be obliged to report to meetings and interviews established by professionals and to respect one or more obligations imposed by the judge, namely:

a) The obligation to attend regularly the appropriate educational course, if the juvenile delinquent is in the period of compulsory schooling and prove to the judge that he meets this requirement and to explain any absence by reason;

b) The obligation to undergo cultural, educational, professional, lucrative, sex education, self education training or other.

c) Prohibition of going to certain places, businesses or performances;

d) The prohibition of leaving home without a prior legal authorization;

e) The requirement to reside in a particular place;

f) The obligation to appear in person before a judge for minors or the professional designated by him, to bring information about activities and to justify them;

g) Any other duties that the ex officio judge or at the request of The Public Ministry considers necessary for social reintegration of the condemned, respecting dignity.

The public entity, after the judgment of conviction, has to indicate immediately or within 5 days to the professional responsible for the execution of the measure covered by Article 7 paragraph (1) letter h) of the Organic Law and to inform the court about appointment made.

Unlike Romanian provisions, the Spanish ones established that during the execution of the supervised freedom measure established by the court, the juvenile delinquent is monitored by qualified personnel in order to acquire skills and capacities necessary for the personal and social development.

In this regard, the professional designated with supervision will meet the child in order to draw up an immediate plan for the implementation of the measure which will consist of:

1. An overview of the situation;

2. An analysis of the personal, family, social, educational, training or employment in order to identify the causes which determined the offense.

3. Socio-educational model established by public entity to be followed.

Besides, the professional will propose minimum frequency of interviews with the child through which monitoring and control of the supervised freedom method will be achieved.

The measure can be ordered against juvenile offenders who commit fault (faltas) for a period of 6 months. For offenses committed by juveniles, the Spanish legislature sets the duration of the method for

[17] Arad Courtroom, Criminal sentence no. 1929/2014 -http://portal.just.ro/55/SitePages/Dosar.aspx?id_dosar=5500000000164208&id_inst=55.

[18] http://noticias.juridicas.com/base_datos/Penal/lo5-2000.html.

[19] http://www.boe.es/buscar/act.php?id=BOE-A-1995-25444 .

those aged between 14 to 16 years which will be 3 years and 6 years for those aged between 16 and 18 years old.

If the minor commits an offense for which the law prescribes imprisonment of 15 years or more, we may apply:

a) The measure of the closed regime for a period of 1 to 5 years of supervised release and measure up to 3 years if the juvenile offender is aged 14 or 15 years.

b) The measure of the closed regime for a period of 1 to 8 years of supervised release and measure up to 5 years if the offender is aged 16 or 17 years.

The juvenile judge is able to interrupt the execution of the measure, reduces its duration or replaces it with another if it considers the change is in the interest of the infant offender.

After analyzing the Spanish provisions we claim that the measure of supervised release presents a high severity degree giving a tighter control than the surveillance measure program of the Romanian law.

We also appreciate that the provisions of Article 7, paragraph (1) letter h) of the Organic Law were the source of inspiration for the Romanian legislature in the regulation of the daily non –custodial educational measure.

3.3. Weekends consignment

Weekends consignment is a non-custodial educational measure with no correspondent in previous criminal law which can be imposed to minor offenders with an antisocial behavior.

According to Article 119 of the Penal Code, the weekends consignment measure consists in the juvenile delinquent obligation not to leave the house on Saturdays and Sundays during 4 and 12 weeks, unless, in this period he has an obligation to participate in certain programs or carry out certain tasks imposed by the court.

The minor's interdiction to leave home operates in the time between 0:00 to Saturday and until 12pm on Sunday.

By "home" we mean any building freely chosen by a person to effectively carry out privacy. We consider that it is irrelevant whether it is the same or not with the domicile or the residence of the minor or whether it is permanent or temporary.

Thus, the housing may be a juvenile delinquent room, for example the room of an apartment or of a house, the tent in a resort, a room in a hostel or a hotel.

Therefore we hold that the child can spend every weekend in different houses insofar as it benefits from the probation officer surveillance and the person designated as such.

To overcome such situations, we propose *de lege ferenda* supplementing the provisions of article 68 of Law 253/2013[20] with the following provisions: "The court or judge in consultation with the probation officer must individualize the house in which the minor serves the educational measure provided for in article 119 of the Penal Code."

By imposing the measure of weekend consignment a dual purpose is achieved, satisfying the preventive effect of educational measures, so as the minor should avoid contact with certain persons or his presence in certain places which could predispose to the manifestation of criminal behavior.

Unlike other educational measures examined above, the weekends consignment affects the constitutional right to free circulation[21] regulated in article 25 thus influencing the minor's behavior through both physical and moral constraint.

According to Article 68 paragraph (4) of Law no. 253/2013, the execution of the measure provided by Article 119 of the Penal Code usually takes place under the supervision of the adult living with the child or of another adult designated by the court during some weekends in a row, except the case in which the court or the mandatory judge, under the proposal of the probation officer, disposes otherwise.

We manifest some reservations about the provisions above because we argue that familiar environment can contribute a greater share in the education and training of minors having in view their inclusion in society.

Also, the Council of Europe Recommendation no. 2008/11 on the European rules for juvenile offenders requires to include parents or a tutor in procedures for the execution of sanctions or educational measures.

Therefore, we propose *de lege ferenda* that the supervision of law enforcement should primarily be the responsibility of parents, adopter or guardian of the juvenile delinquent and where this cannot be done by them, the supervision should be done by an adult designated by the court.

Similar to the educational measure provided for in Article 118 of the Penal Code, and in the case of the weekend consignment, the supervisory control is the responsibility of the probation officer both on the execution of the measure by the minor, as well as the performance of duties by the person exercising supervision.

During the execution of the educational measure regulated in Article 119 of the Penal Code, the juvenile delinquent may follow a program of social reintegration, whether as a result of the disposition by the court of this obligation in the content of the educational measure, or as a result of the establishment of this activity by the probation counselor as part of the weekend consignation. The probation officer will establish the type of program or course, according to the particularities of the minor.

It is important to emphasize that the measure of weekends consignment is considered more severe than

[20] Law no. 253/2013 on the enforcement of sentences, of educational measures and other non-custodial measures ordered by the court in criminal proceedings published in the Official no. 513 of 14 August 2013.

[21] Romanian Constitution, published in the Official no. 767 of October 31, 2003.

other analyzed educational measures and may be imposed on juvenile delinquents that commit more severe offenses.

Thus, in judicial practice[22] the court held as sufficient the measure provided by Article 119 of the Penal Code which is to be applied for a period of 5 respectively 10 weeks to minor defendants who committed the crime of robbery provided by Article 229, paragraph (1), letter b) concurrent with the destruction incriminated in Article 253 paragraph (1) of the Penal Code.

The preamble of the Criminal Code states that the non-custodial educational measure regulated by article 119 of the Penal Code has as a correspondent the educational measure of permanence at weekends from the Spanish Organic Law no 5 of January 2000 on the criminal liability of minors.

According to Article 7 paragraph (1), letter g) of the Organic Law, the minors subject to such a measure must remain at home or in a special center from Friday afternoon or evening to Sunday evening for a maximum period of 36 hours, except for the time they need to devote to socio-educational tasks imposed by the judge, tasks which are to take place outside the place of detention.

Measure can be ordered against juvenile offenders who commit fault (faltas) for a period of 4 weeks.

For offenses committed by juveniles, the Spanish legislature provides that the duration of the measure for those aged between 14 and 16 years old will be 12 weeks or 16 weeks for those aged between 16 and 18 years old.

The professional responsible for coordinating the execution of the measure, after receiving the decision of the court by which the number of weeks and appropriate hours is established, will meet to draw up a plan[23] for individual implementing. In this regard, it will be established:

a) each weekend day during which the measure will be implemented as well as the place of detention;

b) the socio-educational tasks that can be imposed on juvenile offenders, the place where these will take place and the time required for them.

It can be seen that the Spanish penal provisions qualifies the permanence measures on weekends as a gravity lighter than the extent required by Article 119 of the Romanian Penal Code, which led to the easing of the application.

3.4. Daily assistance

Daily assistance, taken from the Spanish criminal law, has no counterpart in the previous Criminal Code and is considered the most severe non-custodial educational measure that can be imposed on juvenile offenders.

According to Article 120 of the Penal Code, daily assistance consists in the obligation imposed on juvenile to comply with a schedule set by the probation service, which contains the schedule of activities and their conditions as well as the restrictions imposed on the minor. The duration of the measure is between 3 and 6 months, and the supervision is coordinated by the probation service.

It is important to emphasize that the Romanian legislator, like the Spanish, states that the program must be the result of a consensus between the probation counselor and parents, guardian or other person in whose care the minor is, in consultation with this one.

In case of disagreement, the appointed judge has the obligation to fix the program content, through a motivated and final agreement, after hearing those interested.

By including parents or guardian in procedures for the execution of sanctions and educational measures, it is made a transposition into national law of the provisions of Council of Europe Recommendation no. 2008/11 on the European rules for juvenile offenders.

If the court decides against the minor the measure required by Article 120 of the Penal Code, without imposing obligations under Article 121 of the Penal Code, we consider that their absence may be supplemented by restrictions imposed in the schedule by the probation officer.

Finding long-term strategy to restore a new socio-educational trajectory to rehabilitate the juvenile delinquent is based on the need to have a constant at all levels: family, community, education.

By conducting an educational program we follow the harmonious development of the child's personality, through his involvement in activities which suppose social networking, organizing leisure mode and enhancement of his skills.

According to Article 90, paragraph (1) of Law 253/2013, the minor for whom the daily assistance measure was imposed, may follow a social reintegration program or a school or training course, as a result of the disposition by the court of this obligation as part of the educational measure, or as a result of the establishment of this activity by the probation officer assisting the daily plan.

The daily assistance measure can be applied only if the court considers that other non-custodial educational measures are insufficient for the education and reintegration into society of the minor. Thus, for example, in judicial practice[24] it was ordered the

[22] Suceava Courtroom,Penal Decree no. 486/2014- http://portal.just.ro/39/SitePages/Dosar.aspx?id_dosar=21700000000013354&id_inst=39.

[23] Art. 28 of Decree 1774/2004 approving the Organic Law Regulation 5/2000 - http://www.boe.es/buscar/act.php?id=BOE-A-2004-15601&tn=1&p=20040830&vd=#s2.

[24] Bucharest, Courtroom, sector 6, Penal sentence no. 18/2015 http://portal.just.ro/303/SitePages/Dosar.aspx?id_dosar=30300000000207251&id_inst=303

educational measure regulated by article 120 of the Penal Code, for a period of 6 months against the minor who committed two offenses of robbery indicted in article 233 of the Penal Code in formal competition.

As stated in the subsection dedicated to the surveillance measure, the provisions of Article 7, paragraph (1) h) of the Organic Law, referring to the measure of supervised release, were the source of inspiration for the Romanian legislature in the regulation of the non-custodial educational measure of daily assistance.

After examining the above provisions, we conclude that daily assistance made by the probation service meets all the needs of the juvenile offender, giving it the much needed transition in the context of an offense, to a higher level where it will receive specialized support in an organized way.

4. Conclusions

In our opinion, we consider that the new Code of Criminal legislature manages to provide the court a large variety of criminal sanctions that have the ability to lead to the education and rehabilitation of the minor.

In this paper, we consider that we were able to analyze in detail the new non-custodial educational measures in relation to international criminal provisions applicable and to highlight their role and importance.

We conclude by saying that the examination of such issues of interest for both legal, sociological and psychological domain due to the specific characteristics of the juvenile delinquent.

COMPARATIVE ASPECTS REGARDING THE SETTLEMENT UNDER THE CODE OF CRIMINAL PROCEDURE OF 1969 BY THE HIGH COURT OF CASSATION AND JUSTICE OF AN APPEAL AGAINST AN UNREASONED CONVICTION SENTENCE DELIVERED BY THE COURT OF APPEAL SUBSEQUENT TO THE ACQUITTAL DECISION ISSUED BY THE TRIAL COURT

Mircea Constantin SINESCU[*]

Abstract:

This article examines, in relation to the national law (the Code of Criminal Procedure of 1969) and the provisions of the European Convention on Human Rights, the judgment of an appeal filed against an unreasoned sentencing decision delivered by the appellate court subsequent to a decision for acquittal rendered by the first-instance court (trial court). The article approaches this issue in light of the domestic and the international case law, with a highlight on several sentences that are deemed illegal due to their superficial reasoning or to a reasoning that fails to describe the circumstances, the evidence adduced and the grounds based on which the sentencing was ordered, as well as by reference to cases where the higher courts, after reassessing the evidence and the facts established by the lower court, delivered a decision to sentence, yet without reexamining the evidence that had been deemed sufficient by the first-instance judge to question the reasonableness of the charge and to render a sentence of acquittal. The author further illustrates the importance given by the Romanian legislator, and in particular by the European Convention on Human Rights, to the duty of the law courts to state the reasons of their sentencing decisions, particularly in cases where the trial court delivered a judgment of acquittal.

Keywords: *failure to give reasons, reassessment of evidence, appeal, fair trial, retrial.*

I. Introduction

The right to a fair trial, as guaranteed under Article 6 paragraph 1 of the European Convention on Human Rights, means, inter alia, the right of the parties to the proceedings to present the observations which they regard as relevant to their case. This right can only be seen to be effective if the observations are duly considered by the trial court.

Article 6 of the Convention establishes the duty of the law court to conduct an effective examination of the submissions, the arguments and the evidence adduced by the parties to the proceedings.

Moreover, a fair trial requires that a higher court should give extensive reasons for its decision instead of just limiting itself to upholding the reasoning of the lower court, and to conduct a thorough examination of the key issues that are brought before it, such obligation being constantly acknowledged by the case law of the European Court.

II. Content

Having regard to Article 383 (1) of the Code of Criminal Procedure of 1969, the decision of the appellate court, which makes the object of our consideration, should have contained in its recitals the grounds in fact and in law which have led to the delivery of the sentence, including an actual and effective examination of the submissions and evidence adduced by the parties in the case during the three stages of the trial (prosecution, trial on the merits and appeal), as well as of the offenses the defendant(s) is are charged with.

Failure of the appellate court to fulfill its duty described above represents an infringement of the mandatory provisions of Article 356 (c) of the Code of Criminal Procedure of 1969, which establishes both the obligation of the court to "*consider (a) both the evidence that served as the basis for judging on the criminal aspect of the case, and the evidence that were dismissed ...",* as well as the appellate court's duty to "*examine (a) any elements in fact based on which the decision delivered is grounded".* These obligations are also stipulated in Article 403 (1) (c) of the new Code of Criminal Procedure (enacted on 1 February 2014 by Law no. 135/2010, with further amendments and additions).

Under the provisions of article 383 (1) of the 1969 Code of Criminal Procedure, the decision of the appellate court should have included in its introduction the references provided for in Article 355 of the 1969 Code of Criminal Procedure, and in its recitals, the factual and legal grounds for admission of the appeal and the reasons that led the court to deliver its decision, as specified in article 379 (2) (a) of the 1969 Code of Criminal Procedure (admission of the appeal, cancellation of sentence and retrial of the case by the court of first instance).

It is worth mentioning that, according to the provisions contained in Article 384 of the Code of Criminal Procedure of 1969, judging of the case by the

[*] Assistant Professor and PhD Candidate – "Nicolae Titulescu" University – Faculty of Law – (**mircea.sinescu@sinescu-nazat.ro**).

court of appeal is regulated by the provisions contained in the special part, Title II, Chapters I and II of the Code.

Consequently, the judgment of the case on the merits, conducted by the court of appeal after cancellation of the sentence, is governed, according to the reference mentioned above, by the specific rules of judgment applicable to a court of first instance.

Thus, articles 356 (b) and (c) of the 1969 Code of Criminal Procedure provide that the recitals of court decision delivered in the case should contain:

- a description of the offense subject to accusation, specifying the time and place of the offense and the legal classification of the offense under the complaint,

- the examination of the evidence that served as a basis for the settlement of the criminal aspects of the case, including evidence that were dismissed by the court, as well as the examination of any facts on which the decision is grounded.

In the case of a conviction sentence, the recitals have to also describe the offense or every offense the court finds the defendant to be guilty of, as well as the form, degree of guilt, aggravating or mitigating circumstances, repeated offense (if any), the amount of time to be deducted from the punishment imposed and the acts determining its length.

In addition, in the event that the appellate court failed to actually check the judgment appealed against based on the evidence administered during the examination by the court of first instance (Article 379 (1) of the 1969 Code of Criminal Procedure), and ruled only formally and contradictory to the court of first instance with regard to the grounds for appeal (Article 379 (3) of the 1969 Code of Criminal Procedure), the appellate court was deemed to have violated the procedural obligations that are currently contained in Article 420 (8) (1) of the new Code of Criminal Procedure.

The content of a court judgment should describe not only the decision per se, but also the grounds and the legality of the decision delivered by the court.

This is exactly why the main duty of the judge (judges) called upon to decide in a criminal matter is to ground his (their) judgment on the evidence adduced in the case before them and to examine it in accordance with Article 63 of the Code of Criminal Procedure of 1969, following a thorough assessment thereof, such assessment to be clearly reflected by the sentence delivered.

To this end, the entire evidentiary material must undergo an unbiased examination and any contradictions in the conclusions drawn from the substance of every piece of evidence adduced should be subjected to the deliberations of the court, which are designed to review and evaluate the evidence by confrontation, so that truth may come out, which is the primary function to be properly fulfilled in all the stages of the criminal lawsuit.

Insofar as "*to state the reasons means to demonstrate, to highlight the concrete facts that, used as premises, lead to formulation of a logical conclusion",* and "*the mere assertion of a conclusion without indicating concrete facts […] or reference to […] the acts the case in general does make a proper reasoning"* (High Court of Cassation and Justice, Criminal Division, decision 656/2004), the court's failure to give reasons is obvious in the case of the decision analyzed herein.

There may be situations where the judgment appealed against suffers from an obvious lack of an effective and comprehensive examination of the evidence adduced, despite the fact that the decision of the lower court, which was cancelled, had been an acquittal decision, and in spite of the fact that the specific circumstances of the case brought before the court had demonstrated the complexity of the facts and the need for an extensive reasoning with regard to both the admissibility of Prosecution and the delivery of the sentencing decision (including the length of imprisonment).

Failure to state the grounds of the decision is an issue regulated by the provisions of article 6 § 1 of the European Convention on Human Rights.

Seen from this perspective, the lack of reasoning is a circumstance which should automatically lead to cancellation of the unreasoned decision and the sending of the case for retrial back to the first-instance court.

In the case under our consideration we are not dealing with a failure to give sufficient reasons, but with a total lack of reasons for the criminal sentence delivered by the judge of the trial court.

In a situation where the criminal proceedings were been virtually eliminated before the court of first instance, the court of appeal would be required to directly censor the judgment of the first instance, which is an aspect that was not contemplated by the legislator, and the defendant would be deprived of the legal and conventional right of the double degree of jurisdiction in criminal matters (Article 2 paragraph 1 of Protocol 7 enshrines the right of the person convicted of a criminal offense by a court to require the examination of the statement of guilt or of the sentence of conviction by a higher court), all the more as the scope of the circumstance of cassation has been drastically narrowed by the amendments brought by Law no. 2/2013.

The intention of the legislator to speed up the settlement of criminal cases by removing undue decisions to send back the case for retrial should not be deemed as the complete cancellation of the stage of judgment of the case in the court of appeal, as it happens in such a case.

Besides, a sound reasoning of the judgment is an imperative obligation that cannot be neglected in favor of speed.

It should be noted that, according to Article 6 § 1 of the European Convention on Human Rights,

everyone is entitled to a fair and public hearing within a reasonable time by an independent and impartial tribunal established by law, which decides on the grounds of any charges brought against him/her. The same article stipulates in point 3 (c) that everyone charged with a criminal offense has the right to defend himself against all charges brought against him.

According to the unanimous opinion expressed in the specialized literature, the reasoning of the judgment should be relevant, complete, grounded, uniform, compelling and accessible. The reasoning is also of essence for any court decision and represents the guarantee for the parties to the proceedings that their applications are properly analyzed.

In this regard, the practice of the Supreme Court has constantly held that the absence of reasoning leads to cancellation of the unreasoned decision and to retrial of the case by the court violating the legal provisions governing the obligation to give the grounds of the court decision.

The same conclusion can be drawn from the Case Law of the European Court of Human Rights, regarding the right to a fair trial.

For example, in its judgment of July 1 2003, delivered in the case *Suominem v. Finland*, the Court held that Article 6 requires that any judgment be reasoned so that the litigant may know which of his submissions were accepted and the reasons why some of his defenses were dismissed.

In the case *Garciz Ruiz v. Spain*, the judgment of 21 January 1999, the Court noted that judgments of the court should adequately state the reasons on which they are based.

In the case *Boldea v. Romania*, judgment of 15 February 2007, the Court ruled that there had been a violation of article 6 § 1, noting that the Romanian court decisions had failed to give adequate reasons and that the applicant had not been given a fair hearing in the proceedings that had led to his conviction. In the considerations of its judgment, the Court recalls that the right to a fair trial guaranteed by article 6 § 1 of the Convention includes, inter alia, the right of the parties to bring before the court any submissions as they may deem relevant to their cause. The Court further recalls that the Convention is not intended to guarantee rights that are theoretical or illusory, but rights that are practical and effective (*Artico v. Italy of 13 May 1980*), and this right can only be seen to be effective if the observations are really "heard", this is to say are duly considered by the trial court. In other words, Article 6 § 1 implies in particular the duty of the court to conduct a proper examination of the submissions, arguments and evidence adduced by the parties (*Perez v. France, Van der Hurk v. Netherlands).*

Lack of reasons for the court judgments has been sanctioned by the ECHR in the cases *Albina v. Romania*, judgment of 28 April 2005, and *Dumitru v. Romania*, judgment of 1 June 2000, when the ECHR held that Article 6 § 1 was violated, with the Court emphasizing the fact that any judgment should be reasoned in response to the arguments adduced by the parties to the proceedings.

We are in a similar situation in this case, unless the court of appeal hears the defendants and the witnesses, despite the fact that it proceeds to reinterpretation of the evidence and, hypothetically speaking, to determining of a different state of facts than that upheld by the court of first instance.

I believe that in the situation described above we are dealing with an infringement of the right of the defendants to a fair trial, guaranteed by Article 6 (1) of the Convention. Moreover, the European Court of Human Rights has held that "*when a court is called upon to examine the case as to the facts and the law and to make a full assessment of the question of the applicant's guilt or innocence […] that question could not, as a matter of fair trial, have been properly determined without a direct assessment of the evidence given in person by the applicant - who claimed that he had not committed the act alleged to constitute the criminal offe*nce" (judgment of 26 May 1988 in the case *Ekbtani v Sweden*, Series A no. 134, p 14, § 32, and *Constantinescu v Romania*, no 28871/95, § 55, ECHR 2000-VIII).

ECHR case law has consistently held that whenever the issues a court is called upon to consider have a deeply factual character, which is likely to call for a new assessment of the evidence and in particular of the statements, the right solution is the reassessment of the evidence.

In other words, if the appellate court bases its decision essentially on a new interpretation of the evidence adduced during the trial in the first instance, a new hearing of the defendants and of the witnesses that are relevant to the case is required, all the more as the trial court was the only court that had conducted the inquiry, being the only court that had administered the evidence and that can assess directly the submissions, witness declarations and other evidence adduced by the defendant in the case file.

Undoubtedly, the appellate court is entitled to interpret the information provided by the evidence, holding that the defendants are considered guilty, but it also has the duty to reconsider the same evidence that was sufficient for the trial judge (first-instance judge) to question the grounds of the charge and to render a decision of acquittal.

In the same line of reasoning is the by decision no. 1687/20, of May 2013, rendered by the High Court of Cassation and Justice, Criminal Division, stating that "*It appears that, in spite of the fully devolution effect of the appeal, which is provided under article 371 (2) of the Criminal Procedure Code, and despite the obligation of the court to proceed to hearing the acquitted defendants, the Court has limited itself, in a totally unjustified manner, to record in its conclusions only the legal standing of the defendants, after which, without assessing any further evidence and dismissing all the requests made in this regard by the defense, except for the circumstantial documents, and*

thereafter to find the defendants guilty, ruling on the several issues of a deeply factual nature, by a new interpretation of the evidence adduced during the criminal investigation and the inquiry.

Firstly, there is an infringement of article 378 (1)[1] of the Criminal Procedure Code, according to which, during the judgment in appeal, the court is obliged to hear the defendant present in court according to the provisions of the special part Title II, Chapter II, if the defendant was not heard by the trial court and when the trial court has not rendered a sentence of conviction against the defendant.

*The text was introduced following the convictions of Romania by the European Court of Human Rights, with the European Court ruling that, when a court is called upon to examine the case as to the facts and the law and to make a full assessment of the question of the applicant's guilt or innocence […] that question could not, as a matter of fair trial, have been properly determined without a direct assessment of the evidence given in person by the applicant - who claimed that he had not committed the act alleged to constitute the criminal offe*nce.

As such, the direct assessment of the evidence adduced by the defendants cannot be achieved by simply acknowledging the upholding of their previous statements and of the fact that they are innocent, because such a hearing does not meet the requirements of article 378 (1)[1] of the Code of Criminal Procedure and the provisions of Article 6 (1) of the ECHR, the appellate court having the duty to hear them in detail, according to the procedure laid down in Articles 323 and 324 of the Code of Criminal Procedure (to which even of article 378 (1)[1] of the Code of Criminal Procedure refers), because such a legal standing is not equivalent to the exercise of the right to remain silent.

Secondly, the High Court finds that, indeed, the appellate court has based its decision on a new interpretation of the evidence, including the witnesses' statements, the defendants being found guilty on the basis of the same evidence that led to the delivery by the first instance of a decision of acquittal under Article 10 (a) of the Criminal Procedure Code.

It is true that, according to article 378 (1) (2) of the Criminal Procedure Code, the court verifies the judgment under appeal, based on the work and material in the case file, including any further piece of evidence, being able to give a new assessment of the evidence adduced in the first instance court. But these procedures, which allow the appellate court to make a fresh assessment of the evidence, can only be interpreted in conjunction with Article 6 of the Convention and the case law of the European Court in this matter, which has direct application in the legal order of the Contracting States.

The High Court holds that, even in cases handed down against Romania, the European Court held that the manner of application of Article 6 in the courts of appeal or recourse depends on the status of the appeals procedure. When the internal procedure allows the court of appeal or the court of recourse to reassess the evidence of the facts established by the lower courts, article 6 applies in full to them, too. In this regard, the Court has consistently found violations of the right to a fair trial where the appellate court rendered a conviction sentence based on a new interpretation of the declarations of the witnesses heard in the court of first instance, the same declarations which had led the first-instance judges to doubt the merits of the allegations and deliver a sentence for acquittal.

The fact that, given the decision of acquittal rendered by the first instance, the applicants did not specifically request further evidence to be taken by the court, is considered by the Court as irrelevant, insofar as article 6 of the Convention does not preclude that court from taking positive measures to ensure the right to a fair trial (Constantin and Stoian v Romania).

Under these circumstances, the failure of the Court of Appeal to hear witnesses in person and the failure of the Supreme Court to remedy the situation by sending the case back to the Court of Appeal for a new examination of evidence has substantially reduced the applicant's rights to defend himself. The Court reiterates that in its case law it has pointed out that one of the requirements of a fair trial is to give the accused to chance to confront witnesses in the presence of a judge who must decide in the case before him, because the judge's observations as to the behavior and credibility of certain witnesses may have certain consequences for the accused. Previous considerations are sufficient to lead the Court to conclude that in this case the national courts have failed to comply with the requirements regarding a fair trial."

We therefore consider that, in this case, all the considerations above call for the one obvious decision: admission of the appeal, cancellation of the Decision of the court of first instance and the retrial of the case by the Court of Appeal, with the hearing of the defendants and of the witnesses in this case under the provisions of article 385 index 16 (c) of the Code of Criminal Procedure of 1969, in relation with Article 6 (1) and 3 (c) of the European Convention on Human Rights.

III. Conclusions

The duty to state reasons for court judgments is the result of the requirements arising from the Convention. In this regard, the conventional text enshrines, on the one hand, the right of every person to present arguments and defense before the court, but, on the other hand, requires the Courts to examine the parties' submissions effectively. In this regard, it is noted that the obligation to state reasons for the judgment of the court is the only means to check compliance with the rights of the parties, but it is at the same time a requirement which helps to ensure

compliance with the principle of sound administration of justice.

THE PLEA BARGAIN AGREEMENT

Radu SLĂVOIU[*]
Mihai Daniel ONIȘOR[**]

Abstract

Alongside major changes in Romanian criminal law, the plea bargain agreement gave a new approach on the mechanisms of criminal procedure in national law, thus creating a series of problems and divergent interpretations of the content and limits of this mechanism in solving criminal litigation.

What motivated us in our scientific analysis was the novelty of the issues that arose both in the doctrine and interpretation of the legal provisions and in the practice of prosecution offices and national courts, the high impact that the new proceedings can have on criminal policy and the need for clear and efficient provisions that can ensure legal certainty.

Our paper is divided in four major parts: the nature and object of the agreement, the conditions of plea bargain, the prosecutorial phase, court validation and appeal procedure, in each of these sections taking into account the legal provisions, analyzing working hypothesis, identifying probable issues and problems and providing our opinion on possible solutions.

Our findings prove the fact that the novelty aspect of this procedure determined a number of gaps in the law, aspects that can dramatically influence the result of the criminal case and the guarantees that the parties have in criminal law. Moreover it will underline the unclear provisions that make the new law inapplicable in certain cases and leave a number of situations without any lawful solution.

Keywords: *plea bargain, minor offences, admissibility conditions, admission of guilt, superior prosecutor's approval, changing legal qualification, individualizing the penalty, notifying the court, court assessment, invalidating the plea bargain.*

1. Introduction

I. Introductory remarks. The plea bargain agreement is a special procedure which is new in the criminal legislation in Romania, being regulated in Title IV of the Special Part of the Criminal Procedure Code adopted by Law 135/2010 as subsequently amended and completed by Law 255/2013. The relevant provisions are given by article 478-488 of the Criminal Procedure Code.

According to the recitals of the Criminal Procedure Code, introducing this special procedure targeted to reduce the duration of the case trial, to simplify the activity within the criminal prosecution stage and to save money and human resources within the legal procedures.

The Romanian lawmaker was inspired by the French and German criminal law systems, but the procedure exists – in similar ways – also in other European countries.

II. The nature and object of the agreement.

The plea bargain agreement appears as a procedure which is derogating from the common law procedure applicable to certain small crimes, having as main feature the possibility granted to the defendant to participate in the decision making process and to negotiate the penalty which is going to be applied to him.

This special procedure is not confused with the one of arraignment acknowledgement stated by article 374, paragraph 4, articles 375 and 377 of the Criminal Procedure Code, whereas there are several differences between these two.

- while arraignment acknowledgement can occur only during the trial, the plea bargain agreement is only concluded during the criminal prosecution stage;
- the plea bargain agreement involves a negotiation carried between the prosecutor and the defendant in regard to the individualizing the penalty (the penalty's type, quantum, type of enforcement, waiving the application of the penalty or delaying its application), whereas the result engages the obligation of the judge under certain conditions. The arraignment acknowledgement does not have such feature, and the judge has the exclusive task of individualizing the penalty in the case in which he orders a conviction solution.
- the admissibility conditions of the two procedures are different (for example, under the aspect of the cases in which they can occur, the plea bargain agreement is more restrictive, being allowed only for the crimes for which the law provides the punishment with prison for more than 7 years, while the arraignment acknowledgement is excluded only in the case of crimes which are punishable with life in prison);
- although both procedures are abbreviated procedures, the trial is much shorter in the case of the plea bargain agreement. Therefore, in case of the arraignment acknowledgement, though the criminal

[*] PhD Candidate, Assistant Lecturer, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **raduslavoiu@yahoo.ro**).
[**] PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **danielonisor08@gmail.com**).

trial is simplified, the documentary evidence is allowed (article 375, paragraph 2 and article 377, paragraphs 1-2 of the Criminal Procedure Code); at the time when the judge solves the arraignment acknowledgement, there are no evidence administered. The trial in the case of the arraignment acknowledgement has a stage reserved for debates and for the last word of the defendant, a situation which the plea bargain agreement solving does not provide for.

According to article 479 of the Criminal Procedure Code, the object of the agreement is that the defendant admits the crime he committed and the legal grounds on which the criminal investigation was started. The two aspects do not form an object of negotiation, yet they are elements that the defendant is obliged to comply with in order for the agreement to be admissible.

III. The conditions of the agreement.

The analysis of the legal provisions shows that for the admissibility of the plea bargain agreement requires the compliance with the following conditions:

a) The case must be in the criminal prosecution stage, with the criminal action already started (article 478, paragraph 1 of the Criminal Procedure Code). The suspect cannot sign a plea bargain agreement. If the procedures already reached the trial stage, this special procedure can no longer be used as a resort, but the defendant may still opt for the arraignment acknowledgement, under the conditions of article 374, paragraph 4 of the Criminal Procedure Code. The plea bargain agreement is also possible in the case of reopening the criminal prosecution under the conditions of articles 335, 341 paragraph 6 letter b) or article 341, paragraph 7, item 2, letter b) of the Criminal Procedure Code and after reinitiating the criminal prosecution in case of restitution made by the preliminary chamber judge, under the conditions of article 334 of the Criminal Procedure Code (in all situations, after initiating the criminal proceedings). We also consider that this procedure can be resorted to after a first approval was dismissed by the court and the file was returned to the prosecutor for the purpose of continuing the criminal prosecution, according to the conditions of article 485, paragraph 1, letter b) of the Criminal Procedure Code;

b) The penalty stated by the law for the crime which forms the object of the case is a fine or prison for 7 years at most (article 480, paragraph 1 of the New Criminal Procedure Code).

The meaning of the notion "penalty stated by the law" is the one shown by the article 187 of the Criminal Procedure Code: the penalty stated in the text incriminating the fact committed in its consumed state, without considering the causes for lowering or increasing the penalty.

In light of this condition, no plea bargain agreements can be signed for crimes punished by law with life in prison or with the detention for a special maximum time of imprisonment of 7 years (for example in the case of murder, manslaughter causing the death of two or more persons, strikes or injuries causing death, human trafficking, trafficking minors, rape, armed robbery, bribery, counterfeiting, treason or espionage). The special procedure is admissible though in the case of a considerably larger number of crimes (for example murder at the request of the victim, manslaughter in the types stated by article 192, paragraphs 1-2 of the Criminal Procedure Code, strikes or other types of violence, standard bodily injury, bodily injury by negligence, mistreatment of juveniles, fetal injury, illegal deprivation of liberty, threat, blackmail, standard pandering, crimes that harm homes and private lives, theft, standard robbery, crimes against the patrimony by the misuse of trust, frauds committed by means of IT systems, vandalism, crimes against the accomplishment of justice, bribery, influence trafficking and purchase, work related crimes, document forgery, violation of the regulations upon weapons and munitions, electoral crimes).

In our opinion, conditioning of the plea bargain agreement to the punishment stated by the law for the crime forming the object of the case is objectionable. Considering that the defendant accepts the legal qualification given to the action by the prosecutor and participates to the process of individualizing the crime, we consider that it is natural for the incidence of the special procedure to depend on the limits of punishment resulted from the legal qualification. The relation that the lawmaker made with the "punishment stated by the law", a phrase referring to a consumed action, ignores the fact that during the legal qualification the prosecutor takes into account that the action either remained an attempt or it was consumed, and that the defendant is a recidivist or not, if there are legal mitigating or aggravating circumstances; whereas, these influence the special penalty limits within which the individualization takes place. Thus, the admissibility of the procedure gets to be determined by the abstract level of the social danger of that action and not by the concrete dangerousness that the perpetrator shows, whereas this generates certain inequities. For example, a defendant who committed a simple robbery crime during a post-execution relapse may sign a plea bargain agreement though – as an effect of article 43, paragraph 5 of the Criminal Procedure Code – the limits within which the punishment is negotiated are of 3 years and respectively 10 years and 6 months. Instead, because the special maximum punishment stated by the law exceeds 7 years of prison, a plea bargain agreement cannot be signed by the one committing an attempt of armed robbery in the version stated by article 229, article 3 of the Criminal Procedure Code or an attempt of armed robbery stated by article 234, paragraph 1 of the Criminal Procedure Code, though in both situations, the negotiation of the punishment would be done within the special limits cut to half, meaning a minimum of 1 year and 6 months and a maximum of 5

years of prison.

In *lex ferenda*, we consider that this condition should be reformulated as follows: *"The plea bargain agreement may be signed only if the penalty resulted from the legal qualification given to the action and accepted by the defendant is a fine or prison for 7 years at most".*

When it is intended to negotiate a solution for waiving the application of the penalty, the condition stated by article 80, paragraph 2, letter d) of the Criminal Procedure Code must be met, such as the crime to be sanctioned by law with a penalty of maximum 5 years of prison. If the negotiated solution is delaying the application of the penalty, considering the provisions of article 83, paragraph 2 of the Criminal Procedure Code, the penalty stated by the law for the crime forming the object of the case must be prison for 7 years at most.

c) The defendant must admit that he committed the crime and he must accept the legal qualification for which the criminal proceedings were initiated (article 482, letter g) of the Criminal Procedure Code). The acknowledgement must be shown in an express statement of the defendant, such as there will be no need for the prosecutor to deduce or interpret it.

It is debatable in our opinion if the acknowledgement must target the legal qualification given to the crime by the resolution for starting the criminal proceedings. We consider that in fact the reference is made to the legal qualification at the time of the acknowledgement statement, which, after changing the legal qualification (article 311 of the Criminal Procedure Code) can be another than the initial one. Still, related to the qualification at the time of the acknowledgement, the condition upon the penalty limits must also be considered.

In order to sign the agreement, the defendant is obliged to accept the legal quantification given by the prosecutor to the act committed even if that qualification is a wrong one. The legal qualification does not form the object of the negotiation; it is accepted or not by the defendant. We believe though that nothing stops the defendant, before the initiation of the special procedure, to ask the prosecutor personally or by defender, to change the legal qualification when it is considered that it is not the correct one.

We believe that the acknowledgement statement can be made by the defendant personally or by an authentic document.

The provisions of article 483 paragraph 2 of the Criminal Procedure Code show that when the defendant is prosecuted for a complex of offenses, the acknowledgement and the acceptance may be stated only regarding some of the acts. We consequently notice that in this special procedure, the law does not impose that the acknowledgement include all the acts, as requested in the case of the arraignment acknowledgement, during the trial (article 374, paragraph 4 of the Criminal Procedure Code).

An issue raised is related to whether the acknowledgement statement given by the defendant in order to conclude the agreement is revocable or not. We believe that at least until the agreement is solved by the first court, the defendant must have the right to withdraw his acknowledgement statement given during the criminal prosecution. However, it is hard to imagine how the court could issue a conviction solution based on an agreement which was withdrawn and which is not acknowledged anymore by the defendant, after a procedure which was lacked contradictory nature and immediacy, without administering again the evidence submitted during the criminal prosecution and without debates.

d) Enough data must exist regarding the existence of the act based on which the criminal proceedings were initiated and related to the guiltiness of the defendant;

The conditions imposed by the lawmaker is logical in relation to the procedural moment when the plea bargain agreement appears as an option, respectively after the initiation of the criminal proceedings.

e) the prosecutor and the defendant must reach a consensus regarding the type and quantum of the penalty and regarding the way the penalty will be executed or, depending on the case, if the penalty will be waived or delayed;

The simple acknowledgement of the act under the legal quantification given by the prosecutor does not lead automatically to the conclusion of the agreement because the defendant may have a divergent opinion regarding the penalty or regarding the way it will be executed. For example, though he admits that he committed the crime, the defendant proposes waiving the application of the penalty and the prosecutor does not accept this solution.

IV. The procedure of the agreement.

The owners of this guilt acknowledgement are the prosecutor and the defendant. The initiative may belong to any of them, whereas the defendant must be informed by the legal authority on the right to sign an agreement (article 108, paragraph 4 of the Criminal Procedure Code). When the case is being instrumented by the criminal prosecution authority, the agreement can only be signed by the prosecutor who supervises the file. In such situation, the criminal prosecution authority will make justified proposals (article 286, paragraph 4 of the Criminal Procedure Code).

While perfecting the agreement, the injured person plays no part. The law does not even state the obligation of the prosecutor of consulting the injured party.

Though he has initiative in this special procedure, the prosecutor is obliged to comply with the previous and written approval of the superior prosecutor who fixes the limits of the agreement (article 478, paragraph 4 of the Criminal Procedure

Code). It is noticed that the superior prosecutor cannot forbid the initiation of this procedure, whereas his attributions are circumscribed under the law exclusively to setting the limits of negotiating with the defendant. According to article 478, paragraph 2 of the Criminal Procedure Code and the effects of the plea bargain agreement are submitted to the approval of the superior prosecutor.

An issue raised is whether the superior prosecutor may or not refuse the second approval in the situation in which the approval is concluded within the limits for which he granted the initial approval (legal qualification, type of the penalty, quantum of the penalty, the way the penalty will be executed etc.). It could be argued that the effects of the approval cannot be invalidated so long as they fall within the limits of the initial previous approval, but only if they exceed them. We believe though that since the second approval targets the effects of the approval and these effects include the informing of the court, the attributions of the superior prosecutor at the issuance of this approval should be symmetrical with the ones at the verification of the legality and validity of the indictment document. Consequently, we consider that the superior prosecutor could refuse the approval of the agreement's effects under the conditions, for example, where the new interpretation of the documentary evidence in the file, he considers that there are no sufficient data resulted upon the existence of the crime or of the conditions needed to engage the criminal liability.

The law states that minor defendants cannot conclude plea bargain agreements (article 478, paragraph 6 of the Criminal Procedure Code). Though this provision was sometimes criticized, we consider that the impossibility of concluding a plea bargain agreement by a minor defendant is resulted from the specific features of negotiation, which regard – according to article 479 of the Criminal Procedure Code – "the type and quantum of *the penalty* (authors' note)"; yet, according to the Criminal Code, minors are not applied penalties, but correctional measures.

Based on the same argument, we consider that the plea bargain agreements cannot be concluded also by adult defendants for facts committed while being minors. This is because, according to article 134 paragraph 1 of the Criminal Procedure Code, the provisions of Title V of the General Part of the Criminal Code regarding minority is applied to adults who at the date of committing the crime were between 14 and 18 years old, which means that they also shall be applied only correctional measures and not penalties.

The defendant may conclude a plea bargain agreement also in the case of committing a crime after becoming an adult, if his action is concurrent with a crime committed while he was a minor. Obviously the approval will only concern the crime committed during the time when he was an adult and it can be concluded only under the conditions of admissibility. Out of the hypotheses stated by article 129 paragraph 2 of the Criminal Procedure Code, the plea bargain agreement is excluded only in the hypothesis stated under letter c) which states that the penalty applied for the crime committed as adult is life in prison (which means that the crime is punished by law with a penalty imposing imprisonment for longer than 7 years). It was sometimes considered that the agreement is not possible also in the hypothesis stated by article 129, paragraph 1, letter d) of the Criminal Procedure Code, because in this case only the liberty deprivation correctional measure is executed. We observe however that no legal text impedes the defendant to perfect an agreement in this case, regarding the crime committed after becoming an adult. We can neither state that the defendant could not have an interest in this regard (in considering the circumstance that the penalty for the fine which is going to be applied is going to be executed), because – at least in the case of crimes for which law states as penalty alternatively imprisonment and fines – he cannot know previously whether after the regular trial procedure he will be sanctioned with a fine and not with prison for the crime committed as an adult. Yet the two hypotheses are different; if the defendant would be sanctioned with prison for the act committed as an adult, the provisions of article 129, paragraph 2, letter b) of the Criminal Procedure Code would be applicable, so the increased penalty with prison would apply to him for a period equal with at least a fourth of the duration of the correctional measure, or from the rest of the penalty which remained unexecuted at the date of committing the crime after becoming the legal adult age, which means that his situation would be much harder, whereas the liberty deprivation penalties are much harsher than correctional measures. Consequently, for the crime committed as an adult, the defendant would be interested in concluding a plea bargain agreement in the hope that he will be applied only a fine and so he will know that for the crime he committed while he was a minor he will be applied a correctional imprisonment measure, increased with 6 months at most, that he will execute. It can also be noticed that by concluding an agreement and obtaining a fine for the crime committed as adult, the defendant will know that the correctional measure that he will execute can be increased by at most 6 months, yet if he does not conclude an agreement and he is applied an imprisonment penalty, he cannot control the penalty's increase percentage, whereas the provisions of article 129, paragraph 2, letter b) of the Criminal Procedure Code refers only to the minimum of this percentage.

When in the case more defendants are being prosecuted, a plea bargain agreement can be concluded with all of the defendants or only with a part of them. The provisions of article 478, paragraph 5 of the Criminal Procedure Code show that if several defendants wish to resort to the special procedure, each of them will conclude a separate agreement. The provision is amended though by article 485, paragraph

2 of the Criminal Procedure Code, according to which "the court can approve *the plea bargain agreement only regarding some of the defendants* (authors' note)". This contradiction of the law should be corrected; in our opinion, at least in theory, the possibility to conclude one single agreement for all the defendants should not be excluded, since this would not harm the presumption of innocence for the defendants who did not wish to conclude an agreement, as stated by article 478, paragraph 5 of the Criminal Procedure Code, nor would it harm the presumption of innocence for the defendants who concluded the agreement, for the acts that they did not admit to. We believe that it is essential for the negotiation process for the penalty to be carried out separately with each defendant (having thus a personal nature), while recording the results of all negotiations in one single agreement, a fact which would not impede the procedure. Also, there is no obstacle for the situation where several agreements were concluded in the same case, for the court to be notified upon all of them, where the competence is going to be determined according to article 44 of the Criminal Procedure Code.

Yet, even if all the defendants admit all the acts that they are accused of, separate agreements will be concluded if the acknowledgement statements are submitted at different times. If a defendant admits at the same time on several acts, a single agreement will be concluded on all of them. It is possible though that the acknowledgement of each act to come at different times, which requires by the nature of things the conclusion of different agreements.

The negotiation between the prosecutor and the defendant is carried in relation to the following aspects:

a) The type and quantum of the penalty. Since the law does not distinguish it, both the main penalty and the complementary ones are targeted.

The main penalty cannot be something else but a fine or imprisonment, because in the case of crimes for which the law provides life in prison, the approval is not admissible. Also, the provisions upon the possibility of applying the penalty of life in prison is not applicable in the hypothesis stated by article 39, paragraph 2 of the Criminal Procedure Code, since a condition for this hypothesis is that for one of the concurrent crimes, the penalty stated by the law shall be imprisonment for 20 years or more.

By the decision 25/2014, the Supreme Court of Cassation and Justice – the panel for solving criminal law matters decided that in the application of the provisions of article 480-485 of the Criminal Procedure Code, the prosecutor cannot apply in the criminal prosecution stage, in the plea bargain agreement procedure, the provisions of article 396, paragraph 10 of the Criminal Procedure Code, with direct consequences on lowering the penalty limits stated by the law for the crime committed. Nothing impedes though within the negotiation that the prosecutor and the defendant convene upon a penalty which will not exceed two thirds of the special maximum stated by the law (such limitation could be also indicated by the previous approval of the superior prosecutor). The aspect seems natural to us at least in the case where the defendant completely admits to his actions. If the prosecutor would not negotiate the penalty under the special maximum reduced by a third (or in the case of a fine by a fourth of the penalty), the defendant would not be motivated to conclude the plea bargain agreement, knowing that he can resort during the first instance trial to the arraignment acknowledgement procedure, and the lowering would become compulsory based on article 396, paragraph 10 of the Criminal Procedure Code.

The analysis upon the provisions of article 479 and article 492, letter h) of the Criminal Procedure Code, we note that the safety measures don't form an object of the negotiation, whereas their situation is not mentioned however in the contents of the plea bargain agreement. The court notified of the agreement is obliged though to issue a decision upon it, because – according to article 487, letter a) of the Criminal Procedure Code – the decision must also include the observations stated under article 404 of the Criminal procedure Code and this includes the observations upon the safety measures.

These conditions raise the question related to how the court could decide upon the safety measures. For example, how could the special seizure measure (article 112 of the Criminal Code) apply so long as the assets targeted are not indicated in the agreement? How will the court take a safety measure which is not imperative (for example hospitalization – article 110 of the Criminal Procedure Code), if the prosecutor and the defendant did not negotiate and if they did not reach an agreement over it and, moreover, the procedure before the court is not contradictory? If the prosecutor would request taking such measure and the defendant would oppose it, logically the procedure should include ordering and performing a psychiatric medical-legal expertise and the judge should grant the defendant the right to formulate conclusions. We opine that this problem should be clarified by the lawmaker.

b) The way how the penalty is executed, waiving the application of the penalty or delaying the application of the penalty.

In regard to the way in which the penalty is executed, the prosecutor and the defendant will negotiate also upon the possibility of suspending the execution of the penalty under supervision, under the conditions stated by article 91 and by the following articles of the Criminal Procedure Code.

While perfecting the agreement, the legal assistance of the defendant is compulsory. In lack of an opposing provision, we consider that the legal assistance is not compulsory before the court which will solve the agreement (except for the hypotheses stated by article 90 of the Criminal Procedure Code)

The agreement reached by the prosecutor and the

defendant must have a written shape and its content will be the one stated by article 482 of the Criminal Procedure Code (we consider that this agreement must also include observations upon the preventive and precautionary measures).

The action of notifying the court is the plea bargain agreement.

If an agreement is concluded upon some of the actions or only with some of the defendants and for the other actions or defendants the indictment is made, the court will be notified in separate documents. In such a situation the case must be separated. It was estimated with reason that in such situations application difficulties will appear. In the cases with several crimes and several defendants, the notification of the court can reach to be made by an indictment document for some of the defendants and by a plea bargain agreement for the others. It is possible that for the same defendant that the notification will be done by an indictment document for some of the crimes and by a plea bargain agreement for other crimes. The situation could get even more complicated: for example, if there are several defendants and only some of them sign agreements on different dates, the notification of the court will be done by indictment document for some of them and by plea bargain agreements for the others, yet also for the others a notification will be sent by plea bargain agreements in successive moments, at the time of concluding each of those agreements. It is hard to presume if the court or courts were informed on different dates, whether the cases concerning the agreements could be united, whereas the celerity of the procedure makes it improbable to meet the conditions stated by article 44 of the Criminal Procedure Code. If we add to it the possibility that a part of the ones notified by indictment will resort to the arraignment acknowledgement procedure, a new separation will be applied during the trial stage, which means that we will have during the same trial an excessive fragmentation of the file, and negative consequences upon the validity and legality of the solution will be probable.

Additionally, when the same defendant is investigated for several concurrent crimes, if for some of them a plea bargain agreement is concluded, being approved by the court, and for the others he is sent to trial and definitively convicted, the merge of the penalties will always be done in the procedure stated by article 585 of the Criminal Procedure Code.

At the same time with the plea bargain agreement, the court will also be submitted the criminal prosecution file. If the agreement regards only some of the facts or only some of the defendants, the prosecutor will submit to the court only criminal prosecution documents referring to those acts and persons. If the defendant, the civil party and the civil accountable party have signed a transaction or a mediation agreement regarding the civil claims, this transaction or mediation will also form the object of a notification sent to the court.

The solving of the plea bargain agreement will also be made by the court which will have the competence of judging the case in substance. If the criminal prosecution was done for several defendants or for several crimes for which the competence belongs to different courts depending on the personal or material quality, the agreement will be solved by the court which is competent in relation to the facts or persons it refers to and not in relation to the ones for which an indictment was concluded. This conclusion results from the interpretation of article 483, paragraph 2 of the Criminal Procedure Code, because, so long as the agreement will be accompanied exclusively by those crimes concerning the facts and persons it refers to, the court could not verify its competence in relation to the facts and persons within the indictment, who remain unknown for it.

If the notification of the court by agreement is made only regarding certain facts or defendants, it is possible that it will be followed by a declination of competence ordered by the prosecutor. For example if in the case several defendants are prosecuted and only one or some of them sign an agreement, and the competence was given by their quality, after notifying the court, the prosecutor will request the separation and he will decline his competence for the continuation of the criminal prosecution regarding the other suspects or defendants, because the provisions of article 44, paragraph 2 of the Criminal Procedure Code do not apply during the criminal prosecution stage (article 63, paragraph 2 of the Criminal Procedure Code). For example, if for manslaughter a senator and a person with no special quality are investigated, the criminal prosecution will be done by the General Prosecutor's office attached to the Supreme Court of Cassation and Justice. Only the defendant who is a senator signs a plea bargain agreement and the court is notified upon this agreement. For continuing the criminal prosecution against the defendant with no special quality, first there is a need to order the competence declination to the prosecutor's office attached to the court. This situation could be practically avoided only by taking over the case based on article 325 of the Criminal Procedure Code.

In lack of a contrary provision, the composition of the panel which will solve the agreement is the one stated by the law for the first instance trial.

The special procedure does not know the stage of the preliminary chamber, which means that the task of checking the competence and the lawfulness of notifying the court, the legality of the evidence administration and the other criminal prosecution documents falls under the responsibility of the court. Though the law does not stipulate anything, we appreciate that the court could not decline this activity, because this activity forms the grounds for the validity and legality of the solution it will issue. For example, if the court finds that some evidence were not obtained legally, they must be excluded (article 102 of the Criminal Procedure Code) which can lead to the non-fulfillment of the condition of admissibility of the

agreement stated under article 480, paragraph 2 of the Criminal Procedure Code. Also, the verification of competence is essential, since the material and personal lack of competence are cases of absolute nullity when the trial was done by an inferior court (article 281, paragraph 1, letter b) of the Criminal Procedure Code).

According to article 484, paragraph 1 of the Criminal Procedure Code, if the plea bargain agreement lacks one of the obligatory observations or if the conditions stated under articles 482 and 483 of the Criminal Procedure Code were not complied with, the court orders covering the omissions during 5 days at most and it notifies the head of the prosecution office which issued that agreement. In our opinion the text of the law is vaguely formulated. For example, if the conditions stated by article 483, paragraph 1 of the Criminal Procedure Code upon material competence were not complied with, it is natural that the court must decline its competence, even if it risks a competence conflict, and not notify the prosecutor. Additionally, it is not very clear which those obligatory observations that could be missing are in fact, others than the ones stated under article 482 of the Criminal Procedure Code; probably the lawmaker wanted to refer to the lack of the approvals of the superior prosecutor regarding the limits and effects of the agreement.

The 5 days deadline is decadence and not a recommendation one, such as in the case of noncompliance the solution is to dismiss the agreement based on article 485, paragraph 1, letter b), of the Criminal Procedure Code.

The trial is public. Because the court was notified by agreement, the procedure is not contradictory. The criminal trial, the debates and the last word of the defendant are missing. The law states that the prosecutor, the defendant and his lawyer, as well as the civil party if it is present will be heard. Due to the specifics of the procedure we believe that they will have the exclusive word on the admissibility of the agreement and for the justification of the solution reached by negotiation, including under the aspect of the concordance between the solution proposed and the gravity of the fact and the dangerousness of the criminal.

In light of the law's silence, we consider that the injured person should not be cited or heard.

A question raised is if the court can raise itself the problem of the legal qualification given to the fact and mentioned in the agreement. In lack of contrary provisions, we consider that the court may change the legal qualification, after discussing it with the prosecutor and with the defendant; it is unconceivable that the judge is impeded by a legal qualification convened upon by the defendant and the prosecutor, when it considers that it is wrong. It must be analyzed though what solution will the agreement have in such case. Two situations are possible:

(i) Changing the legal qualification is made due to insufficient evidence regarding a part of the state. For example, this agreement showed the mitigating circumstance of being provoked or another mitigating legal circumstance and the court considered that there are no sufficient data justifying them; or an act composed by two material actions was qualified as a continued crime and the court considers that one of them is not shown by the evidence existing in the case and it changes the legal qualification into the simple form of the crime. In such case, we consider that the agreement should be dismissed based on article 485, paragraph 1, letter b) of the Criminal Procedure Code, for the failure to comply with the condition stated under article 480, paragraph 2 of the Criminal Procedure Code;

(ii) It could happen that the change of the legal qualification appears based on the same factual state, due to the different interpretation of its concordance with the incrimination regulation. For example, though the factual state shown in the agreement remains unchanged, the court considers that the crime is not theft but robbery.

In this second case, more problems arise. For example, the penalty stated by the law in relation to the new legal qualification can be different or it can be the same as for the crime initially shown in the agreement. If the penalty related to the new qualification is different and it equals at most 7 years of prison, it can happen that the concrete penalty reached by agreement is not located within the special limits stated by the law and for the new legal qualification. It is possible that for the new legal qualification a previous complaint is needed from the injured person, a complaint which was not needed for the action shown initially in the agreement. It might also happen that the change of the qualification determines the competence of another court, superior to the one notified by the agreement.

The law is not clear on the solution which will be adopted in such situations. We believe that this should be always dismissed at least for the reason that the negotiation between the prosecutor and the defendant and because the individualization of the punishment was grounded on a different incrimination regulation than the correct one, determining implicitly an erroneous application of the provisions of article 74 of the Criminal Procedure Code. Additionally, article 485, paragraph 1, letter a) of the Criminal procedure code shows that by admitting the agreement, the court will order one of the solutions stated under article 396 paragraph 2-4 of the criminal procedure code, which means that the fact exists and it is a crime; consequently, the judge deliberates also upon the legal qualification.

On the agreement, the court will state one of the following solutions:

a) Admitting the agreement and convicting the defendant, waiving the application of the penalty or delaying the application of the penalty.

Out of the systematic interpretation of the provisions of article 485 of the Criminal Procedure Code, it results that this solution is ordered when the

following conditions are met:

- the court finds that the conditions stated by articles 480-482 of the Criminal Procedure Code regarding all the actions held under the liability of the defendant, forming the object of the agreement are met;
- the solution reached by agreement is not disproportionately gentle related to the gravity of the crime and with the dangerousness of the criminal.

According to article 485 paragraph 1 letter a) of the Criminal Procedure Code, when the agreement is admitted, the court cannot create for the defendant a harder situation than the one stated in the agreement. We therefore deduce that the judge is compelled as a maximum limit by the solution convened upon by the prosecutor and the defendant in regard to the type and quantum of the penalty and in regard to the way it will be executed, because it can order a more gentle solution for the criminal. Consequently, the individualization of the penalty is partially the responsibility of the judge. In lack of contrary provisions, the judge may issue even a smaller penalty than the negotiation limit imposed by the agreement of the superior prosecutor who signed the agreement.

It can also be observed that though the solution of the law, in case the agreement is admitted, we are not actually in the presence of an agreement, whereas the judge orders a solution that the prosecutor did not accept.

An issue is raised regarding what solution should be issued when the court considers that there are sufficient data regarding the existence of the action for which the criminal proceedings were initiated, and regarding the guilt of the defendant, but in the mean time a case liberating them from the criminal liability appeared. For example, after notifying the court by agreement, an amnesty law was adopted. The court must dismiss the agreement and send the file to the prosecutor or it must admit it and order the ceasing of the criminal trial? On one hand, the conditions of article 480 paragraph 2 of the Criminal Procedure Code are met ("there are enough date regarding the existence of the *action* – authors' note") so the dismissal of the agreement is not possible anymore; on the other hand, the solution regarding the approval of the agreement and the ceasing of the criminal trial is not stated by article 485, paragraph 1, letter a) of the Criminal Procedure Code.

The same question is raised when after notifying the court by agreement a law appears discriminating the action, like when despite the defendant accepts the legal qualification set by the prosecutor, the action admitted upon, though it exists as it was noticed and described in the notification document, is not stated by the criminal law.

In our opinion, the logical solution – which is not stated by the law though – would by that in such cases the ceasing of the criminal trial should be ordered, or the acquittal, as the case may require. We believe that the formulation of article 480, paragraph 2 of the Criminal procedure Code should have been different, respectively:" [...] there is enough date regarding the existence of the *crime* for which the criminal proceedings were initiated and regarding the guilt of the defendant, *and he will be criminally liable for them"*

In *lex lata* though, in the cases above, the court cannot do anything else but dismiss the agreement and return the case to the prosecutor, who will order closing the case.

Once the agreement is approved, the court issues a decision in this regard acknowledging also the transaction or the mediation agreement signed between the parties regarding the civil proceedings. If the parties concluded no transaction and no mediation agreement, the court leaves the civil proceedings unsolved. In this case, according to article 27, paragraph 2 of the Criminal Procedure Code, the civil party may start a case on the dockets of a civil court.

b) Dismisses the plea bargain agreement and sends the file to the prosecutor for continuing the prosecution.

This solution is ordered in two hypotheses:

- if the conditions stated under articles 480-402 of the Criminal Procedure Code are not met, regarding all the crimes of which the defendant is accused and which formed the object of the agreement. It is notable that when the agreement is concluded on several crimes, it will be completely dismissed even though the admissibility conditions are not complied with regarding only one or some of the crimes;

The judge who dismissed the plea bargain agreement for this reason does not become incompatible if the court is notified by a new agreement or by a new indictment, except for the situation when the decision by which he rejected the first agreement stated the existence of the crime and the guilt of the defendant; in this situation there will be an incompatibility case which is stated by article 64, paragraph (1), letter f) of the Criminal Procedure Code.

- if he considers that the solution which formed the base for the prosecutor and the defendant to reach an agreement is unjustifiably gentle related to the seriousness of the crime or to the dangerousness of the criminal. We consider that this second situation is subsidiary to the first, because the problem of the way in which the penalty was individualized is not raised except for the situation where it is found that the actions exist, they are crimes, they were performed by the defendant and he is criminally liable.

An issue is also raised upon how the prosecutor should act in this situation. According to article 485, paragraph 1, letter b) of the Criminal Procedure Code, the sending of the case is done "in light of *continuing the criminal prosecution*" even if the decision of the court is only grounded on the disproportion between the solution in the agreement and the seriousness of the crime or the dangerousness of the criminal. Logically, the prosecutor should only restart the negotiation with the defendant for adapting the solution to the

circumstances of the court, only that the defendant – being a new agreement based on which the situation will be unavoidably harder compared to the initial one – is not obliged to accept it. On the other hand, we ask ourselves if the prosecutor could somehow be obliged to restart the negotiation even if the defendant would agree to it; in lack of any remark of the law upon this aspect, we consider that he is not obliged to such thing. Consequently, the simple renegotiation is possible, followed by a new agreement, with a harder solution than the initial one, as well as the continuation of the criminal prosecution, finalized with a trial by indictment.

We consider that if there are no new evidence obtained after continuing the criminal prosecution, the prosecutor is obliged to send the case to trial (if he does not sign a new agreement with the defendant). This is resulted from the circumstance that by the initial solution of dismissing the agreement, a judge found that the action exists, it is a crime and the defendant is criminally responsible, and the prosecutor must consider this point of view. If there are new evidence though, the prosecutor may order any solution, including the closure of the file (for example if resulted that the action is not mentioned by the criminal law or if there is a justifiable case or a non-attributable crime case) or waiving the criminal prosecution (new evidence may show a lower dangerousness of the action and of the perpetrator than initially thought).

If after continuing the criminal prosecution, the prosecutor informs the court upon a new agreement or upon an indictment, the judge who dismissed the initial agreement will be incompatible with judging upon this (article 64, paragraph 1 letter f) of the Criminal Procedure Code).

When the notification was made based on the same documentary evidence (the criminal prosecution did not provide consequently new evidence) there lies the question whether the court is related to the definitive decision by which the initial agreement was rejected based on the fact that the penalty was too gentle. We consider – at least in the case of the notification by indictment – that the answer is negative, and the determining argument is related to the different evidence standard between the regular and the special procedure. Though the definitive previous decision by which the agreement was dismissed determines the fact that the action exists, it is a crime and it was committed by the defendant, it is grounded still only on "enough data" (the minimum condition for concluding the agreement), while the solution of convicting according to the regular procedure requires findings "beyond any reasonable doubt". Consequently the judge notified by indictment cannot be compelled to issue the conviction on the substance, done by another judge, where the evidence standard was much looser. On the other hand, the procedure where the court issued a decision upon the plea bargain agreement lack contradictory aspects, while the procedure based on the notification by indictment enjoys all the guarantees attributable to the trial.

A problem which may appear in practice is related to the value of the plea bargain statement, if the agreement is dismissed. Should it be limited exclusively at the conditions of the special procedure or can it have the value of documentary evidence when the criminal prosecution continues? In lack of a law text regulating this, we choose the last meaning (including with the possibility of withdrawing the acknowledgement), as being at the choice of the prosecutor and of the judge, in the process of analyzing the evidence, if maintained or removed, as corroborated or not with the general view of the documentary evidence in the case.

The law does not state what solution is given to the civil action in case of dismissing the agreement. By analyzing the provisions of article 486 paragraph 2 of the Criminal Procedure Code, we believe that the only logical solution – not stated by the law though – is that the civil action remains unsolved. The civil party cannot address the civil court (after the definitization of the decision upon the agreement) based on article 27 paragraph 2 of the Criminal Procedure Code, because once the agreement is dismissed, the court sends the file to the prosecutor in order for the latter to continue with the prosecution, which means that the civil party will continue to be in the criminal trial, and the civil proceedings are going to be solved by the criminal court notified by indictment.

By the decision solving the plea bargain agreement, the court will also apply properly the provisions of article 396 paragraph 9 (referring to the payment of the criminal fine from bail), article 398 (on the trial expenses) and article 399 of the Criminal Procedure Code (on the precautionary measures).

V. The appeal.

The decision issued on the plea bargain agreement can be challenged by an appeal.

According to article 488 paragraph 1 of the Criminal Procedure Code, the persons who can appeal are only the prosecutor and the defendant. The solution of the lawmaker is debatable. Under the conditions where the court issues a decision and in the case of trial expenses, we don't see why for example the defender (the legal assistance being compulsory) or the interpreter – whose presence in court is compulsory if the defendant does not speak or understand Romanian or he may not express his messages (article 12 paragraph 3 of the Criminal Procedure Code) – could not appeal that part of the decision regarding the charges or the fees related to them when they are not satisfied. Also, if the court accepts the agreements but fails to acknowledge the transaction between the defendant, the civil party and the party which is accountable from a civil perspective, why couldn't the last two make an appeal against the decision?

In regard to the injured party, so long as it was

opted for the solution of neither being cited, nor heard on substance, the lawmaker correctly excluded it from the initiators of the appeal.

The appeal deadline is of 10 days and it starts from the communication.

Solving the appeal, the court may decide to:

a) Reject the appeal as being late, inadmissible or ungrounded and maintaining the sentence (article 488, paragraph 4 letter a)

b) Accept the appeal and:

- cancel the decision by which the plea bargain agreement was only accepted on the way and quantum of the penalty or the way in which the penalty is executed and issuing a new decision, proceeding according to article 485 paragraph 1 letter a) of the Criminal Procedure Code, which is applied accordingly (article 488 paragraph 4 letter b) of the Criminal Procedure Code);

In our opinion, both hypotheses for accepting the appeal are superficially conceived.

Thus, the solution stated by article 488 paragraph 4 letter b) is corroborated with the provisions of article 488 paragraph 2 of the Criminal Procedure Code, according to which against the decision by which the acknowledgement agreement was accepted, an appeal may be submitted only regarding the type and the quantum of the penalty or regarding the way the penalty is executed. Practically, only the prosecutor may challenge this decision, when the first court accepted the agreement and issued a much easier solution for the defendant. The defendant would have no interest in challenging such a decision which is favorable for him.

In this case, according to the above cited texts, the court of appeal proceeds to the new individualization of the penalty or of the way it is executed, stating a much harsher solution for the defendant, because of the prosecutor's appeal and not the defendant's one. The solution cannot be harsher though than the one initially reached in the agreement, because the provisions of article 485 paragraph 1 letter a) of the Criminal Procedure Code are applied correspondingly. Practically, the court of appeal has two possibilities: *(i)* either it applies the solution reached by an agreement; *(ii)* or it applies a different solution than the one reached to by an agreement, much harsher than the one in the decision, but in any case not harsher than the one stated by the agreement.

The above presented may show that in the special procedure, the appeal submitted against the decision of approving the agreement does not have the general effect of devolution stated under article 417 paragraph 2 of the criminal procedure code (according to which "the court is obliged outside the reasons invoked and the requests submitted by the holder of the appeal, to examine the case under all the factual and lawful aspects").

If this was actually the wish of the lawmaker we consider that we are in the presence of a serious mistake. Two hypotheses seem eloquent to us.

Firstly, it may happen that the court of appeal considers that the approval should not be admitted by the first court, considering for example that there are no sufficient data upon the existence of the crime or of the defendant's guilt. In other works, it could consider that the appeal is grounded, but for other reasons than the ones invoked by the prosecutor. How should the judges invested for solving the appeal proceed in this case? Out of the way in which article 488 paragraph 4 letter b) of the Criminal Procedure Code is conceived, it results that they are obliged by the considerations of the first court regarding the existence of the crime and the guilt of the defendant. But what if the judges of the appeal have doubts that the crime was committed by the defendant? If they dismiss the appeal, they maintain against their beliefs a conviction solution (or, as the case may require, waiving the application of the penalty or delaying the application of the penalty). If they would accept the appeal, they should issue a much harsher solution than the one of the first court, again against their beliefs upon the validity of the solution.

Secondly, the lawmaker forgot that the decision of accepting the appeal could be given in violation of provisions sanctioned with absolute nullity. It is for example possible that the court which approved the agreement was not competent in terms of matter or quality of the person or it is possible that the legal assistance of the defendant was not provided. According to article 281, paragraph 3 of the Criminal Procedure Code, absolute nullity derived from the lack of material or personal competence when the trial was done by an inferior court to the legally competent one, may be invoked in any state of the trial. Also, according to article 281 paragraph 4, letter c) of the Criminal procedure Code, violating the provisions upon the compulsory legal assistance of the defendant may be invoked at any stage of the trial, regardless of the moment when the violation appeared (*authors' note – so even if it was recorded during the criminal prosecution*), when the court was informed upon the plea bargain agreement. Moreover, the absolute nullity can be found also ex officio (article 281, paragraph 2 of the Criminal Procedure Code). We ask ourselves how these flaws could be invoked "in any stage of the trial", as stated by the above mentioned tests and what effects does this have if the decision for accepting the agreement can only be challenged by appeal regarding the type and the quantum of the penalty or regarding the way in which it is executed, and in case the appeal is accepted, canceling the decision is limited exclusively to the same three aspects?

We appreciate that such situations are inadmissible. Though the law does not state it, we believe that also in the case of the plea bargain agreement, the general devolution effect of the appeal stated under article 417 paragraph 2 of the Criminal Procedure Code must be applied.

And the solution stated by article 488 paragraph 4, letter c) of the Criminal Procedure Code is objectionable. Also here, the aspects signaled above

regarding the absolute nullity of the decision (the dismissal of the agreement) are valid. We believe that in the cases of absolute nullity, a retrial must be ordered to be made by the court with the cancelled decision or, in case of lack of competence, a retrial made by the competent court, as stated by the provisions of article 421, item 2, letter b) of the Criminal Procedure Code.

Again, we don't believe that this special procedure was meant to avoid the general devolution effect of the appeal.

We consider that a much simpler and clearer solution would have been the corresponding application in the procedure of the agreement, of the general provisions in the matters of appeal.

VI. Conclusions.

The novelty feature of the institution of the plea bargain agreement generated unavoidably inadvertences among the applicable procedural regulations, starting on one hand from changing the nature of the actions leading to the issuance of a solution by the court, from the conflict regulations to the negotiation ones and on the other hand starting from changing the standards regarding the evidence, the active role of the court and the application of the principle of contradictory nature and of the principle of immediacy. These amendments to the mechanism by which the judge of the case makes decisions and to the dynamics of the criminal trial generated problems related to taking and using the procedures upon the control of solutions and the possibilities of the judge to deliberate and decide, being absolutely necessary to create own regulations for the special procedure and move away as much as possible from the traditional constructions involving the development of a simplified trial stage.

THE FUNDAMENTS OF EXPLANATORY CAUSES

Lavinia Mihaela VLĂDILĂ*

Abstract:

The new Criminal Code in the specter of the legal life the division of causes removing the criminal feature of the offence in explanatory causes and non-attributable causes. This dichotomy is not without legal and factual fundaments and has been subjected to doctrinaire debates even since the period when the Criminal Code of 1969 was still in force. From our perspective, one of the possible legal fundaments of the explanatory causes results from that the offence committed is based on the protection of a right at least equal with the one prejudiced by the action of aggression, salvation, by the legal obligation imposed or by the victim's consent.

Keywords: *legal fundament, explanatory causes, anti-legality, typicality.*

1. Introduction

The current study aims the fundamental analysis of the explanatory causes, necessary because the new Criminal Code makes a new distinction of the causes removing the criminal feature of the offence, by dividing them into explanatory cases and non-attributable causes.

Why was it necessary such different approach? By what is justified materially, formally or legally?

The new Criminal Code does not define the explanatory cases, in general, just enlists them, defines them each other and reveals their effects. According to it are explanatory causes the self-defense (Art 19), the state of emergency (Art 20), the exertion of a right or the fulfilment of an obligation (Art 21) and the victim's consent (Art 22), the latter one being of absolute novelty in the Romanian criminal legislation, while the exertion of a right or the performance of an obligation was stated before by our previous codes, namely the one from 1864 and 1937.

According to Art 18 of the new Criminal Code, an action is not an offence if it is committed under the conditions of one of the explanatory causes. Thus, the main effect, criminally speaking, of keeping one of the explanatory causes is represented by the consideration of the offence as anti-judicial, tort, as not being an offence, because, though it is stated by the criminal law, it has in that context, a just feature. Therefore, unlike the previous legislation, self-defense or the state of necessity are no longer causes removing the criminal feature of the offence because the offence is not committed with guilt, but because it has a just feature; as a conclusion, in these cases, the perpetrator commits the criminal offence conscious of his actions and their effects, but, nevertheless, the criminal law understands to approve such behaviors, by considering them justified (allowed and licit), for the reasons which shall further exposed[1].

2. The notion of offence and the new concepts of typicality and anti-legality

According to Art 15 Para 1 of the new Code Penal, it is offence the action stated by the criminal law, committed with guilt, unjustified and attributable to the person who has committed it. Thus, from the definition, it results that are considered, in the present, features of the offence, the lack of stating the offence in the criminal law (the legality aspect of incrimination and thus of typicality – Art 1), the absence of guilt and the imputable feature (Art 16) and the unjustified feature[2]. When even one of these features is absent, the action is no longer an offence, a criminal sanction not being applicable. This is why, in our opinion, unlike that of other criminal doctrinaires of very high value[3], the explanatory causes are just one of three types of causes which can remove the criminal feature of an offence, each of them removing one of the essential features of the offence. Because they can have a

Partea generală*, in the Romanian Criminal Law Review, No 4/2004, p.15; Florin Streteanu, *Tratat de drept penal. Partea generală*, C.H. Beck Publ.-house, Bucharest, 2008, p.470

[2] In our opinion, there are not four features of the offence, but only three, because the attributive feature is part of the guilt, which it completes in order to become one feature of the offence and not two, different. Also, in the German doctrine, where this concept has first emerged, after that being taken by Austria, Spain, Portugal, Greece, the offence was defined from the perspective of the three features, previously stated by us (typicality, anti-legality and guilt). See in the meaning of a comparative law analysis, Lică Constantin, *Tipicitate și antijuridicitate*, in the Romanian Criminal Law Review, No 2/2008, pp. 143-145

[3] With all due respect for the Prof. George Antoniu, we cannot share his opinion according to which, the explanatory causes are different from the causes removing the criminal feature of the offence in which are included only the absence of typicality and of guilt, namely cases of non-attribution, because for some of them may be ordered safety measures, having a subjective feature. George Antoniu, *Cauzele justificative*¸ in the work coordinated by George Antoniu, *Explicații preliminare ale noului Cod Penal*¸ 1st Vol., Art 1-52, Universul Juridic Publ.-house, Bucharest, pp. 175-176. In the meaning of our arguments, see also the opinion of Gheorghe Ivan, Maria Claudia Ivan, *Drept penal. Partea generală conform noului Cod Penal*, C.H. Beck Publ.-house, Bucharest, 2013, p. 134

simultaneous existence with the commission with guilt of the offence, are considered by the doctrine as objective causes, while the causes of non-attribution are considered subjective causes[4].

When an offence is committed, which can have a criminal feature, the first of these features to be analyzed is the one referring to the fact if the offence is stated by the criminal law. A part of the French doctrine, considers this action as being enough, and as involving the attribute of typicality, German term. In this case, the French doctrine uses the term of **legal element**, the authorized bodies having to be sure that the concrete offence corresponds to a legal definition stated by a previous adopted text[5]. According to the new Romanian criminal conceptions, of German inspiration, as previously shown, supplementary to this first normative phase, it shall be analyzed if the offence is identical with the incrimination norms, presenting all its constitutive elements, this concordance being named **typicality**[6].

Nevertheless, an offence may be stated by the criminal law and may have a typical feature, but it can be justified, when it is authorized by a legal norm, when there is the consent of the victim (according to the law), when a right is protected or when an action to save is performed, under the conditions of the law[7].

This is why when the offence has no unjustified feature, we are in the presence, *per a contrario*, of an explanatory cause, "*being the proof that the incriminated action is not, simultaneously, contrary to the law*"[8]. This position of contrariety of a criminal action with the law itself, with the legal order, has been named as **anti-legality**[9], the term being taken on the Spanish channel[10], from the German doctrine.

According to Prof. Maria del Carmen Gómez Rivero, a certain anti-judicial behavior is when it trespasses a certain imperative norm, which without being justified, it endangers the social relation protected by that norm (the special legal object protected by the incrimination of the offence, we might add), which cannot be protected only by extra-judicial means[11]. This is why the anti-legality has a formal aspect, because it aims the violation of a criminal norm and a material aspect (substantial). Also, in order to be ascertained, the anti-legality requires a positive fact, namely the typicality, and a so-called negative fact, the absence of the explanatory causes[12].

Therefore, the two concepts, of anti-legality and of explanatory causes are complementary, the presence of one denying the other one, and vice versa[13]. The presence of an explanatory cause shall make the action to have a licit feature, according to the law and legal order. This idea wishes to emphasize that the presence of an explanatory cause in the commission of a criminal offence makes it permissible by the criminal law, but it does not assume that it is positive or wanted. Also, its existence (of the explanatory cause) does not necessarily assumes the absence of the typical feature of the offence, but "*it removes ab ignition the vocation of the typical action to transform into an offence*"[14].

Another issue generated by the apparition of the new concepts, was if, outside the explanatory causes stated by the Criminal Code, we may add some new ones. Starting from the principle of the legality of the incrimination, the existence of an explanatory cause is analyzed only from the perspective of the ones expressly stated by the law (here are listed all types of explanatory causes, including the ones stated as special causes applicable to certain offences, or the ones stated by other laws than the Criminal Code), because these represent exceptions from the principle of the criminal repercussions and cannot be of strict interpretation[15]. Though, in the German doctrine, starting from the differentiation between anti-legality, specific criminal notion (where the idea that the notion *criminal anti-legality* is a pleonasm), and the judicial licit, which can exist in all areas of law[16], it is considered that there are explanatory causes also in other areas of law, whose role is to remove the legal illicit. Although in terms of effects, these are identical, however the criminal explanatory causes are limited and, in general, are applicable to all areas of law[17].

[5] The French doctrine studied by us does not use the term of typicality, but the one of legality. See Harald Renoult, *Droit pénal général*, 12th Ed., Paradigme Publ.-house, Orléans, 2007, p. 111

[8] George Antoniu, *op. cit.*, p. 172

[9] Matei Basarab, *op. cit.*, p. 77. We note that the majority of the Romanian doctrine, unlike a part of the Spanish doctrine, consider anti-legality as being contrary to the entire legal order, and not just against the criminal norms.

[10] Certain Spanish authors, without explicitly using the term, define anti-legality as strictly being of a criminal nature (criminal anti-legality) and thus, as being formed only from those behaviors contrary to the criminal law, and to all the law, in general. See Luis Arroyo Zapatero, et al., *Curso de derecho penal. Parte general*, Experencia Publ.-house, Barcelona, 2004, p. 193. This is also the idea of Santiago Mir Puig, *Derecho penal. Parte general*, Reppertor Publ.-house, Barcelona, 2002, p. 146

[17] Ibidem, Para 36

Prof Florin Streteanu, also inspired by the German doctrine, appreciates in the same meaning that the "number of explanatory causes cannot be considered as definitive to those recognized in a given moment, the evolution of society determining the recognition and statement of new circumstances"[18].

Nevertheless, the aspects of legality, especially in the area of the criminal law, must prevail, and the judge is compelled to respect the formal concept of anti-legality before the material one, as explained by Claus Roxin[19].

The concepts of anti-legality and typicality, though they complete the theory of offence, do not fully explain the fundaments of the explanatory causes. This is why, in order to discover these fundaments we shall start our analysis from their creators, namely the German doctrine, supported by the Spanish, Portuguese and Italian etc. ones.

3. The fundament(s) of the explanatory causes

According to the German doctrine, pre-quoted, with the elaboration of the concept of explanatory causes, it was aimed its theoretical ground. In the beginning it was tried the creation of a unique fundament for all explanatory causes, elaborating the *theories*, called *monists*. The first of them was created by Wilhelm Sauer, in 1955 and supported by other German authors who have added their own opinions, such as Peter Noll (1965) or Eberhard Schmidhaüser (1987) and was named the *theory of purpose*, according to which an action is just in the area of law if it represents a proper mean for the achievement of a purpose recognized by the legislator as being just (fair). In other words, an action is just and permitted by the law if by it the community obtains a benefit higher than the prejudice caused. To this theory, we would say *utilitarian*, Peter Noll has added as fundament "*the ponderation of values*", while Eberhard Schmidhaüser considers that retaining an explanatory cause preserves that social relation considered as more valuable than the one prejudiced[20]. The same opinion is partially shared by the Spanish authors José Zugaldía Espinar and Esteban Pérez Alonso, for whom the law authorizes a criminal offence in order to save an interest of higher importance than the one sacrificed[21].

Though the theory and its later amendments cannot ground the situation in which both prejudiced values are identical (life against life, for instance). It is noticed that this theory puts on an equal footing a legitimate interest with a right recognized by the law and prioritizes the concept of material anti-legality.

Moreover, the German authors themselves have considered that this theory cannot justify all situations, and thus have emerged the *dualist theories*. Part of these theories have continued to find a common ground for all explanatory causes, while other have tried to find a common ground for all, which was subsequently completed for each explanatory cause.

Back to the German doctrine, Prof Edmund Mezger and Hermann Blei add to the "*theory of the predominant interest*" that of the "*absence of the unjust interest*"[22]. The absence of the interest refers to the situation in which the owner of the right or of the protected legitimate interest is no longer interest in his legal protection and agrees with its "violation" (in other words, when the victim consents to bear a certain prejudice, either material or moral, or both, then there is no confrontation of interests grounding the explanatory cause)[23]. This is why this idea offers to the consent a special place in the justification of the criminal action; though it (the consent) cannot justify by itself "*the collision of interest*" neither it represents a legal base for self-defense, for instance. For these reasons, Claus Roxin considers that this is one of the cases which exclude typicality, and thus not a fundament. For him, the common ground of all explanatory cases is represented by the "fair social regulation of opposite interests" – or, i.e. the criminal offence committed does not generate a social prejudice, being appreciated as fair by the society and, also, necessary for the protection of the prejudiced social relation[24].

With this completion a legal basis shall also be received by the situations in which the two interests or rights are equal as social value.

This is why lately have become widespread those dualist theories which finding a common ground for all – saving the predominant interest – more often, add another legal basis to each of the explanatory causes.

Certain known Romanian authors consider as general ground for explanatory causes the prevalence of the permissive norms, which remove the illicit feature, before the imperative norms which incriminate different criminal actions. This prevalence of the permissive norms is determined by the superior requirements of the social legal order, because the criminal action in the presence of explanatory causes is not contrary to the law[25].

According to us, the general ground of explanatory causes, which can be completed for each

situation, should be searched in the very name of those causes; they express what is morally fair and just, but also legally, in the given case, for as long as we stay within the legal limits. Though are no longer considered as causes removing the guilt, because the offence is committed with intent, at least the aimed result, yet its action is within the limits permitted by the general law, but also by moral, being fair from the social perspective.

Furthermore analyzing the situation of each explanatory cause, we find that for Roxin, the ground of **self-defense** resides in the combination between the theory of the protection of the prejudiced social relation with the principle of the prevalence of law in front of an unjust aggression (we might add). The same idea is supported by the authors coordinated by José Zugaldía Espinar, who add the fact that self-defense also has "a general function of prevention, in the meaning that it warns the potential offender that the victim may react in the most energetic way possible"[26].

For the Romanian author Florin Streteanu the justification of self-defense resides in the prevalence that the society must give to the unjustly prejudiced social value, which in fact represents a combination between the theory of saving the predominant interest with the prevalence of the right of the innocent one in front of the unjust aggression[27].

Other Romanian authors legitimate this probative cause in that as long as the state which had the obligation to protect the social order cannot do it promptly, then it shall allow the possible victim to act for her own protection[28].

The **state of emergency** has as legal base the same principle of protecting the prejudiced social relation, but to the extent to which it is performed proportionally with the caused prejudice[29] (let us remember that one of the conditions of the state of emergency is that the saving action to not generate consequences more serious unless it would not have occurred[30]). But some Romanian authors suggest as fundament the absence of a real prejudice caused to the social order[31], which is near the general ground found by Roxin in his argumentation.

For the exercise of right and the performance of an obligation, the fundament was found in the very unity of the legal order, which cannot order or allow a certain thing within an area of the law or by a norm and to prohibit it in another area or by another norm[32]. Indeed, for as long as a person shall exercise a right or fulfils an obligation imposed by the law, it is protected by the law which states the right or the obligation. However, also in these cases has been ascertained that there are situations in which the initial limits established by the law are superannuated, taking either the form of the abuse of law, or the one of damaging certain legitimate interests or even rights of a person in the performance of an obligation imposed by the law. Is such attitudes are outside the area of law which allowed or imposed them and reach the area of criminal law, then the commission of a criminal action is no longer justified and the action shall be an offence, if other causes removing its criminal feature do not occur.

Same in the case in which the obligation is imposed by an authority, it is justified only if the authority who ordered it was entitled to do this, namely was a competent authority and, in addition, if this order was not intentionally illegal[33].

Finally, the last of the explanatory causes stated by the new Romanian Criminal Code is the **victim's consent**. Considered by itself a fundament by a part of the German doctrine, as stated before, the victim's consent finds its legal base in the possibility offered by the Art 26 Para 2 of the Constitution, according to which "*any natural person has the right to freely dispose of himself unless by this he infringes on the rights and freedoms of others, on public order or morals*". Hence, the fundamental law itself expresses the ground for this explanatory cause, in the right of any person to freely dispose of himself, but within certain limits, which are the compliance with the general legal order, we might say. This public order imposes that the victim of a criminal action can waive only the rights to which morally and legally can waive, enjoying of a right of disposal over them. This is why this explanatory cause is not and shall not be recognized for the offences against life or in other cases expressly stated by the law[34] (for instance, the case stated by Art 190, 210 Para 3 and Art 211 Para 3 of the new Criminal Code).

Other authors propose as basis in this case the very idea of victim's waiving, with the condition that the victim to be the owner of waived value and the value to be of significant importance[35]. Though fair this allegation, in our opinion is preferable a positive base than a negative idea as legal ground for this explanatory cause.

4. Conclusions

The new Criminal Code has inserted new concepts by borrowing certain elements from the German and Spanish doctrines, among which the one of dichotomy explanatory causes – non-attributive causes. This article aimed to reveal the reason for which such differentiation was necessary, searching for the ground of the explanatory causes. It proved to be not an easy task, because we have found many opinions, some of them contrary, other ones complementary, but all very interesting. We have reached the conclusion that it is possible a general cause – the performance of what it is just, from the legal and moral perspective, ground completed with other elements for each of the four causes, as previously presented.

IMPLICATIONS OF THE NEW LEGISLATION ON THE FUNDAMENTAL PRINCIPLES OF THE CRIMINAL TRIAL[1]

Andrei ZARAFIU[*]

Abstract

Each type of criminal trial is construed, from a systemic and normative perspective, on a range of fundamental rules.

The current pattern of criminal trial applied at national level since the implementation of the New Code of Criminal Procedure knows the same normative approach, which begins with the regulation of the Principles for the application of the criminal procedure law.

Even if, from the perspective of the form, the new procedure law was construed on the same normative fundament, from the perspective of the content, these differ from the previous regulations, being more adapted to the new legal realities and correspond to the trial model proposed by the new legislation.

This study aims to analyse the new fundamental principles of the criminal trial, to identify the current dimension of their normative content and to appraise the way in which these reason with the warranties systems offered by the European regulations.

Keywords: *criminal trial, principles, system, warranties*.

Introduction

As a novelty and following the model of criminal law, the new civil procedural law has been explicitly regulated in terms of its fundamental principles.

In addition to the actual content of the fundamental principles, this legislative approach underlines the significant theoretical and practical importance of these basic rules for the judicial system, as a whole.

Any procedural arrangement and, in particular, the criminal procedural one, which is specific to repressive justice, needs an essential, well-rounded framework, as the foundation for the development of the entire judicial construction.

Knowing such basic structure, laying down the correct legislative and practical dimension of its constituent elements, identifying proper solutions to overcome any potential procedural impediments generated by the application of the new basic rules of the criminal trial, become mandatory initial requirements for the application of the New Criminal Procedural Code.

At the same time, any approach which is exclusively theoretical is unable to cover the need generated by the exclusively dynamic character of the application of the criminal procedural law.

Therefore, a useful analysis may not by-pass the specific judicial reflex of effectiveness of certain new fundamental principles of the criminal trial.

Paper content

As a positive law branch, criminal procedural law consists in the entirety of the legal provisions regulating the course of the criminal trial and other legal procedures related to a criminal case. Such provisions, together with those regulating the legal relationships established among the various parties involved in the criminal trial make up the ensemble generically called *procedural law.*

Even if they have the value of *process rules* or *procedural rules*, or belong, as a subcategory, to the category of *organisation rules*, *competence rules* or *procedural rules*, all criminal process law rules have the same purpose: they prescribe procedural rules.

Also, all the provisions of criminal procedural law are mandatory, *i.e.* both the judicial bodies, and the other parties taking part in the criminal trial have the obligation to abide by the rules prescribed by these provisions.

Irrespective of their name, *i.e.* basic rules, fundamental principles, guiding provisions, etc., the provisions of the criminal procedural law comprise some provisions whose value is different from that of the regular provisions. In most criminal procedural laws, these are found in the beginning of the Code.

I believe that the value of a provision of criminal procedural law as a fundamental principle is given by 3 characteristics:

a) *general applicability*, *i.e.* it refers to all the activities carried out during the criminal trial, irrespective of the phase or stage;

[*] Lecturer, PhD, Faculty of Law, University of Bucharest (e-mail: **andrei.zarafiu@mnpartners.ro**).

b) *direct applicability*, *i.e.* it does not need any additional provisions to transpose the generic rule in a particular context;

c) *priority applicability*, *i.e.* it has priority before all other provisions, even if sometimes these have a special character.

In the New Criminal Procedural Code, these provisions were called *principles of application of the criminal procedural law* and are *expressly* provided by Articles 2-12 of the Criminal Procedure Code.

All of the fundamental principles of the criminal trial make up a coordinated and flexible *system*, based on which the other procedural provisions are formulated, and shaping the political and legal framework of criminal justice.

The past years' evolution of the system of criminal trial fundamental principles confirms the *European model* of the new type of criminal trial in Romania, built in accordance with the provisions of the European Convention on Human Rights and based on the mandatory case-law of the Strasbourg Court.

The content of the fundamental principles of the criminal trial should not be considered only at a declarative level, the understanding of the *legal consequences* involved and the related *guarantees* being essential.

A. Lawfulness of the criminal trial (Article 2 of the Criminal Procedure Code)

This may be considered to be the quintessence of fundamental principles of the criminal trial, the framework principle which is the foundation for all other principles.

Lawfulness, as a fundamental principle, implies that all fragmentary activities making up, together, the criminal trial, are carried out *pursuant to the legal provisions*. The principle of lawfulness governs not only the activity carried out in a criminal case (criminal trial, in its strict sense), but also the activities carried out as part of other legal procedures, related to a criminal case.

Not accidentally, the principle of lawfulness is considered to be the most important fundamental principle of the criminal trial, since the law is not only the *requirement*, but also the *condition of the procedure*.

At the same time, in order to fulfil its purpose of preventing arbitrariness, the procedural law has to be predictable and accessible in accordance with the constitutional and human rights protection standards (*M. Udroiu*, Partea Generală, Noul Cod de Procedură Penală, C.H.Beck Publishing House, 2014 p. 5).

The most efficient guarantee of the principle of lawfulness is represented by the *procedural penalties*. Thus, the failure to comply with the legal provisions during the criminal trial may result in:

- the *nullity* of the acts and trial-related measures, and of the procedural acts;
- loss of trial-related rights (by *termination*)
- loss of efficiency of trial-related procedures (claims, complaints, exceptions), by the acknowledgment of *inadmissibility*;
- *exclusion* of illegally or unfairly produced evidence.

At the same time, the *parties to the trial* failing to comply with the legal provisions during the criminal trial may be held liable under the civil, criminal or judicial law (by the application of the judicial penalty). Also as a guarantee to the principle of lawfulness, the successive and progressive course of the activity making up the criminal trial implies permanent control of the lawfulness of the procedural acts (trial-related acts and measures, procedural acts).

Such control is exercised not only *at the request* of the interested parties (*e.g.*, by complaints against the criminal prosecution measures and acts, by the complaint addressed to the judge of the preliminary chamber against the decisions not to start the criminal prosecution or not to lodge a summons, by the exceptions and claims raised in the preliminary chamber procedure, by the means of appeal), but also *ex officio* (by exercising the supervision and control of the criminal investigation bodies by the prosecutor, by verifying the lawfulness and the merits of the summons indictment by the superior prosecutor, by the capacity held by the judge of the preliminary chamber or the court of law to invoke exceptions *ex officio*, etc.).

B. The principle of separation of judicial offices (Article 3 of the Criminal Procedure Code)

Although this principle functioned implicitly also under the former regulation, the separation of the judicial offices, as a basic rule of any modern procedural system, is currently expressly regulated as a fundamental principle of application of the criminal procedural law.

Pursuant to Article 3(1) of the Criminal Procedure Code, the following judicial offices are exercised in the criminal trial:

- the criminal prosecution;
- the disposition of the fundamental rights and freedoms of the individual at the criminal prosecution stage;
- the verification of the lawfulness of the summoning or non-summoning decision;
- the judgment.

What is the principle which *"represents, for the criminal procedure, what the separation of the legislative, executive and judicial authority represents for constitutional law."?* (*A. Esmein* citing Montesquieu in Histoire de la procédure criminelle en France, 1882, not. 410, apud J.Pradel, Procédure pénale, 16th edition, Cujas edition, Paris 2011, p.27.)

Theoretically, the principle means that each judicial office is exercised by specialised bodies, which may not exercise a different office

For the French judicial system, the consequence of the separatist principle does not have a procedural nature, but an organic nature, *i.e.* different judicial

bodies exercise each judicial office (*J. Pradel*, op.cit.,p.27).

In Romania, the current dimension of the principle is not only the result of a deliberate option of criminal policy, but also the expression of certain administrative constraints generated by insufficient judge magistrates.

By reference to both the general provision (Article 3 of the Criminal Procedure Code) and the special provisions whereby the principle is transposed within a particular context (Articles 203, 335, 341, 346, 362 of the Criminal Procedure Code, etc.) *I believe that*, in the current judicial system, the separation of judicial offices is:

- a relative separation, from an organic point of view (due to the lack of specialisation for jurisdictional offices)
- permissive, regarding the plurality in the same criminal case.

What should be understood by the notion *of judicial office*? This notion must not be mistaken by that of procedural office.

The judicial office is an exclusive characteristic of judicial bodies and refers to their competence, setting out the judicial actions taken by the official subjects in performing their duties provided by the law.

The procedural office is a general characteristic of (official or private) procedural subjects, and refers to the interest in consideration of which such subjects take part in the procedures.

While judicial offices set out the judicial bodies' duties, procedural offices set out the attitude (obviously, in a procedural sense) of the procedural subjects.

While the judicial office implies actions, *i.e.* operations performed pursuant to certain express competences, the procedural office implies manifestations and measures, understood as proper remedies.

Both judicial offices, and procedural offices may be exercised simultaneously during a procedural stage or phase, since they are intertwined and manifest themselves at different levels.

Any modern criminal procedural system, including the Romanian one, includes three trial-related offices:

- indictment (exercised on each side of the trial by the active subjects of the two actions)
- defence (exercised by passive subjects of the two offences).
- jurisdiction (to which the decision-making power belongs, power which is exercised by the judges).

Each of the 4 judicial offices has a proper judicial context of manifestation (procedural stage or phase), with a set object lying at its core.

Presently, one may notice the pre-eminence of *jurisdictional* offices, which are manifested including during the criminal prosecution.

These are exercised by the members of the same judicial category – the court judges, even if the methods and procedures applied are different.

The prosecution office and the judgment office are considered primary offices, given the object of the activity implied, which is related to the merits of the case *(clarification of the essential elements of the conflict relationship).*

The other two offices are considered subsidiary offices, given that the activity implied is related to the elements adjacent to the merits of the case *(theoretically, the office exercised by the rights and freedoms judge during the prosecution even has a contingent nature, since it may be exercised in a case other than a criminal case in which a final judgment was ruled by the court).*

Despite the express listing, two other judicial offices may also be identified in the current criminal trial:

- *the temporary order office,* regarding the freedom of the individual, which may be exercised in subsidiary both in the preliminary chamber procedure (Article 348 of the Criminal Procedure Code), and in the judgment phase (Article 362, Article 399 of the Criminal Procedure Code)
- *the office enforcing* penal judgments (see *I. Neagu*, *M. Damaschin*, Tratat de procedură penală. Partea Generală, În lumina noului Cod de procedură penală, Universul Juridic Publishing House, 2014, p.19).

The criminal prosecution office refers primarily to the activity of colleting the necessary evidenced in order to establish the existence or lack of grounds for summons.

From a judicial point of view, the *"collection of evidence"* implies three separate operations: identification, administration and analysis of the evidence.

The criminal prosecution office is exercised by the prosecutor and the criminal investigation bodies through proper acts *(prosecution acts).*

Although both bodies are criminal prosecution bodies, there is not equality, but a functional subordination relationship between them.

The office of disposition of the fundamental rights and freedoms of the individual has a subsidiary nature and is also exercised at the criminal prosecution stage.

The judicial body exercising this office is a jurisdictional body having duties in this respect (judge of rights and freedoms) or, *as an exception*, the body which exercises the primary office of criminal prosecution.

Thus, in exercising such office, the judge of rights and freedoms rules a decision during the criminal prosecution, regarding: preventive measures, precautionary measures, special supervision and investigation methods, and other evidence-related procedures of emotional nature, temporary safety measures, etc.

Also, in exercising its judicial office, the *judge of rights and freedoms* has other duties as well, during the prosecution phase, regarding the *anticipated hearing procedure*, *the complaint regarding the length* of the criminal trial, etc.

The office regarding the verification of the lawfulness of the decision to lodge or not lodge a summons is usually exercised by the judge of preliminary chamber, during the preliminary chamber procedure.

This judicial office also implies, in terms of duties, the *verification of the lawfulness* of the evidence produced and acts performed during the criminal prosecution, the *verification of the lawfulness* (and, exceptionally, even the *merits*), of the decisions not to lodge summons ruled by the prosecutor, as well as the *verification of the lawfulness and merits* of certain acts ordered by the prosecutor (*e.g.*, in case of re-opening the criminal prosecution, pursuant to Article 335 of the Criminal Procedure Code).

The judgment office is exercised at the judgment stage, by the court referred to and vested according to the law, in panels – Article 3(7) of the Criminal Procedure Code.

The activity implied by the exercise of this office is finalised by a resolution of the two judicial actions which, once it is final, acquires the authority of *res judicata*.

The judgment office implies a *jurisdiction* over the merits.

According to Article 3(3) of the Criminal Procedure Code, *during the same criminal trial, the exercise of a judicial office is not compatible with the exercise of another judicial office, except for that provided at paragraph (1) letter (c), which is compatible with the judgment office*.

This general provision is transposed, in a particular context, into the matter of incompatibility: Article 61(1)(e), Article 64(4) and (5), Article 65(4), Article 340 and Article 342(7) of the Criminal Procedure Code.

There are also certain exceptions regarding the admissibility of *multiple judicial offices*:

a) thus, the body exercising the criminal prosecution office in a case, may also exercise the office of disposition of the freedom of the individual at the same procedural stage: the criminal prosecution body may dispose of the freedom of the suspect by retention (Article 209 of the Criminal Procedure Code), or the freedom of the defendant, by retention or judicial control (Article 211(d) of the Criminal Procedure Code);

b) the implicit office of disposal of the freedom of the individual may be exercised by the same judge carrying out the procedure in the preliminary chamber (Article 348 of the Criminal Procedure Code), or making up the court panel vested with the settlement of the case (Articles 362, 399 of the Criminal Procedure Code).

c) the judge of preliminary chamber who exercised, atypically, duties specific to the verification office in the procedure regarding the settlement of the complaint against the decisions not to lodge summons, and ordered the commencement of judgment, is incompatible with the merits judgment of the case.

Such incompatibility, which apparently contradicts the general permission provided by Article 3(3) of the Criminal Procedure Code, is based on a mandatory decision of the High Court (Decision to approve the appeal in the interest of the Law No. XV/2006, Official Gazette No. 509 of June 13, 2006).

The separation of judicial offices represents the condition for the regulation of the functional competence in the criminal trial.

For a detailed approach of the principle, see *A. Zarafiu*, Despre separarea funcţiilor judiciare.Consecinţe. Impedimente. Remedii, în volumul Conferinţei *Reglementări fundamentale în Noul Cod penal şi Noul Cod de procedură penală,* organised by the Faculty of Law, Bucharest University, published at C.H.Beck Publishing House, 2014, p.225-240.

C. Presumption of innocence (Article 4 of the Criminal Procedure Code)

Pursuant to Article 4(1) of the Criminal Procedure Code, any individual is presumed *innocent* until their guilt is established by a final penal decision.

Based on the environment in which the penal action is settled, an individual's *guilt* is conditional upon three cumulative findings of the court, *i.e.*:

- *the deed is real* (it is material);
- *the deed is an offence* (it meets all the elements making up the criminal deed and was perpetrated with the type of guilt provided by the law);
- *the deed was perpetrated* by the person who is summoned.

Within this complex context, guilt as a *procedural* concept should not be mistaken with guilt as essential characteristic of the crime (subjective attitude), *which is a substantial concept*, and takes one of the forms provided by the criminal law at Article 16 of the Criminal Code (the intention, the guilt, etc.).

The material ground for establishing the guilt of a person, *lato sensu*, may only be a piece of evidence, legally and fairly produced.

Also, a person's guilt must be established *beyond any reasonable doubt*, *i.e.* after removing all doubts or contradictions identified in the evidence produced and influencing the judicial body's opinion.

In case such doubts or contradictions (*doubt*) may not be removed by additional evidence or the removal of contradictory evidence, then, pursuant to Article 4(2) of the Criminal Procedure Code, these are interpreted in favour of the suspect or defendant - *in dubio pro reo*.

In consideration of these aspects, the principle of the presumption of innocence has been granted the most important guarantee in the new procedural law:

The regulation, as a distinct situation of *prevention* of the initiation, or *extinguishment* of the criminal action, of the lack of evidence attesting to the fact that a person committed a crime – Article 16(1)(c) of the Criminal Procedure Code.

In other words, as a consequence of the principle of the presumption of innocence, no person may be considered to be guilty and held liable under the criminal law, if:

- *there is no evidence* attesting to the fact that the three cumulative conditions of penal guilt (the deed is real, it is an offence and was perpetrated by the person who is summoned);
- *the evidence produced* is not sufficient to remove the reasonable doubt in the judicial body's opinion.

Under these circumstances, the only possible decision is acquittal (or *classification* at the criminal prosecution stage).

The doctrine established that the presumption of innocence does not have an absolute, but a relative nature, and may be removed by unquestionable evidence of guilt.

I believe that further analysis of this matter is required.

Until the court's decision establishing the guilt *remains final*, the presumption of innocence operates in an absolute manner.

Irrespective of the nature of the offence and the evidence produced, and despite the defendant's position in the trial (the defendant may admit their guilt), until the final settlement of the case, the person against whom the judicial activity is carried out must be treated as *innocent*, from a procedural point of view.

As a consequence of the principle of the *presumption of innocence*:

- the duty of evidence is incumbent upon the person who raises the *charges* (in criminal matters) or *claims* (in civil matters);
- the suspect or the defendant does not have the obligation to prove their innocence, and has the right not to concur to their own indictment (Article 99(2) of the Criminal Procedure Code);
- the decision ruled by the first instance court (which is not final yet) may not be enforced if it is challenged by appeal, even if it establishes the defendant's guilt, etc.

At the level of European regulation, the *presumption of innocence* is perceived as a specific guarantee of the right to a fair trial, established in criminal matters – Article 6(2) ECHR, C. Bîrsan, Convenția europeană a drepturilor omului, Comentariu pe articole, 2nd edition, C.H.Beck Publishing House, 2010, p.533-543.

D. The principle of finding the truth (Article 5 of the Criminal Procedure Code)

Pursuant to Article 5(1) of the Criminal Procedure Code, judicial bodies have the obligation to ensure, based on evidence, the finding out of the truth about the facts and circumstances of the case, and the suspect or the defendant. Being an *obligation* of the judicial bodies, finding out the truth is also a guiding principle in carrying out the trial-related activity.

However, in order not to become an impossible obligation, finding out the truth *must be based* on judicial coordinates. Therefore, what needs to be found in a criminal case is the *objective truth* (judicial), not the absolute truth.

This type of truth requires a correspondence between the conclusions formulated by the judicial bodies and the objective reality concerning the deed and its perpetrator.

Considering its objective nature, the truth may be found, within the meaning of the fundamental principle regulated by Article 5, by *objective means.*

In this sense, the law stipulates the judicial bodies' obligation to ensure the finding out of truth based on evidence. But, according to Article 97(1), the evidence are *de facto elements* (they may be verified, under their material aspects).

The truth found by judicial means is even preferred to past material reality.

Thus, the *de facto* situation established by a final court decision is presumably reflecting the truth – *res judicata pro veritate habetur*.

An important consequence of the principle of finding the truth is the judicial bodies' obligation to clarify, based on evidence, the case, completely and under all its aspects.

Such obligation is transposed in a particular context into

- article 327(1) of the Criminal Procedure Code, which stipulates that the prosecutor may not proceed with the settlement of the cases, unless the criminal prosecution *is completed*;
- article 349(1) of the Criminal Procedure Code, which stipulates that the role of the court is also to ensure that evidence is produced for the *full clarification* of the circumstances of the case, for the purpose of finding the truth.

The evidence must be collected and produced, for the purpose of finding the truth, in full compliance with the law.

Moreover, Article 5(2) of the Civil Procedure Code stipulates the judicial bodies' obligation to collect and produce evidence both in favour, and against the suspect or defendant.

The dismissal or failure to record, in bad faith, the evidence proposed in favour of the suspect or defendant is punished according to the law.

The principle of finding the truth has an *absolute character.* A criminal case settled in breach of this principle and which does not reflect the truth (judicial error) may be re-examined by extraordinary remedies at law.

Also, according to the law (Article 531-542 of the Civil Procedure Code), the person who received a final sentence and subsequently demonstrates that a judicial error occurred is entitled to remedies for the prejudice suffered, offered by the state.

E. Ne bis in idem (Article 6 of the Civil Procedure Code)

The mandatory rule implies by this principle concerns the *situation following* the final settlement of a criminal case.

The rule is the consequence of the authority of *res judicata*.

The authority of *res judicata* is the *status* generated by the final settlement of a criminal case.

The authority of *res judicata* implies two effects:

- *the positive effect*, which enables the enforcement of the provisions of the final penal decision;
- *the negative effect*, which prevents the initiation of a new criminal trial against the same person fro the same deed.

Pursuant to Article 6 of the Criminal Procedure Code, no person may be prosecuted or judged for the perpetration of a crime when a final penal decision was previously ruled against that person, for the same deed, even of under a different legal classification.

At a national level, the condition for the application of the *ne bis in idem* rule is the ruling of a final penal decision (containing the settlement of the merits).

I believe that the mandatory effect also applies if a *decision not to summon* the same person, for the same deed was previously ruled, such decision being jurisdictionally confirmed by the judge of preliminary chamber (by the dismissal of the complaint lodged pursuant to Article 341 of the Criminal Procedure Code).

But, in this situation, the impeditive effect is *conditional*, because it only applies unless new deed or circumstances are discovered – see the explanations in Chapter III, the section regarding the extinguishment of the penal action.

Subject to the satisfaction of the condition mentioned above, the *ne bis in idem* rule is based on a double identity:

- of the person;
- of the deed (in a material sense)

In criminal matters, the identity *of case* (legal merits) is removed by the effect of the law (Article 6 expressly stipulates that the rule applies even if the deed is classified under *a different legal classification*).

Currently, the *ne bis in idem* rule is regulated both at the level of fundamental principle (Article 6 of the Civil Procedure Code), and at the level of cause, which prevents the initiation of the penal action (Article 16(1)(i) of the Criminal Procedure Code).

The rule may be used at a judicial level:

- by *exceptio rei iudicatae*, until a decision is ruled in the second trial;
- by *main course of action*, as a separate reason for appeal or appeal for annulment (Article 426(b) of the Criminal Procedure Code).

The *ne bis in idem* principle has an *absolute nature* both in terms of effects (the prevention may apply even after a decision ruled in the second trial becomes final, by an extraordinary remedy at law.), and in terms of scope of application (it also applies at a supra-national level, within the framework of international judicial cooperation in criminal matters – Article 8 and 129 of Law No. 302/2004, see *M. Udroiu*, op. cit., p. 26-28).

F. The fair nature and reasonable term of the criminal trial (Article 8 of the Criminal Procedure Code)

While lawfulness is the oldest fundamental principle, the framework or main principle, from which all other principles are derived, namely the right to a fair trial is, undoubtedly, the most *comprehensive*.

In the new criminal procedural system, this principle is stipulated, for the first time, as a basic rule, although its existence was unanimously accepted at the level of doctrine and at a judicial level.

The regulatory basis of the principle is Article 6 of ECHR and the case-law of the Court of Strasbourg.

How should one regard the national regulation, which is obviously incomplete and insufficient, taking into consideration the already settled character of the regulation, at a European level?

Article 8 of the Criminal Procedure Code does not regulate the *content of the principle* which guarantees the fair nature and reasonable term of the criminal trial.

The national rule must be considered the "interface" of the complex and multi-valent European regulation, which it accepts without any reserves.

Thus, the content and guarantees of the right to a fair trial, which also includes the reasonable term of the procedure, may not be found in the national regulation, but in:

- article 6 of the European Convention;
- article 47 of the Chart of Fundamental Rights of the European Union;
- the case-law of the Court of Strasbourg;
- the case-law of EUCJ;

Article 8 merely stipulates that the fair nature of the criminal trial is *conditional* upon the satisfaction of the procedural guarantees and the rights of the parties and of the other subjects taking part in the trial.

Also, the national lawmaker believes that the fair nature of the procedure must also ensure the achievement of the purpose of the criminal trial: the timely and full identification of the offences, so that no innocent person may be held liable under the criminal law, and any person who committed a crime may be punished according to the law, within a *reasonable* term.

The notion of reasonable term, which is *generic* in the regulation, is always considered *in a specific context*, depending on the characteristics of each criminal case.

Undoubtedly, in criminal matters, the reasonable nature of the term for carrying out the judicial

procedures implies the promptness of the judicial response.

There are several arguments in favour of this relationship:

- the purpose of the criminal trial implies the *timely identification* of offences;
- the procedural terms are limited in terms of material content: 24 hours, 3 days, 10 days, etc.;
- even if the judicial bodies' obligations were not conditioned by specific terms, they are bound to *efficiency*, using certain obvious time coordinates: *immediately*, *urgently*, etc.

Efficiency is emphasised when the judicial procedures are performed in relation to a person who is imprisoned (*e.g.* Article 322(2) of the Criminal Procedure Code stipulates that the *cases in which people are arrested by the prosecutor must be settled urgently and with priority*, Article 355 of the Criminal Procedure Code stipulates that the *court dates scheduled in the cases where the defendants are imprisoned are usually of 7 days, the judgment being performed urgently and with priority*.

In its turn, trial-related efficiency implies two aspects:

- *expedience* (mentioned above)
- *simplification* of judicial procedures. For example: even if they lack the necessary competence, the criminal prosecution bodies have the obligation to perform urgent criminal prosecution acts – Article 60 of the Criminal Procedure Code; when it voluntarily intervenes in the criminal trial (which was already initiated), the party who is held liable under the civil law starts the procedure from its current stage – Article 21(3) of the Criminal Procedure Code.

According to the case-law of the Court of Strasbourg (see *C. Bîrsan*, Convenția europeană a drepturilor omului, Comentariu pe articole, 2nd edition, C.H.Beck Publishing House, 2010, p.528; I.Neagu, M.Damaschin, op.cit., p.89, *M.Udroiu*, op.cit.,p.35-37), the following criteria may be taken into consideration when setting out the reasonable term of the procedure:

- the complexity of the criminal case;
- the parties' behaviour;
- the authorities' behaviour;
- the importance or the risk involved in the case.

As a novelty, at a national level, the reasonable term was also expressed at a material level, under Article 488^1 of the Criminal Procedure Code, regulating the appeal regarding the length of the criminal trial:

- less than 1 year for the duration of the criminal prosecution or judgment;
- more than 6 months for the cases which are subject to remedies at law.

The present paper has only considered, in analysing this principle, the regulation contained in Article 8 of the Criminal Procedure Code, and several general coordinates of the European regulation.

For a complex approach of this matter, several works need to be taken into consideration, containing a detailed analysis: *C. Bîrsan*, op.cit., p.351 *et seq.*; R. Chiriță, Convenția Europeană a Drepturilor Omului. Comentarii și explicații, 2nd edition, C.H.Beck Publishing House, 2008, p.194 *et seq.*, *D. Bogdan*, *M. Sălăgean*, Drepturi și libertăți fundamentale în jurisprudența Curții Europene a Drepturilor Omului, All Beck Publishing House, 2005, p.162 *et seq.*, *O. Predescu*, *M. Udroiu*, Protecția europeană a drepturilor omului în procesul penal român, C.H.Beck Publishing House, 2008, p.535 *et seq.*, *M. Damaschin*, Dreptul la un proces echitabil în materie penală, Universul Juridic Publishing House, 2009, etc..

In addition to general guarantees, whether *express* (the trial publicity, the reasonable term) or *implicit* (the equality of arms, contradictoriality, motivation of decisions, the right of the accused to remain silent and not to incriminate themselves), regarding the course of any trial (civil, criminal, etc.), the European regulation establishes, in criminal matters, certain *guarantees specific* to a fair trial – *C. Bîrsan*, op.cit., p.543-568.

Some of these guarantees are:

- the right to be informed on the nature of the indictment, Article 6(3)(a);
- granting the necessary time and facilities to prepare the defence, Article 6(3)(b);
- the right to defence, Article 6(3)(c);
- the right of the accused to examine the witnesses taking part in the trial, Article 6(3)(c);
- the right to the free assistance of an interpreter, Article 6(3)(e).

G. The right to freedom and safety (Article 9 of the Criminal Procedure Code)

The *criminal trial* is the only judicial context with a possible impact on individual freedom.

Therefore, in principle, Article 9(1) of the Criminal Procedure Code proclaims that any individual's right to freedom and safety *is guaranteed* during the criminal trial.

The guarantee implied by this principle covers two separate legal categories:

- individual freedom (as a fundamental right);
- individual's safety (all the guarantees protecting the individual against the actions taken by the public authorities).

The legal dimension of the concept of freedom is characterised by:

- *multiple meanings* (freedom, fundamental freedoms, public freedoms – see *A. Zarafiu*, Arestarea preventivă, C.H.Beck Publishing House, 2010, p.)
- *antithetical regulation* (freedoms protected by the strict regulation of the methods by which it is impacted).

Individual freedom protection at the level of the Criminal Procedure Code is limited to the regulation of the temporary methods by which freedom is impacted (*post-delictum*, but *ante judicium)*.

The methods by which individual freedom is finally impacted correspond to a protection achieved by means of *substantial law*, not procedural law.

What are the *consequences* of guaranteeing the freedom and safety of the individual in the criminal trial:

a) first of all, the temporary impact on individual freedom *has an exceptional nature*; it is preferred to maintain the *status quo* as far as freedom is concerned (which is also the natural condition of the human being) – Article 9 (2) of the Criminal Procedure Code;

- like any other exceptions, detention orders or freedom limiting measures may only be ordered in the situations and under the circumstances provided by the law.

One should notice that the protection of freedom at a procedural level refers to any form of temporary impact on freedom.

Without going into further details, which are the field of analysis of specific institutions one should take into consideration that individual freedom may be impacted by:

- *detention* (retention, house arrest, preventive detention);
- *limitation* (limitation of the freedom to move or travel);
- *conditioning* (following the establishment of certain obligations specific to judicial control).

Also, one should take into consideration that the temporary detention of an individual may take:

- *primary forms* (preventive detention measures, temporary safety measures based on medical reasons)
- *auxiliary forms* (detention in case of a psychiatric forensic examination, execution of a warrant for arrest, when the perpetrator is caught by any person, in the case of citizen's arrest)

b) any arrested individual has the right to be informed, within the shortest possible time, and in a language they understand, on the reasons for being arrested and has the right to lodge an appeal against this measure – Article 9 (3) of the Criminal Procedure Code;

c) another consequence of this principle is the competent judicial bodies' obligation to order the revocation of the measure and, as the case may be, the release of the person retained or arrested, when a detention or freedom limiting measure is found to be illegally ordered;

d) the right of any individual, against whom a detention order was *illegally* ordered during the criminal trial, to obtain a remedy for the prejudice suffered, according to the law.

In this sense, Article 539 of the Criminal Procedure Code stipulates a form of special liability in tort for the act committed by another person *(the liability of the State for the act committed by the judicial body)*, where the tort is the illegal detention.

Also, this special form of liability is also associated to a proper legal instrument for materialisation, *i.e.* a *civil injunction*, with specific elements, also regulated by the Criminal Procedure Code (Articles 541-542 of the Criminal Procedure Code).

H. The right to defence (Article 10 of the Criminal Procedure Code)

The guarantee for this right is a basic rule of all judicial procedures. However, in criminal matters, the right to defence manifests itself in its *complex* dimension.

In reality, the principle guarantees a set of *legal remedies* aimed at protecting the position and trial-related interests of a party or main subject in the trial.

Therefore, the content of this right is a *complex one*, which manifests itself in three separate areas:

- *the right* of the parties and main subjects in the trial to defend themselves;
- *the right* of the parties and main subjects in the trial to be represented *by a lawyer* (the right to a technical defence).
- *the obligation* of the judicial bodies to take into consideration, *ex officio*, the aspects which are in favour of the parties and main subjects in the trial (suspect or defendant), such obligation being expressly regulated by Article 5(2).

Starting from this complex content of the right guaranteed as a fundamental principle, I believe that the wording *right of defence*, used in the former regulation, is more eloquent than *right to defence* used in the note to Article 10 of the Criminal Procedure Code and Article 24 of the Constitution, which seems to induce only one component of the right *(the right to the defence offered by an expert)*.

Defence is a wider notion than *legal assistance.*

Article 10 of the Criminal Procedure Code regulates the *general context* of manifestation of the principle guaranteeing the right of defence in the criminal trial.

There are numerous legal remedies or trial-related guarantees which, *as a whole*, make up the right to defence, and are present in almost all the procedures.

The right to defence is guaranteed not only to the defendant, as a passive subject of the penal action, but also to the other parties or main subjects in the trial – Article 10(1) of the Criminal Procedure Code.

The parties, the main subjects in the trial and the lawyer have the right to be granted the necessary time and facilities to prepare the defence.

This provision allows, for example, the parties and the main subjects in the trial to request and to be granted a term for the purpose of *hiring a lawyer.*

Also, the regulation allows the lawyer to request and be granted a term in order to *study a large legal material.*

Even if, in principle, the time required to ensure an effective defence is *generically* guaranteed, following to be assessed *in a specific context*, depending on the characteristics of each case, sometimes there is no prior material quantification thereof.

Thus, pursuant to Article 91(2) of the Criminal Procedure Code, if the chosen lawyer *is replaced* by an official lawyer, during the trial, the court has the obligation to grant the official lawyer a minimum term of 3 days to *prepare the defence*.

The defence implies, first of all (but without limitation) a *defensive mechanism*, whereby a judicial response is given to certain indictments or claims.

The right of/to defence must be specifically and effectively guaranteed in the criminal trial, not formally or superficially.

In this sense, Article 10(5) of the Criminal Procedure Code stipulates the judicial bodies' obligation to ensure the *full* and actual exercise of the right to defence by the parties and main subjects in the trial, throughout the criminal trial.

A specific component of the *right to defence* in criminal matters is the *mandatory legal assistance* (which is sometimes free).

Even if the European protection of the right to defence (see the comment made by prof. Bîrsan, op. cit., p. 550-558 regarding Article 6(3)(c), which refers to the assistance given to the "accused", at a national level, in certain cases, *legal assistance becomes mandatory* not only for the suspect or defendant (Article 90 of the Criminal Procedure Code), but also for the harmed person and the other parties [Article 93(4) and (5) of the Criminal Procedure Code].

In these cases, the legal assistance must be supplied by a chosen or official lawyer, otherwise the absolute or, as the case may be, relative invalidity of the act is triggered [Article 281(1)(f) of the Criminal Procedure Code].

The new regulation of the right to defence in relation to a trial stipulates, as a component of the fairness and loyalty of the trial, the obligation to *exercise the right to defence* in good faith, in accordance with the purpose for which such right was acknowledged by the law – Article 10(6) of the Criminal Procedure Code.

What is the reason for the special placing of the right to defence, which is regulated as a set of trial-related rights, under the obligation to exercise the right in good faith?

Such provision *seems to be superfluous*, as long as Article 283(4)(m) of the Criminal Procedure Code approves the punishment by fine of up to RON 5000, of the judicial default consisting in the abuse of right (the exercise in bad faith of any trial-related and procedural right).

The regulation is regarded, at the level of the doctrine (*M. Udroiu*, op. cit., p. 48), as an implicit acknowledgment of the judicial bodies' ability to punish, in relation to the exercise of the right to defence, the abuse of right.

However, I believe that this *implicit* instrument of control, may easily become an *arbitrary* and *excessive* instrument, when used as a possibility to limit or condition the exercise itself of the right.

Trial-related excess in the exercise of the right to defence does not require any additional punishment (in addition to a judicial fine), but merely ignored.

Prof. Tanoviceanu (op. cit., vol. IV, p. 141) argues that "*the defence has every right, even the right to exaggerate, to use skills, to deviate from reality".*

Especially as far as the lawyers are concerned, the right to punish the abuse of right *other than* by applying a judicial fine, should only be granted to the bodies fostering the exercise of this liberal profession.

Accepting the judicial bodies' ability to impose additional punishments for the trial-related excess while exercising the right to defence means to implicitly accept the *absolute prevalence of the other trial-related offices* (indictment, jurisdiction) over the defence.

I. Respect for human dignity and private life (Article 11 of the Criminal Procedure Code)

The purpose of the criminal trial cannot be achieved *by any means*.

The judiciary activity encompasses certain exigencies pertaining simultaneously to the protection of both the public and private interest.

In this respect, according to Art. 11(1) of the Criminal Procedure Code, any person against whom a criminal prosecution was initiated or who is being on trial should be treated with the observance of human dignity.

The regulation *is showing deficit* since the protection of human dignity should be extended to all the stages of the criminal trial.

Only through such an extended application does this right correspond to the regulating modality at both national level (Art. 22(1) and (2) of the Constitution), and supra-national level (Art. 3 of ECHR, the European Convention for the prevention of torture and Inhuman or Degrading Treatment or Punishment, Strasbourg of November 26, 1987, ratified by Romania by Law No. 80/1994).

The principle regarding the observance of human dignity has an immediate corollary. No person can be subject to:

- torture;
- inhuman punishment or treatment;
- degrading punishment or treatment.

Each of the 3 notions relates to its *own semantic area* (see in this respect *C. Bîrsan*, op.cit., p.127-167, *A. Crişu*, Drept procesual penal, 4th Edition, reviewed and updated, Hamangiu Publishing House 2013, p. 67-71).

The most obvious consequence of the principle regarding the observance of human dignity can be encountered in the field of evidence.

Thus, the principle regarding the loyalty of the production of evidence entails, according to Art. 101 of the Criminal Procedure Code, the following *interdictions*:

- it shall be prohibited to use violence, threats or other means of coercion, as well as promises or urges

in order to obtain evidence (Article 101(1));

- no interview methods or techniques can be used, which affect a person's capacity to consciously or voluntarily remember or recount the deeds constituting the object of the evidence. The interdiction shall apply even if the interviewed person expresses his/her consent to the use of such a hearing method or technique (Article 101(2)).

Even if Art. 102(1) refers only to the evidence obtained *by means of torture*, as an application of the principle regarding the observance of human dignity, all the evidence obtained in breach of the said interdictions should be excluded.

Other trial-related institutions transpose on a specific level the exigencies entailed by the principle regarding the observance of human dignity:

- the suspension of criminal prosecution (Art. 312(1) of the Criminal Procedure Code) or of judgment (Art. 367(1) of the Criminal Procedure Code) when the suspect or, as applicable, the defendant is suffering from a severe condition, which prevents him *to attend* the criminal trial;
- the interruption of the hearing when a person shows visible signs of excessive fatigue or the symptoms of a disease affecting his/her physical or psychological capacity to attend the hearing (Art. 106(1) of the Criminal Procedure Code);
- the medical treatment under a permanent escort which is ordered when the person who is in preventive detention is suffering from a condition that cannot be treated in the medical network of A.N.P. (Art. 240(1) of the Criminal Procedure Code);
- declaring the session as non-public if the Court considers that judgment in a public session might impair a person's dignity (Art. 352(3) of the Criminal Procedure Code);
- postponing or discontinuing the execution of the punishment by imprisonment or life imprisonment when it is found, on the basis of a forensic expert report, that the convict is suffering from a condition that cannot be treated in the sanitary network of A.N.P. (Art. 589(1)(a) related to Art. 592 of the Criminal Procedure Code).

Last, but not least, emphasis should be placed on the fact that the protection of human dignity may appear in the shape of certain deeds incriminated by the criminal law:

- abusive inquiry (Art. 280 of the Criminal Code);
- subjection to ill-treatment (Art. 281 of the Criminal Code);
- torture (Art. 282 of the Criminal Code).

Art. 11 ensures, at the basic rule level, a double protection: both of human dignity, and of *private life*.

According to Art. 11(2) of the Criminal Procedure Code, observance of private life, of inviolability of domicile and of the secrecy of correspondence *shall be guaranteed*.

However, unlike human dignity, the protection of these rights is not absolute, as certain methods that affect the aforesaid principles are legally accepted.

Unlike other types of trials, the criminal trial entails sometimes the use of certain intrusive procedures, for the purpose of obtaining evidence, liable to affect a person's private life.

In this respect, mention can be made of the special supervision methods, generally stated in Art. 138(1) of the Criminal Procedure Code (interception of communications or of any type of communication, access to an IT system, video, audio surveillance or surveillance by taking photography, the location or monitoring by technical means, the retention, surrender or searching of mail transmissions, the use of under-cover investigators and collaborators, etc.) as well as any other procedures of discovering and seizing objects and writs (searching and seizing of objects or writs, Art. 156 of the Criminal Procedure Code).

Despite their emotional content, these methods of obtaining evidence are accepted at principle level if the limitation of the right to private life, of the inviolability of domicile and mail secrecy entailed by them occurs under the restrictive conditions of the law and if it is necessary in a democratic society.

J. Official language and the right to an interpreter (Article 12 of the Criminal Procedure Code)

Pursuant to Article 128(1) of the Constitution, the judicial procedure is carried out in *Romanian.*

This constitutional rule is transposed, at the level of the fundamental principle of the criminal trial, to Article 12, which stipulates that the official language in the criminal trial is Romanian.

The parties and the subjects in the trial who do not speak or understand Romanian, or unable to express themselves, have the right to an *interpreter*, free of charge.

The interpreter is a participant to the criminal trial who has no legitimacy in the case, who ensures *the exercise of the following* trial-related rights for the party or subject in the trial to which one of the above mentioned situations applies:

- the right to take note of the elements of the file;
- the right to speak (to give statements, to give explanations, to ask questions);
- the right to submit conclusions in court.

Pursuant to Article 12(3) of the Criminal Procedure Code, when legal assistance is mandatory, the suspect or the defendant is granted, free of charge, the possibility to communicate, through an interpreter, with the lawyer in order to prepare the hearing, to lodge a remedy at law or any other claim related of the settlement of the case.

The inability *to speak* or *to understand* Romanian or to express oneself is a matter of fact determined by the statement given by the party or subject in the trial, or inferred by the judicial body, considering all the elements of the case.

Moreover, Article 12(2) of the Criminal Procedure Code acknowledges the right of the

Romanian citizens who belong to national minorities *to express themselves in the mother tongue* before the courts of law.

However, this right is not conditional upon the lack of knowledge or inability to express oneself in Romanian.

In all cases, the procedural acts (understood as judicial writs) are prepared in Romanian.

The notion of *interpreter* is wider than that of *translator*. Also, the category of interpreters also includes the experts ensuring communication with people who suffer from certain sensorial, mental defects – according to the rules of *defectology*.

The interpreter's failure to perform their trial-related obligations may be punished by judicial fine or even by a penal sanction [the interpreter may be an active subject of the offence of false testimony, pursuant to Article 273(2)(c) of the Criminal Code].

This principle is transposed into a specific context by numerous rules:

- articles 81, 83, 85, 87 of the Criminal Procedure Code stipulate, among the trial-related rights of the main subjects and parties, the right to an interpreter, free of charge;
- article 105 of the Criminal Procedure Code regulates the hearing through an interpreter procedure;
- articles 209(2), 212(2), 226(3) of the Criminal Procedure Code regulate the obligation to inform the person against whom a preventive measure was ordered, in the language she understands, of the reasons for ordering such measure;
- article 329(3) of the Criminal Procedure Code regulates the obligation to provide a certified translation of the indictment etc.

Under the European regulation, *the right to free assistance by an interpreter* is a specific guarantee of the right to a fair trial in criminal matters – Article 6(3)(e) of the European Convention (*C. Bîrsan*, op.cit. p. 568-570).

Conclusions

The new fundamental principles of the criminal trial equally demonstrate both the deliberate option of the decision-making factors regarding the orientation of the penal policy at a national level, and the alignment of the Romanian criminal trial to the mixed, European model.

The regulation of the current system of basic rules related to the criminal trial reflects the intention to strike a balance between the need to protect public interest, by constraint, punishment and prevention, and the need to protect private interest, by guaranteeing more individual rights and freedoms.

Equally important is the acceptance and application of this new approach by the judicial system, so that the rules prescribed by these fundamental principles would not operated at a merely declarative level.

COMPARATIVE ANALYSIS OF THE CAUSES OF ABSOLUTE NULLITY OF THE CONTRACT IN THE ROMANIAN AND THE SPANISH CIVIL LAW

Carla Alexandra ANGHELESCU*

Abstract

The present paper is aimed to present a comparative analysis of the causes of absolute nullity of the contract in the Romanian and the Spanish civil law. Thus, the study focuses on the presentation of both similarities and differences between the provisions of the Romanian Civil Code and the Spanish Civil Code that regulate the legal institution of the nullity of contracts, outlining the practical consequences of the conclusion.

Keywords: *absolute invalidity, capacity, object, cause, form.*

1. Introduction

The invalidity of the contract is the civil sanction that is set to put aside the effects which are contrary to the legal provisions that regulate the validity conditions that are required for a lawful civil contract.[1]

Thus, the invalidity appears at the moment the contract is signed and prohibits that all or part of the ilegal effects of the contract take place.

The major clasification of the invalidity is done by using the criteria consisting of the nature of the interest which is set by the parties at the moment of signing the contract.

When the nature of the interest regards private matters or is considered to have minor impacts on the parties in comparison with the security of the civil circuit, the nature of the invalidity is relative, whereas the nature of the interest taken into consideration are of major importance for society or could have important consequences on the patrimonial effects of the parties and other persons, the invalidity is considered to be of absolute character.

The major difference between the absolute invalidity and the relativa invalidity (also known as the anulability of the contract) consists of the juridical regime of the effects of the invalidity. This matters refers to who can invoke the effects of the sanction or if the court cand state ex oficio the invalidity of a contract, whether the sanction can be covered through confirmation by one of the contracting parties or its author (in case of the unilateral act) or the period of time in which the invalidity can be invoked, with major references regarding if the sanction is brought up by the plaintiff or the defendant of the case.

Therefore, this study aims at presentinf the principal causes of invalidity both in the civil system of Romania as it was fundamentally changed by the New Civil Code enacted by Law no. 287/2009 and in the Spanish civil system in order to establish a common ground for the application of the legal provisions as they are quite similarly expressed in both legislations.

Due to the specific terms used in the Spanish civil code, I have noticed that the Spanish civil law is not often presented in our legal papers or studies, although the interraction between the two countries has been evidently increasing in the last decade, mainly after Romania joined the European Union in 2007, therefore creating more legal ties based on contractual relationships.

Thus, a more profound studying of both the differences and similarities of the contract and of its effects as legal institutions would prove beneficial for the study of the European civil law in the context of the unification of the legislations of the EU Member States.

2. Content

Usually, the legal provisions specifically state the nature of the invalidity whether it is an absolute or a relative one in specific cases. But sometimes determining the nature of the cause of invalidity could become an operation of legal interpretation that has to take place before establishing if the cause of invalidity exists and what effects it has on the existence of the contract.

In order to help the persons involved in the application of the legal provisions, the New Civil Code of Romania enacted by Law no. 287/2009 brings an improvement to the clasic way of determining the nature of the cause of invalidity by stating a legal order that has to be followed in such operations. Thus, article 1252 of the New Civil Code stipulates that if the nature of the invalidity is not explicitly determined or such

* Carla Alexandra Anghelescu, PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **anghelescu_carla@yahoo.com**). "This work was supported by the strategic grant POSDRU/159/1.5/S/141699, Project ID 141699, co-financed by the European Social Fund within the Sectorial Operational Program Human Resourses Development 2007-2013".

[1] Gabriel Boroi and Carla Alexandra Anghelescu, *Curs de drept civil. Partea generală, Ediţia a 2-a revizuită şi adăugită,* (Bucharest: Hamangiu Press, 2012), 236.

nature does not result without any doubt from the legal provision itself, then the invalidity has a relative character, also called as anulability.

This can only be applicable in the case of the virtual invalidity because only in such case the nature of the invalidity is not expressly set forth by the legal provision. Although after analysing the text there are two conditions that seem to be independent and alternative when applying this presumption of relative invalidity, that is the lack of specific determination of the nature of the invalidity and not resulting implicitly and beyond any doubt from the provion, in fact the second condition also contains the first condition.[2] Thus, in addition of not being explicitly determined by the regulation, the persons who is called to interprete and apply the sanction of the invalidity has doubts whereas the nature of the sanction, that is the existence of the doubt regarding the absolute or relative character of the invalidity.

Usually, according to the Romanian civil system as it has been interpreted and developed by the national jurisprudence and its relevant doctrine, the causes of nullity could be stated as regarding the following aspects: the violation of the legal provisions setting forth the rules of the civil capacity, the invalidity of the object of the contract, the invalidity of the cause (scope) of the contract, the lack of form as provided by the law ad validitatem, the violation of the limits of the principle of the freedom of the contracts.[3]

The Spanish civil Code has a similar provision, but with the opposite effects due to its formulation. According to article 6.3 of the Civil Code, the contracts which are contrary to the imperative and prohibitive provisions are void by the effect of the law, except for the case in which the provision sets another sanction for the violation of the validity condition.[4]

Therefore, the Spanish civil code sets forth the importance and the seriousness of the causes of absolute nullity, providing that, in general, every violation of the regulations that stipulate the validity conditions of the contract atracts the absolute nullity of that contract, unless a specific regulations provided otherwise or establishes another type of civil sanction for that particular case.

In regards of the causes of absolute nullity, the Romanian civil Code establishes that they appear in the following situations in general terms: the total lack of consentment, for example when a person signs a contract which had been written in a foreign language that person does not understand at all. This case also exists in the Spanish civil system, therefore this consists of a similarity between the two legal systems.

In relation to the consentment of concluding a contract, it is imperative to say that in both system the vices of the consent (the error, the violence) are seen as causes of anulability. In the Spanish civil system this is explained by the fact that article 1261 of the Spanish Civil Code stipulates that there is no contract if one of the fundamental conditions of the validity of the contract does not exist at the moment of the conclusion of the contract itself. As the vices of consent are presumed to affect an existing consent of at least one of the contracting parties, the sanction that must intervene in this case is the relative nullity of the contract and not the absolute invalidity, which only exists in case of total inexistence of the consent at the moment of the signing of the contract.[5]

Although on this point there are similarities between the two civil legal systems, one could underline that the modification brought in matters of the vices of consent by the Romanian New Civil Code might have created a difference regarding the type and nature of the nullity in case of the absolute violence, as in the Spanish civil system this case atracts the absolute nullity of the contract, whereas article 1251 of the Romanian Civil Code generally states that the presence of the vices of consent can only atract the anulability of the contract and not its absolute invalidity.

Such an observation would at first be preferable, but a thorough analysis of the matter would reveal that in fact the premise is false due to the fact that actually, in both the Romanian and the Civil systems, the absolute violence is considered to be a part, only just a cause that could lead to the total lack of consent which, as has just been established, gives way for the absolute invalidity of the contract concluded by at least one party whose consent is entirely absent due to the existing violence that prevents him from having any representation of the conclusion of the contract and of the legal consequences of such a legal operation.

Another question regarding the case of the object of the contract raises multiple similarities between the two legal systems. There should be mentioned that both the Romanian civil system and the Spanish civil system regard the existence and the validity of the object of the contract as a ost important condition in regards to the validity of the contract as a whole. Therefore, the simple lack of determination of the object of the contract atracts the absolute invalidity of the contract itself. The same kind of sanction, that is the absolute nullity intervenes if the object of the contract is contrary to the public order or the morals.

A novelty introduced by the Romanian Civil Code regards the difference of concept between the

object of the contract and the object of the obligation. Such difference tends not to be too obvious to the analysis of the legal provisions of the Spanish civil Code set forth in articles 1271 to 1273, although the practical importance of the dichotomy only falls in second plan.[6]

As regards to the cause of the contract, article 1238 paragraph 2 of the Romanian Civil Code stipulates that the lack of cause of the contract atracts its anulability, whereas in the Spanish civil system the lack of the cause is considered to be a motive for the absolute invalidity of the contract. Otherwise, both system consider the immoral or the illicit cause of the contract as a cause of absolute invalidity.[7] It is noticeable that article 1237 of the Romanian Civil Code considers the fraud as subsumed to the concept of illicit cause of the contract. That is that whenever the parties or at least one party concludes the contract only with the purpose of eludind the application of an imperative regulations, that contract is submitted to absolute invalidity because it violates an imperative legal provision that protects the general interest of society over the particular interest of the parties involved.

The final condition of validity of the contracts relates to the form in which the contract is lawfully concluded by the parties. Both systems preserve the general principle based on the liberty and choice of the form of the contract, that is that the contract is concluded once the two parties have agreed on its terms, without any sacramental form ofr the contract, except for the cases specifically set out by special legal provisions.

A few very similar provisions of the the Civil Codes have to be underlined. First of all, article 1244 of the Romanian Civil Code imperatively stipulates that all contracts regarding the tranfer of any real estate rights that have to be enlisted in the public record of the ,,funciary book" (cartea funciară), a public institutionalised registry which asure the publicity of the existing proprerties and their current owners. The imperative form provided by article 1244 is the authentic form, which means that the contract has to be concluded and atested by a notary.

In regards of property, art. 1280 paragraph 1 of the Spanish civil Code mostly states the same thing, that the contracts and all acts that have as an object to create, transfer, modify or terminate real rights regarding immobiliary goods have to be concluded in a public form, otherwise the same sanction of the absolute nullity of the contract would apply in such cases.[8]

In terms of the relative invalidity of the contract, there are more similarities between the two legal systems.

For example, is the case of the vices con consent, the essencial excusable error of the party, the dolus, the intimidacion and the deep fear. As a specific of the Spanish legal system, the lesion does not represent a cause of relative nullity as it does in the Romanian civil system, it only atracts the rescicion of the contract. On the other side, the New civil Code of Romania has introduced a new concept as to the sanction that intervenes in case of the lesion of the contract.

According to article 1222 paragraph 1, the party whose consent has been affected by lesion has to right to choose betweem asking for the contract to be anulled or the maintaining of the contract along with the diminuished obligations on her behalf. Paragraph 3 of the same article introduces a difference between the case in which the party who invoked the lesion was a minor at the moment the contract was signed, in which case the party can ask for the anullement of the contract without any restrictions, and the case in which the party was of age at the moment he signed the contract. In the latter, due to the fact that adults are presumed by the law to have mental and legal representations of their acts and operations and can thus see the consequences of their acts, the action of relative invalidity based on grounds of lesion of the contract cand only be admissible if the value of the lesion surpases half the valoue of the contract at the time the motion is registered at the court.

Another significant similarity consists of the cause of relative nullity regarding the violation of the provisions setting forth the incapacities or better said the capacity of a person to work or, in the way the Romanian system, the capacity of a person to exercise their civil rights by signing contracts by themselves without the consent of a representative or a tutor.

3. Conclusions

The causes of the invalidity of the contract can be put in different groups. The first one referes to the violacion of the legal limit stated by article 1255 of the Spanish civil Code, that is the law, the moral and the public order. A similar context is provided by article 1250 of the Romanian civil Code which stipulates that the contract is absolutely invalid in the cases explicitly provided by the law, as well as in the cases in which the absolute nullity comes as a result of disregarding a rule of general interest.

Another category comprises the absence of one of the esencial requirements of the validity of the contract, such as the consent, the object of the contract (or of his main obligations) and the cause.

Part of the Spanish doctrine[9] regard a different category of causes of invalidity when it comes to the illicit character of the cause and of the object of the

contract and not analyse these causes of nullity under the category of simply the missing fundamental conditions of the contract, the esential difference havibg to be that in this case the object or the cause exist, but in same way come against the public order or the moral of the society in such a way it is imperative for the absolute invalidity to operate in order to draw the effects of the contract ineffective.

The last category refers to the formal condition of the contract regarding the form ad solemnitatem whose violation invariably atracts the sanction of the absolute nullity of the contract due to the important effects.

A future study could focus on the analysis of the principles that regulate the effects of the invalidity of the contracts according to both the Romanian Civil Code and the Spanish Civil Code in order to asre a continuity of the comparative studies in this area.

THE STATIC AND DYNAMIC ASPECTS OF ROMAN LAW AS PORTRAYED IN THE SOURCES OF LAW

Alina Monica AXENTE*

Abstract

The dynamics of the private Roman law sources had been influenced by the conjoined action of three factors: the Romans' conservative mentality, their practicality and the incorporation of the concepts of equity and good faith into their legal system. By virtue of the Romans' conservative mentality, their private law functioned according to less than thirty laws. Towards the end of the Republic, against the background of the economic revolution that gave variety to social relations and enhanced their complexity, many of the provisions of the old laws, including those laid down under the Law of the Twelve Tables, became inapplicable. Faced with these challenges and animated by their practicality, the Romans realized that appropriate measures had to be taken so as to strike a balance between the provisions of the law and the new demands of the ever-changing Roman social life. To this end, they started from the conviction that trade economy could not be strengthened and further develop without an effective legal ordinance. In order to counterbalance the discrepancy between the laws and the development of the social environment, the Romans resorted to procedural means and extensive research upon which they elaborated in accordance with the principles of equity and good faith. Consequently, towards the end of the Republic, the Praetor's Edict and the jurisprudence functioned as a legal filter with a view to striking a balance between the provisions of the old laws and the new social atmosphere. Throughout this stage in the evolution of private Roman law sources, the law embodied the static aspect, whereas the Praetor's Edict represented its dynamic counterpart. Therefore, by means of interweaving tradition with innovation, the Romans managed to modernize the private law under the impression that the old laws were still in effect.

Keywords: *sources of law, procedural means, jurisprudence, subjective rights, codification.*

Introduction:

On today's legal scene, modern law distinguishes itself through the metaphysical nuances it possesses and the fact that it places high emphasis on the reformation of the fundamental sources of law and the codification process. However, systematic research should not be conducted on legislative technique only, but also on the actual causes of law. Against a background in which the law is regarded as the inventor of social relations that will eventually bring about virtual law, it is essential that we look back on a system in which social relations led to legal action, thus contributing to the development of the law. Given that the sources of Roman law have no equivalent anywhere else in the world, it is no wonder that scholars have shown great interest in these profoundly original works. The dynamics of the sources of private Roman law had been influenced by the conjoined action of three factors: the Romans' conservative mentality, their practicality and the incorporation of the concepts of equity and good faith into their legal system. By virtue of the Romans' conservative mentality, their private law functioned according to less than thirty laws. This scarcity can also be explained by the old Romans' reluctance to abrogate their laws on the grounds that they reflected not only the voice of the people, but also the will of the gods and any act of human interference with them was thus prohibited. On the other hand, towards the end of the Republic, against the background of the economic revolution that gave variety to social relations and enhanced their complexity, many of the provisions of the old laws, including those laid down under the Law of the Twelve Tables, became inapplicable. Faced with these challenges and animated by their practicality, the Romans realized that appropriate measures had to be taken so as to strike a balance between the provisions of the law and the new demands of the ever-changing Roman social life. To this end, they started from the conviction that trade economy could not be strengthened and further develop without an effective legal ordinance.

In order to counterbalance the discrepancy between the laws and the development of the social environment, the Romans resorted to procedural means and extensive research upon which they elaborated in accordance with the principles of equity and good faith. Consequently, towards the end of the Republic, the Praetor's Edict and the jurisprudence functioned as a legal filter with a view to striking a balance between the provisions of the old laws and the new social atmosphere. At this stage in the evolution of Roman law, whenever the Praetor deemed a plaintiff's claims legitimate, the latter was also presented with the appropriate procedural means to have his claims valued by judicial process1. Moreover, the Praetor also created new, flexible and effective legal institutions that served as the basis for a new legal

branch called the praetorian law which functioned as a counterpart to the civil law laid down under the old laws. Throughout this stage in the evolution of the private Roman law sources, the law embodied the static aspect, whereas the Praetor's Edict represented its dynamic counterpart. Therefore, by means of interweaving tradition with innovation, the Romans managed to modernize private law under the impression that the old laws were still in effect.

By means of subtle interpretation of the legal texts, new legal proceedings destined to settle the disputes that arose during this time frame were introduced in the science of law. Consequently, a similar function had to be carried out by the jurisprudence. Acting under the impression that they reinterpret the old civil law, the jurisconsults heavily exploited the resources of the legal technique and created new legal institutions. It is through formulating legal principles and systematizing the research material on their basis that the jurisconsults managed to produce a dynamic work that could offer practical solutions to even the most complicated legal disputes. Here is how the synthesis of the Romans' conservative mentality, their practicality and the requirements of natural law led to the emergence of a dynamic and effective legal system the sources of which successfully ensured both the stability of the legal institutions and their adaptability to the ever-changing social conditions.

In order to shed light on the manner in which the Praetor's Edict influenced the development of the civil law, we must elaborate on the features and the functions of certain legal praetorian institutions. We will now further discuss the praetorian property, inheritance and pacts.

As far as matters of property are concerned, the Praetor created a fictitious action that made civil property available to peregrines[2]. Given that the right of civil property could be originally exercised by the Roman citizens only and was sanctioned through actions for the recovery of personal property, the Praetor introduced into the formula of this action the fiction stating that peregrines are Roman citizens, thus making it applicable to them too. Praetorian property was also sanctioned through a fictitious action to which certain things mancipi acquired through tradition were subjected[3]. For a long time, the only manner in which things mancipi could be transferred was through mancipatio, but if a thing mancipi was transferred through tradition, the Praetor would make the acquirer entitled to use the Publician action that features the fictitious formula stating that the necessary time for usucaption had run and, in this way, the acquirer won the trial as usucapient. In the Praetor's view, the one who purchased the property of another should be deemed to be in good faith and entitled to legal protection. Put differently, the aforementioned solution draws on the concept of good faith. Another addition to property law includes the fact that the Praetor managed to alleviate the consequences of the pecuniary punishment through the introduction of the arbitrary clause into the formula of the action[4]. According to this clause, if it was proved that the plaintiff was the rightful owner of the object of the legal dispute, but the defendant refused to return it to him, the latter would be compelled to award the injured party a monetary compensation established by the plaintiff in compliance with the overall rule. As a result, there was every incentive for the defendant to return the object to the plaintiff and in so doing, the retaliation in kind came to be prescribed via an indirect route. Therefore, although the pecuniary punishment was not expressly abolished, it was not, in fact, used in property recovery litigations, meaning that, on this occasion, a procedural rule was amended through a procedural mechanism[5].

The Praetor brought about changes in matters of inheritance too and first among these was the fact that according to praetorian law, legal actions entailed the protection of the rights of succession of blood relatives[6]. Although civil kinship was the only ground of succession laid down under the Law of the Twelve Tables, the Praetor also called to the inheritance the blood relatives who did not qualify as civil relatives, a practice that became known as praetorian inheritance. The Praetor's reforms later provided the basis for the Imperial reforms and by the time of Justinian, blood kinship became the only ground of succession[7]. Once again the Praetor did not expressly abrogated the regulations of the civil law, but through the protection of the rights of succession of the blood relatives, he laid the foundation of a new successional system that eventually prevailed, being legislated by the modern law.

The Praetor's reforms exerted a tremendous influence over the successional system which functioned as a catalyst of the protection of the rights of succession of the blood relatives, insofar as, according to the Law of the Twelve Tables, the agnatio was the only ground of succession. Through these reforms, the Praetor revolutionized the old successional system that deemed the cognatio irrelevant and paved the way for the Imperial reforms by means of which the consanguinity became the ground of succession. Therefore, the Praetor not only created a new successional system, but he also indirectly contributed to the shaping of specific aspects of the modern successional matters.

In reply to the complaints of the blood relatives, the Praetor altered the old successional system via a procedural route that implied the grant of new formulae based on the possession of successional goods known as bonorum possessio. By this means, four new categories of praetorian heirs appeared, namely the bonorum possessio unde liberi, the bonorum possessio unde legitimi, the bonorum possessio unde cognati and the bonorum possessio unde vir et uxor. This new successional order entailed other changes: firstly, the emancipated son and his descendants were no longer excluded from the inheritance, thus joining the sui heredes. Secondly, if an agnate repudiated the inheritance, it would no longer become vacant, for it would be passed on to the next category of heirs, namely the cognates. By introducing this new category of heirs into the successional hierarchy, the Praetor revolutionized the old regulation in which they did not appear, thus creating a successional vocation for the mother and the children born in a marriage without manus. Of course, this was possible only if the relatives belonging to the first two categories were absent. Otherwise, the existence of a single agnate made it impossible for the cognates to be in the line of succession to the inheritance. Through the introduction of the fourth category of heirs, the bonorum possessio unde vir et uxor, those8 married without manus were granted the right to inherit each other, on the condition that there were no heirs belonging to the first three categories. Although the agnates continued to take precedence over all other heirs, the Praetor, who was not a legislator, took the first step towards the protection of the rights of succession of the blood relatives that, in turn, lead to the implementation of the Imperial reforms by means of which the cognatio became the ground of succession.

The praetorian pacts emerged in response to the finding that the formalist approach to contract matters was nothing but a hindrance in the way of the commerce that was so vital to the Roman society. Therefore, by introducing the praetorian pacts, namely the recepta, the hypotheca and the constitutum debiti, the Praetor not only elevated the simple act of intention and manifestation of volition of the parties to the rank of legal contract, but he also created new adaptation patterns for the law to the dynamics of the society.

The activity performed by the Judicial Magistrates, led by the Praetor, was mainly defined by the extension of the scope of regulation via procedures9. In so doing, the civil law which had been portrayed in the legal texts as contradictory, rigid and formalist was influenced to the degree that it evolved towards an abstract, unified approach10. The emergence of the praetorian law came, among others, as a consequence of the fact that it was inconceivable to the Romans that a subjective right could exist without an appropriate corresponding action. While nowadays the existence of an action originates from the existence of the law itself, in the Roman world, the subjective right arose from the existence of the legal action and therefore it was impossible for a subjective right to exist without a corresponding legal action11. The specificity of this relationship between right and action put the judicial bodies at the forefront of the overall development of the private law by ensuring both its stability and flexibility.

The concepts, principles and institutions of the praetorian law were later subjected to scientific research and organized into collections known as ad edictum. Salvius Iulianus' Edictum Perpetuum12 marked the culmination of the systematization process on the basis of scientific criteria undertaken by the praetorian law. While the Law of the Twelve Tables is a collection of primitive legal customs enshrined in the practice of the courts, Edictum Perpetuum is not only the outcome of the systematization process that passed the evolved judicial practice through the scientific research filter, but also a regulatory model that prevailed through its subtlety, accuracy, harmony and above all, the general and abstract nature of its provisions. Unlike modern society which often takes the risk of legislating away nothingness, the Romans closely followed the thread of the judicial practice. The explains the fact that the concepts and principles of the classical Roman law were recognized as such only if they were enshrined in the practice of the courts. It is concluded that, at the peak of the Roman legal system, judicial practice played a crucial role not only in the application of the law, but also in its creation.

For its part, by means of interpretation, the jurisprudence created new legal institutions that not only departed from the requirements of the old civil law, but also denied it. One can mention in this respect the adoption, the emancipation and the adjoining pacts.

The adoption emerged via interpretation in response to the social demands in a context where, in accordance with the Law of the Twelve Tables, it was a nearly impossible undertaking. By interpreting the provisions referring to the sale of sons, the jurisconsults created this artificial form of acquisition of parental power by which a person who was under the power of the head of his family came under the power of another13.

It is through the interpretation of the provisions of the Law of the Twelve Tables referring to the sale of sons, too, that the Praetor created the emancipation in reply to the fact that the rapid development of trade

[12] O.Lenel, Das edictum perpetuum, ed.I, 1883; ed. a II-a, 1907; e. a III-a, 1927, republished under the imprint of Aalen, 1956.
[13] GAIUS, 1.98; XII. T., 4.2.

economy became wholly incompatible with the son's incapacity to perform legal acts in his own name14.

Last but not least, one can mention in this respect the emergence of the adjoining pacts that, in the form of conventions concluded in addition to the main obligation, sought to make certain content-related amendments15.

At the same time, the jurisconsults drew up new legal principles. However, these principles were recognized as such only if they were able to offer optimal solutions to all types of legal disputes in a given area. Therefore, it is not through metaphysical judgements that the principles of the Roman law came into being, but rather through the fact that they confirmed in practice. The close link between the content of the jurisprudence and the requirements of practice is suggestively highlighted by the historical path taken by those fragments of the classical works that were compiled under Justinian's Digest and Institutes.

While the adoption of the Law of the Twelve Tables and the codification of the Praetor's Edict marked the culmination of several natural development processes which consisted in introducing certain legal norms and procedures, Justinian's Digest and Institutes hold a different historical meaning. They are not supposed to symbolize the end of a cycle in the legal evolution, but Justinian's desperate attempt to resuscitate the Roman slave society. Justinian, aware that the Roman slave system was collapsing, appointed a number of highly regarded jurists to systematize and reinstate the most valuable fragments of the works of the classical jurisconsults, hoping that if they came back into force, the slave system would be saved16. In reality, all his efforts turned out to be in vain as the slave society eventually collapsed, being replaced by feudalism.

Under these circumstances, Justinian's codification proved to be inoperative and a few decades later, it was gradually replaced by other sources of law that matched the new social realities. Emperor Justinian's failed attempt to return to the classical Roman law can be explained by the fact that the classical legal procedures were neither passed through the filter of the judicial practice, nor adapted to the demands of the feudal social relations which were on the rise at that time. Upon noticing that the provisions laid down under the Digest and the Institutes did not meet the new social requirements, the judges found themselves powerless to apply them.

Indeed, the classical legal values that appeared as a result of the unprecedented development of the trade economy could not be mechanically applied to a context in which natural economy prevailed. It was much later, specifically after the capitalist economic revolution, that the legal texts of the Digest and the Institutes were properly welcomed and successfully applied.

The sources of private Roman law do not owe their originality and effectiveness to metaphysical judgements, the thirst for codification and legislative techniques, but rather to their ability to keep pace with the growing demands of the legal practice. The instruments employed by the legal thinking and practice, namely the principles, institutions, classifications and concepts, reflected the social, economic and political changes experienced by the Roman world. The jurisprudence, the praetorian law and the law of the gentes took shape in response to the formalist and rigid civil law and in accordance with the principles of equity and good faith. The balance between the dynamic and static aspects of the sources of private Roman law was struck when the Praetor's responsibilities and the jurisprudence merged and created a convergent, like-minded force that employed different methods in order to counterbalance the discrepancy between these two features as follows: the jurisconsults extended the scope of regulation via interpretation whereas the Praetors sanctioned new subjective rights via procedures[**].

TRANSFORMATION OF COMPANIES FROM THE PERSPECTIVE OF LAW NO. 31/1990

Amelia Raluca BUŞCĂ*

Abstract

The legal consequences associated with amendments of a memorandum of association are influenced both by the intended purpose of the shareholders and by the practical type of amendment, whether it is in the form of changes of the share capital, mergers and acquisitions, dividing a company, change of registered office, change in the form of a company, extension of the company or others.

The paper proposes an approach to the effects of such changes underlining the general principles with a special focus on the uniqueness of the legal personality of a company maintained even after such alliteration as change in the form of a company occurs.

The research has illustrated the importance of the subject matter to Company Law, seen as a determinant element of a company's legal status through which this specific entity brings about the necessary flexibility vital to its existence and survival.

Keywords: *Company Law, memorandum of association, amendments of a memorandum of association, legal consequences, change in the form of a company.*

Introduction

It is common for companies to be forced, during operation, to adapt to economic and social circumstances, manifested in a society in constant expansion and globalization.

From a general perspective, these developments are due, primarily, to economic globalization, to irreversible trend of interdependence of world economies as a result of augmentation rate of international trade, of international capital flows or fulminant development of science and technology.

To align the needs and interests of individual associations with economic circumstances in which they occur, the associates may resort to adapt the company through the institution of changing its components.

Changing the company is achieved by modifying its articles of association. Thus, the legislator called Title IV of Law no. 31/1990 - "Amend the Articoles of Incorporation".

Wisely, was proposed the doctrine[1] as this title to bear the name "Change of the company", as amendments to the articles of incorporation is only a means by which is performed the change of the company itself. The establishment, operation, modification, dissolution and liquidation of the company are the legal consequences produced by consistent manifestations of wills of members and referring to the legal status of the company itself[2].

1. General principles of changing articles of incorporation

Amendment of Articles of Incorporation is performed under paragraph (1) of article 204 of Law no. 31/1990, by decision of the General Meeting or of the Board of Directors, or Executive Board, adopted pursuant to article 114, paragraph (1), or by decision of the court, pursuant to article 223 paragraph (3) and article 226 paragraph (2) of the Act.

The scope of changing the company, achieved by amending articles of incorporation, as reflected in Title IV of Law no. 31/1990, is represented by the change of legal form of the company [referred to in article 205 and article 204 paragraph (2) letter b)], extention of the duration of the company (art. 205) and the reduction or increase in share capital (Chapter II articles 207-221).

In addition to this, article 113 of the Act refers to moving the headquarters, changing the scope of activity, establishment or dissolution of secondary offices: branches, agencies, offices or other units without legal personality, merger with other companies or division of the company, as well as the anticipated dissolution of the company.

From the economy of the legal provisions mentioned above, results unequivocally the declarative nature of cases of changing the companies, so that doctrine and judicial practice included in this category: withdrawal of a partner, assignment of shares, completing articles of incorporation with new clauses on the issue of bonds, possibility to continue the company with the heirs of an associate, continue the

[2] Amelia - Raluca Bușcă, „Analiza condițiilor generale pentru modificarea societății în reglementarea Legii nr. 31/1990", ["Analysis of the general conditions for changing the company in regulating Law no. 31/1990"], in *Curierul Judiciar* no. 9/2014, p.494-502.

limited liability company with a single associate following the withdrawal, exclusion or death of other / other associates[3] and revocation of the administrator appointed by the Articles of Incorporation[4].

Will of associates/shareholders to amend the articles of association can often materialize on several levels, meaning that the decision to amend the articles of incorporation may look more elements of the company. Thus, the share capital may be increased and changed the company's legal form, may exercise the right of withdrawal of an associate while reducing the share capital by an amount equal to social part due to the withdrawing associate, may exercise the right of squeeze-out while delisting the company[5] etc.

The effects of modifying the articles of incorporation are different depending on the purpose of the associated by this operation, as well as the practical case of change. Thus, the possible consequences of change are: increase or reduction of share capital, extension of duration of life, changing the form of the company, company relocation, merger, division of the company etc.

Legal personality of the company is unique, and article 205 of Law no. 31/1990 states that amendments to the articles of association, exempli gratia, changing the form of the company, extension of its duration, do not cause the creation of a legal entity.

A corollary of this allegation is that are not affected the rights and obligations existing in the assets of the company at the time of its amendment.

In the following, we will refer to the effects of the change printed by the specific of one of the amendments to the articles of incorporation to which article 205 of Law no. 31/1990[6] reffers.

2. Transformation of the company

Notions

Because the company form produces multiple and significant effect on the company, which in its essence is amended in the doctrine[7], was decided to use the term "transformation of the company" to refer to the case of amending the articles of incorporation[8].

Legal form of the company draws its own legal regime regarding the establishment, organization, operation and termination of the company, influencing the conditions of the financial liability of associates, share capital, initial minimum contribution and minimum capital, the tax regime of the company etc.

The will of the associates in the sense of changing the company's form may be due to the evolution of the interests of associates during its lifetime, which have the possibility to choose from the five types of company allowed by law, general partnership, limited partnership, joint stock company, limited company by shares and limited liability company, the one that is able to best meet these interests.

By the form of the company, is understood exclusively one of the forms mentioned above and provided by article 2 of the law. Thus, the transformation of a limited liability company into a limited liability company with unique associate in not considered, as the latter does not have a separate regulation as a particular form of company[9]. However, trading the company on a regulated market or in an alternative trading system does not transform the company, this having essentially the same basic

[4] See Supreme Court, Commercial Division, Decision no. 1990/2002, in *Revista română de drept al afacerilor* [*Romanian Journal of Business Law*], no. 2/2003, p. 118. Conversely, the Court of Appeal Timișoara, Commercial Division, Civil Decision no. 128 of June 22nd 2010, unpublished, by showing that "the appointment and removal of directors, whether they are appointed by the articles of incorporation or by decision of the general meeting of shareholders, does not respresent an amendment to the articles of association of a company".

[5] In Continental Europe, most companies who withdraw from a regulated market resort to this mixed type of amending the articles of incorporation, called buyout offer with squeeze-out, with the acronym BOSO. To describe this mechanism as well as a comprehensive study on the causes of its use, see Isabelle Martinez, Stéphanie Serve, "The Delisting Decision: The Case of Buyout offer with Squeeze-out (BOSO)", in *International Review of Law & Economics*, December 2011, vol. no. 31, no. 4, p. 228-239.

[6] For the effects of the company life prolongation, see Amelia - Raluca Bușcă, „Efetele modificării societății conform Legii nr. 31/1990", ["Effects of changing the company according to Law no. 31/1990"] in *Curierul Judiciar* no. 10/2014, p.565-570.

[7] C. George, Drept Comercial Român [*Romanian Commercial Law*], op. cit., pp. 492-493.

[8] French law adopted the same term of transformation of the company. See Association Henri CAPITAN, *Vocabulaire juridique*, Gérard Cornu, editor, QUADRIGE / PUF Publisher, Paris, 2008, p. 930. It defines the transformation of a company as changing the form of a company, for example, transformation of a limited liability company ("SARL") into a joint-stock company ("société anonyme"), which does not entail the creation of a new legal person, but which is assimilated, sometimes, in tax matters, to a transfer of enterprises.

[9] See C. George, op. cit., p. 493.

characteristics as the previously held the listing on capital market[10].

Thus, this can be causes of the company transformation, the need for a capital which allows additional investment and / or an increased productivity, the imposition by the legislator of expensive technological acquisitions to improve the quality of a product, the need to increase export capacity, the need to increase the credibility of the company on the market of a product, anticipation of an augmentation of financial risk in a partnership or in general, domestic sau international economic or legislative changes.

Terms of achieving the transformation of the company

The transformation of the company is achieved in terms of article 204 of Law no. 31/1990[11], being necessary to be accomplished, in addition, the requirements for valid constitution of a company such as that chosen for transformation, such as the minimum number of associates, minimum capital, rules on statutory bodies and rules on the creation of corporate intent.

In principle, the choice of the form of the company is a reflection of the principle of freedom of contract, for the protection of public interests. The law provides exceptions to this rule, as the company is required to companies in the insurance sector, which can not exist except as limited companies, according to article 11, paragraph (1) of Law 32/2000 on insurance activity and insurances supervision[12] and banking, according to article 287 Government Emergency Ordinance no. 99/2006, banks, Romanian legal persons, and must be legally established as a joint-stock company[13] under commercial law[14].

3. Effects of achieving the transformation of the company

For the associates and because of their successors, changing the legal form of the company has effects from the moment of the decision to change. Pending the procedure for registration in the Trade Register and publication of the amendment, to third parties are not opposable specified change.

Continuity of legal personality of the company that changes its legal form is expressly provided for in article 205 of Law no. 31/1990[15].

The main reasons for the subsistence of the legal personality of the company subject to transformation are the coherence of the tax regime and legal effects on third parties.

In French law, which provides the same rule on continuing legal personality, it was shown that there is no transformation in the meaning of the word unless legal personality subsists. Otherwise, there would be the

[10] *Ibidem*. The author shows that many companies have found it necessary that the admission of the company to trading on a capital market to be reflected in the articles of incorporation, but the action is voluntary, subject to the general rules of statutory amendment, and not an expression of transforming the company.

[11] Under article 204 of the Law no. 31 / 1990 is not required the signature by all the associates of the act amended and of the updated articles of incorporation. In this matter, are not applicable the provisions of article 5 of Law no. 31/1990 included in Title II - Setting up companies, but the provisions of Title IV of Law 31/1990 entitled "Changing the articles of incorporation". Because these acts are the result of decisions of general meetings of shareholders, on the amended act and updated constitutive act is sufficient the signature of the persons referred to in paragraph 4 of article. 204 - Administrator or Board members. See C.A. Craiova, Commercial Division, Decision no. 556 / 6.04.2008, published on the internet at http://portal.just.ro/54/Lists/Jurisprudenta/DispForm.aspx?ID=513.

[13] For details on legal form needed to set up a bank and sanction of non-compliance with legal provisions on the legal form of banks, see Carmen Adriana Gheorghe, *Drept bancar* [*Banking Law*], 3rd edition, Ed. C.H. Beck, 2014, p. 104, 120-125.

[14] Stanciu D. Cărpenaru, *Tratat de drept comercial român. Conform noului Cod civil,* [*Treaty of Romanian Commercial Law. Under the new Civil Code*] op. cit., p. 141.

[15] Similar provisions are found in the legislation of many European countries. E.g., under Belgian law, until February 23rd 1967, the majority jurisprudence which the Court of Cassation confirmed several times, based on the principle of inviolability of essential elements of the company, was to the effect that the change in legal form by decision of the general meeting was prohibited, the adoption of such a decision led to the dissolution of the initial company, and establishing a different legal entity. By introducing a section VIII in the Uniform Laws on companies, by the Law on February 23rd 1967, was removed this dirimant obstacle in the way of transforming the company, granting that it continued the legal personality and not interrupted by such amendment to the articles of incorporation. See, in this regard, Claudine Weyne, editor, *Lexique sociétés Commerciales édition 2007,* Wolters Kluwer Belgium Publisher, Waterloo, 2007, p. 773 and Tilquin T. and V. Simonart, *Traité des sociétés*, vol. I, Kluwer Éditions Juridique Belgique Publisher, Diegem, 1996, p. 46.

dissolution of the company, followed by the creation of a new company[16].

Given that is preserved the legal personality, is understandable that the company keeps its identifying attributes such as headquarters, nationality and unique registration code.

Regarding the firm[17] of the company, is required it to be changed, lawfully provided for the form of the company chosen for transformation.

Thus, when the form of the company was changed into a general partnership, the firm of the company transformed must include the name of at least one associate with the words „general partnership" written as such. (Article 32 of Law no. 26/1990)

The transformation of the company into a limited partnership assumes that the new firm of the company to include the name of at least one of the general partners, with the words "limited partnership", written entirely. (Article 33 of Law no. 26/1990)

The law provides that if the name of a stranger person from the compant appears, with his consent, in the company of a general partnership or limited partnership, it becomes unlimited and severally liable for all obligations of the company. The same rule is applicable to the limited partner whose name appears in the limited partnership company. (Article 34 of Law no. 26/1990)

Regarding a joint-stock company or limited by shares, it consists of a personal name, likely to distinguish it from other companies, and will be accompanied by the words written entirely "joint-stock company" or "S.A." or, where appropriate, "limited company by shares". (Article 35 of Law no. 26/1990)

Finally, on a limited liability company, it includes a personal name, to which may be added the name of one or more partners, and will be accompanied by the words written entirely "Limited Liability Company" or "LLC" (article 36 of Law no. 26/1990)

Therefore, in all cases, changing the form of the company will attract the change of its firm, so that the associates will have to provide a specific clause on the company name[18].

After transformation, subsist without modification all contracts concluded earlier with third parties, such as lease contracts for headquarters, insurance contracts, loan contracts, leasing contracts etc.

It can not be supported that the transformation of the company would impose *per se* new obligations or would have any effect on the liability of shareholders, who are bound by the same social obligations as the existing in the moment of changing the form of the company[19].

However, we can conclude that the law does not impose obligations on creditors to preserve their rights to claim on the company. Of course, if the transformation of the company attracts new guarantees due to changes in its form, social creditors should be able to benefit from them. The solution is favorable to social creditors and is based on the fact that the associates have consented freely in changing the form of the company, thus taking all the negative effects that would attract such an amendment to the articles of association.

For example, we mention that if a limited liability company is transformed into a general partnership, creditors should be recognized, with the rights recognized to the initial form of the company, also the right to joint and several liability for social liabilities, according to article 3, paragraph (2) of Law no. 31/1990.

De lege ferenda, this solution should be integrated in article 3 of Law no. 31/1990, into a separate paragraph, as follows: "(4) If, prior to the amendment of the company, the associated who were liable for the social obligation only up to the competition of the subscribed capital became associates in the general partnership or limited associates in the limited partnership or in limited partnership by shares, paragraph (2) is applicable and social obligations incurred prior to such change, apart from the situation in which the creditor expressly consented in writing to change the company".

Please note that we have not considered it necessary to restrict the scope of applicability of the proposed text exclusively for the amendment of the company to change the legal form. On the contrary, as drafted, it could be applicable, for example, if is changed the articles of incorporation by becoming a general partner of a limited partner. We also appreciate useful to be made explicit renunciation of the social creditor to the guarantees of his claim, solution that can be removed otherwise the principle of mutual consent governing contracts. However, we considered it necessary to establish the written form ad validitatem, to prevent possible problems that would face the courts in reviewing the validity of the act of renunciation.

Also in regard to the effects of the transformation of the company, towards third parties, we mention that changing of the legal form of a limited partnership into a limited company or limited liability compant does not alter the terms of attracting liability towards the social creditors with titles previous transformation, they will respond unlimited and severally and not up to the subscribed capital.

Another proposal *de lege ferenda* with great practical utility is that article 3 of Law no. 31/1990 to include an additional paragraph as follows: "(5) Where, prior to the amendment of the compant, the associates who responded for the unlimited social obligations and

---

[16] Y. Guyon, *Droit des affaires, Tome 1, Droit commercial général et sociétés*, Economica Publisher, Paris, 1996, p. 593.

[17] Article 30 of Law no. 26/1990 on Trade Register, defines the company as its name, where applicable, the name under which a trader operates and under that signs.

[18] Law 31/1990 does not use the term firm, but the name. See article 7, letter b); article 8, letter b); article 81, article 19, article 56 etc.

[19] C.A. Ploiești, Commercial Division and the administrative and fiscal department, decision no. 394/1998, in the Commercial Law Review no. 6/1999, p. 136, quoted by St. D. Cărpenaru, Gh. Piperea, S. David; *Companies Law*. *Comment on articles*, 5th edition, 2014, op. cit., p. 717.

jointly became limited partners in the partnership or company limited by shares shareholders in the joint-stock company or associates with limited liability company, paragraph (2) is applicable and social obligations incurred prior to such change, apart from the situation in which the creditor expressly consented in writing to change the company".

The considerations which accompanied the proposal for the introduction of the paragraph (4) in the article 3 of Law no. 31/1990 shall remain valid with respect to this de lege ferenda proposal.

Clearly, from the date of legal transformation of the company, the legal status of the company follows the new form chosen by the associates, with all the consequences resulting from the law.

3. Aspects on transforming the company in other countries

Changing companies in United Kingdom

Under article 21 of the *Companies Act 2006*[20] - Companies Law in 2006, in the United Kingdom, the change of documents of incorporation (named "articles of incorporation"[21]) can be achieved after a decision at an extraordinary general meeting of associates[22].

Article 22 of the same law provides that the articles of association of a company may contain certain clauses, referred to as *provisions for entrenchment*, establishing that certain elements of the articles of incorporation may be amended or excluded only if certain conditions are met or only after carrying out certain procedures much more restrictive than those applicable to the changes referred to in article 21.

The terms set out in article 22 can be inserted into the constitutive act *ab initio* or may be introduced by a subsequent agreement on which all associates have manifested its willingness positively.

It is noteworthy that, according to article 22 paragraph (3) of the same law, the inclusion of some *provisions for entrenchment* does not prevent modification of the articles of incorporation by agreement of will of all associates or change of it judicially.

4.2. Changing the company in France

According to the French Commercial Code[23], amending articles of incorporation of some companies may have *inter alia* aimed at changing the company's name or form, increase or decrease of the share capital, registered office and duration of the company.

On the transformation of companies, it may be voluntary or statutory. The voluntary basis may have, for example, the motivation of associates to benefit from a favorable tax regime and the need to adapt the company structure applicable to a more complex form[24]. However, the law may require change of legal form of the company, as a requirement for the survival of the company. Thus, according to article 221-15 paragraph (7) of the Commercial Code, the death of a associate of general partnership, where the shares are transmitted to a minor heir, since can not be held the unlimited and joint liablily to such person, it is necessary to transform the company, within one year, *inter alia* in a limited partnership in which the minor to acquire only the quality of limited associate. Otherwise, the company will dissolve.

The consequences of maintaining moral personality of the company after the transformation, provided by article 210-6 of the Commercial Code were amply discussed in the doctrine[25].

In terms of the company, transforming effects are reduced; meaning that, in the absence of novation, the rights and obligations that the company has entered into the old legal form subsist[26].

Regarding the rights of the associates, from the date of conversion will come into the new social rights, which replace the earlier rights through real subrogation.

4.3. Changing the company in Belgium

Unless otherwise stated, the general meeting of associates has the power to amend articles of incorporation of joint-stock companies, of private

[20] Law can be found on the Internet at the following address: http://www.legislation.gov.uk/ukpga/2006/46

[21] Until the entry into force of the *Companies Act 2006* for the establishment of companies was necessary to draft two articles of incorporation, named *memorandum of association* and *articles of association*, *memorandum and articles* together. Since the entry into force, October 1st 2009, is no longer drawn *memorandum of association*, but companies established before that date, work based on the two aforementioned acts.

[22] The procedure for making such decisions is described in article 283 of the *Companies Act 2006*. In principle, it requires the consent of at least 75% of associates.

[23] It is found on the internet, as official, updated daily, at http://www.legifrance.gouv.fr/affichCode.do?cidTexte=LEGITEXT000005634379.

[24] See Philippe Merle, *Droit commercial. Societies Commerciales*, 7th Edition, Dalloz Publisher, Paris, 2000, p. 123.

[25] See Philippe Merle, *op. cit*, p. 125 and J. Fiscel, "L'absence d'être moral nouveau dans les transformations de société", *Gazette du Palais* 1986, II, p. 724.

[26] Y. Guyon, Note on March 4th 1969, Semaine Juridique - édition générale II, 15949, quoted by Philippe Merle, *op. cit*, p. 125.

limited companies[27] and cooperative companies with limited liability[28] under article 558 or 286 of the Companies Code[29].

In view of legal adoption of decisions, it is necessary that the proposed amendments to be expressly stated in the summons, the quorum shall be one half of the capital for the first convocation, for the next meeting is legally constituted regardlesss the quorum and the adoption of a decision to be made with a ¾ majority of the votes.

Belgian law provides different requirements for certain amendments to the articles of incorporation of the company.

Exempli gratia, to change the main object of the company is required prior report prepared by the management board or body, by detailing the situation of assets and liabilities of the company for a period ending no later than three months before the report to be attached to the act of summoning. The absence of this report draws annulment of general meeting[30].

Authentic form is mandatory for amending articles of incorporation of companies.

Subsistence of legal personality of the company after the change of legal form is provided in article 775 of the Companies Code. Proposal for the transformation of the company must be the subject of a report of the board of directors or management bodies, similar to that required for the change of the legal status of the company.

If the transformation of legal form of a limited company, of a limited partnership by shares or of a SPRL, the shares or social parts without vote right receive, after transformation, a vote right, regardless of any contrary provision in the articles of incorporation.

In the case of a general partnership transformation, of a limited partnership or a limited partnership by shares, joint associates and general associates bear unlimited joint and several liabilities towards third parties for previous social obligations.

Interestingly, in the case of transformation of a company into a general partnership, into limited partnership or limited partnership by shares, joint associates and general associates bear unlimited, but not jointly liability, to third parties for previous social obligations[31].

4.4. Changing the companies in Spain

On July 04th 2009, has intered into force the Law no. 3 / April 03rd 2009 on structuring changes of companies[32] with a wide content, detailed by 103 articles[33].

Regarding the objective scope, article 1 of this law states that structural changes of companies consist of transformation, merger, partition, global assignment of assets and liabilities, including international movement of headquarters. In this regard, paragraph (2) of the Act states that it is intended to regulate only those changes with "structural" character, i.e. changes affecting the property structure or of personnel of the company.

Subjective scope of the law is detailed in article 2, which states that it is applicable to all companies that have commercial character, or by their object, either by way of establishment.

Article 3 of the Act stipulates that following the transformation of the company by adopting a different legal form, it retains legal personality.

Regarding the effects on the liabilities of the associates for social obligations, article 21.1 provides that associates that assume personal and unlimited liability for social obligations are liable in the same way for previous debts of transformation.

Except where associates expressly consented to transformation, personal liability of members subsists, who were personally liable for contracted company's debts previous to transformation. Liability can be drawn no later than 5 years from the date of publication of transformation into "Trade Register Official Bulletin".

On the subjective side of this responsibility, in the doctrine was shown that it extends both on associations that remain in the company and on those who choose to withdraw from the company, as a result of transformation[34].

Regarding the subject of liability, the law refers to debts, but the doctrine concluded that this must look, in the case of successive performance contracts, only the

---

[27] Private limited company ("société privée à responsabilité limitée, with the acronym SPRL") consists of one or more persons responsible for social obligations only in the line of their contribution and whose rights of association are not transferable except under certain conditions.

[28] Limited liability cooperative company ("société coopérative à responsabilité limitée, with the acronym SCRL") differs from SPRL by the fact that it must have at least three partners, to a minimum of two to SPRL, and by way of functioning of it.

[29] Companies Code of May 7th 1999 published in the Official Journal of August 06th 1999 under the no. 1999A09646, p. 29440, can be found on the Internet at www.ejustice.just.fgov.be.

[30] For details, see R. Verhoeven, *La pratique des Sociétés*, vol. I, Kluwer Publisher, Waterloo, 2007, p. 163 et seq

[31] For further details on the companies transformation, see R. Verhoeven, *La pratique des sociétés*, vol. II, Kluwer Publisher, Waterloo, 2007, p. 729-733.

[32] Available on the internet at http://www.boe.es/buscar/act.php?id=BOE-A-2009-5614

[33] Since its adoption, the law was received with skepticism both in doctrine and in jurisprudence, considered a true "technical failure". Fernando Vives Ruiz, Arnau Tapias Monné, "Law of Structural Modifications. A standard technically failed in *InDret-Magazine for the Anaysis of Law for 4/2013*, Barcelona, pp. 3-49. Also, see Jesús Quijano Gonzalez, "Elaboration process of the Law for Structural Modifications of Companies" in Fernando Rodrigues Artigas, editor, *Structural Modifications of Companies*, T. I, Aranzadi, Pamplona, p. 25-38; GONZÁLEZ-MENESES and Segismundo ÁLVAREZ ROYO-VILLANOVA, *Structural Modifications of Companies*, Dykinson Publisher, Madrid, 2011 and José Mª Beneyto Pérez, Rita Largo Gil, publishers and Esther Hernández Sainz, coordinator, *Transfers of companies and structural modifications of companies*, Bosch Publisher, Barcelona, 2010.

[34] See Manuel Álvarez GONZÁLEZ-MENESES and Segismundo ÁLVAREZ ROYO-VILLANOVA, *Structural Modifications of Companies*, Dykinson Publisher, Madrid, 2011, p. 107.

obligations to pay, corresponding to benefits previous transformation[35].

Under the provision of article 21.1 of law, is established the possibility of relief of liability, if those creditors consent the transformation.

It should be noted that, as stated, the law contains an institution less used in European legislation, global assignment of assets and liabilities of a company.

Despite the controversy that has born the Law on structural modifications of companies, it is worth the effort to codify in detail of the Spanish legislator in a timely matter, with tendency so close to the multiple faces of the legal consequences caused by changes of the company under its scope.

Conclusions

Changing companies, achieved by modifying their articles of incorporation, as provided by law, appears as one of the most viable solutions and less intrusive, available to the signatories by law, of a corporate pact to meet the needs of expanding companies, competitive or economic.

Compared to the dissolution of the company and formation of a new legal entity that takes into account the interests of current associates, changing the compay is shown, most often, as being preferable, for understandable reasons.

Given the outstanding importance of the institution as discussed, the conclusion suggests itself that the need for the development of the company must be accompanied by a constant effort to rationalize the regulations on its amendment. Thus, it is reasonable the idea to support, in Romania, an extensive process of refining the legal framework in this area.

By de lege ferenda proposals made in this approach, was tried the legislative consecration of some conclusions expressed in this paper, after the consultation with the doctrine and jurisprudence on the matter, consequent to the idea of making a predictable legal framework and unambiguous.

Of course, perhaps the most appropriate recommendation would be that the legislator to devote the amendment of the compant with a wider chapter in which to take some legislative solutions that have already been applied successfully in the legislation of other countries with longer tradition in the field of commercial law codification.

CONSIDERATIONS REGARDING THE LOAN AGREEMENT IN THE LIGHT OF THE NEW CIVIL CODE

Stanciu CĂRPENARU[*]

Abstract

The loan contract contract is a legal contract by which a person, lender, transmits to another person, loanee, the use or the full legal rights regarding an object, with the obligation of returning, at a certain time, of the good or another good of the same quantity and quality

The loan contract has two forms, the loan for use and the loan for consumption.

The loan for use (Romanian: comodatul) is a free basis contract by which a party, lender (Romanian: comodant), hands in a movable or immovable good in order to be used by the other party, loanee with the obligation of returning, at a certain time, according to the contract .

The loan for consumption contract is an agreement by which a person, the lender, gives to another person, the loanee, a sum of money or any goods that are fungible and will be consumed by own nature and the loanee will return the same sum of money or the same quantity and quality of goods.

Keywords: *loan contract, loan for use, loan for consumption, promise of a loan, interest.*

1. The New Civil code richly regulates the loan agreement, with its two forms, the loan for use and the loan for consumption[1].

For the first time, the Civil Codes has provisions regarding the loan promise.

1.1. The loan contract is a legal contract by which a person, lender, transmits to another person, loanee, the use or the full legal rights regarding an object, with the obligation of returning, at a certain time, of the good or another good of the same quantity and quality[2].

The loan contract is part of the real-property contracts which means that for its validity the good that is loaned has to be given to the loanee (art. 1174 Civil Code). Handing in the good is the main condition for giving effects to the contract, and also its main effect.

1.2. The loan contract has two forms, the loan for use (Romanian: comodat) and the loan for consumption.

The main difference between the forms is the nature of the right that it is transmitted, in the case of the loan for use the lender transmits the loanee the right to use the good, as for the loan for consumption the lender transmits the loanee the full property right over the good.

The different nature of the right that is transmitted also gives birth to differences between the two forms of the contract.

1.3. The New Civil Code, for the first time, refers to the promise to contract, as the intention of a person to enter into an agreement in the future.

According to the law, the promise to contract must have all the conditions of the contract that is to be agreed. Should some of them lack the parties cannot execute their promise.

If one party refuses to undertake its obligations, a Court of justice, at the request of the other party which has fulfilled its obligations, may rule a decision that gives effect to the promised contract, should the nature of the contract permit and all its legal conditions are validly fulfilled.

Art. 2145 of the Civil Code permits a promise to contract a loan, which because is a real-property contract, the simple assent of the parties is not enough and the handing in of the good is mandatory.

If the good is held by the beneficiary, and the other party refuses to bind the contract by not giving its consent, a Court of justice, at the request of the other party which has fulfilled its obligations, may rule a decision that gives effect to the promised contract should the nature of the contract permit and all its legal conditions are validly fulfilled.

Thus, for the closing of the loan contract, by means of a Courts ruling a decision that gives effect to the promised contract, the law requires a perfectly valid promise of contract, the good must be in the possession of the beneficiary and a refusal from the other party to adhere to the contract.

2. The loan for use can be found in the provisions of the New Civil Code, art. 2146-2157.[3]

2.1. The loan for use (Romanian: comodatul) is a free basis contract by which a party, lender (Romanian: comodant), hands in a movable or immovable good in order to be used by the other party, loanee (Romanian: comodatar) with the obligation of

[1] The legal provisions can be found in the New Civil Code, Book V, Title XI, Chapter XIII, art. 2144-2170.

[2] See C. Hamangiu, I. Rosetti-Bălănescu, Al. Băicoianu, Romanian Civil Law (Tratat de drept civil roman), vol. II, Ed. C.H. Beck, Bucharest, 2008, pag. 622.

[3] See Fr. Deak, Romanian Civil Law. Special contracts (Tratat de drept civil. Contracte speciale), ed. Universul juridic, Bucharest, 2001, pag. 340 and next; L. Stănciulescu, Civil law. Contracts (Curs de drept civil. Contracte), ed. Hamangiu, Bucharest, 2014, pag. 401 and next.

returning, at a certain time, according to the contract (art. 2146 Civil Code).

The loan for use contract has the following characteristics: it is a real-property contract, it is always free based, it is unilateral and it transfers only the use of an good.

2.2. The validity conditions of the loan for use contact are se same given by law for any other real contract: the legal capacity of the parties to enter an agreement, the consent of both parties, handing in the good, a legal and moral object and a legal and moral purpose.

2.2.1. The loan for use contract is a management legal act. Thus, for it's legally closure both parties have to have the capacity required by law to enter a management contract.

Due to the fact that by means of loan the use of a good is transmitted, any person that was not forbidden by law or contract to use it may be a lender. Thus, the tenant or the holder of the real right of use may be a lender.

As for the loanee, he may not allow another to use the good without the express consent of the lender (art. 2148 par. 2 Civil Code).

2.2.2. The loan for use contract is closed, like any other real contract, by the agreement of both parties that sign it and when the good is handed in. the agreement of the parties not followed by the handing over of the good will only result in a promise of contract (precontract). Should the good be at the beneficiary, the other party refuses to acknowledge the contract, the Courts may rule a decision that gives effect to the promised contract (art. 2145 Civil Code).

2.2.3. The loan for use contract may refer to a movable or immovable good. Thus, the good that is given for use has to be returned in certain time, the good must only be not fungible and must keep its substance when used[4].

2.3. As any other contract, the loan for consumption gives special obligations. Being an unilateral contract results in obligations only for the loanee, but after, during the execution of the contract, some extra contractual obligations may arise for the lender too.

2.3.1. The obligations of the loanee are:

a) He must use the good he loaned according to its destination, given by the contract, or given by the nature of the good (art. 2148 par. 2 Civil Code).

According to the provisions of the law, the loanee cannot be held liable for any damage to the good should he use the good in respect to its destination for which it was loaned to him. Should he use the good for any other purposes than the one it was loaned to him or keep the good after the maturity of the loan, the loanee can be held liable for any damage that the good may suffer of if it is lost, even if the cause may be beyond control or an act of God. It represents an exception should the loanee prove that the good would have suffered a full or partial damage anyway due to the same cause beyond control. But still, the loanee will be held liable for the destruction of the good then the cause beyond control could not have been avoided by substituting a personal good or when he could not save both of two goods he chose to save his own.

The loanee can transmit the use of the good to a third party only with the express consent of the lender.

The misconduct regarding the use of the good as to its intended purpose gives the right to the lender to terminate the contract and claim damages (art. 1516 Civil Code).

b) The loanee must preserve the good given to him for use. In order to assure the use of the good for the duration of the contract and also to assure its return at the maturation of the loan, the loanee must preserve the good.

According to the law, the loanee must preserve and guard the good having the prudence and diligence of a good owner (art. 2148 Civil Code).

Due to the fact that by effect of the loan for use contract only a right of use is transferred, the risk of the contract falls to the lender as the owner of the good.

c) The loanee must pay all expenses arising from the use of the good. According to the law, any necessary expenses regarding the exploitation of the good fall to the loanee (art. 2151 Civil Code).

In some cases the loanee could ask for compensation from the lender, for any necessary improvements that the good might require and that could not have been foreseen when the contract was signed (art. 2151 par. 2 Civil Code).

d) The loanee must return the good. By effect of the loan for use contract, the loanee only receives a right to temporary use the good. Thus, the loanee must return the good at the specified term, or, should no specific time be stipulated, after he made use of the good according to the parties' agreement (art. 2155 Civil Code).

In the absence, from the contract, of any specific term or stipulation regarding the use the good or if the use of the good is on a permanent basis the loanee must return the good at the simple request of the lender.

The law also allows in advance return of the loaned good. The lender may ask for a return of his good before the specified term or before it was fully used according to the agreement, in the following situations: the lender has an immediate and unforeseen need for that good; the loanee does not respect his contractual obligations; the loanee deceases (art. 2156 Civil Code).

The good must be, in principal, physically retuned as it was (art. 2146 Civil Code). Restitution by money equivalent will be possible should only the agreement stipulate such permission or the lender

[4] Exceptionally, it has been admitted that goods that are consumed when used can be considered, by will of the parties, not fungible, and thus may become the object of a loan for use contract. See F. Deak, reference above, pag. 342.

waivers the physically return of the good as not necessary[5].

Taking into effect the obligation to return the good is facilitated by the law recognizing the loan for use contract as executors title. According to the law, should the contract be terminated due to expiration or death of the loanee, the loan for use contract that is conducted in an authentic form or under private signature is therefor an executors title (art. 2157 Civil Code)

In the absence from the contract of a specific term for returning the good the contract is an executors title only in the case when the scope for using the good is not mentioned or the use for which it was loaned is permanent.

A point must be made, that the loanee cannot hold the good as retention right for any obligations that he might have against the lender (art. 2153 Civil Code).

Should the loanee refuse to hand over the good, the lender can stake out a claim in requisition, as the owner of the good, which is unlimited, or can stake out a personal claim based on the loan contract, which is subject to limitation.

2.3.2. During the execution of the contract of loan for use some extra contractual obligations may arise for the lender:

a) The obligation to return all expanses made for conservation of the loaned good. As mentioned before, the expenses regarding the administration and conservation of the loaned good fall to the loanee. But during the execution of the contract there could be a necessity for adjusts to the loaned good, unforeseen at the signing of the contract. These expenses are to be paid by the lender, if he was notified in advance and did not oppose to adjusts being made by the loanee, or because of the urgency that the adjust required there was no time to notify him (art. 2151 par. 2 Civil Code).

The obligation of the lender to return the expenses mentioned has as basis business inventory (art. 1330 Civil Code).

b) The obligation to repair any damages of the loanee. The lender is obliged to pay any damages for any injury or prejudice caused to the loanee by his own fault. According to the law, the lender who, at the date of closing the contract, knew about hidden defects of the loaned good and failed to report them to the loanee must repair any damages suffered by the latter (art. 2152 Civil Code).

The obligation of the lender to pay all damages suffered by the loanee has as basis the delinquency responsibility of the lender (art. 1357 Civil Code).

2.4. The loan for use contract ceases according to the general rules: when the contract has been executed; the severance of the contract; the death of parties etc. in the application of the general rules the particularities of the loan for use will be taken into account.

2.4.1. According to the law, the loanee is entitled to use the good until the given term or until the good has been used according to the agreement of parties. Once executed, the contract is fulfilled and the loanee must return the good to the lender (art. 2155 Civil Code).

In the absence from the contract of the elements required to determine when the contract has been fulfilled, also in the case when the use of the good is permanent, the contract is considered to end upon request of the lender.

2.4.2. Any misconduct by the loanee gives the lender the possibility to server the contract, claim the return of the loaned good and also damages (art. 2156 Civil Code).

2.4.3. In general, after the death of a contracting party all rights are transferred to their inheritors by effect of the law. In the case of the loan for use contract, should the loanee decease, the contract will be terminated only at the request of the lender for the return of the good (art. 2156 Civil Code).

3. The loan for consumption contract has its legal provision in art. 2158-2170 Civil Code.

The Civil Code has general provisions regarding the loan for consumption and special provisions regarding the loan with interest.

Should any person close up loan for consumption contracts on a professional basis, the special provisions regarding credit institutions[6] or financial institutions[7] will be applicable.

3.1. The general provisions of the Civil Code regard the closing and content, validity conditions and effects of the loan for consumption contract.

The loan for consumption contract is an agreement by which a person, the lender, gives to another person, the loanee, a sum of money or any goods that are fungible and will be consumed by own nature and the loanee will return the same sum of money or the same quantity and quality of goods (art. 2158 Civil Code).

Usually, the loan for consumption is a free basis contract. In respect, art. 2159 Civil Code presumes that if the parties did not otherwise agree, the loan for consumption will be free basis. Should the loan for consumption refers to a sum of money, it will be presumed that the contract is by onerous title.

The use for consumption contract is a real contract, is unilateral and transmits the property.

3.1.2. The validity conditions for the loan for consumption are as any other contracts: the legal capacity of the parties to enter an agreement, the consent of both parties, handing in the good, a legal and moral object and a legal and moral purpose.

3.1.2.1. Because the use for consumption is a property transmitting contract, for its closing, both

[5] See F. Deak, reference above, pag. 346. See L. Stănciulescu, reference above, pag. 406.
[6] See Government Urgency Ordinance no. 99/2006 regarding institutions for credit and capital adequacy.
[7] See Government Urgency Ordinance no. 93/2009 regarding nonbanking financial institutions.

parties must have legal capacity to make disposition acts.

The lender must be the owner of the good and must fulfill the legal provisions regarding the disposition of that good.

The loanee must fulfill the legal provisions regarding his capacity to take property of the good and also to return it.

3.1.2.2. The loan for consumption contract will be realized, like any other real contract, by consent of both parties and giving out the loaned good. Giving out the loaned good is a condition for the legal closing of the contract and not an effect of it.

3.1.2.3. The object of the loan for consumption contract is a sum of money or any goods that are fungible and will be consumed by own nature (art. 2158 Civil Code). So, the object a general goods, fungible and that consume their substance.

Fungible goods are those that can be substituted with another alike in the execution of an obligation (art. 453 Civil Code).

The goods that consume their substance are movable goods which when normally used they must either be alienated or their substance is consumed (art. 544 Civil Code).

A point that must be made is that the object of the loan for consumption must be only goods that consume their substance by own nature.

3.1.3. Being a unilateral contract, the loan for consumption gives obligations only to the loanee. During the execution of the contract some extra contract obligation may arise for the lender too.

3.1.3.1. By the valid closing of the loan for consumption contract the loanee becomes the owner og the loaned goods and thus may dispose of them. As owner he will bear the risk of the contract (art. 2160 Civil Code).

After a specific period of time the loanee must give back to the lender the same sum of money or the same quantity and quality of goods. In lack of another agreement of the parties, the loanee must return the same quantity and quality of the goods that he received at the signing of the contract, regardless of the change in price.

If the object of the loan for consumption is a sum of money, should the parties not agree otherwise, the loanee must return the same sum, regardless of any fluctuation of its value.

In the case that giving back the same quantity and quality is not possible the loanee is obliged to pay the full value of the good from the date and place when the restitution was supposed to be done (art. 2164 Civil Code).

The return of the goods must be done at the specified term stipulated in the contract. According to the law, the term for restitution is presumed to have been fixed in favor of both parties. Should the contract be on free basis, the term is considered to be fixed only in favor of the loanee (art. 2161 Civil Code).

When the contract lacks to specify any return term for the loan, it will be fixed by the Court of Justice, according to the procedure provided by the law for presiding judge's interim order (art. 2162 Civil Code).

When ruling over the return term, the Court must take into consideration the purpose of the loan, the nature of the obligation and of the loaned goods, the conditions of the parties and any other relevant facts.

In the case that the contract allows the loanee to return the goods only when he has the means to do so, the Court should it observe that the loanee has them or could have had them cannot give a retuning term of more than 3 month.

In the case of the return term fixed by the Court the claim is subject to limitation, which begins at the date of closing the contract (art. 2163 Civil Code).

As in the case of the loan for use contract, regarding the obligation of retuning the loan, the loan for consumption contract is conducted in an authentic form or under private signature and is therefore an executors title, by law, in the cases of the death of the loanee and the expiration of the contract (art. 2165 Civil Code).

3.1.3.2. According to the law, the lender must repair any damages caused to the loanee because of the hidden defects of the goods (art. 2166 Civil Code).

In case of the loan for consumption which is by onerous title, the lender who, at the closing of the contract, knew of the existence of hidden defects and failed to notify the loanee must offer reparation should the loanee suffer any damages. The liability of the lender will be ascertained under art. 1707 Civil Code regarding the general warranty obligation of the seller for hidden defects of the sold goods.

3.2. The provisions of the Civil Code regarding the loan with interest contract regulate the field of application, the notion of loan with interest, different forms of interest, how interest flows and the anticipated payment of interest[8].

3.2.1. The provisions of the Civil Code regarding the loan with interest are applicable every time, on a contract basis, an obligation is born regarding a sum of money and that has a term for execution or regarding general replaceable goods, should no special rules exist regarding the validity and execution of such obligation (art. 2167 Civil Code).

Crediting on a professional basis can be done only by financial or credit institutions or other institutions given such right by law.

3.2.2. The loan with interest is the loan for consumption contract by onerous title, in which the loanee must return not only the sum he had loaned but also pay interest.

By effect of the law, the loan for consumption that has a sum of money as an object is presumed to be

[8] See Florin Moțiu, Special contracts in the new Civil Code (Contracte speciale în noul Cod civil), ed. Wolters Kluwer, Bucharest, 2010, pag. 297-299.

by onerous title which equals to a loan with interest (art. 2159 Civil Code).

3.2.3. Interest represents an equivalent of the use of capital (usage interest). Interest may be stipulated in currency or any other performers under any title or designation that the loanee must pay (art. 2168 Civil Code).

3.2.4. In case of a loan of a sum of money, interest will be added from the first day that the sum was given to the loanee. He must pay interest at the maturity of the loan contract.

Paying interest in advance can be made for only 6 month in advance (art. 2170 Civil Code).

If the rate of interest is only determinable any likely overpayments or deficits will be subject to compensation from one rate to another, for the entire duration of the contract, with the exception of the last rate which is always in favor of the lender.

3.2.5. The legal frame of the legal interest is given by Government Ordinance 13/2011 regarding the legal usage and penalty interests for money obligations and for certain financial and fiscal measures in banking sector[9].

The usage interest is the interest due by the debtor of an obligation regarding a sum of money at a certain term, calculated for the period previous to the expiration of that obligation. This interest is the price for using that money.

The penalty interests is owned by the debtor of a money obligation that was not restituted at due date. This interest represents compensation for sanctioning and repair the damage caused to the creditor by the late payment over the due date.

In the absence of an express agreement of the parties, regarding the interests' sum, the legally stated interests will be paid, as for either the usage or penalty interest.

The rate of the legally stated usage interest is set at the level of the reference interest given by the National Bank of Romania, which is the rate of interest for monetary policy, set by decision of the Council of administration of the National Bank.

The rate of the legally stated penalty interest is set at the rate of interest for monetary policy plus 4 percent points. In contracts between nonprofessional parties the rate of penalty interest will be at the rate of interest for monetary policy diminished by 20%.

In contracts between professionals and in those between professional and public contracting authorities the interest will be at the rate of interest for monetary policy plus 8 percent points[10].

In contracts that have an international element, when the Romanian law is applicable and when the payment is in a foreign currency, the legally stated usage and penalty interest is 6% per year (art. 4 G.O. no. 13/2011.

JURIDICAL WILL IN CONTRACTS

Emilian CIONGARU*

Abstract

In the business law, almost all judicial relationships of private law are obligational juridical relationships which are made up of legal acts and facts. The most important legal act is the contract since it is the basis of the social life in any community meaning that it represents the most important economic and juridical instrument for the participants to a contract. The persons are free and equal in society and, consequently, no power is valid and fundamental unless it relies on their consent, namely on a contract. So, the existence of a civil contract relies on the principles of consensualism, a perception based on moral rules to observe one's promises, to have good faith and to observe the interests of your fellow creature. The exterior manifestation, the expression or declaration of the juridical will constitutes the consent of such person in making the structure of contract. The declared will must correspond to the person's real will and the adoption and declaration of the juridical will must take place consciously. Any contract that does not derive from juridical will is null and the civilizing character is inexistent. The principles giving sense to consensualism is the one of agreement between parties so as to produce legal effects by itself and it is enough for the conclusion of a contract, regardless of the form in which it is exteriorized, a principle expressed by the Latin adagio pacta sunt servanda.

Keywords: *business law, principles of consensualism, juridical will, contract.*

1. Introduction

The liberty of contract principle has been initially taken over by the private international law in terms of the conflict of laws, and then it was consecrated in the internal law of the European states starting with Napoleon's Civil code, a codification work massively taken over by the Romanian Civil Code of 1864, then in the New Civil Code which take effect from 2011. We might say that by the recognition of the liberty of contract and the fact that the subjects of law are free to conclude or not any contracts and to establish their content in an unhampered manner being able to modify or extinguish the assumed obligations, the science of law has evolved from the rigidity of the quiritarian Roman law to the flexibility of consensualism from the modern era of law.

Will is undoubtedly one of the words having a high frequency in the current language mainly due to the fact that this term is associated to the human being's will to tend to something, to achieve something, to attain certain goals, to obtain the things necessary for the daily life, to fulfill a dream etc.

In the field of law, the will is met very often in cases such as the will of state incorporated into the juridical norm (the juridical norm being the expression of such will), the individual (unilateral) will that may manifest to achieve some agreements or to exceptionally produce legal effects by itself; the legal effects of human being's actions or inactions differ sometimes depending on the fact whether they are voluntary or involuntary.[1]

The principle of the free will in contractual matter means the liberty to conclude contracts but not in the sense of a perfect free will, but in the sense of liberty conditioned by the social life and the legal norms[2].

The word given by exteriorization of will in any contract represents the formation of the legal act, a fact leading to its definition as being the manifestation of will performed with the intention to produce legal effects, namely to create, modify or extinguish a judicial relationship and it contains three notions[3]: it is a manifestation of will which must come from a conscientious person since it is a product of such person's thought; the will must be manifested, namely exteriorized, so as to be efficacious from a juridical viewpoint; the manifestation of will is made to produce legal effects[4] to create, modify or extinguish a certain juridical situation.

This definition highlights the fact that the manifestation of will expressed to produce legal effects is the essence of the legal act, this will constituting the fundamental element of the legal act.

2. Content

The juridical will is a psychological act[5] and both from the psychological viewpoint and the juridical

viewpoint the will is a complex element[6]. The will is complex from the psychological viewpoint because its formation represents a complex psychological process comprising a series of stages. The will is complex from the juridical viewpoint because its structure is made up of two elements: consent and cause and, consequently, the correlation between consent and juridical will is of the part-whole type.

When speaking of a contract, an offence or any legal act, one must take into account the psychological will which really took place in the consciousness of the subject of law in question. But the law has mechanisms that filter it by resorting to a series of extremely accurate juridical concepts and this way the will is turned into completely something else than the de facto will, namely an ideal will that the subject of law should have had and which has a logical nature and not a psychological one.

The will manifested by the contracting party must not be erroneous or determined by a vice of consent such as an error, an act of violence or by fraudulent maneuvers; the expression of will has to be the result of one's own decision, of autonomy without being influenced in any way or the result of a constraint or dubious methods. Only this way, the will incorporated into a contract really is one's own psychic process, a capacity of the contracting party to propose goals and to attain them.

Pacta sunt servanda principle, conventions must be observed, a principle relying on keeping one's word lays at the bottom of the entire organized society[7] expressing the rule of consensuality of conventions according to which parties' will is sufficient for the validity of a convention, except when we speak of real or solemn contracts, and the execution of obligations is made as they were assumed. The convention or contract, the legal act having the mission to civilize states, peoples, and persons, represents the basis of life in any community.

The theory of autonomy of will was enunciated and developed in the individualism climate of the 18th century by J.J. Rousseau and I. Kant.[8] In the Kantian philosophical system, autonomous will is a categorical imperative which justifies by itself: the most profound aspect of the human being is their free will. In order to have free wills, they must reciprocally limit themselves so as to ensure the social order. This order is the result of a social contract but not of a contract which intervened sometimes in history, as they thought, but of a contract resulted from the human mind itself.

The theory of autonomy of will[9] was considered for a long time as a postulate of the social life. Later on, mainly in the 20th century, they noticed that this theory contains numerous errors and exaggerations such as: the affirmation that the human being was initially free and that they gave up a part of their liberty by a social contract for social coexistence is pure fiction; will may not be autonomous since the human being lives in society and the social life imposes numerous obligations; there are no absolute liberties but only concrete liberties, namely determined by action or inaction.

The contemporary legislation and doctrine[10] based on the ideas, principles and norms of the continental law system identify two qualification criteria of the civil contract, more precisely the consensus and the legal purpose. The latter is considered as a subjective orientation of consensus and is totally subjected to parties' discretion to produce juridical-civil effects. Based on these criteria of uniform qualification of civil contracts, contractual agreement becomes binding for the parties regardless of other objective factors such as the form taken by the agreement or the effective transmission of right based on it, or especially the recognition by the legislator of such case in quality of content of contract sanctioned by the positive law. In other words, the construction of the civil contract relies on the principles of consensualism[11], the perception based on moral rules to keep one's word, to have good faith and to observe the interests of your fellow creature.

To be considered as a source of law, the will must be conscientious and rational. The consent, as an element of exteriorization of will, must be vice-free and expressed in full knowledge of facts. The theory of consent vices reinforces the free character of will. Thus, the consensus lacks the juridical sense where will is not free since it cannot create law.

The real will expressed with the intention to generate legal effects is the only one creating law, the altered or putative will is considered not to have existed upon the occurrence of consent. The sanction of expressing such a will is the cancelation of the likeness of law generated this way[12] (theory of nullity).

Internal will creates law. The exteriorization of will is a logical condition for the creation of contract whereas the interior one may not disclose its valences. In case of contradiction between the real and expressed will, the former prevails because will shall be appreciated as it must (*sollen*) be, and not as it is (*sein*), described. Real will remains the essence and the exteriorized will remains the phenomenon.

To manifest in the law and to produce legal effects, the will must be exteriorized either by words, written documents or by any other material means. If

it was not exteriorized, psychological consciousness does not mean anything in law. Incontestably, the manifestation of will does not have a juridical significance either unless there is also a psychological will behind it. In the light of this psychological will which was the source, the legal ground resides in the external manifestation in that two parties contracted something after they have thought about it and the volition acts took place from the psychological viewpoint and this is manifested at the exterior by words, sometimes even written words. This external manifestation is the only proof of will: will is intangible without this filtration through the external manifestation. Consequently, what we must consider as essential in law is not the psychic will but the external manifestation of such will. [13]

The rational individual defines liberty by themselves through their will to get engaged judicially thus creating their own juridical reality.14 In the private law this is characterized by the fact that will is the intellectual fundament of the contract and the source of its binding force.he role of law is only limited to the guarantee of execution of contract and sanction is the only role of state in a contract. The explanation resides in the fact that the human being is a free individual whose activity may not be limited but by their will (intrinsic element) and not by the juridical norm (extrinsic element). At the same time, will is considered as the unique source of justice. The contract as a paradigm of voluntary self-limitation of individual freedom is not only the source of rights and obligations, but also embodies the idea of justice since only the contract, by self-accepted limitation, ensures the liberty of conscious will. The contract is genetically superior to the juridical norm, consequently the juridical norm may not limit individual's liberty but to the extent to which it guarantees the preservation of one's fellow-creature's liberty.

The requirements related to the form or registration of contracts as well as the rules of invalidity of contracts, most of them being an image of public limitation[15] of individual liberty, are tightly correlated and they are present in a large number of juridical norms.

The general conditions regarding the form of contract establish the form that the consensus must have so as to be acknowledged by the public authority[16], regardless of parties' will. In this case, even if the registration of a contract takes place after the conclusion of agreement related to the contractual clauses, the failure to make it shall lead to the nullity of contract from the viewpoint of the public authority and shall deprive the parties of the possibility to defend in court.

The juridical consequence of parties' failure to reach an agreement regarding all the essential clauses of contract differs from the consequences of the principle of formalism, namely the failure to conclude a contract means its inexistence as a juridical fact generating civil rights and obligations.

The form of expression of will upon the conclusion of a contract is analysed in tight connection with its content conditions knowing that in the Romanian law the rule of consensuality operates according to which parties' consensus17 is sufficient for the valid elaboration of a contract. We may not also overlook the issue of proof of the juridical operation in the sense of negotium juris for which purpose they require the written ascertainment of parties' will (the document is required ad validatem) or the existence of an inception of a written proof which completed by other evidence proves this operation. In the cases when the written form of contract is required under the sanction of absolute nullity (ad validitatem), the will of contracting parties shall be expressed and mandatorily be ascertained in writing.

"We may legitimately think that the Contract law is a universal law adapted to all epochs and all peoples, places and circumstances, that it is founded on the fundamental principles of good and evil coming from the natural reason and that they are unalterable and eternal".[18]

If the contract represents an adhesion to certain special juridical objects, it creates general situations meaning that when a person concludes such a contract or they become a borrower, seller or buyer they understand to be applied all the dispositions from the juridical norms referring to the specific legal object – loan, sale-purchase, entire chapters from the civil law comprising the provisions related to the specific legal acts as well as other entire chapters of law interpretation that the specialists in the domain constitute in an enormous quantity of information that make up thick treatises of civil law.

The question is whether the individual who concluded a contract and who most of the time does not have juridical knowledge may know all this huge volume of clauses incorporated automatically in their document. Most often, even an experienced lawyer could not provide them all, the more so as most individuals who are profane could not do this. The entire legislative system of a state, and not only, is involved in every manifestation of an act of will of each inhabitant of such state but, of course, not by an act of psychological will. When concluding a legal act, individuals think of a very limited number of

[18] Wesley Addison, *Traite des contrats*, 1847, apud Patrick S.Atiyah, *Essays on contract*, (Oxford, Clarendon Press, 1986), p. 17.

conditions and for the rest they understand the law shall apply or they are constrained to obey it. Consequently, the effect of the legal act is, to a very limited extent, the product of the individual's psychological will and much more the product of hypothetical will as the individual had to have it when they consented to the conclusion of the legal act. Thus, between the legislative systems of a state and the individuals that are subject to the laws there is a continuous stream of legal communication[19]

Exemplifying for this purpose is the obligation of execution, a case in which will produces future effects even between living persons. Relevant is the situation when a person is lent a sum of money that they undertook to reimburse upon maturity the contract establishing implicitly that if they fail to fulfill such obligation they shall be liable to the rigour of the law. Upon maturity, if they failed to pay, the will that they manifested in their legal act long ago would produce effects upon maturity. Though they no longer want, they must pay the amount due. Thus, the psychological will disappeared much but the juridical will continues to subsist and produce effects. Another example may be given in case of the inexistence of will in infants and mad people, and yet as a person it produces juridical effects by the acts of their representatives since we do not speak of psychological will.

3. Conclusions

In conclusion, *the juridical will* requires the entire society to keep their word given in contracts, the observance which any contract is governed by the principle of free will or also known as the principle of liberty of contracts, according to which the parties are free to conclude any convention, to establish any clause by mutual agreement, to modify or to extinguish any obligation. The principle of free will manifests, in terms of content, by consensualism meaning that the parties are free to adapt the contract pursuant to their juridical will necessary upon the conclusion of a legal act and which supposes the fulfillment of two conditions: the existence of a will and the juridical intentionality thereof. According to the principle of consensualism, contracts may be validly concluded and produce legal effects by the simple consent of the parties, regardless of the form in which the consent is expressed. Based on the principle of free will, the parties create by themselves, exclusively by their will, the juridical norm meant to govern their juridical relationships agreed upon and mutually advantageous.

ENFORCING ARBITRAL AWARDS IN ROMANIA - ALWAYS A CHALLENGE

Paul COMŞA*

Abstract

Securing a favourable award from a foreign or domestic arbitral court proves to be in many cases only half the battle. As a rule, Romanian law and courts acknowledge the final, binding and enforceable nature of arbitration awards and state the principle that arbitration awards shall be freely implemented by parties. However, there are instances where the unsuccessful party does not voluntarily perform the obligations arising from the arbitral award. In these cases, before incurring legal expenses on formal enforcement procedures, it is worth attempting several informal or indirect means of persuading the other party to honour its duties. If the opposing party still refuses to comply with the award, one may resort to an ordinary enforcement procedure. In Romania, enforcement procedures may be conducted by judicial executors only after the arbitral award is rendered enforceable by a domestic court of law. As in most developed states, the vast majority of Romanian courts have enforced both domestic and foreign arbitral awards. Although there are certain instances when arbitral awards have been denied enforcement, these are the exception rather than the rule because under Romanian law the right of refusal to comply with the arbitral award shall be exerted only through an action of annulment for limited reasons.

Keywords: *arbitral award, enforcement of arbitral awards, final and binding, annulment of arbitral awards, enforcement procedure1*.

1. Introduction

Obtaining an arbitral award may not immediately end the dispute between parties. Even if this is rather an exception than the rule, there are instances when the losing party refuses to comply with the award promptly and voluntarily. In this hypothesis, several steps need to be made in order to enforce the arbitral award in the state of execution. These steps may vary from one country to another because each national legal system has its own requirements when it comes to enforcement procedures concerning domestic or foreign arbitral awards. Also, rendering an arbitral award enforceable in the state of execution may require compliance with certain mandatory procedural laws applicable at the seat of arbitration. This article briefly examines the issue of enforcing arbitral awards in Romania, with reference to relevant provisions from international regulations and other systems of law, as well. This topic is not fresh, being already analysed in many respects by Romanian scholars and tackled in several books, scientific papers and conferences. However, the enforcement of arbitral awards recently returned to the public's attention after the massive amendments to the Romanian Code of Civil Procedure in force, in October 2014, and the recent European Commission intervention regarding the implementation of the Arbitral award obtained in the *Micula v. Romania* case[1].

In Romania, the final, binding and enforceable nature of arbitration awards is recognised by law, courts and legal literature. However, even if, as a principle, the enforcement procedure does not allow for a substantive re-examination of the award, parties shall undertake an additional common procedure in order to enforce the arbitral award. The right to refusal to comply with the obligations set forth in the arbitral award shall be exerted only through an action of annulment for limited reasons.

As regards the recognition and enforcement of foreign arbitral awards, Romanian courts have usually denied arguments challenging their correctness. Still, the recent Arbitral Award in the *Micula v. Romania* case, which is currently under assessment by the European Commission for potential incompatibility with the internal market, may change this trend.

Therefore, due to their rising importance in the current law environment, this paper deals mostly with the legal basis and jurisprudence concerning the enforcement of foreign arbitral awards in Romania. The article addresses in particular the denial of enforcement of foreign arbitral awards, as well as the annulment of arbitral awards by Romanian courts.

2. Preliminary Step towards Enforcement: Recognition of Arbitral Awards in Romania

As a rule, recognition is prior to enforcement and it represents the official confirmation that the respective arbitral award is authentic, final and binding. Upon recognition, the award may be rendered enforceable by a domestic court of law.

Romanian law and courts generally recognize arbitral awards, whether international or domestic, and

*Assistant Lecturer, "Nicolae Titulescu" University of Bucharest; PhD Candidate, Faculty of Law, University of Bucharest (e-mail: **paulcom7@gmail.com**).

[1] The European Commission notification regarding the implementation of Arbitral award *Micula v. Romania* of 11 December 2013, published in the Official Journal of the European Union C 393/27 from 07.11.2014.

acknowledge their final, binding and enforceable nature if certain requirements are met.

In accordance with Article 1124 of the Romanian Code of Civil Procedure[2], any foreign arbitral award is recognised and may be enforced in Romania if ***(a)*** the dispute settled through arbitration may be resolved by Romanian arbitration courts and ***(b)*** the arbitral award is not contrary to public order. This legal provision refers to foreign arbitral awards[3], but domestic awards also need to comply with these rules.

These legal requirements are not only particular for the Romanian law system, but are also encountered in Article V paragraph (2) of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (1958, also known as the *"New York Convention"*), ratified by Romania[4]. Article V states that *"recognition and enforcement of an arbitral award may (...) be refused if the competent authority in the country where recognition and enforcement is sought finds that: (a) the subject matter of the difference is not capable of settlement by arbitration under the law of that country; or (b) the recognition or enforcement of the award would be contrary to the public policy of that country."* The European Convention on International Commercial Arbitration (1961), also ratified by Romania[5], has a more detailed approach, by indicating the governing law of the arbitration agreement. However, it envisages slightly the same legal requirements: according to Article VI paragraph (2) of the Convention, "*in taking a decision concerning the existence or the validity of an arbitration agreement, courts of Contracting States shall examine the validity of such agreement with reference to the capacity of the parties, under the law applicable to them, and with reference to other questions: (a) under the law to which the parties have subjected their arbitration agreement; (b) failing any indication thereon, under the law of the country in which the award is to be made; (c) failing any indication as to the law to which the parties have subjected the agreement, and where at the time when the question is raised in court the country in which the award is to be made cannot be determined, under the competent law by virtue of the rules of conflict of the court seized of the dispute. The courts may also refuse recognition of the arbitration agreement if under the law of their country the dispute is not capable of settlement by arbitration."*

In Romania, each recognition procedure begins with the examination of the arbitration agreement. More specifically, the competent court[6] examines whether parties have clearly incorporated a valid arbitration clause into their contract.

According to a widely used definition, an "arbitration agreement" is an agreement by the parties to submit to arbitration all or certain disputes which have arisen or which may arise between them in respect of a defined legal relationship, whether contractual or not[7].

2.1. The Validity of an Arbitration Agreement

There are several requirements regarding the validity of an arbitration agreement provided by national and international regulations and highlighted in the legal literature and law cases. Although these conditions may vary from one country to another, they generally refer to ***(a)*** the need for writing; ***(b)*** a defined legal relationship between parties; ***(c)*** the *"arbitrability"* of the dispute settled through arbitration and ***(d)*** the relationship of the arbitration clause with the contract into which it is incorporated[8].

---

[2] Law no. 134/2010 regarding the Code of Civil Procedure, published in the Romanian Official Journal no. 545/2012. The current Code of Civil Procedure is in force from February 15th 2013 and replaced the former Code of 1865.

[3] According to Article 1123 of the Romanian Code of Civil Procedure, foreign arbitral awards means any foreign arbitral awards issued in both domestic or international disputes taking place in a foreign state and which are not considered in Romania as domestic arbitral awards.

[4] The Convention on the Recognition and Enforcement of Foreign Arbitral Awards was concluded under the auspices of the United Nations Conference on International Commercial Arbitration held in 1958, in New York. Currently, there are 154 parties to the New York Convention. Romania ratified the Convention in 1961, by State Council Decree no. 186 issued on July 24th 1961.

[5] The European Convention on International Commercial Arbitration was concluded in Geneva, on 21 April 1961. Romania ratified this Convention by State Council Decree no. 281/1963, published in the Official Journal no. 12 issued on June 25th 1963.

[6] In accordance with Article 1125 paragraph (1) of the Romanian Code of Civil Procedure, the competent court is the tribunal located in the area where the losing party has its domicile or headquarters.

[7] This definition was provided by Article 7 of the UNCITRAL Model Law on International Commercial Arbitration from 1985, as revised in 2006. The Romanian Code of Civil Procedure (Articles 550-551) defines two forms of arbitration agreements, namely: *"clauza compromisorie"*, in English -*"compromissory clause"* or *"arbitration clause"*, under which the parties agree to submit all future disputes to arbitration and *"compromis"*, sometimes termed in English *"special agreement"*or *"agreement as to arbitration"*, under which parties agree to submit a current litigation to arbitration. Slightly similar legal definitions to the ones presented above are provided by the United Kingdom Arbitration Act of 1996 (Section 6), French Code of Civil Procedure (Article 1442), German Code of Civil Procedure (Section 1029), Dutch Code of Civil Procedure (Article 1020) etc. They are also compatible with the Italian law (see Articles 806-808 of the Italian Code of Civil Procedure), Spanish law (see Article 9 of the Spanish Law no. 60/2003 – *"Ley de Arbitraje"*) and other European legislations.

[8] For a detailed analysis on this matter, see Alan Redfern *et al.*, *Redfern and Hunter on International Arbitration* (New York: Oxford University Press, 2009), 89-106.

(a) Romanian law[9] requires that an arbitration agreement shall be in writing, in line with other international[10] and national[11] regulations.

The arbitration agreement shall be incorporated either into a document signed by parties, or in letters, telefax copies, telegrams, electronic mail or other forms of exchanging messages between parties, which ensure proof of the respective agreement by supporting documents. Also, the reference in a contract to any documents containing an arbitration clause constitutes an arbitration agreement in writing, provided that the reference is such as to make that clause part of the contract[12]. Therefore, predetermined arbitration clauses may be incorporated entirely or partially by parties into their contract *per relationem*.

When the agreement refers to a litigation concerning the transfer or establishment of an ownership right on immovable property, the written arbitration agreement shall be authenticated by a public notary[13].

Romanian courts clearly state that unwritten arbitration agreements are not valid[14].

(b) In order to be valid, an arbitration agreement shall envisage litigation arising from a "defined legal relationship" between parties, whether contractual or not[15]. Parties shall unequivocally state their intention to settle their disputes by arbitration in their agreement.

In case of a contractual relationship, all claims shall refer to the respective contract. More specifically, the dispute submitted to arbitration shall generally refer to contractual liability or be closely related to the parties' agreement, thus being governed by the law of the contract.

In the hypothesis of a tort liability, the dispute submitted to arbitration shall have a "close enough relationship" with the agreement concluded between parties[16].

(c) The dispute governed by the arbitration agreement shall be capable of settlement by arbitration[17].

Determining whether a particular litigation may be resolved by an arbitral tribunal is significantly important when it comes to recognition of foreign arbitral awards.

The issue of *"arbitrability"* may be viewed from two perspectives - subjective (*ratione personae*) and objective (*ratione materiae*)[18]. *Ratione personae*, national regulations usually forbid certain natural and legal persons (mostly states and public authorities) to submit their disputes to arbitration. *Ratione materiae*, there are particular types of disputes which are not capable of being resolved through a private dispute resolution mechanism such as arbitration.

If the recognition of the arbitral award is sought in Romania, the Romanian Code of Civil Procedure clearly determines the disputes that may be settled by domestic and international arbitration. According to Article 542 of the Romanian Code of Civil Procedure, any dispute may be resolved through arbitration, unless it is related to matters involving the civil status of the natural person, the capacity of both natural and legal persons, mandatory provisions regarding the inheritance law and family law and, respectively, inalienable rights.

Consequently, as a rule, commercial disputes may be resolved by arbitration[19].

Public authorities that carry out economic activities may also conclude arbitration agreements, unless stated otherwise by law or their constitutive or organizational documents[20]. In other words, public entities have the capacity to enter into valid arbitration agreements only if they are empowered by national or international regulations[21].

Furthermore, pursuant to Article 1111 of the Romanian Code of Civil Procedure, any patrimonial dispute may be settled through arbitration if it is related

[20] If the complainant, public authority, does not have a legal authorization to conclude an arbitration agreement, the respective clause is null and void. See the Romanian Court of International Commercial Arbitration, Arbitral Decision no. 177/July 4th 2006, published in Marin Voicu, *Arbitrajul comercial. Jurisprudență adnotată și comentată 2004-2014 (Commercial Arbitration. Case Law with Commentaries)*, (Bucharest: Universul Juridic Publishing House, 2014), 170.

[21] *E.g.* Article II paragraph (1) of the 1961 Geneva Convention on International Commercial Arbitration.

to rights which are not inalienable[22] and the law of the place where the arbitration court is located does not provide for a national court to have exclusive competence on the respective legal issue.

Consequently, as a rule, Romanian legislation allows for a dispute which involves an economic interest to be submitted to arbitration, unless it concerns inalienable rights or other exceptions expressly provided by law.

(d) The validity of the arbitration clause partially depends on the validity of the contract into which it is incorporated.

The arbitration agreement is, in principle, autonomous from the main contract[23]. According to Article 550 paragraph (2) of the Romanian Code of Civil Procedure, *"the validity of an arbitration clause is independent of the validity of the contract into which it is incorporated"*[24].

Therefore, the arbitration agreement is unaffected by the status of the main contract[25]. In other words, the fact that a contract is declared null and void by an ordinary court does not entail *ipso jure* the validity of the arbitration agreement[26]. However, parties which have concluded the main contract and, implicitly the arbitration clause shall have legal capacity to enter into the respective contract[27] and give their valid consent to submit disputes which may arise between them to an arbitral court[28].

2.2. The Binding Effects of the Arbitration Agreement

A valid arbitration agreement incorporated into a contract (*per relationem*) becomes part of the respective contract. Consequently, according to Article 1270 of the Romanian Civil Code[29], which states the principle of the binding force of contracts (*pacta sunt servanda*), there is a binding commitment by the parties to refer to arbitration.

The principle of the binding force of the arbitration agreement is clearly specified in Articles 552 and 553 of the Romanian Code of Civil Procedure. Therefore, when parties have validly agreed to resort to arbitration, national courts do not have jurisdiction to decide upon the substance of the present or future disputes covered by the respective arbitration agreement.

Domestic courts acknowledged the autonomy and binding force of arbitration agreements[30]. It was held that the validity of the arbitration clause is independent of the validity of the contract into which it was incorporated and Romanian law does not provide for requirements of "subsequent validation of the arbitration clause"[31].

International jurisprudence also recognizes the binding nature of the arbitration agreement. It has been considered that if *"parties concluded an arbitration agreement, emphasizing that resort to arbitration, although conditional, was mandatory in that nothing could be interpreted as giving the parties a choice between arbitration and litigation"*[32].

A valid arbitration agreement, thus binding for parties, has two main effects, namely: ***(a)*** it compels the parties to solve all *"arbitrable"* present or future litigation by arbitration and ***(b)*** it prevents the parties from seeking resolution for the respective litigation through domestic courts[33].

Romanian and international courts generally recognised the validity of arbitration agreements (by frequently applying the *in favorem validitatis*

---

[22] Disputes which concern inalienable rights shall not be settled by means of arbitration. See Curtea Supremă de Justiţie (*The Supreme Court of Justice*), Decision no. 537/1998, published in Corneliu Turianu and Vasile Pătulea, *Drept comercial. Culegere de practică judiciară (Commercial Law. Jurisprudence)* (Bucharest: C.H. Beck Publishing House, 2008), 26.

[23] The international jurisprudence is also in favour of the autonomy of the arbitration clause in relation to the main contract. See, for instance, the ICC International Court of Arbitration, *Meniccuci v. Mahieux* case, Decision from December 13th 1975, extract published in Jean-François Lachaume, *Jurisprudence Française Relative au Droit International (Année 1975) - French Jurisprudence on International Law (Year 1975)*, in Annuaire francais de droit international, vol. 22, 1976, 887.

[24] For a detailed presentation on the autonomy of the arbitration agreement under Romanian law, see Raluca Dinu, *Aspecte teoretice şi practice privind formarea şi autonomia convenţiei arbitrale (Practical Aspects Regarding the Formation and Autonomy of the Arbitration Agreement)*, in Revista Română de Arbitraj (Romanian Journal of Arbitration), vol. 15, no. 3/2010, 39-58.

[33] See Article 10 of the Rules of Arbitration Procedure of the Romanian Court of International Commercial Arbitration, as amended on June 5th 2014, and Articles 552-553 of the Romanian Code of Civil Procedure.

principle) and their binding effects. It was held[34] that when an ordinary court recognises the validity of an arbitration clause, the litigation arising from non-compliance with the contractual duties shall be submitted to the competent arbitration tribunal because the domestic court is not competent to settle the respective dispute. The Romanian Supreme Court of Justice considered that by concluding an arbitration agreement which stated that all disputes shall be settled by a specific arbitration court, parties committed to remove the competence of national courts concerning litigations covered by the respective agreement[35].

In another case, a national court declined its competence in favour of an arbitration court designated by parties through their agreement[36].

Therefore, the binding effects of arbitration agreements are widely recognised by law and jurisprudence.

2.3. The Final and Binding Nature of Arbitral Awards

Romanian law recognises the final and binding nature of arbitral awards, whether domestic or international, and states the principle that the arbitral award shall be voluntarily implemented by parties.

According to Article 74 paragraph (1) of the Rules of the Romanian Court of International Arbitration, *"the arbitral award is final and binding"* and *"it shall be voluntarily implemented by the party in default, promptly or within the period indicated in the award"*. This perspective is shared by the Romanian Code of Civil Procedure which states that *"the arbitral award is final and binding"* (Article 606) and becomes *"enforceable and binding since it is communicated to parties"* (Article 1120 paragraph (3)). The arbitral award may only be cancelled by means of setting aside, based on one of the reasons expressly provided by the Romanian Code of Civil Procedure (see *infra*, Section 3.4).

Romanian legal literature acknowledged the final and binding nature of arbitral awards even under the 1865 Code of Civil Procedure. It was emphasized[37] that when decisions are made by jurisdictional authorities such as an arbitral tribunal, they are governed by similar principles to the ones applicable to court decisions. Therefore, an award is not only final, but also a binding decision.

The making of the arbitral award has a number of immediate effects: it prevents the parties from seeking justice in ordinary courts; it is *res judicata* with regard to the respective dispute; it is enforceable; it may be used as evidence in other courts[38]; it terminates the arbitrators' jurisdiction over the dispute which they have resolved and it marks the point in time since the award should be voluntarily performed by the parties[39]. *Res judicata* of the arbitral award may be raised in both ordinary and arbitration courts[40].

The final and binding nature of arbitral awards is widely recognised in other domestic and international regulations, as well.

A detailed reference to the final and binding nature is provided by the Arbitration Rules of the International Chamber of Commerce from Paris (*I.C.C. Paris*), which state, in Article 34 paragraph (6), that *"every award shall be binding on the parties. By submitting the dispute to arbitration under the Rules, the parties undertake to carry out any award without delay and shall be deemed to have waived their right to any form of recourse insofar as such waiver can validly be made"*.

Also, the uniform UNCITRAL Arbitration Rules, as amended in 2013, clearly stipulate that *"the award shall be made in writing and shall be final and binding on the parties. The parties shall undertake to carry out all awards without delay"* (Article 34, paragraph 2).

Furthermore, the 1958 New York Convention on the Recognition and Enforcement of Foreign Arbitral Awards provides that *"each Contracting State shall recognize arbitral awards as binding and enforce them in accordance with the rules of procedure of the territory where the award is relied upon"* (Article III).

The arbitration laws from other European countries generally recognise the *res judicata* nature of the arbitral award[41]. Consequently, in other countries

as well, a claimant cannot bring the same claims in a different arbitration or court proceedings[42].

This outcome is legitimate because, as emphasized by the legal literature[43], *"one of the fundamental objectives of international arbitration is to provide a final, binding resolution of the parties' dispute. (...) If parties are not bound by the results of the awards made against them – either dismissing or upholding their claims or declaring their conduct wrongful or lawful – then those awards do not achieve their intended purpose and are of limited practical value"*[44].

Regarding this aspect, a leading decision pronounced by the United States Court of Appeals acknowledged the fact that *"extensive judicial review frustrates the basic purpose of arbitration which is to dispose of disputes quickly and avoid the expense and delay of extended court proceedings"*[45]. Consequently, *"the sanctity of res judicata attached to the final decision of an international tribunal"* (author's note: ordinary or arbitration court, international or domestic) became *"an essential and settled rule of international law"*[46].

Romanian courts constantly share this perspective. It was held that arbitral awards are enforceable just like any other ordinary judicial decision[47], final and binding between parties[48]. They also become *res judicata* with regard to the dispute settled by arbitration[49] and are duly recognised in Romania when all mandatory requirements concerning the validity of the arbitration agreements and arbitral proceedings provided by the Romanian law and the international conventions ratified by Romania are met[50]. Last but not least, Romanian courts established the fact that, as a principle, the recognition and enforcement procedure does not allow for a substantive re-examination of the award[51].

3. The Enforcement of Arbitral Awards in Romania

3.1. The Easiest Way to Enforce an Arbitral Award – Convince the Losing Party to Comply with the Award

Before granting permission for enforcement in the ordinary courts of law, the party who wins in an arbitration trial shall consider persuading the losing party to voluntarily perform its duties arising from the arbitral award.

The enforcement procedure is not mandatory and, before incurring legal expenses on formal enforcement procedures, it is worth trying to convince the party in default to promptly comply with the arbitral award.

The losing party may be determined to fulfil its duties by exerting commercial pressure, threatening to cease trading, negotiating a reduction in the size of the award in order to avoid the legal costs of enforcement action or applying reputational pressure. The threat of enforcement action may be sometimes enough to encourage voluntary payment[52].

A cost/benefit analysis for enforcement against informal means is always appropriate in order to ensure that the most effective steps are taken.

However, in many cases the losing party asks for a new trial. In this hypothesis, the party who won the arbitration shall file an application to render the arbitral award enforceable.

3.2. The Enforcement Procedure in Romania. Reasons for Denying Enforcement

In Romania, the enforcement procedure constitutes the second stage in civil proceedings and is the only legal way to oblige the losing party, by using the coercive force of the state, to comply with the arbitral award.

As evidenced above, arbitral awards are final and binding. However, parties need to undertake an additional common procedure in order to enforce them in Romania. Thus, the party seeking enforcement shall

[52] Stuart Dutson *et al*., *International Arbitration. A Practical Guide*, 203.

file an application at the courthouse located in the area of the debtor's or creditor's domicile or headquarters. If the creditor's domicile or headquarters is located in a foreign country, he may file the application at the courthouse located in the area of his chosen residence (see Article 640[1] Romanian Code of Civil Procedure). The relevant arbitral award and arbitration agreement shall be attached in original or certified copy to the application[53]. The procedure for rendering the arbitral awards enforceable is charged with RON 20 (see Article 10 of Government Emergency Ordinance no. 80/2013 on court fees[54]).

Problems arise when the arbitral award or agreement are made in a language other than Romanian. In this case, the party applying for enforcement of the award shall produce a certified translation of these documents into Romanian. However, foreign arbitral awards and agreements shall be "overlegalised" by both competent public authorities and diplomatic or consular agents from the country where the respective documents were issued (see Article 1092 of the Romanian Code of Civil Procedure). In a controversial case[55], a Romanian court refused to enforce an arbitral award because the document was not authenticated by the International Chamber of Commerce from Paris Secretariat, the French Ministry of Justice, the French Ministry for Foreign Affairs and the Romanian Consulate from Paris.

The court which is competent to solve the application examines the validity of the arbitral award in the council room, without summoning the parties.

Recognition or enforcement of foreign arbitral awards may be refused only for limited reasons, respectively if the party against whom it is invoked proves that ***(a)*** the parties to the arbitration agreement were incapable pursuant to the law where the arbitral award was rendered; ***(b)*** the arbitration agreement was not valid under the law governing it or under the law of the country where the arbitral award was issued; ***(c)*** the party against whom the foreign arbitral award is invoked was not given proper notice of the appointment of the arbitrator or of the arbitration proceedings or was otherwise unable to present his case; ***(d)*** the composition of the arbitral tribunal or the arbitral procedure was not in accordance with the arbitration agreement or, failing such agreement, was not in accordance with the law of the country where the arbitration took place; ***(e)*** the award deals with a difference not contemplated by or not falling within the terms of the submission to arbitration, or it contains decisions on matters beyond the scope of arbitration; ***(f)*** the foreign arbitral award has not yet become binding on the parties, or has been set aside or suspended by a competent authority of the country in which, or under the law of which, the award was made (see Article 1128 of the Romanian Code of Civil Procedure). These rules are almost similar with the requirements provided by the 1958 New York Convention in Article V.

If the court renders the arbitral award enforceable, all enforcement procedures may be carried out by Romanian judicial executors.

Frequently, the losing party demands a substantive re-examination of the arbitral award during the enforcement procedure. However, Romanian courts of enforcement only verify the validity of arbitration agreements, arbitral proceedings and arbitral awards and do not extensively review the litigation.

As pointed out in the legal literature, *"efficient arbitration implicates a tension between the rival goals of finality and fairness. Freeing awards from judicial challenge promotes finality, while enhancing calls for some measure of court supervision. The arbitration's winner looks for finality, while the loser wants careful judicial scrutiny of doubtful decisions"*[56].

In the majority of reported decisions Romanian courts have enforced arbitral awards and promoted finality, supervising only the validity of arbitration. For instance, claims regarding the interpretation and implementation of duties arising from the arbitration award[57], alleged non-designation of the subject matter and arbitrators through an arbitral clause[58], alleged violation of the right to defend[59], substantive matter of

[53] For a detailed presentation on the reasons why the documents to be rendered enforceable shall be presented in original, see Gabriel Boroi, Carla Alexandra Anghelescu, *Verificarea înscrisului în original în cadrul procedurii de învestire cu formulă executorie (The Examination of the Original Document in the Procedure for Rendering it Enforceable)*, available online on http://www.inm-lex.ro/fisiere/d_175/Investirea%20cu%20formula%20executorie_depunerea%20originalului.pdf (Consulted on March 4th 2015).

the dispute settled through arbitration[60], high amount of arbitral expenses[61] were not accepted by Romanian courts.

3.3. The Enforcement Procedures in Other European Countries

Other European countries have slightly similar rules when it comes to enforcement.

In the United Kingdom, an award made by the tribunal pursuant to an arbitration agreement may, by leave of the court, be enforced in the same manner as a judgement or order of the court to the same effect (See Section 66 of the Arbitration Act from 1996).

In France, the party who seeks coercive enforcement needs to obtain an *exequatur ordinance* (fr. - *ordonnance d'exequatur*) from the competent domestic court located in the area where the arbitral award was issued (Articles 1487 and 1516 of the French Code of Civil Procedure).

In Germany, in order to render an arbitral award enforceable, parties shall file a petition for a declaration of enforceability at the higher regional court (*Oberlandesgericht, OLG*) designated in the arbitration agreement or, if no such designation was made, at the higher regional court in the district of which the venue of the arbitration proceedings is located.

If no venue for arbitration proceedings has been arranged in Germany, the higher regional court (*OLG*) shall have jurisdiction in the district of which the respondent has his registered seat or his habitual place of abode, or in which assets of the respondent are located, or in which the object being laid claim to by the request for arbitration proceedings, or affected by the measure, is located; as an alternative, the higher regional court of Berlin (Kammergericht, KG) shall have jurisdiction.

The competent court is to order a hearing for oral argument to be held if there are grounds for reversing the arbitral award. Such grounds for reversal shall not be taken into account insofar as a petition for reversal based on these grounds has been denied, in a final and binding judgment, at the time the petition for declaration of enforceability is received.

The arbitral award, or a certified copy of the same, is to be enclosed with the petition for a declaration of enforceability of an arbitration award. The certification may also be performed by the attorney retained and authorised for the court proceedings (see Section 1064 paragraph (1) of the German Code of Civil Procedure).

Under German law, the recognition and enforcement of foreign arbitral awards is governed by the 1958 Convention on the recognition and enforcement of foreign arbitral awards. The stipulations of other treaties concerning the recognition and enforcement of arbitral awards remain unaffected.

The procedures presented above resemble the ones provided by other European domestic laws such as the Italian law[62], Spanish law[63], Dutch law[64] and Greek law[65].

Consequently, not only in Romania, but also in other countries, the enforcement of arbitral awards requires the cooperation of ordinary courts. In cases where the national courts of enforcement are not supportive, international regulations such as the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (1958), the European Convention on International Commercial Arbitration (1961), the European Convention for the Protection of Human Rights and Fundamental Freedoms (1950), the Convention on the Settlement of Investment Disputes between States and Nationals of other States (concluded in Washington, in 1965) and several bilateral investment treaties provide strong protections. These international guarantees were envisaged by the international jurisprudence[66].

3.4. The Possibility of Challenging Arbitral Awards in Romania

Under the Romanian law, the right of refusal to comply with the arbitral award may be exerted through an action of annulment before the competent court within a month since the communication of the arbitral award[67] (Article 611 paragraph (1) of the Romanian Code of Civil Procedure). This legal term is

These cases were commented by Sabine Konrad and Markus Birch, in *Non Enforcement of Arbitral Awards: Only a Pyrrhic Victory?*, published by Revista Română de Arbitraj (Romanian Arbitration Journal) no. 4/2010 (Bucharest: Rentrop&Straton Publishing House), 48-53.

[67] In the case a regulation on which the award was grounded is declared unconstitutional the legal term is of three months.

mandatory. Romanian courts often dismissed the action of annulment on grounds of lateness[68].

Romanian courts may cancel an arbitral award only for the following reasons: ***(a)*** the litigation was not capable of being settled by arbitration; ***(b)*** the tribunal resolved the dispute in the absence of an arbitration agreement or under a null and void arbitration agreement; ***(c)*** the arbitral court was not constituted in accordance with the arbitration agreement; ***(d)*** the party in default was absent during the debates before the arbitration court and the summoning procedure was not legally conducted; ***(e)*** the award was issued after the deadline of the arbitration procedure has expired, one of the parties invoked the caducity of the arbitration and both parties did not agree to continue the trial; ***(f)*** the arbitral award is beyond the scope of the arbitration agreement (*extra petita* or *ultra petita*); ***(g)*** the arbitral award does not include the sentence, reasoning, place and date when it was issued or it is not signed by all arbitrators; ***(h)*** the arbitral award violates the public order, good morals or other mandatory regulations; ***(i)*** a regulation or provision on which the arbitral award is grounded is declared unconstitutional by the Romanian Constitutional Court.

Therefore, for instance, Romanian courts may cancel arbitral awards on the following grounds: disputes concerning the status of partner in a limited liability company may not be settled by arbitration[69]; disputes referring to several legal issues, only part of them being capable of being settled by arbitration, may not be solved by arbitration courts[70]; public authorities are not allowed to conclude arbitration agreements in which they designate domestic courts of arbitration, unless expressly authorised by law[71]; the arbitration agreement is null and void, not being signed by the legal representative of the legal person[72]; the arbitration agreement was not signed by both parties[73]; the arbitration court vested to solve the litigation was changed several times during the proceedings[74]; the super arbitrator was nominated without seeking the parties' consent[75]; one of the parties was not legally summoned because the citation did not include its apartment number[76], the dispute was settled *ex aequo et bono* and the sentence is not thoroughly explained in the arbitration award[77] *etc.*

3.5. Challenging Arbitral Awards in Other European Countries

The possibility of challenging arbitral awards is also provided in other systems of law.

In the United Kingdom, arbitral awards may be challenged when the person against whom it is sought to be enforced shows that the arbitration court lacked substantive jurisdiction to make the award, on the ground of serious irregularity affecting the tribunal, the proceedings or the award[78] (Sections 67, 68 of the Arbitration Act from 1996). The court may by order confirm the award, vary the award, remit the award to the tribunal, in whole or in part, for reconsideration, set aside the award in whole or in part or declare the award to be of no effect, in whole or in part.

[78] In accordance with Section 68, Subsection (2) of the Arbitration Act from 1996, "serious irregularity means an irregularity of one or more of the following kinds which the court considers has caused or will cause substantial injustice to the applicant: (a) failure by the tribunal to act fairly and impartially as between parties, adopt procedures suitable to the circumstances of the particular case, avoiding unnecessary delay or expense and comply with other general duties provided by the law; (b) the tribunal exceeding its powers, otherwise than by exceeding its substantive jurisdiction; (c) failure by the tribunal to conduct the proceedings in accordance with the procedure agreed by the parties; (d) failure by the tribunal to deal with all the issues that were put to it; (e) any arbitral or other institution or person vested by the parties with powers in relation to the proceedings or the award exceeding its powers; (f) uncertainty or ambiguity as to the effect of the awards; (g) the award being obtained by fraud or the award or the way in which it was procured being contrary to public policy; (h) failure to comply with the requirements as to the form of the award; or (i) any irregularity in the conduct of the proceedings or in the award which is admitted by the tribunal or by any arbitral or other institution or person vested by the parties with powers in relation to the proceedings or the award.

The United Kingdom also ratified the 1958 New York Convention and incorporated the requirements for recognition and enforcement of New York Convention Awards in its legislation (see Sections 100 – 104 of the 1996 Arbitration Act).

However, even in the United Kingdom, a country with a declared pro-arbitration attitude, there are problems related to the enforcement of arbitral awards. For instance, in 2009 the English Court of Appeal refused the enforcement of a New York Convention award in *Dallah Estate and Tourism Holding Company v The Ministry of Religious Affairs, Government of Pakistan* on grounds that the arbitration agreement was not valid under the law to which the parties subjected it or, failing any indication thereon, under the law of the country where the award was made. In this case, a domestic English court contradicted an international arbitration tribunal, composed of experienced arbitrators, which considered that the arbitration agreement was valid under the French Law (the law where the award was made)[79].

In France, the party against whom the arbitral award is sought to be enforced has the possibility of challenging the respective award through an action for annulment only if ***(1)*** the arbitration court was not competent to solve the litigation, ***(2)*** it was not legally constituted or ***(3)*** did not conform to its mission; ***(4)*** the principle of contradictoriness was not observed; ***(5)*** the arbitral award is contrary to public order or ***(6)*** the arbitral award does not include the reasoning, the date when it was issued, the name of the arbitrators, their signatures or it is not held by the majority of arbitrators (Article 1492 of the French Code of Civil Procedure[80]).

The French law lists fewer grounds for cancellation than the ones provided by the Romanian law. Consequently, at least in theory, the French system of law seems to be more flexible in enforcing arbitral awards than the Romanian one.

Indeed, in practice French courts have enforced arbitral awards which, *exempli gratia*: maintained the prohibition for the franchisee to conduct similar commercial activities with other members of the franchise (limited in time and space), even if this constituted an alleged violation of the public order[81]; referred to French civil law provisions which were not raised by parties during the proceedings[82] or were challenged on grounds that the arbitration agreement was missing, if this issue was not raised during the arbitral proceedings[83].

In Germany, only a petition for reversal of the arbitration award by a court may be filed against an arbitration award.

According to Section 1059 paragraph (2) of the German Code of Civil Procedure, an arbitration award may be reversed only if: ***(a)*** the petitioner asserts, and provides reasons for his assertion, that: ***(i)*** one of the parties concluding an arbitration agreement did not have the capacity to do so pursuant to the laws that are relevant to such party personally, or that the arbitration agreement is invalid under the laws to which the parties to the dispute have subjected it, or, if the parties to the dispute have not made any determinations in this regard, that it is invalid under German law; ***(ii)*** he has not been properly notified of the appointment of an arbitral judge, or of the arbitration proceedings, or that he was unable to assert the means of challenge or defence available to him for other reasons; ***(iii)*** the arbitration award concerns a dispute not mentioned in the agreement as to arbitration, or not subject to the provisions of the arbitration clause, or that it contains decisions that are above and beyond the limits of the arbitration agreement; however, where that part of the arbitration award referring to points at issue that were subject to the arbitration proceedings can be separated from the part concerning points at issue that were not subject to the arbitration proceedings, only the latter part of the arbitration award may be reversed or ***(iv)*** the formation of the arbitral tribunal or the arbitration proceedings did not correspond to a provision of the German Code of Civil Procedure or to an admissible agreement between the parties, and that it is to be assumed that this has had an effect on the arbitration award; or ***(b)*** the court determines that: ***(i)*** the subject matter of the dispute is not eligible for arbitration under German law or ***(ii)*** the recognition or enforcement of the arbitration award will lead to a result contrary to public order.

Unless the parties to the dispute agree otherwise, the petition for reversal shall be filed with the court within a period of three months. The period begins on the day on which the petitioner has received the arbitration award.

The petition for reversal of the arbitration award may no longer be filed once a German court has declared the arbitration award to be enforceable (see Article 1059 paragraph (3) of the German Code of Civil Procedure).

Thus, the German law has a rigorous approach when it comes to cancelling arbitral awards.

The sole possibility of cancelling the arbitral awards under limited grounds is also provided by other

---

European systems of law such as the Italian law[84], Dutch law[85] and Greek law[86]. The Spanish law mentions the possibilities of annulling and revising arbitral awards, but only for limitative reasons[87].

4. Romania, Between Scylla and Charybdis – Notes on the Controversial Case of Micula v. Romania[88]

The recognition and enforcement of foreign arbitral awards requires the cooperation of both domestic and international institutions. Problems arise whenever different levels of authorities do not share the same attitude towards enforcement action.

Many of these kinds of situations are encountered in the European Union (*E.U.*).

As a rule, the E.U. does not interfere with the recognition and enforcement proceedings of arbitral awards within its Member States. Regulation No. 1215/2012 on the recognition and enforcement of judgements in civil and commercial matters by the Member States[89] is illustrative in relation to this aspect. In accordance with article 1 paragraph (2), the main European regulation related to enforcement issues does not apply to arbitration, so it does not directly refer to cases where domestic courts have to render decisions relating to arbitration proceedings or arbitral awards.

However, in accordance with article 12 from the Preamble, Regulation No. 1215/2012 does not prevent the courts of a Member State, when seized of an action in a matter in respect of which the parties have entered into an arbitration agreement, from referring the parties to arbitration, from staying or dismissing the proceedings, or from examining whether the arbitration agreement is null and void, inoperative or incapable of being performed, in accordance with their national law.

Even if this Regulation apparently allows the Member States to adopt their own policies on arbitration, there were several cases when European authorities strongly recommended national courts to deny enforcement of arbitral awards.

Many of the respective cases referred to arbitral awards which were contrary to mandatory European consumer laws.

For example, in *Mostaza Claro* case[90], the European Court of Justice (*E.C.J.*) held that the national court seized of an action for annulment of an arbitral award must determine whether the arbitration agreement is void and annul that award where that agreement contains an unfair term, even though the consumer has not pleaded that invalidity in the course of the arbitration proceedings, but only in that of the action for annulment.

In *Asturcom* case[91], the E.C.J. went even further and stated that a national court hearing an action for enforcement of an arbitral award which has become final and was made in the absence of the consumer is required, where it has available to it the legal and factual elements necessary for that task. If the arbitration clause incorporated into the contract is unfair, it is for the respective court to establish all the consequences thereby arising under national law, in order to ensure that the consumer is not bound by that clause[92].

Other alleged violations of mandatory European rules were related to competition law and especially in subject matters related to state aid. In a leading case[93], The European Court of Justice stated that a national court must refuse to apply any provision likely to conflict with the Community law, including a national provision that seeks to lay down the principle of *res judicata* in so far as the application of that provision prevents the recovery of State aid which has been found to be incompatible with the common market in a decision of the European Commission which has become final.

An interesting case concerning the alleged violation of European state aid regulations by a Member State is currently under investigation by the European Commission.

The *Micula v. Romania* case arises from Romania's introduction of certain economic incentives for the development of disfavoured regions of Romania and their subsequent revocation in the

context of Romania's accession to the European Union in 2007.

Specifically, in 1998, Romania enacted Emergency Government Ordinance 24/1998, which made available certain tax incentives, including customs duties exemptions to investors in certain disfavoured regions who met the requirements set out in the respective Ordinance and its implementing legislation.

Relying on those incentives and expecting that they would be maintained for a 10-year period, the claimants made substantial investments in a disfavoured region located in north-western Romania.

In order to meet the criteria for accession to the European Union, Romania needed to eliminate all forms of state aid in national legislation incompatible with the *acquis communautaire*. Therefore, in 2004, Romania revoked most of the incentives provided by Emergency Government Ordinance 24/1998, including certain facilities granted to the claimants, ending the part of the incentive program early.

The claimants, of Swedish nationality, filed a request for arbitration on grounds that Romania violated the Sweden – Romania Bilateral Investment Treaty, which is designed to protect Swedish investors from unfair or inequitable treatment by the Romanian government.

Romania's primary defence was that the respective incentives were not compatible with the European Union law and the amendment of Emergency Government Ordinance 24/1998 was to comply with European Union accession and to address the European Commission's concerns over state aid. Romania's position was strongly supported by the European Commission, which intervened in the case as *amicus curiae*, on behalf of Romania.

However, the ICSID Arbitral Court awarded the claimants and forced Romania to pay them a considerable amount of damages.

As regards the enforcement of the arbitral award, the Tribunal referred to Articles 53 and 54 of the ICSID Convention which state that the award shall be binding on the parties and each Member State shall recognize an award rendered pursuant to the Convention as binding and enforce the pecuniary obligations imposed by that award within its territories as if it were a final judgment of a national court.

Following the issuance of the arbitral award, the European Commission tried to prevent Romania from honouring its payment obligations, arguing that the award is unenforceable within the European Union. The European Commission pointed out that the implementation of the arbitral award would constitute illegal state aid, which may create an economic advantage not otherwise available on the market for the claimants. Still, Romania partially enforced the award.

In May 2014, the European Commission issued a suspension injunction which enjoined Romania to immediately suspend any action which may lead to the execution or implementation of the arbitral award. The suspension injunction was directly binding for the Romanian domestic courts.

On October 1st 2014, the European Commission decided to initiate a formal investigation procedure on the case. Following the respective investigation, the European Commission concluded that compensation paid by Romania for the abolished investment aid scheme breaches EU state aid rules and the beneficiaries have to pay back all amounts already received.

However, Romania is currently between Scylla and Charybdis because the European Union is not the only authority to be considered in this case.

The role of the World Bank is not to be underestimated when enforcing ICSID arbitral awards because the International Centre for Settlement of Investment Disputes is a member of the World Bank Group[94].

The World Bank often reminded the member states where the ICSID arbitral awards were to be enforced of the importance of prompt payment. The international credit institution may also refrain from making new loans to a member country in certain extreme cases involving expropriation or external debt issues[95].

Therefore, the World Bank may pressure its member states to enforce ICSID arbitral awards.

Consequently, Romania courts have a delicate task when it comes to choosing between enforcing the arbitral award in accordance with domestic rules, ICSID regulations and the bilateral investment treaty between Romania and Sweden and, respectively, denying enforcement in order to comply with the public order of the European Union.

The *Micula case* may set a precedent on refusing the enforcement in Romania of certain arbitral awards that meet the validity requirements according to the domestic law, but are contrary to European regulations. This solution might undermine the Romanian people's trust in arbitration, as an alternative dispute resolution mechanism.

Therefore, in the future, problems related to the recognition and enforcement of arbitral awards tend to become more and more complex and controversial.

5. Conclusions

Arbitration has become an accepted dispute resolution mechanism in Romania over the last

[94] Other members of the World Bank Group are the International Bank of Reconstruction and Development, the International Finance Corporation, the International Development Association and the Multilateral Investment Guarantee Agency.

[95] See Antonio R. Parra, *The Enforcement of ICSID Arbitral Awards*, paper presented at the 24th Joint Colloquium on International Arbitration held in Paris on November 16th 2007, Session on Specific Aspects of State-Party Arbitration. The article is available online in PDF version on *http://www.arbitration-icca.org/*.

decades, due to its indisputable advantages. Among its benefits is the final and binding nature of arbitral awards.

Romanian law and courts generally acknowledge the finality and enforceability of arbitration awards, whether international or domestic. However, in recent years, there were several exceptions to the rule. An important exception, which could set a precedent for denying enforcement, is the *Micula case* (presented in section 4).

This might lead to the conclusion that enforcing arbitral awards in Romania still represents a challenge, even if, at least in theory, the Romanian law is pro-arbitration.

One way of dealing with the risk of non-enforcement is to persuade the losing party to voluntarily perform its duties arising from the arbitral award. This goal could be achieved in many ways – *e.g.* by exerting commercial pressure, negotiating a reduction in the size of the award, applying reputational pressure *etc.*

However, in many cases the losing party seeks a substantial re-examination of the award before the ordinary courts. In this case, the only option remaining for the winning party is to file a request to render the arbitral award enforceable. This procedure may be costly and time-consuming, especially when you need to enforce an arbitral award issued by a foreign court of arbitration.

As a rule, Romanian courts examine the validity of arbitration agreements, proceedings and awards in order to render them enforceable. In many cases this additional procedure is a mere formality.

After granting enforcement, the right of refusal to comply with the arbitral award may be exerted only through an action of annulment for limited reasons, before the competent court and within a month since the communication of the arbitral award. The grounds for annulment are pretty diverse and may be sometimes interpretable. Nevertheless, Romanian courts have rarely cancelled arbitral awards.

Romanian regulations and case law on recognition and enforcement of arbitral awards resemble other European domestic arbitration laws and jurisprudence. Most European countries ratified international conventions meant to harmonize arbitration and court-related procedures. Also, many European systems of law recognise the final and binding nature of arbitral awards and are in favour of enforcement.

Still, national regulations are not entirely uniform when it comes to enforcement procedures and validity requirements. Future research in this field may lead to interesting results, by determining the European countries with the most favourable attitude towards arbitration.

Also, an extensive review on the European case law related to the enforcement of arbitral awards could provide valuable insights.

INSURANCE OF ASSETS REGULATED BY SPECIAL LAWS

Matei DĂNILĂ*

Abstract

Within the introduction the paper analyzes the main legal hypotheses which may bring into question the binding nature of the insurance.

The provisions of the Law no. 136/1995 (Art. 3) provide that, the legislator understands that, it is of binding nature the insurance that materializes through an agreement in which the rights and obligations of the parties shall be established by law.

Since the parties are "forced" by the law to conclude the respective agreement, the law also establishing the content of the legal relationship of obligations as well as the sanction for the non-conclusion of the agreement by the potential insured and by the insurer, the agreement is classified as a forced agreement.

In the legal field regarding assets insurance such an example is the mandatory home insurance against earthquakes, landslides and floods.

However, the legislation also comprises provisions that lead to the mandatory conclusion of an insurance agreement without establishing, by the law, the rights and obligations of the parties.

In such cases, the relationships between the parties are going to be established when the agreement is concluded, according to each insurer, based on certain (adhesion) agreements. For the insurer these insurances are always optional, without sanctioning the refusal of the conclusion. The mandatory conclusion relates only to the insured and exclusively regards the conclusion of the insurance agreement, which maintains the nature of the adhesion agreement and does not acquire the nature of a forced agreement.

The article analyzes the main special regulations regarding the mandatory insurances of assets, insisting on the mandatory home insurance against earthquakes, landslides and floods, the property insurance subject to mortgage loan agreements and the insurance of assets subject to leasing contracts.

The final part of each section presents the conclusions regarding the type of insurance analyzed.

Keywords: *mandatory insurance, home, leasing, mortgage loan.*

I. Introduction

The main normative acts governing the insurance field are Law no. 136/1995 on insurance and reinsurance in Romania, as subsequently supplemented and amended, Law no. 32/2000 on insurance companies and insurance supervision and the new Civil Code (Law no. 287/2009 on the Civil Code).

The insurance activity is also regulated by secondary legislation. We take into consideration the norms issued by the Insurance Supervisory Commission of Romania ("I.S.C.") before its duties were taken over by the Financial Supervisory Authority ("F.S.A.") and the norms subsequently issued by the new supervisory and control authority[1].

Pursuant to art. 192 of Law no. 71/2011 for the implementation of Law no. 287/2009 on the Civil Code, art. 9-47 of Law no. 136/1995 were abolished, and, thus, the main rules regarding the insurance contract and various forms of insurance are presented in the new Civil Code.

As a result of the changes caused by the entry into force of the new Civil Code, the application of the Law no. 136/1995 was substantially reduced, the normative act evoked currently regulates the compulsory motor third party liability insurance for damages resulting from road accidents.

The assets insurance contract is regulated by the Civil Code, in Section II of the insurance contract, entitled "assets insurance" (art. 2214-2220).

Referring to the categories of assets that may be subject to an insurance contract, according to an opinion[2], only the traded goods can be insured, although, in certain cases, there is also accepted the insurance of assets that are temporary unassignable.

Furthermore, there are insurable the assets that are movable by their nature, the movables by anticipation, the assets that are immovable by their nature as well as the immovables by destination. It is

* PhD Candidate, Faculty of Law, "Nicolae Titulescu" Univeristy of Bucharest (**mstdanila@gmail.com**).

[1] The Financial Supervisory Authority (F.S.A.) was established by G.E.O. no. 93/2012 on the establishment, organization and functioning of the Financial Supervisory Authority published in the Official Gazette, Part 1, no. 874 of 21st of December 2012 as a self-financed, independent, autonomous, specialized, administrative authority, with legal personality, that performs its duties by taking over and reorganizing all duties and prerogatives of the National Securities Commission (N.S.C.), the Insurance Supervisory Commission (I.S.C.) and the Private Pension System Supervisory Commission (P.P.S.S.C.);

[2] Irina Sferdian, „Asigurări. Privire specială asupra contractului de asigurare din perspectiva Codului Civil", Editura C.H.Beck, Bucureşti, 2013, page 166

possible to insure both specific assets, individually determined, and also generic assets, even the ones not individualized (e.g. the goods from a warehouse, unspecified, within the limits of an insured amount), provided that the individualization is possible when the insured risk occurs.

The consumable goods and the durable goods can be equally insured, specifying that, often, in the insurance contract, in case of some of the consumable goods, exclusions from payment of the compensation are found. (e.g. fuel from the tank).

Although productive goods can be insured, the insurance of fruits requires, in most cases, a special clause and a supplement of the insurance premium. The same situation may occur in case of the insurance of incidental goods. Thus, also basically the insurance of the main goods extends to incidental goods, in order to ensure the latter, one may claim to supplement the insurance premium that is owed.

The doctrine has also shown that certain assets and social values can not be subject to insurance, in this regard there are listed the assets resulted from committing a crime, fines of any kind, illegal activities.[3]

There are also excluded from insurance (i) the assets that are no longer of economical importance or the ones that can no longer be used as intended or due to the degradation, (ii), the assets that no longer meet certain requirements provided by the normative acts and (iii) the assets that, by their own characteristics or because of the place where they are located are not at risk or, on the contrary, are subject to an excessive risk.[4]

In this context, of the presentation of the categories of insurable assets, we specify that there are assets for which it is mandatory to conclude the insurance. Thus, we identified, in the specific legislation of certain activity fields, provisions that refer to the insurance of assets and that establish the obligation to conclude an insurance.

From the normative provisions analyzed one can draw the conclusion that, in certain cases, the insurance of assets is mandatory. Before proceeding to the presentation of the main aspects of interest regarding the insurance of assets regulated by special laws, we consider that it requires some comments and distinctions regarding the mandatory nature of certain insurances of assets, as they are regulated in the analyzed normative acts.

In terms of insurance classification, it shows great interest the classification of art. 1 of Law no. 136/1995, as subsequently supplemented and amended, that "in Romania, the insurance activity is carried out as life insurance and general insurance, mandatory or optional, under the law." Therefore, according to legal provision quoted, the insurances can be mandatory or optional.

In accordance with the provisions of the Law no. 136/1995, for the optional insurance, the relations between the insured and the insurer, as well as the rights and obligations of each party shall be established by the insurance contract, (art. 2) while, for the mandatory insurance, the relations between the insurer and the insured, the rights and obligations of each party are established by the law.

The determining criteria for the assessment of the mandatory nature of an insurance are, on the one hand, the source of the obligation to conclude the insurance, which is broadly represented by the law, and, on the other hand, the legal relationship that arises between the insured and the insurer by the contract concluded. The first criterion distinguishes the optional from the mandatory insurance, and the second criterion, distinguishes between the types of mandatory insurance [5].

As an example, the Law no. 136/1995 on insurance and reinsurance in Romania regulates as mandatory insurance, the civil liability insurance for vehicles owners, the mandatory nature of the insurance arising from the law. For the application of the Law no. 136/1995, periodically, there are issued norms that regulate the content of the mandatory civil liability insurance contract, the latest normative act issued in this respect was the Financial Supervisory Authority Norm no. 23/2014 on compulsory motor third party liability insurance for damages resulting from road accidents [6] (MTPL).

Also, the Law no. 260/2008 on the mandatory home insurance against earthquakes, landslides and floods [7], provides, even from the title, the mandatory nature of the insurance. Also, norms are issued for the application of this law. We refer to F.S.A. Norm no. 7/2013 on the form and clauses of the mandatory home insurance contract[8].

From the provisions of art. 3 of Law no. 136/1995 it comes out that, in the legislator's sense, the insurance of a mandatory nature, is the one that takes shape of a contract where the rights and obligations of the parties are provided by the law. Because the parties are "forced' by law to conclude the respective contract, the law also establishing the binding legal relationship as well as the sanction of

non-conclusion of the contract by the possible insured and by the insurer, the contract being classified as a forced contract.

There are legislative provisions that lead to the obligation to conclude an insurance contract but, however, without establishing, by law, the rights and obligations of the parties. In these cases, the relationships between the parties shall be established in the contract, depending on each insurer, based on certain contracts (adhesion contracts).

In this regard we mention the professional liability insurances (lawyer, notary, doctor, accountant, etc.), the conclusion of which is mandatory, being required by the normative act that regulates each of those professions separately.

Also, regarding the insurance of assets the legal framework that establishes the binding nature of insurance is met, exclusive obligation of the insured.

Taking into consideration the obligation stated by the provisions of art. 2060 paragraph 2 of the Civil Code binding the consignee to conclude an insurance contract for the assets received as consignment [9], the obligation to ensure the cultural movable assets temporary exported provided by the provisions of art.3 of G.O. no. 44/2000 [10], regarding certain measures on the temporary exported cultural movable assets [11], the obligation provided by G.O. no. 51/1997 binding the financer or the lessor in a leasing contract, to conclude an insurance for the leased assets or the obligation to ensure the assets acquired by mortgage loans, during the contracts, the obligation provided by art. 16 of Law no. 190/1999 on the mortgage loan for real estate investments.

Also, by Law no. 15/1998 on optional insurances of assets, people and civil liability within the Ministry of National Defence, Ministry of Interior, Romanian Intelligence Service, Foreign Intelligence Service, Protection and Guard Service, Special Telecommunications Service and Ministry of Justice – General Directorate of Penitentiaries, republished[12], there has been provided that these institutions conclude optional insurance contracts for the provided assets, in case of damage, destruction or other events.

These insurances can not be considered mandatory under the Law no. 136/1995 because the rights and obligations of each party are not established by law, not being forced insurance contracts, but they may be considered mandatory regarding the insured, respectively the person that has the obligation to conclude the insurance, the obligation established by a normative act set forth for the regulation of the profession (notary, lawyer, doctor, etc.) or an activity (leasing, bank lending activity, etc).

In the case of the latter, the insured has the obligation to conclude the insurance, as mentioned above, and as comes out from the law. Failure to comply with this obligation is sanctioned, for example, with the suspension of the professional activity that the person carries out, with the impossibility to conclude service contracts, or with the termination of the concluded contracts for non-execution of the contractual obligations, among which the conclusion of the insurance. As shown in the doctrine[13], these insurances are always optional for the insurer, the refusal to conclude these insurances is not being sanctioned. This type of insurances is called "pseudo mandatory insurance"[14]

In conclusion, if in case of mandatory insurances as the compulsory motor third party liability insurance for damages resulting from road accidents (MTPL) or the mandatory home insurance against earthquakes, landslides and floods, both the conclusion and the form, respectively the content of the insurance contract are enforced by the law, in case of "pseudo mandatory insurance", the obligation lies only for the insured and regards exclusively the conclusion of the insurance contract, that keeps the adhesion contract nature and does not acquire the forced contract nature.

We, hereinafter, present the insurances of assets regulated by special laws, trying to approach the main aspects of interest with regard to (I) the mandatory home insurance against earthquakes, landslides and flood, (II) the property insurance subject to mortgage loan agreements and (III) the insurance of assets subject to leasing contracts.

II. Mandatory home insurance

1. Legislative framework

Home insurance against hazards became mandatory with the coming into force of Law 260/2008 on the obligation to take out insurance for residential buildings against risk of earthquakes, landslides and floods, published in the National Gazette of Romania (NGR), No. 757 of November 11,

[9] In accordance with the provisions of art. 2060 paragraph 2 Civil Code "the consignee shall ensure the assets to the value established by the consignment contract or, in its absence, to the price estimate on the consignment date. He will be held liable to the consignor for the damage or loss of the assets for reasons of force majeure or due to a third party, if they were not ensured on the consignment date or if the insurance expired and was not renewed or if the insurance company was not agreed by the consignor. The consignee is required to pay regularly the insurance premiums.";

[10] According to art. 3 paragraph 2 of G.O. no. 44/2000, "the temporary export may be approved only in special cases and only for movable assets classified as Thesaurus, National Commission for Museums and Collections without conditioning it by the existence of an insurance contract for the asset in question, as provided in paragraph (2)";

[11] G.O. no. 44/30.01.2000 was published in the Official Gazette no. 788 of 12.12.2001, was approved and amended by Law no. 143/2001 and republished under art. II of the Law no. 143/2001, published in Official Gazette of Romania no. 171 of 4th April 2001, Part I.

[12] Official Gazette no. 200 of 30th of April 2001;

[13] Irina Sferdian, Contractul de asigurare de bunuri", Editura Lumina Lex, Bucureşti, 2004, page 25;

[14] Irina Sferdian, op cit, page 25, also see Cosmin Iliescu, "Contractul de asigurare de bunuri în Romania", Ed All Beck, Bucureşti, 1999, pages 106-108;

2008, subsequently amended and completed both by Law no. 243/2013, published in the NGR, Part 1, No. 456/24.07.2013.

We specify that at the time this document was drawn up, the Chamber of Deputies of the Romanian Parliament, as decisional Chamber, approved a draft of a law regarding the amendment and the supplementation of the Law no. 260/2008[15], the normative act being forwarded for promulgation to the President of Romania, so that, to be subsequently published in the Official Gazette of Romania. On 23 of april 2015 the law was rejected for promulgation by the President of Romania, who mentioned, in the reexamination request which was sended to the Parliament, the fact that the law has to be improved in certain aspects.

In order to turn mandatory home insurance into a practical instrument, the legislator has enacted a set of norms, initially designed by the Romanian Insurance Supervisory Commission ("I.S.C."), and subsequently by the Financial Supervisory Authority ("F.S.A."). These technical norms refer to issues such as authorization of insurance companies to offer mandatory home insurance policies in case of earthquakes, landslides or floods[16], to the form of and clauses in the mandatory home insurance contract[17], to the ways and methods to ascertain, valuate and compensate the damage incurred[18].

In addition to this, the Pool for Insurance against Natural Disasters ("P.I.A.N.D.") was set up in September 2009, when the Certificate of Incorporation was signed. Its activity is regulated by P.I.A.N.D.[19] norms drawn up successively by I.S.C. and F.S.A.

Under Law no. 260/2008, P.I.A.N.D. is the only company authorized to issue mandatory home insurance policies against natural hazards, which was set up through the association of companies authorized to issue such policies.

The organization and operation of P.I.A.N.D, the conditions and documents required by F.S.A. to authorize P.I.A.N.D. to offer home insurance coverage, as well as the conditions to be met by shareholders and by officials in P.I.A.N.D are regulated at present by the F.S.A. Norm no.6/2013, published in the National Gazette of Romania no. 521/20.08.2013.

The matter of mandatory home insurance coverage against hazards caused by natural phenomena is not dealt with in EU legislation, but this protection mechanism exists in seven European states, which apply to mandatory home insurance, namely, Denmark, Holland, France, Belgium, Switzerland, Norway and Spain.

2. The scope of the insurance

In keeping with Law no. 260/2008 any residential building can be covered by insurance.

Natural persons or legal entities have the obligation to take out insurance coverage if they own various types of property (dwellings). The law mentions private houses, state owned flats, official temporary housing, etc.

As far as the term "residence" is concerned, the legislator refers to the provisions of Art.2 of Law no. 144/1996, taken in conjunction with the provisions in Art. 3, paragraph 1 of F.S.A. Norm no.7/2013[20].

In the case of condominiums, the term "dwelling" refers both to spaces which are exclusive property as well as to the appurtenant quota of the joint ownership over the commonly used spaces and construction elements. (art 1 of Law no. 260/2008).

In the case of condominiums, a separate insurance policy must be taken out for each dwelling.

The insurance policy does not cover outbuildings, extensions, utilities, which are not structurally connected to the building insured, as well as the possessions therein (art.3, paragraph 7 of the law amending Law no. 260/2008)

The law distinguishes between type A and type B constructions. Type A buildings have the structural strength made of reinforced concrete, metal or wood, or outer walls made of stone, burnt bricks and/or any other materials having undergone chemical and/or thermal treatment. Type B buildings have their outer walls made of loam brick or any other materials which have not been subjected to any chemical and/or thermal treatment.

---

[15] The Chamber of Deputies passed by final vote on 25th of March 2015, "The draft of the Law regarding the amendment and supplementation of the Law no. 260/2008 on the mandatory home insurance against earthquakes, landslides and floods (PL-x411/2012) - ordinary law (291 votes for, 3 abstentions);

[16] Norms regarding the authorization of insurers to issue mandatory home insurance policies for earthquakes, landslides or, floods, enforced through FSA Order no.23/2008, published in the National Gazette of Romania (NGR) part 1 , no. 3 of 05.01.2009, with amendments brought by FSA Order no.19/2009, published in NGR a no.621/16.09.2009;

[17] The norms and clauses of the mandatory home insurance contract, enforced by F.S.A. Order no. 5/2009, published in NGR no.320/14.05.2009, amended by F.S.A. Order no.10/2010, NGR , part 1.no.538/02.08.2010 which represented the initial legal regulations were quashed , by FSA Norm no.7/2013 concerning the form and clauses contained in the mandatory home insurance contract published in NGR, part 1 no. 521 of 29/08/2013;

[18] Norms regarding the examination, valuation and compensation for damages for mandatory home insurance policies (MHIP) were enforced by F.S.A. Norm no. 7, published in NGR, no.369/02.06.2009.

[19] IPNH Norms, applied by F.S.A. Order no. 17/2009, published in NGR No.691/14.10.2009, amended by F.S.A. Order no 20.2009, published in NGR no. 691/14.10.2009 , which constituted the initial legal regulations were quashed by F.S.A. Norm no.6/2013- IPNH published in NGR, part 1, no.521/20.08.2013

[20] Art.3. Paragraph 1 of F.S.A. no.7/2013 states that "dwellings are considered to be those constructions destined for permanent or temporary living, which are made up of one or several rooms used for habitation, fittings an fixtures which are integral part of the construction used as dwelling, with the structural frame and walls presented in Law no. 260/2008, republished, city subsequent amendments and additions.

The law does not make either the features of the area the dwelling lies in or the state of the building, a prerequisite condition for taking out insurance coverage, as the law is primarily meant to provide social protection[21]. In the case of dwellings lying in areas with a high risk of natural hazards, or of buildings in an advanced state of disrepair, or raised disregarding legal regulations in force, the question arises whether in such cases the consequences of a natural disaster can be said to be "uncertain " and hence, if they can be subject to mandatory home insurance. One may wonder, with justification, if this is a matter of insurance or of social solidarity[22].

The law does not provide for insurance coverage of property irrespective of its condition. The legislator expressively states that the unsatisfactory state of a building can cause the policy holder to forfeit his right to indemnification.

The following excluding alternatives have been taken into account: the collapse of the building is exclusively due to construction defects, even if related to one of the risks insured (art. 23 paragraph 2, point 2.3 of F.S.A. Norm no.17/2013); the damage was produced to a dwelling built in an unauthorized area (art 24, paragraph 1 of F.S.A. Norm no. 7/2013) or in case the insurance beneficiaries/ the insured have built, extended or modified a dwelling in the absence of a building permit, legally issued, or have not fully complied with its specifications, thus affecting its structural strength and consequently, enhancing the exposure to a a risk legally covered by insurance. (Art.24, paragraph 2 of the F.S.A. Norm no. 7/2013).

The amendments brought to Law no. 20/2008(the respective bill has been approved by the Chamber of Deputies and is pending promulgation by the President of Romania) have established that dwellings which are part of buildings classified as presenting Class 1 seismic risk cannot be insured against hazards before they have been seismically refitted.

Insurance practice has been confronted with the question whether parish houses fall within the scope of Law no. 260/2008 or not.

The provisions of art. 170, paragraph 4 of Government Ordinance no. 53, referring to the Statute Governing the Romanian Orthodox Church (R.O.C.) places “parish houses” within the category of “Church Property”, i.e. property used in the practice of the religious cult. According to a distinguished prelate of the Romanian Orthodox Church this destination does not allow “parish houses” to fall within the scope of Law no. 260/2008[23].

One must also consider, for a correct classification, the provisions of the Statute Governing the Romanian Orthodox Church recognized as such by Government Decision no. 53 of 16.01.2008, on the Statute for the organization and operation of the Romanian Orthodox Church, published in the Official Gazette of Romania, Part 1, no. 50/22.01.2008, according to which "general, mandatory norms regarding the insurance of church property belonging to the Romanian Patriarchate are subject to the approval of the Holy Synod". (art. 170 paragraph 8).

In our opinion, in keeping with the provisions of art.2, letter a) of Law 114/1996, taking out insurance coverage is mandatory if the parish house " meets the living conditions necessary for an individual or a family" (art. 2 , letter a) of Law 146/1996). We think that the possibility conferred by the legislator on the Romanian Orthodox Church to adopt general and mandatory norms regarding the mandatory insurance of its own property cannot lead to disregard for legal norms on mandatory insurance of dwellings passed by the Romanian State.

Finally, it is worth also pointing out that, the law amending Law no. 260/2008 does not allow insurance companies which are authorized to issue insurance policies for natural hazards to offer optional insurance policies to owners who have not first taken out the mandatory home insurance policy.

3. The parties of the insurance contract

The Insurer. In mandatory home insurance policies, the insurer is P.I.A.N.D., which is an insurance-reinsurance company, set up as a private legal entity, and not by the different insurance companies which through association go under the name P.I.A.N.D., the latter only acting as intermediaries in closing mandatory home insurance policies.

P.I.A.N.D. is the sole company authorized to issue mandatory home insurance policies.

In keeping with the provisions of art. 7, para. 1 of Law no. 260/200, the insurance contract is concluded in written form between P.I.A.N.D. and the homeowner, mediated by the insurance companies authorized to cover natural hazards risks, by derogation from the provisions of Law no.32/2000, subsequently amended and completed.

Therefore, the insurers do not incur the risk themselves, they only transfer it to P.I.A.N.D., in their capacity as intermediaries, in keeping with the provisions of art. 12 and 13 of F.S.A. Norm no.7/2013. The insured pays the premium to the insurer, who in his turn passes it on to PA.I.N.D., as required by the provisions of art.7, paragraph 1 and 4 of Law no. 260/2008, as amended by Law no. 243/2013.

[21] Corneliu Bente, "Obligativitatea asigurării locuinţelor", The Journal of the Faculty of Economics Science, Analele Universitatii din Oradea, Stiinte Economice, vol II, 2006, p.532, http//steconomice.uoradea.ro/Analele/en.volum-2006-finance-accounting-and-banks.html;

[22] "Asigurarea Locuinţelor-o noua asigurare obligatorie.Intre experienta si experiment", author Mirela Carmen Dobrila in Analele Stiintifice ale Universitatii "Alexandru Ioan Cuza" Iasi, Tomul LVIV, Stiinte Juridice, 2010.

[23] Fr. Mihai Valica: *„Asigurarea obligatorie a patrimoniului bisericesc şi nu numai-un abuz o jignire”* , article from 07.08.2011 published on the website „Apologeticum”; article that can be read on the website www.apologeticum.ro;

The Insured. Pursuant to F.S.A. Norm no. 7/2013, the insured can be any natural person or legal entity having an insurable interest in the dwelling which is the subject of the mandatory home insurance policy, that is, the owner, building caretaker, lessor or the legal representative of the former who upon closing a mandatory home insurance contract with P.I.A.N.D. commits to pay the obligatory premium to P.I.A.N.D.

The insurance policy can include a beneficiary of the insurance, designated by the owner to receive the indemnification for the damage incurred by the dwelling insured.

Under the law, house owners whose title to a property is recorded with the tax authorities (art. 3, paragraph 1 of law 260/2008) have the obligation to take out insurance for their property. Persons or authorities designated as caretakers of the respective property incur the same obligation (art.3, paragraph 2).

Regarding the insured, according to the doctrine, it is the financer-lessor[24] who is under the obligation to close an insurance contract in cases of financial or operational leasing.

As regards the property right dismemberment (usufruct, habitation and easement) it is the obligation of the bare owner or of the owner to take out insurance for the usufruct and the habitation rights, since he holds over the legal provision for the building, keeping the capacity of owner thereof. In case of the easement right, this obligation belongs to the holder of the superficies right in capacity of construction owner, in case of life annuity contracts this obligation belongs to the annuity debtor in capacity of home owner, and for the caretaking contract the obligation for the insurance's conclusion belongs to debtor of the caretaking obligation[25].

In cases in which the owner of the property changes, the liability of P.I.A.N.D. continues until the expiry of the validity of the insurance policy covering the dwelling (art.17, paragraph 2 of F.S.A. and Norm no.7/2013). The former owner must hand over the insurance policy to the next owner, who has the obligation to notify the insurer that the title to the property is now held by a different person. In this way the validity of the insurance contract is maintained ope legis, with no need for a new clause.

4. The form and content of the mandatory home insurance contract

There are express legal provisions with reference to the written form and the clauses of the mandatory home insurance contract.

Both art. 7 of the Law no. 260/2008[26], republished, and the provisions of the F.S.A. Norm no. 7 /2013 (art. 9) govern aspects regarding the (written) form of the contract, the content of the insurance contract and of the mandatory home insurance policy, the conditions that the insurance must fulfill in order to ensure its validity.

Under the current law the mandatory home insurance policy is considered to be valid if the following conditions are met cumulatively: a) the insurance policy covers the building for residential use for the mandatory amount; b) the insurance policy covers for the risks stipulated in art.6; c) the insured has paid the mandatory premium (art. 8 of Law 260/2008, republished in 2013)

The written form of the contract is required ad probationem, not ad validitatem and it ensures compliance with regulations regarding the content of the insurance contract, as laid out in art.2201/civil code, which lists the elements the insurance policy[27] must mention.

By the recent amendments to the Law no. 260/2008 the proof of the mandatory home insurance contract is carried out only with the mandatory home insurance policy, eliminating the provision from the previous regulation according to which the proof was made both by mandatory home insurance policy and by insurance certificate.

The insured value is the maximum liability assumed by IPNH to underwrite the risks listed in art.2 letter b) of Law 260/2008, subsequently amended and completed, for each type of dwelling insured, joint or several, irrespective of the number of covered hazards produced during the validity of the insurance contract. (art. 25 paragraph 1 of the F.S.A. Norm no.7/2013).

In keeping with the provisions of art 26, paragraph 1 and 2 of F.S.A. Norm no. 7/2013, for type A dwellings the value insured is the equivalent in RON of 20,000 Euros, at the exchange rate set by the National Bank of Romania on the day the mandatory home insurance contract is concluded. For type B dwellings the value insured is the equivalent in RON of 10,000 Euros.

Each time property damage occurs, the insured value diminishes, in keeping with the amount paid as compensation. The policy holder can increase the

[26] Art. 7(1) Mandatory home insurance contract is concluded in writing either directly between P.I.A.N.D. and the owner of the house, or by insurance companies authorized to practice disaster risk, as a derogation from the provisions of Law no. 32/2000, as amended and supplemented, and must meet at least the following conditions;

[27] For aspects regarding the insurance contract probation and form see V. Nemeș, Dreptul Asigurărilor, Ed a 4-a Editura Hamangiu 2012, page 188;

value insured to the initial amount by paying a higher premium.

If the amount of the indemnification received for one or several hazards covered reaches the compensation limit, the owner is obliged to close a new mandatory home insurance contract, after carrying out all the repair work necessary to make the dwelling habitable again.

5. Insured risks

The insured risk is a future contingency, possible but uncertain, provided for in the contract of insurance, the insurance agreement being concluded against harmful consequences that may occur as a result of the occurrence of such risks.

The risks that can be subscribed by concluding the mandatory home insurance are: earthquakes, landslides and flooding.

Therefore the insurance contract *does not cover all the risks* incurred by the property insured, that is the building, the dwelling, respectively.

In certain cases (for which no details or examples are given) the law amending Law no. 260/2008 (PL-x411/2012, at present pending promulgation by the President of Romania), provides that the Pool for Insurance against Natural Disasters ("P.I.A.N.D.") can condition the conclusion of **the insurance policy against natural disasters** (mandatory home insurance policy) on a **risk inspection**.

The risk inspection shall be carried out according to the norms of the Financial Supervisory Authority (F.S.A.), and its costs shall be borne by the insurance – reinsurance company P.I.A.N.D.

According to art.6 of Law no. 260/2008, risks for which it is mandatory to take out insurance against natural hazards in fact represent the damage caused to buildings for residential use as a direct or indirect effect produced by any form of manifestation of a hazard.

The deficiencies in the formulation of art. 6 of Law no. 26/2008 require clarification since legal doctrine correctly points out the confusion between insurable risks and damage[28], due to the legislator's lack of complete clarity.

The provisions of art.2, paragraph 1, b) of Law no. 260/2008 limit natural hazards to earthquakes, landslides and flooding, while for other risks additional optional insurance is required.

Consequently, mandatory home insurance can be taken out alongside an optional insurance policy as they cover distinct risks and types of damage. It should be mentioned that in case of damage, compensation is paid primarily by virtue of the mandatory home insurance policy, while the remaining indemnification due is paid based on the optional policy[29].

Through its effect, Law no. 260/2008 makes it possible for damage produced as an indirect consequence of insured hazards to be covered by insurance, as well.

Thus, art. 20 paragraph 2 of the Financial Supervisory Authority Norm ("F.S.A.") no. 7/2013 on the forms and clauses in the insurance contract also stipulates the coverage of direct damages incurred by the constructions destined as dwellings, *the indirect consequence* of the occurrence of the events mentioned in paragraph (1), such as fire, explosion as a result of an earthquake or landslides or other similar cases.

In the specialized literature on this subject it is pointed out that the risks mentioned are limited, with the exclusion of severe storms or fire from the list of insurable risks.

To support this critical opinion it is shown that Prudential Norms on covering risks posed by natural hazards applied under I.S.C. Order no.4/10.04.2002, published in the National Gazette no.359/20.05.2002, which set out the conditions to be met by authorized insurance companies to be allowed to underwrite hazard risks, include in the category of hazards all risks associated with a catastrophic event or a series of events, which can cause substantial damage in a short period of time. Natural hazards are defined as events caused by natural calamities, among which, alongside earthquakes and floods , thefts are mentioned.(art.1).[30]

Besides the provisions of I.S.C. Order no.5/2009, F.S.A. Norm no. 7/2013 lists the risks which are not indemnified, art. 22, paragraph 1 and 2, and the cases in which the mandatory home insurance policy is not valid[31]. Also, art. 23 and 24 list the situations that

[28] Vasile Nemeș, „Asigurarea obligatorie a locuinței" in the review "Buletinul Național pentru pregătirea și perfecționarea avocaților no. 1/2010, page 76 ;

[29] Art. 19 paragraph 4[1] introduced by Law no. 243/2013 amending and supplementing Law no. 260/2008 provides: "In case a person has both a compulsory insurance contract, and an optional insurance contract, payment of damages is firstly carried out based on the compulsory insurance contract, for the remaining uncovered payment, the payment shall be carried out based on optional insurance contract. The insured value taken into account in order to determine the optional insurance installment is represented by the difference between the total value of the house insured and the insured value taken into account in order to determine the compulsory insurance installment";

[30] Mirela Carmen Dobrilă, op. cit., page 115;

[31] Art. 22. - (1) Mandatory home insurance against earthquakes, landslides or floods does not cover the damages caused by:

1.1. floods during barrier lakes formation or when changing artificial watercourses; by the formation of the barrier lake we understand filling with water the barrier lake up to the overflow;

1.2. in cases of sudden threat of collapse or landslide, as well as in case of the inability to use even by repairing or strengthening buildings, if these phenomena occurred, facilitated or aggravated by digging or by civil works of any kind, prospecting, exploration or oil or mining exploitation on the surface or in depth, regardless of the time passed since their completion or abandonment;

1.3. compaction (sagging) of the foundation soil either under the load of the construction or due to other causes;

1.4. the formation of cracks in the foundation soil or the ground around the building, due to the volume variation of the land, as a result of contraction/expansion caused by freeze/thawing;

entitle P.I.A.N.D.. not to grant the indemnification[32], among which we can find the general provision referring to failure to comply with the contractual obligations, the one referring to failure of the insured to comply with the obligation to inform, lack of evidence regarding the justification of the right to indemnification, favor the damage or increase of the prejudice by the insured or the persons that live and take care of the household together with the insured, etc.

6. Insurance contract duration and effects

The mandatory home insurance contract is valid for 12 months, during which time P.I.A.N.D. assumes responsibility for the consequences of an insured hazard (art.15 of F.S.A. Norm no. 7/2013).

The insurance policy is binding starting at midnight on the fifth day after the obligatory premium was paid in and the insurance contract was executed and issued, with the exception of policy renewals where the policy becomes binding at midnight of the day following the day when the premium was paid, and the contract was executed and issued.

Therefore the responsibility of P.I.A.N.D. starts at midnight, of the fifth day after the insurance premium was paid, and on the following day for policy renewals, but not earlier than on the day following the expiry of the previous policy and the date on which the title to the property held by a natural person or legal entity takes effect. (art. 16 of F.S.A. Norm no. 7/2013).

Thus, as mentioned before, the change of the title holder is no cause for the termination of the insurance contract.

The responsibility of P.I.A.N.D. ends either on the date of the expiry of the validity of the insurance contract (midnight of last validity day written on the policy) or before it, the moment the building insured becomes completely uninhabitable or ceases to exist for causes other than those representing risks covered by insurance. (art. of F.S.A. Norm no. 7/2013).

Loss of dwelling status of a building does not entail reimbursement of the mandatory premium.

As far as the effects of insurance are concerned, these do not differ from the contractual effects of the other types of insurance policies.

The main rights and obligations are set out in art.15 and16 of law no.260/2008, amended and completed, as well in FSA Norm no. 7/2013 (art. 11-12, 20-4, 29-34)

In order to be indemnified, the person having incurred the loss must send a written request for compensation to the insurer who has issued the mandatory home insurance policy on behalf of P.I.A.N.D.. This document is the notification of damage. In the case of social housing or of persons who receive social benefits the insurance policy will be issued directly by P.I.A.N.D. and, consequently, the request for compensation must be addressed directly to it, too. (Art. 29, paragraph 1-3 of F.S.A. Norm no.7/2013).

The damage notification must be done within 60 days from the production of the risk insured. The right to indemnification is established on the basis of the documents issued by the institutions authorized to ascertain the state of natural disaster.

The insurer will draw up a damage report and will work out the compensation amount due function of the demands and possible objections raised by the insured or beneficiaries of the mandatory home insurance policy, without exceeding the ceiling set by law or the value of the damage produced. (art. 28 of F.S.A. Norm no. 7/2013)

P.I.A.N.D. will directly reimburse the policy holder on the basis of the report forwarded by the insurer who has surveyed and valuated the damage caused. (Art.29 and 31 of F.S.A. Norm no.7/2013).

In case there are several home insurance policies taken out for the same dwelling, issued by different authorized insurers, all valid at the date the hazard occurred, the indemnification due to the policy holder cannot exceed the effective value of the damage sustained as a direct consequence of the risk covered

1.5. field surrounding the house and that is not associated with the notion of home and is not subject to insurance;

1.6. extensions that are or are not part of the construction designated as insured home (garages, warehouses, sheds, stables, window boxes, pergolas, fences, etc.) and special installations and facilities (pools, saunas, auto ramps etc.);

1.7. any kind of goods, other than the construction designated as insured home (goods or items necessary in order to live, valuable papers etc.)

2) P.I.A.N.D. does not grant compensation for:

2.1. homes built in areas where the competent legal authorities prohibited this by public documents or communications addressed to the insured;

2.2. buildings collapse exclusively due to construction defects, even if it is related to the occurrence of an insured risk; 2.3. temporary accommodation costs until the reconstruction of the house that is subject to the manadtory insurance policy and that was damaged as a result of a covered risk.

[32] Art. 23 – P.I.A.N.D. is entitled not to grant compensation if:

1. The insured/contractor has not fulfilled the obligations arising from the contract;

2. within the statements of the contractor/beneficiary or his representatives, on which the insurance contract is based on or that are made during the claim for compensation or on any other occasion, are being found untruths, forgery, fraudulent aspects, exaggerations or omissions misleading the PA.I.N.D. or the insurer that issued a mandatory insurance policy;

3. The beneficiary does not present sufficient evidence in order to justify his right to pay the compensation, according to the provisions of art. 18 paragraph (2) of Law no. 260/2008, republished, with subsequent amendments and additions;

4. the damages were favored or aggravated by fault, for the part of the damage which was intentionally increased by the insured/beneficiary or by persons living together with the insured/beneficiary in the home insured, by the representatives of the insured/beneficiary, by the persons authorized to represent the beneficiary for compensation or by the insurance contractor.

by insurance. In these circumstances the first mandatory home insurance policy concluded overrides and cancels all later ones and P.I.A.N.D. will return the premiums already paid. (Art. 28 of F.S.A. Norm no.7 /2013)

The penalty for not complying with the obligation to take out mandatory home insurance is an administrative fine ranging from 100 to 500 RON, in keeping with the provisions of art.30, paragraph 1 of Law 260/2008, amend by Law 243/2013.

7. Conclusions

1. Close scrutiny of the special legislation in the matter of mandatory home insurance has brought to light several problems the solution of which, in our opinion, will play a crucial role in achieving the social goal the legislator had in mind when making home insurance mandatory.

2. Thus, in spite of the fact that Law no.260/2008 has been amended twice we think that the legislator has not found yet concrete solutions for several problems. The competence to solve many of these problems mentioned under Art 1 of F.S.A .Norm no.6 /2013 belongs to P.I.A.N.D.: namely, the setting up and administration of a data base recording all buildings for residential use, since there are no records for uninsured dwellings at present, the absence of an updated map of catastrophe prone areas in our country (areas at high risk of flooding, complete records of high seismic risk buildings), raising the minimum registered capital of P.I.A.N.D. (now the equivalent in RON of 12 million euros), closing reinsurance contracts with important reinsurance companies, since occurrence of hazards mentioned in the respective law will entail the accumulation of huge amounts in compensation due, which cannot be paid out at present, working out a highly precise insurance mechanism and description of the role played in it by each insurer that is part of P.I.A.N.D., the statutory conditions in which commissions are charged, and finally, a clear description of the role played by P.I.A.N.D. as an insurance-reinsurance company.

3. The law does not deal with a number of issues such as relations between shareholders, the conditions in which new shareholders can join P.I.A.N.D., the role representatives appointed by F.S.A. will play and the way conflicts of interest can be avoided, conditions in which a shareholder can withdraw from or be excluded from IPNH.

4. Last, but not least, setting up a monopoly on this market segment and restricting market access by imposing the condition of adhering to P.I.A.N.D. need to be closely correlated with the principles and legal norms in force in the matter of competition.

5. In addition to this, given the absence of distinct provisions referring to dwellings classified as posing an extremely high seismic risk, we suggest these should be exempt from the obligation to be covered by insurance, and should form the subject of special regulations.

III. Property insurance subject to mortgage loan agreements

1. Legislative framework. Scope and type of insurance.

Law no. 190/1999 (updated)[33] governs the legal regime of the mortgage loan for real estate investments.

According to the Law no. 190/1999, the mortgage loan for real estate investments is the mortgage loan granted in order to carry out real estate investments meant for dwelling purposes or other purposes than dwelling or in order to repay a mortgage loan for real estate investments previously contracted (art.2, lett. c).

The wording of the legislator according to which "granting the loan is secured *at least* by the mortgage of the estate that is subject to the real estate investment for whose financing the loan is granted" (art. 2, lett. c, paragraph 2 of Law no. 190/1999) is fully consistent with the subsequent provisions of the regulatory document evoked.

Therefore, pursuant to the provisions of section II of the law, entitled "*Compulsory Insurance Contracts"*, "in case of a construction mortgage, the borrower shall conclude an insurance contract covering all its risks. The insurance contract shall be concluded and renewed in order to cover the entire validity period of the loan, and the insured's rights arisen from the insurance contract shall be assigned in favor of the mortgagee for the entire validity period of the mortgage loan for real estate investments". (art. 16 paragraph 1 and 2 of the law).

Consequently, the insurance contract for the property subject to mortgage loan agreements shall be binding due to the express provision of the law, the parties shall transpose this legal provision within the content of the agreement between them.

The insurance of the loan's securities may not be mistaken for the insurance of the secured loans. The scope of the insurance for the insurance of the loan's securities is made of movables and immovables with which the creditor secured the repayment of the loan and the insured risks are represented by the risks of loss, theft or total or partial loss of the respective property (for example: fire, flood, theft, damage, destruction etc.) while for the insurance of the secured loans, the insured risk is represented by the lack of repayment of the loan[34].

Although the property insurance subject to the mortgage loan agreements is an insurance concluded

[33] Law no. 190/1999 was amended and supplemented by Law no. 201/2002, Law no. 34/2006, G.E.O. no. 174/2008 and G.E.O. no. 50/2010;
[34] Vasile Nemeș, „Dreptul asigurărilor", Ediția a 4-a, Editura Hamangiu, 2012, page 280;

in order to ensure the repayment of the loan, in our opinion this insurance is a **property insurance** (and not a suretyship insurance – fifteenth class of general insurances)[35] whereas, even if the borrower doesn't repay the loan on due date, the insurer can not be bound to pay the compensation in the absence of the occurrence of the insured risk. In such a situation the mortgagee will proceed to the capitalization of the movable or immovable that is subject to the security.

Therefore, if regarding the insurance of the secured loans the insurer will grant the compensation due to the non-repayment of the loan, keeping the action for the capitalization of the property used as security, regarding the insurance of the loan's securities the insurer is liable only in case of the loss of the property used as security not seeking for remedy unless it is proven that there is a person who is guilty of the property loss.

In this latter case we are in the presence of a case of legal subrogation, that is carried out in case of insurances, if the insured risk has occurred, when the insurance company subrogates by law the rights of the insured that is indemnified against the person guilty of the occurrence of the damage.[36]

Not the least, distinct from the provisions of the Law no. 190/1999, are also of interest in this matter the provisions of the Civil Code, with reference to the provisions of art. 2330-2332, that we'll develop within chapter IV regarding the assignment of rights from insurance and payment of the compensation.

2. The parties of the insurance contract

The borrower has the capacity of the insured, and it falls under the obligation of the borrower to conclude the insurance contract with an insurance company of his choice, the law expressly prohibits the lender to impose on the borrower a certain insurer (art. 18 of Law no. 190/1999).

The insurer may be any insurance company at the choice of the insured. In practice, there was discovered the abusive nature of the terms which established the obligation of the borrower to conclude the insurance contract with an insurance company that was a partner of the bank or approved by the bank and the bank's right to choose the new insurance company which renews the insurance policy.

Thus, certain Courts have decided that it may not be held the defense of the bank according to which the necessity of choosing an insurance company by the bank is required for the reason of avoiding any risk as the risk of inefficient compensation, total lack of compensation or the risk that the policy may not cover certain situations, etc.[37]

3. Insurance contract duration.

Law no. 190/1999 establishes the rule that the duration of the insurance contract is at least equal to the repayment period of the mortgage loan.

Art. 16 of the law provides that the insurance will be concluded and renewed in order to cover the entire validity period of the loan.

For this purpose, multi-annual contracts or a single insurance contract may be concluded, valid for the entire period provided for the repayment of the loan.

4. Assignment of insurance rights. Holder of the right to compensation.

The insurance contract, regardless of the means chosen, will be concluded in order to cover all risks associated with the construction and the insurance indemnity will be assigned to the mortgagee.

The law provides the assignment of the insurance rights, both in case of insurance of the mortgaged construction and in case of insurance regarding the risk of non-completion of the real estate investment.

The assignment of rights arising from the insurance contract entails the consequence of receipt of compensation by the mortgagee, no doubt within the loan balance, otherwise we would be in a situation of unjust enrichment.

In this regard, by a test case decision[38], interesting consequence of the multitude of issues approached, the jurisprudence has held both the binding nature of the insurance of property subject to mortgage loan agreements and the fact that the right to compensation is assigned only insofar as the non-performance of the contractual obligations and only within the claim credit limit agreed.

Moreover, it was also noted the opposability of assignment to the insurance company, the latter being bound by this agreement.

Pursuant to art. 24 of Law no. 190/1999[39], the mortgage debts that are part of the portfolio of an institution authorized by law, may be transferred to another institution of the same type or to other entities

[35] In this regard, study the classification of the insurances within the Annex no.1 of the Law no. 32/2000

[36] In this regard, art. 2210 paragraph (1) new Civil Code provides: "Within the limits of paid indemnity, the insurer is subrogated to all the rights of the insured or the beneficiary of the insurance against those responsible for the occurrence of the damage, except for insurance of persons";

[37] We mention the Civil Decision no. 17199/17.12.2012 delivered by the District Court of the 2nd District Bucharest as well as the Civil Decision no. 6953/25.10.2010 delivered by the District Court of Targu Jiu, court decisions quoted by Associate Professor PhD Răzvan Dincă in the paper „Abusive clauses in the non-banking financial services contracts", presented within the ALB national conference, Romania, IXth edition, with the title „Revival of the economy lending by rebuilding the confidence in the non-banking financial institutions", conference held at the Intercontinental Hotel Bucharest on November 21st 2013;

[38] Civil Decision no. 64/24.02.2014 delivered by the Court of Appeal Cluj in the file no. ..84/2013, published by the Court of Appeal Cluj Civil Section II, administrative and fiscal courts in the collection of relevant decisions, year 2004, Ist quarter;

[39] By Decision no. 30/2015 delivered on 02.03.2015 and published in the Official Gazette of Romania on 03.25.2015, the Constitutional Court of Romania rejected as inadmissible the critics of unconstitutionality of the provisions of art. 24 of Law no. 190/1999, deciding that the motivation of the authors can not constitute a genuine criticism of unconstitutionality;

authorized and regulated for this purpose by special laws.

The assignee acquires, besides the right under a mortgage associated with the mortgage loan for real estate investments and the rights arising from the insurance contract for the property covered by this mortgage and the other guarantees accompanying the mortgage debt transmitted. No doubt that the assignee may also acquire the rights arising from the insurance of the risk for the non-completion of the construction started with the amount of money borrowed from the bank.

In the specialized literature it has been shown that for property insurances the loss of the legal relationship of the property leads to cessation of the insurance. However, in case of assignment provided by art. 24 paragraph 3 of Law no. 190/1999 this occurs not as an exception expressly regulated by this legal provision, so that the insurance continues to produce effects regardless of the number of assignments occurred, the assignment becomes effective regardless of the insurer's will, on condition of its notification for opposability.[40]

The opposability of the assignment to third parties, except for the insurer, is carried out through its registration with the Electronic Archive of Security Interests in Movable Property, at the expense of the insured (art. 16 paragraph 3).

Towards the insurer the opposability of the assignment is carried out through its notification by registered letter with acknowledgment of receipt or by judicial officers (art. 16 paragraph 4).

We note that, in relation to the provisions of the new Civil Code (art. 1578) which provides for the possibility of notification of the assignment of a debt by written communication of the assignment, on paper or electronically, Law no. 190/1999, a special regulation and previously dated, contains more stringent provisions, the notification is possible only by letter with acknowledgment of receipt or by judicial officers.

We also note that, in practice, the notification of the assignment is accompanied by the remittance to the assignee of the original insurance contract, which is usually in the possession of the assignor, the contract containing the mention regarding the assignment.

The mortgagee, acquiring the capacity of assignee for the insurance rights, will become the beneficiary of the compensation, so that, in case of the occurrence of the insured risk, the insurance indemnity will be paid directly to him.

Law no. 190/1999 establishes that the compensations received by the mortgagee will lead to the settlement of the claim, the imputation and the order of payment are being set: due and unpaid interests related to borrowed capital, the amount of the loan installments remaining to be paid, other amounts owed by the borrower to the mortgagee on the date of receipt of the compensation based on the loan agreement (art. 16, paragraph 5).

We believe that, even in the absence of an express provision regarding the assignment of rights for compensation to the mortgagee, within the loan balance, the issue of granting the compensations in case of occurrence of the insured risk was resolved by the Civil Code. We take into consideration the provisions of art. 2330 - 2332.

In this respect, the legislator of the Civil Code has provided that, in case of the destruction or damage of the property encumbered, if the property encumbered is destroyed or damaged, the insurance indemnity or, where applicable, the amount due as indemnification should be affected by the payment of the preferential or mortgage debts, according to their rank. (art. 2330, paragraph 1).

Regarding the recording procedure of the amounts of money representing the insurance indemnity or compensation, it was provided that the amounts due under this title to be recorded in a separate bank account, bearing interest on behalf of the insured and being available to the creditors who have registered the security in the publicity registers. The debtor can not dispose of these sums until the settlement of all secured claims unless with the agreement of all mortgagees or preferential creditors. But he has the right to charge the interests. In the absence of agreement between the parties, the creditors can satisfy their claims only according to the legal provisions regarding the execution of mortgages (art. 2331).

Moreover the law provides the possibility that, by the insurance contract, the insurer may also reserve the right to repair, rebuild or replace the property insured. In such a case, the insurer shall notify the intention to exercise this right to the creditors who have registered their security in the publicity registers, within 30 days of the date he acknowledged the occurrence of the insured event. The holders of the secured debts may require payment of the insurance indemnity within 30 days of the date of receipt of the notification (art. 2332).

The content of article 2332 of the Civil Code leads to the conclusion that, in case of partial disaster, the insurance indemnity is due to the creditor "only if it is not spent on repairing, restoring or replacing the insured assets". The specialized literature[41] underlines that the right of the creditor is of **subsidiary nature**, because if the insurer repairs the building partially destroyed, the holder of the security interest will not be able to keep the insurance indemnity; instead he will have to give it to the insured debtor.

[40] Vasile Nemeş, "Contractul de asigurare a bunurilor obiect al contractelor de credit ipotecar", article published in "Revista de drept bancar şi financiar" no. 3-4/2008, page 6

[41] Irina Sferdian, „Asigurări. Privire specială asupra contractului de asigurare din perspectiva Codului Civil", Editura C.H.Beck, Bucureşti, 2013, page 188;

5. Conclusions

From the regulations mentioned the following conclusions are drawn:

1. The insurance contract regarding the constructions for which the mortgage has been established in order to guarantee the real estate investment is a contract distinct of the insurance contract of the mortgage loan for real estate investments, but they interact closely, the insurance representing a security made to protect the mortgagee in case of occurrence of one of the insured risks.

2. Despite the indemnity nature and the purpose pursued by the conclusion of the insurance contract (guaranteeing the repayment of the loan in case of destruction or damage of the mortgaged property), the insurance of the property subject to the mortgage loan agreement is a property insurance included in class 8 and 9 of insurance, classification provided in Annex 1 of the Law no. 32/2000 on insurance and insurance supervision.

3. The legislator gives binding nature to the construction insurance contract. Art. 16 of Law no. 190/1999 provides that the borrower shall conclude an insurance contract covering all its risks. The wording of the legislator is imperative, the binding nature of the insurance contract for the real estate purchased under the law no. 190/1999 being construed from both the section title ("compulsory insurance contracts") and the content of the regulation of art. 16.

4. It is possible that the legislator sought to establish the binding nature also to the insurance contract for the risk of non-completion of the real estate investments for which the loan was granted.

5. Thus it explains the introduction in Section II ("compulsory insurance contracts") of the provision regarding the conclusion of an insurance contract for the risk of non-completion of the real estate investment by the borrower (art. 17) and the provision provided by art. 16 ("in case of a construction mortgage, the borrower shall conclude an insurance contract covering *all* its *risks*"- therefore also the risk of non-completion of the construction).

6. However, the provision provided by art. 17 of Law no. 190/1999, that "the mortgagee **may** require to the borrower to conclude an insurance contract for the risk of non-completion of the real estate investment for which the loan was granted" does not induce the idea of incumbency but rather the idea of possibility, faculty, the wording of the legislator not being compulsory.

7. In the specialized literature[42], regarding this issue, it was shown that "the insurance for the risk of non-completion of the construction is optional."

8. The provisions regarding the assignment in favor of the mortgagee of the rights of the insured deriving from the insurance contract (art. 16 paragraph 2, art. 17 and art. 24 paragraph 2 of Law no. 190/1999), as well as the ones regarding the ways to carry out the assignment (art. 16 paragraphs 3 and 4) or imputation of payment for the amounts received as compensation (art. 16 paragraph 5) consequence of the occurrence of the insured risk regarding the real estate, represent the legal provisions meant to ensure the repayment of the loan granted by the financial institution. Legal provisions with the same purpose can be found in the Civil Code, art. 2330 - 2332.

IV. Insurance of assets subject to leasing contracts

1. Legislative framework. Scope and type of insurance.

The leasing operations are governed by the G.O. no. 51/1997.

According to the provisions of ar.1, the Ordinance applies to the leasing operations whereby one party, called lessor/financer, in his capacity of owner, transfers, for a determined period of time, the right of use over an asset to the other party, called lessee/user, at his request, for a periodic payment, called leasing installment, and at the end of the leasing period, the lessor/ financer undertakes to comply with the lessee/user's option right to purchase the asset, to extend the leasing contract without changing the type of leasing or to terminate the contractual relationships.

The subject of the leasing operations may be assets immovable by their nature or that become movable by destination and movable assets, in civil circuit, to which the right to use computer programs is added.

The insurance obligation is expressly provided within the evoked regulatory document[43].

The insured risks are represented by the risks of loss, theft or total or partial destruction of the assets subject to a leasing contract, after the occurrence of certain risks such as fire, flood, theft, damage, destruction, etc.

The insurance of the assets subject to a leasing contract is a compulsory insurance of assets.

The insurance contract of the property subject to the mortgage loan agreements shall be binding, the parties shall transpose within the content of the agreement between them this legal provision, aspect also provided by the law. Thus, according to art. 6 paragraph 1 lett. e, the leasing contract should comprise, beyond the contracting parties, at least the following elements:…e) "the clause regarding the obligation to ensure the asset."

[42] „Contractul de asigurare a bunurilor obiect al contractelor de credit ipotecar", author Vasile Nemeş, article published in „Revista de drept bancar şi financiar" no. 3-4/2008, page 5;

[43] Such provision can be fond within art. 5, paragraph 1 lett. e) art. 6 paragraph 1 lett. e), art. 9 lett. f), art .10 lett. d), art .26 of the G.O. no. 51/1997;

2. The parties of the insurance contract. Rights and obligations from the insurance's outlook.

The parties of the insurance contract are the insurer and the lessor/financer.

In compliance with the provisions of art. 5 of G. O. no. 51/1997, the obligation to ensure the asset is incumbent on the lessor. The obligation of insurance of the asset by the lessor is reiterated in art. 9 lett. f according to which the lessor/financer, in capacity of owner of the asset [44], undertakes to ensure, by an insurance company, the assets under lease.

The provision of art. 5 paragraph 1 of G.O. no. 51/1997 has a double meaning: on the one hand binds the contracting parties to ensure the asset under the leasing operation and, on the other hand, protects the user in case of total or partial destruction of the asset, knowing that one of the obligations established by the law binding the user is to bear the risk of loss, destruction or damage of the asset used including fortuity[45].

The lessor/financer, that is bound to ensure the asset, may also choose the insurer (unless the parties have agreed otherwise) with the mention that the insurance costs are paid by the owner of the asset. (art.5 paragraph 2)

This obligation, borne by the lessor/financer, is expressly provided also within the provisions of art. 10 let. d), the lessee binds to the lessor to pay all the sums owed according to the contract – leasing installments, insurances, contributions, taxes for the amount and on the terms mentioned in the contract.

Since the leasing performance is accompanied by an insurance performance of the asset that is subject to the leasing, concluded by the lessor, from the financial-accounting point of view the operation shall be invoiced by the latter to the lessee.

According to a recent decision of the Court of Justice of the European Union [46] when the lessor under a leasing contract ensures himself the asset subject to the leasing and invoices to the lessee the exact cost of the insurance, such an operation is qualified as insurance and a VAT exemption is applied based on art. 135 paragraph (1) letter (a) of the Directive 2006/112/EC of the Council from 28th of November 2006 on the common system of value added tax.

The Court qualified, in principle, as distinct and independent performance of services for VAT purposes (i) the services performance of the proper leasing and (ii) the services performance of the asset's insurance subject to leasing, especially in circumstances such as imposing an insurance contract conclusion through the leasing contract, but especially when the insurance of the asset subject to the leasing is essentially an end in itself for the lessee, and not the way to benefit from the leasing service in the best conditions.

If the insurance premiums are borne by the lessee/user, their counter value may be financed by the lessor, based on an expressed agreement in this regard.

We state that, as in the case when the payment for the insurance premiums is carried out by the lessee/user, the lesssor/financer shall have the capacity of insured person instead of the lessee/user.

The main consequence arising therefrom is that, if the insured risk occurs, the indemnity insurance will be paid by the insurer directly to the lessor/financer and not to the user, issue on which we shall return.

In this context we specify that the rules governing the insurance relations of the assets contracted by leasing are of optional nature, so that the parties may agree that the lessee/user has the capacity of insured and that he collects the insurance indemnity, or the capacity of insured of the financier may be kept, but it may be provided that the user is the beneficiary of the insurance, in which capacity he will also collect the compensation.

In the event that the insurance is concluded by the user, in practice, an assignment clause of the rights to compensation in favor of the lessor is provided.

Regarding the obligation to conclude a civil liability insurance for car owners (RCA), in case of car leasing, it is borne by the user, who is mandated by contract by the Lessor (leasing company) to conclude it. Constraining the user to conclude the civil liability insurance for cars with the same insurance company where the Casco insurance policy is concluded, represents, in our opinion, a violation of his right to freely choose a contractual partner.

3. Insurance contract duration. Holder of the right to compensation.

Similar to the property insurance subject to mortgage loan agreements, the duration of the insurance contract shall be at least equal to the period of the leasing contract.

For this purpose, multi-annual contracts or a single insurance contract may be concluded, valid for the entire period of the leasing contract.

[44] Before passing the Law No. 287/2006 amending G.O. no. 51/1997, it was not provided the requirement of the financer's capacity of owner of the assets subject to leasing operations. In its current form, however, although G.O. no. 51/1997 maintained the principle of transmission of the right to use of assets subject to the leasing contract, the condition regarding the financer's capacity of owner of the assets was introduced.

[45] Pursuant to art. 10 lett. f of G.O. no. 51/1997, "the lessee undertakes to assume, for the entire period of the contract, unless otherwise stipulated, all the obligations arising from the use of the assets directly or through his representatives, including the risk of loss, destruction or damage of the used asset due to fortuity, and the continuation of payment of the leasing installments until the full payment of the amount of the leasing contract".

[46] Decision no. C-224/11-17.01.2013 of the European Court of Justice may be found on the website http://www.juridice.ro/282621/cjue-prestatie-de-leasing-insotita-de-o-prestatie-de-asigurare-a-bunului-care-face-obiectul-leasingului-scutire-de-tva.html;

In case the insured risk occurs, if all conditions of validity of the contract are met, the obligation to pay the compensation is incumbent to the insurer, we will distinguish between the case of total and partial loss.

In the first case, respectively, the assumption of total loss of the asset subject to the leasing contract, the insurance indemnity will be received by the lessor/financer and he will turn against the user under the leasing contract, if the compensation does not cover the damage caused, i.e. the total value of the leasing contract.

The conclusion is set based on the common law principles regarding the coverage for damages, arising from partial or total loss of the assets, but it also results from the correlation of the provisions of the G.O. no. 51/1997.

Thus, according to art. 10 letter f) of G.O. no. 51/1997, the user bears the risk of total or partial loss of the asset, and has the obligation to continue the payment of the amounts as leasing installments until the full payment of the value of the leasing contract is carried out.

This provision is to be correlated with the provisions of art. 26 of G.O. no. 51/1997, according to which, in the case of damage registration and of payment of the amounts stipulated by the insurance for the assets subject to the leasing contracts, the parties may agree to settle the mutual claims by compensation, under the law.

The principle of settlement of the mutual claims by compensation, in case of loss of the asset, established by art. 26, refers precisely to the financier claim against the user, consisting of the equivalent leasing installments to be paid after the loss of the asset. Therefore, the remaining leasing installments to be paid will be compensated with the insurance indemnity received by the financer as a result of the occurrence of the insured risk.

In practice there has been raised the issue regarding the effective date when the leasing contract is terminated, in case of theft or total loss, aspect relevant with regard to the determination of the amounts to be compensated.

This issue has been judicially solved, the Court establishing that, in relation to the obligation of the user to continue the payment of the monthly leasing installments, there can not be affirmed that the leasing contract was terminated on the date of the theft because the leasing contract concluded expressly establishes the obligation of the user to continue the payment of the monthly leasing installments in case of theft.

The user's obligation ceased on the date when the lessor has received the compensation from the insurer, however, the lessor has the obligation to pay the user the difference between the compensation value and the amount due in relation to the provisions of the leasing contract, allowing the user to claim compensation from the insurer, in other procedural framework, for the delay of the payment of the compensation or the unfounded refusal to pay [47].

In case of liability for the loss of the assets, in common law, the compensation can not exceed its value from the moment of the occurrence of the prejudice. In other words, it is prohibited unjust enrichment of the owner, by receipt of compensation exceeding the value of the asset. Leasing regulations do not contain any derogatory rule, meaning that, as shown above, the financer may turn against the user, only for the difference that does not cover the value of the leasing contract[48].

Admission of another solution would equate to an unjust enrichment of the lessor/financer, consisting of, on the one hand, collecting the insurance indemnity and, on the other hand, the leasing installments due, intolerable situation in our legal system.

In the event of the occurrence of partial damage, to the extent that the user has paid the leasing installments up to date, the lessor may agree that the payment of compensation shall be carried out directly to the user's account, taking into consideration also the fact that he incurred the costs of bringing the asset in the state before the insured risk occurred.

4. Conclusions

Summarizing the aspects presented above, we point out the following:

1. The lessor is the one who has the freedom of choice regarding the insurance company in order to conclude the insurance contract;
2. The insurance premiums will be paid by the lessee/user;

The rules governing the insurance relations of the assets contracted by leasing are of optional nature, so that the parties may agree that the lessee/user has the capacity of insured and that he collects the insurance indemnity, or the capacity of insured of the financier may be kept, but it may be provided that the user is the beneficiary of the insurance, in which capacity he will also collect the compensation.

FIDUCIA IN THE LIGHT OF THE NEW CIVIL CODE INSTITUTION OF LAW WITH UNREGULATED FINALITY

Claudiu Răzvan DEDU[*]

Abstract:

The institution of "Fiducia" relatively completely regulated by the content of the art. 773-791 of the New Civil Code, represents, together to the institution of periodic property and the one of administration of one's assets, a premiere in the Romanian civil law. The apparition of this institution of law in the continental law (also in the Romanian law) is the result of a long interface process between the civil continental law and the Anglo-Saxon one, during which many institutions of law or types of contracts have been taken over in the continental law, as a consequence of the globalisation of the business relationships.

The legal mechanism of Fiducia exists in the continental law since its beginnings, more precisely even since the apogee of the Roman law. This way, this legal instrument, of assets administration can be found in the legislation of many European states, among which, we can mention the Anglo-Saxon legislation (trust), German legislation (trauhand), French legislation – legislation which represented the inspiration source of the Romanian legislator in the matter of Fiducia.

Unlike the Anglo-Saxon law, where the trust has three forms (guarantee, administration and the one concluded for performance of a liberality) in the Romanian law, fiducia has only two of these forms, respectively, Fiducia as guarantee and Fiducia as administration.

In the banking field, Fiducia as guarantee, although it has real practical advantages comparing to the most commonly used real estate mortgage, it is not used by the credit institutions, these still preferring that the reimbursement of the loans granted to be guaranteed by a mortgage contract.

Keywords: *Fiducia, Fiducia as guarantee, subjects of Fiducia, the new civil code.*

1. Origin and evolution:

The etymology of the noun "*Fiducia"* originates from the Latin word *"fìdo",* which means to trust (to have faith in someone or something), loyalty.

The origins of "Fiducia", as legal institute, can be found in the Roman law, although the institute of "Fiducia" has been taken over in the continental civil law by adaptation of the *trust*, regulated by the Anglo-Saxon law.

The fiducia contract is one of the oldest real contract, originating in the Roman law – *pactum fiduciae.*[1]

In the Roman law, fiducia was present under two forms, respectively "*fiducia cum amico"* (fiducia for administration) and "*fiducia cum creditore"*(fiducia employed as security).[2] Two elements were indispensable to be able to establish any of the two types of "Fiducie".

The first element, called "*datio*" was representing the ownership transfer and it was characterised by "*traditio*", respectively by physical delivery of the asset. "*Datio*" on its turn, could have two forms, for a "Fiducia" to be established, respectively (i) either it happened in a ritual formula before the magistrate (*in jure cessio*), (ii) either happened before five witnesses. **The second element,** was represented by a document, respectively, the convention called *pactum fiduciae.* It can be noticed that the second element has been kept also in the modern regulations of "Fiducia", meanwhile the element "*datio*" lost its application.[3]

It is also very important to specify that with regard to the modern regulations of the fiducia contract, in the Roman law, the implementation of the "Fiducia" was limited to the inheritance field, and the third party acquirer (the successor) had only the possibility to exercise a strictly personal action against the fiduciary, in case of non compliance with the contract. The Fiducia of the modern age is different from the fiducia regulated by the provisions of the Roman law and also in the light of the separation of the patrimonial assets, in the meaning that, currently, the personal assets of the fiduciary should not be confused with the ones from the fiduciary assets, as was happening in the Roman law.[4]

Although, some elements of "Fiducia" from the Roman law have been taken over in an adopted form, from the contemporary regulations, the resistance structure of the current "Fiducia" is grounded on the Anglo Saxon law, from which the *trust* has arisen, separating this way the fiduciary assets from the personal assets of the fiduciary, by implementation of the *split ownership theory* or *theory of title split.*[5]

[4] Cătălin R. Tripon op.cit. p. 178-179

[5] Cătălin R. Tripon op.cit. p. 191

With regard to the regulation from the Romanian civil law, it can be said that it represents a taking over of the French regulations in the matter of "Fiducia", with certain particulars. [6]

In France, as we have already mentioned, fiducia has been reintroduces as legal institute, by the law of 19th of February 2007 , currently being regulated by the art. 2011-2030 of the French Civil Code.

"Fiducia", as polyvalent legal instrument, has fallen in quite a disgrace in the historical moment of the French Revolution, and from the apparition of the Civil Code of Napoleon since 1804 and till the moment of its reactivation in 2007, "Fiducia" was forgotten, having no interest.

The Civil Code of Napoleon of 1804, almost integrally transposed in the Romanian Civil Code of 1864, has expressly prohibited the Fidei-Commissum sub-institutes which were related to the inheritance law. Because "Fiducia" was usually associated, in practice, to the fidei-commissum sub-institutes, it has been arrived to the extensive interpretation – atypical for the civil law – of an interdiction text, in the meaning that it would have in view also the legal mechanism on which we have put our attention. This interpretation *in extenso*, to which we make a reference, has been taken over by the Civil Code of 1864, from the Civil Code of Napoleon 1804, resulting therefore that "Fiducia" has never been prohibited in the private law of Romania, as we have well know, what the law does not prohibit it means that it allows .

The return of "Fiducia" in the legal actuality of nowadays can be explained by the pressure exercised on the continental private law, by the British/American system, respectively, by Common Law, system where the *trust* has born, which although it is not perfectly identified with "fiducia", still it comes near very much, as legal-economical finality, to what we understand by "Fiducia" .

Therefore, we can say that by the legal regulation of the "Fiducia" institute, Romania only follows the example of other European states, such as France, Germany, UK, Italy, Swiss, Luxemburg or Austria, making available to practitioners, of the Civil, commercial and banking law, the legal regulation of a legal instrument, extremely present in the commercial relations on international level.[7]

Now, we can say that there are two fiduciary patterns in the European private law, respectively the British pattern (*trust*), which has been taken over also by the Italian Civil Code and the French pattern (art. 2011-2031 French Civil Code) adopted also by the Romanian Civil Code of 2011, at the articles 773-791.[8]

It is essential to specify that the French pattern prohibits the indirect liberality, interdiction taken over also by the Romanian legislator, who, by the text of the art. 775 of the Civil Code, it provides that the fiducia contract by which an indirect liberality in the benefit of the beneficiary is achieved is subject to penalty of absolute nullity.[9]

2. What is the meaning of "Fiducia"?!

Notion and object of Fiducia

"Fiducia" is a civil law institute, regulated by the Romanian Civil Code, at the art. 773-791.

Therefore, by the provisions of the art. 773 New Civil Code the legislator defines "Fiducia" as being the "*legal operation by which one or more constitutors transferring real rights, receivables, guarantees or other patrimonial rights or an ensemble of such rights, present or future, to one or several fiduciaries who exercise such with a determined purpose, in the benefit of one or several beneficiaries. These rights form an autonomous mass of assets, distinct from other rights and obligations from the fiduciaries patrimonies."*

From the content of the legal definition, it does not result the way how the "Fiducia" shall be used, which will be the application of this institute, but in the doctrine[10] it has been ruled that for fiducie we have to have in view two finalities, respectively fiducia – instrument of administration and fiducia – instrument of guarantee. As voluntary and contractual regime, fiducia allows a person to legally proceed to desisting the personal assets administration, by assigning them to a trustee (the fiduciary) who has to administrate and dispose of with loyalty and attention, in the advantage of a beneficiary.[11]

With regard to the object of fiducia, the text of the art. 773 Civil Code enumerates examples only, the rights that can be object of the transfer, without the legislator refers to the assets on which holds these. But, interpreting the legal text, we shall conclude that the present or future assets – immovable and movable, tangible and intangible ones (receivables, intellectual property, securities etc.) may be subject to fiduciary transfer .[12]

From the real rights, the use and habitation can not be object of fiducia, pursuant to the provisions of

[12] G.Boroi; C.A.Anghelescu; B.Nazat – op.cit.p.202

the art. 752 Civil code, which prohibit the assignment of these rights.[13]

The Fiducia contract is a property transferring contract, the property right of the constitutor being provisory transferred and for a determined purpose to the fiduciary, this way the fiduciary achieving the three attributes of property. Although, with regard to the ambiguity of the institution, it can be alleged that the fiducia entails only a dispossession of the assets or rights of the constitutor in the benefit of the fiduciary. In this orientation, a fiducia does not imply a veritable transfer of the property right, in the classic meaning of the notion, because at the end of the contract, pursuant to its provisions or to the law, the assets and the rights return to the patrimony of the beneficiary or constitutor. Practically, the fiduciary shall enjoy extended rights on the object of fiducia, which will make it different from the administrator of the property of others.[14]

In a quite recent article, dedicated to Fiducia, it has been affirmed for good reason, that ***the fiduciary is and is not an owner,*** the author having in view to allege such affirmation, the atypical character of the prerogatives acquired by the fiduciary, obviously relating to the common characteristics of the property right[15].

As a matter of fact, the obligations imposed by contract to the fiduciary are obligations in the interest of other person (beneficiary) and the character of the fiduciary property right is a temporary one which leads to a limitation of the exercise of the owners prerogatives, for the fiduciary the property right not being absolute nor perpetual, being transferred to the fiduciary by the constitutor, strictly in the consideration of a determined objective.

The second thesis of the text of the art. 773 New Civil Code presents also a great importance representing a taking over of the technique used in the regulation of the trust of the Anglo-Saxon and establishing, this way, dedicated assets for the fiduciary, the text corroborating to the general regulation of the dedicated assets, regulation provided by the art. 31 paragraph (2) and (3) New Civil Code. In conclusion, the assets, object of fiducia do not mingle to the assets which were in the patrimony of the fiduciary on the date of the agreement with regard to the fiducia contract, because the assets trusted shall form a particular, distinct mass – the fiduciary patrimony.

In the French doctrine[16] the affirmation according to which *fiducia makes from property a simple instrument in the benefit of a particular finality* has been made.

Starting from the legal definition, we can affirm that *"Fiducia" is the legal operation by which the constitutor provisory transfers some patrimonial rights such as the real estate right/movable property right, receivables, guarantees to the fiduciary, as the fiduciary becomes their holder for the whole period of the fiducia contract, exercising such rights for the purpose established in the contract and at the end of the fiducia contract the fiduciary shall transmit such rights to the beneficiary*.

We can notice that fiducia appears as a complex contractual operation characterised by the existence of a transfer of rights for good and valuable consideration, of an atypical mandate (irrevocable) consisting of the administration of dedicated assets in the benefit of the beneficiary and this entity – transfer, mandate, administration – practically forms the contractual relation resulted from the fiducia contract.

Also, from the content of the legal definition, it can be deducted that the object of fiducia is represented by a series of successive phases, such as: **transfer of the patrimonial rights from the constitutor to the fiduciary; administration of these rights by the fiduciary in the benefit of the beneficiary and finally the transfer of the dedicated assets from fiduciary to the beneficiary.[17]**

As it has been noticed in the specialty literature[18] the content and meaning of transfer, as it is set forth by the art. 773 of the New Civil Code, is vague, relating to the provisions of the art. 32 paragraph (2) of the New Civil Code, because the transfer of rights and obligations from one mass to the other is not an alienation.

In the reduced literature dedicated to fiducia, a series of opinions related to the regulation of the property transfer have been issued, therefore, according to one of the opinions[19] the regulation would have in view both the situation in which the transfer of the assets takes place between two different persons who have the capacity of constitutor and fiduciary, and also the situation of one single patrimony, of a person who has a double capacity, of constitutor and beneficiary. According to other opinion[20], we would find ourselves before of a property transferring synallagmatic contract, but with the existence of legal innovation according to which the transferred patrimony would not superpose on the fiduciary patrimony, each of the two patrimony having an independent existence.

---

3. Legal characters of the Fiducia Contract

a) Pursuant to the provisions of the art. 774 paragraph (1) thesis I of the New Civil Code, the fiducia contract has to be concluded under penalty of absolute nullity, in authentic form (*ad validitatem*), from this legal provision practically resulting a first legal character of the fiducia contract, respectively, its **solemn character**.

The correspondent of the art. 774, in the civil legislation of France is the art. 2012 Civil Code (French), with the specification that the obligatory character of the authentic form has a more limited implementation in the French civil provisions.

Therefore, pursuant to the art. 2012 paragraph (2) French Civil Code "*if the assets or guarantees transferred in the patrimony of the fiduciary depend on the community of property existing between spouses or a joint property, the fiducia contract is established by authentic document under penalty of nullity".*

In addition to the authentic form imposed by the art. 774 paragraph (1) thesis I, the legislator has provided also a minimum, compulsory content that the fiducia contract should have under penalty of absolute nullity.

Thus, pursuant to the art. 779 New Civil Code, the contract of fiducia has to comprise (under penalty of absolute nullity) all the real rights, receivables, guarantees and any other patrimonial rights object of the transfer provided by the art. 773 New Civil Code. Also, the period for which the transfer is performed has to be specified, it can not exceed 33 years from the conclusion of the contract (*in France the period of the transfer of the fiduciary property is three time longer, respectively 99 years)*, and also the parties identity but also the identity of the beneficiary or at least the rules allowing its determination and also the purpose of fiducia and extent of the administration and disposal powers of the fiduciary.

b) In principle, the fiducia contract is a contract **for good and valuable consideration** therefore the art. 784 paragraph (2) New Civil Code provides that *"Fiduciary shall be paid according to the parties agreement, and in lack of such agreement, pursuant to the rules regulating the administration of the property of others"*.

By exception, the fiducia contract can be free of charge, in the way that the activity of the fiduciary shall not be paid (disinterested act), having in view that pursuant to the provisions of the art. 793 paragraph (1) Civil code. „*except for the case in which, according to the law, the establishing document or subsequent agreement of the parties or actual circumstances, the administration is performed free of charge, the administrator has the right to a remuneration established by the establishing document or by subsequent agreement of the parties or by law, or, in absence, by court order(judgment). In this last case, the practices shall be taken into consideration and in the absence of such a criterion, the value of the services provided by the administrator"*[21]

c) From the Contract of Fiducia, mutual and interdependent obligations arise as we find ourselves before a **synallagmatic contract .**

d) The Fiducia Contract is also a **commutative contract**, the parties being aware of the extent of the obligations and rights they have one to each other since its signature.

e) The Fiducia Contract is a real rights or receivables or other patrimonial rights or an ensemble if such present or future right transferring document.

f) As for the criteria based on which the fiduciary choices are made, the fiducia contract is a ***intuitu personae*** contract.

4. Sources of Fiducia

The current regulation of the civil code admits that fiducia can arise by law or by contract. The wording given by the legislator to the article 774 New Civil Code is quite unclear, the more so as there was no special law which regulates the fiducia in addition to the civil code and neither to do at least a reference to a series of legally established fiducie or that shall be established pursuant to the law.

Probably the legislator has guessed the apparition of such normative documents by which the legal fiducia is being regulated, but till that moment we can talk only about the conventional fiducia.

Even the modifications brought to the Tax Code, or better said, its integrations, by implementation of the civil code, mention the fiducia contracts concluded pursuant to the Civil Code at the art. 25^1 C.f..

The second thesis, paragraph (1) art. 774 Civil code, provides that the fiducia should **be express,** which leads us to the conclusion that it can be established only by law or by contract concluded in authentic form, so not by court order(judgment), unlike the regulation of the *Anglo-Saxon trust*, which can be established also by the judge.

The paragraph 2 of the art. 774 New Civil Code provides that the law in basis of which the fiducia is established is integrated with the provisions of the relative civil code, to the extent in which it does have contrary provisions, which leads us to the above alleged hypothesis with regard to the apparition in the future of normative documents based on which legal fiducia shall be established.

Also, it can be noticed the exclusion of the legacy from the sources of fiducia, this exclusion being justified by the way in which the fiducia institute has been adapted in the system of continental law, not being acknowledged to fiducia the finalities specific to legacies or donations. Therefore, the legislator has inserted the art. 775 in the civil code, text that sanctions with absolute nullity the contract of fiducia, in the situation in which, through this legal operation an indirect liberality in the benefit of the beneficiary

[21] G.Boroi; C.A.Anghelescu; B.Nazat – op.cit.p.204

would be achieved. The supreme sanction in civil matter, provided by the legislator at the art. 775, follows the prohibition of the utilisation of fiducia in the purpose of elusion of the provisions of legacies and/or donations, protecting this way the forced heirship and avoiding the possibility of debtors to avoid paying the creditors.

5. Subjects of Fiducia

In the doctrine[22] it is considered that only two would be the subjects of the contract of fiducia, without making a difference between the subjects of the contract of fiducia and the subjects of the legal operation of fiducia, although if we shall refer to the legal definition, we shall notice that fiducia is a legal operation – notion more complex that the one of contract.

This way, we consider with regard to the subject of the legal operation provided by the title IV of the Civil Code that these are three, respectively (i) the constitutor, (ii) the fiduciary and (iii) the beneficiary (when the beneficiary is a third person). In conclusion, the term of subject of fiducia as legal operation should not be confused by subject of fiducia as part of the contract of fiducia, because, pursuant to the art. 776 New Civil Code part in the contract of fiducia is only the constitutor and the fiduciary, the beneficiary could be, pursuant to the art. 776 New Civil Code, both the fiduciary and the constitutor, and also a third person – situation in which the beneficiary would have the capacity of assignee(successor) case in which the fiducial operation shall represent a veritable stipulation for another.

The constitutor can be any individual or legal person, with the mention that in case of individuals these persons should have full capacity of exercise, respectively to have the right to conclude acts of disposal. With regard to the legal person, this person is presumed by the law of having full capacity of exercise, considering that among its management bodies there are individuals with full capacity of exercise.

To be considered that pursuant to the art. 778 New Civil Code, text practically taken over from the art. 2017 of the French Civil Code, the constitutor, *in absence of contrary provisions*, has the possibility to appoint a person who represents his/her interests in the execution of the contract of fiducia and to exercise the rights arisen from this contract. This text of law practically representing a legal definition of the conventional representation (art. 1295 New Civil Code), resulted from the parties will.[23]

The reasoning of this provision lies in the fact that the legislator did not limit the area of the persons who can have the capacity of constitutor, and because this capacity can be held also by an individual and many of the individuals do not have the necessary competence to supervise a contract of fiducia, the possibility to resort to the services of a third person is totally justified.[24]

With regard to the **fiduciary**, the legislator has imposed for the fiduciary a qualified character, paragraph (2) and (3) of the art. 776 New Civil Code restrictively mention the persons who have the right to conclude contracts of fiducia in capacity of fiduciaries.

Therefore, the legal text provides that "*can have the capacity of fiduciaries*" **only** the credit institutions, the investments companies and the ones of investments administration, companies of financial services, insurance and re-insurance companies, dully established, paragraph (3) completing this enumeration with other two categories of professionals, respectively, the notaries public and the lawyers, regardless the form of exercise of their profession.

We consider that this restriction imposed by the legislator with regard to the persons who have the right to be fiduciaries, was grounded on protection reasons, the purpose being the one to the try to avoid the operations of money laundry and tax evasion, because at international level it is well known that the fiducia is an institute that can be used to hide the money laundry or tax evasion operations.

We also consider that the legislator had in view, by restricting the area of the persons who can hold the capacity of fiduciary to certain categories of persons, the reduction of the above mentioned risks, because the persons specified in the legal text are subject to a a severe control from specialised authorities, such as BNR, ASF etc.

It has to be pointed out also the fact that the fiduciary independently exercises administration powers on the fiduciary patrimony, pursuant to the contractual objective. Therefore, the fiduciary has to be not confused by the employee nor the proxy of the constitutor because the property of the assigned assets is transmitted to the fiduciary[25].

With regard to the fiduciary attorney at law or notary, it can be noticed that any of them could have at least three patrimonies in the meaning of the provisions provided by the art. 31 and 33 New Civil Code, respectively a personal patrimony, a dedicated patrimony for the profession of notary or attorney at law and one or several dedicated patrimonies related to the fiduciary assets.

Till the new civil code became effective, the law 51/1995 on the exercise and organisation of the profession of attorney at law, and also the statutes of the profession, contained, as we have already mentioned above, a series of provisions regarding the

[25] See A. Răţoi – op.cit. p. 270

fiduciary activities, but these were not representative in the light of the actual civil code, being currently modified and in compliance with the common law in the matter of fiducia.

The Beneficiary of fiducia can be any person, the law having no restrictions to a particular category of persons. Pursuant to the art. 777 New Civil Code, "*the beneficiary of fiducia can be the constitutor, the fiduciary or a third person".*

In other words, both the constitutor and the fiduciary can be the beneficiary of the fiducia, the situation becoming instead very interesting when the beneficiary is a third person, this person not being a part in the contract, having a similar position to the one of the beneficiary third party within the stipulation for another (1284 and following New Civil Code).

Also, it is very interesting the issue of the plurality of capacities of the contracting parties, making us analyse whether the capacity of fiduciary could be cumulated to the capacity of constitutor!! the more so as the art. 777 N.C.C. mentions only who can be beneficiary of the fiducia illustrating also the possibilities of the plurality of this capacity but the legislator makes no reference to an eventual incompatibility or inadmissibility of superposing of the person of the fiduciary with the one of the constitutor.

According to a doctrinary[26] opinion as lons as the law does not prohibit such, it results that the two capacities can be cumulated.

Although the law does not prohibit, existing the possibility to interpret that the two capacities could be cumulated, we consider that this doctrinary opinion finds no legal support, by reference even to the definition of the contract, which according to the art. 1166 Civil code *„represents the agreement of two or several persons with the intention to establish, modify or extinguish a legal relationship".*

This way, in the hypothesis of superposing of the constitutor with the fiduciary we would not be in front of a contract, but in front of an unilateral deed. As a conclusion, no plurality of the capacity of fiduciary and the one of constitutor can exist.

Certainly the three capacities (constitutor, fiduciary, beneficiary) can not be cumulated in one single person, because this way, it could be a fiduciary relationship.[27]

With regard to the plurality of capacities provided by the art. 777 N.C.C., we specify that it is very important in the banking field, in the situation in which the bank establishes a guarantee by a fiducia contract, situation in which we shall meet two beneficiaries, but both, under condition.

This way, if we think to the hypothesis in which the debtor transfers an asset by fiducia to his/her creditor (the bank) in order to guarantee the reimbursement of the loan granted . We find ourselves in the situation in which the debtor is the fiducia constitutor and the creditor is the fiduciary, the creditor receiving an asset as subject of fiducia, asset that the creditor shall assign to the beneficiary mentioned in the contract of fiducia at the end of the contractual period. In this situation, there is the possibility that both the constitutor (the debtor) and the fiduciary (the bank) are the beneficiary of the fiduciary, in the same time.

Therefore, it can be noticed that in the above mentioned situation, we shall have a plurality of capacities – constitutor and beneficiary and fiduciary - beneficiary. To note that in order to benefit of fiducia, both the constitutor and the fiduciary depend on the fulfilment or non fulfilment of a condition. With regard to the constitutor (debtor) the constitutor shall benefit of fiducia subject to compliance with all the obligations of the credit contract and the fiduciary (the bank) shall practically become a beneficiary only in the event of non observance by the debtor of the payment obligations resulted from the credit contract.

Obviously, that in the hypothesis of guarantee a credit contract by fiducia, fiduciary can be also a third person to the bank institution, the last being only the beneficiary of the fiducal, and as well as the debtor-borrower is not a condition to be the constitutor but a third person, case in which we would found ourselves in a condition similar to the one of the third party, constitutor of a security.[28]

With regard to the beneficiary individual, we mention that it is necessary that the beneficiary have full capacity of exercise, this conclusion resulting from the fact the acceptance or waiving the fiducia are disposal acts that can not be concluded by persons with limited capacity of exercise pursuant to the art. 41 and 42 New Civil Code.

6. Content of the Contract of Fiducia

Having in view the particular importance of certain assets that can be object of fiducia, the legislator has provided *ad validitatem* also a minimum content that has to be specify in the content of the contract of fiducia. Therefore, the art. 779 New Civil Code provides, under penalty of absolute nullity, a series of minimum requirements in order for a contract of fiducia to be validly concluded.

This way, the contract of fiducia has to contain, **under penalty of absolute nullity**, all the real rights, receivables, guarantees and any other patrimonial rights that are object of the transfer provided by the art. 773 New Civil Code. It has also be specified the period for which the transfer is done, period that can not be longer than 33 days from the date of the conclusion of the contract and also the identity of parties, but also of the beneficiary or at least the rules that allow its

[26] Cătălin R. Tripon – op. cit. pag 197

[27] Hunor Burian - http://jog.sapientia.ro/data/tudomanyos/Periodikak/scientia-iuris/2011-1/5-burian.pdf

[28] For details, see http://www.iordachescu-law.ro/Studii-de-caz/Implementarea-fiduciei-in-practica-bancara-Modalitati-si-conlucrare-institutionala---avocat-Eugen-Constantin-IORDACHESCU--eID81.html

determination, and also the scope of fiducia and the extent of the powers of administration and disposal of the fiduciary.

The article 779 N.C.C. represents a reproduction of the content of the art. 2018 of the French Civil Code with the major difference of the maximum period of the fiduciary transfer, which, as we have already mentioned above, in the French legislation is of 99 years. From the regulation of the art. 779 let. c) it is deducted that the period of the contract of fiducia can be prolonged by agreement of the parties, but only within the maximum period of 33 years.

Although the Romanian legislator has provided a smaller period than the one provided by the French legislation, the Romanian legislator has still kept the provisions regarding the moment of the beginning of the term, respectively, from the date of the conclusion of the contract.

With regard to the scope of fiducia, the art. 773 New Civil Code provides that it has to be determined, the legislator feeling the need to introduce among the compulsory elements of the contract of fiducia also the obligation to insert in the contract the mentions regarding to the scope of fiducia (art. 779 let. f).

Indirectly it is made reference to the scope of fiducia also in the imperative provision provided by the art. 775 New Civil Code, according to which "*the contract of fiducia is subject to absolute nullity if by this contract an indirect liberality is done in the benefit of the beneficiary".* With regard to this interdiction, provided by the art. 775 Civil Code, it has been affirmed[29] that the solution adopted by the Romanian legislator slows down the development of a new law institute, reported to the trust institute from the Anglo-Saxon law systems (England, USA, Canada) where in absence of such limitation, the regulations are much more permissive, the trust implementation having a bigger variety.

Not at last, we have to specify that besides the special regulations provided by the art. 775 and 779 letter f) New Civil Code, fiducia is also subject to the general rules with regard to the scope, which has to be real, licit and moral.

With regard to the **object of fiducia,** it is represented as we have already showed above, by a series of successive stages, respectively the transfer of some of the rights provided at the art. 779 letter a), transfer which is made, pursuant to the art. 779 letter b), by conclusion of a mandate of administrations in the conditions of the art. 792 New Civil Code, but also by the transfer of the use from the fiduciary to the beneficiary. We notice that these operations, although distinct are in a closed interdependence.

Even if the mandate of administration within the contract of fiducia is similar to the mandate of administration of assets of other (792 and following of the New Civil Code), it should not be confused by this, these two mandates being different by their sources and by the capacity of the administrator of the two legal operations.[30]

With regard to the limits of the powers of administration of the fiduciary, the code provides that the extent of the powers of administration and disposal of the fiduciary has to be provided in the contract of fiducia, under penalty of absolute nullity.

This way, it results that the powers of administration and disposal of the fiduciary can be limited by contract, limitation that I consider that it can not be excessive because it would change the nature of the contract.

Still in the content of the contract of fiducia, it can be mentioned also the obligation of the fiduciary to specify the capacity in which the fiduciary acts, as it results from the interpretation of the art. 782 New Civil Code.[31]

As it has been declared[32] the text of the art. 782 represents the bridge between the institute of fiducia and the institutes of conventional representation, administration of assets of others and mandate, the delimitation from the mandate with representation being given by the lack of the obligation of specification of the capacity of fiduciary.

In the situation in which by the contract of fiducia, it is provided the obligation of fiduciary to specify the capacity in which the fiduciary acts, and the fiduciary acts failing to comply with such obligation, concluding an act in the damage of the constitutor, pursuant to the thesis II of the paragraph (3) of the art. 782 New Civil Code it shall be considered that this act has been concluded by the fiduciary on his/her own behalf.[33]

Also, by the manner of drawing up of the art. 783 New Civil Code, the legislator has integrated the provisions of the 779 New Civil Code, establishing, this way, other compulsory element, additional one, that has to be specified in the content of the contract of fiducia, respectively, the conditions in which the fiduciary should be held liable for the fulfilment of his/her obligations.

The legislator did not provide, in exchange, the content of the obligation to be held liable and neither the period in which the fiduciary has to comply with this obligation, letting both the content and the period at the free choice of the parties. From the second thesis of the art. 783, it results that the fiduciary has to be held liable to the constitutor and his/her representative, but also to the beneficiary, upon request of any of them.

It can be noticed the existence of a striking similarity between the obligation to be held liable of

[29] Cătălin R. Tripon op. cit. pag. 172
[30] see M. Uliescu și A. Gheorghe – op.cit. pag. 156
[31] see also G.Boroi; C.A. Anghelescu; B.Nazat op.cit.p.207
[32] A. Rățoi - op. cit. page 272
[33] R. Constantinovici op.cit.p. 829-830 – comment of the art. 782 Civil code

the fiduciary and the same obligation of the proxy within a contract of mandate.

With regard to the sanction that may appear for failing to insert in the contract of fiducia the conditions in which the fiduciary shall be held liable with regard to the fulfilment of his/her obligations, we consider that it can not be absolute nullity.

Therefore, although the text of the art. 783 New Civil Code is imperative, it can be noticed that the legislator did not specify also the sanction applicable in the event of failing to insert in the contract of fiducia the conditions in which the fiduciary shall be held liable with regard to his/her obligations, or if we could apply the sanction provided by the art. 779 New Civil Code, we would adopt a really illegal situation, having in view that the art. 10 of the New Civil Code prohibits the interpretation by analogy when such an interpretation would lead to the enforcement of a sanction. (the text of the art. 779 New Civil Code besides it provides a sanction is still of strict interpretation).

7. VALIDITY AND OPPOSABILITY OF THE CONTRACT OF FIDUCIA

As we have previously mentioned, the contract of fiducia is validly concluded only if the authentic form provided by the art. 774 New Civil Code and also the minimum content specified by the art. 779 New Civil Code are complied with.

For reasons of social safety, in order to eliminate the possibility of committing tax evasion and money laundry (the constitutor – beneficiary being able to take advantages of the funds illicitly obtained through fiducia) the legislator felt the need to impose another ***ad validitatem requirement*** of the contract of fiducia, respectively, the one provided by the art. 780 New Civil Code, text according to which the contract of fiducia has to be registered with the competent fiscal body or with the local public administration, under penalty of absolute nullity.

Also, the eventual modifications of the contract of fiducia have to be registered with the competent tax body, under the same penalty of absolute nullity. The registrations are performed upon request of the fiduciary within one month from the conclusion of the contract or, as the case may be, from the conclusion of the amendments.

The paragraph (2) of the art. 780 New Civil Code provides the situation in which the fiduciary assets contain real estate rights, imposing their registration, of course, subject to absolute nullity, with the specialty department of the competent local public administration authority, within the property is located, the legislator concluding that the regime of land book stays applicable, from which we can interpret that it is necessary also the registration of the contract of fiducia.[34]

The obligation of registration is kept by the legislator and in case in which the beneficiary of fiducia was not mentioned in the contract, it being subsequently appointed, the sanction in case of failure to register being also the absolute nullity.

We can draw the conclusion that the tax registration represents a validity condition of the contract of fiducia, its failure to comply being punished by the absolute nullity of the contract.

Still, this conclusion is no longer valid in the case provided by the art. 780 paragraph (4) New Civil Code, text that provides that if for the transmission of rights is necessary to fulfil special form requirements, a separate act shall be concluded, under compliance with the requirements imposed by the law, in these case, the eventual lack of tax registration attracting the enforcement of the administrative sanctions provided by the law.[35]

Unlike the regulation of the New Civil Code, in the Anglo-Saxon law, the trust is not subject to any tax registration, because the trust character is preponderantly contractual and not institutional as the case of fiducia.[36]

In view to achieve the opposability of the contract of fiducia toward third parties, the Romanian legislator, in the content of the art. 781 of the New Civil Code has regulated the fact that by its registration in the Electronic Archive for Security Interests in Movable Property the fiducia becomes opposable to third parties.

The paragraph (2) of the art. 781 New Civil Code provides that "*the registration of real estate rights, including the security interests object of the contract of fiducia can be done also the in the land register for each land separately"* emphasising this way the rights transferring character of the contract of fiducia, the legislator imposing this way a double publicity of the real estate rights.

8. POWERS OF FIDUCIARY AND ITS REMUNERATION

In relation with third persons, in which the fiduciary shall enter, it shall be considered having full powers on the fiduciary patrimony, *"acting as a true and sole holder of the respective rights except for the case in which it is proved that third parties knew the limitation of these powers*".

As specified by the provisions of art. 781 N.C.C. (*New Civil Code*), a fiduciary is opposable to third parties in the form and at the time of its listing in AEGRM (*Electronic Archive for Security Interests in Movable Property*), whereas art. 779 letter f) provides, under the penalty of absolute nullity, to insert within the contents of the fiduciary contract the scope of the fiduciary's powers, so it can be construed that, in case the fiduciary contract was listed in AEGRM, the third parties knew or ought to know any power limitations

[34] M.Uliescu and A. Gheorghe op.cit. pag 159
[35] See also R.Constantinovici op.cit.p.828 – comment of the art. 780 paragraph (4) Civil code
[36] A. Rățoi op. cit. pag. 272

of the fiduciary or, better said, it is presumed that third parties would be aware of such limitations at the time of listing the fiduciary in AEGRM.

Such an interpretation, although obviously possible in the future legal practice in the matter of fiduciary contracts, would be unfair, as it is well known the fact that in AEGRM is only mentioned the existence of the contract and not its contents, which leads to the idea that the correct solution would be the one in which the fiduciary would provide the third parties with the contents of the contract, so that they can be physically aware of the limitations of the fiduciary's powers.

It can be observed that the fiduciary acts "*as a genuine and sole holder of the rights in question*", thereby consolidating the conclusion that under the fiduciary contract no genuine transfer of ownership is performed.[37]

The fiduciary's powers may be limited under the contract, as follows from the *per a contrario* ("*on the contrary*") interpretation of the provisions of art. 779 letter f) N.C.C., following that such limitations to be specified, under the sanction of absolute nullity, in the contents of the fiduciary contract.

Even though under the contract, the constitutor has the possibility to limit the fiduciary's powers, we believe that the fiduciary will exercise its powers exclusively, and the respective constitutor will not have the ability to interfere throughout the contract's duration in the manner of fulfilling the fiduciary's obligations, having instead the opportunity to held the fiduciary accountable, and if the fiduciary either will fail to fulfil its obligations or will fulfil them poorly, thereby jeopardizing the interests entrusted to him, the constitutor will be able to request the court to replace the fiduciary, pursuant to Article 788 of the Civil Code.

Paragraph (2) of art. 784 provides that the fiduciary's remuneration shall be effected by agreement between the parties, and in the absence of such an agreement, according to the rules governing the administration of the property of others (art. 793 N.C.C.).

9. FIDUCIARY'S LIABILITY

According to art. 787 N.C.C., the fiduciary is liable, only subject to the rights contained in its patrimony, for damages caused by acts of conservation or administration of the fiduciary patrimony.

It can be observed that the law text does not also cover liability for directives that the fiduciary may order in the performance of the fiduciary contract, the legislator considering, perhaps, that they can be assimilated to certain acts of administration in relation to the entire fiduciary patrimony[38] .

Obviously, the fiduciary's liability may be enforced only by court order.

The legislator also provided the sanction of fiduciary's replacement, if he fails to fulfil its obligations or jeopardizes the interests entrusted to him, for this purpose, granting to the constitutor, his representative or to the beneficiary, a right of legal action to obtain a court order for the fiduciary's replacement.

The institution of fiduciary's replacement, as regulated by art. 788 N.C.C., a text which provides both cases of fiduciary's replacement and a number of procedural issues, according to which, **until settling the replacement request**, it shall be appointed a provisional administrator of the fiduciary patrimony, subject to the provisions of art. 792 and the following of the N.C.C.

The provisional administrator shall be appointed [39] according to paragraph (2) of art. 788 N.C.C., by the constitutor, its representative or, in the absence thereof, by the beneficiary, and if each of them simultaneously appoints one provisional administrator, the appointment made by the constitutor or the one made by its legal representative shall have priority.

Given the wording of art. 788 para. (4) N.C.C., a text according to which *"the appointment of a new fiduciary and provisional administrator may be ordered by the court only with the consent thereof"*, we consider that the text of paragraph 2 should be redrafted (by the legislator) for the purpose of replacing the verb "to appoint" with the verb "to nominate". There are two theses which would lead, *de lege ferenda* ("*with a view to the future law*"), to the need of such replacement, namely (i) the one according to which an administrator cannot be unilaterally appointed, considering the necessity for its acceptance of the provisional mandate and (ii) the one for removing the contradiction between the text of paragraph (2) and the text of paragraph (4) on the appointment of a provisional administrator.

Paragraph (3) provides that the mandate of the provisional administrator shall cease when the court shall rule on the replacement request, irrespective of the judge's ruling, and the second thesis states that the fiduciary's replacement request shall be settled urgently and with priority.

We believe that the regulation on the fiduciary's appointment by the court may hinder this operation in practice, because it would be much easier for the court to limit itself to ordering the fiduciary's replacement, following that the constitutor in question, based on the court order for replacement, to obtain the consent of a new fiduciary and, subsequently, to operate the amendment of the fiduciary contract, according to art.

---

[37] A. Răţoi - work, quote, page 273

[38] A. Răţoi - work, quote, page 274

[39] We believe that the correct expression would be ***shall be nominated***, given that an appointment is to be made by the court after having first obtained the prior express consent of the provisional administrator

788 para. (6) reported to art. 780 and 781 N.C.C. so that the fiduciary's replacement shall take effect.

It can be seen that, compared to the registration provided by art. 780 N.C.C., that is to be undertaken by the fiduciary, art. 788 para. (6) requires that both the constitutor and his representative, as well as the new fiduciary or the provisional administrator, may register the amendment to the fiduciary contract.

We do not understand why the provisional administrator is listed among the people mentioned in para. (6), given that its mandate ended at the time the court ruled on the request for replacement, probably the legislator intended to also highlight the need for the emergence "on scene" of the provisional administrator, only that the wording of the legal text is really unclear.

10. LIMITATION OF FIDUCIARY'S LIABILITY IN CASE OF INSOLVENCY AND DEPENDING ON THE SEPARATION OF PATRIMONY ASSETS

By drafting art. 785 N.C.C., the legislator regulates the cases of limitation of fiduciary's liability in the event of opening the insolvency proceedings against him, stating that, in this situation, the fiduciary patrimony assets are not affected.

The wording of art. 785 N.C.C. is merely a takeover of the provisions of art. 2024 of the French Civil Code, and stresses not only the separation of the fiduciary patrimony assets from the rest of the patrimony strictly owned by the fiduciary, but also the limitation of the fiduciary's liability when he acts in his own name and concerning his own patrimony assets, without prejudice to the fiduciary patrimony.

Please note that the application of article 785 cannot be extended in the case of a notary - fiduciary or attorney - fiduciary, because Law no. 85/2014 does not apply to these categories of individuals. [40]

Art. 786 N.C.C. provides when can be pursued the goods contained in the fiduciary patrimony assets, the purpose for which the legislator restrictedly lists, in the contents of para. (1), the cases in which the constitutor's lenders may pursue such goods. Thus, the goods contained in the fiduciary assets may be pursued by the holders of claims arising in connection with such goods or by those lenders of the constitutor who have a security interest over his goods, and whose enforceability is acquired prior to the conclusion of the fiduciary contract.

With regard to the other lenders of the constitutor, the second thesis of article 788 para. (1) provides that they have the right to pursue the goods contained in the patrimony assets only where they would produce a definitive court order by which it would be admitted a Paulian action (to revoke), provided by article 1562 N.C.C., so that the fiduciary contract will be terminated with a retroactive effect, or in case a fiduciary contract shall become unenforceable subject to a court order, but also with a retroactive effect.

Considering that the listing of such cases has a limitative nature, it follows that the two situations set out above represent the exception, and the rule being the one according to which the constitutor's lenders may not pursue the goods forming the fiduciary assets.

Under paragraph (2) article 786 N.C.C., the legislator instituted the rule according to which fiduciary lenders benefit only from a general specialized pledge over the fiduciary assets, **except** when the fiduciary contract provided for an obligation of the fiduciary and/or the constitutor to be liable, with their own personal assets, for a part or all of the liabilities of the fiduciary contract.[41] In the exceptional circumstances referred to in paragraph (2), the liability of the fiduciary and/or the constitutor will be assumed only when the fiduciary lenders did not settle their claims following the execution of the fiduciary assets, such liability resembling the one of the guarantor who has not waived the benefit of discussion provided for in article 2294 N.C.C.

11. TERMINATION, AMENDMENT AND RESCISSION OF THE FIDUCIARY CONTRACT

The provisions of art. 789 N.C.C. provide for the situations in which the fiduciary contract may be terminated, amended or, as appropriate, rescinded, stating that as long as it was not accepted by the beneficiary, the fiduciary contract may be unilaterally terminated by the constitutor, highlighting the fact that only upon the beneficiary's acceptance the fiduciary mechanism becomes complete.

Basically, para. (1) of art. 789 N.C.C. states an exception to the irrevocability principle of the legal act's effects, thus making possible, in the matter of fiduciary contracts, the unilateral termination of the contract, but only by the constitutor and only until its acceptance by the beneficiary. For that matter, the wording of art. 789 para. (1) of the Civil Code represents an application of the provisions of art. 1276 of the Civil Code, generally regulating the unilateral termination.

We can see that the legislator does not stipulate whether the acceptance of the fiduciary contract by the beneficiary must take a certain form. It is obvious that in a situation of plurality of qualities, the acceptance is no longer worth discussing, because the acceptance of a fiduciary contract coincides with the conclusion of such contract.

Alternatively, in the case of a third-party beneficiary of the fiduciary contract, what form should take its manifestation of acceptance of the fiduciary contract?! As mentioned above, in the case of a third-

[40] According to art. 3 para. (1) of Law no. 85/2014 - *The procedures provided by this law apply to professionals, as defined in art. 3 para. (2) of the Civil Code, **except for those exercising liberal professions**, as well as those in respect of which special provisions are provided concerning their insolvency regime.*

[41] R. Constantinovici – work, quote, page 832 – comment of art. 786

party beneficiary in relation to the contract, the fiduciary contract appears as a real provision of another contract, so that the acceptance of the contract by the beneficiary shall be also made by reference to the provisions of art. 1286 Civil Code, but not even this legal text provides for the acceptance form and manner *ubi lex non distinguit nec nos distinguere debemus (where the law does not distinguish, we ought not to distinguish)*, it appears that acceptance can be both explicit and tacit.[42]

As a personal opinion, we reckon, for a better practical accuracy, that the acceptance of the beneficiary should take at least a written form, *ad probationem*, though it should not be ruled out the fact that the form of acceptance should be the same as the one of the fiduciary contract, in view of the particular importance that fiduciary assets may have and, at the same time, of the power that an authentic document confers to a legal civil act.

In the event that the beneficiary expresses its acceptance, the law provides that the act of recognition of the fiduciary contract can no longer be amended or rescinded by the parties or unilaterally terminated by the constitutor, except when the beneficiary gives its consent for this purpose or, in the absence of such consent, only with the authorization of the court.

The text of paragraph (2) may be regarded as an application of the theory of unpredictability, mentioning that the amendment or adaptation of the contract may also be required for other reasons than those restrictedly provided by art. 1271 N.C.C., since the law does not distinguish between such reasons.

12. CESSATION OF THE FIDUCIARY CONTRACT

The fiduciary contract ceases after the expiry of the term for which it was concluded or if the purpose for concluding the contract was achieved and occurred before the expiry of the term.

Also, the fiduciary contract may cease if all beneficiaries waive it and, without existing a clause in the contents of the contract stating how fiduciary relations are to be conducted in such a situation, the cessation of the contract shall occur on the date on which registration formalities are completed for the last waiver.

Last but not least, the fiduciary contract ceases at the moment of ordering the opening of insolvency proceedings against the fiduciary or when, according to the law, the effects of the legal entity's reorganization are occurring.[43]

In addition to the causes provided for in art. 790 N.C.C., we believe that there is a fifth case of cessation of the fiduciary contract, respectively the situation of cessation of the statute of attorney or notary, under the law.

Last but not least, regarding the *intuitu personae (on a personal basis)* nature of the fiduciary contract, the death or cessation of the fiduciary's existence, may lead to cessation of the effects of the contract.[44]

13. EFFECTS OF THE CESSATION OF THE FIDUCIARY CONTRACT

According to art. 791 N.C.C., upon cessation of the fiduciary contract, the fiduciary patrimony assets existing at that time are transferred to the beneficiary, and in his absence, to the constitutor.

The cases in which the transfer is operated towards the constitutor are provided by art. 790 para. (2) N.C.C., in the remaining cases the transfer is operated only towards the beneficiary.

Also, we can distinguish between the assumptions according to which, at the time of cessation of the fiduciary contract, there is a beneficiary or not, and not because he would have waived the fiduciary contract, but because he either has not been determined under the rules of the contract, or because the beneficiary - a natural person, is deceased and has no heirs, or the beneficiary - a legal person, has ceased to exist under the law.

After cessation of the fiduciary contract, the fiduciary patrimony assets transmitted to the beneficiary or the constitutor shall exist until performing the payment for fiduciary debts, as a patrimony of affectation regulated by law, according to art. 31 para. (3) final thesis N.C.C., so that after paying the fiduciary debts, the fiduciary patrimony assets shall merge with the patrimony of the beneficiary or the constitutor, as appropriate.

The wording of art. 791 N.C.C. is obviously unclear, if we consider the situation where among the goods forming the fiduciary assets we can also find real estate, thus wondering how is to be conducted the transfer of ownership from the fiduciary to the beneficiary or the constitutor? Under the law? Under the contract, which has just ceased? But how will such ownership be tabulated, under which act? We believe that the legislator should complement the provisions of art. 791 N.C.C., and must clearly regulate the situation in which the fiduciary patrimony contains real estate.

14. THE MAIN EFFECTS OF THE FIDUCIARY CONTRACT

A. The transfer effect

As shown in this paper, upon the conclusion of the fiduciary contract, it is operated a transmission with a private title of one or more patrimonial rights, from the constitutor to the fiduciary.

---

[42] Cristina Zamşa - the New Civil Code - Comment on articles - co-authored paper - CH Beck 2012 publishing house - comment of art. 1286 Civil Code – page 1354

[43] For details on this manner of cessation of the fiduciary contract, see Ion Turcu - "Se poartă Fiducia" - http://www.juridice.ro/244256/se-poarta-fiducia.html

[44] G. Boroi; C. A. Anghelescu; B. Nazat – work, quote, page 212

The patrimonial rights subject to the transfer may be, under art. 773 N.C.C., real estate rights (movable or immovable property), rights for claims, but also guarantees, such as mortgages or even a specific claim that was previously assigned (*anticipated*) to the constitutor as a guarantee, indicating that such rights can be both present, thus existing at the time of conclusion of the fiduciary contract, and also in the future.

As soon as the fiduciary contract was concluded and registered under art. 780-781 N.C.C., the fiduciary becomes the exclusive owner of the rights forming the object of the fiduciary contract, and the constitutor no longer has the opportunity to exercise such rights throughout the period for which the fiduciary contract was concluded, the only one able to stand on such rights is the fiduciary.

As we have seen, the transfer of property or other rights from the constitutor to the fiduciary is temporary (throughout the duration of the fiduciary contract) and with a contractually determined purpose, thus bringing a number of limitations to the rights transmitted to the fiduciary.

Although there is a transfer of ownership or other rights from the constitutor to the fiduciary, we must not confuse the fiduciary property with the common property, the fiduciary having, besides rights, a series of obligations established under the fiduciary contract, obligations that must be met in order to achieve the purpose for which the fiduciary contract was concluded in the first place.

Throughout the entire period for which the fiduciary contract was concluded, the fiduciary, even though it "*acts as a genuine and sole holder of the rights in question"*, must not lose sight of the purpose of the fiduciary contract, the mission entrusted to him by the constitutor under this contract, and the fiduciary cannot exercise at its sole discretion the fiduciary ownership.

We can conclude, in this respect, the fact that the fiduciary property confers only a temporary exclusivity to the fiduciary and is not an absolute one, thus observing the major difference compared to the common property, which is of an absolute and perpetual nature.

By its nature, the legal operation of the fiduciary contract involves a number of limitations, the parties being able to limit, in their turn, the legal operation itself, under the powers of the convention.

For this purpose, the parties to a fiduciary contract may decide, in the event that the object of the fiduciary contract would be the ownership over a building, that such constitutor shall use, during the performance of the contract, the building in question, although the fiduciary has acquired, as guarantee, the ownership over that building. The example given resembles very much the situation of the real estate lease contract of the **leaseback** type **(*sale and leaseback*)**, where the landlord alienates the property to the leasing company, which thus becomes the owner, afterwards concluding a lease contract for the building in question, so that at the end of the lease contract, the funder (the leasing company) will transfer ownership back to the user.

Also, under art. 779 letter f) N.C.C., the parties may impose a number of limitations on the acts of administration or directives that the fiduciary may conclude in the exercise of its prerogatives obtained under the fiduciary contract. From the wording of the regulations regarding fiduciary contracts, it can be inferred that in the absence of a stipulation to the contrary, the fiduciary may conclude acts of conservation, administration and/or directives, without needing the consent of the constitutor or beneficiary; however, it is necessary to mention that, according to art. 779 letter f) N.C.C., in the contract it must be provided, under penalty of absolute nullity, the extent of the powers of administration and directive of the fiduciary.

Interpreting *per a contrario* the provisions stipulated by art. 779 letter f), it follows that the parties to the fiduciary contract may establish a limitation of the fiduciary's powers, thus allowing him to conclude solely acts of conservation or acts of conservation and administration. However, we consider that limiting the powers of the fiduciary to the extent that he shall be entitled to perform only acts of conservation, would lead to a change in the legal nature of the contract, resembling more to a storage or mandate contract, by onerous title, is true, rather than a fiduciary one. In conclusion, we believe that the fiduciary's powers may be limited under the contract, but such limitation should not be a major one because it could lead to a requalification of the contract.

The Romanian legislator did not provide, in the matter of fiduciary contracts, the method for bearing the risks associated with losing movable or immovable property, in the event where such goods are included in the fiduciary assets.

Given the absence of a legal provision expressly providing the taking over of the risk of property destruction, within the fiduciary contract, we believe that, in the matter of fiduciary contracts, the general provision is applicable, as established by art. 558 N.C.C., covering the risk of destruction of the property, thus resulting that, in the absence of a provision to the contrary, the fiduciary, after becoming the owner of the property, will also bear the risk of fortuitous destruction thereof.[45]

The fact that under the fiduciary contract is operated a transfer of ownership, atypical for that matter, but still operated, the fiduciary must be guaranteed as well. The law provides for the right of the constitutor to hold the fiduciary accountable; however, the law provides no specific liability in what concerns the constitutor, in the event where the

[45] See also G. Boroi; C.A. Anghelescu; B. Nazat – work, quote, page 203

fiduciary would be prejudiced either by the defects of the goods forming the fiduciary patrimony or by third parties that would be entitled to claim such property or even by acts attributable to the constitutor, and even if such acts occurred after the conclusion of the fiduciary contract.

We believe, regarding this situation, that the constitutor must borne the obligation to guarantee the fiduciary, just like the seller guarantees the buyer in the matter of a contract of sale and purchase, following that such application will be made without restrictions, and in the matter of the fiduciary contract, of the provisions of art. 1695 and the following N.C.C., but also those of art. 1707 and the following N.C.C., provisions that regulate the guarantee against eviction, respectively the guarantee against defects of the property in question.

B. Separation of the fiduciary's personal patrimony from the fiduciary patrimony assets

Patrimony separation, in the matter of fiduciary contracts, is of the utmost importance, being governed by the second thesis of art. 773 N.C.C., a regulation which is corroborated by the general provision regarding the patrimony of affectation, as provided by art. 31 para. (2) and para. (3) N.C.C.

Patrimony separation, in the matter of fiduciary contracts, gives rise to a fiduciary patrimony distinct from the personal patrimony of the fiduciary, thus protecting the fiduciary against incurring obligations arising in relation to the goods forming the fiduciary assets.

At the same time, the fiduciary, under the fiduciary contract and within the powers which have been conferred by it, may give directives regarding the goods forming the object of the patrimony of affectation, following that any goods acquired in exchange for the alienated ones to be also included in the fiduciary assets.

In conclusion, we believe that through the conclusion of a fiduciary contract, there is a transfer of patrimonial rights from the patrimonial assets of the constitutor to a fiduciary patrimony, which is distinct from the personal patrimony of the fiduciary. However, we must not confuse the transfer of patrimonial rights conducted according to art. 773 and the following N.C.C., with an alienation of such rights, as art. 32 N.C.C. provides that in case of affectation, the transfer of rights and obligations from a patrimony asset to another does not constitute an alienation.

C. The effects of the fiduciary contract in relation to the constitutor's lenders

As we mentioned above, the parties to the fiduciary contract are represented by the constitutor and the fiduciary, whereas the beneficiary, if not confused with one of the contracting parties, has the status of *habentes causam*, and in relation to the constitutor's lenders, the contract is merely *res inter alios acta (a contract concluded between others, which cannot adversely affect the rights of those who are not parties to it).*

Usually, the third parties are not affected by the conclusion of a certain legal document, in the meaning that the act is not in their benefit neither in their detriment. With regard to the contract of fiducia, it can be quite a lot in the detriment of the creditors of the constitutor, who will no longer foreclose the assets of fiduciary mass, unless to the extent in which they hold security interests on the fiduciary assets, registered prior to the establishment of fiducia.

This way, as we have already showed at the point 10 above, the Art. 786 of the New Civil Code provides when the assets from the fiduciary patrimony can be seized, purpose in which the legislator has restrictively enumerated at the paragraph (1) the cases in which the creditors of the constitutor can put these assets under seizure.

In practice, it shall be probably, the tendency of some legal persons to protect a series of patrimonial rights, using the legal operation of fiducia in the detriment of its creditors, than, after the establishment of fiducia, the respective constitutor, legal person, to ask the court to open the procedure of insolvency.

We consider, that in the light of the provisions of the art. 117-118 of the Law 85/2014 the legal administrator can make a request to the syndic judge by which it can request the annulment of the contract of fiducia, request that shall be allowed by the syndic judhe, but only subject to the conditions provided by LPI.

Short opinion on the implementation of fiducia in the contemporary legal practice

Although, more than 3 years have passed since the appearance of the Civil Code, the fiducia is not used in practice in any of its forms[46] situation that leads to a penury of case law.[47]

We can not understand why, from the multiple applications of the fiducia as guarantee or fiducia as administration, in practice, at least the fiducia as guarantee of the banking loan is not used.

A mortgage contract concluded in view to guarantee the reimbursement of a banking loan does not grant to the mortgagee the same advantages as the ones of which it can benefit in case in which it should conclude a contract of fiducia to guarantee the reimbursement of the loan.

This way, if a bank concludes a loan credit for the reimbursement of which the borrower guarantee with a mortgage on a property, in case of opening the proceeding of insolvency of the borrower, the bank shall file lodgement of claim, this way, acquiring the capacity of participant in the procedure of insolvency

[46] Unlike the Anglo-Saxon law, where the *trust* has three forms (guarantee, administration and the one concluded for performance of a liberality) in the Romanian law, fiducia has only two of these forms, respectively, ***Fiducia* as guarantee and *Fiducia* as administration**.

[47] Ion Turcu – „Se poartă Fiducia" - http://www.juridice.ro/244256/se-poarta-fiducia.html

of the borrower, but without foreclose the mortgaged property, waiting either to collect the receivables according to an eventual reorganisation plan either it shall assist to the bankruptcy procedure till the liquidation of the asset of the debtor.

In exchange, having in view the same hypothesis but replacing the contract of real estate mortgage with a contract of fiducia as guarantee, in which content the lending bank shall cumulate the capacities of fiduciary -beneficiary, the opening of the procedure of insolvency of the constitutor – borrower shall not cause more problems to the credit institution with regard to the recovery of the debt, because in its capacity of fiduciary, the bank is the owner of the property subject to fiducia, and if the constitutor-borrower shall not pay the loan, the bank shall not be restricted by the procedure, the bank being able even to alienate the property, object of fiducia.

In this case, the bank could be in the table of the obligations of the constitutor debtor, strictly to recover the unpaid remuneration, established by the contract of fiducia, and even for an eventual difference uncovered by the value of the asset, subject to fiducia.

PERSONAL INSOLVENCY

Diana DELEANU[*]

Abstract

In 2014 a draft bill on personal insolvency reached public debate, stirring controversy in both financial and academic environment. The current paper aims at analyzing the merits and weak points of the draft bill.

Keywords: *insolvency, debtor, creditor, restructuring, bankruptcy.*

1. Introduction

The international insolvency proceedings' regulation extends now not only to trade entities, but also to the municipal and individual proceedings.

Many European countries have a long standing practice in restructuring the financial situation for individuals who are unable to efficiently cover their debts.

2. Content

Personal insolvency, also known as "personal bankruptcy" (which is scientifically inaccurate) has been generating significant doctrine and ethical controversy, even in jurisdictions with an old and constant practice. The inaccuracy comes from the fact that –traditionally-the notion of bankruptcy proceedings ends with the dissolution / liquidation of the entity (such as in trade companies' case). Of course, this rule could not apply accordingly in insolvent individuals.

Therefore, this notion appeared from the need to protect the indebted citizen, a more understanding approach than the one which characterized the nineteenth century: the debtors prison.

Almost two centuries ago, in order to obtain a bank loan, Romanian traders had to be registered with the Trade Register, to be debt-free and not been sentenced to the debtors' prison.

The drastic approach from the nineteenth century (which characterized that historical time) left a strong imprint on society, as we see it reflected even in the literature of the time. The work of Charles Dickens would have clearly had another profile, would the author not been scarred as a child by his family's sentence in the debtors prison, after unnecessary expenses his parents made.

Therefore, individual insolvency requires a 'personal' approach, different from the "technical" one (appliccable to trade companies) because the regulation borderline touches upon individual rights and freedom and because, without aiming at that, the proceedings also affect the rights of third-party individuals, who need not be affected.

We cannot help wondering if regulating this procedure isn't a form of legislative regression after the human rights' expansion from the twentieth century.

Also, the current Romanian legislative bill breaks the rule according to which liability is personal, given the fact that the procedure affects third-party individuals who are dependent on the subject of the procedure (e.g.: minors, etc.). Given the fact that liability occurs where there is lack of responsibility, and dependent individuals had no contribution to the subject's deteriorated financial situation, one may notice that the grounds for liability is missing (the prejudicial deed).

The need for such regulations has been extensively debated in Romania. The procedure itself -theoretically- supports the individual debtor (non-trader), and its main creditors (in this historical stage) are the banks and the financial institutions. Under these circumstances, banking associations have been putting substantial pressure on the (not only) Romanian legislative against such proceedings.

This regulation blocks the banking creditors' direct foreclosure, including banks in the wider cathegory of guaranteed creditors.

This is one of the reasons why there were several attempt to regulate the issue in Romania, all far from materializing, given the existing agreement between Romania and the International Monetary Fund.

Critics argue that such a regulation could undermine the bank loan payments discipline, stating that that the credit discipline contributes to strengthening the country's financial stability.

As a consequence, the Romanian National Bank estimates an increase in the level of guarantees required by the financial and banking institutions for offerring a loan.

Studies conducted by the European Commission concluded Romania is a country with very weak protection for overindebted individuals.

Another aspect of the issue generated by personal insolvency is that of managing and protecting personal data during the restructuring plan's

[*] Lecturer Professor Diana Deleanu, PhD Candidate, The Faculty of Social and Administrative Studies, "Nicolae Titulescu" University of Bucharest (e-mail: **dianadel@univnt.ro**).

implementation, given the fact that international law takes stronger measures for securing data.

In other legal systems, the procedure was regulated by separate laws (e.g.: Australia, Italy), or as a mere section included in the insolvency proceedings law (e.g.: Germany, France, Czech Republic, Austria).

At the moment, the Romanian legislation, doctrine and consequently, practice are almost absent, with just the recently published project-bill to debate on.

Personal insolvency aims at ensuring a balance between the protection of the good faithed debtor and defending the creditors' interests.

Should the restructuring procedure end with full debt coverage, the good-faithed debtor (confirmed with such conduct) is given the chance for a „fresh start", as stated in Chapter 11 of the US Insolvency Code.

The doctrine follows two contrary directions: the strict enforcement of the "*pacta sunt servanda*" principle and sharing the debtor's responsibility with the contracting creditors. The first opinion denies the need to regulate this institution, while the second deems it as necessary.

There are three models for individual insolvency: the North-European one, the German one and the Latin one.

The advantages of regulating the procedure are: foreclosure suspension for procedures in progress on commencement of the proceedings; ceasing the flow of interest and penalties for late payment; all debs become chargeable and liquid and termination of all debtor's proxies (mandates).

The subject of the procedure will be an individual without entrepreneurial activities, insolvent, which will reimburse debts according to a plan and/or due to asset capitalization.

The terms to meet for undergoing this procedure are: residence in Romania; assets or sources of income in Romania; the individual does not act as an entrepreneur at the time of application and the absence of debt resulting from commercial activities conducted in their own name.

The debtor is deemed to be unable to pay its debts, two or more claims, towards two or more creditors within 30 days of the due date.

The creditor might also apply for insolvency for an individual debtor, but will need to prove that the debtor is unable to pay its due debts and its claim against the debtor exceeds the amount of Lei 25000.

In other legal systems, the threshold is Pounds 750 (in the UK) or AUD 5000 (in Australia).

In case the procedure is initiated at the debtor's request, they will state the reasons for which they are unable to pay the due debts on their own responsibility .

The request to initiate the procedure will be accompanied by a report of available income and assets, including data on revenues expected to be achieved over the next five years and information on their income in the last three years, along with the debt situation and details of the involved creditors. All statements are given on own responsibility.

The debtor needs to highlight individual assets with a value over Lei 1000 they alienated in the four years before the application and draft a proposal for the debt payment plan.

In order to support the debtor and based on the above-quoted principle of joint liability of the creditor and debtor, at the debtor's request, creditors must provide a written statement on their claims against the debtor, to assist in preparing the report on property and income, highlighting the amount of debts, interest and other costs.

The only party allowed to suggest a plan is the debtor, even though it might add an extra responsibility for them.

This regulation generates a theoretical dilemma: if the debtor oneself is able to draw up a viable and efficient debt payment plan, then:

a. How did one become insolvent (excluding fraud)? and

b. Why would the whole procedure be necessary, if they can manage their financial restructuring alone? Under these circumstances, isn't the procedure a form of law abuse (to suspend foreclosure) and an additional, unnecessary expense?

Regarding the above-mentioned procedural expenses, these will be covered from the debtor's assets, and if the funds are insufficient, the court shall not be able to dismiss the application for commencing the proceedings on these grounds only, and the source of the funds will be a budgetary one.

From this point of view, one could conclude that the legislative applies the principle of (social) solidarity by covering private costs from budgetary sources, while this is a quite unfair to other taxpayers.

Concerning the application of the "good faith test", we might consider that the draft which is currently under consideration adopts the North-European model, given the fact that the court will refuse to open the insolvency proceedings in case the failure to pay is due to the debtor's fraudulent or irresponsible behavior.

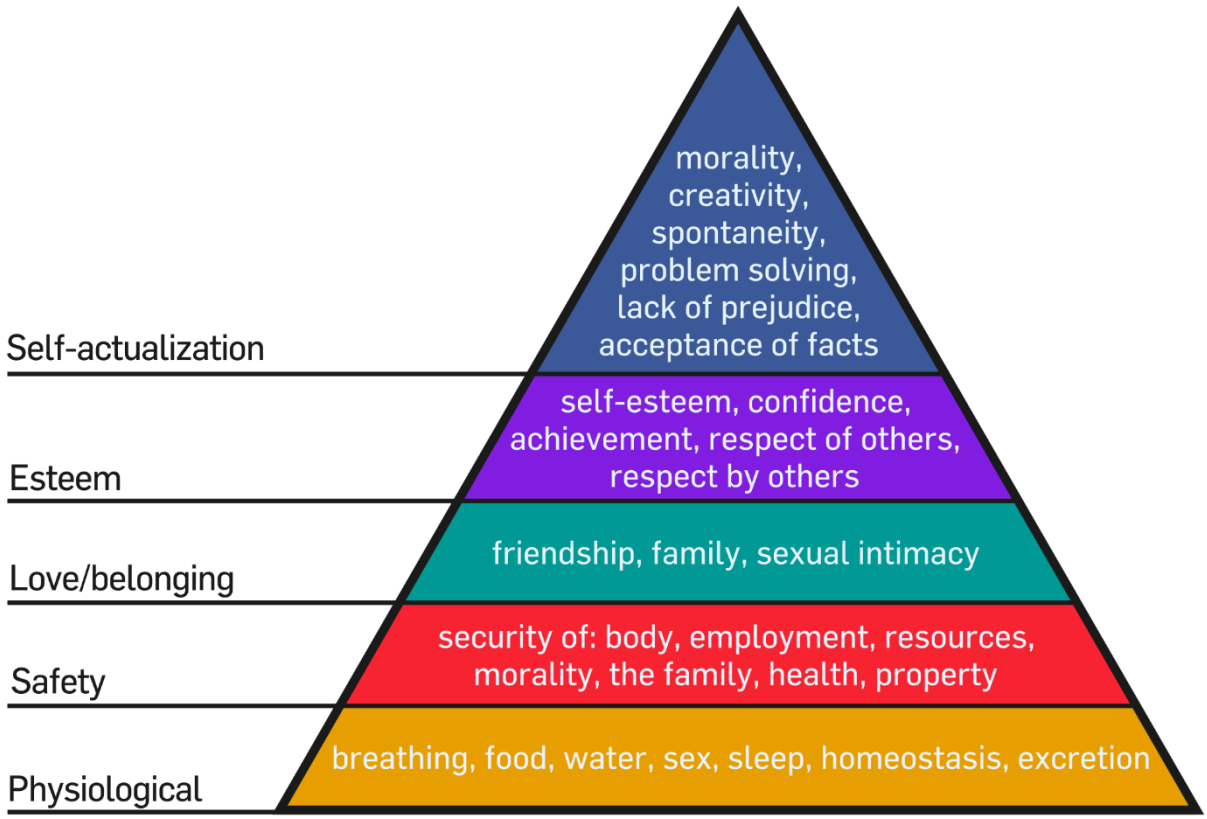
The theoretical dilemma is generated by the exact definition of the debtor's irresponsible behavior of (the fraud is ruled by law).

How can one deem as irresponsible behavior the acts of an individual who freely exercises personal rights and freedom, who cannot anticipate that (in 3 or 4 years) will undergo a strict financial evaluation procedure?

In the 21st century, the exercise of most individual rights (e.g.: access to culture, to higher education, etc.) is financially conditioned, so the draft bill does not state how one will appreciate the

responsible / irresponsible investment in cultural or professional improvement, for instance.

of the nominal value of its claim as recorded in the list, unless they agree in writing to a lower percentage.



Regarding the „personal" feature of these proceedings, one must emphasize that, given the complex character of the human being, a "technical", accounting assessment of previous expenses and of those recommended during the restructuring plan implementation cannot be a rigid, accounting one.

The individual features of the subject are a factor which must be taken into account in assessing the necessary costs of living, such as the bill indicates.

Abraham Harold Maslow's pyamid of needs[1] suggests a landmark which is necessary, but not sufficient in auditing financial statements of the previous three years and planning for the future.

The draft bill states that the judicial administrator shall approve the minimum allowance for the debtor and the people who depend on them which shall cover basic needs, and cannot be larger than the minimum wage.

Other reasons for dismissing the insolvency proceedings commencement application are: if the individual is in (financial) default or has undergone a similar procedure in the past 7 years.

By means of the restructuring plan, an unsecured creditor should receive compensation of at least 40%

One of the most controversial effects of the procedure regulated by the current project is the automatic cancellation of donations and other transactions carried out by the debtor free of charge within three years prior to the personal insolvency proceedings' commencement.

Such justified and very suitable measure in commercial insolvency cannot, however, be copied *mutatis mutandi*s in the personal insolvency proceedings.

It unreasonably affects the rights of an individual (quite solvent at the time who freely exercises their rights on private property), and of the beneficiary of the donation who did not know and could not anticipate the reinstatement of the parties in the initial situation by returning the property to the initial owner.[2]

In addition, any transaction with a related person (spouse, partner, children, grandchildren, parents, grandparents, siblings, their spouses, partners and children who live with them, as well as any other individuals who live with them and depend on the subject of the insolvency proceedings) will be considered a suspicious transaction according to the definition from the Romanian Insolvency Code.

[1] Abraham Harold Maslow, The Pyramid of needs, source: Wikipedia.

[2] One should take into consideration the irrevocable feature of a donation (from the Civil Code), with very few exceptions, which are not to be found in such cases.

As a result of commencing the personal insolvency proceedings, the debtor shall comply with the instructions on the judicial administrator regarding the assets which are subject to the procedure, will provide all the information requested, will not be able to alienate their assets and is required to identify additional sources of revenue, in case they are unemployed.

The debtor must refrain from any transactions and behaviors that may lead to the restructuring plan's failure (while the notion „improper behavior" is not deemed a proper definition), must submit the judicial administrator all amounts collected from legacies, donations, compensation and the extraordinary income and must not take on new responsibilities that they cannot meet to the due date (again, the notion of "new responsibility" is not defined in the draft bill).

The debtor may not refuse a reasonable opportunity to obtain income, and must inform the court and the judicial administrator on any and all changes of residence or their professional activity.

These last ideas of the draft bill (although possibly justified by the need to prevent the debtor from failure to observe the timetable) are more similar to the criminal measure of Court supervision (Court order), regulated in article nr. 215 of the new Criminal Procedure Code. But, such measures are justified in the criminal supervision area, based on the assumption of alleged crimes and aimed at controlling the social threat that the alleged criminal poses[3].

Another restriction of personal freedom may be the fact that should the a legal document by means of which the individual debtor refuses to accept a gift or inheritance without the judicial administrator's consent is not valid.

Another unfounded consequence stated by the draft personal insolvency bill which breaches a number of rights is the fact that the debtor against whom personal insolvency proceedings were initiated and completed may not be the sole associate in a limited liability company for five years from the moment the personal insolvency proceedings end.

Or, the purpose of the procedure is that the individual becomes once again become a viable taxpayer, so that, the measure is unjustified, since it can not be a sanction for fraudulent acts, and, therefore, appears as an unjustified limitation.

As an exception to the rule that a debtor subject to personal insolvency proceedings may be acting as an entrepreneur (authorized), the insolvency proceedings may commence should the creditors agree, the main debt does not exceed Lei 45000 and the debtor has no more than 20 creditors at the time of the application is initiated.

The recorded claims shall be analyzed and reviewed by the judicial administrator within 15 days of the end of claims registration period, who shall draft a list of the debtor's assets within 20 days of the personal insolvency proceedings commencement.

Considering the fact that the draft insolvency bill aims at protecting the interests of debtors and sanctioning the less diligent creditors, the unrecorded claims cease to exist on the date the plan is actually enforced.

As a common feature of this project bill with the regulation concerning the municipal insolvency proceedings[4], we find the lack of a proper ending.

Namely, the draft bill does not state which is the consequence of failure in reimbursing all debt at the end of the period indicated by law.

If in commercial insolvency, failure to reimburse debt and restructure leads to bankruptcy (liquidating the entity), in the case of the other two subjects of law, the individual and the municipality, in which cases, liquidation is not an option, there is a legislative void.

Clearly, individual insolvency proceedings is resumed, and is not to be restarted, while the situation remains difficult for both creditors and debtor, with a lack of perspective of protecting and promoting the interests of both parties.

3. Conclusions

In terms of a rigorous multidisciplinary regulation, personal insolvency proceedings have the potential to be, along with the municipal and the commercial one, a legal solution for the high indebtedness level.

Such a law should observe the limits of individual rights and freedom (not only of the debtor, but also of those depending on them).

But more than that, it should be efficient, and so it should have a purpose (a trading one for creditors by covering liabilities), representing not merely a procedural extra cost and an opportunity for law (judicial) abuse, but a fair and advantageous solution for both debtor and its creditors.

SHORT CONSIDERATIONS ABOUT THE PRECIPUT CLAUSE IN RELATION TO MATRIMONIAL CONVENTIONS

Gabriela FIERBINŢEANU[*]
Ioana PĂDURARIU[**]
Anca Nicoleta GHEORGHE[***]

Abstract

The preciput clause is a subject of dispute since the new Civil Code entered into force.Several question arise in this field: is this clause a liberality or a donation, which matrimonial regime is compatible with the preciput clause, for what reason the legislature choose to regulate preciput as a clause and not as an agreement and the expressed doubts can be continued as regard to the new civil law.The authors of this article are not having in mind to put an end to all those debates they are just proposing an investigation of the preciput clause under two aspects:legal nature and aplicability as related to the matrimonial regimes – legal community, separation of assets and conventional community with accents on the normative evolution as a result of social and economic changes.

Keywords: *preciput clauses, matrimonial conventions, liberality, donation, agreement*.

Introduction

The patrimony benefits that are not a current creation in the different legislative systems will always be a debate theme of the doctrine makers, if we consider their effects on the patrimonies of persons who are alive, but especially the consequences of their establishment over the patrimonies sent to the heirs. The reasons that lead to their genesis and the change step by step of the optics concerning the implementation means in the variable positive norms depending on each community are especially of our concern. As species, the matrimony benefits at the crossroad between the family law and the inheritance law integrate the idea of "freely interested" which is set at the crossroad between the bounds and donations without being yet able to be embedded with arguments in any of both categories.

It is imposible to talk about the preciput without analyzing the matrimonial conventions, organizing the patrimonial relationships between spouses or future spouses.As will be pointed during this study the evolution of those notions is indestructibile attached to the evolution of society, of the position of the separation of the wife"s fortune from the husband"s fortune and at last but not least of the intention of the spouses by reference to their relationship and in the same time to the heirs.This connection makes it so difficult to define, beyond the aplicable legal provision, the true intention and also the moral one when a preciput clause is intervening.

Evolution

The preciput clause is not a novelty, being known as a mechanism since the II B.Ch. millennium, proofs of the practices regarding the preferential partition being identified in the Ur or Nipur[1] cities. The first new born right as patrimony benefit of him is even mentioned in the Old Testament, as in the case of father's death, he received two parts of the inheritance, and the others, one part[2] . Although "the paradigm of legal relation between the giver and receiver", loaded with a certain "moral consistence", having its origins in the principles applicable to an old testamentary heir right, was taken over by either forms in the encodings along the times. [3] However, we think that the delimitation of civil authority areas from the ecclesial area in the matrimony field or in its related one is one of the most acute, by the sociologic change of approach of the family institution and implicit of the subsequent inheritance rights (by the Decision of French Cassation Court, this was decided as not being contrary to the good habits, the liberality whereby its author follows the maintenance of an adultery

relationship he had with the beneficiary of liberality[4] ; the distinction of French doctrine makers between the effects of adultery and non-adultery liberalities, the progress of moral and interpretation of deciders' will or of an agreement parties, either we talk about a matrimony agreement, or we are in front of a civil solidarity pact, there are issues converging to the need of a careful reading of intention, irrespectively of its anchoring in the micro-reality of relationship or in the social macro-reality; on the other hand, we must not forget that affectio maritalis and concubinatio had been present institutions since the Romans' time).

Whereof the inspiration source of the Romanian law giver with respect to the preciput clause, namely the French civil code, we shall focus on certain progress marks of it, specific to French law. In this system, the matrimonial regime (generally the family law) knew a demarcation between the North side of the French territories, where a customary law is applied, which allows the bound of both husbands' fortunes and the South side, where the condominium of the husbands' assets was unthinkable, the rule being given by the dovery system. From the analysis of royal documents, Edit des meres(1567), Ordonnance de Blois(1579), it results the intention to protect the children by the first marriage, against consequences (considered as suspect sometimes) which a new marriage could have. In the case of widows, on the other side, their protection was expressed by the taking over of their own assets, of a half of movable assets shared and a dovery computed sometimes at the value of a half of the deceased husband's own assets, on the north of the country and by retaking the dovery brought on the time of marriage and procurement of an amount of the deceased husband's own assets, computed rated to the value of dovery originally brought into marriage, in the south. The establishment of a community of common assets has been materialized along time by the marital agreements that included, besides the dovery, the wife's own assets, provided that the value brought by each of both husbands to be equal. By the same deed, yet, after the establishment of common assets, the assets that wife was to take over after her husband's death (douaire) were specified before the notary.

The above mentioned system does not represent itself a novelty if we return in time to the age of Justinian emperor and to *dos profecticia* or *dos adventicia* (the doveries brought on the marriage, by the bride's father or even by wife) or to *donatio propter nuptias* (donation on the account of marriage, made by the husband), intended to serve the wife's and children interests, in case of dissolution of marriage or husband's decease[5].Besides *douaire*, in the most of the marriage of 17th century, in Paris, we find the preciput clause, having a similar profile at least at the intentional level, to the one mentioned by this paragraph, namely the establishment by the husband, for his wife, of the right of taking over a certain part of his fortune, before its division between the heirs. Whereof, as shown by the written law of 16th century (inheritance of the Roman Empire) specific to the French South, the wife's assets were under the husband's management, only the dovery and iota of assets received by her by inheritance or donation (paraphernalia) being for the benefit of wife, the right of poor widow to a quarter of assets (quarte du conjoint pauvre), which she acquired under ownership provided that there were no children resulted by marriage or with usufruct title, provided that there were up to 3 children alive that time, will be warranted by the initiated reforms.

It is still required the clarification of the fact that the preciput could overlap on the right of the first new born, but, as resulted by the mix of French condominium law, with the French law, it results that preciput could be found, too, in the donation or as testamentary clause, so that between the droit d'ainesse (the equivalent of primogeniture)[6], which means the right of the new born and cannot be altered by the will of decuius and preciput, at least at the historical level, a full similarity of meanings does not exist.

Legal notion

The clause of preciput is found in our civil law, as inspired from the French regulation, the correspondent of French civil code being identified by articles 1515-1519. The term included by Art. 333 par. 1 of the Civil code is not clear, but rather a report to the content of matrimonial agreement, irremediably binding the existence of preciput to the existence of the agreement. We don't understand why the law maker builds a definition of the clause with no respect to terms like: "decision", "provision", "stipulation" if we only consider the meanings existing in the explicative dictionaries[7], being only limited to the description of the object and effects of such a clause. Additionally, the text of Art. 1516 of French Civil code refers to preciput as a matrimonial agreement between partners, too[8], so it would have been more appropriate, by the opinion of the authors of this study, the definition of preciput (not of the clause) resulted by other arguments shown below, as an agreement between the man and wife or the future man and wife. In the same meaning,

[7] http://dexonline.ro/definition/clause

[8] art 1516 - Le préciput n'est point regardé comme une donation, soit quant au fond, soit quant à la forme, mais comme une convention de mariage et entre associés

we underline, too, the provisions of Art. 367 of Civil code, which provide that in the case of adoption of conventional community, the matrimonial agreement may refer to one or several issues listed at letters a-d, letter d referring to the clause of preciput. Provided that, according to the text of Art. 367, the matrimonial agreement may only refer to one issue, namely "inclusion of the clause of preciput", the law maker's option to bind the conclusion of a matrimonial agreement with a single issue of it, namely the preciput, which simultaneously represents the object of the matrimonial agreement and a clause of it, seams again not understandable.

The Romanian doctrinaires tried too the definition of the clause of preciput as an agreement of husbands, an agreement of will of husbands or, as the case may be, of the future husbands[9], a donation[10], a partial liberality[11], under certain circumstances, a matrimonial benefit established for the surviving husband, if its object[12] is taken into account.

Before analyzing the legal kind of the clause of preciput, it must be specified that neither the French doctrine was unanimous on the issuance of a definition of preciput, because, although Art. 1516 French Civil code refers to preciput as an agreement and excludes it from the category of donations, the Latin etymology of the term *proc* - before and *capio* - to take) does not automatically place on either of categories, so that, it was considered, in turn, as a preferential characteristics of an asset[13], a matrimonial benefit granted by marriage[14], and not the latest a contractual establishment of heirs (if we consider the donations allowed by matrimonial agreements) [15].

It is also required a terminological specification, namely that by Law no. 2006-728 of June 23rd, 2006, regarding the reform in the field of assets and liberalities, french legislator replaced of the text of Articles 843 and 844, the term of preciput by the phrase "hors part succesorale" (outside the assets part). This way, provided the exit from timeshare, the phrase *hors part* is intended to explain the benefit duly or conventionally granted, that an amount of money, a certain asset or a group of assets of being able to be sampled, before the partition, the preferential assignment being of property title, private property or usufruct. Such a clause also exists in the French assets law, so that the donations made outside the assets part cannot be claimed by the heir came to partition, unless they surpass the available quotity (the surplus being subject to reduction).

Legal nature

By the analysis of text of Art. 333 Civil code, it undoubtedly results that by the insertion of a clause of preciput in the content of matrimonial agreement, a benefit of surviving husband will be procured, but not anytime, just before the partition of inheritance, so that we are in front of a possibly affected right by a suspensive condition (survival). It is easy to notice that a heir of succesoral law and of the family law is born(to keep the tone of Art. 333) that seams to be adopted yet with full effects by the great family of civil law, but without identifying itself a clear position within it and losing the connections to his predecessors strangely, because he had all the premises of inheriting the most important qualities from them. But the law maker sets the clause of preciput within Book II About family, Title II. Marriage. Chapter VI. Patrimonial rights and obligations of husbands, Section 1. Common provisions, §4 Selection of matrimonial regime. The selection of the matrimonial regime, although the regulation included in par. 1 and 2 of Art. 333 is full of provisions specific to succesoral law, an issues that is explicable considering the fact that the legal effects are produced on the date of the opening of the inheritance, therefore it is logical that they are subject to the provisions of Book IV About inheritance and liberality. We recognize that the romanian legislator position is not the the happiest one because the structure of the Civil code is not similar to French Civil code which brings together in the Book III: Des différentes manières dont on acquiert la propriété both the provisions that are incident in the matter of inheritance and liberalities and those applicable to the matrimonial regimes, but beyond the empathy, we consider that the separation of the legal notion from the effects of clause would be more appropriate. We support this because, by joining the provisions included in Art. 333, it legitimately incurs the question: the clause of preciput is a liberality?

Starting from the classification of legal acts , it is defined as a liberality the legal document with free title, whereby the decider decreases his patrimony by the procured patrimonial use, opposed to the disinterested acts , whereby no decrease of patrimony is produced, although the decider procures a

patrimonial benefit [16]. In the same meaning, the definition of contract with free title also surprises the intention of procuring the other parties a benefit without the procurement in exchange of a benefit (Art. 1172 par. 2 Civil code). Maintaining the intention of grouping the study instruments, it must not be forgotten the hypothesis of par. 2 of Art. 984, whreby the law maker undoubtedly established the fact that no liberalities may be made, but by donation or adjuncted to the contents of testament.

With respect to donation, certain similarities of the clause of preciput may be noticed to this contract and a certain authentic form (specific to direct donations and matrimonial agreements), the fact that both of them may be considered bilateral legal deeds (if we consider the provisions of Art. 367 letter d), both of them are legal deeds with free title, translative of property, the donation affected by the suspensive condition of the donor's decease, having a similar effect to the clause of preciput, mentioned for the surviving husband, both of them are subject to reduction, and under the aspect of advertisement, they make object of registration at the Notary National Registers, provided by Law 36/1995, republished, of the notaries public and notary activity. The clause of preciput cannot be considered yet as a donation, as mentioned by Art. 1516 of French civil code, neither as form, nor as fund conditions. The Romanian doctrinaires follow the line of French code, "not regarding" the clause of preciput as a donation.

The arguments for this position are represented by the different regulation method of both agreements (the donation is regulated in the Book IV "About inheritance and liberality", Title III "Liberalities", the clause of preciput is regulated within Book II, intended to Family), on the differences regarding their object (the object of donation may be only the donor's own assets, while we talk about the common assets in the clause of preciput), about the time when caducity occurs (on the one hand, the donor's heir constitutes a caducity reason of donation, while in the clause of preciput case[17], the production of effects depends on the decease of one of the husbands, and on the other hand, the divorce and ceasing of the community state represent a caducity cause of the clause of preciput, but not the caducity clause of donation).

Approaching the legacy as issuance method of liberalities, we consider that the basic difference between the two institutions is given by the fact that the legacy is an unilateral legal document, an expression of the exclusive will of testator (Art. 1036 Civil code, undoubtedly establishing that, under the penalty of absolute nullity of testament, two or more persons cannot decide, by the same testament, cannot decide one for the other's benefit), while the right of surviving husband incurs by the agreement of both husbands.

Returning yet to history, it must not be omitted the analysis of surviving husband's position, initially intruder among the other heirs of the deceased, the ideas of the French Civil code 1804 being taken over. These provided priority to the maintenance and preservation idea of assets by the blood relatives. Rough. The Civil code 1864 admitted to the surviving husband the vocation of only inheriting in default of legitimate or natural heirs of twelfth degree, the only concessions being the food receivables, granted to the widow (Art. 1279 Civil code 1864) and the right of poor widow to inherit even if she competes against the heirs (Art. 684 Civil code, 1864). A major optics change occurs on the appearance of Law 319/1944, which changes the surviving husband into rezervee heir, acquirer of special assets rights and especially provides him a competition to any of the four categories of heirs, independently of his material statement. The social dynamics clarifies therefore the status of surviving husband, in the matter of assets law. An adaptation to realities specific to modern states is established, on the other hand, by the possibility of choosing by husbands of the matrimonial regime that will characterize optimum the way that the patrimonial relationships between them will develop, so that, according to Art. 312 par. 1 Civil code, the husbands may opt to classic legal community, conventional community or to the regime of assets separation. It is obvious that since conventionally, the husbands establish the matrimonial regime, unless we start from the idea of fictive marriage (whereof nullity may be covered, however, after 2 years from its conclusion), the partners undoubtedly look to the first rank relative, but especially to the heirs. In this circumstance, it must be understood and it is desirable the clarification of intersection between the provisions concerning family and the matrimonial agreements and those regarding the assets and rules applicable to them. Returning to the clause of preciput, we consider that the provisions that regulate it strictly represents the intersection of these two categories of norms, just with the notice that it would have been probably avoidable the insertion of par. 2 in Art. 333, considering the possibility of its insertion as distinct provision of Book IV, About inheritance and liberalities.

Therefore, we consider that the clause of preciput may be defined as an agreement, whereby the husbands stipulate for the benefit of one of them or either of them that before the partition of inheritance, the surviving husband takes over without payment one or several common assets. Also, it would have been more indicated to define preciput as an agreement, because even in the hypothesis of art .367 letter d), the marriage covenant concluded, in fact will concern the parties and the object, specifying the legal grounds and it is somehow unnatural that, if only this clause exists in the contents of the covenant, its normal form should

[16] Gheorghe Beleiu, Romanian Civil Law, Publishing House 'Şansa', Bucharest, 1993, p 121

[17] for details about caducity of preciput clause and about the legal nature of it see Liviu Stanciulescu, Inheritance Law, Publishing House Hamangiu, Bucharest, 2015, p 94-95

not be given priority, being necessary to acquire the form specific to another covenant (the matrimony one).

However, referring to the legal provisions establishing the preciput, we will eventually try to identify how we may find oursleves in the presence of such a clause by reference to a certain matrimonial regime.

Preciput clause and matrimonial regimes

In essence, the preciput clause is a covenant between the spouses, although it is regarded as being accessory to the marriage covenant.

Two questions arise from here, related to the issue of matrimony systems, that we intend to answer:

§1. May preciput apply only in case of conventional community or also in case the spouses or future spouses adopt either the matrimony system of community of property, or the system off separation of property?

§2. May the preciput clause have a main character, and if yes, if this clause represents the sole object of the concluded marriage covenant, and the spouses are married, under the legal community system, by signing the marriage covenant, does the matrimony system change, from a legal community one, into a conventional one?

§1. Introducing the preciput clause in a sub-section containing only general provisions is not the only argument justifying the opinion that the spouses may give each other this benefit even if they are subject, for instance, to the legal community system[18].

In addition, art. 333 para. (1) of the new Civil Code foresees that, by marriage covenant, it may be stipulated that the surviving spouse may take over without any payment, before the partition of the inheritance, one or several of the joint goods, *owned **in condominium** or in **joint tenancy***. Or, the alternative feature of the norm in art. 333 of the new Civil Code is strengthened by the well-known fact that condominium is specific to community systems (legal or conventional), and joint tenancy is specific to the system of separation of property.

Therefore, *de lege lata*, the preciput clause is compatible both with the system of conventional community, and with the matrimony system of separation of property, and, *de lege ferenda*, it should become compatible with the system of legal community.[19]

Contrary to the French law (art. 1515-1519 in the French civil law), admitting the possibility to stipulate the clause only in a covenant concerning the condominium of the spouses[20], the majority Romanian doctrine[21] rejected this hypothesis, and the conclusion was that the preciput was compatible both with the conventional community system, and with the system of separation of goods.

Part of the doctrine, which states an opinion that we agree with,[22] has suggested that such a clause should be compatible with the legal community system in order to avoid the discrimination between the spouses or the future spouses that are getting married choosing the system of legal community, compared to those that are getting married choosing the system of conventional community or of separation of goods. The surviving spouse must be equally protected, regardless of the chosen matrimony system. Reasoning otherwise, the choice of the matrimony system could be therefore determined by the advantages „created by the law-maker" for certain matrimony systems (and we are not convinced that this was the law-maker's intention when adopting the new Civil Code), which we believe it would seriously affect the spouses' or the future spouses' freedom of choice.

An additional argument, concerning the solution to admit the conclusion of a preciput clause in the system of separation of properties is also the fact that the latter system is created by signing a marriage covenant and, as highlighted, it may generate the spouses' joint tenancy (art. 362 of the new Civil Code), and the goods that are held in joint tenancy may constitute the object of the clause of preciput.[23]

§2. Although the text of the law expressly stipulates that such a clause may make the object of a marriage covenant, a covenant in itself representing the result of an agreement of will, the doctrine[24] asked whether, however, the legal provision has an imperative character, which one cannot waive, or will the preciput clause be able to have a main character. The provided answer was negative, departing from the provisions of art. 333, corroborated with those of art.

[24] I. Popa, quoted works, p. 173.

329 of the new Civil Code, according to which marriage covenants may be signed only in case of choice of matrimony system.

In our opinion, this point of view cannot be accepted. The interpretation of the provisions of art. 329 of the new Civil Code must be made in the sense that only the choice of another matrimony system may be made by matrimony covenant, and not in the sense that a marriage covenant may exclusively include clauses concerning the choice of the matrimony system. Moreover, art. 367 letter d) of the new Civil Code expressly states that the object of a marriage covenant may consist in the clause of preciput, without conditioning this provision to the insertion of other clauses by the spouses or by the future spouses in the contents of the same covenant. This happens because, on the one hand, the law does not forbid such a solution, and, if the law does not make a distinction, neither should the person interpreting it (*ubi lex non distinguit nec nos distinguere debemus*), and, on the other hand, a contrary solution would create a discriminatory treatment according to the applicable matrimony system.

Obviously, we do not abjure that, according to art. 329 of the new Civil Code, if the spouses wish to apply another matrimony system, they will sign a marriage covenant. However, if the spouses sign a marriage covenant (the discussion being relevant only as regards the legal community system) and it contains exclusively the stipulation of a preciput clause and no other additional clause, it does not mean that they choose another matrimony system than the legal one, and they are not under the incidence of a conventional matrimony system.

This is why we do not exclude the possibility to sign a marriage covenant when the parties wish to obey to the rules of legal community system, but at the same time they wish to introduce a clause of preciput providing comfort to the surviving spouse. By this covenant we are however appraising, contrary to the opinions expressed in the doctrine[25], that the matrimony system does not automatically change from a legal one into a conventional one, governed, in terms of composition of patrimony, of its management, of the rules related to the issue of legal community, the matrimony system remaining the one chosen by the spouses, namely that of legal community. It would mean to admit, *mutatis mutandis*, that the conclusion of such a will whose object would consist only in the recognition of a child or indications concerning the ritual of funeral, would determine us to automatically speak of a testamentary inheritance.

Therefore, the fact that the preciput may be instituted only by marriage covenant is not capable of turning in itself the legal system into a conventional system, and this does not determine an incompatibility of the clause of preciput with the matrimony system of legal community.

Conclusions

Although the liberty in choosing the most appropriate matrimonial regime is consacrated by the Civil Code, not allways, transposition of a provision in the romanian legislation from a foreign system, as the French Civil Code, is proven to be the most efficient mechanism to pertinently give to that provision its real meaning.As we tried to illustrate in this study, there are situations when a clause is in fact a real convention with defined characteristics so there is no need to hide it behind the clothes of another convent just for the sake of respecting the setup in a law structure. This could be often also the reason for not using such an interesting option for the spouses and when a legal norm finds itself into such a position its initial scope is not achieved.Being optimistic we believe that until some needed legislative interventions, the arguments presented in this paper will help in practice in finding flexible and effective solutions to assign to the preciput clause the real sense.

THE LEGAL STATUS OF THE SHARES TRADED ON RASDAQ MARKET

Cristian GHEORGHE[*]

Abstract

RASDAQ Market was launched in Romania in 1996, appeared as a mirroring of the well-established American market NASDAQ (which stood for National Association of Securities Dealers Automated Quotations). The role designated for RASDAQ was as platform for valuing papers issued in the privatization program in Romania (mass privatization process - MPP). In fact the participating companies to MPP had the legal obligation, under first Romanian Capital Market Law, No 52/1194, to be listed on a stock exchange.

Although it attended a US regulatory model, RASDAQ had to adapt to European rules with the accession of Romania to the European Union. The relevant EU rules (i.e., Directive 2004/39/EC on markets in financial instruments – MiFID, about to be replaced by Directive 2014/65/EU – MiFID II) provide for only two types of trading systems, i.e. regulated markets and multilateral trading facilities (MTF), while the RASDAQ Market securities fall under none of these two trading systems regulated by MiFID1.

After an entire decade of uncertainty concerning the status of the RASDAQ, Romanian legislator settled the situation of shares traded on this market. This regulation means the end for RASDAQ. Law No. 151/2014 provides that the RASDAQ Market is to be closed within twelve months as of the effective date of such law (October 27, 2014). To this end companies listed on the RASDAQ Market will have to opt for listing on a regulated market or on a MTF or for becoming private companies. Such option rests on the hands of shareholders. Going private asks for shareholders' rights protection so Romanian Financial Supervisory Authority (FSA) provides a procedure implementing the right to withdraw from the company of the dissenting shareholders and for computing compensation for their shares (FSA Regulation No. 17/2014).

Keywords: *capital market, investments, RASDAQ, multilateral trading facility (MTF), regulated market, shareholders protection.*

1. Introduction

RASDAQ Market was launched in Romania in 1996, with the support of the well-established American market NASDAQ. The role designated for RASDAQ was as platform for valuing papers issued in the privatization program in Romania (mass privatization process - MPP). In fact the participating companies to MPP had the legal obligation, under first Romanian Capital Market Law, No 52/1194, to be listed on a stock exchange, so that most of them got listed on the RASDAQ Market. Subsequently, in 1999, there were about 5,500 Romanian companies listed on RASDAQ making it the European market with the most issuers.

As the mother platform, NASDAQ, evolved from an OTC legal status (over-the-counter or off-exchange trading is done directly between two parties, without any supervision) to a regulated exchange (in 2006, the status of NASDAQ was changed from a stock market to a licensed national securities exchange), RASDAQ itself faced a long time of ambiguities regarded its legal status.

Therefore RASDAQ Market started trading in 1996 under the initial name Electronic Exchange RASDAQ, as a trading platform for shares in state owned companies converted into public companies under the mass privatization program. That market was authorised by decision of the National Securities Commission (CNVM, now become ASF – Financial Supervisory Authority) of 27 August 1996 and thus was regarded as a market organised and regulated by the Romanian competent authorities.

On 1 December 2005, Electronic Exchange RASDAQ merged with Bucharest Stock Exchange, the former being incorporated into the latter as a distinct section. The legal person resulting from that merger, Bucharest Stock Exchange Company (public limited liability company), operated two different markets: the regulated market (Bursa de Valori Bucureşti – Bucharest Stock Exchange) and the RASDAQ Market. The first market (BSE) was then authorised by the competent authority of the market (NSC at that time). That authority, under its statutory powers, also controls and regulates the functioning of the RASDAQ Market, but the latter has not been included in any of the categories of negotiating platforms European rules provided for[1]. Such irregularities were the starting point for long term controversy about the legal status of shares traded on RASDAQ Market. As important rules, i.e. the compulsory offers or market abuse offences, were to be applied on regulated market only, the status of RASDAQ Market knew various interpretations. Even the European Court of Justice was asked to deliver a preliminary ruling regarding the regulated market concept and its meaning.

[*] Associate Professor, PhD, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **profesordrept@gmail.com**).

[1] CJEU, C-248/11 Para (19), (20).

Although it attended a US regulatory model, RASDAQ had to adapt to European rules with the accession of Romania to the European Union. The relevant EU rules (i.e., Directive 2004/39/EC on markets in financial instruments – MiFID, about to be replaced by Directive 2014/65/EU – MiFID II) provide for only two types of trading systems, i.e. regulated markets and multilateral trading facilities (MTF), while the RASDAQ securities market fall under none of these two trading systems regulated by MiFID1[2].

The judgement of the European Court stated that a market in financial instruments which does not satisfy the requirements laid down by Directive (Title III Directive 2004/29/CE, MiFID 1) does not fall within the concept of 'regulated market', as defined in that provision, notwithstanding the fact that its operator merged with the operator of such a regulated market[3].

In last year was set out the legal procedure to be followed for the clarification of the situation of the shares traded on RASDAQ Market (and of the shares traded on the unlisted shares market too)[4]. The assumed purpose of the law is to align the RASDAQ market with Capital Market Law No. 297/2004 and European Law[5].

2. Legal solution. Cessation of the activity of RASDAQ Market.

After an entire decade of uncertainty concerning the status of the RASDAQ, Romanian legislator settled the situation of shares traded on this market. This regulation means the end for RASDAQ. Law No. 151/2014 provides that the RASDAQ market is to be closed within twelve months as of the effective date of such law (October 27, 2014). To this end companies listed on the RASDAQ market will have to opt for listing on a regulated market or, as the case may be, on a MTF or for becoming private companies. Such option stays on shareholders' hands. Going private asks for shareholders' right protection so Financial Supervisory Authority (FSA) provides a procedure implementing the right to withdraw from the company of the dissenting shareholders and for computing compensation for their shares (FSA Regulation No. 17/2014).

3. Shareholders decision

Cessation of activity of RASDAQ Market rise to shareholders decision on the future fate of their company: it will remain on the exchange floor or it will exit the public area and will go private.

The shareholders shall debate on the status of the company as RASDAQ Market wasn't licensed for future operation. They shall make a decision regarding the legal actions to be taken by the company required for the admission to trading of the shares issued by the company. Future trading implies admission on a regulated market or trading within an alternative trading system (ATS or MTF), based on the provision of Capital Market Law No. 297/2004 and regulations issued by the Financial Supervisory Authority (FSA)[6].

In the absence of such a decision for market admission or subsequent to an explicit decision, the company will exit the trading floor and it will go private.

4. Shareholders rights.

The shareholders shall have the right to withdraw from the company if the General Meeting of shareholders resolves that the company takes no legal actions required for the admission to trading of the shares issued by the company on a regulated market or trading thereof within an alternative trading system (ATS)[7]. The same right is recognized if the shareholders decision is not accomplished by any cause.

Right to withdraw is subject to the conditions of Company Law No. 31/1990, as subsequently amended and supplemented[8]. This law recognizes such a right of dissenting shareholders in the case of articles of incorporation alteration if such alterations change the initial incorporation of the joint stock company in an essential manner. Thus the shareholders who do not agree with the decisions of the General Meeting regarding the changing of the main object or the legal form of the company, the moving abroad of the registered office, have the right to withdraw from the company and to receive from the company consideration for the shares they possess, at the average value determined by an authorized expert, by using at least two methods of assessment recognized by the European Assessment Standards[9].

[9] Company Law No. 31/1990, Art. 134.

5. **Procedure**

Convening the General Meeting. The board of directors of the companies whose shares are traded on RASDAQ Market must call and take all necessary arrangements for holding the Extraordinary General Meetings of shareholders within 120 days after the entry into force of Law No. 151/2014[10]. All these actions are subject to the conditions of Company Law No. 31/1990[11].

The shareholders debate on the situation created by the extinction of RASDAQ Market and they decide further actions within the new legal framework.

In order to timely and thoroughly inform the shareholders the company's board of directors shall draw up and provide shareholders with a report in accordance with Art. 117^2 of Company Law No. 31/1990 .The report shall comprise at least the legal framework applicable to trading shares on a regulated market or within a multilateral trading facility and a presentation of regulated markets and multilateral trading facilities (ATS) on which the companies' shares may be traded[12].

If the decision taken asks for listing on a regulated market or multilateral trading facility company must follow the steps imposed by such a procedure. Capital Market Law No. 297/2004 and NSC (now FSA) Regulation No. 1/2006 provides an exhaustive set of instructions for admission to a stock exchange. As a result, the company, after the date of adoption of the resolution of the General Meeting of shareholders, shall send FSA the prospectus for the admission to trading, drawn up in accordance with the legal provisions laid down for this procedure[13].

Admission to regulated market. The Extraordinary General Meeting of shareholders may decide the admission to trading on a regulated market. In this situation the company the shares of which are traded now on RASDAQ Market shall fill with the Financial Supervisory Authority (FSA) the request for approval of the prospectus for the admission to trading on a regulated market. Such request shall be submitted within 90 days after the date of adoption of the resolution of the General Meeting of shareholders, in compliance with the regulations[14].

The prospectus for the admission to trading on a regulated market shall be drawn up in accordance with the provisions of Law No. 297/2004 and European Regulation[15].

The company shall also submit to the market operator which runs the regulated market the company intends to be admitted to, a request for admission to trading[16].

The company requesting admission to trading shall send FSA the decision of the market operator regarding the agreement in principle on the admission to trading of securities on the regulated market managed by such market operator. After its analysis of the request for approval of the prospectus, FSA may approve (or refuse) the admission to trading of the shares in accordance with the provisions of Law No. 297/2004[17].

Admission to a Multilateral Trading Facility. The procedure for admission to a trading facility (alternative trading) is very similar to admission to a regulated market. In such case the provisions the company have to comply with are less than in the case of admitting to a regulated market.

The Extraordinary General Meeting of shareholders may decide the initiation of the process for trading the company's shares in a multilateral trading facility (or alternative trading system in American view). In this case the company shall submit to FSA the request for trading in such trading facility (alternative system) together with the system operator's agreement (in principle) on the trading of the shares in the alternative system managed by it.

FSA's decision for admission to trading or refusal of the request for admission to trading in an alternative trading system shall be made based on the regulations applied to alternative trading system[18].

Right to withdrawal. Right to withdraw from the company is recognized for shareholders if the company the shares of which are traded on RASDAQ market is not to be traded on a regulated market or on any alternative trading system once RASDAQ ceases to exist. The term within which shareholders may exercise their withdrawal right is 90 days after the publication of the resolution of the General Meeting of Shareholders in the manner prescribed by the law.

In order to establish the price to be paid by the company for the shares held by the shareholders having exercised their right to withdraw, the board of directors shall request the Office of the Trade Register to appoint an independent authorised expert. This request shall be submitted to the Office within five

[12] Law No. 151/2014, Art. 2 Para (2).

[13] Law No. 151/2014, Art. 6 Para (1).

[14] FSA Regulation No. 17/2014, Art. 3 Para (1), NSC Regulation No. 1/2006, on issuers and operations with securities, as subsequently amended and supplemented, Art. 89 Para (6).

[15] Commission Regulation (EC) No 809/2004 of 29 April 2004 implementing Directive 2003/71/CE of the European Parliament and of the Council as regards the information contained in prospectuses, as well as the format, incorporation by reference and publication of such prospectuses and dissemination of advertisements,.

[16] FSA Regulation No. 17/2014, Art. 3 Para (3), NSC Regulation No. 1/2006, Art. 94 Para (1).

[17] FSA Regulation No. 17/2014, Art. 3 Para (4), Law No. 297/2004, Art. 214, and Art. 217 Para (3).

[18] FSA Regulation No. 17/2014, Art. 4 Para (1), (2).

days following the day of receiving by the company of the first request for withdrawal from shareholders.

The report drawn up by independent expert should be prepared within 30 days after expert appointment and should contain the modalities whereby the shareholders may consult the report and also the price computed by the appointed expert for a share[19].

The company shall inform FSA and the Bucharest Stock Exchange (BSE) through the submission of current reports about all relevant aspects regarding withdrawal procedure, as follows: the registration of the first request for withdrawal, the appointment (by the Office of the Trade Register of the independent expert; the price for one share to be paid to the shareholders intending to withdraw from the company; the deadline for shareholders for submission of the requests for withdrawal from the company.[20]

De-registration with FSA. The company the shares of which are traded on RASDAQ market may decide to go private or fails to complete the procedure for the admission to a regulated market or trading facility. In this case the shares traded on RASDAQ Market shall be withdrawn from trading and deregistered from FSA. The withdrawal rights of the shareholders have to be satisfied first.

De-registering with FSA is the proof that the company is not a subject of Capital Market regulations any longer.

There are many cases, under Law no. 151/2014, when the company the shares of which are traded on RASDAQ Market fails to be admitted to a stock exchange: the companies did not take the actions necessary for holding the Extraordinary General Meeting of shareholders within the 120 days' term laid down by Law No. 151/2014; companies did not hold the Extraordinary General Meeting of shareholders due to the failure to fulfil the legal quorum; the companies did not adopt any decision in the Extraordinary General Meeting of shareholders due to the failure to fulfil the legal majority rules; the companies adopted in the Extraordinary General Meeting of shareholders the decision that the company takes no legal actions necessary for the admission to trading of the shares issued by the company on the regulated market or in an MTF (ATS); companies' request for admission of the shares issued by it on a regulated market or MTF (ATS) was rejected by FSA[21].

Obviously, in all these cases the right of withdrawal of the shareholder is granted in accordance with the provisions of Law No. 151/2014 and the company have to conduct the procedure for withdrawal of the shareholders from the company.

The shares traded on RASDAQ Market shall be withdrawn from trading and deregistered from FSA's records, in the case of the companies which conducted the withdrawal procedure or did not receive any request from the shareholders for withdrawal from the company in all those abovementioned cases.

6. Conclusions

The regulation of RASDAQ Market situation is a radical one. Between the choice of adapting the market in order to fit within the limits of present normative framework and its abolition, with the related options for companies, the legislator chose the last option. The alternative for the companies that are still looking for a trading floor is to apply for admission to established markets that already existed.

Basically the choice is not that difficult: regulated markets in Romania are: Bucharest Stock Exchange (BSE) administrated by the BSE Company (market operator) and SIBEX managed by SIBEX Company (administrator of the market). Alternative trading systems (or MTF) are managed by the same two companies (BVB and SIBEX as system operators).

The chosen normative solution involves carrying out from zero the procedure for admission to trading for companies that decide to follow this path (prospectus for admission to trading, ASF's decision after the approval in principle of the operator concerned). This option involves an administrative effort large enough for the company... And against its inertia: companies need to follow this procedure voluntary, but as the reward is. Besides the benefits of trading usually recognized (visibility, access to a cheaper financial market, secure and easy transfer of ownership of shares, etc.) admission to trading floor allows the company to avoid payment of shareholders' withdrawal rights.

Refusal of admission to trading or failure to complete the procedure draws a considerable burden for the company: obligation to pay the shareholders' withdrawal rights which shall become due once the company behaves in this manner (explicit decision of non-admission, failure of deliberation in assembly, failure of the process of admission to trading).

Although the decision of non-admission to trading belongs to the shareholders majority, not on them press the burden of claims (as in squeeze out/sell-out procedure[22]) but on company. These claims consist in withdrawal rights and they imply on the one hand the uncertainty of determining their fair value (independent evaluation should be performed) and on the other hand, are subject to economic pressure on the company. In fact the impossibility of their payments

[19] FSA Regulation No. 17/2014, Art. 6.
[20] FSA Regulation No. 17/2014, Art. 8.
[21] FSA Regulation No. 17/2014, Art. 9.
[22] Cristian Gheorghe, *Capital Market Law*, Bucharest: C.H. Beck, 2009, p. 242-247.

calls an insolvency procedure so that company may face the dissolution. Even the majority shareholders' may decide to exercise these rights, in such a case the company will cease definitely to exist.

We consider the solution of placing the burden of these rights on the shareholders who decide to keep the company out of the trading market, instead on company itself, would have been fairer. Last but not least, the legislator's intervention is disproportionate as long as the authority (FSA) was able to solve RASDAQ legal status through administrative arrangements. The pendant solution may be qualifying (and authorizing) RASDAQ Market as Multilateral Trading Facility (MTF) with the recognition of a general and time-limited withdrawal procedure from trading together with the recognition of a right of withdrawal from the company for the shareholders in this case. Indecision (perpetuated at least ten years) shown by the FSA has led to present disproportionate legal solution that effectively discourages companies from remaining to trading floor: cessation of the activity of RASDAQ.

RELEVANT ISSUES CONCERNING THE RELOCATION OF CIVIL PROCEEDINGS UNDER THE NEW CODE OF CIVIL PROCEDURE (NCPC)

Andrei Costin GRIMBERG*

Abstract

The change of the new code of civil procedure and obvious the entry of the new provisions at 15th February 2013, has been thought with the hope to accelerate the procedures related to judgement with a noticeable simplification of procedures, all designed with the aim of unifying the case law and to lower the costs generated by lawsuits , costs both borne by the State as well by citizens involved the cases in court .

Thus, the implementation of the New Code of Civil Procedure, desired the compliance right to a fair trial within a optimal time and predictable by the court, by judging the trial in a speedy way , avoiding unjustified delays of the pending cases and to the new petitions introduced, by excessive and unjustified delays often.

By the noticeable changes that occurred following the entry into force of the new Code of Civil Procedure, it identify and amend the provisions regarding requests for displacement, in terms of the grounds on which it may formulate the petition of displacement and the court competent to hear such an application.

Keywords: *displacement, institution processual, contested issue.*

1. Introduction

The application field of the present study, regards the way in which, the new civil procedure code regulations of the new code of civil procedure modifies the procedure of the wording and justify of the displacement requests, in direct comparison with the old Code of Civil Procedure.

Thus, through a short study but concise, the author attempts to identify the main changes brought of the procesual institution of the displacement requests in the light of the new Code of Civil Procedure, regarding the legal fond of the displacement requests.

The importance of this study is to identify the best means procedurals of protective and to follow the impact of new legal dispositions by comparing with the old procedural rules regarding the institution of resettlement and to show their importance as clearly as possible. The author considers it is relevant the analysis based on theoretical and practical issues on the displacement cases in terms of legal standing, such evaluations are made to justify the desire of legislative intervention in national plane.

2. Analysis of displacement procedural institution of civil cases, theoretical and practical implications:

2.1. Preliminary issues concerning the nature of displacement

The resettlement of the civil litigations can be seen as an procesual institution which establishes the reasons and the rules of transfer of solving procedure of the causes from a competent court to another court of the same rank.

Resettlement should not be confused with the incompatibility, hypothesis in wich the judge either ruled the case in which he pronounced already a judgement of the issue disputed wich is likely to disinvest the court, or he is found in one of the situations explicit provided by law and regulated as such by Article 42 NCPC and that can cause the removal of the judge from the panel of judges.

One of the new regulations of NCPC consist in disappearance of the resettlement reason based on kinship and affinity, this situation being quite rare and it is unjustified a separate legal treatment. Also,the cases of kinship and affinity can always be included in the grounds of legitimate doubt on the quality of parts. Therefore, in present there is two exclusive founded grounds of resettlement of the civil processes, namely, public safety and legitimate doubt.

Analysis of the displacement of causes have certain peculiarities in terms of procesual legitimation, NCPC making a difference depending on the reason indicated, in the meaning that request for displacement on grounds of legitimate suspicion can be made by the interested party, opposed to the application on grounds of safety public, which can only be made by the General Prosecutor of prosecuting magistracy near the High Court of Cassation and Justice. The resettlement request grounded on the reason of legitimate doubt is, in reality, a procedural incident created by the legislature for the party that has doubts about the impartiality of the court before which the dispute is analysed .

Another issue that has novelty character, is the alteration regarding the jurisdiction for settling claims

* University junior tutor, PhD, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **avocatgrimberg@yahoo.com**).

for resettlement , which in present is different, depending on the cited reason. Compared to the previous regulation, in wich the application for resettlement on grounds of legitimate doubt was in the jurisdiction of the supreme court, we believe, mainly to avoid overload of the supreme court, the legislature stated in the situation stated above, that the demand for resettlement is resolved by the court of appeal if the court from wich is required the case of displacement, is a first level court or a tribunal, both located under its jurisdiction.

2.2. The grounds of the resettlement requests

The procesual regulations occurred once the entry into force of the NCPC, are likely to ensure the impartiality climate and objectivity necessary of resolving civil cases according to law and truth.

When implementing the new rules of procedure, was taken considered the situation where a civil action exercised against a judge, or a civil action exercised by a judge to the court in which it operates, may give rise to some serious doubts regarding the conduct the process and how the case will be solved , by the colleagues judges..[1]

According to the former procedures , such suspicions could be removed through the institution trial of resettlement of the civil case to another court .

The author believes that by adopting and implementing new regulations procedural legislators, the legislator has watched , among other things , the eduction of existing cases on the role of the High Court of Cassation and Justice, sense in which it is necessary to be mentioned that prior to the new regulations, the competence in solving resettlement requests was exclusively to the High Court of Cassation and Justice, situation that at this moment it presents modificated in the sense that the solving competence of the resettlement requests , belongs to the court of appeal in whose jurisdiction lies the court from where the case resettlement is required.

Was maintained, however, the jurisdiction of the High Court of Cassation and Justice in resolving resettlement requests based on public safety[2].

In connection with these procedural changes, we note that the legislator of the New Code of Civil Procedure preferred the attribute "determined" instead of the traditional expression "a mere presumption" acceptation that was discussed in the literature in the way that the basis of the resettlement application for reasons of legitimate doubt in the view of the new regulations, has envisaged the serious circumstances that threatens the judges objectivity and impartiality, circumstances that , although a general nature must shall be always relate either to the circumstances of the case or to the quality of the parties or to local conflicts.[3]

Thereby, the new rules require in a rigorous and clearly way the examination of the circumstances alleged in the application for resettlement formulated, for the concrete interest of the innovations implemented in the field.

It is noticed through the new regulations a clear distinction, on grounds of resettlement application in terms of competence and capacity exclusive of the initiator of a resettlement request , in this case the Attorney General of the Prosecutor's Office attached to the High Court of Cassation and Justice.

Regarding the second ground of removal, which is based on the public safety ,ground that was not clearly defined by the legislator, since, as it was highlighted in the specialist legal literature , the term used by the legislature , is able to suggest those circumstances that could endanger the public order and tranquility right in the village.

In the literature was emphasized that, the resettlement regarding for public safety it can be required in a exceptional way, this reason it meets sometimes in criminal cases, but much rarer in the civilian cases.[4]

Another unique aspect we consider that will provoke debate among both academics and among legal practitioners,is that concerning the admissibility of an application for resettlement submitted to the High Court of Cassation and Justice regarding a case pending resettlement having as object the application for resettlement filed to the Apel Court in connection with the resettlement of a case pending before the court with lowest level or tribunal.

In other words , in the event That a request of resettlement is made regarding to a process pending before the court (Tribunal, Judecatorie) , the Jurisdiction belongs to the Court of Appeal in Whose Jurisdiction is the court. The resettlement request is Recorded to the competent Court of Appeal to resolve it , but the Interested Party ,is having serious the doubts That appeal court of appeal is impartial , and then he make an another request of resettlement with the scope to resettlement the first application for the resettlement pending case before the court.

Some authors have argued that the amendments made by NCPC in the matter of resettlement will not be able to ensure in all cases the right to a fair trial, as is enshrined in the European Convention on Human Rights. Suspicions may occur especially in those situations where a resettlement request of a case in pending, is at the court or court is in a small provincial town , and in the same city is also the headquartered competent court in solving the resettlement request.

---

[1] Ioan Leș, NCPC comentat pe articole, pg.211, pct.2 Editura C.H.Beck 2013 București.

[2] Art.142 alin.2 NCPC.

[3] I. Deleanu,Tratat procedură civilă, vol.I,Ed. W.Kluwer,p.265-266; I.Leș, Tratat de drept procesual civil, p.316; I.Stoenescu,S.Zilberstein, op.cit.p.226.

[4] NCPC-comentat -Prof.univ.dr. Gabriel Boroi, Octavia Spineanu Matei, Andreia Liana Constanda, Ed. Hamangiu 2013, op.cit.p.356-Andreia Constanda.

In such cases , the ties between individuals are much closer and more obvious, inclusive between judges and the litigants will not have fully guarantee of the independence and impartiality of solving the request.

Other authors have argued that the resettlement will be decided by a court of equal degree in the same town as the appeal court , but this opinion does not remove the doubts about the impartiality of judges , knowing in fact that , between judges in the same town may from case, there is direct or indirect influence unconcerned of the courts to which they belong.

In such cases the issue is the non observance of the right to a fair trial by the existence of at least some doubts about the impartiality of courts of appeal.

We consider this interpretation as an excessive one , under the conditions that in consideration of the highest position of the court of appeal in the legal hierarchy , it offers sufficient guarantees as to the impartiality of judges.

We consider that it would be inadmissible a request for resettlement of the resettlement reached trial before a court of appeal, for the following reasons, on the one hand would violate the will of the legislator who wanted to decrease of the cases number that are less important before the supreme court, and in the other way the provisions of article 140 NCPC other hand refers to the resettlement process itself , the demand for resettlement is a procedural incident , even if the Court of Appeal shall constitute a new folder, which is not in the true sense of the word "a process " within the meaning given by Article 140 NCPC the legislator when drafting the new legislation civil procedural, wanted to remove a such an inadmissible application.

If such a situation would be admissible , it would be like a bypassed way , a relocation request made in respect of a case before the courts or tribunal to be tried all the High Court of Cassation and Justice , which the legislature wanted to overthrow the drafting of new legislation civil procedural.

If such a situation would be admissible , it means that would be like an devious way , for a resettlement request made in respect of a case before the courts or tribunal, arrive to be solved by the High Court of Cassation and Justice , situation in wich the legislator wanted to remove and to overthrow legislator wants to remove and to overthrow by drafting of new legislation civil procedural.

2.3. Exercise of the application of resettlement procedure and its solving.

The request for resettlement , shall be in writing, in accordance with Article 141 para. 1 C.proc.civ at any stage of the process. Paragraph 2 of the same Article states that the resettlement for legitimate grounds for suspicion can only be claimed by the claimant , and that on grounds of public security only by the General Prosecutor of the Prosecutor's Office attached to the High Court of Cassation and Justice.

The request for resettlement based on Article 140 paragraph 1 and paragraph 2 of the NCPC provisions , shall be submitted to the competent court to resolve it, namely, the Court of Appeal.

If The request for resettlement based on Article 140 paragraph 3 of the NCPC provisions , shall be submitted to the competent court to resolve it, namely, the High Court of Cassation and Justice.

The competent court to settle the claim must immediately notify the court from which was asked the resettlement.

The one who is interested may request suspension of judgment , and the court panel may order the suspension by paying bail in the amount of 1,000 lei.

If the court is competent to settle the claim must immediately notify the court from which was asked the resettlement.

If considered that there are reasonable grounds and good reasons, the suspension may be willing under the same conditions ithout summoning the parties even before the first hearing.

The conclusion on suspension no motivates and is not subject to appeal.

The solution of the suspension of the process is communicated to emergency to the court from where has been requested the resettlement.

The demand for resettlement is judged in emergency way in the council chamber , summoning the parties to the process.

During the resettlement can be formulated only accessory intervention for action due to their simple defense, regarding the resettlement. However, no principal intervention is not allowed.

Decision on resettlement, according to art. 144, paragraph 2, is given without motivation and is final, it is in fact a conclusion.

In fact the solution of the resettlement application for admission or rejection of resettlement is not motivated.

Because it is a final and only solution the decision on relocation can not be appealed in any way.

However the solution may be the subject of the analysis under art. 503 alin 1. for illegal citation regarding the term when the final solution is given.

On the other hand the final solution can't be analized under art. 503 alin 2 pct 1.

Court from where has been requested relocation will be notified immediately the solution regarding the demand for resettlement.

If it accepts the application for removal, the litigation will be sent by the Court of Appeal for judgment of another court of the same grade in his constituency.

High Court of Cassation and Justice will move the proceedings in one of the courts of the same level under the jurisdiction of the courts of appeal to any court of appeal neighboring in which the court is required to displacement.

Judgment will show to what extent the acts performed by the court before resettlement is to be kept.

If in the meantime, the court that ordered the relocation proceeded to the trial, the judgment is abolished by law in effect admitted the transfer application.

Under art. 146 displacement process may be required again, unless the application is based on circumstances known at the date of settlement of the previous application or arising after its settlement, otherwise the rejected as inadmissible if the cause is the role of the same court.

Certainly, remain on the issues related to establishing clearly that the grounds of legitimate doubt on the impartiality remain before all courts in the jurisdiction of the Court of Appeal which will be sent the case for trial, given the fact that the person whose quality is the reason for the transfer application can have on judges ascending fund, because of the position of the superior court of which it forms part.

3. Conclusions

Challenge, problem analysis as is presented in this paper consists in interpretation efficiently and correctly the provisions of the new code of civil procedure , regarding the possibility of promoting a new resettlement requests motivated by the impartiality felt of the court invested with a case of resettlement of a legal dispute. Literature specialized has extensively discussed the issue of promoting such an application, but certainly, it is concluded clearly as inadmissible the request for resettlement of a litigation concerning the resettlement request, because, the amendments and supplements to the new civil procedure code, were meant to relieve the High Court of Cassation and Justice.

Considering the legal issues commented , analyzed and presented by the author in this material, some times we could say that the ideas included in this material would violate the Constitution, respectively art. 21 para. (1) and (3) on access to justice and the right to a fair trial, art. 124 para. (2) the uniqueness, fairness and equal justice, as they are interpreted according to art. 20 para. (1) of the Constitution and the provisions of art. 6 of the Convention for the Protection of Human Rights and Fundamental Freedoms, however this can not determine the admissibility of such a request.

Therefore in the case that we accept as admissible the resettlement of a case having as object resettlement, is resulting unquestionably that the reason for which it was thought the new code of civil procedure would no longer have practical efficiency.

THE LACK OF FUNCTIONAL JURISDICTION OF THE DIVISION FOR ADMINISTRATIVE AND TAX DISPUTES IN SETTLING THE APPEAL PETITION WITHIN THE APPEAL AGAINST ENFORCEMENT IN TAX MATTERS ARGUMENTS REGARDING THE CIVIL NATURE OF THE DISPUTE

Andrei Costin GRIMBERG[*]

Abstract

The Romanian legislation sets out the practical and theoretical manner of establishing the legal nature of disputes in the light of the applicable legal dispositions, establishing a specific statutory system for challenging enforcement proceedings.

The characterization of a dispute as civil or commercial in character should be done based on the legal standards applicable to the legal relationships existing between the parties.

As regards the challenge against tax enforcement, establishing the legal nature of the dispute under judgment and establishing the functional jurisdiction of the court that is asked to judge on the substance of the challenge against tax enforcement, as well as of the court invested to settle the appeal has generated over time a number of controversies and opposite solutions.

There were and still are some discussions and confusions regarding the functional jurisdiction of the enforcement courts having jurisdiction to judge on the substance of the challenge against tax enforcement, lodged on the basis of a writ of execution issued under some administrative tax acts.

Keywords: *challenge, enforcement, object, admissibility, functionality, administrative tax acts***.**

1. Introduction

As it is well-known, the civil trial consists of two complementary phases, the judgment (cognitio) and the enforcement (executio), which are at the same time autonomous. The judgment is a condition of enforcement, when the creditor has no writ of execution at its disposal, but when, for various reasons, regarding especially the discharge of the courts of law, the consolidation of credit, the law acknowledges as writs of execution not only the court judgments but also other orders and instruments[1], an instance in which the enforcement is established as being actually the only phase of the civil trial under such circumstances.

All those concerned or injured by enforcement may lodge an appeal against enforcement.

The appeal against enforcement may be defined as the procedural means specific to the enforcement phase, whereby one may request from the court with jurisdiction either the annulment of the illegal enforcement acts, or the obligation of the enforcement body which refuses to enforce a writ of execution to implement it according to law, or the clarification of the meaning, scope and application of the writ of execution.

The appeal against enforcement is a special means of appeal for dismissing some procedural acts fulfilled illegally by the enforcement bodies, and should not be confused with the action for annulment.

As regards the tax enforcements applied according to the Code of Fiscal Procedure, the writs of execution are the result of tax administrative acts issued by the tax authorities, whereby rights and liabilities in charge of taxpayers were established.

The tax administrative act is defined under art. 41[2] in the Code of Fiscal Procedure, as being the act issued by the tax authority with jurisdiction to apply the legislation on establishing, changing or settling tax rights and liabilities. The following are, for example, tax administrative acts: the taxation decision, the tax return, the certificate of tax registration, the certificate of tax record, the reimbursement decision, the decision on applicable measures, the setoff note, the deduction note, the decision on settling a challenge, etc.

The enforcement of the writs of execution issued pursuant to the dispositions of the Code of Fiscal Procedure is a simplified procedure regarding the initiation of enforcement proceedings and the procedural stages in these matters, by comparison with the enforcement implemented according to the dispositions of the Code of Civil Procedure.

The tax procedure establishes that any person concerned, who proves to have an interest may appeal[3]

[*] University junior tutor, PhD, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **avocatgrimberg@yahoo.com**).

[1] Art. 632 par. 2, art. 635, art. 638 par. 1 point 2 and 3 in the NCCP

[2] Art.41 Code of Fiscal Procedure. In the meaning of this Code, the tax administrative act is issued by the tax authority with jurisdiction to apply the legislation on establishing, modifying or settling tax rights and liabilities.

[3] Art.172 Code of Fiscal Procedure „(1) The persons concerned may lodge an appeal against any execution act implemented through the execution bodies breaching the provisions of this code, as well as if such bodies refuse to implement an execution act according to law."

against the enforcement proceedings, against any mode of enforcement, any enforcement act issued and implemented by the enforcement bodies with jurisdiction, the refusal of the enforcement body to fulfill an enforcement act according to law.

The legislator set forth that the appeal against enforcement may be lodged also against the writ of execution based on which the enforcement proceedings were initiated, if such a writ is not a judgment pronounced by a court of law or another jurisdictional authority, and exclusively if there are no other proceedings according to law for challenging it.

As regards tax enforcement challenges, we should mention that the dispositions of the Code of Fiscal Procedure prevail and are supplemented by the dispositions of the Code of Civil Procedure, and this is the reason why, as regards the relevant issue set forth by the Code of Civil Procedure, in case another writ than a court judgment is applied, the appeals may be lodged also against the substance.

As regards this last consideration, some courts of law set forth correctly that there are two categories of challenges in tax matters, namely:

- the appeal against the tax administrative act, within which the injured person is to follow the procedure expressly set forth in the dispositions of the Law no. 554/2004 on administrative disputes, corroborated with the dispositions of the Code of Fiscal Procedure;
- and the appeal against enforcement lodged against the writs of execution issued within the execution procedure of the tax administrative acts executed, such as expressly set forth in the dispositions of the Code of Fiscal Procedure, supplemented by the dispositions of the Code of Civil Procedure.

We should mention that the tax administrative acts generating writs of execution, applied subsequently by the specialist divisions/ departments of the tax authority may not be annulled through the appeal against enforcement, these being appealed against exclusively under the laws aforementioned, avoiding thus to evade some express dispositions on the appeal against tax administrative acts.

Thus, although there is a clear distinction, from a legal point of view, between the appeal against tax administrative acts and the appeal against tax enforcement, there are opposite opinions and customs in practice, due to some wrong decisions or abusive defenses of the debtors.

As a general rule, the legislator established clearly the manner of appeal or annulment of the tax administrative acts issued and applied by a tax authority, therefore, I consider that the solutions pronounced by the enforcement courts invested to settle on the merits an appeal against tax enforcement, whereby also the annulment of the tax administrative acts generating rights and liabilities is requested, without observing the special procedure pre-established by the legislator, are wrong solutions, directly against the dispositions of the Law 554/2004 on administrative disputes, corroborated with the Code of Fiscal Procedure.

The nature and qualification of the appeal against tax enforcement is determined by the purpose considered in proceeding to such an action, in this respect the legislator setting forth that by proceeding to an appeal against enforcement, the annulment of some execution acts or measures considered illegal is envisaged, therefore the annulment of some execution measures is envisaged, whether these are enforcement acts drawn up by a bailiff or by a tax officer.

In all the cases, the challenge has the nature of a means of appeal, given that, by using it, the appellant aims at the annulment of a court judgment or another jurisdictional act, respectively the annulment of some execution measures.

2. Content

Pursuant to the provisions of the Code of Civil Procedure, the enforcement court has jurisdiction to settle the appeal against the enforcement as such, as well as the appeal regarding the clarification of the meaning, scope or application of the writ of execution, if this is not issued by an authority with jurisdiction.

The enforcement court is the court of law within the jurisdiction of which, the enforcement is implemented, except for cases when the law disposes otherwise.

The nature of the appeal against enforcement is determined, undoubtedly, by the civil or commercial nature of the right under dispute, considering that, within it, substantive defenses may be invoked against the writ of execution, according to the hypothesis regulated by the Code of Civil Procedure.

Given that, by enforcement proceedings, the effective implementation of the right claimed is pursued, it results that all the requests during the entire trial, inclusively the ones in the enforcement stage, due to the civil nature of the right acknowledged through the writ of execution, should be judged by the civil court, more precisely by its specialized division.

Even if we accept that the appeal against enforcement poses only procedural problems, the civil court has the jurisdiction to judge all the disputes involving such matters, notwithstanding the main issue that resulted in the conflict between the relationships between the parties.

As far as the appeal against the enforcement as such or the appeal against a writ of execution that is not issued by an authority with jurisdiction are concerned, these shall be settled by the enforcement court with certain exceptions, as stipulated by the Code of Civil Procedure, and, pursuant to the dispositions of the same code, the enforcement court is the court of law within the jurisdiction of which, the enforcement should be performed, unless the law sets forth otherwise.

As regards the means of appeal against the solutions pronounced within the appeals against

enforcement, the same procedural rules apply, the control court being a civil court, and the nature of the writ of execution being irrelevant; therefore, the means of appeal shall be settled always by the civil division of the hierarchically higher court.

This opinion is consistent with the letter and spirit of the law.

The exceptions aforementioned regard the impossibility for the enforcement court to check the legality within the appeal against enforcement, or to annul a debt instrument, or to review the legality of other tax administrative acts issued by the tax authority, given that the legislator set forth a special procedure for appealing against administrative acts, inclusively the preliminary administrative procedure, which is often confused with an appeal against enforcement, therefore an interpretation contrary to the special law[4].

On the other hand, we should mention that the legislator set forth that the appeal against enforcement may be lodged also „if clarifications are required regarding the meaning, scope or application of the writ of execution, if the procedure mentioned under art. 443, in the New Code of Civil Procedure was not used."

The law regulates also the institution called generically by the specialist literature „appeal against the writ", whereby the writ of execution itself is challenged, as regards its meaning, scope or application, and also its validity, by comparison with the existence, scope and validity of the debt challenged.

Therefore, also as regards the appeal against the execution as such, or the appeal against the writ, when such an appeal is against a writ of execution that is not issued by an authority with jurisdiction and, unless the law sets forth for this purpose another means of appeal, the court of law within the jurisdiction of which, the enforcement is performed is the one having jurisdiction to judge territorially and materially.

The interpretation of the legal standards stated shows undoubtedly that the enforcement court is always the court within the jurisdiction of which the enforcement is performed and which has no connection whatsoever territorially or materially with the court that pronounced the judgment to be enforced, and, as such, with the nature of the liability to be enforced.

The appeal against the enforcement invokes, as a rule, the illegality of the enforcement act or the appearance of a cause for settling the liability after the issuance of the writ, such matters being related exclusively to the enforcement itself, the civil nature of the cause being irrelevant.

The fact that the appeal against enforcement may invoke issues related to the validity of the writ of execution, when the enforcement is performed under a writ that was not issued by a jurisdictional body, establishes the civil nature of the enforcement and is a grounded reason for the judgment of the appeal against enforcement, in these matters, by specialist judges.

At the same time, pursuant to the dispositions of art. 717 par. (1) in the Code of Civil Procedure, „the judgment pronounced on the challenge may be appealed against only by lodging an appeal".

Therefore, apart from the exceptions expressly and limitedly set forth by the law, the means of appeal as regards the challenge against the enforcement as such, as well as against the writ that is not issued by a jurisdictional body is the appeal; the court immediately higher than the one that pronounced the relevant judgment, respectively the civil division of the tribunal has the jurisdiction to settle it and not the division for administrative and tax disputes, not having the tax relevance of the writ of execution[5].

We should mention this specifically, given that, many times, the enforcement court invested to settle on the substance of an appeal against enforcement initiated under a writ of execution issued by a tax authority extends its functional jurisdiction, and, as such, orders the annulment of such a writ. The solution thus pronounced is subject to the legally regulated means of appeal, more precisely the appeal, to be settled by the court that is higher hierarchically, on the docket of its civil division. There were cases when such an appeal was allocated exclusively to the division for administrative disputes, although the case for the judgment on the substance regarded a real appeal against the enforcement and not an appeal against the writ according to special standards.

Therefore, it should not be accepted that an enforcement court would have the jurisdiction to examine the legality of an administrative act, given that such an assessment would infringe upon the express dispositions set forth by the law regarding the challenge against tax administrative acts.

The legislator set forth, through the dispositions of the Law no. 554/2004, the possibility that the person harmed as to one of their rights or a legitimate interest by an individual administrative act issued by tax authorities is able to address the court for administrative disputes with jurisdiction, after following the preliminary proceedings. On these lines, the legislator stated clearly, through the provisions of art. 10 in the same law, the court with jurisdiction to settle such actions for the annulment of administrative acts on substance and also the material jurisdiction, to be established according to the value of the debt

[4] Lg.554/2004 – The law on administrative disputes

[5] The High Court of Cassation and Justice - ÎCCJ

Decision no. 15/2007 on the review of the appeal in the interest of law, as regards establishing the jurisdiction for settling challenges against execution, in first instance and within appeals, having as its subject matter court judgments pronounced on commercial disputes, as well as on other writs of commercial nature.

challenged, namely the Tribunal or the Court of Appeal through the divisions for administrative and tax disputes.

3. Conclusions

In conclusion, based on the analysis above, we should mention that, on the one hand, as regards the appeal against the enforcement as such, or the writ that is not issued by a jurisdictional authority, the court of law has full jurisdiction, as a court of first instance, and the civil division of the tribunal, within the appeal, without distinguishing as to the nature of the writ, according to the principle "*ubi lex non distinguit nec nos distinguere debemus*".

On the other part, the definition according to which enforcement is the second phase of the trial has fallen into disuse, given that, at present, enforcement is a stage in its own right, being the effect of a writ of execution being pronounced and not a repetition of the jurisdictional stages.

The dispositions regarding the enforcement and the appeals lodged within it are included in the Code of Civil Procedure separately from other dispositions, the legislator stating clearly what courts are the enforcement courts having the jurisdiction to settle the incidents arising during enforcement.

Therefore, based on the legal acts presented above, we may conclude pertinently that the division for administrative and tax disputes has no functional jurisdiction to judge the appeal lodged against the solution pronounced by the court of first instance as regards the challenge against tax enforcement, even if the writ of execution was issued by a tax authority or local or county public authority.

By interpreting and applying in a unitary manner the dispositions of the Code of Civil Procedure, it results at all times that the court of law has the territorial and material jurisdiction to settle the challenge lodged against the enforcement as such and the challenge regarding the clarification of the meaning, scope or application of the writ of execution that is not issued by a jurisdictional authority, and the means of appeal against the judgment pronounced on the challenge is the appeal as such, to be judged by the civil division of the tribunal.

Any interpretation contrary to the facts reviewed above shall certainly generate some different practices as regards establishing the functional jurisdiction of tribunals (civil, commercial or for administrative and tax disputes) upon settling the appeal as regards the challenge against the enforcement as such, given that the functional jurisdiction of tribunals should be established without referring to the nature of the writ of execution.

Thus, although the lack of functional jurisdiction of the division for administrative and tax disputes of the tribunal upon settling the appeal regarding the challenge against enforcement is a real problem in practice, in the absence of a clear, unequivocal law in these matters, this procedural incident is liable to generate among law specialists a lot of legal debates in the future.

PRE-CONTRACTUAL INFORMATION IN CREDIT AGREEMENTS FOR CONSUMERS

Mihaela-Irina IONESCU[*]

Abstract

The article provides an image to the point on information provided to consumers before the conclusion of a credit contract, starting with the importance of information and ending with the legal framework.

A high consumer protection may be achieved primarily through consumer information. The complexity of banking services but also the vulnerability of consumers in relation to the banks and the unbalanced relationship led to the need to develop specific legislation that clearly establishes the rights and obligations of the parties of a credit agreement for consumers. In this regard, in 2008, after many debates, Directive 2008/48/EC of the European Parliament and of the Council on credit agreements for consumers was adopted.

At national level, the Directive was transposed by the Government Emergency Ordinance no. 50/2010 on credit agreements for consumers. Taking into account national specificities, such as lack of experience of consumers in financial products, the irresponsible lending and the unfair practices of creditors, the national act includes wider provisions than the European Directive, such as those relating to fees limitations or those related to the calculation of the variable interest rate. Also the GEO no 50/2010 applies to all credit agreements concluded by consumers and creditors.

As regards the advertising, any advertisement shall include a series of standard information. Also, pre-contractual information is standard information, is provided to consumers 15 days before the contract is concluded and is transmitted through the "European Consumer Credit Information sheet Standard".

The article presents when, how and what information should be given to consumers and insists on the importance of annual percentage rate and to what consumers should pay attention in order to be able to compare different offers.

Keywords: *pre-contractual information, pre-contractual costs, credit agreement, lenders, distance contracts.*

1. INTRODUCTION

During the last years, a highly debated issue in Romania concerns consumer credits and, in particular, the risks associated with them, which make their presence felt after several years of borrowing. Different stakeholders from the market - consumers, banking institutions, state authorities - launch in various discussions or even organize in diverse structures, with the intention either to claim their rights or to defend their interests, and sometimes some interests do not necessary coincide with the legal rights. These discussions are oscillating from the stage of finding the guilty to finding a solution. Both of the tasks prove cumbersome. Consumers are accused of not reading the contract and of not being educated enough. Banking institutions are accused of failing to conduct proper creditworthiness assessment, and everybody remembers the period in which credit was given on the base of identity card; they are also accused of not offering the proper or the complete information to their clients, or that they took unilateral decisions, especially when it came to unjustifiable increasing interest rates and charges during the contact. Authorities are accused of delayed reactions. In turn, all find explanations.

The fact is that, at least at the level of the legislators, it became clear that the complete, correct and accurate information is the base of balanced contractual relations.

2. Content

Consumer information in the field of banking services concur in pursuit of a high level of consumer protection. The complexity and the importance of banking services offered to consumers as well as the inferior position in which consumers usually are, led to the conclusion, both at European and national level, that special legislation is needed in order to protect consumers – natural persons.

The legislation protects the *average consumer* which is defined by the judgments of the Court of Justice of the European Union as being reasonably well informed and reasonably observant and circumspect, taking into account social, cultural and linguistic factors. Nevertheless, even the average consumer is the weaker and vulnerable part from a contract in comparison with a creditor taking into account the consumer's level of knowledge and his bargaining and economic power.

Moreover, recent empirical research in behavioural economics shows that factors influencing the way individuals interpret and act upon information are more sophisticated that once thought. It is a truism to mention that the consumer is dependent on the information provided by the creditor when taking the decision to conclude a contract.

[*] Assistant Lecturer, PhD, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **mihaelairinaionescu@anpc.ro**).

European legislation

At European level, in April 2008, Directive 2008/48/EC on credit agreements for consumers (the "Consumer Credit Directive") was adopted. The Directive aims to ensure a high level of consumer protection by focusing on transparency and consumer rights. It stipulates that a comprehensible set of information should be given to consumers in good time, before the contract is concluded and also as part of the credit agreement. In order to allow consumers to compare more easily the various offers and to better understand the information provided, creditors have to provide pre-contractual information in a standardised form (Standard European Consumer Credit Information). Moreover, they will also provide consumers with the Annual Percentage Rate of Charge (hereinafter called "APR"), which is a single figure, harmonised at EU level, representing the total cost of the credit.

National legislation

Directive 2008/48/EC was transposed into national legislation by Government Emergency Ordinance no 50/2010 (hereinafter called "GEO 50/2010") on credit agreements for consumers.

Low financial literacy of Romanian consumers during the past period, their lack of experience in financial products, the irresponsible lending and the unfair practices of creditors made necessary that the national legislator impose specific national measures to counterbalance the above-mentioned problems.

With certain exceptions, strictly defined by law, the legal provisions are applicable to all credit contracts concluded between consumers and creditors after the entry into force of GEO 50/2010. Therefore, among others, credit agreements for personal needs and real estate or mortgage contracts are also included, without there being any limit to the granted amount.

GEO 50/2010 regulates the information that should be provided to consumers in different stages – advertising, pre-contractual and contractual, and also issues related to interest and charges.

Information at early stages

Appling the principle that it is easier to prevent than to cure later, it is important for consumers to be the beneficiaries of all useful information before making a decision and concluding the contract. Only in this way, consumers can make appropriate choices for their needs.

Advertising

Standard information is required to be included in any form of advertising - radio, TV, newspapers, etc.

Standard information shall specify, by means of a representative example, the following:

- the fixed and/or variable borrowing rate of the credit, together with information on any charges included in the total cost of credit;
- the total amount of credit;
- the annual percentage rate;
- duration of the credit;
- in the case of a credit in the form of deferred payment for a specific good or service, the purchase price and the amount of any advance payment;
- if applicable, the total amount payable by the consumer and the value of the rates.

In any kind of advertising, the information must be written in a clear, concise, visible and easy to read, in the same visual field and with characters of the same size.

If the conclusion of a contract regarding an ancillary service relating to the credit agreement, particularly an insurance, is compulsory to obtain the credit itself or to obtain it according to the terms and conditions, and the cost of that service cannot be determined in advance, the obligation to conclude such a contract is also stated clearly, concise and visible, along with the annual percentage rate.

The information should be presented in a way that does not distort the economic behaviour of consumers or is not likely to distort the economic behaviour with regard to the product of the average

consumer whom it reaches or to whom it is addressed, and should respect the requirements of professional diligence.

Pre-contractual information - when, how and what?

When?

According to GEO no 50/2010, information should be provided enough time in advance, but not less than 15 days before the consumer concludes a credit agreement. The 15-days may be reduced by written consent of the consumer.

How?

Pre-contractual information must be provided on paper or on any other durable medium, written clearly and easy to read, using the Times New Roman font, 12p minimum. If the information is written on paper, the paper color of the drawn form must be in contrast with the font used;

Lenders must use "the Standard European Consumer Credit Information". Any additional information which the creditor may provide to the consumer must be provided in a separate document that can be attached to the "Standard European Consumer Credit Information form".

In addition to the "Standard European Consumer Credit Information form", the consumer shall be provided, on request and free of charge, a copy of the draft credit agreement.

Pre-contractual information must be written so as not to mislead consumers through the use of technical expressions, legal or specific to banking area, using abbreviations or initials of certain names, except as provided by law or common language. The technical terms shall be explained at the consumer's request, in writing, at no additional charge.

Explanations should include at least the following:

- explaining of the pre-contractual information;
- the essential characteristics of the products proposed and the specific effects they may have on the consumer;
- an explanation of costs that are part of the total cost of credit to the consumer, so that consumers understand what they pay;
- the consequences of not paying for the consumer.

Creditors should be able to prove that the pre-contractual information was received by consumers.

What?

In order to meet its role of offering the consumer the possibility make the best choice, consumers should be aware that it is important to shop around asking the offers of different credit institutions. It is essential to ask for the personalized offer, meaning for exact the amount and period one wants (and can) to borrow. In this situation, the Standard European Consumer Credit Information form offered by different creditors will enable consumers to compare the data.

Once this learned, consumers should read carefully all the information of the standard form. Before mentioning the information provided in the standard form, I would like to call the attention to one key element – the annual percentage rate - APR.

APR is the total cost of the credit to the consumer, expressed as an annual percentage of the total amount of credit. APR encompasses all the known costs for consumer like the interest rate, the charges and so on. APR is not just a simple addition of those costs, but it is calculated according to a mathematical formula used by all creditors from the Member States.

APR is an useful comparison tool but only under the condition to obtain personalized information from creditors on similar offers - meaning the same amount, the same duration of the contract, the same number of rates, the same type of interest. APR changes if the values of one element of the credit offer changes.

In case of credit offers with fixed interest rate, APR will be the same during the whole period. However, in the case of variable interest rate, the value of the APR will be available only at the moment of calculation.

The information of the "Standard European Consumer Credit Information form":

- the type of credit;
- the identity and the address of the headquarter and of the office of the creditor as well as, if applicable, the identity and geographical address of the headquarter and/or of the office, or, if applicable home adress of the credit intermediary involved;
- the total amount of credit and the conditions governing the drawdown;
- the duration of the credit agreement;
- in the case of a credit in the form of deferred payment for a specific good or service and linked credit agreements, that good or service and its price;
- the borrowing rate;
- the conditions governing the application of the borrowing rate, calculation method of the the borrowing rate, as well as the periods, conditions and procedure for changing the borrowing rate and if different borrowing rates apply in different circumstances, the above mentioned information on all the applicable rates;
- the annual percentage rate of charge and the total amount payable by the consumer, illustrated by means of a representative example mentioning all the assumptions used in order to calculate that rate; where the consumer has informed the creditor of one or more components of his preferred credit, such as the duration of the credit agreement and the total amount of credit, the creditor shall take those components into account;
- if a credit agreement provides different ways of drawdown, with different charges or borrowing rates it shall indicate that other drawdown mechanisms for this type of credit agreement may result in higher annual percentage rates of charge
- the amount, number and frequency of payments to be made by the consumer and, where appropriate, the order in which payments will be allocated to different outstanding balances charged at different borrowing rates for the purposes of reimbursement
- where applicable, the charges for maintaining one or several accounts recording both payment transactions and drawdowns, unless the opening of an account is optional, together with the charges for using a means of payment for both payment transactions and drawdowns, any other charges deriving from the credit agreement and the conditions under which those charges may be changed;
- existence of taxes, fees and costs which the consumer has to pay in connection with the conclusion, advertising and/or recording the credit agreement and ancillary documents, including notary fees;
- the obligation, if any, to enter into an ancillary service contract relating to the credit agreement, in particular an insurance policy, where the conclusion of such a contract is compulsory in order to obtain the credit or to obtain it on the terms and conditions marketed;
- the interest rate applicable in the case of late payments and the arrangements for its adjustment, and, any charges payable for not compliance with the contract;
- a warning regarding the consequences of missing payments. The warning must contain the terms for reporting to the credit bureau and the minimum time at which the creditor may initiate foreclosure procedure;
- the sureties required;
- the existence or absence of a right of withdrawal;

- the right of early repayment, and, where applicable, information concerning the creditor's right to compensation and the way in which that compensation will be determined;
- the consumer's right to be informed immediately and free of charge of the result of a database consultation carried out for the purposes of assessing his creditworthiness;
- the consumer's right to be supplied, on request and free of charge, with a copy of the draft credit agreement;
- consumer's right to receive a free copy of the draft credit agreement in case of mortgage loans;
- if applicable, the period of time during which the creditor is bound by the pre-contractual information.

Pre-contractual information requirements for certain credit agreements in the form of an overdraft facility

The legal provisions also apply to "overdraft facilities" and taking into account the nature of these products, specific pre-contractual information is mentioned:

- the type of credit agreement;
- the identity and geographical address of the creditor as well as, if applicable, the identity and geographical address/ office of the credit intermediary involved;
- the total amount of credit;
- the duration of the credit agreement;
- the borrowing rate;
- the conditions governing the application of that rate, calculation method, any applicable costs from the moment of concluding the credit agreement and conditions under which those charges may be changed;
- the annual percentage rate of charge, illustrated by means of representative examples mentioning all the assumptions used in order to calculate that rate;
- the conditions and procedure for terminating the credit agreement;
- in the case of credit agreements as "overdraft" an indication that the consumer may be requested to repay the amount of credit in full at any time;
- the interest rate applicable in the case of late payments and the arrangements for its adjustment, and, where applicable, any charges payable for default;
- the consumer's right to be informed immediately and free of charge, of the result of a database consultation carried out for the purposes of assessing his creditworthiness;
- in the case of linked credit agreements, information about the charges applicable from the time such agreements are concluded and, if applicable, the conditions under which those charges may be changed;
- if applicable, the period of time during which the creditor is bound by the pre-contractual information.

Pre-contractual information in case of distance contracts

In the case of voice telephony communications, the description of the main characteristics of the financial service to be provided shall include at least the following:

- the total amount of credit and conditions governing the drowning;
- the duration of the credit agreement;
- in case of a credit in the form of deferred payment for a specific good or service or in the case of linked credit agreements, that good or service and its cash price;
- the borrowing rate;
- the conditions governing the application of borrowing rate, calculation method, as well as the periods, conditions and procedures for changing the borrowing rate and, if different borrowing rates apply in different circumstances, the abovementioned information in respect of all the applicable rates;
- the amount, number and frequency of payments to be made by the consumer and, where appropriate, the order in which payments will be allocated to different outstanding balances charged at different borrowing rates for the purposes of reimbursement;
- the annual percentage rate of charge, illustrated by means of representative examples;
- the total amount payable by the consumer.

If the agreement has been concluded at the consumer's request using a means of distance communication which does not enable the information to be provided, the creditor shall immediately after the conclusion of the credit agreement fulfill his obligations by providing the pre-contractual information using the form " "Standard European Consumer Credit Information".

In the case of voice telephony communications and where the consumer requests that the overdraft facility be made available with immediate effect, the description of the main characteristics of the financial service shall include at least the following elements:

- the total amount of credit;
- the borrowing rate;
- the conditions governing the application of that rate, it's calculation method, the charges applicable from the time the credit agreement is concluded and the conditions under which those charges may be changed;
- the annual percentage rate of charge, illustrated by means of representative examples mentioning all the assumptions used in order to calculate that rate;
- for the credit agreements which are granted in the form of an overdraft, an indication that the consumer may be requested to repay the amount of credit in full at any time;
- the interest rate applicable in the case of late payments and the arrangements for its adjustment, and, where applicable, any charges payable for default.

Pre-contractual costs

For mortgage credit agreement, the creditor shall also inform consumer that he has to pay in pre-contractual stage only the following expenses:

- expenditure relating to preparation of loan application;
- the estimated costs related to the mortgage and sureties evaluation.

In all cases, the creditor has the right to perceive a charge for analyzing the file only of the credit was granted.

Evaluation of the file

Besides the pre-contractual information, it is also important for consumers to know the period during which the creditor must evaluate the credit file. According to the national legislation, within 30 days of submission of the credit file, but not more than 60 days after submission of the request for credit, the creditor shall respond in writing to the consumer or the consumer's express request, the other form of consumer choice and accepted by the lender on or not to grant credit.

On credit receipt and other documents required, the financial service provider is obliged to immediately hand the consumer a written, dated, signed and registration numbered paper containing the lender's confirmation that he received all documents required by the granting of the credit.

3. Conclusions

In conclusion, information and knowledge are vital for consumers and, as Benjamin Franklin said "*An investment in knowledge pays the best interest."* Nevertheless, education is the one that empowers consumers to benefit of the various offers of the market.

GENERAL ASPECTS AND PURPOSE OF THE CONSUMMATION CONTRACT

Alexandru MATEESCU*

Abstract

The current paper mainly tackles the consummation contract and the ways in which it forms, adjusts and helps the citizen, in the general frame of the consumer's rights. The consummation contract is a legal instrument for institutionalizing the commercial operations between a professional and the consumer. This type of instrument has been especially created to help the citizen in being adequately treated both correctly and adequately in all consummation matters. In the 20th century, the need to bring the commercial relations between professionals and citizens under regulation became imperative. Taking into account the socio-humanistic development rhythm, the consummation contact became a way of guaranteeing for the citizens' rights in consummation matters and, at the same time, it confers a legal frame to guide and direct the merchants.

Since 2007, the year when Romania adhered the European Union, the consumers' rights became even more important, as the fact that the European Union focuses on the rights of all its citizens and the way in which they are treated by the merchants from a commercial point of view, was widely recognized. Once Romania adhered to a commercial frame which embeds over 500 million inhabitants, the dimension of the rights and obligations regarding consummation became an ever stronger argument in bringing the legislation under regulation.

Eventually, clarifying the principles that founded the consummation contract will determine the legal frame in which it revolves and will bring to light the utility it has for the citizens, its subsequent employments and all things that should be further added to it in order to ensure an even better protection and settlement, in legal terms, of the commercial relations between a merchant and one or more citizens.

Keywords: *consumer, contract, citizen, professional, European Union.*

1. First words on the consummation contract

It is considered that between a consumer and a professional there is, and there will always be, an uneven forces rapport. In order to make the commercial relations level even for both parties and to offer them a legal frame in which they can both deploy their activities, the consummation contract has emerged.

It all starts with the professional's offer and the consumer's request. The latter expresses the consumer's will to buy the good or the service that is commercialized, while the professional's offer guarantees that the good or service observes all the parameters that have been agreed upon, by means of the contract. Any person endowed with a judicial ability has the right and is free to conclude a consummation contract, which is in full conformity with the effectual laws, and they cannot be detained by any exterior force. The agreement between parties, followed by the observing of the specific terms requested by law, and called "validity terms", convert a simple understanding into an object with a judicial character, and it becomes a consummation contract.

Once concluded, the consummation contract becomes effective and produces rights and obligations, as it represents a judicial rapport between the involved parties, which become contractual parties. [1]

2. Legal determination and presentation of the consummation contract

The consummation contract has many definitions but, formally, it is a judicial instrument. It represents the free will of both the professional and the consumer for establishing a commercial transaction, with and economic finality, in which the professional provides a good or service for commercialization, which the consumer wants to purchase.

The object of the contract must be clearly sated, it has to be determined by and observe the conditions, in order for it to be considered a licit right.

Based on this link between the professional and the consumer, the law clearly decreed the attributions, rights and obligations of the parties, so that they are on a plain level and that the consumer's rights won't be limited or broken. For that matter, if we stop to think what a professional is, we can imagine a merchant with a technical expertise of the product he provides and who knows all the elements of the good or the product he offers for the eventual consumers to purchase. On the other hand, it is probable that a consumer may not benefit from a technical expertise, or from any experience concerning the good or service he is bound to purchase. The consummation contract is, in its essence, conferred by the law to help the consumer to protect his rights, to be treated correctly and to have the possibility to get to know all the aspects of the good or service he is to purchase. [2]

* PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **mateescu_alexander@yahoo.com**).

We cannot say a consummation contract has its own judicial nature, when determining it. It can be regarded as an instrument that helps bringing the commercial rapports between the parties under regulation, and it is adjusted to fit he type and nature of the good or service that is offered for commercialization. Taking all these regulations into account and based in the fact that is does not have its own judicial nature, we can say that it cannot fall under the category of special contracts.

Through its form, the consummation contract represents a civil law contract.

But how can we exactly assert that this type of contract offers protection to the consumer? Firstly, the consummation contract ensures the correct information and the full knowledge regarding the characteristic and essential data on the product or good the former is bound to purchase. The law specifies and carries that the professional should offer the consumer free access to all the information about the good or product, data that should be at the consumer's free disposition. The main information should include the product's characteristics, the means of payment and delivery.

In case the contract does not observe the validity terms, it can be struck as invalid. Thus, it cannot be said that the contract has been concluded.

When referring to the consummation contract, we can also talk about principles. There are principles that represent the basis in concluding such a contract and also, there are principles that stand at the base of the contract itself such as the liberty to conclude a contract, the fraternity between parties the equality of the parties. All these principles are imperative for a good deployment and conclusion of a consummation contract. The contract's conclusion in positive terms is supported by the effectual law, which is specially designed to infer the rights and obligation of each party, in relation with the other, as well as with the national institutions that supervise on these laws being fully observed.

Based on all these regulations and norms we can say that the consummation contract carries out a judicial and economic purpose and, last but not least, a social one. The consummation contract is a consumerist instrument which both merchants and consumers are bound to make use of.

3. The actual form of a consummation contract and its particularities

Through its nature, the consummation contract implies the existence of two parties, the professional and the consumer.

The professional is defined as the economic part, who offers a good or service for commercialization, or as an economic operator. Thus it is either a physical person, or a legally authorized person who can pursue the following activities: transportation, commercialization or storage of a certain type of goods or services.

On the other hand, the consumer can be any physical person who acts outside their economic and commercial purposes.

3.1. The contract's form and the parties roles

As we have previously mentioned, for any sort of agreement between the two parties there has to exist, first and foremost, a willing agreement between the two.

In case the will is displayed by both parties, then the agreement leads to one of the three existent forms of contract. [3]

The first form is that of compulsory contracts, where the terms are essentially the ones regulated by the law, the conditions are clearly delimited and the attributions and responsibilities of both parties are specified. [3]

The second from is that of the negotiated contract. This is a form of contract which is not concluded too often for transactions between professionals and citizens and it represents a classic contract, as it infers all the standard elements of the agreement between two or more parties, for a commercial purpose. [3]

The third from is represented by the liability contract, which is a form that is specific for the majority of commercial contract concluded between a professional and consumer. The general aspect of this form of contract is that more often than not the liability contract will be exclusively written by the merchant and the consumer does nothing more than giving his written consent. [3]

We can even say that the liability contract involves certain unilateral elements that may injure the consumers' rights. In some cases, as the contract is previously drawn up exclusively by the merchant, the consumer might find himself in a situation where he is forced by the circumstances to agree to some terms he would normally not agree to. [3]

In these cases, when the consumer's rights are injured, we can talk about abusive terms which are imposed by the economic operator, which are designed to keep the citizen from benefiting from all the rights the law provides them with. A good example is the right to compensation, in case the product or service that is provided by the merchant does not observe the conformity rules and when the merchant refuses to deliver the product for the consumer to make use of it. In these cases, the terms that are unilaterally imposed by one of the parties can be considered to be completely invalid. The infringement of any right of the citizen to being treated in a correct and balanced manner in a contract is strictly forbidden by the law 240 / 2004 regarding the consumer's protection and by the European directives regarding the citizens' rights in matters of consummation contracts 85 / 375 / CEE and 1999 / 34 / CEE. [4][5][6]

As we have previously stated, the willing agreement is imperative for both parties, so that such a contract should be concluded. At the same time, the legal dispositions work especially for protecting the citizens from any eventual abuse or legal breaches that might be exploited by the professionals in order to fringe the consumers' rights to an equitable and fair treatment and to a good conclusion of the contract that should benefit both parties. [7]

By applying some terms that may seem a little restrictive, equality and balance between the contractual parties is reached, which guarantees the obeying of legal norms by all parties. The consummation contract is considered to be itself an instrument that guarantees the parties equality.

Its utilization represents both a social and a commercial instrument, designed to establish a balance between the technical expertise of a professional and the limited means a consumer has for protecting their own rights.

3.1. The consumer's rights and the contractual provisions

A contract should clearly state all the details and specifications of the product of service that is being commercialized. This information should be expressed in a clear, non-equivocal manner and with no ambiguity, and the levied price should be mentioned.

In case the contract contains any ambiguity or, if the case be, it includes some terms which do not state clearly the rights and obligations of each party, the respective provision will act to the consumer's benefit. [8]

These are the abusive terms. As previously stated and abusive provision is a contractual term that was not open for negotiation to the consumer and it embeds or specifies an infringement of the consumer's right to contract implementation, of their civil rights or to the detriment of his judicial, social or economic interests. This type of provision breaks the good faith principle and that of the contract's balance and it applies the consumers and professional's rights and obligations in an uneven manner.

An abusive provision can be identified as one that has not been negotiated by the consumer and that has a significant influence in the implementation and execution of the contract. [9]

A good example could be a provision which infringes the consumer's right to unilaterally denouncing the contract.

In most cases, the consummation contract can be perceived as a set of rights that the citizen, or the consumer, has:

- the right to clearly knowing the contractual provisions;
- the right to know the exact price they are bound to pay to the professional;
- the right to a technical support in case of any flaws or failures;
- the right to compensation for any prejudice caused by a product that did not observe the conformity terms in the contract;
- for any bank product, the right of being exonerated from paying for the goods or services which have not been included in the contract;
- for any bank product, the right to receiving a written notification, in a term of at least 30 days, in case any change regarding prices and commissions should occur;
- the right to turn to the authorities, when they consider they have not received a fair treatment;
- the right to a fair and equitable treatment, concerning the contract, without being imposed any provision that may be considered unfair or abusive. [9]

All these rights represent a consumer's liberties regarding consummation contracts. At the same time, the infringement of any of these rights can be seen as an abuse or, if the case be and if it has been drawn up as a contractual provision, it can be seen as an abusive provision. In order to fight this type of practices, law 363 / 2007, a law that refers to commercial practices that are unfair towards the consumer, was issued. [10]

4. Legal European climate in the matter and possible development for the future

As far as the general dogma is concerned, nowadays, the European Union applies and also requires the member states a high degree of enactment in the matter. Together with the European directives, the member states are encouraged to apply a law that is comparable to the European law in this matter.

Directive 97 / 7 / CEE of the Parliament and the Council, from 20th May 1997, brings under regulation the European specific conditions for concluding a commercial contract between a consumer and a professional. This directive was issued as a continuation of directive 85 / 55 / CE, the first directive concerning the protection of consumers' rights to be enacted at European level.

Starting from 13th of June 2014 the changes that have been made to the European Law in this matter, through directive 2011 / 83 / CEE, became effective for all the member states. From the beginning of June 2014, the regulations of the European directive became effective for all the member states. The states of the European Union had 2 years, until the end of 2013, to apply the European directive to their national legislations. [11]

Here we can note some changes that have been made in this area in order to harmonize the social economic environments of all the member states. Just like the past provisions, the present directive has a significant impact on national regulations regarding the consummation contract. Taking into account the 21st century and the fact that the economic and social environments are undergoing a continuous change, the European Union approaches the new services and products which are designed for the European consumers.

4.1. The European Union and the consumers' rights regarding consummation contracts

The provisions brought changes to online transactions and hidden costs that may occur to the consumers' prejudice: the consumer's refunding, by the merchant, in case the former returns the product in a term of 14 days from the online purchase of the good or service; the introduction, at European level, of a form designed for consumers who want to retract from a distantly concluded contract.

Another major change is made regarding credit card transactions and the contracts that have been concluded and paid for using credit cards: the removal of any additional costs the consumers were charged by the economic operator. This was seen as an abusive provision that unilaterally forced the consumer to pay for some charges that were unknown to them and that were not agreed upon when concluding the contract; the obligation to include additional information regarding additional costs in case of returning a purchased product.

Once the new changes to the European law became effective, the rights and obligations that sprung from a consummation contract became more and more well-determined and precise. The new regulations also stated that the consummation contracts had to include the geographical address of the selling facility, not only that of the social headquarters, the levied prices, delivery costs and any additional costs that may eventually occur.

The new provisions are mainly designed for distantly concluded contracts and online transactions. The online commerce underwent a great growth in the past years, which made it desirable and, at the same time, necessary a clear regulation that should offer a wide spectrum regarding commercial transactions between the European professionals and consumers. One of the main development directions was the mere growth that has been enlisted in electronic commerce and in the system of electronic payments. Thus the need for optimizing and adjusting the legislation in the matter became imperative as the consummation contract had to maintain its optimal utility and functionality, in the era of digital technology.

The socio-economic climate underwent major changes in the past years, some that have altered the relations between merchants and consumers, as well as the relations among all consumers and the way in which they could manifest and bear their rights and interests, by means of the effective laws and legislation. Together with the recent difficulties that occurred in the European economic environment, which affected the member states, nowadays the main focus is on the citizen and the way in which he has to be fairly, correctly and equitably treated. In what the transactions and contracts are concerned, they have to benefit from both the knowledge and the certainty that the effective legislation will allow them to conclude a contract that will be observed, that will be fairly applied and that will be guaranteed, based on the effective laws and legislation.

4.2. Present and future, internally and at the European level

As we have previously seen, in the case of the effective European legislation, that of the changes that have occurred and that of the national legislation, consumerism is a symbol of both internal and external development. The necessity of helping the socio-economic climate towards a sustainable and balanced development has pushed the Romanian legislator to look at the contract, and especially the consummation contract, as a civil instrument that must have the possibility of being applied efficiently and with great responsibility by any citizen who manifests their will, determination and liberty to conclude such a contract. [12]

Internally we can notice the regulation's effects through a better integration of all legal aspects regarding commercial transactions. The consummation contract is entirely of European inspiration. Its application and perpetual change keep up with the Romanian society. It is a legal instrument that offers direction to all citizens in the free market.

Externally we can note the European legislation vision. The approach here is much wider, as there is a necessity to adjust and harmonize the legislations of the member states, towards a common system, that can be applied to all of them. This necessity occurred because of the main principles of the European Union: the principle of capital, goods and people free circulation. Thus we have a market that embeds more than 500 million citizens, who are as well consumers that need help and guidance towards a fair and efficient behavior in all commercial operations they are involved in.

In the eventuality of future changes, there are some focus areas, regarding the legal provisions, which may occur, as it is mainly underlined by the human development factors in the most important areas where the society has made some progress in the past years.

The administration and online transaction resources are still put to doubt, even after the latest national and European changes. The consumer's possibility of owning the complete control over any contract he concluded in a virtual environment is still highly doubtful. Also, the discrepancies that may occur between the specifications of the commercialized products and the way they are presented are still put to doubt and can have a negative impact on the consumer. The online environment still has some elements that are not clearly perceived by the consumer.

This is where some beaches of their correct information occur, caused by the merchants, and they can eventually manifest through the fact that the consumer is not completely aware of all his rights. In the most critical cases, they can occur due to weak

information and the negative aspects of the contract, like some provisions meant to infringe the consumer's right to dispose some actions, which he is entitled to, in due time, before the contract's expiration or termination.

Also there may occur some supplementary provisions, and they may occur explicitly for many banking services that are offered at European level the common and free economic space makes is possible for any European citizen to benefit from such a service, in every profile institution for any member state. At the same time, the diversity of laws in the matter makes it possible hiding the consumer's rights and some before-hand information they may receive. In this case, we can talk mainly about coordination between the European Union and the member states, concerning the possibility of a common solution, at a communitarian level, which would subsequently be adapted and harmonized with the national laws of the member states.

Another point present of interest is represented by the provision and distribution of electricity, gas and water towards the consumers. Even of the effective regulations include clear approaches regarding the conditions in which a contract can be concluded, these conditions can at most be general, and they are unable to tackle a specific case with a high complexity.

To sum up, we can say that nowadays a consummation contract provides the consumer with the possibility benefits and to act efficiently in any commercial transaction they conclude. The changes that may occur in the future will be determined on some analysis based on the application and utilization of this contract in different cases, from an economical, judicial and temporal point of view. The changes that will be made so that it better serve the citizen's interest are to be determined by the reaction and evolution of the social, politic, economic and judicial climates, internally and at European level.

THEORETICAL ASPECTS REGARDING THE OBLIGATION AS PROVIDED BY THE ROMANIAN LEGISLATION AND THE DOCTRINE

Bogdan NAZAT*

Abstract:

Taking into consideration the latest amendments of the Romanian civil legislation performed through the Civil code of 2009, as further amended, I consider useful to provide the lecturers with a theoretical overview over one of the most important institution in our legal environment, i.e. the obligation.

The analyse will start with an introduction comprising the definition of the obligation as provided by the Civil code aand the doctrina, will continue with the structure of the obligation and, further, will offer an overview of its sources, identifying, inter alia, the articles in the Civil code where such sources are regulated (e.g. contract, law).

In the end, the paper will provide a doctrinaire classification of the obligation, outlining the main categories of the obligations.

Keywords: *obligation, agreement, unilateral, civil, Civil code, legislation, bilateral, creditor, debtor*.

I. INTRODUCTION. THE DEFINITION OF THE OBLIGATION. LEGAL REGULATION

As regards the scope of this paper, it is undoubted that, even if the current legislation represents an evolution as regards the obligation, the doctrine and the jurisprudence, especially the ones before the Civil code of 2009, are still actual. Therefore, the scope of this paper is to envisage the general aspects related to the obligation, as such are revealed, mainly, by the legislation and the legal writers.

At the beginning, mentions hould be made that the obligation is an old institution, a definition being provided also by the Institutions of Justinian. Therefore, it was stated that the obligation is "a legal relationship, under which we are compelled to fulfil a duty according to the law of our borough" (lat. – *obligatio est iuris vinculum, quo necessitate adstringimur alicuius solvendae rei, secundum nostrae civitatis iura)*[1].

In the current regulation, the obligation is defined under Article 1164 of the Civil code[2] as being that "lawful relationship, whereby the debtor is bound to fulfil a duty towards the creditor, and the latter is entitled to obtain the fulfillmenty of due duty".

Until the current Civil code becomes effective, given that the former regulation (i.e. Romanian Civil code of 1864) did not provide a definition of the obligation, this task was assumed by the legal writers.

Thus, obligation was defined, *lato sensu*, as being "that legal relationship whereby the active subject, called creditor, has the right to request from the passive subject, called debtor – who has the corresponding duty – *to give*, *to do* or *to not do* something, subject to the sanction of state compulsion, unless the action is performed willingly"[3].

Moreover, after the new legislation entered into force, the legal writers offered doctrinaire definition of the obligation, being stated that "the civil obligation is the legal relationship whereby a party, called creditor, has the right to request from the other party, called debtor, to fulfil the duty or duties they have, subject to the sanction of state compulsion"[4].

Based on the above mentioned, we may say that obligation is a private legal relationship involving the existence of two natural or legal persons: the *creditor*, standing for the active component of the obligation (holding a right to claim) and the *debtor* and its duty related to the creditor's right. Such duty of the debtor represents the passive component of the obligation.

Nowadays, it was stated[5] that the term "obligation" has three meanings. Thus, besides the *lato sensu* meaning aforementioned, *stricto sensu*, the "obligation" is considered as being that duty of the passive subject, the debtor. The third meaning of the term "obligation" is that the obligation represents the document itself, incorporating the claim right and the

related obligation, namely the obligation to pay the said claim.

Taking into consideration the above mentioned, this paper envisaged to offer the reader a concise and clear overview of the institution by analysing the legal provisions of the Civil code, with some references to the existent legal writings.

II. THE STRUCTURE OF THE OBLIGATION

Representing a legal relationship, the obligation has three principal elements in its structure: (i) the subjects, (ii) the content and (iii) the object.

In our doctrine, there are opinions based on which the structure comprises also a forth element, i.e. the sanction, which will be also analysed in this paper.

In its current form, Article 1164 Civil code does not refer to this fourth element and, based on this, some legal writers considered that this was due to the existence of that category of obligations known as *imperfect civil* (or *natural*) *obligations.* This category of obligation is characterized by the fact that the creditor is not able to obtain the performance of its obligation by the means of execution, even if the payment is still due[6].

1. The subjects of the obligation.

Called also the *parties* of the obligational relationship, the subjects may be any natural or legal persons, provided that they act in accordance with the legal provisions, as well as the state when taking part directly in civil legal relationships.

Unlike in the case of bilateral obligations, in case of unilateral obligations, a party is solely a creditor and the other party is solely a debtor. For example, in the case of the donation agreement free of burdens, the granter is the debtor, while the grantee is the creditor.

2. The content of the obligation.

The content of the obligational relationship consists of the claim right of the creditor and the obligation related to this right encumbering to the debtor.

In other words, the creditor's right consists in the right to request from the debtor the fulfillment of a certain duty, which may consist of *giving, doing* or *not doing* something, while the debtor's obligation consists in the duty to execute the action to which is bound (e.g. handing over some property, paying an amount of money, delivering a service, executing some work, etc.).

As regards their patrimony, the creditor's claim right is among its active side of the patrimony, while the debtor's duty is in the passive side of its patrimony, hereby resulting the patrimonial content of the obligation.

3. The object of the obligation.

The object of the obligational relationship consists of the *action* or *inaction* the debtor is obliged to and that the creditor may request.

Therefore, the object of the obligation may consist either of a positive action (*to give* or *to do something)* or of an inaction, a negative action (*not to do something* the debtor would have been entitled to in the absence of the assumed obligation).

Starting from the above mentioned, it is important to make the difference between the three major categories of obligations existing in our legislation: *to give*, *to do* and *not to do something*.

The obligation *to give* means the obligation of create or transfer a real right[7], such as, for example, the seller's obligation to transfer to the buyer the property right.

We may say that the obligations *to do* are those positive actions that may not be considered obligations *to give* (the obligation to deliver a service, the obligation to pay the rent, the obligation to execute a work, the lessor's obligation to make available to the lessee the property that is the object of the lease agreement[8] etc.). Therefore, the differences between the two aforementioned categories revealed the meanings of each of them.

The obligation *not to do* consists of the debtor abstaining from doing something that might have done, unless binding to abstain. We should mention that the obligation *not to do* does not refer to a negative general obligation, such as, for instance, the obligation of the undetermined passive subjects of the property right, who have the obligation not to do anything that might affect the owner's right[9].

Therefore, we may say that there is an obligation *not to do something* when, within an obligation, the debtor undertakes to abstain from exercising a right that, normally, it was entitled to exercise. For example, there is an obligation not to do when the owner of a land undertakes before their neighbor not to erect a construction with a certain use, waiving thus to exercise a power they had in their capacity of owner.

4. The sanction of the obligation.

As previously mentioned, the sanction of the obligation is considered by some authors as the fourth element of the obligation. The sanction arises usually when the debtor does not fulfill willingly its obligation and it consists in the creditor's right to use various legal means for settling its claim, such as:

a) *enforcement procedure commenced against the debtor*, regulated by the Romanian Civil Procedure

---

[6] Alin-Adrian Moise, *op. cit.*, p. 1216;

[7] Real rights are listed under Article 551 of the Civil code, and are the following: the property right, the superficies right, the right of usufruct, the usage right, the habitation right, the easement, the administration right, the concession right, the right of use, real security rights, other rights the law considers as being of such nature;

[8] Art. 1786 Civil Code sets forth among the main obligations of the lessor the obligation „*to hand over to the lessee the property leased*";

[9] Gabriel Boroi, Carla Alexandra Anghelescu, Bogdan Nazat, *Civil Law Course. Main Real Rights. Second Edition, revised and supplemented*, Hamangiu Publishing, 2013, Bucharest, p. 21;

Code and which may be direct enforcement and indirect enforcement.

b) *legal action*, regulated also by the Romanian Civil Procedure Code, whereby the creditor requests from the Court having jurisdiction to oblige the debtor to perform the due obligation.

c) *default interest*, namely that compensation in money owed by the debtor for remedying the damage caused to the creditor by the failure to fulfill the obligation in due time, which may be cumulated with the fulfillment of the obligation in kind or with compensatory damages[10].

d) *periodic penalties and fines*. These are amounts of money that the debtor is obliged to pay, under a Court judgment, to the creditor, as far as periodic penalties are concerned, or to the state budget, in case of the fines, as a sanction for fulfilling the obligation late.

A major difference between the two is that, as regards periodic penalties, these are subject to reimbursement after the obligation is fulfilled by the debtor, while the fines may not be reimbursed, being considered revenues to the state budget.

If we shortly analysed the methods available for the creditor to obtain the fulfilment of its obligation, it is our view that is important to discuss also about the legal means offered by the legislation to the debtor in order to perform the payment or to defend its rights.

a) *the notification of default of the creditor*. Thus, pursuant to Article 1510 of the Civil code, "the creditor may be notified of default if refusing without grounds the payment duly offered or refusing to perform the preliminary acts without which the debtor is not able to fulfill the obligation".

If the creditor is notified of default, it "take over the risk of impossibility of fulfillment of the obligation, and the debtor is not bound to return the proceeds obtained after the notice of default". Moreover, "the obligor is bound to remedy the damages caused by delay and to cover the expenses on the preservation of the property owed" (Article 1511 of the Civil code).

b) *consignment of the property or its sale at public auction*. A prerogative set forth under Article 1512 of the Civil code, this arises if the obligation of the debtor consists of handing over a property and such obligation may not be fulfilled because of the ungrounded refusal of the creditor. In such case, "the debtor may consign the property at the expense and risk of the creditor, thus being discharged of its obligation". However, "if the nature of the property makes consignment impossible, if the property is perishable or its storage involves maintenance costs or considerable expenses, the debtor may start the public sale of the property and may record the price, notifying in advance the obligor and obtaining the approval of the court of law" [Article 1514 par. (1) Civil code].

Further, „if the property is listed on the stock exchange or on another regulated market, if its current price or value is too low by comparison with the expenses incurred upon public sale, the court may approve the sale of the property without the notification of the creditor" [Article 1514 par. (2) Civil code].

III. THE SOURCES OF THE OBLIGATIONS

The sources of obligations are listed under Article 1165 of the Civil code, which sets forth that "the obligations arise from an agreement, a unilateral act, management of other person's interests, unjust enrichment, undue fulfillment, delict, as well as any other act or fact that the law connects with the creation of an obligation".

a) The agreement is defined under Article 1166 of the Civil code, as "the agreement of will between two or several persons in the intent of creating, changing or terminating a legal relationship".

b) The unilateral civil legal act is the result of the will of one party (art. 1324 – 1339, Civil code).

c) Negotiorum gestio (called also management of other person's interests) is basically the operation whereby a person, called negotiorum gestor, through its intentional and unilateral action, interferes and does material or legal acts in the interest of another person, called principal, without being empowered by the latter[11]. Negotiorum gestio is regulated by the Civil code, art. 1330-1340.

d) Unjust enrichment (art. 1345 – 1348 Civil Code) may be defined as the unlawful act whereby the patrimony of a person increases at the expense of another person, without any legal grounds, the latter being entitled to claim and obtain the restitution.

e) Undue fulfillment (art. 1341 – 1344 Civil code) means the fulfillment by a person - the debtor (*solvens*) for the benefit of another person – the creditor (*accipiens*) of an obligation they were not bound to and that they fulfilled without the intention to fulfill someone else's obligation.

f) The unlawful act as a source of the obligation-based legal relationships is regulated in Chapter IV of the Title V in the Civil code, being also known as „legal liability". Legal liability may be defined as that obligational relationship within which a person has the obligation to remedy the harm caused to another person by its wrongful act or the harm for which it may be held liable according to law.

Civil liability is, pursuant to art. 1349 and 1350 Civil Code, of two kinds: tort and contract.

[10] *Compensatory damages* are the equivalent value of the damage suffered by the obligor due to the failure to fulfill or the partial fulfillment of the obligation and may not be cumulated with the fulfillment of the obligation in kind;

[11] G. Boroi, L. Stănciulescu, *Civil institutions under the new regulation*, Hamangiu Publishing, 2012, Bucharest, p. 169;

g) Besides all these sources, we should mention[12]:

- civil liability for the damages caused by flawed products put in circulation, governed by the Law no. 240/2004 on manufacturer's liability for damages caused by flawed products, republished[13];
- injuries caused by legal errors.

IV. THE CLASIFICATION OF THE OBLIGATIONS

Besides the categories of obligations mentioned above, i.e. obligations to give, obligations to do and obligations not to do, the Romanian legislation knows several types of obligations, classified by taking into consideration different aspects.

Therefore, the obligations are also classified as follows:

a) *positive and negative obligations*. This classification is significant, for instance, as regards the manner in which the notification of default made by the creditor functions, if damages-interests are claimed for the failure to fulfill, the late fulfillment or the improper fulfillment of the obligation.

Thus, pursuant to provisions of Article 1523 par. (2) letter b) of the Civil code, the debtor is notified of default by the effect of the law when defaulting on an obligation not to do. On the other hand, as regards positive obligations, as a rule, the notification of default of the debtor is required, Article 1528 par. (2) of the Civil code provides that "except for the situation when the debtor is lawfully defaulting, the obligor may exercise such a right only if notifying the debtor either when notifying the first of default or subsequent to it".

b) obligations of outcome and obligations of means. Pursuant to Article 1481 par. (1) of the Civil code, "as regards the obligation of outcome, the debtor is bound to obtain the promised result for the creditor". Thus, obligations of outcome are those obligations characterized by the fact that the debtor is obliged, through its conduct, to obtain a certain result for the benefit of the creditor.

The obligations of means, called also obligations of diligence or obligations of prudence and diligence, are defined under Article 1481 par. (2) of the Civil code as being those obligation within which "the debtor is bound to use all the means required for achieving the outcome promised". Thus, we may define the obligations of means as those obligations consisting of the duty of the passive subject to use all the diligence required for achieving a certain outcome, but without being bound to the outcome expected[14].

c) perfect civil obligations and imperfect civil obligations. The perfect civil obligation is the obligation that is sanctioned by the law, namely the creditor may be helped by state coercion for its fulfillment, if the debtor does not willingly fulfill the assumed obligation.

Most obligations fall into the category of perfect civil obligations.

The imperfect civil obligation, called also natural obligation, is that obligation characterized by the fact that its fulfillment may not be achieved by means of enforcement in a Court of law but, if it is fulfilled willingly, the debtor does not have the right to reclaim the performance.

d) common civil obligations, *scriptae in rem* obligations and *propter rem* obligations. The common civil obligation is the obligation that is to be fulfilled between the parties of the obligational relationship, this being incumbent on the debtor for which it was created. Most civil obligations consist of such obligations, common obligations being the rule in our law system.

Scriptae in rem obligation (or the obligations binding also on third parties) is the obligation characterized by the fact that, being in close connection with a good, shall be effective also as regards a third person that acquires subsequently a real right to that thing, even if they did not take part in the creation of the legal relationship that contains that obligation.

Propter rem obligation, called also real obligation, is the duty incumbent on the holder of a real right to a thing and originates in the law or the agreement of the parties. The existence of this category is justified by the need for example to facilitate the existence of some relationships of good neighbors, to protect things of national importance, to use or preserve the qualities of some important things[15].

e) other categories. According to the source of obligations, there are the following categories of obligations: civil obligations arising from unilateral legal acts, civil obligations arising from contracts, civil obligations arising from negotiorum gestio, civil obligations arising from undue fulfillment, civil obligations arising from unjust enrichment, civil obligations arising from unlawful acts causing harms.

At the same time, there are simple obligations and complex obligations. The category of complex obligations includes divisible obligations and indivisible obligations, joint obligations, obligations affected by term and obligations affected by condition, alternative obligations and optional obligations.

As a last classification, we may speak about pecuniary civil obligations, whose object is the obligation to provide an amount of money, and non-pecuniary civil obligations, whose object is any other performance than an amount of money. This last classification may be made depending on the object of

[12] L. Pop, I.-F. Popa, S. I. Vidu, *op. cit.*, p. 48;

obligation, namely whether this may be expressed or not in money.

V. CONCLUSION

The subject choosen for this paper is actual, even if the Romanian legislation is in continuously change. It can be observed that the legislator considered the doctrine when drafted the the new applicable legislation.

Therefore, by approaching this subject, we intended to offer the reader the possibility to make an opinion of the legal provisions applicable to and the interpretation offered by the doctrine (based on the legal provisions) to the institution under analyse.

GENERAL ASPECTS ON COMPETITION AND THE FIGHT AGAINST UNFAIR COMPETITION

Răducu Marian PETRESCU*

Abstract

In its first part, this paper analizes the different aspects regarding the introduction of the first rules in the area of competition, both at European and national level. Further, the paper presents the purpose of competition law which is to prevent and combat certain market participant behavior which in itself distorts competition. There are also highlighted examples of abusive behavior and anti-competitive practices which have as their main object or effect the prevention, restriction or distortion of competition on the Romanian market or a certain part of it. This paper also touches upon the subject of sector inquiries conducted by the Competition Council on certain sectors of the economy and the various categories of agreements in different sectors, with illustrations of measures or penalties that can be disposed / applied. Furthermore, this paper aims to analyze from the perspective of competition, the life insurance sector in Romania, sector included by the Competition Council among the seven economic sectors with particular importance to the national economy.

Keywords: *competition, upgrading, standardization, socio-political implication, sector inquiries, sanctions, life insurance.*

1. Introduction

The business environment and more specifically it's improvement, was one of the key components of economic reform in Romania. In these conditions, the rules regarding the competition field and ensure a uniform level for all companies on the market, has its place increasingly more evident as market mechanisms start functioning under normal parameters.

For a specific perspective, the legislation concerning the competition field could be seen as an affront to free commerce and to contractual freedom, mining the defining elements of the free market. From the other side, is invoked that sometimes the market mechanisms are unable to reach the best result only through their functioning. That would require a moderated intervention. This is the purpose of the competition legislation.

Introducing a set of rules on competition field was always subject to time evolution of such varied factors. The socio-political which took place at the end of XIX century regarding the agreements between railways, oil and banks field, which were growing up, were threatening the stability of the economical and the political system. In various European country, from the beginning of the XX century, the rules concerning competition tried to maintain a balance between the benefits of the economical cooperation of the companies- cartels- and the economical and political risks implied. Such an approach on the competition field, often, was leading to unwanted political results of unfair competition.

In the European Community, the rules regarding competition have been introduced in 1957 by the EEC Treaty, rules that ensured that the restrictions – tariff and non tariff – existing in international trade, that the member States agreed to eliminate them by signing the Treaty, wouldn't be replaced by the creation of cartels between companies in different countries.

Initially, the rules concerning competition in the European Union, complemented the inter-state policies to reduce barriers to international trade and market unification. From that point, the market has become one of the main objectives of competition field by maintaining fair competition.

The legal framework in the competition field in Romania is given by the Law no. 21/1996 on Competition and Law no. 11/1991 on fighting against unfair competition. These regulations aim at the protection, maintenance and stimulation of competition and of a normal and competitive environment, indented to promote the consumers interests.

2. Content

2.1. Purpose of the competition law

The purpose of the competition law is to prevent and combat a particular behavior of the participants in market mechanisms, behavior indented to distort competition.

In this consideration, it was absolutely necessary to modernize and standardize competition law by adopting a legal framework to address the new reality.

Therefore, by the law in force any agreements between companies, shareholders' resolutions of companies and concerted practices which have as object or effect the prevention, restriction or distortion of the competition on the Romanian market or a part thereof shall be prohibited, especially those which are:

* Petrescu Răducu Marian, PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (email: **rmpetrescu@yahoo.com**).

- fixing, directly or indirectly, selling or purchasing prices or any other trading terms;
- limiting or controlling the production, commercializing, technical development or investments;
- sharing markets or supply sources;
- applying, in the relationships with the trade partners, unequal conditions to equivalent services, causing in this way a competitive disadvantage to some of them;
- conditioning the conclusion of contracts by imposing upon partners the acceptance of certain clauses stipulating additional services which, by their nature or by commercial usage, are not related to the object of such contracts;
- participating, in a concerted manner, with rigged bids in actions or any other forms of competitive tendering;
- eliminating other competitors from the market, limiting or preventing access to the market and the free exercise of competition between other companies, as well as agreements not to buy from or to sell to certain parties without reasonable justification.

The exchange of future prices, future sales, future market shares and future territories may result in the prevention, restriction or distortion of the competition.

The exchange of other categories of sensitive trade information:

- Trade and marketing policies and strategies;
- Confidential information and trade secrets;
- Lists of clients, delivery terms;
- Quality, variety, quantity of products;
- Production volume, discounts, production costs, turnover.

On the volatile markets characterized by short-term agreements, the frequent exchanges of information may hardly cause anti-competition effects.

On the very concentrated markets, a single exchange of information may be qualified as an anti-competition agreement.

According to the relevant applicable legislation, any abuse of a dominant position held by one or more companies on the Romanian market or on a substantial part of it is prohibited. Such abusive practices may consist mainly in:

a) imposing, directly or indirectly, inequitable sale or purchase prices or of other inequitable trade terms and the refuse to deal with certain suppliers or clients/beneficiaries;

b) limiting production, commercialization or technological development to the consumers' disadvantage;

c) applying, in the relationships with the trade partners, unequal terms to equivalent services, in this way causing to some of them a competition disadvantages;

d) conditioning the conclusion of contracts by imposing upon partners the acceptance of additional services which, by their nature or in compliance with the commercial usage, are not related to the object of such contracts;

e) charging excessive or predatory prices, on the purpose to eliminate to competitors, or selling to export under the production cost, recovering the differences by imposing increased prices to the domestic consumers;

f) taking advantage of the state of dependence of another company towards such a company or companies and which does not have an alternative solution under equivalent conditions, as well as breaking the contractual relations for the sole reason that the partner is refusing to submit to certain unjustified commercial conditions.

Furthermore, any actions or inactions of the central or local public administrative authorities and institutions and of the entities to which such bodies delegate their powers, that restrict, prevent or distort competition are prohibited, such as:

a) limiting the freedom of trade or the companies' autonomy, exercised with the observance of the legal provisions;

b) setting discriminatory conditions for the companies' business.

Shall be presumed, until is proven otherwise, that one or more companies are in a dominant position, in case that the share or aggregated shares on the relevant market, recorded during the period subject to analysis, exceed 40%.

General Recommendations:

- No not exchange, directly or by means of third parties, classified information that is rated as sensitive information from the competition point of view;
- Make sure that at the professional associations' meetings shall be discussed legal and permitted subjects.
- The exchange of public information does not represent an anti competition agreement.

2.2. Methods to exchange information:

- Bilateral exchanges:

Both parties exchange information actively by: e-mails, telephone calls, Romanian postal services, attending to meetings.

- Unilateral exchanges:

A party discloses actively sensitive trade information to a passive party.

The simple presence to a meeting where are disclosed sensitive trade information may be construed an involvement in an information exchange.

2.3. Sector inquiries

Are inquiries conducted by the Competition Council on certain areas of the economy and on various categories of agreements in various sectors.

Role of the sector inquiries are to prevent, to sanction and to monitor the market proactively.

Goal of the sector inquiries:

- To obtain information relating to the operating manner of certain markets;

- To analyze and understand various markets and economic sectors;
- To identify the malfunctions related to anti competition.

The unannounced inspections are intended to collect evidences on the alleged breaches of the competition law.

Prerogatives of the Competition Council in the framework of the sector inquiry:

- the legal right to request from the economic operators any information and documents deemed necessary;
- the inspectors shall indicate the legal ground, the object, the information providing term and the sanctions for the failure to respond to the requests;
- the legal right to inform other competent authorities;
- the right to obtain declarations from any person that consents in this respect.
- The competition inspectors shall be allowed to:
- enter the premises, lands or means of transportation belonging to the companies or the residences of head executives, managers, directors and of other employees;
- examine and/or to pick up and/or to copy any documents, registers, accounting, financial and commercial documents and other records related to the company's activity, regardless of the location in which they are stored and the physical or electronic media on which they are;
- request explanations to a representative or to a member of the company's personnel on the facts or documents related to the object and to the purpose of the inspection and to record or the register their answers;
- seal any premise assigned to the company's activities and any documents, registers, accounting, financial and commercial documents and other records related to the company's activity during the inspection and to the extent necessary for the inspection.

How we should behave in case of a sector inquiry?

- Ask politely the competition inspectors to wait in a room, for a short period of time, until you organize yourselves at the internal level of the company;
- Warn the personnel to avoid showing a hostile behavior, obstructing the investigation, destroying documents and communicating to anyone outside the company on the performance of the unannounced inquiry;
- Do not provide voluntarily information or documents that are not requested;
- The answers to the inspectors' questions shall be precise and at the point;
- In case that the questions asked by the inspectors are not clear, request additional clarifications - do not speculate and do not extend the answer more than necessary;
- Make sure that no one is breaking the seals applied by the inspectors – fines;
- Make visible signs indicating that the door or the box may not be opened;
- Provide the requested documents or information on due time.

2.4. Sanctions

For providing inexact, incomplete or misleading information, as well as for incomplete documents or for the failure to provide the requested information and documents, shall be applied the sanction with fine, from 0.1% to 1% out of the turnover corresponding to the financial year previous to the sanctioning. The sanctions shall be individualized by taking into consideration the seriousness and duration of the act.

The companies have the obligation to act in observance of the fair usances, in compliance with the general principle of good faith and with the legal provisions. In case of failure to observe the above, shall be entailed the civil, contravention or penal liability.

Fighting against unfair competition is regulated by Law no. 11/1991, with the subsequent amendments and additions, and aims to secure the fair competition, with due observance of the fair usances and of the general principle of good faith, in the interest of the involved parties, including the observance of the consumers' interests. This regulatory document shall apply to natural or legal persons, Romanian or foreign, that conduct practices of unfair competition.

The trade practices of a company that violate the fair usances and to the general principle of good faith and that cause or may cause damages to any market participant constitutes unfair competition.

Practices of unfair competition shall be prohibited, regarding:

- denigration of a competitor or denigration of its products/ services, made by communication or spreading by a company or by its representative/employee of information that do not correspond to reality regarding the activity of a competitor or regarding his products, likely to injure his interests;
- deviation of a company's clientage by a former or current employee/representative or by any other person by using trade secrets, for which such company has taken reasonable measures to ensure their protection and their disclosure may damage the interests of such company;
- any other trade practices that conflict with the fair usances and with the general principle of good faith and that cause or may cause damages to any market participant.

The unfair competition means the situation of market rivality, in which every company tries to obtain simultaneously sales, profit and/or market share, offering the best business-like combination of prices, quality and connected services, with due observance of the fair usances and of the general principle of good faith.

Within the meaning of the law, "fair usances" mean the generally known set of the practices or rules that apply in the trade relations between companies, with a view to prevent the violation of their legal rights.

Competition Council, as autonomous administrative authority in the competition field, ensures the companies' protection against the practices of unfair competition within the limits of the powers granted under law.

The Competition Council may decide, as the case may be:

- the cessation of the practices of unfair competition, during a claim settlement;
- forbidding the practices of unfair competition;
- applying the civil/contravention fines, if the unfair competition was construed as contravention.

The evidences that may be produced in order to prove that certain facts are practices of unfair competition may consist in experts' reports, documents, correspondence, that vary depending on the particularities of each case.

As an example, in case of a clientage diversion, I consider that the evidences should result both from the clientage deviation, as a factual situation, and from the causality relation between the clientage deviation and the use in this respect of certain trade secrets by the actor of such practice, for which have been taken protection measures and their disclosure may damage the interests of the company at issue.

2.5. Life insurance in Romania as seen from the perspective of market competition

Recently, life insurances in Romania were the subject of a study made by the Competition Council, on which the analysis focused on the period between January 2011 and June 2014.

Through it the life insurance market was seen in the light of two structures that describe the market characteristics, i.e. monopolistic competition (it resembles the perfect competition market in terms of the large number of active firms and ease of entry; products offered for sale in this market are differentiated) and oligopoly (it involves a small number of sellers, protected from other competitors entering the market; active companies in this market offer for sell similar products.).

In terms of market entry barriers, it is considered to have several different types. Firstly, we are talking about regulatory and capital barriers imposed by the Authority of Financial Supervision, such barriers are absolutely justified, due to the sensitive character of the contracts existing in the life insurance market. In short, regulatory barriers are dependent on to the way society itself is organized, including its name, and on certain opinions which it is required to obtain and certain taxes incurred, and the conditions imposed to significant shareholders of the or founders company. In addition, the Authority of Financial Supervision requires the life insurance companies for a minimum paid-up capital. Competition Council considers that the recent trend of tighter market access conditions for life insurance market generates concern.

In terms of the number of firms active on the market, it is considered that there is a trend in which the life insurance market Romania is relatively concentrated, tendency especially highlighted in recent years. Even if the current number of active insurance market is moderate, it is considered that it is still relatively small compared to other countries in the region.

Regarding the homogeneity of the product offered by insurers in the report made by the Competition Council, it is considered that there is a significant difference between the life insurance contracts offered by various market participants, both in terms of basic risks covered and the additional risk that may be incurred by the same insurance.

Concluding on the 3 aspects shown above, it is considered that the life insurance market in Romania borrows both oligopolistic market structure characteristics (entry barriers and a relatively small number of competitors) and those of the monopolistic market competition (likely product differentiation). Competition Council's concerns on this market are the result of concentration trend observed in recent years, a trend that seems to be complemented by an apparent tightening of barriers to entry. Therefore, one of the concerns of the competition authority refers to the relative proximity of the life insurance market oligopoly model, with all the risks that this approach posed for consumers.

3. Conclusions

As a corollary of the entire thesis, I understand to highlight the guidelines of the fair competition, representing the same principles that may be found in the other fields of the law and, in a general manner, in the essence of the legal practice itself as an art of good and equity or "Law is the science of what is good and just" (*jus est ars bonu et aequi*).

For modernization and consistency in the application of competition policy to be successful, it is necessary that the law should apply to a much greater rigor and competition to become the dominant culture.

In the current context of improving the states economic situations as a result of reduced effects of economic crisis, we believe that competition policy should use this momentum. In Romania, the concern for the implementation of pro-competitive reforms is currently high, strongly anchored in implementing Community standards. As a consequence, in the interest of improving the institutional framework and enforcement, we note a number of actions taken by the Competition Council related to the modification of the analysis and legal framework (laws, secondary legislation, procedures etc.).

For example, the modification of Law no. 11/1991 regarding unfair competition by Government

Ordinance no. 12/2014 which had its main purpose to as to modernize the law and strengthen the role of the Competition Council in combating unfair competition. Through the same ordinance, there were introduced a number of changes to the Competition Law no. 21/1996, which aimed to improve the processes, procedures and human resource of the competition authority.

All these efforts are aimed at ensuring consistency of competition policy. This is the key to achieving a competitive fair environment for all businesses. Such an environment makes the companies to strengthen their effectiveness and therefore be better prepared to compete in domestic and international markets. A dynamic business environment that ensures competition induces the necessary motivation to innovate and to promote increase productivity. It also creates a competitive benefit for consumers and society[**].

INTEGRATING UNMANNED AIRCRAFT VEHICLES IN THE ROMANIAN NATIONAL AIRSPACE

Sorana Alina Catinca POP[*]
Remus DOGARU[**]

Abstract

The use of unmanned aerial vehicles in the Romanian civil airspace brings us back to the 1920's, when the first aircraft started to fly over the Romanian sky. Little did the legislators at that time know how to create the proper legal framework for the use of such machines so that all aspects related to their use be covered, as well as identify all potential risks and effects. Nowadays, UAVs are the new aircraft and it is a challenge for the legislators to properly identify the legal framework so that the safety and security of civil aviation are not affected. The paper will address the challenges the regulator faces in the integration of the UAVs in the Romanian civil airspace, developments and issues raised by the current regulation, as well as aspects related to the national regulations expected to enter into force at the end of 2015, beginning of 2016.

Keywords: *UAV, RPAS, unamanned, vehicles, integration.*

1. Short history of the Unmanned Aircraft Systems

The necessary technology for remote control of vehicles has been used since the nineteenth century, when the concept was first applied to torpedoes. Thus, since 1870 torpedoes began to be controlled remotely using various methods invented by John Ericsson (control of the vehicle by using pneumatic systems), John Louis Lay and Victor von Scheliha (control of the vehicle by using electrical systems).

The first technical developments towards radio control or wireless routing, as known today, have been made since 1898 when Nikola Tesla presented to the public his invention in the hope that it will be purchased by the US Army: radio-controlled torpedo.

Government representatives took in derision Tesla's project, considering it another project with no future.

However, on the other side of the Atlantic studies on the possible military applications of radio-guided systems were taken seriously. Thus, the work conducted by the pioneer in the field, Archibald Low, with regard to radio guided missiles, torpedoes and planes during the First World War pioneering work of in radio, brought him the title of "father of the radio-guided systems".

Starting with 1934, Reginald Denny, a former pilot of the Royal Air Force in World War I, opens his first store for radio controlled aircraft produced under Reginald Denny Industries (RDI). In 1940 RDI wins a contract for providing US military with target aircraft.

Returning to the fronts of the First World War, we must remember that the war of attrition that followed the German offensive of 1914-1915 was the perfect stage for the launch of "radio controlled military equipment". Some of them quite notable and very ingenious for their time: guided trolleys to target with light beams and small aircraft equipped with barometer / altimeter, and gyro mechanical counter designed to collapse on predetermine targets. These devices were designed to "deliver" cargo in the enemy trenches. Although there were many brilliant ideas at that time, Germany was the only country that succeeded in using a controlled radio device in its military actions: in 1917 the boat FL 7 was used successfully against British ships which were bombing Oostende and Zeebrugge German bases.

Again, in World War II, Germany was the only country to produce and use military equipment controlled by cable or radio controlled, as follows:

- **Goliath**: a tracked military vehicle capable of carrying a load of 50kg of explosives under enemy tanks. For the movement of the vehicle, two electric motors were initially used, replaced later by an internal combustion engine. These vehicles were used on the Eastern Front, on the beaches of Normandy and in the fight for the suppression of the uprising Warsaw ghetto. Their effectiveness was limited by low clearance, reduced speed and vulnerability to small arms;

- **V1 flying bomb**: the first operational jet missile of the German army. It could carry a 850-pound bomb and had a flight range of around 200 kilometers. The launch could be done with the aid of fixed ground bombers or directly from the bomber aircraft. Although there was a standalone version designed for kamikaze type attacks, it has not been activated again. About 10,000 flying bombs V1 type were manufactured at that time. Around 9521 bombs

Sorana is also an aeronautical inspector within the Romanian Civil Aeronautical Authority specialized in air navigation services regulation (e-mail: **sorana.pop@gmail.com**).

[**] Remus DOGARU is an aeronautical inspector within the Romanian Civil Aeronautical Authority. He is specialized in airworthiness and aircraft registration. Remus is one of the national coorinators of the working group in charge of the UAV legislative package.

were launched over Great British, of which 2419 have reached London. Antwerp was hit by 2448 bombs V1, during October 1944 and March 1945;

- **Cruise missile V2**: first operational ballistic missile in military arsenals of states was guided by advanced gyroscopic system and powered with a diluted mixture of alcohol and liquid oxygen. To obtain liquid oxygen, two auxiliary fuels were used: hydrogen peroxide and a mixture of sodium permanganate and water. The missile had a range of 362 kilometers an explosive load of 975 kilograms and reached the target at a speed of about 4,000 km / h, that made it almost impossible to be detected by radar surveillance. Over 900 V2 type missiles were launched at the end of 1944 to targets located in Belgium (Antwerp), United Kingdom (Ipswich, Norwich), France, the Netherlands and at the end of the war, even in Germany.

- Anti ship missile FX 1400 "Fritz": flying bomb having a maximum mass of 1400 kg payload 700 kg, 4 small wings, control surfaces and radio controlled rocket motor. They were transported to the target attached by Dornier Do 217 bombers. During the war, about 2000 units were built.

Design, construction, testing and development of remotely controlled or autonomous equipment entered into obscurity after the end of World War II. However, the only one who have campaigned for further research, especially aircraft design and testing of autonomous / remote controlled systems, was the US Air Force. The ultimate goal of its research was to develop military systems, complementary to the manned military aircraft.

In this context, in 1962 the aircraft Model 147 "Lightning Bug" appeared, produced by Ryan Aeronautical products. Between 1962-1975 these aircraft were used in the airspace of countries in Southeast Asia for flying missions at low and medium altitude for activities such as: aerial photography, aircraft targeting, launch of antiradar ribbons, radar jamming, launch of propaganda materials.

Given that the use of such equipment were exclusively for military purposes, the information resulting from the completion of the various research programs in the field of autonomous and remotely controlled systems, was classified or less accessible to the public.

The first information on the use of radio controlled aerial systems for the management and adjustment of artillery shooting became public in 1982 after the end of the military conflict between Israel and Lebanon. Israel conflict sought solutions to neutralize their priority, before planning any air offensive, that being possible also given the experience of Yom Kippur (1973) when antiaircraft systems provided by the former USSR Arab allies (Egypt and Syria) have caused significant damage to the Jew military aviation,. The use of unmanned aircraft to locate the positions of Egypt and Syria's air defense systems and their subsequent destruction by conventional means (artillery attacks, air strikes, the use of special forces etc.) resulted in decrease of aircraft destroyed by soil-aircraft missiles.

Following the completion of the "Cold War" Conflicts and the use of increasingly wider "Global Positioning System", autonomous military and remote control systems were brought to the public's attention. The first use of the above mentioned equipment occurred during the first Gulf War (War of 1991 which opposed the military forces of Iraq and the US-led multinational coalition) and had the "star" subsonic cruise missiles BGM-109 Tomahawk.

Subsequently, new systems were designed and developed, some of which we mention: General Atomics RQ-1 Predator and Northrop Grumman RQ-4 Global Hawk, used in the NATO air operations in Serbia. On this occasion the two air systems have been successfully used to collect real-time information on the movements of Serb forces, air defense systems, refugee flows etc.

The beginning of the new century has seen a technological leap, new autonomous or remotely controlled systems with a smaller design-manufacturing cycle are easier to purchase and use. The terrorist attacks of September 11 and the invasion of Iraq and Afghanistan by the US military and its allies led to an explosion of robotic systems used in both civil and military activities.

Autonomous or remotely controlled systems and the importance attached to them is illustrated by the fact that, for example, the US military inventory currently includes about 12,000 robotic systems that can be used in land missions and 7,000 unmanned aircraft that can be used in armed conflicts. In addition to the US military interest in developing new military systems based on new technologies, other 44 countries are engaged in the design, testing, production and use of military unmanned aerial systems on board.

2. International and regional context

The evolution of technology is more rapid than the ability of the rule-maker. Always ahead with at least one step, technology does not cease to amaze us and to challenge our minds so that ways and means are identified so that activities undertaken are conducted in a safe manner.

UAVs today are one of the most intriguing challenges aviation deals with currently, especially from the legal perspective. We are living history by creating the legal framework for the proper integration of remotely piloted aircraft systems into civil airspace. Even though the year is 2015, we are back at the beginning of the 1900 when the aviation legal framework was barely developing and legislators little did they know about all potential risks and situations that needed to be covered from

the rulemaking point of view so that activities were conducted in a safe and secure manner.

The use of UAVs in the civil airspace definitely brings a wide series of benefits. From photogrammetry to search and rescue activities, UAVs are useful systems that assure rapid and efficient solutions for various necessities.

However, their interference is not lacking risks and the civil society is exposed to accidents and violent actions. There were several incidents reported to date, most of them resulted in little or no harm: BBC 2011 in the UK; Mortimer 2012 in New Zealand, LL 2013 in Australia etc.). Some of them on the other hand resulted in death such as the crash-landing of a drone in Congo in 2006[1] and another death from an accident caused by a pilot error and loss of GPS data-feed in Korea in 2012[2].

According to Brownsword, it is of extreme importance to analyze the regulatory connection when it comes to developing a legal framework in a certain context while accommodating new forms of activities.[3] This means that the current legal framework needs to be constantly reconnected to the evolution of technology. In the process of achieving such balance, the analysis of some elements could benefit the course of development:

- new rules to deal with the new situation;
- dealing with the uncertainty of how to handle new activities and how to regulate them;
- identification of potential hazards;
- in which category does the new activity fit, how should it be defined; make sure there is no conflict of laws;
- is it cost-effective;
- does it allow for the activity to develop in a safe and secure manner for civil aviation.

After thorough consideration over these aspects, the characteristics of a solid legal framework should be: oversight (monitoring activities of the regulated acts), enforceability (regulated activities are subject to enforcement), enforcement (the agency with enforcement powers has appropriate resources and uses them), review (constantly reviewed so that it corresponds with the envisaged aims).

On all three layers of regulatory systems, international, regional and national, legislators are in the process of analyzing the elements that lead to a strong legal system that will permit the accommodation of UAVs in the civil airspace.

2.1. Legal framework and future perspectives at international level – ICAO

The International Civil Aviation Organization (ICAO) is a UN specialized agency having its headquarters in Montreal, Canada. ICAO is the organization that sets out the context for regulation[4] in its Member States. Through the publication of standards and recommended practices (SARPs), ICAO seeks the harmonization of aviation legal regimes around the world by promoting the safe and orderly development of international civil aviation.[5] Member States, according to the Chicago Convention[6], may apply different rules from the ones established by SARPs, but doing so, they are required to notify ICAO with regard to such rules that are different from the standards. Failing to notify ICAO, it is presumed that the Member States complies with the SARPs. Thus being said, unless otherwise, States are obliged to comply with the standards and recommended practices developed and adopted by ICAO.

Until now, the organization has been mainly preoccupied with regulating activities in which piloted civilian aircraft are involved. Generally, it covered issues related to aircraft of a given size and operating above a given height and in sectors adjacent to airports. The attention was concentrated on flights that would cross borders and on issues of safety and security raised by such flights.

The scenario more or less involves the following elements:

a. Control – exercised through air navigation service providers, controllers (one or a team) that have responsibility for the design of airspace, have authority over pilots within determined airspace, have a system of communication with the pilot and benefit of sufficient capacity to properly accommodate all aircraft that are present at the same time in that given airspace and last but not least, that have a significant contribution to the conduct of flight activities in a safe manner.

b. Pilot – is on board the aircraft and has ultimate responsibility for the safety and security of the airplane, is in contact with the controller and follows its instructions, is able to analyze the situations and decide accordingly.

On the other hand, the use of UAVs represents a challenge from both pilot and controller perspective, as well as national authorities. First of all, the pilot is not on board aircraft but operates the UAV remotely from a station. This situation decreases the pilots appreciation of the aircrafts surroundings and also weakens the communication

[5] Idem.
[6] Convention on International Civil Aviation, signed at Chicago on 7 December 1944, art. 38.

channel with the controller and has an impact on the way the aircraft behaves. UAVs are smaller than regular aircrafts thus increasing the potential of not identifying properly or timely. Hence, the potential of a collision between a UAV and an aircraft is increased, as well as the possibility of a technical congestion threatening data quality and risk information[7] in the air navigation services field.

According to the Chicago Convention, the regulation of UAVs is left to national laws.[8] It was not until recently that words such as pilotless aircrafts, UAVs, unmanned aircraft started to be used in the ICAO terminology and SARPs. The absence of specific UAV related rules at international level is most probably due to the activities limited to civilian aircraft with a pilot on board.

In 2007, ICAO established the Unmanned Aircraft System Study Group (UASSC) which brought together experts from Member States, stakeholder groups and industry. The Group developed the Unmanned Aircraft System (UAS) Circular 328, published in 2011 which provided an initial step toward the elaboration of an international regulatory framework for RPAS. The Circular is superseded by the Manual on Remotely Piloted Aircraft Systems produced by the study group, now replaced by the ICAO RPAS Panel.

The Manual shows how the existing regulatory framework that was developed for aircraft with pilots on board applies to unmanned aircraft. It gives insight into the changes that will take place in the RPAS domain. It also offers an outline of the ICAO SARPs to be developed on the subject. The Manual is a useful tool for states, industry, service providers and other stakeholders on what the regulatory framework dedicated to UAVs should comprise.[9]

It is expected that standards and recommended practices for air traffic management to be developed by 2020. The process of developing standards and guidance material in the field is only at its beginning and it is expected to continue for 10+ years.

Apart from the development of new SARPs, ICAO has amended 3 of its 19 Annexes to the Chicago Convention in order to accommodate RPAS. Annexes 2 – Rules of the Air, Annex 7 – Aircraft Nationality and Registration Marks and Annex 13 – Aircraft Accident and Incident Investigation have been revised. Throughout the novelties of these amendments we mention:

a. A remotely piloted aircraft system (RPAS) engaged in international air navigation shall not be operated without appropriate authorization from the State from which the take-off of the remotely piloted aircraft (RPA) is made.

b. RPAS shall meet the performance and equipment carriage requirements for the specific airspace in which the flight is to operate.

c. An RPAS shall be approved.

d. An operator shall have an RPAS operator certificate.

e. Remote pilot shall be licensed.

As it can be observed, the international legal framework for UAVs is currently incomplete and immature. Throughout the sections of this paper, regional regime will be analyzed as well as national regulations on order to establish the current modalities and conditions a=in which UAVs can be used.

2.2. Legal framework and future perspectives at regional level

At European level, UAVs utilization is subject to national laws of the States. For these reasons, the European Commission desires a basic regulatory framework in the field by the end of 2015.

Taking a look at the current legal regimes, it can be observed for example that in France, flights over Paris without approval from aviation authorities are illegal and there were incidents reported where UAVs flown over objectives such as the Eiffel Tower or the US Embassy in Paris triggered alarms. In Germany, UAVs must weight no more than 25 kg, while in UK, UAVs above 20 kg are subject to the same regulations as manned aircraft.

For these reasons, the European Commission underlines the necessity of having a harmonized legal framework in the field of unmanned aircraft systems. In this sense, the European Aviation Safety Agency (EASA), the responsible institution for the civil aviation safety in EU, is to develop the specific regulations for UAVs and in particular for RPAS when used in civil application and with an operating mass of 150 kg or more.[10]

Agency is supporting the European Commission to progress the „roadmap" presented by the European RPAS Steering Group (ERSG) on 20 June 2013 and covering the development and integration into non-segregated airspace of civil RPAS in the next 15 years. The roadmap is articulated in three pillars: research and development; safety regulation and technical standardisation; and complementary measures including privacy and data protection, insurance and liability.[11]

---

[7] Roger&Moses pag. 280.

[8] Chicago Convention, art. 8 – "No aircraft capable of being flown without a pilot shall be flown without a pilot over the territory of a contracting State without special authorization by that State and in accordance with the terms of such authorization. Each contracting State undertakes to insure that the flight of such aircraft without a pilot in regions open to civil aircraft shall be so controlled as to obviate danger to civil aircraft."

[9] Leslie Cary, ICAO RPAS programme manager, RPAS Panel Secretary, declaration on the release of the Manual on Remotely Piloted Aircraft Systems.

[10] EASA website – www.easa.europa.eu/unmanned-aircrfat -systems-uas-and-remotely-piloted-aircraft-systems-rpas

[11] Idem.

EASA is also a member of the Joint Authorities for Rulemaking on Unmanned Systems (JARUS), a group open for civil national aviation authorities and regional organisations active in the field of aviation safety regulation. The group is not limited to European countries an organisations. The focus of EASA in this group is on developing recommended requirements for:

- Licensing of remote pilots;
- RPAS operations in Visual Line-of-Sight (VLOS) and beyond (BVLOS);
- Civil RPAS operators and Approved Training Organisations for remote pilots (JARUS-ORG);
- Certification specifications for light unmanned rotorcraft (CS-LURS) and aeroplanes (CS-LURS) below 600 Kg;
- Performance requirements for 'detect and avoid' to maintain the risk of mid-aid collision below a tolerable level of safety (TLS) and taking into account all actors in the total aviation system;
- Performance requirements for command and control data link, whether in direct radio line-of-sight (RLOS) or beyond (BRLOS) and in the latter case supported by a Communication Service Provider (COM SP);
- Safety objectives for airworthiness of RPAS ('1309') to minimize the risk of injuries to people on the ground; and
- Processes for airworthiness.

Recently, EASA released its proposal for a UAV regulation. EASA envisages the creation of three categories of civil drones in order to proper regulate unamnned aerial vehicles used nowadays in activities such as filming, farming, parcel deliveries etc. The aim of the regulation is to promote technological development and at the same time to protect people and goods.[12]

Under the rules suggested by EASA, the lower risk category would cover cover low-energy aircrfat, including model planes and would not require any license. These type of UAVs shall be flown line of sight and away from corwded ares, airports or nature reserves.

In the case where operations of UAVs presume more contact with people or share airspace with other aircrafts, then it would be required that a risk assessment and mitigation to be carried out before the use of the UAV and that permission for use is granted by the competent authority.

The last of three categories envisaged by EASA would make the object of the current regulations for manned aircraft, requiering certain certifications to be obtained before the begining of operations.

There are still certain aspects that such a legal framework will not cover and that pose a serious threat towards private life especially. The use of UAVs raises concerns with regard to intrusion of drones in the private life of persons and in collecting data. They present a threat from the perspective of the illegal use of such aircraft for unlawful interference acts. Another issue raised by the use of UAVs is the liability regime. These aspects are to be dealt by states at national level.

The first draft of the regulation is expected to be presented by December 2015.

3. Legal requirements for UAV operation in Romania

The Romanian legal framework in the field of unmanned aircraft systems is yet to be developed. Until the finalization of the regulation dedicated to remotely piloted aircraft systems, the general legal framework applies, that is the Civil Air Code, Government Decision no. 912/2010 for the approval of the procedure to authorize flights within the national airspace and of the conditions in which takeoff and landing procedures can be undertaken of surfaces of land or water, other than certified aerodromes and Order of the Ministry of Transport no. 8/2014 establishing the condition under which UAVs can be operated in the national airspace.

3.1. The Civil Air Code

Amended at the end of 2014 so that it can properly accommodate UAVs and determine the general conditions under which drones can be operated, the Civil Air Code still has a long way to go, being under a new process of revision.

The recent changes of the Code envisage aspects related to the definition of the drones, the establishment of conditions to be fulfilled by the personnel operating such aircraft and specific sanctions for lack of fulfillment of the enshrined obligations.

Resuming the changes brought to the Civil Air Code it can be observed that art. 3, point 3.8 defines "state aircraft" as those aircraft belonging to state institutions and used for activities in fields such as defense, public order, national security and customs. Article 3 is completed by the definition of "unmanned aircraft", in point 3.8^1 as those aircraft piloted by an automated pilot on board the aircraft, by remote from a remote station on the ground or by another aircraft with a human aircrew on board. The definition is quite broad, trying to cover all possible situations in which an UAV can be activated. However, the definition will have to be adjusted accordingly or removed from the Code once the European Regulation in the specific field enters into force.

Furthermore, the code identifies an obligation for the person in command of the unmanned aircraft to have along the registration certificate for the entire period of the operation of the aircraft. The pilot of an unmanned aircraft is considered to be

[12] Reuters News – EASA Sets Out Drone Proposal for Europe -http://news.airwise.com/story/view/1426206846.html

aircrew and is subject to proper training and licensing.

By analogy with the powers of the captain in command for manned aircraft, the pilot of an unmanned aircraft has full command and responsibility for the aircraft during its operation and is obliged to take all necessary measures to assure that the operation is conducted in a safe manner for both the aircraft and flight.

In terms of applicable sanctions, in case the pilot in command of the unmanned aircraft refuses to present to the empowered persons, the requested documents, especially those which are mandatory to have when operating such an aircraft, are subject to fines.

It can be observed that the Civil Air Code establishes the general principles for the operation of UAVs. However, there are no specific provision related to the illegal use of drones, applicable sanctions as well as means and methods to identify persons using drones in activities without having fulfilled the requested obligations, that is to say, a proper instrument to control abuse. There need to be stringent, clear and easily accessible guidelines about how and when drones can be deployed.

In developing such regulation, there are several principles that need to be followed in order to have fruitful provisions. These principles are a must when it comes to achieving public safety. First, a proper Evaluation of the context, situation and implication needs to be conducted. After the evaluation has taken place, the second step is to develop the draft regulation and submit it for Consultation with the interested stakeholders. The process needs to be Transparent so that its main objectives are achieved. Justification for the form and content of the provision is also needed in order to allow the user to properly understand the intentions of the legislator. Last but not least, oversight is required for the users of the regulation to establish the level of implementation, necessary measures to be taken if the obligations are not fulfilled accordingly, as well as a good source of information for improvement of the regulation.

In the specific context of UAVs, three principles need to be applied to the design of drones as well, which are proportionality, mitigation and controls. The application of such a framework, combined with risk assessment techniques, is likely to identify various segments of national airspace in which congestion occurs and the conclusion might lead to the necessity of some form of air traffic control and that rules need to be developed for three dimensional space rather than two.[13]

3.2. Government Decision no. 912/2010

Government Decision no. 912/2010 establishes the conditions and related procedures for authorization of flights in the national airspace, as well as the conditions to be fulfilled for taking off or landing from a surface (land/water), other than certified airports.

According to the above mentioned decision, flights over Bucharest at a height of less than 3.000 meters can only performed if there is an overflight authorization form the Ministry of Defense. Thus, it can be observed that, in the absence of such an authorization, flight over Bucharest is forbidden. Furthermore, UAVs may take off or land from surfaces other than certified aerodromes if the surface is located outside the city/village and the operator obtained the authorization of the mayor of that city/village for such an operation. If the surface is considered to be public domain, than, the operator needs to have an authorization from the owner of the land. In any situation, the land needs to have the proper characteristics to be used for taking off and landing activities.

The Decision forbids the operation of lights over crowded areas of the flight is conducted at a level lower than 300 meters.

Another restriction imposed by the Decision is related to the type of activities undertaken by the operator, photography been strictly restricted and in certain cases forbidden by law.

The Decision, useful and appropriate for activities in which manned aircraft are involved, but less friendly for the unmanned systems. UAVs are used for activities such as photography and their flight autonomy is quite restricted, meaning that for most of the drones used in such type of activity is near impossible to take off from a surface outside the city. The Decision is in the process of being amended, however, the process is slowed down by negotiations with the Ministry of Defense, trying to adjust the requirements in order to bring any prejudice to national security and public safety.

3.3. Order of the Ministry of Transport no. 8/2014

Order no. 8/2014 is the only regulation in the national legislation dedicated to the use of unmanned aircraft systems.

The above mentioned order allows the operation of UAVs only in temporary segregated areas, established according to the specific national regulation. By temporary segregated area it can be understood - a defined volume of airspace normally under the jurisdiction of one aviation authority and temporarily segregated, by common agreement, for the exclusive use by another aviation authority and

[13] Roger&Moses pag. 285.

through which other traffic will not be allowed to transit.[14]

In the circumstances of the above definition of temporary segregated area, UAVs can only be used by authorities in airspaces under the jurisdiction of another authority. That being said, private owners of UAVs are not allowed to conduct any kind of activities. For these reasons it is proposed that the wording of the Order to be changed, in the sense that temporary segregated are to be replaced with "restricted area"- defined as - airspace of defined dimensions, above the land areas or territorial waters of a State, within which the flight of aircraft is restricted in accordance with certain specified conditions, which better serves the objectives of the Order.

Order no. 8/2014 sets a limit for its applicability to UAVs with a maximum take off mass of no more than 150 kg. It is also proposed the analysis of the amendment of the maximum take off in order to better cover a larger scale of drone models.

It is also essential for Order no. 8 to make a specific distinction between drones and toys with characteristics similar to UAVs.

The Order is currently in the process of being amended.

4. Integrating UAVs in the Romanian national airspace

A sustainable development of unmanned aircraft domain is subject to the fulfillment of the following conditions:

1. **public acceptance**: changing the current perception created after the intense "advertisment" of the success missions in Yemen, Afghanistan and Iraq, after which drones have come to be regarded by most people as "killing machines";

2. **integration in controlled airspace**: as was the case for the " classic aviation ",the use of these aircraft will be economically efficient only when they will be operated in the airspace in its entirety, without the need to allocate special areas.

For the first condition to be fulfilled, organizations and civil aviation bodies, as well as manufacturers make efforts in order to raise societies awareness of the benefits of new technologies. Filming and aerial photography, monitoring of critical infrastructure elements, monitoring of forests and agricultural crops, search and rescue activities (for people that were involved in accidents for example, or for missing persons), assessing the damage caused by natural disasters or appropriate treatments against pests in orchards and vineyards are just some of the activities successfully conducted with the new type of aircraft.

In order to fulfill the second condition, integration of UAVs in controlled airspace, constitutes the real challenge. For the purpose of illustration of the multitude of legislative and technical problems that need to be solved, we mention here two of them which pose the highest level of risk:

i. ensuring a level of security comparable to that of activities involving "classic" aircraft;

ii. identifing technical solutions enabling operators on ground to keep the aircraft on its intended and indentified flight path and to timely determin the possible "route conflicts" with other aircraft.

Addressing both problems mentioned above will have a major impact on the current legal framework requiering review and massive update. By terms of comparison, it can be affirmed that UAVs have generated a revolution in human society similar to that generated by the emergence and proliferation of the Internet at global level.

In terms of the amendments we consider necessary, we apreciate in firts instance that it s essential to establish requirements for the issuance and maintenance of pilot licenses. Given that the pilot can no longer experience danger himself and that the actual piloting of UAVs can be compared to a video game, initial and recurrent psychological testing of pilots is a crucial stage of the licensing process. Another legislative issue regards the management and security of personal data. Considering the technical possibilities (flight duration of tens of hours, maximum flight range of hundreds or thousands of miles, possibility to access prohibited areas or restricted areas due to its small size) personal privacy issues are the most difficult to manage.

From a technical standpoint, liaising radio and maintining the integrity of the connection, writing and updating the lines of code related to the software installed on the on-board computers and the establishment and verification of autonomous flight procedures, are other critical elements of the integration of UAVs in the restricted airspace.

For civil aviation bodies and organs these aspects are of serious concern,not only because of the rapid development of technology and the urgent need for intergration, but also because there is a huge amount of pressure from the various players: producers, users, civil society etc.

It is importnat that we mention here the Declaration of the Conference organized in Riga by the European Commission in partnership with the Ministry of Transportation of Latvia on 5-6 March 2015 in order to have a complete picture of how humanity has treated and continues to approach various stages of its development: the emergence and development of the rail (remember that members of the British Academy of Sciences stressed that

[14] EUROCONTROL (2010) EUROCONTROL Guidelines, The ASM Handbook, Airspace Management Handbook for Application of the Concept of the Flexible Use of Airspace, Ed. 3.0

speeding 40km / h will result in sufocating passengers in cars) or the emergence and development of air transport (same members of the British Academy mocked the studies regarding the design and construction of aircraft heavier than air). We find ourselves today in the same specific situation, where technology runs faster than law, where some activties are hard to be perceived and understood by international society and where we need to adapt and learn how to fruitfully use the resources to our benefit. As in many other situations, new technologies invented and developed by mankind, in this specific context, the UAVs, have a dual use: civil and military. It is our choice as an individual and human race how we perceive these technologies and put them in use to our benefit. T We must be aware that the future is here and can no longer be ignored.

The situation of design, manufacture and use of UAVs in the national airspace is no different from what is happening globally. If until January 2014 the UAVs were virtually unknown to civil aviation bodies in Romania, some aspects regarding the security of state officials and flights safety generated the revision of the national legislation and the neccessity to develop a new regulation dedicated to the use of UAVs with a maximum mass of 20 kg. According to the new law, which was approvedin 2014, national aviation authorities have the obligation to develop and approve a legislative package dedicated to UAVs that will contain the following aspects:

- Conditions for approval of air operators using UAVs in aerial work activities and general aviation;
- Requirements for the licensing of UAV operators;
- Requirements for registration / identification of UAVs;
- Requirements for the issuence of airworthiness documents (national flight permit or airworthiness certificate).

It is planned that by July 2015, the new legislative package to be posted on the website of the Ministry of Transport for public consultation.

The purpose of developing and promoting this new legislative package is to allow the safe operation of UAVs in the national airspace, to ensure the safety and security of all airspace users as well as a smooth transition to future European legislative framework, expected to be applicable for the UAV operation in controlled airspace starting with 2028.

5. Conclusions

Under the current national, regional and international regulatory frameworks, drones are subject to a limited regime which is neither effective, from both the point of view of the user as well as the authorities, nor is it enforced. The aims of the regulatory process and expected outcomes seems not to have been cearly expressed. The discussions and attempts conducted up to this point do not present the required level of transparency , hence, there is clear doubt that emerging regulations will properly reflect the interests and needs of stakeholders.

So far, the eductaional process is poor and for these reasons, manufacturers, retailers and commercial users are not aware of the implications and of their obligation to conduct risk assessment, devise and implement appropriate safeguards and establish certain arrangements, including liability insurance.[15]

The analysis presented in this paper give rise to certain concerns and concluds that the framework is not strong and clear enough for fully autonomous aircarft operations as long as the development of regulations is left to the national regimes.

It is of great importance that international and regioanl organizations reach a conclusion sooner and establish a harmonized procedure and requierements for UAV operation. Until then, it is obvious that a considerable risk exists of harm arising from UAV usage.

THE STIPULATION FOR ANOTHER IN THE ROMANIAN CIVIL CODE

Tudor Vlad RĂDULESCU*

Abstract

The article focuses on the stipulation for another in the context of the Romanian Civil code. Its purpose is to answer a few questions, such as: is the stipulation for another still a true exception from the relativity effect of the contract; what are the circomstances that render a stipulation for another void. Also, a comparative approach of this institution is to be made taking into account, on one hand, the old and the actual civil code, and on the other hand, the romanian approach of the stipulation for another in opposition with other european (and not only) legislations. At last, the article will try to express a point of view regarding the effects of the stipulation for another, as the Romanian doctrine has not yet expressed a firm opinion on this matter.

Keywords: *civil code, stipulation for another, effects of the contract, inter partes effects.*

1. Introduction

The issue of stipulation for another problem was and continues to be, by the fact that it is, according to some authors, the only real exception to the principle of relativity of the effects of the contract, a rather sensitive issue, especially in the context of Romanian Civil Code[1] in force from October 1, 2011.

Thus, if the legal regime of the stipulation for another was under the influence of the Romanian Civil Code of 1864, an eminently doctrinal creation, the Civil Code in force has changed this situation, offering to the institution of the stipulation for another a comprehensive settlement, but raising also a number of issues that have not yet received answers.

Therefore, compared to the place occupied by the articles devoted to the stipulation for another in the context of the Romanian Civil Code, we note that they are situated in subsection 2 of section 6 of the book V, dedicated to the effects of contracts, and more specifically, to the effects that the contract produces to third parties.

Thus, the contract validly concluded does not give rise but to rights and obligations in favor, respectively on the parties, without being able to take advantage or harm, in principle, third parties. Regarding the latter, the contract gives rise to a new factual situation that didn't exist until the conclusion of the act, which must be followed by those who did not participate in the conclusion of the contract and that are totally foreign to it. This is the principle of enforceability, the true effect that a contract produces to third parties.

In these circumstances, we can say that the Romanian legislator understood to share the doctrine and jurisprudence previous to the entry into force of the new Civil Code and to continue to look at the stipulation for another as to an exception to the principle of relativity of the effects of the contract, meaning that a third party could acquire rights, but not obligations under a contract in which it did not take part. However, from the analysis of the rules governing nowadays the institution, we may ask ourselves if it is to constitute an exception to the relativity of the effects of the contract, given the crucial role played by the will of the third-party beneficiary in the effectiveness of the stipulation for another.

Another controversial issue in this area, in which this article aims to provide a solution, is that of the effect that death of the beneficiary of the effect has on the effectiveness of the stipulation, death that occurs prior to the acceptance by him of the right stipulated in the contract concluded between the promisor and the stipulator.

Finally, we propose that we pay also attention to the action that the third-party beneficiary has against the promisor, if it does not perform the obligation in its task, particularly on the classification of this action as a direct action, in the conception given by law and doctrine to this notion, or is a self-contained action, specific only to the stipulation for another.

2. Stipulation for another. Concept and applications

Stipulation for another may be defined as that contract by which one party, called the promisor commits to another, called stipulator, to give, to do or not to do something in favor of a third party, called third-party beneficiary.

The stipulation source is the contract concluded between the promisor and the stipulator, by which the first one commits to the second that it will directly provide a proprietary benefit to a third party, called

* PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest – Faculty of law (e-mail: **tradulescu@yahoo.com**).

[1] Law no.287/2009 on the Civil Code, republished in the Official Gazzette of Romania, Part I, no. 409 of 10.06.2011.

beneficiary. So, the stipulation is a legal operation of bilateral and trilateral efficiency[2].

Although there is no controversy regarding the definition of this institution, the Romanian legislature of 2009 did not understand to define by itsself this legal operation, but chose to show that anyone can stipulate on its own behalf, but in the benefit of a third party (art. 1284 civ. code).

From this point of view, one cannot say that has been adopted a less courageous solution than that adopted in the legislation of other states. For example, the Civil Code of Quebec, art. 1444, paragraph 1 states that "In a contract, it may stipulate in favor of a third party" so that the second paragraph recognize the right of the third-party beneficiary to ask for the performance of the obligation directly from the promisor[3]. Neither the French Civil Code does provide a definition of this operation, confining itself to rule in art. 1121 that "It may provide in favor of a third party when this is the condition of a stipulation that we do for ourselves or of a donation that we make to another one. The one who stated it, cannot revoke it if the third party declared it wanted "to take advantage" [4].

However, a more direct approach is found in the Civil Code of the Republic of Moldova, which, under the name *Contract on behalf of a third party*, shows that „*The parties to a contract may agree that the debtor (promisor) make the benefit not to the creditor (stipulator), but to the third party (beneficiary), shown or not shown in the contract, who directly obtains the right to claim the benefit in its own interest."* Far from being a real definition, however, the approach of art. 721 of the Civil Code of the Republic of Moldova seems to us a more direct one, which establishes even from the beginning what the difference is in this operation, what its effects are and what legal relations result thereunder.

We can find applications of the stipulation in the matter of the specific purpose donation agreement in favor of a third party in the matter of the contract of carriage of goods, where their recipient is someone other than the sender, in the matter of the insurance contract, in the matter of the annuity and maintenance contract etc.

Conditions for the validity of the stipulation for another

Stipulation for another may take the form of a genuine agreement, but most often, it is nothing more than a clause inserted in an agreement. Whatever the aspect in which it is found, being an agreement of wills between two parties – the stipulator and the promisor - it shall comply with the general validity of any civil legal act: the ability of the parties, the expressed valid consent, moral and lawful object and the valid cause.

In terms of form, stipulation for another is not an exception to the rules established in this matter. As a rule, being an accessory clause of a contract, the stipulation will have to take the form required for the validity of that contract.

Thus, if is concluded a specific purpose donation agreement in favor of a third party, the clause by which was established the obligation of the gratuity receiver should take the same form, authentic, ad validitatem, as the donation agreement itself, according to the formal requirement imposed by art 1011 para.1 of Civil Code. However, if it is desired to introduce in an insurance contract a clause by which the sum insured be paid to a relative, the agreement is concluded according to the formal requirements of art. 2200 Civil Code, in writing, but not *ad validitatem*, *but ad probationem*, despite the fact that this clause is nothing but a donation[5].

An express provision we have in the matter of the annuity contract, in the sense that, according to art. 2243 paragraph 2 of the Civil Code "When life annuity is stipulated in favor of a third party, even if it receives free of charge, the contract is not subject to the form provided for donation".

Nevertheless, as regards the maintenance contract, a mention shall be made. Under Article 2255 of the Civil Code, the maintenance contract shall be concluded in authentic form, under the penalty of nullity. Thus, this contract falls always in the category of solemn acts for which valid conclusion is necessary to fulfill certain formalities, namely that of the authetnic form. According to art. 2256 Civil Code, the rules established for the annuity contract matters, relating, inter alia, to the form of the contract when the annuity is established in favor of a third party (art. 2243 paragraph 2 of the Civil Code.) shall apply accordingly to the maintenance contract, also.

However, we consider that in this situation, related to the imperative and public order nature of the policy on the *ad validitatem* authentic form of the maintenance contract, the provisions of art. 2243 paragraph 2 of the Civil Code are not applicable. In other words, the maintenance contract shall always take the authentic form, even when by its means is stipulated in favor of a third party.

We emphasize at this point that if the stipulator raises the question of revocation by the extent permitted by law, the unilateral revocation deed shall have to take the form required by law for the validity of the stipulation itself for another. This condition is not expressly provided, however, it derives from the general principles governing the form of civil legal

[2] P. Vasilescu, *Drept civil. Obligaţii* (Editura Hamangiu, Bucureşti, 2012), 476.

[3] Art. 1444 Civil Code Quebec has the following content*: „(1) A person may, in a contract, stipulate for the benefit of a third person.(2) The stipulation gives the third person beneficiary the right to exact performance of the promised obligation directly from the promisor."*

[4] *On peut pareillement stipuler au profit d'un tiers lorsque telle est la condition d'une stipulation que l'on fait pour soi-même ou d'une donation que l'on fait à un autre. Celui qui a fait cette stipulation ne peut plus la révoquer si le tiers a déclaré vouloir en profiter.*

[5] C. Firică, *Excepţii de la principiul relativităţii efectelor contractului* (Editura C.H.Beck, Bucureşti, 2013), 166.

deed, having as a starting point the principle of symmetry of form.

In addition to the general conditions of substance and form shown above, the stipulation for another must meet a number of special conditions of validity.

On this aspect, already in the doctrine in our country have been expressed several points of view.

Thus, according to an opinion[6], the special conditions of validity of the stipulation for another are: *a) the third party beneficiary be determined or at least determinable when at the time of conclusion of the contract; b) the third party beneficiary of the stipulation exist at the date on which the promisor must perform its benefit and c) the stipulation be beyond doubt.*

In a second opinion[7], it is stated that, along with these two conditions, is also necessary the acceptance *by the third party beneficiary of stipulation*, the Civil Code recognizing a much greater importance for the consent of the beneficiary, its rejection having repercussions regarding the raising of the right in its heritage.

In our case, we understand to adhere to the first opinion expressed, including to the condition according to which stipulation must be express as this legal operation, as an exception to the rule, the intenstion to stipulate in favor of a third party must undoubtedly emerge from the content of the instrument by which it was established.

In terms of acceptance by the third party beneficiary of stipulation, we believe that this is not a true condition of validity of the contract for the benefit of another person, but a condition of effectiveness, a real condition subsequent, as we shall show further in our study.

In what follows, we make a brief analysis of the special conditions of validity, focusing on issues that we believe require a more rigorous interpretation of the text.

A. The first condition concerns the third party beneficiary who, according to art. 1285 para. 1 sentence I *must be determined or at least determinable* at the date of conclusion of the stipulation. The fulfillment of this condition requires either that the third party beneficiary be determined even from the time of conclusion of the document between the stipulator and the promisor, or that exist all those elements enough so that at the time of the execution of the benefit, can be identified the person in whose favor it will be executed.

With regard to this condition, in the French literature it was stated also that the determination of the thrid party may be left event to the discretion of a stranger on the relation between the promisor and the stipulator, as long as in the contract in favor of a third party were given all the necessary directives to be followed by the person designated to determine the beneficiary[8]. Moreover, it is considered that this condition is fulfilled even when the third party is determined on the day the obligation must be performed, not being important the fact that by that point its identity could not be known[9].

To conclude on this condition, we can say that the third party, the beneficiary of the stipulation must be known at the time of conclusion of the contract between the promisor and the stipulator, or, at least, be known by inserting in that agreement elements that make possible its identification at the time the promisor's obligation shall be executed.

B. The second condition required by the Romanian legislator in art. 1285, second sentence, still concerns the third party beneficiary, *and refers to its existence at the time the benefit will be executed by the promisor.* From this, we can conclude on the validity of the stipulation regarding future persons, ie those persons that did not exist at the time of the arising of the legal relationship derived from the stipulation. The third party beneficiary shall not have capacity of use, and therefore, capacity of execution, at the time of conclusion of the agreement of wills between the stipulator and the promisor. It must, however, have the capacity of use at the time the benefit shall be executed by the promisor. We believe that when it comes to rights and not to obligations, full capacity of execution is not required to the third-party at the time of the benefit execution, nor at the time of acceptance of the stipulation that, at least theoretically, as time precedes the time of execution. So in this case of the lack of full capacity of the beneficiary at the time of acceptance of the stipulation, there is no need for legal representation or that the minor custodian approve this deed.

C. Finally, the last special condition of validity of the stipulation for another *is that stipulation be unambiguous.* No matter if it is expressly provided or is apparent undoubtedly from the interpretation of the contractual terms, what is relevant is that the intention to stipulate in favor of a third party be beyond any doubt. In this respect, we recall the decision of the Supreme Court of Justice, still current, which held that, in the judgment of an application for the granting of moral damages, the defendant cannot be compelled to execution to a third party beneficiary of compensations due to the claimant, as it would mean to establish the effects of a stipulation for another, without there being any agreement of wills between the stipulator claimant and the promisor-defendant[10].

The willingness to stipulate to another is a question of fact, which, unless expressly stated in the

contract, will be proven by any means permitted by law[11].

D. Although we do not consider it a genuine condition for the existence of the contract in favor of a third party[12], we believe that this is the place, in this study, to investigate the role fulfilled, in the stipulation mechanism, by the will of the third-party beneficiary[13]

Thus, according to art. 1286 para. 1 Civil Code, *if the third-party beneficiary does not accept the stipulation, its right is deemed to have never existed.*

With regard to this provision, the doctrine has shown that the acceptance by the beneficiary works as a condition of effectiveness of the stipulation, and not as one of validity. This means that the arising of the subjective civil right, directly and permanently, in the heritage of the third-party beneficiary is subject to its acceptance by the latter, having the character of a condition subsequent[14]. For this reason, we argue that the acceptance of the third party is a unilateral act, which produces declaratory effects, *ex tunc*, which makes its right, arisen of the agreement of wills between the promisor and the stipulator reinforce for the future.

If we refer to the classification of unilateral legal acts provided by art. 1326 Civil Code, we believe that the acceptance of the third party is an act subject to communication and that takes effect when the communication reaches the addressee (stipulator or promisor).

Acceptance may be tacit or express, but necessarily it must be beyond doubt. It can be made either prior to or concurrently with the time at which the third party requests to execute the obligation in its task. We believe that a simple request for summons by which the third party, as claimant seeks the obligation of the promisor-defendant to the execution of its obligation constitutes an unequivocal acceptance.

Regarding the form that should take theacceptance, we believe that, if the contract out of which has arisen the stipulation is a solemn act, which must meet a certain shape for its validity, the same should also be the acceptance form.

Finally, one last issue requires special attention in this matter, namely that the time to which the acceptance of the acceptance of the beneficiary may intervene.

In light of previous civil code, the doctrine stated that although the third-party beneficiary is not a party to the contract, it acquires directly and immediately the right created for its own benefit and that regardless of any acceptance on its part (s.n. – T.V.R)[15]. This means, among other things, that despite the fact that the third-party beneficiary died before being accepted the right provided for in the contract concluded between the stipulator and the promisor, both the right and the accompanying actions shall be trasmitted to its own successors, so as will be transmitted the other property elements belongint to it at the time of its death[16].

This view appears to be shared in the current context, following the entry into force of the 2009 Civil Code[17].

However, as noted above, it cannot be argued anymore, based on the provisions of art. 1286 paragraph 1 of the Civil Code that the right shall enter the heritage of the beneficiary, irrespective of any acceptance on its part. As shown with other occasion[18] too, we believe that the acceptance cannot be done only by the third-party beneficiary, in person or via a representative, so while it is alive, the possibility to accept not being transmissible to successors. This solution is inferred from the interpretation *per a contrario* of the second paragraph of article 1286 of the Civil Code, which provides expressly that the acceptance can occur even after *death of the stipulator or promisor*, thereby being excluded the acceptance after the death of the third-party beneficiary. Moreover, the same effect has Article 1285 of the Civil Code, which, speaking of the conditions relating to the third-party beneficiary, establishes that it must exist (s.n. – T.V.R) at the time the debtor must perform its obligation; so, all the more, it must **exist when it accepts**, acceptance that is previous, at the most concomitant to the execution.

Finally, after analyzing the conditions of validity of the stipulation for another, arises the issue of the sanctions itervening in case of their non-compliance.

In a first case, we speak of the nullity, penalty, absolute or relative, if are not complied with the general conditions of validity of civil legal act: capacity, consent, object, cause.

But if what is not complied with is a special condition, the situation is not the same[19] anymore.

Thus according to art. 1285 Civil Code, final sentence, if not complied with the requirements relating to the third-party beneficiary (it is determined or at least determinable, namely to exist at the time of execution of the obligation by the promisor), "*the stipulation will benefit the stipulator, but without*

[11] For the view according to which, this is not a true conditions of validity of the stipulation for another, see C. Firică, *Excepții,* 171.

[12] Despite a previous opinion expressed by us in the work C.S.Ricu (ș.a.), *Noul Cod civil. Comentarii, doctrină și jurisprudență*, (Editura Hamangiu , București, 2012), 617, pct. 5.

[13] In the sense that acceptance is not a condition for the validity of the stipulation for another can be also found in the French case law; See in this respect *Cass., s. civ., dec. din 19 dec. 2000*, in Code civil, Ed. Dalloz, 2008, p. 1168.

[14] G. Boroi, C. A. Anghelescu, *Drept civil*, 229.

[15] C. Stătescu, C. Bîrsan, *Obligații*, 73.

[16] C. Stătescu, C. Bîrsan, *Obligații*, 73-74.

[17] See in this regard C.Firică, *Excepții,* 178, L.Pop, I.F.Popa, S.I. Vidu, *Obligații,* 213.

[18] T.V. Rădulescu, in C.S.Ricu (ș.a.), *Noul Cod civil. Comentarii, doctrină și jurisprudență* (Editura Hamangiu , București, 2012), 617, pts. 2 and 3.

[19] For the opinions expressed before the entry into force of the 2009 Civil Code on applicable penalties, see C. Firică, *Excepții.,* p. 172; A.Circa, *Relativitatea efectelor convențiilor (*Editura Universul Juridic, București, 2009), 206.

aggravating the task of the promisor". Nevertheless, this provision of the Code is not applicable *de plano* in all situations, but it must be circumstantiated to the contract containing the stipulation. Thus, for a contract of carriage of goods, in which the consignee is other than the sender, for a specific purpose consisting in the provision of an annuity to a third party (where there is no interest for the donor to be the recipient of the stipulation), the provision of Article 1285 Civil Code, final sentence cannot be applied[20].

An exception to the rule of art. 1285 Civil Code, final sentence, we find in the field of personal insurance contract, in which, according to art. 2230 Civil Code, "*in case of the death of the insured, if was not designated a beneficiary* (s.n. – T.V.R.) the *insurance indemnity shall enter into the succession, belinging to the heirs of the insured*".

Finally, if not complied with the condition for the existence of an unequivocal intent on the stipulation in favor of a third person, the penalty will be absolute nullity, lacking the intention itself to contract.

Effects of the stipulation for another

Similarly to the the previous legislation, under the conditions of the current Civil Code, it can be stated that the effects of the stipulation for another can be analyzed in terms of three distinct legal relations: i. the relation between the promisor and the stipulator; ii. the relation between the promisor and the third-party beneficiary and iii. the relation between the stipulator and the third-party beneficiary.

i. between promisor and stipulator are produced the effects of the contract by which was introduced the stipulationin favor of a third party. In addition, by the unequivocal agreement on the stipulation, the promisor is bound to the stipulator to execute accurately and timely its obligation to the third-party beneficiary. Given that this obligation incumbent to the promisor arises out a contract, which most often is sinalagmatic, the debtor of the obligation may refuse its fulfillment, under the conditions of the exception of non-performance of the contract (Art. 1556 Civil Code) if, without any justification, the stipulator does not execute its obligation arising from the same contract and that is interdependent with that of the promisor. At the same time, the promisor can also obtain the rescission or, where appropriate, the termination of the contract in which is inserted stipulation for another, if are fulfilled the conditions required by law to implement this measure. Finally, in all cases, the promisor may require the stipulator to pay damages for failure to perform its obligations arising from the contract concluded.

Then, the stipulator the only one[21] entitled to revoke the stipulation made as long as the acceptance of the beneficiary has not reached the stipulator or the promisor (art. 1286, para. 2 of the Civil Code, first sentence) and only with the consent of the promisor if the latter has an interest in executing the obligation (Art. 1287 Civil Code, para. 1, final sentence).

Therefore, revocation of the stipulation may be unilateral (when the promisor has no interest in carrying out the stipulation) and bilateral (mutual).

Regarding the time by which stipulation may be revoked, it appears that it may lay even after the beneficiary has accepted the stipulation, as long as the acceptance has not reached one of the persons indicated in the legal text. Thus, we can say that the right of the third-party beneficiary is fully consolidated only after the time its acceptance has reached the promisor or the stipulator and only if there hasn't taken place the revocation (unilateral or bilateral, as appropriate) of the stipulation.

Revocation of the stipulation, which takes effect when it reached the promisor will benefit the stipulator or its heirs, if hasn't been designated another beneficiary.

ii. Stipulation for another gives rise to a direct and immediate right in the heritage of the third-party beneficiary, which, if accepted, will also provide a right of action against the promisor in order to satisfy this right[22]. Nevertheless, as a third party to the contract between promisor and stipulator, it will not have the right or the interest to ask for the recission of termination of the deed concluded between the two.

Direct action[23] that the third-party beneficiary has against the promisor is most often an action derived from a contract, personal and prescriptive in general limitation period of three years, term that shall run from the time the acceptance of the beneficiary reached the promisor. However, we cannot exclude de plano also the possibility that the third party has to bring an action for recovery, imprescripitibile, invoking its right of ownership of the property that is the subject of the promisor's obligation, acquired from the very moment of the conclusion of the stipulation.

In its defense, the promisor may oppose the beneficiary only the defenses based on the contract including the stipulation - art. 1288 of the Civil Code. So, the promisor may invoke any exception that is entitled to oppose to the stipulator too, such as: nullity of the contract, non-compliance of the standstill period of execution, exception of inexecution of the

[20] P. Vasilescu, *Obligații.,* p. 477.

[21] According to art. 1287 paragraph 1 of the Civil Code, heirs of the stipulator cannot revoke the stipulation, or its creditors, in an actio Pauliana.

[22] I.C.C.J., s.com., dec. no. 1396/31.03.2011, on www.scj.ro.

[23] Do not confuse direct action that the third-party beneficiary has available against the promisor with direct action, recognized for certain categories of creditors, considering the special situation in which they are (direct action of workers in matters of contracts for work, art. 1856 Civil Code, direct action of the lessor against the sub-tenants, art. 1807 of the Civil Code, the principal action against sub-agent, art. 2026 paragraph 6 of the Civil Code).

obligations undertaken by the stipulator to the promisor, etc[24].

iii. Finally, stipulation for another may also raise the question of certain relations between stipulator and third-party beneficiary. But these are not the essence of the stipulation, them showing interest when, through this legal operation, the stipulator tends to extinguish certain legal relations existing between it and the third- party beneficiary. Thus, if the stipulator is debtor to the third-party beneficiary, the performance of the stipulator by the promisor, will have the value of a payment that extinguishes two obligations: the obligation of the stipulator and the obligation of the promisor to the third-party beneficiary, obligations with different sources[25]. If between the stipulator and the third-party beneficiary there are no previous legal relationships on which stipulation for another may cause direct or indirect consequences, we find, most often in the presence of indirect donations, whose advantage is that it will be subject neither to any relation or excessive liberalities nor to restriction[26].

Conclusions

Far from being an exhaustive article, this paper has tried to express a range of views on the controversial issues that have already appeared in the literature after the entry into force of the 2009 Civil Code.

A final aspect that may be subject to our analysis is that regarding the place of the stipulation for another in the assembly of the effects of the contract, namely what is the relation of this operation with the relativity of the effects of the contract.

Until the entry into force of the Civil Code, on October 1, 2011, the literature of our country had been unanimous in finding that the stipulation for another represented the only real exception to the principle of relativity of the effects of the contract.

Nowadays, the doctrine, or at least part of it, seems to have departed from this view, questioning the inclusion of the stipulation for another into the category of genuine exceptions to the principle of relativity. This opinion is supported by the argument that if a real exception to the principle of relativity can exist only by the will of the parties then the stipulation for another is not such an exception, as it needs the acceptance of the third-party beneficiary, otherwise its right being considered to have not ever existed[27].

Without excluding from the beginning the correctness of this view, however, we must remember that the right of the third-party beneficiary arises directly and immediately from the agreement concluded between the stipulator and the promisor. Its greement acts, as mentioned above, only to strengthen its right, its absence having the effect of a condition subsequent. But still, there is no need for the manifestation of its will at the conclusion of the deed between the promisor and the stipulator. The contract for the benefit of a third person is, in our view, still an exception to the principle of relativity of the effects of contracts. What remains to be discussed, but will not be the subject of the present analysis, is, on the one hand, to what extent continues to exist under the conditions of the Romanian Civil Code in force, the discussion regarding the classification of exceptions to the principle of relativity as apparent and true and more importantly, if, stipulation for another continues to be the only real exception hereto.

CONSIDERATIONS REGARDING THE ON-GOING CONTRACTS AFTER THE INSOLVENCY PROCEDURE HAS BEEN INSTITUTED

Dan-Alexandru SITARU[*]

Abstract

The main purpose of the article is to highlight new aspects regarding contracts that a legal person had perfected before the insolvency procedure is opened. Once the syndic judge rules in favour of opening the procedure the judicial administrator, named in that case, has a special power, a right to opt, to either permit the contract to run its course or to denounce it thus ending its effects. Sometimes, due to the special nature of some contracts, the right of option is conditioned and certain procedures must be enforced. Also, due to an obvious possibility that the respective contract might create an unbalance to the debtors' accounts and other sectors, the judicial administrator must take special consideration and can also modify the articles of the contract, rendering new significance or substituting the content of the provisions. Nonetheless, a combination of these possibilities may be preferable to the judicial administrator, partially changing the contracts or keeping in effect only what is in the debtors favour.

Keywords: *insolvency, contracts, right to opt, judicial administrator, debtor*.

I. Introduction

Since last year we have a new Insolvency Law[1], which has only entered into force this year. Its official title refers to the procedures regarding the prevention of insolvency and of the insolvency, but in quickly got a special nickname The Insolvency Code.

The new Insolvency Law has changed some of the old provisions that the old law regulated. Among the most important aspects that this law has introduced are the new prevention procedures, to which the debtor can resort should it desire to avoid the standard insolvency procedure. Also, it has set new rules and new conditions for the possibility of the interested parties to find out, expose and obtain compensation from the people that were responsible for the debtor's insolvency. Finally, new criminal offences were regulated and some of the old ones were rewritten in order to adapt to the realities that could have been observed during the implementation of the old law.

Separately, as to the insolvency procedure in particular, the new law tries to bring balance between the interests of the debtor and those of the creditors. It tries to reconcile some of the aspects that proved difficult in the past. Some aspects like the easy access of the debtor to a reorganization plan or the low powers of the creditors are now stipulated differently so that any attempts of manipulating the procedure are forfeited.

The new law puts an end to the former practice that who among the creditors or the debtor is first to obtain the opening of the procedure has almost limitless powers as to appoint a judicial administrator or to have his debts written in the order of payments more easily.

A clear signal came also from the European Union that encourages the second chance to restructuring the business of the debtor from an early stage of the procedure and continuingly during the restructuring plan, in balance with the interests of the creditors.

New ideas were introduces by the Insolvency Code, most of them protecting the investments that were injected into the debtors that are in insolvency, also debts that are contracted during the insolvency procedure can be paid directly and not have to wait for the end of the restructuring and the opening of the bankruptcy stage. None the less, the protection of the secured debts, like the ones we will refer later in this paper and the regulation of the special delivery agreements which are vital for the debtors activity (electricity, water, gas etc.) that now can be paid by the judicial administrator during the procedure.

II. The focus of the present paper regards the on-going contracts that the debtor has contracted during its normal activity but which now will have a special situation because of the insolvency procedure. The topic revolves around three aspects that govern this situation. Firstly, there are the special effects that come with the opening of the insolvency procedure, that influence the on-going contracts. Secondly, there is the special right to opt of the judicial administrator by which he can choose either to keep the on-going contracts, thus he will have to pay them from the debtors patrimony, or to terminate then, giving way to the signing of a debt at the debtors table. Finally, some of the contracts have special provisions that regulate their effects in either of the judicial administrator's choice.

1. As regarding the special effects that come with the opening of the insolvency procedure, Law no. 85/2014 (Insolvency Code) only partially affects the

[*] Lecturer, PhD, Faculty of Law, "Nicolae Titulescu" University; Lawyer, Bucharest Bar (e-mail: **dan.alexandru@sitaru.ro**).

[1] Law no. 85/2014 published in the Official Journal no. 466 from 25 June 2014.

on-going contracts. Nonetheless the importance of some of these effects must be pointed out.

1.1. Normally the first effect after the insolvency procedure has been opened will be that the debtor can no longer govern its own business. This means that the judicial administrator will decide every aspect regarding the activity of the debtor. Should the debtor opt for reorganisation he might be allowed to continue his activity and retain the decisions regarding his business. This effect has little impact regarding on-going contracts because the right to opt between keeping their effects or terminating them will be of the judicial administrator. However, should some contracts not be terminated and the debtor retain its decisions right, then these contracts will go on as normal and will be the concern of the debtor who will be verified by the judicial administrator.

1.2. The second effect upon opening of the insolvency procedure is that all judicial actions and all litigations will cease and any third parties or persons that have a claim regarding the debtor must come and submit a request to affiliate at the debtor table. The main point is that should any contracting party have any claim from the debtor it must join the debtor table and wait his turn, but also will have to see if the whole contract will be terminated by the judicial administrator, leaving only the option to sign his entire prejudice at the debtor table.

1.3. Other effects of the opening of the insolvency procedure regard the freezing of any penalties, interests or any other sums from non-payment, also suspension from public trading should the legal person have that status. This impacts the on-going contracts because should there be a clause regarding any penalties or other non-payment sanctions they will be suspended from the moment that the insolvency procedure has been instituted.

2. The insolvency procedure is usually instituted because before different juridical acts or contracts have been poorly implemented and business was conducted in an improper way. Thus the judicial administrator has the right to identify all acts and deeds of the debtor or of the persons that are in charge and annul them. Should some contracts be in the interest of the debtor he might keep them into effect.

2.1. The on-going contracts are those contracts that their effect unfold on a certain amount of time, or their effects could not be realised because the insolvency procedure has been instituted and the suspension effect that we mentioned before have been implemented.

Any types of contract qualify for an on-going contract, even if the effects are executed one time or several or multiple times. They may refer to any activity as long as it is legitimate. An exception was regulated by the Insolvency Code, regarding the utilities contracts that have their own special regime. On these lines the utility supplier cannot terminate the contract or cease delivering that utility to the debtor after the insolvency procedure has been instituted nor can the judicial administrator terminate the contracts because it will result in leaving the debtor without vital means to continue its activities.

2.2. As a general principal, all on-going contracts must be continued after the insolvency procedure has been instituted. This special rule can be found in art. 123 par. 1 of the Insolvency Code.

It represents an exception from the general rule found in the Civil Code, art. 1417, that regulates the decadence from all benefits of a term upon the implementation of the insolvency procedure. Surely, the debtor must find itself in either the situation of insolvency or when he reduced the warranties of the creditors or refuses to give any.

This is in line with the main idea of the insolvency procedure that does not have the purpose of terminating any contracts but to continue them in the hope of restructuring the debtor activity.

2.3. A special rule instituted by art. 123 par. 1 of the Insolvency Code regards the annulment of all contractual clauses that specify the termination of the contract due to the implementation of the insolvency procedure, or specify the decadence from the benefits of the term or declare an anticipated maturity of any contract due to insolvency. The only exceptions from this rule are regarding the financial contracts and compensation (netting) contracts. This means that the excepted contracts can have a clause for termination should the insolvency procedure be instituted.

The practical effects of this rule reside in the fact that no creditor should be put above the other. The insolvency procedure is a collective procedure where all creditors come at the same debt table and their ranks are given only in accordance with the special provisions of the Insolvency Code.

2.4. The same article regulates the judicial administrator **right to opt** as one of the major rights of given to him by law. The right to opt has two different implementation options, differing on who is the first person to ask what should happen to an on-going contract.

a) The first possibility has as main decision maker the judicial administrator that in 3 month, after the insolvency procedure has been implement, must decide whether to keep or terminate the on-going contracts. This possibility has certain conditions in order to be implemented.

One of the conditions regards the time frame in which the judicial administrator must reach a decision. He has 3 months calculated from the official implementation of the insolvency procedure. According to art. 45 par. 1 letter d), the syndic judge that presides over the procedure must appoint in its opening sentence upon the person that will assume the judicial administrators obligations. From this moment the 3 month term begins.

The other condition regards whether the contracts that are in debate have been executed. The Insolvency Code regulates that should the contract be entirely executed or substantially executed the judicial

administrator may not terminate them. This extends also to the execution of the main obligations should any accessorial obligations remain. Due to the general principal that all that is accessory follows the main obligation, implementing what is left of the contract is the only solution permitted for the judicial administrator.

b) The second possibility will arise from the notification of the contracting party that contains the question regarding the decision of the judicial administrator as to terminate his contract or contracts. In respect, the contracting party addresses a notification, that mustn't have a specific form or content, but must contain the question wheatear the judicial administrator will terminate the contract.

The notification containing this request must be submitted by the contracting party in 3 months from the opening of the insolvency procedure. According to art. 99 of the Insolvency Code, upon being appointed as judicial administrator he must send a notification to all known creditors communicating them of the implementation of the procedure and inviting them to sign up their claims at the debt table. Now, although the contracting party has 3 month calculated from the opening of the insolvency procedure, in our opinion, it should include also the period necessary for the notification of the opening of the insolvency procedure to that party.

Upon receiving the notification asking about the termination of the contract, the judicial administrator has 30 days to answer it. The answer is not mandatory. Consequently, different effects will result, depending on the judicial administrator's actions:

i) The contract will be considered denounced and terminated upon the ending of the last day of the 30 days period should the judicial administrator give no answer to the notification asking about the termination of the contract;

ii) If the judicial administrator opts for continuing the contracts effect, he must report every trimester wheatear the debtor has funds to on-go the contract. This option implies that the judicial administrator give a written answer to the contracting party specifically saying that the contract will continue its effects;

iii) A special effect arises from the termination of the contract, either by express notice or from not answering the contracting party notification, and refers to damages. The contracting party may claim damages against the debtor, but the payment will be substituted to the order of payment specific to the insolvency procedure and regulated in art. 161 par. 4 of the Insolvency Code.

2.5. The judicial administrator right to opt cannot be implemented or finds no applicability should one of the following situation apply:

a) The contracting party, within 3 month from the opening of the insolvency procedure, denounces the contract or declares an anticipated maturity of the contract and communicates either of them to the judicial administrator.

This situation implies that the contracting party considers the contract terminated without first sending a notification to the judicial administrator asking about the termination of the contract. Also, this possibility does not come in conflict with the interdiction of terminating the contract due to the implementation of the insolvency procedure, mentioned by us in the above paragraphs, because it is a unilateral decision taken after the implementation of the procedure and justified on the general right of the contracting party to denounce the contract should the other party fails to fulfill its obligations.

b) In the special conditions of a sale contract with the retention of the title. Since the sale was conditioned by the seller who will keep the property title until payment, the sale is cannot be completed without the title, should the insolvency procedure be instituted before payment of the contract the seller can retain the title and renounce the payment.

c) In the special conditions of a financial lease contract, the financing party must express its express consent regarding the continuation of the contract, within 3 months calculated from the opening of the procedure. Should the financing party not express its option at all the contracts will be by law considered terminated without any other persons intervention.

2.6. Separately from the right to opt, art. 123 par. 5 of the Insolvency Code regulates that the judicial administrator may **modify the terms of the contracts** negotiated or settled by the debtor. This separate right of the judicial administrator gives way to two different possibilities.

Firstly, the judicial administrator can modify the contracts that the debtor settles after the insolvency procedure has been implemented. Consequently, if the debtor does not lose its right to govern its own business he may enter into negotiations and sign contracts on his own. The judicial administrator only may stand watch for any law breaching and, should it consider that the terms of the contracts settled by the debtor are against its interests may decide to unilaterally modify those terms or exclude them without necessarily terminating the entire contract.

The other possibility is that the judicial administrator may not opt for the termination or keeping the on-going contracts of the debtor, which implies a decision regarding the entire contract, but may decide to rule out some terms from those contracts and keep the other effects. This possibility is subject to the contracting party right to denounce the contract should the other party fails to fulfill its obligations.

2.7. Finally, the last right of the judicial administrator regarding the on-going contracts is to **surrender the contracts** to paying third parties in order to maximize the debtor's fortune.

This solution may be taken into consideration by the judicial administrator should any third parties be interested in buying those on-going contracts from the

debtor. He may set any price for the contracts, as long as it is not in contradiction with the debtor's interests. The content of the surrender contract and its form are governed by the general rules regulated by art. 1566-1586 of the Civil Code.

3. Not all on-going contracts were left to the judicial administrator appreciation, because the law, due to their particularities, considered that special provisions must regulate their effects depending on the option made. Hence, the last part of the article is dedicated to the special contracts that were regulated by the Insolvency Code and that in the light of the right to opt of the judicial administrator will generate different effects by which the participants at the insolvency procedure are bound.

3.1. Regarding the sale contract with the retention of the title, art. 123 par. 6 of the Insolvency Code regulates that if the seller holds property title until payment in full, the sale will be considered fulfilled for the seller and, should he entered his rights at the cadastral register makes the sale opposable to the judicial administrator or the liquidator. The good will be part of the debtors belongings and the seller will benefit from a preference clause which is assimilated to a mortgage according to art. 2347 Civil Code.

3.2. Regarding the bilateral promise to sell that has a certain date, art. 131 par. 1 of the Insolvency Code regulates that the promising-buyer may ask for execution from the promising-seller which is now an insolvent debtor, should the formalities required by the law are met, the contract has a certain date and the following conditions are met: i) the price of the contract was paid in full and the good is in the possession of the promising-buyer; ii) the price is not below the market price; iii) the good is not crucial for the success of a restructuring plan.

Perfecting this contract can be done by the judicial administrator based on his right to sign on behalf of the debtor, perfecting a free of privileges or preference clauses contract. But due to the fact that the bilateral promise was perfected before the opening of the insolvency procedure and some other creditors might have already instituted preferences or privileges over the good the judicial administrator should he perfect the promise to a contract must recognise and note in the debt table the special rights of these creditors.

3.3. Regarding the labour contract art. 123 par. 7 and 8 of the Insolvency Code regulates that when the debtor is the employer the judicial administrator in exercising his right to opt must take into consideration the legal terms for notice given to the employees.

Hence, the termination of the individual labour contracts must be made on an urgent basis and with the notice in advance as they are both defined by the Labour Code. The termination of a collective labour contract must also respect half of the normal notice periode.

Separately, the Insolvency Code regulates the same rule of respecting the notice period, when termination of the contract is decided by the judicial administrator, for the rental contracts.

3.4. Regarding the contracts that imply successive executions art. 123 par. 9 of the Insolvency Code regulates that the judicial administrator may keep their effect if it benefits the debtor but will pay only those executions or deliveries that come after the insolvency procedure has been implemented. All other obligations, prior to the opening of the procedure must be petition to be included in the debt table by the contracting party.

3.5. Regarding the credit loan contracts art. 123 par. 5 of the Insolvency Code regulates that with the consent of the contracting party the judicial administrator may change the terms of the contract should it benefit the debtors fortune.

3.6. Regarding the lease contract art. 123 par. 11 of the Insolvency Code regulates that if the financing party opts for the termination of the contract in the event of the user becoming an insolvent debtor he only may choose from two options:

- either he gives the good to the user and obtains in return a legal mortgage over it and the register of the value of that good in the debt table including all accessory sums calculated until the opening of the insolvency procedure;
- either taking back the good and registering other due sums in the debt table.

As mentioned in the previous paragraphs, this rule represents a special one, because a right to opt belongs to the financing party separately from the one of the judicial administrator and the option must be made by the financing party before 3 month from the opening of the insolvency procedure. After that period he loses his right and the contract is considered terminated by effect of the law.

Should the financing party chose to continue the contract, whit the express approval of the judicial administrator, then the effect may be as written in the contract or as modified by the consent of both.

3.7. Regarding the sale contract of movable goods that are in transit art. 124 of the Insolvency Code regulates that should the insolvency procedure be instituted while the movable goods are in transit from the seller to the buyer who is now an insolvent debtor one of this solution may apply:

i) The seller may take back the good and return all expenses. This solution may happen only if the price has not been paid and the good has not been delivered to the buyer.

ii) should the seller admit the goods to be delivered to the buyer, he will recuperate the price by claiming it from at the debt table.

iii) if the judicial administrator demand the delivery off the good he must pay the full price from the fortune of the debtor immediately.

3.8. Regarding the commission contract art. 124 of the Insolvency Code regulates that if the agent holds goods or titles regarding assets that belong to the client and the agent becomes insolvent the client may

recuperate the entire assets from the agent because he works on behalf of the client.

3.9. Regarding the consignment contract art. 127 of the Insolvency Code regulates that the owner can recuperate the full of his goods but for the case that the agent might have claim or retention right over them. This principal applies to all cases were the debtor is precariously holding goods that belong to another.

If after the opening of the insolvency procedure the goods are no longer in the possession of the agent and cannot be recuperated then the owner can enter his claim in the debt table, at the value it had at the moment of the procedure opening. Should the goods be in the possession of the agent at the opening of the insolvency procedure and be los afterwards the owner can claim in the debt table the full value of the goods.

3.10. Regarding the rental of immovable goods contract art. 128 of the Insolvency Code regulates that when the debtor is the landlord the contract will stay into force should the rent be at market value. Still, the judicial administrator may terminate the contract or refuse to pay any debt or fulfil any obligation to the renter. In this last case the renter has the choice either to claim its loss at the debt table or to reduce the sum from the rent paid.

3.11. Regarding specialises personal services contract art. 129 of the Insolvency Code regulates that if the debtor is obliged to carry out specialised personal service to another contracting party the judicial administrator may terminate these contracts at any time leaving the other party, should he desire, to claim damages at the debtor table.

III. In conclusion, the on-going contracts are in general submitted to the will of the judicial administrator or liquidator. The Insolvency Code has kept most of the old law provisions but improved those were practice and jurisprudence proved that a change was needed. This continuation or the termination of the contracts, at such an early stage of the insolvency procedure may prove vital to the success of the debtors restructuring so it must be carefully thought through.

THE COMPLAINT ABOUT THE PROTRACTION OF PROCEEDINGS

Vlad-Silviu STANCIU[*]

Abstract

The complaint about the protraction of proceedings ("contestația privind tergiversarea judecății") has the role of sanctioning the passivity of the court of law which does not use the means necessary for correcting irregular conduct, or even worse, it disregards the legal provisions requiring a certain conduct from the court itself. The complaint about the protraction of proceedings should not be seen as a possibility to sanction the judge empowered to solve the case. This appeal is actually a remedy provided by law, intended to correct those situations in which the court of law is causing undue delay to the cases, or even more, it doesn`t take the necessary measures for protecting the right to a fair trial within a reasonable and foreseeable time.

Keywords: *The complaint about the protraction of proceedings, fair trial within a reasonable and foreseeable time.*

1. The Right to a Fair Trial within a Reasonable and Foreseeable Time

Having a strong set of principles aiding the civil trial is vital to the strength of the legal system. According to J. Pope`s vision, if we want to highlight the importance of the principles of law, we should imagine the justice system as an "intuitive model of an ancient temple"[1]. The roof of the temple shall remain balanced as long as the foundation is solid and the pillars are uniformly built. Just like this, the Romanian legal system will be balanced only if we all respect the principles of law while judging according to a specific rule of law value system. The stability of the entire legal system depends on all of its elements: "the solidity of its foundation (value system) and the harmony of its structure (the balanced development of all its pillars)"[2]. Moreover, having a strong and harmonious legal system requires "to identify in a systematic manner the weaknesses and the ways to strengthen and integrate the pillars into a coherent whole"[3].

In our current Civil Procedure Code (abbreviated as "CPC"), the legislator regulated these fundamental principles that underlie the civil trial. Before our Civil Procedure Code came into force, these principles were derived from the interpretation of the old Civil Procedure Code articles in relation to the Constitution and of course, by means of jurisprudence. Thus, the doctrine had an important part in successfully shaping "the pillars" of the entire judicial systems, which were even more reinforced by a coherent jurisprudence.

These legal principles are means of understanding the civil procedural rules and are mainly used in solving procedural issues without express regulation. These legal principles are included in the Articles 5-23 CPC.

The Article 6 of the Civil Procedure Code, guarantees everyone`s right to a fair trial within a reasonable and foreseeable time. The trial is to be ruled in a promptly manner by an independent, impartial and legal court of law. The promptness of the act of justice is guaranteed by the court of law that has to take all the legal measures to assure this.

The phrase "in an optimal and predictable period of time" has a particular importance, because according to the Civil Procedure Code, the judge has the obligation to set short hearing dates to assure the promptness of the act of justice.

A hearing date may be considered optimal when it`s short enough so as the parties does not lose sight of their purpose when they started the lawsuit. Under the provisions of art. 238 CPC, the judge is obliged to estimate the period of time in which the trial will be solved by consulting the parties at the first hearing. According to the complexity of the case and the facts that are to be judged, the court of law must set hearing dates that are both optimal and predictable. Thus, the hearing dates should be not only reasonable but also useful to the trial and adapted to the needs of the parties.

On the other hand, given the fact that a hearing date is by nature essentially relative and also that the judge can reconsider the date of the trial with no sanction whatsoever, the provisions of art. 238 CPC have a preventive role in a psychological way at most.

According to the European Court of Human Rights (ECHR) jurisprudence, the condition of setting hearing dates of a reasonable length, aims on the one hand "to create an effective judicial system that does not allow administrative or procedural delays" and on the other hand must provide "effective remedies for the situation of exceeding the length of judicial

[2] Idem 2.

[3] Idem 2.

proceedings"[4]. In order to support the idea of having predictable hearing dates the legislator has regulated a number of new rules likely to prevent delay in trial cases and encourage the rule of trials with greater rapidity. Whether we are talking about the Complaint about the protraction of proceedings or the regulations of having maximum limits for setting hearing dates, the aim of the legislator was to facilitate the act of justice, to make it faster and more transparent.

To what extent this has been achieved by regulating the Complaint about the protraction of proceedings, we shall discover from analyzing the regulations, both in terms of its impact on civil trials and its effectiveness compared to the practice developed over the years in the Romanian courts of law.

2. The Premises of Regulating the Complaint about the Protraction of Proceedings

This procedure has emerged as a consequence of the jurisprudence of the Strasbourg court that has ruled on the need of internal procedures that allow interested parties to contest the period of time in which their trials are being solved. Thus, the Complaint about the protraction of proceedings appears as a mean to achieve the ruling of the European Court of Human Rights.

The European Court of Justice pointed out on numerous occasions the need for such procedures, obligating the states to regulate a procedure for those cases that are solved in a long period of time. In this case, before the regulation of this new procedure, Romania was sanctioned on the one hand for not finalizing trials in a short period of time and on the other hand, for the lack of legal procedures in order to the correct the irregularities of long lasting trials. After the Civil Procedure Code came into force, and regulated these procedures, the European Court of Justice can only penalize Romania for disregarding the principle of finalizing trials within an optimal and predictable period of time.

In full accordance with the decisions of the ECHR, which sanctioned the absence of legal means to act in cases of exceeding the reasonable time in which a case should be solved, this new procedure enables the party, that believes that its right enshrined in Art. 6 CPC is violated, to ask the court to take action in order to correct that situation.

3. The Reasons for the Regulation of Trial Delay Appeal

The main objective of this procedure is the administration of justice in a firm and fast way. Thus, the Art. 6 in the Civil Procedure Code establishes the right of everyone to have its cases solved in an optimal and predictable period of time, by an independent, impartial and legal court of law. This is why, the court of law is obliged to take all necessary legal measures to conduct a fast trial case.

One of the solutions provided by the legislator to solve this cases in an optimal and predictable period of time is the procedure of Trial delay appeal.

This procedure is designed in such way that, when the judge does not respect the deadlines, and does not take legal measures to correct the situation, the interested party can file the complaint about the protraction of proceedings. This procedure can be used even when the deadline to fulfill a particular procedural act was not respected by the party itself or even the prosecutor or judge.

As noted by the High Court of Cassation and Justice in Decision no. 5313/2013, the complaint about the protraction of proceedings has the purpose of sanctioning the passivity of the court that, even though it has the legal measures to correct the reasons why the trial takes too long to be solved, the judge does not use them.

Furthermore, the Complaint about the protraction of proceedings must not be seen as an opportunity to punish the judge hearing the case. This procedure is in fact a remedy provided by the rules of procedure, "applicable in situations which cause undue delay or even the court`s lacks of measures to ensure the trial completion in a reasonable period of time"[5].

4. Effects and Consequences

The Complaint about the protraction of proceedings has the following effects: it prevents the trials to be finalized in a long period of time and it sanctions those responsible for the delay.

Specifically, the court seized with this procedure will set a new hearing date for the procedure to be completed. The question that we may ask is what will happen if not even during this new hearing date, the situation is not corrected. Will the party be able to seize the court with a new Trial delay appeal? Regardless of the answer, if it does not correct the situation even during the second hearing date, the procedure`s efficiency is questionable.

With no penalty expressly provided for this, one can conclude that the role of this procedure is purely psychological. This procedure will certainly produce effects for those who already respect the court of law, the procedures and the promptness of the act of justice. For the other category of recipients, because of the lack of coercive means and penalties, this procedure will not be able to change their attitude.

Furthermore, if the judge targeted by such a procedure could be disciplined for failing to take the

[4] Gabriel Boroi, O. Spineanu-Matei, et al., *The New Civil Procedure Code* (Bucharest: Ed. Hamangiu, 2003), 1015

[5] Decision no. 5313/17.05.2013 of the High Court of Cassation and Justice having as object the Complaint about the protraction of proceedings

legal measures to ensure the promptness of trial (either by court`s internal regulations or by a new law coming into force), the measure would not be equitable having regard to the many situations in which, the trial is delayed by the parties (sometimes even intentionally).

However, there are situations in which the delay of trial is a direct effect of the case is administrated by the court. Thus, in the matter of evidence, after the expiry of the date provided for this situation, you need to administer new evidence that emerged from the debates, this situation will become increasingly rare given the possibility that the judge may be penalized for exceeding the optimal and predictable length of trial, set at the first hearing date. As a result, the reluctance of judges to approve the proposed evidence in such cases will lead to a rapid resolution of the case, thus respecting the principle of promptness, but at the expense of a fair solution.

5. Regulations

This special procedure of Complaint about the protraction of proceedings, is a non-contentious and incidentally appeal and is regulated by art. 522-526 CPC. The Complaint about the protraction of proceedings is intended to ensure that the principle of trial promptness is respected and guarantees the right to trial ruled within an optimal and predictable period of time.

5.1. The Parties and Causes of Action

According to the provisions of Art. 522 para. 1 CPC, every party to a civil trial, as well as the public prosecutor taking part in the proceedings, is entitled to bring a complaint whereby they allege a violation of the right to a trial within a reasonable and foreseeable time and consequently request that adequate measures be taken to efficiently deal with the alleged violation. In the second paragraph of the same article are listed the cases in which the Complaint about the protraction of proceedings may be filed:

a. where a statutory deadline for the finalization of a case, the delivery of a judgment or the drafting of a statement of reasons is reached without any of the requisite action having been taken;

b. where a party to the proceedings fails to comply with a court order urging it to carry out a specific procedural act by a deadline and the court does not take statutory measures against that party;

c. where an authority or other third party to the proceedings fails to observe a time-limit set by the court to submit to it a document, data or any other information deemed essential to the case, and the court does not take statutory measures against the defaulting authority or third party;

d. where the court defaults in its duty to dispose of the case within a reasonable and foreseeable time by not taking the required statutory measures or by not carrying out a procedural act, as imposed by law, even though it could have done so in the time that had lapsed from its last procedural act.

To file such a complaint, is necessary to have a law suit in front of a court of law. Although this is not expressly provided, it follows logically from art. 522 CPC.

The first case under consideration by the legislator regards the situation when judges does not comply with the procedures required by law. Since this complaint will be judged by a panel of judges that are invested with the proceedings on the merits, it is hard to believe that such a complaint could be accepted, given the reason that such a delay would exist mainly because of the volume of activity due to the high number of trials in Romania.

Of course, in cases of gross negligence or bad faith on the part of the judge, such an approach would be justified but these cases are limited in number in relation to the situation described above. The main effect will be contrary to the objective of the new Civil Procedure Code, generating even more lawsuits.

Another reason which would excessively lengthen proceedings could be the judge`s poor time management, which of course can be improved but not by such a measure.

In this first case, the Complaint about the protraction of proceedings, can be considered as a "reminder" for the judge. The same result would have been achieved by a simple request during the hearings.

In the other two cases provided for by art. 522 para. 2.2 and para. 2.3 CPP, it is clear that the complaint holders will issue guidance on resolving the situation, and even considering the opportunity of certain procedural acts. In this situation, the risk for the parties to replace the court`s ruling is quite clear.

Furthermore, just like it shown before, the parties could "remind" the judge by means of a written or verbal request, and the court could oblige the ones that delay the procedures to act accordingly under penalty of warning or fine.

Such a use of the complaints will delay the trial even more, given that in addition to the numerous cases a judge has to rule upon, they will have to analyze and decide upon these new ones. Moreover, these complaints can be and most likely will be attacked separately, and thus resulting in an even greater number of cases that have to be ruled upon.

Regarding the fourth case referred to in art. 522 para. 2.4 CPP, it gives the party the possibility to file a complaint when the court does not take legal actions or does not fulfills certain procedural acts, which is contrary to the principle of judge`s independence. Thus, the party is able to replace the court`s ruling indicating which procedural acts should be met. Even if the judge does not meet the procedural act willingly, this may be due to its appreciation in terms of opportunity and on the basis of the active role of the judge.

5.2. Withdrawal of the Complaint. Formal Requirements

According to the provisions of Art. 523 CPC, the Complaint about the protraction of proceedings may be withdrawn at any time up until a decision has been rendered. Once withdrawn, the complaint cannot be repeated.

Although it is not expressly provided this, in the situation of new reasons, distinct from the one that already was the subject of the first complaint, a new complaint is possible.

These rules also apply to the appeal ("plângere") provided by art. 524 CPP for the following reasons: the legislator did not distinguish in art. 523 CPP between the two kinds of complaints and the possibility of withdrawal the complaint is regulated prior to the appeal of the complaint.

Regarding the formal requirements, according to the provisions of art. 524 CPP the complaint shall be filed in writing or made orally within the court dealing with the case in respect of which allegations of undue delays have been raised. If the complaint is made orally, in this case, it will be taken note of it, together with its legal grounds, in the interlocutory judgment.

An important aspect to remember is that filing of such a complaint does not halt the course of the legal process, and thus cannot be used as an abuse of rights in order to delay the proceedings. A contrary approach would have been contrary to the very purpose for which this special procedure was created

5.3. Examination and Determination of the Complaint

The Complaint about the protraction of proceedings is examined without delay, and at the latest within five days from its submission, by the panel of judges sitting in the main proceedings and no party shall be summoned.

The interlocutory judgment that is delivered if the complaint is well-founded cannot be subject to appeal. Moreover, the judges will order the adequate measures to remove the situation that had led to the protraction of the proceedings to be taken forthwith. The concerned party shall be immediately notified.

If the complaint is unfounded, it is reject it by an interlocutory judgment as well, but in this case, it can be appealed ("plângere") against by the interested party, within three days from the date on which service of process has been effected.

The appeal ("plângerea") is filed through the court that rejected the complaint, which submits it immediately to the higher court together with a certified copy of the case file. In the special situation of the case being heard before the High Court of Cassation and Justice, the appeal will be examined by a different panel within the same court.

The appeal against the decision to reject the complaint is examined and determined within ten days from the receipt of the case file by a panel composed of three judges and no parties are summoned. This decision is final.

If the appeal is well-founded, the panel will admit it and the decision will indicate what action is to be taken and also, if needed it will also set a deadline for it to be implemented.

Please note that the court that ruled upon the appeal cannot, by its own ruling, give guidance or express its opinion on the facts or points of law that may anticipate the judgment on the merits or otherwise infringe upon the freedom of the judge to decide on the ruling to be adopted. In this way, "the independence of the judge hearing the main proceedings will not be affected, having full discretion on the facts subject to judgment"[6], and so, the higher court will only address the reasons regarding the delay of the trial.[7]

Even with such express regulations it`s difficult to say to what extent the judge`s ruling independence will be respected, considering the instructions given by the higher court. Although the goal of this complaint is to report any irregularities likely to delay the trials, through this special procedure are created the premises to exercise possible pressure from higher courts.

Another problem that may arise regarding this complaint is the sanction applied to not respecting the guidelines given by the higher court; to be more exact what kind of sanctions? Such procedures could be used for disturbing the judges, leading eventually to an even higher number of trials, which would definitely counter the purpose for which this procedure was created.

5.4. Sanctions for a Complaint Filed in Bad Faith

In the situation that the complaint and appeal are likely to become themselves a way to delay the trial, the legislator regulated in art. 526 CPP the possibility of sanctioning those that file this procedure in bad faith. Thus, the filing of a complaint or an appeal in bad faith is sanctioned by a fine of between Lei 500 and 2,000. Moreover, the interested party, can also order request an additional payment of compensation for damages caused by the abusive filing of a complaint or appeal. This sanction is applicable to any of the subjects of the complaint or appeal, including the prosecutor, since the legislator did not make any distinction between the subjects.

Given the difficulty of proving bad faith, the legislator provided in the second paragraph of the same article how it can be determined: "Bad faith shall be discerned from the manifestly ill-founded nature of the complaint or appeal, as well as from any other circumstances that make it reasonable to assume that the right was exercised abusively or served a different purpose than that allowed for by the law".

[6] Idem 5.

[7] Legislative Information Bulletin no. 4/2009

It is worth mentioning that filing appeals on complaints is also sanctioned in the same way.

6. The Conclusion

In conclusion, it is necessary that to guarantee any person both the right to a fair trial within a reasonable and foreseeable time and the right to file claims and to report irregularities regarding the trials. However, this can also be achieved by filing written claims or orally request them, without regulating the special procedure of Complaint about the protraction of proceedings, that can also be used as an element of disturbing the judge and even delay the trials furthermore.

The Complaint about the protraction of proceedings will be an effective tool for those who don`t master a good management of time, those who lack interest or are poorly trained, those who hurry and thus make mistakes or even for those who delay trials with bad faith.

This procedure would prove successful given a situation in which all the holders would act in good faith, would be concerned of having a fair trial, and also where the truth and honor would triumph. Because all of this is unlikely to happen in the near future, having such a procedure is more than welcomed, given the degradation of people`s good spirit and understanding one another.

Given the current context of a high number of trials and the "legislative instability that generates periodic waves of lawsuits"[8], the filing of such complaints needs to analyzed accordingly to its opportunity, and thus, avoid arising the already high number of lawsuits and high work load of judges.

However, assuming that the holders file these complaints only in good faith, this procedure would be used only exceptionally and would definitely conduct to shorter trials and better ruling. Otherwise, a large number of such complaints and appeals will weaken and suffocate the legal system, delaying even more the trials.

THE CONFLICT BETWEEN THE LEGAL INTERESTS OF THE ORIGINAL OWNER AND THE GOOD FAITH ACQUIRER OF MOVABLES – A COMPARATIVE OVERVIEW OF THE SOLUTIONS

Dimitar STOYANOV[*]

Abstract:

The present article compares the legal rules on the good faith acquisition of movables in various national legislations of both Member states and countries outside the EU, in order to analyze the differences of the three major types of legal approach towards this means of original acquisition of ownership over movables. It is underlined that the existing diversity in the regulation can cause serious difficulties when multiple jurisdictions are concerned. One of the solutions to this issue is the unification of these rules at the EU level. The provisions of Book VIII, art.3:101 of the Draft Common Frame of Reference provide a solid foundation for this unification and may help to solve cross-border cases in a more efficient and just manner.

Keywords : *'nemo plus iuris' principle; good faith acquisition; original owner; bona fide acquirer; transfer of movables; comparative legal research; Draft Common Frame of Reference.*

Introduction:

Due to its great importance for the security of transactions, there is hardly a major legal system that doesn't contain any rules on the good faith acquisition of movables as well as the protection of the rights of the deprived original owner. The legislations of the particular Member states, as well as other countries outside the European Union are not coherent and they differ in the solution of the arisen legal conflict, taking a different approach to the Roman principle '*nemo plus iuris ad alium transferre potest quam ipse habet*'. Either the deprived owner or the bona fide acquirer (or sometimes even both sides) must bear the risk of losing their rights. The interests of commercial transactions and the liberalization of the market normally favor the bona fide acquirer, while even the basic notion of justice is offended by the idea that the owner of a movable could be deprived of it, sometimes even against his will, simply because someone has disposed with it. Of course, if the acquirer knows or under the specific circumstances of the case should have known that he is dealing with a non-owner or a person not being entitled to transfer the movable, every major legal system unambiguously protects the deprived owner, thus preventing the loss of his rights *in rem*. Much more complicated to solve are those situations where the acquirer is in good faith and the transferor, who has disposed of the movable, is holding it with the consent of its owner.

It is possible to divide the major contemporary national legislations into three broad groups as far as protection of the good faith acquirer is concerned. It will be inaccurate to say that every particular country has an absolutely identical set of rules with the other countries, included in the same group. What is important to stress out is that those legislations share a common legal principle that has defined their legal approach on resolving the conflict between the rights of the dispossessed owner and of the bona fide acquirer. Two extreme and one balanced legal approach can be distinguished. Using the comparative method of legal research the present article aims at studying these three main types of legal approach in cases where the law has to take side in the conflict of legal interests of the deprived owner, on one hand, and a good faith acquirer, on the other.

I. The Original Owner Rule

At the first extreme the original owner's legal interests are being meticulously protected irrespective of the means in which he was deprived of his property. The owner is granted the right to claim back his property, wherever he finds it, even if it has passed in the hands of a good faith acquirer.

The roots of the *original owner rule* can be traced back to Roman private law. In the early period (about 450 BC) private law was codified by Lex Duodecim Decorum (The Twelve Tables) and original acquisition of ownership was recognized by acquisitive prescription only – the so called *usucapio*. This principle intended to protect the owner of the movable from being deprived of his property, on one hand, and the party in possession who could acquire the movable after a certain period of time. A means for the owner of the movable was provided to claim back his property if the prescriptive period had not run.

By the Classical period of Roman law, extending from 1 AD to the end of the third century

[*] PhD Candidate, Assistant at Civil Law at the Department of Law by the New Bulgarian University, Sofia. (e-mail: **dimitarstoyanov2011@gmail.com**).

AD the rules on acquisitive prescription evolved immensely. The major principle, applicable both to immovables and movables, was formulated by Ulpianus – "*One cannot acquire ownership from a person who is not himself the owner*"[1]. Together with another tenet, formulated by Paulus "*What belongs us cannot be transferred to another without our consent*"[2], they formed a concept of the consistent protection of the original owner.

During this period, the basic action available to an owner out of possession to recover his property, both movable and immovable was the *rei vindicatio*, or revandicatory action. Initially the period for this action was limited to one year. The possessor could repel the claim if proving the fact that his possession had lasted longer than one year, without having to prove anything else. This circumstance was seriously obstructing the interests of the original owner.

That's why at the end of the Republican era the prerequisites for the usucapio were set to five elements: *res habilis* (a movable or immovable thing that is not *extra commercium*), *possessio*, *iustus titulus* (a just title, capable of transferring ownership by nature), *bona fides* (good faith) and *tempus* (an elapsed period of time).

Furthermore, at the time of Justinian and his Corpus Iuris Civilis, enacted in the middle of the 6th century, the prescriptive period was increased to three years. If the prerequisites were not met (for example, if the *iustus titulus* was not present because of the circumstance that the goods were lost or stolen, or the possessor was lacking good faith) the period of possession necessary to acquire the thing was set to thirty years. In addition, the Justinian legislation strengthened the *rei vindicatio* so that the owner could pursue his property during the whole prescriptive period.

As a conclusion, Roman law established and developed an approach that meticulously protected the dispossessed owner. This approach has been enacted by a series of national legislations.

English common law takes as a starting point the *nemo plus iuris* principle. As a consequence if someone has disposed of a property not belonging to him, in the conflict between the original owner and a third acquirer the former has the stronger position. This is expressed in art. 21 (1) of the English Sale of Goods Act of 1979 (SGA)[3].

The major difference between English and civil law in respect of good faith acquisition is that the first one lacks a gerenal exception to the *nemo plus iuris* rule to benefit the good faith acquirer. Rather, the SGA of 1979 provides several statutory exceptions to this principle.

The emergence of these exceptions is to an extent influenced by a statement by Lord Denning:

"In the development of our law two principles have striven for mastery. The first is for the protection of property: nobody can give a better title than he himself possesses. The second one is for the protection of commercial transactions: the person who takes in good faith and for value without notice should get a good title."[4]

The first exception concerns *apparent authority* (also known as the doctrine of estoppel), which is actually provided in the second part of art. 21 (1) SGA'1979 "… unless the owner of the goods is by his conduct precluded from denying the seller's authority to sell". This doctrine means that if the owner has assured the buyer that the seller has an actual right to transfer the title of the goods, the buyer can acquire the title despite the fact the seller was not the owner[5].

The second statutory exception to the *nemo plus iuris* principle is referred to as *sale under voidable title* (art. 23 of the SGA) - "When the seller of goods has a voidable title to them, but this title has not been voided at the time of the sale, the buyer acquires a good title, provided he buys them in good faith and without notice of the seller's defect of title". It offers protection to the buyer of a movable if he purchased it in good faith and did not know that his seller has a defect of title (cases of fraud, duress, misrepresentation etc).

The SGA contained the market overt rule as well, but the provision was abolished in 1995[6].

Other statutory exceptions can be found in the Factors Act of 1889, concerning cases of mercantile agency[7] and seller in possession after sale[8].

The provisions of the English Sale of Goods Act have influenced a number of common law

[1] "Nemo plus iuris ad alium transferre potest quam ipse habet"- D.50, 17, 54.

[2] "Id, quod nostrum est, sine facto nostro ad alium transferri non potest – D. 50, 17, 11.

[3] Art. 21 (1) SGA : "Subject to this Act where goods are sold by a person who is not their owner and who does not sell them under the authority or with the consent of the owner, the buyer acquires no better title to the goods than the seller had, unless the owner of the goods is by his conduct precluded from denying the seller's authority to sell."

[4] See *Bishopsgate Motor Finance Corporation Ltd. v Transport Brakes Ltd* [1949] 1 KB 332 at 336-337.

[5] The estoppel is actually a rule of evidence preventing a person from denying the truth of a statement he has made previously or the existence of facts in which he has lead another to believe. See Laszlo Pók, op. cit., 7.

[6] The market overt rule was codified in art. 22 (1) SGA'1979 : Where goods are sold oin market overt, according to the usage of the market, the buyer acquires a good title to the goods, provided he buys them in good faith and without notice of any defect of title on the part of the seller".

[7] Art. 2 of the Factors Act provides: "Where a mercantile agent is, with the consent of the owner, in possession of goods or of the documents of title to goods, any sale … made by him when acting in the ordinary course of business of a mercantile agent, shall, subject to the provisions of this Act, be as valid as if he were expressly authorized by the owner of the goods to make the same."

[8] Art. 8 of the Factors Act provides that if the owner of a good sells it two times the second buyer can acquire the title if he acts with good faith and has no knowledge about the first sale.

national legislations, like Scotland and Northern Ireland (as part of the United Kingdom), Cyprus[9], India[10], Canada[11] etc.

Among the countries whose national legislations belong to the Continental legal system Portugal is the only country whose Civil Code has fully adopted the *nemo plus iuris* principle. Portuguese civil law does not recognize good faith acquisition. There are no rules comparable to the "possession is equal to a title" principle, embodied in the French law, or even to the provisions of §929-932 BGB allowing the good faith purchase despite the enhanced protection of the original owner.

This circumstance results in the legal construction that a sales contract, by which the seller is neither the owner, nor legally entitled to dispose of the goods, is considered void, as art. 892 of the Portuguese Civil Code explicitly provides. If, however, such a contract is concluded and the purchaser acting in good faith, paid a consideration, the Portuguese legislator provides a restitution claim for the price because of unjustified enrichment of the transferor (art. 894 of the Portuguese Civil Code). The dispossessed owner can always claim back his movable, no matter how much time has elapsed.

II. The Bona Fide Acquirer Rule

At the second extreme, an acquirer who gained possession over a movable through a valid title, becomes the rightful owner, even if the movable has originally been lost or stolen from its original owner. The former owner loses his rights over the movable, but can always claim compensation for unjustified enrichment against the transferor of the goods. The policy of a comprehensive protection of the good faith transferee, known as the bona fide acquirer rule, has been adopted by the new Italian Civil Code of 1942. Pursuant to art.1153 of the Italian Civil Code, as far as movables are concerned, the possession is equal to a title. This principle is based on the need to increase certainty in the circulation of movables, since it is nearly impossible for a person to undertake a thorough investigation if every transferor of the goods was in fact their owner. Another argument in support of adopting this principle is the speed with which transactions occur, not allowing the transferee to keep a complete record of the transfers. It is being stressed out that the possession of a movable creates a legitimizing appearance of ownership, so that every person exercising power over a movable has a right to dispose with it, as far as other people unaware who the actual owner is are concerned. Pursuant to art. 1153 et seq. Italian Civil Code, the former owner cannot bring a rei vindicatio action against the good faith acquirer under any circumstances, not even if the goods were lost or have been stolen from him. Thus, the Italian Civil Code of 1942 has eliminated the distinction between involuntary and voluntary loss of ownership and enhanced the protection of the bona fide transferee in either cases. Furthermore, there are no additional requirements concerning the title except its validity, which means that both onerous and gratuitous acquisition will lead to extinguishing the original owner's right and the good faith acquirer shall become the new owner.

Throughout the Member states, there is no other legal system implementing the *bona fide acquirer rule* to such an extreme extent. The other national legislations are being somewhat influenced either by the balanced approach or by the *original owner rule* that consistently protects the right of the dispossessed owner. Particularly interesting is the policy towards good faith acquisition adopted in the Czech and Slovakian legislation. Both countries have very similar civil and commerce codes and thus share the same principles. Their civil codes do not provide any rules on good faith acquisition. Is it not possible to acquire ownership from a transferor who lacks the right to dispose regarding the transferred property. The absence of a right of disposition of the property always results in an absolute nullity of such a contract[12]. It is clear that Czech and Slovak civil law have adopted the *nemo plus iuris* principle. Surprisingly, on the other hand, the Czech and Slovak Commercial Codes have codified a set of very liberal rules on good faith acquisition, applicable to merchants only (see § 446 of the Slovak Commercial Code and § 446 of the Czech Commercial code). The main purpose was to promote the security of commercial transactions. § 409 of the Slovak Commercial code explicitly provides an exception of the *nemo plus iuris* principle if the good faith acquisition is based on a business relationship. Since there is no rule excluding lost or stolen goods, scholars[13] believe that they can be acquired in an original manner from the good faith transferee.

Another example of a national legislation that adopted the bona fide acquirer rule, but sustained some influence from the balanced approach is Austria.

Art. 367 of the Austrian Civil Code provides that it is possible to acquire ownership over movables from a non-owner in three particular

[9] Cyprus's Sale of Goods Act of 1994 and its articles 27-30 mirror the provisions on good faith acquisition of English Sale of Goods Act of 1979.

[10] See art.26-30 of India's Sale of Goods Act.

[11] See § 22-24 of Canada's Sale of Goods Act.

[13] Ivan Petkov, op.cit., p. 421

situations: at a public auction; if it is purchased from a person in the course of the latter's commercial activity of selling goods of this kind; and if the owner has voluntarily entrusted the movable into the seller's possession. Moreover, the acquisition must be for value and the acquirer must have obtained possession over the movables in good faith.The rules on good faith acquisition in the Austrian civil code do not provide an exception on lost or stolen goods. This circumstance has lead scholars to assume that it is possible for the good faith transferee of these goods to gain ownership over them in an original manner[14]. This effect can occur only if the other prerequisites of the good faith acquisition are present. Despite these limitations, the Austrian Civil Code provides an enhanced protection of the legal interest of the good faith transferee, allowing him to acquire ownership even over lost or stolen goods. Scholars tend to categorize Austrian law as one of the most protective jurisdictions towards good faith purchasers[15].

The liberal Austrian provisions that can be ranked as the second most favorable to the bona fide acquirer (after the Italian ones), have been fully adopted by the art. 64 et seq. of the Slovenian Ownership Code as well.

III. The Balanced Approach

1. The Consensual System

Just like the bona fide acquirer rule, the balanced approach recognizes good faith acquisition as a separate, original manner of acquiring ownership over a movable from a person acting in good faith.

The basic rule that has become the founding stone in a number of national legislations when it comes to good faith acquisition is that "with reference to movables, possession is considered equivalent to title"[16], meaning that possession and ownership of movables go hand in hand. The first national legislation to adopt this principle with the intention to protect good faith acquirers and the interests of commerce, was the French Civil Code of 1804 and its article 2279 (a recent reform changed the numeration to art. 2276). The drafters of the Code placed this provision in a section called "On some special prescriptions". Thus, good faith acquisition was looked upon as a special, instantaneous acquisitive prescription rule. This explanation is rejected by Marcel Planiol[17], however, being in contradiction in terms since "acquisition by prescription presupposes a certain period of time has actually elapsed". A more recent theory explains the legal nature of the provision on good faith acquisition as an irreputtable presumption of ownership in favor of the possessor[18]. The prevailing view, supported by the case law of the French Cassation Court is that the good faith acquisition is a separate, independent method to acquire ownership over a movable in an original manner. The main effect of the principle "as far as movables are concerned, possession is equivalent to title" is that it overrides the rules in the law of obligations regarding abuse of trust by a transferor holding a limited title or even nullity of a contract. The result therefore is that the good faith acquirer a non domino neither receives the ownership right on a derivative basis, nor takes title by instantaneous prescription, but acquires a clear title by statutory provisions[19].

In order to fully comprehend the good faith acquisition in French law one must keep in mind that according to art. 711 of the French Civil Code, ownership is acquired and transmitted by succession, by gift (both inter vivos and mortis causa) and by the mere effect of a obligation.This provision brings us to the conclusion that the French transfer system is consensual, which can be derived from a closer look on article 1138 as well : *An obligation of delivering a thing is complete by the sole consent of the contracting parties. It makes the creditor an owner.*

Thus, the provision of art. 2276 (1) serves a double function. In the first place, it provides a rule of proof – possession establishes a legal presumption that whoever is exercising the factual power over a movable is deemed to be its owner, unless proven otherwise. In the second place, it contains a material rule – the act of possessing a movable renders its possessor as the owner in case the movable is being transferred to him by someone not entitled to dispose with it.

The French Civil Code does not specify further requirements that the possessor has to meet before he is entitled to invoke the *possession vaut titre* rule. That's why case law helped the institute to evolve. Nowadays, it is unambiguous that the transferee of a movable that was transferred to him by a non-owner can acquire ownership if he received actual ("real") possession and he doesn't know or should not have known that his transferor lacks ownership over the movable. Transition of ownership is not caused by

the effect of an obligation, but instead, by mere possession. This possession creates a new title on behalf of the good faith transferee, independent and not deriving from the original title.There is no requirement for the transaction to be onerous – any valid legal act capable of transferring rights over movables is sufficient[20].

The major difference between the balanced approach and the bona fide acquirer rule can be found in the attitude towards lost or stolen goods. Unlike the quite liberal approach in Italy that allows the good faith transferee to acquire ownership even over lost or stolen goods, the provisions of the French Civil Code exclude them from the material protection of the good faith acquisition. The reason for this exception can be found in the circumstance that loss and theft lead to involuntary loss of possession. If the property was lost or got stolen, the original owner can reclaim it back from whoever holds it, even from the good faith transferee. Because of its somewhat radical nature, the French legislator has limited the time-span for such a claim to be made to three years – not from the date of the bona fide acquisition, but from the moment the movable got lost or was stolen (see art. 2276 (2) French Civil Code).

The good faith transferee of a lost or stolen movable is not left completely empty-handed. Pursuant to art. 2277 French Civil Code, *when the present possessor of a thing lost or stolen has bought it at a fair or market, or at a public sale, or from a merchant selling similar things, the original owner may have it returned to him only by reimbursing the possessor for the price which it has cost him.*

This remarkable provision of medieval origin is called the "market overt" rule. It serves a primary function – to create a counter-exception in favor of the transferee who acquired in good faith lost or stolen movables under normal, unsuspicious circumstances[21]. On the other hand, it protects him against a possible insolvency and/or untraceability of his transferor. If the dispossessed owner reclaims back his goods, the good faith buyer can spare the difficulties of trying to find the seller and refund the purchase price. The French Civil Code has adopted a much more fast and practical solution that strikes the best possible compromise in the conflict of legal interests between the original owner and the bona fide acquirer – the owner is obliged to reimburse him with the price paid for the lost or stolen goods. Until he has received this payment, the possessor is entitled even to exercise a retention right over the movables.

This balanced approach, resulting in a compromise in the conflict of legal interests between the dispossessed owner and the bona fide acquirer was adopted by the revoked Italian Civil Code of 1865 (art. 707). One of the most significant merits of art.707 Italian Civil Code'1865 was expanding the protection of good faith acquisition institute over bearer instrument and money as well. The old Italian Civil Code had a great impact on a huge number of national legislations that belong to the Romanistic legal family, including the Bulgarian one.

In Bulgaria, the first rule on good faith acquisition was enacted in 1904 in the revoked Law on Property, Ownership and Servitudes. This act implemented the provisions on ownership and other real rights from the revoked Italian Civil Code and closely followed both the consensual system of transferring ownership and the balanced approach in terms of good faith acquisition. Its article 323, identical to art. 707 of the old Italian Civil Code, contained the rule "With reference to movables and bearer instruments, possession is considered equivalent to a title". The possibility for the original owner to reclaim his lost or stolen movables for a period of three years, as well as the market overt rule in favor of the good faith acquirer who bought lost or stolen goods at a fair, market or at a public sale, were present as well (art. 324 and 325 of the Bulgarian Law on Property, Ownership and Servitudes).

After the deep socio-economic changes in the Bulgarian society after World War II, in 1951 a new Ownership Act came into force and remains until today the primary source of rules on ownership and other real rights. The policy on good faith acquisition sustained only minor changes. Pursuant to art. 78 (1) of the Bulgarian Ownership Act, the good faith purchaser of movables or bearer instruments, who acquired them on a valid onerous title is their new owner if he didn't know that the transferor did not own them. If the goods were lost or stolen, art. 78, (2), first sentence provides the familiar three year period for an ownership claim to be made by the dispossessed owner.

The first change concerns the requirement for value of the legal act that transfers ownership. If it is gratuitous, the interests of the dispossessed owner will prevail, because it is not justified to protect the person who has enriched himself, without sacrificing a counter-performance. As mentioned above, modern Bulgarian civil law has continuously adopted the balanced approach and a general policy of enhanced protection of the bona fide acquirer has never been customary.

The second change is tightly connected with the socio-economic changes in Bulgaria. After 1950, commercial law was abolished and private enterprises were nationalized. They were all transformed into State-owned socialistic enterprises

[20] Eleanor Kashin Ritaine, National Report on the Transfer of Movables in France, in National Report on the Transfer of Movables in Europe, (Munich: Sellier. European Law Publishers, 2011), 119-128.

[21] Arthur Salomons, "Good Faith acquisition of movables", in *Towards an European Civil Code, 4th revised and expanded edition*, ed. M. Hesselink et al. (Wolters Kluver Law International, 2011), 1065-1082.

who were the only major participant in Bulgaria's economic life until 1989. That circumstance made the counter-exception concerning lost or stolen movables bought at a fair, market or at a public sale pointless and incompatible with the socialistic state regime, since it presumed the presence of private commercial relationships. This rule was substituted with another provision that suited the new regime better, yet expressed the same ideas. Pursuant to art. 78, (2) second sentence, if a person bought lost or stolen goods from a State or cooperative enterprise, he acquires ownership in an original manner and the former owner cannot claim the goods back under any circumstance. No possibility for reimbursement of the price was provided as well. The legislator's aim was to affirm the dominant position of State and cooperative enterprises as the substitute of all previous private companies and partnerships and to increase citizens' trust in the new legal subjects who were designed to achieve the primary economic goals of the ruling party. Still, it must be pointed out that the good faith transferee enjoyed such a favorable position only if he acquired the lost or stolen movable from a State or cooperative enterprise. If the goods were transferred by anyone else, the original owner's interests prevailed and a claim could be successively carried out even without having to reimburse the good faith acquirer with the price paid.

After the transition to free market economy in the late 80's and in the beginning of the 90's, the State and cooperative enterprises are no longer the only and the biggest participant in the economic life of Bulgaria. The majority of them were reorganized in the process of privatization and nowadays they have a negligible role. This circumstance significantly reduces the applicability of the provision of art. 78, (2), second sentence and causes a debate on enacting a new rule on the protection of the good faith transferee who acquired lost or stolen goods from a transferor acting in the ordinary course of business.

Apart from Bulgaria, the consensual system of transferring ownership as well as the balanced approach on good faith acquisition was adopted with some changes by many other national legislations within the European Union, as well as other, Non-member States. The Belgian Civil Code has adopted an identical set of rules and stands the closest to its primary source – the French Civil Code. The provisions of art. 2279 and 2280 of the Belgian civil Code follow art. 2276 of the French Civil Code to the letter. Out of the EU, art. 1161 and 1162 of the Ethiopian Civil Code have fully adopted the French approach on good faith acquisition as well. The only difference is that the rules on good faith acquisition in the Ethiopian Civil Code are not placed next to the provisions about prescription, but among the other separate methods of acquiring ownership by original manner.

Modern national legislations have adopted the consensual transfer system as well, but have provided some additional requirements or other prerequisites as far as good faith acquisition is concerned. The most typical one is that the acquisition must be onerous. Only when the good faith transferee has given or promised a counter-performance his legal interest is worthy of protection. A number of national legislations broaden the scope of the "good faith" requirement as well. In contrast to the French Civil Code where case law defined good faith as the lack of knowledge that the transferor is not the owner of the movable[22], modern civil codes tend to perceive the good faith requirement as a lack of knowledge that the transferor is not entitled to dispose of the goods. The transferee may know that he is dealing with a non-owner and this circumstance will not vitiate the acquisition a non domino. The main reason for this concept is protecting the dynamic commercial relationships in cases when the transferor established factual power over the movable on a lease, pledge or rent contract, but the acquirer believes that his transferor holds the goods on a consignation contract, for example and is entitled to transfer them.

A number of national legislations combine the classical French approach and a modern, reformed policy on the good faith acquisition. Such rules can be found in art. 933 of the Swiss Civil Code[23], art. 464 of the Spanish Civil Code[24] art. 4.96 of the Lithuanian Civil Code[25], art. 95, (1) of the Estonian

[22] Cass. 1re civ., 23 mars 1965: Bull. civ. I, n° 206: « *En matière d'application de l'article 2279 du Code civil, la bonne foi … s'entend de la croyance pleine et entière où s'est trouvé le possesseur au moment de son acquisition des droits de son auteur, à la propriété des biens qu'il lui a transmis; le doute sur ce point est exclusif de la bonne foi*. »

[23] Article 933 of the Swiss Civil Code states that "If someone has acquired ownership or other real rights over a movable in good faith is worthy of protection in case his transferor was not entrusted with the movable as well". Article 934 (1) provides a 5-year period of time for the original owner to claim back his stolen or lost goods after he reimburses the good faith acquirer with the price the latter paid for the movables. For additional information see Arnold F. Rusch, Gutgläubiger Fahrniserwerb als Anwendungsfall der Rechtsscheinlehre, in:

Jusletter 28. January 2008, p. 12-13; Tuor/Dreyer/Schmid, Das Schweizerische Zivilgesetzbuch (Zürich: Schulthess Polygraphischer Verlag, 1996), 618-619.

[24] "As far as movables are concerned, possession is equivalent to title". For additional information see José Manuel de Torres Perea, "Acquisition from a non domino in Spanish civil law" (paper presented at the International Scientific Congress on Spanish-Philippine Private Law, University of Malaga, April 16-17, 2015).

[25] "If a person in good faith acquires property for value and without notice that the transfer doesn't have authority to dispose, the legitimate owner may bring an action for rei vindicatio of the goods against the good faith transferee, provided that the owner lost the goods or was dispossessed without consent or that the goods were stolen." Apart from this exception, the good faith acquirer can always rely on a title to

Property and Ownership Act[26], art. 5:39 of the New Hungarian Civil Code (in force since 2014)[27], art. 3:86 of the Dutch Civil Code[28], the Swedish Good Faith Acquisition of Personal Property Act and § 1 of the Norwegian Good Faith Acquisition Act. Outside the EU, the balanced approach on good faith acquisition has been implemented in art. 1197, 1204 and 1268 of the Brazilian Civil code[29], § 34 of the Sale Law of Israel, art. 798 and 799 of the Mexican Civil Code, art. 194 of the Japanese Civil Code, art. 1713 and 1714 of the Civil Code of Quebec and art.1157 of the Iraqi Civil Code[30].

2. The Abstract (Traditio) Transfer System

Among those national legislations included in the balanced approach group, the rules on good faith acquisition enacted in § 932 of the German Civil Code (Bürgerliches Gesetzbuch) deserve special attention. The starting point of the German transfer system is that a legal consequence can either follow directly from a statutory provision or from a party's legal act. In contrast to the French Civil Code, German private law does not grant translatory effect to the contractual agreement, but has developed its own method, known as the "Trennungs- und Abstraktionsprinzip". The transfer of title must find its basis in a real agreement distinct from the obligation created prior by the parties. The basis of the transfer therefore is held to be the agreement on the transfer of title, this real agreement being an agreement in rem. Furthermore, pursuant to § 929 BGB the real agreement must be made public by the abstract act of *traditio*, that is the transfer of possession and both contracting parties must have agreed upon the passing of ownership. As far as these requirements are fulfilled, all powers embraced in the right of ownership pass to the transferee. In other words, ownership doesn't pass until the transferor has actually delivered the movable to the transferee. The transfer of title is a consequence of the real agreement, not of the underlying agreement creating just a mere obligation to transfer[31].

Apart from this major difference, with regard to the acquisition a non domino, German private law resembles the French provisions, yet imposes a much more consistent legal protection of the original owner in comparison to art. 2277 of the French Civil Code.

The basic rule is given in § 932 (1) BGB: *The transferee becomes the owner occurring under paragraph 929 even if the movable doesn't belong to the transferor, unless he did not act in good faith at the time at which he would acquire ownership under these provisions.* The transferee is worthy of protection only if he acts in good faith at the moment of delivery. Section 932, (2) BGB sets out that "*the purchaser is not in good faith if he is aware or due to gross negligence is unaware that the movable doesn't belong to the seller*".

Paragraph 932 BGB does not provide a requirement for value and this might create the false impression that both onerous and gratuitous transfers can lead to a good faith acquisition. However, § 816 BGB provides that the person who acquires a movable without a counter-performance, may be under a duty to return it to the owner under the rules of unjustified enrichment. This means that good faith acquisition under the rules of the German Civil Code can occur only if it is for value.

Despite being positioned in the balanced approach group, German private law is somewhat influenced by the *original owner rule* and this can easily be seen when it comes to the scope of protection of the dispossessed owner. Similarly to French law, §935 BGB starts off by manifesting that the movable must have been voluntarily entrusted to the transferor, thus excluding lost or stolen goods, but continues by referring explicitly to goods of which the owner had otherwise involuntarily lost possession. This provision extends the number of occasions when the dispossessed owner can reclaim back his movable and since there is no requirement for him to reimburse the price the good faith acquirer had paid[32], we can conclude that the rules on good

ownership. Art. 4:96 of the Lithuanian Civil code provides that lost or stolen goods can be vindicated within three years from the moment of dispossession.

[26] "A person who has acquired a good by transfer in good faith is the owner of the good from the moment of gaining possession over the thing even if the transferor was not entitled to transfer ownership." The Estonian civil law doesn't explicitly provide a requirement "for value" of the acquisition. However, if the acquisition was gratuitous, the acquirer must re-transfer the thing to the entitled person even if the disposition was otherwise valid. This provision is derived from the rule of art. § 1040 Law of Obligations Act: "An acquirer in good faith who is no longer enriched in the extent of the (gratuitous) transfer by the time he learns or should have learned about the filing of a claim against him, is relieved of the duty to re-transfer the thing". For more detailed information about the Estonian national legislation in terms of the good faith acquisition see : Priit Kama, Evaluation of the Constitutionality of Good-Faith Acquisition, *Juridica International*, XIX (2012), accessed May 08, 2015, doi:10.12697/1406-1082.

[27] Section 5:39 (1) provides that "A bona fide acquirer acquires ownership of a good, which has been sold in the course of the transferor's commercial activity, even if the merchant was not the owner of the goods". Section 5:39, (2) and (3) create the exception concerning lost and stolen goods and the counter-exception, when these goods are obtained at public auctions. See Laszlo Pók, An old topic in a modern world, *European Review of Law and Economics*, vol. 2 (2012), 7.

[28] "Although an alienator lacks the right to dispose of the property, a transfer pursuant to articles 90, 91 or 93 of a movable thing, unregistered property, or a right payable to bearer or order is valid, if the transfer is not by gratuitous title and if the acquirer is in good faith."

faith acquisition in the German Civil Code, despite sharing common principles with the French provisions, stand much closer to the *original owner* rule than most of the other national legislations from the *balanced approach* group.

The German approach has influenced a number of national legislations, for example the Greek Civil Code. Its provisions on the abstract method of transfer of movables, as well as on good faith acquisition (art.1034-1038 Greek Civil Code) follow in general § 929-932 of the German Civil Code. However, the Greek legislator has adopted the "French" market overt rule on lost or stolen goods, bought at a public auction, or at a fair or on the market, providing a better protection of the legal interests of the bona fide acquirer in comparison to the German Civil Code[33].

Other national legislations that adopted the German Civil Code, can be pointed out as well – the provisions of art. 22 of the Law on Property and other real rights of Kosovo[34] and art.187 et seq. of the Georgian Civil Code[35].

IV. The need for coherence and the Draft Common Frame of Reference as a role model

As this short comparative overview has shown, there is a considerable diversity on the rules of good faith acquisition. The majority of national legislations strive to find a balance between the interests of both the original owner and the good faith transferee, especially when it comes to lost or stolen goods. Yet, within Europe Italian and Portuguese law represent the two contemporary extremes and throughout the national legislations there are differences beyond trifle. This circumstance is able to cause serious difficulties in legal enforcement if multiple jurisdictions are concerned, not to mention the unfair treatment of either parties if the applicable law is less susceptible and provides a considerably lower level of legal protection towards one of them in comparison to their national legislation, for example.

In my opinion, the existing diversity of rules could be overcome on the way of a unification of the provisions on good faith acquisition through a mandatory act, enacted at EU level. For this purpose the rules of the Draft Common Frame of Reference (DCFR) may serve as a role model. The Draft Common Frame of Reference is prepared by the Study Group on a European Civil Code that consists of legal scholars from several jurisdictions in the EU. It is a soft law codification[36] which can serve as a common denominator in the approximation of laws within the Member States[37].

Because of its great importance for promoting security of transactions and commerce, the Study Group has provided a set of rules regarding good faith acquisition of movables in Book VIII, art. 3:101 of the DCFR[38].

The provision of art. 3:101, (1) DCFR sets out that when a movable is acquired for value from an unauthorized transferor, the transfer is valid, provided all other transfer requirements are met and the transferee neither knew nor could reasonably be expected to know that the transferor was not entitled to transfer. The article contains a rule on burden of proof as well: "The facts from which it follows that the transferee could not reasonably be expected to know of the transferor's lack of right or authority have to be proved by the transferee".

Art.3:101, (2) DCFR provides that good faith acquisition does not take place with regard to stolen goods, unless the transferee acquired them from a transferor acting in the ordinary course of business.

As one can see, the Study Group has tried to strike a compromise between the provisions on good faith acquisition in the majority of national legislations. The requirement for value, the strict standard on good faith and the exclusion of lost or stolen goods from its scope of application are aimed at granting a better protection of the dispossessed original owner, whereas the market overt rule and the wider content of good faith (especially compared to the provisions of the French Civil Code) put the transferee in a favorable position.

The choice of the Study Group to place the burden of proof on the good faith transferee has been regarded as "highly unusual" and criticized for causing a detrimental effect to commercial transactions, as well as urging costly and time-consuming lawsuits that the rules on good faith

[33] See art. 1039 Greek Civil Code : "If the lost or stolen things are ... things, sold at a public auction, or at a fair or on the market, the buyer does acquire ownership of them if he is acting in good faith". See P.Agallopoulou, *Basic Concepts of Greek Civil Law* (Athens, 2005), 394.

[37] http://www.sgecc.net/pages/en/introduction/100.aims.html (accessed on 09.05.2015)

[38] The Study Group agreed upon the need of drafting rules on good faith acquisition. This would balance the interest not only of the concrete parties at an individual level, but also of all participants in the commercial relationships intending to acquire goods. The scholars state that it would be too burdensome, costly and insecure if every particular acquirer was forced to undertake a detailed investigation of his transferors' rights. Not having a good faith acquisition rule would ruin legal certainty and increase investigation costs immensely. See Eric Clive, *Principles, Definitions and Model Rules of European Private Law. Draft Common Frame of Reference. Full Edition*, vol. 5 (Munich: Sellier European Law Publishers), 2010, p. 4827.

acquisition are evocated to prevent[39]. Perhaps the reason for this criticism is that in the majority of national legislations a presumption of good faith is provided in favor of the transferee. The only two countries in the EU whose rules on good faith acquisition provide a requirement for the transferee to prove that he did not know or couldn't have known that he was dealing with a non owner or a person, not entitled to transfer ownership, are Sweden and the Netherlands.

On the other hand, one can find solid arguments in support of this policy. Placing the burden of proof on the transferee can be regarded as a form of balancing the interests. The good faith acquisition leads to depriving the original owner of his rights *in rem* and should be seen as an exceptional opportunity for the transferee to acquire ownership.

Another justification for this decision can be found in the general principles of the law of evidence. The transferee, as one of the contracting parties, is much closer to the act of acquisition than the original owner and it would be much easier for him to provide evidence of his good faith. The original owner will have immense difficulties to investigate the circumstances of the transfer that might have occurred on a different place or after a considerable period of time has elapsed. Moreover, there is a general principle that a person who wants to benefit from a specific provision has to provide facts and evidence that support his statement.

Conclusion:

The comparative overview of the major national legislations made above reveals that the existing diversity of the solution to the conflict between the legal interests of the original owner of a movable and its good faith acquirer can cause serious difficulties when multiple jurisdictions are concerned. The importance of this issue is even bigger under the conditions of the EU-Internal market and its primary feature - the free movement of goods. In spite of being a mere soft law codification, the DCFR can provide a solid basis for legal harmonization among national jurisdictions. Adopting a set of harmonized rules may help to solve cross-border cases on good faith acquisition in a more efficient, consistent and equitable manner.

PECULIARITIES OF INTERNAL MANAGEMENT BELONGING TO THE COMPANY ADMINISTRATOR GOVERNED BY LAW NO. 31/1990

Carmen TODICĂ*

Abstract

The management (power) responsibility (internal management) involves committing physical operations of implementing the social will embodied in the General Assembly decisions as well as verifying their execution. In this way, the administrator is authorized by the General Assembly to execute its decisions. Furthermore, these decisions implementation implies concluding legal deeds (of conservation, management and disposal) requested by the activity of the company, and thus, achieve its core business. However, as have emphasized, certain legal deeds of disposition of particular importance to the assets of the company, may be concluded only with the approval of the general meeting of shareholders. In this context, as well as a lacunar regulation on the applicable sanction it is necessary to analyze the effects such the lack of authorization, as well as the administrator liability in relation to the management of the company. These powers (authorities) of the administrator concern the internal management of the company (management),that is the relationships of the manager with the company and shareholders, which requires delineation of the power they represent.

Keywords: *internal management, legal representative, approval of the general meeting, the delegation of powers.*

1. Introduction

The management of the company involves the exercise of two responsibilities: internal management task and the task of representing the company in relationships with the third parties. Having in view the fact that the management of the company implies the completion of legal deeds with the third parties, the present study aims at conducting a comparative analysis of the two functions (powers) of their manager - internal management and legal representation, but with special focus on internal management. The study[1] reveals peculiarities of the internal management: How is the task performed within the collective management bodies, what implies the task itself – does it limit to completion of legal deeds, in the meaning of art. 70 of the Law, or does it imply the conclusion of legal deeds, divided into categories according to the type of company? What is the penalty of breaching the general meeting approval required to complete certain transactions and the consequences on the civil liability of the administrator. As we shall show, contrary to the doctrine, we consider that the obligation of concluding legal deeds of a certain value to the company only with the approval on behalf of the general meeting, is expressly established by law, the liability to the company for non-compliance can only be a tortious one. Moreover, in this case, in the assumption of the administrative bodies, the liability lies with collective bodies and not individually to the administrator.

The analysis of this task is a first phase in developing a comprehensive study on the power of representation and the dual quality of the administrator not only as a trustee but also as a legal representative, more precisely as organ of the company. Basically, the question arises as to know if either we can speak only of a trustee administrator of the company, according to the opinion of doctrine that governed the literature until now, or to adopt the organicist theory. We believe that the administrator exercises internal management as a trustee of the company. Thus, the quality of the company's trustee manager does not exclude the one of an body of the company. This results from the provisions of art. 209 paragraph 3 of the Civil Code *"relationships between the legal person and those who make up its management bodies are subject, by analogy, to the rules of the mandate, unless otherwise provided by law, regulation or statute."*

In general, the theme approached was analyzed in two categories of specialty papers: on the one hand by the treaties or university courses with a broader research object, and on the other hand, in the articles regarding certain problems, reaching only adjacently the power of management, the peculiarities and liability for failure in exercising congruently.

2. Legal framework of managing the company task

Achieving the core business and the purpose for which the company was set up it becomes possible only by performing deeds of administration and management.

As a legal operation, the company's management involves the exercise of possession, enjoyment and disposition of the stock-in-trade and other elements of

patrimony as well as concluding deeds of preservation, management or disposition in relation to these goods. In this context, the management is a form of exercising the business ownership, in order to meet the statutory objectives.

Administration of the company is carried out by a distinct body of permanent management, represented by the sole administrator or board of directors (specific to the unitary management system) respectively by the directorship and the supervisory board (in the dual system of administration in stock companies). It performs operations required for the achievement of the core business, giving concrete expression to the will of the company, reflected in the decisions of the General Assembly (*internal management task*). Furthermore, the administrator represents the company in the relationships with the third parties, engaging its legal liability for deeds such as agreements (*representation task*). Generally, the internal management task is performed by the administrator under the control and in collaboration with the Assembly/shareholders, whereas the task of representation is the exclusive attribute of the administrator, as the body (legal representative) of the company.

Law no. 31/1990 regulates generic administrator powers through two "key" texts, namely art. 70 paragraph 1 according to which, "*managers of the company can perform all the operations required for the fulfillment of the core business* ..." (internal power management), and art. 701 of the Law which provides that "*deeds of disposition regarding the goods of a company are concluded by the legal representatives of the company, pursuant to the powers conferred, as appropriate, by law, articles of association or bylaw not being necessary a special and authentic proxy for this purpose.*" (power of representation).

The law also contains provisions on the powers of the administrator differentiated on types of companies. Thus, in terms of partnerships and limited liability companies, art. 7 letter e) of the Companies Law no. 31/1990 establishes that the articles of association of these companies must contain clauses regarding the "*associates representing and managing the company or unassociated administrators ... the powers that were granted to them and if they are to exercise them together or separately.*" Regarding the stock companies and partnership limited by shares, art. 8 letter g^2 has the same effect (as amended by Law no. 88/2009) stipulating that, in the articles of association there must be references to "*the powers of managers, directors and, if applicable, the members of the directorship and if they are to exercise them together or separately.* "

From the Companies Law provisions it results that the powers of the administrator are very broad, he can perform all operations of management and representation required to achieve the purpose of the company. In other words, the administrator is able freely to pursue all those activities necessary to fulfill the general duty to manage the company.

From the provisions of art. 7 letter e) and art. 8 letter g^1 of Law no. 31/1990 it results the clear distinction that the law makes between the power of management (internal management, rough administration) and the one of representation. It should be noted that the right of representation is a special right, distinct from the general right of administration, limited to the internal management of the company. Thus, the internal power of management regards the relationships of the manager with the company and associates, and it belongs to any administrator appointed under the law. Instead, the power of representation belongs only to the administrator who was granted with this prerogative and it commits the company towards the third parties. Hence, the administrator powers may be limited to the internal management of the company (ordinary administrator) or may include powers of representation, situation in which the administrator is authorized to engage the company in relationships with the third parties. Regarding the sole administrator, it shall benefit from the fullness of management power (the power of internal management and representation). However, in cases of multiple administrators, the powers granted to some of them may be limited to the internal management of the company, while the others or one of the administrators are granted powers of representation. Thus, if the hypothesis of a plurality of administrators, the power of representation shall belong only to those administrators to whom it has been expressly conferred.[3].

3. The task of management (internal management) of the company

The management of the company primarily involves the fulfillment of internal management operations, which means deeds required by normal course of the company's business and the purpose for which it was founded. In this sense, art. 70 par. 1 generically stipulates for all types of company governed by Law no. 31/1990, "*administrators can carry out all the operations required for the*

[2] On approval Emergency Ordinance no. 82/2007 amending and supplementing Law no. 31/1990 and other incidental acts. Prior to this legislative change, the two legal provisions were distinguished (letter g^1) "*powers entrusted to managers and directors and if they are to exercise them together or separately*" and (letter i^1) *the representation powers conferred to administrators and, where appropriate, to directors, members of the directorate, and if they are to exercise them together or separately.*" By amending the provision contained in letter g^1) and the repeal of the one stipulated in i^1), at present, the text takes into account the strength of internal management (administration) and the one of representation.

[3] In all cases, the act of vesting the administrator must contain an express statement regarding the right to social signature, that is the power to represent the company

performance of the company's object, apart from the restrictions referred to in the articles of association."

1. The legal disposition is re-engaged with reference to the collective management bodies of the joint stock company. Thus, in the unitary system of administration of the joint stock company, the board carries out the internal management of the company. According to art. 142 par. 1 "*The Board shall be responsible for carrying out all the necessary and appropriate deeds in order to achieve the core business of the company, except those reserved by law for the general meeting of shareholders*." Therefore, the internal management task is a collective one, it devolves on the entire council as a body. In its turn, the Board, in the exercise of the company's management must respect the powers expressly recognized by law to the general meeting. In the dual management system of the stock company, the company's internal management task devolves on the Executive Board as a collective body. Thus, according to art. 153^1 par.1 the directorship "*fulfills the necessary and appropriate deeds in order to achieve the core business of the company, except those reserved by law for the supervisory board and the general meeting of shareholders.*"

From the aforementioned, it results that the administrator/member of the Board has full decision-making authority for all management operations, except those assigned by law to other bodies of society or prohibited by the articles of association.

However, certain legal deeds of disposition, of a particular importance for the assets of the company, may be concluded only with the approval of the general meeting of shareholders.

Thus, *in joint stock companies*, according to art. 150 of Law no. 31/1990, paragraphs 1 and 2 "*if through of articles of association it is not provided otherwise ... under the nullity, the administrator shall be able to own, dispose of or acquire goods to or from the company having a value over 10% of the net assets value of the company only after obtaining approval of the extraordinary general meeting of shareholders. The provisions of par.(1) also apply to renting or leasing operations.*" The text applies adequately to the directorate members or members of the supervisory board in the dual management system, as reflected in the art. 153^2 par.6/art. 153^8 par.3 based on art. 150. Furthermore, the prohibition regards the directors in the unitary management system (art. 152 reported to art. 150), under the delegation of the stock company management to one or more directors.

As it results from the analysis, for transactions of a higher value, the administrator/ director/ member of the Executive Board or the Supervisory Board needs endorsement on behalf of the extraordinary general meeting of shareholders. Thus, in order to conclude legal deeds concerning the transfer of certain assets, including rental or lease between the administrator and the company, if the goods in question have a value higher than 10% of the net assets of the company, the prior consent of the extraordinary general meeting is mandatory. The percentage of 10% is calculated by reference to the approved financial statement for the financial year prior to the one in which the operation takes place, or where appropriate, the subscribed share capital, but only if the financial situation has not been submitted and approved as the provision of art. 150 par. 3 stipulates.

The approval must be obtained beforehand and must come from the extraordinary general meeting, under the quorum and majority conditions required by the Companies Law for this assembly (respectively those provided by art. 115 of the Law). Such an act concluded by the administrator without approval is sanctioned legally by the text mentioned with nullity.

The law sets as punishment, in case of lack of approval on behalf of the extraordinary general meeting, the nullity of the act concluded in such a way, but without distinguishing whether it is absolute or relative nullity. And if these acts or transactions result in damage to the company, they shall be covered by the administrators under the civil tortious law.

In the doctrine[4] it was stated that the penalty applied in the case of lacking approval is absolute nullity, given the imperative character of the legal provision. We believe that, only in appearance, the provisions of art. 150 are mandatory, of public order. First, we have in view the purpose of the regulation, to protect the shareholders against the consequences of any decisions with impact on the company's assets that could be made by administrators, without consulting shareholders. And secondly, that the beneficiary of a measure established by law solely in his favor may waive such a favor, shareholders may waive the statutory provisions listed by a clause in articles of association. Therefore, as required by the very text of the law ("*if through the articles of association it is not provided otherwise*"), through the articles of association it may waive the requirement for approval.

Although we are reserved about such a mandatory regulation, however, based on the text "under penalty of nullity" and to protect the public interest of any company, we believe that the legislator had in view the penalty of absolute nullity. In our opinion, the deed being void, it is considered that it was never completed and, consequently, the liability for damages cannot be contractual, but only tortious.

However, the doctrine[5] stressed that such a sanction may be covered through the general meeting of shareholders decision taken on the basis of a report of the censors which explains the reasons for which the approval has not been previously obtained. In other

[4] Constantin Micu, "Organization of administration in joint-stock companies. The unitary system.", *Romanian Journal of Business Law* 2 (2007): 69

[5] Stanciu D. Cărpenaru et al., *Companies Law. Comment on articles*, (Bucharest, C.H.Beck, 2006), 464; M.G. Sabău, "Mandatory approval of shareholders in general meetings as regardsrenting of real assets of the company", *Commercial Law* 1 (2004):70.

words, there is a subsequent ratification of the operation by the assembly, and therefore, it would be unjust for the deed to be considered invalid, as long as the shareholders intend to ratify it. If, however, such an operation conducted without the endorsement of general meetings led to the misappropriation of assets of the company, it can draw even the criminal responsibility of the administrator.

In compliance with the same formalities and under the same penalty are held the people "close" to the administrator (spouse, relative or in-laws up to the fourth degree), if they dispose of or acquire goods from or to the company. Under the same strictness are the documents signed by the company concerned with a civil or commercial company to which one of the persons abovementioned is administrator or director or holds, alone or together, shares up to at least 20% of the subscribed capital. This shall not apply if either of those is the subsidiary of the other companies (art. 150 paragraph 4[6]).

2. In companies based on partnerships, according to art. 78 par. of Law 31/1990 *"(1) If an administrator takes the initiative of an operation beyond the limits of normal trade transactions practiced by the company, he must notify the other administrators before concluding it, under the penalty of bearing losses that have resulted from this.*

(2) In case of opposition on behalf of any of them, the associates representing the absolute majority of the share capital shall decide.

(3) Operation concluded against the opposition is valid to third parties who had not been communicated such an opposition."

Typically, under the powers of internal management, the administrator of a limited partnership may conclude by himself, without the others' agreement, any acts and operations, as long as they are allowed to achieve the core business of the company. However, the administrator can perform operations that exceed the normal trade of the company (for example: the sale of the stock-in-hand of the company; in block alienation of a significant part of the machinery or real assets of the company; pledging the stock-in-hand; establishment of mortgages on real assets of the company).

The law does not specify what is understood by "limits of regular operation of the trade practiced by the company" nor does it provide a criterion in this respect, therefore, in the doctrine there were outlined two opinions. In the first opinion[7], it was considered that the text envisages operations that breach the core business of the company (as is provided for in the articles of association). Along with other authors[8], we consider that the transaction falls within the scope of business of the company, but it is carried out by exceeding the ordinary commerce transactions carried out by the company. Framing within the regular operation of trade is a matter of fact, assessed on a case by case basis, depending on: the nature of the activities of the company, the volume of transactions and their value.

Exceptionally, the law allows an administrator to conclude operations that exceed the limits of operations typically carried out by the company, but only with the consent of all other administrators (art. 78 par. 1), *and in case of opposition of one of them, with the prior approval of shareholders representing the absolute majority of the share capital* (art. 78 par. 2 of Law 31/1990), *under the sanction of bearing losses that may result therefrom.* In the absence of an express formality in this regard, notification of the other administrators by the one wishing to conclude such an operation can be performed by any means. In case of litigation, the proof of this notice may be made by any means of probation and it falls to the administrator which concluded the transaction. Furthermore, in the case of an objection to the operation that is intended to be completed, the final decision belongs to the associates, who shall decide by an absolute majority of the capital, since ultimately they shall respond unlimitedly and are jointly liable for obligations of the company.

However, if the operation is terminated by the administrator against the opposition on behalf of associates, the company shall be validly kept liable towards the third party. In this respect, it is also stipulated by art. 78 par. 3 "*operation completed against the opposition made is valid towards the third parties...*", the company being so committed to them. An exception is the situation in which third parties were aware of the opposition made when concluding the operation. Therefore, the rule established by paragraph 3 is designed to protect third parties who have contracted with the company, as long as they were of good faith, and considered that the administrator is empowered to conclude the document.

Although the law does not specify, for the same reason, the same shall be the solution if the operation is completed by the administrator without informing the others. In this case, the company is validly liable to third parties. Only if the company proves that the third party knew either that the operation goes beyond the normal trade of the company, or the fact that other administrators have not been notified, it shall no longer be liable for the obligations arising from the transaction.

---

[6] According to art. 50 par. 4 "*provisions of this article shall also apply to transactions in which one party is the spouse or a relative or close to the administrator until the fourth degree; also if the transaction is concluded with a civil or commercial company in which one of the persons abovementioned is administrator or director or holds, alone or together, a share of at least 20% of the subscribed capital, except one of the companies concerned is the subsidiary of the other*."

[7] Hans Kelsen, *The pure doctrine of the law*, (Bucharest, Humanitas, 2000), 187-189.

[8] George Chifan, "The special character of the ability to use of the company. Specific exceptions", *Journal of Business Law* 3 (2004): 62-63 ; Marius Şcheaua , *Company Law no . 31/1990 , commented and annotated*, (Bucharest, Rosetti, 2002) , 115

In both cases, however, the company shall bring an action against the administrator that concluded the act in disregard of the notice of opposition in order to recover any damages. This is because the operation that goes beyond normal trade concluded without the acknowledgment of others administrators or against the opposition of one of them is valid to third parties, the company is committed to them. Thus, by law, liability for any losses resulting from the operation belongs to the administrator, as a penalty that he has not notified the other administrators or disregarded their opposition, concluding an operation that goes beyond the normal trade of the company.

It should be noted that the provisions of art. 78 are optional, so that the associates, by a clause in the articles of association may derogate from them stating that administrators can have the initiative of certain operations that go beyond the usual operations of trade, on their own, without the consent of the other administrators in this regard.

4. Delegating management of the company

Powers of management (internal management) conferred to an administrator of the company must be exercised by the manager himself, according to the common law principle that the trustee must exercise his assignment.

Exceptionally, out of practical reasons, the company law allows the administrator to transmit, under the conditions expressly set, the power of managing the company to another person.

Thus, in the case of the joint-stock companies regulating the institution of delegation of management to one or more administrators, Law no. 31/1990 allowed functional separation of the executive and non-executive components, separation necessary and consistent with the principles of corporate governance, but also established legally the delegation (transmission) of the power of management towards them.[9]

According to art. 143 par. 1 of the law, "*the Board of Directors may delegate the management of the company to one or more administrators, appointing one as general director.*"[10] In essence, this delegation regards routine management tasks, namely the power of management (internal management). Therefore, the management of the company is to be exercised mainly by one or more directors appointed out of the board of directors or from outside, including people from outside the company. For the purposes of the law (art. 143 par. 5), the director of the joint stock company is only the person to whom powers of managing the company have been delegated, in other words the current administration, by exclusion of any other person, regardless of the technical name of the job occupied within the company.

However, art. 143^1 par. 1 establishes the principle that directors "*are responsible for taking all measures related to the company's management, within the limits of the company core business and subject to the exclusive powers reserved by law or by articles of association to the Board and general meeting of shareholders*." Basically, the directors may exercise any power of managing the company, except those provided by law or the articles of association as the exclusive responsibility of the Board. Obviously, there cannot be a total delegation of managing power belonging to the board, which would mean its removal, as a company body. Therefore, directors cannot be delegated the basic competencies of the board provided by art. 142 par. 2 (determining the main directions of activity, establishing accounting policies, preparing the annual report, the preparation of the general meeting, an application for opening insolvency proceedings) nor tasks assigned to the board by the general meeting of shareholders. We believe that directors may transfer those competencies related to everyday activity of the company and for which the regular convening of the council would be difficult. Furthermore, when operative management tasks are delegated to the directors of the company, the Board remains responsible for supervising their activities (art. 142 par. 2 letter d).

5. Conclusions

The task (power) of management (internal management) involves committing physical operations, the implementation of corporate intent embodied in the General Assembly decisions as well as verifying their execution.[11] Thus, the administrator is authorized by the General Assembly to execute its decisions. However, these decisions require the conclusion of legal acts (of conservation, management and disposal) implied by the company's activity, and thus, achieve its core business. However, as we noted, certain legal acts of disposition of particular importance to the assets of the company, may be concluded only with the approval of the general meeting of shareholders. These powers (functions) of the administrator concern the internal management of the company (management), that means relationships the manager has with the company and shareholders. Therefore, the power of management belongs to any administrator appointed under the law.

From the abovementioned, it results that the task of managing is granted to administrators under the

[9] In the case of joint stock companies whose annual financial statements are subject to a legal obligation of financial auditing, delegation of the company management to directors is mandatory.

[10] The text was amended by art. I pt. 92 of Law no. 441/2006. Prior to this change, the Board could delegate part of the powers to a committee composed of members chosen from administrators. This delegation of powers was seen as a rigid rule, resulting in avoidance of the delegation of executive power and its separation of the non-executive one in the joint stock company.

[11] Sorin David and Flavius Baias, "Civil liability of the administrator in the company", *Law* 8 (1992): 26.

articles of association or subsequent to the setting up of the company, by decision of the General Assembly. Instead, power of representation has a twofold character, legal for powers established by law and conventional for duties set out in the articles of association.[12]

Regarding the relationship between several administrators of the same company, and their assigned functions, the company law does not establish common rules for the internal management and the task of representation, sometimes being incomplete.

Regarding the task of managing in joint stock companies with a plurality of administrators, they organize in the board of directors, respectively directorship or supervisory board as collective management bodies with the same obligations, responsibilities and powers as the sole administrator, but with particularity that the attribute (power) of internal management is exercised collectively. Thus, decisions regarding management actions are taken by the Board, by the directorship respectively and not by the administrator alone. However, liability for incorrect administration does not belong to the manager, but it is converted into joint liability of all members that make up the collective body. For partnerships and limited liability companies, Law no. 31/1990 does not provide the possibility of organizing administrators in a collective body, nor does it contain any specific provisions regarding the administration of this company in the event of multiple administrators. However, it merely devotes a single article (art. 76 par. 1) to the rule of unanimity in the administration of the company, namely administrators can work together and make decisions by unanimous vote.

However, in terms of the powers entrusted, there is no distinction between managers, associates and those who are not associated, indicating that in carrying out deeds of administration, the associate administrator shall express a double will, of partner and administrator, so in case of abuse, he shall incur the double penalty of revocation and exclusion from the company. In this sense, art. 222 par. 1 of the law stipulates "*it may be excluded: ... d) the associate administrator who commits fraud to the detriment of the company or serves of the social signature or the social capital for the benefit of his own or others.*"

In all cases, the powers entrusted must be exercised personally by the administrator, because the Companies Act prohibits, in principle, transmission of prerogatives of management and provides joint liability for any damage to the administrators, who unrightfully substitute others. Furthermore, the powers entrusted should be exercised with prudence and diligence specific to a good administrator (art. 144^1 par. 1).

[12] In another opinion, it is the law that, through a set of mandatory and optional rules, creates a framework for performing management and representation activities. Thus, the law is the one that allows the General Assembly to establish the number and scope of the powers of management and representation to be granted to the administrator also the law fixes the limits for granting and exercising them. Tus, this representation is lawful, even if the idea was born of a mandate, it is independent of it. The administrator of the company acts as legal representative of the company, and in reality there is no mandate relationship between the administrator and the company - Sorin David, Flavius Baias, op.cit.,:19.

THEORETICAL AND PRACTICAL CONSIDERATIONS ON THE EXECUTION OF THE LEASING CONTRACT IN ROMANIA

Raluca Antoanetta TOMESCU*

Abstract

Leasing contract: the present study was made with the scope to underline the ambiguity and the controversies between the national laws and the international norms which govern this type of contract, which is so widely used in economically developed countries.

The leasing contract is not a contract for instalments' payment nor a rental contract, it's a special type of contract, a form of financing by which all of the participants capitalize on their resources in a benefiting way, so no one loses and everybody wins.

These benefits can become a reality only by obeying strict and clear norms, which leave no room for interpretation, because any personal interpretation may radically change its legal form, converting it to something totally different from a legal point of view.

The main purpose is not to solve a previously solved equation, but to compare the national and international norms so as to raise necessary questions where they should be raised.

Keywords: *to lease, residual value, the lease term, financed amount, instalment, financial leasing, operational leasing.*

1. Introduction

Based on the translation of the word "leasing", excluding the strict morphological origin from English language, the verb "to lease"- giving towards usage, defines and benefits of a determined legal feature, to grant the right of the precarious detention (the use of something not owned) of an asset for a determined period of time, and at the end of the term having the possibility of transferring the property right, without confusing with the verb "to rent"- to lease, which consists of transferring the right of usage on a strictly determined period of time, at the end of which the owner will retrieve the asset. We make this statement in order to fundament the following theory on this principle.

Leasing is a way to finance individual or legal entities consumers , that wish to acquire movable or immovable assets, on a long time use, but which do not have financial possibilities or do not consider the investment stringently required. This way of financing comes to meet those who cannot or will not access bank loans by encumbrance of movable or immovable assets through the establishment of mortgages or liens. It has proven to be one of the most efficient means of financing productive investments, offering additional security to those who do not dispose of sufficient capital.

The complexity of this contract which at first sight seems so ordinary, together with the legislative gap in our ambiguous legislation, is and will be a constant source of research and informing, but also a controversial source of conflict.

Based on the assumption that in modern society the notion of leasing is almost known, I will intentionally omit the thorough presentation of this contracts' legal features , insisting, on the other hand, upon this contracts' position in the context of current national and international law.

Due to its particular legal structure, but also to its alternative execution conditions, the leasing contract positions itself in a particular framework compared to the other types of contracts, being viewed on an individual basis in terms of enforcing international economic-financial provisions under current legislation.

The main issue that the leasing contract encounters in Romania is represented by the faulty and confusing legislation.

1. PERFORMANCE OF THE LEASING CONTRACT

In the operational area of the leasing contracts 'performance can be found:

- The purchase agreement
- A lease
- A contract of mandate
- A real estate sale-purchase promissory agreement

* PhD Candidate, Faculty of Law, "Nicolae Titulescu" University of Bucharest (e-mail: **ratomescu@gmail.com**).

The provisions of international regulations such as SIC 17[1] and UNIDROIT[2], regarding the leasing contract, have precise specifications about its performing, under one of the two categories, financial and operational, as well as to their defining features , from both the legal and economic point of view. These directing provisions were taken respectively also in the Romanian legislation. Thus, we notice the following:

- The financial leasing contracts are defined as the leasing operation that transfers, largely, on all the risks and benefits incidental to ownership of the asset. The title deed can be transferred, eventually, or not.

I. The features that normally lead to a classification of the leasing operation, as being financial leasing, are:

1. The contract states that the ownership of the asset will be transferred to the holder by the end of the leasing term.

2. The holder has the option of purchasing the asset at a sufficiently advantageous estimated price (small enough in relation to its fair value), so as at the beginning of the leasing, there is a reasonable certainty that this option can be exerted.

3. The leasing contract covers most of the activities' economic life, even if there is no transfer of ownership.

4. The value of the actual minimum of the leasing installments (minimum leasing payments), at the date of the contracts' commencement is at least equal to almost all of the active's fair value to hire.

5. The assets that are subject to the leasing contract are of special nature so as only the holder may use them without making any subsequent changes.

II. Operational leasing contracts are defined as leasing operations which do not qualify as financial leasing.

The different aspect of land and buildings should be retained – overall, of real-estate assets – developed by SIC 17, putting this type of assets in a special class due to their longer lifespan, recommending their registration in terms of operational leasing in order to avoid , in the case of financial leasing, calculation of a high residual value or of a very high installment rate.

Within the meaning of IAS 17 (3rd paragraph), the following terms mean the following:

a) The fair value is the amount at which an asset can be traded or a liability settled, willingly, between knowledgeable parties, within a transaction in which the price is objectively determined , term which has been taken into OG 51/1997[3], as an input value representing the acquisition cost of the asset.

b) The leasing term states the period of time, irrevocable, for which the lessee has contracted to lease the asset […], with or without additional payment, option for the exercise of which the lessee is certain, to a reasonable extent, at the beginning of the leasing. – this concept has been take into OG 51/1997 referred to as the leasing period, but whose definition, although very important, cannot be found within the contents of the ordinance.

c) Economic lifespan is the period of time in which an asset is estimated to be economically used by one or more users; - term that cannot be found in the leasing national legislation, the legislator perhaps considering that the duration strictly concerns the funder;

d) The useful life is the estimated remaining period of time, from the beginning of the leasing term, without being limited thereto, during which it is expected that the incorporated economic benefits are consumed by the entity; - term that cannot be found in the leasing national legislation, the legislator perhaps considering that the duration strictly concerns the user;

e) Minimum leasing installments are payments which the lessee must or may be bound to make, during the leasing term, excluding contingent rent, cost of services and taxes that the lessee will pay and which will be reimbursed thereof – term which we absorb as installment , defined by OG 51/1997 as being "the share of the assets' entry value and the lease interest rate, which is determined based on the interest rate agreed by the parties" – in the case of financial leasing;

f) The residual value represents the estimated fair or market value of the leased asset, at the end of the contract; only did this notion was taken over by Law no.287/2006 as: "residual value represents the value at which, after payment by the user of all leasing installments stipulated in the contract and all other amounts due under the contract, the ownership transfer is made upon the asset to the lessee and is settled by the contracting parties"; whose interpretation taking over evidently raises a number of questions to those interested, being an ambiguous and generic definition which is economically and legally unrelated with the definition found in international regulations. In art. 27 alin. 3 of OG 51/1997, subsequently amended, residual value is looked upon as a random value that will be agreed upon willingly by the parties, in fact wholly misunderstood, from an economic point of view this value is mandatory agreed upon through specific regulations in the area.

In the case of returning the asset at the end of the leasing term, in order to be protected against various risks surrounding its activity and that may affect the residual value of the asset, upon request of the lessor, the lessee will ensure the achievement of the assests'

[1] IAS were issued between 1973 and 2001 by the International Accounting Standards Committee (IASC) and represents a set of accounting standards, all listed companies in the EU are now required to prepare consolidated financial statements in accordance with IFRS (new name). The main purpose of IAS 17 is the definition and disclosure of financial or operational leasing operations.

[2] International Institute for the Unification of Private Law, commonly known under the name UNIDROIT is an independent intergovernmental organization whose purpose is to study ways of harmonizing and coordinating the private law of states and groups of states and progressive preparation for the adoption by its various members of uniform rules of private law.

[3] Government Ordinance no. 51 of 28 August 1997 on leasing operations and leasing companies, the issuer Government of Romania, published in Official Gazette no. 224 of August 30, 1997

residual value to at least a certain value, consented by the lessor, thus named guaranteed residual value. Such guarantee of the residual value can be directly made by the lessee or by means of an affiliated party to the lessee.

Only that this term in our legislation, I mention, was completely ignored, although of major importance in protecting the economic point of view of the financier. The contract provides, according to defining legal rules that ownership of the asset will be transferred to the lessee by the end of the lease term. Thus, given that the lessee takes possession of the title deed at the end of the lease, it will be clear that leasing installments shall have to be sufficient in order to return the lessor his costs plus the reimbursement of invested capital. International regulations make no reference to the lessor / funder accounting registration of amounts collected in advance and that they could claim starting of the lease term. In contrast, OG 51/1997[4], article 6, section. (2) letter "c" specifies imperatively the insertion in the leasing contract of the value of the advance payment, so by default a sum paid in advance.

I subscribe to the course of performing the leasing contract, only by paying installments, without paying any amounts as advance, as defined by international regulations and established by practice, in general, through the annex schedule to the contract, thereafter being registered as revenue for the lessor/financier and as an expense for lessee/user.

Unlike loans, leasing essence is to ensure full funding of an investment, hence the entire cost of acquisition of asset that is subject to the contract.

All leasing companies in Romania claim their customers payment of an amount in advance, and this prior to purchasing the asset that is subject to a leasing contract. Under these circumstances, the financed amount becomes lower than the asset's cost of acquisition, reducing itself by the advance payment paid by the client, with which it basically auto finances.

I believe that by imposing the lessor/financer to make an advance payment as well as by paying the residual value simultaneously with the installments – the leasing contract becomes a sale- purchase agreement with installment payments, starting with the collection of the advance payment, the lessor/financer losing the capacity of lessor, while remaining financier - him becoming a promissory seller, and the lessee/user by accepting to make the advance payment, as well as the residual value simultaneously with leasing installments receives the status of a promisor buyer, thus eliminating from the very beginning the essential and defining feature of the leasing contract, being the temporary transfer of right to use, with the right to option regarding purchase or restitution of the asset that was subject to the contract, because making the advance payment confers the lessee/user not only a precarious right of possession but rather a right to effective property.

Assuming that the lessee/user, after accepting the contracts' conditions on advance payment and inclusion in all or part of the residual value in the installments, due to factors beyond their control or dependent, give up the option of buying the asset or of continuing their leasing contract during its performance, then the amounts representing advance payment, as well as the residual value collected by the financier, may constitute unjust enrichment, not constituting the subject of a leasing contract *stricto sensu* (strict sense).

In the case of leasing contracts, the investment is the lessor's/of the financier, who has the necessary funds to purchase certain movable or immovable assets, which he then gives to be used for an amount to be paid consecutively in installments as leasing rates, on a preset time, the value of the installments, upon enforcement of the contract is at least substantially equal with all of the value of the leased asset, so that at the end of this period the lessee/user can opt for termination of leasing or purchasing the asset. Only then through the collection of the market value or of the amount remaining to be depreciated, strictly defined as residual value and that will benefit the lessor/financer, as owner of the asset, in order to recover the investment made, a transfer of ownership will be done. Since leasing is different from loan precisely because it's meant to provide financing to those who lack equity or attracted (loans) for purchasing the asset, we believe that clear regulations should be imposed upon this issue in the leasing legislation, so that they could contract an asset in a leasing type system without a down payment.

2. TERMINATION OF LEASING

The leasing contract is considered terminated under the following circumstances:

a) If the user refuses to receive the asset upon the deadline stipulated in the lease.

b) If the user is in a state legal reorganization and/or bankruptcy.

c) Failure of the user's right to option.

d) Failure to perform full payment of installments obligations.

I consider analyzing for the Romanian legislator appropriate, especially the situation in which termination occurs for default of payment, as this situation has that generated most disputes relating to the leasing market in Romania last years.

Whenever there is any cause of early termination of the contract, of the nature of wrongful default by a Contracting Party of the obligations derived from the contract, the New Civil Code states that: "*When, without justification, the borrower fails to perform the*

[4] The Act includes changes in the following documents: Tax Code published in 2003; Law no. 533/2004, Law no. 287/2006, Law no. 241/2007; Law no. No 93/2009 published in the MOF. 259 of 21/04/2009; Law no. No 383/2009 published in the MOF. 870 of 14/12/2009.

*obligation and is in default, the creditor may, at its discretion and without losing the right to penalty clauses whether due to him [...] 2. obtain, if the obligation is contractual , **retroactive termination** or termination of the contract or, where appropriate, reducing their correlative obligations; [...] S. N.* "this being confirmed by para. (2) art. 1516.

In the case of the leasing contract when the lessee / user does not perform the obligation to pay the full installments for two consecutive months, calculated from the due date specified in the lease, according to art.15 of OG 51/1997, the lessor / financer has the right to cancel the lease and the lessee/user must return the asset and pay all amounts due up to the date of the refund under the leasing contract.

Art. 15. –"*If the contract does not provide otherwise, if the the lessee / user does not perform its obligation to pay in full of the leasing rate for two consecutive months, calculated from the due date stipulated in the lease, the lessor / funder has the right to cancel the lease and the the lessee / user is required to return the asset and pay all amounts due, until restitution under the lease.*"

Corroborating this benefit conferred by law to the lessor/financier with the power of enforceability of the lease term (art.8 of OG51/ 1997), recovery of the prejudice seems apparently usual. As such, issues arising from the provisions relate to its interpretation and practical application of the law, being the courts attribute.

In the matter of interest here, according to art. 8 O.G. no. 51/1997 on leasing operations and leasing companies, leases, are enforceable titles: "*Art. 8. - leases and real and personal guarantees, established in order to guarantee the obligations under the lease, are writs of execution*". If the lessor / funder will cancel the lease for failure to pay the lease rate according to art.15, the question is whether we can proceed to forced execution of the the lessor / user based on the power conferred by art.8 the lease term of the ordinance?

I think not, because once the lease terminated, it is no longer effective, it no longer has any an output between contracting parties, and a claim to that effect coming from the creditor would amount to the performance of the contract, provided that it opted itself for dissolution of the contract.[5]

1. Both the old Civil Code, the State under art. 1021, that the party who has fulfilled its contractual obligations has choice or to compel the other party to perform the convention if possible or to request cancellation of the convention with damages.

2. Furthermore in the New Civil Code the court prerogatives are intended to restore, where appropriate, the contractual balance of the consideration of benefits and avoid excessive conspicuously abuses, thus as cancellation of the contract for failure to pay, the company financing will be subject to the following provisions:

"Art. 1755 Reserve property and risks

When a sale with the installment payment, the payment obligation is guaranteed with reservation of ownership, the buyer acquires ownership of the date of payment of the final installment of the price; But good risk is transferred to the buyer upon delivery of it.

Art. 1756 Failure to pay a single rate of price

Unless otherwise agreed, failure to pay a single rate, which is more than an eighth of the price, does not give the right to terminate the contract and the buyer retains the benefit period for successive rates.

Art. 1757 Termination of contract

(1) When obtained terminate the contract for failure to pay the price, the seller is required to repay all amounts received but is entitled to retain, in addition to other damages, fair compensation for the use of the asset by the buyer.

(2) When it was agreed that the amounts received as rates remain, in whole or in part, acquired by the seller, the court may nevertheless reduce these amounts properly applying the provisions relating to the court reduced the amount penalty clause.

(3) The provisions of par. (2) applies if the lease and of the lease, if, in the latter case, it is agreed that upon termination of ownership of the property to be acquired by the lessee after payment of the agreed "

Therefore, if the creditor has chosen cancellation of the convention, it cannot require the debtor, naturally, than liquidated damages, damages that can, of course, be proved.

I appreciate therefore that obvious inconsistency between the provisions of the Civil Code and art.15 of OG 51/1997, make it impossible for them to be simultaneously enforced, the legislator being left at the interpretation of the court's judgement to resolve this conflict of laws.

Due to the unusual and complex leasing contract, and due to the lack of clear legislation in this field, leases are subject to numerous interpretations thus generating a large number of disputes.

Hoping to revitalize the leasing market in Romania, I consider it appropriate to revise the current legislation and its completion in accordance with international regulations, for this the beginning being constituted by the provisions of the New Civil Code, which already began to have effect. Based on this, although major inconsistencies appear between theory and practice, sometimes daunting, we remain nevertheless at the opinion that the variant of leasing, financial or operational, gives the user account of the undeniable advantages in comparison to other methods of buying or renting.

SOME CONSIDERATIONS REGARDING THE NOTION OF ENFORCEMENT ORDER

Nicolae-Horia ȚIȚ*

Abstract

The issue of enforcement orders is particularly important for the field of regulations applicable to the execution. Enforcement order are the fundament of enforcement proceedings, aimed at fulfilling the obligation contained in the title. With reference to the current regulation of enforcement orders, we must distinguish between formal titles, that require a verification of their enforceability prior to the onset of the enforcement proceedings, and substantial titles, which are enforceable by law at the end of the procedure of which they emanate. With reference to this distinction, the article analyses the characteristics of enforcement orders, making a number of clarifications and remarks about the procedure for declaration of enforceability, recently reintroduced into the Civil Procedure Code by Law no. 138/2014.

Keywords: *enforcement, enforcement order, European enforcement order, declaration of enforceability, judgement.*

1. Introduction

The issue of enforcement increasingly concerns theorists and practitioners in Romania, especially after the advent of the new Civil Procedure Code (CPC). Enforcement rules go through a strong process of autonomy to those applicable to the trial phase of the civil trial[1], a phenomenon that determines the individualization of civil execution law as a distinct branch of law[2]. There are numerous scientific papers on enforcement procedure (we refer in particular to courses and dissertations), many authors analyse enforcement issues and in many Law faculties enforcement procedure is studied as a matter separate form civil procedure. Modifications to the new CPC by Law no. 138/2014[3] intensified the interest in the matters regarding enforcement procedures, as well as the practical problems raised by the entry into force of this law, from the time application of enforcement rules to the and to change the procedural rules (among them standing out the removal of the enforcement approval procedure from the jurisdiction of the enforcement court and the its attribution to the enforcement officer, the reintroduction of the declaration of enforceability procedure for arbitration awards and enforcement orders other than judgements, the regulation regarding the possibility to appeal only the minutes of the auction, and not the act of adjudication in the forced sale of immovable assets procedure etc.).

This article aims to address the issue of enforcement orders, based on the importance and relevance to the enforcement proceedings, under Article 632 para. 1 CPC. Although the importance of this topic is relatively high, it is to be noticed in the legal literature in Romania the absence of a monographic approach to the enforcement orders; however, there are numerous general studies[4] or

* Senior Assistant, Ph D, Faculty of Law, Private Law Department, "Alexandru Ioan Cuza" University of Iași (e-mail: **horia.tit@gmail.com**).

[1] In another study, we brought as the main argument of the phenomenon of autonomy of enforcement procedure the terminology used in Art. 24 and 25 para. 1 CPC and art. 3 par. 1 of Law no. 76/2012, which tends to individualize enforcement proceedings as an activity different from the trial, given the possibility that the two are governed by different procedural rules. See, in this regard, Nicolae-Horia Țiț, "Conceptual Distinctions regarding the notion of Enforcement", *Journal of Public Administration, Finance and Law* Special issue 1 (2014): 146-147, accessed March 4th, 2015, http://www.jopafl.com/uploads/issue6/CONCEPTUAL_DISTINCTIONS_REGARDING_THE_NOTION_OF_ENFORCEMENT.pdf

For the French

dedicated to certain categories of enforcement orders. Most contain a descriptive presentation of enforcement orders, listing the main regulations applicable, but relatively few conceptual distinctions. Through this paper, we propose a novel classification of executive orders, by reference to the substantive law and in particular to the general theory of obligations. To this end, we analyse the relevant provisions of the CPC and the Civil Code (CC) and the European regulations on executive titles, in order to highlight the relevance of the existence or occurrence of an enforcement order within the obligational legal relationship. Starting from the classical distinction made between judgments and other enforcement orders, we will consider both the substantial insight concerning the enforcement in kind and though compensation obligation and the procedural one, on the formalities to be carried out prior to the enforcement application. By this analysis, we propose to determine a change of approach in the matter of enforcement orders, especially in the context of generalization, by Regulation 1215/2012, of the possibility to certify as European Enforcement Orders of judgments given in a Member State[5].

2. What we refer when we define and classify enforcement orders?

With reference to the provisions of art. 632-642 CPC, and exclusively from a formal perspective, enforceable titles can be classified into two broad categories: judgments and other documents or decisions which the law gives enforceable nature[6], the essential difference in procedural terms, among them being that the first are not subject to the procedure of declaration of enforceability, while others are (art. 640[1] CCP for documents other than judgements and art. 615 CPC for arbitral awards).

By entering into the equation the concept of European Enforcement Order (EEO), they would individualize as a separate category (art. 636 CPC)[7]. We also might identify as a distinct category of enforceable titles those emitted during enforcement procedures, for which it is not necessary for a declaration of enforcement (e.g. the enforcement officers minutes regarding expenses made during the procedure - Art. 696 para. 4 CPC, or the adjudication act as a result of forced real estate sale - Art. 855 para. 2 final sentence CPC, except that, for the act of adjudication it is necessary to create a new execution file, i.e. a new application for enforcement and a new verification of the conditions to trigger the enforcement, under Art. 665 CPC).

From another perspective, a substantial one, the enforcement order is the incarnation of a civil obligation[8], capable of being implemented within the enforcement procedure prescribed by law (Art. 628 para. 1 CPC). What determines the existence of the enforcement order is the substantial legal relationship, whose content consists of rights and obligations whose breach or failure, improper or delayed fulfilment resulted in issuing the title, either by following an adversarial judicial proceedings (in case of judgments, European order for payment procedure or the judgement given in the European small claim procedure), or following a graceful procedure (like the declaration of enforceability or the certification as a European Enforcement Order for uncontested claims[9]).

Tracing the emergence of the enforceable title, we can talk about a phenomenon of crystallization of legal relationship, of certification and liquidation of the debt, if we were to consider the features that it must satisfy according to art. 662 CPC. This phenomenon puts its mark on procedure to be followed in order to obtain an enforceable title. As a general rule (although its status rule can be easily put into question, especially in the current widespread use of the documents that are directly enforceable without the need for triggering civil judgment[10]), the appearance is the result of contentious procedure, based on contradictory and completed by the delivery of an act of jurisdiction, whether it is a judgment or arbitration award. In this procedure, finalized with a judgement, the substantial rules have a paramount importance and the role of the right holder is essential, considering the principle of availability[11].

In this regard, it should be noted that the notion of enforcement is not specific to procedural law. In substantial law, reference to enforcement is made in

doctrine, see Roger Perrot, Philippe Thery, *Procédures civiles d'exécution, 3e Édition refondue* (Paris: Dalloz, 2013), Anne Leborgne, *Droit de l'exécution, Voies d'exécution et procédures de distribution, 2e Édition* (Paris: Dalloz, 2014), Nicolas Cayrol, Droit de l'exécution (Paris : LGDJ, 2013), Philippe Hoonakker, *Procédures civiles d'exécution. Voies d'exécution. Procédures de distribution, 3e Édition* (Buxelles : Larcier, 2014).

matters relating to fulfilment of obligations, along with the payment, as way of executing an obligation. Emphasis should be placed differently, however: the rules contained in the Civil Code (Articles 1516 – 1548) are substantial, conducting to a transformation of the legal relationship determined by voluntary non-performance of the obligation, i.e. the payment. In the absence of payment, the creditor, as provided by art. 1516 par. 2 C. civ., has three alternatives: to request for an enforceable judgement or, in case he already holds an enforceable title, to apply for the enforcement of the obligation; to obtain, if the obligation is contractual, the rescission or termination of the contract or, where appropriate, the reduction of their reciprocal obligations; to use, where appropriate, any other means provided by law to achieve its right[12].

The creditor is entitled to achieving full, accurate and timely execution of the obligation (art. 1516 par. 1 of the Civil Code.), which means that its right is automatically doubled under the law: the creditor holds two rights: a substantial one, the subjective right itself, contained by the legal relationship with the debtor and resulted either by a manifestation of will or by a legal fact, and a procedural one, embodied in the enforceability of the title, allowing him to opt between an execution in kind or by equivalent, according to Article 1527 and 1530 Civil Code[13].

The way in which the obligation is transformed, becoming an enforceable debt often relates to the completion of a judicial or arbitral proceeding, through which the court or the arbitration establishes the alleged acts and deeds indicated by the applicant and give their legal qualification, resulting in a judicial act which, by law, is apt to be brought out by enforcement. As a result the jurisdiction, the legal relationship may undergo a transformation, because, in some cases, the enforceable debt is different from the original obligation of the debtor (especially in the case of contractual relations), but an equivalent amount of money meant to cover the creditor's damage or compensate for the loss.

There may also be situations where the judgement strictly implements into and enforcement order the structure of the existing legal relationship, so that the debtor will be enforced for the exact actions that represented his obligation in the first place, by virtue of the acts or deeds that generated the legal relationship. In some cases, by virtue of the law, the obligation is ex lege enforceable, without the need for the creditor to apply to the court, given the nature of the contractual obligation and the formal requirements of the contract (for example, for the obligation to return the leased asset, the lease contract concluded for a specific period of time by an authentic document or the agreement signed under private signature and registered at the competent fiscal body shall be enforceable under the law, subject to the formality of the declaration of enforceability, according to art. 1809 par. 2 and 3 CPC).

3. Formal and substantial titles. Some considerations on the declaration of enforceability procedure

Another distinction might consider formalities required for the document to be enforceable.

Following the amendment of the CPC by Law no. 138/2014, the procedure of the declaration of enforceability was reintroduced for the titles that are not the result of a procedure in front of a court, i.e. documents that the law provide as enforceable titles (art. 640^1 CCP) as well as for arbitral awards (art. 615 and art. 635 first sentence CPC) and the decision of other bodies having jurisdiction over some special matters (Art. 635, second sentence CPC).

Some distinctions are required in this regard. It is noteworthy that in all possible situations, the enforceability of a security or title is determined solely under the law[14]; a document cannot gain enforceable power by virtue of the will of the parties, even if the content of the legal relationship is represented by rights that parties may dispose of.

Even if this issue is not explicitly mentioned in Art. 625 CPC, which regulates the principle of legality in the course of procedural enforcement, the eminently legal character of enforceability derives from the interpretation of art. 632 CPC, which establishes, first, that any procedure of enforcement execution can take place only pursuant to an enforceable title, then lists enforceable titles stating that such a character can have only those which the law provides for. Therefore, in order for the right to be achieved via enforcement procedure, there has to be first a legal provision stating the enforceable character of the title, at a general and abstract level, conferring a higher legal force to certain decisions or documents.

The distinction to which we referred in the previous paragraph envisages the procedure that the creditor must follow to obtain the writ of execution, procedure, also imperatively established by law: in cases where the law confers enforceable abstract character to certain securities, it is often not enough to trigger the execution procedure, requiring, in particular, a verification of certain formal requirements in relation to document or judgment, the verification procedure conducted through the declaration of enforceability. This is to certify that, in particular, the title held by creditor falls into the category of those who by law can be enforced and that, eventually, there are no formal impediments that would prevent the title to be enforced. During the

[12] For the substantial remedies provided by law for the creditor, see Liviu Pop, Ionuț-Florin Popa, Stelian Vidu, *Tratat elementar de drept civil. Obligațiile* (București: Universul Juridic, 2012), 254-262.

[13] Nicolae-Horia Țiț,"Conceptual Distinctions regarding the notion of Enforcement": 148-149.

[14] For the notion of law in this context, see Ion Deleanu, Valentin Mitea, Sergiu Deleanu, *Tratat*, p. 31.

procedure of the declaration of enforceability, the court will not check the requirements for triggering the enforcement, which shall be verified by the bailiff via the minutes for the approval of enforcement, under art. 665 CPC, particularly with regard to situations covered by law when the application for enforcement (Art. 665 para. 5 CPC) will be rejected by the bailiff[15]. The procedure of the declaration of enforceability concerns only the verification of the title and not of the claim, or, in other words, the substance of the right[16].

In this respect, two observations are required. The first one concerns the very notion of enforcement title or order, specifically the source of enforceability. As noted above, the enforceability arises form law in all situations; the title is enforceable under the law, not on his declaration of enforceability. A document is an enforceable title even if not declared enforceable, this character being conferred by law. The procedure of the declaration of enforceability is a non-contentious procedure which checks whether that document falls into the category of writs of execution and cannot be interpreted as a procedure through which the title becomes enforceable[17].

This interpretation is supported both by the drafting par. 1 of Art. CPC 640^1 (according to which "execution titles other than judgments can be enforced only if declared enforceable") and the content itself of the enforceable formula: "... we empower and order the bailiffs to enforce title ... "(art. 640^1 par. 6 CPC). Therefore, the title exists before the procedure of declaration of the enforceability is triggered, because its enforceability derives directly from the law and the court only checks and certifies it by the procedure of the declaration of enforceability. Therefore, the declaration of enforceability has only a declarative, not a constitutive effect. The document does not become an enforcement title as a result of the procedure of the declaration of enforceability, but is enforceable by law, and this character is only checked and certificated throughout this procedure.

Another argument in this regard is represented by the fact that the law provides for two distinct situations in which the request for enforcement may be rejected: the judgment or, where applicable, the document, is not by law an enforcement title (art. 665 par. 5 pt. 2 CPC), and that the document other than a judgment have not been declared enforceable (Art. 665 para. 5 pt. 3 CPC). The law therefore provides the two as different issues, the enforceability being conferred by the law and not by its declaration by the court.

A second observation on this issue concerns a matter discussed and controversial in the literature and recent practice. Two opinions were developed in connection with legal and technical operations related to the declaration of enforceability: first, that it is not necessary to submit the original title and the declaration of enforceability is to be contained in a separate writ of execution, communicated to the creditor, manifested especially in the practice of the courts; the second, that the original title must be filed by the creditor and the declaration of enforceability is applied on the title, becoming a part of it, expressed in the doctrine[18].

In connection with this matter, we have a mid-opinion: first, we consider that the enforcement formula should not be applied on the enforceable title. As noted above, the title exists prior to the procedure of the declaration of enforceability and it is the law, and not the declaration which gives the title its power. Enforceability exist in the abstract, as conferred by law and investiture procedure serves only formal verification and confirmation. Otherwise, the writing of art. 640^1 CPC would have to be different, namely "documents (not enforcement titles), other than judgments can be enforced only if they are declared enforceable". Such wording would be contrary to the rule laid down in art. 632 para. 2 final thesis CPC, according to which enforceable titles are the documents that "... can be enforced by law." Therefore, substantial enforceability is conferred by law: for example, the documents authenticated by a notary public, to the extent that they contain a certain and liquid debt, become enforceable titles if the debt has fallen due (art. 100 of the Law no. 36/1995 of public notaries and notary activity, in conjunction with Art. 639 para. 1 CPC)[19].

Enforceability is established by law in connection with substantial features of the claim, especially since the certainty of the claim practically merges in current regulation with the undoubted existence of the claim in the wording of the enforcement title (Art. 662 para. 2 CPC). The

---

[15] In this regard, the introductory wording of art. 665 para. 5 CPC is objectionable because the executor does not solve in the procedure for the approval of enforcement an application for the approval of the enforcement, but the application for enforcement itself, launched by the creditor under art. 663 CPC. The phrase was taken from the previous regulation, prior to Law no. 138/2014 that regulated the application for enforcement and the application for the approval of the enforcement as two separate acts, the first being launched by the creditor to the executor and the second by the executor to the court. For details, see Nicolae-Horia Țiț, "Sesizarea organului de executare și încuviințarea executării silite în reglementarea noului Cod de procedură civilă", *Revista de științe juridice*, 2(2013): 192.

In this context, the wording used in the art. 665 para. 5 CPC ("bailiff will reject the application for the approval of enforcement ...") does not match the one used in par. 1 ("request for enforcement shall be settled within 3 days after its registration") and requires, de lege ferenda, to be replaced by "bailiff will reject the request for enforcement."

[19] Oprina, Gârbuleț, *Tratat*, 340-341.

declaration of enforceability is nothing but a formalization of the existing substantial enforceable character, by simply checking the consistency between the actual title held by the creditor and the category of documents provided by law[20].

We can conclude that there is a substantial sense of the notion of enforcement title, represented by the certain and undoubted establishment of the obligation to be accomplished by the executor, which is usually a judgment but in some cases may be determined by express provisions of the law, which removes the obligation of the creditor to apply to a court and gives him the right to take direct enforcement, based on the category of the title (e.g., promissory note, according to Art. 640 CPC) or on the formalities that were brought out while preparing the document (e.g. document authenticated by a notary public, according to Art. 639 CPC and Art. 100 of Law no. 36/1995). There is also a formal sense, different from the first, which requires certification of the court, if the title is another document than a judgment. In these circumstances, the declaration of enforceability is not a part of the substantial title, to be included in the conclusion rendered by the court for that purpose. This finding emerges from its very wording ("... for which purpose the present conclusion for the declaration of enforceability was passed")[21].

From this point of view, we do not embrace the opinion that the writ of execution shall be applied directly on the original title, but consider correct the practice of the courts that have declared the enforceability by a separate document, containing the enforcement formula. From the wording of art. 640^1 par. 6 CPC undoubtedly comes the conclusion that the declaration of enforceability is part of the court order, and not of the title itself, with the consequence that the effect it produces is strictly related to the power conferred to the creditor to request triggering of enforcement, and not necessarily to confer enforceable character to the title itself[22].

Secondly, on the question of the mandatory filing the original title along with the application for the declaration of its enforceability, we consider that, at least as a general rule, it is not necessary. As noted, the title exists and has an enforceable abstract character independent of the declaration of enforceability procedure. Enforceability precedes this procedure and derives directly and exclusively in the law. Therefore, the verification of the court has no constitutive character, but only declarative, in which case it would not be required that the original title be filed. The verification made by the court regarding the enforceable character of the title, namely if the title held by the creditor is such a title provide by law, can be made based in a copy and not necessarily the original, especially since in some cases, the creditor is not in possession of the original, preserved by the instrumentation agent (e.g. acts authenticated by a notary public, which are prepared in a single original, kept in the archives of public notary - art. 97 paragraph 1 of Law no. 36/1995). Being a non-contentious procedure, according to art. 532 para. 2 CPC, the court may take ex officio any measure necessary for solving the application, therefore could, if it considers necessary, order the original appearance for confrontation, if it considers that it is necessary for the verification and declaration of enforceability. Original submission is not required as a rule and there is no express mention in this regard as long as the formula is not to be applied on the original title, as we have shown above.

4. Conclusions

The notion of enforcement title or order has two components: one that involves the embodiment into the title of the substantial characteristics and elements of the legal relationship, in terms of the options that the law provides for the creditor (execution in kind, termination / rescission and restitution of benefits, execution by equivalent), the other, formal, given the conditions which must be met in order to proceed to enforcement. In case of judgments or other titles that do not require a declaration of enforceability enforceable (European enforcement orders, acts of adjudication), the two components are embedded and embodied in the very existence of the title. With arbitral awards and other documents requiring a declaration of enforceability, the two components are separated: in addition to the mere fulfilment of requirements provided by law for enforcement, a formal verification of these conditions must be made by a court, achieved through a declaration of enforceability. This does not confer the title its enforceable character, but only confirms and certifies that character, for which the declaration of enforceability is not a component of the title, but of the court order.

[20] Perrot, Thery, *Procédures civiles d'exécution*, 139.

[21] On the contrary opinion, see Toma Cătălin Răileanu, „Câteva considerații privind învestirea cu formula executorie", http://www.juridice.ro/360231/cateva-consideratii-privind-investirea-cu-formula-executorie.html (visited March 5th, 2015).

[22] In France, the declaration of enforceability ("formule exécutoire") is applied on a copy of the title. See, Perrot, Thery, *Procédures civiles d'exécution*, 139. However, the French legislation regarding this issue is different from the present Romanian legislation and in many parts similar to the regulation of the former Romanian Civil procedural Code, in the sense that even the judgement are subject to a declaration of enforceability, and the enforceability of the title derives from this declaration (Leborgne, *Droit de l'exécution, Voies d'exécution et procédures de distribution*, 186-187).

In French doctrine, the enforcement order is defined as the "document which bears the declaration of enforceability" („On définit parfois le titre exécutoire comme étant celui qui est revêtu de la formule exécutoire" - Perrot, Thery, *Procédures civiles d'exécution*, 139) and, therefore the declaration formula is a part of the title, unlike the Romanian system.

THE CORRELATION BETWEEN THE INHERITED DEBT AND THE RIGHT OF OPTION ON SUCCESSION

Ana-Maria GHERGHINA (VASILE)*

Abstract

A natural person's patrimony consists, apart from rights (assets of the succession), of a liabilities side as well related to obligations that the patrimony's holder bequeaths onto the heirs following his/her death. The succession implies that there are two parties, i.e. the assets of the succession and the inherited debt. The inherited debt is mainly made up of the inheritance duties and liabilities. The main components of the inherited debt are the debts the deceased has left, following that the duties shall be the obligations arising out after the succession will be opened.

However, without defining the inherited debt concept in the specialized literature, successional liabilities have been considered to mean those patrimonial obligations of the deceased toward a third party or the inheritors existing in the successional patrimony on the opening of succession, regardless of their origin (contractual, tortious or legal). Inheritance duties refer to those obligations which did not exist in the de cujus patrimony, but come into existence devolving upon the heirs on the date of succession's opening or subsequently after that time, either in consequence of the deceased's desire, or independently of it.

The main characteristic of the option on succession is that the right of option belongs exclusively to the presumptive heirs. From this point of view, the option on succession seems to have nothing in common with the inherited debt. Nevertheless, I intend to analyse the correlation between the two institutions from the perspective of the place inheritance creditors hold in the totality of rights of option. Their presence is only justified when there is an inherited debt.

Keywords: *inherited debt, duties, liabilities, right of option, inheritance.*

1. Determining the liabilities in the probate estate

Determining the inherited debt is absolutely necessary in order to establish the field of application of the rules concerning the succession rights. Establishing the inherited debt is mandatory as it considers both the persons liable to settle them, as well as the rules concerning the settling of the liabilities. These legal procedures are compulsory in the case of liquidation of any succession, when there are debts.

When determining the liabilities, one takes into consideration the link connecting the debts of the deceased, the ones part of the inherited debt and which are uncontested, these debts having in common the person liable for payment. Another common trait of the deceased person's debts is their transmissible character, having at the basis the principle of the "survival of the deceased person's debts". In another train of thoughts, the deceased person's debts don't have an *intuitu persone* character concerning the debtor, having the same legal regime.

We have mentioned in our scientific approach that the inherited debt includes the debts and duties the deceased incurred during his life, followed by an analysis of the categories of debts and duties excluded from the inherited debt.

Therefore, an opinion states that the taxes and duties related to the transmission of the right of property over the successional assets are not included in the inherited debt. The amounts accordingly due to the fiscal administration do not result from a tight assimilation with the debts of the deceased, but they don't correspond accurately to the rights of a personal creditor of the deceased[1] either.

The taxes and duties that are applied to the transfer procedures of the succession rights are considered a personal duty of the successors and not of the succession, as they benefit from this transfer. Therefore, these taxes cannot be brought at the estimation table of the available share of the estate as they are considered to be owed to the state, following the notary successional procedure of settlement of the estate and are not assimilated to the funeral expenses. Thus, the taxes and charges necessary for the transfer of the succession rights are personal duties of the inheritors.

2. Creditors of the legal inheritors. Introduction

According to Article 1107 of the Civil Code, the creditors of the legal inheritors can accept the inheritance by means of a derivative action, within the limit of settling their debt. This article of the law rules out the controversies concerning the possibility of the creditors of the prospective inheritors to exercise the inheritor's right of successional option by means of a derivative action in order to accept the inheritance but only to the extent of settling their debt. The justification given by the doctrine takes into consideration the fact that their derivative acceptance

* PhD Candidate, "Nicolae Titulescu" University of Bucharest (e-mail: **vasile.anamaria4@yahoo.com**).

[1] See A.L.Banu, *Pasivul succesoral (Successional Liabilities)*, Universul Juridic Publishing House 2011, page 156.

can only consolidate the title of legal inheritor the prospective inheritor has at the opening of the succession, although it was asserted that the option cannot be exercised by means of a derivative action by the creditors of the prospective inheritors as it has a personal character, only the entitled one being able to estimate whether it's the case to accept or not the inheritance and a derivative acceptance made by the creditors of the legal inheritors would violate the principle according to which no one can be forced to accept an inheritance[2].

Although the name given by Article 1107 of the Civil Code regards the creditors in general, there is the possibility to make an acceptance of the succession the prospective inheritor is entitled to and acknowledged to him, but not to the creditors of the succession. Therefore, according to Article 1122 paragraph (2) of the Civil Code on the fraudulent consequences of waiving with effect only on the plaintiff creditor and only within the limit of his debt, the acceptance of the inheritance made by the creditors of the prospective inheritor produces effects only in the extent necessary for settling one's debt, and these effects are produced only regarding the plaintiff creditor.

In its turn, Article 1113 of the Civil Code gives the right to any concerned party (thus also to the creditors of the succession) to request the prospective inheritor to opt for the succession sooner than within the one-year time limit provided by the law. This way, the creditor has the legal opportunity to meet the circle of persons against whom one can bring civil procedures in order to recover the debt, as the prospective inheritor either accepts, or waives the inheritance.

Article 1156 paragraph (5) of the Civil Code also gives an advantage to the creditors of a succession by means of the privilege they have against the creditors of the legal inheritors and states that out of the assets attributed with the partition or out of those replacing them, the creditors of the inheritance shall prevail in being paid before the personal creditors of the inheritors.

3. Acceptance and forms of acceptance of the inheritance by the creditors

According to the provisions of the Civil Code, the creditors of the prospective inheritor can act by means of a derivative action and accept the inheritance in the place of the inactive holder of the right. The old Civil Code didn't provide this expressly, reason for which two contrary opinions were generated. According to the majority, the personal creditors of the inheritor have the possibility to accept the inheritance by means of a derivative action, the title of inheritor the prospective inheritor received upon the passing away of the testator being consolidated by means of this acceptance. The logic of this point of view was given by the fact that the right of successional option is of patrimonial instead of personal nature.

A contrary opinion states that the option cannot be exercised by the personal creditors of the prospective inheritor because, despite its patrimonial content, the right of option has potestative character which gives it a strong personal character as well. For this reason, it can be exercised only by the legal inheritors, as only they are summoned for the inheritance according to the law or to the will and only they can be holders of the right of option[3].

We acquiesce in this last point of view as we consider that the principle of the free right of successional option must be observed, even if the legislator opted for the first point if view, more objective and meant to protect the civil legal circuit. For this we shall analyse of the right of succession right of the creditor of the prospective inheritor, showing the degree in which he can become the holder of this right.

We make a distinction between the creditors of the succession and the creditors of the prospective inheritors. The creditors of the succession shall not be able to take a derivative or revocatory action, as the prospective inheritor who didn't opt doesn't become a successor, remaining alien to the inheritance, and cannot be forced to opt in any way, as a result of the potestative character of the right of option. At most, the prospective inheritor can be forced by the creditors of the succession to express the option within a shorter amount of time than the one provided by Article 1103 of the Civil Code (one year), regardless of the prospective inheritor's form of option. Only after the prospective inheritor expressed his option by becoming successor, one might put the problem of the rights of the creditors of the succession or of the creditors of the successors to act in one way or another function of their interests[4].

In order to protect his rights, the creditor of the succession has the right:

- to force the successor to opt, not to accept the inheritance, by any mean, even before the end of the one-year term provided for expressing the successional option;
- after the inheritor expresses his option, depending on his decision, the creditor of the succession is a privileged party before the creditor of the prospective inheritor and may act for reclaiming his debts by taking advantage of his advantage;
- if the option expressed is fraudulent, the creditor

[2] See F.A. Baias, E. Chelaru, R. Constantinovici, Ioan Macovei, *Noul Cod civil. Comentariu pe articole, (The New Civil Code. Reflections on amendments)*, C.H. Beck Publishing House, Bucharest, 2012, page 890.

[3] See I. Dogaru, V. Stănescu, M.M.Soreaţă, *Bazele dreptului civil. Vol V – Succesiuni (Bases of the Civil Law. Volume V – Successions)*, C.H.Beck Publishing House, 2009, page 257.

[4] See I.Popa, *Drept civil. Moşteniri şi liberalităţi (Civil Law. Inheritance and liberalities),* Universul Juridic Publishing House, Bucharest, 2013, pages 449-450.

of the prospective inheritor may take a revocatory action for annulling a waiving to an active inheritance or an acceptance of a passive inheritance[5].

As a consequence, knowing that the creditors of the succession and those of the prospective inheritor have an equal interest in recovering their debts, the difference between them being given only by the privilege of the creditor of the succession before the creditor of the prospective inheritor, the institution of separation of the estates is no longer available.

To support all the above-mentioned, we may say that the creditor of the succession, without having the right to a derivative or revocatory action by means of the presidential ordinance, may force the prospective inheritor to express an option within a term even shorter than one year time. If the prospective inheritor accepts the inheritance, the creditor of the succession in his capacity of privileged party shall be given preference over any other creditor for the recovery of the debts, but if the inheritor waives the inheritance, the creditor of the succession has no longer the possibility to take a revocatory action and shall redirect his action against the other inheritors accepting the inheritance, if they exist, and if they are not against the territorial and administrative unity in case of vacant succession.

The creditor of the prospective inheritor, although he has the possibility to speed up the prospective inheritor to opt within a shorter time and may take a derivative action which allows him to express the option in the place of the inheritor, and the revocatory action which allows him to revoke a fraudulent action, doesn't benefit however from the privilege of the creditor of the succession, therefore, when competing with the later, the creditor of the prospective inheritor shall comply with the advantage of the creditor of the succession.

4. The derivative action and the inherited debt

Article 1560 from the Civil Code defines the derivative action as the situation in which the creditor whose debts are uncontested and enforceable and who may exercise the debtor's rights and actions when the later refuses or neglects to exercise them to the prejudice of the creditor. The creditor won't be able to exercise the rights and actions closely connected to the person of the debtor.

To be mentioned that only the creditors of that inheritor meeting all the conditions to be called upon the inheritance have the possibility to exercise the right of successional option in his place. Therefore, if the prospective inheritor doesn't have the legal competence or lacks successional vocation, is unworthy or has been exhereded by the deceased, being unable to take part in the settlement of the estate, his creditors won't be able either to exercise this right in his place.

The derivative action has a range narrowed to merely exercising the rights of the debtor with patrimonial character, case in which there are several limitations nevertheless. Thus, according to an opinion, the following category of rights cannot be exercised by means of a derivative action:

- rights concerning the settling of the debtor's estate or of individually determined assets (loaning an asset, leasing a land, alienating a possession, assigning rights);
- rights and actions connected closely to the person of the debtor and implying a personal consideration from his part (dissolution of marriage, revoking a donation on grounds of ingratitude, cutting back of an allowance);
- intangible patrimony rights that, as they cannot be traced, cannot be exercised by the creditors (right to an allowance, usufruct, right of occupation)[6];

Therefore, by analysing the law, one may notice that for exercising the rights by means of a derivative action, the debt must be uncontested and enforceable, its existence must be accepted and the creditor must be able to demand the payment from the debtor, the debt must have reached its maturity and not to be barred. On the other hand, the debtor must not exercise personally his right of option, case in which the creditor of the prospective inheritor cannot take a derivative action any more. Ultimately, for exercising a derivative action, a legitimate interest of the creditor must exist, materialized in the prejudice he suffers as a consequence of the debtor's passive behaviour.

The passive debtor is part in the process, as the derivative action produces effects regarding him, regarding different creditors, but the derivative action, although individual by means of its exercise, produces collective effects, in the sense that the situation created is profitable for all the creditors, with no preference for the plaintiff creditor.

For this, acceptance of the inheritance by the creditors of the prospective inheritor is essentially different from the applicable common right of the derivative action. The legislator expressly provided that the inheritance shall be accepted only to the extent of satisfying the respective creditor who proceeded in exercising the right of option in the place of the prospective inheritor. Such an acceptance shall not be profitable but to the creditor who acted in the name of his debtor or to that creditor who, having rights similar to those of the plaintiff, intervened in the process or expressed his own acceptance[7].

So, by means of the derivative action, the creditor doesn't become the holder of the title he

[5] Idem 452.

[6] See D. Negrilă, *Dreptul de opţiune succesorală. Vol.I (Right of successional option, volume I)*, Universul Juridic Publishing House, 2014, page 174.

[7] Idem, page 175.

recovered, but only replaces the inheritor in exercising his right.

An opposite situation would be unconceivable, being known that the right to succession is conditioned by the existence of the successional vocation the successor of the deceased must have. His personal creditors, as they don't have this vocation, cannot express the option on these grounds and, in terms of the fact that, for no damage to be incurred, a limited access to the debt is given to them and conditioned by the existence of the debtor among the inheritors of the deceased.

As a result, by means of the procedure of acceptance, the creditors do not become successors and do not acquire their prerogatives, as it's well known that no person can be successor unless called upon an inheritance either according to law, or by means of a will.

In regard to the succession and to its author (the deceased), the creditor's rights are justified only by the existence of a debt against the prospective inheritor and only within the limits of this debt.

One must understand therefore that the creditors of the prospective inheritor must not be analyzed as true holders of the right of successional option, but as substitutes of the inheritor and only with partial character, in the extent necessary for settling their debts. Even if the creditor accepted a succession in the place of the inheriting debtor, the sole holder of this successional right remains the inheritor, being able to exercise it as he pleases, because one cannot speak of the irrevocability of the successional option action as there is no proper acceptance, nor about the inheritor becoming an acceptant for the entire part of the inheritance he is entitled to. The acceptance expressed by the creditor of the prospective inheritor is limited therefore only to the value of the debt, and the irrevocability of the action of option refers only to this value. For the rest of the inheritance the prospective inheritor is entitled to, the later can opt as he pleases. Nevertheless, only his personal acceptance shall make the inheritor a successor. The prospective inheritor's waiver shall retroactively annul his title of inheritor, except for the share needed to pay the debt of the plaintiff creditor.

The waiver shall determine the access to the probate estate of the other inheritors, either from the same category, or from a subsequent category, as beyond the value necessary for the payment of the debt by the creditor, the waiving successor is considered to have waived also the part rightfully his after the payment of the debt, the share being distributed to the other successors whose quotas have either decreased with the prospective inheritor's acceptance, or they would have been removed from inheriting because of his presence.

"If the inactive prospective inheritor has more than one creditor, acceptance may be executed by either of them, even separately and at different moments, if the term for expressing the option didn't expire. We have showed that the acceptance expressed by the creditors doesn't have an irrevocable character of the acceptance made personally by the prospective inheritor. It makes unavailable only the share necessary for the payment of the debt towards the creditor who exercised the right. Other creditors accepting in their turn the inheritance makes appear a conjunction of creditors, the effects of the acceptance needing to be extended to accepting all the debts"[8].

For the case in which the inactive inheritor has a share of the inheritance smaller than the total value of the debts of the accepting creditors, the payment of the creditors is made according to their preference, and if they all are unsecured creditors, the payment shall be made proportionally.

We may deduce therefore that for the case in which the creditors of the prospective inheritor didn't settle their debt after retaining the rightful share, part of the uncovered debt remaining unsettled shall pursue the debtor until the debt is covered entirely.

For the acceptance of the succession by the creditors of the inactive prospective inheritor to make the latter an acceptant of the inheritance he is entitled to, it is absolutely mandatory that the prospective inheritor to have exercised his option to this end. For this, his summoning must be made in order for him to manifest his option.

The prospective inheritor's creditor agreement for accepting shall be concluded afterwards without regard to the inheritor's presence at the settlement of the estate or to his option.

In order to draw up this document, the respective creditor must make available the title stating his uncontested and enforceable debt. The fact that the prospective inheritor is inactive must be proved by means of a notary or of a court, in the sense that if the term for expressing the option allows it, the summoning for at least a term of the settling of the estate is necessary. The fact that he doesn't shows up is a sufficient proof that will determine the successor's inactivity. The creditor's interest and the damage he may suffer are easy to prove by means of the mere existence of the debt[9].

Within the notary successional procedure of settlement of the estate, the creditor settles his debt by executing the assets to which the debtor is entitled. If the later is present to the notary successional procedure and agrees, one may conclude a voluntary division of property and draw up a certificate of payment towards the creditor, but if the prospective inheritor either doesn't show up for the debate, or is not willing to conclude this division, the creditor can benefit from these right only by means of an action in court. He will not be able to conclude a voluntary division if the prospective inheritor debtor is not present, except for

[8] D.Negrilă, *op.cit.*, page 176.
[9] Idem, page 177.

the case in which he is empowered by the later with a special certified power-of-attorney.

According to Article 1156 from the Civil Code, the personal creditors of the inheritor may request in court the division of the inherited assets and demand the presence of notaries upon the conclusion of the document of voluntary division of property.

If the inheriting debtor is the only one in his category and with his degree and waives the inheritance after the creditors accepted it or chooses to remain inactive, with the possibility to be precluded from exercising the right of option, the option expressed by the prospective inheritors of subsequent degrees and categories shall be taken into consideration, until the field of inheritors of the deceased shall be accurately determined. For example, if the respective inheritor is the only son of the deceased and waives the inheritance subsequent to its acceptance by a creditor, the relatives next in line shall be called upon, descendants from sons, daughters or relatives belonging to different categories of legal inheritors.

5. The revocatory action and the inherited debt

By way of the provisions of article 1122 of the Civil Code, the legislator allows the creditors of the prospective inheritor to revoke by means of the revocatory action the waiving of the debtor if this action is fraudulent. So, according to law, the creditors of the prospective inheritor that unlawfully waived the inheritance can request the court the revoking of the waiving in what concerns them, but only within a three-month time as of the date when they expressed the waiving. Admitting the revoking action produces the effects of accepting the inheritance by the prospective inheritor debtor only regarding the plaintiff creditor and only within the limits of his debt.

According to Article 1562 from the Civil Code, if the creditor proves that damage was brought to him, he may request that the legal document concluded by the debtor in prejudice of his rights, as those by means of which the debtor creates or amplifies a state of insolvency, be declared not enforceable. An onerous agreement or a payment for executing such an agreement may be declared not binding only when the third contracting party or the one receiving the payment knew that the debtor creates or amplifies a state of insolvency.

As in the case of the derivative action, the legislator grants to the revocatory action (or Paulian action, named from its creator, the roman praetor Paulus) several legal provisions shaping a complete and coherent judicial regime of this action.

According to an opinion, the revocatory action is that action by means of which the creditor may obtain in court that the legal documents concluded by the debtor in the prejudice of his right not be enforceable[10].

The revocatory action has the legal nature of a mean of protection of the creditor's rights, but also a special judicial nature due to its characteristic of having an autonomous legal configuration, as the creditor may exercise a personal right.

The following conditions must be met in order to exercise the revocatory action:

a) a prejudice that the creditor suffered as a consequence of concluding the legal document by the debtor must exist. This requirement implies a personal and effective prejudice of the creditor because of the fact that the debtor created or amplified the state of insolvency by concluding the legal act. The text of the law validates the difference between an act of depletion of the debtor, insufficient for promoting the action and an act of depletion by means of which the state of insolvency is created or aggravated. There are excluded the legal documents by means of which the debtor pays a debt, refuses an enrichment or makes new debts[11]. The plaintiff creditor may use any means of evidence in order to prove the insolvency of the debtor.

b) a fraud to exist, made by the debtor. The fraud shall be determined by means of simply knowing that, by waiving, a prejudice is caused, not being necessary the intention to bring a prejudice. As it is a unilateral legal act, the prejudice must exist only in connection with the prospective inheritor debtor and not in connection to other prospective inheritors or inheritors of the deceased[12].

c) the debt to be uncontested upon the introduction the action and also liquid and enforceable, but only at the date when the decision is ruled. Consequently, the plaintiff creditor must make the proof upon introducing the action only in what concerns the existence of the debt, because, as he prepares an execution of the assets in the probate estate, he must prove that the debt he refers to will become liquid and enforceable in a near future, until the decision is ruled.

d) a third party accomplice to the fraud must exist. The legal requirement for a third party to have taken part in the fraud is specified exclusively in case of onerous agreements or of the payment for the execution of such a contract. In case of documents made on a free basis, the law considers that the fraud made by the debtor is sufficient, as the third party must protect a free patrimonial advantage, as opposed to the creditor who must avoid a prejudice. The fraud made by a third party exists when the later was aware that

[10] See C. Stătescu, C. Bîrsan, *Drept civil. Teoria generală a obligaţiilor (Cilil Law. The general theory of debts),* IX[th] edition, revised and completed, Hamangiu Publishing House, Bucharest, 2008, page 355.

[11] See L. Pop, *Tratat de drept civil. Obligaţiile (Civil Law treaty. Debts),* volume I, General legal regime. C.H.Beck Publishing House, Bucharest, 2006, page 392-395.

[12] See D. Negrilă, *op.cit.*, page 181.

the debtor was creating or amplifying a state of insolvency[13].

Apart from these conditions, the waiving must not have become irrevocable because the succession was accepted by other inheritors or because the right of option was prescribed.

The main effect of admitting a revocatory action is the unenforceable character of the waiving in regard to the plaintiff creditor and shall determine the inefficiency of waiving to the extent necessary for settling the creditor's debt. The revocatory action introduced by a creditor cannot produce effects towards other creditors unless they have intervened in the process and requested in their turn the revoking of the waiving.

The revocatory action does not make the inheriting debtor an acceptant of the inheritance, but produces effects of partial acceptance and limited to the value of the debt. Concerning other legal connections and persons, the waiver remains as such and no title of inheritor is granted to him. Nevertheless, if no there are no other prospective inheritors to have accepted the inheritance within the time limit available for expressing the successional option, the prospective inheritor debtor, if he decides to revoke by himself the waiving, shall become inheritor acceptant, although not as a consequence of the revocatory action, but of his own revocation on the waiving. The share of the party waiving the inheritance, remaining after the settlement of the debt shall be divided between the other inheritors in equal parts. In case the share to which the debtor is entitled is not satisfactory for settling the debts of all the plaintiff creditors, they shall be paid in the order established by law, in compliance with the degree of preference of their debts.

Revoking of the fraudulent waiving doesn't turn the creditors into inheritors even if they will receive a share of the probate estate to settle their debt; this assignation takes place only because of their capacity of creditors of the inheritor and not by virtue of a right to the inheritance. Therefore, the revocatory action on the waiving doesn't make the creditors holders of the right of option; the action is personal, belonging to the creditors and, if we didn't consider that the creditor may become holder of the right of option neither in the case of the derivative action, where he was replacing the prospective inheritor, more of the less one cannot grant the creditor this capacity within the revocatory action[14].

Conclusions

Upon establishing the liabilities, one must consider the correlation between the debts of the deceased and which is uncontested, having in common their creditor; these debts have as common trait their transmissible character, according to the principle of continued existence of the debts of the deceased.

In conclusion, the universal inheritor that paid a common debt, debt exceeding his share of the inheritance, has the right to sue for compensation the other inheritors, but only for the share from the debts of the succession devolving upon each of them.

By analysing the institution related to the acceptance of the inheritance, an opinion of the majority, expressed in the literature in the domain, states that the personal creditors of the inheritors, having the possibility to accept the inheritance by means of a derivative action and consolidating therefore the title of inheritor the prospective inheritor obtained upon the passing away of the testator, exercise in the place of the inheritor the right of successional option violating as a result the principle of the right of free successional option in order to protect the principle of the natural circuit of assets. However, in our opinion, the personal creditors of the prospective inheritors can accept the succession in their place, by means of a derivative action, only if the prospective inheritor didn't exercise his right of successional option out of bad faith, in order to prejudice his creditors. This legislative approach may seem advantageous in order to protect the interests of the creditors of the prospective inheritor, but also as an exception from the principle of the freedom of right of successional option.

Concerning the institution of successional waiving, the law states that the inheritor that waived his right is not bound to pay the liabilities of the succession. The provisions of the law state that the waiver can be bound neither concerning the duties, nor the debts. Hence, even if the liability to support these expenses is more of a moral nature, the prospective inheritor owing respect to the deceased, in virtue of these rules, if a third party alien to the inheritance made expenses related to the funerals, one cannot recover his debt but in regard to the inheritors that have accepted the inheritance and not the ones that waived it, the later category having no kind of debt towards these parties, as a consequence of their waving[**].

A FEW NOTES ON THE EVOLUTION OF THE COMMERCIAL SALES CONTRACT REGULATION

Dan VELICU[*]

Abstract

Today, we think that the commercial sales has a long history as institution and therefore the relocation of its regulation from the commercial code to the civil code seems to be an authentic revolution inside the European or national private law.

In fact, the modern regulation of commercial sales emerged only in the nineteenth century and a proper regulation was strengthened in that very century.

The present paper aims to analyze if this kind of revolution is an useful and necessary and if, by relocation, the institution has really disappeared.

Keywords: *commercial sales contract, commercial law, comparative legal history, civil code, codification*.

1. Introduction

As we know the sales contract was and is the most useful contract in social material transactions.

For some centuries, during the Dark Ages, when the barter was the main transactional activity, the sales seemed to be only a variety of it. However, at the end of the Middle Age, when the monetized economy emerged and the necessities of coin were covered by the discovery of the gold in the Americas, the prevalence of the sales contract was assumed.

From that time up today, nothing proved to be a challenge to the sales contract and the barter became more and more a sign of backwardness, economic liability, peripheral region or economic crisis.

As we shall see, the commercial sales contract has acquired a specific profile and regulation during the nineteenth century, but can we consider it today – when most of the material changes suppose in fact a commercial sales contract – as a specific contract which needs a special regulation? If the special hipothesis turned into a general one, do we still need a special regulation contained in a commercial code?

Therefore, it seems not to be so bizarre to renounce to all these commercial codes which belong to the past and to the social stratification of the industrialization era.

On the contrary to this common opinion, I think that the distinction between civil and commercial law deserves, at least, a summary analisys, and the recent evolutions inside the private law suggest that reality has to prevail on the ideology or on the obsessive ideea to revolutionize the law.

2. The first phase: neglecting the commercial sales contract.

At the end of the eighteenth century or, at least at the beginning of the nineteenth century, the sales contract was accepted as the most complex contract which needed a specific, proper and extended regulation.

In this context, there was no surprise that the authors of the Napoleonic civil code put the regulation of the sales contract in the front of all other contracts. And, more, the regulation of the barter was regarded as a secondary institution.

Practically, from now on everybody agreed that the exception became basic or common rule and the basic rule became only an exception.

However, there were only two main issues to settle at that crucial moment.

Before the Napoleonic code of 1804, in France of the *Ancien Régime* there was an essential distinction inside the private law.

On one hand, the minor material transactions were regulated by local customs, which have been codified in the north of France, or by written rules which were conserved in Southern France.

On the other hand, the so called "commercial affairs" were uniformly regulated from the seventeenth century by the royal ordinances of Louis XIV.

Inspired by the principles of the 1789 revolution, the lawyers and the lawmakers of the republican France wanted to provide an unitary civil law in order to unify the law practice in the new society.

The long debates and, finally, the adoption of the civil code in 1804 seemed to settle that first issue.

The new code gave little or symbolic space to the local customs. All the citizens were subject to these uniform rules which, at least theoretically, permitted more safety and predictability in the social transactions and, finally, unified the French nation.

[*] Lecturer PhD, Faculty of Social and Administrative Sciences, "Nicolae Titulescu" University of Bucharest (e-mail: **dan.velicu@univnt.ro**).

However, it still remained the second issue to settle. What will happen to the commercial law inherited from the seventeenth century?

All these rules were also projected to unify the commercial customs in order to sustain the emergence of the national market and to grow the certitude and the predictability of the commercial transactions along the French kingdom.

In the post revolutionary age, the foreseeable option was to promulgate a new code – the *code de commerce* – which Napoleon did in 1807, at the climax of his imperial power.

It resulted that all the commercial law was in fact upgraded, modernized and set in the new code.

As the most of the energy was spent in order to elaborate a new civil code, a revolutionary one – and we know that Napoleon himself was more proud of it than of his military victories – in an historical era when the Enlightment movement had sustained the efforts towards codifications – the *Allgemeines Landrecht für die Preussischen Staaten* (ALR) was promulgated in 1794 and the Austrian *Allgemeines Bürgerliches Gesetzbuch* (ABGB) in 1812 – the code of commerce of 1807 appeared not as a sophisticated code which is destined to all citizens as the civil code was, but as a sectoral law in order to be use by traders which were still perceived – even the guilds were dissolved in 1791– as a distinct professional class.

Therefore, in this entire context, there is no reason to wonder that the sales contract was regulated in an extended and sophisticated way by the rules of the civil code of 1804.

Practically, the regulation of the contract was covered by 119 articles. In fact, that regulation was one of the most extensive in all the area of the specific contracts[1].

Anyway, the rules provided by the civil code which regarded the sales contract are common rules. They have to be applied in the material relations of the simple citizens but also in all other material relations which may imply the interference of a *commerçant*.

Hence, if the rules of the civil code were to be applied in this specific hypothesis – as was regarded the act of commerce – the authors of the code of commerce paid not much attention to the characteristic of the sales contract as an agreement which implies one or more traders and which can presume, on the whole, a specific regulation.

As a consequence, at that time seemed little to remain in order to regulate inside the code of commerce.

However, with the regard to the sales contract, there was an obvious exception to that conviction of the authors of the code of commerce. The code contains only one article which regulates a specific issue of the sales: the way to prove its existence.

The lawyers who elaborated the code were forced to recognize that despite the perfect and complete mechanisms of the civil code, there were some issues or at least one, that could be not regulated by the common law.

As we know by reading the civil code, in the frame of the title regarding the general regulation of the obligations, the sixth chapter – *De la preuve des Obligations et de celle du Paiement* – offered general rules regarding the modality of proving the contract and these rules were to be applied to the sales contract signed by the simple persons[2].

However, these rules couldn't be applied when the sales contract is a commercial one because it is obvious that the necessities of the trade are incompatible with the rigidity of the civil code.

Practically, the commercial activity can not develop respecting the formalities of the civil code.

Hence, if "public instruments of writing" or "instruments of writing under private signature" can be tools of proving, on one hand, there is no necessity to restrain the use of the "parole testimony", and on the other hand, there are a lot of ways to prove the existence of the duties that can not be use between simple persons as the notebook or memorandum of an exchange agent, an invoice or bill of parcels accepted, the correspondence of the parties or the books of the parties.

It seems that the obvious piece of the reality determined the authors of the code of commerce to impose specific rules on the matter.

As a consequence, the article 109 of the code, the single rule contained by the seventh title – *Des achats et ventes* –, disposed as follows: "Les achats et ventes se constatent:

- par actes publics,
- par actes sous signature privée,
- par le bordereau ou arrêté d'un agent de change ou courtier, dûment signé par les parties,
- par une facture acceptée,
- par la correspondance,
- par les livres des parties,
- par la preuve testimoniale, dans le cas où le tribunal croira devoir l'admettre".

In order to know if the contract was really a commercial sales the article 632 of the code emphasized the intermediary role of the buyer and the financial gain as main purpose of his action.

Hence, as a preliminary conclusion of our study, the French code of commerce of 1807 did not recognize in a visible manner the existence of a commercial sales as a variety of the sales contract between the commercial activities precised by the article 632.

[1] See art.1582-1701 and compare 1708-1831.
[2] See art. 1316.

3. The second phase: the emergence of the new concept – the commercial sales contract

Obviously, until 1815 the French private law was adopted in Rhineland, Belgium, and Holland or other provinces of the Napoleonic Empire, but also in other states like the Kingdom of Naples[3].

Not surprisingly the defeat of Napoleon didn't slow up the diffusion of the new codes.

In the postwar era, despite its origins, the French code of commerce served as a model and was adopted again in the frame of the new *Codice per lo regno delle Due Sicilie* (into force in 1819)[4] but also in Greece in 1835[5] and Wallachia in 1840, while in other countries it was upgraded and modified inside the process of modern codification.

During the same decades of the nineteenth century various reflections of the lawyers and other people involved in commercial transactions were taken in account and by 1830 the new projects couldn't be considered as simple reproductions.

From this point of view, the Spanish code of commerce – *el código de comercio* which was promulgated in 1829 and entered into force in 1830[6]– , emphasized really the frame of two concepts: the commercial contract and the commercial sales.

Its author, Pedro Sainz de Andino introduced a new title – *De compras e ventas comerciales* – which contains 26 articles.

Obviously, because the commercial law maintained its exceptional applicability, limited to specific commercial relations, the sales contract was to be regulated on principle by the civil law and if the civil law was unable to rule a specific hypothesis, the judges will apply if necessary the rules provided by the *código de comercio*.

Therefore, for the first time, at that moment we can consider that the frame of the commercial sales seemed to be complete.

First of all, the code establishes criteria to identify the commercial sales of goods: Pertenecen a la clase de mercantiles: las compras que se hacen de cosas muebles con ánimo de adquirir sobre ellas algún lucro, revendiéndolas bien sea en la misma forma que se compraron, o en otra diferente, y las reventas de estas mismas cosas (article 359).

On the contrary, according to article 360 it will be not considered commercial sales of goods:

"Las compras de bienes raíces y efectos accesorios a estos, aunque sean muebles.

Las de objetos destinados al consumo del comprador, o de la persona por cuyo encargo se haga la adquisición.

Las ventas que hagan los labradores y ganaderos de los frutos de sus cosechas y ganado.

Las que hagan los propietarios y cualquiera clase de persona de los frutos o efectos que perciban por razón de renta, dotación, salario, emolumento, u otro cualquiera titulo remuneratorio o gratuito.

Y finalmente la reventa que haga cualquiera persona que no profese habitualmente el comercio del residuo de acopios que hizo para su propio consumo. Siendo mayor cantidad la que estos tales ponen en venta que la que hayan consumido, se presume que obraron con ánimo de vender y, se reputarán mercantiles la compra y venta".

As many commercial sales are concluded in the absence of the goods the buyer's consent is under condition until the moment he can inspect the goods (article 361): En todas las compras que se hacen de géneros que no tienen a la vista, ni pueden clasificarse por una calidad determinada y conocida en el comercio, se presume la reserva en el comprador de examinarlos, y rescindir libremente al contrato, si los géneros no le convinieren.

More, "la misma facultad tendrá, si por condición expresa se hubiere reservado ensayar el género contratado".

On contrary, there is no such consent under condition if there is sample used as criteria and the goods are exactly as the sample: Cuando la venta se hubiere hecho sobre muestras, o determinando una calidad conocida en los usos de comercio, no puede el comprador rehusar el recibo de los géneros contratados siempre que sean conformes a la mismas muestras o a la calidad prefijada en el contrato (article 361).

As sometimes the time to delivery is crucial for buyer's business the last has the right to terminate the contract if the delivery is late: Cuando el vendedor no entregare los efectos vendidos al plazo que convino con el comprador podrá este pedir la rescisión del contrato, o exigir reparación de los perjuicios que se le sigan por la tardanza, aun cuando esta proceda de accidentes imprevistos (article 363).

If the parties did not establish a time to delivery, the seller will have to retain the goods at buyer's disposal at least 24 hours: Cuando los contratantes no hubieren estipulado plazo para la entrega de los géneros vendidos y el pago de su precio, estará obligado el vendedor a tener a disposición del comprador los efectos que le vendió dentro de las veinte y cuatro horas siguientes al contrato. El comprador gozará del termino de diez días para pagar el precio de los géneros; pero no podrá exigir su entrega sin dar al vendedor el precio en el acto de hacérsela (article 372).

Unfortunately, during the next decades the Spanish code did not influence the commercial codification in Europe except Portugal.

In Italy, for example the commercial code promoted by Charles Albert, king of Sardinia, remained under the influence of the French *code de*

[3] See Carnazza Puglisi, *Il diritto commerciale*, 45.
[4] See *ibidem*, 45.
[5] See *ibidem*, 73.
[6] See *ibidem*, 61.

commerce. As a consequence, there is only one rule regarding the commercial sales – the article 118 – which establishes the ways to prove the existence of the contract.

Only in 1865, when the unity of the Italian state was achieved, in order to offer a new and modern an entire new regulation, the new king promoted a commercial code which was modernized.

Therefore, the commercial sales contract was, finally, regulated by a distinct text (article 95 to 105).

New institutions were added but, in fact, only the next commercial code of 1882 will offer an influential frame of the commercial sales contract.

Hence, the article 59 of the last code modifies the perspective of the French lawmakers by recognizing the validity of the *sale of other person's goods*: La vendita commerciale della cosa altrui é valida. Essa obbliga il venditore a farne l'acquisto e la consegna al compratore, sotto pena del risarcimento dei danni.

Secondly, the article 60 recognizes the validity of the sale without price if the parties have established a way to settle later the price: La vendita commerciale fatta per un prezzo non determinato nel contratto é valida, se la parti hanno convenuto un modo qualunque di determinarlo in apresso.

They can choose a third person to settle the price – "la determinazione del prezzo puo essere rimessa all'arbitrato di un terzo eletto nel contratto o da elleggersi posteriormente" – and also, "la vendita fatta per il giusto prezzo o a prezzo corrente é pur valida; il prezzo si determina secondo le disposizioni dell'articolo 38".

The articles 62 to 65 are regarding the sales of goods that are transported on maritime ships but most important seems to be the entire article 68 which settle the rules to apply when the goods must be delivered at a precise moment and space and one of the parties will not participate to the delivery act.

Therefore, "se il compratore di cosa mobile non adempie la sua obbligazione, il venditore ha facolta di depositare la cosa venduta in un luogo di pubblico deposito, o, in mancanza, presso un accreditata casa di commercio per conto e a spese del compratore, ovvero di farla vendere.

La vendita e fatta al pubblico incanto o anche al prezzo corrente se la cosa ha un prezzo di borsa o di mercato, col mezzo di un pubblico ufficiale autorizzato a tale specie di atti, salvo al venditore il diritto al pagamento della differenza tra il prezzo ricavato e il prezzo convenuto, e al risarcimento dei danni.

Se l'inadempimento ha luogo da parte del venditore, il compratore ha diritto di far comprare la cosa, col mezzo di un pubblico ufficiale autorizzato a tale specie di atti, per conto e a spese del venditore e di essere risarcito dei danni.

Anyway, "il contraente che usa delle facolta sudette deve in ogni caso darne pronta notizia all'altro contraente".

A special rule is offered regarding the sales with an essential time to fulfill the obligation. According to article 69 "se il termine convenuto nella vendita commerciale di cosa mobile é essenziale alla natura dell'operazione, la parte che ne vuole l'adempimento, non ostante la scadenza del termine stabilito nel suo interesse, deve darne avviso all'altra parte nelle ventiquattro ore successive alla scadenza del termine, salvi gli usi speciali del commercio.

Nel caso suddetto la vendita della cosa, permessa nell'articolo precedente, non puo farsi che entro il giorno successivo a quello dell'avviso, salvi gli usi commerciali".

More, as an exception to the rules regarding the visible defects of the goods, the article 70 intervens and settles the issue: Il compratore di merci o di derrate provenienti da altra piazza deve denunciarne al venditore i vizi apparenti entro due giorni dal ricevimento, ove maggior tempo non sia necessario per le condizioni particolari della cosa venduta o della persona del compratore.

Egli deve denunciare i vizi occulti entro due giorni dacché sono scoperti, ferme in ogni caso le disposizioni dell'articolo 1505 del codice civile.

The necessity of regulate the commercial sales of goods was, finally, accepted even in some states which had not an authentic commercial code in the first half of the nineteenth century as Prussia or Austria.

Therefore, in 1861, the Diet of the German Confederation promulgated a General Code of commerce – *Allgemeine Deutsche Handelsgesetzbuch* – which entered into force the next years in the German states, including Austria in 1863 and retained an extended regulation of the commercial sales (articles 337 to 359).

Later, the new *Handelsgesetzbuch* (generally abbreviated as HGB) entered into force in 1900, by substituting the first, while in republican Austria it became compulsory after the *Anschluss* and was maintained from 1945 until now.

Thus, at the end of the nineteenth century the commercial sales – as a main institution inside the private law – was firmly consolidated.

4. The challenges of the twenty century

As it is obvious, the nineteenth century was in fact the century of the modern codification of the commercial law. Most of the states of the European continent had one or two successive codes and the intense scholar activity in this field contributed essentially to the improvements of the national regulations but also to the harmonization of the rules and principles despite the fact that at the beginning of the twenty century nobody could sustain there was an uniform commercial regulation even in the field of the sales contract.

A new trend in modernization seems to emerge on the eve of the World War One.

The Swiss lawmakers adopted two new codes: a civil one and a code of obligations.

For the first time in modern era, the distinction between civil law and commercial law disappeared and a real debate emerged between the lawyers in the interbellum period on the opportunity to follow this path.

Of course, Switzerland has non sea access so there was no need for a maritime commercial regulation, which is the most extended body of institutions in the commercial codes of the European nations, but the Swiss path appeared to be more adequate to our social relations simply by rejecting the exceptional characteristic of the commercial legislation.

In Italy, where the "fascist revolution" of the 1920' tried to be the vanguard of a new society, the debate produced finally a new civil code which entered into force in 1942. Most of the institutions of the commercial code – including the sales contract or the commercial societies – were literally absorbed by the new *codice civile* during the so called process of "commercialization of the civil law" – *commercializzazione del codice civile* – and were applied to all the subjects while the commercial maritime institutions were regrouped in the new *codice della navigazione*.

5. Conclusions

Up to now, it seems that there are two main streams in the process of modernization of the private law: one conservative, trying to preserve the existence of the Codes by adding new articles if necessary or new special laws –and France or Germany are perfect models – and another, innovative which integrate more or less in the new civil code the regulation removed from the commercial code by following the Swiss or Italian path.

At the end of the twenty century, or at the beginning of the twenty first century the Canadian province of Quebec and countries like the Netherlands, Brazil, and, recently, Romania embraced firmly that last tendency.

Despite the will to innovate and its real motivation, we must ask ourselves if this "commercialization of the civil law" does have real ground in our days.

It is not difficult, for instance, to remove the sales regulation from the commercial code and to place it inside the civil sales frame, but all this reform does change reality?

In fact, most of these rules – which are really the fruits of a long experience – will be applied only in commercial relations just because there were created for this very context and not for ordinary civil contracts.

Secondly, when the special rules are to be applied only to professionals – as the Romanian civil code imposes sometimes[7]– the judge will have now again as preliminary task to establish if one of the parties has to be considered a "professional" in order to apply that specific or exceptional rule.

Practically, the reform didn't change the system because the social reality opposed naturally to such a "legal revolution".

As a consequence, in our case, on one hand, the will to unify the private law failed just because commercial rules were only moved in the new code in a strange way, and the establishing of the status is needed again in order to apply the proper regulation.

On the other hand, the reform failed just because its model was outdated. There is no unification in the Romanian private law if the consumer's legislation has to be considered a special one, distinct from the civil code (and I shall not add the absence of a maritime code which will permit the predictable long survival of the commercial code, a meaningless reality which let us be witnesses of the most paradoxal reform in European legal history).

Nevertheless, I shall not say that the unification is an utopian choice for the moment. But, in my view, the unification inside the private law must regard especially the absorption of the consumer's law and not of the commercial contracts regulation.

Finally, I think that the commercial sales law survived inside the new civil code and, in fact, it is completed by the regulation of the consumer's sales law.

PRIVATE LAW EFFECTS OF THE NON-RECOGNITION OF STATES' EXISTENCE AND TERRITORIAL CHANGES[1]

Ioan-Luca VLAD[*]

Abstract

The study presents an outline of the effects in private law (including private international law) of the non-recognition of a state or a change of territory. Specifically, it addresses the question of what measures can another state take, in the field of private law, in order to give effect to its policy of not recognizing a state or a territorial annexation, and, in parallel, what are the means available to private parties with links to the unrecognized state or territory. The study is structured in two parts, namely 1) the effects in private law of the non-recognition of a state; and 2) the effect in private law of the non-recognition of an annexation of territory. I will make specific references in particular to the situation in Transnistria and Crimea, as examples of the two issues being addressed. The study intends to be a guide of past and present state practice at the legislative and judicial level, as well as presenting the connections between instruments of public international law, such as Sanctions Resolutions of the UN Security Council, and normative instruments of private law, such as rules of civil procedure, which must adapt to the policy of non-recognition adopted by (or imposed on) states. The study also presents specific examples of situations or administrative practices which create practical problems, and result from the existence of a non-recognized entity or change of territory: issues like air traffic coordination, postal traffic, the change in the official currency of a territory, questions of citizenship etc., the aim being to present the reader with a full picture of the issues and intricacies resulting from irregularities existing at the level of the international community of states.

Keywords: *recognition, private law, conflict of laws, annexation, independence1.*

1. Introduction

This study is proposed as a bridge between public and private international law. It covers two situations which appear in public international law, namely the proclamation of independence of a new state, and the annexation of territory, but which suffer from issues of legality on the international sphere, and thus are not recognized by the (vast majority of the) community of states. These situations, which involve a (purported) change in the sovereignty over a territory and a population, produce effects not only in public international law, but also in the conflict of laws situations, where a particular legal relation can be localized, with the help of conflictual rules of the forum, to the territory which is annexed, or which is claimed by the newly proclaimed independent entity. The issues raised by such an event are manifold, and this article does not attempt to cover them all. Its importance lies in lying the doctrinal principles which can serve as guidelines for solving conflicts of laws which may appear in such situations. The reader should find in this study a short summary of current national and foreign doctrine on the subject, as well as some jurisprudence regarding cases where issues of the effects of the existence of unrecognized entities have been raised. It bases itself on the state of the current doctrine, in particular Romanian private international law doctrine, as well as German and British studies at the crossroads between public and private international law. From the quoted jurisprudence and doctrine, I will attempt, at the end, to extract potential principles for solving situations of conflicts of law where unrecognized annexations of territory are involved, as a phenomenon which has recently reappeared on the global arena.

The events taking place to the immediate East of Romania, as well as around the Black Sea, culminating with the annexation of Crimea by the Russian Federation make clearly necessary the analysis of the private international law position which the Romanian courts could take. While unrecognized proclamations of independence are not unheard of in the international community, the forceful change of the borders of a sovereign state, which had received independence and territorial integrity guarantees, in exchange for renouncing nuclear weapons, is unprecedented in the history of international relations, and is an extremely grave affront to international equilibrium and security. Therefore, a look at the private international law effects of such a situation is warranted.

2. Content

Recognized as the principal subject of public international law, the state is also invested, by definition, with international legal capacity, and thus legal personality. Also, it is recognized as a legal subject in internal law systems, where, in particular

through its diplomatic missions, which are amongst its organs, it concludes contracts, acquires chattel and landed property (inasmuch as the local legislation allows), is part in trials etc.[2]. Beginning with the older Romanian doctrine, it was asked whether the new state which entered the international community and which benefits of all the rules of public international law regarding its representative organs, diplomatic and consular agents, the laws of war etc., is entitled to exercise all its prerogatives on the territory of the state which granted the legal personality, and thus the right to have rights and obligations just as natural persons. The answer is in the affirmative, because the personality of a state cannot be the product of the juxtaposition of two personalities, it being unique. The legal personality of the state is only the personality of that state considered from the point of view of some of its manifestations[3].

Granting recognition to a state means accepting its presence in the international community and its enjoyment of all rights and obligations which pertain to its quality of a state. The act of recognizing a state or a government attracts for the state being recognized a number of effects, of which the most important are the following:

1 obtaining the entitlement to begin diplomatic relations with other states which recognize it and of concluding treaties with such states;

2 obtaining the right (which according to some states' laws it would not otherwise have), of beginning civil trials before the courts of the recognizing state;

3 the acquisition by the recognized state (with effects also over its property) of jurisdictional and enforcement immunity before the courts of the recognizing state, an immunity which, in some law systems such as the British one, it could not have enjoyed before recognition;

4 the acceptance of its executive and legislative acts in the courts of the recognizing state.

Besides these, in the states where legal precedent gives retroactive effect to recognition, such as the United Kingdom and the United States, the acts of the newly recognized state or government are considered legally valid from the moment when the recognized authority has been installed in power[4].

In civil issues, the states can agree so that, in limited circumstances, they allow for the reciprocal extension of the exercise of some of the state's competences beyond the limits of national territory. In civil legal relationships, with one or more extraneous elements, the private international law rules of each state usually apply. Because of the diversity of solutions which these rules give rise to, in the practice of international private law relations between state, relatively few principles or customary rules have been formed regarding the exercise of civil matter competences[5].

Correspondingly, not recognizing a state means denying it these attributes. In this sense, recognition has a constitutive character, because the act of recognition itself is the one which produces legal effects in the internal law system of the recognizing state. In comparative law, one must now analyze the positions of the United Kingdom and the United States in this regard.

British courts have taken for some time the position that an entity not recognized by the Foreign Office as a state shall be treated by the courts as not existing, and thus will not be able to invoke immunity of jurisdiction. Thus, in a case, the ships belonging to "The Provisional Government of Northern Russia", an unrecognized entity, were not granted immunity from creditors[6]. Correspondingly, an unrecognized entity may not act as a plaintiff in court. For example, in 1804, the Revolutionary Government of Berne could not stop the Bank of England from disbursing the funds of the former city administration[7]. The current main precedent regarding the effects of recognizing an entity in internal law is *Luther v Saigor*. This concerned the operations and production of a timber yard in Russia, owned by the plaintiffs, which had been nationalized in 1919 by the Soviet government. In 1920, the defendants had bought a quantity of timber from the USSR, and the right of ownership was invoked upon it in England by the plaintiffs. These argued that the Soviet decree of nationalization should be ignored because the United Kingdom had not recognized the Soviet government. The first court agreed, and the defendants appealed. In the meantime, the United Kingdom had recognized *de facto* the Soviet government and the Home Secretary had informed the Court of Appeal in writing regarding this. The result was that the higher court was obliged to take judicial notice of the Soviet decree and give it effect as a law of a recognized state or government. The Court also showed that the fact that the Soviet government had been recognized *de facto* and not *de jure* did not change the solution. Another important point is that, because in the Home Secretary's certificate it was stated that the Provisional Government of Russia, recognized by the United Kingdom, had disbanded in December 1917, the Court considered that the Soviet government had started its existence at that date.

Inasmuch as laws, contracts concluded by unrecognized states or governments will not be recognized by British courts, because the

[7] *The City of Berne v The Bank of England* [Chancery], 1804.

unrecognized entity does not exist before national courts. Official recognition operates retroactively up to the time indicated by it, for example up to the *de facto* recognition, which precedes a *de jure* one. To this effect is the case *Haile Selassie*, where the *de jure* recognition of the Italian authorities as occupants of Ethiopia involved the obligation of British Courts to refuse the recognition of the Ethiopian State's legal personality, through its Emperor living in exile, with retroactive effect from the date of the *de facto* recognition of Italian occupation.

A more interesting problem appears when conflicting rights are claimed by entities exercising *de jure* and, respectively, *de facto* control over the same territory. The solution is that the actions of a *de facto* authority regarding people and goods located in its sphere of effective control will be recognized by the British courts, but when the goods of persons are in the United Kingdom, the *de jure* sovereign shall have precedence[8].

In the United States the situation is similar. Only a recognized state may act as plaintiff in American courts. However, American courts allow in limited cases the access to justice of an unrecognized state, on the basis of case by case analysis of the entity under discussion. For example, in the case *Transportes Aeros de Angola v. Ronair*, it was held that where the US State Department had clearly indicated that the plaintiff's (a company wholly owned by the unrecognized government of Angola) access to American courts was to the benefit of the foreign relations of the United States, the courts had to respect this declaration[9]. Absent such governmental declarations, American law is more flexible regarding unrecognized entities, on the basis of the "Cardozo doctrine", according to which "an unrecognized entity which has kept control over its own territory, may gain, for its own acts and decrees, a quasi-governmental validity, if otherwise our fundamental principles of justice, or our public order would be violated[10]".

One can thus observe that the non-recognition of a state does not involve *de plano* its nonexistence in the national law of other states, but only a presumption of the lack of civil capacity, as well as of the invalidity or nonexistence of its acts. This presumption can be overturned either through a declaration, even retroactive or *de facto*, of its recognition, or through a relaxation of the rule with the purpose of protecting private interests.

Citizenship is, ever since Mancini, at least in Continental Europe, the most important point of connection for personal status. By this one understands those legal relationships which concern the party or parties personally. Citizenship is generally understood as a legal community, which subjects a person to a state, and makes this state the owner of rights and obligations. Furthermore, citizenship involves the right of its holder to protection from his state. From the point of view of conflict of laws rules, this public law aspect of citizenship has a restricted importance. Such an example is art. 2600 alin. (2) of the Civil Code which protects the Romanian citizen spouse from the impossibility of terminating the marriage (if such is prescribed by the foreign law). Another example is art. 1069 alin. (2) of the Code of Civil Procedure, which foresees the compulsory jurisdiction of the Romanian courts, as a *forum necessitatis*, when the Romanian citizen plaintiff shows that he cannot begin the action abroad, or that it cannot be reasonably expected for the action to be filed abroad, even when the law does not otherwise grant jurisdiction to Romanian courts, thus protecting the citizen from a denial of access to justice.

In public international law, citizenship is a legal link, which is established on a social fact, on a link, an effective solidarity of existence, interests, feelings, as well as a reciprocity of rights and obligations. It can be said that it is the legal expression of the fact that the individual to whom it is offered is, in fact, more strongly related to the population of the granting state that to that of any other state[11]. By virtue of sovereignty, each state determines alone the criteria and means of acquiring and losing its own citizenship, as well as the rights and duties pertaining to its citizens. In international legal order, only the state as the primary subject of international law, has such a competence[12]. However, the conditions of opposing this citizenship against other states are regulated in principle, by international law. From the point of view of international law, the exercise of state competences over a person is relevant with regard to the conditions in which the legal status of citizens or foreigners is recognized and can be opposed to other states or international entities; and the compatibility of the exercise of these competences with international law rules[13].

Granting someone citizenship without asking that person first, not finding a way, as a state, to subject the granting of citizenship, the fundamental right, the one which conditions all the other rights in a state, to the will of the prospective holder, whom, at the same time, you thus deprive of the benefit of the citizenship to which he did not renounce and from which he had not been excluded, denies *ab initio* any proof that belonging to such a state is a citizenship, and creates the presumption that it is a subjugation, and thus transforms citizenship into the status of a subject[14].

International law refuses to recognize the effects of complimentary, fictitious citizenships, abusively granted by some states to individuals who are not effectively attached to them. At the same time, laws regarding the acquisition or loss of citizenship, founded on racial, religious or political criteria would be considered illicit from the point of view of human rights norms, and thus could not be opposed to other states[15]. Furthermore, the exercise of state competences over persons, although in principle discretionary, must take place in consideration of the following: the regime of a state's own citizens should not irreversibly violate fundamental human rights, and the regime of foreigners should not violate their interests or those of their state of origin. At the same time, every states tries to ensure as good a regime as possible to its citizens located, temporarily or permanently, on the territory of other states[16].

In our legal system, citizenship is not considered as pertaining to the field of private international law, this opinion being in the majority. The arguments brought to this end are as follows: the fact that citizenship constitutes a criterion for determining the applicable law, for example in the field of civil status and capacity of a natural person, does not constitute an argument for including the matter within private international law, because it would mean that all the criteria which serve to determine the applicable law should pertain to this branch of law. The link between citizenship and the legal status of the foreigner does not oppose nor does it deny their separate study, within different legal disciplines[17]. In recent literature the thesis was posited that we can observe a link of interdependency between conflict of laws, conflict of jurisdictions, the legal status of the foreigner and citizenship, because their solution is sometimes preceded by the determination of a person's citizenship[18]. In French doctrine, it is considered that the citizenship, defined as the ensemble of rules which determine the link between an individual and a state, presents sufficient links with private international law so as to be included in its normative sphere. Thus, civil status and capacity of a person being given by their citizenship, the inclusion of the study of citizenship in the field of private international law is justified, as also for the reason that in all cases the legal condition of the foreigner is determined by comparison with that of the national[19].

For private international law, the significance of citizenship is that of an indicator of the appurtenance of a person to a legal system. The fact that the private interests of a party, in respect of their personal status, point towards the existence of the competence of that system of law where the party feels most integrated, leads to a presumption in favor of the appurtenance of a person to a certain system of law. Citizenship is not, however, neither in Romanian law, nor in the Continental European one, the most important point of connection, and in this quality, it is neither unique in comparative law, nor lacking political and legal critiques. In comparative law, one can observe that almost all *common law* states do not see in citizenship, but in domicile, the predominant criterion of belonging to a certain legal system. Domicile is a legal figure composed of factually determinable elements, together with the *animus* of the party, which proves a voluntary and special link towards a state, one more stable than the presence or residence on that territory. It is therefore false to relate domicile (in its *common law* definition) to such mobile spatial connection points; it is closer to citizenship in that it involves a conscious identification with a certain state. Other states (especially in Scandinavia) choose sometimes as a connecting factor, even for the personal status, the place of concluding a certain legal act and thus allow individuals a flexible adaptation to the local law (even if chosen at short notice), which sometimes even allows for manipulations. Citizenship as a connecting factor is in retreat as of the second half of the 20th century. The intervention of other connecting factors, such as habitual residence, even in personal status issues, is ever more visible.

The link between citizenship and the solutions to conflicts of laws shows how complex the legal foundations of conflictual rules are. In as much as conflicts of laws solutions cannot be outside the complexities and particularities of material life, neither can the legal foundations and solutions of private international law be outside the complexities of legal norms, of law seen in its ensemble as the most efficient way of ordering social life of all times and for ever[20]. The institution of citizenship and the condition of a citizen express, however, in the first place, a link, which is principally a static one, of the individual with the State. Evidently, the link is with a particular state. There shall be as many citizenship and as many types of citizens as there are states. And, in respect of citizens of a particular state, the citizens of other states, and stateless persons, are called foreigners[21]. The Romanian State, as it recognizes a foreign state, it recognizes its citizens as such. On the basis of such states' documents, Romanian authorities issue documents for foreigners, valid on Romanian soil, in which that foreign citizenship is attested; similarly, Romanian authorities apply visas on foreign passports, and generally on international travel documents, as the

protection of a state does not always involve its citizenship[22].

The proof of a person's citizenship in private international law always takes place from the point of view of the state whose citizenship is in question. The law of citizenship is of a public nature; no state may decide on the question of whether a person is another state's citizen[23]. In as much as the Romanian State grants citizenship to a person, the foreign citizenship granted until then to such a person are not taken into account. Conversely, a person not granted Romanian citizen is a foreigner, even when another state considers him a Romanian citizen[24]. Thus, in practice, one must prove the rules of citizenship of the state whose citizenship the party might have; in most cases, this is a documentary step without any problems, but sometimes it can offer an interesting image of citizenship rules of various states, or regarding the historical development of nation-states in Europe. Thus, for example, if in 1998 the succession is opened in Slovenia of a *de cujus* born in Slovenia in 1908. During his life, he has held Austrian, Hungarian, Yugoslav and Slovene citizenships, and, perhaps, through his willing enlistment in the German Army, he also became a German, keeping this quality by virtue of the first German law regarding citizenship issues of 22nd February 1955. If, during the probate process, it is discovered that *de cujus* is himself the heir of an uncle deceased in 1944 in Romania (which was not particularly rare before the fall of the Iron Curtain over Europe), whose citizenship is questionable because of unclear circumstances in the last days of the War, the inheritance certificate can easily become a history manual.

The stateless person is that who cannot be considered citizen of any state, according to its rules of citizenship. *De jure* statelessness appears when it can be proven that, according to the citizenship rules of the present systems of law, the person is not a citizen of any of the relevant states. Also, a person holding a laissez-passer issued according to art. 28 of the UN Convention regarding the legal status of stateless persons of 28th September 1954, is a *de jure* stateless.

German law considers *de facto* stateless those persons whose statelessness cannot be clearly demonstrated, but who do not hold a citizenship which can be proven. This can be the result of the nonrecognition of their origin state by the Federal Republic, especially in case of UN nonrecognition. Thus, for example, the South African Republic had excluded of its state territory the so-called *homelands*, which had however not been recognized by the UN, which retrospectively did not affect South Africa as much as it affected their inhabitants who held an unrecognized citizenship, and thus were not treated as citizens by their recognized state of origin, South Africa. For similar reasons, in German law Palestinian refugees are also considered stateless, because, even though they might have held before the establishment of the state of Israel the citizenship of the British Mandate in Palestine, presently they are prevented by the Israeli occupation of the Palestinian Territories from placing themselves under the protection of a Palestinian state. Germany considers that the population of the Palestinian Territories themselves cannot yet benefit from a Palestinian citizenship, even after the admission of Palestine to the UN as an observer state, because of the "lack of effectivity" of Palestinian sovereignty. On the other hand, German law does not exclude conflictual application of Palestinian law, even absent recognition of a Palestinian citizenship, for persons who are habitually resident there[25]. One must observe, from the practitioner's perspective, that there is no one Palestinian law. The law being applied in the Palestinian Territories (Transjordan and Gaza) is different, being made up of rules kept from the time of the British Mandate, military public order rules imposed by Israel, Islamic law (especially in family matters), but also various rules kept from the time of the Egyptian (Gaza) and, respectively, Jordanian (Transjordan) administration.

A problem usually found in jurisprudence, the determination of applicable law in the case of an unrecognized state is specific to the modern and contemporary eras. In private international law of the 19th century, the solving of the conflict of laws in the case of the unrecognized state has been influenced by the considerations given to state recognition as being constitutive and not declarative. In French doctrine, Bartin established the theory whereby the solution to this type of conflict of laws is subject to the rules of public international law. The judge may not apply the law of a foreign state that the forum state had not recognized as a subject of international law, because that would contradict the public power of the forum state. In these circumstances, the court may not apply the law of the unrecognized state, because its national public law rules, as well as public international law principles impose this solution. Bartin's thesis has been dominant until the first half of the 20th century when, at the end of this period, a contrary thesis was argued, namely that even the laws of an unrecognized state may give rise to conflicts of law in the private sphere. This solution begins, above all, from the affirmation, in most legal systems, of the declarative nature of state and government recognition.

Supporting this theory, Henri Batiffol and Paul Lagarde show that the mission of the French judge and the French government are not situated on the same plane. The judge who applies foreign law must establish if his authority is contested on the territory of

the foreign state. The reasons for which the government might not recognize a state are of a different nature, much more complex, and mostly of a political nature[26]. In the second half of the 20th century, an important part of the doctrine, including the Romanian scholars, affirms the possibility that the law of the unrecognized state might give rise to the conflict of laws. This solution was reached both on the basis of general principles of law, as well as particular principles of private international law. In as much as the law of the unrecognized state is not taken into consideration, the effect is the application of a previously existing law, on the basis of its exclusive recognition, which is inadmissible, both as a legal principle, as well as with regard to the effects felt by private persons. The lack of application of the law of an unrecognized state means that the objective law which governs the subjective rights which individuals can enjoy in that state is disregarded, and the purpose of the laws is thus violated, in that they do not attain their goal of protecting individuals, of serving to satisfy their material and spiritual needs[27].

The hypothesis taken into account is that where the conflictual rule of the forum points to the system of law of a state which is unrecognized by the forum state. The generally admitted solution in practice and in literature is that the laws of an unrecognized state may give rise to the conflict of laws. This solution is traditional in Romanian private international law. To support this solution, the following arguments may be brought forward:

- recognition of a foreign state has, in principle, a declarative and not constitutive nature. Thus, a state may recognize another state, but it cannot ignore its legal order. Recognition of a state has a majority political character, and does not apply in the field of conflict of laws, where the foreign state remains a legal subject[28]. The contrary would involve violating the sovereignty of the foreign state;
- if the law of the foreign state is not applied, then the formerly existing laws ought to apply, which would lead to unjust effects for the parties;
- as private law relations are involved, it would be unjust for persons' rights to be diminished or denied because these persons belong to an unrecognized state[29].

A second problem regards the solution of the conflict of laws in the case of a state succession when the successor state is not recognized. The question is asked which law should apply: the law of the state which does not exist anymore, or that of the unrecognized state? In my opinion, the solution is clearly the same as presented above. Thus, this conflict appears when the state, to whose system of law points the conflictual norm, "disappears" between the moment of the legal relation's birth and that of the trial. A just solution involves taking into consideration the context in which this change has taken place. It was thus proposed that, in case the state was disbanded through "force", the idea of the protection of legitimate interests of persons affected directly by the abusive change in sovereignty should prevail. This would mean applying the law of the disappeared state. If we are in the presence of a voluntary unification or split, the rules of the treaty of unification or division should be applied. I concur with this opinion, with the note that, in order to establish the character of the international change of legal personality, one must take into account the official position of the forum state regarding that particular situation[30]. Jurisprudence retains several situations where the non-recognition of a state was invoked, as a reason to deny the application of the currently existing law of the foreign state, and to continue to apply the old law, the one applicable before the change of political regime. Thus, after the establishment of the Soviet Union in 1917, French courts continued to apply tsarist law for more than a decade, such solutions being encountered even much later. In the Scherbatoff / Stroganoff case, solved by the Court of Cassation in Paris, in 1966, it was held that the non-recognition of the foreign government is an impediment for the French judge to apply the foreign law given by this government, before its recognition by the forum state[31].

A similar question is raised by the unrecognized annexation of territories. In such a case, the main difference is that both relevant states continue to exist, and demand the application of their laws to legal relationships which are localized in the territory being annexed. This issue is also connected to the state's presence in such a territory, for example with control over state resources, companies and institutions. In such cases, I believe that the "character" of the annexation takes precedence over considerations of private interests, because of a strong presumption that the unrecognized annexation does not reflect the real attachments of the persons living on the territory, but on the contrary, it is being imposed from above, as an illegitimate act. Furthermore, one must take into account the relevant UN Security Council or General Assembly Resolutions which express an opinion over the annexation, as well as potential rulings of international courts to the same effect. In as much as a UN Security Council calls for the denial of recognition of a factual situation, it would be unlawful for courts of a state, which are part of its official organs, to grant even indirect recognition by applying the law of the unlawful sovereign. This illegality in international law

would preclude any national laws or considerations to the contrary. Where there is no such binding international determination, then I believe that courts should follow the official opinion of the government on the issue of the legality of annexation, so as to protect the interest of the state in not giving recognition to a situation which might affect its international relations. Where the state does not issue any official positions, previously discussed considerations apply, and the court should check whether the parties of the legal relation have indicated expressly the law they understand as being applicable, because in such a case it should be first and foremost for the parties to express their attachment to one or the other system of law in presence.

We can see that where unrecognized states or territorial annexations are concerned, the notion of sovereignty is brought to the fore, and therefore we can think of the principles expressed above as determining the notion of a law proclaimed by a sovereign power as the basis for the appearance of a conflict of laws[32]. I believe that in such a situation the criterion of effectiveness should also find its plenary application, as it exists in public international law. In as much as an entity effectively controls a territory and a population, with private law effects in the legal relations of its members, then its acts should be recognized at least private international law effects because otherwise, the obligation of non-involvement in other states' affairs would be violated, as well as the rights and interests of the persons concerned. Furthermore, private international law has the means, amongst which first and foremost is the notion of public order, to censure the application of the laws of an unrecognized entity which would not be compatible with its national principles.

3. Conclusions

The article has looked at the private international law effects of unrecognized proclamations of independence and annexations of territory. It has illustrated the state of national doctrine, as well as bringing forward approaches from other countries' doctrine and jurisprudence. It has established a number of principles, which could be applied by Romanian courts when confronted with these special types of conflict of laws. I hope this article will serve as a starting point for a bigger discussion in the doctrine and practitioners' forums regarding the means whereby the legal world (by which I understand courts, attorneys, but also the public administration) could react in an appropriate and unified manner to the unrecognized, and often violent, changes taking place in the international community nowadays. I also hope that, during my doctoral studies, I will be able to continue the research on these topics in other legal systems, so as to be able to present a general European view of the matter, in the spirit of unified European principles of law, especially when dealing with threats to the security and balance in the European Union's near abroad.

THE SIMPLICITY OF THE FORM AND COMPLEXITY OF NORMATIVE CONTENT OF CONSTITUTION

Marius ANDREESCU[*]

Abstract

The coding is not only the expression of the political will of the law maker, it firstly is a complex juridical technique for the choosing and systematization of the normative content necessary and adequate to certain social, political, economical, institutional realities. Since Constitution is a law, yet it nevertheless distinguishes itself from the law, the problem is to establish which juridical norms it contains. The solving of this problem needs to consider the specific of the fundamental law and also of the requirements of the coding theory. The determining with all scientific stringency of the normative content of the Constitution is indispensable both for the removal of any inaccuracy in delimiting the differences from the law, for the stability and predictability of the fundamental law and last, but not the least, for the reality and effectiveness of its supremacy.

In our study we realize an analysis based on compared criterions of the techniques and exigencies for the choosing and systematization of the constitutional norms with reference to their specific, to the practice of other states and within a historical context. The analysis is aiming to the actual proposals for the revising of the Constitution.

Keywords: *Constitutional norms, constitutional norm establishing criterions, technical – judicial structure, supremacy of Constitution, normative content.*

I. Introduction

Simplicity is a concept that is constantly to be found in the theoretical elaborations of theology, but in most philosophical doctrines, is associated to the idea of unity of rationality, and generally, of the existence. Understanding the concept of simplicity, involves a comparative report with contradictory accents: simplicity opposes to diversity and composed realities that do not shelter under a law or order. Simplicity does not exclude, however, the complexity of the content, be it rational, of an idea or an objective reality. Simplicity is contrary to uniformity: it is the expression "of one diverse in itself". In the reality plan, the concept of "person", for instance, expresses, in our opinion, the dialectical coexistence between simplicity of the form and the inexhaustible depth of the existential content complex.

We consider as significant in philosophical thinking plan, the philosophical ideas of the great Romanian philosopher Constantin Noica: "The pace of history, in philosophical thinking. The simplicity of pre-Socratic *element* (that gives the composition of world), the simplicity of *self-knowledge*, with Socrate, of *Idea*, with Platon, of *the form*, logical and substantial, with Aristotel, of *subjectivity*, with the Christianity, of *divine*, with medieval philosophy, of *simple natures*, with Descartes, of *perception and representation*, with the empiricists, of *the monad*, with Leibniz, of *transcendental conscience*, with Kant, of *the Self*, with Fichte, of *the Spirit*, with Hegel. The pulsations of history"[1].

In the meanings given above, the simplicity can be accepted as a fundamental aspect of law, mainly in the form imposed by contemporary realities. In the sphere of juridical, the diverse, opposed to simplicity, is mainly made of a multitude of normative regulations that do not answer to a unifying idea and to the unity of the principle expressing the essence. The requirement of simplicity in the sphere of juridical, in our opinion, is best expressed and may be accomplished by the principles of law, as their normative form, simple, preserves at the same time the complexity of the content.

In the followings, we try to make a brief analysis of the notion of principle of law associated both to the idea of simplicity, as to the idea of complexity of content. The normative act that by its nature can highlight better this blend between simplicity of the form and complexity of the content, specific to the principle of law, is the Constitution. That's why we will customize the analysis on the principles of law with referral to the normative content of Constitution.

II. PAPER CONTENT

In philosophy and, in general in science, the principle has a theoretical and explanatory value as it is meant to synthesize and express the foundation and unity of human being, of the existence in general and knowledge, in their manifesting diversity. The discovery and assertion of the principles in any science gives the certitude to knowledge, both by expressing the *prime element* that exist by itself, without the need to be inferred or demonstrated, both by accomplishing the cohesion of system, without which no knowledge or scientific creation may exist. The principle has multiple meanings in philosophy and science, but for our scientific approach, to remember this one:

[*] Judge, University Lecturer, PhD, Court of Appeal Piteşti / University of Piteşti (e-mail: **andreescu_marius@yahoo.com**).

[1] C. Noica, *Carte de înţelepciune, "Book of Wisdom"*, Humanitas Publishing House, Bucharest, 2009, p.71.

fundamental element, idea, basic law on which is grounded a scientific theory, a political, juridical system, a behavior norm or the totality of laws and basic concepts of a discipline". [2] The common place for all meanings of the term of principle, is the *the essence*, an important category for philosophy and law.

A good systematization of the meanings which the notion of principle has is done in a monography[3] : a) the founding principle of this domain of existence; b) what would be hidden to the direct knowledge and requires logical-epistemological processing; c) logical concept that will allow knowing the particular phenomenon." This systematization, applied to law means: a) discussion on the essence of law; b) whether and how we may know the essence of law; c) operability of settlement in the phenomenality of law, correlated or not with the essence."[4] The need of the spirit to climb up to the principles is natural and particularly persistent. Any scientific construction or normative system need to relate to principles to guarantee or substantiate them.

The law, as it implies a very complex ratio, between essence and phenomena, and a specific dialectic to each of the two categories in terms of theoretical reality, normative but also social one, cannot be outside the principles. Mircea Djuvara states: "All science of law consists not in reality, for a serious and methodical research, other then in releasing from the multitude of law provisions, of their essential, meaning just the ultimate principles of justice from which the other provisions derive. Thus the entire legislation becomes of a greater clarity and what is called the juridical spirit, is being captured. Only then is done the scientific development of the law."[5] The words of the great philosopher Kant are still actual, which we propose for meditation to any contemporary legislator: "It's old the desire, which, who knows when?, will it ever be fulfilled: to be discovered for once, instead of the infinite variation of the civil laws, *their principles*, as only in this will reside, as one says, the secret to simplify the legislation."[6] In our opinion this is the starting point for understanding the principles of law.

In the literature in specialty, there is no unanimous explanation with regard to the definition and significances of the principles of law[7]. One can identify a series of common elements which we emphasize in the followings: a) the principles of law are general ideas, guiding postulates, fundamental requirements or foundations of the law system; b) The general principles of law configure the structure and development of the law system, ensure its unity, homogeneity, balance, coherence and developing capacity; c) The authors distinguish between the fundamental principles of law, which characterize the entire law system and reflect what is essential within the respective law system and the valid principles for certain branches of law or juridical institutions.

One of the great problems of juridical doctrine is the ratio between the principles of law, law norms and social values. The views expressed are not unitary they differ depending on the legal concept. The natural law school, rationalists, Kantian and Hegelian philosophy of law admit the existence of some principles outside the positive norms and superior to them. The principles of law are grounded on human reason and configure in term of values, the entire juridical order. Contrary, the positivist law school, Kelsian normativism considers that the principles are expressed by the law norms and in consequence there are no law principles outside the juridical norms' system. Eugeniu Speranţia established a correspondence between the law and the principles of law: "If the law appears as a total of social norms, mandatory, the unity of this totality is due to the consistency of all norms related to a minimum number of fundamental principles, they themselves having a maximum of logical affinity between them."[8] In connection to this problem, in Romanian literature in specialty is stated the idea that the principles of law are fundamental prescriptions of all juridical norms.[9] In another opinion, was considered that the principles of law orientate the elaboration and applying of juridical norms, they have the force of superior norms, to be found in the normative act texts, but can be inferred from the "permanent social values" when they are not expressly formulated by the positive law norms .[10]

We consider that the general principles of law are delimited by the positive norms of law, but undoubtedly there is a relation between the two realities. For instance, equality and freedom or equity

and justice are foundations of the values of social life. They need to find their juridical expression. In this way appears all kind of juridical concepts that are expressing these values, which concepts become foundations (principles) of law. From these principles the juridical norms derive. Unlike the other normative regulations, the general principles of law have an explanatory value as they contain the grounds of the existence and evolution of law. [11]

Alongside other authors[12], we assert our opinion, that the juridical norms are related to the principles of law in two ways: the norms contain and describe most of the principles; the principles are then accomplished by putting into practice the conduct prescribed by the norms. In relation to the principles, the juridical norms have a teleological, explanatory value, more restricted, the scope of the norms being the preservation of the social values, not to explain the causal reasoning of their existence. We may say that the most general principles of law coincide with the social values promoted by the law.

One can identify several most important features of the principle of law:

A) Any principle of law must be of the order of essence. It cannot be identified with a specific case or an individual appreciation of the juridical relations. The principle needs to represent the stability and balance of judicial relations, regardless of the variety of normative regulations or particular aspects specific to judicial reality. Consequently, the principle of law must be opposed to randomness and express the need as essence. Being of the essence order, the principles of law have a generalizing character, both on the variety of judicial relations, as well as for the norms of law. At the same time by expressing the essential and general of judicial reality, the principles of law are the grounds for other normative regulations.

There are important principles of law that do not depend on their consecration through judicial norms, yet the norm of law determines their definite content, in relation to the reference historical time.

B) The principles of law are consecrated and recognized through constitutions, laws, customs, jurisprudence, international deeds or formulated in the judicial doctrine.

With all variety of ways of consecration and recognition of the principles of law, it is obvious the necessity of at least of their recognition in order to be characterized and applied to the law system. This consecration or recognition is not enough to be doctrinaire, yet it must accomplish itself through norms and jurisprudence. It should however be applied a distinction between the consecration and recognition of law principle, and on the other side, on their application.

C) The principles of law represent values for the law system, as they express both the judicial ideal, as the objective requirements of society, have a regulatory role for the social relations. In case the norm is unclear or it does not exist, the solving of litigations can be achieved directly based on the general or special principles of law. As an ideal, they represent a basis for the coordination of the work for lawmaking.

The principles of law, by their nature, generality and depth, are themes for reflection, primarily for law's philosophy. Only according to their construction in the sphere of metaphysics of law, these principles can be applied in the general theory of law, can be normatively consecrated and applied to jurisprudence. Moreover, there is a dialectic cycle as the "meanings" of the principles of law, after the normative consecration and jurisprudential development, are to be elucidated also within the law philosophy.

Such a finding imposes nevertheless the distinction between what we may call: *constructed principles of law*, and on the other side *"metaphysical principles of law*. The distinction we propose has as philosophical substantiation, the distinction between 'constructed" and "given" in the law.

The constructed principles of law are by their nature, judicial rules of maximum generality, elaborated by the judicial norm or legislator, in all situations explicitly consecrated by the law norms. These principles can establish the internal structure of a group of judicial relationships, of a branch or even of the unitary law system. The following features can be identified: 1) are developed within the law, being as rule, the expression of manifestation of the will of legislator, consecrated in the norms of law: 2) are always expressed explicitly by judicial norms; 3) the work of interpretation and application of law is able to discover the meanings and determinations of law constructed principles, which obviously cannot exceed their conceptual limits, established by the legal norm. In this category we will find principles such as publicity of the hearing, the contradictoriness principle, of law and Constitution's supremacy, principle of law non-retroactivity, etc.

The metaphysical principles of the law may be considered as a "given" related to the judicial reality and by their nature are outside the law. At their origin they don't have a legal, normative, respectively jurisprudential, drafting. They are a transcendental 'given" and not transcendent of the law, therefore they are not "beyond" the sphere of law, but are "something else" in the justice system. In other words, they represent the essence of values of the law, without which this constructed reality cannot have an ontological dimension. Not being constructed, but being a metaphysical, transcendental 'given" of the law, they need not be explicitly expressed through judicial norms. The metaphysical principles may have an implicit existence, discovered and exploited in the work for interpretation of law. As an implicit "given"

[11] N. Popa, *quoted works* p.116-117.

[12] N. Popa, *quoted works* pp.116-117, R.I. Motica, Ghe. C. Mihai, *Teoria generală a dreptului. Curs universitar, "General Theory of Law. Academic course",* Alma Mater Publishing House, Timişoara, 1999, p.78.

and at the same time as a transcendental essence of law, these principles need to be found, at last, within the content of each judicial norm and in any act or manifestation that represents, where appropriate, the interpretation or application of the legal norm. It should be emphasized that the existence of the metaphysical principles grounds also the teleological nature of law, as any manifestation in the legal sphere, in order to be legitimate, needs to be adequate to such principles.

In our opinion, the metaphysical principles of the law are: *principle of justice; principle of truth; principle of equity and justice; principle of proportionality; principle of freedom.* In a future study, we will expose extensively the general considerations that allow us to identify the principles above mentioned as having a metaphysical and transcendental value in relation to the legal realities.[13]

The constitutional norms are provisions containing the formulation of the general principles of law or constitutional law. These norms legitimate the power of state, bases and organizing of the power, define some of the institutions or consecrate principles applicable to the fundamental rights. In this context we emphasize that the constitutional regulations containing the formulation of some law principles cannot be excluded from the sphere of the concept on judicial norm because here we find all features specific to them. [14]

The compliance of entire law with the fundamental Law is an important consequence of supremacy of the Constitution, and it should be understood not only through the correspondence in content and form of the lower norms as legal force with the constitutional ones, but also through the need to translate the constitutional regulations and rules (within their spirit and letter) in other judicial regulations.

To note as an important feature of the constitutional norms that arises from the principle of supremacy of fundamental law, the possibility and even the necessity to be translated, concretized through normative regulations, in other branches of the unified system of law. In relation to this element of specificity of the constitutional law norms, is necessary for the constituent legislator to establish a synthetic content, generalizing these norms' content, and not an analytical, procedural one. In the event that, when in the normative content of a constitution would prevail the descriptive, procedural character of the norms, this would lose too much of its constitutionalism finality, the one of being an essence, generalizing factor, for the whole law system. However, the generality of the constitutional law norm's formulation, would not exclude its clarity and precision. Therefore, any codifying work in the matter of constitutional law, is difficult as it should combine dialectically the generality specific to some norms containing law principles, and on the other side the clarity and precision, the last one absolutely necessary to ensure their correct application and to avoid thus, the arbitrariness or possibility for asserting in the name of some constitutional values, of any partisan political interests. This requirement's fulfilling, can be verified in the practice for transposing and interpretation of the constitutional norms met in all state authorities.

One of the most important problems to elucidate the specific of the constitutional norms' aims the answer to the question if all constitutional provisions contain legal norms. The constitutional provisions that aim the economical, social or financial system are norms of constitutional law with the value of a principle, and not mere political goals, as they regulate the conduct of the law subjects taking part in specific social relations. Likewise, the constitutional norms in question establish genuine legal rights and obligations for the law subjects. For example the constitutional obligation for the derived legislator (Parliament or Govern) like in the process of law making to comply these constitutional regulations, otherwise may intervene the sanction of unconstitutionality of the normative acts in question. We note in conclusion that all constitutional provisions contain legal norms because they have the essential features of a norm of law: prescribe the conduct of the subjects to whom they address and generate legal obligations, and such obligations' breaching may attract legal sanctions specific to constitutional law.

The logical-formal structure of the constitutional law needs to contain all three elements: hypothesis-provision-sanction. The main feature of these norms lies in the way the sanction is being expressed. Thus, for several provisions a single sanction may be present. Also there are specific sanctions in the constitutional law, for instance declaring as unconstitutional a legislative act or revocation of a state body. Given the structuring role of constitutional law for the entire law system, the logical-formal appreciation of the constitutional norms must also be made by reference to other categories of legal regulations. For the regulations of principle or of maximum generality contained in the fundamental law, some sanctions are included in the norms of other branches of law (civil law, criminal law, administrative law). In this regard, the solution of principle was correctly mentioned into the doctrine: "I think that sanctions are to be found even in the constitutional norms for the violation of any provision provided that the obligation or

G. Burdeu, *Droit constitutionnel et institutions politiques,* LG *"Constitutional Law and Public Institutions*". DJ, Paris, 1966, pp. 71-90.

entitlement is exactly identified, in other words the conduct of the subjects of law."[15]

Another element of particularity for the principles with legislative value of the constitutional law refers to the regulation subject. Without going into detail, we retain the idea contained in the contemporary doctrine, according to which the common element and proper only to social relations that form the regulation subject of the constitutional law norms, is that they appear in the process for establishing, maintaining and exercising of state power.[16]

All norms contained in the constitution are norms of constitutional law, and also principles of law, even if some of these regulate also the social relations specific to other law branches. Having into consideration that the constitutional law, in particular the constitution, contains norms with value of principle, referring not only to the organizing and functioning of state authorities but also referring to the social and economical system. In consequence, the subject for regulation of the constitutional law is formed by the social relations that appear during the process for the establishing, maintaining and exercising of state power, but also those referring to the bases of the power and bases for power organizing. These categories refer to the sovereignty of the people, characters attributed to the state, to the territory of population, included those referring to the fundamental features of social economical system.

From the technical, juridical point of view, the regulation object of the norms with principle value of the constitutional law and implicitly of a constitution, can be split into two categories of social relationships: a) specific relations of constitutional law that relate to the organizing and exercising of state power and cannot be a regulatory object for other juridical branches; b) double legal natured relationships, governed both by the constitutional law norms and by the norms of other law branches.[17] The existence of such legal relationships justifies by because between the branches of the law there is no rigid demarcation. One needs to consider also the superior legal force of the constitutional law norms, the criterion differentiating them from other norms of law, which confers a structuring value for entire law system.

III. CONCLUSIONS

Constitution is a law, but at the same time through its juridical force and content distinguishes from all other laws. At the same time, the fundamental law supremacy confers to it the quality of a primary formal source for all other branches of law.

In a comparative analysis of the regulations contained in the contemporary constitutions is noticed that the historical, political, national, cultural, religious etc. diversity of the states, does not directly result in a diversity of the legislative content for the fundamental laws. The content of the modern states' constitutions present many resemblances and sometimes wordings almost identical with some of the institutions regulated.[18] This resemblance is determined mainly by the identity of the regulatory object of the constitutional norms.

On the other side, the diversity in the normative content removes the idea of uniform standards generally valid for the contemporary constitutions. The diversity of normative content is a consequence of the fact that the fundamental law of the state is determined in terms of the content of social, political and economical realities, on the characters and attributes of the respective state, historically expressed and at the same time on the will of the constituting legislator, essentially a political will, at a certain historical moment.

Along with other authors, we believe that the scientific definition of constitution is the main criterion for identifying the normative content. Such a criterion ensures the generality necessary to give a scientific character to the scientific elaborations in the matter and it explains at the same time the regulatory unit but also the constitutional normative diversity.

For the purpose of this scientific approach, we retain the essence of every attempt to define the fundamental law namely: "The Constitution is a political and legal fundamental establishment of a state"[19]. In the legal acceptance, the fundamental law is the act through which it is determined the power statute and therewith all legal rules, having as object the regulation of the bases of power and bases for power organizing.

The legal concept of constitution can be expressed in two different meanings, respectively in a substantial and a formal meaning. Analyzed separately, the formal and material acceptation cannot be a sufficient criterion for identifying the normative content of the fundamental law. Accepting the formal criterion has as a consequence that the fundamental law could regulate any social relationship, regardless of their importance or object of regulation. [20] The material criterion is also unilateral as it excludes the procedural elements, required for a scientific

characterization of the fundamental law. The scientific approach regarding the identification of the normative content of the constitution must consider cumulatively both the formal and the material acceptation to which the political dimension referred above, is added. Therefore, we consider one may identify three criteria in order to establish the normative content of a constitution:

The establishing of the normative content of constitution is made according to the specific, importance and value of the social relation regulated. We share the view expressed in the literature that, unlike other categories of legislative acts, the norms contained in the constitution should regulate the fundamental social relations that are essential for the establishing, maintaining and exercising of power, but also those referring to the bases for the power, respectively the bases for power organizing. Therefore, the constitutional norms are always principles of law having a decisive role in establishing and functioning of the government bodies and in determining the form of the state, namely its character and attributes.

The normative expression of the constitutional principles, themselves simple as a normative form, but complex in nature and in the content determined by the object of regulation, constitutes a source and the normative-value ground of the unity and simplicity of entire legislative system of the state. The reporting of legislator to the constitutional principles, not only for guaranteeing the simple formal correspondence between the judicial norm and the fundamental law, but mainly to legislate in respect to these principles and having as a finality their content, is a prerequisite to eliminate the diversity of norms, a natural consequence of the governors' excess of power in legislative matters. There are therefore two ways through which the power can legislate: the first that is disregarding the teleological reporting to the constitutional principles and in general to the principles of law, aiming only the formal correspondence with the constitutional norms, and the second one teleological oriented to the content, meaning and limits imposed by the principles of law. In the first case, the result is the normative diversity, lacking a rational, unifying factor; in the second hypothesis there is at least the possibility of achieving the simplicity and unity of the normative system within the content's complexity.

It is important to underline the constitutional dynamism. The fundamental law is a dynamic, opened act, and in a continuous crystallization process. The constitutional status is achieved through a continuous and complex process of interpretation and application of the texts contained in the body of the constitution by state authorities. Furthermore, the constitutional norms cannot and must not provide definitions. For instance also in Romania's constitution exist such concepts, definable by way of interpretation and forming an object of analysis for the Constitutional Court: "spirit of tolerance and mutual respect" (article 29, paragraph 3); "identity" (article 30, paragraph 6); "private life" (article 30, paragraph 6); "lawful state principles" (article 48, paragraph 2); "public interest" (article 44, paragraph 3); "proportionality and public moral" (article 53) or "extraordinary situations" (article 115, paragraph 4).

The normative content of constitution needs to be understood and determined by having into consideration the teleological criterion highlighted in the above stated definition. Namely, the fundamental law's structuring role for entire social, political and state system, guarantor of fundamental rights and liberties. The fundamental law must achieve the social dynamic balance but also the stability and institutional harmony, the efficient guaranteeing of the fundamental rights, essentially the real constitutional democracy requirements based on the values of the lawful state, on institutional and social balance and on proportionality[21].

THE APPLICABILITY OF THE EU CHARTER OF FUNDAMENTAL RIGHTS: NATIONAL MEASURES

Elena ANDREEVSKA*

Abstract

After the entry into force of the Lisbon Treaty on 1 December 2009, the European Union's Charter of Fundamental Rights ('the Charter') has found a place among the formal sources of EU law, and has become a standard of review for the validity of EU acts. It became legally binding for EU institutions, bodies, offices and agencies of the Union, but also to the Member States.

Even after the entry into force of the Charter', some doubts regarding its legal effects are still looming large. Among them is whether, and to what extent, the Charter applies to national measures that are connected to EU law but are not intended to implement it directly. This legal uncertainty affects the position of individuals seeking to assert their fundamental rights before a national judge. In particular, whereas the application of the Charter warrants disapplication of the conflicting national measures, the same remedy is often not available when plaintiffs rely only on other fundamental rights instruments (like the European Convention on Human Rights or national constitutions). There is no doubt that the borderline between EU law and national law is not always easy to establish in a concrete case.

This article discusses theoretical and practical problems arising out of the application and interpretation of Article 51(1) of the Charter, according to which the Charter is addressed to the Member States 'only when they are implementing Union law'.

Keywords: *Charter of Fundamental Rights; European Union Law; Fundamental Rights; European Union; Competences of the European Union; Court of Justice of European Union; Applicability of EU Charter at National Level.*

Introduction

After the entry into force of the Lisbon Treaty, the European Union's Charter of Fundamental Rights (the Charter)[1] has found a place among the formal sources of EU law, and has become a standard of review for the validity of European Union (EU) acts.

The original purpose of the European Union's Charter was to consolidate those fundamental rights applicable at the EU level into a single text "*to make their overriding importance and relevance more visible to the Union's citizens*". As such, it should have served as a showcase of the achievements of the EU in the field of human rights protection.[2]

With the entry into force of the EU's Lisbon Treaty on 1 December 2009, the Charter became legally binding for EU institutions and national governments, just like the EU Treaties themselves - the legal bedrock on which the EU's actions are based.[3]

One of the sticking-points in the negotiations on the Charter of the European Union[4] was the question of its applicability at national level. The Charter is addressed, first and foremost, to the EU institutions. It complements national systems and does not replace them. Member States are subject to their own constitutional systems and to the fundamental rights set out in these. Member States need only have regard to the Charter when their national measures implement EU law,[5] as stipulated in Article 51 of the Charter.[6]

* Professor, PhD, Faculty of Public Administration and Political Science, "SEE-University, Tetovo", Macedonia (e-mail: **e.andreevska@seeu.edu.mk**).

[1] Official Journal of the European Communities, C 364/1.

[2] This effort was premised on the reassuring assumption that the rights listed would not entail additional State duties; the modest purpose of the Charter, as reflected in the Preamble, was that of "*making those rights more visible*,"*i.e.* not to create them anew (nor to extend the existing ones). An accurate reconstruction of the origin of each right is provided in the Explanations Relating to the Charter of Fundamental Rights (2007/C 303/02), accounting for the "conservative" value of the Charter. A full list of the sources of the rights included in the Charter is set out in the updated "explanations" of Presidium. See OJ 2007 C 303/17.

[3] The Treaty of Lisbon not only makes the Charter a legally binding document but also endows it with the status of Union primary law. According to Article 6(1) TEU, as amended by the Treaty of Lisbon, the Charter 'shall have the same legal value as the Treaties'. It is noteworthy that Article 6(1) TEU also provides that the Charter shall be interpreted 'with due regard' to the Explanations which were drawn up as a way of providing guidance in its interpretation. The Explanations have been published as an annex to the Charter as adapted in 2007, [2007] OJ C303/717. See, e.g. Case C-279/09 *DEB*, judgment of 22 December 2010 nyr, para 32.

[4] The Charter was first proclaimed by the European Parliament, the Council and the Commission as an instrument of soft law, [2000] OJ C364/1. Article 6(1) of the TEU, as amended by the Treaty of Lisbon, refers to a slightly modified version ('as adapted at Strasbourg, on 12 December 2007'), reprinted in [2010] OJ C83/389, and makes it clear that the adapted Charter 'shall have the same legal value as the Treaties', in other words, have the status of Union primary law.

[5] The link between an alleged violation of the Charter and EU law will depend on the situation in question. For example, a connecting factor exist: when national legislation transposes and EU Directive in a way contrary to fundamental rights, when a public authority applies EU law in a manner contrary to fundamental rights, or when a final decision of national court applies or interprets EU law in a way contrary to fundamental rights.

[6] See Rosas, A.; Armati, L. EU Constitutional Law: An Introduction. Oxford: Hart Publishing, 2010, p. 147−151; Rosas, A.; Armati, L. EU Constitutional Law: An Introduction. 2nd rev edn. Oxford: Hart Publishing, 2012, p. 164−168 (forthcoming); Rosas, A.; Kaila, H. L'application

As is well known, the introduction of a fundamental rights regime into EU law is essentially a story of judge-made law. In 1969, the European Court of Justice (ECJ) recognised the importance of fundamental rights by holding that they form part of the general principles of Community law whose observance the Court ensures.[7] Some landmark judgments of the early 1970s developed and refined this approach.[8]

Later developments include political declarations made by the then Community institutions and the gradual insertion of fundamental rights and human rights clauses in the Treaty on European Union (TEU) and the Treaty establishing the European Community (TEC).[9]

Decisive steps have been taken towards a Europe of fundamental rights. The Charter has become legally binding[10] and the Union is going to accede to the European Convention on Human Rights (ECHR).[11]The European Parliament[12] and the European Council[13] have made promotion of fundamental rights in the Union one of their priorities for the future of the area of justice, freedom and security. There is now a member of the Commission with specific responsibility for the promotion of justice, fundamental rights and citizenship, and the members of the European Commission promised, in a solemn undertaking before the ECJ, to uphold the Charter.[14] More generally, the Lisbon Treaty is a major step forward in that it has extended the co-decision procedure, removed the pillar structure set up under the earlier Treaty, given the Court of Justice general responsibility in the field of freedom, security and justice, and confirmed the place of human rights at the heart of the Union's external action.

In addition, The Union's accession to the ECHR[15] was made obligatory by the Lisbon Treaty (Article 6(2) TEU) and will complement the system to protect fundamental rights by making the European Court of Human Rights competent to review Union acts. This external judicial review should further encourage the Union to follow an ambitious policy for fundamental rights: the more the Union tries to ensure that its measures are fully compliant with fundamental rights, the less likely it is to be censured by the European Court of Human Rights.

Finally, it should be noted that Article 6(3) TEU, as amended by the Treaty of Lisbon, preserves the idea, expressed in the case law of the ECJ since 1969, that fundamental rights constitute general principles of Union law. This arguably will mean that the rather open-ended list of sources of inspiration which the Court has relied upon to 'find' the general principles of Union law, including other human rights conventions than the European Convention, as well as the constitutional traditions common to the Member States, will not lose its relevance altogether. On the other hand, the Charter will arguably be much more important in guiding both the Union legislator and the EU Courts.[16]

1. The Charter and its content

The European Communities (now the European Union) were originally created as an international organization with an essentially economic scope of action. Initially, therefore, there was no perceived need for rules concerning respect for fundamental rights.

However, once the Court of Justice affirmed the principles of direct effect and of primacy of European law, according to which Community law takes

[14] Text of the solemn undertaking:

I solemnly undertake:

- to respect the Treaties and the Charter of Fundamental Rights of the European Union in the fulfilment of all my duties;
- to be completely independent in carrying out my responsibilities, in the general interest of the Union;
- in the performance of my tasks, neither to seek nor to take instructions from any Government or from any other institution ,body, office or entity;
- to refrain from any action incompatible withmy duties or the performance of my tasks.

I formally note the undertaking of each Member State to respect this principle and not to seek to influence Members of the Commission in the performance of their tasks. I further undertake to respect, both during and after my term of office, the obligation arising there from, and in particular the duty to behave with integrity and discretion as regards the acceptance, after I have ceased to hold office, of certain appointments or benefits.

[15] See http://human-rights-convention.org.

[16] The term 'Union Courts' refers, apart from the ECJ, to the General Court (previously the Court of First Instance) and the EU Civil Service Tribunal, which are all seated in Luxembourg. Here, the term does not refer to national courts of the EU Member

States, although they may be viewed as EU courts in the large sense or at least as courts which are part of the EU judicial system.

precedence over domestic law,[17] certain national courts began to express concerns about the effects which such case-law might have on the protection of constitutional values.[18] In response to this, in 1974 the German[19] and Italian[20] constitutional courts each adopted a judgment in which they asserted their power to review European law in order to ensure its consistency with constitutional rights.

At the same time, the ECJ developed its own case-law on the role of fundamental rights in the European legal order. As early as 1969 it recognized that fundamental human rights were 'enshrined in the general principles of Community law' and, as such, protected by the Court itself.[21] Its subsequent reaffirmation of the same principle eventually led the German Constitutional Court to adopt a more nuanced approach, recognizing that the ECJ ensured a level of protection of fundamental rights substantially similar to that required by the national constitution, and, thus, that there was no need to verify the compatibility of every piece of Community legislation with the constitution.[22]

For a long time, the protection of fundamental rights against action by the Communities was therefore left to the ECJ, which elaborated a catalogue of rights drawn from the general principles of Community law and from the common constitutional traditions of the Member States. [23]

The Charter did not invent any new rights, but certainly smuggled into the Union some that had not been previously contemplated as Union rights *per se*. The drafters put together civil, political and cultural rights, on the one hand, and a selection of social and economic rights, on the other hand.[24]

This approach had been deliberately avoided in previous codification efforts[25]). The classic (and simplistic) view is that civil rights and liberties mostly require that States abstain from acting against them (a negative obligation), whereas economic and social rights impose a positive obligation on States to provide their citizens with tangible benefits, through which the enjoyment of those rights is possible. Accordingly, States are reluctant to enter into commitments.[26]

In fact, the reality now might be a little different, and the issue of enforceability of positive obligations might indeed arise. Concern about the direct invocability of certain norms is, in fact, visible in the Charter itself, which specifies that its provisions can be either rights or principles (or both). The main purpose of this distinction was clearly to single out those clauses that could not be deemed directly enforceable, and Art. 52(5) – a clause that was introduced at the request of the United Kingdom – tries to make this point painstakingly clear.

However, in order for this distinction to be relevant a head-count would be necessary: which of the provisions are rules and which are principles? The

[17] Costa v. ENEL, Case 6/64.

[18] If European law was to prevail even over domestic constitutional law, it would become possible for it to breach the fundamental rights granted by national constitutions.

[19] See Solange I - Internationale Handelsgesellschaft von Einfuhr- und Vorratsstelle für Getreide und Futtermittel, decision of 29 May 1974, BVerfGE 37, 271 [1974] CMLR 540.

[20] See *Frontini v Ministero delle Finanze* [1974] 2 CMLR 372. The *Frontini* case (1973) is of key significance, primarily for what has become known as the "Frontini Re serve". In this case, the CCI proclaimed that limitations on Italian state sovereignty imposed by the EC, are legitimate only in areas which are explicitly set out in the 1956 EC Treaty. More specifically, the *Frontini* case declared that European law can force the Italian national courts to revoke national laws that contradict European law; but, importantly, that this cannot apply to national laws that regulate the basic principles of the Italian constitution.

[21] Ibid. Supra 8.

[22] See Solange II - Wünsche Handelsgesellschaft decision of 22 October 1986, BVerfGE 73, 339, case number: 2 BvR 197/83, Europäische Grundrechte-Zeitschrift, 1987, 1, [1987] 3 CMLR 225, noted by Frowein (1988) 25 CMLRev 201.

[23] However, the absence of an explicit, written catalogue of fundamental rights, binding on the European Community and easily accessible to citizens, remained an issue of concern. Two main proposals were made on repeated occasions with the aim of filling this legislative gap. The first was that the European Community could accede to the Convention for the Protection of Human Rights and Fundamental Freedoms (ECHR), an already existing regional instrument aimed at protecting human rights, whose correct application by States Parties is supervised by the European Court of Human Rights. This option, however, was ruled out after the Court of Justice rendered an Opinion [2/94], according to which the Community lacked the competence to accede to the Convention. As a consequence, this avenue could only be pursued after the Treaties had been amended. The necessary amendments were finally adopted with the entry into force of the Treaty of Lisbon. Article 6 TEU now requires the Union to accede to the ECHR.The other proposal was that the Community should adopt its own Charter of Fundamental Rights, granting the Court of Justice the power to ensure its correct implementation. This approach was discussed on a number of occasions over the years and was proposed again during the 1999 European Council meeting in Cologne. See Conclusions of the European Council in Tampere, 15 and 16 October 1999, Annex ("Composition, Method of Work and Practical Arrangements for the Body to Elaborate a Draft EU Charter of Fundamental Rights, As Set Out in the Cologne Conclusions"). Meetings of the body responsible for preparing the draft Charter (renamed the "Convention") took taken place from December 1999 until the autumn of 2000. After agreement by the Convention of a final text of the Charter, the Presidents of the European Parliament, the Council of the European Union and the European Commission proclaimed the Charter on the 7th December 2000 on the fringes of the Nice European Council. See [2000] OJ C 364/8, 18 December 2000.

[24] The Charter, as now contained in the Constitution, is divided into seven parts: Title I: Dignity (Articles 11-61 to 11-65); Title II: Freedoms (Articles 11-66 to 11-79); Title III: Equality (Articles 11-80 to 1-86); Title IV: Solidarity (Articles 11-87 to 11-98); Title V: Citizens' Rights (Articles 11-99 to 11-106); Title VI: Justice (Articles 11-107 to 11-110); and Title VII: Final Dispositions (Articles 11-111 to 11-114). It includes not only restatements of traditional rights, but also innovations.

[25] ECHR is mostly concerned with the former kind of rights, but consider also the separation of the 1966 UN Covenants Namely, the International Covenant on Civil and Political Rights and the International Covenant on Economic Social and Cultural Rights.

[26] Instead, the concept that no new State obligations could be derived from the Charter prevented at the outset the trite debate about negative and positive obligations, and defused concerns that positive rights, once written into the Charter, might give rise to obligations enforceable in courts.

Charter is silent more ambivalent on this point, and the Presidium's explanations failed to establish clear distinctions.[27] Ultimately, it seems to be something for case-law to decide upon; the courts will clarify which principles deserve direct application, *i.e.* which economic rights impose, except where otherwise noted content on this site is licensed under a Creative Commons 2.5 Italy License E – 26 positive obligations on Member States.[28]

2. Interpretation of the EU Charter

In order to understand the impact of the Charter on EU law the scope of it has to be determined, both regarding when it is applicable and how the provisions within it should be interpreted. According to Article 51 para 1 of the Charter, the provisions of the Charter are addressed to the Member States only when they are implementing Union law. Explanations relating to the Charter ,[29] which (according to the Article 6 of the TEU and Article 52 para 7 of the Charter) provide guidance in the interpretation of the Charter, state that as regards the Member States, it follows unambiguously from the case-law of the Court of Justice that the requirement to respect fundamental rights defined in the context of the Union is only binding on the Member States when they act in the scope of Union law. The Explanations are used to show that case-law pre-dating the Charter is applicable in interpreting the meaning of the provisions. The Court of Justice confirmed this case-law in the following terms:

'In addition, it should be remembered that the requirements flowing from the protection of fundamental rights in the Community legal order are also binding on Member States when they implement Community rules ...'.[30] This case-law includes two situations where the Charter imposes obligations on the member states, in accordance with Article 51 of the Charter. The first one is when there is an EU obligation that requires the member states to take actions; the second one is when a member state derogates from EU law. When the member states implement legislation that does not follow from an EU law obligation the Charter is not applicable.

In *Wachauf*[31] and *Karlsson*[32], which both dealt with fundamental rights based on the general principles, the CJEU held that those rights where binding upon the member states when applying a normative scheme put in place by the EU legislator.[33] According to Lenaerts the *ERT* case[34] shows, contrary to the view of other scholars, that the Charter in fact does apply when the member states derogate from EU law.[35] The *ERT* case is mentioned explicitly in the Explanations concerning Article 51, which supports that the fundamental rights in the Charter must be respected when member states derogate from EU law.

Following the rules relating to the application of the Charter, the Charter shall not be applicable as to the "exclusive Member States competences" or belonging to their "reserved domain". But even in the fields where Member States remain competent to regulate while the Union is not competent to lay down rules, the Member States must exercise their competence with regard to Union law.[36]

ECJ in the cases of *Melloni*[37] and *Åkerberg Fransson*[38] have received due attention. Both cases dealt with the interpretation of the Charter, and hence with the future course fundamental rights protection at the EU level is likely to take. In *Melloni*, first, the ECJ ruled that in principle Member States are allowed to apply (higher) national fundamental rights standards in matters falling within the reach of EU law, but only 'provided that the level of protection provided for by the Charter, as interpreted by the Court, and the primacy, unity and effectiveness of EU law are not

[27] A very accurate appraisal of the Praesidium's explanations, which also accounts for their ambiguity on the right/principle divide, is provided in Sciarabba: 2005.

[28] On the similar duty as undertaken by the ECtHR (through the expansive use of Arts. 2, 3, and 8 of the Convention, and through the development of new safeguards for non-discrimination and procedural fairness (Arts. 6 and 14).

[29] Explanations relating to the Charter of Fundamental Rights. OJ C 303, 14.12.2007, p. 17 - 36. The Explanations relating to the Charter are not legally binding but an interpretative tool. The interpretative value of the Explanations should be higher than that of *travaux préparatoires* since the authors to the Treaty of Lisbon and those of the Charter has stressed the importance of the Explanations. Hence, in practice the CJEU cannot interpret the Charter contrary to the Explanations without engaging in judicial activism.

[30] Judgment of 13 April 2000 in a case C-292/97 [2000] ECR I-2737, paragraph 37 of the grounds. This rule applies to the central authorities of the Member States as well as to regional or local bodies, and to public organisations, when they are implementing Union law.

[31] Case 5/88 [1989].

[32] Case C-292/97 [2000].

[33] As regards the derogation situation Lord Goldsmiot (The Charter of Rights, Freedoms and Principles, Common Market Review 38: 1201-1216, 2001) and former Advocate General Jacobs (J.G Jacobs, Human Rights in the European Union: The role of the Court of Justice, European Law Review, No. 4, 331-341, 2001) among others have argued that the Charter should not apply, while the general principles should apply.

[34] Case C-260/89 [1991].

[35] In the *ERT* case the ECJ states that when deciding whether rules that obstruct the freedom to provide services can be justified according to EU law it has to be 'interpreted in the light of general principles of law and in particular of fundamental rights'. The *ERT* case also confirms that fundamental rights were considered general principles before the Charter was adopted. When member states derogate from EU law, the general principles demand that the fundamental rights are respected.

[36] See, for example: Judgment of the Court of Justice of 2 October 2003 in case *C-148/02 Carlos Garcia Avello v Belgian State*, European Court reports 2003 Page I-11613, paragraph 25. Judgment of the Court of Justice of 12 May 2011 in a case C-391/09 *Malgožata Runevič-Vardyn and Łukasz Paweł Wardyn v Vilniaus miesto savivaldybės administracija and Others*, paragraph 63.

[37] Case C-399/11 [2013].

[38] Case C-617/10 [2013].

thereby compromised'.[39] Secondly, in *Åkerberg Fransson* the ECJ opted for a wide interpretation of Article 51(1) of the Charter. This section holds that the provisions of the Charter are addressed 'to the Member States only when they are implementing Union law'.[40]

According to Article 6 of the TEU, the provisions of the Charter shall not extend in any way the competences of the Union as defined in the Treaties. Article 51 para 2 of the Charter confirms that the Charter may not have the effect on extending the field of application of Union law beyond the powers of the Union as defined in the Treaties. But, extending the scope of application of the Charter by the way of extending the scope of application of EU law is not excluded by these provisions. It follows that in order the Charter to be applied the link with EU law has to be established. Whenever a link can be established between a national measure and the application of the provisions of EU law (e.g., with respect to EU law on European citizenship, by moving to or visiting another Member State – cross-border link), the protection of fundamental rights at EU level is activated and thus the Charter of Fundamental rights should be applied. If, such a link is not found, the Charter will not apply. Extending the field (scope) of application of the Union law has the effect of extending the scope of application of the Charter.

Finally, the relationship between ECHR and the Charter is mainly regulated in Article 52(3) which "is intended to ensure the necessary consistency between the Charter and the ECHR", "without thereby adversely affecting the autonomy of [EU] law and of that of the [ECJ]". The autonomy of EU law could mainly be grounded on the principle "of the more extensive protection", which means that the provisions formally affirm that the level of protection maintained under EU law could never be lower than that guaranteed by the ECHR. In light of the Explanations relating to the Charter the provisions are formulated in a way allowing the Union to guarantee more extensive protection and never offer a lower protection of the rights than contained in ECHR.

As a final point, the Charter does not pose a serious threat towards the national constitutions. The implementation of the Charter does not alter the division of competence between the Union and the member states. Also, the existence of the Charter is not aimed to extend the competence of the EU institutions, especially that of the ECJ.[41]

Applicability of the Charter to the Member States

The question of application of Union fundamental rights at Member States' level has caused more discussion and concerns. When should national courts and authorities apply the Charter, and Union fundamental rights in general, rather than fundamental rights recognised in the national constitution and in international human rights instruments binding on the Member State in question?

In the light of the above, it should not have come as a surprise to anyone when the ECJ, in *Wachauf*, confirmed that Union fundamental rights 'are also binding on the Member States when they implement Community rules'.[42] In *ERT* and subsequently, the test was formulated as a requirement that the national measures 'fall within the scope of Community law'.[43] Contrary to what some of the discussions at the Convention which prepared the Charter of Fundamental Rights appeared to assume,[44] the Court did not launch any radical new principle in these judgments but simply stated the obvious.

That said, it has not always been easy to draw the line separating those national rules that fall within the scope of Union law from those falling outside that scope. In some cases, the ECJ has concluded that the link between the national measures and Union law was not sufficiently direct or strong and that the national measure thus fell outside the scope of Union law (perhaps the most well-known case concerned a prisoner who attempted to invoke his Union law right to move and reside freely as a basis for contesting his prison sentence).[45] A number of examples best illustrate the issues that can arise.[46]

---

[39] Para 60.

[40] However, in *Åkerberg* theECJ did not consider this reason to refrain from reviewing an issue concerning an offence of national value-added tax evasion and the application of the *ne bis in idem* principle in Sweden.

[41] It is also worth noting that the translations to the Charter are not coherent between the language versions. This will lead to problems when it comes to how the Charter should be interpreted in practice when the formulations are dissimilar between the member states. For how the ECJ handles this issue, see the recent judgment in *Åklagare v. Hans Åkerberg Fransson* (Case C-617/10 [2013]).

[42] Case 5/88 *Wachauf* [1989] ECR 2607, para 19. See also Case 36/75 *Rutili* [1995] ECR, 1219; Case 63/83 *Kent Kirk* [1984] ECR 2689; Case 249/86 *Commission v. Germany* [1989] ECR 1263.

[43] Case C-260/89 *Elliniki Radiophonia Tileorassi* (ERT) [1991] ECR I-2925. See also Case C-159/90 *Grogan* [1991] ECR I-4605, para. 31.

[44] Rosas, A. Is the EU a Human Rights Organisation? *CLEER Working Papers 2011/1.* The Hague: T.M.C Asser Institute, 2011.

See, e.g. de Búrca, G. The Drafting of the European Union Charter of Fundamental Rights. *European Law Review.* 2001, 26: 126, 136; Eeckhout, P. The EU Charter of Fundamental Rights and the Federal Question. *Common Market Law Review.* 2002, 39: 945, 954.

[45] Case C-299/95 *Kremzov* [1997] ECR I-2405. See also Case C-159/90 *Grogan, supra* note 19; Case C-306/96 *Annibaldi* [1997] ECR I-7493.

[46] See Case C-60/00 *Carpenter* [2002] ECR I-6279, paras 37–40; Case C-117/01 *KB* [2004] ECR I-541, paras 30–34. In the case of *Goodwin v UK* and *I v UK*, judgment of 11 July 2002, the European Court of Human Rights had held that the fact that it was impossible for a transsexual to marry a person of the sex to which he or she had belonged prior to gender reassignment was a breach of the right to marry; Case C-71/02 *Karner* [2004] ECR I-3025; Case C-144/04 *Mangold* [2005] ECR I-9981; Case C-555/07 *Kücükdeveci* [2010] ECR I-365. In *Kücükdeveci*, the problem did not arise in the same way as the deadline for the implementation of Directive 2000/78 had expired. These two cases also raise the question of horizontal application of Union fundamental rights; and Council Directive 1999/70/EC of 28 June 1999 concerning the framework agreement on fixed term work concluded by ETUC, UNICE and CEEP, [1999] OJ L175/43.

National judges are increasingly aware of the Charter's impact, and they seek guidance from the Court on its application and interpretation under the preliminary rulings procedure.[47] To determine whether a situation falls within the scope of the Charter, as defined in its Article 51, the Court examines, in particular, whether the relevant national legislation is intended to implement a provision of EU law, the nature of the legislation, whether it pursues objectives other than those covered by EU law, and also whether there are specific rules of EU law on the matter or which may affect it.[48]

Three recent cases are good examples of situations where the Court held that the Member States were not implementing EU law, and thus where the Charter did not apply.

First, in *Pringle*[49]*Pringle*4, the Court held that when Member States established a permanent crisis resolution mechanism for the Eurozone countries, they were not implementing EU law. The Treaties do not confer any specific competence on the EU to establish such a mechanism. Consequently, Member States were not implementing EU law within the meaning of Article 51, and the Charter did not apply.

Second, in *Fierro and Marmorale*[50],*Marmorale*5, the Court examined Italian legislation which requires a deed of sale of real estate to be annulled if the real estate was modified without regard to town planning laws. Such automatic annulment hampers the exercise of the right to property (Article 17[51]). The Court declared the case inadmissible as there was no link between national laws on town planning and EU law.

Third, in *Cholakova*[52], the Court examined a situation where the Bulgarian police had arrested Mrs Cholakova because she had refused to present her identity card during a police check. The Court held that, as Mrs. Cholakova had not shown an intention to leave Bulgarian territory, the case was of a purely national nature. The Court held that it was not competent to deal with the case and declared it inadmissible.

There are currently three situations in which it is clear that the application of the Charter is triggered.

First, 'implementing EU law' covers a Member State's legislative activity and judicial and administrative practices when fulfilling obligations under EU law. This is the case, for instance, when Member States ensure effective judicial protection for safeguarding rights which individuals derive from EU law, as they are obliged to do under Article 19 (1) TEU. The Free Movement Directive[53] permits Member States to restrict the freedom of movement of EU citizens on grounds of public policy, public security or public health. The Court held in the *ZZ* case that the basis for such a refusal must be disclosed to the person concerned.[54] In this case, the grounds for a decision refusing entry into the UK were not disclosed for reasons of national security. The Court confirmed that a person has the right to be informed of the basis for a decision to refuse entry, as the protection of national security cannot deny the right to a fair hearing, rendering the right to redress ineffective (Article 47).

Second, the Court established that the Charter applies when a Member Stat authority exercises a discretion that is vested in it by virtue of EU law. In *Kaveh Puid*[55], the Court confirmed its previously established case-law[56]and held that a Member State must not transfer an asylum seeker to the Member State initially identified as responsible if there are substantial grounds for believing that the applicant would face a real risk of being subjected to inhuman or degrading treatment, in violation of Article 4 of the Charter.

Finally, national measures linked to the disbursement of EU funds under shared management may constitute implementation of EU law. In *Blanka Soukupová*[57]*Soukupová*12, the Court held that in implementing Council Regulation 1257/1999 on support for rural development from the European Agricultural Guidance and Guarantee Fund Member States are required to respect the principles of equal treatment and nondiscrimination, enshrined in Articles 20, 21(1) and 23 of the Charter. When providing early retirement support for elderly farmers, Member States are required to ensure equal treatment between women and men, and to prohibit any discrimination on grounds of gender.

Conclusion

The Charter is binding on the Member States when they act within the scope of application of Union law. Member States are binding by the provisions of the Charter whenever the link with EU law is established. In such case, national measures, even the ones falling within the exclusive competences of the Member States, has to respect the provisions of the Charter.

In 2013 the Court dealt with a large number of cases concerning the Charter's applicability at national level. This highlights the Charter's increasing interaction with national legal systems. In this context, the *Åkerberg Fransson* judgment plays an important role in further defining the Charter's application in the Member States by national judges, even though the case law in this respect is still evolving and likely to be continuously refined. National judges are key actors in giving concrete effect to the rights and freedoms enshrined in the Charter, as they directly ensure that individuals obtain full redress in cases where fundamental rights within the scope of EU law have not been respected.

EU institutions have made significant efforts to ensure the consistent application of the Charter's provisions since it gained legally binding force as primary EU law. Any impact on fundamental rights needs to be carefully considered during legislative procedures, especially at the stage of elaborating final compromise solutions. A strong inter-institutional commitment is required to achieve this goal. EU legal acts can also be challenged before the Court for any infringements of fundamental rights. The Court's scrutiny extends to Member States as well, but only where they implement EU law. Outside that area, Member States apply their own national fundamental rights systems. This is a clear and deliberate choice made by the Member States when designing the Charter and the Treaty. The EU institutions must go further than merely respecting the legal requirements following from the Charter. They must continue fulfilling the political task of promoting a fundamental rights culture for all, citizens, economic actors and public authorities alike. The fact that the Commission has received more than 3 000 letters from the general public regarding the respect of fundamental rights indicates that individuals are aware of their rights and demand respect for them. The Commission supports their endeavours.[58]

It is not yet clear how far the ECJ will go to interpret the Charter favourably in the application of EU law, whether it will engage with principles in a normative fashion or actually add nothing to the existing law. However it has already started to use the Charter in its consideration of cases, both indirectly and upon application.

VALUES AND VALORIZATION

Elena ANGHEL*

Abstract

I live with the feeling that, in the past few years, Romania has been a drifting ship. We do not know where is it going, nor the place it will arrive at. Like any individual endowed with reason, I wonder why chaos took over this society and, if I would have the power to change anything, what would be the solution to less troubled waters. I think we lost our way because we forgot to always refer to the values that should guide us ... or because we refer too often to non-values. I think we could find our way and stop wandering if we will rely our evolution on values, if we will teach our children from a young age what values and non-values are and if we could run our existence in the spirit of a real value horizon.

People live together, not just coexist, as so deeply professor Gheorghe Mihai highlighted[1]. Coexistence is specific to herds, packs, hordes; but human community means collaboration, cooperation, consensualisation, which implies a consciousness towards values. "What is missing now to the human society is a behavior that relates to a code of virtue"[2].

Moral values are the support for the legal values. Unfortunately, today, it seems to me that values are inverted and that the belief in the perfectibility of the individual (and therefore the perfectibility of law) is increasingly being questioned. Contemporary society is characterized by lack of motivation, lack of a strategy and the absence of any ideals. In this context, I believe that the individual today feels the necessity of some value referrences more acutely, whilst the society needs a law deeply based on moral values. As morality itself contributes to the valorization of the law, I think that moral appeal is more necessary today than yesterday, as a remedy for the individual and, consequently, the law to overcome their crisis.

For all these reasons and also because I share the view that "the concrete law is not viable without values and these values are always expressed in the defining principles of a law system"[3], I felt the need to write about values and valuation.

Keywords: *value, valuation, law crisis, principle, ideal.*

INTRODUCTION

The rules of cohabitation within the society are not spontaneously produced by the intuition. Mircea Djuvara noted that „the concept of value is present within all the legal relations and therefore it can be said that the law in its integrity is nothing but a research of values. They are classified in increasingly higher values, having the same nature as the very idea of obligation, being set out as unconditional values"[4].

First of all, the values concern the process of creation of the law by being valorized by means of the enacted rules of law. The lawmaker creates the ideas within an axiological area. The law always starts from the social actions, but it also means legal consciousness, ideals and social values. Ion Craiovan noted that an action becomes a value as soon as it falls under the dynamic field of our interests and opinions[5]. Each and very rule outlines social values, defined as „appreciation criteria, standards, norms" which are values representing "fundamental principles of choice" for human life. As soon as the values acquire legal expression, they are promoted and protected by the rules of law they translate. Within the society, the values motivate the individual, guide it and grant reference models and systems to it. Therefore, we speak about the perception of the values in what concerns the individual and the valorization function of the values on the human inwardness.

The specific element of the society is the praxio-axiological cooperation of its members. Gheorghe Mihai deeply outlines that people do not coexist, the people live together[6]. The coexistence is specific to the herds, packs or hordes; but the human community means collaboration, cooperation, unity which implies the value awareness. The individuals, as free beings endowed with sense and consciousness, choose their behaviors, measure their actions, relate to behavior standards and assess the consequences of their actions. Therefore, „the feature of the individual of being free, able to choose based on a rational purpose is the one that differentiates so radically the animal from the human being".

CONTENT

The axiological dimension of the law represented a point of interest for the whole philosophy of the law. Ioan Humă outlines that the legal axiological condition is the key condition of the law. The substance of the law lies not only in the normative dimension of the law, but also in the valuable contents which confer the axiological meaning to the field of the law. Therefore, the field of the law and especially its regulatory framework "falls under the scope of the creative tension between what it actually is and what it should be, between the reality and the ideal and between the fact of life and the value. To remove the law from the axiological field means to reduce it to a pile of facts, of things belonging to the entropic fact of life and not to the human action able to model the social reality and the human being itself"[7].

The principles of the law are the expression of the values promoted and defended by means of the law. According to J. Locke, „the principles have such an influence on our opinions that we usually judge the truth and weigh the probability by means of them to such extent that all that is not compatible with them is so far from us that we do not even think it can be possible"[8].

Such great is the importance of the values, that they classify any positive law from the axiological point of view. However, the people do not cohabit only legally, but also morally, politically and religiously. The law does not exhaust the wealth of the horizon of the values: besides the independent legal values which build the rules of law, there are also other values, namely non-legal values which are necessary for the human coexistence and which the law takes over, legalizes, promotes and defends by means of its rules. „The philosophy of the value is the only one which can justify both the general human nature of the value and the fact that the different types of value are complementary, so that if the human being does not cultivate values it is unilateral, poor and in the end comes to be inauthentic"[9].

Therefore, the legal axiology does not investigate only the legal values. Since it aims the legalization of the other social values, the principles represent the field where the law meets the philosophy, moral, politics and the other social fields. The circumscription of the content and of the purpose of the general principles of law inevitably engages the theory in formulating valuable statements which are opened to the philosophical horizon so that the real penetration of their meanings necessarily implies the philosophical meditation: the philosopher is the one who "queries the whole law, the concept of the law while the lawyer "queries the concreteness of the law"[10]. Ion Craiovan noted that the philosophical universe of the value, „attracts, repulses or causes reluctance, but it proves to be unavoidable by the human being within its permanent attempt of self-definition and construction"[11].

Ioan Humă outlined that the philosophical truth is different from the scientific truth due to the fact that, by studying not the thing itself but its impact on our spirit, the philosophical truth confers value[12]. Notwithstanding, the author establishes that the two subjects are complementary: „the science of the law certifies the philosophy of the law and the latter is nourished by the living truths of the former".

The ethics also represents an axiological criterion of the law. There are several law principles that claim the defense of certain values coming from the moral; therefore, the fairness, dignity, the good and the useful thing, the truth and the good faith are categories of the moral. Sometimes, the doctrine assesses the individual itself as a value, seeking answers to the question of whether the individual as a distinct personality is or has value. Therefore, according to Ion Craiovan, „the human being creates values and creates itself by means of the values which become coordinates of the human action and ontological determinations of the human condition".

The moral values represent the basis of the legal values. In our opinion, the two social fields, namely the law and the moral are complementary in the field of the law and they merge in order to achieve the scopes of the society without being mutually exclusive. However, within the accepted legal principle, the existence of the law was sometimes perceived as a subsidiary intervention: „the law exists as long as the individuals are incapable of morality, in its meaning of virtue"[13]. We believe that the substance of the law is not the coercion, the perfection being achieved by means of the valorization function of the moral within the law. First of all, the law is claimed in order to educate, to valorize and to prevent (this is why the majority of the individuals comply with the normative prescription) and only to the extent necessary the law is claimed in order to coerce and to punish.

The distinction of perspective between the law and the moral in terms of the value consists in the fact

that "the moral admission of the value of the human life is universal and absolute and no speculative derogation of it can affect its substance, while the legal admission of the same vale is suddenly neither universal nor absolute as long as the same lawmaker falls in contradiction in the same respect"[14]. Therefore, we understand that what is important is the admission of the values, not the way they emerge within a positive law system which changes from an era to another, but within their logical anteriority, the everlasting values of the founding principles of the positive law being the ones that really matter. In what concerns the political influence, the principles of law are "the result of the continuous and necessary observations of the social needs and none of these principles represents just the result of the abstract speculation"[15]. Before being embodied into a principle of law, a certain principle represents the object of the political ideologies; up to the extent the idea takes shape in the common legal consciousness of the society, the concept sets oneself up as a principle of law, being then translated into the rules of law. According to Ion Craiovan, the political values such as peace, freedom, equality, independence express the aims of the social-political system, the content and the structure of the power, the mechanisms of exercising the political leadership and ideologies[16].

According to Montesquieu, to pretend that the justice exists only if the positive law discloses it would be as absurd as if someone pretended that the radii of the same circle were not equal before drawing the circumference.

The draw up of the list of all values would have no practical use. However, we believe that the values such as justice, legal security, social order, peace, social progress, freedom, equality, human dignity, property, democracy, rule of law, national sovereignty represents the invariabilities of the legal judgment. We distinguish between legal, moral, political, religious, aesthetic, economic and philosophical values. The legal accepted principles notes the existence of the scope values which are sought by means of the action and of the instrument values by means of which we are able to reach the scope value[17]. The scope values, „although spiritual creations of the society, arising from cohabitation, live by means of their subjective interpretation of the human experience which engages them in dreams, aspirations and ideals of life". For example, according to Djuvara, the scope value is the justice which „orders by means of its own authority. It must be heard for ourselves and inside ourselves without reference to any other purpose, because there cannot be any other purpose higher than it"[18].

The philosophy of the law often attempted to classify the values in a particular hierarchy. Each of those who approached the study of the values of the law classified within this hierarchy the values which they considered to be the most important. Therefore, there is a multitude of systematizations, claiming a diversity of "higher rank" values. As far as we are concerned, we move away from the attempt to classify the values, wondering under what criteria we might consider that a certain value is more important and other less important for the universal human being? Therefore, we agree with the words of the professor Craiovan: „the originality and irreducibility of the values lead to the failure to admit the superiority of rank, and at most, to temporary priorities depending on the human social needs related to them"[19]. It is shown that the hierarchy of the values should not be understood as a mechanical subordination of the values, likely to cancel the specific of each value.

Throughout the evolution of thinking, the values were "ranked" depending on the importance they granted to the human community, according to the aspirations of the respective historical moment. For the Romanian lawyers, the law was the art of the good and of the equitability, Toma d`Aquino defined the law by means of the idea of equality, according to Kant the law means the individual freedom, to Bentham the utility, to Duguit the solidarity, while the positivists remained to the state law. Most of the philosophers considered the ideal of justice to be the supreme value. Mircea Djuvara wrote that „our sense does not conceive anything higher than the idea of justice; we necessarily understand that there cannot be any another interest above justice; the ideal of justice is higher than any other ideal, is an ultimate ideal in this respect"[20]. François Terré noted the ambivalence of the law: the law is a mediator between the right thing and the wise thing, it tends to reconcile the aspirations of the law with the requirements of the society[21].

J.-L. Bergel also admits the possibility to classify the general principles of law depending on their value, arguing that: everything related to the social order prevails over the personal interest; the requirements of the public order prevail over the non-retroactivity of the law or of the individual property; the fundamental

freedoms have priority over any other legal categories. Basically, the conjugation of the principles of law depends to some extent on their specialty or generality, so that the principles applicable to a certain subject shall have precedence over the general principles[22].

Paul Roubier outlined the necessity to explain the law based on the theory of the values. The definition of the rule of law fundamentally involves an essential dimension, as the law is a normative science situated in the field of the "should be" and subject to the law of the purpose. The law is not an explanatory discipline, it does not describe the reality on the indicative mood but on the imperative, the law is founded on valuable judgments and its assessments are always set by reference to an ideal[23].

Paul Roubier noted the existence of the three-dimensional theory of law, in the sense that each of the three main thinking movements – the positivism, the natural law and the realism – explained the concept of the law by reference to a certain value. Each of the values discovered by these accepted legal principles correspond to a certain stage in the evolution of the society, as follows: the positivism considers that the key value is the legal security, the value of the justice prevails in the field of the natural law, and the realism seeks the purpose of the law within the social progress. According to Roubier, the trilogy of the legal security, justice and progress represents the hierarchical order of the values.

According to Rickert, there are certain principles that give meaning to the history and they consist precisely of the fundamental values that govern the development of the humanity. The accepted legal principle shows that „in formal terms, they are timeless by means of their validity, regardless of the historical transformation, but their content depends on the historical life. Therefore, in what concerns the history, the system of the values has an open character"[24].

The historical continuity of certain values asserts their importance and the absolute nature, regardless of the changes recorded from a society to another. By being located within the natural law, these values are absolute and represent a legal constancy. The evolution of the ideals emerges from the consciousness of the society, however, to a certain extent it can lead to a re-valorization of the law. Therefore, by being related to a particular system of positive law, the social values established within the content of the rules of law may be subject to "transformations", rearrangements. Therefore, in terms of the axiological dimension, the Romanian constitutional system was established in 1991, the supreme values being referred to in art. 1 of the Basic Law. By means of the review of the Constitution in 2003, the democratic traditions of the Romanian people and the ideals of the Revolution of 1989 supplemented these values. Thereby, certain ideals, aspirations and values were taken over from the natural law and were expressly provided by means of the rules of law, by being transformed from real sources into formal sources of law.

Mircea Djuvara showed that the ascertainment of the ideal built by the society must be the beginning of any scientific research of the law. According to Gheorghe Mihai, the value „is not natural, as the properties of the things, it is not based on the real world, but on the ideal world, of the pure validity"[25]. However, although the individuals are similar by means of the values they receive, they are still different by means of their valorization, due to the fact that „each and every value is valorized by means of the actions". Therefore, the human being is endowed with responsibility, is aware of the values that the rules of law engage, adopts them and chooses between the legal and the illegal, the licit and the illicit actions. By means of the actions, the human being decides to adopt a certain legal conduct and commits to translate the values admitted by it.

Therefore, the value represents the mark of the responsibility and the validity of the rules of law falls under the conditions of the acceptance. Those who disregard the rules of law defy the values involving them. Therefore, the fulfillment of the law depends on whether it is accepted and assumed as a value and a rule by the members of the society. The coercion is not the one which essentially ensures the force of the law, but the power to valorize the rules of law imposed on the individuals. In this regard, the understanding of the fulfillment of the law is an act of assessment and search of the justice and of the other acknowledged values.

Ion Craiovan distinguishes between the action of valorization and the action of preference, as follows: the action of valorization, by being emerged within the social consciousness prevails over the actions of preference which occur within the individual consciousness[26]. The value is a "generic human quality", although it is inner: it is repeated in the individual consciousnesses which live it, as if it belongs only to a single individual; the value remains universal by means of its structure, no matter the historical time. The values propose to the individual "a complex of coded solutions that store the collective experience of the group to which it belongs, anticipate and humanize its creations".

The law is „generated and structured within and directed towards the inseparable connection with the constellation of values of the historical time in which it is developed and in certain conditions the law itself accedes to the statute of value"[27]. The author conceives the culture as a merger between the knowledge and the value. The knowledge is not sufficient in order to grant an unitary view to the act of culture, therefore the value appears as a "fulfillment of the knowledge" in relation to the human being, its aspirations and needs. In the first place, the culture, by involving valuable judgment, represents the crystallization of the knowledge and in the second place the embodiment of the value. The elements of the knowledge are "capable of valorization within the humans' area by means of their very essence and genesis, therefore they are potential or actual values of the human being".

Petre Andrei distinguishes between the process of knowledge and acknowledge (valorization) of the values. Therefore, the process of knowledge is theoretical and results in making existential judgments; it grants us the "explanatory theoretical values" on the top of which the value of the truth is laid. The process of acknowledge is a practical process which results in valuable judgments. The valorization, preceded by the knowledge, consists in the "research of the correspondence, matching between a middle value and a scope value which we consider as a feasible fact". Within the valorization process the individual is engaged intellectually, emotionally and volitionally. The result of the valorization process is an absolute, general and supra-individual value consisting of all the values that create the culture: the cultural ideal[28]. In the same time, as stated in the literature: (...) empowering people through their involvement in community life can be perceived as a factor related to democracy, to the development of the society[29].

The values, ideals and aspirations of the society find their expression in the content of the rules of law. A certain concept, a certain value, such as equality may be a subjective right considered essential. Therefore, we speak about the subjective right to equality. In addition "certain subjective rights are selected based on the criteria of values due to their importance and registered as fundamental rights"[30]. Equally, the same value, by being one of the basis of the law, may achieve the content of the principle of the objective right. „Therefore, the equality and freedom, as the basis of the social life need to find their legal expression. Therefore, the legal concepts of the equality and the freedom which shall become basis (principles) of law emerge, thus resulting in the emergence of the rules of law"[31].

The qualification of these ideas, concepts and values depending on their importance and consecration within the legal, national or supra-national order is not an easy task. The long discussions prior to the draw up of the European Union Treaty on the coverage of the "values of the Union" proved the difficulty of such a process, determined by the meaning to be granted to the concept of "value"[32]. Therefore, difficulties were encountered in trying to establish if one of the ideas should be considered as values or objectives, the replacement of the „values" with „principles", of the „human rights" with the „fundamental rights or fundamental freedoms" emerged, the area of the objectives of the Union extended. Basically, it was considered that the values able to accomplish the following two requirements should be recorded as values of the Union: the fundamental behavior and the basic legal content which is clear, without controversies, so that the member states know their obligations and the penalties which emerge in case of the failure to fulfill the obligations. That way, the former "principles" become "values" in the Treaty of Lisbon and, for the first time, the rights of minorities are mentioned[33].

Ion Deleanu noted that, „by means of an original feed-back circuit, once the law is created, it becomes mandatory to the state which is a subject of law, like other subjects. In order for the law to have the power to become mandatory, several minimum terms are indisputable; the postulation of the genuine and persuasive moral and political values of the global civil society and of the individual, by means of the rules of law; the establishment of a democratic environment; the strengthening of the state responsibility principle; the establishing of control means over its activity; the creation of a coherent and stable legal order; the strict promotion of the legality and of the constitutionality principle; the conversion of the human being into the cardinal axiological mark"[34].

CONCLUSIONS

The importance of the principles of law and their related values is suggestively expressed by Gh. Mihai in the following lines: „The algebraic equations and the chemical schemes are also beautiful, the demonstrations of the geometry and the sociological investigations are fascinating, but neither of them breaths the human beauty in the same way the legal truths succeed in doing it, by means of which we aspire to live surrounded by the good and the right things. The people need not only the harmony and the balance but how could they hope to spend effectively the other needs if the balance and the harmony are missing and are altered?"[35]

If the specialized literature records a consensus over the importance of the existence of the principles, the determination of the number of the general principles leads to many disputes. The four principles of natural law established by Grotius – the obligation to repair the damage caused by own actions, the fulfillment of the undertaken commitments, the respect towards the assets belonging to another persons, the fair punishments of the offenders – were gradually supplemented by tens of principles, by revealing a real passions of the theorists to list principles. Gh. Mihai noted in the works of the doctrinarians the existence of at least one hundred principles, classified in four levels: essential for *omni et soli*, essential for the Romanian law in force, essential for a branch of the law, essential for the legal institutions. Furthermore, the difficulty increases when the principles are to be stated; for example, the author shows that the principle of freedom was granted 47 statements within the works published in 2004.

According to Gh. Mihai there is one single principle which organizes the law and which does not need any acknowledgement: the principle of justice. The justice, as an ontological principle is registered in the spiritual essence of the human being. This principle of „what it should be" is multidimensional and its dimensions lead to another dispute: the representatives of the monism assert the single dimension of the principle; the representatives of the pluralism argue that „the basis is represented by a plurality of principle, without agreeing on their number"[36]. In what concerns the dimensions of the principle of justice, Gh. Mihai claims the equality, freedom and responsibility. The independence of justice is not only a desiderate of the Constitution`s editors, it is a reality, it has practical application, so it is not only a state of mind [37].

The multitude of opinions can be justified as follows: we are situated in a field which confers a generous space to the creative role, so that each and every researcher makes all the efforts in order to bring something new, by exceeding the level of the knowledge already settled. However, we must not forget that the principles represent a guarantee for the stability of the legal order, a requirement which should not be sacrificed in favor of the creative vanity. What is really important is the existence of the principles: „a principle, whatever it may be, in relation to which all individual relations are arranged, is essential for the maintenance of the society; the significance of this principle, the things it allows or prohibits do mot matter, but its existence is fundamental for the social body"[38].

THE RESPONSIBILITY PRINCIPLE

Elena ANGHEL*

Abstract

"I'm wishing Law this: all legal obligations sholud be executed with the scrupulosity with which moral obligations are being performed by those people who feel bound by them ...", so beautifully portraited by Nicolae Titulescu`s words[1].

Life in the society means more than a simple coexistence of human beings, it actually means living together, collaborating and cooperating; that is why I always have to relate to other people and to be aware that only by limiting my freedom of action, the others freedom is feasible. Neminem laedere should be a principle of life for each of us.

The individual is a responsible being. But responsibility exceeds legal prescriptions. Romanian Constitution underlines that I have to exercise my rights and freedoms in good faith, without infringing the rights and freedoms of others. The legal norm, developer of the constitutional principles, is endowed with sanction, which grants it exigibility.

But I wonder: If I choose to obey the law, is my decision essentially determined only due of the fear of punishment? Is it not because I am a rational being, who developed during its life a conscience towards values, and thus I understand that I have to respect the law and I choose to comply with it?

Keywords: *responsibility, freedom, juridical liability, values, principles.*

INTRODUCTION

The International Bill of Human Rights, by claiming that freedom and equality of dignity and rights are inborn, shows that human beings are "endowed with sense and consciousness and should behave fraternally towards each other". Therefore, freedom, dignity and equality emerge from the human sense and consciousness and not from the objective right. Similarly, this study aims to show that the need to comply with these core values of the human quality has the same justification, being based on the human sense and consciousness which represent the premises of the responsibility.

According to Gh. Mihai, the responsibility is a concept of justice as value, together with freedom and equality as values. As far as we are concerned, we believe that the major difference consists in the fact that while freedom and equality are inborn, the responsibility is to be cultivated in time due to the fact that it is not innate. „The human being is not born with a formed responsible personality (…), but with the ability of being responsible for what happens throughout its psychosocial formation as a subject able to know itself and the others"[2].

Therefore, the responsibility is an attribute of the human personality, a synthesis of the responsibility feeling and the responsibility knowledge. The extent of the responsibility is given by the level of the self-awareness. The society has an important role in this respect. The individual lives and evolves within a social environment; it expresses itself within the social life, interacts and permanently relates to values. And the values are those which proclaim and defend the society at one point in time: it sets up a model to be followed up and requires its members to comply with it. In this regard, the assumption of the values and the compliance of the individual behavior with the social regulations shall be performed voluntarily, without involving any compulsory social forces, which are outside of the individual's environment, but only a high level of civic consciousness.

If the individual does not meet the standards of conduct and violates the social relation, its behavior also reflects the extent to which the society managed (or did not manage) to valorize the actions of the individual and to implement the sense of responsibility on it. „The antisocial behaviors should be viewed not only as punishable actions, but as diseases of the individual of which remedy must be sought if it has not been found or as diseases of the society itself due to the fact that it is not exempt from any sort of psychosis. The disease is often due to the environment and therefore it is necessary to treat the environment, although this should not be generalized"[3].

Therefore, we can discuss the educational role of the law on the completion of the individual's personality and we will detail it in the following lines.

CONTENT

By focusing on the coercion at the expense of the education, the law succeeds in restore the social order for the moment. But this is only an apparent success due to the fact that „the effect is the one focused and

the cause is ignored. The appearance and the violation of the rules that regulates the social report are removed and the substance is kept: namely the lack of socialization of the individual". The law should implement in the consciousness of the individual not only the fear of coercion and punishment, but should act for the improvement of the individual by means of education, under the consequence of the improvement of the entire social order. It is argued that the law „should have as a final purpose the re-modeling of the individual's self-awareness", due to the fact that „what is missing is the faith in the human being's perfection"[4].

This is the moral dimension of the responsibility. in what concerns the legal dimension of the responsibility, this takes the shape of a general law principle which involves on the one hand the promotion of the social and human values by means of the rules of law and on the other hand the defense of these values within the process of the law.

Therefore, the value is a mark of the responsibility. The responsible human being develops throughout its life, the ability to distinguish between values, pseudo-values and non-values. Despite this, the criterion of the values varies from one legal system to another and even within the same system, depending on the periods of time. For example, the homosexuality is an offense which violates the social values of Colombia but which is not sanctioned in Spain where it is not deemed to violate a social value. Therefore, the legal responsibility is related to the relative law system and it is impregnated by its precariousness"[5].

The perspective distinction between the law and the moral in terms of value is that „the moral admission of the human life is universal and absolute and no speculative derogation of it can affect its substance, while the legal admission of the same value is suddenly neither universal, nor absolute, as long as the same lawmaker falls in contradiction in the same respect"[6]. Therefore, we understand that what is important is the admission of the values, not the way they emerge within a positive law system which changes from an era to another, but within their logical anteriority, the everlasting values of the founding principles of the positive law being the ones that really matter. We can say that the difference between law and morality consists, on the one hand, in the purpose (law envisages general interest - social welfare, public utility, while morality is related to moral elements, other factors than economic order, opportunity) and, on the other hand, in the effectiveness of the two (law imposes coercive sanctions, morality does not)[7].

The criteria of the legal responsibilities is represented by the legal values expressed by the regulatory system by means of the rules of law, as well as by the other social values which, without falling in *abinitio* under the scope of the regulation, are then legalized and valorized by means of the rule of law.

The principle of the responsibility concerns both the process of drawing up the laws (targeting both the responsibility and the liability of those who perform the respective duty, reflected in the selection of the values that correspond the best to the interest of the society), and the fulfillment of the law, by emphasizing that the law should not be understood only as a tool used in the field of the damage already occurred but also as a tool used to develop the feeling and awareness of the responsibility. Recent doctrine stated that "responsibility principle can be inferred even from his interpretation of the Romanian Constitution which provides the principle of responsibility of state powers and civil servants[8]. According to Hayek, the most important role of the law lies in its ability to predict the individual's actions, so that by being established on prevention and on the coordination of the individual behaviors in the desired direction, the social order is ensured[9].

From the etymological point of view, the term ("responsabilitate") „responsibility" comes from the Latin s*pondeo*, which in Romanian law means the official obligation of the debtor to the creditor to fulfill the performance undertaken under the agreement. The distinction between responsibility-liability (responsabilitate – răspundere) is reflected in the legal language by using different words, as the case of the Romanian language, or of the English language: „liability" (răspunderea), and „responsibility" (responsabilitatea).

By analyzing the content of the two terms, Gh. Mihai shows that the responsibility belongs to the personality as a whole, while the liability „is divided in as many forms as the number of persons expressing this personality; I am personality, but I disclose my moral person in moral relations, the legal person in legal relations and the political person in political relations"[10]. Furthermore, in practice, the author shows that the specific of the personality is revealed by means of the natural person in civil legal relations, by an offender in criminal relations and by a citizen in constitutional relations. The positive law holds liable a

certain person as a natural person in civil relations, as an offender in criminal relations and as a taxpayer in fiscal relations. However, the author outlines that „not all the persons of the same individual take part in the creation of the legal values, but its personality due to the fact the personality is the value which valorize, while its persons valorizee, wear and express the values by means of different social relations, including legal relations".

Starting from the above mentioned, Gh. Mihai points out that each human being is a person, a subject endowed with judgment, feelings, will, emotions, attitudes, it is able to distinguish the right from the wrong, the truth from the lie, the justice from the injustice, it can be hold liable for its own choices which are revealed by means of its behavior; furthermore, each human being is a personality, thanks to these features which distinguish it from any other human being. Therefore, the author concludes that, „I am a person as any other human being but I am judged based on evidence as a personality"[11].

The responsibility is the „sine qua non existential quality of the human being who knows itself and the others and who performs the action no matter in how many forms it is divided (moral, legal, political)"[12]. By representing a value, the responsibility is an indestructible merger between the feeling and the knowledge, so that we can speak about the feeling and the knowledge of the responsibility.

According to Dumitru Mazilu, the responsibility is „an intrinsic coordinate of the human behavior which plays a decisive role in the freely consented performance of the provisions of the rules of law and in preventing the violations of the law"[13].

The process of the self-awareness involves two dimensions: the responsibility represents the positive side, by meaning the extent to which the society managed to implement its system of values on the individual, and the legal liability which represents the negative side by emerging in cases where the law failed to fulfill its educational, preventive function. The legal responsibility is an institution by means of which the lawmaker expresses the vocation of legal liability of certain persons due to the potential acts and legal actions committed. The legal responsibility is prior to the committed offense, unlike the liability which emerges only after the occurrence of the act or legal actions which caused damages and only under the terms provided by the law.

On the field of the damage already occurred, the legal liability contributes in order to ensure the legality, as the simple approval of several penalty measures would not be enough if by their application the restoration of the rights established by the law and violated by the individual was not pursued. On the other hand, the prevention and education of the law pursue to highlight „its ability to engage collective response binding upon the person who violates the rule of law which anticipation is able to lead to the respect and compliance of the members of the society who do not want the legal penalties to be applied on them"[14]. Legislative changes that occur at a time raise serious issues to different areas of law in terms of interpretation and application of legislation[15].

By being endowed with sense and consciousness, the human being is free to choose, to decide and to act. Only the independent human being is responsible and therefore liable. It is aware of the values, understands and internalizes them, then chooses between them and translates them into its actions. Given this, we outline that the discussion on responsibility becomes meaningless if we do not have the free will as a prerequisite. „In order to question whether an act of some persons is right or wrong, we firstly must take into account that the respective person was free when it committed the act. If the person was not free, then all the problems disappear and only the scientific problem, which has nothing to do with the law, emerges"[16].

The existence of the responsibility requires the fulfillment of two conditions: the freedom of the personality and its ability to decide, in other words the ability to act freely and consciously. Therefore, the freedom is the *sine qua non* condition of the responsibility. We cannot speak about responsibility if the will of the individual was determined by external means, was forced or directed. The responsible involvement within the social life means the free admission of the values, the knowingly assessment of the causal consequences and the uncontrolled decision to act according to own will.

In this respect, Gh. Mihai noted that the responsible person is the individual who makes the choices, decides and carries out its spiritual and material actions[17]. Therefore, by being self-aware, the individual, the recipient of the law, chooses between the legal and the illegal actions, the licit and the illicit facts, decides on those to be carried out by it and undertakes to commit them, which means that it is

responsible. Therefore, we can say that the independent individual who is aware the values of the rules of law, internalizes and adopts them, is the individual legally responsible; if it does not adopt them and chooses other values, which it undertakes to translate in actions and deeds, it is also legally responsible. „The human being is legally and morally responsible for the scopes knowingly assumed, meaning the scopes that it evaluated, assessed, thought and chose and for the actions controlled by its judgment and deliberately wanted"[18].

As a basic principle, the principle of the responsibility is directly linked to the principle of freedom due to the fact that it is based on the free will: „all the determinations of the law are determinations of the will, starting from property, exchange, illicit actions and ending with the civil society and the state"[19].

In terms of knowledge and will, the human being is responsible for its actions and it can be hold liable only up to this extent. Its will should not be constrained by internal or external factors, so that the individual, in order to be liable, has to be aware of and to agree with its actions. The connection between freedom and responsibility was also discussed by Hayek: „The freedom does not mean only the fact that the individual has both the opportunity and the burden of the option; it also means that it is bound to bear the consequences of its actions and the fact that he will be praised or blamed"[20].

The social liability emerges as a consequence of placing the individual into a regulated social environment; the latter always relates to the values; the violation of the regulations bearing values (meaning the shortage of their assimilation, introspection and self-awareness fulfillment) leads to the liability of the person in question.

Basically, each and every violation of the existing social regulations leads to the moral, religious, political or legal liability, meaning the obligation to bear the consequences of the failure to comply with the rules of behavior, an obligation incumbent on the offender who violated the rule. The legal liability is one of the expressions of the idea of social responsibility.

The social liability existed since the primitive times under archaic forms such as private vengeance or private compensation. We should recall that the subject of the legal liability was also discussed in the works of the great ancient thinkers. According to Platon, nobody should remain unpunished for disregarding the law, no matter the damage it causes by means of the respective committed offense. The beginnings of the theory of the prevention are found in Platon's works, the philosopher considering that the liability must emerge "not in order to pay for the committed mistake, because once the damage has been done, it cannot be repaired, but in order for the guilty and for the persons who see it being punished to sincerely hate injustice and to release themselves of this weakness in the future".

In what concerns the Romans, *The Law of the Twelve Table* established, beyond the rule of the private vengeance, the system of the legal structure whereby the pecuniary compensation right for the damage incurred of the victim of an offense was recognized. G. delVecchio noted that this was the reason why „the less harsh trends of replacing the vengeance with the compensation did not fail to occur. Instead of being avenged, the offense was compensated, either according to the award of an arbitrator chosen by the parties among the elder persons or according to an established rate"[21].

Later on, Grotius established the four principles guiding the whole law, the principles which are nowadays the pillars of the field of the legal liability: *alieni abstinentia* (the respect for the other's assets); *promissorum implemendorum obligation* (the fulfillment of the commitments); damni culpa dati reparation (the compensation of the damages caused to other persons); poene inter hominess meritum (the fair punishment of those who violate these principles).

Mihail Eliescu believes that the liability, by being a social fact which „is limited to the reaction caused by an action that the society of the place and time of the committing considers it punishable[22]. Nicolae Popa added that in case the legal liability is dispersed, the social reaction has different distinctive features, being an institutionalized reaction triggered by an offense and being organized within the limits set by the law[23].

In the accepted legal principle, the legal liability institution is defined as the unit of the rules of law concerning the relations that arise in the field of the activities carried out by the public authorities under the law, against those who violate or ignore the rule of law, in order to ensure the compliance with and the promotion of the rule of law and public good[24].

According to another opinion, the legal liability is analyzed as a „special legal relation, consisting in the obligation to bear the penalty provided by the law, as a result of committing an attributable legal act. However, this obligation falls into a complex content

which is supplemented by its relevant and related rights"[25].

We hereby outline that the legal liability is not the only type of liability which sanctions the violations of the rules of conduct. The legal liability is related and complementary to other forms of social liability. Therefore, the individual may be hold liable by the society by means of disapproval or even by the individual itself by means of its inner feelings and its consciousness of being a responsible person. In this case, the authority competent to perform the judgment is the individual itself: „a responsible person judges itself and therefore assumes the result of the judgment; it is demanding with its own person as a result of the self-judgment and assumption of the strictness against itself"[26].

According to Gh. Mihai the liability emerges from the responsibility, the legal liability is the awareness of an illegally committed act, the fact of holding someone legally liable is the consequence of committing an illegal act, namely the violation of the legal provision by means of a knowingly material behavior, while the fact of holding someone religiously liable for example, is the consequence of the violation of a divine rule „by means of the words, facts and thoughts"[27]. In what concerns the area of the law the responsibility is an existential quality of the individual by means of which it expresses its personality within social relationships, while the irresponsibility emerges *per accidens*. The irresponsible person manifests, binds and looses the relationships with other persons, but the social liability is not assigned to it, so that it is not hold liable for illegal acts. Unlike but not opposed to the rule of law, the moral regulation expressly establishes the irresponsibility cases also called "causes that remove the legal liability", outside of which we are legally responsible and able to be held liable.

Therefore, the mandatory character of the rule of law is different from that of the moral regulation; however, it is essentially to outline that the field of the responsibility is set between the two categories, the ethics and the law: being enhanced by the moral, the law is implemented by the individual as the awareness of the need for the rule of law, and not as being essentially binding. If the legal order gathers the social harmony and the coercion, in this order and not vice versa, the legal penalty emerges only as a potential element, „if needed". Therefore, this is the purpose of the law: to educate, to valorize, to prevent (this is why the majority of individuals comply with the normative prescription) and only to the extent that the social harmony is disturbed by antisocial actions, to re-establish the rule of law by applying penalties. Therefore, an increased responsibility is translated by the installation of the legal liability on the theoretic level; the deeper the responsibility is implemented in the individual's inner the less the individual is held liable on the field of the law, by incurring penalties.

Essentially, both the moral regulation and the rule of law addresses to the individual's consciousness, the perfectibility of the individual representing the scope to be reached. In the field of the law, the consequences are more generous, meaning that the perfection of the individuals reached by the valorization function of the moral law, leads to the perfection of the legal order, the final scope of any society.

We note that in the accepted legal principle, the order of fulfilling the functions of the law is sometimes reversed. Therefore, one opinion[28] shows that, by establishing the conduct to be followed, the law creates automatic behaviors: the subject complies with the rules of law without the creation of new behaviors being necessary; the law is the one that has to fulfill the creative task. If the individual complies with the rules of law, means that it assimilated the prescribed behavior, the assimilation being explained by the author by means of two reasons: „firstly, because the law has the sanctioning power", then due to the fact that the "law has a creative ability and it is persuasive". Therefore the penalty is not a potential and alternative element which is perceived only when needed, but the decisive element of the individual for the purpose of assuming the imposed conduct. Furthermore, the persuasive value of the law is not imagined as being due to the valorization ability of the law with the consequence of making the individual to be responsible, but to the idea that „the will of the authority means a lot for the individual, de facto it means an order".

All the above mentioned are also supported by logical and legal considerations: the penalty is only one of the three elements that make up the structure of the rule of law. No doubt that the legal penalty is the one that confers specificity (chargeability) to the rule of law, unlike the other types of social regulations. This must not lead however, to the equivalence between the legal liability and the legal penalty. We are liable, due to the fact that, above all we are responsible and only to this extent we can be held liable. The liability is a stage prior to the application of the penalty. The legal frame of awarding the legal liability is broader and cannot be limited to the penalty. The content of the legal liability is complex, consisting of the right of the state to hold liable the individual who violated the rule of law and to apply the penalty provided by the law, on the one hand, and on the other

hand, of the correlative obligation of the individual who committed an offense to bear the respective penalty. The basis of the legal liability is the illicit action and its consequence is the application of the penalty. The penalty is only one aspect of the relationship of the legal coercion, namely the reaction of the society to the committed offense. However, the liability should not be based on the coercion; beyond the repressive function (the application of the penalty), the legal liability has also an educational function, or it would be more appropriately to say that it has the role to reeducate the individual, and is embodied in the social responsibility of those who proved the lack of admission of the values by means of violating the rule of law.

CONCLUSIONS

„The law shall exist as long as the individuals are incapable of morality, in its sense of virtue"[29]. D. C. Dănişor, I. Dogaru, Gh. Dănişor outlined that the basis of the law is the education and not the coercion, regardless if it is based on the will of the majority or on the state or most of the time on the arbitrary penalty. The law should belong to the sense so that the "idea of scope which is not imposed by force, regardless if this force is led by the majority, should take priority in the field of the law. The things that really happen fade in front of the things that should happen, but what should happen is not outside the law, but this is the law itself"[30].

Therefore, if the legal liability lays within the area of the law, is related to the public authority and aims de facto the compliance or the non-compliance with several prescriptions contained in the rules of law, is indifferent to the position of the individual in relation to these prescriptions since it does not imply any option, interest, conviction or initiative of the individual, the legal responsibility has a value content due to the fact that the individual relates to the values expressed and included by the legal normative system of the society by means of its own options, interest, by creating an own value system in relation to which it manifests its attitude within the social area[31].

According to Gheorghe Mihai, the value „is not natural, as the properties of the things, it is not based on the real world, but on the ideal world, of the pure validity"[32]. However, although the individuals are similar by means of the values they receive, they are still different by means of their valorization, due to the fact that „each and every value is valorized by means of the actions". Therefore, the human being is endowed with responsibility, is aware of the values that the rules of law engage, adopts them and decides to adopt a certain legal conduct and commits to translate the values admitted by it. Sever Voinescu noted that the law is a criterion by means of its ideality, due to the fact that by means of the valorization of the human's actions the law contains the project of the ideal social relations[33].

Within the society, the individuals acquire different levels of freedom that they tend to exercise in strict consideration of their personal interest. This is why the law appears as the limitation of the individualism, acting in order for the freedom of all members of the society to be possible. The individual freedom should be accompanied by the feeling of the responsibility, this is why, regardless of all the theories on this subject, we consider that the law cannot accomplish its mission without being supported by the moral. In this respect, François Terré noted the ambivalence of the law: the law is a mediator between the right thing and the wise thing, being the articulation of the individual and the social actions[34].

The law is built in consideration of its social effectiveness, consisting in the adherence of the society members to the rules of law. By being addressed to free subjects, endowed with will and consciousness, the law should be accepted by the society members as value and as regulation. Therefore, the implementation of the law should be based on the coercion only as an auxiliary element: „the implementation of the law by means of the enforcement and compliance with the regulations depends on the way a certain hierarchy of values and interests is required by the consciousness. This public consciousness is the real basis of the law, and not the coercion which is only a corrective measure"[35].

THE RIGHT TO NONDISCRIMINATION. THE EUROPEAN COMMISSION AGAINST RACISM AND INTOLERANCE – A MONITORING BODY OF THE COUNCIL OF EUROPE

Raluca MIGA BEŞTELIU[*]

Abstract

Along the last six decades, the Council of Europe, as an international regional organization, generated a complex body of both binding and non-binding legal instruments. The importance of non-binding legal documents, also identified as European soft-law, is demonstrated by the Council of Europe's constant and growing involvement in monitoring activities and the creation of non-conventional monitoring structures, particularly in the field of human rights. One such structure is the European Commission against Racism and Intolerance (ECRI), which, throughout its' broad and complex areas of competence has helped define and consolidate the European framework in matters of broadly identified as racial discrimination. ECRI had also brought a substantial contribution to the adoption of the 12th Protocol 12 of the European Convention on Human Rights (ECHR) and to the consolidation of related case law before the European Court for Human Rights (ECtHR).

Keywords: *Council of Europe, ECRI, non-discrimination, racial discrimination, soft-law, recommendations, monitoring.*

1. The Council of Europe and the rule of law. The importance of monitoring activities as *early warning* instruments.

Democracy, the rule of law and the respect for human rights and fundamental freedoms are the original common values of the Council of Europe, that continue to unite the 47 member states.

According to its Statute, the Council of Europe, as a regional intergovernmental organization of *cooperation*, does not have supranational competences. Thus, legally binding obligations originated in the activity of the organization, can not be imposed on member states. For instance, wthin the framework of the European institutional architecture, the Council of Europe endevours to elaborate an important **common european conventional network**, in various fields of cooperation[1]. Those Conventions are not compolsury, they are *only recomended* for ratification to the memberer States of the Council of Europe[2].

Safeguarding the respect of human rights and strengthening of neccesary democratic reforms can thus be achieved by establishing common standards of conduct**,** that has been and continues to be a difficult task that member States have assigned to the organization. Since such standards are not legally binding[3], compliance is achieved by means of a specific system that promotes them, which consists of: elaboration of *soft law* regulations and introduction of a variety of *monitoring activities* for their implementation.

The European *soft law* regarding human rights. The concept of ***soft law*** in contemporary international law has a variety of meanings; its most generally accepted description is that of *a legally non-binding instrument*. It describes *inter alia* some UN General Assembly resolutions, declarations of international conferences, guidelines, codes of conduct, common standards of conduct, or certain general "principles" to be observed in different international interactions.

- **Monitoring mechanisms.** According to international institutional law, **monitoring activities** in international organizations pertain to the more general concept of **supervision**, which includes all methods by which "*Member States are encouraged to comply with the rules, not only by the threat of sanctions being imposed for non-compliance, but also through the possibility that there will be some form of supervision or official recognition of violations.*"[4]

In the European context, monitoring the respect of human rights is seen as „the starting point for a clear understanding of the nature, extent, and location of the

[1] A total of 215 Conventions were adopted, as to September 2014.

[2] Among them,only the European Convention on Human Rights and Fundamental Freedoms (**ECHR**),adopted by the Council of Europe as early as 1950 and entered into force in 1953, has particular normative consequences for the states that ratify it. The Convention sets up the European Court of Human Rights (**EctHR**), as an important jurisdictional *supranational* body, since the Court judgements impose legal obligations upon States parties.

[3]Among them,only the European Convention on Human Rights and Fundamental Freedoms (**ECHR**),adopted by the Council of Europe as early as 1950 and entered into forcein 1953, has particular normative consequences for the states that ratify it.The Convention sets up the European Court of Human Rights (**EctHR**), as an important jurisdictional *supranational* body, since the Court decisions impose legal obligations upon States parties.

problems which exist and for the identification of possible solutions".[5]

For almost sixty years, the Council of Europe has constantly perfected the functioning of several now well-established **independent bodies** endowed with the task of *monitoring* a wide variety of standards in member States and *anticipating* possible malfunctioning[6]. The expertise and professionalism of these bodies allows the Council of Europe to pinpoint non-compliance issues and offer *recommendations* to its Member States.

There are two categories of such monitoring mechanisms: Convention based structures and Non-conventional monitoring structures.

- ***Convention based structures*** are**:** The **European Committee for Social Rights,** created by the the *European Social Charter*; the **Committee for the Prevention of Torture** within the *European Convention for the Prevention of Torture*; the **Consulting Committee** of the *Framework Convention for the Protection of National Minorities*; the **Committee of Experts** of the *Charter for Minority Languages;* the **Group of Experts on Action against Trafficking in Human Beings** (GRETA), acting within the framework of the *Convention on Action against Trafficking in Human Beings* [7].

All the afore mentioned bodies are set up with the task to evaluate ,at regular intervals, each State Party's compliance with the respective treaty provisions.They recommend improvements in legislation, policy and practice in each of the state parties.The results of those monitoring activities are eventualy presented to the Council of Europe's main institutional structures - the Committee of Ministers, Secretary General and Parlamentary Assembly. This way the members of the 47 National Parliaments are constantly informed about the application of the provisions of the respective Convetions and are able to exert, if necessary, political pressure in encouraging national governments to take appropriate measures[8].

- ***Non-Conventional Monitoring Structures*** set up within the Coucil of Europe are: **The Commissioner for Human Rights** was established in 1999, by Resolution (99) 50**),** as an independent institution, mandated to promote awareness of and respect for human rights in the 47 member states. The activities of the Commissioner and his Office focus on three major, closely-related areas: a system of *country visits* and *dialogue with national authorities and civil society* to identify vulnarabilities and key issues in the countries visited; *thematic work* and *awareness-raising activities*, such as the release of opinions regarding specific human rights issues. Since the entry into force of Protocol No. 14 to the ECHR, the Commissioner has the right to intervene *ex officio* as a third party in the Court's proceedings, by submitting written comments and taking part in hearings[9].

The Committee of Experts on the Evaluation of Anti-Money Laundering Measures, set up in1997 is an anti-money laundering evaluation and peer pressure mechanism, subsequently renamed **Moneyval**. After the events of 11 September 2001, Moneyval's terms of reference were revised by the Committee of Ministers of the Coucil of Europe, to include compliance with the relevant standards on terrorist financing, as some of the techniques which apply in money laundering are relevant also in identifying terrorist financing. Currently 28 Council of Europe member states are evaluated by Moneyval[10].

The Group of States against Corruption (GRECO). Over more than a decade of efforts to combat economic crime (including, inter alia, bribery) at European level, in 1994, Ministers of Justice of Council of Europe member States agreed that corruption should be addressed at European level, as it poses serious threats to the stability of their democratic institutions. In 1997, at the 2nd Summit of Heads of State and Government of the Council of Europe, Member States decided to intensify their anti-corruption efforts and adopted *Twenty Guiding Principles against Corruption* (Resolution (97) 24) and on the 1st of May 1999, the **Group of States against Corruption (GRECO)** was set up by 17 founding Member States (Belgium, Bulgaria, Cyprus, Estonia, Finland, France, Germany, Greece, Iceland, Ireland, Lithuania, Luxembourg, Romania, Slovakia, Slovenia, Spain and Sweden)[11]. By *monitoring compliance with Council of Europe anti-corruption standards*, GRECO aims at improving the capacity of Member States to fight corruption. Through mutual evaluation and peer pressure, it helps to identify deficiencies in national anti-corruption policies, promotes the necessary legislative, institutional and practical reforms, provides a platform for the sharing of best practices in the prevention and detection of corruption[12].

2. The inception of the European Commission against Racism and Intolerance (ECRI), as a non-conventional monitoring body of the Council of Europe.

The fight against racism and discrimination has always been one of the *raison d'etre* of the Council of Europe, whose historical and political roots go back to the Second World War and the need to prevent its horrors from happening again. For over 50 years, efforts to promote tolerance have been at the heart of the Council's work, reflected in its various institutional structures and programs in political, legal, social and cultural fields.

In the early 90s the upsurge of racist violence in Europe and other parts of the world gave a new urgency to this combat. In October 1993 the Vienna Summit of the Council of Europe's Heads of State and Government decided to set up a new specialized body -**European Commission against Racism and Intolerance (ECRI**), as a monitoring mechanism to combat manifestations of **racism, xenophobia, anti-Semitism and intolerance**, from the perspective of fundamental human rights protection, in all the Member States of the Council. The decision to establish ECRI was taken at the highest political level and was the result of the conjoint will of the European Heads of State to give a new impetus to the fight against racism and discrimination in Europe. [13] In October 1997, the second Summit of the Council of Europe, held in Strasbourg, strengthened ECRI's action and in 2002 the Committee of Ministers of the organization granted ECRI **autonomous Statute**[14], thereby consolidating its role as an independent human rights monitoring mechanism to combat manifestations of racism and other forms of racial discrimination in all Member States of the Council of Europe.

3. General mandate, composition and functioning.

ECRI's general mandate was conceived to provide the Council of Europe's Member States with concrete and practical advice on how to tackle problems of racism and discrimination in their respective countries. To this end, it examines the legal framework for combating racism and racial discrimination in **each country**, its practical implementation, the existence of independent bodies to assist victims of racism, the situation of vulnerable groups in specific policy areas (education, employment, housing, services etc.) and the tone of political and public debate around issues relevant for these groups. As previous experience has proven, all these concepts and circumstances are changing and can take different forms, covering not only the most blatant abuses of human rights, such as state-sanctioned segregation, apartheid or Nazism, but also other, more subtle forms of racism and discrimination, which are nonetheless harmful means of differential treatment experienced in everyday life. They can include the targeting of persons on the grounds not only of race or ethnic origin, but also of religion, nationality or language, or a combination of such grounds.

The Commission is made up of 47 members – one from each Member State of the Council of Europe. Members are appointed by Member State governments, for a renewable term of five years in accordance with the following terms of ECRI's Statute: *The members of ECRI shall serve in their **individual capacity**, shall be independent and impartial in fulfilling their mandate. They shall not receive any instructions from their government*.

ECRI meets and takes its decisions in Plenary Sessions, held in Strasbourg, three times a year. **Working groups**, made up of different ECRI members, prepare the drafts of ECRI's future decisions. The continuity of the activity is assured by a permanent Secretariat, provided by the Council of Europe within the Directorate General of Human Rights and the Rule of Law.

4. ECRI as a monitoring body of the Council of Europe.

As opposed to other monitoring bodies within the Council of Europe, whose mandates are treaty-based[15], ECRIs monitoring activities are not based on the stipulations of a specific treaty. Its role lies mainly in *detecting and signaling manifestations* of racism, xenophobia, anti-Semitism and intolerance within all Member States. A distinct characteristic of ECRIs mandate resides in the fact that it takes into consideration not only the extreme and serious manifestations of human rights violations, but also *those encountered in everyday life*, which can build up to constitute important obstacles to equality and nondiscrimination. Another characteristic of ECRIs more recent activity is the extension of its monitoring focus to also include *new categories of vulnerable groups* (such as migrants and asylum seekers). In addition to this, ECRI pays particular attention to racist *hate speech* and violence and also to effective *anti-discrimination legislation* in Member States.

3.1. The "three pillars" of its activity.

ECRI statutory activities are put in practice through three main components ("pillars"):

- *Country-by-country monitoring* of the phenomenon of racism, discrimination and intolerance in each Member State of the Council of Europe. In the light of relevant findings and accomplishments in each country visited by ECRIs experts, individual ***Country Reports*** are drafted and **specific recommendations** are formulated, for concrete improvement measures in the fight against racism and discrimination.
- Work on general themes, which consist of drafting *General Policy Recommendations* (GPRs), covering the main domains of racism, intolerance and discrimination.
- *Relations with the civil society*, in each Member State, by information and communication activities, with the aim of *awareness-raising* on issues under ECRIs mandate.

4.1.1. Country-by-country monitoring.

In the framework of its *country-by-country monitoring*, ECRI examines the situation concerning manifestations of racism and intolerance in each of the 47 Council of Europe Member States. The findings, along with specific recommendations as to how each country should deal with the problems identified, are published in separate documents as **Country Reports.** These Reports are drawn up after a **contact visit** to the country in question and a confidential dialogue with the national authorities. The country-by-country monitoring takes place in 5-year-cycles, covering nine/ten countries per year. The *fourth round* of country-by-country monitoring procedure ended in 2012 and the *fifth round* is in progress.

3.1.2. General Policy Recommendations (GPRs).

Prepared and adopted by ECRI plenaries, the GPRs are addressed to all Member States. They contain guidelines on general themes related to ECRI's specific mandate, covering some important issues, such as: key elements of national legislation to combat racism and racial discrimination (GPR No. 7); the creation of national specialized bodies to combat racism and racial discrimination (GPR No. 2); combating racism against Roma and antigypsism (GPR No. 3 and GPR No. 13); combating islamophobia (GPR No. 5), racism on the internet (GPR No. 6); combating racism while fighting terrorism (GPR No. 8); anti- Semitism (GPR No. 9); racism and racial discrimination in the activity of the police (GPR No. 11); education (GPR No. 10); sports (GPR No. 12) and employment (GPR No. 14).

Relations established with civil society

Combating racism can only be effective if the anti-racism message filters down to society in general. For this reason, awareness-rising among the general public and a communication strategy are crucial. In 2002 ECRI adopted a **Program of action** to consolidate this aspect of its work, which involves, among others: **Round tables** in different member States, cooperation with other interested parties in each country, as NGOs, the media and youth sector. The round tables are frequently organized upon publication of the last Country Report in a particular member State.

3.1.3. Interdependence between ECRI activities.

Activities carried on through ECRIs "three Pillars" are not separate from each other but *closely linked and interdependent.* The C**ountry Reports (1)** bring to light particular problems and, taken as a whole, highlight the main trends in all Member States of the Council of Europe. Some of these trends call for concerted and carefully considered strategies, which ECRI develops when drafting **General Policy Recommendations (2).** Implementation of all the recommendations, general and country-specific, is promoted through **information and awareness-rising activities** involving the civil society, on national and international level **(3)**.

3.2. Specific working methods and procedures within ECRI.

Since its first meeting in March 1994, ECRI action developed on a ***step-by-step*** principle. The strategy has been to gradually build up activities and procedures, thus ensuring that, in line with its founding documents, those activities are constantly evaluated, consolidated and used as a basis for the next step forward.

3.2.1. Concerning the ***country by country monitoring*** ("Pillar 1"): The research, drafting and adoption of all Country Reports follow some **basic stages**, in order to reach the best impact of this activity:

1st stage - A working group, formed of 5 ECRI members, examine the information and prepare ***a monitoring visit,*** which takes place, in each Council of Europe member State. Two of the rapporteurs carry out the visit, where they meet and exchange information with both government and the civil society partners. On the basis of the information gathered, ECRI plenary adopts a ***draft Country Report.***

2nd stage - The draft report is sent to the authorities, through the *national liaison officer* (NLO), for comments. The draft report may be revised in light of the comments of the authorities (only concerning *factual errors*). ECRI plenary adopts the ***final report***.

3rd stage - The Report is sent by ECRI to the government in question through the *intermediary* of the Committee of Ministers of Council of Europe. Only after presentation to the Committee of Ministers, the final Country Report is published.

3.2.2. The principle of reporting on an "equal footing". The structure of all Country Reports follows a **uniform pattern**, reflecting ECRI's mandate and its concern to treat all member States, regardless of their particularities, *on an equal footing.* Thus, the <Table of contents> of any Country Report comprises information, evaluations and recommendations on the following issues:

- the country's legal and institutional framework, relevant for ECRIs mandate: ratification or signing of the important human rights treaties; antidiscrimination legislation -constitutional, criminal, civil and administrative law provisions- and the degree of their implementation;
- in each Country Report, a number of the same **core issues** are examined: **discriminations in various fields** -education, employment, housing, healthcare, services; **manifestations of racism,** such as racist violence, anti-Semitism, racism in public discourse, conduct of law enforcement officials, hate speech, racism on the internet; the situation of **particularly vulnerable groups** facing discrimination, in each country. Vulnerable/target groups may vary, from country to country, in connection with internal or international events.
- in each country report a number of different **specific recommendations** are formulated, regarding different critical areas of discrimination identified in the countries visited.

3.2.3. Constant procedural improvements. ***Four rounds*** of Country Reports were accomplished until 2012 and the ***fifth cycle*** of country reporting is in progress since 2013.One of the new and important elements already introduced in the fourth round of reporting is an ***interim follow-up procedure***. It consists of selecting, from all the recommendations formulated in each Report, ***two or three specific recommendations,*** for which ***priority implementation is requested***, after a **two years period**. Those recommendations should be ***important, feasible*** and ***measureable.*** Two years after the publication of the Report, ECRI will address a "communication" to the government in question, asking whether those specific recommendations, for which priority implementation was requested, have actually been put into effect.

In line with other procedural improvements, are also the Appendices which, at the governments request, might be attached to the Country Reports, containing particular governmental view points; they are transmitted by the Governments, at the end of the confidential dialogue with ECRI and may still be changed or amended by the government in question, at the meeting of the **Committee of Ministers of the Council of Europe**, during which **the final Country Report** is transmitted to the government.

4. The role of ECRI in the adoption of the 12th Protocol of the European Convention on Human Rights.

4.1. From the principle of equality to the assertion of a right to nondiscrimination.

In the context of the protection of human rights and fundamental freedoms, the concept of nondiscrimination, was expressly advanced as early as 1948, in the United Nation's Universal Declaration of Human Rights. **Art.7** of the Declaration reads as follows:

All are equal before the law and are entitled without any discrimination to equal protection of the law. All are entitled to equal protection against any discrimination in violation of this declaration and against incitement to such discrimination.[16]

In the UN Covenant on Civil and Political Rights of 1966, nondiscrimination is viewed as a prerequisite for the effective application of the principle of equality and thus, attached to all fundamental human rights and freedoms. **Art.26** of the Covenant reads as follows:

All persons are equal before the law and are entitled without any discrimination to the equal protection of the law. In this respect the law shall prohibit any discrimination and guarantee to all persons equal and effective protection against discrimination on any ground such as race, color, sex, language, religion, political or other opinion, national or social origin, property, birth or other status.[17]

From a different perspective, **Art. 14** of the European Convention for the protection of Human Rights and Fundamental Freedoms (European Convention/ECHR), entered into force in 1953, prohibits discrimination **only** if affecting the rights secured by the Convention:

The enjoyment of the rights and freedoms set forth in this Convention shall be secured without discrimination on any ground such as sex, race, color, language, religion, political or other opinion, national or social origin, association with a national minority, property, birth or other status.

The main argument for limiting the application of Art. 14 to the rights sanctioned by the Convention and oposing the adoption of a general prohibition clause on racial discrimination was the fear that generalizing nondiscrimination would result in a host of legal interpretations, thus introducing uncertainity in the case-law of the European Court of Human Rights.

4.2. The adoption of the 12th Protocol to the European Convention on Human Rights.

In view of these "limits" set by Art.14 of the ECHR for the application of the nondiscrimination clause, insistent calls were registered from some quarters within the Council of Europe for the scope of

[16] UN General Assembly Resolution 217 A (III),adopted December 10th 1948.

[17] See UN General Assembly Resolution 2200 A (XXI) adopted December 16th 1966; the Covenant on Civil and Political Rights entered into force on March 23th 1976.

nondiscrimination to be extended, in order to cover **all forms of discrimination**. For that purpose the Parliamentary Assembly of the Council of Europe put forward repeated Recommendations asking the Committee of Ministers of the organization to widen the scope of the prohibition of discrimination by means of a new Protocol to the European Convention.[18]

Thus, in 1995 the newly created body of the Council of Europe, the **European Commission against Racism and Intolerance** (**ECRI**) drafted a document entitled "*Reasoned report on the reinforcement of the nondiscrimination clause of the European Convention of Human Rights".* ECRI's document pointed out that, in prohibiting discrimination, **Art. 14** of the European Convention of Human Rights did not go as far as other international instruments for human rights.[19]

Subsequently during 1994-2000, laborious negotiations were opened for drafting and adopting the text of a new Protocol to the ECHR. During all those stages, the activity within the newly created European Commission against Racism and Intolerance was closely linked to that endeavor.[20] The reason for ECRIs focus on the adoption of a new Protocol was mainly its concern for **effectiveness**: a normative instrument of that kind was urgently needed to combat new forms of racism and racial discrimination, of which there had been a noticeable upsurge in Europe in that period[21]. In ECRIs vew, the establishment of a general clause against discrimination on the ground of race, colour, language, religion or national or ethnic origin, conceived as **a fundamental human right**, would be a significant step towards effectively combating manifest violations of human rights which result from racism and xenophobia.

Eventually, on the 4th of November 2000, the 12th Protocol was signed in Rome. The Protocol entered into force on April 1st 2005, after ten ratifications. As of 2014, it has 18 Member States and 19 signatories.[22]

Art. 1 of the Protocol 12 to the European Convention reads as follows:

„General prohibition of discrimination.

1 .*The enjoyment of* ***any right set forth by the law*** *should be secured without discrimination on any ground such as sex, race, color, language, religion, political or other opinion, national or social origin, association with a national minority, property, birth or other status.*

2*. No one shall be discriminated against by any public authority on any ground such as those mentioned in paragraph 1."*

Unlike Article 14 of the Convention, Protocol 12 extends the ECtHR jurisdiction to "any right secured by law". Thus, the Court can rule on cases of discrimination even in respect to rights not explicitly mentioned in the Convention, such as access to services, employment, housing, healthcare and also in relations with private parties.

5. Legal status of ECRI's documents as Council of Europe s*oft law* in human rights.

The ***specific recommendations*** in each Country Report and, in particular, the content of the **General Policy Recommendations** drafted by ECRI experts represent part of the Council of Europe *soft law* on human rights[23].

They *are not legally binding*, do not impose legal obligations on member States; their implementation resides in the Governments willingness to enact them on national level. The system is based entirely on the principle of cooperation and dialogue. Thus ECRI is not a mechanism competent to apply international "sanctions" against those Member States who do not implement the measures suggested.

In accordance with the international legal principle of national sovereignty, ECRI cannot itself change laws, policies and practices in Council of Europe Member States. The methods available to fulfill its mandate, being specific for the Council of Europe as an international organization of cooperation, include: awareness-rising, dialogue, persuasion and, at some extent, horizontal political *peer-pressure*, mainly by means of dialogue between the representatives of the Member States, *within the Committee of Ministers* and the *Parliamentary Assembly* of the Council of Europe.

One example of ECRIs *soft law* document which has a particular contribution in defining the concepts in the fields of racism and discrimination is the ***GPR No.7 on national legislation to combat racism and racial discrimination.***[24] In order to effectively combat discrimination, **GPR No. 7** sets out a number of key elements for which it offers *legal definitions.* Thus, for the most important concepts within the remit of ECRIs mandate, GPR No. 7 recommends that those definitions should feature, uniformly, in all comprehensive national legislations.

In the process of drafting GPR no.7, the core concept of **„race"** received a particular attention. On the one side, the use of the term was challenged, considering that it could suggest recognition of the

[21] See, *M.Head*,"The Genesis of Protocole No.12",in *Non-discrimination:A human Right*,Coucil of Europe Publishing,2006, p.35-49.

[22] Romania ratified the 12th Protocol to the ECHR by Law no.103/3.05.

[23] See *Compilation of ECRI General Policy Recommandations*- www.coe.org/ecri

[24] See *G.Cardinale*,"The preparation of ECRI's General Policy Recommendation n°7 on National Legislation to Combat Racism and Racial Discrimination", in Revue du Droit Europeen relatif a la non-discrimination, Edition 5/2003.

existence of *different human races,* which is an inacceptable postulate of racist doctrines. On the other side, it was considered that the concept of race should be maintained on the ground that, in everyday life, victims of *racism* and *racial discrimination* are often erroneously perceived as belonging to 'another race'. Eventually, as an important clarification,the following foot note is accompaning the use of the term: „*Since all human beings belong to the same species, ECRI rejects theories based on the existence of different « races ». However, in this Recommendation ECRI uses this term in order to ensure that those persons who are generally and erroneously perceived as belonging to « another race » are not excluded from the protection provided for by the legislation"*.

Thus, ***racism*** is conceived in a very broad sense, covering not only "traditional" criteria, such as race, color, national or ethnic origin, but also other grounds as *language, religion or nationality:*

*"**Racism** ...shall mean the belief that a ground such as race,colour,language, religion, nationality or national or ethnic origin **justifies contempt for a person or a group of persons, or the notion of superiority of a person or a group of persons."***

The importance of a clear distinction between **direct** and **indirect racism** should also be uniformly applied at national level, when dealing with racist manifestations: **"*Direct racial discrimination*** *shall mean any differential treatment based on a ground such as race, colour, language, religion, nationality or national or ethnic origin, which has no objective and reasonable justification. Differential treatment has no objective and reasonable justification if it does not pursue a legitimate aim or if there is not a reasonable relationship of proportionality between the means employed and the aim sought to be realised".*

" *Indirect racial discrimination* *... shall mean cases where an apparently neutral factor such as a provision, criterion or practice cannot be as easily complied withby, or disadvantages, persons belonging to a group designated by a ground such as race, colour, language, religion, nationality or national or ethnic origin, unless this factor has an objective and reasonable justification. This latter would be the case if it pursues a legitimate aim and if there is a reasonable relationship of proportionality between the means employed and the aim sought to be realised."*

"*Racially motivated offences* - *„The law should penalize the following acts when committed intentionally: a) public incitement to violence, hatred or discrimination b) public insults and defamation or c) threats against a person or a grouping of persons on the grounds of their race, color, language, religion, nationality, a national or ethnic origin; d) the public expression, with a racist aim, of an ideology which claims the superiority of, or which depreciates or denigrates, a grouping of persons on the grounds of their race, color, language, religion, nationality, or national or ethnic origin;"*

GPR No. 7 has also ***a wide scope****:* these uniform **legal concepts** and **definitions** are recommended to be adopted and applied in *all branches of national law* (constitutional, criminal, civil and administrative)**.**

The GPR No. 7 also points out the fact that *modern-day racism* includes not only manifestations aimed at *individuals* but also at *groups* and that it might be based on *one* or on *several of the grounds* above mentioned.

6. Contribution of ECRI to the development of the case-law of the European Court of Human Rights (ECtHR) on matters of racial discrimination.

Lately, more and more often**,** the decisions of the European Court of Human Rights make express references to ECRI's Country Reports and also to its GPRs, in cases involving, for instance, ***freedom of association and assembly*** (art.11 of the European Convention on Human Rights), ***freedom of speech*** (art. 10), ***racist violence and racial discriminations*** (art. 14).

In a case before the Court, brought by 16 Czech nationals of Roma origin (*D.H. and others v. Czech Republic)*, the applicants proved that, between 1996 and 1999, they were placed in special schools for children with serious learning difficulties. They complained that, on account of their Roma origin, they suffered discrimination in the enjoyment of their right to education, in violation of Article 14 of the European Convention on Human Rights. The Court decision, endorsing their complaints, referred in particular to the work of ECRI: Three Country Reports on the Czech Republic, in which such segregation practices were condemned; adoption of ECRI **GPR No. 3** on ***Combating racism and intolerance against Roma/Gypsies****;* the definitions of *racism* and *direct and indirect discrimination* contained in ECRI **GPR No. 7** on National legislation to combat racism and racial discrimination.[25]

In another case, brought before the Court by two Turkish citizens (*Hasan and Eylem Zengin v. Turkey)*, the Court found that religious culture and ethics lessons in Turkey could not be considered to meet the criteria of objectivity and pluralism necessary for education in a democratic society, because, favoring Islamism and the study of Koran, prevented the pupils to develop a critical mind towards religion. In its judgment, the Court quoted the analysis and specific recommendations made by ECRI in its third Report on Turkey, as well as ECRIs **GPR No. 5** on Combating intolerance and discrimination against Muslims[26].

In the case - *Nachova and others v. Bulgaria*, the Court, applying for the first time Article 14 of the

[25] See http://hudoc.echr.coe.int/sites/eng/pages/search.aspx?i=001-83258

European Convention on Human Rights prohibiting discrimination, quoted extensively passages of ECRI Second and Third Reports on Bulgaria, in which discriminations against Roma were reported as violations of democracy; specific recommendation were also formulated[27].

7. Conclusion

Since its beginnings in 1993, ECRI has come a long way. Being a non-conventional mechanism of the Council of Europe, has allowed ECRI to expand its area of monitoring and to consider manifestations of racism and discriminations that were not foreseeable in the early 90, such as immigrants, asylum-seekers and refugees. In the aftermath of the terrorist attack of 9/11, Muslims in Europe also became the subject of increased surveillance, hate speech and even violence. The context in which ECRI functions has changed over the years, and some new trends have appeared, while other phenomena remain a constant concern on the European scene, as for instance, persistence of racial discrimination, which is closely linked to the rather precarious implementation of the anti-discrimination legislation in Member States.

EU ACQUIS ON E-COMMERCE

Larisa Antonia CAPISIZU[*]

Abstract

The discovery of a new form of communication between people, the Internet, was a premise of commerce development. The emergence of a new form of economic relation manifestation, e-commerce, led to important changes in the sphere of legal regulation. The need for these changes derives from the global and complex nature of the Internet.

Keywords: *e-commerce, Internet, computer crime.*

1. Conceptual delimitations

The advent of the Internet and the continuous development of information and communication technologies has led to a new type of trade, e-commerce, which is a separate entity with its own rules different from those of the traditional commerce.

The traditional commerce, based on written documents, rests on three pillars: promoting credit, speed of trade and security of trade, its legal certainty.[1]

The electronic commerce meets all these demands of the traditional commerce, being the most dynamic sector of the electronic exchange of data and information system.

The term e-commerce came from the other side of the Atlantic, in a project of "Federal Electronic Commerce Acquisition Team" in 29th of April 1994. According to this project, the electronic commerce represents "the combined and optimal use of all available communication technologies to develop trade enterprise". It covers the exchange of computerized data, but also e-mails, in line databases, electronic payment transfer.

The electronic commerce, as seen by the Organization for Economic Cooperation and Development, represents doing business via the Internet and refers to all types of transactions related to trading activities, conducted at the firm level or other buyers and is based on the processing and transmission of information in digital form, including text, sound and images.

The European Commission defines e-commerce as trading activities done electronically. It comprises various activities including electronic trading of goods and services, network delivery of goods, electronic transfer of capital, electronic submission of dispatch sheets, direct marketing and warranty and post-warranty service. The electronic commerce involves both traditional activities in areas such as health, education and new activities, such as virtual malls. It involves both products and services.

The Romanian doctrine defines e-commerce as "the entire use of electronic resources and technologies for trade and for other economic activities (meaning the use of electronic communication as a transmission medium throughout you can create, produce, advertise, catalog, inventory, purchase or sell goods, services and programs with economic value or that will adjust accounts)".[2]

A more comprehensive definition presents electronic commerce as consisting of all payments in which the transaction data are transmitted electronically, the person who pays and the person paid are directly involved in the transaction, and all the necessary information for authorizing for payment are exchanged electronically between the two sides.[3]

2. History of e-commerce

Although it is known that the emergence of e-commerce is linked to Internet development, in fact, first forms of electronic commerce have emerged much earlier, in the first half of the 20th century, when American Airlines has adopted a control system of sold, canceled and free seats at the flights that they provided. The first Home Banking system using the PCs was adopted in 1980 by First Interstate Bank, USA, and the first travel reservation system, easySABRE, was introduced in 1985 by Sabre Travel Network.[4]

Since the Internet can brings together people from different corners of the world, elaborating and adopting unitary rules at the international level regulating ecommerce is imperative. At the national level, it is necessary to adopt internal rules which are consistent with the global ones and that can adapt to the economic realities for each state.

[4] Jacques Henno, *Internetul* (Bucureşti: Ed. Prietenii Cartii, 2008), 100.

An important step towards adopting uniform regulations regarding the ecommerce is the European Agreement signed on 1st February 1993 in Brussels, which was ratified by Romania through Law no. 20/1993.

The variety of national legislation, which may lead to different regulations for similar situations, represents an obstacle to the development of electronic commerce. A solution to ensure international compatibility and consistency of legal norms is the UNCITRAL Model Law on Electronic Commerce, adopted in 1996. This law gives national legislators a set of internationally accepted rules for implementing electronic commerce. The Model Law contains 17 articles and is accompanied by a Guide to enactment.

A significant contribution to the development of e-commerce regulation comes from the International Chamber of Commerce in Paris which, in 1997, adopted the General Usage for International Digitally Ensured Commerce - GUIDEC.

In 1988, the European Commission launched TEDIS (Trade Electronic Data Interchange Systems) programme, aiming to develop an appropriate legal framework for the increased use of Electronic Data Interchange (EDI) in the Member States of the European Community.

The intensification of legislative activity in several Member States of the European Union has highlighted the need for a harmonized legal framework at the European level in order to prevent the national regulations to become an obstacle in the functioning of the Internal Market.[5]

According to Title XV of the Treaty on European Union, called Research and Technological Development, the European legislation for the program implementation consists of various directives, decisions, recommendations and communications[6].

The most important directives of the European Parliament and of the Council on electronic commerce are Directive 1999/93/EC of 13 December 1999 on a Community framework for electronic signatures and Directive 2000/31/EC of 8 June 2000 on certain legal aspects of information society services, in particular electronic commerce, in the Internal Market.

Another important legislative act is the Council Framework Decision 2001/413/JHA of 28 May 2001 on combating fraud and counterfeiting of non-cash means of payment.

In 2001 the Model Law on Electronic Signatures was adopted by the United Nations General Assembly Resolution no. 56/80. This law was adopted at the 37th session of UNCITRAL, held in Vienna from 18 to 29 September 2000. The Model Law on Electronic Signatures contains 12 articles and is accompanied, just like the UNCITRAL Model Law on Electronic Commerce, by a guide to enactment.

In Romania, online trade started in 2004, much later than in Western countries. For this reason, online trade has grown more slowly in our country compared to countries like the UK where over 80% of all purchases are made online. This form of trading is on an upward trend in Romania, even if its growth is slower than the online trade of other European countries. Romania, compared to other countries with a long tradition in computer science, does not have a historical institutional tradition. The first steps in this direction were made by the National Institute for Research and Development in Informatics.

3. The European legal framework on e-commerce

The electronic commerce is an important source of revenue for providers opting for an electronic market. Therefore, in order to develop its huge potential in a safe environment in which all participants have confidence, certain standards and regulations ought to be imposed.

The legal framework for trade, which traditionally relies on procedures and requirements tailored for documents on paper, is adapting to new technologies. Electronic commerce is a separation of the traditional trade based on documents.[7]

According to the provisions of Title XIX of the Treaty on the Functioning of the European Union, called Research and technological development and space, European legislation consists of secondary legislation such as directives, decisions, opinions and recommendations, as well as complementary measures, such as communications.

EU acquis consists of common rights and obligations applicable to all Member States. EU acquis covers all the legal rules governing the work of EU institutions, actions and policies, consisting in[8]:

- the content, the principles and the political objectives contained in the original Treaties of the European Communities (Treaty establishing the European Coal and Steel Community, the Treaty establishing the European Economic Community and the Treaty establishing the European Atomic Energy Community) and in the subsequent Treaties (Single European Act, the Maastricht Treaty, the Treaty of Amsterdam, the Treaty of Nice, the Treaty of Lisbon);
- the legislation adopted by the EU institutions to implement the provisions of the Treaties (regulations, directives, decisions, opinions and recommendations);
- the jurisprudence of the Court of Justice of the European Union;
- declarations and resolutions adopted within the European Union;
- joint actions, common positions, conventions,

[8] Zoltán Horváth, *Manuel sur l'Union Européenne* (Assemblée nationale hongroise, deuxième édition en français, 2007), 231.

resolutions, declarations and other acts adopted by the Common Foreign and Security Policy (CFSP) and in Cooperation in the field of Justice and Home Affairs (JHA);

- international agreements in which the European Union is a party, and those signed between the Member States of the European Union with regard to its work.

The most important directives of the European Parliament and of the Council on electronic commerce are Directive 1999/93/EC of 13 December 1999 on a Community framework for electronic signatures and Directive 2000/31/EC of 8 June 2000 on certain legal aspects of information society services, in particular electronic commerce, in the Internal Market.

The aim of the Directive 1999/93/EC stated in its first article is to make electronic signatures easier to use and help them become legally recognized within the Member States. This Directive establishes the legal framework for electronic signatures and certification services at European level in order to ensure the proper functioning of the internal market of the Community. The Directive aims to build confidence in the process of certification of the origin and integrity of electronic messages in IT era.

The Electronic Signature Directive does not cover those aspects relevant to the formation and validity of contracts or other legal obligations, when there are certain legal requirements, national or European, regarding the form of the act. It also does not affect rules and limitations prescribed in national or European legislation for the use of documents.

The Directive 1999/93/EC defines the conditions applicable to the use of electronic signatures, reaffirms the principles of the Internal Market, establishes the legal effects of electronic signatures and the security measures to protect the electronic information.

The Directive 2000/31/EC on electronic commerce contributes to the proper functioning of the electronic commerce in the Internal Market, ensuring the free movement of information society services between Member States. This Directive establishes the framework for the national legislation regarding the information services for the Internal Market, it establishes the conditions for setting up the certification bodies and it regulates the commercial transmissions and the electronic contracts, the liability of intermediaries, the rules of conduct applicable, the judicial and extra-judicial settlement of disputes, as well as the cooperation between Member States.

The Directive also defines "the coordinated field" as the requirements contained in the Member States legislation, applicable to the information society services and that the providers of such services must comply. These requirements may relate to professional qualifications, authorization or notification of the information service provider, his behavior, quality of services and liability of service provider.

Directive 2000/31/EC defines the principles governing the information society services provided in the Internal Market[9]:

- The principle of free access to information: Member States cannot, on matters falling within the coordinated field, restrict the freedom to provide information;
- The principle of excluding prior authorization: Member States shall take the necessary measures so that the set up and the continuation of the activity of IT service provider shall not be subject to any prior authorization or other conditions having equivalent effect;
- Member States shall impose on service providers the obligation to facilitate the free, simple and direct access of service users to information that identifies the supplier and its authorization, when the law stipulates the necessity of an authorization;
- Member States shall ensure that any commercial communication which is an information society service will identify the commercial nature of communication and the conditions which must be met in order to participate in any promotional offer;
- Member States shall ensure that legal regulations applicable to the process of forming and to the execution of the contracts do not create obstacles for the use of electronic contracts and do not to lack these contracts of their legal effects motivated by the fact that they were created by electronic means;
- The principle of "simple behavior": Member States shall ensure that the service provider is not held responsible for the information transmitted, as long as the provider does not interfere with the electronic message.

Another important normative act at EU level in the field of electronic commerce is the Council Framework Decision 2001/413/JHA of 28 May 2001 on combating fraud and counterfeiting of non-cash means of payment. This Framework Decision defines the specific facts of fraud involving the use of other means of payment than liquidity. Under this framework decision, fraud involving any form of non-cash means of payment will be recognized as a criminal offence and should be incriminated in all Member States, regardless of the person who committed it, natural or legal person, and should be punished by effective, proportionate and dissuasive penalties, without necessarily involving deprivation of liberty, except in the most serious cases.[10] The framework decision lists the various types of behavior that should be incriminated and also establishes a series of criteria to determine the jurisdiction of the national judicial authorities in respect of the offences referred to in the framework decision.[11]

[9] Schiau, „Cadrul juridic al comerţului electornic": 56-72.
[10] Adrian-Milutin Truichici, *Lupta împotriva fraudei şi falsificării mijloacelor de plată, altele decât lichidităţile la nivelul Uniunii*. *Europene*, Revista de drept comercial 2 (2008): 8.
[11] Moise, *Metodologia infracţiunilor informatice,* 277.

The decisions of the European Parliament and those of the Council, the communications from the Commission to the Council and to the European Parliament and the Commission's recommendations are enforcement instruments for the existing directives.

In conclusion, the characteristic of EU regulation is that the directives, the decisions, the recommendations and the communications do not replace the existing regulations in Member States on electronic commerce, but aim to harmonize these national legislations in order to attain international compatibility and development of electronic commerce in the information society.

4. The implementation of European rules on e-commerce in Romania

In the context of the emergence and the development of electronic commerce, the Romanian society has suffered social, economic and legal transformations. From a legal perspective, Romania has adopted regulations that have outlined a legal framework for the sustainable development of electronic commerce, regulations consistent with international obligations.

In this respect, Law no. 20/1993 ratifying the European Agreement of 1 February 1993 in Brussels must be mentioned.

Among the objectives set by Romania with the European Union are:

- promoting and developing trade, as well as harmonious economic relations between the parties;
- providing a basis for economic, social, financial and cultural cooperation;
- supporting the efforts of our country's economic development;
- providing a framework for the gradual integration into the European Union.

Romania has complied with the obligations and, therefore, began creating a framework composed of a series of regulations governing every component of this complex system of transactions, the electronic commerce.

In this regard, the provisions of Law no. 365/2002 on electronic commerce, as amended, are applicable. This law transposes Directive no. 2000/31/EC of the European Parliament and of the Council of 8 June 2000 on certain aspects of information society services, in particular electronic commerce, in the Internal Market. This normative act is "the common law" in the field. The concept of e-commerce, although known before 2000, it wasn't enacted in Romania until the emergence of e-commerce law.

The main normative act subordinated to the Law no. 365/2002 consists of the Methodological Norms approved by Government decision no. 1308/2002.

The electronic commerce is based on the electronic signature regulated by Law no. 455/2001 and by accepted standards for data transmission security and data storage. This law transposes Directive 1999/93/EC of 13 December 1999 on a Community framework for electronic signatures.

Article 2 of Law no. 455/2001 states that the provisions of this law "shall be supplemented with the provisions concerning the conclusion, validity and effects of legal acts", art. 2 para. (3) of Law no. 365/2002 states that the provisions of this law shall be supplemented with tax laws, the laws governing the protection of individuals with regard to the processing of personal data and privacy in the telecommunications sector and the legal provisions on competition and par. (5) of the same article states that "if it does not contain derogations, this law is supplemented by legal provisions on the conclusion, validity and effects of legal acts, with other legal provisions that are intended to protect consumers and public health, as well as legal provisions regarding the regulation of private international law".

The Law no. 455/2001 establishes the legal regime of electronic signatures and of the documents in electronic form, as well as the conditions for providing the certification of electronic signatures, according to art. 1, and the Law. 365/2002 aims to establish the conditions for providing the information society services, as well as to incriminate as crimes the facts committed in connection with the domains security used in e-commerce, the issuing and the use of electronic payment instruments and the use of identification data in order to perform financial operations, providing a framework for supporting the free movement and safe development of these services.

The first steps in lawmaking in this area, in accordance with the international legal framework, were made by adopting G.O no. 130/2000 on the legal regime of distance contracts, followed by Law no. 455/2001 on electronic signature, together with G.D no. 1253/2001 on the approval of Technical and methodological rules on electronic signature law enforcement, then G.O no. 20/2002 on public procurement through electronic auctions and G.O no. 24/2002 regarding the receipt by electronic means of local taxes, Law no. 51/2003 approving G.O no. 130/2000 on the legal regime of distance contracts, G.D no. 181/2002 on the establishment of the General Inspectorate for Communications and Information Technology and G.D no. 182/2002 on the list of competent authorities that are obliged to use electronic procurement auction. The legal framework was completed by the electronic commerce Law no. 365/2002.

The internal regulations that build this legal framework are transposing the EU legislation. Many other laws are governing specific aspects of electronic commerce, for example:

- National Bank of Romania Regulation no. 4/2002 concerning transactions through electronic payment instruments and the relations between the parties to such transactions;

- Order of the Minister of Communications and Information Technology no. 16/2003 on the procedure for approval of payment instruments with remote access, such as Internet banking or home-banking applications;
- Title III of Law no. 161/2003 on certain measures to ensure transparency in exercising public dignities, public functions and in business, to prevent and to punish corruption, which aims to prevent and to combat cybercrime and which contains provisions related to crimes and offenses, procedural provisions and aspects regarding international cooperation in combating the phenomenon of cybercrime;
- Law no. 250/2003 approving Government Emergency Ordinance no. 193/2002 concerning the introduction of modern payment systems;
- O.G. no. 73/2003 amending and supplementing O.G. no. 20/2002 on public procurement through electronic auctions;
- Law no. 485 2003 amending and supplementing the Banking Law no. 58/1998;
- Norms for the application of G.O no. 20/2002 on public procurement through electronic auctions.

In conclusion, in the light of the economic integration into the European Union, it was necessary for Romania to harmonize its national legislation with the European legislation. After the accession, the EU law was automatically integrated into the national law. As regards to the alignment with EU rules on electronic commerce, Romania has adopted a set of laws transposing EU provisions, acts summarized in the section above.

5. Conclusions

In conclusion, I believe that the regulation in the EU of the Internet in general and of the electronic commerce in particular, remains a mosaic of laws, rules, standards and different practices. This situation hinders the development of online services and undermines the confidence of actual or potential users, both in terms of demand and supply. The ignorance of the rights and of the applicable rules, as well as the opportunities offered by the digital economy, increases people's reluctance. The practical difficulties related to cross-border transactions (payments, shipping, dispute settlement, risk of abuse) discourage them to take full advantage of the Internet to purchase or supply goods and services.

PARTICULARITIES OF PARLIAMENTARY OVERSIGHT IN DIFFERENT POLITICAL REGIMES

Silvia-Claudia CĂLIN-MIHALCEA*

Abstract:

The quality and intensity of the parliamentary oversight performed over the Government are shaped by several major criteria: political regime, electoral system, structure of the Parliament (unicameral/bicameral), parliamentary culture and tradition. This paper emphasizes some distinctive elements and particular mechanisms of the control exercised over the activities of the executive power, from the point of view of the political regime established in states with modern democracies.

Keywords: *Parliament, Government, parliamentary oversight, separation of powers, state*.

1. Introduction

Ensuring the representativeness of the people in a democracy, the Parliament must exercise one of its functions – the parliamentary oversight – as a necessary balance between the powers in the state in order to prevent the seizing of the state power. Pierre Avril appreciates that it strictly represents a verification, „a material operation, framed by the law by fixing its procedure and consequences"[1].

The Dutch author, Paul Penning, defines the parliamentary oversight as „the legislature's ability to constrain executive behavior"[2], while Frederick Stapenhurst and Riccardo Pelizzo considers it of „vital importance in ensuring that governments carry out their duties efficiently, democratically, and in a fiscally responsible manner"[3].

It is well known John Stuart Mill's opinion, which can be partially applied to the contemporary era: the true mission of a Parliament is to watch and control the Government, to bring its actions to light, to ask for its presence and justification when its acts seem questionable, to blame them if they are contestable, to watch the persons from the Government when they abuse their position or fulfill their mission contrary to the peoples' will and to appoint their successors, whether express or virtually[4].

Professor Ioan Muraru emphasizes the importance of the parliamentary control and considers it as a „full one", being exercised upon the entire activities according to the laws and Constitution, a „necessary one", as the Parliament is called to establish the manner the other state authorities are fulfilling their mission and „differentially" acting[5].

The Government, the chief of state, the public administration are the main action areas, seconded by other domains as security and intelligence which no longer represent taboo fields. In this regard, we will focus on the most important factors and circumstances that influence and shape the dimension of the parliamentary control.

2. Content

2.1. Political regimes - general remarks

The political system traces significant characteristics and the presidential one states the chief of state as the head of the Government, being directly or indirectly elected, by the vote of the people. Such a pattern is described as a rigid separation of the powers, both the President and the Parliament have their own electoral legitimacy. On one hand, the President cannot be held politically accountant by the legislative body and on the other hand, the latter will not be dissolved, both parties lacking a lethal weapon.

This is the case of the United States of America, where the President is the leader of the public administration but without forming a Government to be fully responsible in front of the Congress. We are facing an incomplete parliamentary oversight, which extends to the veto right regarding some laws, the approval of public appointments and the verification of the foreign affairs policies.

The strong point in such regime is the fact that the political and criminal responsibility are separated, thus the impeachment procedure is applied. The subject of such a procedure may be any civil officer of the Government, even the President, for cases of treason, bribery or other high crimes and

misdemeanors (article II of the United States Constitution, section 4). In the history of the United States of America only two procedures regarding the impeachment of a President were finalized, both of them with an acquittal: Andrew Johnson Acquitted on the 26th of May 1868 and Bill Clinton on the 12th of February 1999.

In parliamentary regimes, the President is elected, politically accountant to the legislative body and, by symmetry, dismissed by the Parliament after a vote of non-confidence.

As a part of an oversight institution, the members of the Parliament belonging to the party in power must verify the activity of the executive, based on the mandate entrusted by the people. But, at the same time, the performance of the Government influences, in a decisive manner, their political and electoral fate; this is that „paradox"[6] of the parliamentary systems, a dilemma often solved when the point of view of the political parties prevails.

There are some exceptions in the parliamentary systems as well, in Germany, for example, where the Chancellor concentrates in his hands the executive power and also has the right to request the President to dissolute the Bundestag. The President has prerogatives to appoint persons in public positions, including judges, to represent the state, to sign treaties, but he doesn't answer in front of the Parliament.

In such regimes, an important element which influences the Parliament - Government relationship is the electoral system and Philip Norton emphasizes the existence of „powerful correlation, but not total"[7] between the majority election system and the British Government model, and between the proportional representation system and the continental model. The first one facilitates the victory of one party, so a powerful government can be formed, which prefers to debate on major themes during the plenary sessions and not during the special or permanent committees, in order to avoid the oversight. On the other hand, the proportional system resides in the formation of minority governments, as no party is able to gain absolute power, the activity in the committees is very intense, and so the executive is often forced to negotiate.

Having a unicameral Parliament or one with two chambers also shapes the dimension of the parliamentary oversight. After analyzing legislative bodies of United States of America, Russia and the 28 member states of the European Union, we came to the conclusion that 16 have a bicameral parliament and 14 a unicameral one.[8]. Without making a strict rule, it is noticeable that the Parliament with one chamber is specific to unitary centralized countries, while, the decentralized federal ones[9], have two chambers.

There are states where both chambers have prerogatives to exercise the parliamentary oversight and this procedure is more efficient (especially in case of a minority Government in the superior chamber); generally, the inferior chamber plays a major role. The relationship between the two institutions is also influenced by the existence of a strong and active opposition and by its capacity to organize and put the Government in difficulty.

In semi – presidential regimes, a specific set of rules is instituted between the President, the Parliament and the Government. The new element is the accountability of the chief of state in front of the legislative body, even if both institutions are extracting their power from the direct vote of the citizens; thus, the President can be suspended or put to trial for high treason.

No matter the political regime, a certain aspect must be mentioned, the situation when the members of the Government or some of them are also members of the Parliament. In Germany and Great Britain, there is such a custom, while in Austria, generally, the ministers are not members of the legislative body.

2.2. Instruments of the parliamentary oversight

This chapter displays the means of the parliamentary oversight, the way it is reflected in national Constitutions and Rules and Regulations of the parliamentary Chambers: questions, interpellations, motions, hearings in permanent committees, committees of inquiry, messages, reports, programs, citizens' petitions, Ombudsman. In order to have a more global image, we chose to analyze the legislation in the member states of the European Union, United States and America and Russia (two states in which the administrations are only indirect responsible in front of the Parliament).

Yves Mény distinguishes three types of parliamentary oversight on the Government[10]:

- Partisan control, orchestrated by the opposition and efficient when the Government is vulnerable;
- Non-partisan control: questions, hearings, committees, etc;
- Control with a sanction: motion of no

confidence, but which cannot be used very often without destabilizing the system.

2.2.1. Questions

A parliamentary question is, in principle, a request of an information which the Government has to provide, which can be made available only to the author or to all the members of the legislative body; moreover, the Government can be called to clarify if facts/data are precise or correct.

In Great Britain, this procedure is one of the oldest prerogatives, dated 1721, the House of Lords. Generally, the Parliament has a question time section in its agenda, broadcasted live on national TV stations or radios. Additional questions may be formulated, usually only on urgent matters.

Written questions are the most used instrument in the oversight activity, given the possibility of the members of the Parliament to ask for detailed explanations from the executive body. In order to prevent the agenda of the Parliament from being blocked, in some countries there are certain regulations such as: the number of persons which can sign such a question (for example five persons in Austria /Latvia or nine in Lithuania) or pre authorization from the Parliament related to the subject of the question. The areas covered by the content of the questions may address a local issue, from the constituency of the author or general ones.

Just to give some examples, in Germany, the Federal Government has to answer to 5000 questions per year, while in Romania, in 2014, the Government had to answer to 3959 questions.

This instrument is sometimes used by the members of the Parliament in order to increase their image in public or inside their political party. The Russian author, Maria Sivenkova, in a comparative study[11], appreciates that this is the case in a quarter of the questions addressed to the British Government and in a tenth in the Russian Parliament. Matti Wiberg also notices that using this mechanism represents one of the means to assume merits and have publicity.[12].

A particular situation is encountered in the United States of America, where the Congress cannot put forward questions for the executive body to answer, which is due to the fact that, as we explained above, the Government is not held politically accountant. However, article II, section 3, states that the President must give the Congress information on the "State of the Union" "from time to time" and make recommendations which he deems as "necessary and expedient".

2.2.2. Interpellations

Usually, the interpellation is a request to get information or clarify a situation regarding the Government's program. It refers to situations related to the national interest and this makes the difference in comparison to a question. For example, in Belgium, House of Representatives, it is not allowed to formulate an interpellation if it refers to local or special issues. An interpellation is initiated in written with the intention to launch a debate and in some legislative bodies it is necessary the agreement of the Parliamentary group in order to be filed.

2.2.3. Motions

The motion is the instrument used by the Parliament to initiate the procedure to partially or fully replace the Government and its radical form is the censure motion/motion of no confidence, „the supreme manifestation of the oversight exercised upon the Government"[13]. Generally, the inferior chamber is the one armed with such means, but we also found exceptions (joint session of the two chambers in Romania). The number of the necessary signatures varies from country to country, as well as the necessary number of votes to pass (two thirds, three fifths, simple majority), while in states like Germany, Spain, Slovenia, the non - confidence vote is given unless the successor is also elected with a majority.

The first motion of no confidence occurred in Great Britain in 1792 and the last one in 1979. In France in 1962, while the most recent in Eastern Europe happened in April 2012 in Romania and it became a very rare thing to be seen.

In presidential systems, the Parliament can occasionally give a no confidence vote, for example the negative vote receive by State Secretary Dean Acheson in 1950 from the Congress of the United States of America. There is also the possibility for a minister to be held accountant individually, but the Government is not in danger and it has the possibility to nominate another person for that portfolio. Latvia is a special case, as, when more than half of the members of the Cabinet have been replaced, the entire Government has to receive a confirmation vote.

2.2.4. Hearings in permanent committees

Lately, it is noticeable the increase of the role given to permanent parliamentary committees. The public hearings are often an efficient vehicle to retrieve information related to the public agenda.

2.2.5. Committees of Inquiry

The committees of inquiry represent the mean by which particular situations, considered to be unclear or critical are investigated and are specific to the inferior

chambers of the Parliament. In Slovenia, only the upper chamber can use this instrument.

The final report do not stand judicial courts, but the public opinion can be influenced by the conclusions contained by such documents and it is well known the case of the special committee in the Congress, which led to the resignation of President Richard Nixon in 1974.

The domains approached in a committee of inquiry are limited and Eric Thiers mentions the vivid debates that took place in France, in 2010, regarding the studies ordered and financed by the President of the Republic. The vote on establishing such a committee did not pass, as, according to the Constitution, the accountability of the chief of state is possible only for high treason and only in front of the High Court[14].

2.2.6. Messages, reports, programs

The chief of states/governments, certain state authorities have the constitutional obligation to present in front joint chambers/single chamber these types of documents. In the presidential system, the chief of state presents, once elected, the political program of the newly elected Government, while in parliamentary and semi – presidential systems, the Government is the one to reveal its objectives. These sessions may be followed by debates, when the members of the parliament or the parliamentary groups can ask for some aspects to be clarified.

Professor Muraru remarks that using the term *parliamentary oversight* in these situations is „conventional, marking the existence of the relations between these high public authorities"[15].

2.2.7. Citizens' petitions

The citizens are allowed to make petitions to one or both of the chambers of the Parliament in order to defend their rights and interests; this way, the Parliament is an intermediate between the citizens and the Government. There are special committees dealing with these petitions and their members have the possibility to ask oral or written references from the Ombudsman.

2.2.8. Ombudsman

Such an authority has Nordic origins, the first Ombudsman being elected in 1766 in Sweden. It has general or special competence, acting to defend the rights of the citizens in relation to the public authorities and functions under different names. In some states it was kept the original name of Ombudsman (UK, Hungary, Northern Ireland) while in others we can find names like commissary (Poland, Cyprus, Russia), chancellor (Estonia), mediator (France, Luxembourg) or lawyer (Romania, Greece). In Italy the institution has only a regional role while in the United States of America can be found the federal Ombudsman.

A special Ombudsman is appointed in areas such as minority rights (Hungary), Gender equality (Sweden), armed forces (Germany), etc.

3. Conclusions

The intensity and quality of the parliamentary oversight are shaped by many factors, which are joined by the parliamentary culture, tradition specific in each state. As a general trend, lately, the parliamentary oversight proves to be a prerogative difficult to exercise, both by the majority and opposition, in their pursue of influencing the adoption of the legislation.

In any democracy, the purposefulness of the parliamentary control has to overcome the statute of confrontation, sometimes duel, between the executive and legislative bodies, so that it becomes the equilibrium point from which the needs of the citizens are met, according to the mandate they have granted.

THE IMPORTANCE OF THE LISBON TREATY. MAIN CHANGES AND THEIR ROLE IN THE CONSTRUCTION OF THE EUROPEAN UNION

Honorius CIRCA*

Abstract

Analyzing the "Europe 2020" Strategy means analyzing the concepts of intelligent, durable and social-inclusion and social-dialogue friendly growth. In this context, the Lisbon Treaty appears as the supplier of a judicial basis for the enactment of the Lisbon Strategy and the "Europe 2020" Strategy stands as an instrument for enacting the Lisbon Treaty. Furthermore, the European social model emerges not merely as a symbiosis of the different national models of the Member States, one being thus able to debate on its global uniqueness. Concerning this aspect, we place a heavy emphasis on the analysis of the possible implications the compulsory character of the Charter has, in addition to the increasing role of the social partners within the EU.

Keywords: *subsidiarity, principle of law, treaty of Lisbon, novelties of the treaty, institutions.*

TREATY OF LISBON

The Treaty of Lisbon ends a process of reform undertaken between 2000 and 2010, its content representing a reversal to the text of the Constitutional Treaty, in order to create a future Union capable of facing internal and international challenges. The main points are:

First, the Treaty of Lisbon is the result of a political process which began at Maastricht and continued at Amsterdam and Nice through which a prominent double innovation has been achieved:

- A method innovation (the constitutional process of the Convention);
- A model innovation (the political development);

Second, this process can further be divided into three parts:

- The first part, that of the proposals and the agreements – The Convention and the Constitution;
- The second part, the deadlock – the constitutional crisis;
- The final part, the relieving – The Lisbon Treaty.

One has to remark that whereas the deadlock phase has been thoroughly debated and scrutinized at European level, overtaking the differences was a process less observed by the European citizens, knowledge about these procedures being considered trivial by both the media and high-ranking officials. A possible explanation for this occurrence may lie in the double interpretation of the Lisbon Treaty, in terms of both gains and costs, and therefore of the different individual interests involved[1]. If we have already identified the great gain in maintaining the content of the Constitutional Treaty, the most important loss is the disappearance of its constitutional form, its symbolic reference and its constitutional language.

It is very important to understand the complex political, institutional and decisional reforms brought about by the Lisbon Treaty, a treaty which should ensure the legislative framework for reforms over the next 20 years.

On the 13th of December 2007, heads of state and government signed near Lisbon, the Treaty amending the Treaty on European Union and the Treaty establishing the European Community. The treaty, named the Treaty of Lisbon after the town in which it was signed underpins the end of the constitutional crisis, replacing the Constitutional Treaty whose ratification wasn't carried through. The Lisbon Treaty represents the most ambitious amendment of the founding Treaties, since the establishment of the Communities, over passing in terms of importance even the Maastricht moment. The number and scope of the reforms enacted by the Treaty were made possible because the main parts of the Constitutional Treaty were transferred with the consent of the Member States in the current Treaty. The New Treaty of Lisbon is in fact the old Constitutional Treaty losing its constitutional character[2].

For the European Union and its legal basis, the main consequences of the Lisbon Treaty are as follows:

1. The Lisbon Treaty is a classic reform treaty. As the previous Treaties of Amsterdam and Nice, the Lisbon Treaty modifies the existing Treaties, without replacing them with a new text. There is a return to the traditional amending/complementing technique, different from the innovative form underscored by the Constitutional Treaty, i.e. a legislative consolidation through the adoption of a completely new text, the Lisbon Treaty distancing itself from the radical and simplifying formula of replacing almost all existing

[2] Wallace, Helen, Mark Pollack, Alasdair Young, Policy-Making in the European Union, Sixth Edition, Oxford University Press, 2010

European treaties with a single, simpler and better structured text.

2. The Treaty includes nevertheless an important innovation: the disappearance of the European Community and its replacement with the European Union, which becomes a legal entity. The disappearance of the European Community represents in itself a simplification, thus being eliminated a legal entity that has on several occasions generated confusions, the citizens being more accustomed to the political reality named the European Union and having difficulties in understanding the relation between the EC and the EU;

3. Nevertheless, the Treaty establishing the European Community does not simply go away alongside the disappearance of the European Community but, once amended, changes its name, becoming with the enactment of the Lisbon Treaty the "Treaty on the functioning of the European Union". It is not simply a change in terminology, but also a change in functions.

The Lisbon Treaty is therefore a classic treaty, which includes amendments to the two fundamental treaties, the Treaty on the European Union and the Treaty establishing a European Community. As in the case of all treaties such as these, at first sight, all the changes enacted cannot be encompassed, a process which is greatly facilitated by the consolidated texts. At the same time, the treaty includes a great number of Protocols and Declarations annexed to the two amended treaties. In addition to that, the fusion between the EC and the EU does not comprise the fusion with the European Atomic Energy Community (EURATOM), which continues to function as well as the Treaty which established it, i.e. the EAEC Treaty. Of course, the EU and the EAEC share the same institutions in their functioning. In other words, after the coming into force of the Lisbon Treaty, the primary law of the European Union will operate with two texts:

- The Treaty on the European Union;
- Treaty on the Functioning of the European Union.

The first introduces fundamental reforms in the Treaty on the European Union, including its structure. The second reforms and renames the Treaty establishing the European Community, as a result of the disappearance of the European Community, introducing at the same time prominent changes. A material distinction between the two treaties is therefore instated, the latter becoming the basic text and the former developing the meaning or the latter.

From a judicial perspective, there is no hierarchic relation between the two treaties. Moving away from the formal and structural aspects, an analysis of the amendments the Lisbon Treaty makes to the older treaties is necessary. The first aspect we must take into account is that the Lisbon Treaty develops and consolidates the European Union, born at Maastricht, developing its political model. From this perspective, in addition to the afore-mentioned disappearance of the European Community, several fundamental changes are enacted:

- The legal entity status of the European Union;
- The compulsory character of the Charter of Fundamental Rights of the European Union;
- Establishing the set of values and objectives of the Union;
- Establishing the dispositions for the democratic functioning of the Union;
- The continuation of the growing community importance of the third pillar of the EU, concerning justice and internal affairs;
- Dividing the competences;
- Establishing a procedure of controlling the subsidiarity principle;
- Enacting an ambitious institutional reform;
- Enacting major innovations in the fields of external policy, defense and security;
- The establishment of a new legal basis for the Union.

THE MAIN NOVELTIES OF THE TREATY

Examining the formal aspects of the Lisbon Treaty and the structural changes it entails must complement the analysis of its material content. We synthesize here in brief the novelties and the reforms enacted by the Lisbon Treaty and its contributions to the changes that will affect the European Union:

1. The Lisbon Treaty strengthens the political dimension of the European Union, developed in the last years. The European Community ends its existence, thus being recognized the appearance of a common political reality, that of the European Union – unlike the previous situation when two judicial realities corresponding to the two organizations, the EU and the EC, coexisted. The Union gains legal person status and, by explicitly establishing its values and objectives the political project and its nature are more strongly defined. The political character of the Union is strengthened also by the specification of its functioning principles: representative and participatory democracy. As to this latter aspect, one has to take into account the importance of introducing into the functioning framework of the Union of the legislative initiative of a million citizens. As innovative as this is the stipulation that, for the first time, a state has the possibility of voluntarily leaving the Union;

2. The Lisbon Treaty clarifies and defines the relations of the Union with the Member States through the catalogue of competences. To this extent, we must highlight the novelty of the national legislatures' participation to the activities of the Union. In addition to their traditional functions, the Lisbon Treaty gives the national parliaments the role of guarantor of the national competences in relation to the Union. Hence, the national legislatures will be able to take part in the process of "ex ante" political control of the

community's legislation accordance with the subsidiarity principle and will play an important role in the simplified revision of the treaties, through the possibilities opened by the "gangway" procedure;

3. Of utmost importance for the democracy of the Union is the compulsory character of the Charter of Fundamental Rights of the European Union, although there are some exceptions for the United Kingdom and for Poland.

4. The consolidation of fundamental rights protection mechanisms is highlighted also by the possibility of the Union's accession to the European Convention on Human Rights, a prominent document of the Council of Europe, which entails the EU's acceptance of an external control mechanism in the field of the fundamental rights;

5. In order to cope with the challenges which stem from the increase of the Member States, the Lisbon Treaty enacts an important institutional reform which strives to ensure the democratic quality of the Unions functioning as well as guaranteeing its decision and action capacities;

6. The legislative and decisional procedures are profoundly altered. In order to increase the efficiency of the community's action, the Lisbon replaces the unanimous decision of the Council with the qualified majority voting procedure for 28 new fields of action. In addition to that, the stipulations of the Lisbon Treaty entail that in 28 cases the rule of decision-making is qualified majority. In regards to the legislative procedure, the Lisbon Treaty stipulates that the rule is the old general rule of the "ordinary" procedure. This procedure is none other than a reformed version of the "co decision" rule, which entails that in order to pass a decision, both the Council and the EP must, on parity, approve it. The partnership of the European legislature is thus consolidated. As to the legislative acts of the Union, the Lisbon Treaty considerably disentangles the matters by making a clear cut difference between "legislative acts", i.e. those approved by means of a legislative procedure and "executive acts", i.e. those adopted through competence declination by the Commission. Furthermore, a clear hierarchy between these categories is established;

7. To clarify and explain the functioning of the EU, the Lisbon Treaty outlines the competences of the Union, establishing three categories: exclusive competences, common competences and complementary competences. The Treaty also lays the foundations for a catalogue of competences belonging to each of the three afore-mentioned categories. As to the exercising of these competences, the main change is the establishing of monitoring procedures over the conformity of the common action with the proportionality and subsidiarity principles. First, a political "ex ante" control is instituted, through the participation of the national legislatures in this procedure, the possibility of bringing an action in front of the Justice Court being guaranteed. As to the action competences of the European Union, the Lisbon Treaty establishes new judicial grounds for the Union's development of actions and policies in fields as diverse as humanitarian aid, space research, energy, climate change, youth, sports, civil protection and administrative cooperation;

8. In most cases, we are not talking about exclusively new competences, but more likely a thoroughness of older stipulations. The great leap forward from this perspective is the institutions of the Freedom, Justice and Security Space;
